"Why can't yer?" inquired Tommy.

"Becos," answered John with dignity, "yer know it ain't good — *it ain't brotherhood.*"

Tommy was silenced, this was something beyond his comprehension, but he relieved the tension of his feelings with an extra hideous grimace.

Neighbors

Little John's feelings were mixed and mingled. Though rarely the aggressor, he had always manfully held his own; now he was called upon to

act up to his principles or his words would go for naught, and he really was an adept at facial expression. It was really a sacrifice. "I'll be after saying good morning to yer, brother," he replied with slow dignity, and turned away, blinking the tears from his eyes. "I done it fur brotherhood," he whispered to himself, "and it's meself that knows I'm no coward."

Had the sky fallen, Tommy would not have been more surprised. He was well acquainted with John's finished performances in the line of making faces, and to be called *brother*! He felt very red and uncomfortable.

A few weeks later, during which the two families kept much to themselves, Susie rushed home from school in a great state of excitement. She had met that nice doctor who attended to Tommy's cut finger and he had given her tickets for her mother, Tommy and herself to go to a children's Christmas play and symposium, to be given in a hall near by.

Mrs. Davis finally consented to take them. As they entered the hall the curtain was just rising and Mrs. Davis hurriedly sat down in the only

vacant seat she saw near. What with the brilliant lights, the flags, the flowers and the exquisite scene on the stage where white-robed children walked and talked and sang among the trees and flowers on the margin of a lovely lake, the poor woman felt, as she afterwards expressed it, "quite flustered like," and not until the first interval did she discover that she was seated beside Mrs. Murphy. The children were wildly excited to find that John and Molly were among the fairy kings and queens and Greek philosophers on the stage, and Tommy's enthusiasm quite got the better of him, when John recited with action a poem which gave rich play to his inimitable facial gifts that spoke of the actor born.

"Well done, John," he shouted at the top of his shrill little voice. "Hurrah for brotherhood!" and didn't the people applaud! As for John, he never felt so happy in his life. The eyes of the two mothers met, and though they were misty with tears they had never seen so clearly before.

"It was just heavenly," said Mrs. Davis next morning to her neighbor, wiping her eyes with the corner of her apron. "I'm not given, as you know, to new-fangled notions, but to see and hear them children! Mollie looked like an angel, and it weren't

no play-acting, neither, it were just natural and real. What did yer say? Bring the children again next time? *They'll be in it next time themselves,*" answered Mrs. Davis proudly; "they're to go to school next week. I asked about it last night. I'm not given to new-fangled notions, but we are all brothers and sisters, and we ought to love each other, and nobody can deny it, and it's nothing but good they learn at them Lotus Groups anyhow! I've seen it with my own eyes. May be I've been a bit hard on yer, Mrs. Murphy; seems like there's more in the notions yer had about that school than I gave yer credit for."

This astounding admission almost took away Mrs. Murphy's breath, but true to her nature she rose to the occasion. "Sure an' it's an illegant lady I always thought ye ware," she said, and the kettle having boiled, the brown teapot was produced, and the two sat down to a cup of tea, while the children gathered on the floor to talk of the wonderful school in which they were, all four, to become fellow pupils. The spirit of brotherhood entered into the hearts of the little gathering, never again to be denied and derided, brightening henceforth, alike the lives of the old and the young, led by the example of little children trained and nurtured on "the principles of Universal Brotherhood."

E. I. W.

ODE TO THE WEST WIND

by SHELLEY

WILD West Wind, thou breath of
Autumn's being,
Thou from whose unseen presence the
leaves dead
Are driven, like ghosts from an
enchanter fleeing.
Yellow and black and pale and hectic
red,

Pestilence-stricken multitude; O thou

Who chariotest to their dark wintry bed
The winged seeds, where they lie cold and low,

Each like a corpse within its grave, until
Thine azure sister of the Spring shall blow
Her clarion o'er the dreaming earth, and fill
(Driving the sweet buds like flocks to feed in air)

With living hues and odors, plain and hill:
Wild Spirit which art moving everywhere:
Destroyer and Preserver!

Be thou, Spirit fierce,

My Spirit! be thou me, impetuous one!
Drive my dead thoughts over the universe,
Like withered leaves to quicken a new birth;

And, by the incantation of this verse,
Scatter, as from an unextinguished hearth,
Ashes and sparks, my words among mankind!

Be through my lips to unawakened earth
The trumpet of a prophecy! O Wind,
If Winter comes, can Spring be far behind?

The Trend of Twentieth Century Science

Periodicity a Universal Law of Nature—Unknown Elements

THAT the universe is built upon geometric and mathematical lines was naturally an axiom with the ancient sages, discredited for a time as of course are all such axioms, but now coming once more to the surface by an irresistible force of gravity. H. P. Blavatsky emphasizes this fundamental truth in her efforts to persuade science to argue from universals to particulars, pointing out that by its means scientific prediction may always precede discovery and that research may be carried on in the light of certainty instead of the gloom of dubious experiment. To a certain extent the law of periodicity has already been recognized within certain severe limitations, but we are still very far from realizing how rigid is the hold of mathematics upon every branch of material science and the direct and guiding light which it throws upon research.

Sir William Ramsay has recently reminded us of the amazing results which have already followed the application of a single mathematical law to the discovery of new "elements." He points out that we have been accustomed to think of gold, lead, carbon, etc., as being distinct and inconvertible and as bearing no necessary relation one to another. A single mathematical fact, however inexplicable that fact may be, has however shown conclusively that there is a mysterious relation between them. That one mathematical fact has however done more than this. It proved the existence of other elements of which at the time science had absolutely no knowledge whatever. It proved that there must be other elements in nature and that these unknown elements must possess certain atomic weights and none others, and those unknown elements are now being found one by one. Although the particular periodic law which did these wonders is of course now well known it may not be amiss to briefly restate it and in so doing to follow the example of Sir William Ramsay.

If then we draw a diagram in spiral form and mark each known element upon the curve of that spiral with its atomic weight expressed in terms of the square of the distance from the center we shall see at once that these atomic weights bear a definite and mathematical relation one to another. We shall see more than this as did the chemists who first examined this table of the elements arranged in mathematical scale. They saw that upon this scale there were gaps, that there were positions on the spiral where elements ought to be found but of which the positions were vacant. Here was a mathematical prediction and a mathematical indication and the specialized research which followed was abundantly justified by its results. Helium and argon were speedily found, then came krypton and neon and finally xenon. All these elements accurately fitted the vacant positions upon the spiral scale, thus putting out of court all suggestions of chance and establishing the existence of a periodic law of which this tiny glance had been afforded.

It would be possible to cite other instances no less striking, and notably Bodes' law of planetary distances. Enough has however been done to show that nature does indeed mysteriously geometrize. We know that she does so in certain instances but we are coy in believing that she does so in all instances.

What is this mysterious geometric law which is thus intruded into material operations, what is this mathematical pattern which is thus imposed upon everything which nature builds? If we have the courage to face the problem we shall find that it will place in our hands a lever of tremendous potency for raising the stones which now cover the tombs of buried knowledge. If, for instance, we admit that there is a law of periodicity underlying the whole of nature may we not look for its operations in human life and human consciousness, in the events of history, in the waves of human knowledge, of human aspiration, of human passion and of human despair? Surely these things are as worthy to be controlled by law as are the atomic weights of elements. We already see something of a periodic law in human physical disease; why not also in mental disease and in all mental movements? Is not humanity also a part of nature, a not inconsiderable part, and must the human mind remain forever self-exiled from the charmed circle wherein is law and design and order? Let us make postulates for mind as well as for matter.

STUDENT

Science & Religion—Misconceptions of Herbert Spencer's Teachings

THE religious papers are of course talking much about Herbert Spencer. They are not all agreed that his influence was anti-Christian. To a certain extent the more enlightened perceive that the great thinker left religion at any rate unharmed. But even they do not see that an extension of his own main principle of psychology is the very key to religion.

His principle is that cognition and knowledge are gradually built up from sensation, that is, from what is subjective. Vague and unplaced and undefined sensations, such as those of the infant, gradually become clearer, are compared and separated; and finally there results clear perception of the world of things and changes.

But the same process, thus going on in the infant physically, is also going on in mankind spiritually. We are all dimly aware of spiritual "sensations," inspirations, impulses to aspiration, to loftier life, to compassion, to self-sacrifice, to duty. They are vague, unplaced, undefined. Yet they are the germ of our knowledge of the divine, of God. Humanity as a whole, with respect to these, is an infant; though a few have grown to manhood. But these are as insistent as are the physical sensations of the infant, and will one day lead to knowledge of *their* world just as definite. There is always a beyond, in the physical and in the spiritual, to which our ever expanding consciousness has not yet expanded. Man's account of the spiritual world he feels changes, from age to age, just as does his account of the physical. The "atom" today is not that of science yesterday. And so our conception of God changes and deepens from age to age. It can never come to finality, though there is no uncrossable bar on the farthest horizon. "This is my conception of the atom," says one man and "this mine," says another. Their difference does not prove no atom, nor that both are not approaching truth if their minds remain open. J.

Are Minerals Alive?—Jewels Require an Occasional Sleep

EVERY object in the universe, whether human, animal, vegetable, mineral, or otherwise, is organized, and is a center for the manifestation of the great intelligent Life-principle and World-soul which pervades all nature. It is absurd to call one thing alive and intelligent and another dead and mechanical. The latter designation has no real meaning, and is only used by inaccurate thinkers to explain things which they have not thoroughly investigated.

Every day science discovers new wonders and new complexities in what was thought to be inert clay; and all goes to show that life and intelligence prevail wherever our observation can penetrate. The following clipping is a case in point:

Many jewels require an occasional sleep, so to speak, in order to retain their brilliancy. Diamonds, rubies and sapphires are among the number. They should be put away in total darkness every now and then. The usual velvet or satin-lined cases are the correct receptacles. It is best to wrap them in jewelers' tissue paper, then pack them in wool and lay in air-tight compartments. A number of stones are seriously affected by fumes from furnaces, sewer-gas, moisture and sea air.

Fraternity of Science—Experiments That Were Reconciled

EMINENT scientists are often puzzled by the utterly contradictory results reached in the apparently identical experiments of different workers in their ranks. Sometimes years pass by before a reconciliation is reached.

A way out of all such difficulties has been found by a French and an American physicist who found themselves in the above plight, and the method does equal credit to the Johns Hopkins University, the Carnegie Institution and the Institut de France. These three bodies, supplying conjointly the expenses of travel, apparatus and experiment, made it possible for the two scientists to meet—the American going to Paris—and conduct their hitherto contradictorily resulting experiments together.

The point questioned lay in the domain of electricity, and the two workers, now perfectly unhampered with any difficulties, settled it once and for all. An apparently unimportant difference in their respective apparatus had originated the discrepancy.

STUDENT

UPON the anniversary of the birthday of General Washington it may not be inappropriate to remind our readers of a chapter in the history of the American flag which, largely through his valor and sagacity, became the flag of an united and independent people. In this connection we know no more remarkable record than that furnished by a little book published nearly fourteen years ago and entitled *Our Flag*, and of which Mr. Robert Allen Campbell is the author. He tells his story with a concise energy which leaves nothing to be desired, and our task would be most simply and adequately performed by merely transferring from his pages the scenes to which we would draw attention. This is unfortunately forbidden by the exigencies of space, and we must content ourselves with an all too brief resume.

It seems that in 1775 the Colonial Congress appointed Messrs. Franklin, Lynch and Harrison as a committee to devise and recommend a Colonial flag. Washington was then in camp at Cambridge, and in order to profit by his proximity, the committee arranged to meet at that place. They were to be entertained by a well-known citizen living in a small house, and who already had a guest under his roof, an old gentleman who was commonly known as "The Professor." The narrowness of the accommodation necessitated that one of the committee should share the Professor's room, and the one selected was Benjamin Franklin.

Of the Professor himself but little was known. He appeared to be of an advanced age, but strong and active. His manners were ingratiating, and he conversed freely of long past events as though he had participated in them. His manner of life was peculiar, his diet consisted entirely of cereals and fruit, and he devoted his time to a collection of rare old books and manuscripts, which he seemed to be translating or rewriting, and of which he took the most elaborate and secret care.

Soon after the arrival of the committee a dinner was arranged, at which Washington was present. The party consisted of the General, the host and hostess, the three committeemen and the Professor. So remarkable was the conversation of the latter and the wisdom which he displayed, that as the party was breaking up it was hurriedly decided, in whispered conference with Washington, that the Professor be invited to join the committee. This was done through the agency of Franklin, and the Professor responded with a few well-chosen words of appreciation, continuing as follows:

We are now six, an even number, and not a propitious one for such an enterprise as we have now in hand. We cannot spare anyone already a member of the committee, even though in so doing we should improve the conditions in one respect, by making our number five; but we must needs increase our number, so we will be seven. This increase of our numbers should be by the introduction of an element that is usually objected to—or even worse than objected to, ignored—in all national and political affairs. I refer to woman—the purifying and intuitional element of humanity. Let us therefore invite our hostess—because she is our hostess, because she is a woman, and above all because she is a superior woman, to become one of us; and may be she will prove a most important factor in solving the important question which we are to consider; for more depends on our work here and now than appears on the surface, to the multitude; and for her patriotism, her intelligence, her fidelity and her discretion, you may, one and all, hold me personally and entirely responsible, that is, if any one of you suppose that any man's endorsement, in any way, adds to an earnest and good woman's responsibility.

The suggestion was a startling one, but it was none the less adopted,

Birth of Old Glory

SOME EARLY AMERICAN FLAGS

and the hostess became one of the committee which was now of seven members.

During the afternoon Franklin and the Professor went for a long walk together and it was noticed that on their return they "wore the relieved and confident looks of earnest and determined men who had, in a satisfactory way solved a perplexing problem, and of victors who had successfully mastered a difficult and dangerous situation."

Upon the reassembling of the committee it was suggested by Franklin that the Professor be invited to repeat the conver-

sation of the afternoon and to describe the flag which he proposed to Franklin as suitable for the occasion. Responding to the invitation the Professor made a lengthy speech of which we can allow ourselves but a brief extract. He said:

Comrade Americans: We are assembled here to devise and suggest the design for a new flag, which will represent, at once, the principles and determination of the colonies to unite in demanding and securing justice from the government to which they still owe recognized allegiance. . . . This, I say, is what we are expected to do, because this is the publicly announced, as well as the honestly entertained intent of the great majority of the people of these colonies, as well as of their representatives in Congress and of their soldiers in the field. This is unquestionably true now; for the sun of our political aim, like the sun in the heavens, is very low in the horizon, just now approaching the winter solstice, which it will reach very soon. But as the sun rises from his grave in Capricorn, mounts towards his resurrection in Aries and passes onward and upward to his glorious culmination in Cancer, so will our political sun rise and continue to increase in power, in light and in glory; and the exalted sun of summer will not have gained his full strength of heat and power in the starry Lion until our Colonial sun will be, in its glorious exaltation, demanding a place in the governmental firmament alongside of and in no way subordinate to any other sun of any other nation upon earth. . . . General Washington here is a British subject; aye, he is a British soldier; and he is in command of British troops, and they are only attempting to enforce their rights as loyal subjects of the British Crown. But General Washington will soon forswear all allegiance to everything foreign, and he will, ere many months, appear before his own people, the people of these colonies and before the world, as the General commanding the armies of a free and united people, organized into a new and independent nation.

The flag which we now recommend must be one designed and adapted to meet the inevitable, and soon to be accomplished, change of allegiance. The flag now adopted must be one that will testify our present loyalty as British subjects; and it must be one easily modified, but needing no radical change, to make it announce and represent the new nation which is already gestating in the womb of time; and which will come to birth, and that not prematurely, but fully developed and ready for the change into independent life, before the sun in his next summer's strength ripens our next harvest. The field of our flag must therefore be an entirely new one. For this there are two reasons, either one of which is amply sufficient why it should be so. First the field must be new because it will soon represent a new nation. Second, the field must be one hitherto unused as a national flag; because it will

represent an entirely new principle in government—the *equal rights of man as man*.

The Professor then went on to suggest for the consideration of the committee a flag with a field composed of thirteen equally wide, longitudinal, alternate red and white stripes, and with the Union Flag of England for a union. He then described the way in which the symbology of such a flag would be explained and spoke so forcibly and with such obvious weight and wisdom that the committee unanimously adopted his suggestion and the flag thus outlined was accepted by General Washington and used by him as the general flag and the recognized standard of the colonial army and navy.

STUDENT

THE CHILDREN'S HOUR

Washington & His Comrades

DEAR CHILDREN: Next Monday is Washington's birthday, the day that always takes us back, in thought, doesn't it, to the time when the thirteen little colonies stood banded together to fight for freedom. It is inspiring to live over again even the times when everything looked so dark, for the war wasn't all victory and glory, you know. In fact, when we read history we will find there were really not as many victories as there were defeats, counting them one by one. But, you see, the colonies were in the right, strong men were leading this nation, *and they just didn't give up.* That's the secret. They had the light, the real light, to guide them, and we find every year a new inspiration in thinking of the brave men who were soldiers

then; of two perhaps, more than others, George Washington, the Commander-in-Chief, and his beloved comrade and counsellor, Thomas Paine.

Why were these men great—what made them so? Well, look into their lives, and you will find some of the reasons. The greatest was that they knew the Raja Yoga secret, the secret which has always been known to a few great souls here and there, but which most people think is something else, because it is so very simple—and this secret is called "DUTY." Raja Yoga boys know all about it. But most people, particularly in those dark days, were too busy with their own troubles and their own cares to think much about their duty to others. Now Washington's life, as we study it in books that men have written about it, and as we study it by the traces that it left upon the history of our country, seems to have been guided by this love for duty, which today we see shining in the lives of our Raja Yoga boys like the great light. Nothing was too small for Washington to do thoroughly and well—if he found it worth while to do it at all. More than that, while he was doing even the simplest things as a boy, he *paid attention* to what he was doing, and he didn't let his mind wander off, thinking about the things he ought to have done yesterday and the things he wanted to do tomorrow. That's why, in after years, there was nothing too hard for him. So, step by step, he grew from boyhood to manhood, just as Thomas Paine did—and some day I shall tell you more about Paine—steady and honest and true.

Washington had another quality, too, which I somehow always associate with Raja Yoga boys and girls, and that is the peace-making faculty which blossoms pure and white out of Brotherhood. You remember when Washington was still a very young man, he was chosen to go as a peace-maker among the Indians to secure the signing of an important treaty, partly because he understood the Indian nature and he knew that Indians' hearts aren't all "savage," and partly because he was honest and could be trusted. Think, too, of the great compassion that Washington had, and many of the men that stood about him as well, not only Paine, but Jefferson, Adams, Benjamin Franklin, Lafayette of France, Alexander Hamilton, and ever so many other great men—and great women, too, such as Mercy Warren and Abigail Adams. We can read in their lives the reasons why they became great without ever intending it, or even dreaming of such a thing—the reasons why they had such a beautiful reverence for the true and pure, that serenity and calm, that faith

in humanity that even wickedness and treachery couldn't shake—they're all Raja Yoga reasons, too, every one.

Now, boys and girls, do you think that just because we are a great nation and have gotten quite used to our Declaration of Independence, that all the fighting has been done? Do you think the nation has no more need of great, true, strong leaders? Do you think that we are free while little children all over this land are being starved and injured because some men are so eager to make money? Do you think that we are free when homes are wrecked everywhere because so many people are selfish and forget all about duty? Do you think we are free when there is sorrow and suffering on one hand and selfish pleasure on the other; when some people have entirely too much to eat and other people not enough? If the nation needed one Washington and one Paine a century ago, it needs a hundred now. Where are they?

Now don't say "I haven't the opportunity to be great," or "there are no such chances today." Nonsense. You have a thousand chances where Washington and Lincoln and Paine had but one, and you have a thousand things to inspire you where they had but one. I sometimes think when I look out over the world, "how different the world's life is from the Raja Yoga picture that the Loma-land children are making, the picture of life *as it ought to be.*" I sometimes think that we have a thousand times as many enemies to fight as Washington had in the old days.

And besides all this, boys and girls, haven't you their great victories to rest on, like the broad lower steps of some great spiral stair-case on which to climb—and help others, which is more splendid still. You need more faith in yourselves—that is, Raja Yoga—more trust in the great Compassion that watches over life, but which must have strong hands and strong hearts to carry out its purpose; more real love for little children who haven't your opportunities; a great deal less ambition; in a word, *a great deal more light in your hearts.* Think what Katherine Tingley is doing to bring Raja Yoga light to children all over the world, and what greater inspiration can there be than to just fall in line, like soldiers, and help her; not "tomorrow;" nor "when I get ready;" nor "some other time," but "NOW."

We keep Washington's birthday as a sign of our gratitude to the brave

men of whom Washington is one. It is one of our sacred liberty days, and we cannot afford to let such days be forgotten.

Do you remember how the Temples of ancient Greece had great supporting columns sculptured to represent the human figure. *Caryatides*, the Greeks called them. General Washington and his comrades have always seemed to me like great supporting columns—pillars—on which the Temple of our Freedom rests.

TODAY

by NIXON WATERMAN

“WE shall do so much in the years to come,
 But what have we done today?
 We shall give out gold in a princely sum.
 But what did we give today?
 We shall lift the heart and dry the tear,
 We shall plant a hope in the place of fear,
 We shall speak with words of love and cheer,
 But what have we said today?
 “We shall be so kind in the after while,
 But what have we been today?
 We shall bring to each lonely life a smile,
 But what have we brought today?
 We shall give to truth a grander birth,
 And to steadfast faith a deeper worth,
 We shall feed the hungering souls of earth,
 But whom have we fed today?”

Churches and the Masses

THE Bishop of London has recently stated that only one per cent of the male population of the East End attend any place of worship. So much for London. From Glasgow comes the opinion of Dr. James Orr of the United Free Church College, that there is a vast and growing population “which was about as indifferent to the church and what was going on in it, as to what was going on in Timbuctoo,” and as a general summing up, the well-known divine Dr. Horton, says:

For the great multitude of strenuous, hard-working men of the modern world, the church has nothing to offer. Those within the church have no welcome and no sympathy.

No less inclusive and no less authoritative is the declaration of Charles Booth that,

Although it is difficult to form any definite judgment as to the religious character of London, the fact must be admitted that the great mass of the people remain apart from all forms of religious communion, apparently untouched by the Gospel that, with various differences of interpretation and application, is preached from every pulpit.

These quotations, although intended to especially apply to England are, of course, equally applicable to America and to the whole of the Christian world. The American churches are indeed particularly noisy in denouncing the apathy of the people and their utter indifference to the organizations which they have maintained so long. That a complaint of this nature should emanate from the churches is certainly one of the extraordinary signs of the day, and strongly illuminative of the mental condition which dictates it. What should we say to our physicians if they plaintively mourned that their patients persisted in being ill in spite of all their medicine? Should we blame the patient or the physician, and how much more severe would be our censure if the physician openly professed to have an elixir of life which would unfailingly cure all diseases? The physician exists for the benefit of the patient and not the patient for the benefit of the physician. If the patient is not benefited there is no possible intellectual jugglery which can hide the fact that the physician has failed and his medicines are of no use. He may have done his best, it may be an honest failure, but it is none the less *his* failure and not that of the patient. But if he should begin to throw stones at the sick man for his apathy, instead of at himself for his incompetence, then indeed we should begin to protest. Apathy is no excuse for failure. Apathy is a symptom of the disease which the physician is paid to cure.

That this state of things should specially exist among the very poor is a peculiar aggravation of the case. If only the rich and the comfortable

were indifferent we could afford to imitate the complacency of some of the churches. But we do not forget that it was for the peculiar benefit of the poor and the suffering that Christianity was established and ordained. It was the *poor* who were blessed, it was the weary and the heavy laden who were invited, it was the lame, the halt and the blind who were bidden to the feast; nay, they were compelled to come in. It now seems that these are the very classes who persistently remain outside, and who can neither be tempted nor persuaded to taste of the good things specially provided for them. How is this—because it was not always so? When Rome was at her lowest depth of corruption, when her streets were filled with the bloody phantoms of insensate cruelty and unthinkable vice, when her aristocracy and her democracy, patrician and plebeian, occupied a common level of bestial ferocity, the simple Christian message of love and fraternity ran like a flame among the flax, and the hideous barbarity which resisted it was a fan to the fire. The converts to a gospel of love changed their lives and not their clothes, and the divinity which was aroused in them overcame the last shrinking shame of the tortured body. Truly, it did not last long, because the political and social power which followed upon success was laid like a fester at the roots of faith and brotherhood, and a triumphant church wielded the old scourge of persecution, which she should have broken and forever destroyed. What then has happened since the days of Nero? Have human hearts hardened to divine truth during these two thousand years of “progress,” that the religion which melted the human stones of Rome can in no way touch the slums of our great cities of today? Are we less susceptible to divinity than the war-hardened soldiers of the Prætorian guard, are our multitudes more savage than the blood-fed throng of the coliseum? Or have the churches themselves lost the secret of success, have they lost the ideals which once crowned with triumph the teachings of Jesus?

We are told that the masses of the people have lost touch with Christianity. We would reply that the masses of the people cannot lose that which they never had. If they had ever been touched with the Christianity of Jesus, that touch would have redeemed and glorified our national life. The masses of the people, the toiling millions of our cities, the human swarms of slum and tenement, the pitiful wreckage of our civilization, have never heard of Christianity in the only way in which religion can at all be audible. Some there have been who have preached and taught and lived the religion of Jesus, but their number has been so small as hardly to touch the edges of the work, and even their efforts have been neutralized by the persecutions, the contempt and the denial of official theology. Christianity would today be as effective against the bestialities and the barbarities of the Twentieth century as it once was against the moral cesspools of the First century. But devils are not cast out by devils, and human misery will not depart by the clamoring of creeds, nor by puerilities, nor ambitions, nor the vain repetitions of ragged formulas.

Wisdom comes only from sympathy and love, and compassion lays her wreath of laurels upon the heads of those who seek her.

Never has there been so great an opportunity for real men and women to do the work which only real men and women can do. How many are there who will stand up in their own divinity and so go forward to the human harvest? How many are there who will discriminate between their true selves and the rags of prejudice and convention and creed in which they have stifled themselves, which they have supposed to be the garment of God, but which is nothing whatever but the livery of the devil? Truly the prayer of one righteous man availeth much if it be but the prayer of action.

STUDENT

A Just Judge

A SECTION of the press is rightfully applauding the action of Judge van Wart of Brooklyn, who has warned landlords and agents that it will be useless to apply to him for warrants for dispossession while the cold is such as to cause intense distress to those thus evicted. Who can question that the action of the Judge is distinctly illegal? Who also can question that it is in strict conformity with the higher law of humanity and compassion, and therefore of God?

That this announcement has been received with public applause is magnificent evidence of the better nature of the community which will never be called upon entirely in vain.

RELIANCE

by HENRY VAN DYKE, in *Atlantic*

NOT to the swift, the race;
 Not to the strong, the fight;
 Not to the righteous perfect grace;
 Not to the wise, the light.

But often faltering feet
 Come surest to the goal,
 And they who walk in darkness meet
 The sunrise of the soul.

A thousand times by night
 The Syrian hosts have died:
 A thousand times the vanquished right
 Has risen glorified.

The truth the wise man sought
 Was spoken by a child;
 The alabaster box was brought
 In trembling hands defiled.

Not from my torch, the gleam,
 But from the stars above;
 Not from our hearts, life's crystal stream,
 But from the depths of Love.

Question

What is the need of promulgating Theosophy when there are so many other religions?

Answer

(1) This is a question which in the first place seems to imply a misconception of Theosophy, and in the second of religion. The inference is, that in the mind of the questioner Theosophy is simply one more of the numerous cults which are known as religions. But Theosophy, as has often been emphatically stated, is unsectarian. It has no creeds, and asks no man to subscribe to any faith except a faith in Brotherhood.

If religions are desirable to have in the world (meaning by this, groups of articles of faith), one would fancy that those who think so would be glad to welcome a new one. For certainly, to say the least, conditions in the world are not all that could be desired. The religions in their present form are unequal to the situation. Instead of mastering it, they have succumbed to custom. But Theosophy is not competing with any of these. It is not a new cult. And if it has an excuse for existence, it is on quite other grounds.

The very framing of the above question might suggest to some its answer: Perhaps there are too many religions. And, in fact, why should there be, how *could* there be, more than one? This is something which must have puzzled every thoughtful person. The human race must have a common origin, must have a common destiny—and truth must be truth, forever and ever.

At different stages of evolution and to different groups of minds, it may need to be translated differently, but fundamentally it must always be the same thing. There must be something which is behind all of these various expressions, something big enough to include them all, something basic enough to harmonize them all, something pure enough to purify them all. That something must be unsectarian, because it must be universal. It must be abstruse enough for the greatest intellect of this or any age, and simple enough for the merest child. It must be comprehensive enough to appeal to, and reach any part and all parts of any nature—and stir the right into action. It must be able to turn the currents of human energy into right channels.

Somewhere, something like this must exist. The universe is unthinkable without it. And since the religions have become so corrupted by man that they cannot reveal the art of living, it would evidently be a great advantage to us if we could find that which is behind all the religions.

Theosophy has been given anew to the world. Does it fulfill the conditions? Is it the key which can unlock the mysteries of life? This is a question which each one must answer for himself. G. V. P.

(2) In this question there is found the usual misconception in regard to Theosophy, the supposition being that it is another form of religious belief which must be accepted by would-be Theosophists.

With this idea in the mind of the questioner, coupled with the self-evident inadequacy of religious beliefs to really affect the lives of men, one can readily understand the mental attitude which gave rise to the query.

The Christian world for centuries has become so thoroughly imbued with the idea of "salvation through belief," that it is somewhat difficult to remove the misconceptions arising therefrom, and to turn the mind in the direction of a *knowledge which must be tested by each individual*.

Theosophy is this knowledge, conserved throughout the ages, and voiced by every great religious reformer more or less fully, according to the capacity or receptivity of the people of his time. A knowledge of Theosophy makes the common basis of all religions clear, and marks distinctly the cyclic efforts made to further enlighten humanity in the path of true knowledge.

The present period, with its wider intellectual knowledge, its advance in science, its freedom from superstition, and closer approach to fraternity among the nations, offers the greatest opportunity for a world-wide promulgation of this knowledge, not as a matter of belief, *but as a guide to right living and true progress*.

It covers every field of human activity, and meets the needs of every human life. It removes from men's minds the paralyzing influence of fear, the offspring of false religious conceptions and beliefs. It places man in his true position in the grand scheme of Universal evolution, and equips him with the right knowledge and power to work out his own salvation and that of humanity. To study and to practice it, making it the ruling power in one's life, is to enter into one's birthright spiritually, mentally, morally and physically.

As before said, it is not a matter of belief—each may test it—indeed, each one must test it in the fire of experience to know it, and certainly only those who have tested it in their lives, and continue to test it in every experience of soul, mind and body, are justified in promulgating it; and they, knowing it to be what it is—the salvation of humanity here and now—cannot cease from doing that which the great voice of humanity so emphatically demands. R. C.

Extracts from "The Fragments" of Novalis

WHERE no gods are, spectres rule.

Where children are, there is the golden age.

Spirit is now active here and there: when will spirit be active in the whole? When will mankind, in the mass, begin to consider?

The Holy Ghost is more than the Bible. This should be our teacher of religion, not the dead, earthly, equivocal letter.

All faith is miraculous and worketh miracles.

The greatest of miracles is a virtuous act.

If a man could suddenly believe, in sincerity, that he was moral, he would be so.

Man is the Messiah of nature.

If God can be man, he can also be stone, plant, animal element, and perhaps in this way there is a continuous redemption in nature.

The fate which oppresses us is the sluggishness of our spirit. By enlargement and cultivation of our activity, we change ourselves into fate. Everything appears to stream in upon us, because we do not stream out. We are negative, because we choose to be so, the more positive we become, the more negative will the world around us be until, at last, there is no more negative, and we are all in all. God wills gods.

Every act of introversion—every glance into our interior—is at the same time ascension, going up to heaven, a glance at the veritable outward.

DURING last year the United States added 5723 miles of line to its railway service, the total mileage being now 209,855.

A Rally of Materialism

THE address which has recently been delivered by Professor Landenburg upon "The Influence of Natural Science on Our Conception of the Universe," has attracted a great deal of attention because of its attack upon immortality. We would, however, suggest that a pronouncement of this kind derives its interest not so much from its intrinsic value as from the fact that it constitutes a momentary rally of certain intellectual forces, which were already in full retreat, and of which it cannot possibly delay the entire extinction. A belief such as that in immortality, which is shared by practically the whole human race, cannot be destroyed by a demonstrated lack of material proof. The world may for the moment be interested, some few persons here and there may be captivated, or pretend to be, but the majority of lay readers are at most in the position of those "convinced against their will," and who therefore "remain of the same opinion still." When Galileo renounced his heresies as to the movements of the world, he is said to have immediately remarked under his breath, "it does move all the same," and the fallacies and injunctions of materialism have very much the same effect upon the popular mind, as had the commands of the judges upon the convictions of Galileo. It does move all the same. It certainly does move.

Professor Landenburg is ingenious and plausible, and being doubtless of a great sincerity, we very willingly believe that he is himself the chief victim of his own false reasoning. Here is an illustration, and but one of very many. He bids us,

Think of men distinguished in art or science, of great statesmen, of philosophers, founders of religions, whose souls undoubtedly when in their prime were worthy of immortality. But these men become old, and crabbed and querulous, perhaps even childish, before they die. To which soul then will you award immortality? To the soul of the just departed, or to the soul which no longer exists? This kind of difficulty meets us at every step. I will content myself, however, with mentioning one instance only because it permits me to recall to you the beautiful address given under similar circumstances last year by Professor V. Eiselsberg, of Vienna. You heard then, if you did not know before, that in case of the complete removal of the thyroid gland the patient so treated frequently became idiotic, that is, they as good as lose their soul. What becomes then of your immortality?

If the Professor seriously wishes to combat the teachings of spiritual philosophy, of which Theosophy is the essence, why does he not at least take the trouble to find out what those teachings are? He is in the position of a general who opens fire before he has ascertained the location of the enemy. He makes a truly remarkable display but it lacks efficacy.

We would therefore point out that the existence of the soul and its immortality are in no way based upon the fluctuations of the intellect, or the seeming fluctuations. The soul is the divine and immortal part of man, and it is the light of the soul upon the intellect which confers immortality also upon those higher parts of the intellect which are thus illuminated. We might, however, put upon one side even so distressing and inexcusable a confusion as this, and still show that the Professor's arguments are strangely lacking in the logic which we have a right to expect. We would therefore point out that a change in the manifestation of intellect, which is induced by old age or bodily mutilation, is surely no evidence that the intellect itself has changed. The Professor reminds us of those savages who believe that the sun is extinguished because it is eclipsed. Spiritual philosophy believes that the brain is a vehicle or a medium which is used by the mind for its manifestation, in the same way that the light of a lamp shines through the glass globe which is placed around it. If instead of a yellow globe, we use a blue one, do we argue from that the flame of the light has in any way changed? We certainly do not, but that is peculiarly what Professor Landenburg is doing. Again, we may soil the globe, or allow it to become nearly opaque with dust and dirt, so that the inner light shines dimly. Is that inner light in any way changed? The light of the lamp is the mind, and the globe is the brain and body. The light shines quite steadily all the time, but the medium through which it shines may change from hour to hour.

May we allow ourselves one more illustration, equally homely? Do we say that the skilled carpenter has lost his mechanical knowledge because his hands are slowly incapacitated by disease, or even cut right away like the thyroid gland of which the Professor speaks? During the progress of that disease the work done by the carpenter will become more and more inferior, more and more faulty, but his knowledge of his trade will remain unimpaired. It can no longer be manifested because he has no longer the material vehicle or medium by which to manifest it, but the light is none the less burning, the flame itself has not been changed.

It is, of course, very easy to elaborate an attack upon spiritual philosophy if we allow ourselves to be consistently blind as to the contentions of that philosophy. The position that the brain is but the vehicle of the mind and that we know of the latter only through the imperfect translation which is rendered by the former may seem very absurd to the materialist, but it is none the less the only theory which will explain the complex phenomena of life in their entirety, along lines of cause and effect and of ethical equilibrium.

The Raja Yoga Edition

THE Special Raja Yoga Edition of **THE NEW CENTURY** contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to **THE NEW CENTURY CORPORATION**, Point Loma, Cal., the papers will be mailed for you without extra charge.

A New Force in the World

There is a new idea at work in the world. An idea that knows no hate, no prejudice, no national boundaries, no intolerance, no superstitions. The new idea—new in the sense that it is now making itself felt—is coöperation as opposed to competition. It is perhaps the most prominent fact in the world today, and it has assumed that attitude within the last quarter of a century. It comprehends in some degree all the leading forces of modern life.

This, if carried to a proper conclusion, will not array man against man, but in solid ranks against Nature solely. What will be added to the wealth of the world by such alliance is altogether beyond calculation. How much the gaunt figure of Hunger will be pushed back, and how much the burden of fear that rests upon the hearts of the world will be lightened by this process, is also beyond calculation.—D. P. Kingsley, in *Collier's Weekly*.

For a Greater Dignity in Daily Life

THAT life might be more dignified than it is, we all feel, some more strongly than others. Everybody who thinks and feels at all can imagine an ideal of life more dignified than the life that is actually led. We realize very keenly at times how little and undignified humanity is in this era of modern progress and enlightenment. Humorists and cynics have sought to prove that dignity and nobility are only a halo thrown over bygone times when viewed from the distance of present time, and have given us pictures of society in heroic and romantic ages in which the people are made to be as petty and commonplace as people of today. But though this may be true to a limited extent, though there is, of course, room for the error of false perspec-

tive in viewing history, it is by no means true altogether.

The past is not all imaginary, nor are all its colors merely the purple halo of distance. There have been civilizations as great and dignified as ours is little and undignified, and there shall be such again. Golden ages are not all dream, either in the past or the future.

Everyone can appreciate the difference between a person of noble and dignified bearing and character and one of a small mind and paltry spirit; and if it is possible for any man to be noble it is possible for you and me. We can make our lives sublime.

It Is Vanity That Makes Men Small

Anyone who seriously aspires to thus dignify his own life will probably be forthwith confronted with that arch-enemy of all greatness—conceit. It is vanity ("emptiness") that makes people small. And vanity, including morbid self-consciousness of all kinds, fear of others' opinion, constraint, posing and assuming various masks, is what makes modern civilization so small.

But there are times when the natural dignity, the unconscious greatness, the untroubled serenity of the rest of nature, come home to our hearts and throw into horrible relief the narrowness and discomfort of our own life. Then we feel the longing to be great and calm and free, like the Spirit of Universal Life, whose breath we have felt, whose presence has blessed us.

But it is not to cut a figure in the world that we aspire—that is only vanity again. The aspiration is to be rid of those innumerable little vexations that we have been allowing to ruffle us and distract our attention from the nobility of life.

It is to live the daily life allotted us as it ought to be lived, as it might be lived; to dignify that daily life and make it a joy and a consecration—this is the urge. To do things well and for pure love of the work and the art, to be silent, to be generous, to scorn all those absurd anxieties about our health, our reputations or our fates—

The Real Life Always Noble

these are the aims, and what do they all amount to but freedom from the false personality and from the false selves which we allow to hide the real Self?

It is the real Self, whose life is noble, that we desire to unveil; and the little grinning monkeys of false self, which chatter and strike attitudes all over the stage of life, must go.

And about the ancients again—our school-books will tell us how cruel the Assyrians were to their prisoners, and how voluptuous the ancient Persian empire was. But it is well to recall that, as H. P. Blavatsky said, we have copied all the vices of antiquity, and improved upon them, but their mighty virtues we are ignorant of or have ridiculed. She shows, in her vigorous articles, that no age of antiquity can compare with a modern capital in extent and ingenuity and variety of vice, and that we surpass all the cruelties and profligacies mentioned anywhere in history. But as to the virtues of antiquity, we either do not understand or scoff at them.

"The periodical rise and fall of human character on the external planes," says H. P. Blavatsky, "takes place now, as it did before, and the ordinary average perception of man is too weak to see that both processes occur each time on a higher plane than the preceding."

Brotherhood Alone Brings Happiness

Thus we shall see among us again the pursuit of grand ideals and the worship of character, as we see it in the past, but on an even higher level. The universal habit of estimating things by their money-price, the itch to get, the restlessness and inability to be calm and still, the cynical sacrificing of honesty and generosity to motives of personal gain, the ridiculous and degrading scientific conceptions of Nature and of man's place in it, the universal gadding-about and pleasure-seeking, and the monotonous lives of the poor—all these things are signs of one of those stages in human evolution when it turns a dark corner.

But man cannot continue to live without the light and fresh air and warmth from the spirit; and it is moral and spiritual starvation that is now once again compelling him to expand his heart to the sunshine of the grand old ideals. Life has for very many become intolerable. It can be made a joy and a dignity. But a united effort is needed; for, so long as we prey upon each other (by methods more cruel and inexorable than any that the ancients knew of—and more hypocritical), there can be no opportunity for true life for either victim or despoiler. Brotherhood is the condition of true happiness.

H. T. E.

Cotton Mather, Past and Present

THE following letter from Cotton Mather, the famous Boston minister, will be read with some interest. The original is in the possession of the Massachusetts Historical Society:

To Ye Aged and Beloved JOHN HIGGINSON:

There be now at sea a Shippt (for our friend Elias Holcroft of London did advise me by the last packet that it would sail sometime in August) called ye Welcome, which has aboard it a hundred or more of ye hereticks and malignants called Quakers, with William Penn ye scamp at ye head of them. Ye General Court has accordingly given secret orders to Master Malachi Huxett of ye brig Porpoise to way lay said Welcome as near ye coast of Cod as may be and make captives of ye Penn and his ungodly crew so that ye Lord may be glorified and not mocked on ye soil of this new country with ye heathen worshipp of these people. Much spoil can be made by felling ye whole lot to Barbadoes where slaves fetch good prices in rumme and sugar and we shall not only do ye Lord great service by punishing ye wicked but shall make gayne for his ministers and people.

Yours in the bowels of Christ.

COTTON MATHER

Those were fine old days when a minister of religion could issue orders for the enslavement of "ye hereticks and malignants," and could even profitably exchange "ye whole lot" for "rumme and sugar." Cotton Mather was not a good speller, but this need not be remembered against him. At least he gave us the great principle, which is now in a hale, hearty and vigorous old age, of how we may "not only do ye Lord great service by punishing ye wicked, but shall make gayne for his ministers and people." Sometimes we reverse the order of these high aims, but we never forget the concluding benediction.

X.

Egypt as a Soul Asleep

Extract from a letter dated Luxor, Thebes, Egypt, January 25, 1904

HOW is mighty Egypt fallen! Fallen is her greatness, fallen is her people, fallen is her name, and today these hordes of Cook's tourists who infest this sacred land, who overrun its temples, and who chatter idiotically in the holy tombs, profaning their mighty majesty, seem so symbolic to me of a country, a people, and a Soul asleep. But there will come a new awakening. I know inwardly that it cannot but come some day. Whether it will be along the lines of the old days or otherwise, I do not know.

In studying the fellaheen, the low-caste native Egyptian, it is clear that they are a mixture of at least three different peoples—Arab, Copt and Soudanese. But there remains in them yet more than a mere touch of that spirituality that once made Egypt great. They cling tenaciously to many age-old customs; they are cheerful, bright and wide-awake, and many a time I have seen flashes of fire that can surely never spring from out of a dead heart. But most of them are miserably poor and in sore straits to make the most miserable of livings. But help will be brought to these people.

Another really fine and interesting body of people is the majority of the tribes living around and above Upper Egypt proper, and nominally called Nubians. One tribe especially, the Bishareen, are as little like the usual black man as it is possible to imagine. Their features are very regular, almost Caucasian in outline; while the shape of the head is distinctly brachycephalous and not dolichocephalous, as is the ordinary mark of the negro. It becomes interesting to recall in this connection that the ancient Egyptians claimed Ethiopia as their birthplace, and the Ethiopian claimed kinship with the peoples living beyond the Arabian peninsula. These Bishareens look more like Singalese than anything else. Who knows but that they may be the descendants of Aryan tribes now degraded by Karma and intermarriage? It is a fascinating study in any case.

Frontispiece---Mining in South Africa

The illustration on the cover page of the NEW CENTURY PATH this week shows a gold mining scene in South Africa. Native miners are beginning work on the surface croppings of a large claim located in the vicinity of Johannesburg.

A University Chancellor

A CERTAIN university chancellor from whom we withhold the gratification of an advertisement seems to have held some conversation with a newspaper man on the subject of commercial ethics and the extinction of smaller enterprises by larger ones. The interviewer suggested that the process was "like mercifully taking up an ailing child and benevolently wringing its neck." In our benighted condition we should have imagined that a suggestion so frankly brutal would have drawn forth a condemnation from the chancellor of a university who is supposed to occupy some kind of moral position to a large number of young people. Probably our ethics are old fashioned and obsolete for here is the reported reply of this educational solon:

Yes; the analogy is not a bad one. I believe that society, as it becomes more enlightened, will come to adopt some such course as you suggest. Such cases will be referred to a committee of skilled physicians and if they decide that the life is a wreck, that recovery is impossible, on their decision the sufferer will be mercifully put to death.

Now if a statement of this kind had been made by a mere savage or criminal it would have needed no comment. It would be explained by its source. But that a university chancellor should advocate the legal murder of babies appears to call for some general condemnation. Society "as it becomes more enlightened" will strive to save and not to destroy, and we are satisfied that very few members of the medical profession would arrogate to themselves the necessary knowledge or would be unashamed not to possess the necessary ferocity for such a system.

Cruelty is always ignorant and always stupid, and we have here an illustration of both ignorance and stupidity. Many of the greatest men and women that the world has known have been "incurably" sickly as infants. Under such a system William of Orange would of course have been murdered, and so unquestionably would Helen Keller. Herbert Spencer would probably not have escaped, and other instances will occur in great numbers. We can only express our regret that one holding such opinions should have authority over the minds of the young. J.

To Save Chicago

THERE seems to be a growing desire to "save Chicago," by which of course, is meant the poorer parts of the city. The scarcer references to the other and wealthier portions would indicate either that they do not need salvation or that attempts in that direction would be useless. We sincerely hope that these efforts will be successful, but the philanthropy which becomes a fashionable fad is always to be looked at askance. It seems that "to go slumming" has now become something of a fashionable freak and while the impulse is doubtless an amiable one, the methods need intelligent supervision if they are not to do more harm than good. A similar fad was developed in London at a time when a series of peculiarly horrible murders directed attention to the slums of Whitechapel. The luxurious carriages of the west end descended in droves upon the east end and a thoughtless benevolence expressed itself by streams of silver coins poured indiscriminately into the hands open to receive them. The immediate and only obvious result was a raising of slum rents, and this ill-advised charity went direct into the pockets of the tenement landlords. There is nothing needing so much experience as the charitable distribution of money. Of all forms of benevolence it is the most dangerous and the most easy. There is, however, a benevolence which is neither dangerous nor easy. Let us ask ourselves to what extent our own selfish and luxurious lives are perpetuating the miseries which we wish to relieve. Philanthropy has no better beginning than self-reproach and self-amendment, and the ruthless self-application of a few economic basic principles would be the most powerful of all remedies for our general ills. The real creators of the slums are those who contribute nothing to the moral or material wealth of the community, who live at the expense of the community and render no service in return. If we were to say that these are the true criminal classes we should not lack for very high and intelligent authority and support. He who does not work for others, morally, intellectually or physically, is himself a representative of slum life and the creator of that life in others, whether he happen to live in the east end or in the west end. From those to whom much has been given, much will be expected, but it is the disgrace of our civilization that it is often those who have received the most who render the least.

Some Views on XXth Century Problems

Girls and Boys and Crime

THE annual report of the Juvenile Court of the state of New York brings out some interesting information. The greatest number of arrests are made among children between fourteen and sixteen years of age. The parole system has been found to be successful, for only twelve per cent of the eleven hundred children paroled during the last year were committed for violation of the parole. The report also indicates that "girls are not so bad as boys." Out of 4790 children under sixteen committed by the magistrates, 4360 were boys, while only 430 were girls. Against this showing for the girls is their tendency towards melancholia. Six girls were arraigned on the charge of suicide, while no boys were brought into court on this charge.

This report by no means indicates that girls have a monopoly of the virtues, for, at present, in the majority of homes the girl is more carefully guarded than the boy. That does not mean that she is treated more wisely, as the report concerning suicide would indicate; but the particular and awful forms of "badness" which bring boys into the police court, seem to be unusual among the girls. Not that they are not possessed of the same force. They are. Not that this force is turned into right channels, while that of the boys goes wrong. It does not. Taken altogether, just as many girls are warped and misunderstood by their bringing up as boys. That in their nature which might flow outward in active and positive tendency to crime, flows inward, and they destroy themselves in a dozen ways of which suicide is only one result. It is well to consider these things instead of congratulating oneself on appearances.

Statistics teach us much and often strike somewhere near the truth, but unless one has some knowledge of the laws that govern human nature and human life, unless one has some knowledge of the life of the world itself, statistics are about as misleading as anything one can discover in a week's journey. Statistics at the best give us but half-truths, and half-truths are sometimes as misleading as whole falsehoods. A. V.

Indifference of Parents to Education

A WELL-KNOWN lady educationalist is concerned at the lack of interest which parents take in the education of their children, and well she may be. She proposes that schoolrooms be furnished with a kind of grille behind which the said parents may sit and watch the proceedings. Apart from the embarrassment to the teachers which would be caused by such a scheme, it is not easy to see how the interest of the parents would thereby be aroused. Those who are already interested might avail themselves of the plan, but they are not the ones who need to be reached. The neglect of the duties and responsibilities of parenthood is a national danger, and indifference to school education is only one feature of it. The stolid indifference which is displayed by so many parents toward the real interests of their children is one of the great problems of the day. It is responsible not only for juvenile crime, but also for the recruits which day by day swell the army of the adult criminal classes. We need a national awakening rather than a school-room grille. STUDENT

Reform in Educational Methods

IN matters of education, Sir Oliver Lodge speaks as one having authority and not as the Pharisees. Referring to the schools of his own country, he says that they need reform. The reform he spoke of was, of course, intellectual reform. The fault he had to find with the schools was that the majority of boys turned out of them were ignorant; they neither possessed knowledge, nor did they know how to acquire it. They did not, as a rule, feel any interest in it, nor did they respect it.

This is a severe indictment. Its vibrations cross the Atlantic, and may perhaps persuade some authority of equal weight to corresponding eloquence wherever it may be needed in America. It might, perhaps, take the form of a discrimination between education and athletics. At present there is some confusion. STUDENT

The Hysteria of Modern Civilization

NOWHERE is the hysteria of modern life better illustrated than by the suicide statistics by which we are besieged. Professor Bailey, of Yale University, has devoted some attention to these data, and he tries to explain some of the curious phenomena connected with this distressing problem. He asks why so few of these crimes occur on Saturday, and he plausibly explains that Saturday is pay-day and the day following is a day of rest, two things which combine to throw a ray of light into gloomy lives. The argument may have something to do with it, or there may be other causes not yet understood. It is at any rate a terrible disclosure of the weakness of our hold upon the realities of existence that causes so utterly trivial should be the arbiters of life and death. No less suggestive is the fact that men usually commit suicide on Monday and women on Sunday. Monday, for the man, means a return to work or to the search for work, while for the woman, Sunday often means a day of religious excitement. The Professor also suggests that Sunday, for the woman, is preeminently the day of domestic troubles, the day when these troubles are most likely to culminate disgracefully and then tragically. It is a tremendous and terrible picture of social life to which the crime itself is the pathetic index. STUDENT

Why Men Don't Go to Church

A MODERN lay writer has joined the army of churchmen who ceaselessly ask why the ordinary man does not go to church. This question is customarily used as a basis for a hackneyed complaint of popular apathy, of the Higher Criticism, of anything and of everything except the true cause. The writer in question is not of this kind, he does not seem to believe that apathy has anything to do with it, and he speaks from the common-sense point of view, which is occupied by the "man in the street," who has some undecorated ideas of duty and who does not particularly want to argue about them. He says:

Is Christianity, thus interpreted, the name for anything characteristic or dominant in the Western World? . . . Shall society call itself Christian because, forsooth, after living all day by principles which turn the earth into a battlefield, it summons the ambulance in the evening and picks up the wounded, and sheds tears of pity over the dead? So asks the plain man, who has no turn for the subtle arguments of the modern apologist. He remembers that he is a responsible unit in the society professing this Christianity, and the suspicion crosses his mind that in his personal profession of such a religion he may be something of a pretender, and he ceases to go to church.

In still plainer language, if that be possible, the average man does not go to church, because, generally speaking, he finds there no answer, nor attempted answer to any one of the problems which haunt his mind; because he finds that the religion of most of the churches is perfectly powerless to mitigate any of the horrors of civilization or even to recognize them in their more conventional aspects, because he finds that it does not cool the flames of human cruelty nor melt the ice of human selfishness. For this long time we have asked, what is Christianity? We have altered our creeds and amended our definitions and split the world into a thousand sects which cannot even agree to differ. The average man does not ask *what* is Christianity; he asks *where* is Christianity and getting no answer, stays away from the church. STUDENT

Significant Population Statistics

THE last census returns show that out of a population of over 76,000,000, only 41,000,000 whites had been in America for more than one generation. To draw attention to such a problem does not seem to be fruitful at a time when self-interest so largely takes the place of an enlightened political wisdom. Nations, like individuals, learn by experience, and it is usually bitter experience. It may yet be the lot of America to discover at a time of national crisis that her population is large, but that it is not American, and that the ideas of freedom, which should be her peculiar heritage, have been submerged beneath a flood of imported old-world prejudices, customs and superstitions.

Art Music Literature and the Drama

Ibsen's Dramas Picture Darkness Instead of the Light

THREE of Ibsen's dramas are being presented at the present time in three different parts of the United States by three different companies: *The Doll's House*, *Ghosts* and *Hedda Gabler*. Time was when Ibsen's plays were persistently quoted as being shocking and improper, but they set people to thinking and then it was admitted that Ibsen had a message, a pessimistic, cynical, unpleasant and quarrelsome message; but, a message. After awhile there came to be more thinking. Then some people began making a fetish of Ibsen.

The fact is, Ibsen has been countenanced without being wholly understood. He asked questions which he, as well as the public, was unable to answer, and he asked them in an irritating fashion. The questions were not unanswerable, and today are being answered by those who are sounding the note of a true philosophy of life, but Ibsen himself offers no solution.

That is why his plays, almost without exception, leave one gloomy, pessimistic, and heart-sore. At best they leave the mind unsatisfied and hungry. They are but fragments of Truth, broken arcs, as it were. In many of their phases they picture not life, but death. It is as if Dante were to take us down and down and down, through cycle after cycle, to the very pit of the Inferno and then plunge us into the ice-water of Cocytus and leave us there. Dante was wiser; he completed the cycle that he had begun, that cycle of the Soul's journey through the *Inferno* of experience, up through the *Purgatorio* of aspiration and trial and effort, on to the *Paradiso* of fulfillment, where the soul reveals its message and the lesson of life is known. Ibsen usually leaves us in Cocytus, a terribly chilly place. The philosopher who really longs to help humanity, and not merely disintegrate, must do more than simply state a problem, *he must solve it*. We are facing today the same old problems that Ibsen states so ferociously—if we may be pardoned the expression—problems of wrong-living, of the sins of the father which are visited upon the children, of fallen women, of the pure but dwarfed woman who makes havoc with her environment as soon as she begins to grow—and all the rest. But there is a solution and we find it in the wisdom of the human heart. There lies the mystery, there shines also the light. We cannot afford to talk darkness, nor to preach gloom. We have only to look up. The light exists. It is we who sulk and forget and turn away from it. Ibsen searches, but he does not reveal. He seeks, but he does not find. But today, there are those who have found the answer and the light, and who, through a purified Drama, will yet give to humanity a new revelation. And the time is nearer at hand than we believe.

STUDENT

JAPAN has recently lost her greatest tragedian, Danjuro Ichikawa, as he was known in private life, Shu Horikoshi. "He has been king of the Japanese stage for the last thirty years," writes Yone Noguchi. "He raised the standard of drama and the stage to high respect. He endeavored to make the stage an educational institution, and he almost succeeded."

The Music of the Ancient Hawaiian Singers Passing Away

WHAT the *Iliad* and *Odyssey* were to the ancient Greeks, the *Mele* is to the Hawaiians, a record and a witness of the days of Hawaii's ancient glory, when warrior kings were her statesmen. And as Homer, so the Greeks tell us, wrote down the old records, preserving those which before his day had been transmitted orally from father to son for countless generations, so Kamehameha the Great has handed down for us today the song-poem of old Hawaii. An ancient custom among the Hawaiians was to bid to their feasts minstrels or bards who entertained the guests by chanting the *Mele*. Today the last of these old singers or chanters will soon have passed away. There are at present one or two living, but they are very old, and there are none to take their places, for the younger Hawaiians are out of sympathy and out of touch with many of the old institutions. Recently the Library of Congress has requested copies of the music of Hawaii, and as much as possible of this ancient poem-record, the *Mele*, will soon be sent to Washington.

The natives will tell you that most of the music popularly called "Hawaiian" and classed as such consists really of adaptations of American and other melodies brought into the island by foreigners. The *Mele* represents the heart and fiber of the real and ancient Hawaiian music. How long will we continue to study Homer, and shed tears over the ancient days when the Bards sang in the halls of Odin, while we ignore the same customs, and song-poems of equal value because just as intimate to the real heart-life of the people, simply because the people who sing them happen to be dark-skinned, uncivilized (fortunately) and modern?

With the ancient Hawaiians music was used as an accompaniment to song, or else to the chanted lines of some poem, never alone. It is remarkable that the Hawaiians have preserved the *Mele* intact, as they have been able to do, for they had not the opportunities that the ancient Greeks had in intercourse with older and wiser civilizations. Nevertheless, they have evolved a musical system of their own which has value and beauty. A.V.

Mozart, the Precocious Child

IN spite of what cynics may say as to "hot-house genius," and about things which

Forced into bloom too quickly,
Perish e'er harvest come,

the fact remains that, almost without exception, our great musicians, particularly our great composers, have been marvelously precocious musically. Mozart is the example most familiar and most often quoted. At three years of age he amused himself for hours at a time picking out, not simple tunes, but chords on the piano. At four years of age the baby hands were actually playing certain simple pieces of classical music. Before he was six young Mozart actually played his own compositions, and, with his sister, was taken on a concert tour. Within three years from that time he had conquered what were then four of the greatest musical centers in Europe, and at ten years his reputation as a composer was established.

"THE SUN OF VENICE," by TURNER

POETS to come! orators, singers, musicians to come!
Not today is to justify me and answer what I am for.
But you, a new brood, native, athletic, continental,
greater than before known,
Arouse! for you must justify me.

I myself but write one or two indicative words for the future.
I but advance a moment only to wheel and hurry back in the darkness.

I am a man, who, sauntering along without fully stopping,
turns a casual look upon you and then averts his face,
Leaving it to you to prove and define it,
Expecting the main things from you.—Walt Whitman

"IT IS THE ARTIST'S LOFTY MISSION TO SHED LIGHT
ON THE DEPTHS OF THE HUMAN HEART."

"YOUR Majesty mistakes. The song is not mine. It was composed by my sister!"

These words, spoken by Felix Mendelssohn to Queen Victoria, evidenced his own honesty no less than the genius of his sister Fanny. The Queen, then in all the happiness of her own married life, had summoned the famous composer to Windsor Castle, and, out of compliment to him, sang what she supposed to be one of his own songs, "Schoener und Schoener." His answer, in its unconscious and honest generosity, betrayed traits that were characteristic not alone of the composer but of all the members, without exception, of the gifted Mendelssohn family.

Fanny, the sister of Felix, and four years his senior, was scarcely less gifted musically than her brother. That she has not a separate and distinguished reputation is due partly to the fact that not only Jewish notions but German traditions were quite at war with the idea of a woman having a separate, public career as a composer, but chiefly to the fact that she gave the best of her musical life in service to her brother. In 1822 she wrote of Felix: "I have seen his talents develop step by step, and I myself have contributed something to their development; he has no musical confidant before me, he never commits a thought to paper without laying the first copy of it before me. For example, I knew his operas by heart before a note was written down."

Fanny Mendelssohn was blessed as are very few by parents whose wisdom was of the heart no less than of the head. Her father, Abraham Mendelssohn, was noble and just even to austerity; her mother was one of the purest and most refined of orthodox Jewish types, of poetic temperament, familiarly acquainted with French, English, Italian and Greek. Homer she read in the original. Musically gifted, she was the first teacher that Fanny and Felix ever had, conducting them even through the most difficult studies of Bach. As a mere child Fanny not only played Beethoven and Mozart, but twenty-four of Bach's fugues. Not long after her birth her mother wrote to a friend, "The child has a Bach fugue hand."

Wiser than the traditional German fathers, who, even today, contend that the woman's sphere is properly bounded by "*Kinder, Kirche, und Kuchen*"—children, church and cooking—Abraham Mendelssohn gave his daughters, as well as his sons, superior educational advantages. Fanny was by no means an amateur in music. As a pianist she was conceded to be her brother's equal, and in musical composition he should have been the last to underrate her capacities. Fanny received advanced training in thorough-bass and musical composition, yet traditional German prejudice

Fanny Mendelssohn Hensel

is strong, and it must be admitted that her father failed to aid her in her musical life as he might have done, for

although he and Felix admitted all the possibilities of Fanny's mind, they did not favor her having a career as an independent author. "For many years Fanny yielded to the opinions of her father and brother on this point, but at last her desire for an honorable fame, and the large inducements offered her by the first publishers of Germany, caused her to yield and she set herself to the preparation of a volume of songs. Felix made a laughing surrender of his position and in a characteristic letter admitted her to a place in the guild of musical literature. This concession was very near to the death of both Fanny and Felix."

Many of the compositions attributed to Mendelssohn are probably hers; others owe the best in them to her criticism or her touch, while a few are openly acknowledged to be the work of her hand, among them some of his best "Songs without Words," Nos. 2, 3 and 12 in Opus VIII, and Nos. 7, 10 and 12, in Opus IX.

Fanny Mendelssohn was temperamentally an artist, using the term in its widest signification. Her face was singularly frank and beautiful, her eyes large and expressive, her movements vivacious and decided.

Her love for the beautiful amounted to a passion. The ugly, dull or insipid she could not bear, while her love of purity and simplicity made her indifferent to luxury and mere comforts. What she did require was refinement and a musical life. The "Sunday Mornings" at the luxurious old Mendelssohn mansion were famous all over Berlin. At these gatherings Fanny and Felix played, assisted by an orchestra of their own training, and from a mere family circle, their audiences gradually increased until they included the most distinguished residents and guests in the Prussian capital. No contemporary private home witnessed a gathering more exclusive, and it was as one of her father's guests that Fanny first met William Hensel, who later became her husband.

Hensel was an artist, his works today well known in England and in Prussia, but when he begged permission of Fanny's parents to win the love of their gifted daughter, he was poor and unknown. Fanny was but seventeen. Naturally, the parents were slow to give their consent, and when Hensel finally left Berlin for Rome he had permission to correspond with Fanny's mother but not with Fanny herself.

The mother's letters reveal, to a marvelous degree, the secret of the rare balance possessed by all her children, so unusual a thing among those who are marked with genius. "You know that I esteem you," she wrote to Hensel at one time, "and have a real affection for you, but the same

Women and Education

"I FIND, in my experience as a teacher, that women are more original than men, that they are more spontaneous and less often swayed by ambition. It is astonishing to me how little selfish ambition many very able women have and they seldom have any avarice at all."

Mrs. Sophie Bryant, whose statement is given above, is head-mistress at the North London Collegiate school, England, and a member of the Consultative Committee of the Board of Education which is composed of persons appointed by the Crown to draw up regulations and act as advisors on educational matters. She also occupies a seat in the Senate of the University.

Mrs. Bryant has many ideas quite in advance of those currently accepted. She is an educationalist by heredity, as it were, her father having been, as rector of a large parish, a profound student of the education problem as affecting the poor. She was accustomed from her earliest years to an atmosphere of discussion and it is interesting to know that she never went to school. Her father was her only teacher, but she had "plenty of fairy tales and Pope's *Homer*." Mrs. Bryant would keep the daily newspapers and most of the magazines quite away from the children, although she is a profound believer in the educational value of good fairy tales. "The first duty of a teacher," she says, "is to look after the little lost sheep at the bottom of the class. A teacher can only be an ally, after all, for only what a child does for himself will serve him in the long run. Part of a teacher's skill, in my opinion, consists in keeping in the background at the proper moment."

Mrs. Bryant advocates an all-around education for girls, and believes in thoroughness in work. "I have found," she says, "that girls who 'do well' in school usually 'do well' in whatever they undertake afterwards. If they don't 'do well' in school they are not apt to come out well in later years. They may desire to climb high, but they have nothing to climb on, for their mental equipment is too shadowy. They may take on polish, but there are times when that will not meet emergencies. I believe that the domestic arts generally could be taught as a part of the school course with profit. But if girls are brought up with a habit of serviceableness and general adaptability they will become good housewives and mothers, with proper effort, quite as a matter of course. If it becomes their duty to read Greek they will read Greek, and if it becomes their duty to cook a dinner they will cook that dinner and do it beautifully." M.

reason that makes me forbid an engagement makes me declare myself adverse to any correspondence. . . . Fanny is very young and, heaven be praised! has hitherto had no affair and no passion. I will not have you by love-letters transport her for years into a state of consuming passion and a yearning frame of mind quite strange to her character, when I have her now before me blooming, healthy, happy and free." Something here, methinks, for the average mother of today to ponder over; and in Leah Mendelssohn's wisdom we read, beyond doubt or cavil, one of the reasons why the marriage of Fanny and young Hensel, which occurred some years later, was the gateway into a comrade-life that was an idyl in its purity, its serenity, its simple cloudlessness and joy. Their only son, Sebastian Bach Hensel, has become the discriminative historian of the entire family.

JULIA HECHT

An Appeal to Queen Alexandra

PETITIONS addressed to Queen Alexandra and the English government respectively have recently been circulated under the auspices of prominent London women in behalf of the women and children of Macedonia. The petition to the government emphasizes "the burden of responsibility which rests on our country for the prolongation of the system which makes possible the horrible deeds now being perpetrated in Macedonia," and appeals to the government to take some effective action speedily. This is a portion of the text to Queen Alexandra:

Your petitioners are deeply moved by the indescribable woe which is being heaped upon the women and children of Macedonia. Bereft of their male relatives, their babies torn from them and murdered before their eyes, their daughters ravished and killed, many of themselves outraged and butchered, their homesteads burned, the case of the survivors is desperate unless Europe comes to their succor without delay. The Turk refuses admission to those who would tend the sick and wounded, and it is in every way made most difficult to convey to them the needful food and clothing. Your Majesty's tender sympathy and gentle wisdom are potent with the crowned heads of Europe, and it is with the confidence of loyal subjects that we appeal to your Majesty to come to the help of these innocent sufferers.

AND now that women are stepping into "Man's sphere," it may be that some of our vexed problems will be solved by the opposite process. It is said that quite recently several thousands of foreign young men have been brought to London to engage in general domestic work among English families.

So far, according to report, the experiment has been more than satisfactory to both of the parties most directly concerned. The young men servants perform housework, which it must be admitted is, in some particulars, too laborious for any woman, in a cleaner and more thorough manner than "Jane," who has been so ruthlessly displaced.

Their employers tell us they have no grievances, no "visitors," and do not worry about "evenings out."

But then, the experiment is new and new brooms are pretty certain to sweep clean. The real solution will only come when human life itself is simplified, and the true equilibrium attained. Until that is done we will simply oscillate between one experiment and another, arriving nowhere.

R.

QUEEN ELIZABETH was a highly skilled performer on the virginal, and required her maids of honor to be able to sing and play on the lute. Her reign was characterized not less by the stronger qualities of statesmanship than by her patronage of art, literature and music.

It is conceded that the Woman's String Orchestra of New York fills a certain niche in the musical life of the metropolis that would otherwise remain unfilled. It is at present giving a series of concerts, the last, held in Mendelssohn Hall, being a pronounced success.

QUEEN MARIE ANTOINETTE was Gluck's pupil when a young girl. Later, it was her strong support that enabled Gluck to carry out some of his most advanced ideas in musical interpretation and composition. The Queen played both harpsichord and harp.

WHERE you are is of no moment, but only what you are doing there. It is not the place that ennobles you, but you the place; and this only by doing that which is great and noble.—*Petrarch*

The Ancient Ruins of Gran Quivira in New Mexico

A REPORT from the Governor of New Mexico gives an account, all too brief, of the prehistoric ruins of Gran Quivira, thirty miles north of Whiteoaks and fifteen miles west of the Gallinas Mountains. We cannot do better than quote this report, with many wishes that it was more extensive and more detailed:

The walls of a large church, some thirty feet high, built of blue limestone in a mortar of clay, and the remains of a number of other large buildings indicate the former presence of a great population. The nearest water is fifteen miles away in the Sierra Gallinas. Surrounding the Gran Quivira at various distances are the ruins of other towns of almost equal extent. Among these are the ruins of Abo, built of red sandstone embedded in clay mortar, with a town wall surrounding it, part of which, running in one direction, is 950 feet long. Quarra, another Indian town of similar dimensions, was not far distant. All of these have the ruins of churches, showing that at one time the Spaniards held possession. Southerly, extending along the malpais, from Gran Quivira to Tres Rios, opposite Sierra Blanca, and in the numerous cañons of this range and of the Sacramento Mountain range, and in the Salado, were a number of towns and villages, now in ruins, indicating that there must have been concentrated here a population running into the thousands. The strangest feature about nearly all of these towns is the absence of water near them, and in some instances it is many miles off. A casual observer following the general course of the line of towns and villages can reach no other conclusion but that the face of the country has gradually changed since these towns were built and occupied.

The Gran Quivira proper is situated in Socorro County in the eastern foothills of the Oscura Mountains and about three miles west of the Lincoln County line. The ruins of the Abo pueblo and others in that vicinity are in Valencia County, while the ruined pueblos and the malpais to the south and southeast are in Lincoln County. A description of Gran Quivira is included in this article, as it is easiest reached from the highway running from Santa Fe to Lincoln, and will be easy of access from Progresso station on the Santa Fe Central Railway, about thirty miles distant.

In the malpais, the lava fields, are the ruins of great rectangular buildings, sometimes built of dressed stone. Into some of these the lava has run and partly submerged them, others are filled with volcanic ashes. Among the ruins is a triangular building 400 feet long on one side and 300 feet on the other two, also the ruins of a circular building 150 feet in diameter. Corn that had been gathered and put in piles has been found embedded in the lava and was evidently overflowed during a sudden catastrophe. The skeletons found under the fallen walls of Gran Quivira and other towns also indicate that the towns were suddenly destroyed and not deliberately abandoned.

In 1540 Vasquez Coronado, while in search of the far-famed Seven Cities of Cibola, heard of the grand city of Quivira, in the country of the Tagnos, where there were princely palaces three and four stories high, built of stone and decorated with jewels, where the roofs were covered with gold and silver and glittered in the sunlight; where the streets were broad and shaded with trees; the gardens resplendent with flowers and the women wondrously beautiful, and he determined to visit and conquer it. After a weary tour from Culiacan in Mexico, by way of the Rio Gila and the great cañon of the Colorado, he finally reached it. Day by day, as the sun became fervent and the mirage flattened in the landscape, the magic city was before him. Then it vanished, and before him lay a Pueblo Indian town, like other towns he had visited, and the inhabitants had neither gold nor silver.

Castaneda, who accompanied Coronado's expedition, wrote of it: "At Quivira, mountains began to be perceived, and it appears to be a well-peopled country, with

plants and fruits similar to those of Spain, such as plums, grapes, mulberries, rye grass, oats, flax, etc."

Don Antonio Espejo (1581) says: "Many of the people wore long gowns of cotton tastefully painted, and one of the tribes, the Jumanes, painted the face, arms and legs. They had great bows and arrows and sharp-cutting swords, with sharp stones on both sides, similar to those of the Aztecs, and they were very expert in the use of the sword and could cut a man in two at one blow. Their shields were covered with untanned bull's hide, and some of the tribes lived in houses of stone four stories high."

Repeated attempts have been made to lift the legendary treasures of the Gran Quivira.

A Remarkable Work by Dr. Budge on Ancient Egypt

DR. BUDGE'S immense work upon *Ancient Egypt* will be a landmark of research. As Curator of Egyptian antiquities in the British Museum, the author is peculiarly qualified for the work which he has undertaken and which he has brought to so successful a finish. The volume in question consists of over a thousand pages, with two hundred and fifty illustrations, and while there is here no question of finality a remarkable work has been produced and Egyptian research has been epitomized and brought well up to date.

It is from the religious aspect that Dr. Budge is most illuminating.

His scholarship is too ripe to be mingled with the dogmatism of modern theology or modern civilization, and while we do not doubt that many of his conclusions will be modified by still further discoveries he, none the less, shows a broad and enlightened sympathy with his subject which should mark the end of the futile attempts to belittle the attainments of old Egypt.

The most remarkable of the author's arguments is that by which he seeks to penetrate the mask of Egyptian deities and to discover a belief in one supreme ruler of the universe. In support of this contention he cites the writings from the earliest dynasties, writings of a very rare spiritual beauty and which prove beyond contention that behind the everchanging figures of the Egyptian Pantheon there was a conception of a Supreme Being which did not change nor disappear, that there was an exalted monotheism too lofty for casual reference or for visible imagery. One of the quotations which he gives to us declares that this God "cannot be figured in stone. . . . His dwelling-place is not to be found out . . . and the heart of man is unable to depict him." None the less illustrative of a religion undefiled are the Egyptian precepts which were written more than six thousand years ago and upon which Dr. Budge lays a well-deserved stress. Here are three of them, which represent

their lofty character: "If thou wouldst be a perfect man make thou thy son to be pleasing unto God;" "God hateth disobedience;" "Verily, a good son is of the gifts of God." To attempt a review or a description of a work so immense as that of Dr. Budge would be impossible here and indeed undesirable anywhere. It must speak for itself and we can but express our obligations to the distinguished author for so substantial an epitome of progress and for the painstaking care with which it has been prepared.

A Queer Member of a Strange Family

AMONG the many interesting wild plants of Point Loma there is one which is especially remarkable, not so much for its lack of beauty as for its general strangeness. It is a species of the curious *Euphorbia* family, and its stiff, shrublike shape, two or three feet high, renders it noticeable even before one is close enough to observe the gray bark, the few small grayish leaves, and the solitary flowers, about one-eighth of an inch in diameter, of a pale yellowish color, with light chocolate-brown centers. The little fruits hang oddly beyond the flower, as shown in the cut. The bark is no thicker than tissue paper, next beneath it being a white sapwood, which, when cut, exudes a milky sap which dries into a rubbery gum. This sap is said to be an excellent dressing for wounds, especially such as cuts, etc.

Only a little of the sap will come from one cut, because the plant has some way of stopping it quickly. The heavy, fleshy root is still more remarkable than the blunt thick branches, because within the white sapwood is a relatively large core of what looks like raw meat, though the sap in it is white like the rest, and when this sap is mixed with the other it makes an excellent mucilage.

The plant grows on the driest hillsides, and lives through the summer as the other plants do, by a sort of hibernation. When it does die, it dries away to a corklike brown pith. When furnished with water, the plant tends to lose its shrub form and becomes of a more trailing or creeping habit, with a much increased leafage.

On the whole, this plant gives the impression of being more animal than vegetable, and to have very definite ideas of its own. Indeed, all the *Euphorbia* are a strange lot, with uncanny, unvegetable characteristics. Some are almost vinelike, while others, like the *Poinsettia*, become loose, reedy trees of extremely rapid growth. And they all have queer, freakish flowers, as though they were experimenting.

Feed the Birds in Dry & Frosty Weather

THOUGHTLESS people have not the slightest idea of the suffering of wild birds during the frosty weather, or when the ground is covered by snow. The little ones of the household should be encouraged to remember the poor birds, so dependent at this time of year upon assistance.

Remains of cold potatoes, broken small, will be picked up eagerly; a handful of rolled oats will be a perfect feast, and cooked rice, barley, peas, etc., left from a meal, are all very much appreciated. The pleasure of watching the birds eat is very great, especially to children, whose natural love toward all dumb creatures is intensified by the knowledge that they are befriending them, and perhaps saving them from a cruel death. Those living in a city flat have, perhaps, not the same opportunity of studying the wonderful variety of birds, but even a town sparrow would be glad of a few crumbs put out on the window-sill. I have seen a sardine tin with water on the window-sill of a flat, and the avidity with which it was drunk, showed the kindness was appreciated.—*George's Weekly*

THE EUPHORBIA

LITTLE BROTHERS OF THE GROUND

by EDWIN MARKHAM

LITTLE ants in leafy wood,
Bound by gentle Brotherhood,
While ye gaily gather spoil
Men are ground by the wheel of toil;
While ye follow Blessed Fates
Men are shriveled up with hates.
Yes, they eat the wayside dust,
While their souls are gnawed by rust.

Ye are fraters in your hall,
Gay and chainless, great and small;
All are toilers in the field,
All are sharers in the yield.
But we mortals plot and plan
How to grind the fellow-man;
Glad to find him in a pit,
If we get some gain of it.
So with us, the sons of Time,
Labor is a kind of crime,
For the toilers have the least,
While the idlers lord the feast.
Yes, our workers they are bound
Pallid captives to the ground;
Jeered by traitors, fooled by knaves
Till they stumble into graves.

How appears to tiny eyes
All this wisdom of the wise?

THE ANT

by PRINCE KRAPOTKIN

IF the ant stands at the very top of the whole class of insects for its intellectual capacities; if its courage is only equaled by that of the most courageous vertebrates; and if its brain—to use Darwin's words—"is one of the most marvelous atoms of matter in the world, perhaps more so than the brain of a man," is it not due to the fact that mutual aid has entirely taken the place of mutual struggle in communities of ants?

about among them, sniffing at their handbag and bundle. Soon his master hears a little bark. He knows what that means, and finds Scip dodging about the heels of a passenger. The Warden quietly invites the suspect into the baggage-room and questions him about the game which he has concealed about his person or effects. The dog has never been known to fail, and when he has made up his mind that the law has been violated he has always been correct so far.—*Boston Record*

Our Relations to the Lower Animals

THE United States exploring party which discovered the little island of Laysan in the Southern Pacific reports that it is the nesting place for countless myriads of birds of many different species. It belongs to the United States and will be at once made a national reserve for the preservation of the bird life which centers there.

The discoverers state that the birds there "are absolutely fearless, . . . seeming not to know that man is an enemy. It is a curious example of what the relation of the animals to man might be." We would suggest that instead of being an example it is scarcely more than a hint. Those birds are not afraid, it is true, but they do not seek man's company, nor apparently regard him as any concern of theirs as long as they are unmolested. But this is a merely negative friendship; it should be positive. Man has, of right, dominion over all other animals, he should be their deity, their guardian, their judge and lawgiver, but he has chosen to be their tyrannical robber instead. It should be that every wounded, sick, hungry or distressed animal would appeal for assistance to the first man it saw, as to an elder, stronger brother, or a kindly parent. Instead of this they run away and hide, knowing only too well that men, with few exceptions, are their worst enemies. Man should be the dominant lord of all the brute creation, regulating the balance of animal, and thus of vegetable, life; assigning the range of species, and by careful selection and elimination without individual pain, improving their types and developing their highest possibilities.

Instead of the grim chaos now existing in wild life there should be rational system and well-planned arrangement; instead of the intense and constant struggle for existence there should be orderly adaptation under a ruling mind, even as a farm is kept. This condition we may hope to see when men learn to live simply and think highly, and cease to regard their wild brothers as personal property. This ideal relation between man and the animals is both recorded and predicted in the Bible and other sacred books, and we may hope that the time is not far distant.

S. E.

SCIP lives in Old Town, Maine, when at home, and is an undersized cur, with bright eyes and sharp ears, of badly mixed lineage. He is owned by the State Game Warden, whose duty it is to examine certain trains coming down from the game region. Every piece of game must be checked up and suspicious packages examined. The Maine law positively prohibits the taking out of the State of game birds in any way whatever. As the people alight from the train few notice the little dog dodging about among them, sniffing at their handbag and bundle. Soon his master hears a little bark. He knows what that means, and finds Scip dodging about the heels of a passenger. The Warden quietly invites the suspect into the baggage-room and questions him about the game which he has concealed about his person or effects. The dog has never been known to fail, and when he has made up his mind that the law has been violated he has always been correct so far.—*Boston Record*

Universal Brotherhood Organization

Central Office Point Loma California

AT the anniversary meeting of The Universal Brotherhood and Theosophical Society on Sunday evening, Isis Theatre contained one of the largest audiences ever gathered there. The entire house, including the very uppermost balcony, was thrown open and many, who were unable to obtain seats, were reluctantly forced to depart. A special program had been arranged by the Point Loma students to celebrate the third anniversary of their public meetings in San Diego. February is a month of anniversaries in The Universal Brotherhood and Theosophical Society. On February 13th, four years ago, Katherine Tingley took up permanent residence at Point Loma; on February 18th, six years ago, The Universal Brotherhood Organization was founded by Katherine Tingley at the great Theosophical Convention in Chicago, at which The Theosophical Society merged itself into and became an integral part of the new and greater Organization, now known as The Universal Brotherhood and Theosophical Society; on February 23rd, seven years ago, the corner-stone of the School of Antiquity was laid on Point Loma by Katherine Tingley, who had just returned from her great Crusade around the world.

The addresses were "A Human Garden—an Allegory," by Dr. Gertrude Van Pelt, and the Anniversary Address by the young Loma-land orator, Master Thorley Von Holst.

The following songs by the special Raja Yoga chorus from Loma-land were enthusiastically applauded by the great audience: "What Say the Clouds?" (Hutton); "Violet," (Frank Damrosch); "In the Meadow," (J. C. Macey); "Tell Me What the Brook Doth Say," (A. F. Anderson).

The instrumental music by students of the Isis Conservatory of Music included: Overture, "Rienzi," (Wagner); "Rondo Capriccioso," (Mendelssohn).

Master Thorley Von Holst said in part: "Today is the third anniversary of the Sunday meetings held at Isis Theatre. When we look back a year, we are surprised at the changes and improvements that have occurred since then. The students of Point Loma and the children of the Raja Yoga School, are deeply interested in the welfare of this city, and sincerely wish to see its rapid advance, both on material and moral lines.

"When we attempt to look forward to the future of San Diego, we are simply astounded by the possibilities of this city. But, are we to confine our ideals and ambitions to having our city simply a great manufacturing and trade center, or shall we determine that we will have our city held up as a shining light and example of purity and beauty?

"It is well known that all of our great cities are hotbeds of crime and disease; yet why is this so? Is the reason for men living in cities simply because they wish to accumulate wealth, and live in selfish enjoyment, while the less fortunate brothers are starving? Surely not, and if we once kill out the demon of selfishness this would not be so.

"Fortunate indeed are the children who have the love and protection of Katherine Tingley. How I wish all the boys and girls could receive the blessings of the Raja Yoga School! Then they would realize that a city owes its reputation to the *lives and characters of its citizens*. The Raja Yoga children are trying to make their daily life so honest and upright that when we grow to manhood and womanhood, we will have a foundation for true citizenship."

In the course of her description of "A Human Garden," Dr. Van Pelt said:

"This garden had the power of speech, and its flowers bore the form of faces. They were not human faces, nor was the speech such as we know it. It was a speech through thought, which was just as intelligible and natural there, as is communication through speech with us.

"Another fact, which it was impossible not to observe quickly, was that nothing ever rested in the same condition for a moment in that garden, and that from every particle of soil something was growing. The plants were either growing more full and vigorous every moment, or they were becoming withered, drooping or sickly.

"In the center was a human form of kingly bearing, who was plainly the lord of the garden. Everything that took place had some relation to him. He either explicitly gave his consent to it, or at least tolerated it. Many permissions were constantly given in a half-stupid condition, as if he were but little interested. And this appeared to the old man as very strange, for every thing *was* of such vital importance to him. He showed his power once or twice so clearly that there could be no doubt of it, and then he seemed to forget, himself, that he had this power. At one time, in the midst of a terrible thought confusion, he uttered the command,

LOMA-LAND STUDENTS AT ISIS THEATRE

Anniversary Exercises — An Allegory by Dr. Van Pelt & an Address by Master Thorley Von Holst

Reprinted from the San Diego News

"Silence!" and instantly there was a deep quiet. The countenance of the lord became radiant with joy, and he held an intense listening attitude, as if he were communing with some invisible host. "During the most of the time this lord was subject to one delusion after another. So intimate and mysterious was this connection that he was constantly confusing his

own identity with theirs—in something the same way that a man will say sometimes 'I am sick,' when perhaps it is only his body. He threw his whole force into one plant after another, and for the time being entered so completely into the desires of these curious things growing within his garden, that his whole energies were directed toward satisfying them. Even if these were directly opposed to his own interests, it was the same thing. Under these circumstances, such a plant grew to undue proportions, and for the time being dominated all the others. When he had appeased its cravings so that it was content to rest, another instantly began to clamor for attention, and for some unaccountable reason the lord exhausted himself by gratifying one after the other of these insatiable plants. Once or twice he reversed the order and made the plants bend to his purpose, just long enough to show that he had the power. And at such times they all took on a new color and began either to wither away or work for him.

"It was a pitiful sight to see this lord, so capable of great things, making himself into a slave, harboring and raising plants, cultivating, in fact, the very things that poisoned the air he breathed. It was a strange case of infatuation. Some of the most noxious weeds he guarded with special care. They used him the most unkindly, rendered him the most exhausted and miserable after he had thrown his life-force into them for a time, yet through some unaccountable attraction he nourished them the most.

"There was one plant, rather taller than the others, who had the desire to appear wise and brilliant and learned. He was none of these things, but he persuaded the lord of the garden to lend him *his* power, *his* talents, *his* energies, and then he seemed great. In return for this, the lord was used remorselessly. He was forced to strain himself to acquire knowledge which was to him altogether valueless, but which for the time being gave him a brilliant reputation in the world in which he moved. He merged his desires with those of the plant and lent himself, without reserve, to their accomplishment, until overcome with weariness, he tore himself from this entanglement, and asked himself seriously to what end he was working. For an instant, he saw the folly of his recent pursuits, but before he was able to grasp its full import, another plant of graceful bearing persuaded him that he desired, above all other things, to make himself admired; that it was his right, his due; and that life held no other treasure equal to this. Quickly all his energies flowed with those of *this* plant, and he yielded to the impulses he felt within him with all the intensity of his nature. Suddenly on the verge of doing a mean act, he was startled and came to himself, for he was not a mean man by nature, and the shock aroused him.

"As the old man watched this noble man turn hither and thither between conflicting emotions; moved alternately by ambition, pleasure and disgust; used and abused by those beneath him; saw him weary and confused, and all unconscious of his greatness, an anguish took possession of him, which was more than he could bear. He longed to seize this lord, and hold him for a moment quiet. Surely, he thought, if he but pauses, he will perceive his folly. He turned to the child for help. 'In pity,' he cried, 'arrest him, show him.'

"'Not through coercion,' the child replied, 'can he be helped. He is a lord. Although he has drugged himself with the emanations from these plants, and now sleeps a strange hypnotic sleep, yet he is guarded and watched over. A rift in these clouds will be made from time to time, as has even come to pass during our watch, and then he may raise his head above them, and even disperse them. There are those waiting to help him to find himself, when he asks, or if he but gropes toward them blindly. It is the light beyond which renders luminous these overhanging clouds.'"

Government Coaling Station

From Los Angeles Examiner, February 14th

ALREADY the government officials have decided upon a coaling station in San Diego harbor, to be located upon the government reserve, which includes several hundred acres on Point Loma. It has been delayed only through the fact that the \$75,000 quarantine station is located in the middle of the tract of land upon which the naval department desires to build. A bill carrying an appro-

pritation of \$200,000 is now pending in Congress providing for the removal of the quarantine station to a point further north on the reservation, to make room for the new improvement. Money is already available for the construction of the coaling station. It is believed that the coming of the coaling station will be followed by further expensive improvements, including the installation of a general naval station and dry-dock.

A movement is also on foot to remove the naval training station from San Francisco to this harbor, the officials favoring it because of the superb climatic conditions and the conveniences for training Uncle Sam's youthful tars here afforded.

A Glimpse of Loma-land

Reprinted from the *Los Angeles Saturday Post* of February 13, which also contained two fine illustrations of views of the Homestead and Children's Grounds

THE fact is generally recognized in San Diego today that the present wave of prosperity in that beautiful bay city had its inception with the establishment on Point Loma of the International Headquarters of the Theosophical movement throughout the world. And the city and the Theosophical colony have advanced during the last four years hand in hand, until now the Point Loma institution stands as one of the most beautiful and attractive places in the entire west, while San Diego is entering upon an era of progress and growth that bids fair to outlive, and in a far more substantial and lasting manner, the tremendous years of the great Southern California boom.

Nearly a million dollars have already been expended in transforming the erstwhile desert acres of Point Loma's summit into a vast garden of beautiful students' homes and educational institutions, and yet the work there is only fairly begun.

A great university building of stone, to be known as the School for the Revival of the Lost Mysteries of Antiquity, is among the projected improvements in the near future, while every month witnesses the completion of some structure, the expansion of some one of the many departments of the world-wide work. Gathered on Point Loma now are men and women and children from every quarter of the globe—over half a thousand of them. Naturally the Americans predominate, but as the chief purpose of the institution is to give practical force and effect to the broadest teachings of Universal Brotherhood, the beautiful little city on the hill has come to be the home of what is probably the most cosmopolitan group of men, women and children to be found anywhere on earth.

Just now the head and heart and hand that planned and has guided the destinies of Point Loma (or Loma-land, as it is lovingly called by its residents) is absent. Katherine Tingley, beyond doubt the most remarkable woman of her time, is in Europe—or Asia—or perhaps Africa. At any rate she is away off somewhere forwarding the movement in some quarter of the world—just where is unimportant to this review, the remarkable fact being that during her prolonged absences everything moves along in Loma-land at its wonted pace, without friction in the slightest detail and with seemingly no diminution in the remarkable energy with which the manifold phases of the great work are habitually conducted.

To teach Brotherhood, demonstrate the practicability of its application to even the smallest affairs of everyday life—this is the one central purpose of the movement; to this end was Loma-land founded, in the exemplification of this truth has its magnificent progress been made, and to this end is every effort of the entire institution continually and persistently directed.

A chimerical purpose, it may be thought—but those who have visited Point Loma do not think so when they come away, whatever may have been their prejudices before their visit. Katherine Tingley spells success in large, bold letters. Everything she has touched since her incumbency of the Theosophical Leadership has turned to gold—the gold of a higher standard of living and a greater joy in life. Point Loma is the proof. The now world-wide famous Raja Yoga children of Loma-land are veritable incarnations of brightness, intelligence, good health and joyousness. Sometimes of a Sunday evening a band of them will come riding over to San Diego to sing and play at Isis Theatre. On such nights the theatre is jammed and often hundreds are turned away. Sometimes they give one of their historical tableaux or a drill, or something—and these exhibitions are marvels in their way.

Whatever anyone may say or think of the Theosophical philosophy which is built up around the central theory and practice of Brotherhood, no one who expects to be regarded as a sane member of his community, will gainsay Katherine Tingley's work for the children. It is superb. It is also intensely human, as well as humane. The Raja Yoga children are children of warm red blood, full of life, vigor, play

and laughter—as all healthy children should be. But they are vastly more than all this. They are independent, self-reliant, keen, intelligent, even intellectual to a most remarkable degree. Without exception they are musicians. Most of them are vocalists. They learn to read music almost as soon as anything else, and their original musical compositions are more excellent and more frequent than are good prose compositions among other children. Yet the actual school hours at Loma-land are much shorter than elsewhere. One of the secrets of the Raja Yoga training—so far as the present writer has been able to discern it—is that work and play are so inter-blended that the child never realizes the difference between them. Every duty is a pleasure, every pleasure and recreation is at the same time a part of their constant education.

Here in the past two years over a quarter of a million dollars has been expended in constructing quarters for men and officers. The buildings which comprise post quarters are rapidly nearing completion.

A CLASS OF THE RAJA YOGA DAY SCHOOL IN SAN DIEGO, CALIFORNIA

and laughter—as all healthy children should be. But they are vastly more than all this. They are independent, self-reliant, keen, intelligent, even intellectual to a most remarkable degree. Without exception they are musicians. Most of them are vocalists. They learn to read music almost as soon as anything else, and their original musical compositions are more excellent and more frequent than are good prose compositions among other children. Yet the actual school hours at Loma-land are much shorter than elsewhere. One of the secrets of the Raja Yoga training—so far as the present writer has been able to discern it—is that work and play are so inter-blended that the child never realizes the difference between them. Every duty is a pleasure, every pleasure and recreation is at the same time a part of their constant education.

“Katherine Tingley's system of education early inculcates the truth that the child is a living soul, responsible for its every thought and act,” said one of the Raja Yoga teachers recently.

And from the tiniest to the tallest of these wonderful children, all of them love, nay, adore their good god-mother, Katherine Tingley. Not one of them but would—indeed, constantly do—go to extraordinary lengths to win a smile or a glance of approval from her.

But the children have no monopoly of this. Katherine Tingley's rule, though autocratic beyond that of a czar, is absolutely moral. Indeed, therein is its strength. As the moral law is superior to the civil law, so is this woman's power—not only on Point Loma, but wherever in the world there is a group of loyal Theosophists—infinitely stronger than that which could be delegated by any written contract or constitution. Those who look to her for guidance do so voluntarily—voluntarily to the very last degree. No creed or dogma binds them—no fear of excommunication holds them. In Katherine Tingley's philosophy there is no hell to terrorize. Membership in the Theosophical Society carries with it no special privileges—either in this world or the next. Only an added responsibility, and perchance, a better opportunity to work and serve and give—these are the perquisites of membership. Those who are self-seeking and ambitious for personal advancement do not join the Point Loma Theosophists. Yet the membership increases. Men and women of wealth, education, intelligence, refinement—men and women who are masters in their arts, crafts and professions constantly seek membership—rich and poor alike. All are rich at Point Loma, rich in good health, energy, vitality, high aspirations and lofty purposes—rich in a genuine, joyous brotherhood of unselfish work. You and I, who are busy winning dollars, will call them dreamers, visionaries, of course. Well, theirs is a pleasant dream, at any rate—and who of us gets even so much as a pleasant dream out of life? Seriously, it is a very remarkable movement, with a remarkable object in view, a quite remarkable membership, and with a most remarkable Leader. It will be interesting to watch its future progress.

"DON'T feel bad, ma-ma." "O, we're going to carve her the loveliest tombstone!"

"Mama, Uncle Ned's going to get us another dog, just as nice."

"Mama doesn't 'feel bad,'" said Mrs. Dayton. "She feels grateful that we have had such a splendid comrade as Juno." Though her face was a little paler than usual, the mother smiled as her three sturdy boys tumbled out of the room, led by Hal's exclamation, "Come on, let's hurry and carve it and Uncle Ned'll help us set it up."

"How in the world, Nell, with all due respect to you, can anyone come to think so much of a dog?" This from Hester Morrison, an old classmate of Mrs. Dayton's, who was making her a visit after many years of separation.

"Hester, if you knew my gratitude to Juno, you wouldn't wonder. I'm not a bit sentimental, but there was a strength and a beauty in that dog's comradeship that I confess, Hester, I haven't found very often in those who have called themselves my friends. I owe Juno a great deal."

"That's right, Hester," and Uncle Ned turned from his desk, which was littered with the usual business man's correspondence. "We practically owe Nell to Juno. I don't know what might have happened if it had not been for that dog."

"Well, Ned," said Mrs. Dayton, "at least, she gave me my first lesson in compassion."

"O, how romantic," said Hester, a shallow nature, but ready and quick of sympathy. "Tell me about it. Juno's only an ordinary shepherd dog, isn't she?"

Mrs. Dayton closed her eyes for just a moment, as if she were looking into the past. She was one of those strong, sweet natures, of whom the world affords but few. Her self-control had been acquired, not easily, but bravely, for the sake of the three little boys who looked to her for all their ideals. Few realized the depth of her nature, because of this balance and her usual reserve.

Suddenly she smiled. "Ned," she said, "do you remember when you had that ranch in Montana?"

"I remember the visit you made me, Nell," rejoined Ned, throwing down his papers. "Seems like a century ago, doesn't it? Why don't you tell Hester about it? She'd understand you then."

"Tell me, Nell; I'm desperately interested!" said Hester.

"Well," said Mrs. Dayton, "you see Ned had been ranching for several years and my vacations were lonely, for we'd always spent them together. You remember, one summer, I wrote you asking if I couldn't come and make you a visit."

"Yes," broke in Ned, "and I wrote you in reply that you never could stand it, but that you were welcome to come!"

"Well, Hester, I went. Ned met me at the train, took me to his ranch, a curious old place, some four miles from Helena. The city seemed not more than a mile away in that clear air, but immediately about us there was nothing, nothing, nothing—not a house in sight, and there were days when I didn't see a soul besides Ned and the cook."

"One afternoon, when I was there alone, a camp wagon drove up. I was not alarmed, for I knew Ned was expecting some of the herders in from the mountains. As they came in from the stables, after putting up the horses, I noticed following one of them a beautiful shepherd dog. I had never cared for dogs, but I took an interest in this one because my appearance frightened her."

"She never seen a woman, Miss," said the herder—"Joe." "We raised her up to camp, and she's never been out o' the mountains before. She's less'n a year old." And then I remembered that I was among the ranches of Montana, where womanhood is so chivalrously recognized and so precious, and where women were then so rare.

"Come on, Juno; she won't hurt you," said Joe.

"I offered her a bone. The great brown eyes gave me another glance and she slunk under the table. She was as unused to kindness as she was to women—that was evident."

"She's hungry enough, Miss," said Joe; "she ain't had anything since we started. Maybe you can coax her to you with a bone." Joe was a Tennessee 'cracker' who had come west with a little money, had invested in sheep and had made his thousands. He was herding then for Ned and had charge of a flock up on 'the Divide.' Well, to come back to Juno. Within a week she would not only eat from my hand, but she followed me everywhere, and even insisted on remaining in my room at night. She slept on the floor beside my bed.

"One day Joe said, 'Shepherd dogs have a hard life, Miss Nell, and if you like Juno, I wish you'd keep her for your own. She's much finer than any dog I've got, but the life's terrible hard on her, and I don't be-

The Awakening of a Woman

lieve she'd ever last another winter. She's too fine, that's the fact. I'd like to see her in a good home.'

"Well, frankly, I didn't care much for Juno, but I thanked Joe, and I wondered what I would do with the dog later. That was all. At last it came time for me to go back to my school."

"Don't forget about the trip up to camp," said Ned.

"I'm coming to that," rejoined Mrs. Dayton. "I wish you could have seen Ned's camp, Hester. It was located on the very top of the old Rockies, on what was called 'the Divide'; so high up that the clouds were below us when we awakened mornings. A few rods away was one of those mountain streams whose banks are as clean cut as the facets of a jewel, and all about there were woods. It was lonely enough, for no human being ever passed that way oftener than once in three weeks and then only to bring the herders provisions. Joe, Ned and I went on horseback—the camp was some sixty miles from Helena. The cook followed with the big camp wagon and supplies. There were the immense flocks and the faithful dogs beside them, and at the sight Juno seemed to have lost her head. She looked at me; then she looked at the sheep."

"Then she went out to her guard duty over the latter."

"In a short time, back she came to see that I was safe. Then her sense of duty became stronger and led her back to the sheep. That night when I retired, she remained with me, saw that I was safely tucked under the blankets upon my bed of fragrant pine boughs, and then went out into the cold and damp to her duty, guarding the great flock—and there she remained until morning."

"The next day it occurred to me to take a walk. Juno, of course, went with me. I intended to go but a short distance into the forest and I started off alone, for my ideas of danger were extremely provincial. Finally we came to a stream and I was startled, for Ned had told me that the only trout stream back of us was some four miles away. I was lost, that was evident. Hardly had I made this discovery when I slipped and sprained my ankle. Juno was in despair—and certainly I was. She evidently realized what had happened. The situation was serious enough, for night was coming on and my foot was agonizingly painful. I made a final attempt to walk, but the effort was too much and I think I must have fainted."

"When I opened my eyes Juno was gone."

"I can assure you, Hester, I never felt more desperately alone in my life. Not ten rods behind, we had passed the tracks of deer on the soft ground. At my right I could see a great tree, the bark of which had been injured by a mountain bear in his efforts to pull down wild grapes. I knew that as soon as night came on I should hear the coyotes calling and altogether—well, the situation was terrible and for the first time in my life I really faced despair. I knew that Ned would search for me and reach me in time, but how soon I didn't know and the prospect of a night in that forest was not a pleasant one. I wondered why Juno had to go away just at that point. I really had not particularly cared for her. She had seemed to me to be more of an attaché than a comrade and it was my utter loneliness that made me think of her then rather than any deeper feeling. But then I realized for the first time that she had been in a very real sense a protection to me."

"Suddenly, I heard Ned's voice and immediately Juno came bounding along, covering my hands and face with kisses." "Well, Nell," said Ned, "I guess if it hadn't been for your dog, you'd have been here all night. We'd already started when she'd got back to camp. We went north. You veered round, it seems, and you can just thank Juno for that. She came back and told us about it and she showed us the way."

The little group were very quiet. "It's true, Hester," said Ned, suddenly. "Nell did change after that. She's never been quite the same since, but a heap finer."

"Ned," said Mrs. Dayton, "I've often wondered how we, as a race, came to lose that loyalty and fidelity and purity that dogs have, almost without exception. We're not half grateful enough to them for their comradeship and the lessons they teach us, and today I must say my feeling is rather one of gratitude than one of grief. I was selfish as a girl. It was that little shepherd dog that gave me my first start toward being a better woman."

"Do you know Nell," broke in her brother suddenly, "I never saw you and Juno together but I found myself thinking of the old Knights, each with his horse or hound. You know, I fancy there must be a real relationship between us and these beautiful creatures that we neglect so. But we haven't discovered it. Curious idea, isn't it?"

"Yes," said Mrs. Dayton with a smile, "Curious."

STUDENT

The Trend of Twentieth Century Science

Gigantic Prehistoric Reptile Found in a Montana Lake

THE *Scientific American* gives a description and illustration of the gigantic fossil head of the *triceratops*, found in Montana by an expedition of the American Museum of Natural History. In speaking of this animal as a reptile we have regard rather to its scientific classification than to its appearance. Belonging to the extinct family of the *dinosaurs*, it had affinities with present reptile types, but in other respects differed considerably from them. The illustration shows us a beast like a rhinoceros, with three horns on his face, going on four short legs, and with a thick tail, trailing like that of a lizard. This is a restoration of the animal by an artist skilled in that kind of work.

The *triceratops* flourished and became extinct during the Cretaceous age, from three to ten million years ago. Its size and strength can be gauged from the dimensions of the skull found, which is seven and a half feet long, and five and a half wide; and it was probably twenty-five feet long and weighed ten tons, or about twice as much as an elephant. The formation of the teeth show that the animal was herbivorous, and did not grind his food but clipped the foliage and branches, consuming from two hundred to four hundred pounds for a full meal. The intelligence could not have been anything remarkable, with only half-a-pint of brains to ten tons of body. But the beast only needed to know the road to its mouth, for its size, toughness and horns made it invulnerable.

The place in Montana where this find was made was in remote times a great lake basin and inland sea, and is now regarded as America's great prehistorical burying-ground, where are reposing the petrified remains of numbers of the strange and rude animals of the past. A horn was noticed projecting from the earth, and careful excavating revealed the whole head, which was most cautiously unearthed and cleaned, glued and plastered, and transported to New York. The specimen, incased in plaster, weighed 3100 pounds.

STUDENT

The Mystery of Comets Has Not Yet Been Solved

BORELLY'S Comet of 1903 has now passed out of sight, except in the very largest telescopes, but we have not solved the riddle which these "long-tailed" visitors present again and again. This comet, with its mysterious divided tail streaming away from the sun, as is usual with these appendages, was clearly visible to the naked eye, and was the brightest we have seen for several years. But it did not approach the brilliancy of the great comet of 1882, a magnificent object in the dawn, which appeared about the time of the last war in Egypt. A remarkable statement just made by Mr. Vernon Boys, President of the Mathematical and Physics section of the British Association, is worth noting in connection with H. P. Blavatsky's teachings:

What is a comet and of what does its tail consist? asks Mr. Boys. It was impossible not to be struck by the similarity of the language used in describing comets and that used in any paper written on radium. He knew that mere superficial similarity was worth very little, if anything, but for centuries the sky has shown phenomena still not entirely understood, and inability to remove all difficulty by the aid of radium or similar material, was no reason for dismissing the idea of any connection without further thought.

H. P. Blavatsky speaks of profound difference between cometary and terrestrial matter as known to us, and says that comets have much to do with the original formation of planets. They are partly self-luminous, but even the magic power of the spectroscope has not yet solved the mystery of their constitution, and their origin is entirely unknown to science. A plausible suggestion is that they have been ejected from terrestrial, planetary or lunar volcanoes. Certainly some of the tracks of the shooting stars are precisely coincident with the orbits of a few comets, and the meteoric iron may have come from volcanoes.

THE students of the University of Missouri have petitioned to be allowed to eat only two meals a day. Experiment has shown that a student is thus in better health and spirits and better equipped for work.

Scientific Delusions About the Nutritive Value of Food

THERE is no sense in the attempts to estimate the nutritive values of foods by analyzing them into constituents such as water, albumen, fat and the like. No law that we know of ordains that constituents have the same value or properties in combination as they do when separate, in fact, experience proves the opposite.

If a plum pudding is analyzed into the above mentioned substances, why not analyze it further into carbon, oxygen, potassium, sulphur, etc.? The answer will doubtless be that there is a distinction between chemical and vital, or between inorganic and organic substances, and that the nutritive value of a food stops short at the point where we break up the proteids, albumen, etc., into inorganic compounds and elements. But it is more probable that such a distinction is one of degree only, and that any analysis, however slight, changes the properties of the constituents, making these properties different from what they were when the constituents were united.

An apple may be 88 per cent water, but should we obtain the same nutriment from 88 parts of pure water and 12 parts of dried chips? It would not even seem surprising to find entirely innutritious substances combining to form a perfect food, if the combination were effected by nature's alchemy.

In short, the whole principle of appraising a thing by what can be extracted from it, or estimating the value of a perfect whole by its parts, is fallacious, whether in the studio or the kitchen. The statistics of food-values obtained by such a process can never be anything but most misleading. In some cases the results may be very near the truth, in others only a rough approximation, and in others entirely erroneous. Such a loose and illogical method is not worthy of a science claiming exactness and infallibility; and no one need be disturbed by such statistics of the value of foods.

STUDENT

It Is Not True That Brain-work Shortens Any One's Life

THE octogenarian physician, Sir Herman Weber, has been combating the idea—not an unusual one—that brain-work tends to shorten life. He maintains the exact opposite. The woman who does no brain-work is apt to live in her feelings and emotions, and that is a short path to disease of mind and nerves. Women who are saved from that by the necessity for continuous household labor, have, as part of it, an equally continuous mind strain. The combination would only be productive of health and longevity if their hours of night rest were unbroken, if there were no anxiety, (*that* is what kills) and if the conditions of sunlight, air and food were properly looked after.

The man who does no brain-work is apt to live in appetites and thirsts for sensation—assuredly the path of death. From that he may be in a measure saved by hard physical work; and if to this he would add mental occupation, his salvation would be complete. Man is meant to be a worker. To fulfil his destiny, to achieve health and longevity, and to live each day to its utmost, he must work, using all parts of his nature, physical, mental and spiritual. Idleness is a fermentation in which poisons are generated on all planes.

STUDENT

The White Man's Burden Is Ill-temper Instead of Gaunt Hunger

THE question of whether or not we eat too much is one which continues to arouse a good deal of discussion, but it could perhaps be settled more quickly by experiment than in any other way. Let those who wish to solve the problem for themselves begin by making a substantial reduction at meal times and note the result. The experiment must however be of sufficient duration to allow the stomach to get over its initial attack of ill-temper at being deprived of the white man's burden, an ill-temper which is usually mistaken for hunger. The result of an honest trial will probably be the discovery that health is better in every way, the body less torpid and the mind more clear. The problem will then be solved as far as we ourselves are concerned and our share in future discussions will be confined to the bare statement of our own experience and the recommendation to go and do likewise.

Here and There Throughout the World

YAWATARO (CHATEAU) NEZU, TOKYO, JAPAN

Where Women Never Quarrel THERE is a certain sect in the State of New York which claims to be leading the Christian life. Thirty families live together in one community,

The women have cooked over one range and we have all eaten at the same table for over two and a half years, without a single quarrel or harsh word. That is evidence that we are living our religion.

So speaks the head of this community, and the very homeliness of his proof excites respect. Truly it is the little things of life which show character, the power to resist the every day temptation, the tranquillity which is not ruffled by the vexation of the day, the sweet reasonableness which is itself calm and which creates calm. The religious beliefs of this community seem to be as attractive as their domestic life. They have thrown out the conventional God and try to find God for and in themselves. They say, too,

We do not believe there is a hell. The true God would no more prepare a hell than he would make a devil. The only devil a man sees is when he looks into a mirror. The only devil is in us.

A life of concord must usually follow upon a sane theology, and it seems to do so in this case.

Prosperity of a German Author "SWEET are the uses of adversity." The German military author who incurred the imperial displeasure by writing a novel descriptive of army life is said to be now living affluently in Vienna, thanks to the advertisement which his work received from exalted quarters. A similar fiat was issued against another work which forcibly advocated international peace, and this also has produced a perfect harvest of gold for the author, who will devote this unexpected income to the very object for which he wrote the work which has been so ineffectively banned. It seems almost fortunate that persecutors never learn anything. Their hostility appears to be more valuable than their indifference.

The Poverty of the English Clergy THE pitiable poverty of the English clergy, and especially of curates, is a well-worn topic of the religious papers. The size of the curate's income seems invariably to be in inverse proportion to the size of his family, and constant appeals for a remedy are in the air. A casual glance at some church newspapers suggests to us a possible remedy and we hasten to make it known. In these papers we see references to the expenditure of \$25,000 for a reredos, \$500,000 for a bishopric and \$2500 for an altar-cloth. Why not devote the money to the impoverished curates? The other articles would never be missed.

French Premier and 10 Commandments THE Premier of France has enriched the vocabulary of the world by a new phrase. He speaks of the "ferocious egoism" which so often dominates international politics. If there should be any doubt as to M. Combes' meaning in thus speaking of ferocious egoism, we would suggest the word patriotism as an explanatory alternative in the sense in which that much abused word is frequently used. There is a feeling among the baser portion of humanity that patriotism constitutes a perpetual indulgence for the blatant and arrogant advocacy of a national policy which would disgrace and dishonor an individual. The French Premier shows an inclination to apply the Ten Commandments to nations as well as to persons. It is an innovation, and one which leads us to believe that even the Sermon on the Mount may one day make a somewhat forceful intrusion into international politics.

The Zionists & the Immigrant Problem THE problem of pauper immigration is not an easy one to solve without violation of humanitarian instincts which are already none too strong and none too plentiful. Mr. Greenberg, a prominent worker in the Zionist Movement has recently commented on some proposed restrictions upon Jewish pauper immigration, and he said:

After reading these proposals, it occurred to me that if they had been in force in Judea 2,000 years ago the great founder of Christianity himself could not have entered Jerusalem, for He glorified in having "No visible means of subsistence."

Perhaps the Zionist Movement itself will help to answer a very distressing question.

King Menelik Likes American Policy A GOOD character is a commercial asset of no small value, and let him that standeth take heed lest he fall. The Emperor Menelik of Abyssinia, is said to have a favorable view of the American Government because he believes it to be innocent of the land greed from which some other nations are not entirely free. The result is distinctly advantageous to American interests and is an object lesson of the extraordinary power of justice in such international affairs in these and in dealing with potentates like Menelik. But nothing is so easily lost as a good reputation.

No Fraternity for Auckland Ministers ON a certain Sunday in the year it has been the practice for Auckland ministers of all denominations to exchange pulpits. This very small expression of Christian fraternity has now been forbidden by the Episcopal Bishop so far as his own clergy are concerned. He calls it "a make-belief in the expression of my faith." It probably is a make-belief, so far as he is concerned, like a good deal else that may be found in certain church practices. "See how these Christians love one another."

Herbert Spencer to the Japanese A VERY remarkable letter from Herbert Spencer to the Japanese nation has just been published. The message of the great philosopher to Japan was pointed and concise—"keep other nations at arm's length as much as possible." Herbert Spencer was acquainted with Europe and he knew what effect the falsenesses of modern civilization would have upon an Oriental nation too emulative and too imitative to discriminate between the worthy and the unworthy, the fruit and the thorns.

Boers Want Colony in America CERTAIN Boer delegates are still searching for land suitable for the settlement of a number of their people who are anxious to leave South Africa. At the present time Mr. Luther D. Wishard is on his way to Sonora, Mexico, with this object in view, and he intends subsequently to examine the lands in Oklahoma and Indian Territory.

Jack Frost and His Pictures

WHAT an airy, fairy, lace-maker Jack Frost would be, or what a wonderful goldsmith, if his materials were only filmy strands or beaten gold. They tell us there are not less than a thousand forms among the frost crystals on our window-panes, every one of them exquisite and perfect in pattern. It is not hard to believe that this is true when we get up these mornings (not in Loma-land, to be sure, for it's always summer here), and trace out the wonderful forms that Jack Frost has left upon our window-panes. There are stars and comets, and then that exquisite leaf form, which the old French goldsmiths in the days of Louis XV loved to model about the base of some jeweled vase, and which the Greeks called the *acanthus*, and placed on their temples. Then there is the strawberry form, and the queer little overlapping arcs that make us think of Siegfried's dragon, so much are they like scales—filmy, waving lines, as if the sea had washed over the panes—coral forms and all kinds of sea-weed forms, and beautiful maidenhair ferns and many, many others. How does Jack Frost do it? When we look at a frosted window-pane that was so clear and clean the night before, we feel sure that the pictures he traces are first cousins to the wonderful pictures that our scientists are making of voice tones. Do you suppose that Jack Frost just *sings* them upon the window-pane? A. V.

The Soldier and the Bird

IT is related of General David S. Stanley that at one time, while leading a force across our great plains, he suddenly gave the order "Left oblique!" The broad column swung at once outward to the left, a column of more than two thousand men, with many horses and wagons; and as the soldiers passed, there on the ground, by their side, they saw a tiny bird's nest. In it were wee nestlings and above it the mother-bird hovered, chirping in the greatest anxiety. And then they knew why General Stanley had given that order. The wee bird's nest had been built on the ground directly in the line of march. But General Stanley was bringing his men across the plains to fight for a principle, and it was not in his heart to injure, wantonly, even a little bird. There must have been in his heart a great love for the helpless and beautiful among God's creatures. Soldiers *should* be compassionate. E. H.

How Boys Can Help

by a Young Student of the Raja Yoga School

MOST boys do not realize, at the present day, that they have the responsibility of the future resting on them. They have got into the way of thinking that they must wait until they are grown up before they can do any good or be of any use. This is a false notion. When we are young we are sowing seeds and we will reap the harvest from them when we are men. So it all depends upon the early years of his life whether a boy will be of use to humanity or not.

Great deeds spring from the small, unseen duties of life being carefully and conscientiously performed. A boy who has been taught something about the laws which govern his being, as we are taught in the Raja Yoga School, knows how true this is. And these laws can be, and *are* taught, to little children not more than three years old. A boy so taught has a high ideal to work for and Raja Yoga shows us *how* we can work for it in our school, or in our home, or wherever we may be. And working for this ideal leads us to make our surroundings bright and clean and beautiful. How can boys or girls expect to help their nation, or be of any great use to humanity if they do not build up a simple greatness at home?

The way to attain to this ideal is to strive constantly to build character and to build it on a firm basis. And the boy who tries every day and does not get discouraged or selfish will succeed.

GREAT BRITAIN was the first country to issue postage stamps. That was in 1840. Brazil came next, and in 1844 Switzerland followed. France did not issue stamps until 1849.

It is interesting to know that some years before our own government adopted postage stamps, postmasters made private issues for their own convenience. This was done also in Switzerland.

LITTLE six-year old Lizzie Smith of England, has recently received a medal from the English Humane Society for rescuing her brother, a tiny baby boy only fifteen months old, from a burning house. She fought her way through smoke and flame with the little one in her arms and saved him, although she was burned herself. She must have known about Raja Yoga, or heart-light—don't you think so?

CLIMBING UP THE HILL

HAPPY-GO-LUCKY and Faint of Heart
Set off on a journey with Only Try.

And each was ready to do his part
While the sunny hours went merrily by,
But when the shadows were growing long
And the crickets chirping their evening song
Up rose like a barrier mighty and strong
A rocky hillside aigh.

Said Happy-Go-Lucky, "Suppose we wait,
And somebody passing may give us a ride."
"We shall break our necks if we climb so late!"
Poor Faint of Heart, in a panic cried.
But Only Try, with a resolute eye,
Looked up at the hill and the sunset sky.
"There is plenty of time," said Only Try,
"And the moon is full besides."

So Only Try, without stay or stop,
Went clambering up over rock and root.
Till he stood at last on the hill's green top,
In a beautiful clearing, with flowers and fruit.
But the other two are waiting still,
For nobody lives or ever will
That can reach the top of the smallest hill
By sitting down at the foot!

SILENCE

by SWINBURNE

BUT ye, keep ye on earth
 Your lips from over-speech;
 Loud words and longing are so little worth,
 And the end is hard to reach.
 For silence after grievous things is good,
 And reverence, and the fear that makes men whole,
 And shame, and righteous governance of blood,
 And lordship of the soul.
 But from sharp words and wits men pluck no fruit,
 And gathering thorns they shake the tree at root,
 For words divide and rend;
 But silence is most noble to the end.

Optimism---True and False

THERE is an ever greater tendency among our public men to examine the watchwords which we have nationally adopted, to ascertain if they still bear the meaning which was originally intended, and whether we may not reasonably search for still higher ideals to guide our national life. President Woodrow Wilson, of Princeton University, has referred to some of these points in a recent speech upon Americanism. Optimism is, of course, a supreme virtue. It is itself creative of the conditions which it anticipates, but it ought to be based upon something more definite than a calm oblivion to the actual dangers which threaten. True optimism recognizes all perils with the assurance that they can be rightly overcome; it is productive of vigorous action and not complacency. President Wilson says "we now have things on a national basis which does not seem at present to be threatened by any catastrophe. It is true that we have anarchy to deal with, but this is no evil peculiar to us." Now, our ideal has certainly been lowered and not raised if we can console ourselves for the evils which we have by the recollection that other nations possess them also. We are accustomed to deplore the conditions which rule elsewhere and to attribute to them the social wrongs from which we hope to be free. A threat is not less dangerous because it is directed against many, and if the disorders which afflict some other countries are found also to exist in America, we must necessarily ask if they spring from the same cause. If they do, then have we not failed to establish our claim to introduce a new social order which shall make these things impossible? For America to plead that she is no worse off in this respect than some of the countries of Europe is not a position which America ought to occupy.

President Wilson speaks well when he says that we have entered the present century with a big question-mark staring us in the face. "We pride ourselves," he says, "on our liberty, but if what we call liberty is found in the cities it is a peculiar liberty." It certainly is—a very peculiar liberty. It is a liberty which consists of wholesale oppression and general license, and the learned President is justified in saying that the makers of the Constitution would fail to recognize their handiwork in its present condition. The Constitution was framed by men who believed that the preservation of liberty would remain instinctive in the American heart. They supposed that they were drawing up an instrument which would be a guide to those who were determined to possess liberty and to confer it. They were far too wise to suppose that any constitution could either create or preserve a freedom which was not based upon the continuing intention of those to whom that constitution was given. The Constitution is a memorial of that intention, and it has no abiding efficacy outside of it. Does that intention still persist, or have we learned to look upon the Constitution as an amiable obstruction which can be climbed over, through, and around in a hundred different ways? The Constitution ordained freedom, but have we freedom? Is the individual at liberty to effectively participate in the government of the country in the way in

which it was intended he should participate? Is the individual at liberty to entertain and to express his religious opinions free from all pains and penalties? We know very well that he is not, and that if he avows unpopular religious views he will be immediately and deliberately crushed by a carefully constructed Juggernaut against which there is no appeal. Has the individual any remedy against the outrages of some few sections of the Press? Practically, he has no remedy whatever, and we all know it.

We look back with pity upon the old nations who were despotically governed by crowned tyrants. But the fact that the government was centered in one individual tyrant was itself a check upon abuse, and history is full of instances of the way in which that check operated. Rome grew tired of Nero as England did of Charles I and the Stuart Dynasty. The tyrannies of today have many heads, and they are all safer than was that of King Charles. Today we have no remedy whatever against oppression in its worst forms, and with such an outlook we cannot share in the false optimism which sees only a cloudless sky and a clear horizon. We do, however, profess that better optimism which recognizes many and grave dangers, but which is confident of victory, because it relies upon the divinity of man and an innate national nobility which will not fail for long to assert itself.

X.

A Plan for Emptying Hell

IN one of George Macdonald's novels, *Robert Falconer*, a singularly noble-hearted boy, brought up in the strictest and narrowest Calvinistic and predestinarian line, proposes a plan for emptying hell, which perhaps has not its parallel in literature.

The boy is distressed at the thought of the myriads in hell, doomed to be there for all eternity; and he cannot imagine the possibility of his own happiness in heaven whilst knowing of the torment going on below. He is discussing the matter with his old grandmother, whose heart (to her great remorse) constantly affronts her rigid creed. Apologizing to the author for slightly simplifying the Scotch for ordinary readers, here is the plan: The preliminary line of reasoning starts from his perception of the fact that in life the innocent have frequently to suffer for the sins of the guilty. This he submits to his grandmother, who says:

Ay, laddie, many a one has to do that. But not to make atonement, ye ken. Nothin' but the sufferin' o' the spotless could do that. The Lord wadna be satisfied with less nor that. It must be the innocent to suffer for the guilty.

But (says the boy), gin we gang to the good place, we'll all be innocent, willna we, grannie?

And being thus made innocent, we are in position to satisfy the requirements of "the Lord," and can ourselves make an efficacious sacrifice.

All them that sits doon to the supper o' the Lamb 'll sit there because Christ suffered the punishment due to their sins—winna they, grannie?

Doobtless, laddie.

But it 'll be sair upon them to sit there eatin' and drinkin' and talkin' away, and enjoyin' themsel's, when every noo and then there 'll come a sough o' wailin' up from the ill place.

What are ye drivin' at, laddie? I canna unnerstan' ye.

So the lad unfolds his plan. He will first take care that he himself gets into Heaven.

Weel, once I'm in there, the verra first night I sit down wi' the lave o' them, I'm goin' to rise up and say—that is, gin the Maister, at the head o' the table, disna bid me sit doon—an' say: "Brithers an' sisters, the whole o' ye, hearken to me for ae minute; an', O Lord, gin I say wrang, just tak' the speech from me, and I'll sit doon dumb and rebukit. We're all here by grace an' no by merit, save His, as ye all know better nor I can tell ye, for ye hae been longer here nor me. But it's just ruggin' and tearin' at my heart to think o' them that's doon there. Maybe ye can hear them. Now, we hae no merit, an' they hae no merit, an' what for are we here and them there? But we're washed clean and innocent now; an' now, when there's no stain lying upon oursel's, it seems to me that we might bear some o' the sins o' them that have over many. I call upon each one o' ye that has a frien' or a neebor down yonner, to rise up an' taste nor bite nor sup more till we gang up all together to the foot o' the throne, and pray the Lord to let us gang an' do as the Maister did afore us, an' bear their griefs an' carry their sorrows doon in hell there; gin it may be that they may repent and get remission o' their sins, an' come up here with us at the long last, and sit doon with us at this table, all through the merits o' our Savior Jesus Christ, at the head o' the table there. Amen."

This is the plan. And we doubt not that there is many and many a Christian of Calvin's gloomy creed who would gladly make any sacrifice here or hereafter if they had any hope in its efficacy.

STUDENT

WISHING

by ELLA WHEELER WILCOX

DO you wish the world were better? Let me tell you what to do.
Set a watch upon your actions, keep them always straight and true;
Rid your mind of selfish motives, let your thoughts be clean and high;
You can make a little Eden of the sphere you occupy.

Do you wish the world were wiser? Well, suppose you make a start,
By accumulating wisdom in the scrap-book of your heart.
Do not waste one page on folly; live to learn and learn to live.
If you want to give men knowledge, you must get it ere you give.

Do you wish the world were happy? Then remember day by day
Just to scatter seeds of kindness as you pass along the way;
For the pleasure of the many may be oftentimes traced to one,
As the hand that plants the acorn shelters armies from the sun.

STUDENTS' COLUMN

Conducted by J. H. Fussell

[CONTINUED FROM FEBRUARY 14TH]

Question

How can you expect such an all-embracing science and philosophy, as Theosophy is claimed to be, to reach the masses?

Answer

(3) It is unquestionably true that the masses need—not only something which they can readily understand

—but something which explains life, and also meets the requirements of everyday existence.

Dogma and belief play but a small part with the people, and they have drifted away from the influence of the churches: at the same time the ears of the common people are open to anything that savors of truth, as witness the many forms of "new thought," which find so many followers. The people are ready for the truth, and their understanding is better than they are generally given credit for.

The form of the question implies that Theosophy is a very complicated and difficult subject. As to this a great Teacher has said, "It gives the greatest minds their fullest scope, yet . . . it will not overwhelm the understanding of a child." Its fundamental principles are easy to understand, they are reasonable and just and meet the requirements of daily life, as well as awaken the highest and best in man. There is nothing in Theosophy itself to prevent the masses understanding it and making it a power in their lives.

The question, therefore, resolves itself into one of methods, and of these there are many. There is continually being directed—in this as well as in other countries—the promulgation of Theosophy, pure and simple, and this is reaching not only the cultured and educated, but the masses in ever increasing numbers, for the application that is being made is of such a nature as to be of practical guidance and support in daily life.

But our greatest work perhaps is being done in the Raja Yoga Schools for the children, the success of which is admitted by all who take the opportunity to inform themselves as to the results of the few years' work—in building of character and the conferring of a high-grade of scholarly attainment.

Besides the direct methods, there are the indirect, which are seen in the leavening of science, philosophy, literature and even sectarianism, with Theosophical principles: all this reaches the masses, for the influence of the cultured and educated upon the people is very strong. These indirect methods do not promulgate Theosophy by name, nor do they impart a knowledge of it with any degree of completeness, yet they lift men's minds out of the narrow grooves of thought of the past, and prepare the way for a fuller exposition of that Theosophy which is complete in itself and sees no unsolvable mystery anywhere. R. C.

(4) Surely it is only through an all-embracing philosophy and science that the masses can be reached. They are waiting for something that will deal with the problems of daily life, something that reaches right into their homes, and every day common-place affairs. It is through the practical application of right philosophy and science, which Theosophy alone can give, that the hearts of the people can be reached and men and wo-

men aroused to a better understanding of themselves and of the daily perplexities of human life. When the students of Theosophy can show them the philosophy of pleasure and pain, joy and sorrow, and how to fill the whole of life with joy and happiness, by right living; when they can demonstrate the nobleness and dignity of labor, done with a spirit of love and helpfulness, then will they turn towards us and our philosophy with outstretched hands and demand to be shown the way. And all this is being done and the students of Theosophy are learning to live such a life under the guidance of Katherine Tingley.

There is no phase of life which Theosophy can not reach. It applies to the rich as well as the poor, oftentimes it is those who have felt the sorrows of life who are more easily reached, for oftentimes they have already learned to look upon their circumstances from a philosophical standpoint, many times even trying to get happiness out of their very misfortunes.

The beginning, which has already been made, to make Theosophy practical in daily life, is even now arousing the minds of the people, and it is just this practical application of Theosophy that alone can reach the masses. They want to see and know the results of this application, and when they realize that it is possible to live such a life as Theosophy teaches, full of joy and happiness, also that health and happiness of people and nations are the result, the seed sown will bring forth bountiful harvests. A. E. W.

(5) To this question the first reply that might occur to some persons would be the answer conveyed in the inquiry, that is, that we expect to reach the masses because Theosophy is so "all-embracing." In fact it has well been designated as a *Universal Religion*, as it is adapted to the needs of all.

For the past ten years there has been a tremendous and wonderful increase in all the activities of life from the fact that the time had arrived when a rebirth was to take place of what has always been, for never were there truer words uttered than, "There is nothing new under the sun." With this old-new order of things there is a great tearing down and a general casting aside of many so-called "precedents" that have tied the hearts, minds and hands of the people.

When such a time arrives in the world's history at a casual glance it may well be called a *dangerous situation*, but why not look deeper and see for ourselves that the value of precedent, outside self-complacency, much so-called science, the getting together of money for other than legitimate uses of life and many other objects in life, rest on a most precarious foundation inasmuch as they do not rest on *Law*, but a *fleeting, ever-changing order of things*. But let us look deeper and we find that we can make it a harvest-time for the gathering in out of the chaos of that which is good, and there is much, and apply it for the good of all.

And Theosophy is already doing its work of uplifting the world. The seed planted and nurtured by H. P. Blavatsky, W. Q. Judge and Katherine Tingley shows itself in the plant now reared, for the shackles are falling off the minds of the masses—the leaven has been doing its work. G. A.

Theosophy is that ocean of Knowledge which spreads from shore to shore of the evolution of sentient beings; unfathomable in its deepest parts, it gives the greatest minds their fullest scope, yet, shallow enough at its shores, it will not overwhelm the understanding of a child.—W. Q. JUDGE

THE SOUL'S TRAVELING

by ELIZABETH BARRETT BROWNING

I DWELL amid the city ever,
The great humanity which beats
Its life along the stony streets,
Like a strong and unassuaged river
In a self-made course
I sit and hearken while it rolls.
Very sad and very hoarse
Certes is the flow of souls:
Infinite tendencies
By the hute prest and pent,
In the infinite turbulent.
How we tremble in surprise
When sometimes, with an awful sound,
God's great plummet strikes the ground.

THE higher the mind, it may be taken as a universal rule, the less it will scorn that which appears to be small or unimportant. Greatness of mind is not shown by admitting small things, but by making small things great under its influence. He who can take no interest in what is small will take false interest in what is great.—*Ruskin*

Hypnotism in the Sunday-school

AMONG recent exports from the American continent is a certain gentleman who has now landed in England, and whose mission it seems to be to conduct a sort of revival in Sunday-school teaching. He has addressed various conferences of teachers on the subject of hypnotic suggestion as an aid in Sunday-school work. He has pointed out how impressionable is the mind of the child, and the extent to which this kind of hypnotism can be used for educational purposes.

We can well understand that nothing short of hypnotism could persuade the child of average intelligence to believe much that is told in the Sunday-school, but it is none the less horrible in the extreme that such abominable advice should be given in the name of religion. Would that it were possible to reach the ears and the understandings of the parents in time to prevent such reckless tampering with the minds of their children, and the almost certain and incurable mischief that must follow.

And yet how many parents are there who would act upon such a warning even were it possible to give it? There seems to be no limit to the covering capacity of a religious profession. It appears to be equally effective as a disguise for the fraudulent public company or for the moral vivisection of a child.

STUDENT

He who has an enemy for a critic is fortunate; he who has a friend for a critic is more fortunate; he who has himself for a critic is most fortunate; he who has no critic is entitled to our commiseration.

By keeping the mouth shut it is easier to keep the eyes and ears open.

POINTS OF WISDOM

from H. P. Blavatsky

THERE is but one Eternal Truth, one universal, infinite and changeless Spirit of Love, Truth and Wisdom.

There is one Light for all, in which the whole Humanity lives and moves and has its being.

The Universal religion can only be one, if we accept the real primitive meaning of the root of that word.

We are all brothers—by the laws of nature, of birth and death, as also by the laws of our utter helplessness from birth to death in the world of sorrow and deceptive illusions.

The "Christian" virtues were taught and practised by Buddha 600 years B. C., as other Chinese and Indian good men and adepts accepted and taught them to the multitudes thousands of years before Buddha. Why call them "Christian," since they are universal?

It is not "the fear of God" which is "the beginning of wisdom," but the knowledge of self which is wisdom itself.

He who would profit by the wisdom of the universal mind, has to reach it through the whole of Humanity, without distinction of race, religion or social status.

Truth can never be killed: hence the failure to sweep away entirely from the face of the earth every vestige of the ancient Wisdom.

In the Twentieth century of our era scholars will begin to recognize that the Secret Doctrine has neither been invented nor exaggerated, but simply outlined.

A Native American Volapuk

THE following very interesting passage is copied from the preface to a dictionary of the Chinook jargon, which is the trading language in general use between whites and Indians all through Western Canada and the Northwestern United States. It is also used more or less by the Chinese of the same region. The parentheses are ours:

The language of the native Indian is seldom heard (by strangers). The progressive English is forcing its way even into the lodges of the most savage tribes, and many of the original Indian dialects of the coast, of which Chinook was the most important, have disappeared entirely with the nations that spoke them. It is a remarkable fact that the Indian tribes, occupying so small a territory, and compelled to traffic, travel, make war and carry on such intercourse as their nomadic life required, spoke languages as different from one another as modern Spanish is from English. These languages were almost as numerous as the tribes themselves. In the strip of territory from the mouth of the Willamette river to the ocean (about fifty miles) at least five distinct languages were spoken, the Wahkiakum, Cowlitz, Multnomah and other tribes using among themselves only their own tribal language (as most of them still do); but in voyages along the rivers or in hunting parties in the mountains, the Wasco Indian who happened to meet the Clatsop—one from the mouth of the Columbia and the other from Central Oregon (200 or 300 miles away)—made himself perfectly understood in this accommodating jargon, which was in use from the Rocky Mountains to the Pacific as a trading language.

We venture to predict that such a universal language will come into use when "the great civilized nations" learn to live with as little international friction as these "barbarous tribes" did.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

No Heaven-bent Mob for Him

At an evangelistic service at Glasgow, the other day, the preacher at the end of his address cried: "Now all you good people who mean to go to heaven with me, stand up!" With a surge of enthusiasm, the audience sprang to its feet—all but an old Scotchman in the front row who sat still. The horrified evangelist wrung his hands and addressing him, said: "My good man, my good man, don't you want to go to heaven?" Clear and deliberate came the answer: "Aye, Aww gangin' but no wi' a pairsonally conducted pairty.—*St. James Gazette*

► A Grave International Situation ►

WE should have to turn back many pages, many chapters of history before finding an international situation of equal gravity to the present. The waters of human hate have risen as though impelled by some demon hand and the lilies of peace have disappeared. Two great peoples have cast their civilization into the crucible of war and the shock of their contending forces has created a military maelstrom of such colossal magnitude that all other nations are straining at the slender ties which bind them to peace.

Who can say what the end of it shall be or through what dark valleys of desolation humanity must pass before it shall reach the tranquillity which is founded upon fraternity and not upon the menace of its protecting armies.

There is nothing magnificent in most of the international quarrels of today. There is in them no trace of that nobility which has at times laid a redeeming touch upon the most ruthless wars. Men have fought for freedom until they have forgotten their common humanity, they have been stirred into conflict by the primitive passions which have demanded no excuse whatever for their display and no stimulus to their exercise. But today the nations fight as though they were soulless machines directed only by the mind of the money-maker, and the sentiment which calls itself

Unblushing Political Intrigue

patriotism is but the unwholesome effervescence of a collective greed. Political intrigue is so unblushing and its cupidity so unconcealed that the actual clash of arms is almost a relief from its base preliminaries.

Here at any rate is something we can understand, here at any rate is the ferocity of the wild beast triumphant and unashamed. The causes of war, of the present war and of all its possible extensions, are given to us glibly enough, in our daily newspapers whose omniscience is often tempered only by a desire to make confusion worse confounded and to add fuel to the destructive flames. But the true student will look further and deeper than the dispatches of foreign state secretaries and the wiles of the embassies. He will see that war is but an expression in its most brutal form of the time spirit, that it is but the Moloch which has been born and nurtured in our homes, our counting-houses and our pulpits and which has now grown so great and strong that it must be fed upon blood, triumphant in the desolation of broken hearts and the ruined homes of the poor. The burden of this guilt and of all guilts which are yet to come does not rest upon parliaments nor upon governments. It is shared by every human unit whose heart has been soiled by hate and strife and there is not one of us exempt. Not from the blue sky comes the tornado

► Upon All Rests the Guilt of War

but from the piled up clouds which frightfully obscure the sun and which give warning of devastation before the thunder breaks. Up from every civilization the vapors of human hate and greed and oppression have steamed for these many years, up from the heart of every human being who has hated his brother. The storm center may circle hither and thither and the lightning may strike now here and now there, but its force is a world force, created by the world and destined to be the scourge of the world.

Inasmuch as upon every one of us lies the guilt of war as well as its retribution, unto every one of us is given the power to enforce its cessation. No calamity is altogether without its crown, if it bring with it the realization of responsibility, not alone for the support of peace congresses and the persuasion or compulsion of others but for the establishment of concord and fraternity within the boundless sway of our own hearts. Whosoever hateth his brother is a murderer. He has added his portion to the sorrowful sea of strife which encompasses the world and whose waves break in ruin upon unseen shores. If we will not learn the fraternity of joy then must we learn the fraternity of grief. Even through the iron mouth of guns the great law speaks to us and in the cry of the war-orphan is the judgment and the inexorable doom.

Unto each man comes a moment when every act and every uttermost hidden thought springs to sight from the dark caves of memory, to stand in accusation or in defence before the soul. How great shall be our condemnation if there be then any record of opportunity wasted or misused when by thought or speech or act we might have aided the cause of peace upon earth, which is the outcome of that other inner and individual peace which passes all understanding.

STUDENT

Frontispiece—An Irish Village

THE illustration on the cover page of the NEW CENTURY PATH this week gives a typical view of a street scene in a village in the south of Ireland. There is a peddler's cart in the foreground, and the usual complement or sunny-faced children are in sharp contrast against the clean, white walls of the cottages.

"Onward! Christian Soldiers"

THE following words conclude a farewell speech recently delivered by an European Prince to some soldiers on the point of embarkation against a "savage" foe: "May every bullet find its mark! May God be with you!"

Egypt---Past, Present, & Future

(From our Special Correspondent)

LUXOR, EGYPT, 25th January, 1904

SUPPOSING one, after journeying up the Nile to the confines of what was ancient Egypt and then back to Cairo again, were asked to give his impressions of the Egypt of today, what could he say that would be distinct from both guide-books and from what former travelers have written on the subject? Little; but supposing again that such an one looked out upon the country and brought it in his mind to compare with the hidden life of those long passed days of the Pharaohs when Egypt was great and mighty and the mother of not only all we have today but also the child of that unknown past whose relics are now slowly coming to light. In that field of thought might it not be found that men know not all? To-day the towering chimneys of sugar refineries replace the obelisks of the past raised by people who thought more of the mysteries of life than of its outer garment, darting tapering fingers to the heavens and offering eloquent testimony to the thought and wisdom of the centuries. Whether one wanders through the desecrated temples of that land, whether one ponders upon the secret meaning of the holy signs engraved upon their walls, whether one gazes upon the profound tombs and the bodies of the dead that they hold, but one thought is uppermost. What was the life, what the wisdom, what the vitality, of this ancient people who built so grandly, who thought so nobly and who made so great an impression upon the mind of the world? There is a feeling of compassionate power, a sense of assurance produced upon one by all this, and the wonder of it all is that the further back one goes into the life and achievements of these old Egyptians, the finer becomes the art, the more majestic the architecture. The fact is that Egypt has no known beginning. She marvelously and wonderfully springs from the thought of the infinite in the full bloom of her national existence.

Whence came all this? It is history that when the first known settlers appeared upon the banks of the Nile they found there two races living side by side, one fair and the other dark. Yet the ancients of this land traced their history back to Menes the first human king, right into the heroic and divine ages. Now has America of prehistoric times no part in this? If not, how explain the multitudinous similarities which are found in religious symbolism in the two Americas, and even in exactly the same manner of embalming the dead whether in America or by the Egyptians, as proved by the testimony of Herodotus and by the mummies themselves and by the exhumed dead of the two Americas? Aye, the voice of history speaks with a very certain sound on this subject but facts speak with an even more certain and positive voice and the day will come when these facts will no longer brook contradiction. In those days there will be a revelation and many a monument raised to bigoted and biased genius will topple from its base. One who knows says that America will prove to be a book of revelations for the world, and truly if there be such a thing as sequence and evolution's onward march that book is now about to be opened. Surely everything points that way. The days may come when the study of Egypt's temples and hidden wonders may be "the study of fools," as that same teacher has said, for there will be fountains of human knowledge laid bare in America while here will be only—however great the gap—a reproduction of what went before elsewhere. Who lives will see.

Then the Egyptians of today, what a sorry rôle they play! What a contrast with their mighty fathers, these wretched fellaheen. Their one hope in life seems to be to get as much backsheesh as Allah will send them in his great mercy. And they look upon the hordes of Cook's and other locusts who swarm over the land as a providential dispensation of the Most High. But it would be unfair to ignore some redeeming points and more agreeable qualities which the fellaheen has. He is bright, astonishingly quick to grasp a truth and is ensouled with a spark of spiritual fire which leavens and purifies him. How often have I not wished that the advantages might be given to them that are given so bountifully to others at a certain place on the Pacific coast, in Cuba and elsewhere. They are the most promising type I have ever seen and these unfortunate people are deserving of better things. What is more, they will get them too, that I feel and know.

The English supervisory direction of affairs has done inestimable things for this miserable land. Lord Cromer's actions and suggestions to

the native heads have been so far-sighted and beneficent that one may well think he has obeyed a higher impulse and acted upon a nobler feeling of humanitarian instinct than is common to men.

What will be the future of Egypt? An age old prophecy says that her star will some day rise again and I fully believe that prophecy. Her recuperative power is astonishing. Her people are patriotic, industrious and very intelligent; her climate for the greater part of the year is simply ideal and she is almost absolutely protected from foreign aggression. Her future will again be a brilliant one and may be a world forming one, but that not before epochs have rolled from time into eternity. G. D. P.

Silvela on the State of Spain

FOR very many years Señor Silvela has occupied a position in Spain which gives him a special competency to speak with authority of the condition of the country. He has recently allowed himself to be interviewed, and the opinions which he then expressed are worthy of much attention, although those who are accustomed to look below the mere surface of events will see in them a pessimism which is not justified. He does well to speak with a profound regret of the deteriorating influence of the bull-ring and of the public lottery, and he then goes on to say:

I wished to govern Spain as an European State, as a country cultured and free; but I found at all times concealed enmity where I naturally looked for strong and loyal support. . . . We possessed at one time men of war, which appeared to be men of war, and sailors appearing to be sailors. With this double deception people feared us a little. Today, however, no one fears us, and no nation can continue to stand alone without inevitable decay. No republic is possible without Republicanism, and no great country without patriots. Patriotism is disappearing in Spain because the country costs money. . . . Finally, the Spaniard of today is either a bull-fighter or desires to become one; anything in fact, except a Spaniard.

Señor Silvela is despondent because he is justifiably disappointed. He does not see that his pessimism is contradicted by the very turmoil into which his country is now plunged. There is no effervescence without energy and while Spain is, of course, suffering from her own peculiar malady, her vigor is proof that national death is still a long way off. Turmoil is better than apathy, and the unpleasing features which are so apparent in her national life, are but as the scum which must rise to the surface, while a wholesome regeneration is in process below. X.

Welsh Discovery of America

IT seems that there are more claimants to the discovery of America than is usually supposed. There is a story in existence that about the year 1140 the Welsh Prince Madoc crossed the Atlantic and landed in Florida. Soon afterwards he returned to Wales and organized an expedition of about 300 men who once more crossed the ocean, reached America and founded a colony. Only one of his followers came back to Wales and his story was recorded and preserved by the bard Gwyllon Owen, and the manuscript is said to be still in existence.

The story has never lacked believers both in Wales and in America. Catlin, who lived among the Mandan Indians, firmly believed that this tribe was of Welsh origin. They alone of all Indian tribes used the coracle, and the manuscript in question specifically states that Prince Madoc introduced the coracle among American Indians. The Mandans, moreover, were of fair complexion and had red wavy hair like the Welsh. They were proficient in making glass beads and similar civilized ornaments and a great many of their words were identical with the Welsh language. The Rev. Benj. F. Bowen is another authority, who examined the story and accepted it as true, and his book, "America Discovered by the Welsh," published in 1876, contains a large amount of very interesting evidence. STUDENT

If there is one thing on which the modern advanced thinker prides himself, it is his open mind. . . . The Bible is probably inspired, but probably also it is not; free trade is unquestionably sound in theory, but so is protection; . . . the moral law should always be supreme, but we need not apply it strictly in practice. In short, our minds are not only open, but open at both ends. . . . We no longer hold to any tenet fiercely enough to burn the infidels; but what is more, we are so doubtful about our own creed that we will not even back it with our money, let alone going to the stake for it.—*The Nation*.

Some Views on XXth Century Problems

Modern Relics of the Inquisition

DURING the last week the authorities of the city workhouse of Kansas City state that they have wrung from prisoners, confessions which laid bare a plan to escape, in which fifteen or twenty of the inmates of the institution were implicated. Confessions were wrung from them by such means as were used in the Spanish inquisition. H. A. Couch, Thomas Brennan, Joseph Morely, Walter Allen, Charles Evanston and his brother Fred Evanston were separately placed in the dungeon and were tortured until they told all they knew. — *Syracuse Telegram*

In the most casual manner the clerk in charge of the prisoners recently gave an account of the way in which they were tortured. It is almost impossible to read the account with anything like equanimity, so horrible is it. The cell in question is a small circular room, just high enough to allow a man to stand erect. The victim's manacled hands were fastened to the wall, level with his face, by means of a short chain passed through the handcuffs. The prisoner, of course, cannot stand up, or lie down, or even kneel. He is fed on bread and water. If he becomes so tired that he must relax his muscles, he is permitted to let his body hang loosely from his suspended arms, while the iron handcuffs cut into the flesh. Said the city clerk:

It is nothing. Why, I have kept a man in there as long as forty-eight hours. Most of them are game, you know, and we just have to keep them in there until they think they are dying; and when a man gets in that condition, no matter how tough he is, he is ready to tell everything he knows when you carry him out; and if he shows the least reticence, back he goes. I tell you, it is fine.

But quite outside of humanity [the reporter asked him], What about your responsibility? Suppose these men die under your treatment?

O, we have the city physician examine him. We don't leave them there until permanent injury results, of course.

This is the Twentieth century, and these are some of the methods by which we unmake certain products of our civilization, after carefully making them what they are. As Samanthly Allen used to say:

Confessions Extracted by Tortures

We spend all the money we take in on high licenses buying ropes to hang the criminals we make.

What hope is there for a civilization that will tolerate such things as these, that will place over our criminals a keeper who says, "It is nothing, we have a city physician come out to examine them!" And after all, what is the result of this? Do they get the truth? If they do, there might be a shadow of an excuse, but they don't. Did Galileo tell the truth under torture? One cannot think of human torture without recalling that scene in Joan of Arc's dungeon when Cauchon, the despicable Bishop of Beauvais, threatened her with torture if she did not answer and "tell the truth." She had been for weeks suffering under the questioning of her Inquisitors. This was to be the climax. Said Cauchon:

There is the rack and there are its ministers. You will reveal all now, or be put to the torture.

And then she made that answer that will last as long as time; which shows the absurdity of torture, the awfulness of it, and its futility:

I will tell you nothing more than I have told you, no, not if you tear my limbs from my body, and bear in mind that even if, in my pain, I did say something otherwise, I would tell you afterwards that it was the torture that spoke and not I.

She laid her hand upon a truth as old as the world. That was centuries ago. Have we not learned by this time?

We pretend to be very humanitarian in our prisons, but in some of them we make a dead-set determination to get the truth, the whole truth, and nothing but the truth, the excuse for more diabolical cruelty than the average mind can take in and keep its balance. That is why the vivisector tortures dumb animals, to get at the truth about something—or nothing; and that is the excuse we make today for tortures that would have shamed the dungeons of medieval Europe. We are after "the truth," and yet the simple fact is, as Joan of Arc declared, that words spoken under torture are always valueless. "It is the torture that speaks and not I."

The True and the False Education

IN Loma-land every one learns to be practical and to convert his theories into deeds. Thus it is a school in which true education is gained—education in the art of living. In the Raja Yoga Schools for children the same thing is true: there also education in real life is considered the mainspring, practical knowledge is made to keep pace with theoretical learning and the children early learn to act.

All this is well-known to those who have studied the ideals and methods of life held and carried out in Loma-land, and there is no need now to more than mention it sufficiently to introduce our main topic. In Loma-land all work is deemed as equally honorable and valuable, and every student takes his share of the general work necessary to a common life. This would perhaps be of small account were it not that Loma-land is setting a pattern which the world will surely copy. That the world is crying out for such a lead as we can give it, is sufficiently evidenced by the voices that reach us from the world. Among those is an article in *The Philistine* for January, from which the following is quoted:

By separating education from practical life society has inculcated the vicious belief that education is one thing and life another.

I will never be satisfied until one-half of the curriculum at Harvard is devoted to doing things, instead of merely talking about them.—*President Eliot*

The preacher who is separated by education and custom from the world of useful effort, hasn't anything worth telling on Sunday.

The best way to learn to be useful is to be useful. To take a young man from life for four years and send him to college, in order to educate him for life, is to run a grave risk that you will not get him back into life. The colleges are constantly graduating incompetent people, and this will continue until men get a living and an education at the same time.

To do a certain amount of manual labor every day, should be accounted a privilege to every normal man and woman.

To work intelligently is education.

To abstain from useful work in order to get an education, is to get an education of the wrong kind, that is to say, a false education.

The chief error of the colleges lies in the fact that they have separated the world of culture from the world of work.

In short, the world is tired of false education, which separates learning from practical life, making the learned men useless and the workers ignorant. It is crying out for some one who can make life once more a glorious whole for each one:

For the man who can weld Life and Education, the laurel awaits.

Some Queer Reading for Children

THERE is a curious bit of reading in a recent number of a magazine intended for boys and girls. It describes the new rifle of the United States Army. This weapon, it appears,

will shoot a single bullet through the bodies of fifty-five men formed in a straight column all facing its muzzle, the nearest man being fifty-three feet away. At a distance of 1500 yards it can, with one of its little lead projectiles, mow down twenty-three men; at 1000 yards, thirteen men; at 1500 yards, six and one-third men. According to a law deduced by ordnance experts, the fleshy part of a man's body, from front to back, offers the same resistance to a bullet as does a plank of white pine one inch thick. This has been demonstrated by shooting bullets through the corpses of men and through targets of the wood mentioned from various distances—

and so on, three columns of it. The rifle is evidently a good one; but does the description of it, as above, make a very improving couple of pages' reading for a lot of boys and girls whose doings the paper is designed to chronicle? Need they be introduced to these gruesome details in a magazine for their own reading?

Immediately following this article is a poem by Whittier, commencing:

To weary hearts, to mourning homes,
God's meekest Angel gently comes.

A large proportion of the homes would doubtless be mourning the work of the rifle eulogized on the preceding page.

STUDENT

Art Music Literature and the Drama

The Architecture of Our Great Cities

YOUR Athletic Association Building is two Venetian palaces, one piled on top of the other; that warehouse on the Lake Front is the Campanile with the top cut off; two buildings that might stand in Damascus are shown in the upper and lower parts of your Medinah Temple—and so it goes. But the worst is your Desdemona house on the Lake Shore Drive. The house of Desdemona from which this was copied was built in Venice in the Fourteenth century. In the Eighteenth century its owner took the liberty of spoiling it architecturally because he wanted to enlarge the entrance and it is this spoiled building that you have reproduced in your city for a home.

It is in this fashion that M. Antoine Borel, a Parisian art critic, recently discussed the architecture of one of our great cities, and the shots certainly struck home. If there is one feature of our civic life that must seem ludicrous to the well informed it is the collection of architectural curiosities that make up portions of our great cities. Civic life means almost less today than it meant in some of the cities of medieval Europe.

Here and there efforts are made to reach something like harmony and unity in the design of say, a group of buildings in our parks, or the laying out of a long driveway, or possibly a block or two of houses. But the city as a whole just grows, and the man who feels like putting up a Venetian palace is never in the least disturbed if his neighbor builds a German Rathhaus over the way. Washington is one of the few cities which has a certain unity in its beauty. This is largely due, of course, to the general plan adopted in laying out the streets, and to the fact that private and particular prejudices have not been permitted to have full scope in the erection of every particular building.

It is absurd to talk of a more beautiful civic life until those who make up our cities are capable of working together on some one line. Why should our street commissioners and our park commissioners always be politicians? Why not elect on our Boards an educator or two, a landscape-gardener, a practical and well-informed architect, a sculptor, an artist, and a man of general culture who has traveled abroad and can bring to those of us who have not a great deal that we need—with one or two politicians, of course, just for leaven? And why not consider art as well as expense in the erection of our public buildings?

This does not mean that every building should be a palace. It means in the truest sense that every building should be fitted in purpose as well as in structure for the use for which it is intended.

If the truly useful is beautiful there can be no beauty in a structure which is obviously out of its proper environment. It is time we changed our fashion of copying Venetian palaces for livery stables and medieval dungeons for our homes. Let us regulate our desires by moral fitness. STUDENT

AN "Irish Folk-song Society" has recently been organized by prominent women of Ireland. Their purpose is to collect and publish the ancient airs and ballads of the Irish race and they will make special effort to have the airs published in the old traditional scores.

Fragment—Shakespeare's Environment

WE have yet much to learn in the production of our modern drama, and the greatest lesson of all is outlined for us by a single glance at the time in which Shakespeare lived and dreamed and worked. From among his own comrades he chose the actors for his dramas, and they, responding to the magical influence of the master in their midst, rose to heights undreamed of, often surpassing themselves in their performances, so that, notwithstanding the total absence of scenery and external aids, the production of these plays was often a revelation.

The mystery dramas of Shakespeare, pulsating with life—the vigorous, sturdy life of those times—are not the work of a student in his study, but that of an actor among his student-actors. Despite the unsurpassed depths of thought revealed in them, Shakespeare's appeal, first and last, is ever to the heart, rather than to the intellect.

A word, too, of the scenery among which these actors and comrades lived and worked. The Avon, on which Stratford lies, is a series of curves, dotted with little islets and having so gentle a current that one may row up stream almost as easily as down. The river, too, being level with its banks, enables you to glide between wooded slopes, or meadow-land, golden with buttercups, glorious with great elms and spreading oaks. Then the hedges of wild-roses, hawthorn and clematis—does any one, I wonder, outside of England, know what a hedge is like? The bright-hued kingfisher darts in and out among the overhanging willows, the tall reeds and rushes—it is a picture that enters your heart and stays there, like the smile of a friend.

May not the calm, the serenity, of these dramas be, in a measure, due to the fact that Shakespeare and many of his actor-friends spent the days of their youth beside the Avon, lifted and quickened by the very power of its sunlight and its peace?

ALFRED TENNYSON, from the portrait by WATTS

TO VICTOR HUGO

by ALFRED TENNYSON

VICTOR is poesy! Victor is romance!
Cloud-weaver of phenomenal hopes and fears!
French of the French and lord of human tears!
Child-lover, bard, whose fame-lit laurels glance,
Darkening the wreaths of all that would advance
Beyond our strait their claim to be thy peers!
Weird Titan, by thy wintry weight of years
As yet unbroken! Stormy voice of France,
Who does not love our England, so men say;
I know not! England, France, all men to be,
Will make one people, ere man's race be run;
And I, desiring that diviner day,
Yield the full thanks for thy full courtesy
To younger England, in the boy, my son.

M. REDON, architectural expert of the Louvre, Paris, has made the interesting discovery that the walls of the great art gallery are buried to a depth of nearly twenty-five feet. "It is as though some splendid statue had been standing for centuries covered with earth up to its knees." According to M. Redon, the hidden base resembles that of a magnificent palace and there are indications that a moat fifty feet wide originally surrounded the building. As soon as the requisite funds are forthcoming excavations will begin. It is three hundred years since the glorious Louvre has been seen as a whole.

THERE is in the museum of the Academie des Sciences of Paris an air violin. It resembles an ordinary violin excepting in the fact that the strings are acted upon by a current of air instead of a bow. The tone is said to resemble that of a French horn. Will the violin yet be classed among wind instruments?

HERBERT SPENCER, the philosopher, was devoted to music. In his youth he was somewhat of a singer, and even in old age and under the stress of ill health was a frequent attendant at concerts and operas.

HAPPY UNION WITH WIFE AND CHILDREN, IS LIKE THE MUSIC OF LUTES AND HARPS.

— Confucius

IT is a matter of record that, not longer ago than 1820, one Brouchet, who resided

near the village of Broughton,

England, led his wife to the cattle-market at Canterbury and requested the cattle salesman to sell her for him. The salesman declined, saying that it was somewhat out of his line, whereupon Brouchet hired a cattle-pen, led his wife into it by a halter and sold her before many hours to a Canterbury resident for five shillings. That was but eighty-three years ago, and in England.

The woman question, in its march through the ages toward the answer which the future holds, has passed through many phases and written for itself a varied and entertaining record. It is ordinarily believed that to find the custom of bartering wives one must go to the primitive tribes of darkest Africa. But it is really necessary to do no more than go back a hundred or two years in the history of almost any civilized country. It was not many hundred years ago that fair young English women came by the ship-load to Virginia, then just being settled, and were virtually sold to those who became their husbands, for so many pounds of tobacco. In England, among a certain class, the custom was continued until even the present century. In the *Times* of September 19, 1797, we read, "An hostler's wife in the country lately fetched twenty-five guineas. We hear there is to be a sale of wives soon at Christie's;" and a few months later the same paper records, among its news items, that "at the last sale of wives there was but a poor show, though there were plenty of bidders. One alone went off well, being bought by a Taylor who outbid eight of his competitors." Such sales were usually held in the public markets and market tolls were frequently collected similar to those charged for cattle. The woman was always delivered to the purchaser with a halter around her neck. In Birmingham, in the toll book kept in the Bell Inn, Edgbaston street, the following entry may still be read:

AUGUST 31ST, 1779.

Samuel Whitehouse, of the parish of Willenhall, in the county of Stafford, this day sold his wife, Mary Whitehouse, in open market, to Thomas Griffiths, of Birmingham, value one shilling. Signed, Samuel Whitehouse, Mary Whitehouse. Voucher, Thomas Buckley of Birmingham.

It is, of course, true that these instances have no weight as showing that the English people made any excuse for that sort of thing. The people undoubtedly belonged to that class from whom—while not criminal—almost anything may be expected. But the condition existed, and the better classes allowed it to exist, therein becoming sharers in the responsibility for this disgrace. It was, of course, a sign that the flame of the old ideals of woman's position had not quite burned itself out, and it would be a fertile bit of material for those who are still playing on the same old note of "woman's rights and man's wrongs." But there are two sides to every question and the woman question is no exception.

There was once a time—or tradition as well as archeological records err—when woman's position was that of man's comrade, co-worker, even teacher. She stood beside man, not his inferior nor his superior, not his rival nor his dictator, but his equal and his trusted friend. Just what happened of course we do not know, but something must have happened,

The Marriage Question

something terrible in its Karmic results. Woman lost her place and her power; she became in the eyes of man his inferior,

and man quietly placed his heel upon her neck and psychologized her into thinking that she truly was. From the first step downward the descent was swift and easy.

Today, nine-tenths of the disturbance that is in the very air we breathe is the result of the struggle made by the womanhood of the world to rise out of its old and degraded position and to regain, to a degree at least, the position it has lost. The instances quoted are only a few out of many signs showing the upward trend and the slipping away of the old order. One might easily condemn the men who led their wives to the cattle-market and turned them over to the highest bidder with a halter around their necks. But what of the woman who would submit to such a thing without protest?

These women were wives—possessions, of course—but still women—souls. There must have been a time in the life of each when she had it

in her power to awaken in the man whom she married the little spark of justice and compassion that slumbers in every heart. There must have been a moment of choice, a moment when it lay in that woman's power to decide whether the ways should go up or down, the ways of that journey which she and this man, her husband, should tread together. But the woman was ignorant, unthinking, absolutely without any conception of her own power, her life's possibilities, her own divinity. The moment passed, the opportunity slipped away. Instead of taking her place as that man's guide and comrade, she became his servant, his property, his inferior. It is a part of the law that it should be so, for it is of the law that those who do not seize the great opportunities that present themselves will be crushed beneath the Karmic results of that neglect. They may not err wilfully, but no hand can stay or turn aside the results of error, once made.

It is useless to depend on laws alone or public sentiment alone or any outer thing to bring

the womanhood of the world to a realization of its true position. The only hope lies in awakening within the hearts of women themselves a living, glowing assurance of their own divinity, the infinite power of their souls *if they will but claim it*. Laws may do something to adjust matters after women have fallen into pain through ignorance or some mistake, but what we need more is something to prevent the mistake being made. The divorce court at thirty is a poor substitute for the knowledge, the self-reliance, that a woman should have had at twenty. It alleviates but does not cure.

The only remedy for the injustice that is inflicted on women—and for the injustice that women inflict on men by allowing them to continue in a selfish course of action without protest—is the knowledge that the soul lives and that every woman who submits to that which crucifies the soul is not only doubling the chains that hold her a prisoner, but is laying fetters upon all womanhood throughout the world. Within the hearts of women themselves the battle must be fought and won before they can ever step upward and outward into their true position and—which may be even more important—before they can even be thoroughly just to the men beside whom they stand.

RACHEL

THE following was written by the poetess, Elizabeth Barrett, after her meeting with the poet, Robert Browning, and before their marriage. It was published under the title of "Sonnet from the Portuguese," in which she gave a picture of her ideal of that comradeship alone which makes the true marriage possible. The marriage of Elizabeth Barrett and Robert Browning was, as is well-known, one of idyllic happiness and purity, and it was under the inspiration of their life together that the best work of each was done:

XXII

When our two souls stand up erect and strong,
Face to face, silent, drawing nigh and nigher,
Until the lengthening wings break into fire
At either curved point—what bitter wrong,
Can the earth do to us that we should not long
Be here contented? Think, in mounting higher,
The angels would press on us, and aspire
To drop some golden orb of perfect song
Into our deep, dear silences. Let us stay,
Rather on earth, beloved—where the swift
Contrarious moods of men recoil away
And isolate pure spirits, and permit
A place to stand and love in for a day,
With darkness and the death-hour rounding it.

A Step Forward

THE bill providing for the appointment of a "State Director of Marriage Reform Instruction," which has been proposed by Representative Dashiell of Iowa, has been the target for some ridicule. But it certainly merits more than a passing laugh, for it means, to those interested, a step forward from out of the tangled network of modern social problems.

The bill states that the director is to serve for five years with a salary sufficiently ample, and his duties are "to formulate a course of instruction for candidates for matrimony," the same to be furnished to every reputable physician in the State. Representative Dashiell is himself a physician, and it is stated that the bill is endorsed generally by physicians.

That physicians should have taken the initiative in this matter arises probably from a laudable desire to better the physical conditions of the race. That the majority of men and women at present prove their incompetency in selecting matrimonial mates is evidenced by the great number of unhappy marriages, and perhaps a little education on these lines may be beneficial. Good men and women are making efforts to change these troubled conditions, but the majority are so misdirected.

A religious society of women has recently been formed, having for one of its fundamental objects the suppression of divorce, which is becoming too prevalent to suit their dogmatic ideas. Again, we hear of a woman lecturer (who, by the way, is unmarried) going to the alarming extent of advocating "cells for divorcées." Can such things be? For a proper readjustment, and a true solution of the difficulty, would it not seem more rational to go to the root of the matter: deal with conditions *before*, rather than *after*, marriage?

The ounce of *prevention* is better than the pound of *cure*, which now, in lieu of something better, must be divorce. But divorce or the suppression of divorce cannot help the children born from uncongenial marriages.

Regarding the said "School for Matrimony," certain important questions arise. Who are the men that are competent to undertake such an important work? In what school of life will their training be? Is the work of such a nature that it should be conducted by men only? After all, is not a School for Matrimony rather limiting the question?

To our way of thinking, the basis for all true reform is to begin with the children. Teach *them* the true principles of life, *right action* and *right thinking*. If every boy and girl knew how to live a clean, healthy and upright life, based on the true principles of life, and knew how to govern his or her own life accordingly, by the time maturity was reached the question of matrimony would be dealt with as properly and easily as any other natural event in life.

E. C. S.

WE are all of us more graceful by the inward presence of what we believe to be a generous purpose; our actions move to a hidden music—a melody that's sweetly played in tune.—*George Eliot*

It is reported that a society known as the Filiae Fidei (that is, Daughters of the Faith) has been organized by Roman Catholic women for the purpose of protesting against productions like *Parsifal* and to censor current literature. One of the by-laws reads, "No member of the Filiae Fidei shall recognize socially, or in any other way, any divorces. She shall not accept invitations from such, nor extend her hospitality to those having violated, according to the dogma of our church, the marriage tie." Several prominent members objected to this clause and have withdrawn.

Honor of Erin's Women

ALTHOUGH in one way we are bound by space and time, yet the light-winged heralds of freedom that rise in our hearts and unite the present with the distant past, are smiling denials to such a thought. Sometimes from across the centuries, from a woman's purity and trust flashes the light which brings forth that which kindles the flame of aspiration, in which a nation may be reborn. As the flame is lit, it blends with the parent flame, the torch of purity and trust that called it into being, thus bridging the past with the present in a glowing radiant stream of heart-life which knows neither time nor death, only the undying purpose, and beauty of the soul.

In the reign of King Brian, Ireland was prosperous and peaceful, and a bright inspiring picture of the people is given in a beautiful poem of Moore's, which was founded on a true narrative. A queenly Irish maiden, to prove her trust in the people of her country, traveled alone, richly dressed, from the one end of Ireland to the other:

BRIDGE KILLARNEY

Rich and rare were the gems she wore,
And a bright gold ring in her hand
she bore;
But oh! her beauty was far beyond
Her sparkling gems or snow-white
wand.

"Lady! dost thou not fear to stray,
So lone and lovely through this
bleak way?
Are Eria's sons so good or so cold,
As not to be tempted by woman or
gold?"

"Sir Knight! I feel not the least
alarm,
No son of Eria will offer me
harm ---
For though they love woman and
golden store,
Sir Knight! they love honor and
virtue more!"

On she went and her maiden smile
In safety lighted her round the
Green Isle;
And blest forever is she who relied
Upon Eria's honor and Erin's pride.

THE first woman factory inspector to be appointed in New Jersey recently began work, under orders from Governor Murphy to inspect child labor conditions, and her work was entered upon without her identity being known to the mill owners or to the parents of children employed.

"I am ascertaining," said she recently, "the true conditions of child labor in the mills. I find that the real difficulty lies with the parents. This is particularly true in Passaic, with its floating population, where parents, in order to make their children bread-winners, swear falsely. I have met with no opposition whatever from mill owners, but on the contrary am treated with every courtesy. Manufacturers, as a rule, want the child labor laws enforced, and I am convinced that the blame which rests upon them rightly belongs to the parents. If the parents can be forced to obey the law there would be no trouble with the manufacturers themselves. American fathers and mothers, even if desperately poor, want their children educated, and with rare exceptions will make great sacrifices to that end. The foreigner has quite other ideals, and it is not uncommon to find an entire family dependent upon the earnings of two or three sickly children. In some cases part of the earnings of even these children is squandered in gambling and drink. The immigration problem lies back of this, as it lies back of many others."

In a Chicago hospital lies little Carrie Anderson, a young girl whose heroism at the Iroquois fire resulted in the saving of fifty lives. She herself was badly injured. In spite of the fact that the entire left side of her garments was ablaze, she caught a ladder thrown across the alley from the Northwestern University Building and carried it to a resting place on the fire-escape of the second balcony. Across this ladder fifty men, women and children escaped. Carrie's mother was a scrub-woman.

Brief Glimpses of the Prehistoric World

Archeology
Paleontology
Ethnology

Some of the Remarkable Prehistoric Caverns in Europe

THE Rev. Lambert Karner of Göttweig, in Austria Hungary, has done a remarkable work of archeological research, and he has done it so quietly that the book which he has just published is almost the first indication which has reached the outside world. It seems that scattered throughout Central Europe, but chiefly in Austria Hungary, are a number of immense caverns, artificially excavated from the sides of mountains and extending far into the earth. Some of them are of great length, the usual form being a straight passage of from fifty to one hundred and fifty feet in length, which then divides into various passages running in different directions. New caverns are constantly being discovered, the outer orifices being so small as to be readily hidden by the vegetation and through natural changes. At frequent intervals these passages widen out into chambers. The course of the excavation is at a constantly changing level, and their direction is winding and often semicircular. There is no apparent reason for this, as there seems to be no difference in the consistency of the soil and rock through which they pass. The chambers vary in size from six to ten feet, and are sometimes double, one opening into the other, but at a different level, and are often provided with stone seats or recesses cut into the walls. However intricate and extensive these excavations may be there is never more than one entrance, and this is of the smallest possible size consistent with human use.

Inscriptions have in some cases been found, but these are always in relatively modern tongues and are supposed to be of later work. Some utensils have also come to light, but these also are supposed to be of subsequent periods, although some of them go so far back as the Roman Empire. The book which Father Karner has now published is of considerable size, and contains a large number of maps and some excellent photographs, which must have been taken under circumstances of great difficulty.

The original purpose of these excavations remains a mystery. One authority suggests that they were designed for burial purposes. If this is so they seem to be of very unnecessary extent, and the fact that no human remains have been found in them would negative this theory. That they were used as residences is equally improbable. The most plausible suggestion is that they have some religious significance, and their serpentine form would lend itself to such an idea. Readers of H. P. Blavatsky's works will remember her explanation of this universal cult and the philosophic meaning which underlies it.

The Adaptability of the Hydroscope to Archeology

THE newly invented hydroscope is to be pressed into the service of archeology for which, indeed, it is peculiarly suitable. It will be remembered that this remarkable instrument illuminates the bottom of the ocean, even at very great depths and enables the divers to work with very great precision and certainty. The hydroscope is now to be used to search for the fleet of Xerxes and, if successful, the results would be of enormous importance. Arrangements are also being made to recover the ship which Pompey loaded with the art treasures of Greece and which was wrecked on its way home nearly two thousand years ago. If this ship could be recovered we might reasonably expect to be placed once more in possession of Greek works of art surpassing anything which we now have. The great danger is, of course, that the silting sand may have buried ship and cargo beyond the possibility of recovery. X.

Probability of Any Prehistoric Animals Being Still Alive

ARE there any living prehistoric animals still in existence? The discovery of the okapi lends some plausibility to the theory, and now we have some curious stories from Patagonia which suggest that the relatively unexplored and inaccessible parts of the world may still have some strange secrets for the daring investigator. It seems that a large cavern near Puerto Consuelo, in Patagonia, has long been known for its deposits of animal remains, and among these relics has been found a piece of skin about five feet by two feet in size and covered with thick hair two inches long and bearing a number of bony excrescences like peas. It appeared to be fresh, producing gelatine when boiled, and there were even traces of blood to be seen upon it. The discoverer believes that it belongs to an edendate, greatly resembling the mylodon, an enormous fossil animal ten feet high, whose remains have been often found in the upper tertiary layers.

A contributory story is furnished by a Patagonian traveler who fired at a strange animal having a strong resemblance to a pangolin. Some Indians gave him a piece of skin which seemed to belong to a similar animal to that at which he fired, and Professor Ameghino, to whom he sent this specimen, pronounced it to be a part of an edendate of great height, and to which he gave the name of *Neomylodon*.

We now have a further and corroboratory account from M. Tournouër, who has also been exploring in Patagonia. A translation of this gentleman's story is furnished by the *Literary Digest*. He says:

Being one day on the bank of a stream in the interior, near which he had encamped, he saw emerge from the middle of the current the head of an animal as big as a large puma. He shot at it, and the animal dived and did not reappear. Its head was round, with brown fur, and its eyes, surrounded with light yellow hairs, were elongated toward the ear, and without external eyelid. According to the description by an Indian guide, this was the mysterious hymché.

What is this animal to which the Indians give the name of hymché and of which they

seem to stand in great dread? Is it possible that the ancient mylodon is still to be found alive, and if this is true of the mylodon, why not of other monsters long since supposed to be extinct? In this connection we are reminded of many Indian stories to the effect that live mastodons are still to be found in the far north.

A Babylonian School Four Thousand Years Ago

SOME curious information is to hand with regard to the ancient Babylonian school, which has lately been discovered, and which is certainly 4000 years old, if not considerably more. The school consists of a small brick house in the center of the city of Sippara, and the number of inscribed bricks which have been found are shown to be the models and the exercises of the pupils. One such brick declares that "he who learns to write well in the school will shine as the sun."

The building contains seven rooms, which were obviously used for the various classes. In one the inscribed bricks were found to be grammatical exercises, and another room was apparently used for poetical exercises, and others for geometry and arithmetic. The thumb-marks of the teacher are clearly discernible where he obliterated errors upon the soft clay. It appears that girls and boys received the same education, and a legal document has come to light which had been revised and corrected by a woman learned in the law, named Amat Baon. X.

A NATIVE WARRIOR OF SOUTH AFRICA

Nature

Studies

Man's Dominion Over the Earth

IN the vast schoolhouse of nature we learn one supreme lesson, or rather we should learn that lesson had we the wisdom to look and read. We should see that beauty and usefulness are so akin that neither can at all exist without the other, and that as function becomes more and more perfect so too it becomes more and more exquisite. Nature does not try to be beautiful, she does not seek to decorate herself, she devises no ornaments. She wills only that each of her parts shall be even better adapted to fulfil its mission and with the growth of perfection comes absolute increase of beauty.

Our growing indifference to nature is born of our resentment at her reproof. She reproves us for the ugliness of our lives and of our systems, for our distorted notions of utility, for our unwillingness to learn. Within our cities we fortify ourselves against her, and within our hearts we bid her defiance, not knowing that she has lent unto us the elements of her own being for training and guardianship. There must truly be a commerce between man and nature, for are not our bodies and our passions made up of the countless myriad lives that we have borrowed from her for our service and that we may control and guide them? When death looses the chain which has held these lives around us do they not return from whence they came with the message of our neglect, like children who have rioted all day in the schoolhouse without a teacher?

It is said upon authority not yet altogether without weight, that "God took the man and put him into the garden of Eden to dress it and to keep it," and furthermore that unto man was given "dominion over the fish of the sea, and over the fowl of the air, and over every living thing that moveth upon the earth." The life of all the world was given unto man to guard and to keep, that it should serve him and that he should serve it. Have we recognized that the soul of man is the divine apex of the pyramid of nature and that the whole of nature is represented by all those other parts of man which are inferior to the soul? Nature is within us as well as around us and the pictures of nature which fall upon our eye are but the reflections of that within ourselves.

Do we complain of the rigors of external nature, of her destructiveness, of her turbulences and of her cruelties? Let us first look within ourselves and see if indeed we have dominion there, and if there also we shall not find elemental riot and both tooth and claw red with the blood of conflict. Had we established order within ourselves, had we exercised dominion over the "beasts of the field," had we done our duty in the garden, "to dress it and to keep it," then too we should see order and design and a gracious beauty in all externals.

MARCH

by LUCY LARCO

MARCH! March! March! They are coming
In troops to the tune of the wind:

Red-headed woodpeckers drumming.
Gold-crested thrashers behind;
Sparrows in brown jackets hopping
Past every gateway and door;
Finches with crimson caps stopping
Just where they stopped years before.

March! March! March! They are slipping
Into their places at last:
Little white lily buds dripping
Under the showers that fall fast;
Buttercups, violets, roses,
Snowdrops and bluebells and pink;
Throng upon throng of sweet posies,
Bending the dewdrop to drink.

March! March! March! They will hurry
Forth to the wild bagle sound;
Blossoms and birds in a flurry.
Fluttering all over the ground.
Hang out your flags, birch and willow!
Shake out your red tassels, larch!
Up, blades of grass from your pillow!
Hear who is calling you --- March!

THE BUILDING OF A DAISY

The Building of a Daisy—Type & Heredity

IT seems to be taken for granted by all botanists that one species or genus, or one form or type, must necessarily be "evolved" from another by lineal descent, under the influence of—well, no matter what, *something*, anyhow. But when we take a long, wide view of the vegetable kingdom we see an approximation and blending of some one factor of plants otherwise so widely divergent that their "common ancestor" must have been several million generations back.

Indeed, any factor of a plant's structure is connected, by an endless series of small differences, with the same factor in every other sort of plant in existence. In the picture are shown a few of the steps, or detail studies, which go to make a composite flower.

First, the loose spray of the heliotrope, then the regular spike of the candytuft, and in regular order the progressively perfected types of the galardias, and so on to the cosmos, which contrasts so strangely with the heliotrope with which the series begins. To properly fill out even the

short interval of type between the first and last of these nine would require specimens of many hundreds of species, including the poinsettias, bougainvilles and their kindred.

It might be extended both ways until the series would reach from the buttercup to the calla-lily, which is a composite flower with only one petal. But in arranging such a series we should find that the other factors of the plants selected would not vary in accordance with the flowers.

Indeed, we would separate near kin and unite wide

strangers. The same would be the result if they were arranged in the sequential order of any factor, because of the unrelated divergencies of type; no factor of plant structure having any observable fixed relation to any other. Following this line of thought in detail, which space here forbids, we reach two or three very obvious conclusions, for it can scarcely be longer questioned that the production of new species is under the direction of some form of intelligence which has a definite purpose to accomplish.

It is equally evident that the sequence of type is not the same as the sequence of heredity, and we are forced to the conclusion that this world of effects only shows us the types resulting from, or incident to the relation which exists, and the development which occurs upon the (to us) invisible world of causes where all "missing links" really exist. Y.

FRENCH people have a curious industry known as truffle hunting. In Vacluse and in the old province of Perigord, are great oak forests so dense that the sun does not penetrate. In taste the truffle is slightly like a very fine-flavored mushroom and it is considered a great table delicacy.

Universal Brotherhood Organization

Central Office Point Loma California

A GOOD audience assembled at the Isis Theatre on Sunday night to hear an address by the Rev. S. J. Neill on "The Federation of the World." The music by the Point Loma students of the Isis Conservatory of Music, was of the usual high order and was much appreciated. Mr. Neill said in part: "In the vision of the poet and

LOMA-LAND STUDENTS AT ISIS THEATRE

"The Federation of the World," and
Music by Students of Point Loma

Reprinted from the San Diego News

seer when he 'Dipt into the future far as human eye could see, Saw the vision of the world and all the wonders that would be,' in that vision he beheld the advent of a happier era when the 'War drum throbbed no longer, and the battle-flags were furled, In the parliament of man, the federation of the world.'

"It is fitting that we, as believers in Universal Brotherhood, should at all times, and especially at such a time as the present, lift up the ideal of international Unity, the ideal of an United Humanity, 'the parliament of Man, the federation of the world.' For the present is verily a time of unrest and anxiety to all nations, and the vision of the poet seems very far off. The federation of the world seems much less likely than it did a month ago. 'Nation shall rise against nation,' said Jesus, and again and again His words have been fulfilled, but the end is not yet.

"The seeds of strife have been sown, and the harvest of strife must be reaped. Nevertheless the federation of the world will, like many other great things, come about so simply and so naturally that men will wonder it did not come sooner. Men will wonder that Universal Brotherhood was not long ago seen to be the wisest thing, the best thing for all, and in harmony with the life of the universe.

"Glancing at what we know of the history of the world, we see that in spite of many wars, and many things very evil, there is, nevertheless, a silent and resistless force above all, and in all human affairs which is lifting the race to a higher plane.

"Looking at the condition of nations generally we see that in ancient times people were more isolated from one another than now. Roads were few and bad. Journeys by sea were dangerous and lengthy. The railway and the telegraph were not dreamt of. There was no universal postal union to link the nations together; no widespread commerce to bind them in common interests. No doubt this isolation, while it had many drawbacks, was not without some compensating advantages: it developed those strong qualities which mark the individuality of different peoples. And when, like distinct notes of music, these national individualities, in a happier time, are harmoniously joined together, then we shall see how all things are made to work together for good. 'For brass I will bring gold, and for iron silver, and for wood brass, and for stones iron: I also will make thy officers peace, and thy governors righteousness.' Then will be seen that

"The Soul of Things is Sweet,
The Heart of Being is Celestial rest;
Stronger than woe is will: that which was Good
Doth pass to Better — Best.

"When that age of isolation gave way to the beginning of commerce there came naturally a more general knowledge of other countries and peoples, but gradually and painfully the lesson has still to be learnt that all the world is bound together, and that the suffering of one is the suffering of all, and the welfare of one the welfare of all. There is no standing alone. 'No man liveth unto himself, and

no man dieth unto himself.' We may sometimes hear a person say, 'It is my own, and I can do what I like with my own.' This is a mere illusion. We are all of us tenants, and a single day may transfer what we think is our lasting possession to some one else. We are not owners, but only stewards for a little while, and the more we can use the steward-

ship for the good of all the richer we are. It takes individuals a long time to learn this truth, and it takes nations much longer, but learnt it must be in the end: and the Great Master who weaves the pattern of the web of Humanity casts nothing as 'rubbish to the void.'

"For a time the apparently diverging interests of a few merchants of various countries may produce strife, but in the end there is an interweaving of national interests which tends toward a recognition of international unity. Gradually the barriers which separate are taken away and it is felt that the world is one, and that humanity is one.

"Suffering in itself is not a blessing, its use is to act like a red signal warning us against taking the wrong path. In a word, the great life of the universe is love, righteousness, peace, and whatever goes contrary to these, must bring disharmony and suffering.

"I think the present time is especially the day of judgment. I do not use this word in the corrupted sense which calls up the picture of a human court of law on a cosmic scale, the good on the one side and the bad on the other. Each day is a day of judgment, *i. e.*, it is a day of separating and discerning. But now and then events may be so grouped, nations may be so grouped that we may see more clearly the working of the good and the opposing evil. The great danger has ever been when the evil powers so cleverly assumed the garment of light that they were mistaken for the children of light. And now we have reached a clearance in the forest; we have evolved to a time of discerning when we may, if we will, discern the powers that work for evil and the powers that work for good. Where we see a tendency to link nations together not for selfish ends but for universal peace; where we see a fostering of international amity and concord, there we may discern the presence of the friends of humanity. But where we see the semblance of this only, and underneath the spirit of selfishness, disunion and strife, there the evil powers are made manifest.

"Every time we are quick and generous enough to see the good in other peoples and nations; every extension of the principle of arbitration; every effort we make to realize the brotherhood of humanity—all these things are bringing nearer and nearer that federation of the world when the 'kindly earth shall slumber rapt in universal law.'

"Therefore, in the midst of war and rumors of war, we look confidently to the ceasing of strife, and the unity of all nations and peoples in one great federation—Universal Brotherhood become, not an ideal simply, but an actual fact. As in the 'White Christ,' the poet heard

"Countless voices far and nigh sing sweet beneath the sky,
All that is beautiful shall abide, all that is base shall die.

"So may we hear the song of the heart of the world, a song of victory over darkness and evil, a song of joy and peace unto united humanity."

Gibraltar Has a Rival in Point Loma

Reprinted from the Los Angeles Examiner of February the 14th, 1904

in which it was finely illustrated with good views of Loma-land

SAN DIEGO, February 13—San Diego has every reason in the world to feel proud of that massive strip of land which forms the outer wall of its famous harbor—known the world over as Point Loma.

"The Point," as it is called, has two great values. First, as a strategic naval base it can be favorably compared with the famous Gibraltar, which has so safely guarded the Mediterranean for so many years. The United States Government has already made this point a powerful fortress, and with its masked batteries a naval attack upon San Diego is almost an impossibility. From its outermost point burns a beacon which assures the weary seaman a safe anchorage within its walls.

Second, but not less important, Point Loma ranks high in the minds of all admirers of nature, art, music and drama as an educational center. Upon this massive earthly structure stands the Homestead of Universal Brotherhood—a well-chosen spot for work of this kind.

Point Loma is the world center of the Universal Brotherhood Organization and Theosophical Society, which has for its supreme object the elevation of the race. It asserts that "Brotherhood is a fact in nature," and it professes to teach brother-

hood, to demonstrate that it is a fact in nature, and to make it a living power in the life of humanity.

The activities at the Point, in addition to the daily duties of home life, comprise lofty ideas through lectures, literature, music and drama.

The Theosophical movement was brought to the attention of the world by Helena P. Blavatsky a quarter of a century ago. On the death of Madame Blavatsky it remained but to illustrate the pungent application of these teachings. This is now being done at Point Loma.

The term education here has a much wider significance than it usually receives. It means no less than the development of the soul with all the capacity that belongs to it. This is done by the tuning of the whole nature, so that perfect harmony is produced.

The basis of the whole education is the essential divinity of man, and the necessity of transmuting everything within his nature that is not divine. The intellect must be the servant and not the master, if order and equilibrium are to be attained and maintained.

In such a system all services must be voluntary, and therefore no salaries are paid.

The aim of true education is not to acquire a store of facts. For this a retentive memory is the only requisite. It is too often found in the world that memory and knowledge are accredited with an identity which they in no way deserve. Thus true education is the power to live in harmony with our environment—the power to draw out from the recesses of our own natures all the potentialities of character.

The education at Point Loma consists of the regulation of the whole life upon the highest ideal, which must alike govern the most hidden thought as effectually as it does the mutual relationship of the student.

At the Raja Yoga School children are treated with the facts of life along with its needs. The love which is extended to them is the truest of affection, which constantly thinks of their welfare without regard to the selfish pleasures they can render in return.

The manifestation of true love for a child is to help it to develop its highest faculties, to teach it to help itself and so to grow strong to help its fellows.

The Theosophical education is not so much a something which is imported; it is a liberation from the powers of the lower forces which hinder and check a growth which ought to be unchecked and spontaneous. Great progress is being wrought daily at Point Loma by this wonderful institution of instruction, conducted by Katherine Tingley and her able assistants. The higher ideals of life are instilled in the child from the time it is brought there until it leaves, fully prepared to meet any contingency in life.

Military discipline is maintained, which gives all an erect carriage, together with perfect physical development. As only a few hours are spent in the schoolroom, much time is devoted to outdoor life, where sunshine continually smiles upon all.

The artistic eye finds many charms at this ideal spot. The construction of the main building is the result of much study, and can only be fully appreciated by a close inspection.

R. W. Machell, late of the Royal Academy of London, has done much to further improve the Homestead. Upon its walls are hung some of his most famous paintings, which are masterpieces of their kind.

The entire grounds offer many attractive suggestions in landscape gardening; along with the great amphitheatre for the reproduction of Greek dramas and open-air plays, which has for a background the grand Pacific—an ocean of untold beauty.

Our Relation to Others

Paper read before the Sydney, N. S. W. Lodge

THE answer to this question as to all others, depends upon the general view we take of life, hence the importance to our welfare of a True Philosophy of Life. "Out of the fulness of the heart the mouth speaketh," and it may be added, *so will a man act*, for the hidden thoughts and ideals of our lives, color our actions daily. We all know this to be true of our own experience if we pause and think.

In the light of Theosophy it no longer becomes possible to ask the question of Cain, "Am I my brother's keeper?" because we learn that we are so. The relation of ourselves to others is a very close and intimate one. There is nothing sentimental about the Theosophical ideal of Brotherhood, it is taught in that great philosophy as a *fact in Nature*, and facts as you know, are something from which we cannot escape, they are there to be dealt with and they are taken into consideration by practical people as active factors in their lives. Theosophy is not a new teaching, it is but a representation of truths as old as the world, given out age after age to the various peoples, by the Spiritual Teachers of those times, and afterwards embodied in the Sacred Writings, the Bibles of the world. At the present age, however, the presentation has been more detailed and more complete, because as a people we have grown ready for it, and need it for our further development on right lines. Truly, as sheep, we have wandered and gone astray from the green pastures of unity, unselfishness, and brotherhood, into the barren wastes and among the rocks of selfishness and separateness. But the voice of a great spiritual Teacher is calling to us through the mists and desolation, whispering words of hope, inciting to nobler action.

The Philosophy of Life breathes the spirit of the Eternal Truths, is founded upon a rock that the test of experience will prove immovable and that the testimony of the

A SENIOR CLASS IN THE RAJA YOGA DAY SCHOOL AT SAN DIEGO

sages of the past has sanctioned by repetition in their day. Simple and few are the great Laws of Life, half a page will suffice to write them down in words. As we learn to live in accord with them, our lives will become grander, nobler, happier and sweeter. First and foremost, Brotherhood is an actual fact in Nature; it is a truth that with what measure we mete, it shall be measured to us again. We are Immortal Souls dwelling in Temples of Flesh. Threefold Beings, Souls in a house of clay overshadowed by the Eternal Spirit. "Ye are all Sons of God," said one of our Divine Teachers, who added of Himself, "I and my Father are one," and commanded his followers to also become perfect and united to the Supreme Spirit to which they owed their origin. To "become perfect," it seems absurd! And so it would be, if we only lived on earth once, and here we come to the lost chord of modern spiritual teaching, the missing note that has destroyed the harmony, and rendered so many hopeless and pessimistic. We are Souls, living while on earth in bodies fashioned and formed, and the circumstances of our lives decided, by the thought and actions of our lives that have gone before. All who are here tonight, all the people in the world, are the effect in character and environment of their own past. Collectively and individually we are what we have made ourselves.

So much for the past; a study of our own lives, and the collective life of humanity at the present time, and historically will discover a great deal of unbrotherly action, a great forgetfulness of these four great Truths I spoke about earlier in my paper, and a persecution of the Teachers who came to show us the way, with the consequent great suffering and great confusion. Turning our eyes away from the Light Within, so largely unheeding of the Teacher's words, "the kingdom of heaven is within you," we have groped in the darkness of our lower natures, looking only at the outer separateness of mankind to the utter neglect of that vital truth our Inner Unity, for in very truth Soul is knit to Soul in the bonds of a Common Origin, Spiritual Identity. So our relation to others has been viewed in a false light and our interests have not been considered identical. But really there is a common goal ahead of us, Universal Perfectibility, and our true interest lies in aiding our neighbors to walk the path that leads toward it. This can only be done by reforming ourselves; all growth proceeds from within outwards, and we can none of us start a reforming current of energy at work in the world of which we are not ourselves the center and starting point. In the light of Theosophy how foolish, how puerile, become the quarrels of the world, national and individual. As parts of a whole we are fighting with and wronging ourselves, and must feel the discord and hurt within our own being. In our true relation to others, our attitude must be one of uncompromising Brotherhood, and those who have tried to act in that way will bear witness to the clarifying effect upon their own natures.

It is not always easy to hold in practice to the fact we are Souls, but it is the task set before us, so we may as well make a beginning to bring the Kingdom of God upon earth, for that is what it means. Amidst the general unrest, uncertainty, the feeling of change in the air, the uprooting of time-honored landmarks, this True Philosophy of Life has been again presented for man's acceptance and many thousands of lives are affected by its beautiful teachings.

E. I. WILLANS

The Triumph of Mabel Hawthorne

ABEL HAWTHORNE sat on the piazza of the old Hawthorne home, her eyes fixed upon a Latin grammar which lay open before her on the broad piazza ledge. "*Hic, haec, hoc — bujus, hujus, bujus.*" She was preparing for the morrow's examination. Before her spread the broad lawn and as she lifted her eyes she saw the gardener cutting great branches from the Japanese quince hedge which grew in front of the stables.

The Hawthorne home was one of the most beautiful in the village. The Hawthorne family was one of that group of wealthy and sensible colonial families of which a few New England villages still can boast.

A voice floated out through the open window. "Yes," said Mrs. Hawthorne, "Mabel is almost more of a student than I would wish. She is very ambitious and I am sometimes afraid that she will injure her health. Just now she is studying for her examination in Latin, and to be frank, Mrs. Mead, I expect her to win the medal."

"You are certainly blessed in your daughters, Mrs. Hawthorne," the caller replied. "Mabel is a beautiful girl and she will blossom into beautiful womanhood."

"But tell me about the work of your committee, Mrs. Mead."

Mrs. Hawthorne was President of the Woman's Club, and Mrs. Mead, Chairman of the Committee on Practical Philanthropy, a committee for which she had recently organized a new plan of work, that of friendly visiting among the families of the poor.

"I have been about a good deal during the last week, and I am convinced that the practical, neighborly touch is the secret. Yesterday I visited Mrs. McQueen." Mabel stopped studying and listened. Sara McQueen was one of her classmates, and between the two there existed, unfortunately, nothing gentler than a cordial antipathy. "McQueen, the father, is a ne'er-do-well, evidently, and the mother takes care of the whole family."

"I understand," said Mrs. Hawthorne, for Mrs. McQueen's jellies found their way into the finest homes of the village.

"I could see that she has the utmost difficulty to get along. I asked her if I could do anything. Instead of the usual complaints, I was astonished to find her reserved and dignified. She told me that she 'got along' nicely and that just now she was counting on Sara's winning the medal. It seems that this year they need an assistant in the preparatory Latin class and the student who stands highest in this examination is to receive the position. The salary is not large, but twenty dollars a month would mean a great deal, I can readily see, to that family."

The conversation then drifted into personal channels and Mabel went back to her Latin grammar.

Mabel Hawthorne was fairly idolized by her family and by her friends. In fact, she was selfish and spoiled. However, too sensible to blight her girlhood by forcing her into society, Mrs. Hawthorne kept her mind filled with the ideal of study for a few years, and after that some useful work to do. Yet deep within Mabel's nature lay a certain unselfishness of which no one had ever become aware.

Sara McQueen was the oldest of a family of seven. When Mabel was out upon her pony, or rowing upon the lake with her brother, Sara was scrubbing, baking, sewing, waiting upon her sick father, washing dirty little faces and settling stupid little differences between the six children younger than herself. She was the backbone of the family. She, like Mabel, was studious and ambitious, and for something like a year the rivalry which had existed between herself and Mabel in the Latin class had grown more bitter as it had become more real. Mabel's one ambition was to respond properly and creditably to the family pride and this she did term after term by carrying off the honors at examination.

Sara's ambition was to help her over-worked mother and to open up a bit of a path, at least, for the education of her younger brothers and sisters. She looked forward to the coming examination with an intensity of feeling that was unusual. Twenty dollars a month, think of it—if she should win the medal—but there was Mabel. Every time she thought of Mabel, her face grew sad and sometimes it darkened just a bit.

When Mabel went back to her grammar, there was Sara McQueen looking up at her from the pages instead of the declensions and conjugations. She felt very uncomfortable. She looked again toward the hedge of Japanese quince and pulling aside the great branches of wisteria that obstructed the view, she was startled by a little "cheep, cheep." There, fairly within reach of her hand, was a robin's nest and two struggling, crying little robins. They were the homeliest things Mabel had ever seen, and the hungriest. She put her lead-pencil between the little yellow-rimmed bill of the largest. It wasn't a kind thing to do, but Mabel felt like experimenting. Then she gave them a little poke. She was decidedly out of humor. A flutter of wings drew her attention and she saw the mother bird flying about in

the wildest excitement. "Well," said Mabel to herself, "I expect they *are* hungry, but they'll just have to wait, for I have my Latin to get," and instead of going away, as the quivering mother had a right to expect, she remained close to the nest. The bird fluttered about for a moment, and then losing sight of her fears in compassion for her babes, flew down to their nest, fed them, then brooded them beneath her warm feathers. Her bright little eyes were fastened upon Mabel every moment. A feeling still more uncomfortable came into Mabel's heart. She sat quiet, dreamily looking at the little bird, so willing to sacrifice herself—for what? Two homely little scraps of something that she loved! Then there came before her again the face of Sara McQueen, also guarding, like the mother bird, the little bits of humanity that she loved. For one awful moment Mabel realized the emptiness of her own life. Was it possible that *no one needed her*?

"Well, Mabel," said her brother that evening, "going to 'bone' tonight for examinations?"

"No," said Mabel; "I'm tired." But she mentally resolved to rise early the next morning and study then. How she hated Latin just then!

The next morning, as she entered the schoolroom, the teacher was writing the questions upon the board. The sight of them was as the scent of powder to a war-horse. Mabel's compunctions vanished. How proud her mother would be, if she were to win the medal—and Harold—think of it!

The first question plunged her into verbs, her pride: "*Give translation and principal parts of the following verbs: Ignoscit, dicere, dare, sumus, oportet, miror, surrexi, vixi, amabitur, incedit.*"

Mabel plunged into the examination with zeal. Then came definitions. "*Define and write five original sentences showing the correct use of the following: Ablative absolute, supine in um, locative ablative, subjective genitive, and dative of indirect object.*"

The questions were difficult, but Mabel knew her ground. She wrote on and on. Once she lifted her eyes and looked at Sara McQueen who sat three aisles to the right, and that queer feeling came into her heart again, until at last, as she neared the end of the examination, it seemed to her that she could hardly breathe. Within her heart there was being fought out a battle of more moment than some that are known as decisive in history. She reached the end of the ninth question and threw down the pen. Her head was aching, her face was flushed. She felt almost bewildered, as if she *must* stop and think for a moment and get a free breath. She buried her face in her hands.

"What is it, Miss Mabel?" said the teacher. "Have you missed something?"

A moment passed. Suddenly it seemed to Mabel as if the weight of ages had rolled from her shoulders. She looked up at the teacher with a smile which was like an illumination.

"O, no, Miss Andrews; I am quite all right."

Miss Andrews was just writing on the board the last question: "*Name five regular deponent verbs.*" Mabel could have named a dozen. She took up her pen, tried the point reflectively on the edge of her writing pad, and then quietly and steadily wrote: "*Nascor, patior, queror, utor, loquor.*" Quickly, as if she feared that delay might mean danger, she went to the teacher's desk with the sheet of foolscap.

"I have finished, Miss Andrews."

"You have done well, Miss Mabel. If you like, you may go now."

Mabel passed out into the sunlight.

The following Monday simple exercises were held in the schoolroom preliminary to Commencement. At these it had always been the custom to announce the result of examinations, giving the names of the fortunate students who had ranked first. Mabel's brother was, of course, on the *qui vive*.

"Don't be too sure, Harold," said Mabel the final morning. "I have an idea I didn't stand so high."

"Nonsense; we will see."

That afternoon, when the teacher made the announcement, she said, "For Latin, first year, Sara McQueen." Sara passed up the aisle and the teacher pinned the medal upon her well-worn white dress. She glanced at Mabel on her way down. "Have one of my roses, Sara"—this to Sara, who carried herself so badly—Sara, whose complexion had been made abominable by late hours and insufficient food, and whose hands had been coarsened and roughened by hard work. Mabel smiled; Sara smiled, too, through her tears.

"How in the world did it happen?" said Mabel's brother that evening. "You know that Latin grammar from beginning to end."

"Well, Harold, it *was* rather queer about that last question. I should have given five regular deponent verbs and I gave five irregular."

Harold glanced at his sister and then looked steadily into the grate fire. "H'm!" he said, reflectively.

✻ The Trend of Twentieth Century Science ✻

The Case Against Vivisection Depends on Public Interest

WE fear that the opponents of vivisection have a hard fight yet in front of them. For the vivisection is not an abnormal horror, wholly out of relationship to the consciousness of the age. To appreciate this, note the softened attitude that people assume, directly they think it proved that from vivisection has resulted knowledge valuable to doctors in combating disease.

Vivisection will not cease till the public attitude is: Though vivisection increase our knowledge of disease; though it provide us with new remedies; though it save human lives that would have been lost without it—yet we will not have it. We will not permit that our sick shall be in the hands of men whose consciences have been beaten into insensibility to animal suffering. Vivisection will not cease till then.

The whole picture is dark. Among the vivisectioners you see the desire for fame, money and abstract knowledge, wire-pulling the lay figure labeled "Desire for relief of human suffering." And on the other side you see the public accepting the label, piously accepting the word *anæsthetics*; and willing to have its own pain relieved at the expense of animal pain.

Vivisection will not cease till men recognize animals as living beings with the destiny of evolution within them, behind us, blinder than we, led by us, of another degree, but not of another kind. Then they will begin to wonder what they are doing to the consciousness of the animal when they send it to death, with the ideas *man* and *agony* perhaps indissolubly connected, perhaps registered as an instinct for ages to come.

In no long time, vivisection will be part of the training of all medical students; they are already in hourly familiarity with its results. An idea may arise from that fact, capable of appealing to public selfishness. As things stand, it is the only argument of much use. Discoveries of physiological and pathological fact have been made by vivisection, are being made, will be made. It is not very telling, though true, to say that all thus discovered of fact would also have resulted more slowly along other lines of research, from the study of accidental injuries, and so forth. It is not very telling, as yet, to suggest that what the vivisection-won "serums," etc., give in one way, they take in another; and that in the end they have an evil effect on the average death-rate. It will avail little to point out that the greatest therapeutic triumphs of our day—the work of x-rays, ultra-violet light and radium—owed nothing to vivisection, and that they show the way to the most fruitful and beneficial research. And it will avail nothing at all to assert the living truth that the practise of vivisection has the effect on the operator that he becomes incapable of conceiving any of the finer operations and connections of physiological life at all. Our whole ideas and ideals of the physician are changing. He will pass with most of us, nowadays, if he has a case of "serums," another of animal extracts, a box of one of the coal-tar *anæsthetics*, and some morphia in a syringe. Is it any wonder that the cries of *no drugs and no doctors* get louder and louder? They arise from the growing intuition that the training of the modern medical student is such as utterly to blunt his appreciation and treatment of all the finer forces in that human body which is the matter of his study. Those who can understand the situation will not be found urging legal *limitations* to the practise of vivisection, licenses, or any other partial measure—but its total abandonment. It is altogether out of tune with the next note of human evolution, a note already beginning to sound. SURGEON

A SECOND specimen of the African quadruped known as the okapi, discovered by Sir William Johnson, has been secured by Mr. Walter Rothschild for his extensive zoological museum at Tring, England. A special expedition was organized in Central Africa to secure a specimen from the Congo Forest, dead or alive. That which has been received by Mr. Rothschild is the skull and skin of an adult okapi, says the *Scientific American*. This animal was depicted in the very ancient Egyptian sculptures and paintings, and was until recently believed to be either mythical or a conventionalized deer. X.

The Preexistence of Ideal Types in Cosmic Intelligence

THE platonic doctrine of preexistent ideal types seems about to re-enter the world of biology. The form in which an approach to it has just been stated by a French geologist, M. Meunier, may be understood from this quotation:

Organized beings have often been compared to the products obtained by the potter in baking clay. . . . The potter, in fact, after having for a long time made hemispherical vessels, bowls and the like, invents a more spherical form to prevent so much evaporation. A further step consists in furnishing the opening with a cylindrical extension, which may be closed with a stopper. Thus we have a bottle. The addition of a handle is an obvious advantage, and thus we have a flask.

M. Meunier argues that the bowl did not give rise to the bottle, nor that to the flask: but that the idea of the bowl in the mind of the potter suggested the idea of the bottle, and this gave rise to the idea of the flask.

So with the various species and orders of living beings, which, in their ascent from the lowest up to man, give us the picture of evolution. Not one of them gave rise to another; but the idea of which each is the embodiment gave rise to that higher idea of which the next higher form is the embodiment.

M. Meunier's view is not exactly the platonic. The platonic teaching is that the ideas of which all things are the embodiment preexisted in the Divine Mind from eternity. But in M. Meunier's view, they evolve one after another in that Mind—though he does not use the words "God" or "Divine Mind." Moreover, if his analogy of the potter is to be pressed, it would make the cosmic artificer a learner from experience. His doctrine will not therefore find favor with the platonist, the Christian (of any ordinary type), nor of course with the orthodox scientist. But it will be welcomed by those who think of the Divine Mind as having fashioned within itself an absolute ideal of life, an ideal towards which nature-life constantly strives. But that implies that nature-life is intelligent, or consists of intelligences, from the highest to the lowest; close to the absolute ideal at one pole; guiding material evolution at the other; like the gradations of rank, with their subdivisions of duty, in an army; living forms representing their experiments, adaptations, concessions, successes and sometimes even failures, in their attempts to guide life to ever more perfect expressions.

Science may presently move more and more in some such direction as this. Her changes are rapid and complete. Every decade witnesses a reversal of some once "axiom." The veteran von Hartmann, writing last year, said of Darwinism that, supreme as it was during the eighties of the last century, it had now "been weighed and found wanting. In the first decade of the Twentieth century it has become apparent that its days are numbered." The theory of ideal types may not be so far away after all. X.

Success of the Open Air Treatment for Consumption

THE open air treatment of consumption as carried out in New York has been followed by the happiest results. Out of one hundred and twenty-seven of the worst cases that could be found, eighty-four were discharged as cured at the end of six months, and eleven were still under treatment. These results are very wonderful, when it is remembered that consumption is only now emerging from the category of incurable maladies.

Tuberculosis is probably not the only disease that unaided nature is willing to heal. There is still a rooted opinion among the unthinking that the sick man must be hedged around with every possible contrivance to prevent the intrusion of fresh air. We are told that the very gods fight in vain against stupidity and we can therefore understand why the victories of medical common sense are not more rapid than they are. The invariable wish and effort of nature is to heal, and she usually succeeds when she is allowed to stand by the sick-bed, instead of being forced to wait outside the room. She would succeed still more often if we would learn to open our minds as well as our windows, and to consciously invite and anticipate the healing force. It is never refused. X.

Here and There Throughout the World

RUINS OF DUNLACE CASTLE, COUNTY ANTRIM, IRELAND

The French Premier Believes in Peace ARE WE once more to see the day when statesmen will not be ashamed to publicly avow a moral sentiment. The French Premier, M. Combes recently said:

We regard peace as at once the first need and the first duty of nations. It is for Republican France, the country par excellence of democracy and of solidarity, a moral obligation, of which we are profoundly sensible, to do everything to ensure peace to others while preserving it for ourselves. . . . France is for peace, wholly for peace. All her thoughts are thoughts of peace; all her dreams, even the fairest, are dreams of peace. Patriotism is misled when it is asked to do otherwise than to work for the consolidation of peace.

The policy of France indicates sincerity to the principles thus avowed.

Swiss Parliament & the Referendum A BILL has been introduced into the Swiss Parliament requiring that all cattle shall be anesthetized before being killed. The bill was rejected, but by invoking the power of the referendum it was passed over the heads of the Legislature and has therefore become the law of Switzerland. The system of the referendum is found only in Switzerland and New Zealand. By its means a direct appeal to the people can be made in order to elicit their judgment upon a disputed measure. If referendum were in force in other countries we should find many instances in which the nation is more humane than its government and of course more intelligent.

Tahitians Killed by Civilization THE "blessings of civilization" are probably not appreciated by the Tahitians so much as we should like to see. When Cook landed at Tahiti in 1769 there were 200,000 natives. There are now 11,000, the remainder having been exterminated by the white man's burden—alcohol, disease and vice. The most trivial ailments are fatal to the Tahitian, but Dr. Nicholas Senn, America's famous surgeon, says that they are "a simple race of happy, honest, forbearing, but dreamy people, who are doomed to extinction by civilization." Is there no cure for civilization?

Clerical Interference in France THE speeches which the French Premier has delivered on the subject of clerical interference with education and upon other matters of a like nature have just been published in book form with a remarkable preface by Anatole France. It would indeed be unfortunate if these speeches were lost. They were addressed directly to France and indirectly to the whole world.

The Diplomats Are Leaving Serbia THE representatives of the Great Powers are leaving Serbia one by one and under a variety of excuses.

The real reason is that they are unwilling to accept the King's hospitality at the approaching festivities when they might find themselves side by side with the unpunished murderers of the late King and Queen. If they were to give the actual cause of their absence it might produce a wholesome effect, but to tell the truth would be opposed to the traditions of diplomacy. This action on the part of the Powers makes it all the more difficult to understand the complacency with which they viewed the slaughter in Macedonia. Surely quantity is not a palliative.

Mistake of Danish Minister of Justice THE Danish Minister of Justice has proposed to re-establish corporal punishment as a deterrent to highway robberies. He probably regrets that proposal as it was immediately negatived by a consensus of Parliamentary opinion. He defended his scheme by the plea that civilization ought to defend the "weak" with which every one very heartily agreed upon the understanding that the morally weak need protection as much as the physically weak. Brutality can never be cured by more brutality, although a good many brutal people believe that it can.

How China Convinced a Journalist FRANCE has a distinguished visitor in the person of Wei Tang Tao who has just arrived from China. Wei Tang Tao was a journalist and he was so indiscreet as to print a statement that "the government is compromising the future of China by its stubborn refusal to have anything to do with western discoveries." For this offence Wei Tang Tao had both his ears cut off, and is of course now satisfied that his recommendation of western discoveries was entirely erroneous.

The Lace Industry Waning in France FRANCE is beginning to mourn the decay of its lace industry, which machinery has driven from the field. There are, of course, many industries which are better performed by machinery than by hand, but lace-making is not one of them. Machine-made lace can hardly pretend to be even an imitation, and it is strange that so beautiful a fabric as home-made lace should ever fall into disuse. Eventually it must have a revival to the great profit of those who participate in it.

Exhibit of Child Life in Russia AN extraordinary exhibition may now be seen at the Tauride Palace, St. Petersburg. All the exhibits relate to some different phase of child life, from birth until the farewell to school. The Empress of Russia is said to have inspired the idea, and it has been carried out in great detail. There might now, however, be a special department for children who are rendered orphans or homeless by war. That would bring the exhibition up to date.

Eucalyptus & Sulphur for Phthisis A BERLIN chemist has introduced to the medical profession a preparation which he believes to be a new cure for consumption. Several doctors have tried it and the results are said to be very gratifying. The preparation consists of oil of eucalyptus, mixed with sulphur and charcoal, and evaporated over an alcohol lamp. The virtues of eucalyptus are, of course, well-known, but sulphur has probably not yet begun its full career of usefulness.

The Child Mortality in East London THE child mortality in the east end of London is three times that of the west, being at the rate of 350 per 1000. The statistics from other great cities would tell a similar shameful story. They constitute the answer of civilization to the divine command, "Suffer the little children to come unto me." Little children are indeed suffered to come, and they come through suffering.

THE CHILDREN'S HOUR

Tommy's Fun

TOMMY peered out from behind a tree. "She's coming," he muttered, his blue eyes dancing with mischief as his sister appeared in the doorway daintily dressed, and carrying a tennis racket and a small white parasol.

"Madge and Gwen are coming to tea, Charlotte," she called out, as she ran down the steps.

"Why don't she put it up?" mused Tommy, as he watched her walking briskly down the avenue. "The sun's hot enough to spoil her complexion." But Amy, unconscious of what was desired of her, went serenely along and, reaching the gate, passed out of sight.

The merriment faded out of Tommy's face and he became grave and meditative. "Suppose she doesn't put it up till she reaches the village! I wonder who she's going to visit? I wish I could see her put it up. I will!" and off he ran full speed down the avenue. The gate shut with a bang. "There she is!" he gasped, "and there's Madge and Gwen. I guess they are all going to a tennis party."

"We decided to come and meet you, Amy," said Madge.

"She's going to put it up," whispered Tommy. "There it goes!" The dainty parasol opened and over the astonished Amy fell a shower of visiting cards. A moment of bewildered silence, then the air rang with merry peals of laughter.

"Tommy did this. I know he did," said Amy.

"Why, there he is!" exclaimed Gwen.

Tommy, in his excitement, had come nearer and nearer, and now stood close beside them, grinning and chuckling.

"Come here, you naughty boy, and pick up every one of these cards," commanded Amy severely. "How dare you do such a thing!"

"I intended you to open it in the avenue, Amy, honor bright," replied the culprit, as he began picking up the cards.

"Do you think that is the way to start in to become a knight, Tommy?" asked Madge.

"We must go," said Amy, "and Tommy, you go home and put these cards where you found them."

Tommy gazed after them with his eyes fixed on Madge. "They are coming back to tea," he commented to himself, "and Madge promised to tell me more about that hero. I wonder will she now—'twas only fun."

Madge found a small piece of paper by her plate, and written on it: "But I don't forget what you tell me. I remember the hero said, 'When you do wrong take the blame of it; do not give up the truth for any man.'"

And that night Tommy heard more about the hero.

A. P. D.

From Japan

DEAR CHILDREN: I have just received a letter from a friend in far-away Japan, and some portions are so interesting that you must share them with me. This is what she writes:

"Japanese children are simply delightful. They hardly ever cry and they almost never make a noise—and they play without quarreling! (That's Raja Yoga, you know.) They are always self-possessed, always polite, and I don't wonder that the grown-ups love them so much—for

the grown-ups *do* love them, Aunt Esther, and many little ones in this land are surrounded with a care and a solicitude that even the best American homes do not always afford. Japanese children are very fond of fairy tales and they have a great many that resemble our own nursery tales of fairies, ogres, and giants.

And then there is the Japanese 'Bre'r Rabbit,' too, who tells all kinds of tales, and there is even one dialogue between a Rabbit and a Crocodile—think of it! But that may be one reason why Japanese children are always so interested in animals and are invariably so kind to them. Then, too, Japanese children are taught to be more tender in their treatment of flowers than our children are. You never see a Japanese child whipping off the heads of daisies with a cane. They treat plants and flowers as if they were little living comrades."

AUNT ESTHER

DEAR CHILDREN: I live in a suburb near London, and near my home lives a lady who has the queerest pets you ever saw. They are baby lions. Some of them are not so very small, and it is interesting to see her with them. They were sent to her when they were very little, so little that she had to feed them on warm milk. Perhaps that is why they are so fond of her

now. Whenever she walks in the garden there are one or two always beside her, and one day when I called upon this lady I saw a lion cub sitting in a big armchair beside the baby. Before the grate-fire was another, stretched out at full length. You see, even animals that are believed to be savage, are not so when they are treated as animals should be treated. They will respond as quickly as little children will, and when people learn this, how much happier the world will be!

There is an old, old legend—and perhaps it is a true one—of a musician named Orpheus who, when he played upon his lute, would call to him all the animals of the forest. There at his feet they would sit, enchanted. While they were wild before, his music made them tame. And I sometimes think that that is the way it will be again some day. Surely it will, if Raja Yoga comes to be known, for Raja Yoga means justice and love.

■ The Old Stone Basin ■ by SUSAN COOLIDGE ■

IN the heart of the busy city.
In the scorching noon-tide heat.
A sound of babbling water
Falls on the din of the street.

It falls in an old stone basin,
And over the cool, wet brink
The heads of the thirsty horses
Each moment are stretched to drink.

And peeping between the crowding heads,
As the horses come and go,
The "Gift of Three Little Sisters,"
Is read on the stone below.

Ah! beasts are not taught letters;
They know no alphabet;
And never a horse in all these years
Has read the words; and yet

I think that each thirsty creature
Who stops to drink by the way,
His thanks, in his own dumb fashion,
To the sisters small must pay.

Years have gone by since busy hands
Wrought at the basin's stone—
The kindly little sisters
Are all to women grown.

I do not know their home or fate,
Or the names they bare to men,
But the sweetness of that precious deed
Is just as fresh as then.

And all life long, and after life,
They must the happier be
For the cup of water poured by them
When they were children three.—Selected

Students'

Path

PIONEERS

by ELLA HIGGINSON, in the Voice of April Land

WOULD God that we, their children, were as they!
Great-souled, brave-hearted, and of dauntless will;
Ready to dare, responsive to the still,
Compelling voice that called them night and day
From that far West where sleeping Greatness lay
Biding her time. Would God we knew the thrill
That exquisitely tormented them, until
They stood up strong and resolute to obey.

God, make us like them, worthy of them; shake
Our souls with great desires; our dull eyes set
On some high star whose splendid light will wake
As from our dreams, and guide us from this fen
Of selfish ease won by our father's sweat.
Oh lift us up---the West has need of Men!

Unpractical Speculation

THE *Babel of Modern Thought* is the title of one of H. P. Blavatsky's writings; and, as Babel signifies a vast confusion of voices ending in nothing but strife and failure, the word is peculiarly appreciable to the condition of current speculation and opinion.

The extreme multiplicity of our books, magazines and papers, and the fact that everybody is nowadays "educated" up to the point of being able to babble plausibly and with much self-gratification, make this an age of talk and gossip beyond belief. There is a vast whirlwind of speculation and opinion on every conceivable topic and from every possible point of view, until the weary brain aches with the attempt to keep up with even a small fraction of it.

Of all this talk the greater part may be at once ruled out as babble of the hastiest kind, opinions thrown off without reflection, speculations indulged in without any clear idea either of the object aimed at or the premises on which they are based.

Of the remainder, which may be more serious and carefully considered, there is again a major part which is impractical, having no bearing on the problems of actual life. This composes what may be called modern philosophy, so far as any definite and uniform conception can be traced in such a nebulous mass.

And modern philosophy is almost entirely of the unpractical kind, such as is usually evolved in ages of rank material civilization.

It deals with abstractions rather than realities. For example, we speak of men and women, not as actual persons, but as types and classes; and in this way we deal with mere conceptions which may be very unlike the realities which they are intended to represent. Thus there are "the workman," "woman," "nations," "the millionaire," "the child," and so on. And similarly in other departments of speculation we have abstractions like "government," "the people," "commercial interests," "religion," and so on. And in science words like "motion," "matter," "space," etc., which denote the same kind of hazy and unreal conceptions.

Hence modern philosophy is for the most part a game, played with counters, and with "men" who are about as much like real men as the ivory chess bishop is like the actual black-robed church dignitary. When problems in real life claim attention, philosophers forget their games and parlor puzzles and behave with the usual mixture of horse-sense and stupidity that characterizes plain people.

The "philosopher" is notoriously a failure in the ordinary affairs of life; so much so that the two things are generally regarded as going together. The kind of speculation we are speaking of is elaborated by men of but little experience of life—"arm-chair philosophers," as they have been called. We read of their simple, unpretentious lives, their regular and cautious habits, delicate health, eccentricities, etc. Men of affairs and much experience do not weave these systems.

It is easy to make a philosophical system when facts do not interfere much to check the accuracy of one's conclusions; when one is allowed to use imaginary men for real ones—men who will do what they are calculated to do; and when one is not required to modify one's own mode of life in the way which the philosophy would demand.

Now all this abstract speculation is a sad misuse of the intellect. The intellect is surely intended to be a guiding light through the winding ways of life. Intelligence is opposed to ignorance, as light to darkness; it is a divine ray shining in the depths of our carnal nature, and capable of raising the latter to divinity.

But there seems to be a tacit understanding between the carnal man and the intellectual man, that, so long as the former is permitted to continue a life of self-indulgence and inactivity, the latter shall have free play in the realms of imagination. Thus we get the arm-chair philosopher, weak, amiable, impractical, slovenly, big in the forehead and weak in the knees. And below him come a numerous host of less prominent individuals, all with their imaginations developed far ahead of their executive power, and as clever in abstract reasoning as they are incapable in actual conduct.

In the mode of life which, under the Leader of the Universal Brotherhood and Theosophical Society, the students of Loma-land are so thankfully learning to live, all this visionary and unpractical learning has to give way to real usefulness. The speculating, inventing part of our nature has to take its proper place in subordination to the will acting under the influence of noble aspiration and the desire to be brotherly and true and useful in the world. It costs some people no little patience and trouble to neutralize the set habits of thought and feeling and mode of living contracted before they came to Loma-land, and to get themselves into condition to do a little practical philosophy. But the joy of the effort and the meed of victory are well worth the trouble.

And if, as we in Loma-land believe, our life and institutions are indicative of those that the world will have to adopt in the near future, we may look for a speedy reaction against the time-worn ruts of thought in which that world still grinds on. Freedom from enslaving ideas, and from the sluggishness of behavior which turns all speculation and aspiration into the region of vain dreams, is the kind of freedom that hearts are aching for.

As the discussion of the problems of life has now become inextricably tangled, it is time to rule all motions out of order and revert to the "previous question" of "what shall I do now?"

STUDENT

MEN ARE FOUR

THE man who knows not that he knows not aught---
He is a fool; no light shall ever reach him.
Who knows he knows not, and would fain be taught---
He is but simple; take thou him and teach him.

But whoso, knowing, knows not that he knows---
He is asleep; go thou to him and wake him.
The truly wise both knows, and knows he knows---
Cleave thou to him; and evermore forsake him.

An Arab Proverb

Moral Imbecility and Naughtiness

DR. STILL, of some European note, is of opinion that the naughtiness of some children is due to "moral imbecility." This of course is perfectly true, but the imbecility is on the part of the parents. If Dr. Still will take the trouble to acquire a due understanding of the way in which these naughty children have been trained he will wonder that their naughtiness is not ten times greater than it is. Indeed it speaks volumes for the moral buoyancy of some children that they are able to resist the moral influence of their loving, mischievous and well-meaning parents.

STUDENT

WHEN the day has come the light of the candle grows dim and it is extinguished. Within ourselves is a higher illumination before which the flickering glare of the lower desires grows dim, until, at last, we extinguish them.

MANY times the climber thinks the heights are reached, but finds there are others beyond; and yet, at last, the top is reached.

QUANTITY does not make quality. No process of addition or multiplication can make that which is poor good.

If you wish to discover faults search amongst the faultfinders.

LET EACH WITH A HEART SAY

by ELLA WHEELER WILCOX, in *New York Journal*

I AM the voice of the voiceless,
Through me the dumb shall speak,
Till the deaf world's ear be made to hear
The wrongs of the worldless weak.

From the street, from cage, from kennel,
From stable and zoo the wail
Of my tortured kin proclaims the sin
Of the mighty against the frail.

Oh, shame on the praying churchman
With his unaltered steed at the door,
Where the Winter's beat, with snow and sleet,
And the Summer sun rays pour!

Oh, shame on the mothers of mortals
Who have not stopped to teach
Of the sorrow that lies in death's dumb eyes—
The sorrow that has no speech!

The same force that formed the sparrow,
That fashioned man, the king;
The God of the whole gave a spark of soul
To furred and feathered thing.

And I am my brother's keeper—
And I will fight his fight,
And speak the word for beast and bird
Till the world shall set things right.

Conducted by J. H. Fussell

Question

What are the Theosophists trying to accomplish at Point Loma at such a distance from the great centers?

Answer

(1) If we look at the fact that modern Theosophy, as a philosophy and science of life, has been taught and studied for more than a quarter of a century by a great many people throughout the world, and that the object of its promulgation was not intended as a mere matter of intellectual attainment on the part of individuals, but that its principles, and the knowledge gained therefrom, should be applied to the lives of the people of the earth, it is clear that the time must come when those students who were ready to take part in a demonstration of those principles in daily life should come together and do so.

The Theosophical Society and Universal Brotherhood has from its inception been under the guidance of great Teachers and Leaders, and it is to the present Leader, Katherine Tingley, that the establishment of the Point Loma Headquarters is due.

That the choice of location was a wise one cannot be questioned, as far as a pure, clean mental and physical atmosphere is concerned, unsurpassed physical surroundings and climate—and, in fact, every condition that makes for success in a movement of this kind.

The fact that this school of training is removed from the large centers does but add to the certainty of its success, for the disturbance and contamination of those places is not felt; at the same time the Headquarters is in close relation to those large centers through the same channels as connect all cities, and also has a still closer connection through its many lodges and members distributed throughout the world in large and small centers alike.

The work done at Point Loma finds its way directly and indirectly to the people of many countries, and that work is constantly extending. A body of men, women and children is being trained to render unselfish service for humanity, and is constantly increasing in size and effectiveness.

Most particularly effective is the situation at Point Loma for the training of children, for by its very distance from the large centers are avoided the follies and mistakes, the wrong habits of mind and body, and the erroneous conceptions of life which obtain in these places, and there are provided the very best conditions for the growth of noble men and women—such citizens as the world so sadly needs.

Moreover, other centers similar to that at Point Loma are being established—conducted by teachers who have been trained here; and so from

this apparently sequestered spot goes on the good work of bringing light and succor to those in darkness and distress, and the demonstration of the near possibility of a higher, better civilization than has yet obtained, and a fuller happiness for all creatures.

R. C.

(2) Theosophy is nothing if not practical. For thousands of years the world has been drifting further and further away from soul-wisdom, and the principles and practices of Brotherhood. These are no longer the basis for life, but have been replaced by other and selfish considerations. At the Point Loma Center the principles of equity and Brotherhood are the key-note of life; the daily life there is an illustration of them, and as the work expands into manifold departments all human work receives the touch of wise and unselfish endeavor, and there is established a nucleus of right living, a new reign of conscious adherence to the higher laws of being that constitutes the hope and promise for the future of humanity.

To the light that shines so pure and clear all hearts will turn at last, and this home of the soul-life will be recognized as the spiritual center of the world.

M. M. T.

(3) It would be impossible to tell all they are trying to accomplish, but in general terms they have set themselves to work to create a new and entirely different environment from that which can be found elsewhere. The Point Loma world center is composed of earnest people, who are not satisfied with present conditions. The great centers are the points where modern methods, forms and ideas are the most intense, and they are therefore the points where, of all others, the Theosophist would least like to be.

It is not easy to change one's habits, to get out of old ruts, to shake oneself free from others' opinions and influence. And in the great centers where, so to speak, all these things are in the atmosphere, it is well nigh impossible. In order to have a chance of success in remodeling life, there must at least be a sweet, clear unspoiled place in which to work.

From this center, once it is established, the work will widen and spread, so it is not in a spirit of seclusion that Theosophists have separated themselves from the great centers. If they thought the social fabric was in the main right, they would no doubt be content to work in it, supporting it and helping it a little here and there. But to the Theosophist anything short of radical measures is simply a waste of time. There must be a fundamental change, a complete transformation—a new order of things, and at Point Loma is the spot which is destined to establish this.

G. V. P.

The Earl of Cromer

IN 1883, after Arabi Pasha's rebellion had been crushed by the British, a Major of Engineers named Evelyn Baring was made British Agent and Consul-General in Egypt.

Soon after he took up his duties a Turkish merchant called at his office in Cairo and was astonished to find that it was unnecessary to bribe him in order to secure attention and get business done. Gratified by this fact he gave the Englishman what he thought was good advice.

"Depart from this country," he said. "I perceive that you are an honest man who has come into a nest of scoundrels. You can do no good here."

"Everything in the Government of this country is rotten. Justice is bought at a price, and the very Judges are worse thieves than those whom they punish."

"The starving fellahs [peasants] are flogged into paying their taxes, but the rich landowners need pay no taxes at all, provided they bribe the officials."

"I am here to change all that," Baring replied.

"You cannot. Every one of the officials is a vampire, and lives by draining our life-blood. Do you think they will let you spoil their feast? They will kill you rather."

"I will stay and fight them. You follow the Prophet, and you must believe, as I do, that the sword of Azrael falls when Allah wills."

"Allah shuts his eyes to a fool," snapped the Turk, quoting a favorite Mohammedan proverb. "Within the year I shall see your funeral pass my door."

That was twenty years ago. Evelyn Baring still lives, but he is now the Earl of Cromer, P. C., G. C. B., G. C. M. G., K. C. S. I., C. I. E., D. C. L., and most of the remainder of the alphabet.—*New York Sun*

ARROGANCE and ignorance are good pals; when unearned wealth joins them they can take up the whole sidewalk.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Education in a Republican Government by Montesquieu

It is in a Republican Government that the whole power of education is required. The fear of despotic Governments naturally arises of itself amidst threats and punishments; the honor of monarchies is favored by the passions, and favors them in its turn; but virtue is a self-renunciation which is very arduous and painful.

This virtue may be defined, the love of the laws and of our country. As such love requires a constant preference of public to private interest, it is the source of all private virtues. . . . Now Government is like everything else; to preserve it we must love it. Everything therefore depends on establishing this love in a republic; and to inspire it ought to be the principle of education; but the surest way of instilling it into children is for parents to set them an example. Parents have it generally in their power to communicate their ideas to their children; but they are still more liable to transfuse their passions.

It is not the young people that degenerate; they are not spoiled till those of maturer age are already sunk into corruption.

The Eternal Law of Fraternity

THE ancient philosophers inculcated the study of self as the solution of all human problems, collective as well as individual, and this was but the presentation in a philosophic garb of the eternal law of fraternity. The family, the town, the nation and the universe are reflected in the individual who contains within himself the developed or the latent possibilities of all. The forces which move in the world and which make for peace and war, for good and evil, for progress and stagnation, can all be identified in ourselves upon however small a scale, and humanity advances as a unit through its dangers and towards its goal. Such an idea is the enemy of pessimism and of fear, because it gives to the world the power of choice and of reform, which

we know ourselves as individuals to possess. He who sees that the events of his own life are regulated by law, knows also that the will of nations cannot prevail against that same law, that there is a design, an intention, a necessity behind all things.

In looking at the affairs of the world we lack the great perspective which would give us a glad confidence instead of a dread. We stand aghast at the efforts which humanity makes to adjust itself and to control the incubus of its lower nature, and we suppose that because the body politic trembles and shakes that it is therefore in its death throes. Death would indeed be near if there were no adjustment, if greed and cruelty were to breed no compensating pain, if heartless luxury had no tomorrow. So long as the earth endures, seed-time and harvest shall not fail from off the face of it. It is because the world is divinely alive that we must reap the whirlwind where we have sown the wind. And if perchance we have sown dragon's teeth, these also must come to fruition for our salvation, that we may know our handiwork and so pass on and sin no more.

Upon every side we hear of national catastrophe and the forebodings of pessimism. Prophets of disaster speak to us of wars and rumors of wars, and the air vibrates with portents and presentiments. Is it inopportune to suggest that the only real calamities were the world-wide selfishnesses which have produced these things, and that all possible results therefrom, whatever they may be, are in the nature of remedies, none the less curative because they are distasteful?

There is no possible disaster except the commission of folly and the worship of self. That we must readjust ourselves is not a misfortune. The poison was a calamity but not the antidote.

The Throbbing Forces of Health

And so, because the world of men is but a vast and faithful picture of the individual man, so within each one of us there is a reforming power which can be wielded by the wayfaring man as well as by the scholar. The throbbing forces of health are abroad in the world to an extent of which we little dream. They will tolerate no hidden evil but will fetch it forth upon the surface where it can be seen and handled. There is no individual who cannot become a center for the restorative forces of nature, no individual who cannot become a world of light in miniature in which the radiance of hope will go out into all other worlds which are, or may be, in the darkness of dread and despair. It was said that even a sparrow cannot fall to the ground without the divine will, without the judgment of the Law. Is not a vast discrimination the very essence and heart of divine law, and shall it not translate chaos into order and execute justice among nations?

And so now and always, we can do much, not only by preaching our philosophy of hope, but by practising it. We believe, we know, that it is well with the world. Let us act as though we believe and know it. Hope is irresistibly contagious, and men need only an invitation to lift their eyes from the ground with its magnified perils, and to fix them upon the horizon where heaven and earth meet and mingle. Let us think steadily of life and not of death, of peace and not of discord. Let us believe in justice, and the triumph of right. Let us be assured that the Oversoul of humanity is alive forevermore, that it has the keys of fate within its hands and that it will subdue all insurrection from below, imposing at the last its utmost perfect peace upon all turbulences and upon all violences.

STUDENT

Suicide and Guilt

GENERAL SIR HECTOR MACDONALD, when accused of a disgraceful crime, committed suicide, and the world said that he had thereby admitted his guilt. The world is usually anxious to return a verdict of guilty from a standpoint too lofty and too virtuous to be troubled by mere evidence. It has now been ascertained that General Macdonald was *not* guilty, that there was no shadow of justification for the charge, and that it was the result of malice and slander. Suicide is evidence of moral cowardice, but is it evidence of guilt? There is perhaps something in the contrary contention. The guilty man has steeled himself against possible detection and has mentally arranged whatever defense is open to him, but to the innocent man the charge may come with such unexpected force as to shatter the mind and conquer courage. Those who thus assassinate an honorable man and brave soldier are not to be envied.

A Suicide Institution

IT seems that one of our well-known universities is earning for itself a reputation as a "suicide institution," because of the frequency with which this horror occurs. Various representative men have been invited to advance theories in explanation of such a sinister state of affairs, and their replies may be quoted as evidence not only of a wide divergence of views but of the inadequacy with which so serious a problem is sometimes faced. Here are five opinions which have been obtained from five separate authorities:

- Coeducation is the leading cause of suicide at ———.
- Dyspepsia, caused by wretched boarding houses.
- Hard physical and mental work.
- The most reasonable explanation seems to me to be that of imitation.
- The lack of religious and moral training.

We hope that the first theory may at once be ruled out of court. If we have actually reached a point of degeneration where men and women cannot be educated together without producing an epidemic of suicide, such a condition would seem even more menacing than the crime itself.

The second explanation, that of dyspepsia, is an illustration of inadequacy that it would be hard to equal. How deplorable must be the mentality which is driven by dyspepsia over the edge of sanity, and how dangerously near the edge must that mentality normally be. Are we to believe that there is any considerable number of students who need only the final urge of dyspepsia to take their own lives. It is almost incredible, and in any case such an explanation does but move the problem one step further back.

The third theory of hard physical and mental work is almost equally unsatisfactory. Hard work never hurts any one if it is properly systematized, and invigorated by worthy object and ideal. There is hardly any breaking strain to a due combination of mental and physical labor so long as it is fortified by lofty aims and intentions.

The fourth theory, that of the fatal power of imitation, may have much to support it, although it also is deplorably inadequate. We must, however, again express our wonder at the picture which it displays, a picture in which the minds of young men and women at the time when they should be healthiest and strongest are yet in a condition so morbid, so diseased, as to be irresistibly driven to imitate the irrevocable crime of another.

The final suggestion that suicide among students is caused by lack of religious and moral training may mean very much or it may mean very little. It all depends on the definition we attach to these expressions. If they mean ordinary creed and dogma we would suggest that these things are the cause of suicide and not the prevention. The religion which gives to life the crown of a supreme sanity is the religion which recognizes the existence of the soul, its sublime mission and the unflickering eternity of conscious life. The religion which shows that law is the ruler of events is the destroyer of despair, and the perspective of life which it gives to us proves that hope and attainment have no boundaries, and that all circumstances are helpful and friendly. If this is the kind of religious and moral training which is meant, we would express our hearty agreement, knowing well that suicide and all other crime would disappear forever wherever its light can penetrate.

STUDENT

Dr. Max Nordau

DR. MAX NORDAU is a striking illustration of what can be achieved by unaided ability. He was born in very poor circumstances and at the age of fifteen he was already supporting his mother, father and sister. At the age of eighteen he was studying medicine at the Pesth University and earning the money as a reporter. His writings soon attracted attention and his fame culminated with the publication of his great work on *Degeneracy*. Truly, men become famous, not by the education which we put into them but by the innate ability which is allowed to come out of them.

STUDENT

Frontispiece---Loch Katrine

THE illustration on the cover page of the NEW CENTURY PATH this week gives a fine view of Loch Katrine in the County of Stirling, Scotland. This is one of a group of very famous lakes in Stirling County, the others being Lochs Lomond, Arklet, Coulter, Ellrig, and Black.

The Cheapness of Life

INSCRUTABLE are the workings of the human mind and of human sympathies. Especially is this true of the very divergent values which we place upon human life. A sudden calamity, such as the destruction of a theatre, fills us with consternation and pity, but an infinitely greater and more needless waste of life we are able to view with unconcern. During the last five years 38,890 persons were killed and 253,823 were injured on the railroads of the United States. We should like to see how these figures compare with the results of all the world's wars during the same period. And this frightful casualty list is unnecessary. The *Chicago Tribune*, writing editorially upon the subject speaks

Of the thousands sacrificed every year to human indifference, carelessness and lawlessness, and to the risks taken by greed and indolence.

It seems that we annually kill one person for every 300 railroad employes, but in Germany only one in every 750 is killed; in Austria, one in every 1000, and in Great Britain one in every 1500. In America there is no decrease from year to year, while in Great Britain, in the year 1874, forty-six were killed out of a total of 250,000, and in 1894, out of 381,000 only six were killed. The mining, manufacturing and building industries tell the same tale. According to the *Chicago Tribune*,

The New York *Commercial Advertiser* has investigated some of them. It finds that among 142,420 employes in the Pennsylvania anthracite mines in a recent year, there were 461 fatal and 1030 non-fatal accidents. Last year 788 persons were killed in mines in the United States. It also finds that on the railroads, in the mills and factories and in the building operations the yearly number of fatal accidents is not less than 20,000, and of non-fatal 150,000, and that from one-half to two-thirds of these are avoidable.

The disgrace of it all is in the concluding sentence. If an individual causes the death of another through indifference, carelessness, lawlessness, greed or indolence, it is usually left to a jury to give that offense a name and to a judge to award a punishment, but apparently if the offense be upon a sufficiently large scale there are no such penalties resulting.

STUDENT

Rich Men's Sons

DR. GUNSAULUS is one of those preachers who seems to be unafraid to take hold of the vital truths of practical religion with bare hands, and apply them to the needs of the day. He has lately preached a sermon upon "Rich Men's Sons," and while he avoids the vulgarity of attaching a spiritual halo to either poverty or riches, he recognizes that every social condition has its peculiar dangers as well as its peculiar opportunities. None the less he says that "it seems easier to go to perdition in a dress suit than in a sack coat," and he goes on to offer the unpalatable truth that,

Society, as organized today, swallows many a young man into an early grave, and the young man is unfortunate who comes into the city and gets into a wealthy crowd. In the sixteen years I have lived among you, I have gone to the graves of young men with wealthy fathers, who themselves have dug the graves for their sons. The United States Government can never be strong until fathers give to this country boys that have been governed.

That the graves of the children are dug by their parents is lamentably true of every class of the community and not of one alone. If we could but more clearly see the workings of the law of cause and effect, if we could but see the roots from which the baleful, poisonous flowers of civilization have sprung, there would be a reform in nursery and school such as the world has never yet seen, nor ever so urgently needed. There would be fewer gray hairs brought in sorrow to the dust.

Dr. Gunsaulus sends an arrow straight to the heart of the question when he says that this Government will never be strong until fathers give to their country more sons that have been disciplined. We have today a strange and fatal fallacy that freedom and discipline are antagonists. We shall have to learn that there is no freedom without discipline. Slaves we must all of us be either to the good or to the evil, and strange indeed is that freedom which binds us hand and foot and throws us into the arena of our own passions. To discipline a child is to give it a knowledge of good and evil, and the divine free will which can discriminate and choose between them. Mothers and fathers can learn this lesson now if they will, or they can wait for the scourge of nature to teach it to them by sorrow.

STUDENT

✻ Some Views on XXth Century Problems ✻

✻ Fruit on the Tree of Selfishness

THERE are some old books which produce a feeling almost of despair, not because of the social picture which they paint, but because of the indifference with which that picture has been received. It has been admired as a work of art, we have rhapsodized over color and composition, but we have been blind to the burning message with which it throbs, and the dance of death has led us ever nearer to the precipice from which it was meant to warn us. Such a book is Carlyle's *Past and Present*. Take it up now and read page after page of burning denunciation, of a great heart's bitter, compassionate wrath, and then realize that by all usual human standards that book has failed, its merciless dissection of the horrors in which we live and move and have our being has left us unaffected, and the passage of years since its publication has but heaped misery upon misery and crime upon crime. Slum life has increased, despair, disease and vice are more aggressive, and the fruit upon the tree of selfishness has become the desire of all nations.

Another such book is made up of the early writings of John Richard Green, the historian. These writings were first given to the world in 1867, when the eminent author was a clergyman in the east end of London. Almost every word that he wrote then might be written today, except that his sorrowful pleadings for the poor and the oppressed would today be intensified by an intensified and more calamitous misery. He speaks scornfully of our "charities," which, he says, are a sign not of our compassion, but of our indifference, and which do but intensify the misery by adding unto privation the inevitable corruption of mendicancy. Society is too indifferent either to leave the slums entirely alone or by determining the cause of social disease to end it.

All that some people know of it is summed up in the annual winter's cry of distress. Christmas after Christmas brings the same appeal to public charity, the same plea of want of employment, of starvation, of death. Every year the appeal is more generally responded to, but the cry grows louder with the response. Charity—benevolence, that is, with other people's money—has become the winter business of the East end.

This corrupting charity is administered by the religious organizations, who scramble with one another for the influence to be gained by its distribution.

There is no inquiry as to solvency or responsibility or a proper auditing of accounts; the tap is turned on, and the one question is, Who shall be first with his bucket?

These essays were written nearly thirty years ago, and while they have not, of course, had the same enormous circulation as the writings of Carlyle, they were, nevertheless, widely read, and are now given to the world in book form. Is the world likely to do any more than admire their literary form, their vigor and their scope? Will the world listen to this voice from the dead, or will it render to the writings of John Richard Green the same homage of stupidity which it has continuously offered to Carlyle?

Such books as these produce, as we have said, a feeling akin to despair. The slum life of all our great cities grows more extensive and more cruel, year by year. Year by year the corrupting stream of gold is poured out that the feeble whisperings of embryonic consciences may be quieted. What is to be the end of it, because to an end it must most speedily come?

STUDENT

✻ Self-Indulgence and Alcoholism

THE number of people who take no alcoholic drink whatever is steadily on the increase, but the total consumption of alcohol is also on the increase. This can only be explained on the assumption that those accustomed to alcohol are drinking it in larger quantities, thus maintaining and enlarging the old averages. In England, for example, the consumption of alcohol has increased 21 per cent during the last twenty years, and many other nations could tell the same story. It may well be called one of the problems of the age, and it is a problem which is likely to remain unsolved so long as we devote so much attention to the eradication of evils and so little attention to the

removal of evil. The alcohol habit is a growth upon the tree of self-indulgence and so long as we assiduously cultivate the tree the supply of fruit is not likely to diminish. We deliberately set our children afloat upon the broad stream of self-gratification without oars or compass, and then we marvel at the almost inevitable shipwreck and call it one of the problems of the day.

STUDENT

✻ Slum Life Is Based on Selfishness

SOME wealthy men of Chicago are about to inaugurate a scheme for the alleviation of slum misery. The plan is to transplant the people from the congested districts to agricultural lands which will be procured for the purpose.

Very similar experiments have been tried in London, and to a great extent they are a failure. The slum dweller is not fitted for farm life and he cannot work productively, and unless he can work productively the scheme is simply a financial charity. We have also to remember that the slums are being recruited far more quickly than they can be emptied, and the true remedy is to stop the inflow. To do that we need something more than a mere tinkering with externals. The congestion of the slums has a cause and until the cause is removed the congestion will go on. What then is the remedy?

We must frankly admit that we see no remedy whatever, no possible alleviation until we are ready to reconsider the basis of our social life, and by this we refer in no way to legislation, nor agitation, nor any of the social anti-toxins which we are so noisily anxious to compel each other to swallow. The true basis of our social life is a mental and moral basis. All miseries and all remedies begin here and nowhere else. So long as we are willing to live like hungry wild beasts in the arena, so long will there be a certain number of unfit who cannot defend themselves and who will fall before the sharper teeth and the longer claws of the remainder. To cease for an occasional hour from the work of mutual destruction in order to pick up one or two of the wounded and disabled is of course good, if ineffective, but how infinitely better to cease inflicting the wounds. One thing is certain. No reform is possible which is based upon a continuance of the present mental conception of daily duty. Slum life is not in anomaly, it is an integral and inevitable part of our system. Slum life is not a disease, but the symptom of a disease, in the same way that a headache may be the symptom of blood-poisoning. The real malady must be sought for in the collective life of the community, the home, the counting-house, the pulpit and in the pew.

The real slums are to be found in the thought life of all classes, the habits of selfishness of which the material slums are but the inevitable deposit. Very much of what we call charity is paid as a ransom for our habits of thought and we would willingly pay ten times as much rather than see rude hands laid upon the ark of our greedy covenant. No true reform will ever come out of subscription lists nor board meetings, but wherever there is one man who determines to live righteously, with or without the support of others, and to face "ruin," and ostracism and ridicule, and all the other pitiful ghosts of fancy and fashion, there within that man's heart has been liberated a force which shall not fail. X.

✻ Who Will Arouse the Churches?

A WRITER on the drink problem of a nation says that, to overcome the evil finally, resort must be had to legislation. "But meanwhile legislation halts, because the churches, which should be powerful in the formation of an enlightened public opinion, are inadequately aroused on the question."

Here is an ingenuous and unconscious admission of the fact that the churches do not lead, but follow. What, one asks, is the function of the churches supposed to be? They need arousing? Then who or what is to arouse them? The churches are to be aroused to form an enlightened public opinion, and this in turn is to cause legislation, which again will prevent the drink evil. In the absence of anyone who will arouse the churches and so set the train of mechanism going, we must wait until they wake up.

STUDENT

Art Music Literature and the Drama

Descriptive Music and the Soul's Higher Need.

MUSIC of the higher kind awakes in us the dormant faculty of intuition, it stirs the imagination, and calls into action a part of our nature that the ordinary life of the world today tends to deaden and obscure, a part of our nature that is purer and more subtle than the reasoning, analytical mind. For this reason, perhaps, the better kind of music always irritates people who have given up the attempt to raise or purify their own lives and who only want to hear that kind of music which appeals to the sensuous or to the intellectual.

The intuition has been so long neglected and despised that it has become dormant in a great majority of people, and any appeal to it produces in these people a feeling of irritation, akin to the feeling produced by a demand made upon them for any kind of effort. Also, it causes them to feel annoyed because they do not "understand" it; that is to say, they can not give themselves any clear statement of an intellectual kind of the meaning of what they hear. They are so completely at the mercy of the intellect that they want an intellectual analysis of an emotion and an intellectual formula in which to express it. This they call "understanding," not seeing that the higher emotions are greater than any intellectual analysis, formula, or expression of them.

The intuition is the voice of the soul and the soul is greater than the mind. For this reason what is called "descriptive music," although generally popular with the intelligent masses, is condemned very often by those who see the higher possibilities of music. For the same reason the general public like to have an explanation of the meaning of a piece of music and the more artistic or cultured equally dislike such interference with the action of their own intuition. There is, indeed, something vulgar and even impertinent in an attempt to suggest to an audience what it shall think about while listening to a musical composition, and such explanations are only excusable when they are so lofty and inspiring as to raise the mind to a higher state preparatory to the hearing of the music. But this is not what the lower nature wants, and, if offered, serves only to bring about the irritation alluded to. To be popular the description must appeal to the emotions familiar to the lower nature, and so must tend to close the door of intuition which it is in the power of music to unlock. If the explanation or description should fall below the level of the intention of the composer of the music, it becomes an offence morally and artistically, an insult to the composer, and an injury to the audience.

Far better is it to seek no such intellectual explanation, but to let the music tell its own tale and let the soul of the listener have a chance to awake for a moment and fill the mind with even a confused impression of higher things. Better the unsatisfied wish for an understanding of what is heard, than such a sop to the lower part of the mind, which is truly the Cerberus who barks at the gate of the Soul's castle. R. MACHELL

The sound of music that is born of human breath,
Comes straighter from the soul than any strain
The hand alone can make.—*Arion*

SCHUBERT was one of those great musical geniuses who was able to write out his choicest melodies on the inspiration of the moment. "One afternoon, as he was sitting with some friends in the garden of a tavern near Vienna, he saw a volume of Shakespeare on the table. He took it up and turned over the leaves till he came to 'Hark, hark, the Lark.' After looking at it a few moments he exclaimed, 'a lovely melody has come into my head: if I only had some music paper.' One of his friends drew a few staves on the back of a bill of fare, and Schubert, undisturbed by the tavern noise, jotted down his delightful song."

Celtic Music and the Pentatonic Scale

RESEARCHES being made within the last few years in the matter of Celtic music are not without their significance. One of the chief characteristics of Celtic music, the pentatonic scale, arises from the limitations of the instrument used, the harp. Examples of the pentatonic scale are not common today either in Scotch or Irish music, although one finds instances in a few well-known Irish airs, such as "The Groves of Blarney." The latter, with certain additions and interpolations, came to be known in the early part of the last century as "The Last Rose of Summer."

It is interesting to know that until 1100 B. C., the Chinese had only the five notes of our ordinary pentatonic scale, C-D-E-F-G, but in that year F sharp and B natural were added. This scale was used for several centuries until at the time of the Mongolian invasion there was introduced another scale, having the F natural instead of F sharp. The result of this was something so very like confusion, or so it appeared to the Chinese, that we are told an imperial edict went forth that no subject of the emperor should, after that time, use the interval of a semi-tone; and so the scale was reduced to C-D-F-G-A. There is an interesting analogy here, but whether there is any immediate connection between the musical system of the two countries is not yet determined.

FRAGMENT

by ELIZABETH BARRETT BROWNING

THE cygnet finds the water; but the man
Is born in ignorance of his element.
And feels but sin at first, disorganized
By sin in the blood---his spirit-insight dulled
And crossed by his sensations. Presently
He feels it quicken in the dark sometimes;
When mark, be reverent, be obedient---
For such dumb motions of imperfect life
Are oracles of vital Deity
Attesting the Hereafter. Let who says
"The soul's a clean white paper," rather say
A palimpsest, a prophet's holograph
Defiled, erased, and covered by a monk's---
The apocalypse, by a Longus! poring on
Which obscure text, we may discern perhaps
Some fair, fine trace of what was written once.

ures, and if they were enlightened, in most cases they would repudiate the suggestion. In Holland the 'planting' of falsely decorated Delft was not long ago almost a 'cottage industry,' designed to meet the convenience of the foreign ill-informed tourist, intent on picking up pieces of genuine Delft."

JOHN LOCKE in his *Thoughts Concerning Education* (and educators are already calling him old-fashioned, you know), says with regard to teaching children rhythmic motion, that is, dancing: "Nothing appears to give children so much becoming confidence and behavior and so to raise them to the conversation above their age for, though dancing consists only in outward gracefulness of motion yet, I know not how, it gives children manly thoughts." He adds that the teacher should be chosen with the utmost care. One must take exception, however, to the statement that "dancing consists only in outward gracefulness of motion." Much that today goes by the name of dancing certainly reflects no more than that, but Locke's ideal of the dance must have somewhere skirted the boundaries of the real thing, or he would not have prescribed it for children. The ancient dance was a ceremonial, majestic, sacred, consecrated to the Temples—one of the mysteries truly. It was one avenue by which the Soul expressed itself. How has it been degraded!

SPEAKING of "wonder children," little Katherine Mills, a child of eleven years, is organist in an Essex, England, church, and Master Johann Sebastian Magill, a child of six, is organist in a church at Southgate, according to an English paper. The latter has recently been giving organ recitals, in addition to his regular musical work in the church.

CHOPIN was always averse to playing after dinner, and it is related that he once said, after having declined to play, in spite of the host's suggestion that all great artists played at that time, "*Mais, j'ai mangé si peu!*"

MUMA MANTILOR—"Mother of the Wounded"—by this name is Elizabeth, Queen of Roumania, known to many thousands of her subjects. As "Carmen Sylva" is she best known to the reading public.

The life of Roumania's beloved queen is as romantic in its history as a fairy tale. Born in a castle on the Rhine, descendant of the knightly House of Weid, the little Princess Elizabeth, in spite of the claims of her environment, lived a free, out-of-door life, never so happy as when wandering with her two faithful dogs, among the towering beeches of the forest about her castle-home. "Princess of the Wild Rose," she was called, and justly.

Sensitive, passionately fond of the beautiful, gifted musically, refined and most prepossessing, she grew to young womanhood surrounded by an admiration which did not, however, taint the sweetness of her disposition. At nine the little Elizabeth was writing poems, dreaming dreams and getting up theatricals among her playmate friends. At fourteen she wrote her first drama. She studied music with Rubinstein and Madame Schumann and today loves nothing better than to sit in the palace music-room as the twilight deepens, improvising upon the great pipe-organ. It was to the Queen, his one-time pupil, that Rubinstein dedicated his composition "The Sulamite." And her marriage to Prince Charles—a love marriage, by the way—with their romantic entry into Bucharest, amid such popular rejoicing as even a Queen rarely sees, was as a doorway closing upon a fascinating past and opening into a superb future, a future whose griefs served but to strengthen, purify and refine. In nothing is the Queen more remarkable than in her capacity for work. She rises long before the sun, and there, in the great conservatory-library, before breakfast, her poems, essays and stories are written. This leaves the day practically free and she devotes it, hour after hour, to the welfare of her people.

In Castle Pelesch she spends her summers. Built high up in the Carpathian mountains, as the castle is, the Queen is close to nature, and yet, surrounded by almost every marvel of art, from gorgeous oriental tapestries to carvings and paintings. And there is music always, for the Queen has her own orchestra and at times conducts it herself.

Carmen Sylva, in her poems, has sounded some of the deepest notes in human life. In some we read between the lines but the serenity and

✧ Carmen Sylva ✧

TO be in a position to do even the most insignificant thing to raise the veil which hides the divine from the vision of men should be regarded as an inestimable privilege. Only as we are true to ourselves can we be true to our trust.

KATHERINE TINGLEY

sweetness that is native to the unspoiled woman-heart; in others, we perceive the warrior, who, outraged with the world's in-

justice and saddened with its sorrow, is all fire and flame. The death of her only child, little Marie, brought into her life an overshadowing grief. But with the courage that is ever the sign of those who are innately unselfish she transmuted the personal sorrow into pure compassion. Only one incident in her life is the record of her services to the wounded, during the terrible Russo-Turkish war, when, dressed like the plainest of her subjects, she worked day and night for weeks in the emergency hospitals. And many a soldier declared that his fever was cured not by medicines but by the visits of his beloved Queen.

In her recent book Carmen Sylva says:

A woman's real knowledge need not be so great as her desire for knowledge in order that she may be a spiritual support for her children. . . . Ideal life would be in the country, in one's own garden, which would yield what one needs for food, with simple, healthy clothes, and books in which one could learn what no stereotyped school-lesson teaches.

If only women would learn that they are not here to be understood, but to understand! That is their holy vocation. People, especially men, seldom understand

women, for the man is much simpler in his sentiments and has seldom time to hearken to them. It suffices for him if he finds his hearth comfortable when he has worked himself tired. He doesn't want, then, to study the fine wheelwork of a woman's soul, but thinks that the simple fact of his loving her is enough, and that she wants nothing further. If women only knew what holy strength was bestowed on them by locking up in themselves their solitary thoughts and being always amiable, unnecessary storms would not so often arise. . . . Perhaps there was a time when man and woman were one single being,

and perhaps the legend of the rib dates from the time of the separation. They can now never become one again except in self-sacrifice. . . .

Nature rewards great and deep love with beautiful and highly talented children. All know this and yet have the unconscientiousness to place unhappy children in the world because they forget to love one another. With a great love, a sacred love, heaven can come quite near. . . .

If one, from the beginning, regarded marriage as a holy sacrifice one would perhaps get on better. For this reason no laws and regulations can be made; it is for the individual to ennoble and perfect this.

There would be no "woman question" if the question of marriage had been differently handled.

Carmen Sylva on Joy and Sorrow

THE Newspaper Enterprise Association has secured a translation of a recent article contributed by Carmen Sylva to the *Leipsiger Zeitung*, in which the writer says:

"Few people on earth can have enjoyed reaching their 60th birthday as much as I have. When I was 20 years of age, I had a burning desire to be 60. Old age seemed to be a haven of refuge from the storms and troubles of life, but now that I have reached my 60th birthday I find that life is still dark and incomprehensible.

"During the first 30 years of my life, I experienced everything which a human being can experience in respect to sorrow and misfortunes. I have begun to write an authentic and full account of the earlier years of my life in order to put an end to many inaccurate versions now in circulation.

"The second 30 years have been filled with laborious work. What remains to me is to watch the gates of heaven slowly opening and revealing to me the dear ones who have gone before. Such a heavenly light shines down on me that earthly matters can no more trouble me.

"I have preserved such a capacity for enjoyment that every moment of life brings me a fresh pleasure. A flower, a ray of sunlight, an innocent young face, a venerable old face, a word, a song, one note from the strings of a violin, a leaf, an animal, a good deed, all these things inspire me with gladness and the joy of living.

"I have never experienced disillusion. Many spoil their own lives and those of others by their inability to love their fellow-men as they are, instead of figuring out how they ought to be. I am able to see beautiful features in every face and fine traits in every character.

"Two words have been struck out of my dictionary—family and strangers. I had to desert my own family to adopt a whole nation, and the only child that I bore was taken up to heaven. There are no strangers, for all men are brothers, and all claim treatment from me as such.

"We have no right to have sympathies and antipathies, if we desire to live as Christians. Every one of us is on earth for the service of all the others, according to his strength and capacity for doing good. Old age should be bright sunshine which lights up the lives of all around, and I pray God that I, too, may radiate these rays of kindness and benevolence. I welcome old age with its peace, its patience, its charity. God grant me the power to warm the lives of others till that great moment comes when I can shake off the shackles of earth, and rise in unspeakable happiness to greet my Maker face to face."

CARMEN SYLVA

TO CARMEN SYLVA

by JOHANNA AMBROSIIUS

NOT even once have I looked on thy face;
Yet when all cloudless beams the sky's blue space,
I think as deep, as pure, serene and clear,
Thine eyes may be as this fair azure sphere.

When earth in all her pomp of bloom beguiles
And from each flower-cap an angel smiles,
When breath of love through all the world goes forth,
I think e'en thus bewitching is thy mouth.

All beauty which the heaven and earth enfold,
I could, O noble Queen, in thee behold!
In very joy and rapture I must weep,
Because the earth and heaven in thee tryst keep.

The Women of Ainos

WE need not go back in thought to prehistoric times, nor even consult ancient history, to discover proofs abundant that evolution proceeds not by the urge from below, but by the patient, compassionate helping from above. Since man existed this compassionate help has been extended. Those who are inferior have learned from the races and peoples above them, and Great Teachers have come from age to age bringing the light. But for their coming the races of men would not have advanced. It is part of the Law that there must be the compassionate down-reaching and out-pouring or evolution cannot go forward, for "compassion is the Law of Laws."

Professor Frederick Starr of the University of Chicago, is about to go to the island of Yezo of the Japanese group, to investigate the Ainos, a race which, centuries ago, was driven northward, presumably by the Japanese. They took refuge in this island and have existed for centuries, practically cut off from all intercourse of a helpful kind, with any contemporary race. While the Japanese have a certain connection with them, they regard them as their inferiors and treat them as such, and as a result the Ainos have degenerated, until today they are a dying race. They have no history, no ambition, no future. A hundred years ago they were in the midst of what was practically the Stone Age. A hundred years hence, it may be, they will have ceased to exist. They no longer make even a reputable bow and arrow, and their position in the scale of evolution is assured, if all other evidence were lacking, by the treatment of their women.

According to Aino religion, women have no souls. They are drudges, mere conveniences, and while there are occasional women who rebel against the pressure of their lives, most of them sink into a stolid indifference. It is not at all uncommon for Aino women to commit suicide. She is one of the Aino institutions merely, and a very lightly considered one. Divorces, however, as certain bishops and cardinals will be delighted to know, are practically unknown in that land.

Professor Starr is already well known because of his many original ideas, one of which has recently been commented upon by the newspapers. He is reported to have said in an address to his students, that alcoholic liquors are a valuable aid to genius and that, instead of hindering the processes of evolution, stimulants are a positive help! Whether Professor Starr's investigations among the Ainos will bring about any change in his opinions remains to

be seen. Perhaps he will classify this race as among the "exceptions to rules," for the fact is that the Aino man loves his Saké above all else, and drinks almost continuously. The women do not drink, for the reason that Saké is a drink for gods and men only! Upon women, as they are soulless, it would be wasted.

STUDENT

A TEMPEST, according to report, has been created in some sections of the University of California by the announcement made by Professor Gayley that his course in the English Department will be open to men students only, and that women will hereafter be debarred from attendance. The reason given by Professor Gayley is simple and presumably satisfactory. He says, merely, that the men have been crowded out of even the largest lecture-rooms by the great number of women students, and that they simply have no chance to take the work against the greater number of women. This is an argument for—or against—higher education for women, according to one's personal view!

THE Indiana Supreme Court recently announced the doctrine that a mother-in-law is of a right entitled to dutiful and honorable conduct on the part of her son-in-law, particularly when she trusts him as a son. When one considers what a husband owes to the one who loved and reared, cared for and educated, the woman who gives the best of herself to enrich his own life, it is strange indeed that the position of mother-in-law is often so anomalous. It may be the tide is turning.

Egypt and the Bible in the Strong Light of Archeology

A SERMON delivered by the Rev. Newton Mann, of Omaha, is worthy of very considerable study, not only for its erudition, but also as evidence of the extent to which enlightened preachers are focussing the light of archeology upon Biblical research. The sermon is one of a series upon the "Causes of the Modern Transformation of Religious Thought," and the discoveries of archeology are handled in a manner so distinctly Theosophical as to constitute something of a landmark in religious thought. We are in no necessary agreement with all of the preacher's conclusions, but it is none the less gratifying to see that the proved facts of archeology are so soon bearing fruit, and that there are, at any rate, some pulpits where theology and indisputable truth are not at variance.

Mr. Mann very rightly points out that the mere testimony of the ancient has hitherto counted for very little where such testimony was supposed to be in conflict with the Bible. He points out that even the statement of Callisthenes, that he himself had visited the Babylonian observatory and had there examined the astronomical observations of over 1,900 years, went for very little and was forgotten. How could there be such knowledge within a century of the flood? It mattered not that Callisthenes was a witness of unimpeachable veracity. His testimony seemed adverse to Biblical revelation and that was sufficient.

But now we have something more than written evidence. We have Babylon itself with its libraries of learning. We can no longer deny and it will soon be equally impossible to ignore.

Egyptian discoveries have been no less startling, no less subversive to popular theology. Seven thousand years of Egyptian life are now firmly within the grasp of history and the dawn of the Egyptian race is still out of our sight. This is perhaps the worst blow which theological chronology has ever received or is likely to receive.

Ages before the "captivity" Egypt had attained to a civilization which the "chosen people" were never even able to imitate, and Mr. Mann goes even so far as to say that we must now revise our ideas as to the Biblical story of captivity and exodus. He says, indeed, that the whole account "is in the main a work of the Hebrew imagination, having only slight foundation of fact." He points out as a matter for some wonder that after so long a residence in Egypt the Israelites should have emerged with so little trace of such a contact.

On their first appearance in Palestine they lacked the civilization of Egypt, were inferior, except in a rude art of warfare, to their neighbors, knew nothing of embalming, had no idea of personal immortality.

The Rev. Mr. Mann seems to be disappointed with the literature of Egypt. He admits that it is based upon the positive assumption of immortality, but he finds much that he thinks unworthy of the height to which Egypt had reached in other directions. This may perhaps be due to an incomplete understanding of writings which we have only been able to read since the discoveries of Champollion. It may also be due to the materialism of our minds which find it hard to attune themselves to an entirely spiritual faith. Mr. Mann thinks that the creative genius

of the Egyptian people was in doing and not in thinking. We should, however, suppose that thought is necessarily the mother of action, and that mighty and enduring deeds are always born of mighty and enduring thoughts. A majestic art, for example, can never flourish side by side with a puerile religion, and an architecture which is still the wonder and the admiration of the world must be the expression of lofty thought and an aspiration which is religion in its truest sense. Mr. Mann himself quotes from Professor Petrie, who describes the finding of an ivory statuette of the First Dynasty. The Professor's words are so graphic that we reproduce them, although the discovery is now so well-known. He says:

Suddenly a patterned robe and then a marvelous face appeared in the dust, and there came forth from his six-thousand-year sleep one of the finest portrait figures that have ever been seen. Wearing the crown of Upper Egypt, and clad in his thick embroidered robe, this old king, wily yet feeble with the weight of years, stands for the diplomacy and statecraft of the oldest civilized kingdom that we know. No later artist of Egypt, no Roman portrait-maker, no Renaissance Italian, has outdone the truth and expression of this oldest royal portrait, coming from the First Dynasty of Egypt. . . . We must now grant in future that a complete art had arisen nearly seven thousand years ago, and that it has seldom been equaled and hardly ever surpassed in the five fresh births of art which have occupied the course of human history.

Mr. Mann very truly says that "the existence of a well-developed civilization, in which so advanced an art as sculpture had attained rare perfection 7,000 years ago, more distinctly negatives the Biblical story of creation than the geologists' requirement of 50,000,000 years for the laying down of the sedimentary rocks."

To a very great extent the churches have failed to take advantage of the progress of archeology. They have watched that progress with undisguised hostility, and theology has allowed itself to be forced from point to point at a loss of dignity which it will take a long time to recover. The interference of science with Biblical chronology has been resented as an insult to the very ark of the covenant, and while science was confined to abstruse and difficult speculation, it could be resisted, so far as the ignorant

were concerned, with some measure of success. But times have changed. Geological theories, and even geological evidence, could, after a fashion, be explained away, but all our colleges of theology combined cannot explain away the ruins at Luxor or at Karnac, and the chronology which is engraved upon stone. Babylon remains as a stupendous fact, and when theology has condescended to recognize Babylon and Egypt, it will be time to invite its attention to ruins more ancient yet, the buried cities of America, the birthplace and the nursery of the mighty men who went forth to establish the land of Khem.

Studies

The Sky Has Its Own Message for All

IN one of his finest nature sketches Ruskin expresses his surprise that the beauties of the sky receive such scanty attention even from those who profess to be lovers of nature. Of the landscape and ocean we never weary, to mountain and lake we give all the wealth of our admiring wonder, but if we speak of the sky at all it is but as the touch of completion which makes perfect the magic picture. We should perhaps better understand the reason for this if we more carefully examined the source of our nature-love and the meaning of the all too vague stirrings within us which seem longing to break forth into voice. Is not our love of nature a higher egoism, an egoism so pure and true that we would willingly find some other word less soiled by unwelcome associations?

Does not nature speak to us in a thousand voices which we recognize to be also our own, or which we know were once ours and can be ours again?

Is she not speaking to us of a Garden of Eden behind us and within us, a garden in which God walked and talked with man?

Some message from her boundless peacefulness enters as a sad reproach into the heart which also was once the dwelling place of peace, and with the vibration of that message the dark curtain of our blindness is stirred as by a night-wind, and we know that somewhere within the heart there is still the domain of a great peace which passes all understanding. There is in the face of nature a mighty patient yearning to be understood. Her own forces are within us, and it is our kinship with mountain, lake and valley, with storm and summer sun, and with the kindly brooding night, which strives for the recognition which we have not love enough to give.

And the sky; has it no message? Surely, it has no message that we can read or hear. Surely, no whisper of the mystery has reached us, or we should have put all little things away from us, the smallnesses which to our distorted vision have seemed great enough to cloud the brightness of that other boundless firmament within. The landscape and the sea call forth from us some welcome from their counterpart in ourselves, but what shall be the counterpart of that which is measureless, which knows no boundary save that of our baffled and returning thought, of the abyss into which the imagination peeps and shudders? Silent are the immensities of space above us, and though we should rise and set our feet upon the stars, the stairway of infinite space leads ever onward.

We speak not much of the sky because we fear it. We dread the mystery above us and the mystery within, the ineffable presences which poise themselves amid the suns, and the still small voice which vibrates through the portals of the heart. Beyond those portals are immensities like unto those without, in which is a light ineffable upon which no human mind can look and live if it bear one stain of sin or self.

Is it our smallnesses which cannot bear to look upon infinity, the real infinity within, the mirage of infinity without? And not until we have more greatly loved, more greatly dared, shall we roll away the clouds which cover the face of the great deep, not until then shall we gaze unabashed into the abiding and transcendent glory of the sky. X.

FORGET-ME-NOT

WHEN to the flowers so beautiful
The Father gave a name,
Back came a little blue-eyed one
(All timidly it came);
And standing at its Father's feet,
And gazing in His face,
It said in low and trembling tones:
"Dear God, the name Thou gavest me,
Alas, I have forgot."
Kindly the Father looked Him down,
And said: "Forget-me-not!"

EARLY SWEET PEAS FROM LOMA-LAND

Is Similarity of Structure a Safe Guide?

IN all botanical and zoological classifications great stress is laid upon "similar structure," etc., as evidence of family relationship, if not of actual lineal descent, but to the uninstructed mind it is not so clear why there is necessarily any such extensive system of kinship, and, if there is, why similarity of appearance should be considered the evidence of it. This may seem, at first glance, like a rather wild suggestion, but some very familiar facts go far to justify it.

Even the most exact of our present-day scientists now see fit to adopt the belief, firmly held by Kepler, Herschel, Spencer, etc., that the visible Universe is but the outward garment and instrument of an unspeakably sublime Intelligent Purpose. Having gone so far they must and do perceive the definite and practical fact that everything has a REASON for existing. Some of them have seen yet a little deeper, and do confess that that REASON is, in some few cases, unknown to them.

One curious fact especially annoys them, that the most similar species are so often so very widely separated while those inhabiting the same region are so diverse. Suppose a suggestion be

sought in the creations of human intellect. There is no outward similarity between a letter, ready to post, and a telephone instrument, yet we know them to be essentially related and that each may perform the other's function of conveying information. A straight wire fence looks very much like a relative of the telegraph poles and wires beside it, but we know that they are not related either in origin or function.

The primitive composing-stick does not at all resemble a Mergenthaler linotype in appearance, but they are closely related in function; the rotary press has many points of resemblance in appearance and manner of motion to a planing-machine, yet they have no similar function in human economy; one can in no way replace the other.

We see in our own land the sword, the sickle and the hatchet, very different implements, yet by searching the world over we may find an unbroken line of transitional types from one to the other. Is the analogy sufficiently obvious? May it not be that the Controlling Intelligences have done the same thing and that we may finally find truer bases of classification in purpose and function than in similarity of structure and of habits?

Possibly we may also, when we adopt that view, perceive more clearly the purpose which each species serves in the infinite complexity of life and in the great evolutionary plan of the Guiding Minds. W. E.

EXPERIMENTS are being made for the introduction into America of the Egyptian fodder grass known as berseem, and enough has already been done to show that this valuable grass can be successfully grown in Texas and Louisiana in rotation with rice. Mr. D. G. Fairchild, the special traveling agent of the Department of Agriculture, says that "it will be good to grow between rows of trees in the irrigated orchards of California and the Southwest, and the Department will introduce it upon the plain of 1,500,000 acres flooded annually by the Colorado River. It grows quickly, looks like alfalfa and is a fine fodder."

Universal Brotherhood Organization

Central Office Point Loma California

A NEW Heaven and a New Earth," was the title of an address delivered at the regular meeting of The Universal Brotherhood and Theosophical Society in Isis Theatre last Sunday evening. The large audience was appreciative and unsparing in applause of this, as of Mr. Sidney Coryn's address, entitled "The Man of Character." There were several excellent violin quartette selections by Raja Yoga boys, and an instrumental number or two by the Isis Conservatory students. In the course of her address, Mrs. Tyberg said:

"Those who, in childhood, have a fair share of careless pleasure and freedom from responsibility, and some training of the mental faculties that is supposed to prepare them for life, have considered themselves fortunate; if the opportunity for enjoyment continues through youth, if there is physical health and perhaps beauty, and talent in some direction with the means to cultivate it, they regard their youth with satisfaction. Manhood and womanhood are supposed to yield the happiness of close association with others in different relations, the pleasure of beholding children grow up, preparing to live as nearly as possible according to the parents' ideas of how they would like to see them live; we crave for ourselves and those we love, immunity from the ills that beset human life—from poverty, from disease, from the results of evil doing (for it is easy to forget our own evil doing or that of others, if we can make ourselves believe that the painful consequences can be avoided). Wealth and power and influence in the world, the means to gratify our desires, of whatever kind, and the means to make others happy or comfortable, travel, books, art, music, social success, a high degree of attainment in our chosen calling—all these are prized and thought to constitute happiness. But, alas! how many lives are devoid of any of these things, spent in misery and suffering, some even without the fictitious hope of a heaven. Into some rare lives enters the joy of being able to help others wisely, but even for these the hour strikes, and all too soon the opportunity to achieve on earth is over. Three score years and ten at the utmost to learn, to suffer, to enjoy, to work, to live. This is human life as the majority have looked upon it for more than a thousand years.

"But fortunately light has begun to glimmer through the awful cloud that has obscured the truth concerning man's destiny, and, thanks to the teaching of the wisdom religion, there is rapidly spreading in the world the knowledge that this view of human life is but the ignorant formulation of a few minds, blinded by material desire, which, nevertheless, could be foisted upon many other minds that, also blinded by material desire, have dully accepted the doctrine of despair and death. Now is revealed once again to the world the knowledge that man is a soul; that he has a thread of consciousness that persists through many lives on earth; that opportunity succeeds opportunity, by which man can build character and work out his destiny. 'There are no breaks, no gaps, to the one who knows himself as a soul.' The unknowable Heaven-state is transformed into a resting period between lives on

LOMA-LAND STUDENTS AT ISIS THEATRE

Mrs. Tyberg delivered an Address on "A New Heaven and a New Earth," also Address by Mr. Coryn

Reprinted from the San Diego News

earth. We know once more that it is *here* that man must perfect himself; *here* must he fit himself for higher states; *here* must he fashion himself into a higher being.

"But do even those to whom has come the priceless teaching that man is a soul realize in full the possible dignity and beneficence of a human life on earth? Do

they think what the human kingdom represents in the great life of the universe? Man is the crown of the kingdoms of Nature: for millions of years the forces of Nature in harmony with the law underlying all manifested life have been building a body that the mind and soul could occupy and use. 'For the sake of the soul's experience the universe exists,' and into the human form is that soul at last destined to enter, and through it experience earth-life and win its fruitage. We are in error, deluded, if we believe that we can live unto ourselves alone; each of us is a part of the great universal life, and we do but nullify an existence and debar ourselves from our full sphere of action, if we ignore this truth. Little enough do we think of the mystery and sublimity of the opportunity a human life offers. The wonderful human form is the synthesis of all the form building of the ages. Man contains within himself the history and experience of all the kingdoms of Nature, and now on him and his choice depend his own destiny, and that of all the kingdoms below.

"For where Nature has followed serenely and unconsciously the mandates of the law, man must *choose* to attune his being to the *higher law*. He must consciously 'throw himself into the sublime order, and do with knowledge what the stones do by structure.'

"If we realized this broad and high destiny that we have in common with all others, would we not bestir ourselves to sound and remove the causes of the waste and destruction of human life that is the tale of every day? Should not our compassionate hearts have found wise ways of helping our brothers out of all misery and suffering? Let us awake! and turn the world with us into pure and regulated ways of living that will make it possible for the higher consciousness and intelligence that overshadows humanity to enter and become the motive power in our lives! When we *have* regulated our lives, when we live in higher unity with our brothers, a higher unit of the divine mind that planned the universe *will* enter into the human race and lift all life.

"In the old order of things, men believed they would die and go to heaven, to be with God; but now we know it to be the truth that, by pure lives and unselfish effort, we can make it possible for the gods to come unto us, and teach us as they did the early races of humanity. Then shall we reach the heights of life which, as yet, we have not hope, or faith, or insight enough to picture.

"Let us awake to our great destiny! Let us, by sublime effort, win for the human race a life in which humanity's *heart*—still unrevealed—may find the way to make a *heaven on earth*."

MISS ELLEN BERGMAN, who has just returned to the Loma-land student life from

Work of the Swedish Lodges

these, however, for a great many of our students know English now."

"What most impressed you, Miss Berg-

man, during your last visit to your home in Sweden?"

her old home in Sweden, brings with her most enthusiastic reports of the loyalty and activity of the Swedish lodges. "There is in the work," she said, "a unity and a harmony which I have never known before. We begin to realize there, for I still feel myself in every sense a part of the Swedish work, that we can never come to Point Loma until we have builded a real Point Loma spirit in our midst. We begin to realize, at last, what an opportunity we have to put the personality on the altar and just let it burn and burn and burn! It is not that we have less of the intellectual, but that we have now *more of the heart life*. The change in the last two years, or even in the last six months, has been marvelous."

"To what do you attribute that change, Miss Bergman?" I asked.

"To many things, doubtless, it is due," she replied. "But in my opinion it is due mainly to the sense of nearness to the Center that the members have, and that has come, I believe, from the way in which they study and read the NEW CENTURY PATH. Every week, as soon as the NEW CENTURY PATH has arrived, certain pages are allotted to certain members to translate for the rest of the Lodge. One takes the art page, another the editorial, another the science, another the archeological, another the children's page, and so on. Every article in the paper is thus translated and the translations read to the members in session, with comments and discussions. I cannot begin to tell you what this means to those members who do not understand the English language. There are not so many of

"Well," she replied, her eyes twinkling, "I think I was most impressed by the sight of the Boys' Club on the wharf just as I sailed, shouting, 'Hurrah for the Raja Yoga School and Point Loma!' The Boys' Club has been doing splendid work under a young man who is a member of the military. They have, of course, some military drills, and they are also giving a series of dramas in which the lives and heroic deeds of our great kings are dramatized. The Girls' Clubs are taking up dramatic presentations, too. How I wish Katherine Tingley would do for members of these clubs what she has done for the Lotus Children in sending the latter their new Symposium. But how can she? When does she get time?"

"It would be difficult," continued Miss Bergman, "to give you any idea of the interest aroused in the public mind by the presentation of Katherine Tingley's new Symposium, *The Little Philosophers*. The Lotus Children were assisted by members of the Boys' and Girls' Clubs. In fact, the work of these clubs and that of the Lotus Group is interblended, because our young men and women are only Lotus Children grown larger. There is a loyalty and a clearness of insight in the members that I have never before seen, and I believe we are on the way in Sweden to become fitted to carry on the Leader's larger work without so much strain and so many mistakes. Just now the hearts of all are with the Leader as well as with the comrades at Point Loma."

STUDENT

HEAVEN is here on earth, is a familiar saying, and it does indeed depend on man's

own will and intelligence (God-given) to make it so. The theologians have removed heaven to the clouds and postponed its enjoyment to the hereafter; and this as a compensation for taking all the joy out of human life in the here and now.

We preach not against religion itself, but only against that which is misnamed religion, the dogmas and creeds that have overlaid religion and turned it into a barrier instead of a revelation.

Nature is infinitely bountiful. No one has fathomed her depths or come to any stopping place beyond which she has no more wonders to reveal. The universe, in which we live *here and now*, is infinite in resources; the more we search in it, the more we find; and each new discovery, instead of bringing us nearer the limit, only opens up vaster avenues of knowledge and experience.

If we do not find life sufficiently full and rich and joyous, that is not because these things do not exist on earth, but because our dulled senses do not perceive them. Some people—poets, artists, of refined and sensitive nature—see and hear and feel much more than others. There was a time when each one of us, in the freshness of childhood not yet blunted and distorted by false living and wrong education, found in this world more joy and life, more beauty and interest, than we do now.

The question is: Could the organism of man be so strengthened and purified that it would always be ready to respond to the harmonies of nature and to thrill with the same deep joys that nature thrills with? Could the brain of man be so refined and cleansed that it would transmit light like a cleaned window-pane and make us wise? If so, life might become a joy, and earth a heaven indeed.

When we consider the way in which humanity has been abusing its body, misusing its mind, and defiling its soul, for ages, we cease to wonder that our eyes have grown dim and cannot see, our ears deaf to the music of the spheres, and our nerves too lax and heavy to thrill to any of the higher and purer emotions. Think of the generations of blood and strong drink and gluttony behind us. Think of the ages of blind faith in dogma, of religious wars, and of superstitions. Think of the lives spent in the useless hunt for wealth or the frivolous round of amusement or the grinding of perpetual overwork. It is not such a kind of life that can breed bodies strong and healthful, refined and well-proportioned; minds comprehensive and free from prejudice; hearts mild and generous, serene and unpoisoned by pride, anger, jealousy.

H. P. Blavatsky has explained how the human organism contains two sets of nerves: one coarse, like catgut, and able to respond only to coarse, powerful stimulation coming from the passions and appetites; the other fine as drawn silver wire, answering only to the breath of pure and lofty thought and feeling coming from the soul. Thus man has these two musical instruments, one strummed on by passion and lust, the other

What We Miss Through Selfishness

lightly swept by the fragrant breezes of wisdom like an Æolian harp.

Needless to say it is the catgut harp that we usually play, and many are the desires we have to employ to keep its slack chords continually vibrating. Hence the universal need for strong stimulation, for greed, for excitement, for stimulants of all kinds.

But the finer nervous system, like a well-tuned lute of silver wire, needs no such coarse twanging to make it yield its exquisite harmonies; and a race of men with this kind of organization would need no second-rate heaven to console them.

The aim of Raja Yoga training for children, as taught in Loma-land, and of the Universal Brotherhood ideal generally, is to produce bodies, minds, and souls, strong, pure, well-tempered, and balanced, so that human life may be what it should, and men no longer need to drug themselves with wine or excitement or heaven.

The knowledge gained by our present science can never be truly beneficial to humanity, nor reach any satisfactory conclusion, unless science changes its methods. For this science tries to discover truth by the use of the imperfect and crippled senses; which however only misrepresent nature. A much shorter and more successful road to knowledge would be to refine the senses so as to be able to perceive nature clearly and truly. It is owing to this wrong method of pursuing knowledge that nature is represented to us as being crude and bloodthirsty, and that unseemly and despairing views of life and of man are promulgated. Could our scientists see nature through undimmed eyes, they would penetrate some of her many veils and recognize the goddess herself.

Oh! to think what we are missing by failing to attune ourselves to nature! Living (or rather existing) in a dull world shut in by walls, with darkness made visible by lamps, groping like blind people among the paths of life which we ought to see clearly but have to guess at.

Selfishness is the giant disease that has wrought all this havoc in our natures. The self-seeker descends into a narrow vault in his own nature, and there dwells shut

out from the broad sunshine of the common or shared life. His finer senses, no longer used, harden and become dulled. In his blind pursuit of self-interest he has destroyed sympathy—that wondrous faculty by which we blend ourselves with other beings and partake of their experiences. The indirect consequences of self-seeking, when it has been practised for generations, are many and varied, and are to be traced in our racial infirmities, moral, and mental, and physical.

Having learnt the bitter lesson of experience, our race has now to regain (with added glory) the joyous and enlightened state it has lost. Brotherhood is the key-note. We must ever strive to realize how very much we all lose by pursuing the mistaken paths of personal incentive, and how very much we all stand to gain by enlarging our ideals and conceptions and then putting into daily practise what we have discovered.

STUDENT

WISDOM OF H. P. BLAVATSKY

OURS are the days of "Sheffield plating" on the moral plane.

This is not a time for golden rules, for people prefer moral pinchbeck.

A religion in the only true and correct sense is a bond uniting men together—not a particular set of dogmas and beliefs.

Religion, per se, in its widest meaning, is that which binds, not only all men, but also all beings and all things in the entire Universe, into one grand whole.

Theosophy transmutes the apparently base metal of every ritualistic and dogmatic creed into the gold of fact and truth.

Theosophy heals the wounds inflicted by the gross asperities of the church "isms" on the sensitive soul of every naturally religious man.

Man is but a fallen angel, a god within, but having an animal brain in his head.

Theosophy has brought back from materialism and blank despair to belief (based on logic and evidence) in man's divine Self, and the immortality of the latter, more than one of those the church has lost.

✧ In the Face of Tremendous Odds ✧

"TAKE an inventory of myself! Well, I have, and mercy, don't it make me look small! A quick, suspicious temper, a keen eye for my friends' faults, a fatal habit of dawdling, a —"

"No wonder you feel inclined to despair," remarked Lucy, with a twinkle in her eye, as she laid down her work to reach for the embroidery silk.

"No, is it?" returned Mabel dolefully. "Perhaps now," she added with a touch of chastened pride, "you will not wonder that I find it difficult to be always sweet and pleasant and brotherly, when you think of my many deficiencies, indeed"—dwelling with interested regret on the picture conjured up—"you may even feel surprise that I do as well as I do, miserable sinner that I am." She leaned her elbow on her knee and her chin in the palm of her hand and gazed blankly outward.

The pity deepened in Lucy's eyes, while she silently stitched away.

Presently she quietly said, "Do you know, I think you have omitted quite the most important item, something that would alter all the rest?"

Mabel looked up sharply. "What?" she asked.

"Yourself," answered her friend, with the sweetest of smiles.

"Myself!" gasped Mabel, "well, who have I been describing?" with indignation in her voice and the fire of battle in her eye; for, between ourselves, she rather reveled in the picture presented, and felt herself in quite the right attitude to extract the spirit of the Lenten virtues prescribed for the truly humble. And here was Lucy laughing at her, or very near it, and looking as cheerful as possible.

"Your outer garments, merely," her friend replied, "the rind, not the core, the persisting immortal part."

"I don't think I understand you," answered Mabel, "you'll be saying myself isn't myself, at all, in a minute; you metaphysical people are awfully abstruse and quite beyond my range of intellect," she concluded with the self-complacent air of the quite-satisfied-with-her-ignorance.

"My dear," said Lucy, "what I am saying is not abstruse metaphysics, but simple Theosophy, just the bare, beautiful truth. The fact is that we are souls, and not a mere collection of faults, failings and limitations, which are obstructions and hindrances to the light of the soul. Of course they are part of us, in the sense that our character is what we have builded up as the vehicle through which we must express ourselves as souls, and is, of course, the result of our past deeds and thoughts. But that's different from the way you view it."

"It is," commented Mabel, "and there is the tea bell ringing. Bother! why cannot we have it later? This is just the nicest part of the whole day in summer to take an airing."

"I am sorry, girls, we need to have tea so early tonight, but Clara's mother is ill, and if we have it later it means clearing it away ourselves," said their aunt, "and I promised your visit was to be a holiday."

Mabel felt guilty.

"If I'm a soul," she commented next day, sitting on the grass leaning against an old pear tree as she watched Lucy sketching, "why do I not stop thinking mean thoughts? It is all very well to talk, but you good-natured people have little idea of the struggles of us less favored mortals."

"We have all a higher and lower nature," answered Lucy, "and what you call good-natured people are those who have recognized their divinity and their power to control their animal nature and have set about putting it in its proper place. If one does not rouse and subject the animal in us, it will subjugate us, and that is where all the trouble and pain and

complications begin, because when the reign of selfishness begins, the soul qualities cease to manifest."

"The words you use are long and awe-inspiring, but I think I catch the drift of what you say."

Months and years passed. The two friends drifted apart. Lucy became a teacher and found, in the needs of her pupils, opportunity and outlet for all the richness of her sweet nature. Mabel married and for a time forgot all else in her life's great happiness, which was crowned and blessed one fair day by the coming of a little babe. She became, all unconsciously, selfish. But after the sunlight came shadow. Death had claimed her child.

Hands tight-locked together, lips compressed to keep back the choking sobs, Mabel knelt by the window. With the awakening of love in her heart came the realization that she was a soul. Stronger it grew when they laid her baby in her arms, and the blue eyes looked up to hers, and the mother's heart refused to say "good-by" forever, when, after the happiness of a few short months, the little soul returned to whence it had come. In the pain, the rebellion and bitter grief, the agonized questionings that followed brought at last back to her memory the recollection of the talk

that she and Lucy had had together in their young days. "I wonder where she is now! she was always so good and sweet—if I could only see her once again!" A letter came to her next morning from her old friend who had seen the notice of her baby's death and wrote to express her sympathy. "Loma-land," the very name breathes of peace," she murmured, "so that is where she is, in sunny California." "Why not go there for a trip?" Why not? I will see what Percy says."

"I am more than glad I came, we both are, aren't we, Percy? And you really do live your doctrines here, the very atmosphere gives one hope; I feel now I must begin to make myself over again, I have led my poor husband a life since we lost our darling, with my selfish grief, but I won't any more," she added resolutely, wiping away her tears. "These babies here

are an inspiration, and I shall be a better woman all my life for my glimpse of Raja Yoga; even if I have no baby of my own, I can still help you in this beautiful work for the children, can't I, dear? I can send you some money at all events, that will mean the rescue of another little waif and stray."

Lucy's face beamed. "The true mother's heart never stops at her own, but includes the babies wherever they be," she replied, "and the joy of helping the helpless would brighten the saddest lives, could they but rise to their opportunity. Some day they will, for they will know that selfishness is the path that leads to peace, and brotherhood is the law of life."

Mabel and her husband were on the lawn of their pretty home in Loma-land. "I am glad indeed, we came to sunny California," she said, "and that I know about Raja Yoga. Percy, it has seemed to me as if all the past were as a message to turn me from my selfish ways. I can bless my sorrow now, and that will mean so much of good to the other souls committed to our care. Surely we loved our little one in the past, and as surely now I feel we shall in some life meet again. How glorious the teachings that take away our grief and fear; how true are the words of the dear old Bible, "The truth shall make you free," and it is practical Theosophy that has taught me to see it."

E. I. W.

PAST AND FUTURE

by ELIZABETH BARRETT BROWNING

MY future will not copy fair my past
On any leaf but Heaven's. Be fully done.
Supernal will! I would not fain be one
Who, satisfying thirst and breaking fast
Upon the fullness of the heart, at last
Says no grace after meat. My wine hath run
Indeed out of my cup, and there is none
To gather up the bread of my repast
Scattered and trampled; --- yet I find some good
In earth's green herbs and springs that bubble up
Clear from the darkling ground --- content until
I sit with angels before better food.
Dear Christ! when thy new vintage fills my cup.
This hand shall shake no more, nor that cup spill.

✧ The Trend of Twentieth Century Science ✧

Unseen Color-Octaves—Some Science of the Future

IT is now definitely established that the human body yields one (at any rate) of the five or six kinds of "rays" whose discovery began some years ago in the laboratory of Professor Röntgen.

Not long ago it was found (by M. Blondlot) that almost all luminous bodies, even a Welsbach burner, emit as part of their light an invisible set of rays now known as "N-rays." They are also emitted by tempered steel, sulphur in crystals and some other things, permanently; and temporarily during the compression of wood, glass, or india-rubber.

These, like X-rays, cause a phosphorescent screen (for example, a plate covered with certain crystals), to glow. They thus become indirectly visible. But these N-rays have the special peculiarity that any object upon which they have fallen for some time continues to give them off after the original source has been removed. In respect to the phenomena of refraction and reflection they behave like common light.

The radiations of the human body answer to these same tests, and seem therefore to be Blondlot's N-rays. D'Arsonval, reporting some results from his own experiments on them, says:

The apparatus used in showing the human radiations is composed of a screen of platinumcyanid of barium rendered slightly luminous by a fragment of a radium salt. Under the influence of the *n*-rays, such a screen acquires a higher degree of luminosity. Now, if instead of bringing the *n*-radiations we approach the screen to a muscle, an increase in luminosity is seen. This increase is in proportion to the contraction of the muscle. The same effect is produced by the nerves. The sensitiveness of the apparatus is so great that we may trace with it the course of a nerve under the skin.

By a study of the wave-lengths and rates of vibration of all the ether waves now known to us, including electric waves, the light-spectrum with its ultra-violet and infra-red addenda, and some of the recent "rays"—those, namely, that are real waves and not, like the "cathode" rays, mere showers of particles—we can make a most interesting table of octaves. As in music, an octave is here considered as consisting of those waves, the rates of whose vibrations lie between any number and its double, together with these two extremes.

Highest up come three octaves of ultra-violet rays; then the octave visible to us as the seven colors; then seven octaves of infra-red waves; then a gap of five octaves, a "gap" because its contents are so far not discovered; then twelve octaves of Hertzian electric waves; then other octaves of other forms of electric waves of enormous length and correspondingly slow rate of vibration. The N-waves fall somewhere in the infra-red set or just below that.

We find, then, that out of all these thirty and more octaves, one only appeals to our senses. We only see objects in so far as their radiations come within our little octave of perception. The wealth of their radiations lying beyond that, octave beyond octave of light and color, is to us nothing. What a new world we should discover if our eyes could take in another octave or so! If our vision ran down to the N-rays, the human body would be seen as radiating light with every move and thought. If it ran up through the ultra-violet octaves, we should doubtless perceive something of chemical changes by the changing of light about the substance.

Could we but look forward to the science coming during this century, the record would seem like a handiwork on ancient lore, or a chapter from the Arabian Nights. The writings of more than one old "magician" may, as after all they turn out to be, science quaintly put, redeem him from the stigmas of superstition or charlatanism. STUDENT

PROFESSOR HUSSEY, of the Lick Observatory, California, who for weeks past has been camping at Canoblas, near Orange, New South Wales, is reported to have discovered ten new double stars. The *Daily Mail's* correspondent says the Professor, who is visiting Australia in pursuance of the Lick Observatory scheme to establish a chain of astronomical stations round the world, has removed his camp to the Blue Mountains for the purpose of making further observations.

One of the Marks of Civilization Is Elaborate Cookery

WE note, in an advertisement of one of the innumerable "break-fast foods," that it is "pre-digested beyond the liver stage." That seems to be regarded as a great recommendation.

One of the marks of civilization is cookery. The more elaborate the civilization, the more elaborate the cookery, the further from their natural state are the products eaten. Cooking is of course (considered simply as the application of heat) a stage of digestion. Our modern aim is to go further than heating, and by the use of natural and artificial digestives to save our organs more and more of their proper work. And food is esteemed in the proportion in which this is done.

It does not seem to occur to us that something may be lost from food both by pre-digestion and even mere cooking; a set of essences dissipated outside the body which should be dissipated inside it—to its great profit and invigoration. And this profit may greatly exceed that resulting from the saved labor of digestion.

There are undoubtedly many people whose misfortune it is to need their food not only cooked but pre-digested. But we should certainly class pre-digested foods as medical expedients, suited only for such. To all others we should suggest that labor saved the digestive organs is not necessarily a favor to them or the body, provided that they are not expected to work beyond the needs of the body. And if they are, it is better to get the ill results from them than from the deeper physiological mechanisms. They call attention to their overwork in no obscure way. The cry of the others is obscure, not attended to, not ascribed to its true cause.

And need we even cook everything that passes our lips? M. D.

The New Era in Medicine Is Working Wonders

THE animal world must be looking with hopeful eyes upon the progress of modern medicine. Already the N-rays are beginning to tell us more about the localization of faculties and functions in the brain than all the monkeys, dogs, and guinea-pigs in the blood-stained back yards and vaults of all the vivisectors in the world.

The Finsen red-light treatment of smallpox, rendering it a brief, non-disfiguring and fairly trifling malady, should surely have its vast effects. And there can be no question that the ultra-violet and X-rays might do the same for the serum treatment of diphtheria. The same Swedish benefactor (who, by the way, was characteristically stigmatized as a charlatan fifteen years ago by the medical profession) has already put an end to the tuberculin treatment of lupus. It is worth noting that this man refuses to make anything by his discoveries, contenting himself with a modest annual pension of \$1200 from the Danish government.

In a word, medicine is on the threshold of its new era. If the doctor of today could look forward fifty years at the methods of diagnosis and treatment which will then be in full activity, he would probably fail to understand a single maneuver. No serums, no vaccines, no anti-toxins, no hypodermic syringes, no morphia, no coal-tar poisons, a surgical cabinet rarely opened—and no basement with caged rats and poisoned dogs.

Instead, as many methods of producing and applying—*light!* And further on yet may come the era of sound and music. Further ahead yet, men may have learned not to generate the causes of disease, and so to lead lives to which all physical maladies will be unknown. M.D.

AMERICA certainly intends to lead the way in astronomical observations. Prof. George E. Hale, the director of the Yerkes Observatory is apparently not satisfied with the present Yerkes refractor nor with its location and he is now searching for a sight upon which to build an astronomical establishment which shall be the best in the world. Up to the present he seems to think that the atmospheric conditions upon Mount Wilson are the most suitable for this purpose. It is his intention to build an astronomical telescope 150 feet in length which will produce an image of the sun sixteen inches in diameter. The magnitude of this task will be appreciated when it is remembered that the present Yerkes refractor produces only a seven inch image. J.

Here and There Throughout the World

SECTION OF MUIR GLACIER, ALASKA, SHOWING BLACK ICE

Unusual Literary Treasures of Spain THERE are some welcome indications that the seals are about to be taken from the literature of Spain, which is probably far more extensive than we at present suppose. Mr. Martin Hume, for example, finds that a course of ten lectures is not too lengthy to adequately deal with "Spanish Influences upon English Prose Literature." There are many who believe that Spain possesses a vast wealth of Moorish, Arabic and Jewish manuscripts which have never been translated and of which the existence is almost forgotten. Where is the scholar who will do for Spain what Max Muller did for India and so enrich the world with some of those ideas which through great age have become young again? We need them.

The American Policy in Panama PROFESSOR HART of Philadelphia has made an animated defence of American policy in Panama. Discreetly disavowing an intimacy with a game which he believed was called poker, he had been given to understand that "when your cards were on the table bluff was impossible." In dealing with Panama all the cards were on the table and there was no recourse to the wiles of diplomacy. The relations between the American nation and its president reminded him of the house in which the partitions were so thin that you could hear the man next door changing his mind, and that was the kind of partition separating the nation and its president.

The Immigration Problem, England THE immigration problem is as ever-present in England as it is in America although its menace may be of a different nature. Mr. Evans Gordon writing upon this subject in the *National Review* expresses a contention which we have ourselves often urged that the solution must be "sought in the countries whence the immigrants come, not in those to which they go." To prevent the landing of undesirable arrivals is of course necessary and a step in the right direction. How much better it would be, and how much more humane, to dissuade them from leaving their homes.

Progress of Boer Colony in Chile GENERAL VAN STRAETEN says that the Boer colony at Araucania, in Chile, is doing well and is likely to be successful. There are now three thousand members. They have been well received by the Government and the people, and are rapidly establishing a flourishing industry in the exportation of timber.

Ohio School Children Well Drilled A REPORT from Ohio describes how four hundred children marched in perfect order from their burning schoolhouse, while the teacher set the step by playing the piano. These children seem to have been educated, and congratulations are due to them and to the teachers.

Oriental Books from England AN English publishing firm known as the Orient Press, is about to devote itself to the issue of a number of hitherto untranslated Oriental works, which will be sold at an almost nominal price. The series will be known as *The Wisdom of the East*, and the first volume to be issued will be a translation from the Arabic of Rabbi Bachye, entitled *The Duties of the Heart*. Other publications will be, *The Sayings of Confucius*, *The Odes of Confucius* and *The Sayings of the Brothers of Sincerity*, who flourished in Persia during the Ninth century.

The British & the American Ministers THE following telegram has been sent by Mr. Choate, the United States ambassador in London, to Sir Mortimer Durand, the British ambassador to the United States:

Accept my cordial greetings and best wishes for the success of your noble mission to promote perpetual friendship between Great Britain and the United States.

Sir Mortimer Durand is likely to be as popular in Washington as Mr. Choate is in London, and that is saying a great deal.

Japanese Soldiers Decorous & Sober A TRAVELER who has recently returned from Japan writes as follows of the Japanese soldiers:

They may be seen in numbers in the streets, walking along decorously with happy, smiling faces, frequently two and two, holding each other's hands like little children. They seem never to be noisy or intoxicated, even on the most festive and demoralizing occasions.

Joyousness and sobriety will go a long way in affairs of peace as well as in those of war.

The American Army of Volunteers THE following is extracted from a letter addressed to a correspondent by Field-Marshal Viscount Wolseley:

The American army is the only one I know of which, like our own, is obtained upon the system of voluntary enlistment. But the American government, wiser than our own, pay their men well, and the result is that the American army, as far as it goes in numbers, is, I believe, the finest army in the world.

This is high praise and we know that it is well merited.

The Newspapers & Hague Tribunal THE industry with which some newspapers fan the war embers into a flame was well understood at the preliminary meetings of the Hague tribunal. A proposal was made to inflict severe legal penalties upon any newspaper which should continue to comment upon international difficulties after they had once been submitted for determination. The suggestion was of course found to be impracticable, but it none the less indicated the extent of a very dangerous nuisance.

The Private Soldier in French Army THE fate of the common soldier appears to be receiving some of the attention which it deserves. General Passevien, of the French Army, struck a high note in an open letter to his men, in which he asks them to remember that ill-treatment of recruits is unworthy of honorable traditions. He asks for a spirit of comradeship, and for a fraternity which is not sealed by drunkenness, but which is to be proved by a thousand little mutual services.

Mr. Bernard Shaw on the New Race MR. GEORGE BERNARD SHAW is very tired of the innumerable expedients for the hastening of the millennium, expedients which usually consist of forbidding other people to do things which they want to do and for which we do not ourselves happen to have any inclination. Mr. Shaw says, "What we need most of all is to train a new race of men—a better race—a more intelligent race."

THE CHILDREN'S HOUR

A Letter From Lucifer

MY DEAR CHILDREN: For a long time I have wanted to write you a letter, but Madame (O how I love Madame) always said, "Wait, Lucifer, until I have your picture taken." One day when my brother and I were singing a song in the kitchen—a real duet, I assure you—Madame came in with the photographer. "O," she said, "that is magnificent. Just the right view. Take it quick." That's why I am able to send you our portraits. I have another one, too, that I shall send you later on. My name is Lucifer. I am jet black. My brother's name is Fifi, and he's white and gray. We used to live at the Refectory, but one day we went to visit the people at the Homestead. Madame said, "Mes pauvres petits chats!" and gave us a drink of milk. Fifi was frightened and ran away, but I wasn't.

I stayed with Madame all day, and that night on going back to the Refectory I had a serious talk with my brother. The next day we came to the Homestead to stay. We like the Japanese ever so much; we like Madame better; but we like Brotherhood best of all.

Fifi misses a great deal of petting. I don't. Every time the students have a meeting I always attend. They never pay any attention to me when I come in, but that doesn't disturb me in the least. I just jump up in the lap of the student nearest me, and then, after I have visited them all, I take my seat on the large window-sill back of the secretary. When Fifi first went to the Homestead, he was afraid of everything. One day I heard him calling me. He was standing at the foot of the stairs. I told him to come up. Still he cried, "Meow! meow!" and then it occurred to me—for Fifi is very timid—that the poor little cat didn't dare to come up alone. I went down to him immediately, and after talking to him a few minutes, we went up together.

I often go to visit my friends, sometimes at the colony; but Madame told me yesterday that I must stop going because Fifi is so lonesome when I am away; he cries all the time.

Fifi is naturally just a bit nervous, and so when we eat our dinner together I eat just a little at first. Then I go away and let Fifi have the plate to himself. Then, after he eats part of his dinner, he goes away and waits for me and I go back and eat just a little more. That's Brotherhood, you know. One day I heard Madame say to herself, "Strange—I don't believe Lucifer knows what the word 'selfish' means." She was right. What does that queer word mean: s-e-l-f-i-s-h? In our language, that is, cat language, we don't have such a word.

I am very fond of music and so is Fifi. They always have music at the meetings which the students and I attend, and I sit as still as a mouse and listen to every note. Fifi doesn't go with me to the meetings because he is so nervous, so I remember what I can and sing to him.

Now, children, perhaps you think Madame is writing this letter. Of course, she is holding the pen, but I am sitting on the arm of her big chair and telling her every single word. Can't you hear me purr? Perhaps I shall write you soon again. Yours for Brotherhood, LUCIFER

The Story of Narcissus

DEAR CHILDREN: The beautiful fragrant Narcissus is already blooming in Loma-land. That is because the rains have come. Where many of you live it is still too early for even the least bit of green to peep through the ground, and I doubt whether you have even set out the bulbs yet. Yesterday when I looked at the flowers I wondered how many Buds and Blossoms knew the story of Narcissus.

Once upon a time, years and years before, there lived in a land called Greece, a beautiful youth. His name was Narcissus, and he had a sister whom he loved devotedly. Narcissus believed his sister to be the most beautiful being in the world, and the sister believed her brother to be more beautiful than even the daylight when the sun shone on it.

One day the sister died and Narcissus was desolate. He still wandered through the fields of this land called Greece, but no longer with a free step or a light heart. One day when he was very tired he sat down near a spring. Bending over, he saw his own face reflected in the water. Now, they had no looking-glasses in those days, and Narcissus never dreamed that the beautiful face was his own reflected in the water, but he believed it to be that of his sister.

He tried to seize the form and hold it, and then, failing to do so, in disappointment, he died. That night the fairies came to take his body away to the mystic island, but all they found was a pretty white flower—and they named it Narcissus. AUNT ESTHER

Lucifer and Fifi, two Cats of Loma-land

MY LITTLE GRAY KITTY AND I

WHEN the north wind whistles round the house,
Piling the snowdrifts high,
We nestle down on the warm hearth-rug—
My little gray kitty and I.
I tell her about my work and play,
And all that I mean to do,
And she purrs so loud, I scarcely think
That she understands—don't you?

She looks about with her big, round eyes,
And softly licks my face,
As I tell her 'bout the word I missed,
And how I have lost my place.
Then let the wind whistle, for what to us
Matters a stormy sky?
Oh, none have such jolly times as we—
My little gray kitty and I.—Selected

Kindness to Animals

DEAR CHILDREN: I wonder if you know how kind the Chinese are to little animals. I have recently been traveling in China and, while in many ways their customs would not appeal to us and might even seem to us absurd, they could teach us many lessons in kindness to God's little creatures.

They are very fond of birds and it is not at all uncommon to see a Chinaman of the upper class sauntering along holding up a stick to which a little bird is attached by a long string. You will admit that it is a great improvement on a cage, for instead of being a prisoner the bird can make short flights and enjoys doing so, chirping and singing all the time. I have seen bird cages quite open, in which the birds contentedly remained inside or perched upon the edge. The Tient-sin lark is celebrated for its songs and can be trained to sing when commanded. I have seen a Chinaman place a cage before one of these birds on the ground and, going away a short distance, whistle. At this command the bird would burst into a most exquisite song. Outside of the bazaars one often sees wicker baskets full of common sparrows and it is not at all unusual for Chinamen to visit a bazaar for the sole purpose of buying these little birds and then letting them fly away, just for the pleasure they find in making the little things happy. When we think of the joy and brightness that the birds bring to us and of their great service to man, is it not strange that anyone should find pleasure in being cruel to them? A LOTUS GROUP TEACHER

THE MASON

by GORTHE

THE Mason's ways are
A type of existence,
And his persistence
Is as the days are
Of men in this world.

The Future hides in it
Gladness and sorrow;
We press still thorow,
Nought that abides in it
Daunting us---onward.

And solemn before us,
Veiled, the dark Portal,
Goal of all mortal---
Stars silent rest o'er us,
Graves under us silent!

While earnest thou gazest
Comes boding of terror,
Comes phantoms and error,
Perplexes the bravest
With doubt and misgiving.

But heard are the voices---
Heard are the sages,
The Worlds and the Ages:
"Choose well; your choice is
Brief and yet endless:

"Here eyes do regard you,
In Eternity's stillness;
Here is all fulness,
Ye brave, to reward you;
Work and despair not."

In Prison

THEOSOPHY appeals to all kinds and conditions of men because it is a philosophy of actual life and based upon the realities of life, and because it arranges events and conditions in their true perspective of human immortality. It appeals to the cultured because it includes culture, not as the possession of a class, nor as depending upon intellectual education, but as a condition to which every one may attain who looks at the reality within instead of the appearance without. It appeals to the ignorant because it places knowledge within their reach even although material wealth and opportunity be not within their reach. It equalizes all men in our common need of aid and wisdom and it offers to all men the courage and the dignity which must come with the recognition of an indestructible divinity.

That Theosophy is doing its gracious work we have abundant evidence and none can be so gratifying as the assurance that it carries some hope where there was none and that it calls forth a light where there was only darkness. It has not failed if it can minister to those who are in prison, if it has a message to those who are bewildered and it may be crushed by forces which they have never been taught to understand, to those whose lives have been darkened by wrong action, as indeed the lives of all men have been darkened. From inmates of prisons we have received many expressions of appreciation such as the letter addressed to the editor of the NEW CENTURY PATH, of which the following is an extract:

My minimum sentence expires next year. If during that period you would kindly send me any available Theosophical literature (or such of it as you may think a neglected mind can understand) I am sure you would be rendering quite a few of us a kindness that would leave us so deeply your debtor that I know it would be impossible for us ever to repay you. Hence I make no promises on that line but I will endeavor to lend a helping hand to others in every way possible right now, today,

tomorrow, if possible, and some day in the future I may be able to thank you personally for your great and arduous labors for mankind in general and for us poor, ignorant fellow human beings in particular, who find ourselves shut out from all outward pleasure and sunshine. I for myself never had a small ray of hope, never really lived, never had the right idea of this life and could not bear to think of any other until, thanks to you, I happened to get hold of, and read and reread my first copy of the NEW CENTURY PATH. That was over a year ago. What a change for the better in that short time and how different everything is to me it would be impossible for me to describe or explain.

There is certainly no man anywhere to whom the message of eternal life and boundless opportunity is inappropriate, no man anywhere to whom the assurance of a law and justice boundless and absolute can fail to bring courage and light.

STUDENT

THERE rolls the deep where grew the tree.
O earth, what changes hast thou seen!
There where the long street roars, hath been
The stillness of the central sea.

The hills are shadows, and they flow
From form to form, and nothing stands;
They melt like mist, the solid lands,
Like clouds they shape themselves and go.—Tennyson

The Mind of the Savage

A MUCH disputed point is whether the mental power of savages are in any way inferior to those of civilized men, or whether their peculiarities are entirely due to lack of education. We should have supposed that civilization itself could furnish abundant illustrations of a mental, and also a moral, incapacity unsurpassed, and unsurpassable, by any variety of savagery. Mr. D. G. Brinton, however, reviews this question. He says that it

Has been answered by taking the children of savages when quite young and bringing them up in civilized surroundings. The verdict is unanimous that they display as much aptitude for the acquisition of knowledge and as much respect for the precepts of morality as the average English or German boy or girl, but with less originality or "initiative." I have been in close relations to several full-blood American Indians who had been removed from an aboriginal environment and instructed in this manner, and I could not perceive that they were either in intellect or sympathies inferior to the usual type of the American gentleman.

It is said that the average Cherokee child learns to read and write in two and a half months, while the Cree child can read rapidly after a few weeks' teaching. Very similar results have been observed of the Australian aborigines, who are supposed to stand, intellectually, at the lowest point of human development. But of them it has been remarked that the limit of attainment is soon reached. In later life they show a "want of application and stability, capricious morals, variety and love of praise"—serious defects and, of course, entirely unknown to civilization.

STUDENT

Travels in Thibet

DR. SVEN HEDIN tells us that he traveled into Thibet from a pure love of adventure. He says:

I wanted to pit my alertness, my courage, my resourcefulness, and my resolution against the strong hand of destiny. In a word, it was adventure I sought for, far more than I sought to get to Lhasa.

He seems also to have had some desire to verify the gruesome stories of torture which were recounted by another Thibetan traveler a short time ago. Dr. Hedin did not believe these stories:

A few years ago an uncritical young man astonished us with tales of his having been tortured in Thibet; but I was in no degree deterred by his sensational stories, for the simple reason that I did not believe them.

This is very plain speaking, but not so plain as his conclusion. He writes:

It would be a gain for everybody concerned if people who find it difficult to stick to the plain truth would leave the writing of books alone.

Dr. Hedin himself was expelled from the country, but there was no torture, nor suggestion of it.

STUDENT

THE well-bred man is not self-conscious. The man who prides himself on his case is persistently conscious of himself.

CREEDLESS

by J. C. BUCHANAN

I HAVE no creed,
 But I have in me that surpassing words,
 Of faith in God as boundless as the sea;
 A love that takes in all the human race.
 I see good in all creeds,
 Good in all religions,
 Good in all men,
 Good in all living things.
 The only sin to me is selfishness;
 The only happiness the good we do.
 Oh, let us drown these empty sounds and forms—
 The letter that divides in warring sects;
 And let us fill our hearts with love to men.
 Oh, build a church as wide as human needs;
 Imbue it with the Spirit, not the husk;
 And henceforth leave the race unfettered, free,
 To follow out its impulses divine,
 For God is in us and will lead us on,
 If we but leave our hates and follow him.

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question Do the Theosophists believe in heredity?

Answer (1) Theosophists, being students of Nature's laws, most certainly recognize the fact of the transmission of traits and tendencies to offspring, but they do not consider that physical heredity fully explains or settles the question of character.

Looking upon man as an immortal soul, with an immense past behind him, they regard bodily heredity as but a portion of that soul's heredity—a natural law affecting the physical instrument of the soul. It is held that the guiding mind and real character of each soul are not the result of body and brain, but are peculiar to the soul itself, and that the coming into any particular race or family is in exact accord with the soul's needs in the way of experience or readjustment.

In the past we, as souls, took part in, and are therefore responsible for social conditions in which body and brain were helped or hindered in development; and we are in this life reaping the exact results, individually and collectively, of our previous thoughts and actions. With this idea in mind we are able to perceive the scope and purpose of the teaching that "as a man sows, so must he also reap." Heredity, therefore, means to the Theosophist much more than the ordinary conception, and with his understanding of it he is able to combat and overcome traits, tendencies and limitations which, without this knowledge and effort, would dominate his life and his progress.

That physical heredity does not cover the ground of individual character nor meet the facts of recorded history, is easily shown. We have many records of ancient and high civilizations now extinct. If physical heredity explains the transmission of power, knowledge and capacity, how is it that these civilizations have disappeared, and that from some of them we find but a few degenerate descendants? Or, in the case of families, do we not find great musicians and other geniuses springing from parents and ancestors of very mediocre abilities and knowledge, and, on the other hand, of the families of such exceptional characters showing no evidence of the transmission of genius?

Theosophy teaches that the real capacity and ability belong to the individual soul; are, in fact, the soul's heredity. As the body grows old and dies, so physical races reach the end of their existence: but the soul's great line of paramount heredity moves on through new races and peoples on its path of evolutionary progress.

R. C.

(2) Heredity refers to certain influences with which a child is born and which he is supposed to have received from his parents and more remote ancestors.

Every one comes into the world with certain tendencies and characteristics. And any one can observe that children resemble their parents in looks, in manners, in mental traits, in small and curious idiosyncrasies; that certain diseases run through families for generations often; that vices

and morbid appetites are perpetuated; that criminals beget criminals, and that people of refinement almost always have refined offspring.

All these things any one can see, and why should not Theosophists believe in facts which are so apparent? It is even probable that many of them believe in it more deeply than do most others—not Theosophists—for they talk not only of family heredity, but race heredity, soul heredity, and spiritual heredity. If they differ from others on this subject, it is in regard to the hold this force must of necessity have.

There is a very common superstition that the chains of heredity are unbreakable, but there is also running along with this a belief that this is not the case, for all people make efforts to overcome their heredity where they think it is worth while. If they thought the task of modifying these tendencies were a hopeless one, they would not attempt it. And to admit such a condition would be to deny the possibility of progress. Probably the world holds few such pessimists as this, so that every one practically believes in a certain degree of power to overcome heredity.

Theosophists believe a child is what his parents have made him, and something more. This also is a belief shared by the majority of the world. The only question is whether this something more is more powerful than bodily and brain tendencies received from the parents. Theosophists believe a man is a soul inhabiting a body; that the soul is more powerful than the body with its tendencies; and that to the extent this is realized physical and mental heredity can be modified.

Evolution proceeds from within, outward, and consists in a ceaseless molding, modifying and purifying of the physical and social organism, with the purpose of making both perfect transmitters of the soul life.

G. V. P.

Civilization

WE note that the melancholy roll of suicides in this country shows the same steady increase as in the older countries of Europe.

The figures are: in 1899, 5340; in 1900, 6755; in 1901, 7245; in 1902, 8291; in 1903, 8597. Half of them were by poison, showing definite predetermination. One might have thought that the conditions of life in a comparatively new country would be so different to those of the older ones, that the spirit of a young nation would be so buoyant, as to reduce suicide almost to nothing. It is hardly possible to avoid the pessimists's axiom that civilization is a disease, one of whose symptoms is suicide.

Crimes of criminal violence have also increased, and are answerable for about as many deaths as suicide. More than *seventeen thousand* persons in one year hurried into death by their own act or that of another! And those figures have to be multiplied by four or five to include those whose despair would drive them to suicide save for fear; and those victims of violence which fell short of complete murder. And we are dealing with but one country and one year. Surely it is time to cease to prate about the glories of our civilization.

STUDENT

The Church and Education

THE *Guardian*, which is the organ of the established Episcopal Church of England, has recently said:

In order to keep going our own Church schools, we are obliged to block, whenever we can, the general advance of the education movement.

It is always interesting to see the wolf, in an unguarded moment, throw off the sheep's clothing. Before long the whole of civilization will awake to the fact that dogmatic theology detests secular education and will lose no chance to injure it. This is not always confessed with such engaging candor, but it is always true.

STUDENT

Waste Human Material

ADMIRAL FISHER, who is practically in supreme command of the British navy, is a severe disciplinarian, but his views upon the training of boys are sound and sensible. He, at any rate, is not a believer in original sin, or if there is any such sin he does not think it any cause for discouragement. He recently said: "Give me a boy young enough and I can make anything out of him." There are certainly boys enough for whom no one seems to have any particular use, waste material, which is allowed to go to contagious ruin because we have not yet learned where the true wealth of the nation is to be found, and how it may be developed.

STUDENT

AGNOSTICISM is not yet entirely inarticulate, as is evidenced by *An Agnostic's Apology and*

Other Essays, which has now passed into a second edition. We have no quarrel with an agnosticism which endeavors to live up to the humility of its name. A confession of ignorance is often the beginning of wisdom, but very much of the agnosticism of today goes further than this. It not only proclaims its own ignorance, but it denies the possibilities of knowledge, and in defence of its creed it becomes as aggressive, as dogmatic and as intolerant as the theologies which it tries to supplant.

The author of the apology in question defines agnosticism as "an assertion that there are limits to the sphere of human intelligence," which appears to be an assertion as unphilosophical and as illogical as the ordinary and mischievous creeds of the churches. At this period of the world's thought, it must require much courage to base any prediction whatever upon human incapacity. The history of the human mind is full of such falsified prophecies.

The apology in question is, of course, not an apology at all, but an aggressive bombardment. If it is intended as an attack upon Christianity, it is an entire failure, because its object is not Christianity, but only the grotesque caricatures which are trying, now more vainly than ever, to pass under that name. The author must, indeed, be well aware that the dogmas which he assaults are disowned and denounced by many of the most prominent and commanding figures in the Christian churches. Indeed, so well does he know this that he quotes to us Canon Farrar, who

Declares and calls God to witness that if the popular doctrine of hell were true he would resign all hope of immortality if he could thereby save, not millions, but one human soul from what fear and superstition and ignorance and inveterate hate and slavish letter-worship have dreamed and taught of hell.

On the subject of infant damnation, the author writes with a force which commands the admiration of every Christian who has gone to Christ for his religion instead of to the churches. He says:

What are we to think of the religion in which so fearful a belief grew and flourished; a belief calculated to drive men mad, to make them pray for annihilation as infinitely preferable to the state which it reveals, and which, so far from exacting a moral influence, pollutes the imagination and lowers the tone of character of all who accept it? . . . If the accepted version of this doctrine be utterly repulsive we should be forced to hold that Christianity poisons the springs which it represents as the sole support of the spiritual life. No other doctrine is so important in regard to practice, and none so horrible.

✻ An Agnostic Apology ✻

But why give the name of Christianity to these revolting beliefs? It is true that there are some peculiar and fantas-

tic people, the backwash of the churches, who believe, or pretend to believe, in infant damnation; but it is not fair to give the name of Christianity to a savage dogma which is rejected by every intelligent Christian. Christ's own words were, "Suffer little children to come unto me, for of such is the kingdom of heaven." How then can we give the name of Christianity to what is the antithesis of Christianity?

On the subject of immortality, the author says "the preëxistence of the soul is as plausible a dogma as its post-existence." Here, of course, he commands our very enthusiastic assent, although he is only repeating the words of Hume, who said that if the soul be immortal it must also have been eternal, and that the "doctrine of preëxistence is the only one unto which philosophy can hearken." Reincarnation, or repeated earth lives, is the necessary corollary to preëxistence; but here again we must object to an attack upon Christianity, on the ground that it does not teach preëxistence and Reincarnation. It is true that these beliefs are not ordinarily held by the churches, although even here there are many exceptions. Nevertheless, Reincarnation is explicitly taught in the Bible in many places, and by Christ himself, for did he not say of John the Baptist, for example, "This is Elias, who was for to come." The early churches held to a belief in Reincarnation, and the author's strictures should not therefore be applied to Christianity, of which Reincarnation is part and parcel, but rather to modern theology, which, for reasons best known to itself, has unlawfully expunged from its systems the one supreme teaching which makes clear the justice, mercy, and love of God.

It is, of course, fascinatingly easy to select from the Babel of opinion which now calls itself Christianity such portions as especially lend themselves to attack. This, however, is not an assault upon Christianity, which consists of the teachings of Christ and of nothing else. Such a procedure would be quite justifiable if the churches were the only avenues through which we could learn of Christianity. But the churches have no other means of knowledge than the humblest citizen who has learned to read and can buy or borrow the four gospels. To demolish the creeds of today may be an admirable proceeding, although an unnecessary one, as they will speedily demolish each other. But let us clearly avow what we are doing and refrain from attacking Christianity—that is to say, the teachings of Christ—for misdemeanors of which it is in no way guilty.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Observations taken at 8 a. m. Pacific Time

INSTEAD of bemoaning our difficulties, we ought to be thankful for them, for it is out of these trials is forged what we call character. We know men in whose faces we can read it, and we know how it has been won. Whenever we see a face marked by an expression of strength and self-reliance, we conclude that it represents a history in which there has been something to fight against, something to overcome. The influences which have left their impress upon it have not been of the arm-chair and slipper kind. We know that many a victory has been gained in the midst of rough experiences, for we can read the scars of battle in the lines upon the face. Yes; hardship, trial, difficulty, make character; or, to change the figure, they are the stepping-stones upon which the soul rises.

The Battles of Olden Times

IN days of old, before the discovery of modern methods of warfare, the battles of the world were fought by men of courage and strength, in personal conflict with the enemy. We, who look back upon these great battles have some difficulty in reconstructing the motives, and in imagining the enthusiasm with which they were entered upon and maintained. In pondering over them, however, one thing is evident. The valor and strength of an army was generally in direct proportion to the enthusiasm with which the cause was entered upon.

The prowess of any body of warriors was measured by their conviction of the justice of their cause, by their patriotism, by their devotion, by their

disregard of their own lives or safety, when moved by the impulse of a just indignation against wrong or oppression.

In modern times we have had but few of these wars of faith and freedom. For centuries, the struggles of nations have been for aggrandizement, for wealth and for empire. One is sometimes tempted to believe that the days of chivalry are past—that never again can pure enthusiasm so animate a nation as to make it invincible through that unseen bond of deep and earnest conviction, which converts every true warrior into an unconquerable unit of force, forgetful of every consideration save the

The Great Cause of Brotherhood

cause with which he is absolutely identified. And if all this is true of the wars of nations, it is also true of those conflicts which are undertaken by men on the plane of mental and moral effort. The times are out of joint. Dilettanteism, mental speculation, political and social corruption have whittled away the pure aspirations of otherwise thoughtful men. The world appears to be swiftly rushing to a chaotic destruction. There is no well-defined purpose to animate or consolidate the energies of those who are anxious to lend their services to the cause of truth and righteousness. But stay. Let us pause for a moment and see whether this is so or not.

William Q. Judge once said, "There is a great cause—in the sense of an enterprise—called the cause of sublime perfection and human brotherhood."

Here surely is a cause worth fighting for, if it be true that such a cause exists. It will not require much reflection to convince any man of well-balanced mind that such a cause *does* exist. The ideas which underlie it are as natural to every man as the air he breathes. The very thought of peace and good-will among men is sufficient to make the blood flow a little quicker, to give an added light to every eye. The very word comrade is a spell to move every human heart. Search

How Very Great Is the Necessity

as we will, we shall find that all the great teachers of mankind have made this cause the central point through which their wisdom has found foothold in the faith of men. Many are the martyrs who have given up their all—even their very lives—that this great cause might still remain (however obscurely) within the thoughts of human-kind.

This being the case, surely it is timely to proclaim this cause once more. Look where we will we can scarcely fail at once to see how great is the necessity.

And having adopted this cause as our own, and sworn to maintain it, at whatever cost, we shall do well to consider the laws of ancient chivalry. Those who fight the powers of selfishness and darkness for the sake of humanity, will find those powers first within themselves. Having first entered there upon the conflict they will learn the lessons which will serve in the greater battle. Patient endurance and a never failing conviction of the truth will be all availing. Such soldiers do not look to each other, in the heat of battle, for compliments upon their prowess, nor do they fight for the doubtful reward of distinction above their fellows. Having done their best they do not fear blame or misfortune. They recognize

Who Fight Not to Have But to Give

with glad delight the strength of each one of those with whom they stand shoulder to shoulder in the fray. They receive with acclamation each one who joins the ranks and they willingly give him the position which is his due. They do not, like children, crawl about with their faces to the ground expecting to be placed upon their feet, nor do they play with fire or sharpened steel to the danger of themselves and others. They stand up like men and fight, unfalteringly without haste, anxiety, fear or anger. They are sure, each one, that there is, for him, nothing else worth struggling for but the cause. They recognize their leader as the greatest of their comrades, the most enduring, the most fearless, the most unselfish, the wisest in council, and that his leadership is due to this and to nothing else. They do not fight that they may *have* but that they may *give*. With such ideals, comrades in arms, backed by the laws of the universe, can accomplish all things. They are fighting for the cause that is their beacon star and that alone.

C. W.

THE illustration on the cover page of the NEW CENTURY PATH this week represents a street scene in Cuba during the anniversary in honor of the poet Heredia, a full description of which appears on page 11.

Encyclopedia Biblica

THE *Encyclopedia Biblica* has produced something very much like a storm. That it should be intensely distasteful to orthodoxy we can very well understand, but we cannot understand why it should be viewed with such unconcealed timidity by men whose liberal thought has itself contributed to the conclusions therein recorded.

The work which Dr. Cheyne has edited with such masterly care and erudition has forcefully brought before the world some of the verdicts of the Higher Criticism. We cannot see that Dr. Cheyne has done this in any unfair manner or that he has confused demonstration with mere speculation. Courage and a hearty comradeship with truth are the only sins which can be laid at his door and the heinousness of such offenses as these are too well understood to need mention.

That Dr. Cheyne should incur the animosity of the orthodox is, as we have said, comprehensible and creditable to himself. It is not however easy to explain why he should be so severely blamed by those who themselves hold the views to which a currency so wide has now been given. His error probably consists, not in the opinions which he promulgates, but in the manner in which he promulgates them.

Among many of the most liberal leaders of religious thought there is a lamentable tendency to be tender toward ancient beliefs simply because they are ancient, and in spite of the fact that they have been proved to be untrue. They apologize, as it were, for presenting the world with the truth, as though error had grown respectable with age, as though indeed antiquity were almost as good a credential as accuracy, and as though the two ought not to be brought into conflict without misgivings and regrets.

However enlightened such men may be in their general theology, they are rendering an ill service to religion. If humanity were still in an intellectual nursery it might perhaps be advisable and possible to feed it with a spoon. It was once possible, but it is so no longer. We may as well face the fact that the theological edifice in which the world has been educated is now in ruins and men do not like to live in ruined houses. Every stone in the old building may be encrusted with sentimental memories but these are of small account if those stones now fail to do the work for which they were erected. We may reverentially place the old ruins in our museums, but it is an ill service to urge us to live in them or to say or do aught which will hinder us from building up other houses founded upon truth and which will therefore be more durable. If Dr. Cheyne has truth to give us in his *Encyclopedia* let us furnish to it all the publicity possible instead of skirting round about it with a diffident apology to antiquated errors for our daring, and a nervousness lest we shall tread upon the toes of these who are pleased to worship the white hairs of venerable nonsense.

STUDENT

The Evil Days of Sport

EVEN the devotees of pugilism seem to be opening their eyes to the degraded level which their favorite sport—surely itself the most degraded of all forms of athleticism—has reached.

The sporting contributor to a well-known Pacific coast daily, commenting upon a challenge about to be issued to the present prize-fighting belt-holder, says:

The money is what the champion will spar hardest for. The old days when the glory which followed the winning of a world's championship was the chief prize of a fistic argument have passed away. In their place has materialized a spirit of commercialism, which places coin above glory.

R. H. Kain, the eastern sport expert, in a recent letter, speaks similarly:

It is a great pity that the spirit of commercialism enters so largely into sport nowadays. Every form of sport is tainted with it and there are almost no manly competitions in modern times with any other end in view except the gate receipts. There is no honor or glory in winning which equals in the mind of the athlete the amount of money which can be carried away.

And the other side of the picture is made by the spectators. They go as they would go to see a man burned alive, as the Spaniard goes to a bullfight, to gratify the most brutal element in human consciousness, the demon that is reawakened by the prospect of blood-shedding.

These two factors face each other at the prize-fight, contributed by fighters and performers respectively—lust for money and lust for blood. Truly a fine descendent of the contests of the old Greek days, when combatants and audience met to show and to see to what perfection of form and strength the human body could attain!

STUDENT

Diseases and Palliatives

IT makes one a little impatient to read our modern learned treatises on the causes of "degeneracy," and of abnormal depravity. Some of them seem as if they were almost intentionally blinking the real issue. The one root cause is so obviously selfishness. The general urge, everywhere operative, is to grasp. Men under its influence may have other and subsidiary motives, gleams of kindness, impulses to philanthropy, and what not. But these only play around the intensely and malignantly active center, a center so universally operative that no one notices it; or only does so to embalm it into a proverb—"self-preservation (read self-aggrandizement) is the first law of nature."

There must therefore always be a large class desperate from extremity of need; and a larger, desperate from fear of that extremity. And the desperates breed those who have the stamp of desperation on the very germ of their consciousness.

It is all very simple, and there is only one real remedy; quite obvious, but also quite inaccessible if we all wait till another begins.

The root of the evil has many branches. One of these is the murderous employment of children in factories, upon which we have often commented. Another, also effecting children, very real but of much less extent, is their employment in theatres. A typical case has just excited a good deal of attention in London. A mother was fined for not sending her little child of twelve to school. She pleaded that she absolutely needed the child's earnings at a theatre. There were two daily performances three miles from home, and when this hardly more than baby returned after midnight, its exhaustion was too great to allow of rising in anything like time for school the next day. A fine was imposed. One wonders what the mother will do: half starve with the child (who will go with an empty stomach through the winter streets to school), or compel it to go to the theatre and get up for school?

We try to palliate by a profusion of legal enactments. In this instance we can make it illegal for children under a certain age to play in theatres; we can compel their attendance at school, and we can feed them when they get there.

STUDENT

Animal Prize Fight

IN one of our great Californian cities a wildcat is on exhibit in a store window. Another store window is being prepared for the reception of a bulldog. A placard announces that these two animals will "fight to a finish" before a public audience on a fixed date. Tickets are on sale and one of these responsible for this elevating amusement announces that a large number of applications for admission have already been received. The cat which is said to be tame and gentle to human beings has already killed a bulldog in a similar encounter. The promoter says there will be no trouble about getting together a good crowd when the time comes and he does not anticipate any effective interference. The only respectable parties to this abominable business are the cat and the dog who would have no idea of fighting except in self-defense. We look forward with some interest to a vigorous pulpit denunciation of this shameful affair. The religious press might also notice it if they can momentarily curtail the more important and vital discussion as to whether the true believer may or may not play a game of cards at an evening party.

STUDENT

Important Discovery in Pedagogy

AFTER long and careful investigation the Chicago experts on educational psychology have formally decided, that children have better average physical health if they have outdoor recreation, and that their moral and mental health will be better if their playground is somewhere else than in the gutters and back alleys. One extremist even suggests that it would be good public economy to provide, at municipal expense, playgrounds where they could "amuse themselves without interference." But it should be remembered that these children have been playing in gutters and alleys, and that their whole lives have been so unnatural and perverted that they do not know how to play properly. Only too often these unwatched playgrounds become merely enlarged opportunities for the practice and communication of the vices previously learned. Would not a wise, merry, companionable guidance by some competent older persons be a valuable aid in regenerating them? Y.

Some Views on XXth Century Problems

Alcoholism Is One Link in the Chain

THE LANCET gives us the timely reminder that "drink may often be an effect just as much as a cause, and when we see the places in which many of the poor live we cease to wonder that they seek relief from their misery and discomfort in the warm and cheerful gin palace." Alcohol drinking is of course a link in a chain and we shall never do any true remedial work so long as we suppose it possible to isolate a single link and to close our eyes to those other links to which it is so tightly bound. There is no department of our social life which does not ceaselessly preach to us the eternal truth of human unity, of universal responsibility. All sin, all misery, arises from unbrotherliness. That is the source of the chain of which every link is stained with sorrow. Wherever there is one human being who hates his brother, who fails to love his brother, upon him lies the personal guilt, not alone for alcohol drinking but for all other faults and follies and crimes which have expelled us from the earthly Eden and which keep us wandering in the wilderness. But if there is universal responsibility, so also is there an universal power to help, and in this light we shall see that the least effective of all aids are those which spring from an intense realization of another's infirmity and that the most potent aids are those which are based upon a recognition of our own contributions to the selfishness which curses the world. He who learns to be unselfish in the small things of daily life stands already as a savior of his race. He it is who has solved the drink problem and the slum problem and all the other perplexities which are so only to those who begin to reform others instead of themselves. X.

Triviality of the Religious Press

THE decay of the religious press is often quoted as an evidence of the same apathy which empties the churches. As we have often pointed out, a visit to the average church, the hearing of an average sermon, will give us all the explanation we need of the empty pews. Until men can be persuaded to leave their intelligence and their spiritual hunger in the church porch, they are not likely to fill the seats which are now empty.

As to some religious newspapers, we can satisfy ourselves in like manner. The solution is so supremely simple that there is hardly room for discussion. Buy these papers and note the extent of their contribution to national sanity and to national righteousness. Here, for instance, is a prominent religious newspaper which devotes considerable space to the burning question of what amusements may be allowed to the true believer. It might be supposed that the man of average intelligence would contemptuously dismiss such a subject as being suitable only for private and individual determination. Not so the paper in question. It propounds the problem and answers it in a few pregnant lines. Here they are:

Is it a violation of mere church rules to dance, play cards and attend theatres, or is it a violation of the spiritual constitution of mankind?

We believe that the experience of the Christian church goes to prove that these indulgences are an infraction of the deepest moral and physical laws.

How is it possible to read such puerilities without despairing of human intelligence, and who are the people able to willingly peruse such frivolities without despising themselves? The flame of war is smouldering in every quarter of the world, and civilization itself is well-nigh submerged beneath a flood of misery and degradation. These are the things which lie like hot irons upon the hearts of religious men, not card-playing and dancing. Hate and starvation and despair have their hands upon the throat of humanity, and we are asked to consider the question of parlor games. Surely, the world has never seen such a spectacle since Nero mouthed and gibbered in front of dying Rome.

There are some religious papers which are an ethical adornment to literature, and which will yet be recognized and prized more fully than ever before. And there are other papers which are the enemies of true religion, and which yet deplore a public apathy which they create and foster. But we would tell them that their real foe is not public apathy, but rather public condemnation and contempt.

STUDENT

Suicide Does Not Cure the Pain

THE Chicago Inter Ocean discusses at some length the connection between life assurance and suicide, and assumes that an increasingly large number of persons deliberately assure their lives with the intention of destroying themselves, and so guaranteeing a provision for those they leave behind them. With the ethics of life assurance we have at the moment no concern, but it is remarkable that it should now be admitted as a matter of business that the religious deterrent from suicide has weakened if it has not already disappeared. The *Inter Ocean* tells us that this deterrent "never was so strong as religionists tried to make themselves believe. There are thousands of men to-day, at any rate, who would simply laugh at fear of punishment after death as an argument against suicide." It depends, of course, entirely upon what we mean by punishment. If we mean anything akin to human punishment or to the theological hell, the laughter is natural. If, however, by punishment we mean the pain with which every act of folly is inevitably fraught, we do not see how death can possibly interfere with an universal law of cause and effect which we see in tremendous operation around us at every moment.

Pleasure and pain are states of consciousness which, although often induced by physical conditions, can with equal readiness be induced without those conditions. Deep within the heart of every one of us there is the certainty that consciousness and its capacity for joy and suffering persist after the death of the body. It is as futile to expect to escape from mental pain by destroying the body as it would be by the destruction of a suit of clothes. The real pain from which we are trying to escape is always mental, although it may seem to have a physical cause. Pain cannot be ended by destroying the body, which is but the temporary covering of the immortal consciousness which it harbors and confines. Crime has never yet proved a refuge from pain and never will. It is but an addition to the debt and not its discharge.

When Hamlet contemplated this greatest of all crimes against the majesty of himself he was attracted by the simile between death and sleep. But then sleep also brought its equipoise; to sleep was *perchance to dream*. Are not our sorrows now but as the troubled dreams of a higher life, and shall we shatter those dreams by plunging ever deeper, deeper into the place of shadows, into the very haunts of night?

STUDENT

Cancer and National Luxury

THE examination into the causes of cancer which has been made by the Hon. Rollo Russell is certainly interesting. His conclusions may not be susceptible of definite proof but they have an air of plausibility which commends them to very serious attention. Briefly stated, Mr. Russell believes that cancer is a concomitant of national wealth, that is to say of luxury, and the anxieties attendant upon modern civilization. The disease is most prevalent in rich countries, it increases with the growth of wealth, and it is more frequent among the rich than among the poor. The immediately exciting cause is usually a meat diet, subsidiary causes being tea, coffee, alcohol and tobacco.

Mental worry is also a prominent factor and where these varied forces are absent, cancer is almost unknown. In other words, the disease is a part of the greater malady which we have learned to call civilization. Mr. Russell's conclusions will carry small comfort to those whose ideal of the medical art is merely a conferred impunity to break the laws of nature and who have no other conception of remedial measures than the pursuit of the elusive microbe. They will, however, carry much comfort to those who are not slaves to their appetites and to those who will welcome this further demonstration of an universal law which never refuses its protection and which never overlooks an infraction.

Civilization has been defined as the power to acquire luxuries and to dispense with necessities. It is not possible to do either the one or the other with impunity. The most successful bacillus hunting will not outwit nature nor divert her purposes. Her retributive and educational resources are too vast and too complex for that.

The Dweller on the Threshold

"THE Dweller on the Threshold," painted in 1888, was the first of the paintings by R. Machell, which all were directly inspired by a study of Theosophy as revealed in the writings of H. P. Blavatsky. It now hangs in the house where that first great exponent of Theosophy lived and died, 19 Avenue Road, London, the English Headquarters of The Universal Brotherhood. A replica hangs in the rotunda of the Homestead at Point Loma. In it is allegorically presented the struggle of the aspirant to attain union with the higher nature and the inevitable conflict with the black shadow of his own lower nature, which rises between him and the visions of purity to which he aspires.

It is the first effort to climb the mountain and reach the light which brings the aspirant to a realization of the gulf that lies between the life of material self-indulgence and the region of pure life and the light of true wisdom.

Urged by ambition, unconsciously selfish even in its aspiration, the man has climbed the height and at last sees the light and a bright figure above calling him to greater effort. But a giant shadow comes between and shuts out the light; the pilgrim falls back despairing. The woman who loves and seeks to follow and to shield the one beloved, looks for no reward, has no ambition but to follow and to help, and her back is turned to the light, which makes a pale glory around her unconscious head, a promise of the day when she shall see the light for herself and, it may be, lead the way by a surer path than the one that here ends in failure.

The picture goes no further, but we may look beyond and see the pilgrim, learning from this effort and this fall, the truth that selfish effort at self-liberation is doomed to failure; and we may see him retrace his steps down again into the valley, forgetting self in service to his fellows and, sustained by the memory of that glimpse of the pure life, seeking to lead others to a search for the true Path; the Path that shall lead, not one or two chosen ones, but *all the world* out of the valley of the shadow of despair to the sunlit heights of "Right Living." There only is joy and the Higher Freedom. R. M.

WHEN H. P. Blavatsky declared that religion and science were one she brought down upon her head not only criticism, but contempt. Today we are beginning to realize—though most of us forget to thank H. P. Blavatsky and her successors for teaching us—that as life is one, as soul is one, so The Arts are one, not five hundred—one sea, not a collection of water-tight compartments, each containing its particular and special "different-from-the-rest" supply. There is a middle line which avoids both extremes. Those who follow it are able to take all that is best in the old, and sifting from the new all that is crass and trivial, from these create a whole whose center, at least, is true.

LET any sculptor hew us out the most ravishing combination of tender curves and spheric softness that ever stood for woman; yet if the lip have a certain fulness that hints of the flesh, if the brow be insincere, if in the minutest particular the physical beauty suggest a moral ugliness, that sculptor—unless he be portraying a moral ugliness for a moral purpose—may as well give over his marble for paving stones. Time, whose judgments are inexorably moral, will not accept his work. For, indeed, we may say that he who has not yet perceived how artistic beauty and moral beauty are convergent lines which run back into a common ideal origin, and who therefore is not afire with moral beauty just as with artistic beauty—that he, in short, who has not come to that stage of quiet and eternal frenzy in which the beauty of holiness and the holiness of beauty mean one thing, burn as one fire, shine as one light within him; he is not yet the great artist.—*Sidney Lanier*, in a lecture to the students of Johns Hopkins University

from Katherine Tingley's private collection

The Fine Arts in Our Universities

A SMALL tempest, which has been fanned to quite generous proportions by the newspapers, has recently been inaugurated in Columbia college by the resignation of Professor McDowell. In his letter he states:

It is with some chagrin that I report the small results that my efforts have brought about. The reason is obvious. If the colleges consider the fine arts worthy of serious consideration, the effect of this is powerful. For most preparatory schools and women's colleges have imitated the universities' neglect of art, and thus higher education in these institutions becomes incomplete and materialism chokes out idealism. I have tried to impress the powers that be with the necessity of allowing no student to enter the university without some knowledge of the fine arts. Such knowledge may be very general and not technical. This would force upon the preparatory school the admission of the fine arts to the curriculum. The present ignorance of the incoming student demands a remedy if the courses in the fine arts are to give anything but the most elementary instruction. No student should attain his B. A. degree without passing in at least two courses of a faculty of fine arts.

In order to bring to a focus the art elements existing in Columbia, I proposed that music be taken out of the faculty of philosophy, and architecture out of the school of mines and with belles lettres form a faculty of fine arts, to complete which painting and sculpture would be indispensable.

Professor McDowell's suggestions did not meet with the approval that he hoped and when it was suggested to introduce kindergarten into his proposed division of fine arts, he resigned as stated, refusing, to quote his words, to make of his department "a co-educational department store."

Those of broad culture, particularly Europeans, have always looked with astonishment upon the fact that the fine arts are so little considered in American universities.

The obstacles that Professor McDowell has encountered in his attempt to carry out his plan—broad and eminently common sense, it would appear—seem the more surprising when one considers the musician's rank as a com-

poser. He is not only the greatest of American composers, but one of the very few today who base their musical theories upon profound scholarship. Many of his compositions are as superb in their unity and in the stately march of their progressions as an old Greek pageant.

Professor McDowell's education was gained through years of study in Europe. From the Paris Conservatoire he went to the great Joachim Raff, who taught him composition. Liszt was frankly enthusiastic over his work.

Henry T. Finck, one of our most reliable musical critics, speaks of him as a "musical thinker," and the description fits. Those who have been exploiting what they choose to name this "controversy" in our daily papers seem to be quite unaware of these facts. Yet they should have certain and decisive weight in a controversy such as this. STUDENT

GLANCING over the pages of our current magazines, particularly those devoted to the care of children and the subjects that belong to the schoolroom and the nursery, one is impressed with the number and variety of prescriptions for neurotic children. "Why is my child so nervous and what can I do about it?" That is the cry. Fresh air, tonics, change of climate, special dietary—all these things are recommended. But the proportion of neurotic children increases as the years go on, and it is evident enough that even cod-liver oil and sea baths cannot and do not reach the root of the difficulty.

We are living in an age whose one sign is restlessness. Things do not merely move, they seethe, whirl. Life itself—to those who are in it—seems, more than aught else, like a great maelstrom into whose vortex many are sucked down never to reappear. That an organism so sensitive as a child's should not be affected by this condition would be strange, for there is a world all about us which, though we cannot see it, yet impinges on our thought-life, making or marring all our destiny.

But many a child is born marked with a tendency towards nervousness, restlessness, discontent. It is the bequest of the conditions which surrounded his prenatal life. For this the mother is not entirely responsible, for few mothers, even when they so desire, are always able to so adjust their environment, at critical times, as to gain from it help rather than hindrance. Yet all mothers could try. Did they but realize that the whole future may lie in the resolve of a single moment at a critical time; did they but realize how little are the seeds which, planted, grow into giant trees perchance for the healing of the nations, did they realize how much depends upon the little daily conquests over one's own nature—mothers would, verily, try harder. Fewer children would come into the world marked by nervousness, by a morbid habit of mind, by an incapacity for self-control, by passion, by selfishness.

But much can be done afterwards. What is needed more than all else is a knowledge of human nature on the part of mothers. Too many mothers fly from one extreme to the other. Comparatively few take the sensible middle ground. The "don't" and "naughty boy" and "mama'll whip!" that so many children hear, is balanced by the attitude taken by many mothers that the child is always perfect and always right.

Nervousness in Children

One extreme is as bad as the other. One begets fear, the other irresponsibility; one begets cowardice, the

other recklessness. In either case the soul is kept absolutely shut away, denied expression, and the child steps out into life with all the fundamental knowledge yet to be acquired.

What mothers need is a knowledge of Theosophy—a knowledge that the child's nature is dual, the higher tendencies forever warring against the lower, each seeking to conquer or absorb the other. To know this, to watch the child's every tendency with this in mind, to teach the child himself to know the difference between the higher nature and the lower—this will do more to cure nervousness and restlessness in children than anything else in the world.

There would be no neurotic children if mothers and fathers lived up to all the sacredness and all the responsibility of motherhood and fatherhood. Many do the best that they can, but what they need is a greater knowledge, a deeper insight, the insight that Theosophy alone can give them. A. V.

THE LOST JEWEL

by EMILY DICKINSON

I HELD a jewel in my fingers
And went to sleep.
The day was warm, the winds were prosy;
I said: "'Twill keep."

I woke and chid my honest fingers—
The gem was gone:
And now an amethyst remembrance
Is all I own.

Work of Irish Women

IN Ireland the experiment has been tried, with marked success, of having women appointed as work-house inspectors. Concerning this the *Irish Times* says:

When first women became eligible for election on Poor Law Boards in these countries the prevailing feeling was, perhaps, that of astonishment at the idea of refined and educated women undertaking the disagreeable duties that fall to the lot of the guardian of the poor. But a little experience quickly toned down the astonishment. The opinion has rapidly gained ground during the past few years, that the care of the aged and sick, and above all superintendence of the education and training of the children in the work-houses, are eminently feminine concerns. As a result of this change, the appointment of lady guardians to our town and country work-houses, which was at first regarded in the light of a somewhat doubtful experiment, is now looked upon as an important step in our social progress.

It is unfortunate that the art of lace-making is dying out among so many of the peasantry of the European countries. The island of Gozo, one of the Maltese islands, is an exception. Here an enormous quantity of the most beautiful lace is made, certain patterns being the property of certain families and handed down from mother to daughter for generations.

Annie P. Dick

SOMETHING like two years ago Mrs. Fred J. Dick of Dublin came to Loma-land in search of health. She found health and very much more, for she has found here her life work. To see her among the students or with the little children, of whom she is very fond, one feels that something more has come into her life than is usually vouchsafed, even to our finer types of women.

Mrs. Dick was born in Scotland, spent a part of her girlhood in South Africa, later returned to Scotland, where she married. Her home, until coming to Point Loma, has been in Dublin, where she was most active in the work of the Lodge and particularly of the Lotus Group, of which she was superintendent. Her husband is known to all members as editor of *The International Theosophist*. "There is no comparison possible between the life at Point Loma and the life of the world," she says. "No energy, no effort is wasted here; everything fits into a general plan, and day by day you become more conscious of the noble purpose that runs like a thread through every act and every intent. Here you can trust others and through that gain more confidence in yourself."

"What work most interests you, Mrs. Dick?" I asked; and she replied, "The work for the children, because it seems to me the most far-reaching in its results and the most fundamental. By every act those of us who are helping the children are nourishing the living seeds which will unfold later and blossom in the service of humanity."

"But what is Raja Yoga?" I asked. "I can best answer that by quoting Mrs. Tingley's own definition," was her reply. "'Raja Yoga is the perfect balance of all the faculties, physical, mental and moral, and true comradeship is the condition of its fulfillment.' By means of the Raja Yoga method, as I have observed it, much suffering, both mental and physical, will be saved, because the children so early get a knowledge of their own natures. Their real intelligence becomes awakened, they soon become able to discriminate between right and wrong. In a most wonderful fashion and at a very early age they learn lessons that under other methods of education have to be learned many years later and at the cost of disappointment and pain."

"Raja Yoga solves the problem of child-training, in my opinion, because it teaches the child to be self-reliant and independent; it makes him brave enough to face and conquer his own lower tendencies and able to recognize and be guided by the higher. At an age when most children are being pampered and protected to their detriment by unwise parents and thoughtless nurse-maids, these children are helpful, industrious and happy, veritable little warriors the day through."

"How did you first become interested in Theosophy?"

"I became interested in Theosophy because it answered my questions. I had long been wishing that I could discover just one reason for human existence, for the orthodox conception of God had always been a puzzle to me and somehow I could not harmonize God's unlimited power and love with the suffering and bitterness of the world. There was a time when I actually thought I believed in nothing, until one day I heard of Theosophy. I began to read and I began to apply the precepts. It was like passing out of a dark cloud into the sunlight, and I can assure you the sun is still shining."

Mrs. Dick is a writer of unusual ability, and many a student has found inspiration and real help in the words of "A. P. D." STUDENT

It is interesting to note that in Washington alone there are employed in the various Government departments nearly eight thousand women.

Dr. Esther Salakian

FEW women would have the courage to accomplish what has been accomplished by a young Armenian girl, Esther Salakian, who has recently taken a Doctor's degree in the Southern Homeopathic Medical College in Baltimore.

Born in Armenia, she attended the Aintab College in Turkey where she graduated, then studied in Constantinople, and finally, after the Armenian massacres, came to America. She desired to study medicine, but her total assets covered little more than the clothes she wore. She took up the work of a trained nurse at the Memorial Hospital in Brooklyn, where she graduated. Then, on money earned by her work in this profession, she finally took her medical course, graduating at the head of her class, and the only woman in it. She then passed the examinations of the Maryland State Board of Medicine and from there went to New York where she passed the Civil Service examination as Food Inspector. She has recently become a naturalized American citizen. E. W. H.

MRS. ANNIE P. DICK

SUNRISE

by A. P. D.

THE birds sang.
The trees whispered greeting!
The petals of the sleeping flowers awoke, and
shyly uncurled the welcome from their
golden hearts—all nature thrilled and was
glad!

Only man slumbered.
In the universal choir his heart was mute; he had
forgotten his part.

actually two women motormen employed on street railroads. Twenty-one are stevedores and a much larger number work in brick and stone. Coming to the less laborious occupations we find nearly 8000 women physicians, more than 1000 lawyers and more than 3000 women clergymen; and so it goes, with 113 women at the end of the list who make their living by chopping wood!

PITTSFIELD was the first town in western Massachusetts to be incorporated and now some of its citizens are erecting a monument to one Sarah Deming, its pioneer woman settler. It was in 1745 that the first clearing for Pittsfield was made, and for many years the danger was so great from Indian invasions that settlers were slow in encouraging others to bring their wives and families. Sarah Deming came with her husband from Connecticut, riding the entire distance on the pillion of his saddle.

THE musical critic, Ebel, writes of Mlle. Chaminade: "There is always a conspicuous absence of the commonplace in her compositions. At the present time there are very few male composers France can boast of whose works compare with those of Chaminade's, and not one whose compositions are so widely known and played as hers."

More Light on the Prehistoric Civilizations of Mexico

MORE and more is coming to light respecting the ancient history—antedating civilizations of America. And particularly that field lying over southern Mexico, Honduras and Yucatan. The temples and cities of this region, whose riches in such remains are as yet but partially explored, are filled with inscriptions and hieroglyphics—enough, perhaps, to give us a full view of the life and civilization of that mysterious group of peoples.

There was much more material, books belonging to the priesthoods, books whose “pages were covered with numerals, glyphs, and explanatory drawings beautifully executed in colors.” But when the Spaniards first landed, their priests so completely hunted out and destroyed these infinitely valuable relics, that of the whole number but three remain. These, however, have been photographed and published. And it is more than probable that beneath the temples, undiscovered by these pious vandals, are stores surpassing any yet found.

But no one can as yet read these books and stone inscriptions; and so the greater secrets of that past are yet concealed. The deciphering is, however, but a question of time. And then we may (according to H. P. Blavatsky, *shall*) have to recast our conceptions of ancient history.

Piedras Negras is the name given by the natives of Western Guatemala to the ruins of a newly-discovered city there. Over an area of about a mile and a quarter, surrounded by forest, upon the banks of the Usumacinta river, are scattered a number of pyramids upon each of which is a temple. In front of each pyramid is a closely hieroglyphed limestone column, sometimes more than one, up to ten. And in the plazas in front of the temples are great stone altars, also sculptured and raised on pillars.

Mr. Charles Willoughby, who writes on this subject in the *Scientific American*, remarks that this particular city was evidently the seat of a military civilization, and was thus distinguished from the more cultured and peaceful civilizations of Copan and Quirigua. **STUDENT**

Roman Antiquities—Capitalists Would Purchase

THE city of Rome has received two offers of considerable archeological interest although perhaps not equally disinterested. The first is from a group of capitalists who are willing to advance a sum of \$100,000 which is the estimated amount necessary to raise two Roman galleys from the bottom of Lake Nemi and to provide a suitable museum for their care and display. These galleys can be distinctly seen from the surface of the lake and the examination which has been made by divers is sufficient to show their interesting nature. A Roman galley was practically a floating mansion and as these were probably destroyed without warning, their contents and fittings would furnish an almost unparalleled illustration of the luxury of ancient Rome.

The second offer is from Mr. Andrew Carnegie who wishes to pay \$5,000,000 and all expenses of excavation in exchange for the ownership of an Egyptian obelisk, which is known to be buried near the church of San Luigi de Francesi close to the Piazza Navona. This obelisk was accidentally discovered during some drainage operations, but from lack of funds it was not recovered. Mr. Carnegie has offered very high compensation for permission to export the obelisk. The excavation is of course to be highly desired, but it remains to be seen whether the Italian government will allow such a treasure to pass from out of their custody. **X.**

Italy's Archeological Loss—Greek Chariot in New York

SOME reference has already been made to the ancient Greek chariot recently found near Rome, and which is now on view in a New York museum. The removal of this chariot from Italy seemed at the time to be contrary to the new Italian law, which forbids the exportation of works of art and objects of archeological interest. It seems that a question has been asked in the Italian Parliament as to the way in which the law was evaded in this particular instance. The speaker pointed out that the chariot was of the utmost value, that it was built six or seven hundred years before Christ, and that the loss to Italian archeology was incalculable. It had been bought by a wealthy American for \$40,000. In reply to the question, the Italian Under-Secretary of Public Instruction said that the transaction was due to the negligence of an inspector, who had been dismissed for his fault, and that steps had been taken to prevent the recurrence of such an incident.

If the facts have been correctly reported, it would be a graceful act on the part of the present proprietors of this chariot to offer to return it to the Italian Government for the amount originally paid, in addition to the expenses of removal. The purchaser no doubt acted in good faith, but if the transaction was contrary to the Italian law, a distinct wrong has been done and it should be remedied. America seems to be so entirely indifferent to her own archeological treasures that it is perhaps not easy to understand the almost sacred estimation in which these links with the great past are held by other nations. **STUDENT**

Archeology in Missouri

A VERY interesting cave has been discovered in southwestern Missouri and although it is not yet fully explored its contents promise to be of unusual importance. The cave is seventy feet long, and at the bottom is a layer of ashes and debris three feet deep. This is now being

excavated and not only have very numerous animal bones been found but also four complete human skeletons. In close proximity to these skeletons various flint implements were unearthed, including spear heads, drills and knives. Professor Gould of the University of Oklahoma has examined the cave, and while he has not yet had time to make a sufficient investigation, he believes the discovery to be of the highest importance as bearing upon the earliest human life in America. The appearance of huge stalactites above the ashes would however indicate a very great antiquity. The cave itself is in the solid rock and there are many indications that its human occupation must have extended over a very long period. **J.**

Petrified Forests of Arizona to be Preserved

THERE seems at last to be some prospect that the remains of the petrified forests of Arizona will be preserved. After many years of effort the House Committee on Public Lands has recommended that the whole district be made a national reservation. This is, however, only a recommendation, and we have still to wait for the bill to become law. It is unfortunately not in the power of either committee or Congress to restore the damage which has already been done by vandal tourists, or by those who make a trade out of the plunder of antiquities which ought to be the pride and the care of the whole nation. May we hope that the House Committee on Public Lands will now turn their benevolent attention in other directions and extend their protection to the Cliff Dwellings, Indian mounds and other relics of by-gone days. **X.**

Nature's Message of
Peace and Promise

Nature said
This child I to myself will take,
She shall be mine.
And with me
The girl, in rock and plain . . . in glade
and bower
Shall feel an Over-seeing Power.
And hers shall be the breathing balm,
And hers the silence and the calm
Of Mute, Insaensate things.—Wordsworth

EVERY one to some extent shares the poet's rapture and feels with him the influence of Nature's "Mute, Insaensate things." And were there no barrier at all between the human heart and the heart of Nature how enthralling would be her "Over-seeing Power," and the message which she ever proclaims through a thousand channels would sing its gladness in still clearer tones into the soul, bringing new courage and steadfastness to meet the foe in the eternal conflict of the forces of light and darkness—where to endure to the end, piercing by faith the clouds of doubt, despair and apathy would be well-nigh impossible were it not for Nature's object lesson, her panorama of beauty and harmony which she spreads out before our eyes—a ceaseless Promise and Assurance, Harmony on one plane being an eternal proof of its attainment on all. But until harmony is attained, the keynote of man's life must of necessity be effort—struggle.

The Voice of the Soul sings forth wherever the harmony of Beauty is triumphant—whether in nature or art.

And although the garments with which man as well as nature, love to clothe her are infinite—although the Forms through which she speaks, are without number, yet the Soul is one, and the joyful message is one.

And whether she speaks through a Beethoven symphony, a poppy, the rising sun, a Shakespeare drama, a Venus of Milo, a landscape of Leander, a Gothic cathedral, an acacia tree, a boat sailing on the ocean, a shell of the sea-shore, the beauty of her radiant spirit ever transcends even the matchless beauty of her form.

And her divine message reaches to all—whether it be the old negro, who instead of bread buys a bunch of purple violets, or the poet who sings,

My heart leaps up when I behold
A Rainbow in the sky!—Wordsworth

Or he who knows the potent spell produced by the silent poetry of noble architecture, finding in the Proportion and Harmony of those perfect lines and curves a more convincing proof of the existence of divine law than in all the sermons.

The harmony of beauty then is the soul's own language, and is the one employed by her to express her secrets—her mysteries—her glories—for which no words exist. And her message penetrates to the inmost recesses of the soul with a promise of the fulfilment of its utmost need. STUDENT

A PICNIC PARTY IN WITCH CREEK CANYON, SAN DIEGO COUNTY

Can Bird Flight Be Mechanically Explained?

IN watching the broad-winged soaring birds in their slow gliding on motionless wings we are apt to forget that in this familiar act is manifested a power of reversing weight partly, or wholly. Of course it is true that aeroplanes will support weight if they have sufficient velocity. But any soaring bird will float along, even on a quiet day with no sustaining headwind, as slowly, easily and smoothly as though on wires.

Try the experiment; take a bird-shaped kite two feet across and load it with the weight of a bird that size, say three or four pounds, then try whether it will float when you draw it with all your speed, or even with the speed of a horse. It will not, for the very good reason that that amount of wing-surface multiplied by that speed is not equal to that weight. Yet the birds themselves, even when they are carrying a pound or so of game, can go as slowly as a man's walk with apparent ease and self-control.

The writer in the *Saturday Evening Post* who advanced this and other ideas of a similar nature had but one theory to offer, viz.; that birds have the power of reversing the force of gravity, and rising, instead of sinking, by their own weight. In confirma-

tion he points to certain aquatic birds which have the power of increasing their own weight nearly *three fold* for the purpose of sinking in water.

Since the facts are pointed out, we all recognize them as being very familiar; we have noticed them daily; those of us who are not shut up in cities. But we never thought of them as marvels simply because they were so familiar. Possibly some of the swift-winged species do derive some support from the impact of their wings upon the air, but the closest students of bird flight appear to be very strongly of opinion that the wings are for the double purpose of generating or gathering the sustaining force; as a dynamo gathers electricity; and to act as rudders. Some operate by tension, like a battery, others by motion like a dynamo, hence the difference between the fliers and the soarers. These facts and questions are brought forward by men of such authority in the matter that they cannot be laughed at; therefore they are to be explained—if possible. A. R.

LAST May it became known that four black-winged pratincoles, a very rare bird, had been seen in England. Members of the savage human species known as "collectors" have of course been on the alert ever since and the last of the four has just been shot at St. Leonards. There seems small chance for the survival of any rare animal nowadays, although a great many of the lives thus brutally taken are of far greater value to the community than those of their human enemies.

Universal Brotherhood Organization

Central Office Point Loma California

THE Sunday night audience at the Isis Theatre listened attentively to two admirable addresses by Mrs. Grace G. Bohn on Goethe's *Faust*, and Mr. J. H. Fussell on "Cycles of Opportunity." A large part of Mrs. Bohn's paper was occupied by a most lucid sketch of the plot of *Faust* interspersed with such explanatory

LOMA-LAND STUDENTS AT ISIS THEATRE

Mrs. Grace G. Bohn Describes
"Goethe's Faust"—Mr. J. H. Fussell on "Cycles of Opportunity"

Reprinted from the San Diego News

comments as must have presented this drama in an entirely new and fascinating light even to those most familiar with it. Introducing her subject Mrs. Bohn said:

"Taking a general survey of the great mass of literature that has been produced, of all the great pictures that have been painted, of the songs that have been sung, even of the deeds that men have done for humanity's sake, one sees that above the general level a few rise, high and shining like lights over the pathway of men. A few are deathless of their own right. Why is this so? Why do a few persist through the ages, never to be forgotten, a few great pictures, a few great dramas, a few heroic deeds? I think it is because, while the many picture the ordinary, the common, the passionate life of man, the few picture the life and struggles of the soul itself. Such is the mystery drama of *Faust*."

"And when we take a general survey of all the great souls who have longed to help humanity, who have longed to bring unto humanity something of the message that has found its way into their own hearts, we find that there are only a few, after all, whose words come down to us, positive and strong and true; only a few whose words are mirrors, as it were, reflecting the image of the sun itself. Why? Because the many have worked for ambition's sake, or for gain, or for the novelty of it, while only the few have given their best for humanity's sake. And as those only can know the doctrine who live the life, it naturally follows that only the very few have the power to interpret these great messages. A few, a very few, have understood. The many have passed by on the other side with contempt, perhaps with ridicule."

"When H. P. Blavatsky brought Theosophy to the western world, it was as if she came into a dark room bringing the light, the light that has made of life itself something different. And part of its purpose has been to enable us to interpret the great deeds, the great messages of the past."

"We need the masterpieces of our art and of our literature. Katherine Tingley would give us more. She has made it a part of her life work to revive and re-present the sacred dramas of the ancients, and Theosophy, as she teaches us, will make it possible for greater dramas to be written than the world has ever known, because those who are to come will not have to struggle on as Goethe did, and Æschylus and Shakespeare, not finding the light, perhaps, until they were old men. They will find it as children, and then the real Drama will be written."

"It is because *Faust* is a mystery drama, picturing the soul's own journey and experience that so few have understood it, so few indeed have ever read it, this drama that was sixty years a-building. What is *Faust*? Briefly, it is Goethe's picture of the soul's long search for its ideal, the Eternal Womanly."

In conclusion, Mrs. Bohn showed that the picture given by Goethe is the prophecy of what has actually transpired in our midst, the reestablishment of the old and sacred relationship between the leader and the follower, between the teacher and

the student, a relationship which has been lost for centuries. We see Faust standing at last a free man in the midst of a city of friends, in the nucleus of a free humanity, and he is satisfied. He had not forgotten his ideal of the Eternal Womanly, but he had given it up for the sake of humanity. Mephistopheles was cheated of his bargain, for Faust as he was

no longer exists, but is transmuted. And what is his reward? Waiting for him is Margaret, the Eternal Womanly of his ideal, and she begs to be allowed to take one step downward and backward for the sake of helping him, but she hears the words, "No, go higher still; thy influence followeth him. On to the very heights, he'll follow thee." And so Faust is lifted till they stand side by side and the mystic union is complete.

The scope of Mr. Fussell's paper was outlined by the opening quotation, "There is a tide in the affairs of men, which, taken at the flood, leads on to Fortune; neglected, and all their life is bound in shallows and in misery." He showed in a manner admirably convincing that the cycles with which we are most familiar, those of the heavenly bodies, of the tides, of the movements of the earth, the progress of the seasons, the periodic phenomena of health and sickness, are all visible indices of the unseen, but corresponding movements of the real life of man and the evolution of the Soul. If we think about the matter at all, we are more apt perhaps to notice the recurrence of dark days than of bright ones, but that times and seasons do recur lies within the experience of all, that there are days when our work is lighter and all goes smoothly, and other days when the work is heavy and everything seems at cross purposes. We all know that this is so, but is it chance, or is there some explanation, is there some order or law underlying this recurrence? Must we not believe that all our acts, all phases of human life, of thought and feeling, are under the same law, the law of ebb and flow, the rhythmic pulsation of life throughout the universe. The familiar cycles which we see around us are not matters of chance, it is not chance which sends every ninth wave of the incoming tide further up the shore than those that came before it. In our lives we should find a similar wave-like rise and fall, and that the great events of life befall at recurring periods of years. In the life of nations, we see that the concluding quarter of each century is a period of transition, of beginnings and of great changes. If we can but learn something of the cyclic law governing human endeavor, how much might we not accomplish! During the last twenty-five years the practical and fraternal teachings of Theosophy have taken deep root in the thought of the world. It was a new message that H. P. Blavatsky brought, that William O. Judge proclaimed, that Katherine Tingley is exemplifying, just as the commandment of the Christ was new—"that ye love one another." This was the opportunity of today which in the ebb and flow of life has come to man, to the individual and to the race. Katherine Tingley's work upon the Hill at Point Loma was a question and a challenge to each whether he would respond to the urge of his soul and, through Brotherhood, help build the walls of the new City of Light that shall become a beacon fire to the world, and she calls to each, "Who of you has the strength, the will, to go forward? To them I call, and upon them is already the flush, and the Light of the Victory beyond conception."

JAPAN is a nation of ladies and gentlemen. While their moral standing is not low, the good manners of all classes in Japan is proverbial, and they are said to be "the healthiest, the strongest and the happiest people in the whole world." They know that "life is joy." The "Land of the Rising Sun" is the paradise of children. The great cities—and they have many—are not the breeding places of miserable, unhealthy and underfed mockeries of humanity such as we see by the hundred thousand in the so-called civilized western lands. There is practically no rowdyism. The Japanese have acquired the secret of healthy, intelligent and artistic city life. Their system of physical training called "Jiu-Jitsu" explains a large part of their health and cheerfulness under all circumstances. It consists of simplicity in diet, scientifically designed exercise in the open air without apparatus, and strict discipline of temper during the wrestling and other contests. Rice, eggs, fish, vegetables and fruit supply the bodily needs of the nation; the Japanese live mainly in the open air; they are not overburdened with artificial wants, so their homes and surroundings are artistic and in harmony with nature. The poorest laborer bathes at least once daily.

If we look around the world and compare the customs of different countries it is evident that the Japanese civilization ranks high in spite of some imperfections. The

What Is "Jiu Jitsu"?

A Short Lodge Paper

Jiu-Jitsu system in many ways resembles the Raja Yoga training established by Katherine Tingley at Point Loma, California, but the latter is more complete and searches more deeply into the soul. The physical discipline of Raja Yoga, like the Japanese exercise, is designed to benefit the whole nature as well as the body. Katherine Tingley never wearies in teaching this to her students and the children at Point Loma. Here, and in the Raja Yoga schools throughout the world, we find the greatest importance attached to the building and care of a sound and healthy body as a fitting vehicle for the mind and soul.

The growth of self-restraint and well-balanced character is immensely simplified by the healthful and graceful bodily exercises advised by Katherine Tingley, as the students and children at Point Loma realize daily. The strong effect physical soundness has upon mental and spiritual development is too frequently overlooked, but in Loma-land the balance is kept so that intellectual, artistic, practical and athletic activities are all found in their proper proportions.

Inasmuch as the Jiu Jitsu system is a long step in the direction of Raja Yoga, and has done so much to bring about a higher standard of living among so many of the Japanese people, we wish it well. Educationalists and reformers who are battling with the terrible slum problem might do worse than study it with attention.

HEREDIA

From a poem written in honor of the poet-patriot of Cuba, by SEÑOR P. SANTACILIA

HEREDIA fué el Genio! El Genio inspirado
que trajo del cielo la santa misión
de alzar con su aliento al pueblo postrado;
y el pueblo resuelto, valiente y osado,
en rudos combates venció la opresión.

Hoy rige la patria su propio destino,
hoy nadie perturba su quieto existir,
y puede si quiere per ancho camino
con paso seguro marchando contino.
llegar á la cumbre de un gran porvenir.

Cuba's Poet Honored --- Frontispiece

FROM *El Figaro*, one of the leading periodicals of Havana, Cuba, we translate the following extracts, part of a report of the celebration in Santiago de Cuba of the one-hundredth anniversary of the birth of the poet Heredia, which is the subject of this week's frontispiece:

On December 31st last, this date being the one-hundredth anniversary of the birth of the eminent poet José María de Heredia y Heredia, the cultured and progressive city of Santiago de Cuba celebrated the anniversary with a great public festival. The Heredia Commission, which for some years has assumed the care of the house in which the poet was born—an ancient edifice, so typical of the structures of the past century—in union with various representatives and the entire populace, gave an enthusiastic demonstration, delivering this house to the City Council, not merely as another property to belong to the municipality, but that it may be preserved and kept in repair, and that there may be established therein a School of Fine Arts. The official ceremonies, therefore, took place in the Palace before the full consistory, the military chiefs in full uniform, many distinguished persons, and the general public. After addresses by Virginio Porro, President of the Heredia Commission, and by the enthusiastic Mayor, Señor Emilio Bacardi, the inaugurator of the festival, the ceremonies were continued in the street which bears the name of the poet, and in the house in which he was born. As it was impossible for the house to contain so many people, Señor Bacardi proposed that those who were to read poems should stand in the open doorway facing the immense crowd there congregated. All of the poems, particularly the poem by the French Academician, M. José María de Heredia, a cousin of the great Cuban bard, drew forth prolonged and enthusiastic applause. Afterwards, the children's chorus, accompanied by the Juvenile Band of Santiago de Cuba, sang the "Hymn to Heredia" ("Himno á Heredia"), the words of which were composed by Señor Desiderio Fajardo Ortiz and the music by Señor Ramon Figueroa.

At the close of the reading of the poems and after a repetition of the Hymn, the mayor distributed hundreds of numbers of the special edition of the weekly local paper, *Cuba Ilustrada*, and from morning until one o'clock at night, the house of Heredia was visited by the entire populace of Santiago de Cuba. With an almost religious deference they beheld the autographs and writings of the poet, framed, upon the walls, the pictures of the immortal poet-singer and many symbolic records of the undying glory of this patriot whom they so love and honor. The soul of the festival, as we have said, was Señor Bacardi. All centered about him. It was he who inaugurated one of the most splendid and public festivals that any city ever gave in honor of a poet.

As students are aware, the Raja Yoga Academy, which is one of the Raja Yoga Schools established last year by Katherine Tingley, in Santiago de Cuba, is located in Heredia street, opposite the house of the poet. Heredia is honored by his people not so much for his genius, which was of the highest order, as for his patriotism and his services to "Cuba Libre." It was Heredia who first stirred the hearts and steeled the sinews of the Cuban people for their last great struggle. It was Heredia who first raised the question of Cuban independence, for which he was exiled and died in a foreign land. He was imprisoned and exiled by the enemies of Cuba, but his songs and his memory will live forever in Cuban hearts, as will the ideal to which he gave his life. It was most fitting, therefore, that the Raja Yoga Academy should assume part in the celebration, not alone because of its loyalty to those ideals for which Heredia lived and died, but because the very genius of Raja Yoga strives ever to establish those principles of freedom of which Heredia has become the Cuban exponent.

As shown in the photograph, the Academy was elaborately decorated for the occasion, the colors beloved in Cuba, the red, white and blue, streamed in festoons from pillar to pillar of the great school, and wreaths, garlands and masses of greenery completed the decorations. It was a day

not soon to be forgotten by either teachers or pupils in the Raja Yoga Academy in Cuba, and doubtless helped them to realize more deeply than ever before the need of the higher patriotism. STUDENT

The Good, the Beautiful, the True

Read before Universal Brotherhood Lodge No. 1, Australia

PONDER on these words and a great longing will fill your heart that this great triad might reign on earth again speedily. For in the Golden Age, which age is by no means a myth, men were good and all nature beautiful, and truth reigned supreme. What then altered all this? Selfishness, ambition, lust, and of these selfishness is the greatest—the one great crime, for it is the root of all crimes. Endowed with free-will, the children of earth turned to listen to the cunning and deceitful allurements of the foes of mankind, and in time quite forgot their divine origin, chose evil instead of goodness, beauty and truth. But in spite of the power of the dark side, the compassionate helpers of humanity have from time to time come with help and prevented destruction. They keep alive in the heart of man the divine fire, and it breaks forth in joy, in song, in art.

The good—the beautiful—the true! Good music is beautiful music and is also true music—true harmony and the hearing of it should and does inspire the hearers, if only for the short time of listening, with beautiful joy and good resolutions, to be true to themselves and others. These thoughts pass away, we know, amid the hurry-scurry of the world, but those who experience them feel joy and hope, for the Soul responds to the touch of these three qualities. A beautiful sunset has a wonderful effect upon us of harmony—joy and love towards others—it sends beautiful light upon all around—the trees throw up wonderful lights and shades, and the Soul stirs within and tells us we are not here today and gone tomorrow, but that we shall return again to learn more.

The Universal Brotherhood Organization teaches the methods by which the good, the beautiful, the true, may be known and taught and given out to humanity. The Universal Brotherhood Organization is the vehicle through which truth, light and liberation is being brought, and will be brought, to discouraged humanity—these three corresponding to the good, the beautiful, the true. Humanity is now in sore distress; so long has the Soul-light been hidden, so long has man been deceived, that his Divine origin has been entirely forgotten, and at this time, when a song of joy is sounded through the earth, a call to arms against the Dark Powers that have held sway so long, man understands it not clearly, but feels the tumult, the unrest, the strife; the old creeds satisfy him not, and he knows not where to turn for help—but the light is shining and the Teacher is working—oh, so hard—preparing for the children of earth when they shall turn and seek the light from the only quarter in which it never fails, never goes out. Then the deceivers, the wily ones, will seek to hide their heads and their power will be gone; but not till men work in unison for their destruction. Brotherhood must be realized—being a fact in nature, it must be made so in the lives of men; and it must be Universal. When all recognize that and work together, the evil ones will scatter of themselves. Together we must work—every living soul around, every living soul answering to the call, "Awaken, children of earth!" the New Day has dawned, the Good, the Beautiful, the True, exist as always, and not only for a few, but for all—for all creatures, for all that lives. And our hearts must turn in gratitude and love to our Elder Brothers, who are always helping us, and to their messengers in this time: Helena Petrovna Blavatsky, who gave us the teaching, the good seed sown, the good news given—William Q. Judge, whose beautiful life of suffering without murmur kept it safely until he handed it on to our beloved present Teacher, Katherine Tingley, who is demonstrating, visibly and practically, that it is True—the True life! E. H.

Prominent Visitors at Point Loma

AMONG recent visitors to Point Loma were Mrs. Lucy L. Flower, of Chicago, accompanied by Miss Julia Lathrop, Mrs. Madeline W. Sikes, Mrs. William Ferguson and Mrs. W. H. Bailhache. The ladies came as Mrs. Flower's guests, and after luncheon at the Homestead visited the Raja Yoga School, the group homes of the children, and many other departments of the Universal Brotherhood activities. They were extended many courtesies not generally extended to visitors in the way of opportunities to familiarize themselves thoroughly with the work here. Mrs. Flower is one of the most prominent women in Chicago, and has long been known for her efforts on philanthropic lines, and for the respect in which her opinions on all such matters are held by those most familiar with the city's difficulties and needs. Miss Lathrop is associated with Miss Jane Addams of the Hull House community of that city. For eight years she was a member of the State Board of Charities of Illinois, the only woman ever elected on the Board. Mrs. Sikes is well known for her interest in the question of neglected children, and was prominent in securing the passage of the child labor law in Illinois. All expressed themselves as more than delighted with the work. They were enthusiastic, and, in common with all visitors, particularly those who investigate the work thoroughly, they expressed themselves as being completely mystified by the efforts made in certain quarters to misrepresent this work. OBSERVER

I HAD been shopping all day with friends. We were in foggy London. After our purchases had been made, my cousin suddenly remembered that she had an errand which would take her to the East End, that wretched part of the city in which men, women and little children are huddled together in droves, dying from the heat and foul air in summer, and perishing from cold and starvation in winter. It has been the laboratory, for some time, of social reformers, but it is still the East End, and the miserable sights that one may see there daily, are a sad commentary upon what we are pleased to call our civilization.

It was a bleak, cold day in winter. The snow was falling, and when we reached the East End we had left behind us nearly everything that spoke of luxury or even comfort. We saw plenty of food, but it was in the shop-windows; plenty of warm clothing, but it was displayed before the eyes of the shivering passers-by. Very few were warmly clad, and those who suffered most were the children.

My friend's errand took her to a hall, at the door of which I noticed a large crowd of children gathering rapidly. What a commotion! What a crowd! Girls, boys and babies dressed in every imaginable species of costume—small boys in big trousers and no coats at all, big boys whose bare elbows peeped through their worn sleeves, and whose wrists were bony and blue with the cold; tiny girls, with "mother's shawl" covering their rags. Many of them carried heavy babies, well bundled up, but ænemic, unhealthy, sluggish-brained. My heart ached to see their poor little starved faces, thin and blue with the cold. Not a rosy cheek, not a red pair of lips among all the faces turned so expectantly toward the door. "What's it all about?" I asked the nearest. A dozen interested voices answered me at once:

"'A'p'ny (half-penny) feeds, Miss."

"Ol' koker, Miss, an' breem-butter. Yer get it inside!"

"No, 't'aint butter; it's jam."

"An', teacher, mother says this time I can eat all mine ter meself, 'cos' my bruver picked up a ol' bun outside er shop yestiddy an' 'e eat it all hisself."

This from a small person who would have been eight years of age, judging by appearance, but who assured me, in response to my question, that she was really "turned 'leven," and she added, pathetically, "'E was orful 'ungry, though."

"Come, Billy, show the lady wot you got for a 'a'p'ny." The boy came up, a broad smile on his pathetic little face, a huge slice of bread and jam in his hand. "O, bread 'n' jam and a big mug o' koker. Are you goin' in, Miss?" I had little heart for "koker" or "bread 'n' jam" just then. The children were invited into the hall in groups, and, as each group came out with "bread 'n' jam" in grimy little hands, all conversation stopped and a wild scrimmage took place; the next group formed, the eager children went in, and the door was once more closed.

Night was coming on. It was growing colder, and the cold of London streets in winter pierces one through and through. It seemed to me that I would freeze, although I was warmly dressed.

How those little souls must have suffered from the cold, half-starved and in rags, as they were!

Once more the door was opened to let out the happy possessors of "bread 'n' jam," and, as the children began to elbow each other and push their way toward what seemed to them a Paradise of Plenty, the gentleman in charge held up his hand. "Children," he said, "I am sorry, but we have only enough left to serve six more." The sweet-faced little woman who stood beside him had tears in her eyes at the sight of the disappointed faces; and the effect upon the children—how can I describe it? I doubt if you or I would have acquiesced so bravely under the circumstances. Some of the children had had nothing to eat all day—for we all know what the East End is. All of them were underclothed, underfed and chilled to the bone.

After a moment of almost silence, there began among the more determined ones a desperate scramble to see who should be among the six.

An East End Hero

Big boys pushed smaller ones aside. Little girls tried to creep in under the feet of the others and the woman at the door looked

anxious. I began to realize for the first time what it must mean to be always hungry, always perishing with cold in winter, always having to fight for a bare living, and then, after standing for an hour in the chill of that London street, to be told that only six more could be fed!

The lucky six were passing through the door, when one of them, a boy of thirteen, his eyes big with hunger, caught sight of a little girl standing alone on the curbstone. She was homely and deformed, and held a tiny wooden crutch under her arm. She was tightly holding her precious "'a'p'ny" in her hand and staring blankly and heart-brokenly at the door of the hall. She could not believe it possible that all her beautiful anticipations had come to nothing. Could it be possible that she was to go away hungrier and colder and sadder than she had come? The boy looked fixedly at her for a moment, and then with a "Wait a minute, gov'ner," he ran down the steps, pushed through the crowd and picked the little girl up in his arms. She was small, perhaps half his size, and he easily ran with her up to the door. Putting her gently down on the step and handing her the little crutch, he said, "Go on, Polly; give the gentleman your 'a'p'ny." The man at the door looked surprised. "O, I say, let her come instead er me. She's hungrier, and she's such a little un, sir!" Then, with the air of those who whistle to keep up courage, he shouted, with an effort at bravado, to a newsboy near, "Come on, Jack!" and away they went together. Jack had finished his "bread 'n' jam 'n' koker" half an hour before, and he looked reflectively at his chum, but he said nothing. There was nothing to be said; and then, acts of heroism are not so uncommon in the East End as they were in the more fashionable quarters of London, where my friend lived.

I was touched by the incident and I inquired the name of the boy. "Harry Mullin," said the Superintendent of the little Mission in response to my inquiry. "No, he has no home and no parents; never had any, he says. He is a bootblack, I believe. Comes in here Sundays. I have often wished that I could do something for him, but what can we do with thousands and thousands calling upon us and so few who care in the least about this class of children? He has his weak points, too. He was in the police courts just last week for stealing a loaf of bread. He did not steal it for himself, Jack told me, but for an old man who lives in the shed near his alley and who was sick. There is something fine in that boy and he is worth saving. *But what can one do?*"

When I went home with my friend that night I carried the picture of homely, unkempt Harry Mullin with me. Something must be done for him and I would do it. Three or four days passed, then a week, and the problem was as far as ever from solution, for I could not bring the boy into the fashionable home of my friends, and I had few acquaintances in the city. So I waited and watched and pondered.

One day the gardener told me that he needed a boy to help him, and that afternoon I went back to the East End, to the same little hall around which the children had crowded that chill afternoon for "bread 'n' jam 'n' koker." The sweet-faced woman invited me in. "Harry Mullin!" she

said in some surprise. "Let me see. He was arrested yesterday for being in a street fight and has been sent up for a number of months. But do not be troubled. You could not have done anything with him. There *was* something heroic in his nature—one cannot but admit it—but these boys all come to the same end, and to stem this awful tide seems to me at times impossible. Yes," she added, "it is all true. There are thousands today who drive in carriages, who own magnificent homes and rent pews in fashionable churches, who are admired and flattered, if not respected, who are yet destitute of the spark of heroism that that street gamin possessed; who are absolutely incapable of the self-sacrifice that we witnessed—I well remember it—on that cold day when you stood in the street outside our door."

This is the picture. Will it forever be all shadow? STUDENT

WHEN A BOY STARVES

by BROWNING (*Fra Lippo Lippi*)

BUT, mind you, when a boy starves in the streets
Eight years together, as my fortune was,
Watching folks' faces to know who will fling
The bit of half-stripped grape-bunch he desires,
And who will curse and kick him for his pains—
Which gentleman processional and fine,
Holding a candle to the Sacrament,
Will wink and let him lift a plate and catch
The droppings of the wax to sell again,
Or holla for the Eighth and have him whipped—
How say I?—say, which dog bites, which lets drop
His bone from the heap of offal in the street—
Why, soul and scane of him grow sharp alike.

The Trend of Twentieth Century Science

Health Depends on Digestion and Digestion on Mastication

IT was doubtless hard upon certain cats in the Yale laboratory that they were not allowed to carry on their digestion in private. But the results of the inconvenience inflicted upon them point so excellent a moral that the experimenters may take leave to forgive themselves. The X-rays were used, and the shadow of the cats' digestive apparatus at work upon a meal was thrown upon a screen. Of course they had to be held still during this process. This they did not like; but after a few minutes they became reconciled, submitted to be stroked, and in due time some of them purred. The screen showed that during the time they were irritated, digestion stopped; that it was gradually resumed as they became calm; but could at any time be suspended again by making them angry again. These experiments form part of the matter of an important book on nutrition just published; the author, Horace Fletcher, draws the obvious moral.

We wonder what tale the X-ray screen would tell in the case of the average city man's digestion of his lunch? Eaten in a crowded room, full of the thought-atmosphere of men as preoccupied and worried as himself; his mind intent on the cares of his business, perhaps anxiously planning to outreach some one, perhaps furious with some one who has made a skillfuller or more unscrupulous move; and eaten in half the proper time—what chance to do good work has that complex apparatus upon whose good working the owner's health and length of days nevertheless depend?

Mr. Fletcher's experiments were not on cats alone or chiefly, but throughout many years on himself. And they find corroboration in some tests made at Yale under the auspices of the United States Army upon about twenty-five men. The results of the experiments, compressed into the shortest statements, are these:

Nearly all persons eat about three times too much food, in the honest belief and feeling that they require it. Conscious gluttons often reach an amount of ten times their need.

The reason for the habitually eaten excesses of temperate people is greatly deficient mastication. We only utilize one-third of that which is valuable in our food. The digestive juices cannot get at the remaining two-thirds. Gladstone's celebrated "thirty-two bites" to each mouthful must be greatly exceeded to get a perfect result. Then every cell and particle is crushed, opened, exposed to the digestive solvents and absorbed. Practically nothing remains which is capable of fermentation and putrefaction. One of the chief causes of all diseases is therefore done away with. The brain cells are no longer steadily poisoned with the toxins resulting from intestinal putrefaction; consciousness is clear and buoyant, the fund of energy always copious, and many times the ordinary amount of work can be done without fatigue. Moreover, five hours of sleep now suffice for recuperation.

"Most human ills," says Mr. Fletcher, "come from forcing appetite, anticipating appetite. . . . No one was ever injured by intelligently and calmly waiting for an appetite. . . . It will come as soon as body repairs have been effected by natural agencies and more material is required. . . . Wait for an earned appetite if you have to wait till noon." Then, eating rightly, we can provide our tireless body-builders with perfect bricks. In the author's words:

Mouth treatment of food, which permits, aids and includes insalivation (mixing with saliva), and which is both actively digestive in its functions and preparatory to final digestion, is the only actual mechanical responsibility we have in our nutrition, and, in connection with favorable mouth conditions, insures perfect digestion.

STUDENT

SIR OLIVER LODGE is asking for information as to the habits of the glowworm. His attention has been drawn to a statement recently made by a very careful observer, who avers that during a thunderstorm a glowworm, which was under his observation, extinguished its light for a second or a second and a-half before each flash, relighting its tiny lamp at an equal interval after the flash. Sir Oliver Lodge asks if this phenomenon has been noticed elsewhere.

A Substitute Discovered for Noxious Lead Ingredients

THE terrible sufferings caused by lead-poisoning among painters and potters are well-known, and the fact that these wrongs are allowed to go on in full knowledge of the public is an awful commentary on the want of heart that is prevalent in modern communities. Though there is no lack of amiable benevolence of the useless kind, yet when the slightest effort or the slightest pecuniary sacrifice is called for, there is not enough active benevolence to prevent greedy manufacturers from sacrificing human lives to earn a trifling increase of profit.

It speaks well therefore for France that she has inaugurated the New Year by passing a statute absolutely forbidding under heavy penalties the use of white lead in any form for manufacturing. Other countries prefer to wait until they think they can see their way to appeasing their consciences without disturbing the well-being of their pockets. But this is better than nothing, and will at all events prevent much suffering among operatives. A means of manufacturing zinc white at a price that will compare favorably with that of white lead is reported.

The inventors claim to make it direct from the ore, instead of first making zinc from the ore and then oxidizing the zinc. The heat necessary to reduce the ore is produced by the chemical reaction that takes place among the materials used, and so fuel is saved.

The inventors assert that they can make it the interest of paint makers to use zinc oxide, which is finer in quality, and more durable than the lead; and that the potteries will find it better also.

The Physical Effects of Thoughts and Emotions

PROFESSOR ELMER GATES, whose extensive investigations are attracting considerable attention, has recently said:

It need not surprise any one that the emotions of sadness and pain and grief affect the bodily secretions and excretions, because everyone must have observed that, during these emotions, the respiration goes on at a slower rate, the circulation is retarded, digestion is impaired, the cheeks become pale, the eyes grow lusterless, etc.

The learned professor gives credit for a greater power of observation than is usually possessed. We fear that very few people have any adequate conception whatever of the physical effect of mental states. If this were not so we should not see so much feverish anxiety upon the subject of germs and microbes on the part of those very people who are absolutely indifferent to the infinitely more fatal thoughts which they constantly harbor. A large part of the scientific world seems to divide its time between the detection and identification of microbes and the various ways in which these entertaining little animals may be killed. If Professor Gates will continue his researches he may be able to persuade the community that there are very few disease germs which can flourish in a body fortified by right thinking. A good thought is an anti-toxin more potent than any serum yet discovered. What a healthy and happy world it would be if we had actually observed what the professor supposes us to have observed?

STUDENT

Science Now Accepts the Light and Color Ray Cures

THE light cure for disease is destined to take a prominent place in modern medicine, but we need anticipate no apology to its pioneers for the obloquy and contempt which was their punishment for daring to project their minds in advance of their times. The experiments of Dr. Finsen have contributed much to our knowledge of the curative effect of light. Placing earth-worms in a box, of which one-half was covered with red glass and the other half with blue, he found that the worms sought refuge under the red glass, being obviously irritated by the blue light. A chameleon placed midway between the two colors turned black under the blue ray, while the portion under the red remained white. In this connection it is interesting to remember that so long ago as the Sixteenth century an English physician recommended that small-pox patients be placed in beds of which the hangings and curtains were red in color, this having the effect of relieving the irritation of the skin.

Here and There Throughout the World

A GLIMPSE OF AN IRISH PEASANT'S COTTAGE

Education & Honesty in Denmark

THE Old World seems to be not so entirely played out as some people like to suppose, provided we apply some better test than the capacity for money-making. Denmark, for instance, claims that there is no one within her boundaries who cannot read and write. The Canton band in Switzerland contains no paupers whatever, while from Finland comes the statement that the moral tone of the country is so high that theft is practically unknown, and that money placed in a hole by the roadside is as safe against thieves as it would be in a bank. But there are, of course, some enterprising people in every rank of life who think that integrity is a sign of decadence, and that progress means nothing more than legalized depredation.

Peacemakers for England & America

THE United States Ambassador to England has made a suggestion for the promotion of international peace, which is at least thought-creating. He proposes an interchange of children between America and England in order that there may be a rising generation of peacemakers upon both sides of the Atlantic. The solution of this, as of so many other problems rests, of course, with the children, and even though Mr. Choate's suggestion be difficult of accomplishment we might, at any rate, do something along these lines by ceasing to instil hate into the minds of our children by the deliberate falsification of history.

The Historic Chateau of Malmaison

MR. OSIRIS, a wealthy and philanthropic Frenchman, has just purchased and presented to the French nation the historic chateau of Malmaison, once the residence of the Empress Josephine and the scene of her death. Malmaison is about twenty miles from Paris, and within its park a fierce struggle was waged between the French and the Germans. Napoleon himself stayed there for five days after the battle of Waterloo. It is well that so historic a building should pass into the custody of the French nation.

Methods of Education in China

ONE of the most admirable traits of the Chinese is their love of education. Students may study how and when they please, the Government confining its activity to the holding of examinations. The candidates are confined in cells each examination, of which there are three, occupying twenty-four hours. There are 1700 examination centers, and out of 20,000 candidates for the first degree only 145 are successful. Last year 57,000 students presented themselves for the three degrees.

The Awful Slaughter in Macedonia

A WRITER in *Pro Armenia* asks what has become of the thousands of Bulgarians who were expelled from Macedonia. He says that he himself saw his own wife, his daughter and his three sons murdered before his eyes, and he now wants to know where are the other refugees. He addresses his demand to the Great Powers, but he would do better to ask the wolves. The Great Powers are busy protecting the missionaries and advancing the cause of civilization. None the less, these Bulgarians, though dead, are yet speaking, and they say, "How long, O Lord, holy and true, dost thou not judge and avenge our blood on them that dwell in the earth?" But let them "rest yet for a little season."

Alliance Between Spain and Portugal

REGARDING the suggested alliance between Spain and Portugal, Max Nordau says:

I have an old and deep-seated liking for Spain, and a more recent but no less sincere regard for Portugal. I know the old prejudices which have made the one nation the foe of the other, but I am also aware that Spain and Portugal are kept apart by merely imaginary difficulties.

The mental divisions of the world are mainly due to an imagination, stimulated and inflamed by those whose ambition and whose "patriotism" run upon parallel lines. Ignorance has always peopled the outside world with monsters instead of men.

Vivisection in Switzerland

THE practice of human vivisection by means of hypnotism seems to be making some unholy progress in Switzerland. The results which have been secured by two experimenters are described as having "a remarkable artistic and scientific value." The victim was a woman, and we learn that 500 photographs of the poor creature have been secured while under the induced influence of joy, anger, fear, gluttony, greed, etc. And yet we are complacently told that the increase of insanity is one of the unsolved problems of the day. The subtle insanity of public apathy which permits these horrors is indeed inexplicable.

Japan's Invasion of Corea

JAPAN has some precedent for the invasion of Corea. It seems that she did this once before, some 1300 years before Columbus arrived in America. The Japanese army, which was ably commanded by a woman, crossed the sea upon junks and so impressed the Coreans that they surrendered without a blow, and the Japanese army returned in triumph without the loss of a single man. In 1591 Japan again made war upon Corea and upon China, and her army of invasion was over 300,000 strong. It was placed under the divided command of two generals, one a Christian and the other a Buddhist. Its success was said to be due, to the rivalry between the two religions.

Mrs. Maybrick and the Higher Law

APART from the question of guilt or innocence the release of Mrs. Maybrick will be a profound gratification to all whose hearts are capable of sympathy. Human punishments are relentless, and they are sometimes vindictive. Our detestation of crime is made the opportunity for widening our own phylacteries, and the penalties which we impose upon others express our thankfulness that we are not as they are. It is well for those who fall under the relentless lash of human judgments, that there is in nature a law of compensation which, in its own good time and way, will make straight all crooked, devious paths.

The King of Spain Escapes Assassin

THE King of Spain is to be congratulated on his escape from another attempt upon his life. An infernal machine has been found near the doorway of the royal palace during a state ceremony, and at a time when the building was crowded with persons of distinction.

THE CHILDREN'S HOUR

Sowing and Reaping

Essays by Children of San Diego Lotus Group

WE would all like to be strong and healthy when we grow up, but if through greediness or carelessness, when we are young we sow the seeds of disease we will not have health when we grow up. Perhaps we would like to be persevering like Columbus when we grow up. If so, we must sow the seeds of perseverance now. And if we have any work to do, even if it is disagreeable, we must stick to it until it is done.

D. P.

IF a farmer sows wheat or grain, if it has the right conditions, it will grow. When it is tall enough the farmer will have to cut it, be it good or bad, so that he can use the land for something else. If the crop is not good he will have to suffer the consequences.

So it is with our lives. If we live purely and unselfishly, we will harvest a fine crop. Perhaps our land, or start in life, is not very good. Then our harvest will be slow in showing itself.

Then, if we try hard to do right, we will have it all the better in some life to come. So if we are good and nothing seems to come of it, we can comfort ourselves in knowing it will come some time hence.

People who are unkind and selfish, some time or other will have to reap a bad harvest, no matter how they dislike it.

M. R.

As ye sow, so shall ye reap

THERE is a great deal of truth in this saying and if people would only think more of the seeds they are sowing or, in other words, think more of their influence and of their thoughts and actions, they would not do so many things that are not brotherly.

We often hear gardeners say, "Oh these seeds are no good," while other times we hear them say, "Those seeds were fine."

We also can sow two kinds of seeds only by different names. When we give out pure and helpful influences and thoughts we are planting good seed, and we will reap the beautiful flowers or results, while when we are unkind and think harmful thoughts we are truly planting bad seeds and we will have no beautiful flowers, but we will have weeds, or in other words, we will reap bad results.

Longfellow wrote a very beautiful and true poem called "The Arrow and the Song," which seems to correspond with this saying. We may not reap the results of our actions for a time but we will gather our harvest in due season, as the arrow was found in an oak and the song in the heart of a friend, long after.

CLEANING HOUSE

by E. E. HEWITT, in *Sunbeam*

DOLLY'S clothes are on the line.
Dolly's dishes fairly shine;
Dolly's house is swept all through.
Chairs and tables look like new.
Dolly's little mother, May,
Has been cleaning house today.

Picture books, a goodly row,
Such a pretty order show;
Games and blocks all put in place.
Pencils in the drawing case.
"I'm so tired," says little May.
"I've been cleaning house today."

an exploring ex-pe-dition yesterday. What a big word ex-pe-dition is. And it was splendid! Jack wasn't a bit afraid. He always grows into a knight when we go exploring."

"You are sillier than if you did think about clothes, Peggy," interrupted Amy. "You know quite well you just imagined it all, and Matilda and I don't imagine pretty dresses. Dresses are really true."

"What you imagine is sometimes true," returned Peggy in defense; "besides, I didn't imagine the whole of it. I read about a beautiful white city, and I am sure it is a real city somewhere, so Jack and I went away to imagine finding it."

"But wheredid you go, Peggy?"

"All through the pine woods until we came to the buttercup meadow, and then we sat down to rest for a little and we saw it."

"Oh, did you!" ejaculated Amy, with her blue eyes full of wonder.

"Yes, and you have no idea how splendid it was, Amy! All white and shining—with domes, too! Jack and I would like to have gone through the gates and stayed there altogether—but somehow we couldn't," she added in a sad little voice.

"Why?"

"Because the gates will never open to any one who is always just *talking* about being great and noble. You see all the people who stay there really are great and noble—that is the reason they live in that beautiful place. They are like kings and queens. But I am not very old, and I *am* very small for my age, Auntie told mother,

so perhaps by the time I am grown up I may be ready to live there; and I think, Amy, when people are ready, they will get to know more about it."

"Oh," said Peggy, after a moment's silence, "I know what's better than even that—let's imagine we are there all the time, and let's begin being great and noble now. Let's imagine that this is the Beautiful City."

"I will go there, too," said Amy—"some day"—and I'll take my dolly!"

A. P. D.

DO YOU THINK I LOOK VERY CROSE? I AM JUST SURPRISED—THAT IS ALL. I AM STANDING BESIDE MY LITTLE GARDEN AND THE GARDEN IS BESIDE MY LITTLE HOME IN LOMA-LAND. I DIDN'T KNOW THE PHOTOGRAPH MAN WAS THERE UNTIL HE SUDDENLY SAID, "NOW STAND VERY STILL!"

SILENCE

by SWINBURNE

BUT ye, keep ye on earth
 Your lips from over-speech;
 Loud words and longing are so little worth.
 And the end is hard to reach.
 For silence after grievous things is good,
 And reverence, and the fear that makes men whole.
 And shame, and righteous governance of blood,
 And lordship of the soul.
 But from sharp words and wits men pluck no fruit.
 And gathering thorns they shake the tree at root.
 For words divide and read;
 But silence is most noble to the end.

The Ten Commandments of Aristotle

THE president of Bowdoin College has delivered a masterly address on the Ten Commandments of Aristotle, and while we do not necessarily agree with the whole of his conclusions we cannot help believing that the religious life of the community would find its salvation in an agreement with the learned president that the teaching of these commandments "lacks only the democratic principle introduced by Christianity to make it a complete and ultimate account of life." At the same time we would suggest that the democratic principle cannot well be lacking in any scheme which has for its object the well-being of humanity. These ten commandments of Aristotle are rendered as follows:

Thou shalt devote thy utmost powers to some section of our common social welfare.

Thou shalt hold this end above all lesser ends like pleasure, money, honor.

Thou shalt hold the instruments essential to the service of this end second only to the end itself.

Thou shalt ponder and revere the universal laws that bind ends and means together in the ordered universe.

Thou shalt master and obey the specific laws that govern the relation of means to your chosen end.

Thou shalt use just so much of the materials and tools of life as the service of your end requires.

Thou shalt exclude from thy life all that exceeds or falls below this mean, reckless of pleasure lost.

Thou shalt endure whatever hardship and privation the maintenance of this mean in the service of your end requires, heedless of pain involved.

Thou shalt remain steadfast in this service until habit shall have made it a second nature, and custom shall have transformed it into joy.

Thou shalt find and hold a few like-minded friends, to share with thee this lifelong devotion to that common social welfare which is the task and goal of man.

In what a different world we should speedily live if religion were once more recognized as devotion to the common welfare, to which all pleasures and all activities are to be made subservient; if we were to remain steadfast in this service until habit shall have made it a second nature, and custom shall have transformed it into joy. Can there anywhere be a higher definition of Christianity?

The president's comments upon the ethics of Aristotle are admirable and illuminating. He says that

Morality depends on clear grasp of some imaginary condition of ourselves which is better than any practical alternative and the translation of that potential picture into energetic fact.

What is this but the selection and the pursuit of an ideal, which is the essence of all practical Theosophical philosophy? There is such an ideal in every human mind, a radiant picture of ourselves as we might and ought to be, a picture which we have perhaps long since hidden and repressed, but which can never die so long as there is one furtive aspiration to sus-

tain it. The president gives us a test of our rank in the scale of moral being. He says:

How large a section of the world do you care for in a vital responsible way? The magnitude of the end we see and serve is the measure of our soul's dimensions.

Perhaps not altogether a measure of our soul's dimensions, but rather a measure of our comprehension of the soul's message. How many of us can apply this test with any worthy result, how wide will be the circle of humanity for which we care in a vital responsible way? Here is something better than a catechism or a creed.

STUDENT

The Testimony of a Bishop

THE opinion of a Bishop is not of course of greater value than that of any other man of equal character and education. None the less, it is interesting to record the beliefs of so bright an ecclesiastical luminary as the English Bishop of Wakefield, who recently said in a public speech:

Some people need wounding before they will awaken and take a proper view of the Bible. The nature of inspiration ought to be understood. Scriptural inspiration is not a verbal, mechanical, absolutely accurate and infallible inspiration—not an inspiration of *pens*, but of men who stamped their own characters upon their writings—men who were not free from mistakes, but who were led by the inspiration of the Holy Ghost to embody in their writings a revelation of God.

For centuries it was believed that every part of Scripture was equally inspired—texts had been twisted and tortured into meanings and fixed interpretations as absurd as the Jewish cabbala. Even educated people have found it a great relief to be told such elementary truths as these:

The Bible is not infallible.

The Bible is not necessarily literal and exact.

It is not a scientific text-book.

The books were not necessarily written by the authors whose names they bear.

These names have absolutely no authority, except old traditions of the Jewish race.

The old chronology was not inspired.

The dates in the ordinary Bible are no guide to the dates of the books.

The world was not created 4,004 years before Christ.

Many of the books are composite, and some embody older records like flints in chalk formations; others are by more than one author, and still others are admittedly compilations of various historical and traditional accounts.

Once we realize these facts and understand the great purpose of inspiration, we shall lose the paralyzing and crippling fear of answering truthfully the direct questions of children.

Scientifically and morally (his Lordship continued) there has been a great revelation since the days of the Jewish writers. Charles Darwin has placed not only scientific but also religious thought upon an altogether firmer basis, while the *progressive moral revelation* is shown by the fact that the Jews allowed slavery, polygamy, and *many things* which we should never think of permitting today.

Schools of Crime

SOME years ago a peculiarly horrible murder was committed in France. A certain woman was accused of participating in this crime, and she was defended on the ground that whatever she might have done was performed under the hypnotic suggestion of another. We have nothing to do with the hideous details which were given to the public at the trial. We should suppose that every decent human being would hasten to forget them. It seems, however, that the story has been transferred to American soil, where it would have been retold and vitalized but for the commendable activity of the Washington authorities.

This woman has actually been brought to America by a showman whose intention it was to exhibit her. She was not only to be exhibited as an actor in a revolting murder, but she was to be hypnotized, and in this condition to reproduce the crime of years ago. The Washington authorities have ordered her immediate deportation as one who had been convicted of a crime, and she was sent back by the same steamer which brought her.

It is, indeed, fortunate that the law allowed this action. Had the meshes of the law been a little wider this atrocious performance would doubtless have been carried out in our cities and towns, and an irresistible incentive would have been given to weak and imitative minds. Abominable as such a display would have been, it could certainly be paralleled by many other displays which the law cannot reach or which the authorities are too supine to notice. And yet we marvel at epidemics of crime, while schools and factories of crime are allowed to flourish at our very doors.

STUDENT

BOOKS

by Mrs. BROWNING (*Aurora Leigh*)

I READ books, bad and good—some bad and good
 At once; (good aims not always make good books;
 Well-tempered spades turn up ill-smelling soils
 In digging vineyards, even); books, that prove
 God's being so definitely, that man's doubt
 Grows self-defined the other side the line,
 Made atheist by suggestion; moral books
 Exasperating to license; genial books,
 Discounting from the human dignity;
 And merry books which set you weeping when
 The sun shines—ay, and melancholy books,
 Which make you laugh that any one should weep.
 In this disjointed life, for one wrong more.

POOLS OF SALT AND PLOTS OF SAND

by TENNYSON

WHAT are men that He should heed us? cried the king of sacred song;
 Insects of an hour, that hourly work their brother insect wrong.

While the silent heavens roll, and suns along their fiery way
 All their planets whirling round them, flash a million miles a day.

Many an æon moulded earth before her highest, man, was born,
 Many an æon too may pass when earth is manless and forlorn.

Earth so huge, and yet so bounded—pools of salt, and plots of land—
 Shallow skin of green and azure—chains of mountains, grains of sand!

Only That which made us, meant us to be mightier by and by,
 Set the sphere of all the boundless Heavens within the human eye.

Sent the shadow of Himself, the boundless, thro' the human soul;
 Boundless inward, in the atom, boundless outward, in the whole.

Question Do the Theosophists believe in heredity?

Answer (3) According to modern science, characteristics and modifications acquired by individuals in the struggle for existence are impressed upon the germ-plasm of the race, and gradually become manifested by larger and larger numbers of individuals: thus is the general modification and progress accomplished and the plan underlying Nature unfolded. This germ-plasm is a thread of consciousness for the kingdoms of Nature lower than the human kingdom, and contains the possibility for the gradual evolution of higher forms.

According to Theosophy, when the human kingdom is reached—that is, when a physical structure has been evolved in which the human elements or principles can manifest individual threads of consciousness corresponding to the germ-plasm of the lower kingdoms, henceforth the acts and thoughts of each human being are stored in his individual thread of life, and there exist, ready to show themselves whenever the environment of the individual gives them the opportunity. These constitute Heredity.

Theosophists believe that this individual storehouse of acquired characteristics holds through many lives, and is the basis, in any life, of the possibilities for evil that must be eliminated by the human being, as well as of the nobler qualities we see manifested. M. M. T.

(4) In connection with the answers already given, the following from the writings of W. Q. Judge is interesting:

Some urge that Heredity invalidates Reincarnation. We urge it as proof. Heredity in giving us a body in any family provides the appropriate environment for the Ego. The Ego only goes into the family which either completely answers to its whole nature, or which gives an opportunity for the working out of its evolution, and which is also connected with it by reason of past incarnations or causes mutually set up. Thus the evil child may come to the presently good family because parents and child are indissolubly connected by past actions. It is a chance for redemption to the child and the occasion of punishment to the parents. This points to bodily heredity as a natural rule governing the bodies we must inhabit, just as the houses in a city will show the mind of the builders. And as we as well

as our parents were the makers and influencers of bodies, took part in and are responsible for states of society in which the development of physical body and brain was either retarded or helped on, debased or the contrary, so we are in this life responsible for the civilization in which we now appear. But when we look at the characters in human bodies, great inherent differences are seen. This is due to the soul inside, who is suffering or enjoying in the family, nation and race which his own thoughts and acts in the past lives have made it inevitable he should incarnate with.

Heredity provides the tenement, and also imposes those limitations of capacity of brain or body which are often a punishment and sometimes a help, but it does not affect the real Ego. The transmission of traits is a physical matter, and nothing more than the coming out into a nation of the consequences of the prior lives of all Egos who are to be in that race. The limitations imposed on the Ego by any family heredity are exact consequences of that Ego's prior lives. The fact that such physical traits and mental peculiarities are transmitted does not confute Reincarnation, since we know that the guiding mind and real character of each are not the result of a body and brain, but are peculiar to the Ego in its essential life. Transmission of trait and tendency by means of parent and body is exactly the mode selected by nature for providing the incarnating Ego with the proper tenement in which to carry on its work. Another mode would be impossible and subversive of order.

To one not acquainted with the teachings of Theosophy, the subject of heredity is a most difficult and baffling one, for while we have so many facts that conclusively support it, there are, on the other hand, so many apparent exceptions and contradictory facts as to show it inadequate as a full explanation of character, disposition, habit, etc. Is it not true then that heredity has been asked to explain too much? Theosophists do believe in heredity, and in the light of Theosophy it is given its proper place as a factor in human development, as one of the means used by the soul or Ego in its progress along the pathway of life. A study of the above words of William Q. Judge will be of great value to the student, and as the subject is of such interest and importance, further space will be devoted to it in next issue.

Religion and Science

WE can quite understand that it should at one time have been necessary to point out that the conflict between religion and science is based entirely upon misapprehension, but that the literature of the world should be increasingly burdened with such writings seems a little incomprehensible. Surely, our concepts of both religion and science should now be sufficiently clear to show even the most stupid among us that whatever is opposed to religion in its only true sense cannot by any possibility be scientific, and that whatever is opposed to the proved findings of science cannot therefore be religious. Truth can never be either unscientific or irreligious. The continual appearance of certain new books, however, is evidence that there are still some minds impervious to the most obvious of intellectual axioms.

The eminent London divine, the Rev. Mr. Campbell, who recently visited America, was asked by a somewhat startled admirer how he could possibly reconcile religion and evolution. He replied that no reconciliation is necessary, inasmuch as religion is evolution. It is hard to understand how so great a bugbear could ever have grown from a truth so evident. The supreme object of Christianity, and indeed of every faith, is to promote and hasten this very evolution of which the churches once seemed to be so afraid. As the child evolves into the man, so the bad man evolves into the good man, and the good man evolves into an ever closer resemblance to the Christ-ideal. Evolution means nothing more than growth, and it is hard to imagine that a belief in growth can be considered as heretical or irreligious by any sane, undiseased mind.

If growth and an increase in purity and strength be the lot of man, that is to say, if man can evolve, why not also the whole of nature? Why should not the whole of existence be on the march towards the better and the best? The proposition is so self-evident as hardly to admit of argument. We are well aware that there were, and probably are still, some theological minds whose invincible inertia seemed at one time to be almost a contradiction of progress. But the mind of the world has not been anchored to these profitless sandbanks which ought now to be out of sight. The average religious thought of last century has itself evolved, startling as it may seem. If evolution was actually possible to the dogmatic beliefs of fifty years ago, surely there can be no department of nature so hopelessly inert as to be beyond its influence. X.

SONG OF THE ANGELS

by J. H. MIDGLEY

ONCE more, above the din of strife and madness,
Of angry threat and wild, despairing cry,
There falls like dew upon the old world's sadness,
The sound of angel voices from the sky.

Once more it comes to still the rising clamor
Of warlike discords from the battling world;
Once more, amid the clash of forge and hammer,
The flag of peace is openly unfurled.

Once more it comes, that herald of the dawning,
Which brought to man the Everlasting Light;
It comes again, but with reproach and warning,
That still we dwell in all enfolding night. — *Our Dumb Animals*

Nansen on Athletics

SOME hardihood would indeed be needed to accuse Nansen, the Arctic explorer of effeminacy or of being in any way lacking in manly courage and persistency. His opinion of athletic sports should therefore commend itself to the young men of today who are rapidly beginning to think that such sports constitute all the law and the prophets for university and school. To a journalist who recently interviewed him he said:

The young men of today think it a great distinction to excel in sport and, if possible, to break records. The unreasonably exaggerated praise they win flatters their vanity. But what do they really gain? Beside giving their bodies an inharmonious development and becoming predisposed to disease—particularly to tuberculosis—they lose all interest in practical affairs, make wretched business men and incompetent employees, for all their thoughts are centered upon the coming games. Young men ought rather to roam the fields and the woods and study nature. Solitude makes for character. Modern life is far too superficial. We pass from one object to another; we want to understand everything, to have all the papers and all the new books, and to attend all the theatres and lectures. The development of industry is forced at the expense of that of the man. That is why modern literature is so pessimistic, so unbalanced. Tell your young men to go in for physical culture, rather than for sports, and to go, like the prophets, to seek solitude in the desert.

All extremes are, of course, to be deprecated and possibly Nansen himself goes a little far. But there can hardly be two intelligent opinions as to the destructive effect upon mind and manners of this modern mania for sport.

STUDENT

The Need for Water Fountains

WITH the coming of hot weather the newspapers will begin to record heat prostrations in our large cities. The little list appears year after year in our daily papers in August and September, and has always been a sad commentary upon the conditions in our great cities. Physicians declare, and doubtless they are correct, that the prostrations, in nine cases out of ten, are indirectly the result of the liquor habit. Most of the cases happen among the workmen who depend upon their glass of beer every hour or two, and the remedy is obvious. But how may it be applied?

It is an open secret that the way to keep a garden patch free of weeds is to fill it up with flowers. One who walks through the streets of our cities must be blind not to observe the lack of drinking fountains. If the poor, the shiftlessly poor, could have for the mere getting an abundance of fresh, cool drinking water, would saloons reap such a harvest? Isn't it probable that many a thirsty workman would drink the water and forget about his beer, to say nothing of women and children? It is useless to expect the poor to buy water at soda-fountains, even if they had the money. They are psychologized by the notion that a glass of beer is "worth more" than a glass of pure water, and that the man who buys the former for five cents comes nearer to getting the worth of his money than the man who pays five cents for the latter.

We have, it cannot be denied, a certain duty toward those upon whom the conditions of life press so hard. The extremely poor haven't our outlook, for they haven't in some cases our self-control. They haven't our means. What is our duty? The establishment of drinking fountains at every square would cost a city something, of course. But wouldn't the city save in the end, when one considers that thirst quenched by liquor breeds despair, insanity and crime?

A. V.

TO MAKE our idea of morality center on forbidden acts is to defile the imagination, and to introduce into our judgments of our fellowmen a secret element of gusto. If a thing is wrong for us, we should not dwell upon the thought of it, or we shall soon dwell upon it with an inverted pleasure.—*R. L. Stevenson*

THERE is an idea abroad among moral people that they should make their neighbors good. I have one person to make good: myself. But my duty to my neighbor is much more nearly expressed by saying that I have to make him happy—if I may.—*R. L. Stevenson*

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Pantheism and Ritualism

The tendency of *Pantheism* is to see the God-like everywhere, the personal God nowhere. The tendency of *High Churchism* is to localize the personal Deity in certain consecrated places called churches, certain consecrated times called Sabbaths, fast-days, and so forth; certain consecrated acts, sacramental and quasi-sacramental; certain consecrated persons called priests. — *Robertson*

A Scots minister, protesting from the pulpit against golfers' bad language, told his hearers (says *Golf Illustrated*) how he "dreamt he saw St. Peter on the links. He had in his hand a golden club, but he made a miss. It was most provoking. You know what you would have said. What do you think St. Peter said, and only said under these most trying circumstances? He said, 'Deary me, deary me!'"

THE MYSTERIES OF THE HEART DOCTRINE

Prepared by
KATHERINE TINGLEY
AND HER PUPILS

*The Theosophical
book of the
Twentieth century*

Tells the story and the history of the Theosophical Movement Throughout the World; tells what it is and why it is —reveals the mystery of the Doctrine of the Heart.

The prices are \$2 in cloth and \$1.50 in paper, which barely cover the cost, for it is printed and bound, not gaudily, but with such carefulness and thoroughness of art and craft as to make it unique among modern edition books.

It Is Not All Well With the World

A SPIRIT of perplexity seems to be abroad in the world, not altogether without its pathos and its import. Humanity is becoming a little confused as it is urged to an ever greater speed along the path of material civilization which yet so obviously leads to louder discords, to increase of misery. Civilization has been so profuse in its promises of a golden age, so eager in its assurance of the defeat of pain, so sure of its power to order things aright. But now there dawns upon the minds of men, the slow moving, patient mind of the multitude, the conviction that things are not right, that they are indeed wrong almost to despair, that it is not well with the world, that over the edge of the material

horizon there is no golden age but an ever deeper gloom. We are weary of infallible panaceas, weary of measures and combinations, weary of a tragic path of progress which we see to be a progress downward and backward, and not upwards and onwards. The audible voices of civilization are not the voices of the people, of the nation. The true humanity is largely voiceless; it is too strenuous for over much speech, too patient and too earnest. It has been so willing to be led, but what wonder if it is now a little distrustful and therefore a little perplexed? The golden age promised by science, by commerce and by creed is evidently for the few and not for the many. Perhaps it is at the cost of the many? It is not yet entirely out of date to quote the founder of Christianity in defence of the silent masses of men who wait thus pathetically for a social redemption which may well seem to tarry somewhat upon the way. It is recorded of him who in his day was heard willingly by the people that "he called his disciples unto him and said unto them, / have compassion on the multitude." We may well believe that compassion on the multitude has ever been the force focus of redeemer and reformer, a compassion which has never appealed to their self-interest, which has never fed the flame of greed, nor woven the combinations of hate, a compassion which did but call forth its like as an armor to the weak, a sure defense to the oppressed. This was a compassion which redeemed by wisdom and not by war, which fashioned a union of love and not of threats, of service and not of tyranny. It is the binding force of the universe which exists by love and law, and not forever will it be excluded from the hearts of men. This it is which can alone give the new light by which we shall recognize the enormities of the evils which we tolerate as though they were the will of God. It is ideas which reform and not measures. It is the impulses of the heart which are irresistible and not the calculations of the brain. Reform must come from within the masses of men and not from without, from the many and not from the few. Nature offers the power of the reformer to every one who will but comply with her conditions, to the poor and to the rich alike, to learning and to ignorance. He who has "compassion upon the multitude," has God upon his side, and the heart which has been emptied of self-love becomes a channel for the rivers of progress which flow onward from the past, onward to the ocean made glorious by hope. There is no wisdom but this. It comes from within ourselves and no man can confer it upon another. How many are there amongst the toiling millions of men who will sound a new word for a new day, who will set their faces away from the delusive lights which have called themselves reform, who will recognize the common sorrow of self-interest which walks unabashed and unashamed amongst the people? How many are there who by one kindly, self-forgetting act will lay hold upon the golden thread which leads to power and to peace? How many are there who will have "compassion upon the multitude," the multitude of which they are a part? Unto them will come the light of the new age and from their dead selves they will be reborn.

STUDENT

Remembering Our Wrongs

THE heaviest burden which we can ever bind upon ourselves is a recollection of the wrongs which we have suffered. Of all loads this is the most futile, the most wearing, the most destructive. It is a subtle selfishness which warps the nature; it is the very antithesis of joy. Those whose recollection of their own wrongs is the most intense rarely remember the wrongs which they have inflicted upon others. This is the maelstrom which grows ever larger; which sucks into its vortex every rightful pleasure, which destroys every beauty in life. Those who have suffered injustices in the defence of others are the first to ignore them and to forget them. It is only the small nature, the nature which would itself inflict injustice which is so keenly alive to the wrongs imposed upon itself. Let us face these dark places in our nature, the places where we have stored the memories of our wrongs. Let us go away to some quiet place and there cleanse ourselves, searching our hearts that no trace remain of a memory which is the very home of bitterness. Then we can go out once more into the sunlight with our faces set towards the future and not toward the past, and with a new and abiding vitality within us as of one released from chains and prison.

S.

The Study of History

From *Universal Brotherhood Magazine*, May, 1899

IN any age a certain point only can be reached by the masses. Each age has its highest point of development, in which the people share, to which they contribute, and which they also limit. A study of the mighty ancient civilizations of the far past shows that this point of development was very much higher than it is even now. Could we go back into the prehistoric times, we should note that with successive ages came a gradual decline in spiritual knowledge as civilization succeeded civilization.

But a turning-point has been reached; men and women are again awakening to a knowledge of themselves and their possibilities, and are gradually moving on to a time when the ancient knowledge will be revived and become once more the possession of humanity.

How few turn their attention to prehistoric times; and yet in such study they would find a key that would unlock many of the mysteries and possibilities of their present life!

It behooves students to look at history from a new standpoint, and while I declare America to be much older than Egypt, and to have even given to Egypt her most ancient civilization, yet in the study of the latter they will find a clue to the future development of humanity. For that from which the known civilization of Egypt descended, exists still as a possibility. It is man's birthright and can again be achieved as an actuality. Life is one, and though seemingly divided into ages and long periods of time, and again subdivided into centuries, years, days, and moments, exists in all its potentiality and active potency today as it did in prehistoric Egypt when the gods dwelt with men. That day of innocence and peace passed away ages ago; humanity has long wandered through the dark valley of bitter experiences; but the mountain heights are again seen, suffused with the glow of dawn and the promise of a new Golden Age; and a pathway is once more shown to that realm where the gods still abide. It is yours to climb that pathway, to awake again in your hearts the memory of the childhood of the world and proclaim the new Golden Age of Universal Brotherhood which awaits the human race.

I cannot tell you what secrets await to be revealed to those who study along these new lines. But with the new light that is dawning, with the awakening knowledge of man's divinity, the day is not far distant when the glory of the past shall again become known and the glory of the future be assured.

KATHERINE TINGLEY

What a Religion!

DR. WATSON (Ian Maclaren) writes on "Homely Virtues," and incidentally uses the word religion in a sense which we confess our inability to understand. He says:

There is a kind of man who will not drink nor swear, who believes in the deity of Christ and the eternal punishment of the wicked, but who has no more idea of personal honor than a fox, and who will do things at which a high-class man of the world would be aghast. . . . There are people with a genuine sense of religion who are as crooked as a corkscrew, and there are people who would never dream of calling themselves religious who are as straight as a die. As, for instance, Jacob in one class, and in the other such a man as the Duke of Wellington among Englishmen, and Abraham Lincoln among Americans.

Here we are first introduced to the stupefying idea that it is possible to "believe" in the deity of Christ and the eternal punishment of the wicked and yet to have "no more idea of personal honor than a fox," and secondly we are confronted with people having a "genuine sense of religion" and who are yet "as crooked as a corkscrew."

Passages such as this seem to throw a startling light upon the difficulties of some of the churches. Apparently the "belief" and the "genuine sense of religion" herein referred to have no relation whatever to personal conduct, no influence whatever upon it. From this particular theological point of view it is evidently possible to combine all the belief, which we are sometimes told is the only essential to salvation, with the moral character of a fox. Dr. Watson might indeed have gone further still. He might have told us that a loud profession of creed and dogma is in no way antagonistic to behavior of which any ordinary fox would be ashamed.

We should ourselves have supposed that the practice of the "homely virtues," of honor and truth is religion and that any system which does not include these is a mockery and not religion at all. X.

An Indirect Definition

"THE word *soul* has lost all its meaning," said a scientific man the other day. "No one would now use it with any sense of reality, or as denoting any definite entity." We differ. But though it would not be hard to make a definition, the meaning of the word might perhaps be better got at in another way.

Most of us spend our lives in a long succession of desires; the life of some few is a long tension of will. We desire to own, to receive, to grasp, to taste; a few will only to give, to out-radiate. The difference is between benefit-seeking and benefit-giving. Most of us fear something—disease, death, disrepute; a few do not know what fear means.

There are some few men and women who have not their own welfare at heart; their welfare is not their special concern; they do not mark themselves out from the multitude. They seek no pleasures, and need none; for within their own being they are conscious of a fixed peace or joy in continuity. They are utterly indifferent to praise or blame; never have any wish to get ahead of others in anything, nor any pride when they have done so. Their consciousness is intense, immediate and self-reproductive; that of most of us is kept alive in sensation and desire by the succession of brain-pictures. They compassionate the faults of others where we condemn and criticize.

Have we not now an indirect definition of soul and soul life? The soul is that which inspires these people in their peculiarities. Anyone who wishes can give it another name: Christos, Nous, Spirit, Transcendental Self or Ego—it does not matter. It is, in every man, the ever-present Adversary of his elemental selfishness, the Inspirer to a new level of being. It works in each of us to make us true men and women, no longer animals, alert, every faculty awakened, self-dominating, unselfish and compassionate. We can suffuse ourselves with more or less of its light; and our power to do so is the power to call down our own greater nature into our present life. L.

Japanese Training

AN interesting book on *Japanese Physical Training*, by H. Irving Hancock, throws an important light upon the discipline which the Japanese believed to be necessary for the highest development. The training, however, seems to be as much moral as it is physical, and it may be that these people have thus found a key-note to a more evenly balanced growth than has yet been discovered elsewhere.

Throughout the campaign of the allies in China in 1900, the Japanese repeatedly proved their ability to outmarch our troops by fifty per cent, and this despite the fact that our American soldiers ranked second in point of endurance. What enabled the little men from *Dai Nippon* to outstrip so easily the big, sturdy fellows of the American regiments?

This question the author answers at considerable length. We have ourselves already drawn attention to the education of the Samurai, the Japanese military caste, which is now extinct. Although extinct as a caste a modified form of the Samurai training has now spread throughout the whole people. Physical development has been brought to an exact science, and with it is a moral training which insists upon an equable temper, moderation in victory and tranquillity in defeat.

The great defect of the educational systems of modern civilization is the absence of moral training, which in all possible contests of the future will count more heavily than physical strength, or even physical courage. It is moral training alone which can give unvarying fortitude and tranquillity and which can intelligently enlist these virtues as agencies of success. Character is the dominant force of the world, and everything which develops character is a sure index to all workers of success. Japan is not the only ancient nation whose text-books of progress have been preserved for the use of our own generation. STUDENT

Scene in Tokio---Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week represents a typical view of the city of Tokio, which is the political capital of Japan, the seat of the various executive departments of the island Empire, and the residence of the Government officials and foreign legations. The three great cities of Japan are Tokio, Ozaka and Kioto. The last named was the ancient capital of Japan, and existed for many centuries before the establishment of Tokio.

Some Views on XXth Century Problems

Other and Greater Evils Than War

IT is needless to say that we are in profound sympathy with every movement which has for its object the establishment of international peace. It is, however, easy to exaggerate the importance of even so immense a stride forward as is implied by such a reform as this and to speak of its attainment as the arrival of the millennium, is only to blind ourselves to other evils quite as menacing and far more harmful than that of war. An eminent Rabbi has lately preached a sermon on the subject of arbitration, and he asked why the coming of the millennium had been so long delayed. He seems to answer this by various admirable reflections upon international greed, and the false notions of honor which are so often the *casus belli* in modern disputes. A great familiarity with evil often causes us to minimize its effects or even to overlook them altogether, and we are afraid that the establishment today of international arbitration would still leave plenty of scope for the zeal of the reformer. The cessation of war would, for example, still leave unaffected our competitive system with all its hideous creations, it would leave the curse of alcohol and opium untouched, it would have no result upon those thousand deteriorating influences which are robbing the world of its manhood and womanhood. The removal of war would still leave us to our deification of individual selfishness, which is infinitely more pitiless than open conflict, we should be still left to our dismayed consideration of the problems of insanity, of crime and of disease. All these things are so close to us that we look right over them, or through them, at that other catastrophe which we call war, and which fills our mental horizon only because it is not so familiar. A large part of the peace propaganda today are based upon considerations and arguments wholly material, and very many of our peace aspirations are little more than a recognition that national selfishness is an interference with individual selfishness and its aims, and that war is a disturbance to money-making and greed. When a new ideal of personal unselfishness comes into the world, then indeed the millennium is not far away. Of that new ideal the abolition of war may be one of the results, but it will not be the only result nor even the most important.

STUDENT

Wan Faces of Factory Children

IT would seem that wherever the probe of the social reformer can find its way, there at once is disclosed a state of affairs which it would appear almost impossible to combat by any means known to civilization, even supposing that civilization had any desire to combat it. The latest disclosures have reference to the artificial flower trade and the employment of children, not in the factories but in their own homes. To compel these children to go to school is only to add to their miseries. The work must be done, if partial starvation is not to become entire starvation and the children must therefore work from the moment they return from school until far on in the night. The usual details of course are given. We suppose some people read them, but it would not seem that any one particularly cares. Here is the old story of the children, wan, sunken, haggard and starved, the children who never smile, who have almost forgotten how to speak. It seems that the artificial flower trade lays its curse upon two classes in particular who are unable to work at the factories. These two classes consist of children who have to spend a part of the day at school, and mothers who have babies to "care for." Civilization preys upon the helpless, and the greater the helplessness the greater the blood toll. Here is a representative paragraph from a lengthy report in an eastern newspaper:

All three of the children were thin and sallow and were very rapid workers. Neither the boy nor the younger girl would answer when spoken to; the boy smiled weakly and worked on. The thin chest and waxen color of the older girl announced that she was to be a victim of consumption—a fate that was being hastened by long hours of bending over a table in an unventilated room. But she worked with a nervous rapidity that I could not imagine surpassed.

Something is doubtless gained by the publication of these facts. We shall not at any rate plead ignorance in the judgment-hall where nations are arraigned and civilizations overthrown.

STUDENT

Starving in the Midst of Plenty

A CERTAIN man was recently arrested in one of our great cities upon a charge of stealing bread, and the proceedings which followed are not uninteresting. First of all, the grocer from whom the food was stolen refused to prosecute. He said, "Lord knows, they need it." Then the policeman told the judge "there are nearly 200 people down there who are starving. This man Jones is a workingman and not a thief. He was going to share what he stole with the others. In the buildings where he lives there are many who have not a cent and who have nothing to eat." Thereupon the judge pronounced that "the stealing of bread under such circumstances is no offense." In America, then, with its freedom, its illimitable territories, its storehouses of natural wealth of which even the very doors have not yet been opened, it is possible to find people, and in considerable numbers, who are not only driven to steal by the scourge of starvation, but in whose defense prosecutor, policeman and judge are united. Is this the extreme of civilization which thus meets that other extreme before civilization had begun, when men knew no law except their own dire necessity, and when the satisfaction of elemental hunger made all things lawful? Truly the story is not lacking in portents, such grim portents of disaster as must ever walk in crowds by the side of a starving man, had we but the wit to see them and to be wise before it is too late. At the touch of this one hungry man, constitution and laws and the whole bewildering stupid machinery of our social system seems to have quietly settled down into impalpable dust as though they had never been.

STUDENT

The Great Prevalence of Murder

DURING the last five years nearly 8,500 murders have been committed in the United States. In some States there were more murders than in the whole British or German Empire—so says the *Chicago Tribune*, which then particularly asks what are the legislators, lawmakers and law-enforcers doing to stop it? It is, of course, very necessary that it should be stopped, but to place the crime of murder in a water-tight compartment would be to perpetuate a very common mistake. Murder is but a violent illustration of the spirit of lawlessness which pervades the community, and which manifests itself according to the nature of the lawbreakers. It is futile to isolate a particular law and to clamor for its enforcement, while it is perfectly well understood that other laws may be broken with impunity, so long as we comply with the necessary formalities, pecuniary and social.

The violent and passionate man breaks the law in a violent and passionate manner, while the educated or timid man breaks other laws in other ways more congenial to his nature or more gratifying to his greed. The highway robber and murderer can be educated into the fraudulent company promoter who spreads misery and death throughout the community, none daring to make him afraid; or he may commit wholesale robbery of health and happiness upon the little children in his factory and remain an honored member of the community. Let us suppress all law-breaking, and not merely those forms of it which happen to offend our æsthetic feelings.

STUDENT

Epidemics Produced by Graveyards

AN advocate of cremation, writing to the *Public Ledger*, cites five instances where destructive epidemics of plague and cholera have been produced by the opening of ancient graveyards some of which had been out of use for centuries. These epidemics would of course have been prevented by cremation, but such is the price that we have to pay for experience. The unfortunate part of it is that we have not yet learned the lesson and although the practice of cremation is increasing, it may be that some sharp reminders are yet in store for us. Even stupidity is not entirely incurable, especially when nature is the physician. There are probably very few indeed who now believe that cremation is irreligious or that it can prove a serious inconvenience upon the "last day." None the less, teachings of this kind have left a sediment of unconfessed superstition in many minds and this must be removed.

STUDENT

Art Music Literature and the Drama

Genius: An Excuse For Eccentricity

THE production recently in Paris of a little drama by the brilliant Villiers has brought again to our attention the curious species that people still denominate "genius!" Villiers de l'Isle Adam was one of that coterie of which Paul Verlaine and Maurice Rollinat, who recently died in a mad-house, by the way, were members. Feverish and debauched, violent of gesture, sleeping by day and traversing the boulevards at night, nursing his eccentricities, yet fighting a pathetic fight, at times, against the lower tendencies of his nature, and dying at last of a hideous disease, Villiers yet was the friend of such men as Richard Wagner and beloved by Baudelaire. There was in his work a depth of perception that was startling. He admired our American methods and our American arts. He was a Prodigal by nature, prodigal of his genius, of his means, of everything save the conventional virtues, prodigal more than all of his emotions until he died worn out, a nervous wreck. Villiers loved the beautiful, though half the time he could not tell the true when he saw it. Yet one of his contemporaries wrote:

It may be that the philosophy of Villiers will one day become the formula of our century.

Again and again, through his plays, we are conscious that he almost touches—not quite, but almost—the very hem of the garment of the infinite. He almost breaks the veil—not quite—for his nature and his own peculiarities held him back. His soul was daily crucified by his eccentricities. He was massacred by his own vices.

Mystic as he was, one wonders what he might not have revealed, one wonders what message he might not have carried to humanity's heart, if he could have ceased his perpetual oscillation between the real and the sham, between virtue and the depths of debauchery—if he could have attained something like balance. His whole life of struggle and remorse was epitomized in one moment on his death-bed when he groaned as he saw the woman whom he married at the last moment to legitimize his son, sign the marriage contract with a cross—she could not write her name. That tells part of the pathetic story. What would not right association, a pure, honorable comradeship, have done for such a man?

Some of our critics have tried to work up an analogy between Villiers and our own Poe. Scarcely any judgment could be more mistaken, for with all the error and suffering of his life, Poe was honorable and innately pure. Of all our poets, he has been the least understood and the most maligned. Leave Villiers with his compeers, of whom Poe is not one. There must have been something in a man whom Richard Wagner loved to visit and with whom he loved to converse; but it is time that we ceased to condone the moral pervert simply because at odd times he catches sight of the sun and the stars. In order to glimpse the sunlight one need not stand with one's feet in a sewer. STUDENT

IT is only when the heart is rapt into true passion of melody, and the very tones of the man become musical by the greatness, depth and music of his thoughts, that we can give him the right to rhyme and sing—that we can call him a poet. Pretenders to this there are many, but, precisely as we love the true song and are charmed by it as by something divine, so shall we hate the false song and account it a mere wooden noise, a thing hollow, insincere, altogether offensive and superfluous.

—Thomas Carlyle

Richard Wagner's Own Words Anent "Parsifal"

IT is well-known that Wagner began at one time a drama entitled, *Jesus of Nazareth*.

In his letters he tells us that for a period of years he considered the building of a great music drama which should have for its central figure his ideal of a Teacher. From his letters we glean that he contemplated one with Buddha for the central figure. What became of the earlier manuscript is not known, but that it was incorporated into *Parsifal* it is not difficult to

believe. The ideal of the Grail itself, the asceticism of Parsifal, the temptations, the baptism, the character of Kundry, her washing of Parsifal's feet, the healing of wounds, the raising of the dead (in the last act), to say nothing of the Liebesmahl, or comrade feast, which, by its resemblance to the ceremony of the Eucharist, has flung out such a challenge to the clergy—all these are more than mere coincidences. Still more light is thrown upon Wagner's intentions in a letter published originally in the Bayreuth paper and from which the following extracts are translated:

I have been wondering how to rescue *Parsifal*, this last and most holy work of mine, from the fate of an ordinary operatic career. I am no longer able to conceal the real subject of *Parsifal*, and yet how can theatres like ours dare to attempt to produce the most exalted mysteries of the Christian religion? I could well understand that the church might object to the performances of these sacred dramas on

boards where the trivial holds sway today, yesterday and tomorrow, and before a public which is attracted only by the trivial. I have called *Parsifal* a consecrational festival play, and I must seek a stage to which I can consecrate it.

EVEN the newspapers have had their share in gently filtering into the public mind Wagner's great and sublime ideals. Here are recent headlines from a New York newspaper:

\$160,000 DRAWN BY
PARSIFAL. RECORD
BREAKING RECEIPTS
AT THE METROPOLITAN.

And from another paper witness a long announcement that *Parsifal* is to be produced by one "Dick Norris," with tons of scenery, dozens of chorus boys,

plenty of ascetics doubtless, at popular prices, 10, 15 and 25 cents!

It is stated that among those who saw Sir Henry Irving on the night of his first appearance in London some forty years ago, were George Eliot and George Henry Lewes. "What do you think of him?" asked the former. "In my opinion he will be at the head of the English stage in twenty years," was Lewes' reply. "I think he is there already," said George Eliot, thoughtfully.

AND now, fastened to the India Mill in England is a factory chimney, built in exact imitation of the Campanile, Venice. The Campanile—puffing smoke!

AMONG the work taken up by the Archeological Institute of America is the collecting of old Spanish and Indian folk-songs.

A CORNER IN ONE OF THE LOMA-LAND STUDIOS

FROM a New York paper we clip the following:

In an outhouse, tied with ropes and chains, so they could move only a few feet at a time, two Italian children have recently been discovered at Chenango Forks by H. C. Preston. The children are so emaciated that their bones almost protrude through the skin, the flesh having almost wasted from their bodies. The family is living in a hut and the father is employed on the railroad, earning good wages. Five brothers of the children are in good physical condition, and neighbors assert that the children in question have been kept tied up because the mother has a spite against them. Steps have been taken to have the children cared for and the parents punished.

While this is an extreme case, similar instances might easily be multiplied by anyone who would take pains to investigate the conditions that exist in that stratum of society which seems perpetually slipping over the verge. In the slums of our cities, in communities that exist here and there in the neighborhood of great factories, the world over, it is easy to find conditions that parallel the above case excepting in degree.

Motherhood in itself brings opportunity for a great spiritual uplift. Those whose hearts are true and whose minds are free from needless and selfish anxieties seize this opportunity and pass through trials into a veritable kingdom of heaven, a kingdom which, however, may be again lost if there be lacking eternal vigilance. Motherhood is often the salvation of women who were apparently, before that, on the downward path. For it must not be forgotten that the path of mere intellect is just as certainly a downward path as that of sense gratification.

But motherhood, in the cases of hundreds and thousands of women, means nothing but added care, added annoyance, added chance to fret and worry and storm. This seems a harsh statement, yet it is nevertheless a true one. When H. P. Blavatsky said, "We elbow soulless human beings at every step," it is probable that she said what she meant and that the words state a plain fact. It certainly seems to be the only basis on which one can explain the occurrence of such instances as the above.

"The mother had a spite against them!" Think of it! What does this mean to humanity, to the future, to the race, to the children themselves? What chance have these little ones in life's race and the world's battle?

A vast amount of sentiment on the subject of motherhood has poured itself out over the world during the last ten or twenty years. It is one evidence that the Christos speaketh again, that the true spirit is again in the world, pleading for its old place in humanity's heart. Yet that very fact has challenged every sleeping devil and it is just *because* the opportunities spiritually are so great, that humanity is sore beset. Just because

A Word About Motherhood

we are beginning to awaken to the divine, the spiritual aspect of motherhood, it behooves us to awaken to

that aspect which is the reverse. It is a picture which has its proportion of shadows. We cannot afford to ignore them, for upon our attitude—the attitude of those who look at life from the standpoint of a true philosophy—depends and will depend more than we dream.

There is a motherhood of the spirit but there is also a motherhood that is only of the flesh. We find daily evidence of the latter fact if we are able to discriminate and look a bit below appearances. Nor do we need to go to the slums to find examples.

Almost any neighborhood can furnish them. Among the wealthy the tale is told by the neurotic or pampered child, the home-life which is sacrificed to society's demands, by the fact that motherhood itself is accepted by so many women under protest. And we also find a motherhood that is almost as harmful through its mistaken conscientiousness, its over-solicitude, its lack of trust in the law which rules all the events of life and which inflicts heavy penalties on those who dare, by their worries, to interfere with its processes.

Katherine Tingley has a great message for the women of the world, and a yet greater message for mothers. It is they who hold in their hands the key to the future. Can they be awakened? Can the hearts of the poor, the forsaken, the uneducated women—those who step into cruelty through ignorance of their own natures, their own weaknesses, through ignorance of their children's natures—can these be reached?

It will be done. The time is coming when Christ's words, "Greater things than these shall ye do," will be literally demonstrated in the lives of those who will yet go out into life's highways and byways with this greater message to mothers.

But it can never be done "save by those who know their own natures, who cannot be deceived by the subtle voice of evil, who show forth the guiding presence of the soul in every act and thought."

These are Katherine Tingley's own words. If we believe in truth, the way is plain. The conquest of self must first be made—then will we be fitted to battle with the sin and pain of the world and not before. Let those who long to help no longer spend their energies in mere longings; let them apply those energies to the doing of the daily duty, whatever that may be. If they are mothers, let them live out their privilege in all its fullness, knowing that the law, if trusted, will bring in its own time, the Greater Opportunity, which is—the chance to help other mothers.

STUDENT

Blanche of Castile

THERE is something about the life of a noble woman which lends attractiveness to the pages of history whenever found. It seems at times as though the virtues of many culminated in one, to show, as it were, what the perfect flower of womanhood might be.

Blanche of Castile, Queen of France, was one of the few brilliant women of history. The daughter of Alfonso IXth, King of Castile, and of Eleanor of England, her marriage to Louis, heir to France, brought her at once into an important position. Later, when Louis had become King of France, she encountered much that fully tested her remarkable force of character.

In political affairs she displayed exceptional ability, and was at all times the inspiring genius of her husband Louis VIII. She accompanied him on his second crusade against the Albigenses. After the death of Louis, she assumed the regency for their son Louis IXth, during his minority.

Blanche of Castile has always been regarded as one of the ablest rulers of France. Beautiful, virtuous and possessed of great charm of manner, these traits, combined with her diplomatic qualities and ability to govern, enabled her to develop the resources of the kingdom to a vast extent. At the end of fifteen years she turned over the kingdom to her son in a most flourishing condition.

King Louis IXth, renowned for his virtues and piety, attributed all that was good in himself to the advice and training of his mother, Blanche of Castile.

Although Blanche of Castile was piously inclined, she always resisted successfully all encroachments of ecclesiastical power. Her whole life was one of charity, it is said, and considering the tendency of the times in which she lived, the power for good which seemed to be active all through her career is brought into more vivid prominence.

Blanche of Castile stands in the foremost ranks of the higher womanhood of the race.

Women in German Politics

ONE Herr Stadthagen has recently been sentenced to a term of imprisonment in Germany for urging women to test the validity of a law recently passed by the Reichstag which takes away their right to form or to join any political society. Stadthagen, in his defense, shows that Article 29 of the Prussian Constitution gives women the right to unite themselves with existing political societies, giving to the courts supervision over the same, but not giving the courts power to limit them or to forbid women to avail themselves of this right. A new law has recently been passed which permanently forbids women to enroll themselves members of existing political societies or to form such societies of their own. This was done without repealing Article 29. So here are two contradictory laws and no one has the power to say that either one is invalid. The situation is not conciliatory to the women, nor is it complimentary to the dignity of the Supreme Court. It is surprising that the highest legal body in the Empire has today such limited jurisdiction.

STUDENT

SOTOKITCHI URIU, now Rear-Admiral of the Japanese fleet, met his wife in this country. She was one of the four young Japanese girls sent here by the Empress to be educated, and was a student at Vassar; Uriu at the time a student at the Annapolis Academy, from which he was graduated. Uriu is now forty-three years of age, and English is the language of his household from the children up.

THE women of Japan owe much to their Empress, who is well educated and thoroughly imbued with modern ideas. She has done more than the world knows for the betterment and advancement of her countrywomen.

A New Departure

AGAINST all known precedents a Congressman has voluntarily relinquished his seat, on the ground that his election was obtained by fraud. John F. Shafroth of Colorado, was recently elected to Congress. Not long after he had taken his seat, his political opponent charged irregularities of the most serious nature in the ballots cast for the ticket on which Mr. Shafroth was elected. The ballots from the contested precincts were shipped to Washington and examined by experts. Shafroth himself examined them, and was the first to admit that frauds had been committed. The course he has taken has placed before the community a new type of politician.

But who cast the fraudulent ballots? Unfortunately for those who cry most loudly about "woman's rights and man's wrongs," the particular disgrace in this case rests upon the shoulders of women. The method adopted by those who, in this case, desired to purify politics by means of the ballot for women, was to organize a large crowd of "repeaters," this being composed of women whose occupation is such that their real names are conveniently forgotten, or protected by numerous *aliases*. They went from precinct to precinct, in many cases six votes being cast by one voter, and the woman who was at the head of this disgraceful proceeding, not being satisfied with that, proceeded to get votes from women who were not voters at all, some being mere girls and under age, others non-residents.

There are many surprises these days and this situation affords a number. Those who talk about the "muddy pool of politics," will do well to reflect what it might be like if more men like Mr. Shafroth became politicians. Those who declare that all this country needs is more voters, will do well to reflect that there

are two sides to every question, and that every opportunity begets its own temptations. When will we learn that neither sex has any particular claim upon the virtues, and that justice and honesty and purity are what our political life most needs, not merely more voters, whether of one sex or the other.

STUDENT

IT is stated authoritatively that Joseph Chamberlain's great fight for the establishment of a protective tariff in England is due to the influence of his wife, an American, a daughter of Judge Endicott of Boston. It is said that Mrs. Chamberlain is consulted with regard to every political move, and that doubtless it was more than wisdom on the part of her husband to take her with him to South Africa during the war. Mrs. Chamberlain has made the closest study of English politics. It is interesting, too, that the woman who has played the part of vice-queen in India in a more magnificent style than even Queen Victoria herself, is an American, formerly Miss Leiter of Chicago.

WITH unceasing devotion and zeal Queen Wilhelmina's brave and clever mother—who during Wilhelmina's latter girlhood was Queen Regent—did whatever she could to make her daughter's education a truly excellent one. Among the names of those who taught the young queen, Queen Emma's name deserves a fair place. It was the Queen Regent herself who regulated and superintended all the lessons of Wilhelmina, being present at most of them and taking quite as much interest in them as her little daughter.—*St. Nicholas*

AT the St. Louis Exposition women's industries will be widely exploited. Every jury of rewards will contain one woman at least, and women's work will not be exhibited separately, as was the case, in general, at the World's Fair, but will be classified with that of men.

COUNTESS OYAMA, wife of the field-marshal of Japan, graduated from Vassar College in 1882 as Stematz Yamakama, and nearly one-quarter of her life has been spent in the United States.—*Macon Telegraph*

Brief Glimpses of the Prehistoric World

Archeology
Paleontology
Ethnology

The Progress of Archeology—A Brief Survey of the Field

NEVER before was there so much activity in the world of archeology as today. Data from every country and period are rapidly heaping themselves together. But the facts as yet remain more or less unassorted. How long before a genius arises who shall do for them what Mendelyeff did for the elements of chemistry? Before him, they were known, so to speak, as separate individuals; at his glance they fell into their family relationships, and a whole underlying system of intelligible evolution was revealed.

It is that which we want done in archeology. For the facts are nearly ready. Research is in full swing in Mexico and Peru; among the buried cities of Babylonia and Assyria; in Egypt, Syria, Persia, Palestine, Greece, Rome, even Thibet, and throughout Europe and America.

Among the latest results reported are those of Professor Dörpfeld working at Pergamum in Asia Minor. This is the Pergamos of the Bible, a seat of Christianity, and one of the Apocalyptic seven churches. According to tradition, the city was founded by Arcadian colonists, led by Telephus son of Hercules—a legend which suggests an Atlantean colonization. A magnificent hall of columns seventy yards long has been unearthed here; and also four marble slabs covered with hitherto undeciphered hieroglyphic script.

The English have resumed active work at the site of ancient Ninevah with a special view to the library of Ashurbanipal. And a special mission from the enterprising University of Chicago is conducting investigations in Babylonia on its own account. In Palestine, investigations go on at the site of the city of Gezer. Two layers of civilizations have manifested themselves, the earlier being represented by remains of burials and cremations, in caves below the later ruins. Chief among the latter, and apparently belonging to the Maccabean period, is a huge rock-cut four-million gallon cistern. From a period midway between these two, the prehistoric and the Hebrew, come some evidences of Babylonian occupation in the shape of Astarte plaques.

Egyptian investigation is of course in full swing. To the "sayings" of Jesus we have already referred, and beyond these there has been of late nothing very novel. A large number of "Osiris corn figures" have been found in tombs at Cynopolis, usually misunderstood as offerings to the corn god. They are little cloth packets of grain, roughly shaped like Osiris and buried with the dead or separately. They are of course a symbol of the spiritual resurrection of the soul of the dead man.

The archeological value of Sven Hedin's journey does not seem to have been great, but he found one extinct city in Central Asia. Some records here throw a little light upon the obscure history of the Chinese empire, but practically China and Thibet are as yet unexplored for the purposes of archeology.

In Mexico, investigations seem to go on as it were accidentally. A few weeks ago, for example, a cattle man of Los Angeles, traveling in Mexico, discovered almost by chance a huge mass of forgotten ruins of cities, dating from the time of the mysterious Aztecs. They were mostly on the sides of deep terraced cañons. And in neighboring cliffs were hundreds of ancient cave homes. But the entrances to these were from 100 to 200 feet up the cliff and Mr. Cox had no means of reaching them.

These are but a few of the activities in progress, and the governments of Europe and America are honorably vying with each other in the prosecution of research.

STUDENT

The Agean Hermes

THE discovery at the bottom of the Agean Sea of the bronze statue of Hermes gave rise to a very animated discussion as to the nature of the object, which was undoubtedly held in the right hand of this exquisite piece of work. That something was undoubtedly held in the hand is shown by the official report of the Greek Government, which states that there are rough places in the bronze as though some portion had been broken away. The problem will probably never be settled unless the missing portion should by chance be discovered.

The Government report referred to is one of the most fascinating pages of archeological research which has ever been written. It is of considerable length, but some portions may be reproduced as an indication of its interest. It says:

About the end of 1900 Symæan divers, fishing from the sponge fishing boat *Photios Lentiakos*, under Captain Demetrios Kontos, pulled up the well-preserved hand of a bronze statue off the north coast of Antikythera. At this discovery the captain dived himself, and seeing in the place where the hand was found a heap of various ancient statues, he stopped fishing for sponges and got under way for Syme (an island off the coast of Asia Minor, fifteen miles northwest of Rhodes), whence, after consultation with other patriotic Symæans, he came to Athens and communicated the find to the Greek Government, begging at the same time for official permission to go forward at his own expense to bring up the statues.

Although the communication was received at first with incredulity, which is easily understood, yet the Greek Government, through the Minister of Ecclesiastical Affairs, gave the desired permission to Demetrios Kontos, promising to give him a worthy recompense

for the finds at the end of the operations, and sent with him a special representative of the Archeological Department, as well as a small war vessel to aid as far as possible in the work of raising the antiquities.

The operations began about the middle of November, 1900, and continued till September, 1901, interrupted only for about a month at Easter, 1901. It is to be understood that because of the stormy sea in which the work was carried on the actual working days did not amount to even one-fourth of the time mentioned.

The investigation of the bottom was made by experienced sponge fishers diving in the usual way, and the hauling up of the light objects was accomplished by the ordinary tackle used in sponge fishing boats, while the heavier objects were raised by the windlass of the always-present warship.

The place where the wrecked ship lay in the sea is about eighty feet from the shore and at a depth of from twenty-five to forty fathoms. The ship, many of whose timbers the divers saw and some of which they brought up, if one may judge from these obscure indications, lies parallel to the shore, and a part of it and its cargo apparently is covered by great rocks which have fallen from the headland.

All the recovered objects were transferred to Athens and deposited in the National Museum. The find consists of marble and bronze statues and various things belonging to the ship and the service of the crew.

Of the Hermes itself the report says in part:

The statue is of a nude young man standing erect. He treads firmly on the left foot and has his right leg bent at the knee slightly to the rear. His head looks intently toward the right, following the direction of the right arm, which is bent and raised to a point a little above the head of the youth and stretched toward the right with a certain emphasis. The position of the fingers of the right hand shows beyond question that the man held in this something exactly spherical. The left arm hangs inactive at the side, but the shape of the hand shows that through it passed an object at all events of some length, which the statue bore sloping downward. The expression of the face of the youth is rather gentle. As is usually the case in ancient bronze statues, the eyes are made of different material; the iris is chestnut colored and the apple of the eye white.

"Dumb Animals" Are Out of Fashion

WE recently read a lengthy and very interesting account of the warning of young birds by their parents when danger was near. In the article was used the curious expression, "inarticulate words."

Without stopping to discuss the contradiction in terms, we wish to call attention to the fact that the idea of "dumbness" in animals is, by this time, quite out of date, and that science, piloted by Prof. Garner and others, has at last "discovered" what every farmer's lad has known since the beginning of history, viz., that animals communicate their ideas to one another by definite sounds having definite significance; which is very nearly the definition of language. It is true that their languages are very deficient where ours are most ample; in the distinguishing power of words which enable us to indicate, in addition to the nature or degree of the idea or emotion, the cause and object of it.

Nowadays it is quite permissible to speak of animals' languages, monarchies, societies, games, etc., etc., and it is known that some species have slaves, farms and domestic cattle, and they certainly commit many of the crimes and possess many of the virtues of human beings. In the presence of such facts it is merely futile to talk about "dumb" animals.

They are dumb to us in the same way, and to about the same degree, that a Chinaman or Zulu is so, merely because we cannot understand one another. But in the universal speech of emotional sounds and gestures we can understand, not only all human beings but the higher animals also. Theirs is the language of feeling as ours is of thinking. Perhaps we shall some day be able to put sufficient thought into our emotions to control, without killing them and thereby rule, without destroying, our younger brothers, the brutes. Y.

WE remember to have heard in our school days speculations from the chair of classical

erudition, as to what the ancients *could* have meant by calling the sea purple (porphureon); and even as to whether they were not color-blind!

But if the learned propounder had gone down to the shore at Point Loma at sunset, he might have seen the sea, not merely purple, but purpler than the deepest dye ever invented or the richest colors any artist could paint. And not only the sea, but the wet sand too, right up to one's very feet, as it was one evening lately. The sky was a scene of glory, passing all conception in the infinite variety of its colors and tints and the richness and vividness of their glow. The waters were purple and a golden green, and these contrasted colors were continued along the wet sand. Nature can at times impress even the gross senses and toughened perceptions of the modern man.

STUDENT

IN CHURCH

JUST in front of my pew sits a maiden—
A little brown wing on her hat,
With its touches of tropical azure,
And sheen of the sun upon that.
Through the bloom-colored pane shines a glory
By which the vast shadows are stirred,
But I pine for the spirit and splendor
That painted the wing of the bird.

The organ rolls down its great anthem;
With the soul of a song it is bleat;
But for me, I am sick for the singing
Of one little song that is spent.
The voice of the curate is gentle:
"No sparrow shall fall to the ground;"
But the poor broken wing on the bonnet
Is mocking the merciful sound.

A TYPICAL SAN DIEGO COUNTY LIVE OAK

A Sign of Fellowship in Nature

NEARLY every one has seen, and laughed at, the tense jaw and laboring tongue of a child trying to write; probably we have even found ourselves doing something very similar when engaged in some difficult task. Even animals do occasionally show some unwilling co-ordinate action but we had scarcely expected to find it in the far distant insect kingdom.

Last evening a handsome wasplike fly alighted on my paper to make its toilet, which was done with the utmost care and thoroughness. The most interesting and amusing feature of the performance was, however, the wriggling and twisting of one leg while two others were engaged in some particularly difficult part of the task. It would writhe and squirm in such a perfectly aimless way, and stop with such a sudden relief that words could not have said more plainly that the effort had required a severe strain but had been happily successful.

It was so human at times, that the observer felt the critical situation keenly, and wriggled sympathetically, especially when one desperately active antenna showed how very difficult it was to rub its back with both front legs at once. Surely such a touch of nature makes the whole world kin, and proves Emerson wrong for once when he said that there is no means of communication between the lower animals and man. N. L.

Fighting for Mercy's Sake

UNDER a fine reproduction of the picture of "Sunset on Killary Bay," Galway, Co., Ireland, which recently appeared in the NEW CENTURY PATH, is published the following interesting item. Parentheses are ours, italics theirs:

This beautiful picture, for which we are indebted to the NEW CENTURY PATH, Point Loma, is a scene very near to the home of Dick Martin, who caused the British Parliament to enact the first law in the (modern) world for the prevention of cruelty to animals. These are the facts: The first law in the (modern) world to

prevent cruelty to animals we owe to an *Irish Member of the British Parliament*. The celebrated Lord Erskine tried to get such a law, but they made so much fun of him that he backed out and gave it up. Then came into the House of Commons, from Galway, on the west coast of Ireland, *Richard Martin*, an Irish gentleman—or, as the folks called him, *Dick Martin*—and he was noted for two things. First, *he was very fond of animals*; and second, *he was known to be very much inclined to fight anybody that he thought had insulted him*. So one day he brought in a law to protect animals. Somebody made a catcall. He immediately stepped out onto the floor of the House of Commons and said very gravely that he should be very much obliged for *the name of the gentleman who had seen fit to insult him*. The gentleman didn't give his name and Martin walked back to his seat amid the House and his law became the law of Great Britain, and the *first law in the (modern) world for the prevention of cruelty to animals*.—Our Dumb Animals

Universal Brotherhood Organization

Central Office Point Loma California

TWO papers were read at the Sunday evening meeting of The Universal Brotherhood Organization at Isis Theatre. Miss Edith Wynn's paper was on "The Making of Plans," and its practical common sense was much appreciated by a good audience, as also was the admirable music rendered by the students of the Isis Conservatory.

Miss Wynn said in part: "Is it a good thing to make plans? It is the only way to command your life or shape it to your purpose.

"Either you will attempt to master your situations, or you will drift along buffeted here and there, the plaything of every wind that blows.

"That man is a creator who calls up a picture of what he would have in the future, and lets his mind dwell upon how it is to be done. Since we may be creators, shall we be content to be slaves?

"We have a vague wish to make other people happy. Then let us definitely plan tonight what we will do tomorrow to make one person happier. We must be definite; we must plan and hold ourselves to it, and determine which way we will advance the next day.

"There must be a wrong and a right way of making plans. May be we have set our hearts upon having our own way: we are going to make our home and our family just according to our own ideas; we will have our little castle of ease, where our tastes will not be offended; and our children shall be so superior that we can take a comfortable pride in our success as parents: and in our business, may be we are determined to get certain advantages for ourselves. Then it will be good for us if the Law steps in and breaks up our plans. Yet it is not always so, we may be left undisturbed in our selfish counsels and if we are using this mysterious power of the imagination, we may have wonderful success. Even criminals can use this power and it is often the secret of their success.

"It is a wonderful power man has by means of the imagination to shape the future, control events and direct the line of our progress.

"Now, when we find that we cannot depend upon having our own way, and the Power above us seems to be constantly interfering and ruining our best ideas, we may be heart-broken because of our ill success and fearful of venturing anything against the great power that seems to thwart us: shall we then give up and do nothing in the matter, just sit still and let things come? Shall we be so easily discouraged, shall we not enquire if there is a way to make plans that will prosper?

"You know we are with the Law when we are unselfish, planning for the good of others. If the Law can thwart our strongest efforts when we are working against it, how much shall we be able to accomplish when we are working on its side?

"Why, it is a positive insult to the Soul not to use the power that is ours to paint a beautiful picture in the imagination; a picture which can never become a reality until we have first planned it out in detail.

"We wonder why our civilization is commonplace. This is why: men will not exert themselves to use their imaginations rightly and bring a richness and a beauty into daily life.

"Katherine Tingley lays much stress upon the power of the imagination. There are many legitimate lines upon which we can begin to make plans. Do you want to make San Diego a great and beautiful city—picture it such. It is not difficult in this beautiful bay to imagine a city in harmony with Nature's designs. Buildings

LOMA-LAND STUDENTS AT ISIS THEATRE

Miss Edith Wynn's Address on
"The Making of Plans"—Dr. H.
Coryn on "Prehistoric Remains"

Reprinted from the San Diego News

in perfect taste and of noble workmanship, standing for a purpose and expressing *that purpose* in every part of their construction—what shall it be? We know that our buildings will not be beautiful if they are built to suit private interests and personal whims.

"Imagine we have abolished all deceit and trickery and we have no more selfish

grasping spirit in our commerce! Our citizens joyfully unite to serve with honest work. Our citizens—who are they but our own children? Plan for your children then, plan how you would have them grow day by day.

"To develop the characters of his children a man must have some knowledge of the material he has got to work with. He must study their natures and his own until the lights and shades and 'ins and outs' stand revealed to him. He must know whether his own lower tendencies are trying to hoodwink him. This knowledge of human nature comes only from the true Raja Yoga; the religious creeds and dogmas cannot give it. Ask yourself, are your children all you would have them be; if not, where lies the difficulty, in your character or in theirs? Analyze, stop and think often. And when you see more, don't get discouraged; if you find the picture all in shadow, put some high lights in with the imagination. Make a great plan for building a better character in yourself, and have ideas about what you would develop in your children. Create the picture of that which you would have just as the artist makes a picture first in his own mind."

Dr. Herbert Coryn's paper on "Prehistoric Remains," was a brief consideration of the meaning underlying the discoveries in archeology which are so rapidly multiplying upon our hands. He pointed out that "we are now forced to admit that the story of the world and of civilization is an infinitely old one and that civilization after civilization has arisen, culminated and fallen. It cannot now be contended that the civilization of the present day is the high water-mark of human progress, in face of the discoveries which have been made in ancient Egypt, in India, in Crete, in Mexico, and wherever in fact the spade of the archeologist has been at work. Not only do we there find material attainments which in many aspects are higher than our own, but we find moreover a philosophy of life under which the nations lived in relative concord, and a spirituality which solved for them the problems of life and which made impossible the accentuation of greedy selfishness which so disastrously mark the systems of today. We find too that these ancient peoples, the prehistoric races of men, were unanimous in believing that they themselves were descended from a still brighter past which they called the golden age and that humanity was destined to regain the state which they had lost. What did this universality of testimony mean, a testimony to which our hearts, our unexpressed longings lent their weight? It must surely prove that there is a law of human advance, that mankind has descended into the valley from the mountain height and will once more ascend into a purer atmosphere when the lessons have been learned and purity and unselfishness regained. Unless we could discover an universal law in human advance the problems of the past would remain forever unsolved, but if we could once succeed in breaking away from self-conceit, from prejudice and from preconceived beliefs we should not only recognize the infinite age of humanity but we should see that mankind is indeed a unity and that for untold ages it has been borne upward and onward toward an ideal, that it has never fallen except to rise again and to climb ever higher and higher toward the spiritual perfection from which it started."

IN the Homestead gardens and orchards the signs of spring have already nearly become those of summer. The peach and almond trees have been in bloom for some little time, and now the apples are beginning. The pines and loquats have light green pompons on every twig's end, contrasting prettily against the dark, solid green of last year's leaves. In fact, the fruit on the older loquat trees is nearly ripe and very properly so, because their friends, the guavas, are just beginning their annual five months' restocking, during which they grow some new twigs and leaves and prepare the fruit which will be ripe about October, or perhaps earlier. The guavas are very industrious people and when they are fairly in the swing of it produce very nearly as many fruits as leaves, and are so very accommodating that they keep the table set for birds and men nearly eight months of the year.

The strawberries are nicely in blossom, indeed, a few enterprising vines have ripened some very fine berries already. These people also have learned new habits since they came south and instead of a two or three weeks' season, they give us a constant supply for three or four months, or even longer.

The fig trees are spreading their hand-like leaves ready to start the season at the

Summer Is Nearly Here

old ratio of one leaf, one fig; and keep it up till cold weather.

The eucalyptus twigs have dressed their new leaves and tips in the family uniform of old gold, which shows very neatly against the gray green of the mature leaves.

Green peas, of course, are with us all the winter, but now the last year's bean and tomato vines are commencing new growth and intend to beat the youngsters by several weeks.

The wild flowers have had a quarrel with the weather clerk and are not doing much this year, except the old bushes which have regular arrangements, but even they are not up to par. The loco-weed is different, of course, it blooms all the time no matter what the weather does.

The mulberry orchard has a private agreement with the water pipe and seems to be profiting thereby if one may judge by the vigorous new growth and myriads of berries just setting.

And the weather is perfectly beautiful—adjectives fail—and we humans rejoice that we are not in the blizzard section which we read about in the papers.

OBSERVER

WHAT is this strange something which we call character, the mysterious force which we recognize in every one we meet when we have once succeeded in piercing the crust of convention and insincerity which we throw over ourselves? We are aware that it takes time to know a man, and that as our intimacy increases, so more and more clearly the realities of that man come into view. Then we see a substratum, a permanency, a something which does not change. We look into a shallow stream, and for a time we cannot see the bottom because of the ripples which dance in the sunlight, or darken under the cloud, or make little foam eddies as they go. We have to focus our sight and to look somewhat steadily ere we see the bottom, which almost unchangingly persists in spite of the ever changing waters which sport and play upon it. So is it with a man. We have to focus our sight upon him to see the permanency in him, to see his character; to know him.

The reality of character is a fact which faces us at every moment of our lives. It is intangible, but it is supreme. Wherever two or three men are gathered together, one among them will rule in spite of all agreements and ballots and votings to the contrary. Force of character overrides all these things, ignores them utterly. Before the throne of character all men are slaves and must obey.

We know that there is an aristocracy of character, that nature has arranged the whole of humanity into an order of merit and of command which we can in no way break.

What then is this subtle but supreme force of character to which nothing seems impossible, and which so evidently flouts at all our ideas of the fitness of things, which laughs at birth and wealth and education, and at all those other factors which we insanely suppose to be the elements of success? Whence comes it and how can we crown ourselves with this more than royal power?

First and foremost we know that character comes from within, and it is not something which we add to ourselves from without. We know that the ordinary education of the schools does not give it, because it is notorious that many of the most learned men are entirely without it, while some of the most unlearned men have carried with them such weight that the whole world has wondered at them. It is at once evident that we are born with character, born with the mint stamp upon us, born with the divine impress.

Now whether we speak of conscience or whatever other terminology we may employ, we cannot fail to be aware that far above and beyond the lower mind there is a force which is trying to influence us, which continually presents us with pictures of what we might be, pictures which are so different to the lives which we are actually living. They are pictures of honor, and of courage, pictures of strength and devotion and loyalty, of magnanimity and of self-sacrifice. We have grown accustomed to look away from these pictures and to ignore them, but nevertheless they are still there and they will always be there. They are pictures given to us by divinity, the Soul, the Christ consciousness in every man which said, "Behold I stand at the door and knock." There are some minds which have looked inwards upon these pictures and which have imitated them. There are some minds which have tried to make themselves transparent to the illumination of these pictures, and in so far as they have succeeded the light has flooded into the mind, making it beautiful like itself, transforming it so far as it has been able to penetrate.

Through many lives this inner light has been striving with the mind of man as it

What Is Character?

is striving at this moment, building up character inch by inch. Perhaps for ages it may seem to have gained nothing

because the man has encrusted his mind with thoughts of self which the light cannot penetrate. It will eventually penetrate because it is this Christ consciousness which said, "Behold I will call all men unto me." And on the other hand it may be that the man has recognized the inner urging and has done something to purify the mind so that the light of the soul may enter. Character is the impress upon the mind of the divine will which, once stamped thereon, can never again be effaced. It may have penetrated into some departments of the mind and not into others, thus following the lines of least resistance, and so we see the man whose character is strong in one direction, and weak in another. By this we can understand genius which is the flowering of character. We see a ray of blinding sunlight, an ineffable glory, upon one mountain peak, while all the rest of the mountain is in shadow.

Almost indefinitely might such reflections be extended. Far and above the boundaries of race and creed and color, beyond churches, beyond the reach of selfish prayer, we see the god behind the human mind, striving to make itself felt, and the character of every man is the high water-mark of the divine success, it is the spiritual memory of the wisdom which the Soul has given to us either in this or in some previous life. It is the god in the mind which speaks to us of courage, of endurance and of the compassion which redeems and saves, the god who knocks ever upon the inner door, waiting, waiting, through the ages of our neglect.

There was once a man who entertained angels unawares. If we too knew the glory from whence have come the sparks of even our faintest aspirations, within our hearts we would erect an altar and a shrine, and fire from the highest heavens would consume the sacrifice of our follies.

There was perhaps a time when we knew something more of the divine will than we do now. There was a time when we dwelt within a Garden of Eden, when we walked and talked with God. When we were yet little children, in the days before we rose up to greet the sins and sorrows of the world, we were full of a divine imagination which was so divine because it was so childlike. A wonderful picture stood before our child minds. It was a picture of ourselves as heroes. We would go out into the world to right all wrong, to overthrow the dragon, to rescue and to redeem. So newly had we come from divinity, so beautiful were the clouds of glory which we trailed! Have we forgotten those days when our youthfulness glorified the world, before we stained and soiled the robes of our imagination, before we turned away from the glory of a half remembered heaven, before we threw away the lingering radiance which was around us? There is no tragedy upon earth like that of a child who is being weaned from its ideals, weaned from its soul-given character, who is being taught to sharpen the tooth of self-love that it may tare and rend its way through the world. Almost we hear the shuddering of the soul, almost we hear the cry ever renewed within the sorrowful world, "Father forgive them, they know not what they do." If we would build up character we must recall those child pictures from which we were divorced, we must summon them back from the darkness into which we have plunged them. By imagination we must throw open the portals of the mind that the Soul may enter. We must summon up once more the old ideals, the pictures of ourselves which we made long since when the world was so young to us and the sky was so bright.

To Diminish Sleep

IT is stated that Theodore Mommsen slept only three hours a day during the last twenty years of his life. In spite of this narrow allowance the great German historian died at the age of 86. It would probably be correct to class sleeping and eating as two necessities which have been carried to unwarrantable excesses. It is fatally easy to exalt pleasures into virtues, or at least into needs, and only he who has bravely tried to rearrange the departments of his nature into their rightful order of priority knows how inconspicuous and submissive a position the body can be persuaded to occupy. The more intellectual is the life, the less is the sleep required by the body. The mind itself needs no sleep, and no rest except change of occupation. The weariness which comes after much intellectual effort is the fatigue of the brain which follows the unaccustomed strain which the mind has placed upon it. By continued mental exercise the brain becomes more and more capable of response, and therefore requires less and less sleep, like an engine which works with an ever-lessening friction. The effort to diminish sleep causes, of course, some inconvenience as the automatism of the body resists the change, but we can make no greater mistake than to suppose that this automatism is any index whatever to our real needs. The body will be either the master or the slave, and if it be allowed to be the master, there can be no more health—moral, mental nor physical.

Progress and Alcohol

THAT the Secretary of a State Board of Health should publicly enter into an elaborate defense of alcohol drinking is probably evidence of a desire for sensation and notoriety rather than of reflection and common sense. It is none the less unfortunate that he should so ostentatiously advertise his unfitness for a position of some responsibility. His contention appears to be that the most progressive races are the most drunken, while the passive and unprogressive nations are sober, and we are left to infer that the progress is the result of the alcohol. The education of this gentleman was doubtless extensive, although logic was presumably not a part of it. Without pausing to inquire what this State Board of Health Secretary means by "progress"—a point upon which we should hopelessly differ—we would ask what justification he can find in logic or common sense for selecting a national vice and ascribing progress to that vice instead of to the virtues which that vice has not been able entirely to destroy. He might as reasonably argue that Anglo-Saxon dominance is due to wife-beating, a crime which is said to be peculiarly prevalent in Anglo-Saxon countries. The desire for notoriety may be inextinguishable in some quarters, but it should be tempered by a sense of public responsibility.

X.

It takes many bricks of one kind to make a building. It takes much routine detail to make a useful life.

A LITTLE girl sat on the sandy beach of the Baltic, looking dreamily out over the wide sea. Westward the sun was slowly sinking below the deep blue of the water, painting the clouds golden and rose. Presently the crescent moon and a single star gleamed through the rosy sky. The child was very quiet, though her heart was filled with longing and with wishes which she had not the courage to express. Half asleep, she looked out toward the waves rolling inwards and inwards toward the shore, moaning their rhythmic song of comradeship; and it seemed to her that upon the snow-white crest of the greatest wave came floating toward her a swan. She heard a voice saying, "Heldrun, choose. Your life is lying before you. You stand at the parting of the ways."

She awakened, or it seemed to her that she awakened. The great sea had become like a vast arena, and on it she saw two pictures, one the picture of wealth, ease, luxury, gold and jewels, of carriages with liveried servants and all that the world calls pleasure. Yet the picture was cold upon her heart and she saw it pass without a regret; while another swept in like a pageant across the great arena of the Baltic. There was strife and misunderstanding and grief. It was a picture of loneliness and of pain, motives misunderstood and friends unreconciled, of children and mothers in want. It was a picture of a world that wept; yet over it shone the sun and beyond it were the sunlit heights and Heldrun saw many people and many little children looking toward her. Their eyes were sad yet they said nothing. She felt within her a call to help them.

"I will go," she said to herself. "I can help them. I will speak to them and together we will climb the heights." She beckoned. The picture was gone. The tide was rolling in and the sky was dotted with countless stars.

"Why are you not in the house, you naughty child? Run quickly, or I will tell your father. Don't you know it is nearly bedtime?" This from Kari, housekeeper for the old Norse fisherman whom Heldrun called father. He was not her father, but he loved her with all the tenderness of which a deep, though crude nature is capable. Many years ago he had found her on the shore, lashed to a spar, sobbing, but unhurt, the only survivor from some wreck; there are so many wrecks. He took her to his house and she became the light and joy of his lonely life. Some years later, when he moved into the village where no one knew him, Heldrun was believed by all to be his child and he did not care to tell any one otherwise. He was proud of her and devoted to her, and as for Heldrun she could remember no other home but his, and she herself would have been no happier for being wiser.

"Curious child," the father used to say, "I never will understand her." That morning Heldrun had gone out with him as usual to help haul in the nets. They were filled with glittering fishes.

"Father," she said, "do the fishes like to be taken up from the water?"

"Why, Heldrun," he replied, "I—I suppose so."

"Then why do they struggle?" she asked.

"Why, because they want to come up, I guess."

"Father," said Heldrun, "the water is their home."

"H'm," said the old man, "I hadn't thought of that, Heldrun, but why bother your wits, child, over questions of this kind?"

This was only one of many curious ideas that Heldrun had, for her heart was all compassion. She loved the trees, the flowers, the animals. The sick and neglected among the children of the town, appealed to her heart as no personal pleasures ever could do.

"Well, she'll outgrow this," said the old man, and he dreamed his own dreams, for he had no son and so he looked forward to seeing Heldrun married to some thrifty young fisherman, who with her would inherit the boats and the nets.

"Heldrun," he said one day, "you'll destroy your whole future with these heathen ideas."

The tears came. "Father," she said, "you don't understand."

"I don't understand *you*, Heldrun," he said, and then he added tenderly, "but you're only a child yet, dear, don't mind what I say. I don't mean to hurt you." Deep in his heart he was perplexed.

Ten years had passed and Heldrun was again sitting upon the shore of the old sea. She had grown into womanhood. It was sunset and as once before during her childhood, there had come to her the picture of the future, so, as she sat looking westward toward the sinking sun, there came before her the picture of her past. Again the old Baltic seemed to be

Heldrun's Choice

A Tale of the Baltic

transformed into a vast arena and she saw in bold relief the hardships of her life, the work, the drudgery, not alone of herself, but of the hundreds

in the little village where she lived. What could she do? She was tired—tired of it all. Her father had died. She was helping with the boats, as of old, and mending nets for the fishermen who could afford to pay for such work. More than once, some thrifty fisherman had wished to make her his wife and had offered her a home, where at least, she would be mistress of the drudgery and not its slave, but at the moment of choice, something always came into her heart which made her turn away, or which, perchance, cost her all which had promised comradeship.

Once she was caring for a little child. "You must give it up, Heldrun, if you come with me."

Heldrun wept, then she smiled. "Well, Hans, I will keep Nina; that is my duty. I cannot marry you."

At another time her help was needed by a lonely old woman, who had fallen ill and was lying uncared for in her little hut. Again did she turn away from what might have been happiness—and what might not have been. Yet every moment was filled to the brim, with the joy that comes only from service to others, the joy which in her life was checkered with sorrow because she could not do more. When others were fainting, she stood firm as a rock. When others were discouraged, she was brave. When others were weak, she was strong. The poor, the outcast, the weak, the little children and even the sinning ones of the little hamlet, turned toward Heldrun at the critical time and Heldrun never failed them. But now, that evening, she felt that the turning point had come. A young fisherman from another village had asked Heldrun to be his wife, and it seemed to her that all she had dreamed and hoped must then be realized. She believed that she loved him. He differed from those whom she knew. He was educated; had read whole books; Heldrun could not even write her name. He had traveled; Heldrun had never been out of the little village since she came there, a child. He was very rich from Heldrun's point of view; Heldrun could not have purchased a single garment for herself. He had a great business future, so the other fishermen said. What was Heldrun's future? Then, too, he played the guitar; and from notes; think of it! It had always been the desire of Heldrun's life to own a musical instrument. All the things she had been longing for, comparative ease, luxury, books, travel, music and love—all these she could have for the asking.

"Heldrun," said a voice, "what are you doing here by the shore? Dreaming again? Thinking of those stupid beggars, I'll be bound." It was he. "Now, little girl, it is time we had a plain talk. As my wife you will be quite superior to the rest of the village, and all this running about with poor people will have to stop. Heldrun, you might as well be sensible!"

Heldrun's heart fairly stood still. In the space of a moment, all her dreams became ashes. She buried her face in her hands.

"Nonsense, nonsense," he said.

"Neil, will you leave me? I wish to be alone for a moment." Whistling, the young man went away. He felt very well satisfied with himself. In a dozen villages, there could not be found a single maiden who would refuse all that he had to offer. Of that he was certain.

Heldrun silently looked out over the sea. A great feeling of gratitude came into her heart. The picture of her hardships passed by. She saw only the sunlit heights, the little children, and men and women, clasping hands and climbing beside her. Then she recalled little scenes of yesterday and the day before and the week before that, the meaning of which she did not read at the time; of the cruel laugh, when Neil found her caring for a little crippled girl; of the sneer with which he received her news of the poor old woman who had been so ill. Marriage—such marriage would mean slavery, indeed. She could do little now. But, if married, with money and ease at her command, she could do nothing, life would then be a torture. Heldrun longed for freedom and for peace.

The stars came out one by one. A great white bird floated in from the waters and circled above her head. Heldrun looked up at it and laughed, and there came before her the voice that she heard in childhood. "Heldrun; choose. You stand at the parting of the ways." She rose and stood erect. For a moment she paused as one in a dream. Then she smiled—with the sadness that is often part of deep joy. The whiteness left her face, the rose came back to her cheek. She turned and walked up the winding path with a firm light step. She had chosen. What was her choice?

The Trend of Twentieth Century Science

New and Old Ideas as to Elements and Atoms

AN address on "Elements," delivered before the American Association for the Advancement of Science, and giving a sketch of the history of speculation on this subject, as compared with modern and especially the most recent theories, gives occasion for a word on this question.

Modern conceptions of elements, atoms, or rudiments, are vitiated by the fallacious conception of the universe taken by physical science. For this cult, ignoring metaphysics and neglecting to inquire into the nature of mind and sense-perceptions, tries to solve problems which by their very nature are insoluble. Science may be on relatively sure ground so far as actual observation extends; but, when its investigations carry it beyond the reach of observation, it enters an imaginary world which is all conjecture. In this imaginary world the same laws and properties are supposed to prevail as in the world of observed phenomena. But no natural law is capable of an indefinite extension of its application; and thus fallacies arise which check any consistent conclusion.

For instance, in the attempt to analyze matter into its rudiments, the same properties as to dimension, mass, etc., which are found to prevail in the perceived world, are supposed to prevail indefinitely. Thus the atom becomes simply a very minute particle of matter; and, as there is of course no limit to the extent to which the imagination may go on subdividing and analyzing anything, the size of the atom is from time to time reduced.

But it is useless to seek for the elements of matter in matter itself, or to expect that matter will be found to be made up of matter. If there is an atom, that atom will have no single one of those material properties which are referred to the atomic structure of matter. The atom will be non-material. It must be sought elsewhere than in external nature, and by other means than the senses. The question is one for a truer Science which shall take into account Mind, and inquire into human faculty and the nature of sense-percepts and mental concepts.

H. P. Blavatsky, writing on this topic, brings together the views of some moderns, such as Leibnitz, and of many ancients, proving that, to minds not warped by geometrical fallacies, the atom was a *center of active intelligent life*. Examining our own nature, we find conscious will and intelligence underlying and directing the particles of our body; and the same is true of other material organisms. The decision to call some organisms "dead and inert," and others alive, is purely arbitrary and irrational. All the universe lives and is conscious, and the atoms are its centers of life.

STUDENT

Finger-Tip Marks to Replace the Bertillon System

THE London police have abandoned the Bertillon system for the identification of criminals, and have adopted the method of taking impressions of the finger-tips, which has been proved by Professor Galton to be absolutely infallible and conclusive. Within six months over 1700 identifications have been made by the finger-tip system, a result so remarkable as to attract the attention of United States officials. India and China have, of course, long used this method, not for the identification of criminals, but for signing documents, knowing that while handwriting can always be imitated, forgery is here impossible. But if the finger-tips are so characteristic, are not other parts of the body equally so, and may there possibly be a connection between these markings and the disposition of the individual? The data now being collected by the police ought to supply valuable evidence upon this point. It is now a commonplace of orthodox science that every thought alters the molecular arrangement of the brain and presumably of the whole body. Is there no way to bring a more minute examination to bear upon these changes with a view to their classification? Habits of thought unquestionably induce marked facial and other bodily changes. A man stamps his character upon his face and upon his carriage; but may not these changes have finer ramifications than are yet suspected? Any investigations which tend to show the power of thought are peculiarly valuable.

STUDENT

Vital Property of Springs—The Heterodox Becomes Orthodox

WHETHER there is a mysterious something, besides the dissolved chemical matters, in the water of the various medicinal springs, has long been a disputed point. The medical profession, and the chemico-scientific ranks generally, have of course laughed at the idea.

But it remained true that the same chemicals, dissolved in the same proportions in ordinary water, did not possess the same effect.

The question has now been settled by the finding of the emanations of radium in some of the hot springs, especially those of Arkansas and Bath in England. It is assumed with good reason that the strata below the point of origin of these springs contain radium in some quantity, and that to its emanations the curative powers of the springs are largely due.

Another favorite laughing stock for science was the idea that human beings are centers of peculiar radiations, indirectly under the control of will, and that, through these, men exercise some mysterious influence on each other, apart from words or direct contact. All mankind, however, outside the scientific world, instinctively knew that it was so. The N-rays of Blondlot have now become manifest, and begin to settle this point also. The whole body, with every thought and movement, radiates particles of light and electricity. It is not yet proved that these, falling upon other persons, have an influence upon their bodies, feelings or thought; but the demonstration is not far away.

Of those who maintained this in the past, Mesmer and Reichenbach are already largely vindicated; the turn of Paracelsus has yet to come. How soon will the public learn that the idea which science laughs at today is usually the orthodox truth of tomorrow?

STUDENT

Antediluvian Monsters and Prehistoric Man

GEOLGY reveals, deep down in the older strata of the earth's crust, the fossil bones of strange and huge animals, the like of which had long vanished from the earth at what we call the dawn of human history. One class was the theromorphs, immense creatures between beasts and reptiles, with their spinal bones concave at both ends, giving flexibility like a reptile, but with more or less shoulder, hips and short legs. Their remains have been found in localities as far apart as South Africa and North Russia; some, recently found near Archangel, being in the form of bones cemented together by mineral accumulations. These bones have been cleaned and pieced together. The teeth show that they were vegetarian.

Many of these four-legged amphibious creatures had the third eye, in the back of the head, developed, which is but the counterpart of a like higher sense once possessed by man and to become active in him again, but closed over during ages of materialism.

Sea-serpents sixty feet long, flying reptiles like huge bats, and birds with teeth, are among the wonders of prehistoric natural history.

Modern science does not (at date of writing) admit the existence of man on the earth along with these beasts, for it is unable to conceive of any other kind or size of man than the one we are now familiar with. Yet, as H. P. Blavatsky said, if animals can change so much, why not man also? Man existed on the earth in these remote times, but the earlier races were not so material in substance and structure as the later, and would have left no discoverable remains of their organisms.

STUDENT

NEW "rays" are being discovered every few days. M. Blondlot has ascertained that ordinary sunlight contains sets of rays which will penetrate metals, an inch oak board, and so on. Similar ones are emitted by heated silver and iron. He calls them "N" rays. Of course such discoveries will go on. And in a little while we shall be able to make a scale of octaves of light, each octave with its own peculiarities and set of properties. Says the *Scientific American*:

It seems certain that the new rays have points in common with the known rays of great wave-lengths. . . . It is probable that they are to be found among the fine octaves of the series of radiations which remain unexplored between the Rubens rays (another set) and the shortest electro-magnetic waves.

Here and There Throughout the World

Venezuelan Awards of Hague Tribunal

THE Hague Tribunal, to which the affairs of Venezuela were referred, has decided that the three nations which participated in the naval demonstration—England, Germany and Italy—are to be the first to receive payment of their debts. Venezuela has consented to set aside thirty per cent of the tariff revenues at two ports for the purpose of discharging all her obligations, and the Hague Tribunal was called upon to settle the question of the order in which these debts should be paid. Count Muravieff, the Russian Minister of Justice, was the President of the Tribunal, to which he referred as “the rampart of justice, truth and reason, and the sublime hope of the future.” So may it be.

Jewish Bribery in East End London

IN the east end of London there are twenty-seven different missions to the Jews. The *Jewish Chronicle* learns that twenty-five of these push their propaganda by means of bribery. It may well say:

It is almost incredible that enlightened men and women should set in motion such a terrible engine of demoralization and corruption. Yet the thoroughly iniquitous work is being done, and done, too, in the name of religion. In order to satisfy some theological theory as to the relationship of Judaism to Christianity, the Bishop of London is ready to acquiesce in the moral overthrow of numbers of Jewish men and women.

Is this what is meant by the hunger for saving souls?

Sven Hedin's Experiences in Thibet

SVEN HEDIN's recollections of Thibet are not encouraging to those who would travel in that land of inaccessibility. The famous traveler says:

I would rather cross the Desert of Gobi a dozen times than travel through Thibet again in winter. You travel so many miles at the cost of so many lives, men, horses and camels. It is impossible to form any conception of what it is like; it is a veritable *via dolorosa*.

It will probably be long before the personally conducted tourist party strews its inanities and faculties about the mountain ranges of Thibet. Nature has still her private places.

Very Little Child-Labor in Germany

CHILD labor in Germany is very far from being the public scandal which it has become elsewhere. None the less, a very stringent law has just come into operation restricting the extent to which children can be employed, and particularizing the employments in which they may or may not engage. No child shall work more than three hours a day during the school term, nor more than four hours a day during vacation, and no child can be employed at all without written permission from the police, who will investigate every case. This new law will be enforced without fear, favor or distinction.

No More Flogging in English Prisons

A CLOSE student of the English prison system has recently referred to the abolition of punishment by flogging. He points out that there has been no increase in the crimes for which this penalty has been abolished, but that there has been an increase in the offences for which corporal punishment is still inflicted. Those who so prominently advocate an extension of this brutal punishment would do well to acquire facts. They might then be less loquacious and more intelligent.

French Prizes for Self-Sacrifice

EVERY year the French Academy has the pleasant duty of distributing about a hundred prizes to persons in private life who have shown a disinterested spirit of self-sacrifice. In this way an annual picture is obtained of the unobtrusive virtue and goodness in which the French nation is so rich. These prizes were inaugurated by Baron de Monthyau in 1782, and their award is one of the most pleasing functions of the Academy.

English Artillery to People of Boston

LORD DENBIGH, on behalf of the Honorable Artillery Company of England, has written a letter to Colonel Sidney M. Hedges, commanding the Ancient and Honorable Artillery Company of Massachusetts, from which the following is an extract:

I am desired by the King to express to you the great gratification with which his Majesty has heard of the magnificent reception accorded to us, and his Majesty feels that the cordiality displayed by the people of Boston, and of the other important cities visited by the Honorable Artillery Company, affords a happy indication of the sympathy and friendliness which should always exist between our two countries.

Dissensions Among the Russian Jews

NUMEROUS reports speak of serious dissensions among the Russian Jews, who seem unable to combine in their common defense or to agree upon suitable united action. Without knowing anything of the merits of this particular dispute, it is none the less evident that nearly all the reform movements of the world are hindered and hampered by the inability of men to agree among themselves and to relegate their personalities to their due position. The true tyrannies of the world are after all within ourselves. Exterior tyrannies would be powerless but for the allies which they find in our own selfishness.

Much Cruelty in the German Army

DURING the year ending in June, 1903, no less than twenty officers and 577 non-commissioned officers of the German army have been punished for cruelty to their men, in some instances the cruelty being too revolting for public description. Other European armies are said to be also tainted with similar cruelties. And yet we hear laments that the standard of patriotism in these armies is not so high as it used to be. We should suppose that the patriotism which could survive, for example, the scrubbing of the naked body with a scrubbing-brush must be of a very robust order and not likely to be often found.

Chinese Newspaper 1,000 Years Old

A NEWSPAPER which has been published regularly for nearly a thousand years is undoubtedly one of the curiosities of the world, and its back numbers should certainly be interesting reading. The *Pekin Gazette* was established during the Ninth century and began its regular appearance soon afterwards. It now belongs to the army of dailies and is edited by six members of the Chinese Academy. Such a record as this is likely to produce a feeling of juvenility among modern newspapers. That it should produce a sense of humility is perhaps too much to expect.

Filial Reverence in China and Japan

A FILIAL reverence for parents is perhaps the supreme of all virtues both in Japan and in China, and our missionaries to both these countries might perhaps rest from their customary labors sufficiently to get for us some details as to the way in which these lessons are inculcated. They might also incidentally, and time permitting, ascertain Chinese and Japanese opinions as to the duties of parents toward their children for we believe that to this point also some attention has been successfully given in both countries. Startling as it may seem we might learn something.

Japanese Soldiers Eat No Flesh

It is reported that the Japanese Government has declined all tenders for the supply of tinned meats for the army on the ground that the soldiers do not eat meat. An European officer in the Japanese service recently persuaded his men to eat meat while upon arduous service, but he speedily received a petition to discontinue this diet upon the ground that it exhausted the strength of the soldiers and made them unfit for the duties required of them. Rice is the principal diet of the Japanese army, and this is occasionally varied by a little fish.

THE CHILDREN'S HOUR

Kathleen's Music

"I WOULD like to compose music," remarked Kathleen, "beautiful music, the same as I sometimes hear in dreams."

Susie nodded her head thoughtfully, "I think you will, Kathleen, some day," said she.

"I think so too," agreed Muriel. "Meg," she continued, "once knew a little girl called Freda, who loved music very much, but she wouldn't practice nor study. She told her mother and her teacher that the notes on the pages of the music books were flat and empty. But, as they couldn't understand what she meant, they decided she was wilful and naughty. Meg said Freda herself didn't quite understand. But one day when she was thinking about the tones of people's voices, she imagined how wonderful it would be if only *beautiful* sounds were spoken. After that she began to listen for the tone of her own voice. And she imagined that thoughts must have tones, too.

"Very soon she was pretty sure they had, because she could hear that the naughty, selfish ones, sounded harsh and discordant, when spoken, and the joyous, unselfish ones, thrilled her with their bell-like beauty. And then it seemed as though she could hear melodies, very faintly—and that made her wish she had studied music.

"But she didn't stop to waste time in wishing; she just began to study, and learned so rapidly that every one was surprised. And the last time Meg heard about her, she had composed a beautiful little melody. Meg said Freda was sure to succeed in anything she tried, because whatever she tried to do, she never gave up or became discouraged, but fought obstacles like a Raja Yoga Warrior." A. P. D.

A Real Hero

DEAR CHILDREN: A friend writes me of a little hero only nine years old who was one of a number of ocean castaways who have just reached London. This boy, with his mother and father and little sister, were on the steamer *Cygnets*, which caught fire in mid-ocean and sank. The passengers were put adrift in a boat without wraps and with almost no food. The first night it was very cold, and one of the sailors took off his coat and wrapped it round little Edward, who was sleeping fitfully on a tarpaulin. An hour later the sailor saw that the child had awakened, taken off his coat and wrapped it carefully around his baby sister, four years old. For five days and nights they drifted in terrible distress, and all were ill and nearly freezing when finally picked up by a passing boat. That was real heroism, and yet how in the world could Edward have done anything else? When you stop to think about it, it's a great deal harder to be selfish than to be unselfish, isn't it?

UNCLE FRED

It will soon be flowertime in Loma-land for the winter rains are nearly over. Already the beautiful purple Yerba Santa is in blossom and before long the hills themselves will be covered with flowers.

From Swedish Children

DEAR CHILDREN: The following letter was recently received by the Lotus Mother from a little ten-year-old boy in Sweden. It is written in English, for this language, as perhaps you know, is studied in classes in the Lotus Groups in that land. What an outlook this is for the wonderful work that is waiting to be done for Brotherhood—and *you* will share in the doing of it! Isn't that an inspiring thought? How many of you can write in another language?

DEAR MRS. TINGLEY: I have not written you for a long time, because I think you have so much to do, but now it is nearly Christmas-time and I will write a few lines to wish you a good Christmas and a happy New Year. Mr. ——— told us in his last letter that you had recovered from your last illness. That makes us happy. He also said it was a pleasure to live in Loma-land. For me it is a pleasure to go to the Lotus Group. I have to thank you for *The Little Philosophers*, which we are performing in our Group, December 30th. I like it so much. There are many grand thoughts in it. I would be glad if you would accept a photograph of my little sister and brother and me. I hope you will soon come here to us in Sweden. Your little friend, S. N.

Members of one of the Stockholm Lotus Groups

NORSE LULLABY

THE sky is dark and the hills are white
As the Storm-King speeds from the north tonight,
And this is the song the Storm-King sings,
As over the world his cloak he flings:
"Sleep, sleep, little one, sleep;"
He rustles his wings and gruffly sings:
"Sleep, little one, sleep."

On yonder mountain-side a vine
Clings at the foot of a mother pine;
The tree bends over the trembling thing,
And only the vine can hear her sing:
"Sleep, sleep, little one, sleep;
What shall you fear when I am here?
Sleep, little one, sleep."

The King may sing in his bitter fight,
The tree may croon to the vine tonight,
But the little snowflake at my breast
Liketh the song I sing the best—
Sleep, sleep, little one, sleep;
Weary thou art, anext my heart,
Sleep, little one, sleep.

A Dog's Gratitude

OLIVE Thorne Miller, who has led so many children, and grown-ups, too, all over the world, to appreciate "our little winged brothers of the air," tells us an interesting story of a dog—and the story is a true one. This dog belonged to an old Colonial family, and was particularly noted for his hatred of Indians. On one campaign against the French he insisted on accompanying his master, and his foot became terribly injured from the long tramps. During the fight which ended in Braddock's defeat—you can read about that in your history, you know—he became separated from his master, who went home, supposing him killed. Some weeks later the dog appeared, tired and worn out, but his feet were well, and on them he was wearing little soft moccasins. His master knew that he had been with Indians and they had been kind to him, although they knew he belonged to their enemy. The dog must have known it, too, because after that nothing would induce him to track or injure an Indian. E.

JAPANESE children have a funny little game which they call "the game of perfumes." It consists in burning various perfumes and then guessing "which is which" by the scent of the smoke—not an easy mat-

ter sometimes. They also have a fascinating game of cards, not like our cards, but each one bearing quotations. The game consists in drawing a card with one-half of the quotation and then finding the other half. As to dolls, they devote a special festival day to their dolls, for a doll is, in Japan, as much a boy's plaything as a girl's. The dolls of Japanese boys are generally dressed to represent historical heroes, or as heroic and legendary figures. Great favorites among dolls are those dressed to represent the Emperor and Empress and the great statesmen of Japan. A. W. H.

Path

HOW DID YOU DIE?

DID you tackle that trouble that came to you
 With a resolute heart and cheerful?
 Or hide your face from the light of day,
 With a craven soul, and fearful?
 Oh, a trouble's a ton, or a trouble's an ounce,
 Or a trouble is what you make it;
 And it isn't the fact that you're hurt that counts,
 But only how did you take it?
 You are beaten to earth? Well, well, what's that?
 Come up with a smiling face,
 It's nothing against you to fall down fat,
 But to lie there---that's disgrace.
 The harder you're thrown, why the higher you bounce;
 Be proud of your blackened eye!
 It isn't the fact that you're licked that counts;
 It's how did you fight---and why?
 And though you be done to the death, what then?
 If you battled the best you could,
 If you played your part in the world of men,
 Why, the critic will call it good.
 Death comes with a crawl, or comes with a pounce,
 And whether he's slow or spry,
 It isn't the fact that you're dead that counts,
 But only how did you die?

—Saturday Evening Post

The Religion of Lincoln

THE Rev. Herbert S. Bigelow of Cincinnati, has preached a sermon upon the religion of Abraham Lincoln, of which the following is an extract: "No doubt it is fortunate for the world that the one paper in which Lincoln dealt with the subject was burned by a prudent friend. It appears he profited by his friend's advice, and determined to take no chance in destroying his usefulness in politics by making enemies in religion. In this respect he presents a striking contrast to Jefferson, though it is conceivable that if Lincoln had had any positive and earnest convictions on this subject, he would not have been less outspoken.

"Mrs. Lincoln has said that,

His only philosophy was what is to be will be, and no prayers of ours can reverse the decree.

"One of his law partners has said:

He was an avowed and open infidel; and sometimes bordered on atheism.

"Without the exceptional opportunity for knowing the truth which this witness had, we may safely reject his testimony, unless these names are to be hurled indiscriminately at any man who rejects orthodox standards. Mr. Lincoln was certainly neither infidel nor atheist. No doubt he held views which would have been branded as infidelity and atheism by the pious mob. So also have some of the most deeply religious men that ever lived.

He's true to God who's true to man.

"Measured by this standard you cannot make Lincoln out an infidel. A man cannot prove his fidelity to man and at the same time be an infidel toward God.

"Justice David Davis has said:

He had no faith in the Christian sense of the term—had faith in laws, principles, causes and effects.

"Especially did Lincoln believe in the morality of the universe:

Those who deny freedom to others deserve it not for themselves, and under a just God cannot long retain it.

"That could not have come from the heart of an atheist. That senti-

ment might have come from the heart of a man who was believed to be an atheist, or who called himself one. But the belief that this universe is so constructed that injustice will not work—that belief is the very core of any genuine faith in God.

"Once after granting a pardon which saved the life of a soldier, Lincoln turned to a friend and said:

Say of me that I plucked a thorn and planted a flower, wherever I thought a flower would grow.

"Measured by the standards of the church he was a heretic. Yet his glowing faith in humanity and the right is like a pillar of fire, still leading us, as by the hand of God, out of the house of bondage."

"Fantastic Ideas of Ancients"

One tenet held in common by all these philosophers [the Ionic philosophers, 600 years B. C.], was that matter and mind were inseparable; or, in other words, that all matter is animate. They never thought of the soul as something distinct and separable from matter, as we do. . . . This conception of matter as being alive will help us to understand Greek mythology which, it will be remembered, endowed trees, rivers, springs, clouds, the planets, all physical objects indeed, with intelligence and will.—Myers, *Ancient History*

THE above is a good example of the difference between some ancient ways of thinking and our modern ways, and also of the point of view from which most modern writers regard such ideas of the ancients. The great mistake made by modern philosophers is in mistaking abstractions for realities. The universe is analyzed, for the sake of argument and reasoning, into various abstractions, such as body, soul, life, matter; and afterwards it is forgotten that these are only abstract ideas—mental categories—and people come to speak of them as realities.

Thus, we take a live man and analyze him (for purposes of reasoning), into a body and a soul. Then, in process of time, we become so familiar with the words body and soul that we allow ourselves to think of the body as being a separate thing, able to exist apart, and of the soul as a living something that is inserted into the body. Thus, instead of one real being we get two abstractions, which accounts for the confusion of thought when we treat these abstractions as realities and try to explain them.

The same historical writer also speaks of the sun as being a god, according to some philosophers, while others taught that it was a mass of solid substance like our earth; and it appears to him as if these two notions contradicted each other. But we do not see why a god should not have a body, or outer garb, or physical manifestation; nor why a terrestrial globe should not be informed with intelligence and life just as other parts of nature are.

It is a familiar saying that a drunken man will imagine sober people to be drunk and he himself to be sober. In the same way modern theorists accuse the ancients of being fanciful, while there can be nothing more fanciful and impracticable than their own theories. To say that the world is a great Soul means something, for we know by our own experience what a soul is. But to say that the world is atoms or matter or force, or any of those things, is mere words. However, the age is so wedded to this kind of abstract reasoning that it is practically impossible to disabuse it, until urgent necessity compels people to adopt some view of life that can avail to keep the human race alive and well, which is not the case with any of our "enlightened modern ideas." STUDENT

SORROWS

by HENRY S. SUTTON

THE flowers live by the tears that fall
 From the sad face of the skies,
 And life would have no joys at all
 Were there no watery eyes.

Love thou thy sorrow, grief shall bring
 Its own excuse in after years;
 The rainbow---see how fair a thing
 God hath built up from tears.

GENTLENESS and cheerfulness, these come before all morality; they are the perfect duties. . . . If your morals make you dreary depend upon it they are wrong. I do not say 'give them up' for they may be all the morals you have, but conceal them like vices lest they should spoil the lives of better and simpler people.—R. L. Stevenson

THOU ETERNAL ONE

The following Ode was written many years ago by the Russian poet DERZHAVIN. At this time it is of special interest, for in the past it served as a link between the two nations that then were in sympathy, Russia and Japan. Many years ago the Emperor of Japan had the Ode translated into Japanese, embroidered in gold and hung in the Temple of Yeddo. A Chinese version was also at one time hung in the Emperor's palace in Peking. The following verses are from the English translation by Sir JOHN BOWRING:

O THOU Eternal One! whose presence bright
All space doth occupy---all motion guide:
Unchanged through Time's all-everlasting flight.
Thou only God; there is no God beside.
Being above all beings! Mighty One!
Whom none can comprehend and none explore;
Embracing all---supporting---ruling o'er
Being whom we call God---and know no more!

Thou art! directing, guiding all. Thou art!
Direct my understanding then, to Thee!
Control my spirit, guide my wandering heart:
Though but an atom 'midst immensity,
Still I am something fashioned by Thy hand;
I hold a middle rank 'twixt heaven and earth.
On the last verge of mortal being stand,
Close to the realms where angels have their birth,
Just on the boundaries of the spirit land.

O thought ineffable! O visions blest!
Though worthless are conceptions all of Thee---
Yet shall Thy shadowed image fill our breast,
And waft its homage to Thy Deity.
God! thus alone my lowly thoughts can soar,
Thus seek Thy presence---Being wise and good---
'Midst Thy vast works admire, obey, adore!
And when the tongue is eloquent no more,
The Soul shall speak in tears of gratitude.

Question Do the Theosophists believe in heredity?

Answer (4) In the answer to this question in last issue an extract was given from W. Q. Judge's writings. The following is a continuation of the extract which throws further light upon the subject:

Again, those who dwell on the objection from heredity forget that they are accentuating similarities and overlooking divergencies. For while investigations on the line of heredity have recorded many transmitted traits, they have not done so in respect to divergences from heredity vastly greater in number. Every mother knows that the children of a family are as different in character as the fingers on one hand—they are all from the same parents, but all vary in character and capacity.

But heredity as the great rule and as a complete explanation is absolutely overthrown by history, which shows no constant transmission of learning, power and capacity. For instance, in the case of the ancient Egyptians long gone and their line of transmission shattered, we have no transmission to their descendants. If physical heredity settles the question of character, how has the great Egyptian character been lost? The same question holds in respect to other ancient and extinct nations. And taking an individual illustration we have the great musician Bach, whose direct descendants showed a decrease in musical ability leading to its final disappearance from the family stock. But Theosophy teaches that in both of these instances—as in all like them—the real capacity and ability have only disappeared from a family and national body, but are retained in the Egos who once exhibited them, being now incarnated in some other nation and family of the present time.

Suffering comes to nearly all men, and a great many live lives of sorrow from the cradle to the grave, so it is objected that Reincarnation is unjust because we suffer for the wrong done by some other person in another life. This objection is based on the false notion that the person in the other life was some one else. But in every life it is the same person. When we come again we do not take up the body of some one else, nor another's deeds, but are like an actor who plays many parts, the same actor inside though the costumes and the lines recited differ in each new play. Shakespeare was right in saying that life is a play, for the great life of the soul is a drama, and each new life and rebirth another act in which we assume another part and put on a new dress, but all through it we are the self-same person. So instead of its being unjust, it is perfect justice, and in no other manner could justice be preserved.

It will thus be seen that Theosophists do believe in heredity, and that

Theosophy gives an explanation of it. Heretofore, although heredity was advanced as an explanation of the recurrence of traits and types, it only partially answered the problem and itself needed explaining, but no explanation was forthcoming. In the light of Theosophy, it is seen that heredity is one of the means which the soul uses in gaining experience; it is a method by which it can take up those traits and characteristics which belong to it. But, because the soul is greater than heredity, it can—working with the law of its own being and if its progress demands it—override the natural tendency to transmit traits and characteristics from parent to offspring and so produce what are called exceptions to heredity. In such case it must be that the Ego or Soul incarnates in such a family to gain other experience than that of transmitted traits, it may be to learn lessons which only association with the members of that family can give and which must be in accordance with its own Karma and that of the family.

Through Theosophy and its teaching of Reincarnation and Karma, a new meaning is given to heredity and to the whole of life. Heredity is found to be neither an iron-bound rule nor a capricious method, but to be an aid to the soul's development and yet subservient to the same; and an explanation is found both for the facts of heredity and the exceptions thereto.

A Moslem Legend

IN passing one day by a very ancient and extremely populous city, I asked one of the inhabitants, "Who founded this city?" He replied to me, "I do not know; and our ancestors knew no more than we." Five hundred years afterward, passing by the same place, I could not perceive a trace of that city. I inquired of a peasant when was the city destroyed. He answered, "How odd is your question! This country has never been otherwise than as you see it now."

After another five hundred years I passed again by that place. The country was no longer visible; over it stretched an open sea. I asked of the fisherman how long since their country became a sea. They replied that a person like me should know that the sea had always been where now I saw it.

I came again that way after another five hundred years. The sea had vanished, and there was only dry land. No one knew what had become of the sea, or indeed that ever it had been there.

Finally, after another five hundred years, I returned again. There was a mighty city, and its people told me that its origin was lost in the night of time.—*Mohammed Kaswini.*

A Strong Head Needs a Clean Heart

A WRITER in a prominent daily paper quotes the plea of Senator Quarles for more brain cultivation in the rising generation and in comment says that the trend of modern education is to make its devotees "mentally rich but emotionally poor," which he deplores but scarcely refers to the still greater need of a *moral* training to balance the other and guide it in the path of righteousness.

Mental cultivation and "feelings" without any sufficient guiding moral principle have filled the land with criminals, legalized swindlers, materialistic theorizers, monomaniac reformers, shallow sentimentalists, and religious fanatics.

We want all the mental strength and education, and all the emotional fineness of feeling possible provided that it be controlled by moral principle sufficiently strong to transmute mentality into sublime common-sense and emotionalism into compassionate, sympathetic helpfulness. The writer quoted is correct in saying that feeling is the impelling, and thought the executive force, but he forgot to add that moral principle is the pilot which wrecks or saves the whole.

STUDENT

It is all very fine to talk about tramps and morality. Six hours of police surveillance (such as I have had) or one brutal rejection from an inn door changes your views upon the subject like a course of lectures. As long as you are in the upper regions with all the world bowing to you as you go, social arrangements have a very handsome appearance; but once get under the wheels and you wish society were at the devil. I will give most respectable men a fortnight of such a life and then I will offer them twopence for what remains of their morality.—*R. L. Stevenson*

How to Improve Memory

AMONG a multiplicity of systems for strengthening the memory, we might well find place for some method of forgetting. We often find those who are somewhat noisy in lamenting a bad memory, but who were yet never known to forget an injury, who never forget the failings and misdemeanors of a neighbor, whose memories never relinquish the disagreeable shadows which have fallen upon their lives. What we need is not so much an all-round improvement of memory as its regulation and equilibrium. We ought to endow our memories with discrimination, we need to relax their tenacity in some directions and to increase it in others. In matters of personal injury, of wounded self-love, of ungratified pride, the grasp of memory becomes like that of an octopus. Its thousand tentacles never relax their hold. We remember the slights of years long passed, but the benefits we have forgotten. We unforgettingly recollect the weaknesses of another, sometimes such harmless weaknesses, but the strength, the beauty and the magnanimity of that other we have forgotten.

So true is it that "the evil that men do lives after them, the good is oft interred with their bones." It is from our memories, so fatally tenacious, that the evils derive their baleful vitality. How seldom, too, do we recognize that these remembered evils have grown with the passage of time until they bear but slight resemblance to the fact. We have carried with us the burden of resentment until it is almost more than we can bear, we have surrounded ourselves with an atmosphere of ill-will from which no one suffers so much as we do ourselves.

Perhaps the most unfailing of all remedies for a bad memory lies within ourselves. There is yet abundant space in our memories for all our legitimate, healthful needs if we would but throw away the rubbish, if we would but sort out everything which is hurtful and bar the doors of our minds resolutely against its readmission. We should feel then as though we had dropped a weary burden which we had been so uselessly and painfully carrying. Certain it is that the sun would shine for us with a new and more gracious light, the past would be only beautiful and the future would be only hopeful. Let the preparatory step to an improvement of our memories be a much needed act of oblivion. STUDENT

GENTLENESS and non-obtrusiveness shed an influence as powerful as they are imperceptible.

He who makes ill-health an excuse for an irritable disposition is, often, the one whose irritable disposition is the cause of his ill-health.

Neglecting the Bible

AN university professor, who is also a clergyman, has taken his congregation severely to task for their neglect of the Bible. He said:

I ask of you, "Do you know the book containing your belief?" You would take up arms and sacrifice life for it. You would cast out the man who believes not in it. But do you know it?

You feel guilty if you are asked if you have read some of the current authors and you must confess, apologetically, that you have not. Did it ever occur to you that you have read nothing, or such an insignificant part, of the book which you profess by being a Christian to be the light of your life and the guide for your effort? If there are untruths in the Bible it is pretty near time that we should know them. The Bible should be submitted to literary criticism.

If these were the opinions of the churches in general the Bible would be much more widely read than at present. It is of course unfortunate that any one pretending to intelligence should neglect such a storehouse of good things and such a literary classic as the Bible. He who has not read, for example, the thirty-eighth chapter of Job, does not know the possibilities of the English language, but the fault is with the pulpit and not with the pew.

We have grown so accustomed to associate the Bible with its senseless and dogmatic interpretations that they are almost indissolubly connected in the popular mind. If it were possible for us to examine the Scriptures from the standpoint of one who was opening its pages for the first time we should be bewildered and perplexed at its utter dissimilarity to what is usually called Christianity. But how many are able to do this?

How many are able to read the Bible with the same practical common sense which they would bring to bear upon a current periodical? It is very certain that if we were to import the same prejudices, and preconceived ideas and superstitions into the perusal of our business papers as we do into the reading of the Bible, we should soon be as insolvent pecuniarily as we now are spiritually. It is not erudition which we need so much as that rare and mysterious faculty which, for some inscrutable reason, we call common sense. STUDENT

If for one instant the Supreme Spirit should relax, the universe would dissolve. Eternal vigilance is the law of existence.

MANY times the climber thinks the heights are reached, but finds there are others just beyond; and yet, at last, the top is reached.

He who planneth not for his good deeds does not increase greatly in them; but he who doeth all his good deeds in the future, doeth them not at all.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Observations taken at 8 a. m. Pacific Time

Wisdom is achemy. Else it could not be wisdom. This is its unfailing characteristic, that "it finds good in everything," that it renders all things more precious. In this respect, also, does it renew the spirit of childhood within us; while foolishness hardens our hearts and narrows our thoughts, it makes us feel a childlike curiosity and a childlike interest about all things. Hence nothing can be further from true wisdom than the mask of it assumed by men of the world, who affect a cold indifference about whatever does not belong to their own immediate circle of interests or pleasures.—J. C. Hare, in *Great Thoughts*

"Now, children," said the teacher, "let us see what you remember about the animal kingdom and the domestic animals that belong to it. You have named all the domestic animals but one. Who can tell me what that one is? It has bristly hair, likes dirt, and is fond of getting into the mud." Miss Fanny looked expectantly around the room. "Can't you think, Tommy?" she asked, encouragingly.

"Yes'm," was the shame-faced reply. "It's me."—*Tit-Bits*

Will Not Be Saved by Intellect

ONE of the favorite literary amusements of the day is to forecast the progress of humanity and to paint a picture of the world as we suppose that it will be after a certain lapse of time. These forecasts are popular to the extent to which they flatter. They assume that we are already entirely upon the right road, and that we need but a little more speed, a little more directness, a little more dexterity, to reach the Elysian Fields which a scientific and political materialism offers to us in exchange for our complaisant and ill-placed confidence. With most of these anticipations we feel ourselves to be in very sharp conflict. We do not believe that the millennium will dawn in the laboratory of

the chemist, or that the intellect of the statesman will abolish either crime or pauperism; nor do we believe that dexterity is a good substitute for conscience. The evils of our social systems have not been imposed upon us by an exterior fate, nor by a will other than our own. We are not at all in the position of the good man who struggles bravely against adversity. Our troubles are not due to a want of intellectual thought, and therefore to be remedied by an increase of such thought; nor are they to be compared to the initial faults of a machine which can be cured by adjusting a screw here and a bolt there. We are not suffering from a lack

Too Much Tinkering on the Surface

of legislative skill, but from a want of national heart. It is not administrative ability that we need so much as a warm and living fraternity. Our social systems are the exact correspondences, the material expressions of our moral condition, and they are created by that condition. If they are cruel, it is because we ourselves are cruel; if they are apathetic, or saturated with caste prejudice and avarice, it is because we ourselves have fashioned them unfraternally and in our own image of greed. Of what use then can it be to continually tinker with the external mechanism of our social system so long as the unfraternal minds which created it and which are now creating the systems of the future seem resolutely bent upon perpetuating the soil upon which nothing but social calamities can grow? True legislative and administrative reform will be born from an extended sense of fraternity and from nothing else. It will be an expression of an awakening compassion among an increasingly large number of unselfish individuals, and as such it will redeem. Must we not say of much of the legislation of today that it is an expression of an ever more intellectual selfishness, and that it can therefore have no other result than to intensify and to perpetuate? The effects of legislation always correspond with the national motives which

National Fraternity the Need

called it forth, and by no possible intellectual power or skill can a real reform spring from a selfish motive. How the change will occur from national selfishness to national fraternity, how it is even now occurring, we need not at the moment pause to inquire. That such changes have happened in the past is not the less indisputable because they are ordinarily unexplained. There is a vast consciousness in nature which sometimes, and in obedience to cyclic law, invades the human mind, driving forth old ideas and illuminating it with a new wisdom and purpose. Sometimes we have called this a religious revival, sometimes it has taken the form of a passion for liberty, sometimes it has blazed forth as a renaissance of art and literature. The diamond of the Soul has many facets, and its light is periodically poured into the national mind along the lines of least resistance. These abnormal and divine invasions of the national consciousness have always been preceded by unrest, by expectancy, by a rending and breaking of the mental fetters which we have hugged until they seem to be a part of ourselves. All these signs stand today before our eyes, and we mistake for the portents of disaster what are actually the promises of a new life. Of the nature of the change which is impending we need be in little doubt, because the

Life Shaped by Inward & Divine Ideal

tide is already flowing and its waters are the waters of fraternity and compassion. In the days which are at hand men will shape their lives by an inward and divine ideal instead of by an outward and selfish and calculating expediency; and this will be achieved by the growing number of those who will rearrange their own lives under the divine will and no longer under the personal will. The force which created the social systems of today and which energized them is the force of intellect alone, and not very much of that. The force which must recreate those systems and reenergize them is the force of the Soul, which will give dominance to precisely those sets of motives which are now assumed to be theoretical and unpractical. Not till then shall we find that "remedial legislation" results in remedies, and national conscience and fraternity will find natural expression in the enactments of national will.

STUDENT

Irish Village Life—Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week represents a village scene in the south of Ireland, and may be compared with a somewhat similar view which we published a few weeks ago. Irish village life has a charm as peculiarly its own as that of the natural scenery among which it exists.

Reformers of the World

IT is not the will of nature that the reformers of the world should constitute a caste, that they should be set apart as possessing faculties or abilities not attainable by the many. Some of course there must always be, who pursue some one defined aim with the special powers which are theirs alone. The artist, the poet or the statesman may bend their specialized energies in one direction only, they may dedicate their peculiar strength to the service of men, but because their position is thus a prominent one the work of all others is no less effective. Indeed we may well believe that those who must the most participate in the struggle for existence have opportunities which are all their own. They are so close to the tense strings of our social life that they can the more easily transfer to them whatever melody they may arouse in their own hearts.

The most wonderful of all powers of reform is that of compassion. By it we enlist the gods upon our side and become unconquerable. By compassion we throw the blindness from our eyes and see the rivers of life which ripple in the sunshine and darkens in the shade. The heart which is open to give is open also to receive, and we realize the divine ownership which we exercise over all force. Truly we possess nothing but what we have given to another and he who gives all possesses all.

The saviors of the world have appealed always to the common people of the world. Our redemption must come not immediately from the few but from the many, it must come from the compassion which enters into the heart of the common man, the wayfarer, the toiler. The world will not be saved by its great minds. We may worship intellect and buy for it the choicest fruits of mental attainment, we may reward it with money and make of it a caste and its possessors may be for us a people apart. But nature has a more kingly precedence than this and the tree upon which her choicest fruits are set is so near the ground that there is no one amongst the sons of men too lowly or too poor to pick and eat. Nature's secrets are so profound only because they are so simple; she guards her treasures by placing them within the sight of all. Her wisdom is so difficult that only children can understand it, and her commands are so hard that only children can obey.

When compassion enters into the hearts of the common people, into the hearts of the sons of toil and strife, then shall they take by the hand the learned and the rich and those who sit in high places, and shall show them and lead them into the Kingdom of Heaven. Then the promised benediction shall come unto the poor, and the inheritance of the earth shall be theirs.

STUDENT

The Decline of Religious Newspapers

DR. J. M. WHITON of New York has been writing on the subject of "Religious Life in America," and with special reference to the decline of the religious newspaper. He naturally asks what is a religious newspaper and he finds that the noisily lamented decline applies only to denominational newspapers, that is to say to the newspapers which devote themselves to the advocacy of specific creeds and systems. Dr. Whiton points out that the world at large is revising its ideas of religion and that it is applying the same tests to the religious newspaper as it does to the religious man. Conduct on religious principles being the mark of the really religious man, the same criterion must mark the really religious journal, even in what is still styled the secular press.

Not he that repeateth the Name,
But he that doeth the Will.

The conduct of a newspaper is then the index to its religious or irreligious character. If its conduct is such as to make the world a better place to live in, it is a religious paper. If, on the other hand, it promotes discord, sectarianism and strife it is an irreligious newspaper no matter by what name it may be called.

STUDENT

Relics of Old Days

THE vaults of a certain old established London bank contain the materials for some romantic stories, in the shape of a considerable number of chests, some of which were placed there for safe keeping during the days of the French Revolution and have never since been claimed. Presumably their owners brought them to England and were then so indiscreet as to return to their own country and so to be swallowed up in the Reign of Terror. These chests have never been opened and their contents are therefore entirely unknown.

X.

Babism

THE religious system known in the oriental world as Babism deserves to be better known than it is by these who are interested in the cause of religious liberty and religious reform. Briefly speaking, Babism is a Muslim heresy originated about fifty years ago by a young Persian named Abbas Effendi, who announced himself as the spokesman of some spiritually exalted personages behind the scenes. Its object was to restore religion to its original purity and to make it a living and elevating power in the lives of men. Babism was to be no new religion. It appealed to all faiths alike but it invited its followers by no means to leave their own religion, but rather to enquire into its source in order that its purity might be restored and in order that men might recognize the essential unity underlying all systems. Abbas Effendi and his followers were of course persecuted—frightfully persecuted—*cela va sans dire*. The western historian of Babism, Myron H. Phelps, says:

An era of bloody and relentless persecution followed, which has, not, perhaps, been paralleled in history. Singly and by hundreds the Babis were hunted down and slaughtered. One's heart thrills with emotion, one's conception of the noble possibilities of human nature expands as one reads of the splendid and unflinching heroism of the Babis in the cause of their faith.

Persecution bore its inevitable fruit. Babism increased by leaps and bounds and is today, after these few years, one of the most powerful of oriental religious forces. And yet it contains nothing novel and nothing startling—except much of that mysterious and rare faculty which we are pleased to call common sense. Babism teaches that the whole of visible creation is a manifestation of God and that man himself is an incarnated God striving for expression through the veils of self-love. There are various degrees of union with the God within, the highest illustrations of such union being found in the great historic saviors of the world. To such attitude all men might climb and it is upon this path of ascension that the feet of the whole human race are placed. Advance can alone be made by the exercise of sublime virtue, the eradication of revenge and hate and greed, the tranquil endurance of all fate that may await the devotee. The followers of Babism evidently practiced what they taught; hence their success.

STUDENT

A Navajo Blanket

A GENUINE Navajo blanket would be an object of even greater value than it is today had we but the imagination to understand the mental pictures which it carries. To the Indian squaw who made that blanket it was a prayer in form and color. Every pattern and every tint had a meaning. Color to her was something more than color is to us. It was the true correspondence of a hope or of a fear, of an aspiration or of a sorrow. Let us call it a superstition if we will, although even upon this point modern science may yet have something to say. That blanket none the less represents the heart of a human being and not a mere untutored fancy in shape and color. That blanket is as eloquent to all other Indian squaws, is as clearly read by all others, as is the printed page by us, and perhaps the natural forces of color and form are more readily chargeable with the freight of human meaning than even the written or printed word. To learn to read the story of a Navajo blanket is not a labor lost, although there may be many who have not yet reached the point of perception where this can be successfully done.

STUDENT

Be always on guard. A ship is never left without some one at the wheel.

The spider's web isn't the only mesh in the world.

More Heresy Trouble

DR. J. M. WHITON writes somewhat caustically upon the prosecution for heresy of Professor Bowne of the Boston University. He says that this is not to be regarded as a sign of a backward tendency but rather as a "stand in the last ditch." We do not wish to quarrel about terms but we are sincerely glad that these grand inquisitors are not able to inflict legal pains and penalties upon their victims. To be prosecuted for heresy is of course a diploma of intelligence and of courage, as it always has been, and these modern *autos da fe* destroy the persecutors but not the persecuted. Dr. Whiton's description of these people as standing in a ditch is perhaps not inappropriate and it will probably commend itself to thoughtful people.

STUDENT

Some Views on XXth Century Problems

Lack of Human Interest in Heaven

THE reason why people do not go to church seems still to be a fascinating problem for theological thinkers. The consensus of blame still rests, of course, upon the wicked public who neglect the means of grace, but here and there an original note is sounded refreshingly. Thus the editor of the *Hibbert Journal* pointedly asks if Christianity is regarded as a serious religion, having practical aims in view and a practical way of reaching them. He holds that the public no longer regard it in this light, and that a somewhat strenuous material world has no time for dreaming about impossible attainments. If this view be correct and there is much to be said for it, upon whom must we lay the responsibility? The average man is not greatly interested in heaven or the curious ways by which he is supposed to get there. He is very much interested in the world and he knows that it is strangely out of joint. He knows, too, that Christian essentials relate to the world as it is far more than to some misty hereafter, and if he is once persuaded that Christian ideals are not intended to be practical, that they are indeed a mere unattainable counsel of perfection, what hope has he and why should he persevere? It rests with the churches to remove such misconception, but are they likely to do so? If, for example, the Sermon on the Mount were practically applied, we know very well that a new social order would be established, that life would become beautiful, and that the poisonous vapors of our social troubles would pass away forever.

Do the churches believe that the Sermon on the Mount is practical, not as some far away ideal, but here and now? If they do believe it, why do they not preach it? Why do they not build up for their congregations a vivid and abiding mental picture of the Kingdom of God upon earth, an earthly paradise, and encourage their hearers to conform their public and their private lives thereto? Why do they not denounce every feature of our social life which is inconsistent with that ideal? It would be so easy to fill the churches with a throbbing expectation which would be its own realization. In matters of reform the unexpected never happens. What we ask for and what we intend to have we get, and nothing more. The minister who had one-half the confidence in the laws of the soul that the merchant has in the laws of the market would achieve a result which would astonish him. We want ministers who know something of the sublime creative powers of the imagination and who are not afraid to take the Kingdom of Heaven by violence. The world is very sick of routine and of insincerity. Even the most consistent church-goer must sometimes weary of the prayers which are "ordained to be said every Sunday throughout the year," as though the possibility of their ever being granted had never occurred to their pious authors. Let us have some prayers which register our own intentions, prayers which are worthy of God and worthy of man. Let us have done with the insincerity and the dishonesty which insult divinity by asking without expectation of receiving. X.

The Wreckage of Human Souls

WHAT becomes of those who have been released from prison? Criminal statistics show that a very great number speedily find their way back again into confinement, thus proving that the previous punishment has entirely failed, and that a very large amount of money and energy has been wasted. We all of us understand the waste of money. It goes straight to our hearts. The wreckage of human souls does not appeal to us, or a very large proportion of these prisoners would never have become criminals at all.

There can be very little doubt that a discharged prisoner finds enormous difficulties in recovering an honorable position. Society takes up the work of punishment at the prison gates and forces its victim back again into the old paths of crime, which are often the only paths open to him. We do this to mark our detestation of conduct to which our own behavior often bears a startling resemblance, although not, it may be, from the legal point of view. The chief difference between the released convict and many of those who frowningly pass him by on the other side of the street, is that he has expiated his offense and they have not.

STUDENT

Religious Teaching in the Schools

RABBI VICTOR CARO of Milwaukee has expressed himself strongly on the subject of religious teaching in the schools. He said in a recent sermon: The public schools should be kept perfectly pure from all dogmatical alloy. Do not meddle with an institution that has been and ought to remain purely educational. It is our pride that we have schools in which the practical education of children is hampered in no way by religious pre-conceptions.

It is of course gratifying to see these frequent protests against sectarian interference with the schools. They are none the less an indication of a widespread plot to introduce religious dogmatism among the children and an inquisitorial system of tests among the teachers. With so many evidences on hand there can be no question that such a plot is on foot and it cannot be defeated by occasional protests. These educational sectaries must be shown that confronting them is a massive and impenetrable wall of public determination and that there will be no relaxation in vigilance. The example of many European countries and notably of England, will show us what we have to expect if these people are allowed to set their foot within the school doors. In England we have the avowed determination of the dominant religious party to injure public school education in every way possible, in order that it may not be superior to that of their own schools. We find that the whole question of education is turned into a battle-field for rival sects and that the educational welfare of the children themselves is hardly even a factor. We have to remember that however plausible may be their pretences, yet these who are maneuvering for the introduction of religion into the schools are the enemies of true education.

They hate education because it would be the death-blow to superstition. With our accustomed supineness, we shall no doubt let these drift until a somewhat heated conflict becomes inevitable. That time is apparently not very far off if we may deduce anything at all from the fact that a university chancellor secures the applause of the religious press by a suggestion that university education shall be confined to those holding certain definite religious opinions. The religious press, or a large part of it, would equally applaud the imposition of a religious test upon Congress and Senate. They would applaud anything tending to the magnification of their own position.

STUDENT

An Army of Underfed Children

RECENTLY a committee of teachers reported to the London School Board that there were in London 55,000 children attending school who were habitually underfed. The School Board refused to accept the statement and "referred it back." Quite *apropos*, therefore, is Miss Honnor Morten's book, a brief rather than a treatise, *Consider the Children*. It is a serious indictment of existing methods of elementary education, and by inference, of the methods of this School Board which Miss Morten was at one time a member. The main contentions are: that all children should have enough to eat; that there should be medical inspection in all elementary schools; that corporal punishment should be abolished; that greater caution should be exercised in sending children to truant or industrial schools; that teachers should receive a broader and more humanitarian training; and that religion, in its sectarian sense, should not be taught in the schools. London has some problems that smaller cities know little about, and perhaps the greatest of these is the problem of the submerged many; the many whose children go to school, day after day, underfed, underclothed and uncared for.

"Of what use," asks Miss Morten, "is the enormous expense of building and equipping schools and all the machinery for compelling a child to attend school, if that child, through insufficient food, is in such a state of starvation that it cannot learn? You can force a child to attend school, but you cannot teach that child if it is physically unfit. Teachers in our poorer schools found this out years ago, and in many cases tried to organize free meals. Society after society has been organized to feed the starving children, and funds have come in freely, yet the child is not fed."

A. V.

Art Music Literature and the Drama

Richard Strauss, the Foremost Musical Genius of the Hour

SINCE the illustrious Richard Wagner laid down his pen the musical world has devoted itself to the gradual absorption of that masters' great works. With sudden impulse, however, as if fore-shadowing humanity's most rapid advance in the tone art, another remarkable genius has arisen who penetrates further still into the realm of the unexplored. Of him it is said that he is "the absolute monarch of modern music."

Richard Strauss was born in Munich, June 11, 1864. He is the son of Franz Strauss, a hornplayer in the Bavarian Court band, however, in no way related to the famous Strauss family, so well-known in regard to another class of music. As a lad of four he commenced piano playing and two years later began composing little pieces. He received a classical education, spent five years under the tuition of a noted conductor studying theory and composition. One of his early compositions, Op. 7, attracted the attention of Hans von Bülow who performed the work at Weimar and this started Richard Strauss on the road to musical fame. He became director of the Court Theatre at Munich in 1886.

At that time he began to make new departures in his compositions, being given to peculiar radicalism which at once caused the fiercest attacks to be made upon him by the critics.

In 1892 he was obliged, on account of ill health, to spend some time away from his usual confining activities, and he traveled through Sicily, Greece and Egypt. During that time he composed his first opera, Op. 25. He was married in 1894 to Pauline de Ahna, a well-known soprano who has become a sympathetic and worthy spouse. In the same year he became director of the Berlin Philharmonic Orchestra. Later he directed performances at Bayreuth, Leipzig, Cologne, Brussels, Milan, Moscow, London, Paris, Madrid, Antwerp and Barcelona.

Richard Strauss has been described as being tall with a large finely developed head and long "spidery" arms, a light complexion, blue eyes; his bearing suggesting mastery and self-control. His compositions are many and varied for one so young. They are principally in the form of symphonic poems. The larger works for orchestra include *Symphonie in F minor*; *Italia*; *Macbeth*; *Don Juan*; *Death and Apotheosis*; *Till Eulenspiegel*; *Thus Spake Zarathustra*; *Don Quixote*; *A Hero's Life*. He composed two operas: *Gunter and Feuersnot*; many numbers in smaller instrumental forms and a vast number of songs, very remarkable for entrancing harmonic beauty, intimate sentiment and loveliness of melody. The latter have become known in America through David Bispham and George Hamlin, both ardent Strauss disciples. His larger works have been performed in New York, Boston, Cincinnati, Chicago.

Recently there have been held a series of Strauss festivals at New York under the personal leadership of the composer. The enthusiasm which these performances have kindled among the musicians and the general audience is said to indicate a spiritual kinship between himself and the American public. A New York weekly says:

Everybody could be seen there who counts in the culture of the metropolis. There were princes of finance, dictators of society, queens of opera, autocrats of the baton, lords and ladies of the piano and violin, and all the rest of the gay train who make up the lesser retinue at New York's musical functions of state. Whether they believed in him or not, the auditors rose en masse and joined their ringing cheers to the mighty fanfare which the orchestra blew in honor of the distinguished visitor. For nearly five minutes the scene of frenetic triumph lasted. The attitude of the audience was distinctly devotional and they showed that they came to learn and not only to see. The atmosphere did not crackle with criticism, and every one held his seat until the last note had sounded in the last number on the program. That attitude is extremely rare in a New York concert hall, and spoke

significantly for the class of listeners to whom Richard Strauss' appeal will be directed in this country.

As a leader Strauss is authoritative, quiet, sparing in gesture, careful of detail, emotional in lyric episodes and insistent in climaxes.

His compositions are one and all wonderfully interesting, being especially marked for musical feeling, pure aspiration, extraordinary technic, logical development—never hasty, never trivial—unparalleled inventiveness of description and most original orchestral characterization.

Unlike Richard Wagner he favors "Programmatical remarks" as aids for the understanding of his music.

The NEW CENTURY PATH has frequently referred to Richard Strauss as the rising genius of modern music and the students of the Isis Conservatory are faithful performers of his works. E. A. NERESHEIMER

FROM CARTOON by MICHELANGELO
(Academy of Fine Arts, Venice)

FRAGMENT

NATURAL things

And spiritual—who separates those two
In art, in morals or the social drift,
Tears up the bond of nature and brings death,
Paints futile pictures, writes unreal verse,
Leads vulgar days, deals ignorantly with men,
Is wrong, in short, at all points. We divide
This apple of life, and cut it through the pips
The perfect round which fitted Venus' hand
Has perished as utterly as if we ate
Both halves.

—Elizabeth Barrett Browning

THERE has long been a growing suspicion in the minds of true Gaels that the Irish airs that have been printed, played and sung at concerts for nearly a century are not Irish at all, but merely corrupt versions of the traditional airs adapted to the modern scale. The suspicion, although ridiculed by most professional musicians, has, like Banquo's ghost, refused to be laid. Dr. Henebry, of Dublin, in a recent book entitled *Irish Music*, now attempts to settle this question. He gives expression to what most musicians would call a new theory of music, and, while his opinions are not wholly original, few would have had the courage to maintain them in print; for the critics, while admitting that traditional Irish airs, as played and sung by the Irish peasantry, have certain characteristics which modern musical methods do not reproduce, maintain that this is merely because the "ignorant peasantry" sing out of tune. Dr. Henebry is convinced that there is not only a traditional style of singing among the Irish, but that

the scales used by them had different intervals to those of the modern tempered scale.

M. AUGUSTE RODIN, the famous French sculptor, whose work has sounded a new key-note in the song of modern art, gives this hint to those who love art not less, mayhap, but the dollar more:

We sometimes have fogs in Paris, and though I have never seen London in a fog, I should like to have the experience, however painful. But I do envy London its greys, toning everything down, giving outlines soft and velvety, such as we rarely get at home. Think how my predecessor in the presidency of the society, Whistler, utilized them! I can almost envy him his chances.

Eastertide

MORE and more, as the years pass by, do women realize the obligations that rest upon them because of the very fact that they are women. To those who are loyal and true, who really long to see the world made better, who really love light better than they do darkness, Eastertide brings great blessing and a quickening hope. There is something in the time itself that brings the light very near, and this is true even for those who are at war within themselves, whose minds are turned away and whose path leads them into the shadows.

In his mystery-drama of *Faust*, Goethe gives us a picture that stands, and shall stand, both as record and as prophecy. This drama is a mirror, so to speak, of certain conditions which can never be understood by the brain-mind alone, certain truths which can never be revealed by words. Faust was not utterly shut away from the light, though in his despair he believed himself to be. He heard the call, he caught the Easter feeling, and his heart was touched. It was the Eastertide song that saved him from self-destruction. Margaret brought to birth, out of the shadow of her own agony, the Eastertide within her own heart. By its light—which is the Eternal Sunrise—her heart read the lesson of the law, though her brain-mind could not understand it, and she was saved.

Still is the Master near, still is He near.

The sound of many voices floats into that old Gothic study, high-walled, narrow, a place of chemicals and of books, where human sympathy has been long shut out. And there Faust stands before us as Goethe pictures him, a student who had lived apart from man, searching for the great secret; his life's dream unrealized, the great secret still ungrasped, Faust has given way to his despair. He has filled a goblet with poison and is about to end the weary search, when suddenly he hears the Eastertide song. The heart is touched, the stone is rolled away, the Christos speaks and the Eastertide of a new life rises within his own soul. He flings the poison away and goes out among his fellowmen. The Path is long, for Faust takes the brain-mind way, but never again shall the Christos be crucified and sealed within the tomb.

And Goethe gives us also a picture of Margaret, who, like Faust, travels far along the Path that leads to despair; Faust, the victim of cold intellectuality, its tyranny all misunderstood; Margaret, the victim of her own emotional nature, the tyranny of which became to her merely temptation. But the soul speaks to both, and the barriers are broken. The stone is rolled away, the Christos has risen. Margaret, through her faith and intuition, rose to the heights in a single hour. With Faust

it was a work of fifty years. The two stand before us as typical of humanity's wanderings and release.

It is thus that the Eastertide comes into the heart of each—or may—if we choose. There come times to all of us when life flows on chill and even, with little of inspiration or uplift. Then, some day, the sun of a higher ideal shines upon us. We are conscious, all at once, of the limitations within our own nature, the walls that hedge us in. We begin to realize something of that which is greater than knowledge, that which is revelation. It is the voice of the soul. But the soul cannot express itself. It cannot speak. A thousand customs, a thousand old prejudices, a thousand habits of mind have sealed it as in a tomb. And then, for the first time, perhaps, we discover the real meaning of the gospel of Christ crucified, for daily upon our hearts lies the knowledge and the realization that we have crucified the soul, that we have sealed it within a sepulcher of our own lower impulses and our common life. What shall roll away the stone?

It is easy, after the winter's chill and grayness to rise into something very like gratitude with the first returning of the birds. Something even greater than joy comes to us as the spring comes with its blue sky and flowers. Why should Eastertide persist as a religious festival, year after year, bringing to all minds a deeper feeling of unity and strengthening the bond between man and man? Because it is the symbol of the greatest thing in the world, the coming forth of the soul to take its place as Leader and Guide of life. It is the putting away of the old and the taking on of the new; but only to him that overcometh is given this boon. The Eastertide of life comes only after the death of the personality—that bundle of likes and dislikes and fears. Our Eastertides mark the times that the soul speaks and the Christos steps forth.

The Gospel narrative of the crucifixion and the resurrection of the Christ is but symbolic of that revelation and stepping forth that may come to every one, not once a lifetime, nor once a year, but every hour if we will. Every moment may bring us the Eastertide of spiritual growth. Have we not, as women, a duty in this regard that we cannot neglect and live true? It is woman who stands close to the home center; it is woman who is the eternal guardian of the home life; it is upon woman that the law itself has laid the charge to keep the fire of pure ideals alight in the homes of men. It is we who stand closest to the children of the world; they look to us for their ideals, for the very light that shall guide. What are we that we do not rise in the fulness of our womanhood and roll away the stone from the tomb in which we have buried that which is purest, that which is wisest, and that which is best in our own natures? Katherine Tingley would give to the women of the world the power to make of every day an Eastertide, of every obstacle a stepping-stone, of every battle a victory, the power to see behind every cloud the sun still shining, the power to create and hold within one's own heart the Eternal Sunrise.

A Chinese Woman Reformer

IT is noticeable that a Chinese reform paper has just been issued in New York city, which purports to be the organ of the Chinese Empire Reform Association. The leading editorial of the first issue was written by a Chinese woman, Miss Kang Hong Bac, the gifted daughter of Kang Yu Wei, the leader of the Reform movement in China. Miss Kang Hong Bac outlines, in this article, the aims of the reformers, and makes the strong statement "that the only hope for the success of the plans of the reformers lies in deposing the Empress Dowager and placing the Emperor, the true ruler, on the throne."

It will be remembered that the father of this young lady, Kang Yu Wei, was the former adviser of the Emperor of China, and it was his efforts to reform the old empire that brought on the Boxer revolt of 1900. This caused the Empress Dowager to imprison her son, the Emperor, and put a price on the head of Kang Yu Wei. Friends assisted Kang Yu Wei to escape from the country, and he fled to Ceylon; he is now in China again, a prisoner, but, it is said, under English protection. Kang Yu Wei's learning is so great that he has been termed "The modern Confucius." The daughter, Miss Kang Hong Bac, is preparing for Wellesley. E.

IN an address recently given in the rooms of the Royal Society of British Artists, London, the lecturer said in regard to Joan of Arc and her spirit guides: "In the whole range of human history there is no figure quite so remarkable. She was both soldier and spotless saint. She had the generalship, the insight, of a statesman, and the ability to baffle the court of ecclesiastics who used their forensic arts to entrap her. All these gifts were combined in a simple village maiden in her teens. The phrase, "a heaven-sent warrior," might appear to be a contradiction in terms, but let us study universal laws from the soul standpoint and not from a parochial standpoint. There is no doubt that Joan of Arc, in common with all of those who have really been true teachers, was prepared for her mission by those whose voices are not heard by humanity in general, nor by those who struggle and quarrel and keep themselves immersed in the personalities of life."

THERE was recently posted in the Corn Exchange National Bank in Chicago a notice which states that employees of the bank receiving a salary of less than a thousand dollars a year cannot marry without first consulting the bank officials and obtaining their approval.

The officials state that this was by no means intended to discourage matrimony, but that it was absurd for any one of the class from which their employees are drawn to attempt to support a wife and family on less than a thousand dollars a year in a city like Chicago. There are signs and signs, and this is but one of the straws which show that the wind is blowing toward the ounce of prevention and away from the pound of cure.

THERE are extant but two satisfactory translations of the superb old Celtic Sagas, the Welsh *Mabynogion* and the Irish *Cuchulain*. Both of these very difficult translations, it is worthy of note, were made by women, Lady Gregory and Lady Charlotte Guest.

The Wheel of Time

NOW that Joan of Arc has been made a saint, it is interesting to recall the amount of expert opinion which held her to be in service of the *devil*—indeed, of *three devils*. Sixteen Doctors of Divinity sat on her case, and over them presided a great theological magnate, specially appointed by the Holy Inquisition. This tribunal furthermore consulted three bishops and fifty theologians, and then the whole lot adjudged her guilty of heresy and sorcery.

The verdict was finally approved by the learned theological faculty of the University of Paris. Could anything be more complete? The last body was so clear about the matter that it was even able to "spot" which particular demons helped the maid in her deplorable career of sorcery.

These were Satan, Belial and Behemoth.

And now, in the face of all this she is being made a saint; by the same church which caused her to be burned! And the proofs of the saintship are those very miracles which were formerly proofs of diabolical witchcraft! C.

AN IRISH LOTUS BUD

O CHILD! O new-born denizen
Of life's great city! On thy head
The glory of the morn is shed.
Like a celestial benison!
Here at the portal thou dost stand
And with thy little hand
Thou openest the mysterious gate
Into the future's undiscovered land.
— Longfellow

heroism has come to the surface because of this calamity that might otherwise have remained unnoticed and unknown.

ACCORDING to one of our exchanges, Judge Tuley of Chicago recently declared in a divorce case which came under his jurisdiction, this somewhat astonishing principle, "The duty of a husband is to make a wife obey him; to exercise corrective sternness when necessary and show that he is the master of the house. It is not necessary to beat her," the Judge declared, "but he should take hold of her sharply and correct her!"

If husbands were absolutely perfect beings, capable of holding an ideal position as teacher, guardian, protector and guide; if they were able to remain all the time upon a high and noble pedestal, this plan might work beautifully, but —

MONTANA is represented on the Board of Lady Managers for the St. Louis Exposition by Mrs. Daly of Anaconda. It is said that her husband has given her unrestricted control of his property, which is rated at many tens of millions, such is his confidence in her business sagacity. Mrs. Daly dispenses a large fortune every year in philanthropy.

Babylon and the Bible—Facts and Dogmas That Disagree

WE have already drawn attention to the remarkable sermon on the "Unearthing of Extinct Civilizations," delivered by the Rev. Newton Mann and reported in *Unity*. The references to Babylon in this sermon are no less important than the remarks upon Egypt. The preacher shows very conclusively that every age has learned from the ages which preceded it, and that nothing but the most inexcusable superstition can still preserve the belief that the history of humanity is divided into two clean-cut portions, one being illuminated by divine guidance and the other being without such illumination. Our knowledge of divinity has grown from age to age, not through interposition of an external deity, but through the promptings of an internal light which has never failed to meet and illuminate the aspirations of men.

Mr. Mann reminds us that explorations upon the site of Babylon began about 1850, and the results have been of surprising interest. The descriptions given by Heroditus have been shown to be in no way exaggerated, the strength and splendor of the city having been very great. The vast quantities of inscriptions which have come to light enable us to judge accurately of the public and domestic life of these people, to go with them into their homes and to understand the life which they led in nearly all its details. We find that they also shared the universal belief that the world had once been sinless and will be so again. Upon one of the Babylonian tablets is the story of this first and sinless race, and this tablet is made of surpassing interest by the fact that it had evidently been examined by some Egyptian scholar whose red ink markings are still visible. Upon other tablets is the story of a flood from which, says the preacher, "the much younger Hebrew story is quite obviously made up." The Babylonian record tells us that the man who was saved from this flood was directed to "build a ship of certain dimensions, to coat it thoroughly with pitch, and to put on board of it his entire family, together with the seeds of all living things." The ship is stranded upon a mountain, and the mariner, the Babylonian Noah, is represented as saying: "On the seventh day I took forth a dove and released it; the dove flew hither and thither, but finding no resting place returned." Then a swallow is sent forth and finally a raven, and as the latter does not return the inmates of the ship assume that the land is once more dry. To understand the significance of this story, we must remember that it is far older than the Biblical account. Are we to be told by a Twentieth century de Mirville that these tablets were made by the devil for the purpose of discounting in advance the then unwritten records of Moses?

Much of the social life of the Babylonians was intensely interesting. The 7th, 14th, 21st and 28th of a certain month named upon the tablets were to be kept absolutely free from work, and Delitzsch very properly points out that we have here the unquestionable origin of the Jewish Sabbath. The practice of medicine was attended by many curious observances. It was assumed that there could be no sickness without sin and no cure without reform. The physician would diagnose the disease by enquiring, "Hath this man refused to clothe one that was naked? Hath he refused light to one in prison?" Such ideas would doubtless seem sufficiently crude to the medical colleges of today. They have, none the less, a very marked sublimity of their own, and it may be that there is a very wonderful and a very scientific philosophy underlying them.

Mr. Mann says well that the bearing on religious thought of the discoveries in these long buried cities is too clear to need indication. "Any good thing traced up to that source loses nothing of its charm, for truth and beauty and goodness owe nothing to newness or to age or to place of origin, but remain always and everywhere divine." His concluding remarks are so admirable that we quote them for the benefit of those who suppose that the spade of the archeologist is likely to disturb the Ark of the Covenant. He says:

Such is the plain, common-sense view of the matter; but in this, as in every case when something definite comes to light regarding the origin and composition of the Scriptures, the conservatives raise a great hullabaloo, as though the foundations

of religion were being overturned by sacrilegious hands. The notion seems to prevail with the old guard that as soon as anything is found out it ceases to be holy, that the only way to preserve the sanctities is to hedge them about with mysteries, to set up signs at every angle, "Keep off the grass!" to close the avenues of approach to all whose enquiring turn of mind would lead them to clear up any of the sacred fog that has so long hung about the subject.

The revelations at Babylon have, of course, been dealt with somewhat extensively by H. P. Blavatsky, who shows many of the leading inferences which may be drawn from them. It is all the more gratifying to find that the intelligent thought of the Christian world is being directed into these channels. The result must be a very distinct advance to the cause of true religion, and as such it ought to be welcomed. X.

"There Were Giants in Those Days"

A REPORT comes from Nevada to the effect that some workmen have discovered parts of a human skeleton which must have belonged to a man nearly eleven feet in height. Those who have studied the writings of H. P. Blavatsky will remember her contention, based upon archaic Theosophic science, that humanity was once of colossal size. This is, of course, ignored by orthodox science, but a collection of testimony as to the accuracy of her statement would be found to possess a very unexpected weight. Upon this point the scriptures of the whole world are nearly unanimous, and we have also the evidence of Roman and other ancient writers who were familiar with the discoveries of their own day. The occasional finds which are made today, such as that which is now reported from Nevada, are not without their importance, and are useful links in a chain of evidence which has not yet received the attention which it deserves. Interesting Egyptian Discovery—Tomb of Queen Hatshepsu

TO the American archeologist, Mr. Theodore M. Davis, belongs the credit for the discovery of the tomb of Queen Hatshepsu, the builder of the beautiful temple of Derelbahari. The report says that the two sarcophagi are of hard sandstone polished like copper, and covered with beautifully formed hieroglyphics. One contained a mummy of Hatshepsu and of her father, Thothmes. The first lids of the sarcophagi lie on the floor. Hatshepsu's mummy may be found in one of the unexplored side passages of the tombs, where perhaps it was deposited for the sake of safety in time of danger. The chamber is 40 by 50 feet long. Several side chambers are still filled with fallen rock and rubbish, but it can be seen they are paneled with blocks of fine limestone. The tomb is close to that of Thothmes, fourth King of the Eighteenth dynasty.

A Neolithic Englishman Found Way Down Below

THE skeleton of a prehistoric man has been found near Cheddar, in England. The skull could only be removed in small pieces, but it is evident that it belonged to a man who lived between the paleolithic and the neolithic ages. The bones of the leg have the peculiar flattening which is characteristic of that period. Describing this discovery the *Midland Herald* says the frontal-bone of the skull is thicker than that of the present day, whilst over the eyes a decided boss of bone demonstrates that the brows were very prominent. The height of the man was about 5 feet 5¾ inches. Near by were a large number of flint flakes and knives. STUDENT

Remarkable Discovery of Arrow Heads in Kansas

DURING the sinking of a shaft on the Weir Junction Coal Co.'s land near Kansas City a rudely made wooden box was found more than fifty feet below the surface. The box contained three flint arrow heads, two of them being unfinished. The remarkable feature of this discovery is that it lay under two beds of coal which had been undisturbed. The age of these particular coal beds is of course a matter for scientific determination, but even at the lowest computation it would indicate human life at a period more remote than is usually supposed.

Nature

Studies

Nature's Healing Power

WHO can tell how scenes of peace and quietude sink into the minds of pain-worn dwellers in close and noisy places, and carry their own freshness deep into their jaded hearts. Men who have lived in crowded, pent-up streets, through lives of toil, and who have never wished for change; men, to whom custom has indeed become second nature, and who have come almost to love each brick and stone that formed the narrow boundaries of their daily walks; even they, with the hand of death upon them, have been known to yearn at last for one short glimpse of Nature's face; and, carried far from the scenes of their old pains and pleasures, have seemed to pass at once into a new state of being. Crawling forth, from day to day, to some green sunny spot, they have had such memories awakened up within them by the sight of sky, and hill, and plain, and glistening water, that a foretaste of heaven itself has soothed their quick decline, and they have sunk into their tombs, as peacefully as the sun, whose setting they watched from their lonely chamber window but a few hours before, faded from their dim and feeble sight!

The memories which peaceful country scenes call up are not of this world, nor of its thoughts or hopes. Their gentle influence may teach us how to weave fresh garlands for the graves of those we loved; may purify our thoughts, and bear down before it old enmity and hatred; but beneath all this there lingers, in the least reflective mind, a vague and half-formed consciousness of having held such feelings long before, in some remote and distant time, which calls up solemn thoughts of distant times to come, and bends down pride and worldliness beneath it.—*Charles Dickens*

TO THE beasts it seemeth a strange thing to see the laws of men broken most by those who make them; for the beasts obey the laws of Zeus and whoever leads the herd walks in the path the others are to follow, and doth not, as men do, strive to walk in one path and drive the herd in another.—*From the Ancient*

Interesting Facts About Bird Migration

MR. W. EAGLE CLARKE, a well-known English authority on the migration of birds, has just gone through a month's stay on a lightship, 21 miles from the coast, in order to pursue his favorite study. It has usually been held that birds direct their migrations by sight, and that the great heights to which they rise are for that purpose.

Mr. Clarke's investigations dispose of this view. For though he supports the statements of the great heights to which birds sometimes rise, he finds that they do not depend on elevation for finding their way. During all the time that he was on the Kentish Knock Lightship "the migrants of every species flew close to the water. Yet whatever the weather or state of the sea they kept a straight and apparently unerring course for the coast twenty-one miles distant."

He concludes that they have a sense missing in us—the "sense of direction." Phrasing his idea otherwise, we should suggest that they sense the lines of the earth's magnetic currents, and travel along them.

TANGLED IN STARS

by ETHELWYN WETHERALD

TANGLED in stars and spirit-steeped in dew,
The city worker to his desk returns,
While 'mid the stony streets remembrance huras.
Like honeysuckle running through and through
A barren hedge he lifts his load anew,
And carries it amid the thronging feras
And crowding leaves of memory, while years
Above him once again the open blue.

His letter-littered desk goes up in flowers;
The world recedes, and backward dreamily
Come days and nights like jewels rare and few,
And while the consciousness of those bright hours
Abides with him, we know him yet to be
Tangled in stars and spirit-steeped in dew.

THE PAPYRUS PLANT

Signs of Summer in the North

NOW that it is warmer and spring seems near at hand, even in the northern States, the sparrows are making housekeeping plans and are quite busy working and talking over things in general.

During the severely cold weather the poor little things had hard work to get enough to eat and we had a flock of about fifty that were fed daily by a member of our family. One bird seemed to keep watch while the others were hunting food near by, and when the grain or scraps of bread and meat were thrown down, that one simply dropped from the tree he was in to the ground, and you would think that the others had eyes all around their heads, so quickly did they sense the fact by seeing their watcher drop, that food was at hand, and fly to their dining-table under the tree.

One friend said she was sure she had been feeding over two hundred birds all winter. They certainly have some way of letting each other know where the good feeding grounds are. When she first began feeding them only a few that lived near by came and then the others learned and gradually the numbers grew. Even a bluejay came for his share, and while he was in evidence the sparrows hovered about in the trees, scolding him, I suppose, for eating too much. After taking what he wanted he let the sparrows come back and eat in peace, which I am sure was very kind of him.

DRYAD

We live among unheard Niagaras,
The force that pushes up the meadow grass,
That smelts to ampler roundness ripening fruit,
That lifts the brier rose; were it not mute,
Would thunder o'er the green earth's sunlit tracts
More loudly than a myriad cataracts.

—*Ethelwyn Wetherald*

The Powers of Leaves

A GERMAN botanist has been publishing the results of his experiments on the propagation of plants by means of their leaves. It appears that the leaves of an extraordinary number of plants are capable, under proper conditions, of generating roots.

Hitherto only a few have been known to have this power, such as Gloxinia. But Herr Lindemuth has obtained success with sixty-four species, including fox-glove, musk, tomato and vine. The attempt must be made at a proper time of the year, and the roots are thrown down in from one to two weeks. It is curious that in the great majority of cases—all but five of Herr Lindemuth's plants—the leaves are only able to form roots, not buds. That is, they can just maintain their own existence.

In one case, a species of citrus, the leaves rooted and then persisted unchanged for years. It is evident that in the gradual specialization of functions, the leaves of most plants have handed over their developmental energy to the flower, retaining only a small part for themselves. In the case of cactus, that which is ordinarily called leaf, is a stem; the leaves being represented by the spines. And here the stem retains the developmental energy to the full. STUDENT

Universal Brotherhood Organization

Central Office Point Loma California

THERE was a good audience at Isis Theatre last Sunday evening at the regular meeting of The Universal Brotherhood and Theosophical Society, and a program that was at once highly interesting, instructive and attractive. The musical numbers by students of the Isis Conservatory were of special excellence, being very highly appreciated by the large audience. The address of Mr. Dunn on "Liberty," was paid the tribute of the closest attention by his hearers, who frequently emphasized their approval of his remarks by unstinted applause. In the course of his address Mr. Dunn said:

"Every one values personal liberty, or freedom—for without it our human nature would find little room for growth and expansion. The advance of civilization has been marked by a series of efforts, on the part of the people, to throw off the yoke of worn-out institutions and governments, thereby attaining freedom to establish a new social order. This, in its turn, has become obsolete, and again the cry of freedom had to be raised. It has been answered differently by different races of people. The problem was this—having obtained freedom, what shall be done with it?"

"Some of the brightest pages of history, and some of the darkest, have been written while that question was being answered. All the good and evil forces in human life have risen up in full vigor, locked in deadly conflict for supremacy. A new social order *bad* to be constructed on the ruins of the old; hence the struggle between the good and evil forces to decide which should hold the reins of power.

"Right here we come up against the restricting hand of Nature, whose children we are. In this respect we are absolute slaves to the great law of being—for what freedom *can* we have but freedom to obey the laws of life, violation of which brings such terrible penalties? Is it possible for a man to escape the action of these higher forces on human life, seeing that with every deed performed we actually use those forces as motive power? Surely, a man must stand or fall by the motive that inspires him. There are many people who imagine that liberty means, 'Do as you please.' They seem to possess an indolent carelessness (which they term independence) as to the direction in which their stream of life is flowing—forgetting that though nature is indulgent up to a certain point, she purges with fire when mental weaknesses reach the stage of moral disease.

"On the other hand, we are all familiar with how Nature rewards those who approach her with right mental attitude and sincere desire for fuller life.

"Now, there is, in the mind of every one, a vast store of intuitive, unformed thought, which demands room for growth. When this unformed thought is fostered, and room made for it in the mind by the fire of aspiration, it becomes transformed into those living ideals that make man a God and master of his fate.

"Reasoning, as a rule, leads nowhere. In that mental process our thought force

LOMA-LAND STUDENTS AT ISIS THEATRE

Mr. Dunn Delivered an Able Address on the Subject of 'Liberty' ---An Excellent Musical Program

Reprinted from the San Diego News

is spun out in a thin line of successive ideals, over an orbit like that of the far-away planet Saturn circling round the sun, and never towards it. Inspired ideals go straight to the sun and reveal the presence of the Soul. We then act as from the central sun itself, and centralize all thought and feeling upon present duty. We become spon-

taneously unselfish to the extent we live from the Soul within. There can be none amongst us who has not felt, at some supreme moment, the absolute truth of St. Paul's words, 'Know ye not ye are Gods.' Wherever we find a human life that is so charged with purpose and spiritual energy that it is incapable of doubt or mental indolence, I think we may be certain that that life is an active and positive focus of the higher life of Being. Such moral vitality gives power and unity of thought to the mind, as physical health gives strength to the body.

Now, Theosophy teaches that the starting point of all true action is the *oneness* of all living Beings. This is not a far-away dream yet to be realized, but a present-moment fact that is crushing mind and body to the ground, because of our daily strife to live in a contrary direction.

"Liberty in its true sense is a time of golden opportunity to rebuild our lives upon a nobler and broader foundation.

"There may come a time when Liberty will have passed us by, and present opportunity to choose a higher life be postponed until later years, or possibly to later lives. History reveals that Liberty is not always on earth—the passions of men have again and again shut her out from human sight.

"Today we again stand at the parting of the ways—again we have the golden opportunity to enter the stream of onward life and partake of its treasures. Medieval theologies no longer inspire the nations. When blindly accepted they engender only fear and total paralysis of the God-sent faculties of mind and heart.

"It does not seem possible to conceive of a baser form of slavery than that which prevents the use of the highest organs of the mind. It would appear that, although no Inquisition threatens present-day liberty of thought, men still sit enchanted before the gigantic fear imposed upon them by the past and present enemies of Humanity.

"Although the kingdom of the soul exists, and its gateways stand wide open as always, they are practically non-existent to the man whose mind is asleep.

"But given the living faith of belief in man's divinity, and the courage to take the first step from darkness into light, there is then established a mental condition which will inevitably open our perception to the glorious light which burns in the heart.

"No longer, then, will our ship of life swing this way and that in the turmoils of earth's stormy existence, but the awakened compass of clear perception will ever point to the positive pole of human perfection."

Lotus Groups, Groningen, Holland

From Groningen, Holland, comes a report of the work being done in the Lotus Groups in the study of the English language. The report is accompanied by a number of the leaflets used by the children and they are an inspiration to one who reads them. Katherine Tingley's Raja Yoga teachings have done their work, and to those of us who recall the days when our intellectual horizon was bounded by "I see a rat" and "See the dog run," the little leaflets with their high and exquisitely expressed ideals are certainly a revelation. The following are extracts from them:

LOTUS CLASS IN ENGLISH—1st Lesson: "Happy Little Sunbeams," I am very happy, We are very happy, A Lotus Bud is a happy little boy or girl, Happy little sunbeams, Father Sun and Mother Moon, The sky is blue, The garment of Mother Earth is green, The sunbeams dart through the blue, All of us have a work to do, Even little boys and girls can help the great world, The sunbeams shine at their brightest; Happy hearts, bright faces; The rays of the sun are yellow, Each of us is a ray of the true Sun, Happy children have radiant eyes, The warrior is with radiance clad, The rainbow has seven colors, The Golden Age is nigh when we do our whole duty; The sight of men is darkened by selfish thoughts, so that they cannot see the things divine; Men have lost the way the Wise Ones have shown to them, therefore we must lead the Raja Yoga life to help them to find back again the way to life eternal; By good unselfish thoughts we make our lives divine, by bad and selfish thoughts we make the world unhappy; Song:

Happy little sunbeams, darting through the blue,

Children of light, let us go forth into the world and render noble service to all that live.

Homestead Decorations Completed

THE decoration of the rotunda of the Homestead is steadily progressing, the wall-painting is now finished and the floor-cloth, both of which represent a considerable amount of work and are quite original both in the method employed and in the result obtained. The general color scheme is delicate and luminous, the dominant tone being a light sky blue with a harmonious arrangement of shades of violet reaching to a touch of deep purple in the center of the carpet. There is a certain suggestion of Egyptian style in the somewhat severe lines of the design used on the ground floor, where the predominance of vertical lines recalls the familiar lotus patterns so frequently employed in Egyptian decoration, but it is no more than a suggestion, for the designs are original in form and color and adapted to the peculiarities of the architecture, which is in a style of its own not to be definitely classed under any precise architectural style.

The floor-cloth, which is of canvas, has been treated with dyes specially prepared by an expert dyer and applied with the brush by the artists direct, so that it has been possible to carry out an entirely original design suited to the peculiar requirements of the building and in perfect harmony with the wall-painting. Perhaps the most effective part of the work is the decoration of the two cupolas, which flank the great dome, and which suggest the swirl of clouds swept by the wind, the design being full of "movement," which is more or less repeated in the radiating lines of the floor design.

The flags of many nations are grouped around in clusters on long staffs rising from escutcheons placed on the columns and these form a suggestive object lesson. They represent the international character of The Universal Brotherhood, and their crude

strong colors seem to appeal to the building in which they are gathered to harmonize them. When one sees these emblems of national pride in this beautiful and harmonious building one feels how the old idea of self-aggrandizement which has so long stood for the highest ideal of patriotism is but a small and poor thing compared with the grander ideal of International Brotherhood which is to be the future ideal of nations. When this ideal is fully accepted, I think that the crudity of the colors now used for national flags will be felt to be out of date, and these emblems will be made of such beautiful shades of color that when brought together they will all harmonize and blend with one another and with the most beautiful buildings in which they may be placed; a result that today is only attained by the harmonizing touch of time.

Seeing the collection of battered trophies that hang for instance in the *Hotel des Invalides*, one feels that they have been brought into harmony through war and exposure to storms and sunshine, as if nothing else could tone down their aggressive egotism. May not the touch of brotherhood bring about this harmony by other means both in the flags and in the nations represented by them? OBSERVER

Raja Yoga Teaches Self-Control

WHEREVER our Raja Yoga children of Loma-land have been, people have been struck by that atmosphere and charm which they carry with them and diffuse around. There is about them an evident happiness and repose, a balance of powers, a dignity, a freedom from constraint, an absence of restlessness and physical uneasiness, and many other shades of character which it would exhaust a dictionary to define. We, who have seen it, know it better than we can describe.

And it is even more instructive to watch the change that comes over a child received into the Raja Yoga School from outside. At first he or she is noticeable by the marked difference of bearing and expression, perhaps of vanity, or it may be of ill temper, by restlessness, bad carriage, and all the innumerable marks of the laxness and sluggishness and self-indulgence that are permitted by the majority of parents. But after a while the child looks as if it had *gotten rid of something*.

How real that *something* is, only those know who have had the opportunity to study the process of getting rid of it by the easy (because intelligent) method taught by Katherine Tingley.

It is no figure of speech to say that each one of us has "visitors" or second selves which intrude upon our real Self and share our lives, thwarting our good intentions and making life uncomfortable. But in the world, alas! neither religion nor science can teach us how to distinguish between the true and the false in our character. The essential dualism of human nature, that most ancient and eternal of truths, is nowhere taught scientifically or accepted as an actual fact. In ordinary religious teaching, the higher part or Soul of man is made unreal, separated from life, and relegated to a speculative existence beyond the grave. Consequently this Soul cannot be appealed to as a ready and present champion of good and strength. And again there is the emasculating teaching, so often inveighed against in these pages, that human nature is hopelessly evil and can only be saved by outside help.

And if we pass from conventional religion to the authorities of "intellectual," "scientific" or "rational" culture, we find ourselves in no better case. For, while science concerns itself only with the grosser physical manifestations of life, philosophy is both hopelessly divided against itself and lost in the mazes of logical confusion. Hence the world has no practical common-sense philosophy of life to teach its children; and such teachings as it can give do not square with the facts, which the child soon finds out, gaining a lasting mistrust of his teachers thereby.

To parents the human nature is not dual, but one. They do not understand how to address the higher nature—that is, the *real* self—of the child; and they do not perceive when there is a "visitor" on deck. This failure to discriminate between the true and false selves is indicated by such sayings as "*You are in a temper*," instead of "*You have let a little enemy get control*."

The child never learns that it is a Soul, pure and strong, and that its failings are intrusive forces, which can be subdued or driven out; and so it grows to maturity with the good and evil still sharing the throne of its life, and the intrusive forces become so deeply rooted in the character that it is most difficult afterwards to expel them. But, teach your child from the start that the real self is pure and strong, show it how to separate itself from the intrusive forces (the false selves); and the habit of mastery at once takes firm root and grows as the child grows, overcoming every obstacle.

Here, then, we have the secret of the balance, control and repose of children trained under this system. Self-control, mastery over one's own faculties, is the prime requisite in education. Without it no amount of accomplishment is of much avail; with it anything can be learnt and acquired.

Now listen to the following typical extract from the domestic page of a widely read newspaper, and see if there is not an urgent cry for Raja Yoga training:

"What is there in this wide world to compare with the bright face of a boy, and what a many sided problem he presents! To be sure he does not appreciate being regarded as a problem; indeed, he would rather be left alone than suffer the attentions of those fussy folks who ostentatiously try to 'solve' him.

"The fond mother exhibiting and 'explaining' him to her casual visitor does

not realize that the shuffling feet and uneasy demeanor are the outward and visible sign of a flood of resentment and wounded love, which surges through the boy's heart to think that his own mother should understand him so little, and it would be well for parents to realize the fact that such unwise proceedings do not strengthen the bond of affection.

"Then as to that little word 'don't,' which is his especial bugbear, it is probable that the possibilities of a lad going astray in after years are proportional to the number of times this word is used to him over trivial matters of natural activity. The remedy for misdirected activity is not the word 'don't,' but the word 'do;' that is to say, give his energy some legitimate outlet. Every boy longs to be appreciated and to be of use, and care should be exercised to provide him with indoor and outdoor spheres of real, useful activity."

The writer continues with advice to avoid unnecessary "don'ts," to appeal to reason, and to be just; but there is evidently a sad need for some real knowledge on the part of the parents to stimulate and direct their efforts. What to "don't" is easy to see, but what to "do" is another matter. The parents themselves have learnt by gradual experience to adopt some kind of compromise, more or less consciously hypocritical, between right and expediency. But the child is still full of natural impulses, good and bad; he does not see the necessity for doing this or that, nor realize the urgency of social conventions.

In fact, that bright face that our writer speaks of tells of an essential moral health that the parent does not recognize, and will soon snub out or suffer to languish from want of recognition.

How to preserve that bright face, indicative of man's divine origin as of his eternal destinies, is what Raja Yoga teaches. X.

The Dawn of a New Day

THE dawn of every day is heralded by a bright star known as Lucifer, a name meaning light-bringer. Every new period in the world's career is announced by a herald of the light, when our knowledge and beliefs receive an added impetus and extension. Every one in Christian lands has heard of the star of Bethlehem and knows it refers to that particular light-bringer, Jesus, the Christ. All ages and peoples have had their own heralds of the truth, who announced the old, old truths of man's unity, divinity and immortality as souls. They existed as men, but lived as gods, showing the great example of a true and unselfish life as the way immortal, divine souls should all try to live if they wished, as they ought, to realize the dignity of their calling—souls, and true position in life. Our present age has had such teachers in H. P. Blavatsky and W. Q. Judge, who have passed on, and our present great world-teacher, Katherine Tingley. They have again awakened humanity to a knowledge of their immense past as reincarnating souls, and announced the dawn of a new golden age for humanity. But all of us have to realize that we are souls by a study of their teachings and work for humanity, and by trying greatly to live as souls, for it is the soul that knows the soul. What they have taught and are doing is making it possible for us to live and ultimately to know of a certainty that we are souls and not mere bodies. But the dawn of the new age for each one of us is felt within ourselves, in our own hearts. The knocking of the soul is being felt by us in that inner urge to be true, to do justly, to love mercy and to walk humbly with our God. How often now-a-days we feel the urge to be restrained in our thoughts and words about our neighbor, and how uncomfortable we oftener feel after disobeying instead of resisting the impulse to anger and selfishness. Are not these hints of the soul's awakening in the heart of humanity? If only one felt such, it is a sign of something higher and better for us all. But very many feel so, and it is these urgings which are the heralds of the dawn.

Theosophy has inspired mankind with angelic hope, "who makes him angel, whom she leads," as Emerson says, and awakened us to a knowledge of the evil and wrong in the world and the sorrow and pain and misery they cause. Theosophy has informed us of the other side of life, the true side, and proclaims love and brotherhood as the panacea and the only one, for curing the world of evil and wrong and their attendant results. It has announced to all our oneness in origin and our divine nature as souls. It bids us stand up as souls, insist upon it that we are divine souls and think, and think for ourselves. No truth is a real truth to us till we have thought it out for ourselves, and when we so think for ourselves, instead of accepting what others say and tell us in books and papers, what a different world this will be! Up to a certain degree we must listen to what others say or write, but we cannot *know* the truth if we do not think it over well. To think well is to act differently. Theosophy bids us to think because it will enable us to see clearer and to do better and to keep pace with the change that the thinkers, the true thinkers are causing in our midst. The old order is rapidly changing, giving place to the new order of things. The new day will be a day of brotherhood, consideration for the welfare of others rather than the grab-all, beggar-my-neighbor method of the past. The new day is to be a life of joy wherever the urge of the universal soul of the world has ousted the selfishness of the past. It must come now and it is our part to prepare for it by thinking, and thinking till we know we are immortal divine souls, with a godlike power and purpose in life. This will bring the knowledge of our oneness, our unity with all souls. S. A. A.

MRS. GRANT stood at the florist's counter drinking in fragrance and beauty. It was the day before Easter, and there were great clusters of Easter lilies among the sweet peas, roses and carnations. Standing outside was another woman whose dark, haggard eyes were fastened hungrily upon a jar of Easter lilies in the window.

There was something in the face that at once aroused Mrs. Grant's interest and sympathy, an expression of suffering and heart-hunger mingled with angry and obstinate resolve. She watched the face, which under other circumstances might have been very attractive, for some moments, until the great bunch of lilies she had purchased was placed in her hands by the clerk. When she went out, the woman still stood gazing at the lilies in the window.

"They are lovely, aren't they?" said Mrs. Grant, stopping beside her.

The woman turned a sullen, frowning face toward her, stepping back suspiciously.

"You look as though you loved them," said Mrs. Grant, smiling kindly.

The woman looked at her steadily for a moment. The tears gathered slowly in her eyes. "Yes, I do love them," she said, with a half-sob. "It's been so long since I've had any. They make me think of home."

"Yes, I came from the country, too. You will let me give you some of mine, won't you?"

An eager look came into the weary eyes, as the woman held out her hand; but suddenly withdrawing it, the frown returned, and she said almost harshly, "I never take things from anybody. I earn all I have."

"O, of course; but flowers! that's different, you know. Everybody gives and receives flowers. I've really more than I can conveniently carry. Perhaps you wouldn't mind helping me carry them home—it isn't far?"

"Yes, I'll do that," replied the other readily.

Mrs. Grant divided the fragrant burden and they walked up the street together. Reaching her door, they entered, and, pushing an easy-chair toward her visitor, Mrs. Grant said brightly, "Won't you rest a few minutes while I put my lilies in water?"

The woman sat down, still holding the lilies she had carried. She looked about the pretty room. There was nothing luxurious or expensive, but dainty curtains and cushions, books and a few good pictures, made it all attractive and homelike. A deep sigh caused Mrs. Grant to turn around suddenly.

"O," said the other, looking at her with brimming eyes, "I didn't mean to be rude to you, but—O, everything is so miserable. I wasn't always poor—and when I married I expected a home as nice as this."

"And things haven't gone so well as you expected?" inquired Mrs. Grant kindly, sitting down near her.

The woman paused.

"I'm just desperate," she said, "and what's more, I'm not going to stand it any longer."

"But what is it that is so unbearable? I am very sorry for you, for I have suffered much myself. If you feel as if you could tell me, I might be able to help you in some way. I wish I might."

"You can't; nobody can. When a woman is always put aside for a cross old mother and two stepchildren, she can't be very happy."

"I suppose not," murmured Mrs. Grant, gazing pityingly into the flushed face.

"No, I guess not," said the woman emphatically. "It was so unpleasant; and then my husband lost his position, and finally I had to take in sewing to get food. And it's just gone on for five years, from bad to worse. I can't stand it any longer."

"Can you not, in some way, change things?"

✿ Easter Lilies ✿

"No, I can't change them, but I can get away from them myself—and I shall."

"And leave the others there to suffer alone?" "That's nothing to me," said the woman sullenly. "They've made me suffer enough—I despise them all. I expected to be happy when I married, and I have been perfectly wretched."

Mrs. Grant sat in thoughtful silence. Then she said softly, "Has it never occurred to you that the sweet way of finding happiness for ourselves is to work for the happiness of others?"

The woman ceased sobbing, and looked wonderingly at Mrs. Grant.

"You will permit me to speak plainly—as if you were my own daughter or sister—will you not? I, too, once thought a great deal about my own happiness and very little about that of others. Sorrow taught me my mistake, and now since I do not care for my own happiness and try all the time to make others happy, I find that my life is full of joy."

"I don't know what you mean," stammered the woman; then with a return of bitterness, "Of course, like everybody else, you think I'm to blame for everything."

"No, dear; one party seldom is entirely to blame for any trouble. But if one party will act in such a way as to be blameless, the other party will generally, after a time, try to do the same. Might it not be worth while to try it?"

"But—but—" said the woman helplessly, "I don't know how—to begin."

"O, it isn't so difficult," smiled Mrs. Grant. "Just go home and do all you can to make each one in the family happy."

"Well, maybe I can; I never thought of it that way before. I see now."

"We are all like that, dear, until we get wakened up in some way. It is good for us to suffer if it makes us wiser and better. You have a splendid chance before you to show what you are capable of doing and enduring, and what strength of purpose and character there is in you. Did your husband drink before your home became so unhappy?"

"No," admitted the woman reluctantly.

Two hours later Jane Ellis left Mrs. Grant's door with a brighter face than she had worn for many months.

In her hands she was carrying Easter lilies to the old sick mother and some pretty books for the two little girls.

A year passed away and on the evening before Easter, Jane Ellis came again to the house of Mrs. Grant, bringing her a sheaf of fragrant, white lilies.

She was becomingly attired and accompanied by a tall, well-appearing man, whose every glance toward his wife showed admiration and devotion.

"And to think," said Mrs. Ellis, holding Mrs. Grant's hand at parting, and with tears—this time of joy—in her eyes—"to think what you have done for us. My husband is the best in the world; the girls are growing up so kind and helpful, and are so fond of me; and mother is just as happy and so easy to get on with. I don't know what I would do now without any of them, and—I was going to leave them all. How can I ever repay you?"

"Don't think of it, dear; I'm glad that you came in my way. We must all help each other; that is what we are here for. But really," she added, smiling, "I think it was not so much myself as the Easter lilies."

As Mr. and Mrs. Ellis descended the steps, two of Mrs. Grant's wealthy neighbors passed.

"To think of the opportunities that woman throws away!" said one. "She might move in the very best society."

"Yes," returned the other, "she might be a leader in the best set; but look at the queer people she picks up! Why, that man is only a foreman in Mr. Linton's mill."

STUDENT

GRATITUDE

by ELIZABETH BARRETT BROWNING

OH, the little birds sang east,
And the little birds sang west,
And I said in under breath—
All our life is mixed with death,
And who knoweth which is best?

Oh, the little birds sang east,
And the little birds sang west,
And I smiled to think of God's greatness
Flowed around our incompleteness—
Round our restlessness, His rest.

The Trend of Twentieth Century Science

The Mystery of Sleep—Does the Mind Ever Rest?

SEVERAL new books on the subject of sleep have recently appeared and they are an indication that a very much neglected branch of science is forcing itself upon public attention. That we should for so long have neglected a condition which occupies one-third or more of our normal lives is certainly extraordinary and we may hope that some industry of research may now make amends for bygone tardiness.

It is only natural that materialism should sit with its accustomed weight of stupidity upon our speculations. It is fortunate, however, that the materials for this branch of research are not in the hands of an exclusive few who would otherwise be in a position to present to us not only their conclusions but also the colored spectacles through which to look at them. Everyone sleeps and everyone has therefore his own laboratory of research and the power to collect facts and evidence for himself. The results will depend entirely upon our capacity to exclude preconceived ideas and to approach the problem without any false and useless theories which have been handed to us ready-made and which can do nothing but vitiate and mislead.

Let us first determine not to prejudge the issue by mental references to sleep as a "period of unconsciousness," until at any rate we have logically determined that it is so. The whole trend of modern thought justifies us in believing that a state of unconsciousness is entirely unknown to nature and that while consciousness may rise and fall like the mercury in a thermometer it is the one persisting reality in every domain of being. If we must have a starting place for our thoughts it is far more logical and scientific to suppose that sleep is a state of consciousness rather than its interruption or abeyance. A soldier in battle may be entirely unaware of serious and otherwise painful wounds, but it would be absurd to speak of him as being unconscious. His consciousness is no longer saturating his body and is momentarily unaware of the wounds of the body, but it is none the less intensely active in another direction. When the excitement of battle has passed it will once more flood the nerve centers and become painfully aware of the wound.

Let us also beware of the unproved assumption that the mental state of sleep is necessarily or even probably inferior to that of wakefulness or that its supreme object is the repose of the mind. It may be so but it is a point for determination and we may finally be forced to the opinion that it is the brain, the instrument of the mind, which needs rest, that the mind itself no more requires rest from its activity than does the sun from its shining, and that mental energy may be even more intense when it is released from the material inertia of the brain. Our lack of recollection of the sleep states may be due to somewhat the same causes which prevent the soldier from remembering the details of the fight, that the mind has temporarily laid aside an inadequate instrument and that the recording duties of that instrument are therefore unperformed. The brain readily receives and records mental impressions of a nature to which it is accustomed, but if the mental impressions are entirely abnormal, either far above the normal as may sometimes be the case during sleep, or far below the normal as may be the case during the fury of a battle, then the inertia or sluggishness of the material brain may refuse to receive the impressions and to record them, and what we call recollection is lost.

Another point also is important to remember. If we will once concede that sleep is a state of consciousness in which the brain functions imperfectly or not at all, we may reasonably suppose that it is as varied in its nature as is the waking state. During wakefulness the mind passes up and down the gamut of conditions. It is tranquil and exalted and excited and debased. We pass from spiritual conditions to their reverse. We oscillate from shore to shore of the river of feeling. May it not be so also during sleep and may not our sleeping states be as variously conditioned as our waking states?

The key to this and to all such problems lies in an intense realization that the mind and the brain are separate and distinct one from another, although acting in unison, but as master and servant, during one earth life and for certain restricted ends. The mind employs the brain only upon such duties as it is increasingly competent to undertake, but we must not

therefore gauge the ability and capacity of the master by the work of the servant. The brain represents the mind and represents it badly, as an amanuensis may represent the philosopher for whom he works. How then shall we train the brain to better represent the sublimities of the mind which now lie unrepresented in the world of men or which are represented only by those fleeting flashes which the brain allows to pass? How shall we teach the brain to record the sleep states with their possible unknown glories as well as the gray and misty skies of daily life? Surely we can do this only by kneading it and moulding it into unaccustomed thought shapes of spiritual beauty, by forcing it into a ready response to those spiritual impressions to which it is now a stranger, and which it is now too heavy to receive. For these many years our brains have recorded few other thoughts than those of greed and of self-interest, and to these thoughts it now responds with a fearful and sinister automatism. Our brain cells are polarized to the unworthy, the bow has been bent so long that it is no more flexible. We must re-polarize our brains by spiritual thought so that they may become used to the touch of the god as well as to the touch of the animal, so that they may become transparent to greater lights than any they have ever known, so that we may perceive all these great and gracious things which are hidden by the tender veil of sleep. X.

Euclid Controverted by a Russian System of Geometry

IT has often been shown that a perfectly logical system of reasoning may be entirely erroneous through being based on false premises.

The instance usually given is that eclipses and other astronomical events and cycles can be predicted by the old theory which makes the sun go round the earth. Thus, to prove that a science is logical and consistent does not prove that it is right, or that there may not be another science equally logical but quite different in its results.

Perhaps the best instance of this truth is that afforded by the New, or Non-Euclidean Geometry now attracting attention. Ever since the time of Euclid the world has accepted his magnificently logical system of geometry as unassailable. There is no flaw to be found anywhere in his chain of reasoning. Yet all reasoning must start somewhere, either with axioms or some other form of assumed truth. And Euclid bases his system on certain axioms which hitherto no one had thought of denying.

In Russia and Hungary, however, are certain original thinkers, who have substituted for one of Euclid's axioms (about parallel lines) its exact opposite; and have shown that an exact and beautiful system of geometry can be based thereon.

Thus we have two exact and self-consistent systems leading to widely different results; and the circumstance is a striking lesson against dogmatism. STUDENT

Study of the N-Rays to Replace Vivisection and Lymphs

MORE discoveries come to hand almost weekly respecting the "N-rays" emitted by the human body. It appears that the emission is continuous, but becomes greater from those parts that are in activity, especially muscles and nerves. By this means the study of the localization of cerebral functions can be carried on far more efficiently than by the brutal method of vivisection. Any area of the brain that is thrown into activity proceeds to emit more rays. Thus, during speech, the language center (the third left frontal convolution, above and behind the left eye) begins to glow. The track of the nerves from the limbs up the spinal cord to the brain, including the path of their crossing to the opposite side, can be traced. And all this on man himself, with his interested co-operation, instead of by the torture and final destruction of an animal—or rather a thousand animals. It would be safe enough to predict that within the next five years every result heretofore attained by vivisection will be covered and much more by a process involving no pain or bloodshed. And other discoveries will in the same time make the filthy lymphs, serums and toxins of our medical armamentarium seem what they are—products of a short-lived and already departing neo-barbarism. M. D.

BROADER views of history are often appealed for in the pages of the

NEW CENTURY PATH, and it is therefore interesting to note an attack (in the *Independent Review*) by an intelligent lover of human history on a professor who insists "that history is a science, no less and no more."

This professor, who holds a chair in Cambridge University, England, quotes Ranke's saying: *Ich will nur sagen wie es eigentlich gewesen ist*, ("It is my intention to narrate things only as they actually happened,") and warns us against transgressing the province of facts. This warning we have also heard from professors of science, and to both we reply, what are "facts?" Obviously, in the case of history, human testimony must be the chief source of these "facts."

Now there is grave reason to doubt whether bygone chroniclers were always, or even usually, of the same accurate and careful cast of mind as the professor, and whether they would not have allowed their narrations to get tinged with a personal coloring due to imagination and prejudice. And, even supposing that we did have such "scientific" chroniclers from whom to draw our "facts," there remains the further grave doubt whether the opinion of such individuals on events would be more trustworthy and valuable than that of other people. Human testimony as to events is, as our law courts can show, most vague and variegated; and, as to experts and "scientifically" trained people, the case with them is, if anything, worse.

The only other possible source of facts for the "history scientific" is that afforded by researches and inferences; which again, if we are to judge from the variety of learned opinion, is a highly unreliable source.

So it is clear that, even if we are to reduce history to a bare record of facts scientifically arranged, we have not got a passable outfit of facts to work with. But, granting for argument's sake that we have, is such a view of history even then a worthy, attractive; or reasonable one?

As our critic puts it, the question is, "Whether, starting from the Twentieth century, mankind shall banish literature, emotion and speculative thought from the examination which it accords to its own past."

History is an art, he says, though it may be a science as well. The great men who founded the scientific school of history were men of warmth and imagination, of broad sympathies and literary power, of genial temperament and unfettered intelligence; and they did not anticipate founding a school of dry-as-dust pedantry. They merely pleaded for care and accuracy, which they found lacking in their day.

Why should so great a branch of achievement as literary history, in which alone could expand the genius of Thucydides and Tacitus, Mommsen, Renan, Gibbon, Macaulay and Carlyle; . . . why should the art-science from which mankind has drawn such inexplicable benefits be suddenly brought to an end, because certain people have the honorable ambition to write purely scientific history?

And what is the reason for this infatuation with the mechanical and rigid and cold and lifeless view of history? The answer is not far to seek. It is once more a case of physical science overstepping its limits and attempting to apply the principles by which it investigates chemical compounds and dead bodies to a study where they do not apply.

The "scientific" idea has positively hypnotized the whole of modern thought, and bred a generation of minds that think in geometrical formulas.

An Enlightened View of History

The *Descent of Man* is at the bottom of much of this.

One finds it smeared all over the pages of one's history-books, couched in the half-apologetic tone which the author feels it necessary to use when addressing the superior intelligence of a young student. "You see, my dear children, that men were very foolish in those days. They thought the sun was a god, but we know it is a great ball of [here fill in theory of day]."

On every page one finds the strained efforts of the author to make his story fit in with the Darwinism at the back of the mind. He has started out with an absolutely fixed idea that humanity has evolved from barbarism within the space of two or three millenniums, and this prevents him from seeing what is obvious or taking the natural view of anything. The meanness of his mind disgusts the reader all the time; and his periodical bowings to the altar of ecclesiasticism, whenever he fears that his judgment is misleading him, would be funny if they were not so sad.

We plead for the rescue of the human mind from this preposterous and paralyzing subjection to the physical science idea.

Our critic points out that the "scientific" history is shorn of all its useful and essential attributes. For such a production could be of no use except as an amusement for the pedants themselves. History "begins to be of general use only when it has been presented as common property to the general understanding of mankind, by the high and difficult art of literature."

The man who has no imagination cannot understand the causes or relations of events, and the man without emotions and aspirations cannot understand other people having them, which is why he invents base motives and mean ideas for the ancients.

Another undeniable power of history is to present to us antique ideals of life, often so attractive to men's minds that they mould their own thought and conduct upon them, and even join in associations to propagate the old-new idea and recast society again in the ancient mould.

This thought is sufficiently familiar to readers of the NEW CENTURY PATH, who are continually urged to regard the past ages as vast in duration, mighty in achievement, and the scene of a knowledge and enlightenment now lost to our puny generation, but to be recovered and made even greater whenever we shall have succeeded in freeing ourselves from the thralldom of selfishness and the blight of conceited ignorance. STUDENT

It is a common-place that we cannot answer for ourselves until we have been

tried. But it is not so common a reflection, though surely more consoling, that we usually find ourselves a great deal braver and better than we thought. . . . I wish sincerely, for it would have saved me much trouble, that there had been some one to put me in heart about life when I was younger; to tell me how dangers are most portentous on a distant sight, and how the good man's spirit will not suffer itself to be overlaid, and rarely or never deserts him in the hour of need.—R. L. Stevenson

THE new law for the exclusion of adulterated food imports will have a most beneficial effect upon the California olive oil industry. Already some large consignments of impure foreign oils have been refused admission, the chief admixtures being peanut and cotton oil. In this way the taste of the public will receive a needed education, a great many people being quite unused to the flavor of the pure olive product. The olive is now one of Southern California's greatest staples. STUDENT

WISDOM OF H. P. BLAVATSKY

WE would have all to realize that spiritual powers exist in every man.

We stand at the parting of the ways, where the one path leads down the acclivity to the dark valley of ignorance, and the other climbs upward toward the pure celestial level of being.

The "struggle for existence" applies to the physical, never to the moral plane of being.

It is only by the close brotherly union of men's inner SELVES that the reign of justice and equality can be inaugurated.

The Theosophical Society asserts and maintains the truth common to all religions.

Our endeavor has been to uncover the ruin-encumbered universal foundation of religion.

Charity is the scope of all Theosophical teachings, the synthesis of every virtue.

THE CHILDREN'S HOUR

✧ The Cave Man's Easter Greeting to the Children of Cuba ✧

DEAR BUDS AND BLOSSOMS: Aunt Susan and I took a long walk yesterday, away down the winding path that leads to the water's edge. Aunt Susan said, "Let us go down the rock stairway and see the Cave Man. Perhaps he will let us help him." As all Loma-land people know, there is nowhere to be found a busier person than the Cave Man, for he works for little children all over the world, the year round.

Down the nature stairway we went, so close to the great waves that the spray from their gleaming foam-caps dashed into our faces, and then a few steps, round a high cliff to the door of the Great Cave, which is, as you know, the Cave Man's home. There stood this friend of the children, and as he turned he saw Aunt Susan—for she and the Cave Man are great friends.

"Well, well, my good comrades," said he, "step inside a moment and just see what preparations I am making to bring Raja Yoga joy to the Buds and Blossoms all over the world." So we stepped inside and—well, if I stopped to tell you all that we saw in the Cave Man's home, I would not reach the end of my story, I fear. "These go to the Buds and Blossoms of England," said he, "these to Ireland, these to Sweden, these to Germany, these to beautiful Spain, these to far-away Greece, these to Buds and Blossoms in America and these"—

"But the Buds and Blossoms of Cuba, Cave Man," said Aunt Susan, "surely you have not forgotten them?"

"Cuba—this is for Cuba!" he said, pointing to a long rock-cut gallery which was filled with just the things little children love to receive. "And that is not all. I have more in store for Cuba than you can imagine. Now, just go outside and sit down by the rock pool, until I have finished giving directions to the helper who is going to Australia; and then I shall come outside, too, and tell you a story." A story! It was just as if we were little girls again, Aunt Susan and I! So we went outside the Great Cave and sat down on a rock north of the little pool in which floated glistening bits of kelp, and waited, wondering what the cave man's story had to do with Raja Yoga joy for Cuba.

"Let us look backward a bit," he said presently, as he came to the door of his home. He did not sit down and he did not smile, but remained standing, looking out over the great beautiful Pacific, almost as if he were dreaming a dream. And as we looked westward, we also saw something more than just the sea and sky. We saw a low-hung, beautiful picture, like a panorama, as if the ages were passing before us in review across some great theatre, whose floor was the gleaming surface of the Pacific. And as the Cave Man told us this wonderful tale, which today I am telling to you, it seemed to us that his every word, his every description, was traced in airy color upon that low-hung screen of time. So delicate were the rainbow tints, so shadowy and yet so real was every scene, that I could not describe it all to you in words. Picture after picture passed before us as he spoke, coming as silently as the rainbow comes into the sky and vanishing like the passing of a breath. The pictures you must dream out for yourselves, Buds and Blossoms. I can only tell you what the Cave Man said.

"Once upon a time, so long ago that the mountains are young beside it, there dwelt in America a mighty and beautiful race. The sunshine fell unhindered upon the land, which was a land of temples and of homes. So wonderful and so pure were the people who dwelt here that they seemed to be a race of gods. They

called it an ancient name, which, being interpreted, meant 'The Land of Light.'

"From this land, at different times, went out groups of people to build for themselves homes in other parts of the world. Some went far, far to the East, and founded a great race and a mighty civilization in that land which is watered by the Ganges. Others went eastward, also, but not so far. These dwelt on the shores of a peaceful river. They, too, built up a great race and a great civilization and they called this land Egypt. Others went to the land whose flag today is marked by the green dragon, a land which today has kept but the memory of its past pure splendor, and they called the land China.

"And others went to other lands, in that day when there was no Atlantic and no Pacific, in the sense in which we use those words now, in that day long before the great darkness and flood and whirlwind came which changed the face of the earth and caused continents to disappear and even mountains to sink into the sea.

"And after that great darkness, which left the earth desolate, the people from the Island at the west of this land were scattered, and although those who came after them remembered the time of great darkness, they did not remember the Land of Light which was their home. Nor did they remember that they themselves had sprung from a race so powerful and so pure that it was almost a race of gods.

"Many of these remnants of this great ancient race were left upon islands in the sea. To one such Columbus came and of the people there he wrote home to his King and his Queen, 'The people are so affectionate, so tractable and so peaceable that I swear to your Highness that there is not a better race of men nor a better country in the world. They love their neighbor as themselves.' The island was Cuba.

"But the people were not destined to live much longer

in peace. Selfish and cruel people from distant lands came, seized their lands, their homes, their strong and noble sons, and even took away from them the right to do what their own hearts taught them was right.

"Those were sad days and they were many. The people of this fair island, for it was and is today beautiful almost beyond description, at first were crushed to the earth under the pressure of this cruel hand. Then they rose like Warriors and at last, with the help of a sister-nation this pressure was lifted and today these brave people are free—Cuba and the Cuban people." The Cave Man became very silent.

"But what is the greater gift which you have in store for the Buds and Blossoms of Cuba, O Cave Man?" said Aunt Susan.

"Ah, already have I given it into your keeping. It is this knowledge that was once theirs but is now lost to them, this knowledge that they did not spring from a race of slaves but from a race so mighty and so pure that there is none on earth to-day which may compare with it. Take this to the children of Cuba—nay—give it unto the keeping of the Buds and Blossoms of Loma-land and as I have given it to you, and bid them carry it as a Raja Yoga tribute of love.

And let the children of Cuba receive it—this gift which is the knowledge of their past greatness—in the same loving spirit. Let them find in their own hearts the real Eastertide and let them realize that this Easter message of mine is not alone a record but a prophesy. Those who receive shall find it a new courage, a new trust, a great inspiration. They shall find a new faith in themselves, and then *life will be joy.*"

RING OUT THE OLD

by TENNYSON (*In Memoriam*)

RING out the grief that saps the mind,
For those that here we see no more;
Ring out the feud of rich and poor,
Ring in redress to all mankind.

Ring out a slowly dying cause,
And ancient forms of party strife;
Ring in the nobler modes of life,
With sweeter manners, purer laws.

Ring out the want, the care, the sin,
The faithless coldness of the times;
Ring out, ring out my mournful rhymes,
But ring the fuller minstrel in.

Ring out false pride in place and blood,
The civic slander and the spite;
Ring in the love of truth and right,
Ring in the common love of good.

Ring out old shapes of foul disease;
Ring out the narrowing lust of gold;
Ring out the thousand wars of old,
Ring in the thousand years of peace.

Ring in the valiant men and free,
The larger heart, the kindlier hand;
Ring out the darkness of the land,
Ring in the Christ that is to be.

History of Civilization

A NEW edition of *Buckle's History of Civilization* is an evidence that the world has not yet wearied of the most masterly, the most profound and the most courageous historical treatise which has been produced by modern thought and erudition. It is gratifying to find that such a work is still being read. It would be still more gratifying if we were determined to mend our ways and to put away from us the follies which it denounces. Doubtless this will come in due course. In the meantime we must be content to suffer the evils which Buckle foresaw and against which he fruitlessly warned us. The charm of the *History of Civilization* is not so much in the extraordinary learning which it evidences as in the effort which it makes to show the orderliness of human evolution. Buckle is the only historian who has attempted to find a law of progress, who looks below the externalities of events and finds there a unity, a principle of unfoldment, which is always the same principle, however varied may be its manifestations.

In human history, Buckle discovers a law of advance, or let us rather say he discovers that there is a law. If we have any complaint to make against him, it is that he does not push his research far enough to identify the spiritual nature of that law, and thus to recognize that the history of civilization is also the history of the individual, the story of an age-long conflict between a Higher and a Lower Nature, a conflict which can only end in the peace of acquired equilibrium. Failing thus to see the spiritual nature of the forces underlying human progress, Buckle falls into the error of extremes. He sees the unfailing orderliness of nature, but he applies it so rigidly as almost to exclude human free-will. He tabulates what nations have done in the past, and he makes of his statistics a perpetual prophecy of what they will do in the future. He would have been nearer the mark if he had recognized the operation of human free-will, and the impossibility of predicting its action while at the same time opening his eyes to an universal spiritual ideal which utilizes all human action for its fulfilment. The builder may be supplied with stones of every imaginable size and shape. He will none the less

combine them into the exact form which he intends. For every separate piece a corresponding cavity will be found.

In Buckle's appreciation of Montesquieu, we see the principle which he himself followed. He admires Montesquieu's contempt for the doings of kings and eminent people, perceiving, as he did, that "though these things are very interesting they are also very unimportant." The events of history are not the work of kings and eminent people, who are but the spokesmen of a national or collective state of consciousness. "The Republic therefore was overthrown, not by Cæsar and Pompey, but by the state of things which made the success of Cæsar and Pompey possible." Cæsar and Pompey were but the forceful epitome and expression of the "state of things." They were created by the "state of things," and it is into the latter that we ought to inquire. The former are but incidental and secondary.

Modern historians are lamentably deficient in their comprehension, and even in their recognition of the "state of things." They may plead that they are concerned with results and not with causes, but it is causes in which the human mind is most interested. The history of the world is produced not by a few men, but by the bulk of men, by the collective consciousness and not by the individual. It was the American nation which avowed its independence and not merely the signatories to the Declaration. The nation represented the "state of things," the base of the pyramid. Those whom we call historical personages were the apex, the point of expression. The real event was the consciousness of the common people, and it is with real events that history should concern itself. Buckle deals with realities, but he fails to see their spiritual import. He imagines automatism where there is actually an intelligent direction. He sees that there is indeed a law, but he does not recognize that it is the supreme law of God.

STUDENT

JESUS saith: I stood in the midst of the world and in the flesh I was seen of them, and I found all men drunken and none found I athirst among them, and my soul grieveth over the sons of men because they are blind in their heart and see not, poor and know not their poverty.

Duty the Reformer

THE Bishop of Ripon has addressed himself to the question of physical deterioration of which such alarming reports come from every side. For him the problem is not a very profound one. He sees an almost universal disregard of nature's laws, and is not therefore surprised at the inevitable result. He speaks with approval of the opinion of a number of experts who inquired into the matter so far as one large town was concerned. They reported that the use of artificial food in order to save labor was responsible for much; late hours and the love of excitement on the part of parents was also an important factor. Children were neglected in consequence, and were left to play in the streets and so acquire bad manners and bad habits. The immense consumption of candy was also the cause of ill health and permanent injury.

All this is sound common sense, but what does the Bishop propose to do? The universal panacea of passing a law is obviously inapplicable. We cannot impose a sense of duty by Act of Congress. These and all similar problems have a way with them of resolving themselves into basic moral principles. We cover them up with a cloud of words, but they none the less shine through all the time. Physical deterioration is doubtless due, in a secondary sense, to all these causes, but primarily it is due to a lack of the sense of duty on the part of the parents, and behind them there are of course others, spiritual superiors and the like, who have failed in their duty. These problems are really not intricate at all. There is only one trunk even to the biggest of trees, and when we have once reached the trunk we are confronted with an elementary moral principle which is not at all difficult to understand.

The Bishop himself might do much to heal these sores by so simple an expedient as encouraging the clergy of his diocese to devote their efforts for a few Sundays to preaching duty, *not* the duty of ritual observances, but such more important, if more homely, duties as washing their children's faces, teaching them courtesy and self-respect, and showing them the difference between right and wrong. These things are probably not nearly so interesting as scientific discussions, parliamentary commissions and expert committees. The former, however, represent the way to do it and the latter the way not to do it.

STUDENT

THE GRAIL

BENEATH all earthly beauty
 A holy light doth shine;
 Beneath the chords of music
 There runs a song divine;
 Bend down, O man, and listen!
 Look down, O man, to see!
 Draw near unto the soul of things
 In peace and purity.

Deep in the inner chamber,
 Within your heart of hearts,
 A light is ever burning.
 A light that ne'er departs;
 Turn thought and life towards it,
 Bend all your soul in prayer.
 It is the glory of the Grail
 On God's own altar there.

And having felt the glory,
 And having heard the song,
 And having seen the holy light
 Whose vision makes you strong;
 Go forth into the world of men,
 Lest love and duty fail,
 And ever in your heart shall grow
 The wonder of the Grail.

Question What is the Theosophist's attitude towards war?

Answer (1) Theosophists as a body, have no formulas or beliefs by which their attitude as such may be given in regard to any question.

Each Theosophist, however, working from the fundamental principles of life and being, may formulate his views upon any situation or condition of affairs; therefore, the reply to this question will be from the individual standpoint of the writer.

The fundamental principles of Theosophy point to the divine origin, and common nature, history, development and destiny of mankind—hence our absolute interdependence spiritually, mentally and physically—in other words a Universal Brotherhood which is a matter of Divine law and not of sentiment.

If we recognize this intimate interdependence, we cannot fail to see that the practise of altruism is the key-note to right relations and true progress.

War comes not from altruism, but from individual selfishness and its national expression: it is a reversion to the plane of brute force, animosity and destructiveness, and its persistence as the recognized final arbitrament between the most enlightened (?) nations of the age may well make us question the quality of our advancement.

If individuals and nations worked for the general good of humanity, there would be no war; but they do not. Nations, whose sentiment is for peace, are sometimes forced into war as the lesser of two evils, perhaps as defender of a weak nation against a more powerful aggressor. This exemplifies our interdependence, as well as the fact that war sometimes becomes a righteous though painful duty.

Some wars have greatly aided human progress, and the conditions of warfare have produced remarkable exhibitions of the highest and noblest qualities. War is an expression of the spirit of the age. As long as selfishness predominates in the affairs of men, war will continue to be the supreme court of appeal.

In judging of war, then, let us remember that it is the motive which qualifies the act, and that while struggling to bring about a recognition of the Brotherhood of Man throughout the world, and the reign of peace, even those whose lives are devoted to the practise of altruism and the welfare of all peoples, may—when human life, liberty and freedom of conscience are threatened—feel themselves compelled to resist brute force with the only argument that brute force understands.

STUDENT

(2) War is undoubtedly an evil. And yet an evil out of which good

has often come, as history will bear witness. The results attained through this means might have been accomplished in a better, a right way, had the people been right, yet even the practice of war, horrible as it is, has had some good fruits.

When considered philosophically, it is a strange spectacle. Side by side with the cruelty, the lawlessness, the meanness, the bitterness of war, we see evoked and developed to magnificent proportions, the god-like elements in man. Gentleness, tenderness, courage, fortitude, self-sacrifice come out in bold relief on the battlefield, against the solid background of horror. And paradoxical as it may seem, no doubt, many a man on this errand of destruction, has had aroused within him a new and deeper perception of the common human tie. All this shows that war, like every other intense exhibition of life, is the perversion of something which is right.

For one nation to array itself against another is just as abnormal, just as contrary to all of nature's laws as for one to lift his hand against his brother, and yet there is a warfare which is right, which, according to nature's plan is inevitable and eternal.

There are always the good and the evil, the true and the false, the light and the dark. Life consists in the play of these two forces, and they must always be in opposition to each other. Nature's plan is that the evil—the undeveloped forces—shall be overcome by the good, and the overcoming implies a warfare. And as there is an infinite ocean of undeveloped life below us, this is never ended. It must be eternal.

But the war must be carried on with discrimination, begun by each within himself, and continued outwardly against all sins, but not in a wholesale way against all sinners. Or, what is far worse, not in a wholesale way without reason or understanding against all who happen for the moment to obstruct our path.

The fight must be against those evils which we see in others, by the weapons which can reach those evils, and these are rarely, if ever, made of steel. It is conceivable that a body of people may have become so identified with evil in some form, so compactly a part with it, that a wiping out of the one must mean a wiping out of the other, but this seems hardly a matter for men, in whom good and evil are so confusingly mixed, to decide. Nature doubtless has her own methods for adjusting such situations, and can be trusted to deal with them.

Our present system of national warfare, however, has not even such a motive as this to justify its existence. It is without justification, without reason. It is inhuman.

STUDENT

In a state of society in which Brotherhood is practised there would be no war, and as the Theosophist is one who is working to this end, this of itself shows what is his attitude towards war. But we have not arrived at that state or condition of Brotherhood, selfishness and greed are still rampant and consequently war is just so far inevitable. This being so, is the Theosophist simply to deplore the state of things, to be an upholder of "peace at any price?" That is not my idea of a Theosophist. Too much has been taught us of "the Warrior Spirit" to make it possible to adopt such an attitude.

One of the best answers to the question is in the *Bhagavad Gita*. Arjuna is on the battlefield, between two hosts, and among the enemy he sees friends, preceptors, relatives. If these should be slain, he declares, he would not wish to live. Krishna, who is Arjuna's charioteer, exhorts him, shows him his duty and declares, "To one of the Kshatriya tribe there is no duty superior to lawful war." Do we not have here an answer? but let us note the term "lawful" war. It must be war for principle, of good against evil, in defense of the oppressed. Our warfare in the world should be a continuation and enlargement of the warfare which we have to wage in our own natures. It is held by many that the story of the *Bhagavad Gita* refers allegorically to the warfare in a man's own life, between the higher and lower natures. But that which we find within, we find without also, and what holds good in regard to one, holds good in regard to the other, and the more we carry on this kind of warfare, the sooner will the day of war between nations be past and gone.

THERE is no duty we so much underrate as the duty of being happy. By being happy we sow anonymous benefit upon the world, which remain unknown even to ourselves, or when they are disclosed surprise nobody so much as the benefactor.—R. L. Stevenson

A SONG OF PEACE

by JOHN RUSKIN

PUT off, put off your mail, ye kings, and beat your brands to dust;
A surer grasp your hands must know, your hearts a better trust.
Nay, bend aback the lance's point, and break the helmet bar,
A noise is in the morning winds, but not the note of war!

Among the grassy mountain paths the glittering troops increase;
They come! they come! how fair their feet---they come that publish peace,
Yea, Victory, fair Victory, our enemies are ours,
And all the clouds are clasped in light, and all the earth with flowers.

Ah! still depressed and dim with dew, but wait a little while,
And radiant with the deathless rose the wilderness shall smile,
And every tender, living thing shall feed by streams of rest,
Nor lamb shall from the fold be lost, nor nursing from the nest.

The Marquis Ito of Japan

STEPHANE LAUZANNE contributes an interesting account of the Marquis Ito to the *Paris Matin*. The Marquis Ito is well-known as one of Japan's great men, perhaps the greatest, and although he is now aged he still presides over the councils of the elder statesmen.

The Marquis Ito attributes much of his extraordinary success to the experience which he gained by traveling. The late Mikado, seeing the possibilities of the man and believing that he might one day be Prime Minister sent him to travel in Europe. When the present Mikado came to the throne the work was continued by sending Ito to travel in America.

You are a great minister, but you must still inform yourself more broadly. My father sent you to study Europe; I am going to send you to study America.

The present constitution of Japan is the work of the Marquis Ito. The difficulties which confronted him were enormous. He says:

It was by no means an easy thing to make a constitution for a country which had never so much as heard of parliamentary government. I had no model to guide me in all our history, and it was necessary to build soundly for the future. I tried to forget all the constitutions of all the Western nations and to frame one which would be as adaptable to Oriental peoples. I asked myself how Buddha would have acted under the circumstances and what Confucius would have done if he had been required to establish a parliamentary régime, and I flatter myself that I succeeded pretty well in getting into their skins; for my constitution has worked beautifully for twenty years, and no efforts have been made to modify it in the slightest particular.

Passive Resistance

DR. CLIFFORD, well-known as the promoter of the passive resistance movement in England, has been addressing some needed words of consolation to those who lament the apathy toward religion, by which of course they mean a non-attendance at church. So far from believing that there is a decadence of religion, Dr. Clifford holds that there is a religious revival and that this is shown by the very signs which are usually interpreted in a contrary sense. He says that the churches are making a grave mistake in measuring the religious life of the community by the attendance at church. A new force has come into the world, the force of conscience, and this is producing a feeling of unrest and of questioning of which the influence must be healthful.

There can of course be little doubt that all mental movement is healthful. Even if the movement be in the wrong direction it will all the sooner meet with its strenuous rectification. Quiescence means stagnation; movement means at least vitality.

In support of his contention that a religious revival is on foot, Dr. Clifford points to the increasingly large number of divisions in the church world. Without some searching of consciences, however blindly, there would be no such divisions. Men would acquiesce rather than be at the trouble of dissent. Another symptom favorable to religious growth was the passive resistance movement itself. At the moment of speaking over seven thousand summonses had been issued against persons who had refused to pay an education rate which was to be devoted to poisoning the minds of their children by the administration of dogmas of which they disapproved. Without a strong sense of religious duty these people would rather pay the trifling sums demanded than undergo the annoyance of legal proceedings and the enforced sale of their property. All these things point to an increasing domination by conscience and that conscience should become a final court of appeal is an encouraging sign. X.

No one can cause another as much misery as one can cause himself.

DOCTOR HALE says that "no individual and no combination, seeking profit, will, or even can, preserve or maintain forests, which is a business requiring much longer than one man's life." There could be no more powerful argument for the intervention of Government in order that forests may be preserved wherever it is at all possible. Whoever plants a tree has performed an unselfish and therefore a religious action, and the preservation of a tree is no less a religious and a patriotic duty.

The Raja Yoga Edition

THE Special Raja Yoga Edition of **THE NEW CENTURY** contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to **THE NEW CENTURY CORPORATION**, Point Loma, Cal., the papers will be mailed for you without extra charge.

Observations taken at 8 a. m. Pacific Time

Tree Twenty Centuries Old

Senator Platt of Connecticut has presented to Congress a remarkable document giving the record of an American tree recently cut up for lumber which had lived more than two thousand years and had been successively attacked by forest fires exactly 1659, 463, 324 and 204 years ago, these dates being more accurately fixed than many events in the past century. Professor Dudley in 1900 visited the mountain lumber camps to study the trees and obtained the data by counting the concentric rings of growth on the cross-sections of the felled trunks. The oldest so examined had begun its existence 525 B. C., and, although Professor Dudley was satisfied that extended scrutiny would bring to light a few older trees, he does not expect to find any over 3,000 years old.—*New York Tribune*

Rabbi Invokes Era of Universal Brotherhood

We thank Thee, above all, for this dear fatherland of ours, the promised land of these latter days, the new Canaan, where modern prophets have preached truths no less inspiring than those spoken by Thy chosen messengers of old, where ideals have been set to point the era of universal brotherhood and peace, the hope of all the great spirits of the race. To these ideals may we all remain true.

May those who guide the helm of our ship of state be constantly mindful of the high mission of this American people amongst the nations of the earth to stand as the exemplar of justice, the protector of the weak, the foe of all unrighteousness, the scorner of all wrong doings, the lover of peace.

So imbue all with these ideals that our dear land may stand to the very end as the refuge of all who are oppressed elsewhere, the sanctuary of liberty, the haven of peace.—*From prayer of Rabbi Philipson, of Cincinnati, in United States Senate*

No Compromise With Good & Evil

IT is a familiar thought to Theosophists that every man will be called upon sooner or later to choose definitely and finally between good and evil. The compromise which most people succeed in effecting is not permanent; it is possible only in the darkness of ignorance; fuller knowledge of the nature and destiny of man renders such a compromise impossible. And that fuller knowledge must come to all some day—if not in this earth-life, then in a future one. The aspirations to good and the propensities to evil both gather strength with time; and it is inevitable that a time must come when they will threaten to pull the man in twain, and he must choose the one or the other.

And so it is with the life of humanity in the mass. Today we see everywhere the opposing forces of good and evil gathering strength and producing grave crises, severe antagonisms and glaring contrasts. Institutions, customs and conditions which prevailed without danger in the old times, are becoming impossible through the exaggeration of the various forces that entered into their constitution. No longer, for instance, have we an old-time peasantry, dwelling peacefully in submission to their feudal lord; for education has filled the minds of all with questionings and their bosoms with new aspirations. The relation between lord and vassal

The Old Order Will Not Be Upheld

in whatever department of industrial or social life, has become altogether unsettled, owing to the universal quickening of intelligence and sensibility. And, though there be now, as ever, powers that work to maintain the old order and to check progress, their efforts are vain; for intelligence once awakened cannot be put to sleep again. Therefore, the conditions of modern life having rendered old orders and systems of human interrelation no longer possible, the only course is to move quickly on to the order that is coming.

If humanity can no more be organized on the old feudal basis of lord and vassal, master and serf, owner and laborer, employer and employé, upon what basis must it be organized?

We answer, "Brotherhood."

It has been said that all civilization depends on the "labor habit;" that the labor habit is passing; and that civilization is in grave danger thereby. Do not our disastrous and ever-increasing labor troubles demonstrate this to the full? In British South Africa no white men can be found willing to work the diamond mines for other people's profit. In older times natives would have been used as slaves; but the glare of publicity and the aroused conscience of people will not allow that now. Consequently there

Intelligence Supplants Slavery

is a strenuous attempt being made by the mine-owners to import Chinese to work their mines. From the point of view of these mine-owners such a course seems inevitable, if they are to work their mines at all. But a terrible outcry is being raised against the scheme by the progressive press in England, which calls it slavery. In Borneo coffee is being imported into the richest coffee-growing region of the world; and this and many another tropical colony is lying fallow and unproductive because no one will work willingly and public opinion will not let the native be forced.

This question is of world-wide importance and looms darkly on every prospect of our industrial and civil life. With workmen that will not work and soldiers that will not fight, and with a public opinion that forbids cruelty, how is civilization to go on?

The answer is that we must either lapse into some form of medievalism, under the loving care of some holy institution, or else find in Brotherhood and its kindred ideals the new incentive for effort and the new keynote for harmony. People will no longer toil aimlessly in contented ignorance like the ideal peasant. Personal gain will not serve as a motive for all, since it means the triumph of a few at the expense of the many. There

A Model for the New Order Given Us

must be a new motive for work. And here the same past whose evils we reject can give us a model for the new order. Were there not institutions called Trade-guilds in which master and craftsman were united in a common interest in their work; institutions that built the old cathedrals and knew no distracting lust for money, and no quarrels between employer and employed?

The ancient Greeks in Pericles' time were wondrously cultured and prosperous; but there was a weak spot in their armor that brought speedy deterioration. They despised toil, and they had a horde of slaves to do it for them. Thus they missed being men and became scented fops and unpractical philosophers.

And so in our day culture is allied with indolence and incapacity, while the ready hand is moved by an ignorant mind. Culture and practicality are divorced. But if labor should come to be recognized as a dignity and an essential part of the life of every true and complete man or woman, then no one would care or dare to shirk his share. We have cooperative associations in which all grades from master to apprentice share in the profits; but, alas! the motive—mere commercial gain or the making of a livelihood—prevents success; and these associations find themselves involved with other concerns in the struggle of competition.

It is clear that there must be a great move towards Brotherhood before society can become brotherly enough to be able to work for love of art and craft apart from motives of gain and necessity. But the signs pointed out above indicate that such a change of motive and ideal is inevitable and will be forced on the world by the pressure of necessity caused by the collapse of old systems and principles. Meanwhile Loma-land gets ready to lead the way in the new order of ages. H. T. E.

The Prison of Socrates---Frontispiece

OUR frontispiece represents a view of the prison of Socrates, and thus recalls a story of persecution and of a dignified, a beautiful and a heroic life. The influence upon the world of the teachings of Socrates and of his pupil Plato is so little obscured by the passing centuries that their figures today seem to be more alive than ever before, and the light of two thousand years of thought streams backwards and fashions a halo around the heads of the Greek philosophers.

The story of the trial of Socrates is not likely to grow old nor uninteresting until the breed of reformers is extinct, and that is not yet. Here was a man who preached a philosophy of human life of which all later teachings have been but the elucidation, which is as much the type of a profound wisdom for the Twentieth century as it was for the age which received it. Here was a man whose patient and exquisite behavior carries with it today a persuasive eloquence which no one is too ignorant to understand, and which no man can be too lofty to admire and to follow.

Truly, the race of reformers is not yet extinct and the book of martyrs is not yet closed. The path which was trodden by Socrates will be trodden by others; it is indeed already worn smooth by those who have followed him to a great and glorious end. The defence of Socrates is not that alone of a man before his accusers. It is the plea of human love against human spite and the cruelty of ignorance. It is an eternal protest against those who would chain the thought of the world, who would overcome progress by the rabble cries of self-interest and superstition. Here is one whose advocacy was not for himself, but for posterity, who spoke as though he stood at the judgment bar of the ages:

As to what I before observed, that there is a great enmity towards me among the vulgar, you may be well assured that it is true. And this it is which will condemn me, if I should happen to be condemned, the hatred and the envy of the multitude, which indeed has also happened to many others, and those good men, and will, I think, again happen in futurity. For there is no reason to expect that it will terminate in me.

Hatred and the envy of the multitude are perhaps as strong today as they were in Athens 2,000 years ago. Under the very shadow of the statues which we have erected in honor of Socrates we still hand the bowl of hemlock to those who have followed him. We still persecute those who are sent unto us. The world learns very slowly, but if we imitate the persecution of the past we imitate also its penitence. We open the doors of the Pantheon of History to those whom we have hated and destroyed.

It may be that at the present time we need more the example of the life and death of Socrates than his metaphysics. We need to understand more clearly than ever before how a true man lives and how he dies. We need his sublime perspective of good and of evil:

For neither in a judicial process, nor in a battle, is it proper that I, or any other, should devise how he may by any means avoid death; since in battle it is frequently evident that a man might easily avoid death by throwing away his arms, and suppliantly converting himself to his pursuers. There are also many other devices in other dangers, by which he who is ready to say and do anything may escape death. To fly from death, however, O Athenians, is not difficult, but it is much more difficult to fly from depravity; for it runs swifter than death.

These are lessons which the world never needed more than it needs them today when unselfishness is the one thing which civilization can in no way understand nor tolerate, when self-love sits upon the throne of life, none daring to make it afraid.

Nor am I very indignant with those that accused and condemned me, though their intention in so doing was to injure me; and for this they deserve to be blamed. Thus much, however, I request of them: that you will punish my sons when they grow up, afflicting them as I have afflicted you, if they shall appear to you to pay more attention to riches or anything else than to virtue, and if they shall think themselves to be something when they are nothing, that you will reprobate them as I do you, for neglecting the care of things to which they ought to attend, and conceiv-

ing themselves to be of some consequence when they are of no worth. If ye do these things, your conduct both towards me and my sons will be just. But it is now time for us to depart hence—for me to die, but for you to live. Which of us, however, will arrive at a better thing is manifest to none but Divinity.

Such is the manner in which the wise, heroic ones have ever looked upon life and death and fate, gazing straight upon the face of eternal realities and despising the semblances upon which we build our transient joys and fears. Let us not be afraid that the ship will arrive from Delos, for arrive it surely will. Maybe it is even now at Sunium, but its phantom sails throw no shadow upon the eternal sunlit waters, no shade of fear into the heart which is made strong by truth. STUDENT

National Ideals

A LECTURE by Dr. Lyman Abbott is always valuable and thought productive. Especially is this true of an address upon "Ideals," which he has recently delivered and of which we hope that the full text will be published, instead of a hydraulically compressed summary. A prize-fight would receive several columns of nauseating report; Dr. Abbott receives twenty lines.

Dr. Abbott seems to think that if we were really so practical as we claim to be, we should recognize that whatever is great in our national life was built upon the ideals of those who went before us, and that their actions were but the expression of those ideals. The imagination of the architect is the true building of the house.

It is indeed strange that we do not recognize, individually as well as nationally, how great a force lies in an ideal and in the imagination. Until this recognition comes to us we can never be master of our lives or of our fate; we must remain at the mercy of all the winds of circumstance. One strong effort of the imagination directed toward the chaos of our lives acts like a magnet upon iron filings. Instantly they group themselves into form and shape; in a moment they recognize a guiding and controlling force. Imagination is the most godlike faculty which man possesses. It is truly the fire from heaven, the ladder up which man may ascend to a divine dominion. Happy and prosperous and strong is the nation whose children make for her worthy ideals, and whose sons control their individual lives to the pattern of her well-being. X.

Civic Duty

THE following words, which appeared recently in a contemporary, appeal to us as containing a civic philosophy worthy of some attention:

What is wrong with the town is not in the least the town itself. It is the fact that thousands of people are so placed that they think it is the universe; that they watch the going and coming of the tram-cars as if it were the cycle of the stars.

Devotion to the interests of a town is, of course, a duty, but it is a duty ill performed if we allow it to arouse within us a feeling of separation or of competition. The town or city represents that part of the nation with which we are specially concerned, and which offers to us the nearest point after the home, for the performance of duty.

We do indeed need an extension of consciousness, a fuller realization of duty to the whole world. We must not love the city less, but we must love the world more, we must recognize that in the real problems of life, humanity is a unit and is not divided into municipalities and townships. STUDENT

Birth of Columbus

MR. VIGNAUD seeks once more to add to our knowledge of Christopher Columbus. He has made research into the birth year of the great navigator, and has decided that Columbus was born in 1451. It may seem strange that there should be any doubt upon such a point, but the curious fact remains that Columbus himself was evidently anxious to conceal his age. He makes various statements upon the subject, but they are self-contradictory. Mr. Vignaud has now drawn attention to a notarial deed in which is the statement that at that time—1470—Columbus was *major annis decemnovem*, which Mr. Vignaud insists must be translated "a major being nineteen years of age." This somewhat unusual rendering he supports by very valid reasoning, based partly upon the law of Genoa at that time.

Some Views on XXth Century Problems

Advice on Betting & Gambling

A PROMINENT public man has published some advice to the young on the subject of betting and gambling. This advice is based upon an assurance that money cannot be made in this way and that the gambler is certain to eventually lose whatever money he may possess. This is unquestionably true in a large number of cases, but if gambling can be discountenanced upon no higher grounds than these we fear that it is likely to continue. Evils can never be effectually discouraged except upon fundamental grounds and so long as we ourselves nurture the roots of evil it is quite useless to denounce the branches. There are a great number of men who are too experienced to believe that they can permanently enrich themselves by betting but they are willing to pay for the luxury of excitement as others are willing to pay for luxury in other forms. An effective protest against gambling must include all gambling and not merely the gambling which is carried on at the card-table or on the race-course. Education is now so advanced that our young men are demanding definitions and a precision of terms, and they do not understand why a stake of a few dollars upon a card-table should be more pernicious than a stake of a few millions upon a fluctuating stock. They do not understand why one should be hurtful and why the other should be a commercial backbone of the country. Those who have not the courage to give the widest application to their counsel would do better to abstain entirely or to select some other and less exacting field. Gambling and betting are vices, not because they involve the inevitable loss of money but because they constitute an attempt to gain money without giving any compensating advantage. Legitimate trade is a mutually advantageous exchange of commodities between two parties and he who receives money and gives nothing whatever in exchange for it has obtained that money dishonestly, however much the transaction may be covered by mutual agreement. Gambling is therefore a form of dishonesty and is certainly more degrading to the character than many other forms of dishonesty which come within the criminal code. The tendency of the age is to be ashamed of a direct appeal to moral principles. An appeal to the pocket and to self-interest is more popular than an appeal to conscience. None the less it is true that devils do not cast out devils and the man who abstains from gambling only from a fear to lose his money is not perhaps a very dignified product of moral education. X.

Poor Children and the Vivisector

WHAT is the meaning of this? The anti-vivisectionists have been given a hearing before a committee of the Legislature at Boston. Mr. Herbert D. Ward is reported as having read to the committee a statement said to have appeared in the *Boston Medical and Surgical Journal*, in which details were given of a number of "experiments" carried out in a certain hospital upon some forty pauper children. These vivisectional experiments consisted of puncturing the spinal canal, and it is said that eight or ten of the children died. Referring to the surgeon in question, Dr. Ward said:

These children were entrusted to his care. They were pauper children. He justified the experimental vivisection by saying: "The diagnostic state of puncture of the sub-arachnoid space is so evident that I considered myself justified in incurring some risk in order to settle the question of danger."

The constant demand which is made by some eccentrics for human vivisectional subjects is perhaps not so fruitless as we may have supposed. Even if these facts are correctly reported, we are not quite so sanguine as to suppose that anything effectual will be done to prevent their repetition. Pauper children are very numerous and very cheap. The poor have we always with us, and so long as we can tolerate the fester of the slums the value of pauper humanity is not likely to appeal to us. We are sometimes apt to refer to these poor little waifs as children whom nobody wants. We must henceforth revise our speech if it is to appear that these infants are wanted after all—by the vivisector, as an alternative to the tortured dog and guinea-pig. X.

School and Home Training

THE principal of Graham School seems to hold some strong views on the unwisdom of many of our modern educational methods. He says that "hosts of public school children are killed off by school anxieties and agitation and that many others are crippled for life." Extremists are of course always extreme and there can be no question that there are many contributory causes to the mental and physical decadence which we deplore. Home training is all too often the worst possible training for the strenuous life of the school and many children break down in their studies because they have been enervated in the nursery. None the less, the school system is but ill adapted to the delicate work which it ought to perform and we are still far from recognizing that an important part of education is the knowledge of when to let the child alone. We look upon the pupil very much as though he were a kind of empty sausage skin which must be stuffed with mental food to its utmost capacity and within the shortest possible time. We forget that to arouse within the child a love of learning is in itself a more perfect education and a more enduring benefit than any of these mental attainments to which we now give our diplomas and our medals. Unfortunately a love of learning cannot be made the subject of competition nor of examination and the education of today looks rather for display than for real worth. As it is at present understood, learning consists of a vast army of facts, tabulated and classified, which at all costs must be loaded upon the memory of the pupil. The aim of the teacher should be to bring something out from the mind and not merely to put something in and it is little short of a tragedy when we find that "education" has done little more than effectively wall up all those natural avenues through which the soul ought to reach and irradiate the mind.

The comparison between children and flowers is well-worn but none the less admirable. Children and flowers grow naturally because it is the law of their being, and we can render no more effective service to either than to remove the weeds from their path and to see that nothing external is allowed to interfere with the processes of nature. X.

Mind & Morals for Asylums

A CORRESPONDENT writes a letter of protest to a contemporary against the employment of insane asylum inmates upon the necessary work of the buildings in which they live. Unless there are some undisclosed facts in the matter the system appears to be an admirable one. The victim of insanity who can be persuaded to take an interest in some useful work for the common good is already upon the high road to recovery. Mind and morals enter, of course, largely into all disease, but this is peculiarly true of insanity. The progress of this malady can be gauged with the utmost precision by observing how far the patient shows an interest in others, or to what extent he is entirely centered upon himself. Insanity and selfishness are convertible terms and this is not only true from the standpoint of ethics, but it is now largely recognized by the medical profession. One of the greatest of modern authorities upon mental disease has said that it is the abnormally selfish parent who is most likely to give birth to the idiotic child.

Another keen observer has pointed out that a dawning interest in others on the part of the insane is a sure sign of recovery. It is true that there are still many forms of utter selfishness to which we have not yet learned to give the name of insanity, otherwise our asylum statistics would be even larger than they are. We do not yet describe as a homicidal maniac the man who recklessly sacrifices the lives of others in order that he may acquire money of which he cannot possibly spend the tenth part.

Nevertheless every recognized element of insanity is here present. In the days to come we shall not be so much afraid of a definition and of its application as we are now. We shall recognize that sanity increases with the breadth of our moral interest in and sympathy with others, and that the parents who teach selfishness to their children are inoculating them with insanity as well as with crime. STUDENT

Art Music Literature and the Drama

Technical Training vs. General Culture Among Musicians

"**T**OO much technical drilling stupefies and brutalizes the mind. It actually sends pianists into idiocy, and I could prove this assertion if I had statistics." This statement was recently made by Dr. Frederick Niecks, Professor of Music in the Edinburgh University, and in the course of his remarks he quoted Sir Frederick Bridge's amusing criticism of the many who come to him to learn the pianoforte, but who would like to do nothing but sit down and practise eight hours a day:

They won't go to hear a symphony played and they won't read a book; they will do nothing but thrash a pianoforte as if they regarded that as the business of their lives.

Dr. Niecks' plea is for a wider general culture, a broader life, a training that would give us fewer musical acrobats and more musicians.

Something more than even that is needed. There are faculties higher than those which we call intellectual; something higher than a merely intellectual life. Culture, in its wider sense, includes that something higher, which expresses itself in character—the life of the soul. Unfortunately the word culture has become narrowed in its meaning through a general and persistent misuse.

But the fact is, the time has gone by when the mere technician can persuade us that he has a message that the world really cares to hear, and it is an anachronism that there should still be teachers of music who will tell you that eight hours of practise a day is the one thing needful!

The need which is greatest among musicians is a wider and more general culture. The lack which is most apparent is breadth of view—an honest and more just estimate of life. Musicians generally excuse themselves for this lack on the plea of specialism, a plea which is more fittingly the utterance of a performing dog than a human soul. It is an insult to the soul, to the laws that govern it and to the processes of the soul's own life to declare that mere technique is all that a musician needs. The greatest specialists in any line have always been men of broad and general culture, men who would have made their mark in perhaps a half-dozen other lines. Such were Fra Paoli Sarpi of Venice, Leonardi de Vinci, Richard Wagner, Schumann, Michael Angelo, and many others. Those who are merely specialists and still great are very rare exceptions.

The most astonishing feature of the Loma-land musical training is the fact that the Raja Yoga children accomplish as much with one hour's practise a day as the children of our great musical conservatories do when they practise from three to five, and this is because the soul's law here is recognized. Here the broad life is lived. Raja Yoga children do not grow up psychologized by the notion that they will begin to live a broad full life when they are thirty years old. They live it now and all the time, and their culture is the more complete along special lines because it is general; because they study along all lines, art and history and music and geography and psychology, yes, and even law. Then, too, the life of active helping and positive sharing affords an outlet for the sympathies and leaves the lower tendencies absolutely without a chance to develop.

The plea for specialism is absurd, and these days it is absolutely wicked. We do not excuse one for immorality on the plea that he is a "specialist" in the art of telling the truth; and what court would acquit a man of stealing on the plea that his "specialty" was being charitable? There is an eternal Unity of which all arts, all that is comprised under the name of general culture, and all the moralities, are but parts. We cannot forever remain blind to the fact that, though the minds of men may be ten thousand, the soul is forever one. We cannot afford to forget and insult this Divine Unity in the revealing of which each one of us may become—if we so choose—an Architect-Builder.

A. V.

Again the Question, "What Is Woman's Sphere?"

A FEW months ago the Musical Union of New York became subject to the same general laws as other unions. According to these laws the members are forced to admit women to their ranks, and many and varied opinions have been expressed among professional musicians as to the wisdom of this step. One of the most prominent declares that it is all a great mistake. Women may do on the concert platform, but in an orchestra "they always play out of tune." Then, too, says another, "women cannot play brass instruments without spoiling their looks," and in the orchestra "woman is certainly not in her sphere!" "Harpists," declares another, "are the only feminine musicians that are of any real value to an orchestra." Mr. Franko, concertmeister at the Metropolitan Opera House, is of a different opinion:

I predict that the future will see many women filling positions in our orchestras, especially in high class theatres. They might be particularly valuable in the rendering of operatic scores, than which there is no harder orchestral work, for not only are physical strength and endurance required, but also an intuitive power to anticipate the singer. No two artists sing alike, and a thorough musician has to understand how to accompany each one after scarcely any rehearsing. In many points women would be more desirable than men in this line of work. Then, too, they would be more punctual and more reliable, and I think would not be tempted, as so many men are, to send a substitute whenever they can make a little more money playing somewhere else. Orchestral work is far easier than stage work, nor are there corresponding temptations and disadvantages, and it is difficult for me to understand the prejudice that seems to exist among musicians in this matter.

STEPHEN GOSSON once defined musicians as "Peevish cattle that live by merry begging, maintained by alms, and who privily encroach upon every man's purse." That was a century or two ago, however, when the strolling player expected his one talent to cloak a thousand vices, and music itself too often served as an invitation to the passions rather than a summons to the soul.

THERE is a text which should be preached in the cathedral of music from morn till eve and from eve till dewy morn! It is this: The end of all technic is tone. What shall it profit a man if he play upon a violin a thousand notes where another plays five hundred, if one hundred of his thousand are out of tone? What shall it profit him if they be harsh in quality, or thin and wiry, if the other man's be round and noble? Why should a pianist pride himself that he can play some work faster than any other living artist or more softly than any one else? And what shall be the glory of a singer who can sing a high C-sharp and cannot sing a simple air by Mozart? For slowly, but surely, the day is coming when the true beauty of music will be an open book.—*Selected*

A RECENT spirited debate in the Reichstag, Germany, had for its subject "Impressionistic Art" in connection with the German Art Exhibit to be sent to the St. Louis Exhibition. It seems that Emperor William has recently expressed himself with regard to impressionistic art. He has termed it, unless German newspapers misquote, "gutter art." Knowing his majesty's views, naturally the government commission feels constrained to look with something like disfavor upon the impressionistic school. "Art, ignoring the limits I have described, is not art." This from Emperor William, in his speech delivered March 21, 1901.

The Emperor's views were taken exception to by a number, among them one Herr Mueller, who declared that never had a speech from royal lips been received with so much protest; and he referred to the groups of marble statues which the Emperor had caused to be erected in the *Sieges Alle* as a "monumental marble quarry." He declared that it is contrary to true art to use it for the glorification of princely houses and that art cannot be commanded like a regiment of guards. Said one of the members, "Even the most endowed monarch might be mistaken in his judgment concerning matters of art."

A GREAT SOUL WILL BE STRONG TO LIVE AS WELL AS STRONG TO THINK

— Emerson

IF American women are Empire builders, it is because circumstances have made

them so. From the early days, when they stood beside their husbands and brothers in the wilderness on the shores of New England, until the present time, their training has been a warrior's training. A marvelous school was that period when the first colonial settlements were being made. There was the clearing away to be done; there was also the up-building. Then, to the descendants of these women, came the opportunities that always precede and always follow wars. The women of the Revolutionary times have come down to us as examples of all that is brave and steadfast.

There was Abigail Adams, whose vision was as logical as the wisest man's, who stood as firm as a rock on principle, who knew not the meaning of deviation from the straight and even path of duty. "I do not believe," she once wrote to her husband, "that General Howe has a very smart woman for a wife. A smart woman would have put him into possession of Philadelphia long ago." Then there was Mercy Warren, the splendid sister of John Otis; beautiful Dolly Madison, who risked capture by a mob of drunken soldiers rather than leave the portrait of George Washington to fall into the hands of the enemy. The wisest political foresight could not have planned a better *coup d'état* than this daring little woman executed just on an impulse, an impulse which, however, came straight from the heart.

Then came that period after the Revolution, which was as trying and as fraught with danger as the actual time of the war. Nobly and well did the wives and sisters of the men of those days play their part. Many sacrifices had to be made, but they knew not the meaning of the word, for liberty was to them so precious a thing that it outweighed all other possessions. That was a formative period.

And it is well to remind ourselves that these women had none of the advantages which women have today. They were, by all our standards, almost uneducated, for in those days schools existed for boys alone. Girls were not allowed to attend, and indeed were expected to be satisfied with enough reading and writing and arithmetic to enable them to correspond with their friends, and to reckon the price of potatoes in case their husbands should die and they should be left with the added burden of attending to the family's support. The story is told of one brave girl who learned her lessons by sitting on the doorstep of the school from which she was shut out and hearing the boys recite!

Then came the Civil War. What courage flamed up in the hearts of the women of that day! They went into factories and fields that their husbands and brothers might be free to serve their country. Many who had not home duties went to the front, there to nurse the wounded and to bury the dead. They gave their jewels, their silver, even their gowns, to the great cause. They kept up the courage of the soldiers—which was the greatest boon of all. They went into the most neglected camps with food and care and cheer, into the prisons, into the very trenches after the battles were finished. And the schooling of those days served them in noble stead. No sooner was the war finished and the period of readjustment well entered upon than those who were alive to their country's needs awakened to the fact that another war would have to be fought against the forces that were destroying the nation's homes.

Then how nobly did the women of America come to the front! They may not have always worked wisely—they always worked conscientiously. There were the liquor traffic; the Social evil; certain laws in

✻ Women and Warfare ✻

all States which were, and many of which still are, so unjust to women; the inadequate provisions

for the higher education of girls; the Police Court horrors of our great cities; the problems of infant mortality and many another. What a phalanx! Surely, to attack these evils meant to enter upon another period of stress and war—but a few women were brave enough and unselfish enough to enlist.

They have not accomplished all they hoped in some lines of reform, but along other lines they have done more than they ever dared to dream. The only disadvantage has been the fact that there has been lacking that unity of action which alone can bring about the best results. Each group of women has traveled its own little path, more or less regardless of the other groups.

The Twentieth century is opening. What is to be the part that woman will play? Important, far-reaching, magnificent will be her opportunities. Will she seize them?

Women of extraordinary balance, of unusual power, will be needed, and those who know the women students of Loma-land are well aware that these will be among the leaders. Their work will emphasize the unity that is the secret of success in anything. It will bring into all lines of reformatory effort a new strength and a certain quality of unconquerableness that will "build a future fairer than the past and make the past appear a troubled dream."

E. H. N.

ALL have had moments which have revealed to them the magic power of courage. In its presence obstacles have suddenly been transformed into phantoms, obstructions have leveled themselves and on advancing to meet the foe, lo! he has vanished!

G. V. P.

to the Japanese nurses, Red Cross workers of nearly every nationality have offered their services, and the first party to sail from this country will proceed to Osaka, to which port disabled Japanese troops will go when sent home from the front. The party will consist only of nurses who have seen service in the camps of our own army.

Queen Anne

AQUAINT interest attaches to the following pen picture of Queen Anne, painted by one of the Scotch Commissioners who visited her for the purpose of negotiating a union between Scotland and England. Spite of the "divinity that doth hedge" royalty there still exists a pathetic subservience to the ills that afflict the meanest of subjects though time was when the divinity that surrounded the King and Queen was by no means a mere sentiment as it is today—but that is another tale:

"Her majesty was laboring under a fit of the gout and in extreme pain and agony, and on this occasion everything about her was much in the same disorder as about the meanest of her subjects. Her face which was red and spotted, was rendered something frightful by her negligent dress, and the foot affected was tied up with a pultis and some bandages.

"I was much affected at this sight, and the more when she had occasion to mention her people of Scotland, which she did frequently to the duke. What are you, poor, meanlike Mortal, thought I, who talks in the style of a Sovereign? Nature seems to be inverted when a poor, infirm Woman becomes one of the Rulers of the world, but as Tacitus observes it is not the first time that Women have governed in Britain, and indeed they have sometimes done this to better purpose than the Men."

The Empress Harn-Ko

TO have a name signifying "Spring," and to live in the land of flowers, might almost be enough to compensate one for being an Empress. Add to this, great beauty, sweet dignity of womanhood, and still more, the talents of poet and musician; and the picture of the Empress of Japan is before one.

Yet more than all this, her life is said to be devoted to philanthropy, and her energies to be chiefly spent in promoting the advancement of her countrywomen; in founding and supporting humanitarian organizations. As a musician, the Empress has the reputation of being very clever, and it is said she plays with proficiency the Koto, or seventeen-stringed harp.

To crown all, her marriage with the Mikado has proved to be most happy. They seem united in a life-work that seeks preeminently the welfare of their people. She is the patron and principal supporter of the Red Cross movement, which owes much of its success to her active help and enthusiasm. She works for the wounded soldiers with her own hands. Ladies of her court and women all over Japan are following her example.

One cannot but feel that the position of an Empress offers a unique opportunity to do a mighty work for future, as well as present, humanity.

THE past tells a curious story in the bringing to light of the buried cities of ancient Egypt, which has been, or might be, to the women of modern times a revelation. Pictures, tablets and inscribed stones have been discovered, which give us strange hints and equally strange statements of that time when woman was once regarded as supreme. Even the word describing one of the ancient periods of Egypt is translated as "matriarchal," or mother-rule, and in many of the old monuments the Queen alone is represented as wearing the triple crown. Prof. Wilkinson says that marriage in ancient Egypt was customarily a relation of perfect equality and contentment. Often the man promised obedience to the wife, took her name and his property passed under her control.

JUDGE EMDEN, who presides over Lambeth County Court, England, recently suggested that criminal cases in which women are concerned, either as accused or accusers, should be tried before juries made up equally of men and women. Mr. Bamford Slack, whose wife has for many years been associated with movements for the educational advancement of women, and who is himself a lawyer of wide experience, declared that women should be impaneled on all juries called upon to decide criminal cases affecting the honor of women. "In my own experience," he says, "I have had many cases in which women on the juries could have aided the cause of justice."

WHEN the Portuguese discovered Malabar in the Fifteenth century, a little country off the shores of the Indian Ocean, they discovered also that the affairs of those people, by no means unimportant affairs, were entirely under the control and direction of women.

WOMEN clerks are employed in Japan at many of the railway stations, and in divers respects Japanese women are enjoying a freedom that was undreamed of when the present Emperor came to the throne.

It is not usually known that in "pagan China" up to this day a priestess officiates at many of the altars of worship.

When the Roman Matrons Saved Rome

"MOTHER, thou hast saved Rome, but lost thy son," and with these words Coriolanus led away the Volscian army, the enemies of Rome, with whom he had allied himself, in revenge against his native city.

One can picture the scene leading to this finale; the oppression of the common people by the nobles; the effort of the tribunes to protect the rights of the commons; the demand of the patrician, Coriolanus, that the people should give up their tribunes, or be deprived of the grain sent to relieve them in a severe famine; the bitter feeling that ensued causing Coriolanus to flee from Rome, only to return accompanied by a revengeful foe. Then the Senate was called into action, and an embassy sent to sue for peace. But Coriolanus would listen to none of their proposals.

And now witness the amazing spectacle of a train of matrons, headed by the mother of Coriolanus marching to his tent, and pleading with him to spare the city. Stronger than the rights of the common people, greater than the power of trained diplomats from the Senate, was this band of warrior women, inspired by that higher justice from which is born the courage to win in the battle of right against might. In this manner was the city saved.

STUDENT

QUEEN BOADICEA

ACCORDING to report, Mrs. Coulter, the only woman member of the Utah Legislature, declares that women would accomplish more if they worked harder and talked less. What the world needs particularly, just now, is more work on right lines, and vastly less talking on wrong lines. There is enough energy expended unwisely and selfishly and for the sake of pocketbook and ambition to regenerate a dozen worlds, and one wonders why our civilization is not more "out of joint" than it is. Considering the amount of effort expended on wrong lines and the need of sensible, unselfish work, the condition of humanity is not as bad as might have been prophesied. There is a serious thought in this, but there is also a great hope and an inspiration.

RUSKIN, in his lecture on "War," urges soldiers to be the protectors of women—an urge that has been needed, one must confess, in all ages.

He says:

Whomsoever you deceive, whomsoever you injure, whomsoever you leave unaided, you must not deceive nor injure nor leave unaided, according to your power, any woman of whatever rank. Believe me, every virtue of the higher phases of manly character begins in truth and modesty before the face of all maidens; in truth and pity or truth and reverence to all womanhood.

ONE of the institutions of Japan is the "flower girl," who goes from house to house for the purpose of arranging flowers. She has been as carefully schooled in the art—and it is an art in the highest sense of the word—as our own seamstresses are in the use of the needle. From home to home she goes in the early morning, leaving fragrance and beauty behind her. Japan is a land of flowers, and on certain festival days, as, for instance, those devoted to the cherry and plum blossoms, to the lotus, wisteria or chrysanthemum, the country is like a vast flower garden. In landscape gardening, as well as in the arrangement of flowers, the Japanese can teach us much.

Atlantis and America.—Evidences of Lost Continent

THAT the teachings of Theosophy and primarily those which concern themselves with the antiquity of man and the meanings of archeological discovery will speedily be accepted by the thought of today is evidenced by a long account of discoveries in Mexico, which appears in a widely circulating daily contemporary. This account is based upon the discoveries of Le Plongeon, and the writer tells us that the inferences which may legitimately be drawn therefrom are in part as follows:

(1) That there existed in the midst of the Atlantic Ocean an island continent which was known to the ancient world, and that Plato's description of Atlantis is actual history and neither romance nor speculation.

(2) That Atlantis was a region on which humanity rose from barbarism to civilization, and that other parts of the world were peopled by colonists who went forth from it in search of new homes.

(3) That Egypt, Babylon and Assyria received their population from this island continent, of which the Mexican ruins are some of the remains.

(4) That the Atlantean continent was destroyed by natural agencies, with nearly all of its inhabitants, and that these early Mexican peoples preserved to a peculiar degree the characteristics of the Atlantean race from which they had sprung or with which they were in close contact.

These theories are, in their main outlines, the same as those advanced many years ago by H. P. Blavatsky, who reintroduced them, not as speculations, but as positive teachings based upon positive records. The authoress of the *Secret Doctrine* did not, however, suggest that Atlantis was the birthplace of the human race, but that the buried continent and civilization was but a link in a chain of other continents and other civilizations of which we shall yet recognize the traces as surely as we are now recognizing the remains of Atlantis.

If it is asked, as indeed it is, why so stupendous a cataclysm should have vanished from the memory of man, it may be answered that the description given by Plato was received from those Egyptian priests who professed to be in possession of a record of the events which they described. Inasmuch as every day adds to the accumulated testimony in favor of the actual existence of Atlantis, may we not reasonably believe that the Egyptian statements were based upon recorded facts and not merely upon tradition? We may also remember that the Atlantean fringe remaining upon the American continent and representing the parent stock of the Egyptian and other peoples, were separated from the rest of the world by the inundation which destroyed the remainder of the continent and which made communication impossible. We may also recall that the Spanish invaders of Mexico ruthlessly destroyed immense numbers of books and practically the whole literary records of the country in the same way that other ancient literatures were destroyed in Athens and Alexandria. Were these volumes now accessible we might find that the story of Atlantis had existed during periods more recent than is usually supposed. There may, however, be strange surprises in store for us, and we may yet find that the destruction of ancient literatures was not so inclusive as we have been regretfully forced to suppose.

Now, Plato tells us that the cataclysm which destroyed Atlantis had occurred some 9,000 years before his time, and that from that time all communication had ceased between the Egyptians and those Atlantean or American lands from which they had come. H. P. Blavatsky tells us, however, that the cataclysm to which Plato referred was not the main catastrophe which had befallen at a very much earlier period, and that the lands to which Plato referred were but the remnants of the Atlantean continent which had been spared by the earlier and far more extensive inundation. This may be taken as an additional cause of the paucity of records and the present meagerness of our information.

The evidence which connects the wisdom of Egypt with that of the American Atlanteans and Mayas is, of course, too extensive to be even touched upon here. Readers of Le Plongeon's fascinating books will, however, remember that it was his knowledge of the Egyptian language which gave him the key to the language of the Mayas, and when archeo-

logical evidences have once been firmly knit together they will form a very strong chain of proof, not only as to the reality of the continent of Atlantis, but also that prehistoric America was actually the home of prehistoric Egypt and Babylon. The true and full history of Atlantis is, of course, buried beneath the waters of the Atlantic and beneath ages of accumulated sand-drift. Nothing but physical cataclysm can restore what physical cataclysm has buried, but—who knows? The things which have been are the things which shall be, and there is no new thing under the sun. Strange surprises may be in store for us, and perhaps science will yet be confronted, as it has so often been confronted before, with the physical and substantial proof of events which it has strenuously denied.

Greek City of Olbia. Unearthed by Russian Archeologists

THE Russian Archeological Society has carried out some extensive excavations upon the site of the ancient city of Olbia, which lies on the southern bank of the Boug, not far away from the estuary of the Dnieper. As is usually the case, the examination of the later buildings speedily disclosed the remains of still more ancient foundations which were of a very superior type to those which had followed them. The city seems to have flourished about seven hundred years B. C., and the remains of the houses and temples show them to have been excellently constructed, of remarkably square proportions and admirably dressed and finished.

Amongst the lowest strata reached a perfectly preserved wine cellar was found. Some fifty large jars contained a dry powdery substance which had once been wine. A very considerable collection of works of art has already been removed and sent to the museum at St. Petersburg. This consists mainly of gold, marble and pottery of very first-rate workmanship. Olbia was a colony of Miletus, and was an important center of Greek trade with the interior. Various inscriptions, and especially the decree in honor of Protogenes, show that it maintained a precarious existence against the hordes of barbarians which surrounded it. Finally it became merged with the Scythian tribes and its civilization disappeared. It was destroyed by the Getae about 70 B. C.

Archeology in Rome—the Ancient Temple of Janus

THE *Scientific American* tells us that Commendatore Boni has made further discoveries in the Forum at Rome, among them the site of the ancient temple of Janus, a small structure compared with later temples. In a gallery about twenty feet underground he thinks he has discovered the substructure of the theatre built by Julius Cæsar. Short galleries ending in a square chamber run at right angles from the long gallery, four on the left and three on the right. All these chambers are connected by a narrow terra-cotta tube. His explanation is this: The gladiators entered these chambers and at a signal given by way of the terra-cotta tube they rose up through trap doors, as if out of the earth, and appeared in the arena before the public. The tubes have been cleared and are found to work perfectly, while objects discovered in the galleries give further indications of their use.

A VERY extraordinary skeleton has been found in Gough's caves near Cheddar, England, and Mr. St. George Gray, the curator of the Taunton Museum, pronounces it to be that of a cave-dweller who lived between the Paleolithic and the Neolithic Ages. The skull is in many pieces, but it is evident that the man had prominent brows with a forehead of average width but very receding. The lower jaw is powerfully formed and much wider than those of the present day and the skull itself is very thick and strong. The frontal bone measures nine millimetres in thickness which exceeds by two millimetres the average of the present day. The height of the man was 5 feet 3 $\frac{3}{4}$ inches, which is about the average height of the men of the stone age. The shin bone is flat which is never the case with the present race. A number of flint instruments were found in immediate proximity to the skeleton.

Studies

Point Loma Contrasts

ONE would scarcely expect a lichen to be particularly choice in its selection of a rock to grow on, and yet some species are so. Toward the southern end of Point Loma there are some great boulders of granite, perched high on the hillsides, and they are shaggy and mottled deeply with a gray lichen which is not found elsewhere on the Point, though whether the selection of a "soil" is due to any peculiarity in the chemical nature of the granite, or merely because, being harder, it does not weather away as rapidly as other rocks, may be a question. At any rate the fact remains that it is so, and the effect of these festooned boulders among the low brush is curious indeed.

Scarcely less so is the vegetation in the vicinity. We have been accustomed to think of ferns and cacti as belonging to widely different habitats.

Indeed, the very mention of ferns suggests cool, damp shade quite as forcibly as that of cactus reminds us of the blistering dryness of the desert. But here the ferns have invaded the realm of the cactus and they grow side by side on the dry, stony hillsides far from any possibility of shade or water. One fern was found sharing a half-pint of earth with a bunch of grass, both green and vigorous-looking, though the whole concern was on a tiny ledge high on the face of a rock directly fronting the sun.

Ferns growing in such hilltop locations are in a soil which must be absolutely dry for at least six months every year, yet during that time they not only live, but keep sufficient moisture in the roots to start with next season. And yet after this prolonged baking they come out briskly every spring and produce fronds six inches or more in height during the few weeks when they can grow at all.

And yet a stone's cast from these barren hillsides may often be found sheltered glens where clematis, ferns, grass, cream-cups and shadowing dwarf mahogany bushes make retreats as verdant, cool and moist as ever a "spring poet" wrote about. And such a soil! Black, friable, deep and springy, it would move to covetousness any gardener who knows what plants really like to have mixed with their sand and earth.

In fact, the whole Point is a series of the most startling contrasts. There are cattails, water-rushes and cacti; yuccas, crabs, octopuses and sagebrush; craggy piles of water-scarred rocks, ferny dells and wide expanses of level farm-land; sea-anemones and horned-toads, within five minutes' walk of one another.

It is a synopsis of a great region and with possibilities widely varied and far-reaching. It is a *living* land where nothing seems dead or listless; even the dry branches somehow give an impression of energy and purpose.

OBSERVER

TO THE DAISY

by WORDSWORTH

BRIGHT flower! whose home is everywhere,
 Bold in maternal Nature's care,
 And all the long year through the heir
 Of joy or sorrow;
 Methinks that there abides in thee
 Some concord with humanity,
 Given to no other flower I see
 The forest thorough!

Is it that man is soon depressed?
 A thoughtless Thing! who, once unblest,
 Does little on his memory rest,
 Or on his reason.
 And Thou would'st teach him how to find
 A shelter under every wind,
 A hope for times that are unkind
 And every season?

Thou wander'st the wide world about,
 Unchecked by pride or scrupulous doubt,
 With friends to greet thee, or without,
 Yet pleased and willing;
 Meek, yielding to the occasion's call,
 And all things suffering from all
 Thy function apostolical,
 In peace fulfilling.

KULLEN POINT ON THE NORTH COAST OF SKANE,
 The Southernmost County of Sweden

Gossip of the Bird Folk

POINT LOMA has been selected as a residence by a pair of woodpeckers who have apparently made their headquarters on the Homestead grounds. They are of the common brick-red variety with white bars on neck and wings. They have been seen hunting food on the ground like larks and seem indifferent to trees; indeed we very seldom hear them drumming.

The road-runner children, who were introduced to the readers of the *NEW CENTURY PATH* last summer, have apportioned the Homestead grounds into spheres of activity which they regularly patrol with the result that certain sorts of insects and small reptiles are scarcely to be found. The birds are remarkably tame and seem to enjoy the (not too close, please,) proximity of human beings.

We have another sort of humming-bird with us this year; a little brown fellow with a brilliant crimson head. The golden-green ones with which we are so familiar are relying largely upon the Homestead gardens at present, and the droning hum of their wings can be heard all day.

The migratory species of birds are beginning to return and very soon there will be great nest building operations everywhere. A pair of shrikes have announced their intention of residing in the eastern hedge this year, but their plans will probably be spoiled as we do not approve of the cruel sport of which they are constantly guilty and which has earned them the title of "butchers."

Do not, however, confuse them with the king bird, which they much resemble in appearance. The latter is the farmer's friend in many ways, especially if he keeps chickens, as they will not permit a hawk in the vicinity.

As a natural result the other weaker birds nest in the neighborhood and weed-seeds and insects become scarce. The hawk test will always decide the question if you are doubtful as to species, because the shrike never chases hawks and the

king bird always does. The shrike is a scourge to other birds as it takes a pleasure in killing the younger of any weaker species.

NATURE-LOVER

Absence of Fear in Birds Not Terrified by Man

SINCE the notice, in these columns, of the extraordinary tameness, even friendliness, of the birds of the island of Layson, other reports have reached us of similar absence of fear in the birds of other regions, and the truth is gradually forcing itself into scientific minds that fear of humanity is an acquired instinct, while love and trust of the human family is normal to the animals. It is to be hoped that it will penetrate into the public mind sufficiently to cause some practical consideration of means of regaining the love and trust of the animals, now forfeited by our treacherous cruelty toward them.

X.

Universal Brotherhood Organization

Central Office Point Loma California

THE Easter services by the students of The Universal Brotherhood and Theosophical Society of Point Loma, in Isis Theatre Sunday evening, were attended by a crowd that overflowed into the very top-most gallery, while many unwilling to climb to the upper heights, being denied standing room on the lower floors, turned away regretfully. The Theatre was beautifully decorated with white blossoms—chiefly calla-lilies and marguerites—and greenery, which were lavishly and most artistically grouped.

The program was all that the most expectant of Isis Theatre audiences could have hoped for—barring of course the ever welcome appearance of Katherine Tingley, who has not yet returned from her long journey. The musical numbers given by Isis Conservatory of Music included the Allegro from Symphony in *b* minor, "The Unfinished" (Schubert); Siegfried's Rhinejourney (Götterdämmerung) (Wagner).

The Raja Yoga children's chorus from Point Loma were down for the following numbers: "The Seasons" (A. Hawley); "The Coming of May" (Hatton); "Round" (H. Heale); "Tell Me What the Brook Doth Sing" (A. N. Alexander). Under the leadership of Mr. Neresheimer the children so delighted the audience that they were encored and reencored until their part of the program was greatly exceeded.

Master Thorley Von Holst, one of the many bright, clear-spoken lads of the Raja Yoga School, who is well-known to Isis audiences, then presented a short address, a representative passage from which is as follows:

"If we could only realize the tremendous power which each and every one of us possess—either for good or for evil—we would not so often crucify the Christ within us. We know Christ is in our hearts when we try to help others. The worst character has a spark of divinity too often hidden under a harsh, cruel and selfish nature. The Christ-spirit within each of us brings us nearest to our conception of his divinity. Katherine Tingley has said, 'To know him we must use our own soul's eyes, and picture this beneficent friend in a new way—we must break through the veil of superstition which has obscured him from our view.'"

Dr. Gertrude W. Van Pelt, a special favorite with the San Diego audiences, spoke on "Resurrection." In the course of her address she said:

"The Easter-time is the season when hope is strong. The clouds break here and there, and life seems more full of possibilities. Is this because it is recorded that long ago, Christ, though crucified, dead and buried, rose again? Or is it because this is but the story of the eternal process which Christ told in himself and which all nature has been telling ever since?

"In the springtime the message is so simple that even the dull ones hear it. Even they feel, though they may not understand, that there is no death; that the universe is one, the resting place and home of all. For a moment at least, through some intangible thread, they have been attuned, and in their hearts have sung with nature the song of life. Have not the trees which have looked so empty and dead suddenly covered themselves with green, fresh leaves? Has not the earth which has been so long bare carpeted herself with lovely forms in colors? To the inner man every leaf and bud and flower whispers, 'Thou, O man, who art greater than we, what canst thou do?' And the outer man, even though his head be

heavy and his body bent, catches the echo of the message, which fills the air and feels its inspiration.

"Christ, the Christos, in all nature, in all hearts, ever seeks to become manifest. He it was who said allegorically, 'Behold, I stand at the door and knock.' At the Easter-time it is perhaps a little easier for the outer, the undeveloped man, to hear

this knock. It is perhaps a more favorable time for him, if he looks within his own nature, to read there the same story of the Christos that was written so many hundred years ago, and that has been repeated in varying language in every religion, in every world myth. Once let the majestic meaning of this story enter the mind, and it seems as if every bird and flower were telling it; as if every seed and stone held that secret.

"The Christos is within each man—yes, is in very truth the man himself. But, in entering a body, he has made a voluntary sacrifice, has allowed himself to be crucified on the cross of matter, and suffers in order to lift and help and save.

"What is that bit of consciousness before us, functioning through a being which we call a man? Is it foolish, and flippant and idle, living on the outer crust of that wonderful universe it represents? Is it selfish and mean and avaricious, so separating itself from its life source that it must inevitably become a filthy sore, slough off and decay? Is it ambitious and greedy of power, arming itself for a battle in which failure must be the inevitable result? Or, is it seeking to lift and help and save? Then we may know the Resurrection has begun. It has engaged upon the work of the world—has begun to live.

"The Easter season calls out gratitude as well as hope and joy. Our thoughts turn naturally to the man Christ Jesus, who so long ago made manifest in himself the Christos. This mysterious transformation can never come in one who works for his own development. The least taint of selfishness blocks the channels. The Christ child is never born for one or a few. It is accompanied with suffering and pain. And one who has passed through it must love with a love immeasurable.

"The world is full of actors who have forgotten they are not the parts they play, who have forgotten who they are and why they play a part at all, when suddenly a sterner urge to duty stirs to nobler effort; a truer love for others lightens every task. This is the Christos knocking at the door. It is the Christ child, slowly growing in the womb of human nature. But the blessed birth cannot be completed in a day or year. It is the work of ages, yet little by little each one can prepare for it. Every day something can be cleared away and the new, strong, beautiful life be allowed to push a little forward into this world which needs it so much. For all have the Christos within themselves. All *can* help and *if* they only would, how much might be done just now, in this wonderful world crisis. As there are times in every life when more can be accomplished than at others, so there are times in the world. What means this restlessness, uncertainty, this mighty stirring over the whole earth? Is it perhaps the forerunner of the pangs of a new birth? A time of change is always a time of opportunity. Help it in the right way. If there must be destruction in the world, in our own natures, let it be only of the useless forms—never forgetting that in very truth, there never is, never can be, any real death; that life is inextinguishable. It *is*. It can never cease to be. Out of the ashes of our experiences, our hopes and failures, will rise the flower of compassion—the Christ child, who shall redeem the world."

The Southport Lodge, England

From Southport Lodge, England, comes an enthusiastic report, sent by Mrs. M. E. Nicholson, president, of the presentation of *The Little Philosophers*: "The children surprised us all by the rapidity with which they learned their parts, by their dignity and their remarkable ability in all directions. Nothing has ever been so much enjoyed by them as the preparation for Katherine Tingley's Symposium, and we feel that many things that were not clear to them before are now not only better understood but more thoroughly practised in their daily lives. The whole work has been an inspiration."

San Francisco Lotus Group

On Tuesday evening, December 22, 1903, the San Francisco Lotus Group gave the Symposium of *The Little Philosophers*. The audience listened in silence to the marvelous and yet simple teachings that came from the lips of the children. The latter, indeed, entered into the performance with a spirit and dignity that can not be described. The musical program was exceptionally good, and the children's voices indicated a real inner harmony and spirit of unity among them. To add to the occasion we had a large and well laden Christmas tree. Greetings from all.

HARRIET H. SOMERS, Superintendent

From Several Swedish Lotus Groups

Reports from the Lotus Groups at Ostermalm, Kungsholmen and Södermalm, Stockholm, Sweden, give most enthusiastic accounts of the presentation of the Symposium, *The Little Philosophers*. From the Kungsholmen report we quote the following: We feel with a gratitude indescribable that the force and harmony of real truth underlying the Symposium of *The Little Philosophers*, was perceived by the audience, and that every one who witnessed it took a step higher. The first part of the program was opened by children dressed in the old Viking costume as Warriors of the Golden Cord. The chant at the close was an inspiration.

ALMA NORSELL, Secretary

Lodge No. 1, London, England

On January 1st the members of the Lotus Group at 19 Avenue Road held a New Year's festival. The program opened with a selection from Schumann. After recitations, songs and the beautiful *Intermezzo* from *Cavalleria Rusticana*, Katherine Tingley's Symposium, *The Little Philosophers*, was presented. It was about this feature of the program that the real interest centered. The curtain, upon rising, disclosed a scene of marvelous beauty. Palms, ferns, garlands, roses; the

draperies of white and the background of sea and hills. The children were simply dressed in the Greek costume with garlands and flowers. The New Year's message, as given out in the Symposium by these little philosophers, touched the hearts of all with the power that comes from a simple childlike sincerity. Their dignity and grace cannot be described. They gave the audience something more than mere ideas, and to those who had helped the children in the preparation, the evening's performance seemed like one of the golden hours of the year. M. A. B.

Forest Gate Lotus Group, Lodge 30, England

The evening of December 31st, 1903, New Year's Eve, will remain long in the minds of the members and friends of our work with the children. The Symposium, in the preparation of which the children had spent several happy weeks, was presented, the evening's entertainment being opened by music from behind the scenes. First were heard the children's voices singing "The Sun Temple," then "We Are Wise," followed by a duet entitled "Poet and Water-lily," the latter being rendered by the tiniest Buds. "Love Divine Through All Things Flowing," next came forth in sweet, clear strains, followed by "The Tissue of the Life to Be," and at the conclusion the silence of expectancy seemed to settle over the audience, broken only by the overture to *Tannhauser*. When the curtain was raised there was a scene which thrilled the hearts of all. It was the Symposium of *The Little Philosophers*. After the Symposium, which was well presented—a veritable fairy scene of flowers, garlands and laurel—many of the spectators remarked that only by the living of the life could the children have attained such perfect dignity. After the entertainment a tribute was paid to *The Little Philosophers* in the fact that the spectators departed in silence, carrying with them beyond a doubt a picture and an ideal that the coming years will not efface.

WALTER FORBES

The Soderholm Lotus Group

The Secretary of the Soderholm Group sends us a detailed report of the evening's entertainment, which was given before a large audience in the lodge rooms: The first number consisted of a program by a little girl dressed in the Lotus costume. Then from behind the curtain came the song of the children, "The Sun Temple." After tableaux, songs, and an essay by one of the little children of the Lotus Group, the Symposium of *The Little Philosophers* was given. I marveled to see how well the children caught the meaning of this great work. I expected them to find it difficult and was disappointed. The preparation of it seemed to them the most natural thing in the world. Their attitude taught us more than I can express of the real aims and ideals that Katherine Tingley is trying to bring home to her students.

GERDA STENMARK

Everton and Old Swan Lotus Groups, England

On February 13th, the anniversary of our Leader's going to Point Loma, there to establish the World's Headquarters of The Universal Brotherhood and Theo-

sophical Society, the children of both the Everton and Old Swan Lotus Groups met together at our Lodge rooms. It was a meeting more than happy. It was glorious. The little Warriors came marching in in silence and then sang the "Circle Song." This was followed by simple statements of the meaning of Brotherhood. Then came the "Messengers of the New Year," with their white and gold shields of Hope, Joy, Trust, Truth, Love and Brotherhood. They gave joyful messages and sang inspiring songs. Following these came the magic lantern exhibition, which never loses its charm for the Buds and Blossoms. Among the pictures upon the screen were scenes from Loma-land and the portraits of our three Leaders.

E. A. S., Everton

KATE LITTLETON,

Superintendent Old Swan Lotus Group

Lotus Group, Seacombe, England

Reports from the Seacombe (England) Lotus Group detail great progress. The parents have not only expressed great satisfaction at the work done, but have assisted it by their co-operation. On New Year's day the Lotus Buds had a festival and on January 4th Katherine Tingley's Symposium of *The Little Philosophers* was given. The entertainment was a great success and, owing to a special request sent in from the audience, it was later repeated. On January 13, our children joined those of the Everton and Old Swan Lotus Groups at the Everton Lodge rooms in celebration of the seventh anniversary of the founding of the Universal Brotherhood. Greetings.

ALICE SANDHAM, Superintendent

Portsmouth Lotus Group, England

The Portsmouth Lotus Group, England, on the 10th of January gave an entertainment to parents and friends. The Symposium, *The Little Philosophers*, was given after music and recitations. There was a dignity in its presentation, and a simplicity and power that demonstrated better than words, the character of the Lotus Group teachings. The Symposium brought to all, old and young, a clearer vision of the great ideals which we are trying to realize. The audience was intensely interested and many expressions of their appreciation have come to us.

SUPERINTENDENT

From Ostermalm Lotus Group

The following is a brief extract from the report of Ostermalm Group: The festival was opened by music, followed by songs and tableaux, the suggestions for the latter being taken from the Raja Yoga edition of the NEW CENTURY PATH. In presenting the Symposium we followed as closely as possible the Leader's suggestions, and the results surpassed all our expectations, even our hopes. One child whispered to the teacher, "O, how beautiful; it seems to me as if we were in Paradise." The children did their best and nothing more need be said.

GERDA NYSTROM, Secretary

Differences in Men & Animals

THE naturalist, John Burroughs, has been calling in question those animal stories that tell of almost superhuman intelligence on the part of both pets and the wild, and objects to the ascription to animals of a pronounced individuality, though to the higher ones he will grant a certain amount, especially to those that have much association with man. And he is certainly right in saying:

It may be laid down as a law that the higher we go in the scale of intelligence, the wider the difference among individuals, and the lower we go, the less these differences.

He thinks it probable that snails and oysters do not differ in any appreciable way at all.

What is thus obviously true for animals is also true for men. The higher the nature of the man the more special his characteristics. And one may suppose that the process of evolution will never cease differentiating men out from each other. If one could look far enough on into time, we should see all mankind on a level of development which, when it now occurs in individuals, we call genius. And the genius is more than all others differentiated from his fellows. Human life will never reach its full expression, its profound possibilities will never be brought into even relative manifestation, till that far point in time is reached. For in each unit of humanity is buried a secret of life, a special power, which only he can show and use.

And yet all this differentiation is compatible with—is indeed only to be made possible by—a more and more complete unity and harmony of men's souls.

STUDENT

To Study Religion

A MOTION is to be made before the Glasgow Established Presbytery which ought to be welcomed. It is to the effect that theological students receive henceforth a course of training in economics and the moral causes of the degrading poverty which is one of the great hindrances to the diffusion of religion, and that they be also instructed, among other things, as to legislation, actual and projected, in defense of children and concerning the conditions of child-life generally.

This is certainly a sign of progress. After these many centuries the Established Presbytery is invited to consider the moral causes of degrading poverty. The announcement strikes us very much as would a statement that the medical profession is considering the advisability of studying the human body. In what way has the United Presbytery been employing its time hitherto that it should now be thus assailed by a revolutionary proposal to turn the attention of its students in the direction of religion? The further suggestion that the Presbytery shall consider the conditions of child-life is not of course so startling. It has already paid much attention to the condition of children after death, and the theological hell has for long been peopled with the souls of babies condemned to eternal torture. Within the last few months it has been grudgingly conceded that unbaptized infants may after all and in some mysterious way escape damnation. It now occurs to some members of the Glasgow Presbytery that if these children can avoid damnation after death it may be possible to save them from damnation upon earth. And yet there are those who say that the world does not move and that human intelligence has reached its limit! The Glasgow Presbytery is a proof to the contrary.

STUDENT

China, Past, Present and Future

RECENT events have naturally attracted attention to China, and the result is beginning to show in the production of books. One of the most vivid—*China, Past and Present*, by E. H. Parker—appeared at the close of last year. His book is in some sense a plea for the political rights, the right of self-government, of the real Chinaman now held in subjection by the reigning Mantchu Dynasty. The Mantchu conquerors, says Mr. Parker, have done little for the empire or people. They are practically parasites only. It is high time that "the intelligent and industrious Chinese people, who are excellent municipal and village organizers, should have recognized rights conferred upon them." But at present for any Chinaman to suggest this is merely to lose his life or suffer imprisonment or exile.

The history of the Chinese, what little we know of it, is a long drama of bloodshed. The earliest historian was Confucius, and his narrative begins with the Chinese "Golden Age," when no laws existed or were needed, when the house-door could be left open with no fear of robbers, when the empire was everywhere extending itself, and when there were fairs and marts throughout the land. The monarch under whom this was achieved was *Yaou*, two and a half millenniums before the beginning of our era. Events and the general picture before this we have in legend only, legends of a people coming from whence we know not, and apparently climbing up from a simple nomadism to the civilization described by Confucius. For one of the rulers during this legendary period is said to have taught the people to make huts, another to make fire, another to work iron.

What length of time the legends cover we do not know. Yet according to the records used by H. P. Blavatsky, these people were then what the American Indians are now—remains degenerated from a yet more ancient civilization. As time went on, the country seems to have been blessed with less and less of the peace of its Golden Age. New Dynasties constantly arose, replacing the old. Lieutenants of provinces periodically seized the throne, and sometimes the whole people would themselves rise and oust some reigning profligate.

Confucius himself was born five and a half centuries before our era, and from the time when his history closes we have the picture fairly clear. The same conflicts and changes of Dynasty went on; and at last, in the Thirteenth century, the whole empire was subjugated by the great Mongol Ghengis Khan.

But the Mongolian regime, which included the reign of the renowned Khubla Khan, was very brief. A hundred years saw the last of it, and the empire once more passed into native hands. Not, however, for long. Early in the Seventeenth century the Mantchu Tartars flowed victoriously into the country and established the oppressive Dynasty which now holds the liberties of the people in its hands, staying them from a step into the currents of modern life and thought fully comparable to that taken by Japan. China's place among the great Powers of the modern world awaits her. What she will do when she has attained it may perchance somewhat depend upon the examples they set to her and upon the treatment they accord her during the near future. One may fervently hope that the Chinese memory is not too long and that it may be exceeded by her power to forgive. Meanwhile, let us remember that of the real *in-land* Chinaman, we of the West hardly know anything. STUDENT

A Definition of History by Oliver Cromwell

God manifesting Himself, that he hath shaken, and tumbled down and trampled upon everything that He hath not planted.

The Nature of Man

THE *Nature of Man*, by Professor Elie Metchnikoff, of the Pasteur Institute, continues to receive much attention in the press. We have ourselves already commented upon this work, which appears to contain more "scientific" dogmatism and more unwarrantable assertion than any book of its kind which we have yet perused. To find its parallel for complacent omniscience we should have to search among the third-rate theology of the middle ages and we certainly have no desire to do that. The modern churchman who would write of religion as Professor Metchnikoff writes of science would certainly not recoup himself for the cost of printing.

By "science" Professor Metchnikoff seems to mean in every case—himself. He certainly cannot refer to any of those whose thought and research have worthily claimed the attention of men. He tells us that "future life has no single argument to support it." Encouraged by his own audacity and perhaps by the applause of the young men of the Institute, he goes on to instruct us as follows:

Man is a kind of miscarriage of an ape, endowed with profound intelligence and capable of great progress. His brain is the seat of processes that are very complex and much higher than those of other animals, but these functions are incompatible with the existence of an immortal soul.

Recovering ourselves with some difficulty from this *tour de force*, we learn regretfully that,

Death brings absolute extinction, science cannot admit the immortality of the conscious soul, for consciousness is a function of special elements in the body that certainly cannot live forever.

Now, if we wish to estimate the colossal magnitude of this scientific impertinence, let us recall the way in which the true thinkers of the world have dealt with the problems of life and death. Even those amongst them who have been materialists have contented themselves with the assurance that we know nothing and must be content to know

nothing. Professor Metchnikoff knows everything. There is no sanctum to which he has not ready access. There is no veil, either in heaven or upon earth, which can resist the penetration of his vision, no false modesty restrains his wild career. *La Science—c'est moi*. Pasteur himself surmised, believed, suggested. Metchnikoff knows. Herbert Spencer leads us to the portal of the "unknowable" and with reverence retreats to the domain which he had made his own. It is left to Metchnikoff to overwhelm these pygmies with a knowledge so vast that it embraces every department of existence.

At last we have found the true scientific infallibility, knowledge where before we had speculation, assertion where we once had argument and, we must add, impertinent declamation where once we had the diffidence and the modesty of knowledge. It is, of course, all very sad, although the literary world seems somewhat inclined to laugh and to wonder from what interior arcanum the Professor has drawn his superhuman wisdom. It is none the less to be regretted that such a work should seem to have the inspiration of the Pasteur Institute, and we wonder if it is in any way due to the vivisection which may reasonably be expected to have a deteriorating effect upon the reasoning faculties. The point occurs to us quite casually, but it is perhaps worthy of consideration by mental specialists.

The book itself would naturally be unworthy of notice, except from the effect which it may have upon the callow and unformed minds of young scientific students throughout the world, who are all too ready to accept such writers as this at their own estimated value.

STUDENT

The Trend of Twentieth Century Science

Changing Types in Disease—Our Remarkable Transition

AMONG the consequences of the conditions of our time must certainly be the appearance of new diseases and of changed types of old ones. Increased accuracy of diagnosis does not account for the enormous multiplication of described nerve diseases in our medical text-books; a multiplication so great that a practitioner who took his degrees twenty years ago and had read nothing since would hardly understand the pages of a medical text-book relating to neurology.

Doctors are beginning to notice this change of type, without understanding it. We recently noted, in a report of a meeting of a New York clinical society, that one of the speakers, dealing with the subject of general paralysis, said:

Twenty years ago, if a diagnosis of general paresis was made, it was safe to assume that the patient could not live more than two years, but today it is reasonably certain that he would be alive ten years from the date of the diagnosis. For this transformation the speaker knew of no explanation. Another point of interest is that some years ago, before it was safe to make a diagnosis of general paresis, the patient must have shown some symptoms of grandiose delusions, but today nearly fifty per cent of the patients suffering from this disease are without any delusions of grandeur whatever, and the condition is gradually tending toward a type that will be relatively free from such delusions.

This disease, though increasing in frequency, like most nerve disorders, appears to differ from them in lightening its type. Insanity, as to which we have definite statistics, and which serves as a sort of index-pointer to nerve diseases generally, is increasing so fast as to make an eminent American statistician recently remark that if the present rate of increase is maintained, three centuries will suffice to see the whole population insane.

Thought and feeling are far quicker and more vivid than they were. Men and nations are closer in touch with each other's minds and emotions.

From every disturbed center, ripples expand throughout the whole human thought atmosphere. Our individual consciousness changes color every day, almost every moment, from causes whose source we cannot determine, generated somewhere over the world's wide surface. And this swifter movement is accentuated and punctuated by the speed and completeness of modern methods of communication and travel. Human nervous systems cannot without jar accommodate themselves to the swift passage of the steam age into the electric age, a transition which is also the outer symbol and concomitant of a deeper one. No new birth was ever yet without its throes.

STUDENT

N-Rays and Vision—Sight May Be a Double Phenomena

RESARCHES on the "N-rays" are, of course, steadily continuing and some of them have special interest in connection with the phenomena of eyesight. The shutters of the laboratory were accurately closed, so as to throw the room in such almost complete darkness that the face of a clock on the wall was barely discernible as a faint grey disk. "N-rays" were then directed upon the eye of the experimenter, and the clock-face at once became white and clear and the hands visible.

Now, as it is known that the body generates "N-rays" habitually within itself, from any part of it that is in action, it is suggested that sight may be in all cases a double phenomenon in which the retina is illuminated from in front by the object looked at, and from behind by "N-rays" generated by the observer's brain.

Differences in the vision of different persons may be thus explicable: some contribute more of their own invisible N-light to the process. And it is possible that some abnormal phenomena of sight may be due to the contribution by the observer, to his retina, of an unusual proportion of his own rays.

There is evidence that any active part of the body emits "N-rays," but that there is a sort of spectrum of them, different tissues—muscle, nerve, etc.—emitting different parts of this spectrum.

STUDENT

Chloroforming Plants—Curious Effects of Certain Drugs

SO far, we believe that no one has attempted an explanation of the curious effect of ether and chloroform on plant life. If a branch of a plant be surrounded with an air-tight bag, and the bag then filled with air containing four per cent of ether or chloroform, it will, on the removal of the bag after a day's application, and the transfer of the plant to a hothouse, begin to bud, even in winter or autumn. But only that branch which is thus treated. Any leaves that may be upon it fall off and a new crop is produced.

The explanation is, doubtless, that the narcotic gas paralyzes the veins and venules of the branch. Normally, in autumn, they contract and thus force the plant juices back from the leaves into the branch and from there to the trunk. To the trunk is thus carried, for winter storage, whatever is valuable in the leaves, their juices, starch, sugar and albumen. But if the vessels are paralyzed, they stand dilated, and the trunk pressure is doubtless enough to fill them up again with the juices and dissolved nutritive matters. So as soon as the narcotic is withdrawn, and the branch watered and warmed, the quiescent cells find themselves in possession of a store of sap, just as in spring, and proceed to bud out leaves and shoots. We have therefore an apparent stimulation resulting from a real paralysis. And if this be true, it would follow that if the whole plant, trunk and roots, were exposed to the narcotic, no effect would follow—except perhaps death; for the trunk vessels, also paralyzed, would not force the juices out into the branches.

BOTANIST

California Astronomer Awarded Important French Prize

IT might be supposed that a country so rich as America, a country which has profited so incalculably from the advances of science would see the advantages of encouraging the research which is so essential to its industry. America should be the patron of science as well as of freedom and she would thus become trebly successful not only in the legitimate competition of trade and invention but in the higher aspects of the world's civilization.

The Paris Academy of Sciences for instance offers in one year the sum of \$60,000 as international prizes for scientific discoveries including nearly every branch of knowledge. That this offer is truly international and not merely nominally so is shown by the award to Dr. W. W. Campbell of the Lick observatory of the Lalande Prize for the most important work in astronomy. It is of course intensely gratifying to see an American so deservedly win such a distinction. It would be still more gratifying if we could see the eyes of the scientific world turned upon America as the foster mother of knowledge and research.

X.

To Photograph What a French Scientist Calls the Soul

APARIS scientist has announced his ability to photograph the Soul and his intention to forthwith do so. He finds that by receiving N-rays upon sensitized plates he can get a picture of what he calls the "effluves" and these are supposed to be the "spirit emanations" of the human body. It seems that the "effluves," whatever they may be, are made up of innumerable curved lines converging to a common center. This is all very interesting and entertaining and we will leave the Parisian scientist to settle the matter with his confreres who have so often "proved" beyond all cavil that there is no soul. This extraordinary jargon of N-rays, "effluves," "spirit emanations" and curved lines is however a striking commentary upon the precision of modern thought, but why call it science? Why not call it ignorant guesswork?

STUDENT

THE remarkable obelisk projecting from the crater of Mount Pelée has now disappeared within the cone. In its slow growth of about five feet a day it had attained a height of more than 1000 feet. Its rise was, however, not uniform, and alternated with recessions. Indeed it once sank 150 feet and then reemerged. No cause for its appearance and disappearance has been plausibly suggested.

Here and There Throughout the World

Cruel Treatment of Macedonia Women

HERE is an extract from a report published in an English government blue book. It is from the foreign minister at Sofia and relates to the condition of affairs then prevailing in Macedonia. Many of the women in their flight had to abandon their children, so that they might not be discovered on their way owing to the weeping and cries of the poor little wretches. A large part of the report is unquotable for general reading, so abominable were the offenses committed upon these Christian people in Christian Europe, which practically acquiesced in them in order that international equilibrium might not be disturbed.

Christianity's Slow Progress in China

A RECENT work on China by Mr. George Lynch contains a graphic reference to the city of Peking as seen by the author at night under the bright light of the full moon. Speaking of eastern peoples generally he says "there is no movement whatever" in the direction of these people becoming Christians. "Throughout China, Japan and Korea, Christianity is making no real progress whatever." In Korea "there are seven leading denominations, and they have five different names for God; small wonder if these Korean coolies and peasants think they represent five different divinities."

Silence of Death in Macedonia

THE silence of death now momentarily reigning over the Macedonian question gives the foreign offices of the world an opportunity to publicly wash their hands of responsibility. It seems that upon many occasions they mutually asked each other what could be done, which is certainly a surprising activity where no money interests are concerned. They decided that nothing could be done except to let the dead bury their dead. If human memories were also dead, the question would indeed be settled and there would be no day of reckoning for national disgrace.

English Offenses on Christmas

A LONDON magistrate, commenting upon the extraordinary number of charges which were the outcome of Christmas festivities, remarked very pertinently, "One would think you were celebrating the birth of the devil rather than the birth of Christ. Christmas is supposed to be a Christian festival, but it appears to be rather kept as a pagan festival." An examination of the list of offences to which the worthy magistrate referred would lead us to suppose that he was somewhat unduly severe upon paganism.

The Hague and Venezuela Affair

THE action of the Hague Tribunal in the matter of the clamor against Venezuela has called forth some shrewd criticisms. It is pointed out that the decision places a direct premium upon force and is a distinct encouragement to the resort to arms. There is certainly much to be said for the view that in matters of this kind preferential treatment ought not to be secured by blockades and bombardments. Such truly is the way of the world, but the Hague Tribunal ought to be above the world.

Japan's Mikado Writes Poetry

IT is not generally known that the Emperor of Japan is a poet of no ordinary ability. The *Midland Herald* tells us that his Majesty often composes from twenty-seven to thirty of the poetic couplets known as *Wa-ka* during the course of a single evening. The Empress also writes poetry but not to so great an extent as the Emperor.

Napoleon Did Not Want China

MANY years ago some of Napoleon's officers urged him to conquer China and hold it as the British hold India. His reply was, "Better let China alone. We might conquer a few of their provinces, but we should teach them the art of war and in time, with great armies and navies, they might conquer France."

Hypnotism as Practised in London

AN instructive example of the hypnotic effect on weak minds of newspaper reports of horrors comes from London. As everyone remembers, a celebrated company-promoter, prosecuted and convicted as a felon, immediately poisoned himself to escape justice. More or less lurid and imaginatively illustrated accounts appeared the next day, naming the poison and giving details. That same day, inspired by these accounts, and with no other reason than the hypnotic suggestion they afforded, a youth bought and swallowed that same poison, dying in a minute or so. The poison is an unusual one, and very effective. Thanks to the newspapers, it is now thoroughly introduced to the public.

Italy Will Punish Cruelty to Animals

AN international movement against cruelty to animals is being inaugurated by the cooperation of the various national societies. The impetus comes from Berlin and travelers are invited to specially discountenance the inhumanity which is so prevalent in Italy. It is not generally known that Zanardelli, the late Premier of Italy was instrumental in adding to the criminal code of his country the following clause:

Whoever is cruel to animals or hurts them unnecessarily, or compels them to do work which is manifestly excessive, is liable to a penalty not exceeding one hundred francs.

France and the Barbaric Guillotine

THE Paris authorities are perplexed to find a suitable site for the guillotine which for various reasons can no longer be erected on the *Place de la Roquette*. Very respectfully we suggest to them that the only suitable site for a guillotine is the darkest and deepest vault of the museum where those who are morbidly inclined can look upon one of the last relics of civilized barbarism. Then France could add one more inscription upon the record of her services to the cause of progress.

Ecclesiastical Problems for England

THE alleged scarcity of English curates is becoming an ecclesiastical problem. A suggestion has been made that the intellectual standard for curates is too high and should be lowered. We should not ourselves have supposed that the intellectual standard is too high and we do not very well see how it could be lowered. The problem might be solved by a better distribution of ecclesiastical wealth and by a better treatment of those who are regarded as little better than spiritual drudges.

The Census of India and Its Famines

THE recent census of India shows a population of 294,361,056. The preparation of the returns was only effected after considerable difficulty, great numbers of natives in the outlying districts being persuaded to render the necessary statistics only by the assurance that those who were not enumerated could not expect to share in the government food when the next famine should come.

Russia Will Not Exhibit at St. Louis

IT is announced that the Russian government has abandoned the space which had been allotted to it at the St. Louis Exposition. It is also announced that the Japanese government has notified the Exposition authorities that it will gladly make use of all the space given up by Russia, and that abundant material shall be sent from Japan to form a suitable display.

Japan's Method of Child Training

WE become increasingly anxious to know something of the Japanese methods of training children. A recent well-informed writer tells us that the babies of Japan never cry and that they play "without quarrels and without tears." It is evident that the Japanese have something akin to Raja Yoga training. Certainly nothing else can produce such marvels.

THE CHILDREN'S HOUR

The Wind

DEAR CHILDREN: What a fascination there is in standing still on the heights somewhere and just letting the wind blow and blow! Who has ever seen the wind? What is it? Strong enough to tear great trees up by the roots, to wreck ships, to do no end of damage when it wishes; and then sometimes as gentle and tender as the petal of a rose. What makes the wind blow, or not blow, sometimes? Raja Yoga boys know a great deal about winds, for not a moment of the day passes at Loma-land without breezes from mountain and ocean passing over the rolling slopes.

Something like two years ago Mrs. Tingley established at Point Loma a meteorological station, and here the Raja Yoga boys love to come with their teacher. I have asked him to tell you some of the uses of this station, and this is what he has written about the winds and the wind records. Later he has promised to tell you a bit about the instruments which record the air pressure, the amount of sunshine for each day, the temperature and rainfall. The picture shows one of the Cuban boys climbing up to the top of the weather-vane mast, to see what the little clock has to say about the wind's velocity:

"On the top of an iron mast about thirty feet high is an arrow so balanced that it will turn with every change of the wind, and its point always shows the direction from which the wind is coming. During the daytime from about nine o'clock in the morning till five in the afternoon the wind blows from the west, but in the evening and in the early morning it may be either northeast or south, or between any of these points. When the wind blows from an easterly direction during the day we have either the hot desert wind which sometimes brings the dust storms, or during the rainy season we may expect rain if we see an easterly wind in the daytime.

"To show how fast the wind blows, there is a little windmill on a side arm near the top of the mast. The sails of the windmill are four little hollow cups at the end of four arms, and as they turn they move some clockwork in a little clock case, and by looking at the face of it you can tell the speed of the wind at any time. But it is inconvenient to be always climbing up the pole to see how fast your wind clock is going, and so there is a clever contrivance by means of an electrical connection so that the speed of the wind is registered inside the Weather Station on a machine which goes by clockwork."

UNCLE FRED

EVERY animal in the creation excels us in something. The winged insects, without mentioning doves or eagles, can pass over more space with greater ease, in a few minutes, than a man can in an hour. The glide of the smallest fish, in proportion to its bulk, exceeds us in motion, almost beyond comparison, and without weariness. Even the sluggish snail can ascend from the bottom of a dungeon, where a man, by the want of that ability, would perish; and a spider can launch itself from the top as a playful amusement.—*Thomas Paine*

THE WIND

by ROBERT LOUIS STEVENSON

I SAW you toss the kites on high
And blow the birds about the sky;
And all around I heard you pass,
Like ladies' skirts across the grass—
O wind, a-blowing all day long.
O wind, that sings so loud a song!

I saw the different things you did.
But always you yourself you hid.
I felt you push, I heard you call,
I could not see yourself at all—
O wind, a-blowing all day long.
O wind, that sings so loud a song!

O you that are so strong and cold,
O blower, are you young or old?
Are you a beast of field and tree,
Or just a stronger child than me?
O wind, a-blowing all day long.
O wind, that sings so loud a song!

MEASURING THE WIND
Cuban boys who are students in the Raja Yoga School receiving instruction at the Meteorological Station at Point Loma, California

Cadmium

DEAR CHILDREN: I want to tell you a true story. It is about a little cat named Cadmium and how it taught a selfish maid servant Raja Yoga. Cadmium was Margery May's little kitten, and although his life was as beautiful as a little yellow kitten's life could possibly be, and although he had the kindest mother and the dearest mistress in the world in Margery May, Cadmium was timidity itself. He was frightened about everything. He was what Raja Yoga boys would call "psychologized."

We concluded it must be heredity, for nothing cruel had ever happened to him until Hannah came. Hannah was the new cook. Cadmium annoyed her and when he used to sit down in the doorway and cry, just for nothing at all, Hannah became very cross. Once she threw water on poor little Cadmium and Margery May was in despair. But Hannah was so faithful that Margery May's mother said perhaps it would be better to give Cadmium to the grocery man—he would have a good home—and she was really afraid Hannah would leave if Cadmium didn't, for Cadmium was a nuisance, from Hannah's standpoint.

So, one day, Mr. Hicks, the grocer, carried the little yellow kitten away and there was peace in Hannah's kitchen. But there was sadness in Margery's heart all the time. One morning Hannah was startled by hearing a little scratching at the door and Margery May ran to open it.

"O, it's Cadmium, its Cadmium," she cried, and there he was, thin and tired, but oh—so happy to get back. Mr. Hicks came an hour later for the grocery order and said that Cadmium was afraid

of everything, although he tried to be very kind to him. But he wouldn't eat and that morning they discovered that he was gone.

"Well," said Hannah, and her face was a little flushed, "I do believe that cats have feelings, just like humans. It's a shame, that's what it is."

From that day Cadmium has never had a cross word from Hannah. Now isn't that beautiful?

COUSIN EDITH

NOT long ago, in a little town in the western part of Massachusetts, a man lost his barn by fire. He went out to the ruins to see if by any chance anything could be saved, and there, at one end, sat his old black hen on her nest. He wondered why she didn't move her head and "cluck" at his approach, for she was one of his pets. He thought she must be asleep. As he came near he gave her just a little poke with his cane and to his surprise the wing he touched turned into ashes. Then he knew that she had been burned to death. He heard a faint sound. He listened and from beneath her wing came a little "peep, peep." Pushing her aside, what do you think the man found? *Ten little live yellow chickens.* Why didn't that mother hen fly away to safety and leave her little ones to burn? What was that in her heart which led her to sacrifice her own life for her babies? And how many people would be as unselfish?

Students'Path

LOOK WITHIN

by MATTHEW ARNOLD

EVEN in a palace life may be led well !
So spake the imperial sage, purest of men,
Marcus Aurelius. But the stifling den
Of common life, where, crowded up pell-mell,

Our freedom for a little bread we sell,
And drudge under some foolish master's ken
Who rates us if we peer outside our pen ---
Match'd with a palace, is not this a hell?

Even in a palace! On his truth sincere,
Who spoke these words no shadow ever came;
And when my ill-school'd spirit is a flame

Some nobler, ampler stage of life to win,
I'll stop and say: "There is no succor here!
The aids to noble life are all within."

The Poor Are Always With Us

A GREATER number of persons were receiving Poor Law Relief in London last Christmas than at any previous period for over thirty years. The returns from other great cities would show results not dissimilar. Such is the victorious march of civilization and Christian principles.

The real inwardness of such a problem will hardly bear examination, although there does not seem to be any general realization of its gravity nor any general nor genuine search for a remedy. Truly, the poor have we always with us, and there are not lacking some who suppose, or pretend to suppose, that by citing this well-worn text we throw some sort of a divine sanction upon both workhouse and slum. There are, however, some others who look upon this appalling aggregate of human suffering with the stern realization that nature finds remedies where men can find none, that there is somewhere a limit to human pain, and that misery cannot pass a certain point. There is a dynamic force in human hunger which will not for ever be denied.

Commenting upon the figures which we have quoted, a contemporary laments that the yearly cost to London of its pauperism is something like sixteen million dollars, without counting the cost of its lunatics—a serious omission, by the way, because it is national lunacy which causes all waste, as well as all cruelty and apathy. The cost of our lunacy, avowed and unavowed, is incalculable. But we would suggest to our contemporary that if the cost of pauperism could be estimated by dollars it would be a very small matter indeed. Unfortunately, it is to be estimated by quite other things than dollars. Rather is it to be calculated in terms of national degradation, of the failure of civilization, and of the speedily to be apprehended measures by which nature rectifies her failures or ploughs them under, that they may at any rate be out of sight, that they may at least manure the soil for a better crop if there be truly no worthier purpose which they can serve. The cost to the nation is to be estimated not by dollars, but by the gangrene which pauperism spreads upon its roots, by the loss of ideals, the loss of its soul, the loss of God. When these are lost by the individual the services which we can still render to him are few indeed and final. Is it otherwise with nations?

And yet there are still some righteous men, both inside and outside the churches, who ask somewhat hopefully and manfully what we can do. In Christian countries it is not perchance amiss to suggest that with the aid of concordances and other labor-saving devices, we make for ourselves a collection of Biblical references to poverty and the care of the indigent. So numerous are these references and such a tenderness have they that one might casually suppose that the poor are specially and divinely recommended to our consideration. From these texts thus col-

lected we shall probably get no indication as to charity organization nor parliamentary committees, nor the relative virtues of indoor and outdoor relief, nor even the acknowledgment of donations in the public press. We find rather a stern denunciation of those through whom poverty exists whether their action be collective or individual. The condemnation of a system is the condemnation of the persons composing it, and if there be a system which allows the hideous congestion of the slums, those human cesspools in which young and old alike are allowed to rot, starving and uncared for, how few there are among us of whom it might not be said, "he doth ravish the poor when he getteth him into his net."

Our theologians are fond of claiming a modern applicability for every Biblical sentence, and we will therefore commend to them a text, "His mouth is full of deceit and fraud; in the secret places doth he murder the innocent." So far as practical human interest goes, the slums of our cities are the secret places of the Twentieth century, and in their countless thousands of suffering little ones we see a veritable murder of the innocents—"Eating my people as if they were bread," coining the misery of children into dollars and doling out poor relief in the name of charity.

What is there amiss with the world that poor relief should be our only panacea for the misery of oppression? Have our harvests failed, and is nature less bountiful than heretofore that the earth should be increasingly burdened with those who are starving? Is poor relief the God-appointed substitute for justice and fraternity, and will sixteen millions of dollars, or even the wealth of Golconda, buy for us an indemnity for the injustice which is naked and not ashamed? And we make out schedules of the "cost to the community" and suppose that thereby we have ended the matter, but nature also will make out her schedule of "costs to the community," which the community will forthwith pay—but not in dollars.

STUDENT

An Attack Upon Education

THERE can be little question that an attack upon the public schools of America is in course of preparation. The signs are unmistakable. The preliminary step is to denounce our education as being "Godless," and to utilize epidemics of crime as evidence of what has been produced by the exclusion of religious creeds from the school-house. In this way an appeal is made, first, to the parents who are weak-minded enough to be influenced by it, and, secondly, to the parents who are anxious to impose their duties upon some one else, and who are not at all particular as to the kind of salve with which they anoint what they are facetiously pleased to call their consciences. By such means as these it is expected to produce and foster some sort of noisy public opinion and so to introduce religious tests and disabilities into the appointment of teachers. The method has been tried elsewhere and not without success. It will succeed here unless the friends of religious liberty and of education arouse themselves more thoroughly than they have yet done.

The cause of religious and of educational freedom has been substantially aided by Mr. J. H. Crooker. He has written a book upon *Religious Freedom in American Education*, from which we should like to quote extensively. "Who," he asks, "are American teachers?"

Look at the men and women who come together in state and national teachers' associations. What are they? The most thoughtful, earnest, hard-working, painstaking and self-sacrificing class in the State. In intelligence, singleness of purpose, purity of life, there is not a priesthood in the world that outranks them; and there are few that equal them.

If we wish to destroy the character which is thus deservedly given to the thousands of conscientious men and women who so unobtrusively render the greatest of services to the State, it is easy to do so by the introduction of dogmatic teaching into the schools. Sincerity will then give way to duplicity as the possession of a creed becomes a *sine qua non* of appointment, and educational competency will take secondary rank to subserviency to clericalism. There is room for improvement in our schools as in every other department of life, but to admit dogmatic religion into the sphere of education would be a crime against the children of the nation and an insult to their teachers.

THE OTHER SIDE

by G. W. LING

O GRAND is war with its cannon's tongue,
And the flash of its gleaming blade,
Its volleys that speak the hills among
Like voice from the thunder's shade.
The ring of its martial music set
Its flowing banners wide,
They are thrilling the world today, but yet---
What of the other side?

From the old heroic days that smote
The trembling chords of time,
From the mighty deep of the years remote
That are white with the ages time,
A gilded glory its rays have shed
Where war's dark corners glide,
But the voice of the centuries oft have said---
What of the other side?

What of the hearth-stones cold and drear
That once were bright and fair,
Bound but now in a frozen fear,
Girt with a long despair?
What of the aching souls that wail
From dawn to the twilight bars,
For a sight of the faces, cold and pale,
Stretched 'neath the midnight stars?

O War, the upward ways of men
Have little disturbed thy sway,
Thy knights still count by the thousands ten,
Still march o'er the world's highway.
Not useless all, but when they praise
Thy glories far and wide,
I hear through the rifted gate of days---
What of the other side?

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question A question has recently arisen in regard to the meaning of the term "Higher Self," and whether this should be considered synonymous with the terms "Higher Ego," "Higher Nature" and "Individuality." Will you kindly take up this question in the Students' Column?

Answer The answer to the question can be made from two entirely distinct view-points: (1) From that of a technical and analytical study of man's complex nature—a study which is absolutely necessary, if we would know ourselves. (2) From that of a general study of man's nature as a dual being, the center of the conflict, both in himself and in the world, between the good and evil forces in the Universe.

Speaking technically the "Higher Self," according to H. P. Blavatsky's definition in the *Key to Theosophy*, "is neither your Spirit nor mine, but like sunlight shines on all. It is the universally diffused 'divine principle,' and is inseparable from its one and absolute *Meta-Spirit*, as the sunbeam is inseparable from sunlight." It is "the inseparable ray of the Universal and ONE SELF. It is the God above, more than within, us. Happy the man who succeeds in saturating his *inner Ego* with it!"

The "Inner" or "Higher Ego" is that aspect or principle of man whose distinguishing feature is self-consciousness, which further illuminated by the divine light of the "Higher Self" may be called the "Spiritual Divine Ego." "This," says H. P. Blavatsky, "is the real Individuality, or the divine man." It is this "which overshadows every personality Karma forces it to incarnate into; and this Ego which is held responsible for all the sins committed through, and in, every new body or personality—the evanescent masks which hide the true Individual through the long series of rebirths." The Inner, or Higher Ego, H. P. Blavatsky further describes as "the permanent *Individuality*, or the 'Reincarnating Ego,'" and says "the reincarnating Principle, or that which we call the *divine man*, is indestructible throughout the life cycle."

Thus it will be seen that for the purpose of analysis it is well to remember that a distinction should be drawn between the term Higher Self and the other terms, Higher Ego and Individuality, which are synonymous, while the term Higher Nature is a more general term which may

be said to include these and all the higher powers of man. Concerning this Higher Nature, H. P. Blavatsky says: "Spiritual and divine powers lie dormant in every human Being; and the wider the sweep of his spiritual vision the mightier will be the God within him."

Using these terms, referred to, in a general sense, surely it is not necessary to remind the student to pay attention to the context, for if this is done there should be no confusion. To give an instance, one of the ancient writers, speaking of man, declares: "That which is neither spirit nor matter, neither light nor darkness, but is verily the root and container of these. . . . That thou art, little man, but thou knowest it not."

Contrasted with these terms we have the following: lower nature, lower ego, lower self, personality. A distinction is usually made in Theosophical literature between the terms "Individuality" and "Personality;" this was discussed in the issue of January 24th, and it should be remembered that in essence each aspect of the Higher Nature of man, by whatever name we call it, is one and the same. Thus one of the most interesting of these words is "Individuality," and taken in its root meaning it refers to that which is "indivisible," thus showing identity with the *Higher Self*, and linking together all humanity and all spiritual beings on the highest spiritual planes, and in the essence of Being.

But it is well to remember the advice given to us again and again, that while it is important to pay attention to the right use of words, it is the *Spirit that giveth life*, the letter killeth. X.

Soul Superior to Mind

NEVER was a more harmful delusion than to suppose that the mind can rule the man, and so create a society based on what is misnamed "reason," or "the intellect." The mind is one of the functions of our nature, being really one of the senses, a kind of superior sense that organizes the results of the others. But the mind is not a governing faculty; it needs to be directed by the will. And it entirely depends on whether our will is under the sway of passions or of high aspirations, whether we will use the mind wrongly or rightly.

If the mind is not under control of a purified and unselfish will, then it will serve the selfish passions, and intellect will be the handmaid of desire. As W. Q. Judge says:

If we are but mind, or the slaves of mind, we can never attain real knowledge, because the incessant panorama of objects eternally modifies that mind which is uncontrolled by the Soul, always preventing real knowledge from being acquired. But, as the Soul is held to be superior to mind, it has the power to grasp and hold the latter, if we but use the will to aid it in the work, and *then only the real end and purpose of mind is brought about*.

Hence, unless the will be first freed from its slavery to the passions, and the imagination be purified from the false pictures of vanity, envy, lust, etc., the reasoning faculties will merely delude us. This accounts for the confusion and impotence of religious creeds and scientific and sociological theories, which differ as widely as do the various prejudices and fanaticisms on which they are founded. Only the peaceful atmosphere of Brotherhood can clear the vision enough to reveal a just, wise and harmonious philosophy of life. STUDENT

ABILITY does not consist of one particularly clever feat, but in doing all things well.

Heart Doctrine of Antiquity

HE lets his mind pervade one quarter of the world with thoughts of Love, and so the second, and so the third, and so the fourth.

And thus the whole wide world, above, below, around and everywhere, does he continue to pervade with heart of Love, far-reaching, grown great and beyond measure.

Just as a mighty trumpeter makes himself heard, and that without difficulty—in all the four directions—even so of all things that have shape or life, there is not one that he passes by or leaves aside; but he regards them all with mind set free, a deep-felt Love. Verily this is the way to a state of union with the universal Spirit.

And he lets his mind pervade one quarter of the world with thoughts of pity, sympathy, and equanimity, and so the second, and so the third, and so the fourth. And thus the whole round world, above, below, around and everywhere, does he continue to pervade with heart of pity, sympathy and equanimity, far-reaching, grown great and beyond measure. —*Sacred Books of the East*

A NOBLE DESTINY

by TENNYSON

I TRUST I have not wasted breath:
I think we are not wholly brain,
Magnetic mockeries; not in vain,
Like Paul with beasts, I fought with Death;

Not only cunning casts in clay:
Let Science prove we are, and then
What matters Science unto men,
At least to me? I would not stay.

Let him, the wiser man who springs
Hereafter, up, from childhood shape
His action like the greater ape,
But I was born to other things.

The Culture of the Soul

TO how many does it ever occur that there is within themselves a possibility of growth and that from immemorial times the methods of such growth have been reduced to a very exact science? With the means of physical development we are sufficiently familiar, and no one who wishes to excel in this respect ever supposes that it can be done by a vague haphazard. We know well that diet must be attended to, muscles must be individually hardened and strengthened. In other words, the science of physical growth must be learned, and carefully and painfully applied, in order that we may see the definite and unmistakable results, the positive and proved increase of strength to which we aspire. But the spiritual-training of the mind we approach in quite another way, as though we were upon ground too nebulous for knowledge and quite beyond the reach of definite method with a goal in front of us. Indeed, to very few of us does the problem ever present itself at all, does it ever appeal as a practical possibility, as a Holy Grail which may be won, as a pearl of great price and of an unspeakable beauty.

And yet the means of Soul development are more immediately within the reach of every one of us than are the appliances and the leisure for physical training. No material conditions can ever stand between us and the search for the Soul. Every fate which the hand of the Law has meted out to us becomes the means of our success. There is no human lot which will refuse to bend its shoulders that we may mount upon them into a purer air. Neither poverty, nor sickness, nor the struggle for life, nor weariness, nor bereavement, nor separation, nor lack of intellect and

education, are in any way to be counted as obstacles, but rather as the sign-posts which the Soul itself has planted that we may be the more urged upon our task. It is the object of nature that man shall find his soul, and even her iron touch is a caress.

There is no condition of life of which we may not most potently avail ourselves for the application of this, the most precise of all the sciences. There are no circumstances which prevent us from irradiating the mind with the consciousness of eternal life, with its eternal opportunities for an eternal growth. The curtain of life and of death rises and falls, and the divine nepenthe of forgetfulness flows over us that we be not overwhelmed by a mighty past, but the life that we live is an eternal life; the roar of the ocean of time is in our ears and it will drown for us the little sorrows of a day. It is itself the sound of the Soul which has lived through the eternities and has forgotten nothing. We can crown ourselves with the dignity of life for evermore and thus know what things are great and what things are little.

And likewise there are no circumstances nor conditions which can prevent us from guarding the avenues of thought, that nothing impure be allowed to soil the chamber of the mind, which we intend to be also the habitation of the Soul. The Soul can abide with no unclean thing, nor with hate, nor malice, nor the word that wounds, nor unbrotherliness, nor any of the brood of Self. Is there any man too busy or too poor, too lonely or too ignorant, to love his fellows, to be merciful or compassionate? Is there any man who has no time to be pure in heart? Has the hand of fate ever yet interposed a barrier between any man and his duty?

The search for the Soul brings with it its own light, and here is the only toil in the world which dispels weariness. Unto every man there comes an illumination with the first effort to know himself, and if that illumination shows an internal chaos it gives also the strength and the knowledge to ordain peace and concord within his domain. He sees nature at war within himself, the forces of his being, of which none are sinful, but of which many are out of place. He sees that by discrimination he can establish an order of divine precedence, of equilibrium, and with his eyes fixed upon the growing flame of the Soul which will not for long hide itself, he can remove by the science which has become his own whatever stands between himself and the eternal light. Into his mind comes a new wisdom, wonderful, like the dawn upon the sea. Through the chaos of the world he sees the stately river of divine intention, he sees the Law by which the sparrow falls, by which the suns are swung in space unthinkable.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Emerson on Behavior

Special precepts are not to be thought of: the talent of well doing contains them all. Every hour will show a duty as paramount as that of my whim just now; and yet I will write it—that there is one topic peremptorily forbidden to all well bred, to all rational mortals, namely, their distempers. If you have not slept, or if you have slept, or if you have headache, or sciatica, or leprosy, or thunderstroke, I beseech you, by all angels, to hold your peace, and not pollute the morning, to which all the housemates bring serene and pleasant thoughts, by corruption and groans.

WE positively refuse to accept the cruel and unphilosophical belief in eternal reward or punishment.—H. P. Blavatsky

THE MYSTERIES OF THE HEART DOCTRINE

Prepared by
KATHERINE TINGLEY
AND HER PUPILS

*The Theosophical
book of the
Twentieth century*

Tells the story and the history of the Theosophical Movement Throughout the World; tells what it is and why it is —reveals the mystery of the Doctrine of the Heart.

The prices are \$2 in cloth and \$1.50 in paper, which barely cover the cost, for it is printed and bound, not gaudily, but with such carefulness and thoroughness of art and craft as to make it unique among modern edition books.

POINT LOMA HOMESTEAD

THE magnificent Homestead structure in THE UNIVERSAL BROTHERHOOD grounds on the Crest of Point Loma, is
NOW OPEN *for* SELECT GUESTS

especially for refined families seeking the IDEAL HOME LIFE.

Its SUPERB LOCATION on this bold headland, commanding a sweeping view of the Pacific Ocean, Coronado, San Diego Bay & City and the lofty mountain ranges behind and into Mexico; the AIR VITALIZED by the mingled Ocean & Mountain Breezes, agreeably warmed by the Sunshine, commend this place above all others for Health, Rest, Comfort, and beneficial entertainment. The HOMESTEAD SPECIAL HEALTH CUISINE is a matter of public knowledge.

Suites for families, with or without bath.

Terms: Single accommodation \$3 a day and upward.

Address: Homestead Management, Point Loma, California

The Power of Human Combination

THE greatest discovery of modern times is the power of human combination, although our knowledge of it is but in its infancy. Here is a new force which has upset all previous calculations, a force which the world must understand, and harness and subdue. For these many centuries we have supposed that two and two make four. We are now learning that they do not make four, but rather five and even ten, and that the laws of arithmetic no longer hold good when men unite with their fellows in search of a common aim. A momentous discovery this, and one likely to have results when we have once learned its magnitude,

when we have once learned the new laws of calculation which must be applied when the ciphers are human.

We are now applying the power of combination without understanding it, without appreciating that it is a moral and even a divine power, mischievous and destructive if otherwise used. It is a fruit of the spiritual consciousness of which the tide is beginning to flow earthward. It is touching the upper reaches of men's minds, thrilling human nature with the new force which it brings and dazzling with the promise which it makes of the fulfilment of ideals, both worthy and unworthy. Already the higher and lower are struggling for the mastery of this new potency which has been disclosed by the dawning science of human combination.

Based Upon Human Sor- row & Need

In saying that this is the fruit of a new and spiritual consciousness we mean that it is based upon human sympathy and upon the recognition of a common identity of suffering and of remedy. It is no small thing that men should become generally conscious of sharing with others the sorrows and the needs which they have hitherto thought to be peculiarly their own. It is no small thing that hands should be joined in common helpfulness, even though for the moment this should seem to be but a change from personal selfishness to collective selfishness. For this long time we have become so inured to selfishness that the waters may flow for a time into the old bad moulds, but they will none the less become softened even to dissolution. Human contact for a common aim implies an increase of mutual knowledge, and from this a new fraternity must as surely come as the day follows the night.

Combinations of men bring with them a collective consciousness which must ever more and more dwarf the personal and the selfish. Everything which is mean and base is hostile to human combination and must eventually be submerged. We may, if we wish, speak of this as an exalted

Dominance to the Pure & the Good

self-interest, but so long as it is exalted it is a step, a stride indeed, in the right direction. And we believe that a further and a better development of the science of human combination is imminently at hand, a development which will give the essential dominance to the pure and to the good. We are about to recognize that a combination of good men is more powerful than a combination of bad men, and that by this new and spiritual arithmetic we must resort to quite different rules of addition for selfish men and for unselfish men. The unselfish man will contribute to the combination which he joins an infinitely greater power than the selfish man, because in him there is no undertow, no backwash to detract from and destroy the force of the wave, and he joins only those combinations which are consonant with his own pure and fraternal ideals. The world will look for unselfishness in its leaders and in its combinations of rulers, because only through such can success at all come. We shall recognize that only by fraternity can we invoke the powers which bring victory, that nature gives her sword only into hands which can wield it. And so we assert that the power hidden in human combination is the greatest discovery of the age; that it is a spiritual power, and therefore ultimately subject to spiritual laws, however much it may momentarily seem to be outside of those laws, and that the subtle discrimination and selection of nature will assuredly call forth the combinations which are fittest to direct and to guide the destinies of men.

STUDENT

To Make Us Orthodox

IT seems that there are still some benighted human beings who suppose that they can "make us orthodox by apostolic blows and knocks." A certain clergyman in Ohio having expressed liberal views in a pulpit, was rewarded by a bombardment of hymn-books. A free fight ensued between orthodoxy and heresy, in which the arm of the flesh was vigorously used and eventually the minister seems to have been driven from the church. The heresies which provoked these reprisals consisted of a belief in the universality of God, the denial of a material hell and some cheerful references to the "slaughter-house" religion of the orthodox. Hymn-books, as theological arguments, leave much to be desired, and we do not believe that an unsound faith can be cured by projectiles. At the same time this method of persuasion is of time-honored antiquity, and those who resort to it have an almost unbroken precedent extending for nearly two thousand years. X.

Philosophy of Genius

IT seems that we have still something to learn of the real meaning of genius, and as the occasion always brings the man, here is Mr. Havelock Ellis, with his new book and his willingness to make good the defects in our knowledge.

The author believes that it is a good plan to begin at the beginning, and so he has collected a great number of instances of genius, or of what he supposes to be genius, and he has classified them in a very painstaking manner. Indeed he has taken so much trouble that we sincerely believe his lists and statistics must one day be found useful to somebody. He has arranged his illustrations according to the latitude and longitude of their birth places, according to the size of the families from which they sprung, and their place in those families and their tendency to gout. It is this magnificent prodigality of prosaic detail which leads us to believe that the book must eventually be found to have a value. It is, however, for his final verdict that Mr. Ellis will be remembered. We may, he says, regard genius

As a highly sensitive and complexly developed adjustment of the nervous system along special lines, with concomitant tendency to defect along other lines. Its elaborate organization along special lines is often built up on a basis even less highly organized than that of the ordinary average man. It is no paradox to say that the real affinity of genius is with congenital imbecility rather than with insanity.

The concluding sentence of this altogether delightful summary specially commends itself to us. We feel sure that Mr. Ellis has been reading Max Nordau and his deification of the commonplace. The man of genius must, it seems, steer his perilous way between Scylla and Charybdis, between congenital imbecility and insanity, and with but small hope of avoiding one or the other.

We wonder how long it will be before the world turns itself to a serious consideration of the latent possibilities underlying the race, the possibilities which sometimes become the shining actualities of genius. How long shall we be content with measuring and weighing the great men of the race and discussing to which ward of the lunatic asylum they belong? When we have once learned the alphabet of genius, when we have once discountenanced the colossal conceit which tries to arrange and label the phenomena of genius in the glass cases of the laboratory, it is not difficult to predict that a new enthusiasm will seize the minds of men. We shall recognize that precisely the same potentialities are the heritage of the whole race, that the gold of genius is equally present everywhere, although in one place it may lie upon the surface while elsewhere it is hidden beneath the surface. With this perception will come the search for a science which will be the Science of the Soul. We shall recognize that there is a road to the development of godlike power and that the sign-posts upon that road lead unerringly to the goal. Then we shall no longer look upon the man of genius as upon a strange bird, which has flown in upon us from the night. We shall know that it is we who sit in darkness and that genius is the light which we have not known only because we have shut our eyes.

STUDENT

A Test For the Bench

VERY admirable suggestion has been made, but one which we are not very likely to see in operation. It is to the effect that no Judge shall receive his appointment until he has served one month's hard labor in prison. He would thus have personal knowledge of the punishment which he will be called upon to inflict. Two results would immediately follow. First of all there would be no further delay in the matter of prison reform, and secondly, there would be a marked decrease in the duration of sentences.

X.

Facts of City Life

SOME recent London death-rate figures strikingly bring out the evils of city life. The total average rate is 17 per thousand. But in Hampstead, a suburban part of the city, the rate is 33 per cent below this average; in Finsbury, a central part, it is 32 per cent above. Of women, between the ages of 15 and 35, three times as many die in the central parts as in the outlying areas. How vast must be the mass of disease, short of death-producing, which this represents; of disease, of low health, of physical misery, and therefore of vice! But still the cities grow and throng, and the sky-scrapers rise.

X.

Strength of Religion

THE strength of true religion, the religion of conscience, is a weird and terrible thing, so silent, so all-conquering. The Sphinx of Egypt never looked upon the motley, fantastic centuries with a contempt so mute and so lofty as the scorn with which the fundamental truth of human heart and soul has gazed upon the pigmy hordes which age after age have assembled to assail it. This it is which has stood throughout all time, which towers above the sands of creed, the sands which are blown hither and thither at the will of the winds, but which never cover nor conceal it. It is mute because it needs no defense but time, and by its very silence it bids us wait and see what the end shall be when one more mound upon the desert of human thought shall mark the death of one more creed, of one more futile theory of church or science.

Truly, all these things hurry apace to their self-inflicted doom, and only the Soul endures with its eternal message of simple right and wrong. Turn the pages of history and see the philosophies and the systems which have raised themselves against the ever-living Soul. How bravely they started upon their mission, the sciences with their negations, the creeds with their fogs and their devouring flames. Where are they now, and where are their devotees, and what is the verdict of today upon their insanities to which time has given its perspective? The human Soul stands in silent triumph among the graves of a myriad follies, of a myriad mad-nesses, and its benedictions fall upon every mind which has opened to the Eternal Right and to the Law which is divine in its simplicity. The Soul and its work need not the protection of our human minds. In its defense our law and logic alike are wasted. It stands as an eternal beacon over the tossing, moaning waters of our lives undone, waiting with the infinite patience and the infinite pity of God, for the recognition of the weary and the heavy-laden.

STUDENT

More Heresy

THE Rev. Mr. Beeby, the rector of an Episcopal church in Birmingham, England, finds himself unable to believe certain dead letter creeds with reference to the story of Christ. The bishop of the diocese thereupon demanded his resignation which was tendered and accepted, and so the name of the Rev. Mr. Beeby must be added to the honor list of those willing to surrender their stipends for the sake of conscience. Mr. Beeby has, however, found a champion in Canon Henson, well known for his breadth and liberality.

Canon Henson accuses the bishop of persecution and "resuscitated bigotry," and asserts that there are very many other clergymen who do not assent to all the creeds of their church. Of course there are, but why do they not stand out by the side of Mr. Beeby who is evidently not being punished for his heterodoxy but for his honesty, which is the one unpardonable sin in the eyes of the inquisitor?

Intolerance always makes itself ridiculous, which is a wise dispensation of Providence. The poison and the antidote grow close together. The bishop thought that he would destroy a heresy but he has done nothing but advertise it. He thought that he would crush a heretic and he has created a martyr. Common sense should have taught him better because even a bishop can surely learn something from the history of the churches.

STUDENT

Alcohol and Crime

AN English Judge, having been reproached for unduly strong language on the subject of alcohol drinking has written the following letter:

I have lately been brought face to face for weeks with the conduct of publicans in the carrying on of their business, which has resulted in the most heartbreaking crimes that it is possible to imagine—husbands murdering their wives, wives their husbands, fathers their sons, friends their own best friends—all through the maddening influence of excessive drinking. Twelve murders, eighteen attempts at murder, and woundings without number, that were just as likely to have ended in murder as far as the conduct of the criminal was concerned, have been mine and my brother judges' daily fare for the last four weeks on one circuit.

Mission Valley --- Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week presents a good view of the famous Mission Valley, San Diego, looking from the bluffs at Mission Cliff Park toward the old mission.

Some Views on XXth Century Problems

The Homeless in London at Nightfall

WE learn from a contemporary that one in every two thousand of the population of London is left homeless at nightfall, and London is not a nice place in which to be homeless. These figures are presumably exclusive of the army of the destitute whose only shelter is the casual ward; exclusive also of the infinitely greater army who perpetually live upon the verge of destitution. Our contemporary remarks that this is one of the problems which are almost the despair of any but the most optimistic and with envious placidity we are told that the ultimate remedy lies in the "gradual evolution of a higher and a better civilization." The writer of course means well, but we should like to understand him a little more clearly. We should like to know when the higher and better civilization is likely to begin its evolution. The only civilization of which we have much practical knowledge is itself the creator of these horrors and it adds to them day by day and year by year.

If there is to be a higher and a better civilization—and it is a part of our religion to believe that there will be—it can hardly be an evolution from the present system. It must rather be some kind of a new beginning of which the vitalizing force must be fraternity instead of self-interest. There is, however, another factor to be taken into account. What if this vast aggregate of human misery of which London is only a sample, should suddenly prove unwilling to wait for "the gradual evolution of a higher and better civilization," of which they must be excused for seeing but small evidence? The phrase is of course an impressive one, but phrases form a somewhat thin diet for empty stomachs and a scanty clothing for naked backs.

Such a contingency would be embarrassing. It has indeed proved so upon other occasions and it might therefore be well if we were at once to exercise a little fraternity, which is all that is needed, rather than folding our hands for a little more slumber while the "gradual evolution of a higher and better civilization" is upon the road. One would suppose that this new kind of civilization is to be conferred upon us by some external beneficence rather than one to be gained, if at all, by strenuous and unsleeping effort. There is a wild beast very near the surface in every one of us. When misery reaches a certain point the wild beast becomes restive and even turbulent.

STUDENT

Suicides Increasing in Germany

WE regret to note the extremely rapid increase of suicide in Berlin, more rapid, we believe, than in any other city in the world. In 1900 the suicides were 434; a year later, 525; in another year, 564; and in 1903, 661. This is an increase of 38 per cent, while that of the population is but 3½ per cent. If a man found that his attacks of some malady were becoming yearly more frequent, he would examine his life and habits to ascertain in what way he was breaking the laws of nature, and would then amend his habits. And if he could not at once find out he would experiment here and there till he had discovered the flaw.

Why should not nations do the same? Surely suicide on any considerable scale indicates a national disease, and it is getting worse. Why should not each nation see whether, as a whole, it is not committing some infraction of the laws of nature, which are the laws of God, which, as respects nations, reduce themselves to the law of national and international brotherhood? And then amend ere it be perchance too late. For nations have, before now, found that they had awaked too late.

STUDENT

Some Cause for Truancy in Schools

WHAT are we to do with a boy fifteen years of age who refuses to go to school and who runs away from school as often as he is sent there? There is such a boy in Los Angeles whose delinquencies in this little educational matter have caused his appearance before the Judge. If he were a bad boy the case would be simplified, but this boy is not bad. His father has no other complaint to make of him, and

his mother says that he is as good a boy as any mother could wish to have. He himself has nothing particular to say in the matter, but "his face wore a wistful expression," for which we may assume some undisclosed cause.

Had we acquired some elementary notions of cause and effect, we should require the evidence of the teacher in such cases as this. We should be a little slow to believe that the fault necessarily lies with the boy. Here we have a mother, a father and a teacher who are unable to control one small boy of fifteen—who, by the way, has a wooden leg as well as a "wistful expression"—without invoking the official aid and time of the United States. Why not try the Hague Tribunal?

Pestalozzi once said: "I would go so far as to lay it down as a rule, that whenever children are inattentive, or apparently take no interest in a lesson, the teacher should always look first to himself for a reason." That is a view of education which will bear some examination. The teacher of the unwilling pupil ought to explain *why* that pupil is unwilling.

STUDENT

Boston Will Have a New School

A NEW school, designed to train men and women in the practical administration of the public departments of the poor, the criminal and the insane, is being organized in Boston. It is expected that it will prove attractive to the daughters of wealthy parents, and it is also intended that the courses will be opened to men. That something, and probably a great deal, will be accomplished by this new departure goes without saying, but if the question of salary becomes an important and vital question in the administration of all these departments, and if the word "charity" continues to be used in the old "reaching-down-from-the-heights" sense, the results will not meet expectations. All the science in the world cannot take the place of the heart touch. Unless all signs fail and all things change many will be attracted to this work now as heretofore because of the salary rather than because of an earnest desire to help their fellowmen. The abuses which have been such a blot upon so many "societies for the prevention of" this and that, have been almost without exception traceable to this question of salaries. Christ would probably not have been crucified had he taken pay for "ethical teachings," had he dispensed charity for a consideration and had accompanied his healings with "bills for services rendered." It may be that this new school will solve this question, but in general there is no better way of getting rid of a poison tree than by laying the axe to the root, and the root is unbrotherliness.

STUDENT

Paris Exercised Over Lunatic Law

THE mind of Paris is much exercised over the lunatic asylum law by which any person pronounced by a doctor to be mad must be confined in a lunatic asylum. Questions of this nature have been raised in every civilized country, but so far as we are aware no satisfactory solution has yet been reached. To give to the medical profession as a whole, the power to pass sentences of indefinite imprisonment upon all they may suppose to be insane is to lay a responsibility upon their shoulders too heavy and too onerous for them to covet. Of all human maladies insanity is the least understood. It is probably incapable of definition and it may be that no hard and fast line can ever be drawn between sanity and insanity. Wherever definitions of insanity have been attempted they have usually been found to include many of the world's greatest men and women. It is of course absolutely necessary to protect the community against homicidal insanity. It is also necessary to exercise the most scrupulous care against restraining the liberty of anyone merely because of eccentricity or unconventionality however extreme. We are always ready to assume that a marked divergence from our own opinions or customs is a mark of an unbalanced mind, and the medical profession is not remarkable for its toleration of innovation or change in matters of belief. The problem is hedged around with very considerable difficulties which are intensified by the enormous increase of insanity, which is reported in every direction.

STUDENT

Art Music Literature and the Drama

The Importation of Great Works of Art

ON the 22nd of May, 1902, William C. Lovering, a member of the House from Massachusetts, introduced a bill for the removal of duties on works of art, providing that all such works of art should have been created fifty years prior to the date of importation. This is the substance of the bill introduced to this session of Congress by the National Academy of Design and the Fine Arts Federation of the city of New York. At present the bill is pigeon-holed in the records of the Ways and Means Committee.

Of course it is argued that works of art are luxuries and therefore, since only the wealthy can afford luxuries, it is quite reasonable to impose upon them a tariff. It is also argued that the importation of pictures would interfere with the sale of the works of our American artists; but, as proof that the latter is not fact but fallacy, those who are most interested in securing the passage of this bill are the artists themselves! They realize that any encouragement given to the importation of great works of art would do much to build in this country the art atmosphere that we are entitled to have, but certainly do not have at present. Looking at the sale of pictures from a purely commercial standpoint, the more pictures that are sold, the more there will be sold. It is on all lines so, a demand creates more demand. More than this, the direct result of this tariff is to keep some of the most magnificent collections owned by Americans abroad, such as those belonging to Mr. Morgan and to Senator Clark. They will tell you frankly that they must keep their pictures abroad as long as the present tariff on works of art is enforced. Then, too, the revenue on the importation of works of art is no argument in its favor, for, leaving out the one extraordinary year when Mrs. Gardner of Boston paid something like two hundred thousand dollars duty on works of art brought over for her museum, the yearly revenue has rarely exceeded one hundred thousand dollars per annum.

It is conceded by the best teachers, both in this country and abroad, that art students no longer find it necessary to go to Europe to study, for every facility for complete training is found in our own art schools. But the student at present does need to go to Europe to see the galleries, to breathe, in a word, an art atmosphere. We might have all this in America, but we shall not have it as long as the masterpieces of painting and sculpture are kept across the water.

It is impossible to class these things as luxuries when one considers that in all probability most of those purchased would find their way sooner or later into public galleries.

If we want an explanation of the wonderful art life of Paris and of the art feeling that is so apparent among the whole French people, we may find it in the fact that even the workingmen, week after week, year after year, frequent, with their families, the great art galleries, of which there are not one or two here and there, but many. We will never have an art life among our people until we create an art atmosphere. The beautiful is just as necessary as bread, and the heart demands food as well as the body and the mind.

STUDENT

FRAGMENT

by BROWNING

GOD'S works—paint any one, and count it crime

To let a truth slip. Don't object, "His works

Are here already—nature is complete:

Suppose you reproduce her—(which you can't)

There's no advantage! you must beat her, then."

For, don't you mark, we're made so that we love

First when we see them painted, things we have passed

Perhaps a hundred times nor cared to see;

And so they are better, painted—better to us,

Which is the same thing. Art was given for that—

God uses us to help each other so,

Leading our minds out.

ANTIQUE ITALIAN INCENSE-BURNER
With lamps. From rotunda of Students' Home No. 1, Loma-land

The Whistler Exhibition in Boston

IT is an interesting fact that the world's largest "Whistler" collection has been brought together—temporarily, however—in America. The Whistler Memorial Exhibition was recently opened in Boston under the auspices of the Copley Society. It includes every Whistler portrait owned in America, with one exception, and of his really great portraits owned in Europe only three are absent. There are nearly four hundred etchings, dry points and lithographs.

Whistler used to say that "as music is the poetry of sound, so is painting the poetry of sight." In this exhibition it has been made possible to follow with considerable thoroughness the trend and development of Whistler's own artistic life. One series of "Nocturnes" includes some of his most mystical works. Another series—of life studies—must surprise those who have imagined that Mr. Whistler painted forever in the dun and sombre and invisible gray-brown shades. This exhibition is unique in the history of American art.

It is probable that the death of no one of Whistler's contemporaries would be followed by such a wave of far-reaching interest in his work. Whether Whistler will stand before the future as the greatest artist of the present day, along certain lines, remains to be seen. There are those, and they are significant factors in the world of criticism and of art itself, who declare that he will be. One can no more endorse every detail of his art than one can every detail of his life, but he took certainly a step forward along certain untrodden paths and made it possible for many to follow who would not have been strong enough to lead. Ruskin used to say "the test of an artist's morality is his use of the dry-point." Some of Whistler's dry-points persuade us that if Ruskin was right, James McNeill Whistler was something more than merely eccentric.

STUDENT

IT is nearly time, it would seem, for a reaction from the inane, spectacular "extravanzas" of the present day. Many of them are demoralizing and most of them have no standard at all, as art goes. Almost without exception they feed merely the modern appetite for sensationalism and nothing more. Not that we want *Parsifal* every day in the week and all the time, but there is the classical, standard, sparkling opera or operetta, with its splendid, honest music, its brilliant text and its pure morals. Pure morals and rich, genuine humor go passing well together, though occasionally librettists believe otherwise.

WHISTLER disliked flattery and was quite as quick to detect the insincerity that often exists beneath praise as he was original in his methods of rebuking it. A certain lady was once raving to him about the scenery and ended by remarking, "It is like a series of your superb etchings!" "Yes," said Whistler gently, "nature is creeping up!"

BRAHMS was more or less epigrammatical in his teachings and his comments were very much to the point. "The pen is not merely to write with, it is to erase with." He used to say, "The great composer is he who knows what to leave out," and again, "If your ideas do not flow readily drop the pen and take a walk."

WOMAN'S WORK

Jenny Lind

SAID Mendelssohn: "She is as great an artist as ever lived; and the greatest I have known." It was with Jenny Lind's image before him that Mendelssohn wrote *Elijah*, his last and greatest oratorio.

Her singing in this masterpiece, at the grand performance given after Mendelssohn's death, for the purpose of founding a music-school in his name and to his memory, was one of Lind's artistic triumphs; and yet it was difficult to say of Jenny Lind, "She is greatest here, or she is most glorious there." Had she not been the greatest singer of her day, she would undoubtedly have been the greatest actress. It is only her fame as an artist that has to an extent overshadowed her memory as one of the noblest of philanthropists. It is only because the accounts of her public career fairly dazzle one that it is easy or even possible to forget her as wife and mother, for she was an example in every phase of life, in her pure, unselfish womanliness.

Jenny Lind and Mendelssohn were for many years the closest of friends. "Never have I been so happy, so lifted in spirit, as when I spoke with him, and seldom can there have been in the world two beings who so understood one another, and so sympathized with one another as we." Yet no lives could have afforded a more absolute contrast than the lives of these two friends. Mendelssohn's childhood was blessed with wealth, opportunity, the wisest, purest mother-love, and an ideal home life. What is the pitiful record of Jenny Lind—veritable little wanderer that she was until her tenth year, when the Royal Theatre of Stockholm adopted her?

When Jenny Lind was born no incumbrance could have been so little welcomed in the Lind family as a baby. The family was in financial straits; her father was as thriftless as he was musical, her mother, also a musician, supported the family by teaching school. Little Jenny, as soon as she was christened, was sent into the country into the family of a parish-clerk, seeing little of her mother until she was three years old. Then after some vicissitudes she found her way, together with a dear old grandmother, into the Stockholm Widows' Home.

As it chanced, the maid of one of the actresses at the Royal Opera House, heard her singing one day to her cat. She told her mistress of the marvelous voice, and in the end little Jenny was asked to sing before Count Puke, the head of the Royal Theatre. Jenny Lind describes herself at that time as "small, ugly, broad nosed, shy, *gauche*, undergrown."

"H'm," said the Count as he looked at her. "This is not a *creche*! This is a theatre!"

The child sang—she was accepted, taken charge of and educated at the expense of the Government for ten years. It was a complete change for her and, in spite of obvious disadvantages, was as heaven compared with the unloved, uncared for life she had been leading.

Her mother's influence was the one disturbing element in her life and finally, with characteristic resolution, Jenny Lind, when growing into womanhood, purchased a home for her parents out of her then slender earnings, and had a guardian legally appointed for herself. Affection there undoubtedly was between mother and child, but the mother's severity, love of power, and total incapacity for comprehending her daughter's

"THE advent of genius is like what florists style the breaking of a seedling tulip into what we may call high-caste colors—ten thousand dingy flowers, then one with the divine streak."

temperament or ideals, made companionship on any terms an impossibility.

The record of Jenny Lind's public career is well-known—her marvelous operatic triumphs, the homage paid her at courts, and the honors showered upon her by kings and

queens; her many charities and, as well, the innate sweetness and modesty which made it impossible for flattery to turn her head. To her music was a religion, singing was a mission, and money was a sacred trust to be expended in the service of humanity. When, after her greatest triumphs, she found peace and rest in the comradeship of one whom she devotedly loved, and who was worthy of her, she made in the marriage contract this one stipulation: that her husband should leave her forever free in her charities.

There have been many theories advanced as to why Jenny Lind should have left the operatic stage at the very beginning of her career, when the theatres were always crowded, when thousands were turned away, when her very appearance upon the street was the signal for a virtual ovation.

"The longer I remained upon the stage," she once said to a friend, "the less I grew to think of *that*," and she pointed across the sea westward, to the sunset. She believed in the higher drama and in its mission, and there are no grounds for believing that religious motives—for Jenny Lind was deeply religious—had anything to do with her leaving the stage. She chose the less thorny path of the concert room, for dramatic representation, with its wear and tear, its confusion of detail and wearisome work wore her out, soul and body, "soul, most of all," she used to say.

She was high-strung, nervous, emotional; she loved nature, and her one longing was for the country where she might be quiet. The happiest years of her life were the last years spent in her own home in the quiet of Malvern Hills, with her husband and children whom she devotedly loved. Was it the memory of her own unloved, virtually motherless, childhood that led Jenny Lind, when the great privilege came to her, to walk so unerringly the path of the higher motherhood? It may have been.

Jenny Lind seemed to have brought to fruition in her nature all that was best in the characteristics of the Swedish people. She had their quick sensibilities, their warm sympathies, also their persistence, determination and love of freedom. "And if she had the vivacity of her people, she inherited also the strong passionate feelings and affections which

make the home relationships in Sweden so rooted and so deep; and also that undertone of melancholy into which such artistic sensitiveness is prone to react—an undertone which seems to creep, like the sighing of a wounded spirit, out of the black heart of Swedish pine woods and to hover over the wide surfaces of her inland waters." JULIA HECHT

ADELINA PATTI says of ballad singing: "The truth is that the whole world loves these sweet and simple songs, and every nation has some one melody which is as priceless to its heart as the notes are familiar to the ear. When in frozen Russia I used to sing *Le Rossignol* the people fairly went mad. Oh, those Russians! Never have I seen such lovers of music as Russia holds."

The Shamrock of Ireland

Emblem of Inisfail, the "Isle of Destiny"

Unchill'd by the rain, and unawak'd by the wind,
The lily lies sleeping through winter's cold hour.
Till spring's light touch her fetters unbind,
And daylight and liberty bless the young flower.
Thus Erin, O Erin, thy winter is past,
And the hope that lived through it shall blossom at last.

THE life and realms held forth in the doctrine of the Trinity have ever been accepted as humanity's hope and destiny, and often has the three-leaved trefoil or shamrock been used to symbolize its threefold nature. Sometimes the ancients represented hope in a beautiful child standing tiptoe and holding in her hand a trefoil of three-colored grass.

The light-unveiling beauty of this emblem shows how living and real spiritual truths were to ancient peoples. The Trinity, the Three in One, was not merely an accepted metaphysical abstraction, but an ever-present living reality enshrined in every babe that is born.

Everything godlike and divine is connected with fire, indistinguishable flame and light that neither fades nor dies, but lives on, guiding the destiny of mankind from the hearts of those who are spiritually awake.

In Erin, through the gloom of blind materialism, through persecution, superstition and ridicule, reverence for the sacred fires has never been wholly crushed nor subdued; and now, it links the quickening present with the heart's throb of a mighty past.

The sacred eternal fire, the divine nature of the Goddess Dana, has lived in Erin's people; radiating immortal beauty from the lips of minstrels and bards; revealing unity with the universal mother through loving, welcoming hearts; proclaiming divine superiority and will in the noble dignity and life-unfolding power of her kings and queens; and standing forth glorious, heralding the freedom of the soul, in the unconquerable spirit of her liberty-loving and truth-defending martyrs and heroes.

Today the world feels the pulse of something new. Weary of abstract mazes it is demanding reality. A call has gone forth even for divinity itself. And hope is smiling through the living presence of the ancient emblem—the Children.

A Patch-Work Character

FROM *The Book Lover* we quote the following. Comment is unnecessary:

A CORRESPONDENT sends the following cutting from an English newspaper of 1830:

Copy of a Remarkable Inscription on a Monument lately erected in Horselydown Church, Cumberland.

Here lieth the Bodies
of THOMAS BOND and MARY
his Wife.

She was temperate, chaste, and charitable;
But, she was proud, peevish and
passionate.

She was an affectionate wife and tender
mother;

But, her husband and child, whom she
loved, seldom saw her countenance
without a disgusting frown;

Whilst she received visitors whom she de-
spised with an endearing smile.

Her behaviour was discreet towards
strangers;

But, imprudent in her family.

Abroad, her conduct was influenced by
good breeding.

But, at home, by ill temper.

She was a professed enemy to flattery,
and was seldom known to praise or
commend;

But, the talents in which she principally
excelled,

were difference of opinion, and discovering
flaws and imperfections.

She was an admirable economist,
and, without prodigality,

dispensed plenty to every person in her
family;

But, would sacrifice their eyes to a farthing
candle.

She sometimes made her husband happy
with her good qualities;

But, much more frequently miserable with
her many failings;

inasmuch, that, in thirty years, he often
lamented that, mangle all her virtues,
he had not, in the whole, enjoyed two
years of matrimonial comfort.

At length, finding she had lost the affec-
tions of her husband,

as well as the regard of her neighbors,
family disputes having been divulged by
servants,

she died of vexation, July 20, 1768,
aged 48 years.

Her worn-out husband survived her four
months and two days,

and departed this life, Nov. 28, 1768,
in the 54th year of his age.

William Bond, brother to the deceased,
erected this stone

AS A WEEKLY MONITOR
to the surviving Wives of this parish,
that they may avoid the infamy
of having their memoirs handed down to
posterity with a Patch-work
Character.

A Woman Archeologist

ONE of the most remarkable of our women archeologists is Miss Harriet Boyd of Chicago. Many women have undertaken the work of excavating for historical relics but few have met with success. Miss Boyd is one of the few. Her work is better known in Paris, Athens and Rome than in America.

Miss Boyd graduated from Smith College some years ago and recently received a master's degree from the same institution. She first became interested in archeological work while pursuing classical studies in Athens and was there at the time of the war which opened Crete to excavating parties. She soon learned of a favorable site for carrying on the work which appealed to her so intensely, and in 1900 she started for Crete with her first party of about one hundred workmen and located at a little place on the island of Kavonski. The place looked unpromising enough, but they unearthed several ancient tombs which contained quantities of pottery and other relics, all of which were turned over to the American School of Classical Studies at Athens, with which Miss Boyd was then connected.

Gournia was the site of her work the next year and there, aided by her workmen, Miss Boyd unearthed a Mycenæan town, which historians have called the "Cretan Pompeii." It dates from a period about 1600 B. C. Up to the present time her work has been thorough and she has pushed it with business-like skill. The task, physically, has been severe, for rains and sandstorms, heat and cold, the peculiarities of native workmen and a thousand other difficulties she has had to meet and contend with.

It is interesting to recall that it was the Bronze Age which Homer described in the *Odyssey*, the Golden Age in all Cretan history, and Gournia was undoubtedly one of the ninety cities to which Homer referred. The archeological value of the discovery can therefore hardly be overestimated. When Miss Harriet Boyd sent to the American Exploration Society a telegram saying "Discovered Gournia, Mycenæan site, streets, houses, pottery, bronzes, stone jars," there were those who recognized the fact that she had discovered a city of which absolutely no record exists, save that of Homer's.

There is a human touch in all Miss Boyd's work that augurs well for the future. Her knowledge of human nature has enabled her to manage workmen under the most trying circumstances, and never has she placed her archeological work before the claims of compassion. When the Greco-Turkish war broke out she was in the American School of Classical Studies, Athens, but left books and all student pursuits for work in the army hospitals. For five months she nursed the sick and wounded, not only those who had fallen in battle, but the victims of a typhoid epidemic as well.

THE work done for the child criminals of Philadelphia by the women of that State is receiving wide recognition. Mrs. Frederick B. Schoff, one of the leaders in this movement, is at present preparing a history of the work accomplished, which is to be published as a Government document for general circulation. The article is to be presented, with resolutions by the Secretary of State, to Congress. Mrs. Schoff has also recently prepared, at the request of Honorable Wilfred Powell, British Consul at Philadelphia, a concise statement of the system as worked out in Philadelphia. This will be forwarded to Great Britain and to Australia, and will undoubtedly be the means of introducing the Juvenile Court into these countries.

RICHARD STRAUSS has published something like four hundred works, including songs, piano-forte pieces, sonatas, symphonies, tone-poems, overtures and operas. As yet he is not quite forty years of age. It is interesting to recollect the share his mother had in his musical education. When but six he composed a song with her help, and, recognizing his talent for composition, his mother supplied all his school books with music paper that he might put down any musical thought that came to him. How much would he have accomplished had he met with discouragement instead of wise and loving sympathy?

I THINK you will find it true that before any vice can fasten on a man, body, mind, or moral nature must be debilitated. The mosses and fungi gather on sickly trees, not thriving ones; and the odious parasites which fasten on the human frame choose that which is already enfeebled.
— Oliver Wendell Holmes

Ancient Cities of Mexico Found in Unexplored Canyons

MEXICO seems to have furnished another page to the early story of humanity. Mr. W. J. Cox, while traveling in the neighborhood of the Sierra Madre mountains has found the ruins of an ancient city. The country in which it lies is entirely unpopulated, even by Indians, but that it was once extensively inhabited these ruins bear eloquent witness. The greater portion of the ruins were hidden in deep canyons or clustered around the mountain slopes. The canyons were artificially terraced, but whether this was done for irrigation purposes or as a fortification against enemies remains yet to be determined. The cliff sides, in the vicinity, are also honeycombed with caves, but the entrances being inaccessible without special appliances their examination was deferred until a more favorable season. Upon one mountain peak, Mr. Cox found a very large house or palace. In the center of this building was a shaft which seemed to go straight down into the mountain, but as it was partly filled with water it could not be explored. This may have been a well or it may possibly connect with some underground chamber. In front of the building was a well-built fortress and scattered about were the traces of a city.

Mr. Cox says that these ruins were scattered over a very considerable area and that during his trip he met with no other person. Being alone and without appliances his examination was necessarily cursory, but he believes that the whole region offers the greatest attractions to archeologists and ethnologists. Each set of ruins seemed to have its own burial ground, the graves being plainly indicated. There were no signs of metals except copper.

We are pleased to see that Mr. Cox intends to return to this interesting locality in order to make a more extended investigation and that he will then be equipped with suitable apparatus and a photographic outfit. The Mexican Government has often displayed an intelligent interest in archeology and possibly it will help to decipher these fascinating records.

Archeologists of the Future—Lest Posterity Forget Us

SOME years ago Mr. Frederic Harrison, with a kindly eye to the archeologists of the future and with the certainty that by the year 2900 London would be as desolate as the Egyptian Thebes, suggested that something be done to prove to the generations now unborn the height of our present attainment. He proposed the construction of a subterranean city in which would be placed a collection of the products, manufactures, pictures, books, instruments, photographs, phonographs, models of engineering works, ironclads, railway trains, maps, and all the paraphernalia of our daily life. There was, however, a lack of popular enthusiasm and the scheme was never carried out. Here in America it is not likely that we shall feel a very warm interest in the archeologists of the future while we remain so indifferent to the archeologists of today. It may also occur to some that there are perhaps certain features of our civilization which we need not be proud to record. The preservation of some sections of our daily press, for example, would hardly shed a lustre upon Twentieth century civilization, while the treatment of children in our factories would bring a blush to the cheek of a modern Hottentot and would certainly not enhance our reputation in the eyes of posterity. It is a solemn thing to keep a diary, either for a person or for a nation. If it is not kept faithfully it is useless and if it is kept faithfully we do well to bury it as Mr. Harrison suggested, and the deeper the better. That the future archeologist will find out all about us is perhaps a consummation more to be feared than to be desired.

THE Immortals made a Golden Race of speaking men. They lived as gods upon the earth, void of care and worry, apart from and without toilsome labors and trouble; and no wretched old age awaited them. Always the same in the strength of hands and feet, they knew no other state than joy, and calamity befell them not. When they died it was but as though they slept. They are now presences of inspiration moving about the earth for the help of mankind. Truly is theirs a blessed task.—*Hesiod*

Unexplored Bolivia—Treasures May Be Found There

BARON ERLAND NORDENSKJOLD is now on his way to the unexplored forests of Bolivia for the purpose of archeological research and also in order to study the Indian tribes on the tributaries of the Amazon. Speaking to a Reuter representative the Baron said:

Leaving La Paz, we intend to skirt the east coast of Lake Titicaca and cross the Andes to Pochuco, traversing a country full of interest and of Inca remains. After crossing the Andes the most serious part of our work will commence—namely, a sojourn of eight months in the dense primeval forests haunted by hostile Indians. In order to pursue our investigations, we shall naturally try to enter into friendly relations with these tribes, and we shall work our way along the Madre-de-Dios, Inambari, Tambopata and other tributaries of the Madeira and Amazon rivers. Our headquarters will be on the Rio Tambopata. As our chief object is to study for the first time the tribes of this forest region, we shall not restrict ourselves to any one line of route. I anticipate that it will be difficult to enter into relations with the little-known Indians, who are of a most warlike character. I hope to get fresh information regarding the Araunas, a tribe who have small temples filled with wooden gods. Their principal god is a huge wooden disc, meant to represent the sun, and they also worship wooden axes. We shall probably have greater difficulty in getting into touch with the Guarayos, a most interesting but very hostile race, of which very little is known. We expect to find relics of pre-Columbian civilization in the Andean forests. On the conclusion of our work in the forests, we shall return to Lake Titicaca and study the marine animals.

Bolivia is a little explored country and it would not be surprising if the Baron's archeological and other researches were strangely productive.

Africa, a Meeting Place of the Sunken Continents

LAKE TANGANYIKA, in Central Africa, has of late been attracting a good deal of scientific attention. For this enormous sheet contains a species of jelly-fish or medusa, unknown in any other fresh water. And in its depths occurs a very remarkable series of whelk-like molluscs. It is therefore supposed that in former ages the lake was connected with the ocean.

This was certainly the case, according to Theosophy. If we suppose that what is now the east coast of Africa was the western end or coast of Lemuria, the great Pacific continent, whose sea boundary was the line of the Nile and Lakes Victoria Nyanza and Tanganyika, then it will be easy to see that when Africa west of this line arose as an extension from Atlantis—the continent that was once where the Atlantic Ocean is now—the two great lakes and the Nile would mark the point where the sea was shut in between the two closing halves. Lemuria and Atlantis sank, leaving their meeting place alone standing.

Excavations in Turkestan to Show Age of Prehistoric Civilization

THE Carnegie Institute of Washington has commissioned Professor Raphael Pumpelly, one of America's best known archeologists, to proceed at once to Turkestan in order to make certain excavations. This work is intended to settle the question as to the age of the civilizations of which the remains are known to underlie the soil. Numerous tumuli have been found in the oasis of Meri, and the ruins of ancient Samarkand are of especial interest. A report in the *London Daily News* states that the Professor regards the tumuli as the most important of the remains. These tumuli are quite numerous along the base of the mountains east of the Caspian, and from this point eastward reaching nearly to Andidjan.

For several years Monsieur J. de Morgan has been conducting scientific investigations in Persia, and especially at Susa. He has unearthed tablets and cylinders with hieroglyphic inscriptions, which were considered by Scheil as belonging to a group before the Fortieth century B. C.

Some recent excavations made by Stein brought to light cities in the Tarim basin which were buried in the sands, and Professor Pumpelly believes that the thickness of earth in the tumuli and town sites of Turkestan is evidence of protracted occupation.

By outlining the comparatively unknown region of Turkestan Professor Pumpelly will increase the knowledge of the geological map.

Now Is the Fairies' Busy Season

THE return of spring has once more presented to us the familiar marvel of plant growth; each sort after its kind. Out of the hard yellow soil, which has lain bare and hard during months of summer dryness, has come the green life. The fern-like fronds of the alfilerilla grow side by side with the heavy, fleshy, diamond-spangled ice-plant. There is a bunch of grass beside them and near by a wild hyacinth is thrusting up its one long leaf and slender stalk crowned with purple bells. Plants of a hundred species throng every hillside, all in a hurry to be done with the season's work. The air seems full of the hum of elfin industry. What a tracing of plans, what living masonry and vitalized carpentry must be going on, though we cannot see it! The chemists and perfumers, painters and jewelers, are all busy preparing for the rush of blooming-time. In fact, fairy workmen of a thousand different crafts are all doing their best to meet the emergency, for they know that growing is a business that cannot be done without water, and must, therefore, be hurried through while the supply lasts.

The chilicothe and acanthus workmen are very orderly and follow the regular plan very exactly, but the black sage has no architect at all, and the builders put the branches together just anyhow, the same as the wild-buckwheat people do. There is great rivalry between the yerba santa artists, and scarcely any two have exactly the same shade of purple in their bell-like flowers. The wild yellow violets and the blue-eyed grass, or ground-iris, have family styles which they do not vary for any passing whim; but the painter of the wild hyacinths seems to mix his colors fresh for every blossom, because nearly every one is a different shade. Perhaps some time the elves will find human beings wiser than now and will show themselves to the children as they used to long ago, but now we can only watch the wonderful unfolding of their handiwork, so dainty that we can never hope to equal it.

N. L.

The Wonderful Lifting Power of Growth in Plants

THE other day we noticed a curious upheaval in an old roadway. The compacted ground had been broken through where it was about eight inches thick and an area of about two feet diameter had been lifted out of position. The total cleavage was about eight feet long through hard gravel road-bed, hard enough to require vigorous use of a pick, where it was eight inches thick. The total weight moved was, at a guess, about seventy-five pounds.

And it had all been done by a few, possibly a dozen, Yerba Santa shoots in search of sunlight. Scarce one was larger than an ordinary lead-pencil and none as hard as the flesh of a potato. They could have been easily crushed by a pinch with the thumb and finger, yet by their combined efforts they had made a lift which, including breakage would have tested a man's strength.

A PATH TO THE OCEAN WEST OF THE HOMESTEAD POINT LOMA :::

How it was done the elves may be able to tell; perhaps they have methods of lifting which do not depend upon the laws of tensile nor crushing strength.

STUDENT

Moving an Ant Hill—Gigantic Task of Tiny Workers

WE noticed, today, a colony of ants moving their nest to a drier location. The distance was about sixty feet; fully twenty minutes' travel for one of them. The road was about an inch wide and black with ants from end to end. With all their wonderful sagacity, ants appear to have no space-perception, for they will wander blindly about for half an hour within six inches of the entrance without being able to find it. Some were lost along the road, often within two inches of it, and were unable to find it at all. This curious defect increases the puzzle as to how they succeeded in establishing the highway in the first place. It must have required their best explorers to go that far and be able to return. But they did at last, by some means, get it nearly straight from end to end, only swerving aside to dodge obstructions. Maybe there are some in the nest which do possess the space-perception so as to be able to see several paces; as some men have the sense of justice, which most people lack.

STUDENT

THE world seems still to contain some animals which have an aversion, or, at any rate, an indifference to being discovered and classified. Among these must be numbered a certain bat, known as *Euderma maculatum*, which has until recently eluded the search of the Biological Survey of the United States. In 1891 a specimen was picked up dead. It is described as having "ears like a jackass and a white stripe on each shoulder." Ever since this discovery a diligent search has been made for further specimens, but although a farmer in Vegas Valley, Nevada, described it as being a common summer visitor to that neighborhood, a second specimen has only now been found. Both the species and the genus of this bat are new to science.

Diego audiences that their addresses were listened to with a very full attention. Both papers were of some length and so carefully prepared as to constitute treatises of value upon their respective subjects. Mrs. Hanson's views upon the training and education of children are always warmly welcomed, while Mr. Machell's eminence in the domain of art gives a very high value to his opinions. We regret that we can do little more than give the opening sentences of these two very important papers. Mrs. Hanson said:

"In the children's stories, the little princess is given three wishes by her fairy god-mother, but I feel the whole world could be revolutionized if we had but one. Would that we could start life once again and with a perfect understanding of its responsibilities and laws. If we only knew how to untangle the webs of sorrow and disappointment, of weakness and despair, and spread our wings of faith and hope and sail over and beyond the pits and quagmires, like some beautiful white sea-gull, that breathes only the purest air and lives in sparkling sunshine. Unlike ourselves, it cannot live in the impure atmosphere of crowded districts, amid strife and uncleanness. Have we not all experienced the same feeling as we have gazed at the ocean, watching its ceaseless ebb and flow; when suddenly and noiselessly a great gull sailed above us, unruffled, undisturbed? Such a rush of longing came over us to be like that, above and beyond the worries of life and sailing upward in an atmosphere of peace. But we cannot have this kind of peace, for we must all help to carry our brother's burden in addition to our own. Who of us could be content to gain peace for himself alone? When we have it, we must turn back and help others over the stony places, bind up the wounds and support the faltering footsteps. And who needs our help the most? The children — the misunderstood children. Children who are drifting like a boat on the open sea, tossed by every wind and gale and driven upon foreign shores, from which there is no return, by their own unaided efforts. There are times when the pathos of it all is almost overwhelming, when we can feel the tiny hands from all over the world stretched out in a piteous appeal for help, for some one to guide and direct until they are strong enough to stand alone. We all can look back at mistakes,

disappointments and heart-breakings and think 'if we had only known!'

"But have we learned nothing from these experiences? Are we not stronger and wiser? Who knows the path so well as he who has trod it, with a cross upon his back? And it is from all this unnecessary suffering that we should save the children. We want to give them the

opportunities of living in the sunlight of life instead of in its shadows. Katherine Tingley has said, 'Give me a child until it is seven years of age, and all the temptation of the world cannot move it afterwards. It will have been taught the divinity of its own soul.' And how often does she remind us that we need not search for other worlds to conquer when this world is so full of neglected and misunderstood children."

Among many fine things in Mr. Machell's paper on "The Useful and the Beautiful," he said:

"There is a popular belief, which one might well call a superstition, that the useful and the beautiful are eternally opposed to one another, and I think this is one of the most foolish fallacies of modern thoughtlessness. Like many another error it has been accepted carelessly and become a habit of mind which has now acquired a sort of right to rule the masses who are too lazy to think for themselves. There is a terrible amount of this mental laziness, in spite of the supposed activity of the modern mind.

"But perhaps one of the chief reasons for the existence of this mistaken notion is that the modern world has but a very hazy idea of what is really meant either by beauty or by usefulness. This can hardly be a matter of surprise when we reflect that most people have no clear idea of what they are living for, and consequently can have no clear ideas either as to what is really useful and needful for true life. For the same reason they are quite unable to find any standard of beauty by which to test the right of anything to be considered beautiful.

"Katherine Tingley has told us that 'Life is joy,' and we need no one to tell us that joy is beautiful. Everything then that helps to make life joyful is useful. Is that the way we usually judge of what is useful? To some extent I think it is, but the result of the attempt to get some joy in life is that millions of people live in a state of utter want of all that makes life either joyful or even tolerably free from misery. The reason for this is that each one is trying to get this joy of life for himself without regard to what is the cost to any one else, and it cannot be got that way."

To Educate Children of all Nations

Read at Sydney, Australia, January, 1904

TO successfully teach any subject one must have a knowledge more or less complete of the subject to be taught. So to successfully teach Universal Brotherhood the teacher must understand in some degree the living meaning of the term. For Universal Brotherhood is not merely phrase or fancy coined in the human mind; far from it. It is a fact in nature, and would remain a fact if there were no human mind to cognize it. Universal Brotherhood means, in words then, that humanity and all creatures, suns, worlds and systems of worlds are expressions, aspects or manifestations of the Universal Mind and Soul, and that to successfully teach this basic, glorious truth, it must, to the teacher, be a living fact, not a matter of mere mental acceptance, and consequently devoid of real living power. The successful teacher must know from experience what it means to struggle against and overcome qualities in the mind and heart that oppose the practise of Brotherhood, and the Wisdom and knowledge of self is the great book, combined with the soul, from which the teacher draws living instruction adaptable to every emergency, to safely guard against the possible encroachment in the mind of the child of qualities that oppose real healthy human life.

Although there be many imitators of the methods of Katherine Tingley success will never follow such until Universal Brotherhood has become something more than a mere idea. To feel at one with the life of all, the ceaseless, harmonious throb of the ocean of being is the qualification, the diploma of the true teacher, the degree according to the realization; the observance of the external methods alone are of little value and may end in hypocrisy if the teacher's motive be not good. The teacher teaches what he is, he cannot teach what he is not. And when, on many an occasion, the child has proven himself in character superior to the ordinary teacher, the place for that teacher if he studied his own best interests, should be at the feet of the child. Nature appoints her teachers according to degree of the character, not with regard to the age of the body.

E. J. W.

The True Way to Help the World

Read at public meeting of U. B. Lodge No. 1, Australia

WHAT appeals to us most as the great need of the world today? A greater Spirit of Brotherhood, undoubtedly, to my mind; a deeper earnestness, and a higher ideal and definite aim in life. So many drift hither and thither, rudderless, disabled in the stormy sea of human life, and like to become wrecks if help be not forthcoming; so many, weary of life; so many embittered souls, railing at fate, railing at their fellows, they see the misery existing, but they do not see the real causes of it all, and so in their efforts at helping they still hinder the hoped for result, though in a just universe they receive the just recompense for their good intentions. Every effort in the right direction helps, however, to bring to man that aid he needs to help him forward in his evolution. Man is more than an animal, more than an intellectual Being *merely*, his nature and his needs are *three-fold*. No true Helper of Humanity can leave out the *Soul*, and no true Reformer *ever has*; they have always made the central point of their teaching and practice **MAN IS A SOUL!** The soul acts through the heart, and it is the *Heart-touch*, strange though it may sound to many, that illuminates the intellect and enables it to put forth its greatest power. The true genius has always been a man of heart as well as of intellect. The mind in a properly trained human being is as much the controlled servant of the Soul as the animal body.

The Soul of man, our real *Inner Self*, is ever seeking outward expression, striving to fulfill its mission of perfecting humanity, and the form this feeling of Inner Unity must take on this outward plane is Brotherhood, *Practical Brotherhood*. The true way to help the world is by starting Reform, by being ourselves *Reformers on right lines*. Brotherhood to be *practical* must be practised, mustn't it? There is no use in preaching what we don't practise; only hypocrites are made that way. Think of what the word "*reform*" means: "To form anew; to change from worse to better; to remove which is bad or corrupt," etc., etc. So you see, after recognizing the faults and failings of our present civilization in the

lives of humanity, and the conditions in which we live, we need to be *truly helpers* to start about the Upbuilding, and here is where a True Philosophy of Life becomes so necessary as the ground plan, so to say, of the new structure. And the need of men has once again, as in the past, called forth the Master Builders.

In response to the cry from humanity's heart for reform, three heroic Souls in succession have waged war upon the Powers of Darkness for the liberation of the souls of men—three mighty Reformers, great exponents of Brotherhood. H. P. Blavatsky gave the service of a mighty intellect to the Soul, to aid in breaking down the false, unpractical theories that in her day held down the Soul of man. "Ye are Souls," rang her clarion cry; "arouse! arouse!" and she battered down fortified positions of intellectual fallacies on all sides, letting in the Light of Eternal Truth to the Imprisoned Souls of men. And many did rouse, called to action by her *heroic action*, and the life-giving message she brought.

More and more imperative became the call to practical action, and under William Q. Judge a great stand for the practical realization of *Brotherhood* was made, and many rallied round that flag, and fought the battle that has brought aid to the Regenerative Forces of the World.

Under Katherine Tingley, what do we see? Oh, joy for suffering humanity! The practical beginning of a "new order of ages," the True Philosophy of Life put into practice, the true way to help the world shown in the most convincing of all ways, by objective expression.

From this time forth there will be living examples in the world of what kind of men and women, lives lived on right lines, can produce. The Raja Yoga School has started at Point Loma, the school wherein will be taught the *Science of Life*. Already the children trained therein are calling forth the wonder of the world. And the true way to help the world is such a lovely way: it is the reforming of yourself on new lines to those worked upon in modern times, but old as humanity, and intended from the beginning, the lines of *Soul* development, putting things in order, and order you know is "heaven's first law;" Soul first, as Master and Ruler, then Mind and Body, as willing servants, in the great scheme of Universal Brotherhood that is our destiny to realize in action. Art, and Beauty, and Joy, and Peace, and Plenty, will follow *this* reformation. Truly, the old world will pass away, and there will be a new heaven and a new earth! The first step to bring this about is for each of us to try and realize his Divinity and his Brotherhood with all living things and join hands in bringing it about as speedily as possible, by doing our duty to our neighbor and the *God within* now! E. I. W.

I THINK I could turn and live with animals, they are so placid and self-contained,
I stand and look at them long and long.

They do not sweat and whine about their condition,
They do not lie awake in the dark and weep for their sins,
They do not make me sick discussing their duty to God,
Not one is dissatisfied, not one is demoralized with the mania of owning things,
Not one kneels to another, nor to his kind that lived thousands of years ago,
Not one is respectable or unhappy over the whole earth.

So they show their relations to me and I accept them,
They bring me tokens of myself, they evince them plainly in their possession.

—Walt Whitman

What Is It to Be Genuine

TRUTH is above all things, and is the mightiest power on earth. Yet, what is truth? This is an old, old question, yet it is ever new, and every thinking being has asked it of himself a hundred times or more. Literal truth is one thing, real truth is often quite another. A thing or a saying may often be perfectly true in a literal sense, on the surface, and yet a deception for all that. The impression conveyed is as important as the words, nay, more important, because all that the words are for is to make just such an impression.

Important, however, as our sayings and our actions are, the main thing for us is to be true, to be *genuine*. Our outward expression is important mostly as an expression of that which is within.

It is not necessary nor desirable that we should carry our hearts on our sleeves, nor that we should select the first person we meet for a confidant. That would not only be very foolish, but would work untold mischief, for it would be giving things to those who would misuse them. But we must be true, we must mean whatever we say, and whatever we do we must do with a right good will. If it is worthy of being done at all it is worthy of our best. We must not only be kind to each other, but we must *love* to be kind. The kindness must be genuine, springing from the heart. If we harbor true feelings of love for our fellowmen, then all else comes natural. Our sympathy then goes out to all others, we take part in their sorrow, we rejoice in their joy. We are interested in all that which interests them, and thus we build up that community of feeling through which alone true comradeship is possible. Thus we become true helpmates to each other, strengthening each other not alone at the weak points, but by making the strong ones tenfold stronger.

The more our lives interblend, the more need is there to be always genuine, for any little deception is then more immediately felt, causing estrangement. So also is

the true, honest, free and open, helpful comrade-touch, and each one who is genuine is an inspiration and a blessing to all he contacts.

THE GOLD OF SPEECH

by MABEL PERCY HASKELL

GUARD well thy words---
How else can thou be master of thyself?
Well poised and courteous speech can make thee king
Among thy fellow men.
Keep watch upon thyself
And govern well thy lips as doors unto a treasure house.
That nothing may be stolen from thee unawares
By sudden moods.

The Power of the Soul

IT has been said by a Theosophical writer that "the minds are many, but the soul is one." The soul, then, is that divine, creative, sustaining and binding principle of the universe which unites and relates each to all and all to each. This universal, impersonal soul incarnates in you and me, and is "the light which lighteth every man that cometh into the world." "As lord of this mortal frame it experiences therein infancy, youth and old age, and so in future incarnations will it meet the same." We learn that "He by whom all things were formed is incorruptible, and no one is able to effect the destruction of It, which is inexhaustible. These finite bodies, which envelope the souls inhabiting them, are said to belong to Him, the eternal, the indestructible, immovable spirit who is in the body. It is without birth, and meeteth not death; it is ancient, constant and eternal; and is not slain when this its mortal frame is destroyed. As a man throweth away old garments and putteth on new, even though the dweller in the body having quitted its old mortal frames, entereth into others which are new." Such, in brief, from the *Bhavadgita*, is a description of the divine principle in us, and which the teaching of Theosophy shortens into the statement that man is an immortal, divine, reincarnating soul. We inhabit many bodies, one after another for our lives, in which we live to learn and realize that we are souls, all parts of the one divine, universal principle, the relationships of which parts is expressed by Universal Brotherhood. Hence, we can see that to hurt, to wrong another, is really to hurt *ourselves*, for we are abusing the divine principle which ensouls us all. We are not merely brain-minds, lower selves, as Theosophy calls such, and which are too much dominated by our senses and passions. But it is through the brain-mind that the power of the soul may be felt here and known. No one can know a thing he never thinks about, or thinks about wrongly. If we think we *have* a soul in a sort of supercilious way, thinking we are superior to the sacred divine principle, as our so-called religious training of the past has led us to think, we can never contact it or know its power.

Happily, this false idea is being shown at its true value by the spread of Theosophy, which the three great Teachers of modern days—Madame Blavatsky, W. Q. Judge and Katherine Tingley—have rebrought, sustained and demonstrated to us. We can now fearlessly think we *are* souls, and so learn to discriminate between our mortal and immortal nature. We can now think out the meaning of life and know our source, strength, possibilities and responsibilities. We can stand up as divine souls, with the knowledge that our hopes, our worthy hopes, stand some chance of realization in another life here, if not in this. We can go forward courageously, knowing that the friends we loved, who have passed on to rest, will be found again here in this world, working side by side with us in our evolutionary march. We can joyously look forward to the reign of the good, the beautiful and the true, when we will live and think and act as souls in a golden age here on this old Mother Earth.

The power of the soul is a power of love that brings order out of chaos, and joy out of pain, and ultimate good to all.

The power of the soul is being felt today by the heart of humanity at large. The very turmoil in some lands is a sign of it. The urge to right things and to drop wrong methods of life are other signs. A great soul is in the world and the conscience of humanity is feeling her presence. God is love, we believe. The great heart of a great Teacher is a manifestation of that love which wills and works for truth, light and liberation to all, and it will and must ultimately be responded to, for love begets love. Do we want to know the truth of this? Then we must think of ourselves, our real selves, as divine souls, and turn to our hearts for the light, which illumines our darkness. By so doing we will learn to discriminate the true from the false. By so doing we shall learn the truth of Shakespeare's words, when he said, "There's a divinity that shapes our ends, rough hew them how we will." That divinity is our real, divine, immortal selves, and its will, its power, its law, is over all our acts and thoughts, and urges us to progress, unity and love. Its adjustments of our lives we call pain, by some punishment; but obedience to it and the unexpected results we call joy. According to our Leader and Teacher, Katherine Tingley, life should be joy, and we can see how it can be made so—by obedience to our divine selves.

✧ ✧ The Beginning of the Way ✧ ✧

MARY WEBB felt a bit lonely and there was something like an ache in her heart as she busied herself over the tea-cups. The corner of the lunch cloth caught her eye—a spray of autumn tinted leaves, reminding her of the sheltered corner of the garden, where she had lovingly stitched into the linen a picture of nature's own beauty. Her smile, at first wistful, grew sunshiny at the recollection, but that was before—O well!

Mary resolutely shut off the current of thought that was sweeping in, knowing it to be disintegrating in its effects. After all, why should she expect her sister to do even a share of the menial work, when she made such a capital hostess? How the guests crowded about her!

Frank Fairfield quite held his own in the gay medley of chatter, and admired, in common with all the guests, the graceful manner and witty, light talk of his pretty hostess, a friend of his sister. However, his eyes turned now and then toward the younger girl, Mary. He noticed a thoughtfulness underlying her care of every detail, her regard for each guest, and how finally she took a seat beside the least interesting of all, drawing her into conversation. Without quite understanding why, he soon took a seat beside her, but almost immediately Mary was called upon to play an accompaniment to a song.

Frank Fairfield had come down to the little village of Banksia to spend his vacation between law terms, with a favorite sister. "There are people who lift and people who lean," she had said that very morning to him, emphatically. "A very uncomfortable place this world would be for those who lean were it not for those who lift," she added, "but generally the former have not sufficient gratitude to acknowledge it."

"Have I fallen under the ban of your displeasure?" inquired her brother.

"You men," replied Mrs. Merwyn, with more haste than diplomacy, "always take things to yourselves. I had a case in mind, but I was not thinking of you at all."

"Of whom were you thinking?" replied Frank.

"Well," she answered teasingly, "of some one, or of some two, rather, whom you will meet tonight."

The words recurred to his mind that evening, when he saw pretty Mary Webb patiently remaining in the background for the sake of the comfort of the guests, while her sister Kate, less attractive in many ways, though more brilliant in conversation, remained quite upon the surface of things and apparently without any responsibility whatever. Yet while Frank realized the truth of his sister's statement and fancied that he saw its application before him, he was scarcely prepared to give it its full value, for it must be admitted that many of "those who lean" are good to look upon and the engaging smile hides many a selfish action. Yet, in spite of all the brilliancy of the dozen social butterflies in that little assembly, the calm, cheerful, restful bearing and sweet dignity of the girl who forgot herself in the service of others, stamped itself indelibly on Frank Fairfield's mental vision.

Frank Fairfield was what is generally termed "popular," and he had, withal, a justifiable pride in the straightforwardness of his own life. He "knew his own value," as they say, but underneath the layer of conceit—largely the result of unfavorable conditions—lay sterling stuff awaiting but the teaching of humility to bring it forth.

"Kate! Is she safe?" These were Mary's first words as she returned to consciousness.

"Yes," Frank answered gravely—"and you?"

"I am quite all right now," she replied, opening again the eyes that had wearily closed. "My head aches a little and I—feel a little bewildered, but it is nothing," and she drew herself away from the supporting arm and sat up. Suddenly, with quick trouble in her face, she said, "Are all the others safe, too?"

"Arnold is badly hurt, I fear, poor chap. It is a sad ending to our excursion; but you should not sit up. I shall insist upon your taking complete rest, and with your permission I shall leave you, to go to your sister and Miss Fannie with the good news that you are not injured. They were a little hysterical and I sent them to the hotel."

"But they are quite unhurt?" Mary asked again, as he assisted her to rise.

"Quite. Perhaps you are able to go the hotel, with my assistance."

"No," she said, "my place is here. I am quite well and the others need me. Quick, you can help me if you will."

Mary stood up, a bit unsteadily, but with an effort of will threw off the bewilderment and regained control of herself.

Frank was a willing helper, but the situation was a new one to him and he therefore appreciated the more Mary's skill. When finally the doctors and nurses arrived at the scene of the wrecked train and Frank Fairfield was permitted by Mary to take her to the hotel for rest, a new respect for women and all womanhood had blossomed in his heart. His own help—how blunderingly he had worked, and what harm might not his ignorance have done except for Mary's skill! He, a University man with a degree; she, but a country girl. And so it came about that Frank Fairfield returned to town with his self-complacency well-nigh transmuted into something nobler and better.

A year passed, a happy year to Mary Webb, for the friendship between herself and Frank Fairchild had blossomed into that full, sweet comradeship upon which the true marriage alone may be based; and the marriage which was to take place at the conclusion of Frank's next yearly visit, appeared to both as the open doorway into a new life—a life which should be greater than the old and which was to be filled with unselfish service to humanity. Of this greater work Mary had always held within her heart the ideal, yet her life had been shut in and hedged about. Now the ideal was to be realized, for Frank had found his life-work and Mary Webb felt that at last the dream of her life was to be realized. They would share a life of service together.

"I have you to thank, Mary, for my life's happiness in more senses than one." Thus said Frank Fairfield at the conclusion of the long looked for visit. "But for the example of your own heroism, but for your own womanly unselfishness, I should never have summoned the courage to break down the barriers that were holding me back. Before I knew you, I used to search for the brilliant and the witty, the fascinating and the clever. After I knew you, Mary, I began to search for the true, and then I began to realize how selfishness and thoughtlessness had kept all that was best in me shut away. It was you who gave me my first lesson in Brotherhood and now this new work in the city, Mary—how I wish I could tell you more about it! I can see you among the Lotus children already. How well I remember smiling to myself, in a superior sort of way, at the delight of my old chum, Harry, when I told him how sick and tired I was of the present state of things! It was you, dear, who made me see the emptiness of the old life. And then Harry took me to his society, a Universal Brotherhood he called it, really only six months ago, but it seems ages."

"It has never seemed to me right," said Mary, "that some should get so much brightness, and others so little. Theosophy—so it seems to me—must offer an explanation for these things. It is certainly more beautiful, more hopeful, more ennobling, than anything I have ever read or even dreamed. It has brought so much into my life, Frank, that I feel more than grateful to you."

"Do you believe," she said very simply, and turning to him a face that was filled with earnestness—"do you believe that our comradeship can be just the growth of one short year? It seems to me it has lasted all ways."

"I think it has, Mary," said Frank, "but however that may be, now is our opportunity to make the world richer, because we have formed that comradeship. Let us use it as a means of bringing, not more pleasure or more ease to ourselves, but as a means by which we can help those who wish to look up to find a wiser, truer way of living. We have it in our power to make our home a very sun, radiating light to those who are yet in darkness."

"You are right, Frank, this is our opportunity. A true home is like a light in the midst of darkness. If we have courage and wisdom, our home may be like that."

✻ The Trend of Twentieth Century Science ✻

Dr. Max Nordau and Radium—Heterodoxy in Science Denounced

DR. MAX NORDAU has rendered brilliant services to the world of thought, services which we should be the last to underrate or undervalue. He has put us upon our guard against an increasingly large section of humanity who have erected unworthy and degenerate ideals as their guides in life, who seem indeed to be animated by the unclean thoughts of past ages. For this he is entitled to our appreciative thanks, even though we are forced to dissent from his definitions of degeneracy. The gospel according to Nordau is, of course, the gospel of the commonplace and the orthodox.

He shows but scant desire to discriminate between the thought which is in advance of today and that which is but an imitation of ancient evil, or which arises from the dregs and the wild beast cages of human nature. He knows only two categories, the commonplace and the degenerate, and even Dr. Nordau's worst enemy will not accuse him of being commonplace. Small wonder then that the speculations as to the nature of radium have disturbed the academic philosophy of the learned doctor. He has not yet placed nature herself under the ban of degeneracy although her inconsiderate action in unveiling her mysteries approaches perilously the border line. He does, however, pour out the vials of his wrath upon those scientists who show a willingness to depart from accepted theories in the presence of phenomena which upset those theories. Ancient theories are orthodox and to advance is to degenerate.

Dr. Nordau has certainly the courage of his convictions. Gustav Le Bon is accused of jumping to conclusions and of forsaking ancient belief for a new theory that a continual decomposition and volatilization of chemical atoms is taking place. The Curies themselves, we are told, have "forged a sword of flame for religion and their mysterious element seems to be as fatal to doubters as to minute animal organisms." Dr. Nordau is so good as to admit that Sir William Ramsay "cannot be dismissed with the slighting name of dilettante." And yet,

Sir William, after a superficial glance at the radium tube, also hastens to throw overboard the old, time-honored atomic theory and advocates the possibility of the decomposition of matter. But he does not make the atoms dissolve into ether, but break up into ions, that is, electric particles unconnected with matter. The blessed physicists who invented the theory of ions, assert that they can conceive of particles of electricity, that is, of little pieces of motion independent of matter.

All this is, of course, very sad. Just as we were settling down into a comfortable state of somnolence in the scientific gloaming of a day well-spent, nature has been so thoughtless as to ring a strenuous peal upon the bell and summon us forth to the further labors of renewed and revolutionary thought. That the laity should be disturbed was only to be expected but that the high priests of science, the scribes and the elders should obey the summons is especially regrettable and reprehensible.

Everything which had been counted a positive possession of humanity had become an open question again. The firm foundations on which the modern mechanistic ideas of the world rest have been shaken. They totter and threaten to fall, and with them the proud structure they support. All the wild superstition, all the nonsensical fancies which haunt beclouded brains, but which had been driven back into the most hidden recesses by the bright light of natural science, break jubilantly forth, and by outbursts of contempt and ridicule try to revenge themselves on those laws of order which have kept them in check since the advent of the age of natural science. And it is not only among the laity that this distressing condition of affairs is to be observed. On the contrary, physicists themselves declare that all the laws of physics are suspended, all hypotheses and theories of science worthless, all scholastic systems worthless.

Unfortunately this apostasy on the part of scientists is not without a precedent. Had we been more consistent in the repression of scientific heresy we might have been better fortified against the assault of radium with its law-breaking proclivities. It seems that there is in human nature a tendency toward mysticism from which even scientists are not exempt. Indeed they are just as bad as the rest, and mysticism is the *fons et origo* of all these troubles. Even scientists, who ought to know better, persist in seeing the inexplicable everywhere, in being sometimes overawed by the unknown. Such men as Crookes and Zöllner, otherwise law-abiding

and respectable, have the audacity to record the things which they have seen and even to insist that they *have* seen them, in spite of the head shaking of hoary old theories by which such things were impossible.

But Crookes and Zöllner are by no means the only examples of professors of science who in everything not directly pertaining to the most concrete questions of their specialty, think like children or savages. There are only too many men of science whose whole world of thought, except a little corner which they reserve for their "book knowledge," is mystical, and who are happiest and breathe most freely when a new fact appears which does not quite fit into their school satchel, and they can find some excuse for letting their mysticism penetrate even this little corner. In spite of the fact that they are for the most part occupied with the observation of facts, in spite of their consequent strong logical tendencies, their type of mind is just the same as that of the large mass which surrenders itself openly and unreservedly to primitive superstition. We should like to assume theoretically that each new discovery of science throws a bit of light into the darkness of nature and of men's minds, puts a new tract of the desert of error under the plow of knowledge. Experience proves the contrary. Error triumphantly claims each new discovery of science as its own handmaiden.

But enough has been said. We have shown that unless some means be found to stop this habit of investigation and of thinking, it will certainly spread and who can say what the end will be?

What we need is a scientific holy office with its index of books which may not be read, of theories which may not be discussed and of experiments which may not be tried. Unless we resort to some such expedient nature may be encouraged by her impunity with radium to disclose something more to us and to shake up our dry bones into a semblance of life. Truly it is a strange world, we might even say a degenerate world.

The Secret of Aerial Flight in the Anatomy of Birds

STUDENTS of air-flying are studying more and more carefully the anatomy of birds, thinking—not unreasonably—that they may light upon some subtle secret of structure which their flying machines can copy. It has long been known that some of the bones of birds are hollow and full of air, and that these hollows communicate with the lungs. It is less well-known that there is in many birds a complete network of air-cells under the skin of the whole body, and that these can be inflated from the lungs. As the temperature of the bird may be as high as 115° F., it follows that when he wishes to fly he can, at will, surround himself with a balloon of hot air—almost enough of itself to antidote gravity.

A writer in the *Scientific American* discusses the problem of the flying powers of birds. He says:

In collecting bird skins I have found innumerable air-cells, forming a most delicate and wonderful network between the body and the skin. In the pelican, one of our largest birds, this network of cells practically covered the whole body and was very noticeable. Now if these cells work automatically, like the lungs or like the circulation of the blood, being filled with or emptied of hot air, according to the purpose of the bird to rise, float or descend, then surely we can better understand the ease with which birds seem to sustain themselves in the air during their long flights.

This seems a very plausible suggestion and it may well be that the quills are similarly used as receptacles for air which is heated or cooled by the bird as occasion demands.

STUDENT

Infant Mortality Due to Maternal Ignorance

IT is an extraordinary fact that every fourth death occurring in this country is that of a baby under one year old, and every third death that of a child under five. That is to say, that of twelve deaths, three are infants, and one a child between infancy and five years of age. The chief cause of this mortality is ignorance on the part of mothers that meat, pie and candy are to infants not only not food, but actual poisons. That seems an elementary bit of knowledge, but hundreds of thousands of women have yet to learn it. It would be an easy and useful move to furnish every mother, at the registration of the birth of her child, with a leaflet containing a few simple hints on child-feeding, and indeed on the elements of general hygiene.

STUDENT

Here and There Throughout the World

The Hague, England and Spain THAT the principle of international arbitration is being more and more widely accepted is shown by the increasing number of treaties which tend to this end. The latest international agreement is between England and Spain, by which all matters of dispute are to be referred to the Hague Tribunal as long as "they do not affect the vital interests, the independence, or the honor of the two contracting parties." This clause seems to leave the door perilously wide open, but we must be thankful for such mercies as we can get. National sense of honor is a particularly uncertain quantity which has sometimes been left to the determination of street mobs.

Peace or War in the Balkans WHERE is Boris Sarafoff and what is he doing? A great many people would like to have these questions answered, and especially those in the Chancelleries of Europe. Upon Boris Sarafoff hangs the problem of peace or war in the Balkans, and Boris Sarafoff is waiting for the snows to melt. He is now thirty years of age, and not too old to recall his first childish experience, that of seeing his father and grandfather chained together and beaten nearly to death. Chickens certainly do come home to roost, and it would have paid Europe to see to it that Boris Sarafoff had no such memory to recall. The memories of children are so tenacious.

Marquis Ito Once a Stowaway It is not usually known that the Marquis Ito, the veteran statesman of Japan, once stowed himself away on an English ship and went to London. He was only a boy at the time, but that did not prevent him from starving in the streets and undergoing vicissitudes which usually befall unowned and unwanted children. We wonder how much of the wisdom which he has so beneficently used in the service of his country is due to what he learned and suffered upon the streets of London? How fortunate that he was not captured by the police and "reformed!"

Little Pauperism Among Japanese A JAPANESE writer asks why it is that pauperism in Japan is so rare while other nations with the same population are confronted with an annually enlarged problem of destitution. The question is, of course, one of great magnitude and not to be answered in a few words. Throughout the whole of Japan there are only about 21,000 paupers, and these are mainly the victims of earthquakes. Here we have almost ceased to propound such problems, not because we cannot solve them, but because we are afraid of the attempt. Self-love and complacency have put their veto upon inquiry.

Arbitration in Ancient Greece THE principle of arbitration as a substitute for war is so far from being new that it was in force among the communities of ancient Greece 600 B. C., and there are some who believe that the Amphictyonic Council had the power to compel disputants to resort to arbitration. In later days Henry IV of France tried to weld the European States into a common agreement for the abolition of war. Of course he failed, not having sufficiently realized that humanity loved fighting for its own sake and had no desire to be relieved from its burden.

Dreyfus Is Innocent Declared Labori A MALICIOUS rumor that Maitre Labori is no longer satisfied of the innocence of Captain Dreyfus has produced an emphatic statement from the intrepid advocate. He says: "Not only do I testify that Dreyfus is innocent, but I also affirm that the former proceedings in the Court of Cassation give but a feeble notion of the criminal conduct of certain witnesses against Dreyfus at the Rennes trial." Underhand measures always defeat themselves, and perhaps it is just as well that the enemies of justice should continue for awhile to be their own undoing.

Autograph Letters Between Monarchs IT is stated that two European monarchs, between whose countries a certain friction has arisen, have written autograph letters to each other in the interests of peace. This unconventional action has produced a profound surprise, although to the mind uninstructed in formalities it would seem the obvious and only intelligent thing to do. The wheels of the world would run very much more smoothly if potentates would allow their actions to be ruled more by common sense and less by a very stupid and dangerous routine and precedent.

A Persian Prince's Poem on Long Life PRINCE RIZA of Persia has written a poem on the length of human life which we hope will be translated. He believes that the rightful extent of life is 125 years, being five times the period of development. Full manhood should be reached at the age of 75 and old age fifty years later. Posterity may perhaps verify Prince Riza's theory, but not unless it learns to apply the same intelligent supervision to the human body which we have already learned to apply to our industrial machines, and we are still a long way from that.

France Reducing Military Service IT is authoritatively stated that the French Government intends to reduce the term of compulsory military service from three years to two years. This is intended as an assertion that the soldier is none the less a citizen of the Republic, and that the army is the servant of the law and not its master. There are other European countries which might advantageously follow the example of France, and remind their military caste that the soldier's uniform does not place its wearer above either the law of God or of man.

Japan's True Art of Government ARE we to learn the true art of government from Japan? The Marquis Ito says that the chief rule of a political party "must be the maintenance of an absolute devotion to the higher interests of its country, and it must particularly avoid giving office to mediocre individuals who have no other claim to preferment than their political affiliations." The Marquis Ito has traveled widely in Europe and America. We wonder where he could have learned such a political philosophy as this?

Scotland Invaded by the Opium Habit THE opium habit has invaded Scotland, as is clearly shown by the returns of the Registrar General. This particular vice is something like an iceberg at sea, only a very small portion of the whole is visible above the surface. There is, of course, an outcry for restriction upon the sale of the drug, and perhaps something could be done in this way, but the only efficacious restriction is that which is applied to the desire for self-indulgence, and this happens to be out of reach of Parliament.

Vivisection Vigorously Opposed IN connection with the ever present subject of vivisection and cruelty to animals in general, we are reminded that King George II once taunted the Duke of Grafton for "spending all his time in tormenting a poor fox that was generally a much better beast than any of the brutes that pursued him." The Bishop of Manchester has recently said, "I would rather die a hundred times than save my life by such infernal experiments."

Good Hunting for a Sporting Parson WE see from the advertisement columns of an English daily newspaper that a "sporting parson" is wanted for "a good hunting country, plenty of good stabling, small village, good but small rectory." Everything here seems to be good except the parson. The only stipulation in his case is that he must be "sporting." How many will answer this clarion call to Christian service?

THE CHILDREN'S HOUR

Sowing and Reaping

Essay by a young member of San Diego Lotus Group

WHEN we sow evil thoughts or deeds we must expect to reap them. Most people think if they sow bad and unkind thoughts, they will receive good and kind ones. But they are wrong. Whatever we sow, we will reap a harvest of the same kind.

I once read a story of a farmer who was sowing seeds. When he started it was quite cool and all his thoughts were kind and beautiful. But by and by it became warmer and warmer, and his good thoughts went away and ugly ones came. Two or three weeks later, he went to see how the grain was growing, and found to his surprise that on the first part of his field there was a lovely field of wheat, but on the other part were thorns growing everywhere.

Do you not think where there were thorns was where his thoughts were unkind, and where his thoughts were kind and beautiful there were no thorns?

If I were to say some unkind thing to one of my playmates she would, may be, not say something back that day but some time she will be tempted to do the same kind of thing to me. This shows that when our thoughts or deeds are not pure evil comes of them. If more people would only try a little harder than they do now to be kind and true, there would be more harmony in the world. R. P.

DEAR CHILDREN: The other morning I heard a great outcry among some swallows which had built their nests under the eaves of my barn. Hurrying out, I found that a large gray cat was making desperate efforts to reach the nest. The poor swallows seemed to be panic-stricken, and they finally gathered upon the ridge-pole and held a very energetic conversation. Then one of them flew to a barn a quarter of a mile away where another colony of barn-swallows lived. I waited to see what would happen, and in a few moments back came the little messenger and with him a dozen or more swallows from the neighboring barn. They alighted upon the ridge-pole, chattered together for a few minutes, and then, having evidently made up their minds to a course of action, began circling about the cat. At last, descending upon poor Tabby, all together, they began to peck at him with their beaks, and I can assure you that that cat made an inglorious retreat without any delay! Then they held another conversation, and finally the little neighboring swallows said good-bye and flew back home. Now, isn't that Brotherhood?

Learn to Say No

DEAR COMRADES: It is often easier to say "yes" than "no," but every time we say "yes" when we should not we are indulging in mental laziness, and by and by the will becomes like a muscle that we do not use. Then, when we need it most, we find that it is weak and fails us.

Let us begin right away now to strengthen our will power. If we look back just a little we can easily see how much sorrow we could have saved ourselves by a brave "no" when some temptation came. These unuttered "no's" open the door, sometimes, to the greatest tragedies of life. But we can all become strong if we try. Let us say to ourselves every night before we go to sleep, "I will be strong tomorrow," and then *let us be so*. If we have faith in that part of ourselves that is always strong, of course we can be so. Then, when temptations come, we won't say a lazy "yes." We will say "no." There is in every one's heart a center of peace and strength, and even little children can find it. DOLLY L. V.

WITHOUT AND WITHIN

(Contributed by one of our young readers)

PASSING a shop, a showy watch
Attracts your eye,
So placed that but its beauty meets
The passer-by.

You see no flaw in any part
And so you say,
"It is a perfect work of art,
In every way."

The case may be of rich design
Of purest gold,
Its polished crystals gleam and shine,
Bright to behold.

But 'tis within you look to see
If mischief lurks,
Appearances do oft deceive;
Look at the works.

You meet a person; as you scan
His neat attire
You mark him as a gentleman,
Perfect, entire.

He may seem true, but look within,
Is all as well?
Or is he, like the little watch,
A gilded shell?

It is within, in everything,
That danger lurks;
Appearances do oft deceive;
Look at the works.

R. J. T.

AN unusual place to find a bird's nest is a library mantelpiece, but in a gentleman's house at Brighton a robin's nest was to be seen in that position. In 1897 the robins brought up a family, which in due time fled into the shrubbery. The old birds then pulled the nest to pieces, and in the following year built a second one. The top of the window was left open for the birds to go in and out.—*Exchange*

The Birdies' Curtains

DEAR BUDS AND BLOSSOMS: I am a Lotus Bud, and I live in Massachusetts. I want to tell you what happened in our yard last week. Aunt Sue had been washing out some lace collars and had put them out on the lawn to dry. When she went to get them they were gone. She couldn't find them anywhere.

Next day she washed one more and put it out on the lawn. Then she sat down in the library, near the big window, and watched it. Pretty soon a big robin flew down, picked up the collar and away he flew to his nest.

Aunt Sue watched him, and then had Joe (Joe is the gardener) climb up the tree and get the collar out of the robin's nest.

Joe found both the other collars there, too. Do you suppose the robins wanted to use them for curtains—or what? MATTIE E. V.

THE PARLIAMENT OF MEN

by TENNYSON

MEN, my brothers, men the workers, ever reaping something new:
That which they have done but earnest of the things that they shall do:

For I dipt into the future, far as human eye could see,
Saw the Vision of the world, and all the wonder that would be;

Saw the heavens filled with commerce, argosies of magic sails,
Pilots of the purple twilight, dropping down with costly bales;

Heard the heavens filled with shouting, and there rain'd a ghastly dew
From the nations' airy navies grappling in the central blue;

Far along the world-wide whisper of the south-wind rushing warm,
With the standards of the peoples plunging thro' the thunder storm;

Till the war-drum throbb'd no longer, and the battle flags were fur'd
In the Parliament of men, the Federation of the world.

New Concepts in Science

THERE are two conceptions of the science of today—one might say the science of the last hour—which play with great harmony into each others' hands. As every one knows, the modern scientific conception of an "element" is not that of 20 years ago. It is now practically known that "elements" are really compounds; compounds so close that the compoundness was only lately suspected; so permanent that they were thought unalterable.

But the very permanence is now suspected to be but relative, and of a few elements we know it. Even in our laboratories, the element radium changes into the element helium. Radium itself seems to have arisen, with its brethren actinium and polonium, from the disintegration of the common parent uranium.

And so we reach the conception that all elements are but stages in the long march of substance, some enduring for immense periods, some but for a few seconds. The chemist of a million years hence will study many elements unknown to us because not yet born; and some of those we study will have ceased to be.

The other conception is that *heredity is memory*. Powers and faculties are handed on from parent to offspring because the cells from which the offspring develops remember the use of them. If a hive of bees should acquire some new method of work, that method would be known to each member. And each member, were he permitted to join another hive, could carry with him, and teach, the new method. The analogy with the process of heredity would be complete if the migrating bee gave rise to the new swarm. And the new method would not need to be taught to—but would be *born* in—each individual of the new hive. So as each successive hive slowly acquired some new power, this power with all the old ones, registered in the constitution of each bee, would be handed on.

"Thus every living being of the present day, plant, animal and mineral molecule, is the product of the unconscious memory of organized matter" throughout the whole history of matter. We should note that *memory* may be unconscious without the individual having it being so, or the *use* of it being so. The memory of the art of thinking is, as a memory, unconscious; but the art is nevertheless consciously used.

In the living body we use, changes are going on as in nature, the same changes: elements dying and being born. And the living body of each generation is born from the collective living body of the last; and so back through the ages, back to the time when as yet no element was born; on to the time when all elements have again ceased to be. Our consciousness is the product of the experiences gained in all that vast history; we hold the unconscious memory of it, consciously using faculties gained, whose steps of gaining we have forgotten. Though the elements dissolve

and pass, the purpose of their transit has been achieved—the evolution of humanity's consciousness.

So consciousness is the register of all the past. Loom after loom may have vanished, but each added its something to the pattern of the fabric.

CHEMIST

The Journey of Days

MEN may mark their own stages of growth towards the spiritual life, the illuminated life. It is good and encouraging to do so, if done rightly. First is a sense of discomfort at having done a mean thing, at having done anything one would not like known throughout all one's acquaintance. Then, at having done a selfish thing, openly and visibly even. Then, at having done any action—even those that hurt no one—whose aimed-at results benefit or amuse oneself only.

Then begins to dawn the idea of Freedom, freedom from all that is personal, therefore small. Many long for Light; but they do not understand that the very being of light consists in radiation, in going out every way. Therefore the Light-seeker must from his own heart as his starting-point radiate himself upon all. It is the feeling of kindness, of well-wishing, carried, as it were, to the intense point of "visibility," something "seen" by the eye of feeling. On its way out it floods the personality, mind and body. It is a fire, lit in the heart not by desire to get the warmth, but to give it everywhere. Nevertheless, he who lights it gets the first and the most of the illumination. That is its affair, not his.

The torch which lights it is the desire to give, and the torch must glow purely, the lower fire that wakes the higher. Its glow is dimmed by any selfishness. On some days it seems almost ready to break into its flame: on others it is nearly black. We can but do the best that each day permits, sure that a day of honest effort gone by is a day nearer the goal.

And the goal is Freedom, freedom from any limit; the center of our consciousness is established in and of the very Light itself. What can limit it? What can stop it from radiating a blessing, a touch of inspiration wherever it will, on whomever it falls? Wherever it falls, it makes that spot to glow with a little of its own radiance; and that spot—a human heart—is never again quite the same, quite so dark—even though no effect, no change, is to us perceptible.

As for ourselves, freed from the ever clogging weight, the gnawing insistence of the sensation of personality, the mind is opened, moves lightly, becomes conscious of a new stream of clear ideas and perceptions. The long silent voices of far-away memories begin to speak, memories whose color is that of hope, memories pointing forwards from a saddened sunset to an immense dawn. The rock of death is to us submerged for ever in the risen current of life that now carries us. We are at once freed, careless and intent.

X.

OVER the carnage rose prophetic a voice,
Be not dishearten'd, affection shall solve the problem of freedom yet.
Those who love each other shall become invincible,
They shall yet make Columbia victorious.

ALL waits or goes by default till a strong being appears;
A strong being is the proof of the race and of the ability of the universe.
When he or she appears materials are overaw'd,
The dispute on the soul stops.
The old customs and phrases are confronted, turn'd back, or laid away.

—Walt Whitman

A Sacred Duty

THE preservation of health is a DUTY. Few men seem conscious that there is such a thing as physical morality. Men's habitual words and acts imply the idea that they are at liberty to treat their bodies as they please. Disorders entailed by disobedience to nature's dictates they regard simply as grievances, not as the effect of a conduct more or less flagitious. Though the evil consequences inflicted upon their descendants, and on future generations, are often as great as those caused by crime, yet they do not think themselves in any way criminal. It is true that in the case of drunkenness the viciousness of this bodily transgression is recognized, but none appear to infer that if this bodily transgression is vicious, so too is every bodily transgression. The fact is that all breaches of the law are PHYSICAL SINS.—Herbert Spencer

BRETHREN AND LOVERS

by WALT WHITMAN

WE, enclosers of all continents, all castes, allowers of all theologies,
Compassionaters, perceivers, rapport of men,
We walk silent among disputes and assertions, but reject not the disputers nor
any thing that is asserted,
We hear the howling and din, we are reach'd at by divisions, jealousies, recriminations
on every side,
They close peremptorily upon us to surround us, my comrade,
Yet we walk unheld, free, the whole earth over, journeying up and down till we make
our ineffaceable mark upon time and the diverse eras,
Till we saturate time and eras, that the men and women of races, ages to come, may
prove brethren and lovers as we are.

I DREAM'D in a dream I saw a city invincible to the attacks of the whole of the
rest of the earth.

I dream'd that was the new city of Friends,
Nothing was greater there than the quality of robust love, it led the rest,
It was seen every hour in the actions of the men of that city,
And in all their looks and words.

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question What, according to Theosophy, is man's place in nature?

Answer (1) Man, in his entirety, is an epitome of all nature.
He is a part of every part of life. He covers the
whole scale in himself, and his place is everywhere, from one point of
view. But technically, when we speak of man we mean his mind. It
is that which is being formed in the process of evolution of this planet,
and *that* is the center of the scale. Philosophically speaking, man is said
to be at the point where the two streams of evolution, from the opposite
poles of spirit and matter, meet.

The whole drama of life here centers about the human mind. Every-
thing seems to be in abeyance but lending itself to further this growth.
Those elements, lower in the scale, work automatically. All the little
lives which make up man's body do their work perfectly, except when
interfered with by the human mind. Everything seems stable and sure
and accurate and perfect of its kind, except the human mind and that
which has been disturbed by it. Man evidently represents something in
nature, which is in the process of formation. He was born ages upon
ages ago, and is slowly, by the marvelous power of nature, being molded,
modeled and pressed out from the unknown—created.

At his midway point on the ladder of evolution he is, of course, in-
dissolubly linked with all above and below. Toward all below him he
holds a position of responsibility, for the stream of life must pass through
him to reach them. To all above him he stands in the position of de-
pendence, for it is through help from above that he is being lifted up.
To all the universe above him he owes gratitude, to all the universe be-
low, compassion.

These two sentiments should so fill his breast as to leave no room for
less noble ones. And if he could keep in his moral poise where he belongs
it would be easy to reach the next stage toward which all human nature is
tending—that of the higher mind.

G. V. P.

(2) Generally speaking, according to the teachings of Theosophy,
man stands at the focus point of the universe, the point of balance, the
midway point of evolution, summing up in his nature all the results of
evolution in the lower kingdoms, and possessing potentially all the divine
powers of godhood. He stands as it were with one hand raised to clasp
the hands of those who have already passed through the human stage,
and with the other hand reaching down to those below him.

Wherever man goes, wherever his influence is felt, he is essentially a
transformer, pulling down and building anew, changing the whole face
of Nature, introducing everywhere a new factor in the unfolding of the
purposes of Nature. This new factor is the human mind and will which
is the distinctive and characteristic feature of the human stage of devel-
opment. Man leaves the impress of his mind, to a greater or less ex-
tent, upon everything he does and everything he comes in contact with,
and thus it is in his power to help nature or hinder her.

Because of man's position at the focus-point of the universe, he be-
comes a channel through which the divine impulses of the higher spirit-
ual life must pass in order to reach the lower. Being such a channel
then, it is absolutely necessary that, in order to himself receive these
impulses and the blessings and powers of the higher life, he must ever
dispense them, handing them on to others. Hence the absolute and log-
ical truth that in order to receive, man must first give, and the same truth,
expressed in other words, that in order to know, man must do, he must
be devoted in action, he must perform the will of the Father, the Higher
Self or Divine Nature. If man will do this, then he will take his right-
ful place in nature and come into possession of his heritage, that of a
co-worker with nature and one of her creators.

Ruskin on Lectures

MR. CHAPMAN, convener of the Glasgow Atheneum Lecture
Committee (London) once wrote to Mr. Ruskin, asking him to
lecture at the Atheneum during the winter season. Mr. Ruskin,
in reply, wrote the following characteristic letter:

ROME, May 26th, 1874

My Dear Sir: I have your obliging letter, but am compelled, by increase of
work, to cease lecturing, except at Oxford—and practically there also—for, in-
deed, I find the desire of audiences to be audiences only, becoming an entirely
pestilent character of the age. Everybody wants to hear—nobody to read—no-
body to think. To be excited for an hour, and, if possible, amused; to get the
knowledge it has cost a man half his life to gather, first sweetened up to make it
palatable, and then kneaded into the smallest possible pills—and to swallow it homœo-
pathically and be wise—this is the passionate desire and hope of the multitude of
the day. It is not to be done. A living comment quietly given to the class on the
book they are earnestly reading—this kind of lecture is eternally necessary and
wholesome; your modern fire-working, smooth-downy-curry-and-strawberry-ice-and-
milk-punch-altogether lecture is an entirely pestilent and abominable vanity; and the
miserable death of poor Dickens, when he might have been writing books till he was
eighty but for the pestiferous demand of the mob, is a very solemn warning to us
all, if we would take it. God willing, I will go on writing, and as well as I can.
There are three volumes published of my Oxford lectures, in which every sentence
is set down as carefully as may be. If people want to learn from me let them read
them or my monthly letter, *Fori Clavigera*. If they don't care for these I don't
care to talk to them. Truly yours,

J. RUSKIN

A Prediction by Washington

A REPORT from New Jersey informs us that Noah Raby is dead at
the age of 136 years. There seems to have been nothing very
remarkable about Noah Raby except his extreme age and the fact
that he once heard General Washington say something which seems to
have been not otherwise reported. Noah Raby says:

When I was in Norfolk I heard General Washington speak. I am not sure
what he was talking about, but I know he was very angry. I shall never forget
one thing he said. It has stuck in my mind almost a hundred years: *Go right on,
fellow citizens, as you have been going on, and I can assure you we shall have the
devil to pay in this republic, and no mistake.* Those are his own words.

The report is interesting as far as it goes, although somewhat tantaliz-
ing. We should like to know to what General Washington was referring
and whether his fellow citizens did "go right on as you have been going
on." Judging from the concluding words of the General's prediction we
should suppose that they did, and that they have been going "right on"
ever since.

STUDENT

A Review of the Day

GOETHE once said that we are so apt to let the mean things of
life overthrow the finer nature within us that it would be expedi-
ent for us every day to read a little poetry, or to sing a song, or
to look at a picture.

There is perhaps a better way still and even more within our reach
than the expedients named by Goethe. There are not many who can-
not find some few minutes in which to review the life of the day, and
if that life has been a mean one, let us at least recognize that it is mean.
Do not let the abode of the sordid things become a home, do not forget
that we have but stooped from higher levels which we can and must re-
gain. In this way we shall keep open the path to another world, from
which we may often have to travel, but from which we can never be exiled.
Such a practise, once established, will be a perpetual source of strength.

SONNET

by WILLIAM WATSON, from *For England*

IN the cold starlight, on the barren beach,
 Where to the stones the rent sea-tresses clave,
 I heard the long hiss of the backward wave
 Down the steep shingle, and the hollow speech
 Of murmurous cavern-lips, nor other breach
 Of ancient silence. None was with me, save
 Thoughts that were neither glad nor sweet nor brave,
 But restless comrades, each the foe of each.
 And I beheld the waters in their might
 Writhe as a dragon by some great spell curbed
 And foiled; and one lone sail; and over me
 The everlasting taciturnity;
 The august, inhospitable, inhuman night,
 Glittering magnificently unperturbed.

What Is Practicality?

HUMANITY oscillates to and fro past the center of practicality into the extremes of superstition and unpractical speculation. We read that the great Bacon came to lead his age back from that wilderness of unprofitable intellectualism known as Scholasticism to the path of useful inquiry into natural laws and the conditions of human welfare. But the era of modern science and modern philosophy, at one time a symbol of emancipation and practicality, has passed the center and swung to the opposite verge of unpracticality; so that now the terms "practical" and "unpractical" are confused, and we can say that the so-called practical people are the most superstitious and the so-called visionaries the most practical.

To be brief, we have given too exclusive attention to the outer needs, to industry, physical science, and the material welfare of man. We are unpractically practical. We find we cannot educate our children and keep ourselves healthy, sane and well-behaved. Practical wisdom has now to be looked for in a return to faith in the inner, invisible nature of man and of the universe.

True practicality demands a recognition of the threefold nature of man, as Body, Mind and Soul—each one to be known and cared for. The ancient Spartans gave too much attention to bodily culture and despised the intellect and all refined culture. The Greeks in their best days used to observe the rule of harmonious culture of all the nature.

STUDENT

Dr. Pentecost on China

TWO hours of rapid speaking, and yet scarcely half a dozen in the large audience had moved from their seats. This was hardly to be wondered at, for the speaker was Dr. Pentecost, and his subject the situation in the Far East. Fresh from his recent sojourn in the East, Dr. Pentecost insisted that it was the duty of every Christian man and woman to understand the trend of events in that part of the world. The question would have to be faced as to whether the civilization of the 700,000,000 Asiatics should be Slav or Anglo-Saxon. Next to his enthusiasm for the Anglo-Saxon race and for the important part it should play in the promotion of the happiness of the world, comes Dr. Pentecost's enthusiasm for the Chinaman. China, he declares, is the key to the situation in the East; it is the center of the new-world movement. At present it is as a slumbering giant who hears distant rumblings of change; when the giant wakes up to a realization of his power, the result will be appalling to the West.

The Chinaman, with all his faults, is a great man now. It does not do to judge him by the Canton coolie type, with which we are all more or less familiar. In the interior of the Empire every Chinaman you meet looks like the son of a king, "especially," added the Doctor, "when he has all his good clothes on." His civilization, age-old but wonderful, boasts the necessary possession and development of a literature. In fact, the Chinaman is the most literary of men. In art, science, architecture and agriculture the Chinaman excels, as well as in banking and commercial transactions. He is the only man who has been able to cultivate the land for thousands of years without exhausting it. It is owing to the Chinaman's thrift, industry, persistence, that the white races are afraid of him. Declaring that he was an optimist, though he has passed through the stages of pessimism and agnosticism, Dr. Pentecost said that he was full of hope and belief that in the Providence of God the great question of the Far East would be settled according to God's will and for His glory. He allows great nations to slumber and sleep, to rise and fall. He has been in all Asiatic history; he rules over nations as well as over individuals. Asia is receiving a great awakening and is being touched by a new spirit. The day of redemption is at hand.—*Christian World*.

It is indeed true that the height of the sides makes the depth of the ditch, and if the sides be lowered the ditch is diminished, but if the sides be cast in the ditch is filled. So may the depth of want be lessened by lessening desire, or by casting it away.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Observations taken at 8 a. m. Pacific Time

The Nevada Deserts

The irrigation possibilities of the arid west, especially that part of it included in the great interior basin, once called the Great American Desert, are daily becoming more apparent. Surveys for reservoir sites reveal the fact that there are many locations where water can be cheaply stored and used for power and irrigation. Other surveys show large tracts of good farming land favorably located for watering from these storage reservoirs.

A more detailed study is being made of the amount of water each watershed will furnish, especially those on which there are good reservoir sites, and the losses of water from each. Under the direction of Mr. L. H. Taylor, resident hydrographer of the geological survey at Reno, Nevada, thirteen new stream-gauging stations have been established in Nevada and eastern California. Three of these are on Walker River and branches, one on Carson River, six on Truckee River and tributaries and four on the Humboldt and its tributaries. The run-off data from these and the other eight gauging stations on these streams, when they cover a period sufficiently long to include the two extremes of run-off, will be of great value in determining the irrigation possibilities and designing the works on each. A dozen rain-gauges are to be located at characteristic places in this section. These, with the eleven already in use there, will, with the aid of the run-off data, render ascertainable the ratio of precipitation to run-off, and thus enable engineers to compute, from rainfall records, the run-off from adjacent auxiliary watersheds. Evaporation from the surface and fluctuations of the surface level of some of the larger lakes are being measured, and losses incident to storage of large bodies of water and losses from small bodies of running water are to be studied. During the last season Mr. Taylor has been assisted by Professor E. C. Murphy of Cornell University.—Selected

POINT LOMA HOMESTEAD

THE magnificent Homestead structure in THE UNIVERSAL BROTHERHOOD grounds on the Crest of Point Loma, is
NOW OPEN *for* SELECT GUESTS

especially for refined families seeking the IDEAL HOME LIFE.

Its SUPERB LOCATION on this bold headland, commanding a sweeping view of the Pacific Ocean, Coronado, San Diego Bay & City and the lofty mountain ranges behind and into Mexico; the AIR VITALIZED by the mingled Ocean & Mountain Breezes, agreeably warmed by the Sunshine, commend this place above all others for Health, Rest, Comfort, and beneficial entertainment. The HOMESTEAD SPECIAL HEALTH CUISINE is a matter of public knowledge.

Suites for families, with or without bath.

Terms: Single accommodation \$3 a day and upward.

Address: Homestead Management, Point Loma, California

Children do Constitute Great Hope

WE are accustomed to say that the hope of the world lies in its children whose minds will receive the new light which is coming to humanity before they are ossified by a greedy materialism. The children do indeed constitute a great hope, yet we are unwilling to believe that the army of high achievement will call altogether in vain upon the thousands of young men and women who are leaving our schools and universities and who have not yet learned to be ashamed of the noble ideals which give so pure a light to youth. The glory passes all too soon. All too quickly we learn to look lightly upon the radiance which once encompassed us, and to smile upon its memory as upon a fairy tale. How

reverently we should guard our youth if we but knew that in its gardens of fair flowers the gods yet walk and talk with us until we so willingly step forth from Eden and the fiery sword bars the gateway to all who have not once more become as little children.

Humanity will need its children, but even now it needs its young men and women as it has never needed them before. It needs their energy, their science, their power of thinking. It needs the courage which is so much a part of youth, the courage which can dare to look straight upon the problems of life, which is unafraid to challenge all opinions, all modes of thought, and compel them to show their credentials. It is this very courage which the education of today is liable to destroy. It is this very courage which constitutes true manhood and womanhood. We should have no doubt of the result if we could but persuade every young man and woman to resolutely ask themselves whether they are going out into the world as a supporter of the present order of evil or as its opponent, as its lover or as its enemy. One or the other each one must be. There is no middle course. Wherever there is true manhood it will be aroused by such self-questioning, and a power of determination will arise of which it would be well to inquire the source.

We hear much today of the advance of science and of the power of knowledge. We do well to be proud of the achievements of the age and the hunger to add to them is laudable and beautiful. Let us not, however, confuse a mere knowledge of the thoughts of other men with the wisdom which comes to those who cultivate their own. Those to whom the world is unanimous in giving the palm of greatness have been, almost without exception, those who were comparatively unaware of other men's thoughts, even indifferent to them, but who had a great capacity of thinking for themselves and a great courage in expressing their thoughts.

Latent Forces Should Be Developed

However unpalatable it may be, it is none the less an admitted fact that the heroes of the world have not carried diplomas, nor certificates of learning. Their educational attainments have not usually been above the average. They have often been far below the average, and this is well proved by even a cursory glance at history. What then did they possess which those around them did not? They possessed nothing which does not lie latent in every one of us, and it will pay us to inquire what that is in order that we also may acquire it and thus unite it to the intellect which is the peculiar product of our age. The methods or modes of greatness in the past will not be altered in the future, because they depend upon a law which is not hard to find. Humanity will not transfer its allegiance from those who love their fellows to those who love themselves.

It is natural to assume that every earnest university or school student is anxious to make a name, to add to the scientific knowledge of the world, to emulate the example of teachers and professors whose discoveries are heralded from day to day. Ambition of this kind is not at the moment to be deprecated, but we would only ask if there is not a still higher ambition, a better claim to the memory of men than to make new

Conscience and Intellect Inseparable

discoveries along the lines of material science. It may be within the power of many to secure the admiration of their fellowmen for patience, and successful accuracy of research. How much greater would it be to secure in addition the love of men!

To underestimate the value of intellect would be folly. The world needs all the intellect, and all the learning, that it can get, but it will have no use for intellect without conscience, for intellect which is selfish, which is divorced from brotherhood. There are many such intellects in the world today. Humanity seems to applaud them, to take from them whatever they can give, to be amused by them, to accept from them the crumbs of material advantage which they can offer. None the less, the world will pitilessly forget them. Unless their labor has been unselfish, unless their love has been great, the Nemesis of oblivion surely awaits them. Their names will live but upon the title page of a text-book, or within the records of the patent office.

However much the religion of love may seem to have passed out of sight, the fact remains that humanity remembers only those who have loved it and fought for it, and the unselfish reformer is throned and revered without reference to diplomas or certificates. Intellect is one of the great things of the world, but not the greatest, and because it is so

priceless we would have it crowned and glorified by fraternity. Modern thought cannot divorce them however much it may try. Without fraternity intellect reaches a dead wall. With it there is no limit to its advance, because love raises intellect into genius. STUDENT

Cruelty---Public and Private

TO say that human beings will be cruel to each other in precise proportion to their opportunities seems to be almost an axiom. There are, of course, exceptions, but they are very, very rare. We have only just begun to realize the extent of the atrocities upon the Congo, and now we learn of almost exactly similar occurrences in Italian Somaliland. In the Chamber of Deputies Signor Chiesi deposed to having investigated and verified on the spot the following cases: Thirty natives were starved to death in prison; others were bound to cannon and whipped till they expired, and an entire family of distinguished residents was incarcerated in prison at Mogadiscio and strangled at the rate of one daily. Signor Tittoni, the Minister for Foreign Affairs, in reply, admitted that inquiry had shown that twelve persons had been made away with without trial, whilst others had perished of hunger.

It is not, of course, the fault of the Italian Government, which cannot exercise the supervision which would make such crimes impossible. And yet it would seem that without supervision these horrors are not only possible, but inevitable, and that white men cannot be trusted with absolute power over natives without the check of publicity.

Somaliland and the Congo are in no way isolated instances. Civilization has done very little to diminish cruelty. It has altered the manner of its infliction, it has discountenanced some of its grosser forms, but cruelty is today as rampant as it ever was, and it reverts at once to its most abominable forms as soon as the restraints of convention are removed. It is not merely an indifference to the pain of others which saturates our social system. There is all too often a positive desire to wound, a desire which knows no other limitation than convention, a desire which goes exactly so far as it dares. Our indignation at the cruelties upon the Congo and elsewhere may be sincere. It probably is sincere, but we may well temper it by the reflection that it is but the unrestrained expression of the same cruelty which loves to wound by the unkind word, by the calculated and subtle affront, by the thousand pettinesses which we inflict upon those who are supposed to be our inferiors, by the injustices which cut more deeply than a whip. The cruelties which find their way into parliamentary reports are at any rate free from the hypocrisy by which we label as duties our worst offenses. Of all the crimes of which degraded human nature is capable that of cruelty must be the most hateful to God, and the cruelty in the home, in the workshop and in the counting-house is not the least upon the unseen record of Nemesis, not the least of the stains by which we deface the Soul. STUDENT

In a Japanese School

OUR desire to know something more of the training of Japanese children has brought to us a translation of a set of rules furnished to the schools of Japan by the Japanese Education Department. These rules are as follows:

Never call after foreigners passing along the streets or roads.

When foreigners make inquiries, answer them politely. If unable to understand them, go with them to an official who can.

Never accept a present from a foreigner when there is no reason for his giving it, and never charge him anything above what is proper.

Do not crowd around a shop when a foreigner is making purchases, causing him annoyance. The continuance of this practice disgraces us as a nation.

Since all human beings are brothers and sisters, there is no reason for fearing foreigners. Treat them as equals, and act uprightly in all your dealings with them. Be neither servile nor arrogant.

Beware of combining against the foreigner and disliking him because he is a foreigner; men are to be judged by their conduct, and not by their nationality.

Taking off your hat is the proper way to salute a foreigner; the low bow is unnecessary.

Reverence your ancestors, and treat your living relations with warm cordiality, but do not regard a person as your enemy because he or she is a Christian.

Learn some foreign tongues. In going through the world you will often find such a knowledge of the greatest value.

Huxley, the Reformer

WHEN we are overmuch distressed by the self-advertising and dogmatic pronouncements which we are learning to associate with the name of science, it is something of a relief to turn to the sincere utterances of some of that real race of thinkers who are likely to become extinct unless their numbers are reinforced. The scientific page of a valued contemporary reminds us of the words of Huxley, in which he summed up the aims of his life, "the objects I have had more or less definitely in view since I began the ascent of my hillock." He says that these objects were:

To promote the increase of natural knowledge, and to forward the application of scientific methods of investigation to all the problems of life to the best of my ability, in the conviction which has grown with my growth and strengthened with my strength, that there is no alleviation for the sufferings of mankind except veracity of thought and of action, and the resolute facing of the world as it is.

The teachings of Huxley were, of course, widely at variance with those of Theosophy, but that variance is perhaps more apparent than real. Wherever there is "veracity of thought and of action" there must also exist a comradeship, which is not very far removed from unity. Only surface errors, the errors of the intellect, can persist by the side of honesty of purpose and the heart redeems the fault of the head.

Huxley effected a reform in the world quite outside those special departments of knowledge which he made his own and he owed his powers for reform to nothing so much as his unswerving desire to think and to act with the courage of truth. So far from this man being the enemy of religion he was its friend. He it was who broke away much of the crust of superstition, which was asphyxiating many faithful souls, who showed to them the great white light which shone outside the walls of their doleful cities of creed. He who exposes an error has done a religious deed, and he who loosens a mental chain has followed in the footsteps of Christ. Huxley was one of those men who cast out demons. Perhaps he did it in ways that are not our ways, but we none the less claim an abiding comradeship with all who recognize "that there is no alleviation for the sufferings of mankind except veracity of thought and of action, and the resolute facing of the world as it is." STUDENT

The Blend of Ideals

THERE is one branch of ideal-making which is easier and more fruitful of good than any other. It is followed by making and holding ideal pictures of our friends and comrades. We have seen their faces lit up by a higher light than the common. We have seen them do higher acts than the common. We have known them touched to deeper and nobler feeling than the common. At those moments the inner possibilities came forward in full light and dominance. Why not compel our memories and imaginations to hold and create these pictures for our gallery? Yet it is not properly to be called creation, for this ideal does actually exist, mostly latent, veiled, yet there.

This process, of continually thinking of comrades as at their best, ennobles our own nature, clears away obstructions, elevates the imagination, and makes infinitely easier the making of that ideal of ourselves which is the first step to becoming that ideal. No one can raise himself to his ideals till he leaves off holding in his imagination a set of pictures of the faults of others, or—which is the same thing—holding to pictures of others which present their faults and weaknesses as leading ingredients.

The closer are people associated together in the path of life, the more intimate is the blend of their atmospheres. Those who have no very strong ideals and purposes are almost at the mercy of the pictures formed of them by others. And so, by creating pictures of nobler hues and outlines, we can help all whom we touch on to the point where they may begin making ideals for themselves, and turn that corner at which man ceases to be the victim of circumstances and becomes a self-creator to the nobler issues of life. STUDENT

Wentworth Falls---Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH shows a charming bit of wood and water scenery in New South Wales. The exact location is that of Wentworth Falls, in the Blue Mountains—a region famous for its beautiful scenery.

Some Views on XXth Century Problems

Stern Problems for Religious Papers

A PROMINENT Methodist journal, perhaps the chief organ of that sect in this country, recently said:

The sternest problem which the religious denominations of this country face today is the effort to maintain the circulation of their representative and official journals.

"The sternest problem!" Vice, suicide, murder, child-labor, corruption, materialism, all these little matters count for nothing beside the stern problem of keeping up our circulation! Perhaps the circulation would keep itself up if our "representative and official journals" would come out of their Rip Van Winkle stupor, stop hounding the fearless thinkers out of their ranks on charges of heresy, shake themselves free of medieval nonsense, and face the real problems for whose solution humanity is so painfully waiting.

STUDENT

War May Be a Necessity for Defense

IT is not very uncommon, especially since the outbreak of the Russo-Japanese war, to hear the remark that war is not an evil, is even rather a benefit, a tonic, a depurative, to the nations that engage in it. This is said even by persons of religious and humanitarian nature. But they have not thought out their attitude. War may sometimes be necessity, a defence of the weak or of some great principle. But war *per se*, irrespective of end, can that ever be good?

There is *something* to be said for it. It calls out the courage and endurance of the soldiers, and sometimes—though to a less degree—in the nations concerned. When you have said that, you have said all.

It calls out courage—yes; but does it not also call out disregard for the suffering of others? What does one nation care for the sufferings and bereavements in the other, the starvation, the taxation, the wasted lands and homes; what one army for the sufferings of the other? And since one side depends for its victory precisely on the magnitude of the suffering and impoverishment of the other, the desire for victory, in nine men out of ten involves and includes desire that the other party may have those evils come upon it. War therefore involves the awakening of a force which swamps and replaces that compassion upon which the progress of humanity depends. Let that offset its courage and endurance.

Furthermore; beside a negative disregard for suffering, war awakes in at least seven men in ten a positive hate or contempt for the people of the opposing power. And this, carefully perpetuated by the histories subsequently written, may endure for centuries and lead to further wars. On the part of the beaten nation there remains moreover the desire for revenge, the sense of injustice, and the result of these—the preparation during many coming years of the means for the struggle ahead.

Poverty and Crime Result from War

It is said that war affords employment to a large mass of the population. Who pays their wages? Of course the others, upon whom therefore falls a keener pressure, more poverty; and who therefore evolve in greater measure the progeny of poverty and starvation, namely crime and lawlessness, disease, and vice. Those withdrawn for war cease, moreover, to be producers and amplifiers of the national wealth, remaining consumers.

It is claimed that the production of war material is good for trade. But this production is that of stuff which cannot be used for further production, which does not aid further production, and which belongs neither to the categories of necessity, luxury, nor beauty. Its apparent necessity is due to the necessity for going to war, an artificial necessity which could disappear in a moment. And its destruction is on a vast scale, very rapid, and leaves nothing to show for it.

It is said that war is periodically necessary for the reduction of the population. If there were anything in this idea, it would follow that after war the pressure of poverty would be less. But it is more. The few thousands killed leave the remainder in worse case. The contention is of course the exploded theory of Malthus that population tends continually to outrun subsistence. If this had ever been true, it will be so no more. The bacterial nitrification of the soil, the use of Eucalyptus as fuel, the tapping of natural sources of energy (falling water, waves,

and sunlight) will deprive it of the last vestige of plausibility.

Taking all these things into account can it be maintained that the evils of war as war and apart from some worthy end, do not immeasurably outweigh its benefits?

STUDENT

Legislatures & Individual Privileges

WE have still some little way to go before we relegate legislation to its rightful place—by no means a small one—in the work of reform. To clothe legislation with powers which do not and cannot belong to it, is one of the superstitions of today, and to be classed with all superstitions, theological, scientific and otherwise. There is a mental indolence which breeds superstition, an indolence which is fatally willing to devolve upon some piece of social machinery the duties which ought to be performed individually and which only the individual can perform. We want to take our ease surrounded by an intricate mechanism which will automatically keep the ten commandments for us so long as we give it the fuel of an occasional vote and lubricate it with a moral axiom. No more concrete illustration of this tendency can be found than a contribution by Mr. G. F. Watts to the *Pall Mall Magazine*. Mr. Watts refers to the two vices of drinking and gambling, which he very properly supposes to be destructive of character and a drag upon the wheels of progress. He asks us to consider how great a revolution would be wrought in character and health if the legislature would set itself sternly to the task of preventing these two agencies of evil. It is perhaps an open question if the legislature has any more power over drinking and gambling than it has over the movements of the moon. The supreme duties of the legislature are to guarantee individual liberty of thought and action so far as is compatible with the liberty of others. It is not the duty of the legislature, nor is it within the power of the legislature, to renew a clean heart within us, and this is what we need far more than Acts of Congress. It may be a very good thing to exercise the franchise, but it is a far better thing to exercise our wills, and we shall have to wait for a long time before we have so perfected our social systems that conscience becomes a supernumerary. The evils of drinking and gambling arise from defects in human nature, and so long as these defects remain they will surely manifest. Legislation may perhaps say, and effectually, that some specified form of mischievous self-indulgence shall not manifest in this particular way or in that particular way, that it shall not show itself here or there; but to suppose that the collective lower and passionate nature of humanity can be suppressed by Acts of Congress is not only a fallacy, but it is a mischievous and time-wasting fallacy. We have to deal with the collective force of evil in human nature, and not with the various apertures through which it reaches the surface. We have to urge men along a line of positive moral thought and action, and not merely to a discontinuance of the immoral. Affirmation is stronger than denial, and incitement to the good is better than the prohibition of the evil.

STUDENT

Destruction of Niagara Falls Feared

THE *spiritual* work done by Niagara Falls will never be estimated. Thousands go there yearly; and of these, some few, awed into momentary silence of lip and thought by the spectacle and the throb of vast power, reach some higher level of feeling they had never before touched. In such people the presence of the Falls arouses an action of consciousness not far from prayer. And there can be but few whose sense of beauty in nature is not powerfully stirred. One would think the whole American people would recognize these things, would appreciate the value of their majestic possession and act accordingly. It may be so; we have yet to see. For the very existence of the Falls, as a spectacle, is said to be threatened by a corporation which proposes to take possession and convert this superb mass of falling water into a power plant! They are now pushing their project into the New York legislature.

What will be the outcome of this attempt? Influence is being doubtless used, and if the people do not bestir themselves they will find too late that one of their grandest possessions has been practically obliterated.

Art Music Literature and the Drama

A Journey to the Ancient Temple at Eleusis

THE following extract is from a letter received recently by one of the Point Loma residents from a fellow student, who is at present traveling in Greece:

The first day that we arrived in Athens we attended a lecture in the wonderful Dionysos theatre. Last week we made a trip to Eleusis. There is left of the great Temple, of course, little more than fragments, but from these we could build up in fancy the marvelous Temple where the greatest of the Mysteries of Antiquity took place. I enclose with this a photograph from a relief taken from the Temple, the original being now in the museum at Athens. It represents the goddess Demeter giving corn to the boy Triptolemus, while her daughter places a wreath upon his head. Have you heard of the legend that lies back of the finding of the marvelous Temple, and of the Mysteries themselves? It is this, briefly: Pluto, with the consent of Zeus, had taken Demeter's daughter as his wife and, of course, kept her in his underground kingdom. Her mother, unaware of her whereabouts, sought for her everywhere and at last, becoming informed of her daughter's fate, she begged Zeus to restore her to her. The conference between Pluto and Zeus resulted in permitting the daughter to remain with her mother on earth three-fourths of the year, and one-fourth of the year with her husband in the infernal regions. In her gratitude and joy Persephone sent out the boy Triptolemus to bless mankind with corn, of which the people had never heard, and Demeter asked the Greeks to build her a Temple, in which she would herself initiate them into the Mysteries. These were celebrated twice yearly, and symbolize the great law of periodicity by which mortals are granted the summer—when for nine months the earth is blessed with trees, fruits and flowers—and the winter of three months during which Persephone, who had sent to mankind the corn, remained in Pluto's realm under the earth.

The festivals at Eleusis, from being mere local secret ceremonies, became pan-Athenaic, and when the procession passed from Athens to Eleusis thousands of people, crowned with myrtle, and with torches in their hands, entered its ranks. They arrived at Eleusis at night, according to the custom, entering the city and the Temple in silence. About the earliest and real Mysteries we of course know nothing, our present knowledge dating from that later time when they had become profanized and therefore public.

PROPOS the recent discussion over *Parsifal*, it is interesting to recall the reception that Wagner's *Tannhauser* received when first performed. It was in Berlin and the house was crowded. At the end of the first act the opera pronounced itself, as far as that audience was concerned, an absolute failure. It was, in fact, nothing short of a "fiasco," and one may hardly imagine the anguish and bitterness that it brought to the composer. The *Figaro* wrote the next day: "At last we have got rid of *Tannhauser*. Its death is of the kind which can permit of no resuscitation. If it had been hissed merely, we might have complained of a plot or an intrigue to ruin it, but the thing made one yawn. It is hopeless!" Gounod, not long after, being asked his opinion, said, "It interests me very much from a grammatical point of view!" Auber said, "To see *Tannhauser* is like reading a book without taking breath, and in which there are no commas, semicolons, nor full stops." And now what is contemporary criticism worth?

GOUNOD once said of a certain conductor who failed to interpret his (Gounod's) music according to the composer's idea: "It is calumny. He makes me say what I have never thought."

FRAGMENT

by ELIZABETH BARRETT BROWNING

HOW sure it is,
That, if we say a true word, instantly
We feel 'tis God's, not ours, and pass it on.
As bread at sacrament we taste and pass,
Nor handle for a moment, as indeed
We dared to set up any claim to such!

The Preservation of Our Art Treasures

FRANCE has always been unique among European nations, and indeed among the nations of the world, for her patronage of the fine arts, of science, archeology and literature. It is to the first French Republic that the world was indebted for the discovery that revealed to us the Egypt of the Pharaohs; and it is to the third Republic that we owe much of our knowledge of ancient Asiatic empires, particularly of Persia. Just now the French Academy is in communication with the Minister of Fine Arts for the purpose of securing photographic reproductions of all the manuscripts, papyri and rare books in the various public institutions of France of which no copies exist. This action was doubtless inspired by the recent destruction by fire of the national library at Turin, a catastrophe which should serve as a warning to our government.

Almost without exception the great treasures of art, archeology and literature throughout Europe, and with rare exceptions throughout America, are preserved in buildings that would be easy food for flames. The Louvre is crowded with masterpieces. Why are not steps taken to make it fire-proof? The same is true of the South Kensington Museum in England and many others.

It will be remembered that the catastrophe at Turin cost humanity more than three thousand of the most precious ancient manuscripts. How much would it have been worth to the State—and to humanity—if photographic reproductions of these were now in existence? Yet it were still better to preserve such treasures in fire-proof buildings. The national library of France alone contains thousands of works that are literally priceless. If we do not appreciate them sufficiently to insure their preservation, our carelessness will more than likely be estimated at its full value by the posterity of a few generations hence.

STUDENT

THE death of Gérôme has, of course, set afloat many stories. One of the best—and they say it is true—relates the attempt of a Monmartre poet to hoax the artist. A certain countrywoman was inquiring in the café for the address of a photographer, and the poet, overhearing the request, gave her Gérôme's address in the Boulevard de Clichy, explaining that if she would mention his name to Gérôme the latter would make her a satisfactory likeness at a reasonable price. The woman presented herself at Gérôme's studio and stated her errand. The artist saw the point at once and determined to turn the joke upon the poet by complying with her request. For an hour he worked at the portrait sketch and at length the woman, declaring herself entirely satisfied, reluctantly handed out three francs. Gérôme requested her to seek out the poet in the café, show him the drawing and convey to him Gérôme's thanks for throwing a little trade his way. And the countrywoman did so!

RICHARD WAGNER said at one time to Villiers: "Why, if I did not feel in my inmost soul the living light and love of the Christian faith my works would be the works of a liar and an ape. My art is my prayer."

THE difference between a bad artist and a good is, that the bad artist seems to copy a great deal, the good one *does* copy a great deal.—Blake

BAS RELIEF FROM THE TEMPLE AT ELEUSIS

✻ ✻ "COMPASSION, THE FAIREST ASSOCIATE OF THE HEART" ✻ ✻

FROM an Eastern paper we clip the following:

Dr. Emily Dunning, the woman ambulance surgeon of Gouverneur Hospital, brought to that institution a 21-month-old child that she got from a rear room on the fourth floor of a tenement house at 674 Water street. The mother lay across the bed in a drunken stupor at the time, while the child was found on a pile of rags. Miss Dunning diagnosed the child's case as "starvation and desertion by parents."

This is but one among many similar instances recorded in the newspapers; and it is a straw on one, at least, of the downward flowing currents of human life.

In London there exists a "Society for the Study of Inebriety." Its members have recently made some investigations with regard to inebriety among women and conditions almost past belief in their awfulness have been dragged to light. One physician is authority for the statement that in London alone the yearly average of infantile deaths through "over-laying" was *six hundred*—cause, almost invariably, intemperance. Dr. Claye Shaw attributed the neurotic temperaments of many children to the fact that their mothers had imbibed alcohol during the child's prenatal life. Statistics showed that of infants born of inebriate mothers, nearly sixty per cent died at birth or in early infancy, and the majority of those remaining drifted into lunatic asylums and prisons. Then, too, according to police reports, the majority of women arrested for inebriety is between the ages of twenty and fifty—and there is evidence to show that most of them are, or become, the mothers of sickly, neurotic children, in addition to driving their husbands to despair and ruining their own constitutions.

These are but a few of the facts—not conclusions merely—which were brought out at the Society's recent meeting. From another source comes the statement that during the ten years ending with 1900, while the male death rate from alcoholism has risen by forty-eight per cent the female death rate has risen by seventy-three per cent.

Now, it is not to be supposed that any reader of the NEW CENTURY PATH needs to be lectured upon the evils of alcoholism. But the evil does exist, and among our sister women—lower in the social scale than ourselves, doubtless, uneducated, poor, lacking in moral balance. Yet have they no claim on our compassion? Is it nothing to us that they are mothers, too? Is it nothing to the future that their children, when they survive at all, drift from unkept homes into asylums and prisons? Is all the agony of these conditions nothing to us, just because our own lives are protected and comfort-filled?

The women of whom these revelations have been made have the greatest possible claim upon our compassion and our help. Who are they? All, probably without exception, came into life disadvantaged with a bad heredity, which expresses itself perhaps in scrofula, in some nervous disease or other, in morbid tendencies, or tendencies toward immorality or inebriety. You and I have been more fortunate. Nearly all of these women, doubtless, have felt the pinch of poverty and the grind of monotonous work. They have met, and have not always conquered, temptations which you and I have been spared. Their lives have been neglected, unloved, hard; their pleasures cheap if not coarse; their ideal—"to have a good time." To them, or to most of them, motherhood has not meant that rich uplift into a greater joy and a larger life which it has meant to you and to me, but merely an added burden, "one more mouth to feed." What wonder that some of these women, lacking higher ideals, lacking moral balance, lacking help or hope, should yield to their hunger

✻ On Society's Edge ✻

for excitement and become inebriates? What wonder that some should try to find surcease for their troubles in the delusive forgetfulness born of drink? For it must be remembered that the majority of these women come from a social stratum where the "half-pint" is considered as proper as a cup of tea is with us. Before these women realize what they are doing they are in the chains of a habit.

Emerson has somewhere said that where people lack the exhilarant of soul life they are likely to seek a substitute for it in the exhilarants or intoxicants that belong to the physical life. Certainly he has touched very near the root of this matter, and it is not difficult, in the light of a true philosophy, to point out some forces that would be remedial. Stringent laws would do something, laws that would prevent confirmed inebriates—or, better still, all persons—from obtaining liquor except by a physician's prescription; laws that would prevent the marriage of those who are diseased, neurotic or addicted to drink; laws that would better protect the children that swarm in the districts from which the majority of inebriate women come; laws which would do something, if possible, to stop the increasing tide of illegitimate children that sweeps down, gradually but inevitably, from these quarters to pour its unwholesomeness over the whole nation. These would accomplish something—but not the real thing.

The real reform can never come to be until something is done to touch the heart-life of these women. They are lonely, unloved.

Who knows what might awaken in their hearts if they could once feel the touch of a truly compassionate hand, if they could once look into the eyes of a sister *whose manner did not say, "I am holier than thou?"*

KATHERINE TINGLEY

Who could predict results if music and sunshine and cheer and hope and some creature common comforts could be brought into their lives? This will yet be done, for there are great compassionate hearts waiting to give these women, in the deeper sense, the right hand of fellowship. A little compassionate help—might it not waken in them hope and trust? Once let the heart be aroused, and let there be provided some outlet for the yearnings that now expend themselves in physical gratification—these, with the help of stringent laws, would be sufficient to fairly turn the tide. These women are degraded, it is true; many of them are vicious. They are our sisters, none the less, and it ill behooves those of us who are less unfortunate to speak of the chasm that yawns between them and ourselves as if it were destined to be forever unbridged.

STUDENT

CRIPPLED, consumptive and paralytic children bring in the best results. Consumptive boys and girls bring in from a shilling to eighteen pence a week, though the price of cripples varies according to the nature of their affliction.

This statement was made by one of the members of a "profession" just brought to light by an enterprising English journalist—that known as "the go-between." The "go-between" is invariably a woman and she plays an important part in the lives of the children in the East end, London. It is to her that the dissolute or abandoned woman confides her ill-nurtured child—for a consideration—and it is to her that the beggar woman applies for a ready-made family of diseased or crippled children. "I charge each mother a commission and I also receive a small commission on the takings of my *lady clients*," coolly confessed the "go-between." And this is the Twentieth century! People who are pouring out their sentiment over motherhood in the abstract will do well to pause. This commentary on motherhood reads like a story of the Middle Ages.

STUDENT

INTERIOR OF AN IRISH HOME—SALOON, POWERSCOURT HOUSE

In Compassion

MISS ADA ELIOT, who is probation officer of the Court of Special Sessions in New York, recently said, in a public address, with regard to the women who live on the edge, so to speak, of humanity's life: "I think few women can feel more than I do the hideousness of this subject, this method of earning a livelihood, and yet my blood boils when I think of the way these women are treated. The girls and women I have to deal with in the courts I find marvelously like myself and my own self-respecting friends. Even the lowest has still some sense of honor. My work has made me more and more lenient. I feel now, after a year's experience, that the fault is far more often with environment and social conditions than with individuals. Many a woman whom the police 'pick up,' jostle into a patrol wagon as they might a beast, and perhaps leave waiting there in the midst of a curious, gaping, jeering crowd, is a woman very like you and me, only our lot has been differently cast. Some of them are so sinned against, so little sinning, that my sympathy is torn to shreds. It is not from their stories I form my judgment. I learn the facts. I follow it all from beginning to end. They often do not tell me half the bitter, extenuating truth."

THINK of the pathos, of the injustice, of the sadness, of the shame, of having a well-defined class of "outcast women" and not a hint of a class called "outcast men!"

THE first manufacturing company in Connecticut to be composed entirely of women has filed articles of corporation in the Secretary of State's office in Hartford. Mrs. Cecelia I. Yale is President, Miss Yale, Secretary, and Miss Edith Yale, a member of the Board of Directors.

THE Audubon Societies are making an urgent appeal to the women of America to abstain from using aigrettes. The dealers at present offer thirty-two dollars an ounce for raw plumes, and it is needless to pretend that hunters are not tempted to defy the law. If women do not abandon the use of aigrettes the white herons throughout the world will soon be exterminated beyond question.

De Maupassant's Mother

ONE fact concerning the mother of Guy de Maupassant affords something of a clue to the great gaps that were so noticeable in his literary career and in his personal life. They tell us that Madame de Maupassant was the model for all mothers in that she absolutely idolized her two sons. Yet, as every one knows, she was a pronounced free-thinker, and would never even admit the existence of God—an extraordinary circumstance among French women. Shortly before her death she said to a pious and somewhat anxious friend who tried to "reconcile" her with God:

"God! if he exists, I hope I shall meet him. You say I shall meet him face to face. I shall be glad of that, for I have a little account to settle with him."

The account was the death of her idol, Guy de Maupassant, to which she never became reconciled.

Is it not possible that had she possessed an abiding faith in her own divinity, a clear conception of what soul-life meant, that the lamentable gaps in her son's life might have been better bridged? Her materialistic attitude must have been as serious a disadvantage to her sons in their life as poverty, neglect or physical disabilities. It is too often the fashion among men of genius to quote adversity and disadvantages as being the "making of a man." In nine cases out of ten our great men have become so in spite of just these disabilities, not because of them. If it were an advantage to have shadows rest upon the childhood of the world, then surely our great philanthropists and educators, in trying to better conditions for little children, are wasting time. What might not come to the world through the channels of art, poetry, music and heroism if those children in whom the soul tries to speak could be helped rather than hindered by their environment. We need less adversity in the world, not more, but we shall never have it until we have souls honest and unselfish enough to climb as high by joy as they are forced to do by sorrow. STUDENT

REFORM like charity, must begin at home. Once well at home, how will it radiate outwards, irrepressible, into all that we touch and handle, speak and work; kindling every new light by incalculable contagion, spreading, in geometric ratio, far and wide, doing good only wherever it spreads, and not evil.—*Carlyle*

Mental Prehistoric Remains—Atavism in the Savage

WHAT lies behind the savage, say the red Indian? A lower depth of savagery? In other words, is he coming up or going down, is he the remains of a forgotten civilization, or the product of a still lower ancestry? We are accustomed to assume the latter, to assume it so whole-mindedly that we hardly think it necessary to state it. But as, in digging in the desert, men have often found the remains of cities long buried, evidences of some bygone civilization: so, in excavating the mind of some races of savages, do we come across like traces.

It has long been known that the mental possibilities of the young children of certain savage peoples are the equal of those of the children of our own civilization. Dr. D. G. Brinton has said:

The question has often been considered whether the mental powers of the savage are distinctly inferior. This has been answered by taking the children of savages when quite young, and bringing them up in civilized surroundings. The verdict is unanimous that they display as much aptitude for the acquisition of knowledge, and as much respect for the precepts of morality as the average English or German boy or girl, but with less originality or "initiative." I have been in close relation to several full-blood American Indians, who had been removed from an aboriginal environment and instructed in this manner, and I could not perceive they were either in intellect or sympathy inferior to the usual type of the American gentleman.

We have all read of the phenomena known as "atavism," in which an individual reproduces traits not belonging to its species, some gland or other organ that functioned in its remote ancestry, but which, long disused, has become atrophied. Is not Dr. Brinton dealing with mental atavism? Has not the child of the savage, thus educated, developed anew the mentality of a civilization far, far behind him? Can there be any other explanation? For if not so, then environment, instead of being one of the factors that go to our development, is the only one.

If the savage has no past of civilization to be awakened by our education, and if education and environment alone have waked him from unmixed savagery to our intellectual level, why cannot the same be done for the monkey, or for those hopeless savages for whom education does nothing? As to these latter, one must assume that they have no civilized past, or that they are hopelessly decadent.

But the educable type of savage, may we not assume that he is a man in whom lightly slumber the instinctive memory and powers of a past age of intellect and civilization; that he is in the valley between two crests of civilization of which, may be, no other traces remain, or of which the outer traces are the now rapidly appearing ruins to which, as yet, archeology assigns no date? So at any rate teaches Theosophy. J.

Not All Prehistoric Animals Were of Great Size

PROFESSOR RAY LANKESTER seeks to correct the prevailing impression that prehistoric animals, taken as a whole, were larger than those of the present day. Salamanders and newts, of which the fossil remains have been found in considerable size, were certainly as large as ordinary crocodiles. Reptiles have decreased in size, but with many other animals this is not the case. The remains which have been found in the Miocene strata show that there were then elephants no bigger than a pony or Newfoundland dog, while the horses of the present day are probably bigger than any which have ever existed, nor have there ever been any reptiles bigger than some of the whales now in existence. Upon the other hand, the sharks of prehistoric times were bigger than any which are known now. He showed some teeth of a prehistoric shark and compared them with those of a modern shark known to have been thirty feet in length and with a mouth two feet across. The fossil teeth were four or five times as large, and there could be little doubt that the shark in question must have been eighty feet long.

Archeology of Arizona—Carvings on Sentinel Rock

TUCSON, Arizona, is the center of a district peculiarly rich in archeological relics, but they are the relics of a people so ancient that their story remains one of the unread riddles of the American continent. Ancient irrigation canals run in every direction over the plains of Arizona, stone implements lie around upon every side and the remains of vast buildings have for ages been crumbling into the soil, but no scholar has yet read the mystery of the hieroglyphics, or reconstructed the history of which not even a tradition survives. We know that they must have been an agricultural people, we know too that they understood the art of the potter, and that their written language was one of some complexity is shown by the accompanying reproduction of carvings upon Sentinel Rock.

Although these hieroglyphics have never been deciphered they seem to have a distinct similarity to the picture writing of Egypt, and perhaps we may look here for another link in the chain which connects the fall of prehistoric American civilization with the rise of ancient Egypt. This chain becomes stronger year by year as isolated discoveries fall into their proper place awaiting only the comprehensive survey which will establish the fact. The old story of neglect and vandalism must of course

be told of the archeological treasures of Arizona. For the relics which are now being stolen and destroyed future centuries would give their weight in gold. The curio hunter has almost unchecked dominion over these storehouses of national history, more valuable than the modern and mercenary archives for the preservation of which we invoke the aid of the highest science.

ON SENTINEL ROCK, NEAR TUCSON, ARIZONA

The Huichols and the Flood

A CONTEMPORARY comments upon the religious beliefs of the Huichols, the strange race discovered in the Sierra Madres by Carl Lumholtz. It seems that these people have

a tradition of the flood which is very similar to the Biblical account. They believe, however, that the deluge lasted for five years, and that the ark finally rested upon a Mexican mountain instead of Mount Ararat. Our contemporary considers this tradition to be a very strange one, inasmuch as neither Bible nor missionary has ever found its way to the Huichols. We should have supposed that at this stage of archeological research, every human being would be aware that the flood story is universal and in no way dependent upon either Bible or missionary. The Biblical account is copied almost word for word from the infinitely older Babylonian record, and inasmuch as all the stories relate to a historical fact, the destruction of Atlantis as described by H. P. Blavatsky, it is not surprising that so vast a cataclysm should live in popular tradition. The Mexican account is quite as likely to be correct as the Babylonian. Mexico is today full of the ancient and ruined cities which were built by the descendants of those who survived this, the most recent of the cataclysms which have successively destroyed portions of the world and which spread the broad waters of the Atlantic between America and Europe.

Ancient Regimental Pets Unearthed Recently in Venice

A VERY interesting discovery has been made in Venice while pulling down some ancient houses. A brick-built cavity was found at the bottom of which were a number of bones. These proved to be the skeletons of two horses, and between them was the skeleton of a little dog. On the cover of this strange receptacle were carved in Roman letters the following words, "Milit. Coosth. III, R. Centuria;" and there can be no doubt that the remains were those of regimental pets whose bodies were thus affectionately buried by the Roman soldiers.

The Leaves of Plants Never Die

"DEAD Leaves" is often the theme of the poet in his more melancholy moods, but one may well doubt whether he has any scientific right to his symbol. In the normal course of nature there is no such thing as a dead leaf. Leaves do, of course, exceptionally get torn away from trees in various ways, lie on the ground and die. But leaves do not die on the trees. As autumn comes on, all that is living of the leaf, sap, protoplasm, the life juices and matter of the leaves, together with everything valuable, starch, sugar, salts and albumen, are withdrawn into the stem or trunk. And there they remain, still alive. What is left is the mere shell, dry discolored fiber, husks of cells. Is that the leaf? Surely the leaf remains alive, waiting spring.

And if the plant annually "dies" down to the level of the ground, there has been no real death either of leaf or stem. The living stuff has betaken itself to the roots and rhizomes. If the plant be like wheat, an annual, it would hardly seem true to say that it dies. For as, in the other cases, part of the living leaf and stem stuff retreats, and part goes to the seeds, so in the case of annuals, all go to the seeds. The plant goes on living in the seeds.

Seeds do, of course, die. But that, so far as we remember, has never been used as symbol, or made the cause of a lament by the melancholy of poets. And there is something to be said on the other side, even here.

For the death of seeds is no part of nature's program in the same way that the death of leaves is supposed to be. She intends every seed to live. She provides them with a thousand devices to help them to find good ground, gives them wings and plumes to catch the wind, hooks and gums to stick them to animals and insects, explodes them to great distances from bursting capsules, clothes them with sweet flesh that they may be eaten and scattered by birds, surrounds them with oil, starch, albumen and salt that their first few days of budding need will lack nothing. But her benevolent intent does often fail of its aim. The welfare of the seed has to yield place to some of her greater works.

But one might question whether even then the seed dies; whether the subtle essence of plant form, the guiding essence, the living idea, does not merely betake itself otherwhither, determining the production of one more flower or one more seed in some other plant? "Mere mysticism and metaphysics," science will say, scouting the idea.

The taunt matters nothing. The whole history and process of science consists in the passage of the mystical speculation of one century into the cold tabulated fact of another.

MORE and more attention is being drawn to the Eucalyptus as a means of the world's future heat supply. There are 150 species, variously adapted to desert sands, swamps, and mountain altitudes up to the snow-line. As forest cover, shade trees, windbrakes, improvers of climate, and marsh-drainers, they are of the utmost value. Bees make great use of their beautiful blossoms, and they yield two or three valuable medicines and antiseptics for surgical use. X.

SEA-GULLS

From *West-Country Ballads and Verses*, by ARTHUR L. SALMON

ABOVE the misty headlands
White sea-gulls soar and scream,
And their wings have lured the flashing
Of the sunset's crimson gleam.
O why are those wings so restless,
And whence that boding cry?
Do they catch the breath of the tempest
And the storm that is coming nigh?

Are they the souls of sleepers
In ocean's restless bed?
And do they speak of the living,
Or do they speak of the dead?
O why do the gulls of the ocean
So ceaselessly circle and cry?
Do they think of the storm that is coming,
Or the rest that will come by-and-bye?

SOME LOMA-LAND FERNS

Evidence of Character in Plants

IT is very curious to observe the difference in the methods of self-defense used by plants, even when their weapons appear, at first glance, to be practically identical. Take, for example, the strawberry cactus as compared with the Turkshead. The only difference at first observable is that of size, but a short examination shows that the spine in the center of each cluster on the Turkshead is very massive, so much so that, even if it were not for the pain, considerable strength would be required to force down these pickets sufficiently to reach the body of the plant. In other words, its weapons are wholly for defense, and act only when touched. The strawberry variety, on the contrary, has the center spine of each group comparatively slender, but bent to a hook at the end, so that anything touching will be held by the center spines firmly against the points of its shorter companions, and once firmly gripped it is almost impossible to escape without taking along the points of the curved spines. Here we see a wholly new idea added to the first example; the one is wholly for defense, the other is for defense and retaliation; quite an important difference psychologically.

Other varieties of cactus carry out the retaliation idea in a different way. Around the base of each group of thorns (usually seven) there is a small bunch of cottony-looking stuff which really consists of hundreds of tiny hair-like thorns which are loosened

by even a slight touch and enter the skin whence it is almost impossible to remove them both because of their almost invisible fineness and also by reason of their extreme brittleness, which causes them to break off short, leaving the points to irritate the victim for days or weeks after.

If three men were to adopt three such different methods of defending themselves, we would certainly consider the fact as evidence of considerable difference of character; why then shall we not reach the same conclusion when plants are concerned? Or, rather, as character of behavior is of the mind and not of the body, why shall we not believe that plants of different varieties, species, etc., possess an intelligence as diverse as the nations, races, etc., of men? And that the specific structure, habits and general nature are as truly the evidences of a plant's "character" as a man's actions are of his?

Y.

AN important discovery has been made by Mr. S. A. Mokrshezki who has sent a communication on the subject to the Imperial Botanical Society of India. He has invented an apparatus by which salts of iron and copper can be introduced into the stems of trees with the effect of completely curing the tree of chlorosis and also of stimulating the growth to a very marked degree. An experiment has been made upon eight hundred fruit trees. Dry sulphate of copper was introduced into the stems and the very satisfactory effect is abundantly shown by the series of photographs which Mr. Mokrshezki secured. He believes that in this way it is possible not only to greatly increase the size of the tree but also to improve its color and varieties and to remove the diseases which attack it. The discovery is regarded as very important.

Universal Brotherhood Organization

Central Office Point Loma California

THE announcement that the Raja Yoga chorus from Point Loma would play a prominent part in the services at Isis Theatre last Sunday evening, was sufficient to bring out an exceptionally large audience which, judging from its frequent and hearty applause, was more than pleased by the various numbers on the program. The children sang in their matchless way: "The Three Stages of Life" (Alexander); "By the Waters of Babylon" (Hawley); "Mothers' Song" (Neidlinger); "Abide With Me" (Macy). The crooning "Mothers' Song" was so persistently applauded that an encore could not be refused.

Instrumental music by students of the Isis Conservatory of Music consisted of Overture, "Prometheus" (Beethoven); "Loveley Paraphrase" (Neuvadba); "Slavonic Dance" (Dvorak).

All the musical numbers were splendidly given, forming most fitting interludes for the two addresses of the evening, by Miss Wood and Master Iverson Harris. Miss Wood's title was, "A Little Child Shall Lead Them." She said:

"When we look back to the spring time of our life, when as little children we ran over the meadows carpeted with daisies and buttercups, do we not see long vistas of happy days and catch the melody of our heart's song? We were happy then and wise. Ignorance of the world's sorrow and the world's temptations were not the causes of our happiness. The child's short life had brought circumstances which his pure mind accepted, quite naturally, and as naturally cast them aside with but a passing sigh, and soon the world was aglow with sunshine once more.

"Can you not remember the home or some dear spot with its sweet associations where youth, leading old age, walked hand in hand down the meadow lane? How blessed must have been the companionship! Those who were approaching the end of their lives were strengthened by the trust and faith which shone out in the childish face, and the questions which were asked would need a wise head to answer. 'Who is God?' the child asks, 'Where does he live?' 'Some simple answer must be given,' thinks the aged comrade, and in his efforts to explain so that the young mind may understand he, quite unconsciously, comes nearer the truth, and his understanding is opened.

"The child whispers, 'God lives everywhere. The birds and flowers and little children are his messengers. He lives in our hearts when we are kind to each other. God is in you and in me when we are happy.' 'Alas,' sighs the old man, 'I have searched for God in the high and lowly walks of life, yes, and in the churches. I am still searching for him, but this child has found God in his heart.'

"Have we the faith of a child? Those who dare not trust themselves, who have no faith in their own divinity, in their ability to overcome temptation, cannot expect to have much faith in a power they have never evoked—the power of the soul. I know that once we forget ourselves in a desire to help others, and do not worry and fret over personal circumstances that appear so large in our own eyes, we shall have the trust of a child. We shall trust the God in each of us, who never deserts nor leaves us, but is fashioning our lives according to our ideals and aspirations.

LOMA-LAND STUDENTS AT ISIS THEATRE

Miss Wood's Address Entitled 'Led By a Little Child'—The Raja Yoga Chorus Presents a Good Program

Reprinted from the San Diego News

"It is written in the Bible, 'Him that overcometh will I make a pillar in the Temple of my God, and he shall go no more out.' The Raja Yoga children know that every difficulty conquered is a victory won. There are many victories won in the course of a day, and the faith and trust in their divinity is half of the battle. How much it means to

the world to have a group of children living lives of faithfulness to themselves and others. Looking their characters straight in the face and cultivating a faith that will move mountains, and nothing shall prove impossible to them.

"The students at Point Loma are realizing more fully each day that the happiness and child state can be regained. They are experiencing such joy as only comes to children whose minds are pure and hearts free from selfishness. Did not a great Teacher say, 'Unless ye become as little children ye cannot enter the kingdom of heaven?' The child state must be regained before the light of heaven can shine in our faces. The effects of wrong education and environments have bound and warped so many lives that it needs the sunlight of the soul to brighten and vivify the latent powers of faith, hope and trust."

Master Harris' paper was on "The Duty of a Raja Yoga Boy." Among other fine things he said: "When we speak of the duty of a Raja Yoga boy we do not mean the duty of the boys of the Raja Yoga school only, but any boy who tries to be honest and live a pure life. All boys should not be afraid to criticize their own actions, and especially their thoughts.

"Raja Yoga means the perfect balance of all our faculties. A healthy body is the first requirement, and then comes the necessity for a strong mind. A mind that has the strength to see the truth, and the courage to obey the voice of conscience will save us much trouble.

"We boys who are in the Raja Yoga School, which name means all that is good and honest and pure, have a duty that lies very near our hearts—it is to make Raja Yoga a living power in our lives. We all know how full the world is of hypocrites, those who profess one thing and whose lives are a contradiction.

"We boys have always this ideal of Raja Yoga before us. If we have tried and failed to live up to our ideal, we do not become discouraged but try again. There is always an opportunity to put ourselves on the right track. First of all we must see that our thoughts are pure and strong.

"It is the duty of every Raja Yoga boy to speak out boldly, and without any thought of personal unpopularity by so doing, in protest against any wrongful act that is done, even if it is done by his best friend. By so doing he proves himself a much greater friend than if he were to let that misdeed slip by unheeded, saying to himself, 'If I say anything he will think I am down on him and it will hurt his feelings.' This is the excuse he gives himself to cover the real reason, which is to save his position in the eyes of his comrades. That is nothing but selfishness, plain and simple; to think that one would injure someone else by not speaking, in order to protect his own interests.

"Therefore the duty of a Raja Yoga boy is to uphold the right and do away with the wrong, no matter at what cost to himself."

Prehistoric Remains and Their Lesson

Extracts from an address presented at Isis Theatre, San Diego, by a Loma-land Student

WHAT are prehistoric remains? They are remains of something dating from so long ago that history can tell us nothing about them. It is not the view of science that humanity has had a past, greater than its present. But it may be true, for all that. We may have once stood much higher than we do now, and under proper inspection we may show the traces of that early time.

When you study the traditions of any of the great nations of the past, you find that they all speak of a long past time when their life was grander and more glorious, a time which the Greeks called the Golden Age. After dwelling on its glories, they sometimes sum them all up by saying that at that far-away time so pure were men that the very gods were able to walk on earth with them. Nearly all peoples have this tradition—Persians, Greeks, Hindoos, Egyptians, Norsemen, Aztecs, Mexicans, Zunis, Maories, and many of the tribes of our own American Indians.

Well; it all goes for nothing. The traditions are dreams; the heroes of the Golden Age were personifications of the sun, moon, stars and west wind. Moreover, as men were savages ten thousand years ago, there could not have been a

Golden Age of civilization, or indeed any civilization, twelve thousand years ago.

So answers science to these universal claims. But does it not strike us unscientific people, people not self-hypnotized out of common sense, that the universality of this grand tradition shows that there is something in it? Does not the mere talking about it, even amongst ourselves today, waken a sort of vague half-memory, a sort of conviction that it certainly was so; as if we ourselves had participated in it, had rejoiced like children in the pure morning of human life; and then had lost its beauty, had wandered from then to now through the ages and civilizations of declining grandeur; and at last meet here and talk it over, and wonder whether after all it was not a dream; and finally let science persuade us that it was?

But if it was a dream, then there is only left for us the hypothesis of science—that we are on our way up from the monkeys, and that in the savages of this and other countries we see what we were a few thousand years ago.

Perhaps we were; but it does not follow that behind the savage is the monkey. Behind the savage may lie a set of forgotten civilizations, and he may be passing the valley between those and our own or some future one. If you see a man below you in a valley, it does not follow that he came up into it from some deeper hole;

he may have come down into it from the opposite mountain side and be preparing to ascend that on which you stand.

How goes the evidence? It will certainly be found a little difficult to reckon with on the ordinary view.

Think for a moment of Egypt. We know that in ages long gone by, Egypt had a period of splendid civilization. Then it all vanished, and days of utter degradation supervened, and lasted to our own time. Suppose that that period of splendor was so far away that no traces remained, only that kind of memory that we call tradition. Now three or four hundred years pass, and, as will almost certainly happen, Egypt acquires again a high civilization. The scientist of that day, three or four hundred years hence, will say, "Behold how quickly this nation has ascended from the original savage state!" And he will add, "Of course, like all savages, they had a foolish tradition of a splendid civilization in a wholly imaginary past."

But in this case we shall know that tradition corresponded with a fact.

What do we know about Egypt's past? Nothing whatever to suggest a savage background. On the contrary, the very first glimpse that history catches of her, on the borders of the absolutely unknown, thousands upon thousands of years ago, shows her with a civilization in full swing, a civilization evidently even then ages old.

What about India? We know that the people who are now the Hindoos came thousands of years ago into India from somewhere, we do not know where; and that when they came, they came highly civilized, came with the arts of peace, with poetry and music. Indeed, when we study their great poems, the *Vedas*, we find specimens of poetry which to this day have never been surpassed, which we know to have been sung to music which there is no reason except our own arrogance for supposing to have been inferior; and containing evidence that they were enjoyed by the whole people. Our people do not enjoy superb poetry, and are not—as these people were—profoundly and philosophically religious. Our people enjoy yellow journals and go to prize-fights. So we must have gone down hill since then, one would think.

What of Italy and Greece? We know that in Italy, an utterly unknown period ago, lived two or three sets of highly civilized peoples, the Etruscans, Pelasgians and others, who had carried art to a point not since surpassed. In Greece we know that below the present ruins of Troy lie—layer below layer—eight other Troys, built one after another as the ages passed; and with no suggestion of barbarism in the earliest. In Crete we have recently unearthed the remains of a past civilization and a people—the Minoans—so remote that not even tradition has anything to say about it.

In Peru, Yucatan, Mexico, and South America generally, we are now continually finding vast traces—whole cities and stately temples—of civilization after civilization, layer upon layer, of which even the very latest is too remote to be more than a tradition—sometimes not even that—of the degenerate natives.

And so in our own country, North America; every day brings to light the remains of an utterly unknown—but assuredly not barbarous—past, of which the wandering Indians can tell us nothing.

In fact, the more we know, the more we decipher, the more we dig in sands and ruins, the more utterly do we fail to find any evidences of that barbarous past

from which—according to science—we came. The more we know, the more does the likelihood of that disappear.

And even yet more splendid civilizations than we have ever found any traces of may have flourished and vanished utterly. For think what time can dissolve away and cover. How much of our civilization's marks would be left in 10,000 years if they were deserted? Not a single fragment of paper; nothing made of iron or steel, not a trace of a machine—even an iron-clad battleship dissolved away in the ceaseless waves; not a trace of anything made of wood; not a trace of most of our buildings. Neither here nor in Europe is there the dry air of Egypt which has preserved her pyramids. The London air is eating away the walls of the palace of Westminster, and, till it was varnished, was gnawing at Cleopatra's column that was brought from Egypt. The rains, the winds, the frosts, the hurricanes, the earthquakes and the volcanoes, might blot away every sign and trace. In Egypt the winds and sand-storms of uncounted centuries have buried many of the evidences of ancient civilizations beneath seventy feet of sand, and as we dig deeper, more come up. And in some places there are marks of ten successive temples, one below the other—how many ages between, we know not. So as to what was our civilization, no observers who found the few traces that might remain in 10,000 years could form the very faintest idea. We might be overwhelmed by a yellow horde from the East, as we nearly were 800 years ago, and absolutely wiped from history and even tradition. Moreover, whole continents sink slowly beneath the ocean, carrying with them who knows what remnants of teeming human life?

Moreover, there are traces in us of a grander past. Take the child of a Maori, or any of the better types of red Indian. It is known that if you give to these the education and surroundings that our children have, they prove their capacity to take the same polish and to stand in matters of education and culture exactly where we stand. Could that be so if they had not, buried in them, the remains of once used culture and education, human prehistoric remains of an old civilization?

And may it not be that in ourselves, our ideals of a nobler and grander life to come, like our secret traditions of a Golden Age, a Garden of Eden, are memories, remains? Could we have them or frame them if the state had never been experienced in our human race? Could genius suddenly arise amongst us, could a Shakespeare or a Mozart appear, with nothing in his parentage to warrant it, if it were not a reminiscence, an unveiling of a long-veiled prehistoric remains, speaking of a long past time when the spiritual consciousness of all men was awake and active in its ever fresh beauty? Surely, it would be otherwise as impossible as that an oyster should suddenly develop eyes or fins.

Now, look at the whole thing at a glance: consider the vastly destructive hand of time and nature; the ruins from old epochs and civilizations that have nevertheless survived the countless centuries, ruins one behind another, one below another, separated by unknown time, and think what must have been that which they represent after time has done all his work upon them; think that behind civilizations that built and left remains may have been others that built nothing, times of spiritual civilization when men dwelt close to nature and the Divine, knew where we speculate, touched at all times the glory of direct truth, had perfect peace like that of the Garden of Eden. Of these, no trace would remain save that all-present tradition of a Golden Age—and our unuttered, unformed hopes and ideals.

"Having No Time"

THERE is a certain sort of person who is always retiring from duties on the ground that he has "no longer time to do them." He is sincere; he thinks he has not time. And it is not always true that he puts aside duties he dislikes for those he likes. Indeed he is often very conscientious, and the duties which he thinks he must crowd out he would rather do than those which he retains.

An old proverb runs: *If you want anything done, go to the busiest man you know.*

For one of the very secrets of the universe is in this matter; and, as usual with secrets, it lies on the top, openly visible. This secret is the creation of time. "I will *make* time for it," says a man who has this great secret. Time expands according to our power to pack it tight with deeds. We create the time we need, if we will. If we throw over one duty because another comes upon us, time contracts so that it becomes only enough for the one. If we accept the other, and add it on to previous duties, time increases its length to correspond with necessity. "An hour is no more than an hour," says someone. Never was there a greater error. "An hour" means nothing. One man's hour is another man's minute. It varies in length according to the man who uses it; it is "as large as a piece of chalk."

Time is like strength—created by demand. "The law of nature is that those who do the thing shall have the power; those who do not the thing have not the power."

Sayings of Christ

PROFESSOR HARNACK, the well-known teacher of theology in the University of Berlin, has collected a number of the reputed sayings of Christ, which are not contained in the New Testament but which, from internal evidence, he believes to be genuine. Some of these sayings are:

"It is more blessed to give than to receive," although it is not in the Gospel, it is noted by St. Paul as having been said by Christ.

"He is guilty who troubles the spirit of his brother." This is from fragments of the Gospel to the Hebrews, quoted from St. Jerome.

"You should never be joyful save when you behold your brother in love."

"The seeker shall not rest until he finds, and when he finds he shall be astonished."

"I shall choose out the good. Those are the good whom my Father in Heaven has given me."

"In that which I find you therein shall ye be judged."

Speaking to one who was at work on the Sabbath:

"If thou knowest what thou doest thou art blessed; if thou knowest it not, then art thou accursed and keepest not the law."

"Who is near me is near the Father; who is far from me is far from the kingdom."

"Hast thou seen thy brother? Then hast thou seen God."

There are, of course, a considerable number of other sayings, and additional discoveries are frequently being made.

And There Came a Hero

ALL was quiet in the roomy library of the Woods' country home. The big clock was ticking away peacefully, almost silently, the canary bird was napping comfortably in her swing and Magda, the great Dane, lay asleep before the fire. The only sound was the shuffling of papers upon the cozy little desk before which a slender, handsome, brown-eyed lad was writing.

"Hello, Jack, what you doing?" This from Ralph Woods, who burst into the room, a very amateur avalanche.

"O, just making notes for the debate."

Ralph flung himself into a chair before the fire. "How does the thing read, 'Resolved'—something about heroism, isn't it?"

"Resolved," read Jack from his note-book, "Resolved, that heroism may sometimes best express itself by means of unheroic actions."

"Which do you have, Jack, affirmative or negative?"

"We both have the affirmative, Ralph," was the thoughtful reply.

Ralph rose hastily. "Nonsense," he said. "The idea of heroism having anything to do with actions that aren't heroic! Why it reads like a riddle from the riddle-book."

"Well," said Jack, "there's a good deal to be said on both sides. Take Milly Stevens, for instance. You remember how she gave up her trip abroad and took a position under that miserable Mr. Clark, just so that her sister and two brothers could go on with their studies."

"Well, that's not *my* idea of heroism," said Ralph, vigorously. "I don't go much on the negative, whining kind. Now, what *I* call heroism is dashing into burning houses, and rowing out into breakers in a life-boat when there's a big sea on, and—and standing right up to it like at Thermopylæ and Marathon and —"

"Yes, but Ralph, which really would be *easier*, Marathon, or to do what Milly Stevens is doing?"

"H'm," said Ralph, with some hesitation, "that's different." He shook himself out very much as Magda might have done, took the cap from his pocket and stood examining it thoughtfully for a moment. He was rarely so quiet long.

"Ball game today, is there?" This from Jack.

"Yes, wish we could go together. Say—'er—Jack, I never thought about things being heroic when they didn't look so. Well, good-bye," and out he flew to the ball game.

Jack Fleming and Ralph Woods were cousins, and the former, ever since his mother died, had made his home with the Woods' household. One could scarcely imagine a greater contrast than existed between the two boys; Ralph, big, splendid, boisterous and fifteen; Jack, slender, frail, and a year older. A fall in childhood had injured his spine and so had shut from Jack's life almost all the things that Ralph cared so much about. But the two boys were alike, very much alike, in their generosity, their love of what was straightforward and true, and their splendid good-fellowship. Ralph was known the neighborhood over for a dozen heroic actions. Jack—how he longed, what would he not have given, to have done one really heroic deed. His frailty at times seemed to him almost like a curse. How easy it would have been for him to have grown envious and unkind. There were times when the mere effort to smile was harder and more truly heroic than any effort Ralph had ever made. There were many times when the battles with his own despairs were almost more than he could bear, and when the conquests were as hard won as the taking of a city or the raising of a siege. For deeds less heroic than the conquests Jack Fleming made over himself, almost daily, men win the Victoria Cross in other fields.

It was November and a light snow was falling. Across the dusk of the village streets there rang out a quick alarm. It was the fire-bell. Jack and Ralph were both stretched out upon the hearth-rug before the fire, studying. They heard the bell and both sprang at once to their feet, for what village boy does not love to run to a fire? "Come on, Jack," said Ralph, "it'll do you good to get out. Must be the old post-office. Looks that way."

There was a swirl of caps and coats, a dozen quick words, a slam of

I GIVE nothing as duties.
What others give as duties I give as living impulses.
(Shall I give the heart's action as a duty?)
—Walt Whitman

the big front door, and both boys were on the street, Ralph, as usual, helping Jack along just a bit with a friendly grasp of his arm. They hurried past the court-house, around the big elm and through the arcade.

Five minutes later they had reached the dead-line which separated the crowd from the firemen and engines. It was worse than the boys had even dreamed. The old post-office was in flames and the hotel would go next. A dry, tense, anxiety had settled down upon the crowd. In the hotel window were a dozen white faces. With the falling of the old post-office wall the hotel would be doomed, for between the two buildings stretched a narrow bridge of the flimsiest wood, already on fire. It would have been but the work of a moment to tear down the bridge, but the hook refused to catch. The firemen tried again and again. It is more than likely that the fire apparatus was not the most modern or the best, for the village had never known such a catastrophe. The Chief was in despair. Some one would have to risk his life and not one of his men could be spared, at just that moment.

"Who will volunteer? Five minutes yet before the wall goes. Quick, some one!"

What a hero chance! A single quick climb and that was all. The wall might fall, of course, but then the chief had said, "five minutes yet" and a dozen white faces gleamed out of the windows between that chance and death. Jack and Ralph were just without the ropes and at the word both rushed forward almost simultaneously. Each grasped the ladder at the breast rung. In the excitement neither noticed the other until they stood face to face at the foot of that ladder. Both started. Never before had Ralph known greater enthusiasm; never before had Jack's face revealed so plainly the pleading that was in his heart. It was as if the pent up longing of a whole life had broken its barriers in a single moment, the longing for a chance—just one chance—to be heroic.

Strange things happen sometimes. Ralph—there was but an instant's hesitation—let go the ladder and stepped back. "Go on, Jack, quick, I'll wait for you!" How the frail boy sped upward!

Silence fell upon the crowd. Ralph felt it and knew the reason, and his face flushed. But he stood his ground at the foot of the ladder. In an instant a deafening applause burst out and it seemed as if the crowd itself would break over the ropes that held it away from the fire-lines. The hook was secured. The walls were already tottering to their fall, but Jack was half-way down the ladder and a dozen lives were saved. And then another strange thing happened. He had barely reached the ground when he fell, weeping, into Ralph's arms.

"The excitement was too much for him," said one in the crowd. "Queer the big fellow didn't go," said another, and both remarks Ralph heard.

Four weeks later the postman left a little box at the Woods' home, addressed to Jack Fleming. Jack opened it eagerly. Inside, on a bit of crushed velvet of a delicate lavender shade, lay a medal, a circle of gleaming gold. It had been fashioned from a double eagle. Within the smoothed circle of one face were Jack's initials. On the reverse side a simple square had been limned and within it was graven, "For Heroism, November 23d, 1903." The following Sunday a similar little package was left by Jack in Ralph's room. When he opened it he saw what he at first thought was Jack's shining medal. But it had been sawn through with exquisite neatness and Ralph's face flushed as he took up the delicate circle and read, "For Heroism, November 23, 1903." On the other side Jack had had graven the name, "Ralph Woods." Not a word had passed between the boys with regard to Jack's little expedition—due to the giving up by Ralph of his chance to do the heroic deed. But when Ralph took up this medal he knew that Jack had understood.

That afternoon his mother came into the room and her eye rested upon it. "What is this, Ralph? Jack's medal? What an idea! Why, it's cut in two—and your name! Well, it is certainly strange how much you boys think of each other." Ralph Woods said nothing. But the dignity of his bearing told of the new power that had somehow come to its heritage within his heart.

✻ The Trend of Twentieth Century Science ✻

Mystery of Sleep to Be Solved Only by the Individual

THERE are many and increasing signs of revolt against the science of the mind as given to us by Bain, Spencer and others of their school. And this in spite of the assurances of these teachers that their theories were final and might be regarded in the light of a philosopher's stone which would turn all the mysteries of life into the gold of knowledge. We are, of course, grateful for such teachings as we have received on the association of ideas, and we are not the less grateful because we refuse to believe that they constitute the last word of mental science, and that we may now sit down and take our ease upon the highest possible point of human knowledge.

Our recognition of the many problems which are explained by the theory of the association of ideas does not prevent our equal recognition of the many problems which it does not explain, and we cannot assume the tranquillity which we covet so long as such numerous mental mysteries are knocking on the door. In other words, we are not satisfied that the mysteries of the inner life are finally and forever solved by the teaching that the mind is a kind of adhesive fly-paper to which thoughts naturally and fortuitously stick with a tenacity which varies with the mental—that is to say, the sticky power of the individual. If we were ourselves without mind and the power of introspection, we might accept such a theory. As it is, we have the certainty of something beyond this, of a god in the background with the power of selecting its thoughts, of purifying them when they are selected, a god who holds the keys of the mind and with the power to loose and to bind. The future science of the mind will deal with the god behind the thought, it will penetrate into the palace of the king, not merely concern itself with the suitors at the gate.

The revolt against the deification of mere mechanism is signalized by several books and articles upon the meaning of sleep, and notably by a well-known writer, whose main argument appears to be that during sleep we are shut off from the phenomenal world and enter into contact with the spiritual. Without in any way adopting such a theory, which is far too compact for accuracy, it none the less commands the respect which is due to an honest and unprejudiced effort. It is at least infinitely preferable to such meaningless and empty phrases as a "state of unconsciousness." Its fault lies in its relative failure to realize that the mental conditions of sleep are probably as varied as the mental conditions of wakefulness, and that neither set of mental states can be tied into a parcel and labeled. Wakefulness is entirely compatible with spirituality and sleep is compatible with its reverse. Sleep is a bodily function which may indeed liberate the inner man from certain sets of phenomena and their immediate influence, but it cannot produce a spirituality which does not exist. Sleep may be a cutting of the anchor-chain, but whether we forthwith move and in what direction we move must depend upon quite other causes.

We can, however, do but little to help each other to an understanding of sleep. Each one is already equipped with every implement of research, and all he needs to do as a preliminary is to clear away preconceived ideas, to learn to look upon the inner man as having only a transient connection with the body in which it lives, and to realize that his individual waking consciousness oscillates within very narrow limits upon the infinite scale of consciousness which is rightfully his. The mercury in a thermometer may never rise or fall beyond certain points, but, given the necessary conditions, it will both rise very high and sink very low. Our normal consciousness is like the piano player who confines himself to the middle octaves. Perchance during sleep we may play upon other octaves from which we are debarred during wakefulness by the unresisted automatism of the body. Our lives are small and mean because we suppose that the octaves upon which we so untunefully play constitute all possible octaves, that the thought boundaries which we create for ourselves are the boundaries of the universe. If we open our intelligence to some of the mysteries of sleep we may perhaps find that we ourselves are the sentinels standing at the gates of Eden and that we may repossess the land which once was ours.

News From the Nebulae—Myriads of Blazing Suns

AMONG those mysterious patches of cloudy light known as Nebulae, that wonderful object, the Great Nebula in the Constellation Orion, is at present well placed for observation in the evening. It is just visible to the naked eye as a dim, misty spot in Orion's sword-handle. The great elliptical nebula in Andromeda is also faintly visible without a telescope. All the nebulae are sources of great interest to astronomers, but some recent spectroscopic photographs have revealed a quite unexpected state of things in the light of the Andromeda nebula, which, when fully comprehended, may change current theories of the constitution of these curious bodies. This nebula belongs to the class called "spiral" or "whirlpool" nebulae. They are not resolvable into separate stars even under highest magnifying power, and they have been supposed to be primitive matter condensing in forms resembling eddies of a stream. Seen under high powers the spiral nebulae are certainly very suggestive of the growth of solar systems, but lately the new photography has supplied strong evidence that the spectrum of the Andromeda Nebula certainly, and perhaps others, contains dark lines such as we find in the spectrum of so advanced a body as the sun. Until lately it was thought to be a continuous spectrum, a band of rainbow light unbroken by gaps; this would imply that the nebula was made of luminous gas under high pressure, or of glowing solid or liquid matter. Its curious spiral shape seemed to confirm the theory of the eddy or vortex formation of nebulae, but the recent observations show that this and other irresolvable nebulae are almost certainly not in a merely chaotic state of gas, for the spectra of the solar type are only produced, as far as we know, by the selective absorption of certain rays of light by an atmosphere in front of a solid or liquid core. So it now seems likely that the Andromeda nebula must be composed of a vast number of stars at an inconceivable distance from us, each one surrounded by an atmosphere giving rise to the lines in the spectrum. If so this astonishing galaxy of blazing suns is probably larger than the Milky Way itself, of which our sun is a member.

The views of astronomers respecting the constitution of the stars and nebulae depend upon the light-sifting power of the spectroscope. It is assumed that the waves of light behave in the same manner across the vast abysses of space as in our terrestrial laboratories. But this is by no means certain; it cannot be proved; and, in fact, H. P. Blavatsky declares that important modifications take place in their vibrations as they approach and enter our atmosphere which vitiate the accuracy of our observations. According to Theosophy most of the visible nebulae are not in the earliest, crudest states of matter, but are relatively advanced—"baked bricks" ready for building into worlds. We shall watch the progress of discovery in these subjects with great interest, and there is no doubt that many seeming contradictions and paradoxes will meet investigators before they find a hypothesis which will fully account for all the facts, but the new-time spirit is moving so rapidly and positively into the Theosophical position that it will not be long before the most advanced thinkers will admit that the suggestions brought to us by H. P. Blavatsky provide the only rational clew to cosmic and terrestrial mysteries. R.

Science, Physical and Economic—Broader Conceptions

ASURVIVAL of broader conceptions of the mission of science exists in the custom of including in the programs of national scientific associations papers on economic and social science. This is an admission that science should be interested in the more vital questions of human life, but these papers, which deal with such topics as labor strikes and housing of the masses, have little if anything in common with the papers on physics, chemistry and the like. They form an entirely distinct department, and are on a footing of toleration, rather than cooperation, by the other departments. This tendency to make departments of special study is a loss to every department; for truth is in the whole, not in the parts. The proper study of mankind is Man—Man the unit, physical, mental, spiritual.

STUDENT

Here and There Throughout the World

England & France Apply Arbitration ENGLAND and France have followed up their arbitration treaty, which is in general terms, by another which comes down to details. Their governments have fully discussed all the little matters of outstanding difficulty—matters relating to Egypt and Morocco, Newfoundland, Madagascar, Siam and other places—and settled them once and for all. This means more than the mere departure of those difficulties, all of which were points of danger. It is a precedent for their future guidance; an example; and it has greatly strengthened at a critical moment the existing cordiality between the two nations. Its influence, along with that of the Alaska settlement between America and Great Britain, occurring at the very opening of the Twentieth century, will be profound and far-reaching.

A New Reformer Appears in China CHINA has a new reformer and his name is Kang Yung Wei. Reformers are not popular with the governing classes of China, and Kang Yung Wei has a program which is certainly progressive. He wants:

- 1 Equal political rights for men and women.
- 2 The education of mothers, so that they shall be prepared for the work of motherhood.
- 3 All children to be educated until their twentieth year.
- 4 Marriage among criminal classes to be prevented.

Finally, he holds that parents ought to be held responsible for the characters of their children. And yet we say that China is backward.

Rhythmic Motion Curative, Valuable AT Boston a university professor has been advocating dancing as a means of health and as a general corrective and curative. "If a person is tired, he should dance a minuet; if apathetic, something faster." The age of eighty, according to him, is no bar to the exercise. Of course he is right; but his remarks as to the value of dancing have nothing to do with the modern practice of the art. Late hours, excitement, vitiated air and improper eating and drinking, entirely do away with the benefit, and score heavily on the other side. But under utterly different conditions in every respect, rhythmic motion done to music is valuable, curative and rejuvenating in a very high degree.

Kindness of Russians to Animals A RECENT traveler in Russia speaks enthusiastically of the kindness to animals which is almost universal throughout the Empire. Never once did he see a Russian strike his horse, and he gives a charming picture of the comradeship which exists between man and animal. This is indeed high praise and eloquent of much. Nothing is more indicative of the virtue of the "common people," or the want of virtue, than their treatment of animals.

Japan's Common People Numerous THE population of Japan is about 43,000,000 persons roughly divided into the following classes: Imperial family, 53; nobility, 4,500; gentry, 2,000,000 and common people 41,000,000. From which it will be seen that there are a great many common people in Japan as elsewhere. It will be remembered that Abraham Lincoln once said that God must be very fond of common people as he had made so many of them.

Spain's Low Salaries for Teachers TEACHERS in Spain receive a smaller salary than those in any other part of the world. The average annual payment is only about \$30 for men, while women receive even less. A writer from Madrid says there is a tendency to equalize the payment of men and women, which of course is right in principle. In this case, however, the process is carried out on the basis of the pay to the women, which is wrong in principle.

Shrinkage of Missionary Legacies A RELIGIOUS newspaper says: "The shrinkage in the legacies to our missionary societies seems to indicate that the generation of those who regarded this great work with the same kind of affection as their own families has almost passed away." It is quite likely. Charity, after all, begins at home and it may be that the great human orphanages which we call the slums are more effectively appealing for recognition and for a place in the national family.

Koenigsberg's Memorial to Kant THOSE responsible for the memorial tablet to Immanuel Kant which has just been erected in Koenigsberg, were certainly well-advised in their choice of an inscription. The tablet bears the following quotation from the writings of the great philosopher:

Two things fill my mind with new and increased amazement and respect the oftener and more constantly I think about them—namely, the starry heavens above me and the Moral Law within me.

It is well for us to be reminded that amazement and respect are not incompatible with profound erudition and intellect, however noisy may be the modern school which confesses neither to ignorance nor to awe.

Japan's Marquis on Religious Questions THE Marquis Ito, of Japan, seems to have definite views on national culture and the way to its attainment. He said to a recent interviewer:

We need disinterested men as leaders. The Japanese Government will not deviate from an attitude of strict impartiality with regard to religion. I myself look to science, knowledge, culture, as a sufficient religion. We will continue to follow up the paths of European learning and inquiry.

A combination of science, knowledge and culture ought certainly to constitute a good religion. All religious failures are due to a lack of these things. Indeed, might we not say that religion and knowledge are synonymous?

Bilse's Exposure of German Garrison LIEUTENANT BILSE's exposure of German garrison life has now reached an edition of 70,000. So eager are people to read this prohibited work that it is being smuggled across the frontiers and a regular and lucrative contraband trade has sprung up. Six copies which were recently confiscated were bound and inscribed as Bibles. It is very certain that but for the Government prohibition this little book would have been practically unheard of. We may now expect that authors will court a Government censure as the most certain means of securing a vast circulation.

Poles Object to Becoming Germans THE process of compelling the Poles to be Germans goes on apace. The use of the Polish language is prohibited wherever such a step is possible, as, for instance, in the mining districts, where a fine is imposed whenever Polish is spoken. The business of all benefit institutions must be conducted in German under penalty of a forfeiture of funds. Under such treatment, Polish sentiment is, of course, becoming more intense. Tyranny invariably defeats itself, and this is as true of individuals as it is of governments.

Peru Slaves in Colombian Republic AN interesting little slave trade seems to be in full progress upon the borders of the Colombian Republic. It appears that armed parties are sent across the Peruvian frontier in order to capture the defenceless Indians, who are then sold to an Anglo-American rubber syndicate, transported to distant localities and enslaved for life. May we hope that some little light will be thrown upon these proceedings, even though it may imply an interference with "vested interests" or other sacred things?

THE CHILDREN'S HOUR

Agnes and Her Ferns

AGNES FLEMING had been reading stories about how some rich people had been giving poor and sick persons money and, so doing, had relieved them of their suffering. She sighed and said to herself, "What can I do to bring the sunshine into some one's life? I am as poor as the people in the story whom the rich people helped. I just can't do *anything*."

As Agnes' thoughts dwelt on how much she would like to assist those who were less fortunate than herself, her eyes rested upon some maiden-hair ferns that she had found in the woods and planted in a box for her window. She had become very much attached to them and pictured in her mind how beautiful they would be when they covered the whole box; the idea of parting with them was like giving up a companion that she loved. But she kept thinking about Mary Rice, a little sick girl who lived in a dark attic, and never once got out in the sunshine to gather flowers, and something seemed to tell her that she might give her ferns to Mary and so let her, too, have the happiness of seeing something fresh and green and growing.

The knowledge that she could really help another by giving up something that was her own and that she loved, filled her heart with joy, and Agnes immediately carried the precious box of ferns to little sick Mary.

When Mary saw the ferns and was told that they were truly alive and would grow until they covered the whole box, her eyes sparkled with delight. Each day Mary would examine the ferns, and she came to know every new leaf that came out. They gave her a new interest in life and taught her many lessons in unselfishness, "for," she often said, "flowers do not grow to please themselves, but to give pleasure to others." A. W. H.

DEAR CHILDREN: One day a valuable horse was stolen from the stable of one of my neighbors. Several weeks passed by and the man, giving up all hope of finding it, finally concluded to go to an auction sale of horses, to be held some distance away, and purchase another. When he was driving up to the stable where the sale was to be held, his horse—which was the mate of the one stolen—gave a loud whinny. "Could it be possible that my horse is in that stable?" thought the man. He got out of the wagon, took the horse out of the thills and led him into the stable. There was the stolen horse. The two horses were overjoyed to meet each other, rubbed each other's necks and whinnied like two delighted children. Now how did that horse know that his mate was in the stable? Who can tell? E. H. K.

A Queen and Her Dolls

DEAR CHILDREN: Do you remember about Carmen Sylva and her love for little children? She loves dolls, too, but not in the way that you do. She doesn't play with dolls, of course, she is too busy helping those who are suffering and in want, but she has something like two thousand dolls of her own, and these have been helping her earn money to give to poor children who are in need.

Recently she held a great exhibition and all the kings and queens of Europe sent their contributions to it. The exhibition was all of dolls—think of it! There were ever so many kinds. Each of the royal families of Europe sent six dolls which represented the costumes of their own country and then, besides that, the collection was arranged by centuries, beginning with the daughter of an Egyptian king who lived fifteen hundred years before Christ. She was so beautifully dressed!

Then there was a stately Assyrian king of the Twelfth century, and Egyptian and Jewish beauties, and warriors and statesmen, and sweet-faced dames from ancient Greece and old Rome.

Then there were real tableaux given by the dolls. One represented a Roumanian ballroom, another a great coronation procession. Queen Margherita of Italy sent gaily dressed court ladies and Neapolitan fisherwomen and some splendid Venetian gondoliers.

Then there were doll peasants, fishwives and fishergirls from Boulogne and Normandy, and peasants from the Black Forest. And there were also wonderful tableaux showing the "Pied Piper of Hamelin," and scenes from "Cinderella."

Now why should most of our dolls be dressed in pink and blue and frills, and labeled "From Paris?" Isn't it a nice idea to have dolls representing the different nations? AUNT EDYTHE

NOT what we give, but what we share,
For the gift without the giver is bare;
Who gives himself with his alms feeds three;
Himself, his hungry neighbor and me.

—Lowell's Vision of Sir Launfal

COMRADES

PUSSY WILLOW'S SECRET

PUSSY WILLOW had a secret that the snowdrops whispered her,
And she purred it to the south wind while it stroked her velvet fur;
And the south wind hummed it softly to the busy honey bees,
And they buzzed it to the blossoms on the scarlet maple trees,
And they dropped it to the wood brooks, brimming full of melted snow;
And the brooks told robin redbreast, as they babbled to and fro;
Little robin could not keep it, so he sang it loud and clear
To the sleepy fields and meadows: "Wake up! Cheer up! Spring is here!" —Selected

DEAR CHILDREN: One of my friends has just told me of how two little boys were recently saved from death by their pet dog. Little Robert and Howard, the two boys, were playing policeman the other day. One of them placed the other in an old wooden chest, pretending that he was shutting him up in jail. The little black and tan terrier was playing with them. Snap went the rusty lid, and the two little boys were prisoners. The dog realized the danger and ran to the room up-stairs where their mother was sewing. He barked and barked until finally she drove him away. Then he went again to the box and sat down beside it, and barked incessantly. So she went down-stairs when she saw what had happened, broke the lock and when the lid was lifted the boys were found to be nearly unconscious. The dog had saved their lives. T.

THE NAVAJO BLANKET

by EDWIN L. SABIN in *Toub's Companion*

OUT in the land of little rain,
Of canyon-rift and cactus-plain,
An Indian woman, short and swart,
This blanket wove with patient art;
And day to day, through all a year,
Before her loom, by pattern queer,
She stolidly a story told,—
A legend of her people, old.

With thread on thread, and line on line,
She wrought each curious design:
The symbol of the day and night,
Of desert and of mountain height,
Of journey long and storm-beset,
Of village passed and dangers met,
Of winds and seasons, cold and heat,
Of famine harsh and plenty sweet.

Now in this paleface home it lies,
'Neath careless, unsuspecting eyes
Which never read the tale that runs
A course of ancient, mystic suns.
To us 'tis simply many-hued,
Of figures barbarous and rude;
Appeals in vain its pictured lore;
An Indian blanket—nothing more.

The Means of Growth

LONGFELLOW once wrote that what is really best for us lies always within our reach, and it would be hardly an exaggeration to say that we have here an indication of the whole philosophy of individual evolution.

There has, perhaps, never before been so great a desire—and very much of it is sincere—for a knowledge of the means of growth. No theories are too strange or too bizarre for our consideration, and we ransack the world for some new thing, for some weird belief or practice which we imagine will help our quest. So much of this injurious labor we might save if we would but see that no faculties are worth anything whatever except the faculties of the Soul, and that it is the Soul itself which resolutely holds us face to face with the only obstacles which are in our way. The supreme problem which confronts these searchers for truth is the control of the mind, and while this is very freely recognized, we still suppose that there is some unknown way in which this control may be attained, some other way than the simple and obvious way which is always within our sight. A single introspective glance will show us at once how serious is the need for some kind of mental reform, for the establishment of some kind of government over thought, and yet how few there are, even among the sincere, who exercise any control whatever over the mechanism of the mind. And to do this absolutely nothing is wanted, absolutely nothing can help us except the determination to do it and an interior and unrelaxing watchfulness. We can easily attain to a realization of our needs in this respect by a sudden arrest of our mental processes at some time when we are not actively engaged upon some engrossing matter. We shall probably recognize that a tide of minute and entirely useless thoughts have been occupying the mind, each one lasting but for an instant, each one suggested by the one which preceded it, each one suggesting that which instantaneously follows it. All of these thoughts were uninvited, unregulated and entirely useless. They are nothing more than a mob and a rabble, taking possession of that interior abode which should be for us an ordered and a sacred home. We allow our minds to become simple cages of monkeys and we congratulate ourselves that they are only monkeys and not tigers.

Now the only way in which we can establish control, the only way in which we can cure this mental St. Vitus' Dance, is simply to do it. No books can give us any particular help in the matter however high priced they may be, and there are no profitable secrets which impressive orientals can whisper in our ears whether we pay for them by the lesson or by the course. Our mental homes have been so long without a master that the invaders which riot through the open doors are doubtless difficult to expel, but it can be done and it must be done in the obvious way and not otherwise. We must establish control and we must maintain it. We must allow no thoughts to enter except those which we have selected. We must exercise constant watchfulness, and we must so occupy the mind and in so worthy a manner that it gradually becomes automatic in its rejection of the trivial and the injurious. This is the supreme task of those who would become strong, and no one can do it for us. With our success comes the recognition that all great and gracious powers have been soliciting entrance and that we made no room for them, that all divine forces in nature were waiting but for our invitation, until we had swept and garnished the guest-chamber. The great things of life are the little things and "whosoever will" may take of these waters of life freely.

STUDENT

Jacob Boehme

WE are told by Hegel that philosophy first came into Germany through Jacob Boehme, who will yet be recognized as one of the great religious teachers of the world. He was born in Lusatia, where he was educated as a shoemaker, and he died in 1624. A prolific writer and an extraordinarily successful controversialist, his philosophy attracted widespread attention and heated opposition from the theologians of his day, who were overthrown by him without apparent effort. The following extract upon *The Supersensual Life* will be read by many with interest and profit:

The Disciple said to the Master: How may I attain to the supersensual life, that I may see God and hear him speak?

The Master said: If thou canst raise thyself for a moment thither, where no creature dwelleth, thou shalt hear what God saith.

The Disciple said: Is that near or far?

The Master said: It is in thee, and if thou canst be silent and cease, for an hour, from all thy willing and brooding, thou shalt hear unspeakable words of God.

The Disciple said: How may I hear, if I cease from all willing and brooding?

The Master said: If thou wilt cease from all brooding and willing of thine own, then the eternal Hearing and Seeing and Speaking shall be revealed in thee, and shall discern God through thee. Thine own hearing and willing and seeing hinders thee, that thou canst not see nor hear God.

The Disciple said: Wherewith shall I hear and see God, seeing he is above nature and the creature?

The Master said: If thou keepest silence, thou art what God was before nature and the creature and out of which he made thy nature and creature. Then shalt thou hear and see with that wherewith God, in thee, saw and heard, before thine own willing and seeing and hearing did begin.

The Disciple said: What doth hinder me that I cannot attain thereunto?

The Master said: Thine own willing and hearing and seeing, and because thou dost strive against that whence thou hast proceeded. With thine own will thou separateth thyself from God's willing and with thine own seeing thou seest only in thy willing. And thy willing stoppeth thine hearing with the obstinate concupiscence of earthly, natural things, and leadeth thee into a pit, and overshadoweth thee with that which thou desirest so that thou canst not attain to the supernatural and supersensual.

The Bliss of Self-forgetfulness

IT can never be too often repeated that *real* Theosophy is not contemplation or introspection or philosophizing or talk, but work, work for others, work for the world. We are told that the one fatal bar to progress is selfishness in some one of its Protean forms. Selfishness will never be overcome by thinking about oneself. And, as we have to think about something, the alternative is thought for others and how to help them. As the mind fills with such schemes and the hands take hold of them, self-interest is displaced and egoism fades out. Selfishness dies of inanition, and altruism grows because constantly fed. And all this time true progress grows insensibly on. The mind clears of prejudices and fogs, the spirit grows more sunny and cheerful, peacefulness settles over the whole interior being, and truth is seen with greater distinctness. For the great hindrance to evolution is decaying away.—*From The Path*

OTHERS' PAIN

IF ye do not feel the chain
When it works a brother's pain,
Are ye not base slaves indeed,
Slaves unworthy to be freed?
Is true Freedom but to break
Fetters for your own dear sake,
And, with leathern hearts, forget
That we owe mankind a debt?
No! true freedom is to share
All the chains our brothers wear,
And with heart and hand to be
Earnest to make others free!—*Lowell*

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question

What are the main elements in character building?

Answer

(1) The use of the term "building" is very expressive and significant in connection with character, and perhaps more clearly than any other word explains the process of character formation. This being so, we may restate the question and ask, "What are the materials and the tools, who are the workmen, who is the master-builder?"

All of these we may find in ourselves. The tools with which we work are our thoughts, our desires, and these, too, in another aspect constitute the material out of which is woven that marvelous and subtle garment of the Soul—character. And we may find in ourselves the three grades of workmen, the laborer or apprentice, the craftsman, and the wise Master-builder, though this last, the Master-builder, is known to but few of us in this day and generation because we have disobeyed his commands and have not faithfully followed the design traced by him upon the trestle-board. We ourselves, in our present development, are either craftsmen or apprentices, or in the majority of cases a mixture of both, according to our attitude with respect to the lower nature, whether we have dominated it or become its slave. But the privileges and responsibilities of craftsmanship are ours if we will take them, and follow the dictates of our Divine Nature, the Divine Soul within each of us.

Just as a building cannot be erected by merely making plans, by intentions and thinking, but by hard work, so is the building of character accomplished only through work. We bring with us into each life the character which we have built up in our past existences and upon this we must build for the future.

(2) Character building is our chief business. We are always building, but not always aright, and that which is wrong must be destroyed and something better put in its place. "Except the Lord build the house they labor in vain that build it," for otherwise it is like the house built on the sand that falls before the storms. That our building may stand it must be founded on the rock of the eternal spiritual nature, and the divine one within must direct the work. We, as craftsmen, must follow the plan and be guided by the word of the Master Builder, and not be carried hither and thither by a thousand discordant voices arising from the lower nature. All unfit material must be rejected in the making of this structure. The fit and the unfit are both at hand and we have to choose. A plant will take from the soil in which it strikes its roots the elements that are suited to its own upbuilding, for each little life in its hierarchy of lives works in harmony with the One Life and its plan. But we, in our character-building, are prone to follow blind guides. The brain-mind, lord of the senses and high priest of selfishness, holds sway too much, and instead of precious jewels without flaw or blemish, we have rotten wood and crumbling stone. We identify ourselves with this ruler of the senses instead of with the higher self, and imagine we want all the useless and hurtful things it prompts us to seek. Let us but identify ourselves with the higher nature and see things at their real worth, and we shall have no more use for the worthless in our building. Then will courage and patience and compassion find place, and selfishness will be crowded out.

We may, in a moment of time, set ourselves to work to build in this

way, but we cannot in a moment of time complete the structure. There has been so much wrong building that must be rectified, so much bad material used that must be gotten rid of, that the process is slow, requiring patience and courage and indomitable will. But enduring structures require time in their building and something to try their power of resistance. The sturdy oak has had its centuries of upbuilding and battling with storms, and still endures, while the mushroom grows up in a night and may vanish as soon. The very things that seem to us to be hindrances are helps if we but meet them aright. The gross iron of their make-up becomes a purified and sublimated article that gives strength to our inner fibre when we resolutely make them our servants instead of our masters. And every conquest adds new strength. So, if we allow no failure to dishearten us, but work on and on with the master-plan before us, the time will come when beautiful and filled with living light shall stand complete the structure which nothing can destroy. Not for self can such a one be builded, but for the self of all selves it may.

B. W.

(3) When we think of a great person in history, who has lived nobly and unselfishly, who has suffered that the burdens of others might be lightened, is it of the body we are thinking? Surely it is not, for we might never have seen the person, yet we feel we know him well and his life, even after many years, fills us with admiration and inspires in us a hope with which the whole course of our lives may be changed. What is it then that makes the memory of that life so strong in us? What is it that made his life so powerful? We know it was not the body nor even the mind, it was a something back of those which influenced his every thought and deed. It was his character, pressing upon and into the events of his life, and as the character was so his life was. Thus Joan of Arc is but the name by which we speak of one strong, noble character.

Again, why is it that among the millions of people on the earth no two of them are exactly alike, either in mind, body or life? They all have minds yet regard the same thing in different ways, they all have faces with eyes, a nose, a mouth, yet it would be impossible to pick out two of them that were more than similar in looks; they all do the same things yet their lives are widely different, their tastes, likes and dislikes. Something must have left its mark upon each one to cause this great dissimilarity, to cause the same features to appear so unlike. It is the character, bringing with it those traits and tendencies from the past, which each one has attached to himself, that has stamped itself upon the mind, life and body. More truly, what we see and know as the person, is but the image or likeness of the character. We see the character in the expression of the eye, we hear it in the words from the mouth, it is revealed in the deeds of the hand.

Character may be said to be the soul's own vesture which it has woven for itself through its many journeys through life. So our character today is to us a register of the effects of past experiences, which we ourselves have unconsciously kept and of which our karma is the result. In existence after existence we have met life's experiences, used them as we would, wisely or unwisely, selfishly or unselfishly, and made them a part of ourselves, building up our characters. Character then is the record of what we have been in the past; and what greater proof of past lives could we have, for if we are not responsible for our own characters, where, when and how did we come by them? and whose the blame if our character is weaker than another's? If in the past we chose to live in selfishness, it will be found in the character. If we have aspired in thought and action towards our higher nature the character will reveal it.

As the child at play takes one block and adds it to another till he builds for himself a toy house, so every hour, every day, he is building his character, from the use he makes of the experiences of his life. With his house, he soon discovers that he must build firmly and evenly or it will tumble down, that if a misshaped block is used it will spoil the house, that if he builds with his eyes open he will have better results than with them shut. But people are continually building their characters with much less care and thus there is need of much rebuilding. It is only with a realization that we are souls and that there is a noble purpose in life, that we will allow nothing that is unworthy to attach itself to us, then will our characters be untainted, noble and strong.

E. P.

WHATEVER I leave undone some one else has to finish.

FRAGMENT

by TENNYSON

I WAGE not any feud with Death
For changes wrought on form and face;
No lower life than earth's embrace
May breed with him can fright my faith.

Eternal process moving on,
From state to state the spirit walks;
And these are but the shattered stalks,
Or ruined chrysalis of one.

Nor blame I death, because he bare
The use of virtue out of earth:
I know transplanted human worth
Will bloom to profit, elsewhere.

Theology of the Future

SOME eminent theologians are discussing the source of the theology of the future. The Rev. T. A. Munger invites the churches to turn more and more to the university for its theology, but the Rev. Dr. George A. Gordon believes that vital and permanent truth will come from pastors and preachers. Both these men have a reputation for liberal orthodoxy and the discussion is an interesting one.

With regard to the former of these two views, it might seem as though the universities themselves are as much in need of reform as the churches. The modern university has without doubt many admirable features, but we had not hitherto looked upon it as a theological gold mine, nor can we look with equanimity or even with seriousness upon the kind of theology which it would be likely to produce. Its athletes are, however, frequently of a very high order.

It sometimes happens that the views of university magnates force themselves upon public attention, and these views are not always of a nature to commend themselves to popular confidence. We may, for instance, cite the views of a well-known university chancellor, widely published and advertised, to the effect that the lives of sickly and deformed infants ought to be "snuffed out," and that all incurable cases of disease ought to be terminated by the scientific murder of the victims. If this is the fruit of university theology, if these are the views submitted for the acceptance of our young men, we can only say for the moment that we do not like them.

Then again there was that other educational luminary who wishes to

refuse university education to all students who cannot show that they have a mental equipment of psalms, hymns and catechisms. Is this the broad and tolerant theology which is recommended to us? Dr. Munger of course detests such opinions as heartily as we do ourselves, but we none the less remember the hysterical twitter of delight in which so many religious newspapers forthwith indulged.

Upon the whole, we think that Dr. Gordon's suggestion is the more tolerable, although the world is not likely to become enthusiastic for either view. The preacher with an unbiassed sense of duty, with an unobstructed vision of human fraternity, will be a power in the world of tomorrow as he is in the world of today. We hope much from an increase in the number of such men, but we strongly hold that the humanity of the future will go for its theology neither to the university nor to the preacher. Not for ever will mankind go cap in hand to any external authority whatever. We do not assent to the belief that upon essential ideals of conduct, that is to say of religion, the world will be for ever divided into the teachers and the taught. A new theology is upon the horizon, a theology which will not need intellectualism for its explanation nor eloquence for its recommendation. It is that theology which was once authoritatively described as being so simple "that the wayfaring man, though a fool, cannot err therein."

The advice and the example of good men will never cease to be of value, but humanity does not want any more of the scheduled and catalogued creeds which have passed current for so long. The supply of these mischievous and silly things will not perhaps cease yet awhile, but the demand is dwindling, and the buyers are very few. Universities and creedists may dispute for the coin of vantage, but they will pardon us for the use of terminology not altogether strange to them when we say that the market is weak.

The religion of the future will be the religion of conscience, not the religion of another's conscience nor faith in another man's faith. Every man will be his own church and his own preacher, and in the stillnesses of his own heart he will find the Holy of Holies with ever open doors.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

The Past

Yes, even though our past contain crimes that now are beyond the reach of our best endeavors, even then if we consider the circumstances of time and place, and the vast plane of each human existence, these crimes fade out of our life the moment we feel that no temptation, no power on earth, could ever induce us to commit the like again. The world has not forgiven—there is but little that the external sphere will forget or forgive—and their material effects will continue, for the laws of cause and effect differ from those which govern our consciousness. At the tribune of our personal justice, however—the only tribunal which has decisive action on our inaccessible life, as it is the only one which we cannot evade, whose concrete judgments stir us to our very marrow—the evil action which we regard from a loftier plane than that at which it was committed, becomes an action that no longer exists for us save in so far as it may serve in the future to render our fall more difficult; nor has it the right to lift its head again except in the moment when we incline once more toward the abyss it guards.—Maurice Maeterlinck in "The Buried Temple."

GRATITUDE does more good to the man who feels it than to him for whom it is felt.—H. P. Blavatsky

Laws No Remedy for Human Ills

THERE could perhaps be no more valuable study than that of the attempts which the world has made to happily regulate its affairs by means of laws. It would of course be a study of failure, absolute and colossal, but the recognition of failure might well be the beginnings of better things. Recognition has of course not yet come and it may be a long way off. We are still as feverishly interested in law-making as though it were an entirely new invention accompanied only by the most fortunate auguries for the future, and with no discreditable history behind it. We still believe that we can see in it the panacea for all human ills, the political philosopher's stone which can turn all our leaden

troubles into gold. There is a pathos in credulity almost as great as the pathos of incredulity, and a superstitious belief in the reformatory potency of human laws is as strong and as dangerous today as it ever was before. It is becoming the enemy of personal duty, the pretended substitute for personal virtue. If one-half the force which is now expended in entirely well-meaning demands and struggles for legislation were diverted to the performance of the neglected personal duties of life, the duties to family and to neighbor, the golden age would be perceptibly nearer and social calamity would be perceptibly further away. And yet the failure of lawmaking to perform more than its rightful functions ought by this time to be sufficiently evident. We have only to ask if it has succeeded in advancing human happiness, for surely upon this alone must rest its claim to our sympathy and interest.

If lawmaking has not advanced human happiness it has either been fundamentally misdirected or it has been asked to perform what is inherently beyond its power.

We must at any rate concede that human happiness is not advancing, and that the happiness of the individual is now less than it has been. Human happiness, the happiness of the individual, is the only gauge of national progress. If the average of happiness is increasing, the race is advancing; if the average of happiness is diminishing, the race is retrograding. There is no other possible alternative, no other guide, no other index. The verdict is of course beyond question or dispute. The causes of human suffering are being multiplied, and we may well question if there is a single class of the community which has now a greater measure of real happiness than it possessed many decades ago, while in some classes the wild beast which lies perilously near the visible surface of human nature is rapidly destroying, under the tuition of pain, the only restraints which it has ever known. With these sinister signs has gone an increase of legislation. The parliaments of the world, almost without exception, are entirely choked with impending enactments, with the repeal or the amendment of old laws and with the passing of new ones. Probably never before in the history of mankind have such avalanches of laws descended upon humanity, never before has the almost universal increase of misery been so startling nor so tragic. Is it not time that we faced the real issues, that we no longer asked of human laws what they cannot perform, that we recognized wherein they can be helpful and wherein they can be only helpless and mischievous? Otherwise some entirely worse thing may befall us.

There can of course be only one successful issue from the whirlpool of calamity which threatens to engulf our social systems. We must have fewer insane appeals for new laws to change human nature and a keener sense of individual responsibility, an enlarged sense of individual power to change the human faults with which we are most directly in contact. He who succeeds in putting hope into one human heart has performed a sublime service to the nation, he who redeems one child life from the sin or shame which menaces it has proved his patriotism by service, and he who makes of himself a model of self-sacrificing citizenship in the small and the domestic affairs of life is already one of the rulers of men. Never before have we heard so much of civic and political duties; never before have they been so ill performed. Nature has her way of working back and back to the individual, and the debt of national duty remains unpaid so long as our only vouchers are for votes, and the clamorous devolution of personal duties upon the pitiless lawmaking machines which we have too long deified and trusted.

STUDENT

The Areopagus—Frontispiece

OUR frontispiece represents the Areopagus of Athens, always associated in the popular mind with the hill of Mars, the seat of the Court where Ares was tried by the twelve gods for the murder of Halirrhoetius. Æschylus, however, asserts in the *Eumenides* that the Court was appointed by Athene for the trial of Orestes after the murder of Clytæmnestra. Whatever may have actually been the origin of this wonderful ruin, the rock cut seats of the ancient court may still be discerned where accusers and accused faced each other in the open air standing by the two great stones known as the "stone of implacability," and "the stone of crime."

Coarsening of National Ideals

THE Rev. Dr. Watson, better known as Ian Maclaren, is much troubled at the coarsening of national ideals. It is not surprising that he should be perplexed and even dismayed at the tendencies which he sees around him and which he enumerates in the graphic language of which he is a master. He deplores the false glitter of the town, the banality of the theatre, the degradation of amusement into a means of gain, the insincerity of thought and of literature. Young men are not serious. They want perpetual sunshine, constant excitement and the charm of some new thing. All this is of course deplorably true and in reading the published report, all too curtailed, of Dr. Watson's speech, we confess to skipping much of the diagnosis in order the more speedily to reach the remedy. Here we must confess to a disappointment. We are told that

If every man should have to make his choice for himself and his nation, between mammon, luxury, and vice on the one hand, and simplicity, purity, and faith on the other, then the spirit which had been slumbering would awaken once more.

But every man does have to make his choice and the trouble is that he chooses wrongly, that he allows himself to be carried away by the popular tide of pleasure and self-indulgence. If men were to choose simplicity, purity and faith there is no doubt that the slumbering spirit would awaken, and many other things with it, but men do not choose these things. They seem to prefer their opposites, and what are we to do? It does not seem that Dr. Watson helps us very materially by merely cataloguing our shortcomings and there leaving us.

There is, after all, much to be said for the young men of today, much to be said in excuse as well as in reproof. They are pretty much as we ourselves have made them and we can hardly wonder at their susceptibility to the influences with which we surround them. We can put upon one side the pernicious teaching of the nursery with the recognition that it is a fitting preparation for the still more pernicious influence of the school and the university. Around the young man center all those forces which rob life of its dignity and its nobility. The only seriousness which we teach him is the seriousness of self-acquisition. Religion and science combine to rob him of his ideals and to break up the pictures which might become for him a guide and an inspiration. Religion cramps his existence—the only kind of existence in which he is interested—into a few feverish years; it banks up the darknesses before and behind him, and the science which we so laboriously teach him demonstrates to him that he is but an animal, a beautiful piece of mechanism which may be shattered forever by a fall in the street or a casual chill. What wonder that he chooses between the life of the butterfly and the life of the tiger? These are the only two paths which we have ever allowed him to see. Truly it says much for the innate power of truth that it can ever withstand the enemies which we have assembled to assail it.

The young men of the present day will not be redeemed by the educational agencies upon which we build our hopes. They will be redeemed by nothing but a knowledge of the immensity of life, by a vision so grand that everything unworthy will sink into insignificance. They must be taught that life, *as they know it now*, is eternal, and that no abyss of non-existence awaits them when the sun goes down. Let us remember that the whole of our social system, the whole of our education is a practical inculcation of the precept to "eat, drink and be merry, for tomorrow we die." This is what it actually is, however sincerely we may theorize in an opposite direction. We have to show our young men that life is eternal, that the inner conflict between good and evil must be fought to its end, that death decides nothing, that it is but a moment's truce in a struggle which must be renewed. We have taught them that life is bounded by a few dozen years and that if there is indeed a life after death—and we pay many of our scientists to persuade them that that is not the case—it will be under conditions unknown and unknowable. How then can we blame them for looking at life through the glasses which we ourselves have given them? Why should they look seriously at so small and slight a thing? Why should they not eat, drink and be merry if they must die tomorrow, or if tomorrow they must enter upon some vague existence of which they know little and care less? Our young men need defenders and friends more than they need censors and critics. They need those who will take the bandages from their eyes so that they may look upon the boundless panorama of individual

life and see for themselves that death cannot break nor stay it. They need those who will give back to them the dignity of living of which we have robbed them. They need those who will give to them the crown which comes only from the recognition of eternal life, eternal effort, eternal hope and eternal attainment.

STUDENT

"Here Am I, Send Me"

A GREAT military commander said once that he had searched a whole country and had found but one man therein. That commander was doing upon a small scale what nature is doing upon a great scale. There is a demand for men, and there is an abundance of volunteers, an abundance of those who suppose themselves to be fitted for any position, so it be but high enough. Truly, very many are called and very few are chosen.

There is in nature a process by which men are tested and selected, a process which works automatically and incessantly. There is in every one an upward gravitating force which carries him to the point of trial, and he must then either fail or succeed, either stand back and await more strength, or go forward to some other test. There is always a great work to be done, but from the hosts of humanity how few are there who prove their capacity to do it, who can answer the subtle tests which they have invoked at the hand of nature! What then is nature's conception of capacity, what is it she exacts from those who would sit in her high places? It is not a capacity to do one thing, but to do all things. It is not the ability to stand heat, but also to stand cold. Here is one who can endure poverty, but can he also endure riches? Here is one who can stand unmoved in the face of contempt and hate. This is good, but now let us see if he can endure popularity. Here is another who has decorated his slavery with virtues that are divine, but how will he bear himself when he is the master? Let us take him from the conditions which he has learned and subdued and set him down amid other conditions and see if his tranquillity will now be shaken, if he will turn his eyes away from the inward light which has been the source of his wisdom. Let us see if he can pierce the deception when his self-love masquerades as duty, and ambition imitates the voice of God. Can he turn to all points of the compass or to only one? Is he shaken by injustice, or moved by fear? Is he tranquil under the slight which stings like a whip, and will his fortitude endure against ingratitude and the sneer of a friend?

Unnotified, day by day and hour by hour, these tests come in upon us as though from the careless hand of chance. Yet are they recorded by the law which we have invoked. Whoever in his heart has said, "Here am I, send me!" has invoked that law from which he can demand nothing but the right to try, to be tested. The test comes to no man, but he himself must go to the test. The doors of all attainment stand wide open for us to pass through if we can, but at each door is the Guardian who says, "Thou canst not pass unless thou canst tell me my name." Some have passed but few of these doors, and some have passed very many, but upon nearly all goes forth the fiat somewhere, some time, the "Mene, Mene, Thou art weighed in the balances and art found wanting." Confronting us all is the problem which we have not solved, and that problem is different for all of us. Some base thing of daily life has struck at us in passing and we have not understood it. The lower forces within ourselves have risen in insurrection. They have whispered to us their messages of pride and resentment and ambition, they have tricked us by the false semblance of duty allied to inclination, and we are confused and blinded. And to some has come discouragement, which also is of the pit. The whisper has come to us that there is, after all, no Law, no hope, that we do but beat our wings against doors of iron, that the star which shone for us long since has melted away into nothingness. All these things are the dark shadows which stand by the gates of power and which menace our approach, which turn us back upon the path until we learn to confront them and to tell them their names.

The only fate which can overwhelm a man is from within himself. All nature smiles and beckons his advance, all skies are blue, all waters calm. No arresting hand is stretched forth to stay his progress. We stand each one of us at the high-water mark of our present possibilities, each one of us is awaiting, not the permission to advance, but only the inward strength to pass through the gates onward and upward to all shining and glorious peaks of attainment.

STUDENT

Some Views on XXth Century Problems

Selfishness Is the Cause of All Wars

AN organ of the society of Friends asks why it should be taken for granted that war is inevitable and that civilized nations should still have the right to settle their differences by "fighting it out like beasts or savages." We do not think that the inevitability of war is taken for granted by any section of the community whose views are worth the trouble of ascertaining, but we do think that there is a great deal of short-sighted misapprehension as to the way in which war can be abolished. One of the most dreary signs of the times is our inability to look straight at basic principles, our determination to spend our time in cutting off the leaves of the tree of evil and leaving the trunk untouched and at liberty to replace those leaves as fast as they are destroyed.

The real evils which poison the life of the world are not war, nor crime, nor alcohol, nor any of such things, but unbrotherliness, and so long as unbrotherliness is firmly rooted in the life of nations, so long as it is watered, cultivated and cherished, so long will it continue to bear fruit after its kind. We may discourage war and penalize crime, we may work our legislature and our reform machinery to its utmost limit, but so long as the evil sap rises in the tree, so long will the branches and leaves multiply and grow.

We have of course the deepest sympathy with every effort to minimize the terrors of war, with every phase of the struggle against crime and misery, but we are none the less certain that if one-half the force were directed to the simple teaching of brotherhood, nearly all our social evils would perish of inanition. At the present time some of the finest minds in the world are discussing the causes of war. The explanations and the remedies are alike endless and varied, but how many are there who can see that the wars of the future have already their mimic beginnings in the nursery and the school, as indeed have all other evils, all other shames and tragedies.

We sow the seed in self-love and self-complacency and we reap the harvest in bitterness and sorrow, and yet we cannot see the link between the two, and even in the midst of our lamentations we sow the seed with greater liberality than ever.

Teach the children to be brotherly, teach them to believe that all humanity is of one family; make great their sympathies and then, and not until then, shall we be able to say that the Prince of Peace has not lived in vain.

STUDENT

Is There An Undiscovered World?

IS there any other world than that with which we are familiar, and if so, can we, by any possibility, lay hold of the end of the thread which will lead to it? There must surely be such another world. The musician can distinguish sounds which are inaudible to others and the artist can see colors which are invisible to others, and we know that sounds exist which are far beyond the power of any ear, as color exists which no eye can see. Are these perhaps the threads which we seek and where then do they lead?

This power to see and to hear which is possessed by artist and musician, whence comes it? Does it find its source in an abnormal delicacy of the mechanism of eye and ear or is this abnormal delicacy the result of some other cause, and if so, of what cause? We are learning to dethrone the god of chance and to believe that he is indeed but an ignorant and foolish ghost and so to transfer our obeisance to reason and to law. Is this finer mechanism of ear and eye due to some interior consciousness which has created it, is it due to some habit of thought in this or in some other life which has moulded for itself the means for its expression? Perhaps we can answer this and many another question if we can once realize that the consciousness of the normal man is not at all in that full contact with nature which we like to suppose but rather that it is confined to five narrow avenues of perception and that it knows nothing of outside nature except the restricted knowledge which these five avenues can supply. We are, as it were, shut up in a structure which has five tiny windows and we know no more of the landscape than these windows can disclose. We are so accustomed to our confinement that we have learned to deny that

Faith & Aspiration Are Requisite

there is, or ever can be, any other landscape than that which we can see. Let us now imagine that by faith and aspiration, by thought and by devotion we can somewhat enlarge these windows, and we may understand something of what the artist and the musician have accomplished. They have enlarged the windows by which they know the outside world and some added beauties are disclosed unto their vision.

The future science of the mind will advance with marvelous speed because it will recognize that the mind is the tenant of the body with unlimited power to improve the premises. It will recognize that the body is an unfinished structure and that the architect is the consciousness within. It will recognize that thought is the implement by which the indwelling mind either enlarges and gives transparency to the windows of that house, or narrows them and beclouds them.

The phraseology which we now apply to mental states will no longer be nebulous and meaningless but definite and precise. Ethics will no more be confused with a vague and well-meaning sentiment and man will recognize the goal of his evolution and every effort thereto will be precise and well directed. In our mental research we shall borrow the accuracy of the physicist and the road of progress will be mapped and charted. We shall recognize that selfishness is folly and by the education which is based upon knowledge we shall solve every social problem. Already the new wisdom is dawning within the world, already we are becoming assured of the infinite powers of knowledge which are within us if we will but so think, and so aspire, and so imagine, as to make our bodies transparent to the spiritual light which is around and which for these many ages has beaten in vain upon the adamant in which we have been content to live.

STUDENT

Resources of Civilization Exhausted

SOME parents seem to be almost proud of their own incompetence. What are we to say of a mother who brings her boy, aged ten, before the judge with the following catalogue of woes:

He is beyond our control.

He steals money and has stolen his brother's boots.

He stays out at night.

He plays truant.

He picks the lock when I lock him in.

He breaks the door when I lock him out.

He has been caned by me.

He has been strapped by his father.

He has been punished by his schoolmaster.

He has been taken to school by me.

He has been taken to the police station, but they would have nothing to do with him.

In this instance, the resources of civilization seem to be well-nigh exhausted. If we cannot reach the heart of a boy of ten by beating him, locking him in and locking him out, what is there left for us to do? It seems a pity that the judges, before whom these boys are brought, do not sometimes take the opportunity to fix the blame upon the right party and to speak to these incompetent parents in a manner which they would remember and which might be reported in the press for the benefit of others. It probably never occurred to this particular mother that in her appearance before the judge she herself was the accused and that her own son was the accuser.

Infant Mortality & Some of Its Causes

THE Commission of the Chicago Children's Hospital Society seems to be doing much useful work not only in instructing mothers as to the proper way to feed children but also in enabling them to carry out the advice which is given. Many of the experiences which are met with throw an unpleasant light upon some of the causes of infant mortality. An almost incredible ignorance seems to prevail in certain quarters as to the proper food for babies. Pure milk was in many cases rejected because of the "yellow stuff" on the top which was supposed to be medicine; while many mothers supposed that milk must only be given as a remedy for illness and should be discontinued as soon as possible.

Art Music Literature and the Drama

The True Drama. A Mighty Educational Force

THE *Ajax* of Sophocles has been given in *Greek* by men and women of the Greek colonies of two of our metropolitan cities, New York and Chicago. A generation ago such a thing was undreamed of; ten years ago it would have been impossible. It must have required something more than a mere romanticist to discover in the Greek peddlers and venders of our cities the possibilities which these dramatic representations prove them to possess. It has required something more than a dreamer to convert these possibilities into tangible realizations. It is well known that the Greeks of our large cities rather out-rival their compeers from the other Mediterranean countries both in industry and in character. They are sober, industrious and peaceable, and a high regard for education is universal among them. It is significant in these times that *Ajax* should have been chosen. The drama itself is a trumpet call to the soul and symbolic in its every line of great truths, holding up, well-nigh persuasively, the mirror to what is the great disease of modern times, ambition.

The drama will be easily recalled as the story of the madness of Ajax. Ambition, augmented by his disobedience of the gods who were his teachers, is in Ajax punished by temporary madness, and the cloud, which descends by command of the gods themselves to obscure his mind, leads Ajax to deeds which are unworthy of his true nature. Upon recovering his vision he is overwhelmed by shame, for he perceives the true nature of this thing which fastened itself upon him, his ambition is revealed to him in all its hideousness, and he takes refuge through the only avenue of escape that appears to him—death.

The performance, as just given by the Greeks of these colonies, has a unique interest from the fact that for ten successive weeks, seven nights of each week were given up to rehearsals—and this from people who labor from dawn until twilight six, if not seven, days of every week. Besides this, *none of the actors received money.*

They gave the drama from their pure love of its ideals, for the honor of their native Greece, and the glory of the race. When we recall what the drama was in the days of old Greece, and how, if it could have been kept upon the high plane to which it was lifted by Eschylus, it would have truly been the salvation of the Greek people, we know that there is something more than we realize at work beneath the surface of things. The presentation of *Ajax* is perhaps only a sign, but, methinks, one well worth reading.

SAID Adelina Patti recently: "Oh, those Russians! They would rip the Tropic of Capricorn off the earth and fling it to you for a belt. Never have I seen such lovers of music as Russia holds. The love, or, to speak accurately, the passion for music, is not with the rich alone or with the poor alone. It is in the pulse of the whole people. It is a link binding them all together."

With the Echoes of Fifty Years Ago

THE *Ohio State Journal*—which is, by the way, nearly one hundred years old—has been recently reviewing occasional articles published in its columns *fifty years ago*. From among those reprinted we clip the following (of passing interest today):

(From our issue of December 14, 1853)

Ole Bull respectfully announces to the citizens of Columbus that he will give in this city one Grand Concert, on Wednesday evening, December 14th, at Walcutt's Hall, on which occasion he will be assisted by

SIGNORINA ADELINA PATTI,

The Musical Phenomenon, and

MAURICE STRAKOSCH,

The Great Pianist, Musical Director and Conductor

Programme

PART I

- 1 La Sylphide Fantasia Romanique, composed and executed on the pianoforte by Maurice Strakosch.
- 2 Cavatini, from Verdi's *Ernani*, sung by Signorina Adelina Patti.
- 3 Soldier's Dream, composed and executed by Ole Bull.
- 4 Magic Bell, followed by the Youth, Love and Folly, Polka, composed and performed by Maurice Strakosch.
- 5 Coming Through the Rye, sung by Signorina Adelina Patti.
- 6 Fantasia Appassionata, by Ole Bull.

PART II

- 1 Musical Rockets, composed and performed by M. Strakosch.
- 2 Introduzione di Capriccio E. Varezzone, composed for the violin alone, by N. Paganini, and performed by Ole Bull.
- 3 Jenny Lind's Echo Song, sung by Signorina Adelina Patti.
- 4 The Carnival of Venice, composed and performed by Ole Bull.

The price of tickets has been fixed at \$1.

REGARDING his orchestral works Gounod often expressed himself as not believing in over-using modulations. "When for a quarter of an hour," he used to say, "the orchestra plays in C, the walls of the room are in C, the chairs are in C, and the sonority is doubled."

ONE wonders why Scotland has never taken a place of any importance among the musical nations of the world. Time was, many hundreds of years ago, when the "land of flood and mountain" was also a land of song. The Scottish people, in the early days, were sweet singers, and no nation, at one time, was richer in characteristic old-world music. Some of their songs bear the stamp of the greatest antiquity. One Gerald Cam-

brensis, of the Twelfth century, recorded that the people sang songs and used for their delight the harp, the tabor and the choro. But the monks, who alone knew how to write, would not deign to transcribe the ballads of the common people, and it was not until about three hundred years ago that a serious attempt was made to save from oblivion the wealth of melody which has come down from the old days.

GOETHE somewhere says in one of his prose-poems, "the eye needs color as much as it needs the light."

THE true drama points away from the unrealities of life toward the true life of the Soul.

KATHERINE TINGLEY

FROM DRAWINGS BY RAPHAEL
(Academy of Fine Arts, Venice)

WHEN THE FULL-GROWN POET CAME

by WALT WHITMAN

WHEN the full-grown poet came,
Out spake pleased Nature (the round impassive
globe, with all its shows of day and night.)
saying, He is mine;
But out spake too the Soul of man, proud, jealous and
unreconciled, Nay, he is mine alone;
—Then the full-grown poet stood between the two, and
took each by the hand;
And today and ever so stands, as blender, uniter, tightly
holding hands,
Which he will never release until he reconciles the two,
And wholly and joyously blends them.

✻ ✻ "NATURE IS IN EARNEST WHEN SHE MAKES A WOMAN" ✻ ✻

IN the New Age, which is now in its formative period, and in which, as all signs point, women are to play

an important part, it is interesting to bring before the mind some of the activities by which they may become useful members of a community, and through which they may fit themselves into their new relationship. Gardening is one of these, an occupation which brings into play a variety of faculties, and one to which woman is peculiarly fitted by nature. In the first place, the out-of-door life it necessitates, and the constant contact with Mother Earth it brings, induces health—one basic requisite for a normal, well-balanced life.

To attain the best results it is necessary to have delicate perception, æsthetic feeling, a trained habit of observation, much patience, pure love for nature and common sense. Essential, but secondary to the above, because more easily acquired, is some scientific knowledge of plants and their needs. The exercise of these faculties broadens the character in many directions and affords every opportunity for it to grow purer as well. Flowers are sweet companions and it is hard to imagine a refined nature coming in close contact with them without gaining greater insight into some of the deeper mysteries of life. Those who are successful in floriculture seem to establish some sort of rapport between themselves and the something which inhabits these less developed but perhaps more beautiful forms. It is a fact of common observation that flowers always grow for some and always die in the hands of others—a fact which I once attributed solely to knowledge and care on the one hand, and to ignorance and neglect on the other. But an ardent lover of flowers once told me that I was quite wrong in such an inference, and that to make a plant really thrive it was necessary to love it. As proof of this she gave me her experiences for two successive years. She declared that during both those years her plants received equally intelligent care and attention, and that the conditions of soil, light, air, etc., were the same. The first year, however, they did not thrive well, while the second, they grew vigorously; and this difference she attributed to the fact that the first year she cared for them intellectually, while the second, she loved them.

That it is not simply a theory that women are by nature preeminently fitted for this occupation is shown by what some women have done. Mrs. H. H. Kellogg, who, by the way is *unsalaried*, is the only woman park superintendent in Chicago. Recently she turned her attention to a small triangular piece of ground at the intersection of Ruth, Cass and Chestnut streets, which had been used as a garbage dump, and under her personal supervision it has been transformed into one of the most charming small parks of the city.

Strange to say, America, the pioneer in woman's work, does not offer the same advantages as England in this particular field. Lectures are given in several colleges there, and at Swanley College a thorough and systematic training is given to women who wish to become gardeners. They are taught the science and art of fruit growing; gardening and the culture of flowers and vegetables, and the college, having among its objects that of fitting women for colonial life, teaches poultry-keeping, cooking, including bread-making, laundry-work, general house-work, dairy-work, the care of bees, and even driving, harnessing horses, light carpentry work, hygiene and sanitation. Mr. Hall, of the college at Swanley, said recently, "There is absolutely nothing that my lady gardeners seem unable to accomplish, and I believe that some of them could even make a clothes-pole sprout."

The Countess of Warwick has established similar work at Reading, England, and the students of the school established by her are also en-

Women as Gardeners

couraged to enter for the diploma of the Royal Horticultural Society. To quote her own words concerning the require-

ments: "The student must know the elementary principles on which horticultural practise is based. She must have a thorough knowledge of the value of soils and the different requirements of plants in water, heat and air, and be able to discriminate between different species and to dissect flowers under the microscope. She must be a first-class botanist, able to put her knowledge to account in surveying or landscape-gardening, in hybridizing and selection in the culture of fruits, and in the treatment of insect and fungus pests. She must also understand the rotation of crops, and be skilled in budding, planting, pruning and potting, and know how to grow a tomato or melon as well as she can make up a bouquet or decorate a table."

Such demand as there is in America for this training is now met to a certain extent in some of the agricultural colleges, but a greater demand would no doubt call out larger opportunities.

Point Loma is laying the lines in this direction, as in almost every other, having a tract of land known as the "Women's Garden." It is probably not an accident that the floriculture of Point Loma should be virtually in the hands of women. It is probably not an accident that the Leader of this great Movement, which has made one of the veritable

"waste places of the earth" blossom like a rose, should be a woman. And it may not be wholly accidental that the wonderful gardens around Loma Homestead, where the pine stands side by side with the palm and poinsetta, where the jasmine and the hardy rose clamber over the porches with an abandon born of luxuriance, should have been placed by the Leader in charge of one of the women students. The latter, for years a

teacher, has found in her work close to nature, health, courage, happiness and a knowledge that books alone can never give. Under her touch the gardens have sprung into something like new life. It is as if each plant vied with its neighbor in an effort to lift the whole to a standard undreamed of before. The idea that the highest privileges of so-called "higher education" are wasted on one who devotes herself to bringing out nature's beauty in all its fulness has long been consigned, in Loma-land, to the limbo of the discarded fancies and outworn beliefs. Because of its own inherent advantages as a bringer of wisdom and health, a restorer of shaken poise, and a true educator on the highest lines, floriculture in Loma-land has become among the women students a coveted privilege.

GERTRUDE VAN PELT

Woman's Work in Germany

GREAT tidings come to us from Germany. A hall in the imposing building of the Reichstag is to be temporarily given over as a meeting place for the International Congress of Women, which will be held in Berlin in June, and the Town Hall of Berlin also will receive them as guests, all of which is due to the fact that the wife of Count von Bulow, the Premier, takes a great interest in the congress. It is well-known that the Kaiser's ideal is the *hausfrau* of the good old-fashioned style, but apparently there are those who have revolted from that ideal just a bit and the Premier himself—so they tell us—leads the revolt. The following news from a London journal adds interest to the above mentioned facts: "Lady gardeners are rapidly coming to the front in the Fatherland, judging by the appointment of Fraulein von Karlowka, of the Horticultural School at Marienfelde, to the post of Royal Gardener at Braunfels. Is this yet one more phase of the revolt against the *Hausfrau* ideal to which German women have been so long vowed?"

LIFE is so much more tremendous a thing in its heights and depths than any transcript of it can be, that all records of human experience are as so many bound herbaria to the innumerable glowing, glistening, rustling, breathing, fragrance-laden, poison-sucking, life-giving, death-distilling leaves and flowers of the forest and the prairies.

—Holmes

A Curious Plant

A WRITER who is interested in the plant life of the desert, tells us of a curious little plant to be found there, which blooms at night only. Its flower yields a most delicious perfume which saturates the air for a great distance. In the morning, however, no trace of flower or perfume is to be found.

An involuntary feeling of attraction arises in one towards this lonely little flower unfolding its beauties to the moon and stars only, and offering its incense to the night; its modest charms to be rarely realized and appreciated save by some wandering lover of outdoor nature, or perhaps the belated traveler.

To us, who live in the day, there is always a certain fascination about all those creatures and plants whose times of action come at the hours which are night to us. They are quite as necessary in the great plan of evolution as are the more active creatures that flourish in the daylight, perhaps even more so.

Madame Curie

ONE of the largest and best-equipped laboratories of the Pasteur Institute in Paris has been placed at the disposal of Professor and Madame Curie, and there is every prospect that a certain sum will be set aside for their use by the Chamber of Deputies. This will enable them to continue their researches unhampered by the problem of supplying the daily bread. Professor Curie will be remembered as the discoverer of radium and Madame Curie of polonium. An English contemporary gives the following interesting details regarding Madame Curie, who, it is said, began her scientific career as a penniless student in the "Quartier Latin" of Paris. Her face, we are told, "is arresting rather than beautiful. Her dark, deep-set, keen eyes, her fine broad forehead, fringed with jet black hair, make her a woman to notice, but the cast of the face is domestic, and not that of the savant. Quiet in manner, she speaks French, Russian and German well." But with all this it would seem that she is very retiring, shunning "advertisement and notoriety, and quietly working away in her laboratory."

M. Curie has been insisting that his wife shall receive the honor due to her as the discoverer of radium. One of the coveted distinctions with which France rewards her great men has just been refused by him on the ground that it was not also offered to his wife.

SIR WILFRID LAURIER, Premier of Canada, recently said with regard to the anti-cigarette legislation now before Parliament: "More can be done by women in teaching and educating our youth than in seeking legislation."

A CERTAIN opera-singer recently refused to wear a costume selected for her by her manager because, in her opinion, it was not sufficiently modest. The manager brought an action for damages against her in consequence, but the singer has won her case. The court, in giving judgment for the defendant, declared among other things, "that a woman's right to preserve intact her feelings of modesty can never in any case be infringed upon, and that, finally, no contract having for its object any sacrifice of such feelings can be upheld by the justice of the country."

Three Zones

IT is said that "there are two places in the world where three zones are represented," where one can pass from orchids to snow in the short space of an hour. Hawaii is one of these places and Darjeeling the other. The change is made by climbing up high mountains.

The change in Darjeeling is said to be the most wonderful. The entrance to the tableland on which the little mountain city stands is through a dark, sombre tropical pass, full of mighty palms and hung with orchids and other jungle growth.

After a while the trees change from palms to the wonderful tree ferns. These alternate with banana trees, until, after some more climbing, forests are reached of magnolias and similar trees.

Through these magnolias the way leads ever up, and all at once, over an open pass, there come into view immense thickets of Himalayan rhododendrons and the evergreen of firs and cedars;

and beyond stand the white, grim, snowclad, frozen mountain peaks like arctic icebergs. In less than two hours a traveler can ascend from orchids through jungles to tea plantations, and thence to a climate of northern roses and violets. It is not such a rare occurrence in Southern California to see the mountain tops in snow and roses blooming in the valleys below.

WASHINGTON is soon to have a diet kitchen in charge of a woman. Physicians expect to

find it the greatest possible help in their work, for it will be so arranged that they can send in directions for meals to be supplied for their patients just as they would send prescriptions to a druggist, with the assurance that the food will be scientifically prepared.

A California Floriculturist

CALIFORNIA has no floriculturist who is more successful or better known than Mrs. Theodosia Shepard of Ventura. In a recent address before the Contemporary Club at Redlands she gave much interesting insight into the growth and development of the plant, tracing it from the simple cell up, through the various evolutionary stages, to the perfect plant.

To Mrs. Shepard flowers are almost human. They are her comrades and fellow-workers, she declares, and yet she does not allow sentiment to make her undervalue practical knowledge, for Mrs. Shepard is an authority on cross-fertilization, selection, hybridizing, grafting, pruning and cutting. She declares that the night is the time to visit with flowers. "The glare of the sunlight is overshadowed by the witchery of the moonlight and the stars, and through the half-lit garden one may wander with flowers fairy-like in form, delicately exquisite in perfume."

U. N.

ONE J. M. Douglas, a lecturer, recently stated to an audience in Ottawa, Ontario: "I have been considering the possibilities indicated by statistics of education in the United States, both common school and collegiate institutions. To judge from these, it is not, in my opinion, at all improbable that the day may come when we will have a woman President of the United States. Certainly in educational circles the young women of the United States are far in advance of the young men."

A GLIMPSE OF THE GARDEN NEAR NORTH END OF LOMA HOMESTEAD

GREEK SONG

from the Greek of Meleager, translated by ALMA STRETTELL

NOW the white iris blossoms, and the rain-loving narcissus,

And now again the lily, the mountain-roaming, blows,

Now too, the flower of lovers, the crown of all the spring-time,

Zenophila the winsome, doth blossom with rose.

O meadows, wherefore vainly in your radiant garlands laugh ye?

Since fairer is the maiden than any flower that grows.

Underground Druidic Temples—Dene-holes of South Essex

WE recently gave a description of the ancient subterranean excavations near the little English village of Chiselhurst. So far, as we pointed out, they are quite incompletely explored. The same is true of another set, known for a longer time. These are the "Dene-holes" of South Essex. The ancient Britons had their Solomon, to wit, King Canobeine, father of the warrior Cassivelaunus. Canobeine or Canoven, like Solomon, was gifted, according to tradition, with many magical powers and with vast wealth. The wealth he is reported to have hidden in, or discovered in, the "Dene-holes." So strong and lasting was this tradition that so recently as a hundred years ago a company was actually formed to explore and work these subterranean passages as silver mines. We do not think, however, that anything was ever done.

The surface soil of South Essex is gravel and loam for about 50 feet down. Then begins chalk, and it is in this chalk that the central hall or dome and its radiating passages, are excavated. To reach them, one has to descend about 70 feet through any one of four shafts by means of a rope. The descent is therefore not very easy, and the surface apertures are quite hidden in the woods.

The plan, as we have said, is that of a central hall or dome; say 20 feet high and the same in diameter. From this radiate many passages up to a distance in some cases of half a mile or more. So far as is known, there are no visible prehistoric remains. But as the floor is largely covered with fallen masses of chalk, and as neither it nor the walls have ever been dug into or sounded, it is quite possible that research would be well rewarded.

We hope that archeologists will soon undertake this work. It seems exceedingly likely that the excavations were some sort of underground temple, or initiation chamber, belonging either to Druidic (Celtic) or pre-Celtic times. STUDENT

Ichthyosaurus in South America

THE University of California has been enriched by a very perfect specimen of the *ichthyosaurus*, the first fossil of its kind which has ever been found in South America. It was discovered near Coquimbo, in Chili, and Professor Merriam, the Head of the Historical Geological Section of the University, says that so far as he is aware no specimen which has yet been found rivals this one in scientific value. The University of California is certainly to be congratulated on its unique acquisition.

Still Discounting Antiquity—Nothing New Under the Sun

THERE has long been a belief that Solomon was a man of unusual wisdom, but it seems that the present age has surpassed him, for we find the assertion in a current periodical that "only the ignorant claim that there is nothing new under the sun." This reckless utterance would scarcely be worth a passing smile were it not the real opinion of so large a percentage of the populace.

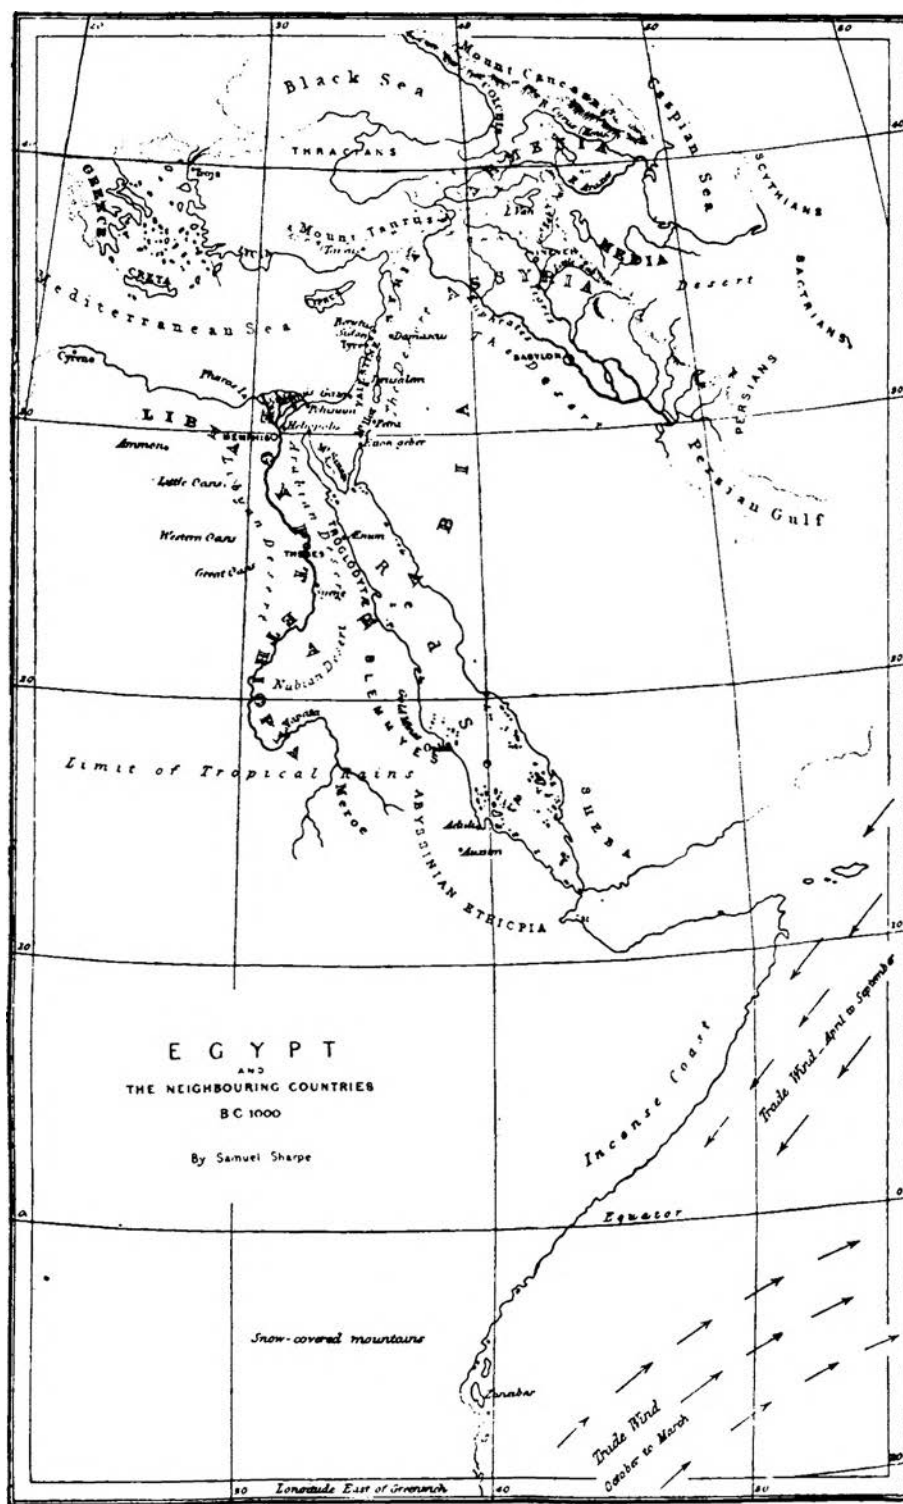

Any one so fortunate as to possess a Bible will find in the first chapter of Ecclesiastes the following passage:

The thing that hath been is that which shall be; and that which is done is that which shall be done; and there is no new thing under the sun. Is there anything whereof it may be said, "See, this is new?" it hath been already of old time which was before us. There is no remembrance of former things; neither shall there be any remembrance of things that are to come with those that come after.

It would readily be inferred from this passage that the parvenue "progressives" of three thousand years ago held views, regarding their own attainments, very closely resembling the self-estimated value of our present civilization, and that the wise king had the same difficulty in convincing the people of that time of the antiquity of history that has attended the efforts of the Three Leaders and especially the present one, Katherine Tingley; experience in convincing the people of the present day that the forests and mountains of Arizona, New Mexico and thence southward through South America contain the monuments and records of a civilization so old that it was dim with age when the prehistoric pyramids and sphinx were built.

Of that, our own former civilization, we have "no remembrance," but may obtain the records if we have sufficient interest in the matter to devote to the purpose one-tenth the amount the nation yearly spends for injurious self-indulgence of one sort or another. Mexico is setting an example in the matter which we would do wisely to follow on a scale proportionate to our national importance and wealth. There would certainly be no more patriotic work than to restore the glory to these fast fading pages of history before they are finally effaced by time. STUDENT

THE map of ancient Egypt on this page will be examined with interest by those who have followed the progress of archeological research, and the history of mankind which it has disclosed.

The Variety of Rootforms

THERE seems to be a quite interesting, and as yet untouched, field of study in the relations between plants and their roots. From the observations we have been able to make, we think that there are at least four essentially different types of connection between plant and root, viz: (1) The root is dominant and produces the top, as violets, ferns, etc. (2) The top is dominant and produces the root, as in the case of cacti, geraniums, etc. (3) The top and root are a single unit, as the conifers and the annuals. (4) The top seems to be an attachment to the root, as carrots, celery, etc. There are also the various classes of semi-roots, tubers, bulbs, etc.

In the first class, the root seems to contain all the vital energy, and even if the top is repeatedly cut off, or the root itself divided, it yet continues to produce fresh plants.

In the second class, on the contrary, the top, or fragments of it, will readily produce new roots for itself, but the roots are not able to produce a new plant. The cactus family is a very striking example of this type.

In the third class, the root and top are apparently animated by a single life; for if they be separated neither part can reproduce the other, but immediately dies. The pines are typical of this arrangement. Plants of the fourth class have the root dominant, with the top rather attached than united to it, as in the parsnips, salsify, etc.

Space forbids a more extended consideration of the subject at present, but it must be plainly evident that if the whole range of underground plant factors were to be included the field of study would be immensely extended. And surely in the gradation from end to end of the long series of rootforms, comprising rizomes, bulbs, tubers, rootstocks, tap-roots, fiber-roots, etc., etc., there must be a vast range of psychological study; for if it is not admitted that plants have an indwelling intelligence, they must, in any case, have been constructed by an intelligence of some sort, and the use of so many different methods to accomplish the same, or nearly the same, purposes, indicates a complexity of reasons which might be worth knowing.

COCKADOS are thought to have less intelligence than any other of the larger varieties of birds, yet there is now a troop of trained Australian Cockados touring the country; and they show a very high degree of intelligence.

THE TIGER

by WILLIAM BLAKE

TIGER, tiger, burning bright
In the forests of the night.
What immortal hand or eye
Dare frame thy fearful symmetry?

In what distant deeps or skies
Burnt the fire of thine eyes?
On what wings dare he aspire?
What the hand dare seize thy fire?

And what shoulder and what art
Could twist the sinews of thy heart?
And when thy heart began to beat,
What dread hand framed thy dread feet?

What the hammer? What the chain?
In what furnace was thy brain?
What the anvil? What dread grasp
Dared thy deadly terrors clasp?

When the stars threw down their spears,
And watered heaven with their tears,
Did He smile His work to see?
Did He who made the lamb make thee?

Tiger, tiger, burning bright
In the forests of the night,
What immortal hand or eye
Dare frame thy fearful symmetry?

Regarding Animal Faculties

IN an article wherein he condemns the "yellow journalism" which has invaded the field of natural history, John Burroughs, the naturalist, allows himself to be carried by the eagerness of controversy into making statements which we hardly believe he will himself approve when in a more judicial mood.

Besides ascribing a most marvelous range to "instinct," he practically says that experience teaches nothing to animals; that they never consciously teach their young," and that young birds build as good nests as old ones.

Such statements are unworthy of serious consideration, because the first and second are contradicted by numberless observed incidents, and the third cannot be proved either way because we do not know a bird's criterion of excellence in nests sufficiently well to judge comparatively.

We also fail to comprehend how it is possible to reconcile the Darwinian theory of evolution by the accumulation of accidental variation with the idea of "cosmic intelligence of species" which gives the "appearance of reason" to the acts of the individuals.

Moreover in his desire to show man's superiority he asserts that "animals are helpless in the face of new conditions while man is not." This is a wholly unfair comparison between the inferior individual animals and superior men, for it is, as the writer must know, almost impossible to teach some people; as witness the many thousands who starved, in India, rather than eat the, to them, "strange food," wheat, which was supplied to them in place of their accustomed rice.

On the other hand the cunning and ingenuity of some individual animals; and of some whole species, as rats, crows and foxes; is too well attested by generations of observers to admit of question. While we fully agree with Mr. Burroughs in his statement that "it has become the fashion to ascribe impossible faculties to animals," we must deplore the unconsidered lengths to which disputation has led him. STUDENT

A WRITER suggests that the buoyancy of birds in the air is due to the balloon action of the cells; filled with warm air. He forgets two facts: (1) He has not shown that the power of flight is proportionate to the number of air-cells; and (2) He fails to explain how birds can fly with the same apparent ease in air as warm or warmer than their bodies.

Universal Brotherhood Organization

Central Office Point Loma California

A LARGE audience listened attentively and warmly applauded an address on "Fate and Destiny," which was delivered by one of the older Point Loma students in Isis Theatre last Sunday evening, at the regular meeting of The Universal Brotherhood and Theosophical Society. There was the usual splendid musical program by students of the Isis Conservatory of Music. In the course of his address, the speaker said:

LOMA-LAND STUDENTS AT ISIS THEATRE

An Able Address on the Subject,
"Fate and Destiny," Attentively
Listened to by a Large Audience

Reprinted from the San Diego News

"We all of us believe in fate or destiny. Neither education, nor civilization, nor what we are facetiously pleased to call common sense, can take away from us this belief. Deep within our minds is the conviction that unseen forces compass us about, that the subtle powers of nature are leagued with us or against us, that we have darksome enemies which no artillery of ours can overthrow, as also beneficences which will give us the victory against all tremendous odds. We stand, as it were, amid a surrounding darkness, and we sense the soundless and the all-pervading motions of fate. In the presence of a conviction of destiny the strong man becomes weak as an infant, and the stripling becomes mighty to overthrow giants. Between ourselves and our supreme success is interposed the finger of fate, and destiny whispers to us, 'Thou fool, this night shall thy soul be required of thee.'

"Much of fate will become comprehensible to us when we know something of the way in which the law of cause and effect operates from life to life, but we shall need something not quite so crude as a mere belief that the conditions by which we are surrounded, our fate and destiny, are the logical result of the acts and thoughts of lives that are past. That of course is true, but we must go further and deeper if we would avoid a naked fatalism. We do but small service by showing a man that he is in prison, unless we also show him how to get out, and the physician who merely diagnoses the complaint and forgets the remedy, had better have stayed away. The Saviors of the world have gone forward with tidings of liberation and not of bondage. They have preached not only the law which binds, but also the law which can loose. They have shown how masterful fate can itself be mastered. They have said to those who suffer, 'Ye suffer from yourselves, none else compels, none other holds ye that ye live and die, and whirl upon the wheel, and hug and kiss its spokes of agony.'

"What then may we understand by the law of Karma, which imposes upon men the burden of fate, which stretches its arm from the far past and imposes a mysterious success or failure upon the efforts of today? One thing, let us be careful not to understand. The law of cause and effect, which we call the Karma of the acts of passed lives, is not a judge who dispenses from a code the penalty which he supposes the offense to merit. Karma is the injury or benefit which we have imposed upon ourselves. It is the *other half* of our action. How often do we realize that when we have done something, only one-half of that something is visible. The other half is invisible. We say that we have planted a seed. We have done more than that because we have also set in motion the natural processes which will bring that seed to fruition. Karma, fate, is the invisible half of what we have done, the invisible half which presently becomes visible as fate and destiny.

"May there not be something in a man's character which we cannot see but which mars not only certain sets or groups of his actions, but all actions? When we can identify the weak spot we say that it is a law of justice, but when we cannot identify that weak spot we say that it is a mysterious fate or destiny. If the blood of the body be impure, what malady shall not lie in wait for us, what physical ill shall not lurk to surprise us unawares? The whole body will show its dis-

content in a hundred different ways, and only the wise physician will know that there is one persistent cause. Now thought may be said to be the ever circulating blood of the mind. If thought be impure, if, that is to say, it be contrary to wisdom and knowledge, all acts which spring from thought will be tainted, but where is the wise physician—

except the Soul within—who can show us when and where that thought has been vitiated, so that upon every act must lie the curse of failure, so that every plan must fail, every project come to naught?

"Let us remember that every thought is a potency, that every thought which issues from the mind attracts to us certain invisible forces which manifest themselves in our life conditions as good or bad luck. He who thinks disease, invites disease. That we know well enough, but do we try to understand the workings of so strange a law? If we will reason from the things that we know, we shall understand many things that we do not now know, and we shall see how certain thoughts are actually the producers of destinies with which they may ordinarily seem to have no connection whatever. Now, if thinking disease produces disease, we can produce health by thinking health, we can produce success by thinking success. We shall know then that the man who hopes creates the very thing for which he hopes, that the ideal which we build up in our minds is the plan of the architect, and the hammer of the mechanic, and the bricks of the builder. God created this universe by divine imagination, and as we ourselves are in the image of God, so we, too, can create our universes by thought and by imagination, along plans which we know to be divine.

"And so the supreme enemy of all ill luck is a well-ordered mind, a mind which shall reflect the divine mind, a mind which knows its own creative and godlike powers. It is the disorderly mind which produces ill luck, the mind which attracts calamity to itself by willing calamity upon others, the mind which broods upon misfortune, and so feeds it, strengthens it and makes it permanent. Nine-tenths of our troubles would cease to exist tomorrow if we could refrain from nourishing them with our thoughts for twenty-four hours. Nine-tenths of those evils would never have arrived at all if we had not signaled for them, invited them by our apprehensions, hoisted a flag for them by our terrors, so that they bear down upon us from all quarters. If ill luck must come, let us meet it as though we loved it, and see then how soon it will weary of us and depart. These things feed upon our mental resistance, by our lamentations we nourish them.

"We cannot juggle with law. We may call it chance if we like, but remember what Emerson said, that *God's dice are always loaded*. By our drugs, and our anti-toxins, and our vivisections, we may hold off pain from the body, but the dice are loaded, and mental or some other misery awaits us instead. We may pile up wealth in defiance of God and man, but the dice are loaded, and other sorrows, other torments overwhelm us.

"Let us then live in the duty of the present and not stretch forth compelling hands unto the future. Is that not enough, are we ever uncertain of our duty, and can any good thing come in other ways? There was a mariner who prayed unto God, 'O God, thou mayest save me if thou wilt, and if thou wilt thou mayest destroy me, but I will steer my rudder true.' What more could he do, what more can we any of us do than steer our rudder true by the light of duty, leaving all tomorrows unto the law which has ordained them. Then only can the hand of fate be laden with all good gifts, and there will be no other destiny for us than the il-limitable will of God."

WE have too much of a tendency to try to cover up our faults. We know that we have a lot of them, but we do not want anybody else to know it, and so we spend a lot of time, thought and energy in trying to act so that our faults do not show. This is wrong. Be yourself, even if you have many faults, and even if they would all show! We all have faults, but what of it? Let us ask ourselves a question: Are we for Brotherhood or are we not? I think we are. Then, if underneath all the rubbish there is the right purpose, what of our faults? Should we stop, and hesitate to act, because our faults would show, or we could not act just as we wanted to? No! We should act the best we knew, for the time being. Through acting we will gain experience and gradually learn how to overcome our faults.

There are people who never make any mistakes, never show any faults, but these are people who never really accomplish anything at all. It is all well enough to

Be Thyself!

A Short Lodge Paper

"be nice," you can do that if you just try to get along with people and adjust yourself to their peculiarities and to their faults. But if you stand for an idea, yourself, and try to express it, you will no longer be considered "nice" and you will have no use for being considered so, for you will see that trying to "be nice" would mean to put limitations on yourself, preventing you from free action.

If you have a fault, do not spend a tenth of a second in trying to cover it up; do not let it keep you from acting, but do make it plain to yourself, that it is something that you should try to overcome!

If, in the heart of every one, and realized in our better moments, there is the desire to do right, then, never mind about the faults, but, Be Yourself! and act as best you can and gradually you will gain mastery over your faults, and so be able to act more in accord with your own better and best ideals. MANY men and women, when hearing of some great thing done—some wonderful act of heroism, some truly noble and unselfish sacrifice by another—long for some such opportunity, and wonder why their own lives are so apparently insignificant.

But, perhaps they are not ready for such great trials, and if they will watch for them they will find close at hand, lots of little things to be done; making stony pathways less rough for tired feet, and may be helping to carry some burden almost too heavy for another's weary shoulders.

Do we not all know, too, what strength and courage it takes to bear cheerfully and patiently the little jars and disappointments of each day with the present rush and friction around us?

How clearly the individual characters are shown in any public place. Take the delay of an electric car or train. Some will roam nervously to and fro, leaving doors open, making their fellow passengers more wretched. Others will sit like monuments of impatience, grieving over their personal discomfort. But how many will think of a chance to help some one else pass the tedious time of waiting more comfortably?

Every incident, of however trivial or disagreeable a nature then, should have its meaning for us. Close observation of all these little happenings, as we travel along on life's journey, will enable us to learn many lessons and also to help others, perhaps, to see more clearly the meaning and purpose of their troubles.

Katherine Tingley has said that "Carelessness in little things is criminal," and, in thinking those words over we see how negligence in the performance of some apparently small duty might cause great discomfort, if not suffering and death. Suppose, for instance, I fail to stoop and put in place a bit of misplaced rug or carpet as I pass, unnoticing or careless. Some one may trip and fall, being seriously injured; or suppose I forget to feed my pets or water my plants—do I not cause suffering? So, it is easy to see the need of careful attention to small duties, if we would not cause pain to others.

Now then, suppose we neglect to dust our room carefully. What is the result? But worse still, if we fail to dust carefully our "mind mirror" each day, keeping it well polished, bright and clear, ready to reflect high thoughts, what happens? Like the neglected room, it grows untidy. Cobwebs get into the brain corners, and when we are called upon to think we cannot respond, until we do our dusting.

The need is for alert, positive, open minds, attention to details, and willingness to do the little things, gladly giving loving service in whatever situation life may place us.

Then, should some larger field claim us we will be ready. These minds and

Daily Training

brains of ours are the instruments for the soul's use. How much use is a lazy one, do you think? Notice the slow movements, dullness of eye, heaviness of body, would we call upon such a

messenger for an important errand, or the rapid carrying out of a plan? No! Neither will those who are looking for helpers in their world work call upon those who are careless or indifferent. There is no time for training them. The big, sad world today needs loving hearts full of compassion, and hands ready to work, and each must get his, or her own self, into readiness or training, by careful attention to and right performance of each small duty.

Each can keep the heart-light burning brightly within. Each can give the warm hand-grasp, the cheerful good morning and kindly good night greetings. There are very sad hearts around us. Lots of chances for practising the "Art of being kind" are waiting for all who have the real desire to help. Here is a quotation from Robert Browning. It gives food for thought:

That low man seeks a little thing to do,
Sees it and does it.
This high man, with a great thing to pursue,
Dies ere he knows it.
That low man goes on adding one to one,
His millions soon hit.
This high man aiming at a million,
Mimes an unit.

So, let us not feel once discouraged when little things seem to be all that come to us to do. Do them in the best way and gladly.

"Sow kindly acts and thou shalt reap their fruition," says the *Book of the Golden Precepts*. Does it not apply to every smallest duty?

The strong desire to help has its effect in arousing others. Let these words from the writings of one of humanity's Helpers, give us joy and thankfulness:

"Do not rush out madly or boldly to do, to do. Do what you find to do. Desire ardently to do it; and even when you shall not have succeeded in carrying anything out but small duties, some words of warning, your strong desire will strike like Vulcan upon other hearts in the world, and suddenly you will find that done which you had longed to be the doer of."—From *Letters That Have Helped Me* F. E. L.

Do THE Duty which lies nearest thee, which thou knowest to be a Duty!

OUR children's children will hold our American Constitution more sacredly than we.—Katherine Tingley

★ The Brotherhood Touch ★

"I AM worn out," said Mrs. Bent, almost querulously. "It seems to me there is no end. It is either anxiety or work. I don't know which is hardest to bear."

Mrs. Bent was very tired, for it had been a busy day and the maid-servant had been ill. But at last the washing was dry; the clothes were dampened and folded away for tomorrow's ironing; the tea-table laid, and the children quietly playing in the little garden, awaiting their father's return. Presently Mrs. Bent heard the children's shouts of welcome, and the father entered the room, with the baby on his shoulder and Elsie clinging to his hand. But his usually cheerful face was overcast with gloom; the daintily prepared tea was scarcely touched and the children's evening romp "with papa" was sadly lifeless.

Mrs. Bent was a tactful woman, and she asked no questions until the children were safe in bed. They were, however, induced to go to bed a bit earlier—the incipient insurrection being stopped by the promise of a story—one of "mother's stories"—a reward not to be lightly rated. Not until both Elsie and baby Fred were sleeping, did she return to the sitting-room. She drew her mending basket toward her and sat down, even then too tactful to question abruptly.

"They have started the retrenchment scheme," said Mr. Bent, suddenly.

"O Jack," she cried, "not you," and the blood ebbed from her cheeks.

"Mary, dear heart," he exclaimed, with sudden compunction, "I didn't mean to frighten you. No; it is Jim Walsh, I meant. I'm safe enough, but what will he do?"

"And their baby only a few months old," said Mrs. Bent; "what will they do?"

"It is a bad problem," returned Mr. Bent, moodily. "I think half the men under me are likely to go, and the prospect before us this winter is enough to drive one mad."

Mrs. Bent stitched away silently. In the face of her neighbor's calamity, how childish seemed her own complaints!

Jim Walsh's face was that of a haggard old man as he reached his home. The blow was doubly terrible because unexpected and undeserved.

"Hush," said his young wife with laughing eyes, as she opened the door, "baby is asleep. O Jim, what is it?"

She turned pale as she caught sight of her husband's face.

"We must make the most of this," he answered with that carelessness which is only a cover and a screen—and he threw his month's pay on the table. "It is the last we're likely to get for some time. I am retrenched."

The agony of Jim's face went to Emma Walsh's heart—but she was a brave woman, and more resourceful than she herself knew.

"Now, Jim," she said, "be reasonable. You know very well if it wasn't for baby and me, you wouldn't mind this a bit. You'd face the situation without a quiver; and Jim, it isn't I would be making a coward of you. Come, have your tea, and we'll talk about it afterwards. Besides, Jim"—and her face lighted up with the same old smile—"you don't know what a manager I am. We're safe for two months yet anyway. You know I have been saving up."

"Well, Emma, you would put life and heart into a post," and sudden gratitude did what adversity had been unable to do, in bringing to his eyes the tears.

"And besides, Jim," continued the wife, her face deeply serious, "that isn't all; there is something in this experience for you and for me, and there is a higher law, Jim, and there is something way beyond and above all the retrenchment schemes in the world. Don't you understand, Jim?"

"Well, Emma, I never could understand much about those things. I suppose I am a soul, as you tell about, but I can't see how it'll work to help us out here. I'm mighty thankful for a wife like you, and that's as far as I can reckon."

The two months passed and lengthened into three. Still there was no change. Jim remained out of employment and very little remained in Emma's purse. They had even been obliged to part with some articles of value from the home, yet Jim's wife kept a bright face and a brave heart, although no one knew how sorely her faith was tried. But at last

a day came to her when it seemed that she would have to give up. The first winds of November were blowing about the house, and she shivered as she glanced about the tiny rooms. It had at last become more than a question of food; they must buy fuel as well. What could they best spare next? Mechanically she went to the wardrobe, and as she opened a drawer, her eye fell upon a pretty little blouse she had made for herself before her marriage. She drew a long breath and almost laughed. "To think that I had never thought of this before! I will write a card at once and put it in the window. The back of this old almanac will do—just the thing. And she wrote out in letters conscientiously careful and large: "Dressmaker—blouses a specialty."

The evening of the same day Mr. Bent came home with his face unusually troubled. The two months had been hard for him for he felt the privations of his men, and, worst of all, Jim Walsh, so worthy and steady, was still unemployed. "Dear," he said to his wife, "I don't believe the poor chap has enough to eat. Now of course they are not quite on our line socially, and they aren't far enough below so we could offer them things without offense, I'm afraid. Could not we ask him to tea? or—we must do something."

"I know her so slightly," was Mrs. Bent's reply, "Emma Walsh seems like such a sensible little woman, but I don't see exactly how I could manage. But I'll take the children up that way for a walk tomorrow. Things may shape. My heart aches for her, I know that."

The next day as she reached the little cottage, the dressmaker's card in the window met her eye. Instinctively she recognized it as the key to the whole situation, and she hurried the children, almost impulsively, through the little gate down the path and up the steps to the door. The tale which the card had begun, Emma Walsh's face completed. She smiled. But behind the smile hung the shadow of a troubled anxiety, and the whole room told the story of want.

Mrs. Bent's heart was so torn between sympathy and her anxiety to relieve the situation, that she was fairly nervous. "Perhaps you don't remember me," she said. "I am Mrs. Bent, and I would like you to make me a blouse. I see by your card in the window"—

"O mama," exclaimed Elsie, "here is a *real little baby* in the cradle."

The two women looked into each other's eyes and words were not needed, for there is a certain freemasonry in motherhood of which only mothers fully know the sweetness and the worth.

"I have been wanting this work for a long time," said Mrs. Bent, and only yesterday my neighbor made inquiry of me as to some one who could do sewing for her. I am sure, that if you suit her, we can get you plenty to do."

Jim Walsh returned while the two women were still talking, and when Mrs. Bent had departed, two-thirds of his anxiety had, unconsciously to himself, departed with her.

With an uplifting of hope in Jim's heart came a turn in the tide of events. It was not long before he found employment and life then looked less like a nightmare.

"I don't mind telling you, Jim, now that it is all over," said Emma Walsh to her husband, as they sat before the fire Christmas night, some months later—little Ida was sleeping in her cradle beside them, and the room had lost its bare look, for good times had come again—"do you know I was pretty near the breaking-point the day Mrs. Bent came in? If I live a hundred years I shall never forget her kindness. And do you know, Jim, I am awfully glad you were retrenched? You know it is the rough weather that tests us and tries our strength, and I tell you I have a faith in the justice of things that I never had before."

"You had faith a-plenty all the time; that's what kept me up."

"Yes, I know, Jim, I held to it right along, but I was coming close to the breaking-point. It was that very afternoon when Mrs. Bent came, and I looked around and saw so many things gone from the house and thought of the winter coming, and then, and then, I heard her knock at the door."

"Well, Emma," said Jim, "guess I'll have to believe in the higher law too. I thought it was just a notion of yours. But notions don't make heroines. And you've been one, sure enough."

STUDENT

The Trend of Twentieth Century Science

Mother Nature—Why Has the Giraffe a Long Neck?

WHY has the giraffe a long neck? The answers to that question illustrate a whole chapter in the history of biological theory. According to the Lamarck school, an early animal kept stretching his neck in order to reach higher and better furnished boughs of foliage. He lengthened it a little and handed on his acquired measure of success to his son, who did likewise; and so on.

This theory is hardly held at all now. It is very doubtful whether acquired characteristics are transmitted to offspring. There is no evidence whatever that the children of a Rubinstein or a Paganini would start life with any greater natural facility of finger movements than the parent, notwithstanding the immense acquired digital facility of those performers. It is not likely they would have children of very marked musical tendency.

The next theory, the Darwinian, that of Natural Selection, supposes that in any given species there is a tendency on the part of offspring to vary a little from the parental type in respect of necks as well as other organs, some having necks a little longer, others a little shorter, others a little stronger or weaker. Those that happened to have the longest necks could get at the most foliage, would therefore be best fed, would live longer, have less danger of dying of hunger, and have more offspring. Thus, generation after generation, the longer necked animals surviving better than the shorter, the streak of tendency to have long necks would become permanent and result in giraffes.

But this theory is in its turn getting attacked from many quarters. The last substitute is that of Dr. John Beard, Edinburgh University lecturer on Embryology. He rejects the Darwinian killing-off method. In his view, the long neck is due to the fact that "Nature eliminated in the germ cells those characters which tended to the production of a short neck," whilst fostering the opposite ones. She did not wantonly wait till the cells became mature animals and then let them fight it out till the short-necks died of hunger.

This seems to be conferring upon "Nature" a conscious power of prevision, and from our standpoint appears to be an important move in the right direction. It also tends to relieve the conception of Nature as a red and agonized battle-field.

But an obvious addition is wanted. Whilst "Nature" was thus seeing to the production of the long-necked giraffes, she was also seeing to it that their special food should be preserved for them from other animals. For she was also working in the germ cells of certain trees, eliminating those characters which resulted in a short trunk and low foliage, and fostering those resulting in a tall trunk and high-springing foliage. So she provided at the same moment the giraffe and his tree.

Have we not here the key to the situation, to the infinite variety of adapted feeders and food, simultaneously produced? May we not look on Nature as consciously working for infinite diversity of forms of life, animal and vegetable, making forever new forms of mutually adapted food and feeder, working simultaneously on both lines? It is just as fact-explanatory a view as that which makes her chief method that of agony and carnage. The Garden of Eden view may one day bloom forth as science, and it may turn out after all that *man* introduced the keynote of bloodshed. Z.

Cycles of Growth—Experiments at Copenhagen

COPENHAGEN is the scene of some interesting experiments in the growth of children. Seventy boys and girls have been weighed every day for some years and it has been found that they gained in weight in the fall and the early part of December. From then until the end of April there is hardly any increase and in many cases a decrease until the end of summer. It would be interesting to know if these data are generally true elsewhere. If so, we have another indication of a cyclic law of which the action might perhaps be utilized. When we have once recognized how universal is this cyclic law of evolution and how the tides of growth and progress ebb and flow in every department of nature, mental as well as physical, we shall be able to take advantage of times and seasons to a much greater extent than we do now. X.

Cancer Caused by Excessive Eating of Meat

THE Hon. Rollo Russell, arguing in the *London Daily News* for a fruit and grain diet, which shall exclude tea and coffee, lays the increase of cancer at the door of flesh-eating. His conclusions are not beyond dispute, but they are certainly worth investigation. Here are some of them:

Cancer is largely prevalent, and increasing, in the richest countries; it is rare or absent in the poorest; moderately frequent in intermediate communities.

It affects natives brought into European ways of living in a far higher proportion than natives in their primitive surroundings.

It is very rare in convents and monasteries where the diet is spare and free from animal food.

The curves of increased flesh consumption, and increased cancer, among nations, tend to correspond.

Cancer is infrequent in India; in Syria and Arabia almost unknown; in Siam, Borneo, Java and Iceland rare. In China much rarer than Europe. In Lagos only five cases in fourteen years, and these five victims had lived like Europeans.

It seems likely that the combination of flesh-eating to excess and the excessive use of tea and coffee specially favors the development of cancer. We find Norway consuming per head 78 lbs. of flesh and 144 ozs. of tea and coffee, with a cancer rate of 950 per million in 1887; Holland with a flesh consumption of 57 lbs., a coffee consumption of about 240 ozs., and a cancer rate of 930 in 1898; Italy with a flesh consumption of 26 lbs., a tea and coffee consumption of 20 ozs., and a cancer rate of 496. On the other hand, the United States, which consumed 150 lbs. of flesh, 162 ozs. of tea and coffee, had a cancer rate, in seven chief cities, not higher than 664 in 1898; and New South Wales, with 297 lbs. and 134 ozs., respectively, had a cancer rate not higher than 508 in 1895-99. The conditions of new countries, however, where the greater part of the population is young and strong, cannot well be compared with the European States. The rate is certainly increasing in our Colonies, as in England. Thus, in New Zealand it was 422 in 1889, 633 in 1899; in South Australia, 427 in 1889, 590 in 1900. In Tasmania the increase has been slower.

Mr. Russell may have exposed one of the causes of cancer; we think he has, but there are doubtless several others. Any cause tending to throw the nervous system out of gear must help in the production of cancer; for cancer is essentially a mass of cells actively multiplying outside the sphere of control of the nervous system. It is a local physiological anarchy. In a phrase, one might say that the cause of cancer is the habits of civilization—as we practise civilization: drink, vice, gluttony, narcotics, stimulants; the exploitation of men and nations by each other, with their consequences—misery, starvation, hate, jealousy, slavery of children, and modes of livelihood that claim their annual victims in tens of thousands. The causes of cancer are the same as those of insanity and suicide; and they overlap and supplement each other almost beyond disentanglement.

In the face of a problem so grave we cannot afford to neglect any plausible theory. M. D.

Why Does the Moon Seem Larger Near the Horizon?

WHY do the sun and moon seem larger when near the horizon than when overhead? The explanation has often been given, yet needs to be continually repeated. Some people think that the refraction of the denser air near the earth is answerable for this appearance. But refraction would not cause an alteration in apparent size, only in direction. Besides which it can be easily shown that the apparent size of the moon near the horizon is the same as when overhead by the simple experiment of holding (say) a pencil at such a distance from the eye that it will just hide the moon, when it will be found that this distance is always the same.

What makes the sun and moon seem larger when low is because they are then near terrestrial things, such as mountains, trees, or the horizon line, with which they can be compared; but when high up they look small by contrast with the vast expanse of the heavens. STUDENT

Here and There Throughout the World

Japan Hopeful of Being Victorious A WRITER in the Japanese paper *Keisei*, asks some questions suggested by the Japanese advance and which strikingly illustrate the gulf of thought which lies between the east and the west. He looks forward patriotically to the coming power of Japan and he asks:

Do we as a nation possess those qualities which tend to beneficent rule? Will those who become subject to us profit thereby? We have reached the parting of the ways that lead to heaven or to hell. Will Japan show herself worthy of the high place she aspires to occupy in the Far East?

These questions are put from a new point of view. They do not ask whether other nations can benefit Japan but whether Japan can benefit them, not what profit can Japan receive, but what profit can she give.

Reduce Mortality on Panama Canal THOSE who are familiar with the horrible death rate which has attended previous work upon the Panama Canal, will hail with delight the intention of the United States Government to so conduct the necessary operations that the mortality shall not exceed that of an average new city. If this intention be carried out—and we do not question that it will—a new era will be inaugurated in public work. It will be a recognition that the lives of the workers are of as much value as the work which they accomplish, and that human health and happiness must not be reckoned at the mere market and trade prices of the raw material.

Californians Pursue Most Books THE President of the Macmillan Company has a good word to say for California readers. He announces that the people of California buy more good books, in proportion to the population, than any other State in the Union. He adds that "the Far West is full of that buoyant American spirit which believes that the strange mixture of races now going on in this country is sure to produce the strongest race the world has ever known. And the writers of California share in this optimism." The people of California will presently be known not only as the readers of good books, but also as their writers, even more so than is already the case.

America and Russia Exchange Acorns SOME years ago the Czar of Russia was presented with some acorns from a beautiful oak tree which overhangs the tomb of Washington at Mount Vernon. These acorns were planted in the gardens of the Peterhof Palace at St. Petersburg, and some fine trees were the result. In 1898 the United States Ambassador to Russia collected some of the acorns which had fallen, sent them to America and had them planted in his grounds in Missouri. Some fine saplings were produced, and one of these has just been transplanted in the White House gardens at Washington, at the instance of President Roosevelt.

America & England Have Controversy THERE is a gentle controversy as to whether the arbitration proposals between America and England originated upon this side of the Atlantic or upon the other. That they originated somewhere is the supreme and honorable fact and the locality is not of great importance. It is, however, none the less gratifying to see this new ambition, this new competition upon the road of peace and concord. One day we shall see all nations making haste to do good.

Plague Statistics Growing in India THE Indian plague statistics go up by leaps and bounds. The number of deaths for the week ending March 6th was nearly 29,000, an almost incredible total to those unaware of the conditions of Indian life, and of the resolute and dangerous hostility which the people display towards every sanitary measure. The plague in India is becoming one of the great problems of the age.

Spain Continues to Be Unsettled SPAIN appears to be in a curiously unsettled and fretful condition. Small outbreaks are reported upon every side, while the President of the Cabinet admits that affairs in Valladolid "have a revolutionary aspect." It seems that the populace are incensed at the large military expenditure on the one hand and the increasing destitution and distress upon the other, and that they should be perplexed is hardly remarkable. Famine is imminent in many districts, but money for the purchase of ammunition is abundant. But Spain is not the only country in which a choice must be made between gun-powder and cheap food.

The Atrocities in Congo Free State DR. BARBOUR, the corresponding secretary of the American Baptist Missionary Union, comments upon the official denials of the horrors which have taken place in the Congo State. He says:

We wish it were possible for us to regard this statement as proving that the frightful reports received concerning conditions in the Congo Free State under the rule of King Leopold, are without foundation. But we are unable, and we fancy that the American people will be unable, to accept these denials as conclusive as against the stream of testimony which for years past has come from residents of the Congo State, including travelers, missionaries and explorers.

Siberia Not a Land of Bitter Frosts WE have still much to learn about Siberia, and there are many popular opinions about this vast country which will be modified by extended knowledge. Siberia is by no means a land of bitter frost, exiles and quicksilver mines. In many parts it is a veritable Garden of Eden, with vast agricultural resources and very beautiful scenery. Within a period of three years over a thousand butter factories were established in Siberia, and the Russian Government is fostering this industry in very many ways.

An Educated South African Prince PRINCE CETYWAYO, the third son of the great Zulu King, is now in London for the purpose of studying at the British Museum and elsewhere. To an interviewer he said:

My object is not to earn my living, as my private income is sufficient, but to learn as much as I can so as to enlighten my countrymen on my return. I am reading law, history and, in fact, anything likely to be useful.

The Zulus are a magnificent people, perhaps the finest in South Africa, and will appreciate what their prince is doing for them.

Spain's King Wants to Help the Poor WHAT little we hear of the young King of Spain is usually of a pleasing nature, and shows that his humanitarian and enlightened instincts have not been drowned in precedent and formula. When he heard of the preparations for his reception which were being made at Barcelona he requested that no expenses should be incurred in the matter, but that whatever money was available should be devoted to the relief of the poor.

Monte Carlo Suicides Kept Secret SUICIDE is said to be very much on the increase at Monte Carlo. Statistics are of course impossible to obtain as cases of suicide are never admitted to be such. Police and officials are all parts of the concern, and no facts are allowed to transpire which might throw a gloom over the festivities. Monte Carlo is the supreme plague spot of Europe, one of the sewers of civilization.

Physical Deterioration in Russia PHYSICAL deterioration is more widely spread than is usually supposed. Even from Russia come pessimistic reports, the conscription committee at St. Petersburg announcing that "the number of strong and robust men for military service is steadily declining." Youthful dissipation is the chief reason ascribed.

THE CHILDREN'S HOUR

The Good Part

Written by a young Lotus Group member

THE large new house that was being built on the corner lot was the talk of the neighborhood.

"O, how I would like to own it!" was the comment of everybody that passed by. Nothing but praise was bestowed upon the building until the finishing touches had all been put on. And then everybody said, "Now there is something about it that I don't like. It is that ugly, gloomy paint and those big eaves that look as if they wanted to grab everything within their reach, and I believe the person that built it never had a generous thought. Anyone whose heart was sunshiny would not have allowed two such mistakes to spoil a beautiful home."

And so the people waited to see what kind of a person would come to take possession.

At last the owner of the house came, a little, hunchbacked, weazen-ed, lonesome man. His name was Mr. Graball, and he knew how to put a price on property. He was very rich in a worldly sense, but in the things of the heart life he was poor because he was selfish. As his wife had died shortly before the home was finished he had decided to sell it. He was a miser.

In order that a larger sum of money might be obtained, flowers were planted in the garden. Every day the little hunchback was seen watering his flowers, tending to the garden. And by and by the neighbors noticed that a change had come over him. His face had a pleasanter look. His heart seemed to have gone out to his flowers. By and by, as he cared for his flowers, he found out that by doing something for others, even if they were only flowers that could not speak, a great many of the ugly places in his character began to be smoothed away. One day he picked a bouquet of beautiful flowers for a little sick girl who lived across the way. Then the neighbors knew that the good part in his heart had been found.

DEAR CHILDREN: Why should you not take a trip to Loma-land—a fairy trip? There are fairies still, you know, good ones as well as bad. They wait just outside the doorway of our hearts trying, oh, so hard! to get in. We call them thoughts—sometimes our own thoughts and sometimes the thoughts of others—but they are fairies just the same, and they will take us wherever we want to go. They have a godmother, too. We call her *Imagination*, and she helps us so faithfully and so well, if we will take pains to see that she has only the good-thought fairies come to visit her. It is in her magical chariot, with its great spreading wings and soft bell-like music, that you can fly to Loma-land in the twinkling of an eye, if you wish to—or, as we say, you can *imagine* that you are here. It's heaps of fun! And now is the most splendid time to be here for all Loma-land is glorious with birds and flowers; with sunshine, sweet pure air and the love of little children's hearts.

COUSIN EDYTHE

LITTLE flower, but if I could understand
What you are root and all and all in all
I should know what God and man is.

—Tennyson

A LITTLE CUBANA
of the Raja Yoga
School, at Loma-land

Did the Birds Know?

NOT long ago a little brig was sailing smoothly along before a good breeze in the South Pacific when a flock of small birds settled down upon the rigging. The sailors fed them. The birds flew away in the morning and returned again at noon. The sailors fed them again and this time the birds had become so tame that they hopped about the deck. They again flew away and in the afternoon the sailors were astonished to see the flock returning, each bird shrieking at the top of its little voice, as if pursued by some terrible enemy.

Instead of alighting on the rigging and the deck in the old happy way they huddled down behind the deck-house as if frightened.

Sailors are said to be very superstitious; but however that may be, they called the Captain and he looked at the barometer. Although there was no sign of bad weather he had the little ship put in shape at once to outride a storm. In twenty minutes after the little birds reached the vessel torrents of rain fell and the sky looked like an arch of mud.

On reaching port two days later the Captain learned that a great tornado had swept across that part of the sea. And here is the strange part of the story. The birds left the vessel directly after the storm had passed over and did not return again. Did they come to tell the sailors about the danger? And what would have happened if the sailors had cruelly killed them the first day they alighted on the ship? Something to think about here, isn't there?

UNCLE FRED

DEAR CHILDREN: I recently read of a curious case, showing that birds have some instinctive understanding, possibly, terror, of death. A certain canary died, and its mate was then removed to another cage. The old cage was thoroughly cleaned and, after remaining empty for about six months, became the home of another bird. But the little newcomer fought and struggled to get out. Then it refused to eat, so of course its kind-hearted mistress found for it another home. Later another bird was placed in the cage. This too, struggled to escape and then huddled itself up on its perch, refused food, and seemed bent on grieving itself to death.

Children, I wonder why. Did the little birdie which died leave some message behind it, or what?

A LOTUS GROUP TEACHER

SUNSHINE AND MUSIC

A LAUGH is just like sunshine,
It freshens all the day,
It tips the peaks of life with light,
And drives the clouds away;
The soul grows glad that hears it,
And feels its courage strong—
A laugh is just like sunshine
For cheering folks along!

A laugh is just like music,
It lingers in the heart,
And where its melody is heard
The ills of life depart;
And happy thoughts come crowding
Its joyful notes to greet—
A laugh is just like music
For making living sweet!

—Our Dumb Animals

DO ANIMALS reason? Why does a dog so easily learn to stand perfectly quiet at times when "on the scent" of something? Who taught the little rabbits to keep still and "lie low" in time of danger? And hunters say that it is most remarkable to see the way in which teal or baby peewits will lie down, put their little beaks flat upon the ground, and remain perfectly motionless for many moments in order to avoid being seen.

THE flowers have come! The flowers have come! The hillsides of that Paradise land in which the Raja Yoga children live are already covered with a glorious nature-carpet of flowers.

SONG

by CELIA THAXTER, in *Unity*

A RUSHING of wings in the dawn,
A flight of birds in the sky!
The darkness of night withdrawn,
Is an outburst of melody!

O birds through the heavens that soar
With such tumult of jubilant song!
The shadows are flying before,
For the rapture of life is strong.

And my spirit leaps to the light
On the wings of its hope newborn,
And I follow your radiant flight
Through the golden halls of morn!

The Art of Getting Old

EVERY little while some representative of the world of science seems to feel prompted to come forth with a pronouncement against humanity's hope and intuition of immortality. The last is Professor Elie Metchnikoff, and he speaks with the usual calm assurance of his kind. If the majority of men had not lost touch of their own immortal center, no harm would be done by any number of such books.

But harm is done, for our civilization has blotted out the clear intuition of earth's older peoples. So that every such treatise closes the eyes of hope and faith somewhere.

There is no proof for immortality save that which each may find within himself.

Every autumn the great trees begin to withdraw from their leaves, which are their hands and eyes and mouths, the life therein, the stored nourishment, the sap, the protoplasm, drawing these elements down for safe housing into the trunk beneath the bark.

The whole art of growing old is taught in that, if we use it as a symbol. For growing old may be elevated into the practice of an art, instead of the oncoming of a misfortune. The sap of life slowly passes back from the senses and organs, lingering last in those that are most vital. Then it passes back, or inward, from a portion of the mind, the portion that is founded on the senses, that holds the memory of the life's little recent events, that faces out upon the details of the daily panorama.

Most men will now feel themselves getting old and dying. Through all their years their whole attention has been concentrated upon passing matters. They have lived in the trifles of the passing days, and have furnished their minds with the contents of the daily paper. That portion of the mind alone they know. How shall they find the deeper place to which the life current is now setting?

That deeper consciousness is seated in the heart, the center of man's highest feeling. All know that there live conscience, compassion, unselfish love, heroic daring, all that gives manhood its beauty, dignity, purity and splendor. These are marks of the indwelling soul, its voices. If, through the years of vigorous manhood, the mind has been accustomed in thought, in prayer, in meditation, to seek this place for the inspiration that dwells there, and then to act in accordance with such feelings; if the man has at all trained himself to "work out his heart"; then his old age will not be as that of others. As the sap dies back from the outer life, the inner will become richer. The touch of the world's life will grow closer. The senses may dim, and memory; but instruments of consciousness greater than these will be developing and acting. And so the man will become aware that instead of moving deathward he is actually moving lifeward. He will see that the "question" of immortality was raised by his intellect only. He will not have an answer to it; it will simply fall to the ground and cease to be. His senses will merge into perception of the world's life, of universal life; feeling will merge into

the greater feeling of universal comradeship; his powers of action, changing form, will become freed; his mind, dissolving from the merely local, will become fuller and richer. And death will at last be the completion of the process he has been watching.

But each must learn for himself the art of getting old; each must find for himself and in himself the immortal; each can understand, reckon with, and be prepared to welcome death, ere death come. STUDENT

Christianity in Japan

SOME religious papers are inquiring into the possibility of the adoption, by Japan, of Christianity as her official creed. A London religious journal prints a long article from a well-informed correspondent on this subject. It appears that some years ago Japan sent a commission to Europe to inquire into our ways of civilization, and in particular our religions.

This body reported to its government in favor of the adoption by Japan of Christianity as her official creed. But, of course, such adoption was only considered in its political bearings. It was thought to be a necessary step towards Japan's reception by the western nations on terms of equality. This portion of the report was not acted upon. The only move made was that perfect liberty was henceforth accorded to the Mikado's subjects to hold any creed they liked, and Japan has now complete religious freedom. Indeed, creed is not a matter of great consideration in Japan. It is conduct that the Japanese consider. Does a man's conduct display loyalty, courage, self-denial, pity, endurance?

The official adoption of Christianity is, it seems, now less likely than ever. For one thing, Japan has been studying the conduct of the "Great Christian Powers." For another, there is the "Asia for the Asians" movement, bringing Japan into ever closer touch with China and other Asiatic countries. And it is obvious that this movement can but grow stronger in the exact proportion in which the "Great Christian Powers" behave toward Asia as aggressors.

The report to which we have referred remarks that the Japanese do not seem anxious to have any more western Christian missionaries among them. "As the military and naval officers regard themselves as the equal of the best European officers, so many of the Christians of Japan believe they are not one whit behind the very chiefest of the missionaries from Europe." This seems to the writer of the article very astonishing: to us, less so. The Japanese have now the Bible; on what else is real Christianity founded? Let their own missionaries, the native converts, armed with the Bible, conduct their own propaganda. Indeed, it would be of the highest interest to watch the type of Christianity, pure and undefiled, that would arise among a people introduced to it by the Bible only, not accompanied and overlaid with the accretions of comment, dogma and tradition that have gathered in the west about the sayings of Christ. STUDENT

PERSONAL limitations must not obscure the possibilities of the hour.

— Katherine Tingley

THE mind is its own place, and in itself
Can make a heaven of hell, a hell of heaven.— Milton

The "Potato Patch" Idea

MICHIGAN has long been famous because of the "Pingree Potato Patch Idea," and in that State it has been carried out on a large scale. In Philadelphia Pingree's plan has met during the last year with remarkable success, being under the charge of the "Superintendent of Vacant Lot Farming." His annual report, recently presented, shows that the utilization of vacant lots for agricultural purposes by people who would otherwise have remained idle, has brought excellent results. Over six hundred people, including one hundred and forty orphan children, were last year given employment on these vacant lots. Each dollar invested in construction, tools and seed yielded a return of from five to seven dollars. Bear in mind that the people thus employed would otherwise have remained idle. They were made up of orphans, the partly disabled, the decrepit, and those out of work, and then consider what the social reformer has to deal with when, according to this report, the main obstacle to the success of this scheme has been to find people who are willing to make use of the opportunities offered. STUDENT

PEACE ON EARTH

by LONGFELLOW

I HEARD the bells on Christmas Day
 Their old familiar carols play,
 And wild and sweet
 The words repeat
 Of peace on earth, good-will to men!

Then from each black accursed mouth
 The cannon thundered in the south,
 And with the sound
 The carols drowned
 Of peace on earth, good-will to men!

And in despair I bowed my head;
 "There is no peace on earth," I said;
 "For hate is strong,
 And mocks the song
 Of peace on earth, good-will to men!"

Then pealed the bells more loud and deep:
 "Love is not dead, nor doth it sleep!
 The wrong shall fail,
 The right prevail,
 With peace on earth, good-will to men!"

Question

How far does habit make or mar character?

Answer

(1) Habit is an every-day expression of cyclic law. What has been comes again and again, unless something is done to prevent it. There is naturally a tendency to repetition.

We may take advantage of this tendency by establishing good habits so that it becomes easier to do right than otherwise, and habit is then in place and is our friend. We may also allow this tendency to take advantage of us in the formation of bad habits so that it becomes easy to do wrong and difficult to do right. We may become veritable slaves to habits that are harmful to ourselves and to others also. In such a case habit is very much out of place. Habit is always in place when we make use of it in the service of the soul, for then it serves all and helps to lift all to higher planes, even the lower nature itself whose wishes are not gratified. Habit is out of place when it caters to selfish and personal desires, for then it serves none well and harms most where it seems most to serve. It is in place when it helps in the building of noble character and out of place when it hinders or destroys this work.

Habit is a powerful ally in making or marring character from the very fact that each step that is taken becomes easier to take again. What an encouragement this is to us, not only in the formation of good habits, but in the breaking up of bad ones. We may seem to make but little headway, or even seem to fail, yet if we have earnestly tried and done our best, we have not failed, however things may seem, for our very effort has given us new strength, and at our next trial we shall be able to come nearer the attainment of the end in view, and so on and on till the desired end is reached. In a lecture on Cyclic Impressions W. Q. Judge illustrated this law very forcibly. He spoke of people having the blues at regularly recurring periods, and showed how by the law of habit, or return of cyclic impressions, the state of this recurring period might be changed to the very opposite. Thus, whenever this tendency to blues arises, think of something to help somebody else or make some one else happy, and do it if possible; then, when the blues come again, the newly-planted impression will come also, and if the latter is encouraged and followed up, it will continue to grow stronger while the other grows weaker, and finally it will crowd the other out altogether. This illustrates how we may correct any bad habit and put in its place a good one.

We have habits of body and habits of mind that ought to be corrected. Every atom of our bodies is attuned to these habits and has to be changed to another key, and this takes time, patience and perseverance. Habits of mind are most difficult to change, and here we have to be every instant on guard against the entrance of wrong thoughts, rejecting all that would mar character and entertaining only those that will make it. And

the law of habit itself will enable us to do this if made use of rightly.

The greatest incentive to never-failing perseverance in our efforts to overcome all wrong habits of thought feeling and action should be the helpful effect such efforts will have upon others; for by such a course we give an uplift that is felt to some extent by all, and upward striving is made more easy for all; while if we allow wrong habits to hold sway we are not only making stronger the chains of our own bondage, but we are adding a weight to the already heavy load of others. If only ourselves were harmed by our lack of heroic endeavor, we might think we could let things slide sometimes and take the consequences, but how can we do it when we know that by such a course we are adding to the misery of the world, and when we know that by the opposite course we might take away something of that misery—might help to send gleams of sunshine into darkness?

This kind of helping is not heralded by a trumpet; it is silent and unseen, but none the less effective, and is in the power of each one of us to do.

B. W.

(2) The body is a thing of habit, an automaton that tends to repeat mechanically the dictates of the ruling master, whether good or bad. It is a law of physics, called inertia, that a body once set in motion will continue to move in the same direction until acted upon by other forces. The physical body, composed of physical molecules, comes under this law, and it tends to repeat again and again the impulses sent from the inner man. The lives composing the man of clay, though conscious in their degree, are of a low order exercising no discretion and resenting any new impulse. If the controlling entity be the lower man, the habits impressed on the body and mind will be accordingly low, but if the true lord be in possession, each act and thought, even though unstudied, will be graceful, helpful and pure.

It is not sufficient that we simply have good habits, the law is satisfied only when each habit, though lofty and pure, is used in proper time and place. We must have pure habits made so by contact with and under the impulse of the higher man, but even though spotless in their purity, they must not be hard and fast and used indiscriminately.

We must be pliable and versatile and use tact even in the application of good things. How can we teach the world unless we are quick to change methods and to adapt ourselves as we meet changed conditions?

Our habits represent an agglomeration of forces created and fostered in the past and forming the environment of the soul when Reincarnation takes place. Even the greatest soul finds the subjugation of the body difficult, and of necessity this persistent automatism will color the actions of the warrior until it would seem to be a part of the true character. The real character of the soul is godlike, but it is practically valueless unless manifested; and if the divine light shines through smoked glass, the transmitted radiance will be smoky and gloomy; and it is the light as manifested that determines the character of the man. It is by the purity of the influence that we are judged and rightly so, for while there is a taint of the lower order left in physical man, there is danger of a fall and a fall unseats the true man and enthrones the personal fiend "who ever wars against the light."

The habit of good must be continuous and persistent until every nook and corner of the body is radiant and only as this cleansing process takes place is it said "the character is pure and wholesome."

The true man, the strong man, the helpful man, is he who is always on guard, whose animal is under control and whose mind is never allowed to steal away his faculties; who recognizes in his fellow men a collection of forces, each varying from the other as the trees of the forest, and who deals with each according to the needs of the occasion. He is a strong character for good who, through habit, stretches and bends to fit the occasion and who dares to do right for its own sake.

A. S.

A RECENT suicide, in two letters he left behind him, explains that his act was due to desire for rest. "I feel so tired and discouraged that I cannot resist the temptation to rest." No man that had ever touched his own soul, or reached any appreciation of the purpose of life, would suppose that suicide was the path to rest. Rest is the reward of those who have run their race and faced whatever difficulties the running involved, not of those who have turned aside. Few would thus shirk the troubles of life if they had been taught in youth that there is no pain but has its lesson.

X.

THE BETTER PART

by MATTHEW ARNOLD

LONG fed on boundless hopes, O race of man,
 How angrily thou spur'st all simpler fare!
 "Christ," some one says, "was human as we are:
 No judge eyes us from Heaven, our sin to scan:
 We live no more when we have done our span---"
 "Well then, for Christ," thou answerest, "who can care?
 From sin which Heaven records not why forbear?
 Live we like brutes our life without a plan!"
 So answerest thou; but why not rather say:
 "Hath no man second life? Pitch this one high!
 Sits there no judge in Heaven our sin to see?
 More strictly then, the inward judge obey!
 Was Christ a man like us? Ah! let us try
 If we, then, too, can be such men as he!"

An Elizabethan Divine on the Reign of Law

OF law there can be no less acknowledged than that her seat is the bosom of God, her voice the harmony of the world; all things in heaven and earth do her homage; the very least as feeling her care, and the greatest as not exempted from her power; both angels and men, and creatures of what condition soever, though each in different sort and manner, yet all with uniform consent, admiring her as the mother of their peace and joy.—Hooker's Ecclesiastical Polity

Hooker was a divine and writer of the Sixteenth century, a man of vast learning, great piety, and exceeding depth and penetration of mind. He is said to have given to English prose literature a dignity which it had not known before. His great work, from which the above extract is taken, aimed at showing the grounds upon which the church could justify its authority, and was a defense against the extremes of Roman Catholicism and Puritanism. It should be remembered that in his time the English church was not a superannuated institution blocking the wheels of progress, but a represented movement of reform and enlightenment; so that a great man would be able to find scope for his energies under her banner. In our day he would have been a reformer of the church, or its opponent.

ALTRUISM is an integral part of self-development.—H. P. Blavatsky

An Universal Religion

THE sermons of Rabbi Hirschberg are well known for their weight and for the wisdom which they contain, and in a discourse recently delivered by the learned Rabbi at Boston he has fully lived up to his reputation. His subject was an universal religion, and he occupies the very sound and common sense ground that all religions are universal so far as they contain universal truths. But this, he says, "is far from acknowledging any one of them to be the true and destined universal religion." Speaking more particularly for his own great faith with its profound sublimities which are so often expressed in the daily lives of its people, he asks if it is not presumptuous to claim a monopoly of divine truth upon contentious beliefs which are not held by millions of devout and sincere persons. The essential affirmations of Judaism, the unity of God and the ultimate birth of the Messiah in every individual of the race, are also essentials of other faiths, and while men may make labels and form corporations, religion itself is the universal birthright of the race.

This is, of course, along the exact lines of Theosophic teachings, and for this reason Theosophy seeks to detach no man from the faith in which he was born or to which he has given his adhesion. Theosophy urges no man to cease to be Christian, but rather to be ten times more Christian than ever before, to ceaselessly explore the depths of his own faith, to learn of it in its purity and to free it from the accretions of two thousand years. If there is anywhere a religion which appeals to the hearts of men it is because of the Theosophy which it contains, the Divine Wisdom which it has preserved and of which it originally entirely consisted. The present-day turmoil in the churches and the searchings of heart which the religious world is undergoing are but the misunderstood efforts of sincere men to throw off the disease of creed and to re-establish the healthy life current of brotherhood, which is but another name for Theosophy. Theosophy, as such, wants no recognition. It does not care whether those who call themselves Theosophists are to be numbered by tens or by millions. But it does care that the supreme essential of human brotherhood shall be recognized and practised under whatever name or label it may please men to give to the system which it glorifies. So long as such sermons as that by Rabbi Hirschberg can find intelligent and appreciative audiences, so long we shall have abundant cause for content, so long we shall know that it is well with the cause of human brotherhood, and that good seed has fallen upon good ground and is bringing forth fruit abundantly.

The Raja Yoga Edition

THE Special Raja Yoga Edition of **THE NEW CENTURY** contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to **THE NEW CENTURY CORPORATION**, Point Loma, Cal., the papers will be mailed for you without extra charge.

The Ideal Church

"The ideal church," says Rev. Newell Dwight Hillis, "is one noble building, centrally situated, crowded from Sunday morning to Saturday night, the center of the social, musical, literary and ethical life of the community; the home of light and joy; the pride of all the people."

THE man who is lacking in love for his native land is lacking also in a sense of duty. The country of our birth is the chief claimant upon our service, and he who disregards this supreme obligation is walking backward upon the road of life.

Classifying and Tabulating Religions

IT has lately become popular to classify and to tabulate the religions of the world, as well as the various denominational divisions of each country. For a certain order of mind there is a peculiar fascination in watching the ebb and flow of contending forces and in speculating upon the ultimate result of a very unedifying and irreligious rivalry. A few years ago the task was distinctly easier than it is today. The number of those unwilling to be classified was very small, and the boundary lines between the creeds were well and sharply drawn. At the present time, however, a distinctly new element has entered into the problem. Not only have the old labels lost much of their meaning, but

there is now an immense volume of very sincere and serious thought which refuses to allow any brand whatever to be placed upon it, which remains outside all dogmatic organization, and which, by its silence, increases the perplexity of those who cannot conceive of any religion without external formulas, legible labels and aggressive propaganda.

We are well aware that we have still to reckon with much sincere thought of the materialistic order. Its remedy will, however, be found in its very sincerity, and we are not without the assurance of observation that materialistic thought, or what appears to be such, is often accompanied by actions fraternal and spiritual to a very high degree.

A New and Exalted Order Coming

That a new and exalted order of consciousness is coming into the world and offering its illumination to every mind which is willing to receive it, is a belief which we have often expressed and upon which we lay increasing emphasis as its signs are so visibly multiplied upon every side. It is toward this new and inexpressible consciousness that the unclassified religious thought to which we have referred is directing itself. However apparently unformed it may yet be, however seemingly vague and inarticulate, there is none the less a growing perception that man has not, nor can he ever have, any other religion than the search for the God within himself, and that all creeds and externalities are but magnets which fatally draw him away from that God. There is no other hope either for nations or for individuals than in the increasing clearness of this vision, the increasing recognition of the sure and certain success that must follow every effort to see it, and the reward ineffable which it is waiting to bestow. What wonder that the religious census monger is silently and even contemptuously dismissed by those who have seen, it may be afar off, the splendors of the inner and eternal light!

Peace Will Come to Him Who Finds

Truly, we behold it but as a vision in the night-time, because we have not yet learned to search for it, but we shall learn, and to him who finds it will come the peace which passes all expression. We shall learn that there is within the heart a holy of holies into which every man may enter unafraid without either mediation or intercession, if he can but leave without the door the love of self which makes him blind and deaf. No longer will the Will of God be merely a phrase without a meaning; it will become a fact in nature to be ascertained and to be obeyed by all who can silence for a season the turmoil of desire. Then will religion be no longer a sentiment of which we can enumerate and arrange the prides and prejudices. It will have become a fountain of wisdom, and nothing will be too small to escape its guidance, and nothing will be too great to do obeisance to it. It will unite men by love instead of separating them by hate, it will be the universal language of human aspiration, it will give to mankind the leadership of just men who have been made perfect.

Surely, a gracious and a glorious prospect, and one which may seem to be in but ill accord with the present strife of the world. Yet it was said that "He maketh the wrath of men to praise Him," and under the storm and battle-swept soil of human life lies sheltered the seed of a new age already quickening to the coming splendor of flower and of fruit. Y.

Eternal Life

IT is only the believer in the eternity of the individual life who can ever see anything in its true perspective, who can distinguish between the ant-hills and the mountains of daily experience. If it were possible to invoke from Divinity some supreme gift for men, some leaf from the Tree of Life which is for the healing of all nations, what better thing could we ask than a knowledge that individual life is eternal, eternal backward into the unlit and fathomless past, and eternal forward into the future which only hope can see? What a convulsion would then be wrought in the affairs of men and with what speed would human minds let go the things which most they prize! How instantly would the objects which we now call great dwindle away into the infinitely little, and with what haste should we search for the things at which we now have no time to throw even an idle glance! How small would be our politics, our ambitions and our strivings, and in what majestic guise would the very humblest of duties appear before our eyes! Even a measureless eternity would give us no time to hate and immortality itself would be all too short for the demands of love.

STUDENT

Our Hopes of Immortality

SCIENCE and religion alike are puzzled over the present attitude of the average man toward immortality. Science, as represented by more than one eminent professor, tells us with a distinct note of discouragement, that in spite of all its teachings, in spite of all its discoveries, men still believe in immortality. Upon the other hand we are assured by some representatives of religion, that men, and especially dying men, no longer show a feverish concern about the hereafter, are no longer tormented by fear, nor uplifted by ecstasy, and that such anxiety as they may show is for the earthly welfare of those they leave behind them. And meanwhile the "average man" seems indifferent as to the discussion which his perversity has caused. He goes upon his way in the full assurance that the Kingdom of Heaven is not yet upon earth, wherever else it may be, and that it is perhaps upon earth where it ought first to show itself. After all, he has been taught to pray that the Kingdom of Heaven may *come* rather than that he may go to it, leaving, it may be, his dear ones upon earth, in another kind of kingdom, the reverse of Heaven.

Perhaps the attitude of the average man toward immortality, the average man, the man in the street, in whom we are all so condescendingly interested, is not one of the indifference which we suppose. Had he the leisure to discuss the matter with his self-appointed mentors, he might tell them that they are no more qualified to instruct him about immortality than he is to instruct them. Perhaps not so much so. Wisdom does not necessarily lie in much discussion, and silence is better to great ends. Science can do no more than tell us that it has searched for the Soul and has not found it, as Arctic explorers have searched for the North Pole and have not found it. And as for the hysterical agonies of dread or exaltation, which once mocked the soul of the dying, it may be that a new spiritual consciousness is beginning to whisper audibly that the life count is closed, and that it shall be eternally well with us even though our freight of folly may be a heavy one. Man is becoming his own high priest both of science and of faith. He is becoming conscious of a Holy of Holies within himself, into which he alone may enter, while intellect stands without the door. Therein are said to him things unlawful to utter, indeed impossible to utter, and for a while he no more hears the angry waves upon the rocks and the discontented ripples on the shore. For a space there is no more sound than the breathing of the unutterable sea of time.

It was well said by Lorenzo de Medici, that he who does not believe in immortality is already dead, and there is truly an odor of the grave about these unfortunate ones. Even our abiding pity for them will not persuade us to argue with the dead, least of all upon the subject of life. For our knowledge of immortality we in no way depend upon erudition. To this door every man has the key, every man has within himself the knowledge which no other can confer upon him.

STUDENT

Heart Action

WHAT do we mean when we say that a word or an action comes from the heart? Hardly any expression is more usual, hardly any expression less understood. Even physiologically some thoughts and actions seem to have a different seat from others. Consciousness appears ordinarily to be in the brain and yet where is he who has not sometimes been conscious of a conflict between the reasoned intentions of the head and the warm unreasoned impulses of the heart? Because these latter are unreasoned we subordinate them, victims as we are of the intellect superstition, the malady of the times. The impulses which we feel welling up from the heart and which we suppose it to be our duty to suppress, are however but a foretaste of what might be if we would but listen and obey. Instead of mere impulse might come the spoken voice which has been called the "still, small voice." Instead of the suggestion of a heart glow which we have learned to despise as mere sentiment, would come a clear and steady flame burning upon an eternal altar, a flame which veils and which discloses the face of God.

The perfected man who is even now being fashioned in the divine workshops of eternity will live more in the heart than in the brain. He will be very close to the fire which fell from heaven, the fire in the heart which we now keep so far from us that it is as it were in another world. However great may be the present development of intellect it is as nothing

to what it will be when we have learned to feed the fire of the heart, to give to it the fuel of our self-love until its wonderful flame shall rise into the cold chambers of the brain inspiring them to an undreamed of genius. Of all forces in human nature, the intellect is the best of servants and the worst of masters. Let us offer to the heart the tribute of our awakened recognition. Let us invite it to its rightful sovereignty.

Spirituality and Organization

THE Rev. R. J. Campbell is well and favorably known in America, and has deservedly secured a reputation for broad and liberal thought. He none the less furnishes an illustration of the extent to which theological bias can narrow our survey of the universal spiritual laws which respect neither persons nor organizations. He contributes an article to a contemporary in which he deals with "Religion and the New Humanism." He tells us that he can see the religious spirit unconsciously working *even* in the quickened humanitarian impulse of men who have severed their connection with formal religion. Does Mr. Campbell seriously suppose that the religious spirit descends upon earth, as it were, in parcels, labeled and addressed to the various denominations, and that it is therefore surprising that those not belonging to the denominations should be found in possession of it? He really seems to think so, for he relates with some apparent surprise that a newspaper man of his acquaintance, who had a great dislike for church-going, had none the less been busy in arranging to send crippled children to the seaside. It is a little difficult to argue against complacency of this kind which assumes some special and exclusive partnership between human organization and the great spiritual forces of the universe, and that such complacency should still flourish is a little astonishing and disheartening.

We would suggest that human dogmatic organizations and corporations are not, and never have been, the peculiar vehicles of divine light; that they are, indeed, and always have been, very much like barnacles upon the ship, unornamental, and distinctly injurious to progress. It is the organizations which have attached themselves to religion and not religion to the organizations. The sooner we get rid of the idea that spiritual light reaches humanity through certain specified shafts or tubes, the better it will be for us. Spiritual force may be received by any heart which invites it, and the only way to invite it is by the precept and practice of human fraternity, which is more likely to exist apart from creeds than with them. Judged by this standard, we think that the non-church-going journalist who sends crippled children to the seaside is in the way of receiving a very unusually large amount of spiritual force. Indeed, if a tree is to be known by its fruits, he seems already to have received it.

The Heartless Asiatic

A WELL-KNOWN newspaper correspondent in the East is guilty of the following statement: "The Asiatic is heartless. The suffering dumb brute means nothing to him."

Now, we do not know whether this correspondent is merely writing from the fantastic exuberance of his own ignorance, or whether he is simply trying to write down, and down, and down, to the mental level of his readers. It would, perhaps, be useless to inquire exactly what this precocious young scribe means by "the Asiatic," and whether he knows how many hundreds of millions of human beings, of the world's oldest and most humane civilizations, are included in this term. Is he, for example, aware that the people of India are Asiatics? Probably not, but a map of the world will convince him of its truth. Still further research will show him that a very large proportion of the people of India are so tenderly considerate of animal life that our habitual behavior toward the dumb creation fills them with measureless and eloquent abhorrence. This is so well known that we should have thought even a war correspondent would have been aware of it, and even the necessity of filling two additional lines of newspaper space would not have justified so gross a libel upon far more than half the human race.

Japanese Scenery --- Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week shows a bit of Japanese scenery that is quite characteristic of suburban localities in the Island Empire. An extended article on Japan that will well repay careful reading appears on pages 12 and 13 of this issue.

Some Views on XXth Century Problems

Bulgarian Jews Crucified by Mobs

IT appears that Bulgaria has been disgraced by an anti-Semitic outrage, a number of Jews having been seized by the mob and crucified. Some tardy steps were taken by the authorities to suppress the turmoil and to conceal the murders, *fearing to excite the animosity of the Jewish financiers against Bulgaria.* What a picture of human nature! Only yesterday we were reading of the massacre of Bulgarians and the atrocious and dishonoring tortures inflicted upon them. The curtain falls for a moment only to rise again and to disclose these very people crucifying and murdering the weak and the defenceless and covering up the evidences of their crimes, not from a feeling of natural shame and remorse, but for fear of incurring the hostility of the money lender.

We can make no greater mistake than to suppose that those who have themselves been persecuted are thereby less liable to persecute others. The reverse is the fact. Persecution has usually been a curse to him who receives it and to him who inflicts it, and noble indeed is the nature which can suffer persecution without degradation. The history of all times shows that power and persecution are practically synonymous terms. Nor indeed need we turn to history for confirmation of this truth. We need only look around us at the social systems in which we live to see that the habit of persecution is only limited by its opportunities, and that the desire and determination to make others suffer for their beliefs is one of the dominant features of human nature as it now manifests.

If this news from eastern Europe be confirmed we shall doubtless hear much of it and the indignation will be as sincere as it was upon a previous occasion. How sincere that actually was we may well be somewhat in doubt. Persecution is not confined to eastern Europe nor does the absence of bloodshed mitigate its abomination. We do not remember that the authoritative proposal to impose religious tests upon university students, and to deny higher education to those who could not pass those tests, was received with any apparent signs of detestation, nor is there any evidence that the murderers of Lompalanka in Bulgaria nor of Kishinef are lacking cultured and educated comrades in the other countries of civilization.

Humanitarian Work for the Children

SURELY, it is worth our while to do something for the children of the slum and the factory; worth our while, in fact, to do something for every ignorant and neglected child with whom we may come into contact. There are, indeed, few among us who cannot do something for some child and so help to lift the curse which the misery of babies is laying upon civilization. The problem is becoming more pressing every day, and fortunately there are some signs that the public conscience is being aroused. There are very many who are willing to help, to sympathize with organized efforts, and to give their pens and their voices where they are needed. There are still very many others whose efforts are, so far, confined to a well-meaning sentiment, or to the expression of a wish that something may be done. There is, however, a more practical way than any of these, valuable as they are. The neglected and miserable children of our towns are within our sight every day. Suppose we were to make it a rule of our lives never to lose a chance to do something for some child who needs help. It might be a word of tactful advice to a mother, it might be only a careful and affectionate word to the child, it might be the keeping of some waif under partial observation in case the opportunity for something more practical should occur. Attempts at legislation are good, and organization is good, but if the recording angel can set down one single act of kindness to a child, one single individual act which will help that child-nature to unfold, it will not be lost among other and more pretentious deeds.

Let us by all means encourage humanitarian legislation, let us raise our voices publicly and privately, but do not let us forget to crown all these efforts by individual acts of compassion, by the cup of cold water individually given, and so gain for ourselves that gracious experience which only contact can bestow. "Inasmuch as ye have done it unto one of the least of these, ye have done it unto Me."

Iniquity Ad- vertised and Increasing

A CHICAGO pastor has commented upon the prevailing lawlessness which is now so popular a theme in certain quarters. He says, "Iniquity constantly spreads and advertises, and anybody can see it except those whose business it is to check it." We would ask for more information in order that the blame may be rightly affixed. We are so accustomed to paying other people to do our duties for us that we are apt to forget that we have any duties at all of our own except to cast an occasional vote at the bidding of someone else. Unless we are finally to understand that a modern community is merely a collection of selfish units banded together for a greater facility of aggrandizement, we must maintain that it is the business of everyone, without any exception whatever, to check iniquity. We presume that our cities are still self-governing, that they are not subject in any way to external and despotic control, and that they are therefore entirely responsible for any conditions which may grow up within their borders, and the responsibility is of course individual as well as collective. This devolution of responsibility is the curse of modern life. By it we may succeed in deceiving ourselves, but we certainly do not deceive the recording angel. The guilt for the existence of slum life, which is the very factory of iniquity, lies directly at the door of every man and woman who has failed to attack this evil in every way known to them. If, as we are told, the spread of iniquity is apparent to everyone, then upon every one is the condemnation, and there will be no kind of relief for us until we recognize it.

X.

Public Press too Eager to Publish Crime

DR. HENRY HOPKINS, the President of Williams College, holds very strong opinions upon the deterioration of public morals and upon the causes of such deterioration. He says that the very foundations of our national life are threatened, and that nearly every branch of our social system is invaded by a spirit of lawlessness, treachery and crime. As to the causes, Dr. Hopkins is in no doubt whatever:

One of the most potent, most ubiquitous, most constantly operative causes is the vast volume of criminal suggestion flowing in upon the public mind through various means, but especially through the public press. The reader is taught both how to perform the crime and how to avoid punishment.

This is, of course, so obviously true that no discussion is possible. Equally true is Dr. Hopkins' conclusion that the "total influence of newspapers is good." The sinister work of criminal suggestion is carried out by a section of the press only which supposes that it has amply defended itself by the proof that it does but supply a demand. A more shallow defense was, of course, never made. Such a plea might be advanced with equal justification by a purveyor of burglars' tools, for which also there is unfortunately a demand. The police would not, however, regard it as effective, and we do not see why it should hold good in the case of those others who teach "both how to perform the crime and how to avoid punishment."

Cancer Not Checked by Radium

THE London Cancer Hospital has definitely declared against the use of radium. It has been carefully tried in sixteen cases, and although in some few instances there has been a slight alleviation of pain, in other cases the pain has been increased. We must therefore suspend judgment as to the very numerous reports of cures which have come from various sources. These are either due to faulty diagnosis, or the authorities of the Cancer Hospital have been premature in their conclusions.

At the same time the action of the Finsen ray upon lupus continues to be very satisfactory. Cases of failure are very rare, and a great many absolute cures have been reported. Lupus and cancer are, of course, entirely different maladies, but they resemble each other sufficiently to justify the hope that they may be amenable to the same treatment. There is, therefore, good ground for hope that the most dreaded disease of the age may yet be successfully assailed.

Art Music Literature and the Drama

Mozart, the Prophet of Cheerfulness

WOLFGANG AMADEUS MOZART was born in Salzburg, Bavaria, in 1756. His life was filled with joy, hard work, grave vicissitudes and very, very many sad experiences. He was but thirty-five when he died, apparently from a fever, although he believed himself poisoned. His funeral was a disgrace to society. Five "friends" who had intended to accompany the body to the grave, turned back because it happened to rain, and the body of Mozart, one of the greatest, most genuine, most lovable men that Germany has ever produced, was hurried, unaccompanied, to a pauper's grave.

Mozart was educated mainly by his father, a violinist. At three he shared harp lessons with his sister, five years his senior, and a year later he played minuets and composed little pieces. A concerto, composed by him shortly afterwards, was criticized by his father as being too difficult. The tiny Wolfgang replied that "no one could be expected to play a concerto without having first diligently practised it." He performed in public when but five years old and at the age of six, with his sister, made a musical tour through Germany.

He was handsome, self-possessed and his manners naturally spontaneous and refined. One day he slipped on the polished floor of the court-chamber and the Duchesse Marie Antoinette lifted him up.

"How kind you are," he said. "When I grow up I will marry you."

It is almost incredible that after the favors received at court, he should have remained so gentle, so unspoiled and so amenable to parental authority that he used to say: "Next after God comes my father."

When still a child Mozart composed a symphony and published a third set of sonatas and an anthem entitled "God is our Refuge." When but ten years of age he composed an oratorio and a year later an opera bouffe.

His tour in Italy was marred by the jealousy of resident composers, to whom his answer was the composition of a number of operas from Italian text? He arrived in Rome on Wednesday in Holy week and went at once to the Sistine Chapel to hear the *Miserere* of Gregorio Allegri. On returning to his hotel he transcribed it from memory, note for note, a feat which created an immense sensation, for at that time singers were forbidden to transcribe the music on pain of excommunication.

The excellence of Mozart's work is only paralleled by the extraordinary rapidity with which he produced sonatas, symphonies, concertos, operas, masses and other important vocal and instrumental works. Both musicians and public recognized his love of graceful melody, the wonderful sweetness of many passages, the torrent of passionate fervor, the natural dramatic instinct of the composer, his reverence for the claims of legitimate art and his capacity to express the sublimest feelings. He was the first of all the composers to observe in his compositions the parity and disparity of tone qualities in the orchestra, that is, how the sounds of some instruments will unite with, and some will penetrate through, others; how

some instruments, by pouring forth a stream of harmony, may enrich or nourish a melody that floats on the surface in another quality of tone.

Mozart's compositions, whether sacred or designed for the stage and concert room, are marked by an individuality of style which cannot be mistaken. There is in them no trace of indecision or inconsequence. Mozart was most wonderfully exact. Everything was pervaded by a noble ideal and individual charm, *vide*, his handwriting and his manuscript music. He himself has left us a description of the loving care he exercised in the production of his charming phrases. Having once conceived an idea he subjected it to a process of mental elaboration which continued until the composition was complete. Then, and not until then, he committed it to paper. It was because of this faculty that he was able to write out the celebrated overture to *Don Giovanni* on the day of the first performance. He tells us that his ideas flowed best when he was cheerful and alone. E. A. NERESHEIMER

ART and Joy go together, with bold openness, with high head, and ready hand --- fearing naught and dreading no exposure.—Whistler

SONG FROM PIPPA PASSES

by ROBERT BROWNING

THE year's at the spring.
The day's at the morn;
Morning's at seven;
The hill-side's dew-pearled;
The lark's on the wing;
The snail's on the thorn;
God's in his heaven,
All's right with the world.

faithfully. Perhaps there would be fewer wars, certainly less eagerness for war, if this man's paintings were better known, were as freely reproduced as those which give us the pomp and inspiration of war.

AN enterprising American has recently purchased and brought to this country the magnificent Seventeenth century tapestries formerly in the Barberini Palace, Italy. They are of peculiar interest, quite outside of their perfect workmanship and their enormous value,

because the designs represent episodes in the life of Queen Dido of Carthage. One of the tapestries represents the landing of Æneas and the meeting of his celestial protector in human shape; another, his meeting with the Queen; and still another, which is of unusual interest, pictures Queen Dido showing to Æneas her plans for the building and fortification of Carthage.

ONE of our historians tells us that John Adams of pre-Revolutionary days, had slender respect for music, and—so they say—he once upon a time recommended a certain Peter Chardon as "a promising youth who has a sense of the dignity and importance of his profession—that of law. This fellow's thoughts are not employed on songs nor his time on flutes, concerts and card tables. He will make something!"

LIFE is a progress and not a station.—Emerson

WE regret to note confirmation of the rumor that the great Russian war-scene painter, Verestchagin, was one of the victims in the destruction of the battleship *Petropavlovsk*. There have been painters enough of the glories of war. Even its horrors had hitherto been painted with the horror melodramatized and transfigured.

But Verestchagin spared us nothing; he made us face the results of the glorious charges, the majestic thundering of cannon, the columns advancing under streaming banners. We saw the limbs torn away, the welling blood, men dying as men do die, ghastly and contorted. It was his message, his sermon, and he gave it

"THE BODY HAS JUST AS GREAT WORK AS THE SOUL, & PARTS AWAY AT LAST FOR THE JOURNEYS OF THE SOUL"

The Need of Physical Culture

THE woman of the past devoted herself to supplying the defects of her physique by artificial methods, albeit inconvenient or unhealthy, following blindly a desire for symmetry and beauty. Today, woman, broader-minded and with higher aim, realizes that future generations depend largely upon her understanding of her nature and the manifold laws that govern it. And Physical Culture, from being a fad, much overridden, has taken its place among the necessities of a well-ordered life.

Women have been grasping the ideal of the "Beautiful." We are building higher ideals, are living purer lives, and now we plead for better bodies. At best we have used but a limited part of the muscular system. Health requires a prescribed amount of physical exercise, a conscientious daily attention to the building of such a body as shall be a willing agent of the ideals that are becoming more real. Not only is exercise needed, but the exhilaration of the sunshine and fresh air, the wholesome stimulus of suitable athletics, the control of nerves and body that out-of-door games develop. Too long have we neglected the physical, lest we should be deemed selfish or vain.

Katherine Tingley has placed in our hands the Key to the Book of Life, bidding us step into the broader path, where the inner and the outer may be in harmony. Go to Mother Nature and learn her ways. Study little children and notice the interdependence of the threefold nature. With this clearer sight how fraught with meaning is *our* every gesture! The coldest material sciences will support us when we assert that every emotion or thought expresses itself through some muscle or set of muscles. We call this or that but a gesture; repeated, it becomes a habit, and habit, persevered in, grows into the mirror of our characters.

For ages women have studied and been taught submission, self-effacement. Is it any wonder that we had the impassive, hollow-chested wife and mother of yesterday? Carry this attitude a little farther and we find the abjectness of fear, the cravenness of guilt.

Not by words do we reveal ourselves to each other, but by every line of face and form do we cry out to all our inmost secrets. Are they good, are they strong, are they evil—he who runs may read, though our lips deny again and again.

So today, even in the light of better ideals, we are cumbered with old habits, not knowing 'tis our duty to *make over the body* as well as the mind.

Isn't it time for a true Teacher? How the world needs the woman she is building! for this is woman's opportunity.

It is not enough that woman shall think pure thoughts and hold high aims; her body must be fit servant and interpreter of the Soul.

Woman's physical nature shall yet stand to the world as a Temple of Beauty and a fortress of strength, within which no weakness can thrive and no evil force its way. Truly, as Katherine Tingley has said, "The world is waiting for a nobler type of woman, a higher womanhood."

A. I. W.

Fencing for Women

SIR HENRY THOMPSON, England's veteran surgeon, advocates fencing as an exercise for women. "I am always trying to impress upon women," he says, "the necessity of using the left hand and arm equally with the right. There is one thing I have to say about the average English woman, and that is that she cannot walk. She walks with her shoulders, and it is perfectly painful to watch her. The reason is that most of our women have not had proper physical training, have not been taught to hold their heads up and look ahead. French women, on the other hand, walk well, and in my opinion this is due to the fact that they generally receive in their youth military training of some kind, or instruction from a fencing master. Outside of all other considerations, a graceful, natural carriage is desirable from the standpoint of health."

The Physique of George Eliot

HERBERT SPENCER, in his autobiography, writes of George Eliot's head: "In physique there was perhaps a trace of that masculinity characterizing her intellect; for though of but the ordinary feminine height she was strongly built. The head, too, was larger than is usual in women. It had, moreover, a peculiarity distinguishing it from most heads, whether feminine or masculine; namely, that its contour was very regular. Usually, heads have here and there either flat places or slight hollows; but her head was everywhere convex. Striking by its power when in repose, her face was remarkably transfigured by a smile. The smiles of many are signs of nothing more than amusement; but with her smile there was habitually mingled an expression of sympathy, either for the person smiled at or the person smiled with."

Favors Women Riding Astride

A WELL-KNOWN physician of Baltimore, commenting upon the growing custom of women riding horses astride, said: "We should all welcome the day when women are no longer bound by a custom that is unsafe and restricts them very much in an exercise that is peculiarly well adapted to their health. All women originally rode astride. The side-saddle was introduced into England in 1341 by a consort of Richard II—Anne of Bohemia—who, being lame, was unable to ride a man's mount. Before her time no such thing as the two pomel saddle was known. Queen Anne died in 1394, but the custom she introduced survived her."—*Baltimore Sun*

Good Brain in Sound Body

THAT a sound healthy body is a powerful aid towards developing clear, strong brain power, is shown in the case of Miss Ivy Williams, who recently passed the Doctor of Laws examination of London University, one of the severest of tests, triumphantly. She is strongly addicted to outdoor pursuits, her accomplishments including cricket, swimming, skating, diving, rowing and cycling, as well as riding and driving—a fair record for one who has won such distinction in graver occupations. She is also an accomplished linguist, and reckons a thorough knowledge of several dead and living languages among her other gifts.

Development of the Physique

MRS. JOSEPH CONN, in the course of a lecture recently given at Bechstein Hall, London, is quoted as making the following statement: "If the importance of attending to these particular muscles (the trunk) was duly considered, such complaints as spine curvature, indigestion, asthma and the general indisposition vaguely described as 'internal weakness,' would be obviated. Mothers themselves should be educated in order to teach their children to breathe, sit, walk and stand properly."

DR. GRACE MURRY, one of our well-known American physicians, said recently: "To answer the question 'Is woman physically capable of competition with man?' is an undertaking which bristles with difficulty. The answer would largely depend upon the consideration of the field of endeavor in which the competition were to take place. The women peasants of Europe carry as great, if not greater, burdens than the men. I have seen women in the valleys of Switzerland carrying on their heads loads of hay which concealed the figure from view and made each resemble a walking haystack. Few are the physicians that would have the physical endurance to stand what the women trained nurses endure in a serious case of illness. I doubt if the master of the household would be able to perform Bridget's task of sweeping, washing, etc., any more than her mistress could enter into 'competition' with her."

American Ladies in Korea

From the *Kobe (Japan) Chronicle*

THE lot of foreigners in the north of Korea, should that country ever become the scene of severe fighting, would be unenviable in the extreme. At present living there is safe enough, yet it was considered wise some weeks ago for the ladies in an out-of-the way part of Northern Korea to be removed to the coast and then sent to Japan. As we reported in a recent article, these ladies were from the American gold mines at Unsan, and they arrived in Japan a few days ago, and are at present in Kobe, awaiting a steamer to take them home to the United States. Although accounts of the ladies' travels agreed in the fact that they met with no unpleasantness on their journey in Korea, and had no sensational adventures, such as would make acceptable newspaper copy, an interview with one of the ladies yesterday afternoon at the Olivier Private Boarding-house, deepens the common impression that a lady is generally a more interesting talker than a man. The lady our representative saw, said she had little to say that would be likely to interest newspaper readers.

Their journey from the Unsan gold mines via Anju, Chinampo, and Chemulpo, while devoid of any happening of an alarming nature, had been full of events common to travel in Korea, both interesting and amusing.

The party of ladies who left Unsan, about nine in number, with three children, were conveyed for some thirty miles in "dumpies," podgy, bumping, inconvenient little carts used at the gold mines for moving quartz, and the procession of dumpies was followed by thirty "jiggys," or Korean carriers, who bore on their backs the luggage of the party, which, as our readers will remember, was escorted by the mine officials—husbands and other relatives of the ladies.

The journey was provocative of much amusement from time to time, because the dumpies, drawn by shaggy little Korean ponies, besides shaking every bone in the body as they traveled over the rough, uneven roads, frequently showed strong inclinations to upset altogether. These little diversions were the chief attractions of the journey until the party arrived at Anju, where it will be remembered they were quartered next door to some Russian officers, from whom they experienced the polite treatment that was expected.

Of the Cossacks the lady says she never saw so fine a body of cavalry in her life. The horses were magnificent animals, and their riders—extremely well armed and equipped—might have been born in the saddle. As an instance of fine horsemanship, the lady said she herself observed an officer, note-book in hand, making a survey of the surrounding country on horseback, under most difficult circumstances. The officer sat on his horse, which was mounting a very steep hill zigzag fashion, with perfect ease, making notes during the ascent, the reins hanging

loose. It was a remarkable feat in horsemanship. This observation led to the inevitable comparison between the cavalry of the belligerent nations. In the opinion of the lady, the Japanese make very poor cavalry troops. They sit on their horses as if they were uneasy in the position, and would far sooner be on foot. Some of the officers' horses that were seen were fine animals, as good as the Cossacks, but the mounts of the rank and file were—well, not good to look at, but they may be hardy and valuable in the field.

In answer to a question, our representative was informed that the Unsan gold-mine undertaking is prospering. New ledges of gold-bearing quartz have been discovered and the company has a bright prospect before it, though at present only two out of the six camps are working. It will surprise many to hear that there are no less than sixty-five foreign employes at the Unsan mines, and many hundreds of Koreans. The principal officials are all American, but some of the foremen and other workmen are of European nationality.

The lady said a great deal which showed her keen sympathy with the Korean—man and woman—whom, after three years' experience in the country, she considers the most abused people on earth, as well as among the most amiable and gentle. The sorry condition of women and men, the tyranny and "squeezing" to which they are subjected by officials, and the oppression which they suffer at the hands of Japanese, were themes on which she spoke a great deal and with feeling.

After reaching the coast at Anju, thirty-two miles south of Unsan, the ladies continued their journey, part of the way escorted by the Cossack troop, and safely reached Chinampo, where they found the American warship *Cincinnati* awaiting them. They were then conveyed to Chemulpo, where several of the party left for Seoul, while the remainder, six ladies and three children, continued their journey.

They traveled on the German steamer (now an O. S. K. chartered steamer) *Amigo*, and experienced the kindest treatment from Captain Hansen, who placed his cabin at their disposal. In a day or two they will be homeward bound.

ROBERT BROWNING's biographer, William Sharp, tells us that the poet's mother "was a woman of singular beauty of nature, with a depth of religious feeling, saved from narrowness of scope only by a rare serenity and a fathomless charity. Her son's loving admiration of her was almost a passion; even late in life he rarely spoke of her without tears coming into his eyes. She was, moreover, of an intellectual bent of mind, and with an artistic bias, having its readiest fulfillment in music, and to some extent, in poetry." When the characteristics of the mothers of great men are better revealed, the lives and work of the men themselves will be better understood.

A New Book on Babylon—Animals & Taxes Mentioned

MR. W. ST. CHAD BOSCAWEN has given us a new book which he calls *The First of Empires "Babylon of the Bible," in the Light of Latest Research*. In spite of its title, which is a bad one, the book itself is a good one. How does Mr. Boscawen know that Babylon was the first of Empires? It seems a pity to embody in a title a theory or a dogma which further researches are certain to disprove. Mr. Boscawen is a victim to the distressing malady of modern scholars which causes them to hail every fresh discovery as that of the beginning of something, or the dawn of something, or the first of something. It would probably have vastly amused the Babylonian sage with his knowledge, for instance, of ancient Atlantis, to be told that the Babylonian Empire was anything more than the latest of such Empires and systems, a link in a chain which he would have known to be of immeasurable length.

The chapter on the "Garden of the Orient" is perhaps one of the most interesting in this volume. The thousands of tablets which have been found on the site of Tello describe a system of land survey more minute than anything of which history has record. Every domestic animal in the country was carefully enumerated and every yard of land, and a system of fractions was used in computing the taxes. The chapter on Babylonian literature is also of great importance. We are given many specimens of poetry and folklore hitherto but little known, of which the following small illustration will be read with interest:

I will sing the song of the lady of the gods;
Attend, O hero; give ear, O warrior,
Of Mama (goddess), her song is sweeter than honey or wine,
Sweeter than honey or wine,
Better than fresh-gathered fruits, better than pure cream.

Very striking, too, is the description of Isum, the god of infectious diseases, as having been "born in the gutter," which shows a hygienic knowledge which we have ourselves but lately acquired.

The translation of Babylonian tablets has, of course, been but lately begun, and we may look forward to a steady stream of renderings for many years to come. As a foretaste of the good things in store for us, Mr. Boscawen is to be congratulated upon his labor. STUDENT

Babylonian Legislation Not Unknown to the Jews

MR. STANLEY A. COOK is well-known as a cautious and careful student of Babylonian literature and remains, and his book on *The Laws of Moses and the Code of Hammurabi* may be welcomed as a valuable addition to our knowledge.

Mr. Cook's problem is the extent to which early Jewish legislation was borrowed from Babylon, and while in the earliest Hebrew literature he can find no unmistakable traces of such borrowing from Hammurabi there are certain phenomena which may imply that the Babylonian code was not unknown to the Jewish lawgivers. It is at any rate certain that during the exile the Jews must have become thoroughly familiar with that code, and "it is from this period onward that the indications tend to grow even more unmistakable."

It is of course evident that there are essential differences between the two systems and we see no reason to disagree with Mr. Cook's suggestion that "the parallels and analogies which have been observed are to be ascribed most naturally to the common Semitic origin of the two systems." The most notable difference is perhaps the spirit in which the two codes were conceived, the Mosaic code having a vivid element of cruelty while that of Hammurabi leaning always toward the side of mercy.

The Postal Service Not a Modern Invention

THE postal service is not, after all, a modern invention. A very complete system was in force under King Hammurabi of Babylon 2,300 years ago. It probably existed very much earlier, but the excavations connected with this particular period have brought to light a considerable number of missives, each enclosed in its clay envelope and directed for delivery. STUDENT

Treasure of the Incas Discovered by Prospectors

THE buried treasure of the Incas still has its fascination for explorers and travelers. We hear now that a party of engineers have discovered \$15,000,000 of Inca gold "among the mountains." The address is somewhat vague and we may reasonably continue in our belief that the treasure still lies undiscovered where its former owners placed it. The story has none the less served to rearouse an interest in the marvelous people who raised themselves to such a height of civilization and power. The traces of their workmanship lie thickly upon the ground which they occupied and speak eloquently of their engineering knowledge and mechanical skill. The great Temple of the Sun, built by them, is now the cathedral of Santa Domingo, while *Saisa Huanian*, the Inca fortress, still stands as proof of their military prowess. The stone of which it is fashioned is to be found nowhere else in the neighborhood and we hear the time-honored marvelings as to the means by which these ancient peoples were able to carry out a transportation which would tax the machinery of the Twentieth century.

That the Incas were the possessors of vast treasures which have never been accounted for seems hardly open to doubt. There is for instance the chain of gold belonging to Huascar and which was thrown into the lake when that prince was defeated in war. This chain was of heavy links and was of such length that it would nearly enclose the great square of the city. Then too there was the treasure which Pizarro vainly tried to acquire and which has never yet been found. Are there custodians of this gold still living? If so, they have well kept their secret. It would almost seem as though there might be such custodians. A modern authority relates that an adventurer did once actually discover a hidden store of gold and loaded it upon his mules, but the natives of the district, angered at what they considered to be a profanation of sacred relics, fell upon him and relieved him of his plunder, barely allowing him to escape with his life. STUDENT

Another Gift from Antiquity—The Preparation of Clay

A BULLETIN from the United States Geological Survey draws attention to Mr. Edward G. Acheson's experiments in the preparation of clay. It will be remembered that Mr. Acheson was induced to investigate the matter by the Biblical reference to the difficulties of making "bricks without straw." The bulletin says:

He was interested in bricks because they are made from clay, and he was desirous of finding a clay ideally suited to crucible making, or, failing in that, of treating refractory clay in such a manner as to increase its plastic and binding qualities to that desired degree. It occurred to him that the straw and stubble that the early Egyptians combined with their clay may have had the effect of influencing the clay chemically, not mechanically. Experiments taught him that clay mixed with an emulsion of straw became more plastic, tougher, and stronger, and required much less water to bring it to a given degree of softness or plasticity. Water in which was dissolved a small quantity of gallo-tannic acid showed the same effect to a marked extent. Infusions of spruce, sumac, catechu, tea-leaves, and oak were tested and all had a similar effect on the clay, though in different degrees.

The experiments show very conclusively that we have one more illustration of the recovery of a lost art, one more gift to the world from ancient Egypt. STUDENT

Archeology of London—An Ancient Stone

THE Museum of the London County Council is not very well known but it has none the less a very considerable archeological interest. Here are exhibited the various discoveries which have been made from time to time during the excavations which are always being made at one place or another. These discoveries illustrate the whole history of London from the earliest times. Here may be seen the remains of prehistoric animals, ancient weapons, shells and human bones with the debris which a great city invariably deposits. An excavation at Brompton recently disclosed an ancient Egyptian stone sculptured with hieroglyphics. This was found at a very considerable depth and is the only one of its kind which has ever come to light in London. X.

Cacti Are Not of the Same Family as the Orchids

THERE seems to be a very general belief that the cactus family lives on scenery and sunlight and that it requires neither soil nor water for its well-being. While it is true that a cactus can retain vitality for years, even if entirely detached from the earth, yet the fact remains that it requires very nearly the same conditions, in less degree, that other plants need in order to grow vigorously. It is among plants an analogy to the camel among animals, inasmuch as it can store away within itself the means of sustaining life in comfort for a longer time than other animals could live at all; but, like the camel again, it must receive nourishment sometime.

In fact, cactus roots are very business-like affairs, actually larger in proportion to the weight of the plant than the roots of ordinary trees. A prickly-pear about thirty inches high and weighing about twenty-five pounds has roots nearly an inch in diameter and which divide to the finest possible threads. These large roots are of a yellow color, very hard, and being prettily grained, can be made into dainty little curios and fancy things. When the season is wet there is great industry amongst the cactus-plant stewards to get in as large a supply of the necessities of life as possible. Once in there is no trouble about working the gathered

Facts Bearing on the Problem of Bird Migration

SOME leading ornithologists have been, for several years past, collecting from a multitude of sources some facts about bird migrations, which are of so unexpected a nature as to call for a wholly new system of theories upon the subject. A synopsis of the results of their observations, some twenty thousand in number, recently appeared in the *Saturday Evening Post*, from which are taken the following items, space forbidding a reprint of the entire article:

Birds prepare themselves for migration by fasting for twenty-four hours.

Birds, which have small powers of flight, ordinarily travel at great speed for long distances when migrating.

Even young birds migrate, and usually go ahead of the adults.

The daylight flights near the earth are merely jauntings; the real migratory flight is chiefly at night, at a height of from two to four miles, and at a speed as high as two hundred miles per hour, or even more.

When rising for the migratory flight they appear to rise vertically with motionless wings, as though by a power not used at other times.

All species are at peace with each other during migration, and use a "bird-language" common to all, but not used at other times.

The lines of migration taken by some species are believed to be along the valley lines of now vanished continents.

materials into whatever is wanted, as the cacti have excellent circulations and employ only the best elf chemists.

Their only dread is a long succession of dry years, which leaves them all shriveled and yellow, so that it takes all next season to restock. Within the lumpy, heavy cactus plant is a structure, which is, if possible, more perfect, more delicate and elastic in its action than is that of a sunflower plant or an apple-tree. If examination be made, it will be found that each cluster of thorns is a bundle of the finest needles, each smooth, straight and carefully packed; and there is a most wonderful system of mounting each cluster in a specially prepared niche of its own, and to produce and sustain all this complexity of structure an extremely complicated internal organism exists and works so well that a single leaf, with no roots, will sometimes remodel its material so as to produce from its own substance another leaf half as large as itself.

Some species migrate from a land of plenty to one of scarcity.

Certain facts observed lead to the theory that the migratory flocks travel, or float, on terrestrial magnetic currents.

Astonishing as these facts are they have been substantiated by the most careful observation, by the most capable and well-equipped men, stationed at suitable points over distances of thousands of miles, and their reports have been minutely compared. Even those who made the observations confess themselves unable to frame any satisfactory theory which will cover all the facts, and we give this too brief epitome to our readers to be interpreted by each for himself.

Y.

There is a something elfish and weird about a cactus; one learns at last to feel it, as though it were one of those strangely half-animal things like the insectivorous plants, but of a different character, elf-hermits who wish to be undisturbed.

Universal Brotherhood Organization

Central Office Point Loma California

AT Isis Theatre last Sunday evening Mrs. Katherine Tingley, who has just returned from a long tour around the world, was an interested listener to a splendid program of Wagnerian music by students of the Isis Conservatory of Music, and two addresses by Loma-land students. In the box with Mrs. Tingley were Messrs.

Clark Thurston, F. M. Pierce and Professor Goppfried de Purucker, members of The Universal Brotherhood Cabinet, while two other Cabinet officers, Messrs. Hanson and Harris, were in the adjoining box. Mrs. Tingley seems to be in the best of health, and has returned from her trip younger looking than ever, even more energetic than of yore. At the conclusion of the program there was an informal reception at her box, many San Diegans improving the opportunity to greet the Theosophic Leader and welcome her home. A number of the girls of the San Diego Lotus Group also paid their respects, each laden with an offering of flowers.

The first address of the evening was by Mrs. E. T. Bundsmann, on "The Drama," a subject which was handled in a most thorough and artistic manner, the following all-too brief extracts of which are given:

"Vanishing, evanescent ripples upon the ocean of Time, are races and nations of men; but as eternal as the ebb and flow of tide, are the principles, the aspirations and ideals which govern them.

"Those peoples whose national life has been fullest and richest, have bequeathed to the world the crystalline essence of their greatness in the form of epic poems and symbolic dramas. These treasures of the past are the most precious gems in the jewel casket of time, for with these as a nucleus we can, in imagination, build up the manifold life of a vanished race.

"When we consider the great Greek dramas, we find that in them the personages and the events circle around a central idea, and symbolize the forces which are at play. And as these are universal in their aspect, the spectacle became, in reality, a religious ceremonial for the education and enlightenment of the people. The higher emotions were evoked, and the people brought to a realization of the beauty and use of virtue in the practice and performance of the offices of daily life. This, indeed, is the true mission of the Drama.

"The love of humanity for dramatic expression shows that it is a need of the heart. No human power holds more potency for good when its right use is maintained.

"In England, the reign of Elizabeth witnessed the flowering of that dramatic art which began with the minstrels of the Middle Ages. Shakespeare, the greatest of bards, ran the gamut of human emotions, as we know them in individual life. His men, women and events are true, up-to-date. Thus, if we would have the best drama of our own time, we must still turn to Shakespeare to fill our needs. But this does not mean that the last word in dramatic art has been spoken. There is an answer to Hamlet's 'To be, or not to be;' 'Our little life is rounded off with sleep' includes the idea of an awakening; and 'There is more in this than we have dreamed of in our philosophy' shows that the poet-dramatist knew of the heights beyond for the soul of man to dare.

"The impulse given by Shakespeare to dramatic art was felt in the other great countries of Europe. Goethe gave to the German people and the world his superb *Faust*; and Lessing, his drama of Brotherhood in *Nathan the Wise*. Corneille and Racine produced classic French drama, and Moliere wrote his inimitable comedies.

"But are these the dramas which the people of America and Europe are witnessing today? Save in rare instances, they are *not*.

"Problem plays, comic opera and farce comedy hold the stage. The theatre has come to serve the same purpose as opiates, narcotics and gambling. The love of sensationalism has invaded this realm, as it has all others; and instead of being an educator, and thus a factor in evolution, the plays of today cater to idleness and luxury, and teach men nothing of the nobility of their calling. The Roman age of 'bread and circuses' is upon us! But it need not last to our destruction. Nor will it, if the signs of the times prevail.

"A revival of the drama is fast approaching; soon the time will be when, through it, man will be led away from contemplation of the personal to the impersonal, and will be shown the spirit of the Divine pervading all life. Thus again will it become a religious ceremonial, teaching to man the noblest and grandest lessons of terrestrial life."

The second address was by the Rev. S. J. Neill, well-known to San Diego audiences. "Can We Know the Truth?" was his topic. From his convincing answer in the affirmative, the following passages are quoted:

LOMA-LAND STUDENTS AT ISIS THEATRE

Katherine Tingley an Interested Listener---Addresses on "The Drama" & "Can We Know the Truth"

Reprinted from the San Diego News

"It is the highest interest of every-one to distinguish between truth and error, between what is genuine and what is false; between what is real and what is merely show. It can never be to the interest of any one to take the wrong path; to walk in darkness rather than light; or to labor under delusion. What light is to the physical eye that truth is to

the eye of the mind. In all ages the wisest and best men have recognized the great value of truth. Milton speaks of it as 'The golden key that opes the palace of eternity.' The philosopher Locke says, 'To love truth for truth's sake, is the principal part of human perfection in this world, and the seed-plot of all other virtues.' Emerson declares that 'Truth is the summit of being; justice is the application of it to affairs.' In Plato we read that 'Truth is the source of every good to gods and men. He who expects to be blessed and fortunate in this world should be a partaker of truth from the earliest moment of his life.'

"Can we obtain this pearl of great price? Can we know the truth? This which has been the quest of the wise and the good in all ages and in every land, and which is declared to be so important—can we attain unto it? Can we know the truth?"

"If some knowledge of the truth were not within human reach all these sayings of wise men concerning it would surely be meaningless. And yet as we view the lives of men, and perceive how men differ not only on trivial matters but also on important ones, we are forced to ask, 'Why is this?' Since truth must be *one*, how is it possible for well-meaning and intelligent men to differ so widely? It is a logical law that 'Contradictories may both be false, but cannot both be true.' And where men differ so widely are they all mistaken? Has no one got the truth? Or, do those who differ see but a partial view of the truth? Are all views of truth only partial, and, therefore, to that extent misleading? These are very vital questions, and all have a deep interest in finding the right answer.

"The eternal reality, the absolute truth can be known in us only by the spirit which is that being itself. The lower mind cannot know it except in a dim and imperfect manner. As we read in the book of Job, 'Canst thou by searching find out God, canst thou find out the Almighty to perfection?'

"The lower mind can lay hold of truth in the sense of facts pertaining to the physical universe; it can also grasp some of the truths which we call necessary or intuitive; but beyond that there is the truth itself, absolute reality, absolute being. And as St. Paul said, it is ever true, that 'The natural man receiveth not the things of the spirit of God, for they are foolishness unto him; neither can he know them, because they are spiritually discerned.' The lower nature can know the truth itself only as it is taken up into the spirit and becomes at one with it. Without this it may know of the truth and talk of it but it cannot know it truly; it is like the moon reflecting the light of the sun.

"Let us always remember that the differences of opinion originate in the lower mind and not in the higher. The differences, the strifes, the wars are bred within us. They spring from greed, from vanity, from love of power, from ambition, from the evil seeds which have sprung up in the garden of the lower nature.

"The conclusion we come to, therefore, is that in order to know the truth and to be sure that we are in the right way, the lower nature must be cleansed of all those qualities which so easily deflect the judgment in its efforts to see the truth.

"Can we know the truth? Jesus says, 'If any man will do his will he shall know of the doctrine.' And again he says, 'Ye shall know the truth and the truth shall make you free.' It is not enough to talk, or read, or write about the truth; to know it we must do it, and become one with it. We read in the *Voice of the Silence* that 'Self-knowledge is of helpful deeds the child.'"

THE character of a man is the sum total of his thoughts. So far from thought being secret, it is loudly proclaimed by every act. The man whose thoughts are for the good of his country will not be deficient in patriotic deeds, and the purer is his thought the wiser and the more effective will be his acts.

I HOLD not with the pessimist that all things are ill, nor with the optimist that all things are well. All things are not ill and all things are not well; but all things shall be well, because this is God's world.—Robert Browning

THERE can be no truce between selfishness and patriotism. The selfish man is the enemy of his country. He steals from his native land the force with which he feeds his own vanity.

FROM birth to death every man is weaving destiny around himself, as a spider does his cobweb.—H. P. Blavatsky

The Trend of Twentieth Century Science

Some Facts and Principles of the New Physiology

THE progress of science is as marked in the domain of physiology as in those of chemistry and electricity. Not only are new facts being heaped up, but new conceptions of old facts, indicating larger use of legitimate imagination, mark the infusion of a new spirit.

The conception of the nerve-cell as living was signalized by the introduction of a new word for it—"neuron." Therewith came a new conception of the mystery of thought.

If one thinks of a sea anemone, with tentacles waving in every direction, a beginning will have been made toward the meaning of the word neuron. Think of them as very minute and as closely set together all over the surface of the brain. Their tentacles move in the gelatinous matter which separates them. Into each neuron enters a fibre bringing sensation from somewhere. Out of each comes a fibre carrying an impulse, which, when it reaches a muscle, gives rise to muscular movement. That is a rough abstract of the physiological conception of the neuron.

Physiology and psychology, joining hands, are now enquiring in what language we think. Must we necessarily think in words, or is there a thought that is deeper than words? Is there a stage of thought when it has not as yet become worded?

The psycho-physiological conception is that it is in the neurons that thought becomes finally fashioned, polished and encased in words as yet unuttered. If we go a step further with it, the outgoing fibres from the neurons transmit the intention to the nerve centres of speech, and so to the muscles of speech.

Behind the neuron is the real thought and the real thinker, the soul. The man is truly this soul, but he does not usually pay any attention to the higher and divine doings of his own consciousness. He only consents to know and to see those thoughts and intuitions which are simple enough to fall within the operations of the neurons. As a thinker he lives the neuron life, taking no account of the finer life of thought that does not come down to that level. For the neuron is the foot of the Jacob's ladder of consciousness, and the upper end of this ladder is in the supreme light of the spiritual man.

The neurons are stored—how we know not—with the records of all the sensations we have ever experienced. They are the keyboard of our terrestrial memory. In the conception of physiology of today, the neurons are continually relating themselves one to another by their "tentacles." Thus memories are combined in all sorts of ways, as the tentacles of different neurons, in their incessant motion, seek each other out and communicate the contents.

The neurons are therefore the abiding place of the terrestrial man, where he sits in the receipt of sensations from all the senses, storing them. He goes over his stores, arranges them to suit himself, lets some get out of sight in the background, keeps some prominently in his view. Here he forms abstract ideas from them. There are thousands of other sensations in his body, but if they are to be his as well as its, they must come there for registration. In meditation and aspiration he retires back from this busy mart for awhile, and recognizes that he is really a spiritual something.

In this conception of the neurons we have the union of the physiology of the day with that higher and spiritual psychology which is so rapidly gaining ground. It is in his intense preoccupation with them that the spiritual man forgets his soulhood and thinks of himself as being but a blend of embodied sensations. It is through their unsupervised vagaries at night that he finds himself, on waking, confronted by dreams. It is by training them that he learns to make them reflect and give intellectual form to his spiritual feeling. And inspiration of all kinds is their irradiation with the light of the spiritual consciousness.

STUDENT

The Art of Long Life Rests in Gaining Self-Control

THE students of the University of Missouri have asked the college authorities to make the daily meals two instead of three. They have found that they are "in better health and spirits, and better prepared for hard mental work," when eating only twice in the day.

Apropos of this, there is a sensible article by Dr. Roger Tracy in the current number of a monthly contemporary. He points out that somewhere between thirty-five and forty-five a waning of the bodily powers tends to occur. The effects of any kind of excess are less readily surmounted. If excesses are kept up, and the aid of medicine invoked to enable these effects to be thrown off, serious results are ahead. But if the warning is taken, habits regulated and diet markedly reduced, a period of rejuvenation will follow. Better health, more power of work, and a clearer mind will be the reward. A higher standard may be reached than any period of youth.

Between sixty and seventy another critical period occurs. It should be met as was the earlier one—a still more careful regulation of habits, a stricter avoidance of excess, a further reduction of diet. Then there will be an ideal old age, clear of mind, vigorous, serene. And life may readily be prolonged to one hundred and even more years, wearing out as a whole and without the advent of a second childhood. The rules are simple. There is in fact but one—Abstain.

This is on the physiological side. But the art of living long is not physiological only. Man is spiritual, mental and physical. The three parts interblend, and all three must cooperate for the perfect life of them. Man must live fully, spiritually; and wisely, mentally and physically.

News About the Nebulae—From the Depths of Space

ONE of the most striking advances in recent astronomical research has been the discovery of the existence in the depths of space, of countless myriads of those mysterious bodies called, from their appearance, spiral or whirlpool nebulae. The result of photographing hitherto unexplored regions of the sky, chiefly by the late Professor Keeler of the Lick Observatory, has revealed the astonishing number of these cloud-like patches of twisted fire-mist, until now unknown, and only recognized now by their pictures on the photographic plate, for they are too faint to be seen by human eyesight even in the largest telescopes. By long exposures the faint images of these almost ethereal bodies impress themselves distinctly enough to be studied. Nearly all show, more or less plainly, the spiral tendency; and, notwithstanding many fantastic irregularities, the underlying uniformity of one unifying thought is apparent. Later on we shall probably reach some definite knowledge of the life-history of these nebulous spirals which may give light on the profound mystery of the origin of rotation in the Solar System.

But in the ancient Indian and Egyptian philosophies many clues are to be found to this and other physical mysteries, for they take into account the underlying spiritual causes, the Divine Intelligence within the forces of nature, symbolized by numerous deities, and in the east called Fohat. Materialistic scientific men scorn the idea of an inner spiritual motive force behind physical effects, but the ancients were wiser than we in this matter, and even now the more progressive thinkers are rapidly nearing a higher standpoint. The materialistic, like the old-fashioned orthodox position, is waning fast.

H. P. Blavatsky brought us a sheaf of treasures from the past, and, respecting the super-physical cause of the apparent beginning of rotation in the spiral nebulae, the following extracts from her writings will be found valuable:

The Deity becomes a "Whirlwind." . . . This law of vortical movement in primordial matter, is one of the oldest conceptions of Greek philosophy. . . . Leucippus and Democritus of Abdera—the pupil of the Magi—taught that this gyratory movement of the atoms and spheres existed from eternity.

Motion (the Breath) becomes the Whirlwind and sets them into rotation. "How does the process of cooling and contracting the mass impart to it a rotary motion?" It is not materialistic science that can ever solve it. Motion is eternal in the unmanifested and periodical in the manifested. It is when heat, by the descent of Flame into primordial matter causes its particles to move, that motion becomes Whirlwind. A drop of liquid assumes a spheroidal form owing to its atoms moving round themselves in the ultimate, unresolvable and noumenal essence, unresolvable for physical science at any rate.

R.

The Transformation of Japan---Glimpses of the

From the NEW CENTURY PATH Special Correspondent

THE impression produced upon one, on first sighting the picturesque islands of the Japanese coast-line, although naturally a profound one, taking the extraordinary history of the country into consideration, is doubly so at this present time, when we remember that here is the plucky little folk who have so boldly defied the mighty military power of the Russian Empire. The rights and the wrongs of this question, shall we not leave to the Higher Law which makes for Justice in its own mysterious ways? But certainly the little Japs are doing all they know how to do, to prove to an astounded world that they believe they are right, that they are working in the greater interest of the Yellow Men, and that they are determined that their international policy and their political principles shall receive due respect and consideration from the all-grasping and all-absorbing White Men.

Throughout the East the Russo-Japanese war is the question of the day. Everywhere it is the one subject which evokes more than a languid interest; in the hotels, in the clubs, on the ships from east to west, it is the topic most talked of and most disputed. Progressive, in our western sense, as Japan was known to be, the rapid way in which she mobilized her forces, threw them into Korea, supported them by her navy, and has turned to account the different happenings of the struggle, has come as a bewildering revelation to all; even to military experts, as they themselves confess.

History offers no parallel to the way Japan has risen from semi-barbarism to the brilliance and power of a new civilization, which has swept over the country and settled down upon the Japanese like a veritable wave of spiritual fire. How did it happen? Scarcely a quarter of a century ago, this people overturned a firm and solid government, crystallized by the authority of centuries; they chose again a form, which from the Thirteenth century of our era had been but a shadow without substance, and therewith threw open many ports to foreign trade and intercourse, which had been even more jealously guarded than are now those of hoary China; upon this foundation of a new-old government they laid the superstructure of their present civilization, and that, too, built absolutely on Occidental lines. Indeed, it were as marvelous a thing, in a way, were old England to come one fine day to the conclusion that Oriental ways and customs were better than Occidental, and were she to follow out the strength of her convictions by inaugurating a new era of Orientalism. The comparison is not overdrawn, if one remembers the intense conservatism of the Asiatic mind and its fatalistic tendency. In Japan, above all other countries, the foreigner was abhorred, and his customs were considered abominable and evil. Now behold the transformation that has taken place, and pause to ask what in the name of the Law does it all mean! Is there not a spiritual Power at work in this people? It is a marvelous "coincidence" that just about the time when the western nations begin dreaming of the dissection of the East, at the time when the undignified scramble for "spheres of influence" in China should be most acute, that a new power steps boldly forth, and without hesitancy or fear cries "Halt!"

Truly, the impression grows upon one that this war has a moral shading which lies behind the seeming, and that things are being done, and national destinies settled, in a way which appears very startling to a reflective mind. To predicate that Japan is destined to sway the balance of power in this Far East is not saying too much; nor, indeed, is it going too far to think that a day is brightening in the East for the yellow races, which may bring out from the womb of the future very curious surprises for the West. The enormous inertia of China needs but a touch to transform it into a military power such as the world has never seen nor even dreamed of, and Japan is fully alive to this fact. Japanese military instructors are achieving great success with the raw Chinese recruit where Europeans failed. In China the foreigner is becoming a greater public nuisance with every day, and where he was some years ago passively borne with, he is now greeted with howls and yells of hate in his daily perambulations. The "foreign devil" is one of the most respectful of these cries. Japan, again, has never lost sight of the fact that Japan must be for the Japanese, and as fast as they learn from the white

man the secrets and the mysteries of this or that manufacture, out he goes; a most dignified exit withal, salved with innumerable bowings and expressions of regret, but still an exit.

These reflections are but a few of numberless others along the same line. Writers who know Japan well and its folk, say that the plans for the future of the country, extending to the "emancipation" of the Yellow Man in general, indulged in by the statesmen at Tokyo, are startling in their magnitude. Does this give no clue to the reason for the war with Russia, even though the Japanese should suffer a humiliating defeat? Ill-starred wars may be re-fought, but the effect of precedent on the human mind is not unknown to the Oriental.

The Japanese is in earnest, in deadly earnest. The earnestness of the nation may be well exemplified by one of its most prominent statesmen today, Marquis Ito, who made his way up from the humble life of a fisherman, then worked his way to England on a sailing vessel and returned full of ideas for the naval aggrandizement of his country. To him is largely due the efficient and powerful navy of today. Another good representative of the men Young Japan has produced, is the gallant officer now in command of the fleet operating against the Russians, Admiral Togo. This man was a poor young fellow, full of patriotism and "go," who managed to get to England, there learned what western methods were, and on his return struggled to the top. Again, as Ito may be called the Father of the Japanese Navy, so may the late Baron Iwasaki be called the Father of the Japanese Mercantile Marine. He was a poor clerk once upon a time, but went to sea, saw what profits were to be had in the shipping business, and sought about to get ships. Little by little he got them; more and more he got; and developed in a wonderful way what is now the Japanese shipping industry and steamship lines. He was, by the way, a firm supporter and staunch helper of both Ito and Togo in their early days.

Japan is naturally a very rich country, blessed by nature with the sinew of modern commercial life: coal. This is being largely mined, while other mines are constantly being developed. Although it is said that five-sixths of the face area of the land is mountainous and incapable of cultivation, yet it ranks as an agricultural nation, and even exports rice, ginseng, green tea, matches, silk handkerchiefs, camphor, papers, flour, toilet soap, beer and other liquors, European umbrellas, and dozens of other things. Among mineral exports I choose at random coal, ingot and manufactured copper, sulphur, antimony, bronze-ware, manganese, salt, brass wire, etc., etc. The list is too long to enumerate. But it all tells a tale; it shows that the Japs are fully alive to the fact that international commerce means national life, and what they will be able to accomplish with cheap and willing labor, as compared with European and American high wages and labor unions, the future will show. The outlook is fascinating; what a couple of small islands have done in the world's history, Great Britain is a shining exemplar; what Japan may do with her five small islands and her innumerable little islets to back her, remains for the future to demonstrate.

The story of Japan reads like a romance. In the life time of this present youthful generation, the chivalrous daimios held sway over Japan, those little five-foot men who carried two swords in their dress, and who fought each other to the death upon the slightest pretext; the Mikado was then but a name. Then like a mighty wave of energy came the greatest revolution the world may show, the more remarkable that it was next to being a bloodless one, excepting always the Satsuma rebellion. The heavy, if chivalrous, hand of the warrior caste was broken, the Mikado restored to the throne of his ancestors, and invested with the real and actual power of the Empire, the country was opened to the abhorred foreigner, who became as it were by magic the welcome sojourner, sought for his practical knowledge; diplomatic relations with the world were established; Parliament was formed, the Imperial Diet of the Upper and the Lower House; an army and a navy were raised and created, as it were out of the air, commerce was fostered and encouraged, and behold, a country in the making, yet made, almost a nation in the perfecting of its latent powers!

The land of the chrysanthemum, of the cherry blossom and of the romantic long-eyed Mousmé; of little five-foot men and four-foot women who look like dainty little fairies, when they retain their national costume,

Island Empire That May Rule Eastern World

the "kimono." What a land for a novelist's theme, beautiful Japan! What a fair background this country, where the ubiquitous tourist, some of Cook's "locusts," for instance, serve as an advantageous set off. They are coming; yes, they are coming, more and more with every passing year. Let me prophesy: within ten years Nippon will be as sought after as is Egypt; within twenty, it will be as much a land to be "done" as is Switzerland. For Japan has scenery which is unparalleled elsewhere, because unique in its features, and it is not difficult to get at.

Later, INLAND SEA, OFF SHIMONOSEKI

A beautiful stretch of country is this! Tree-clad hills rising from the water's edge, and here and there from the rice-fields, which extend in their turn to the lapping waves of the straits. Little houses, with upturned, angled roofs, for all the world like first cousins to Swiss chalets, dot the hillsides, and rise like toy cottages from within the clumps of trees. In another part, on both sides of the straits, are the brown roofs and "champagne bottles" of factory chimneys, and dwelling houses; on one side the coaling station of Moji, and on the other the ancient town of Shimonoseki. No one would believe for a moment, on looking at the line of little dwellings running along the water's side that both of these towns boasts a population of at least thirty thousand souls, so oddly and daintily are the houses hidden among the trees and between the embracing hills. Here too is the junction of the railways running over the largest of the islands, Nippon or Honshiu, and over Kiushiu; the junction being made by a railway ferry across the straits, the passage taking but a quarter of an hour.

Here is the place whence the government despatched the thousands of her troops across to Korea, on its own transports. Even now, five of these vessels are lying at anchor waiting for their living freight, each flying the Japanese colors, a plain white background with a full-orbed red sun upon it, a striking flag, if odd. The railway service is disorganized for passenger traffic to a large extent, so instead of choosing to wait at side-stations until the line is free, your correspondent finds it better to remain on board and land at Kobe and rail it thence to Yokohama. From Kobe to the latter place, on the Imperial Railway, enough native life should be visible to furnish food for thought and script for many an hour. So I wait and watch the coaling of the steamer on which I am. The women work here with the men, queer little creatures scarcely four feet tall, and often carrying the baby, in real North American Indian fashion, papoose fashion on the back. The barges come alongside, and quicker than seems possible, a series of steps are slung against the vessel's sides; on these stand one man to a step; below on the barge are half a dozen others. Then work begins. Little wicker baskets, holding scarcely half a bushel, are produced; filled with incredible speed; and passed up the steps to the bunker holes, where they are slid by women along boards to the bunkers themselves. Quick as a flash come the baskets, quick as a flash are they thrown back to be refilled and passed on again. Never have I seen anything like it. In one minute I counted, watch in hand, forty-three of

these baskets filled with the fine native coal, pass a line, on their way to the bunkers. The thing is done on the principle of passing the water-bucket from hand to hand. I have been informed on reliable authority that these little Japs can stow away 100 tons per hour, incredible as it may seem, by such primitive methods. This same authority stated that coaling could be done in one half the time here that it could be done with the electric bunkers at San Francisco.

In the bay is a small river gunboat, apparently in the best of condition and ready for instant service. The officers, all natives of course, throughout, with the native crew; transports the same; railways the same; everything the same. The Jap learns, rather has learnt, how to do everything, and does it now himself, and well. Japanese railway companies, Japanese steamship lines, Jap newspapers, Jap enterprise. It is unexpected; one asks oneself in a sort of bewilderment, when is it going to stop?

Yet we steamed into Japan, into the inland sea, in a driving snowstorm, reminding me ever so much of times when I have come up New York harbor from Europe, in similar chilly and frosty weather. But it does not last long; the gusts come and go, the deck is besprinkled for a time with

the white tapioca of it, then the sun shines, and it goes. The wind is howling like a thousand demons, then it too lulls, and dies down, and the deck becomes endurable again. Little men in dark blue uniforms, in puffing steam launches, come and go; the formalities of the port are got through with, and we are admitted visitors to Japanese waters. On our way in we pass the fortifications.

The Japs are as jealous of their forts as are the Germans; an instance in point: the other day a passenger was placidly and innocently photographing, snapshotting, around Moji. He was surprised to find himself suddenly under arrest by a posse of the little

Japs and conducted to a police station where his camera had its films extracted, and there before his eyes the officials undertook to develop every one of the negatives he had. On none of the fortifications being found on them he was most politely dismissed. The experience was probably a reminder to him that photographing in Japan in war-time might have sundry attendant evils. What the consequences of a little carelessness might have been in that line were not shown.

That the Japs are wide awake, in their methods of carrying on war, is evident from a little incident that happened on our steamer leaving Hong-kong. The first night out of the harbor, from ten o'clock to about eleven, while ploughing along our 15 knots, we were circled again and again by two Japanese men-of-war, who did a pretty little bit of telegraphing with their flash lights. Suddenly the lights died out, and we knew we were free to pursue our way quietly along.

We reach Kobe, or Hiogo day after tomorrow, as we leave but tomorrow morning, our coaling taking all day. This place is one of the most important ports in all Japan, being central and yet a port; bearing commercially a Chicago-like relation to the rest of the country.

G. DE PURUCKER

A JAPANESE RICE FIELD

Prosperity and Adversity

IN the old days, when the world was young, Prosperity was its teacher, and he made humanity glad and brought many comforts and many blessings in the hope of making men better; but as time went on men became selfish and then sad. Yet still the sun shone and the birds sang their songs and the sky was cloudless, for Prosperity ruled the land and humanity had no other teacher. But, alas! the day came when Prosperity saw that he had failed in his efforts to lift men into the joy of the heart-life. He became still more prodigal in his gifts, but men answered him only with ingratitude, and their hearts grew harder. At last the day came when the air was thick with the selfish thoughts of men, and in that day Prosperity called upon his brother, Adversity. He besought him to lend aid in this work of reforming the world. And so Adversity came and Prosperity went away; and the gifts of Adversity were many, and men called them famine, and war, and danger, and the sins that spring from selfish ends, and the crimes that grow out of false peace. Yet the hearts of men softened not, though the skies were dark and the teaching of Adversity continued bitter and long. And at last the day came when Adversity, despairing, looked at the world and said, "I, too, have failed."

And so it came to pass that the two teachers—who were brothers—Prosperity and Adversity, met upon life's highway and counseled together as to how they should reform the world.

"Let us begin with one or two," said Prosperity.

"We have tried to reform nations and the many have not listened," said Adversity. "You are right; let us begin with one. That one may become a teacher as we are teachers; in that lies the only hope."

And as they discussed upon this highway of human life, there came toward them a woman, who was joyous because of the fullness of her youth, and happy because of her beauty and her strength.

"She will be worthy of our efforts," said Adversity, "but I dread to see her sorrowful and her eyes dim with weeping; you, my brother, give her your gifts first. It may be that she will not need mine at all."

So it was agreed that Prosperity should begin his work. And he was hopeful, because unto this woman he was already known as a friend.

"She has all even now," said Prosperity to himself. "What shall be my gifts?" But as he looked into her life, he saw that it was filled with care and strife. "When she no longer has care and when the worries of life have departed, then surely her heart will speak and the soul will grow within her. I will take her anxieties away."

But the woman lived as before, saying that she became more selfish, and found it still easier to indulge herself in the many little selfish fancies that care had made impossible before.

"O that I had more costly dresses and more sparkling jewels!" she said.

"These things perhaps will elevate her mind," thought Prosperity, "and perhaps through them I may reach her heart."

And he gave her all the divers things for which she asked. But the woman merely wept and cried out that the silken garments ill became the house in which she lived.

"O that I had a palace in which to dwell!"

Then she cried out for servants to do her bidding, and Prosperity gave her all for which she asked.

"If the beautiful does not soften her heart," he said, "then will it grow through gratitude."

But the woman sighed and said that her life was dreary.

"Let me see the world," she said, and Prosperity smiled at this.

"To meet her fellow men," he said, "that will touch her heart and that will save her from herself. She will see misery and the great opportunity will come to her, which is the chance to relieve the sorrow."

But the woman only shut her eyes to the misery of her fellow men. And Prosperity said, "Then I will send her where there is no misery—where the people are pure and patient and good; their example will touch her heart."

But the woman laughed at the good people and came back to the palace, her heart within her as a stone.

Prosperity was waiting to receive her. "Surely," he thought, "she will be grateful."

But, instead, the woman spoke haughtily and demanded further gifts. Prosperity, fearful that he would fail, in his despair gave the woman more and more, but she demanded yet other and divers things.

And so it came to pass that, one fair day, Prosperity and Adversity met

again upon life's highway and discussed again together the question of humanity's sorrow.

"I have failed," said Prosperity. "You, my brother, it is now your turn. It may be that your gifts will soften her heart; mine have but served to make it colder and harder."

And as it came about, Prosperity went away and Adversity took his place and stood at the side of the woman.

She had known Adversity in the old days and she fancied he had departed, never to return. "What will you here?" she said, as Adversity came to her palace.

"I am here to take back the things which my brother, Prosperity, loaned to you. And in the end I, too, have for you a gift—a golden key."

The woman laughed, and answered, "I have gold enough to fashion a thousand keys. Keep your gifts, and go."

"Nay," replied Adversity, "I am come to stay."

The woman laughed again and defied him, and then Adversity took her jewels, her silken robes, her servants and her palace, and at last the woman was left—stripped of all the things that she had desired so much—alone and in a cottage. She wept and wept, and even the sun grew dark and dim to her as a light that failed.

"Surely," thought Adversity, "this will soften her heart, and, understanding her own sorrows, she will feel for the sorrows of others."

But the heart of the woman still remained closed, and she went from friend to friend bemoaning her fate.

Then Adversity said, "I will take away her friends. When she has no one to complain to, then she will find herself and the work of reform will begin." And he did so; but the woman still wept, still rebelled.

Then Adversity took away her health. "Sickness will touch her and suffering will open her heart," he said, "and in the quiet and the loneliness that now will be forced upon her, she will find her real life."

But Adversity was mistaken. The woman would not try. She merely wept and rebelled.

And so it came to pass that, on another fair day, the two teachers, Prosperity and Adversity, met again on the highway of human life.

"I have failed," said Prosperity.

"And failure is mine," said Adversity.

"Now let us work together," said both.

And so it came about that, out of the compassion of his heart Prosperity, sought out the woman and gave her back divers gifts. She began to ask for more. Then Adversity took away divers other gifts and Prosperity gave her what she asked. She asked for a beautiful home and she asked for a beautiful child. Prosperity gave her these. Then she began to complain further and demand other things. And Prosperity consulted Adversity, for he feared again to fail.

Adversity smiled, saying, "You have done well, my brother. Give her what she asks—I will take away her child." The child died soon, and by the side of the little still form, the mother cursed Adversity and said, "Is this the gift that you promised to give me?"

And Adversity said, "It is within your own heart, but you have closed the door upon it."

And the woman was still rebellious. And then it came about that Prosperity and Adversity both departed and left her alone.

In her loneliness and in her sorrow, the hardness that lay about her heart became something other, and for the first time she felt within her own soul all the sorrows of the world. In one sudden moment she saw the meaning of all that had happened to her—of all the gifts that the two brothers had brought: She understood; and as if divining this, Prosperity and Adversity came back to her dwelling, and when she looked up she saw them standing beside her; and within her heart, as she stood beside the little coffin which held all that she really loved, there came into her being something much like joy but more like gratitude. She turned to Adversity and smiled. "I have not forgotten your promise, she said, "your promise of that gift which is beyond all price; the wonderful golden key which you told me would open the doorway for me into a new life. But keep it, I care no more for gifts. My life is complete and joy-filled. I shall become your helper and I shall, with you, serve humanity, and the gifts that I have longed for may be given to others."

But Adversity smiled, saying, "You have the gift already. I gave it when death took away your child—and the doorway is already opened, the doorway into this beautiful realm, the realm of the heart." STUDENT

THE CHILDREN'S HOUR

The Meteorological Station at Point Loma

DEAR CHILDREN: Scarcely anything is more of a joy to the Raja Yoga boys than a visit to the meteorological station. I have already told you a little about it. The very delicacy of the instruments is a perpetual source of fascination, and then meteorological work has a dignity and an importance that means a great deal to Raja Yoga boys. Every day the observations are carefully entered in the books and copies of the monthly register are always sent to the government. By comparing these observations with those made at other places we find that the climate of Point Loma is more perfect than that of any other place in the world. I promised some time ago to send you a little account of the way in which the temperature and rainfall and sunshine and air pressure records are kept, and here it is:

TEMPERATURE—On the top of the weather-station, there are five thermometers. One of them shows accurately the greatest heat during twenty-four hours; another the greatest cold during the same time. By comparing this with two others you can tell how much moisture there is in the air. The fifth is so arranged as to mark the temperature on a sheet of paper which is kept always moving by a very delicate clock, so that the heat of every hour of the day is always known by looking at the paper. At the end of a week you change the paper and put in a new one. It is generally warmest in Loma-land about two in the afternoon and coldest just before sunrise. **AIR PRESSURE**—Inside the weather-station are two barometers. One shows the pressure of the air very accurately at any given time. The record is indicated by a delicate dial. The other is a permanent register made on a sheet of paper by clockwork. This, however, is not so accurate as the first one.

RAINFALL—When it rains you can tell how much has fallen by means of a tall round vessel without a lid which catches the rain falling into it. A measuring rod dipped into the vessel shows you how deep the water is and it is so contrived as to tell you how many inches of water this would amount to, if it had fallen on the ground and none of it had soaked in.

SUNSHINE—A wonderful instrument is the sunshine recorder. From sunrise till sunset the sun's rays shine through a tiny hole in this instrument on to a strip of photographic paper which is kept in the dark inside. And so, as the sun goes on moving,

What It Means to Grow

Essay by a young Lotus Group Student

IF we want the flowers in our garden to be thrifty and to grow well we must water them and take good care of them. It is the same with our characters. If people want their children to grow to be noble men and women they must take pains with them and cultivate their minds and their hearts. Instead of feeding their bodies so much, parents should cultivate their children's souls, and they can do this by teaching them kindness and self-control. Then there will be no room for ugly weeds of selfishness to grow.

Growth is the purifying of our lives. When our hearts are in tune and

we are bright and happy then our characters are growing tall and strong. Everything grows from within out, and so everything that is beautiful in our natures must find its beginning in the heart. And we know, when we stop to think, that every good deed and every good thought have their beginning deep down in our hearts. That is why we always feel happier when we have done a good deed. When we have this feeling it means that we are growing, not in the size of our bodies perhaps, but in character.

If we do not fill our lives with good thoughts and deeds, then ugly weeds of selfishness and fear and hatred will spring up and crowd out the flowers, and the beautiful soul garden will all be spoiled. We need more heart-light. Joy is heart-light. Joy helps our higher

natures to grow, just as sunshine helps the flowers.

CUBAN AND AMERICAN CHILDREN OF THE RAJA YOGA SCHOOL AT POINT LOMA

THE SUN

by ROBERT LOUIS STEVENSON

GREAT is the sun and wide he goes.
Through empty heaven without repose;
And in the blue and glowing days
More thick than rain he showers his rays.

Though closer still the blinds we pull
To keep the shady parlor cool,
Yet he will find a chink or two
To slip his golden fingers through.

The dusty attic, spider-clad
He, through the key-hole, maketh glad;
And through the broken ledge of tiles,
Into the laddered hay-loft smiles.

Meantime his golden face around
He bares to all the garden ground,
And sheds a warm and glittering look
Among the ivy's inmost nook.

Above the hills, along the blue,
Round the bright air with footing true,
To please the child, to paint the rose,
The Gardener of the World, he goes.

At a farm on the Mohawk river are several horses, one of which is totally blind. They frequently swim to the islands in the river to eat the long, green grass. After a recent freshet, in returning, the blind horse became separated and would have been carried away by the current had it not been for the heroism of a comrade horse who swam out and guided the blind one safely to shore.

E. H.

(Continued from First Column)

or rather as our position with relation to the sun continually changes, a line is made across the paper. At night you change the instrument a little so that next day the spot of light does not pass over the same place. At the end of the week, when you change the paper, you have an accurate record of just how many hours of sunshine we have had during the week or during any given day. And that is a great deal in Loma-land.

UNCLE FRED

WHAT HAVE YOU DONE?

by S. E. Kiser, in *Escondido Times*

YOU are going to do great things, you say---
But what have you done?

You are going to win in a splendid way,
As others have won;

You have plans that when they are put in force
Will make you sublime;

You have mapped out a glorious upward course---
But why don't you climb?

You're not quite ready to start, you say;
If you hope to win

The time to be starting is now---today---
Don't dally, begin!

No man has ever been ready as yet,
Nor ever will be;

You may fall ere you reach where your hopes are set---
But try it and see.

You are going to do great things, you say,
You have splendid plans;

Your dreams are of heights that are far away;
They're a hopeful man's---

But the world, when it judges the case for you,
At the end, my son,

Will think not of what you were going to do,
But of what you've done.

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question

What, generally speaking, do you consider will be the effect of Theosophy on the Twentieth century education?

Answer

(1) The educational value of Theosophy is something that is only just beginning to be generally recognized. This being on account of the fact that it is only in the last few years that Theosophy has been made sufficiently practical in its applications to appeal to people as an educational factor.

The Raja Yoga School has become such an example of what can be accomplished by carrying the principles of Brotherhood into the daily lives of children, that the eyes of the world are being forced this way, and the minds of the foremost educators have been set thinking along a line, that to them, was entirely new.

What is the essential feature about Theosophy that makes it so valuable as an educational factor? It is this, developing the realization in the individual that he is a responsible being, that his life is linked with that of all others, that he has in him something more exalted than the physical envelope we see with our eyes, and that this something is capable of expressing itself more and more, of making itself manifest to our perceptions in more ways than one, every day of our lives, if we will only allow it to do so.

It is this gradual unfolding of the soul that is the key to true education. Yet we find that none of the modern educational systems have even a touch of it. They confine themselves solely to the intellectual, and so deal with the vehicle instead of the controlling power.

True knowledge of any kind can only develop from within, the ordinary brain-fed understanding of the parrot-learned style is of little value, because it has not become an essential feature of one's being. It can never become so, as long as the process consists of efforts to force into, without any endeavor to awaken and develop, that which lies *behind* the human brain.

So this will be the effect of Twentieth century Theosophy on education: Making education more a matter of unfolding of the innate possibilities of the individual; for in every human being lies dormant the latent possibilities of comprehending all things that relate to the universe, awaiting merely the touch of the master-hand to awaken heart and mind to an activity which leads to and becomes true knowledge—the knowledge that is a part of one's being and not that which masquerades for it. Also the abolishing of much of the useless rubbish that is taught today in our schools, and the substituting of teachings in regard to our divine natures and of the correlations between us and Nature's various forms of life, inculcating the idea of learning more from observation, of

thinking more and talking less, of being self-reliant without being domineering, of being afraid of nothing and still being prudent, of having a supreme confidence in one's ability to do anything and to overcome all obstacles and still not be egotistical. These are but a few of the effects that Twentieth century Theosophy will have upon education. H. S. T.

(2) The effect on education when the teachings of Theosophy are practically applied to it, is no longer a matter of conjecture or experiment. After three years' test of this system in the Raja Yoga School, with the wonderful results obtained, the truth of the statements made by all the Leaders and Teachers of this movement of what the outcome would be has been demonstrated beyond a question.

Long ago H. P. Blavatsky outlined a Theosophical training for children. But when she brought the teachings of Theosophy to the western world twenty-five years ago, it was into an age steeped in intellectual egotism. She was powerless, at that time, to demonstrate the wisdom of her teachings by practically applying them. Her work was opening the way for her successor by breaking down some of the barriers which were preventing humanity from receiving the Truth. She wrote: "If we had the money, we would found schools which would turn out something else than reading and writing candidates for starvation. Children should, above all, be taught self-reliance, love for all men, altruism, mutual charity, and, more than anything else, to think and reason for themselves. We would reduce the purely mechanical work of the memory to an absolute minimum, and devote the time to the development and training of the inner senses, faculties and latent capacities. We would endeavor to deal with each child as a unit, and to educate it so as to produce the most harmonious and equal unfoldment of its powers, in order that its special aptitudes should find their full natural development. We should aim at creating *free* men and women, free intellectually, free morally, unprejudiced in all respects, and, above all things, unselfish."

What she longed to do then, Katherine Tingley is doing today, and Theosophy, in the Twentieth century, is made practical and applied to all departments of every-day life. Touching education, it entirely changes the basis for training the child. Instead of developing the brain-mind at the expense of physical and moral unfoldment, it shows the due relative importance of each. Building a strong, healthy physical foundation comes first. The child is taught the laws of his being and how to live in harmony with them; that the body is but the instrument for the real self to use, and must be well cared for and attuned before the Soul can express itself through it. He is taught from the first the divinity of his nature; that he is a Soul, with godlike powers, but, being dual, there is also the animal side of his nature, which must be controlled and made to serve the higher, not dominate it. Instead of cramming with facts and data, true education draws out gradually the knowledge already stored up in his inner consciousness, allowing it to unfold like the flowers, naturally and easily.

Development of body, mind and Soul go on simultaneously, and a well-rounded character, perfectly balanced and free, is the result.

The effect of such a system, if generally adopted, would be magical. A new order of things would begin at once, and ignorance and fear would disappear, as shadows of the night when the dawn breaks, and humanity would be saved.

A. D. P.

The Torpedo

THE torpedo does not seem to be so entirely the conception of the present age as we have imagined. The following dialogue is to be found in the *Staple of News* by Ben Jonson, written three hundred years ago:

Barber—They write here one Cornelius-Son hath made the Hollanders an invisible eel, to swim the haven at Dunkirk, and sink all the shipping there.

Pennyboy—But how is it done?

Cymbal—I'll show you, sir. It is an Automa, runs under water, with a snug nose, and has a nimble tail made like an auger, with which tail she wriggles betwixt the coats (ribs) of a ship, and sinks it straight.

Pennyboy—A most brave device to murder their flat bottoms.

THE knowledge that we are divine gives the power to overcome all obstacles.

—Katherine Tingley

THE HOUR AND THE MAN

by PRISCILLA LEONARD

NO man can choose what coming hours may bring
To him of need, of joy, of suffering;
But what his soul shall bring unto each hour
To meet its challenge---this is in his power.

The Meaning of Compassion

SOME of the greatest and most frequent problems of our mental life lie hidden away under such familiar forms that we fail to recognize the magnificence of the treasure which they hide. Truly we travel into far countries to find the wisdom which, after all, we have left by our firesides at home.

The names of our virtues and of our vices are the commonplaces of every day speech, but how many are there who have made any honest and sincere attempt to discover what these things are in their beauty and their ugliness, what scientific messages they have for us, from what parts of our natures they arise, and in what way they are connected with the forces and the laws of the universe. We speak freely of cruelty and despair, pity and compassion, but would it not pay us to ask what these things actually are? We might perhaps find in them the threads which would lead us to a greater knowledge than we imagine.

What for example is compassion and why is this sentiment called forth by the sight of suffering? There are, let us hope, very few who have not at some time felt its force. Did we but glimpse its meaning it would today be the triumphant power in human nature. It would have opened for the race an avenue to wisdom which would have banished the sorrowful perplexities of life.

What then do we actually mean when we say that we have compassion for one who is in pain? Is it not in itself an assertion of the unity of the life which sweeps through all creation, the one life which manifests itself through infinite complexity of form and beauty? If this were not so, whence comes this contagion of pain which requires that we also must suffer because of the suffering of another, and what else is compassion except the ripples which pass from shore to shore when a stone is cast thus painfully into the sea of life? Happy are they who have so far escaped from the prison of themselves that they feel and know the ripples of consciousness, of sorrow, and of joy which pass to and fro over the tides of life. Such alone know the glory of living and such alone have the heritage of nature's wisdom. By compassion we step out from the

darknesses and the ignorances of life, by compassion we become one with the universal God.

And if compassion with one another can thus set ajar the portals of divine wisdom, how great and how gracious must be the flood of knowledge which follows upon a wider compassion, a compassion which embraces humanity, which feels the surge of human hopes and fears throughout the world. What wonder that love and wisdom have gone ever hand in hand and that the path to divine achievement has also been the path of love! What wonder too that power has ever been the companion of compassion, for do we not thereby enlist all evolutionary tides upon our side, do we not thereby become one with all that lives and is it not the force of the universe which passes into us, the onward sweep of the divine intention? Who can say to what heights of undreamed of knowledge compassion may not be our guide? He who loves his fellow men loves also nature in all her forms, and recognition of beauty and symmetry and strength and grandeur is but sympathy under another aspect. Nature recognizes her lovers and opens to them the doors which are ever tightly closed to the analyses of intellect and research, she makes smooth her roads to those who give to her the password of their sympathy. X.

The Book of Genesis

DR. W. T. DAVISON has expressed certain views upon the meaning of the Book of Genesis, which have produced a strained feeling between himself and some of the religious newspapers. This uncomfortable tension Dr. Davison has endeavored to remove, but we fear that the manner of the attempt may, perhaps, increase the difficulty. He writes:

Any minister who believes that the world was created in six days in the year 4004 B. C., or that the deluge covered the whole globe—as the earth is now known to be—so that the highest mountains were covered; or that one of the patriarchs lived on the earth longer than from the Norman Conquest until now, will, of course, teach his people so.

To this doubtful concession he adds the unwelcome assurance that teaching of this nature will, of course, alienate intelligent people and play their game for the enemies of Christianity. We might add that the religious newspapers which support creeds of this kind will lower their circulation, a point not without its due weight in the presence of the assurance recently given us by one of these journals, that the maintenance and increase of their circulation is the supreme problem which at present faces them. We like to help whenever we can. STUDENT

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Sink Holes in Kansas

An interesting phenomenon in western Kansas is described and pictured in a recent report of the United States Geological Survey. One of the natural curiosities of the great plains region is known as the Meade salt well, in southwestern Kansas. It made its appearance very suddenly in 1889.

On March 3d in that year the famous Jones and Plummer cattle trail extended right over the spot where this depression was soon to appear. A wagon passed along the trail over the level ground. It is not known that this spot was seen again until twenty-three days later, when it was found that the ground for a considerable area had sunk into the earth and the hole was partly filled with water from an underground source.

The cavity was circular and the tracks of wagons and cattle on the trail were still plainly seen on either side of the hole. A considerable area around the hole had been depressed to a smaller extent.

The sink hole remains today, and on either side of it are still to be seen the road ruts and cattle trails along which for years scores of thousands of ranch cattle were driven from northern Texas into Kansas. There were very few routes of travel across this wide plain. But the accident to the surface occurred on the most important of them. Those who studied this depression were surprised to find that the water in it was very salt, although the ground water in the neighboring wells contained not a trace of salt.—*New York Sun*

Evil Results of Habits in Selfishness

A MEDICAL contemporary publishes an article which illustrates one of the most radical misconceptions of the present day, a misconception which is largely answerable for the failure of many well-intentioned reforms. The article in question draws attention to the enormous and world-wide increase of the alcohol habit, which has apparently been almost unchecked by the advance of scientific knowledge. It points out that even the most ignorant are now aware of the physiological evils which result from self-indulgence, and that although civilization is now saturated with precise and definite knowledge upon this particular point, the trouble is undiminished and likely, indeed, to in-

crease. It appears, therefore, that we are sinning against the light, such light as science has to offer. The ill results have been discovered, they have been made known by all the resources of the age, they are undisputed and indisputable, but the world goes upon its alcoholic way very much as though Science had not spoken. In the presence of such perversity, what is there for science to do except to go on with its vain repetitions and warnings, to which no one listens except those who do not need them? Now, we hold in high honor every effort, materialistic or

Passion and Desire Must Give Way

otherwise, to wean men from error and to open for them the road to better living. None the less, we hold that the efforts of what we may call a philanthropic science would be more successful if they were more inclusive, that is to say, if they recognized that passion and desire are stronger than intellect, and that moral faults cannot be overcome by the imparting of material facts, however conclusively proved and however freely admitted. Moral faults are to be conquered by moral ideals and in no other way. Material science may be a useful ally; it is, indeed, to be recognized and welcomed as such, but that it cannot stand alone in resistance to evil, nor produce any marked effect upon evil, is evidenced not only by the alcohol habit, but in very many other ways.

A science of morality is, indeed, the supreme need of the age, and by this we do not mean a collection of moral axioms nor of theological commands and injunctions. By a science of morality we mean an application to the mind and higher nature of man of those principles of sound and patient research which have proved so successful in the physical domain. We mean the practical recognition of the unseen forces of human nature, their classification, and their assignment to their due and proper precedence. Not until this is done, not until men recognize that

Break Down the Barriers to Pure Life

there is a vast scheme, a design, and an intention in their lives, a far-off goal and destination to their existence, can we expect them to regulate their actions, and to understand why good is good and why evil is evil. The good and the evil which are confined to the sphere of the body will remain impotent as forces of redemption before the assault of passion unless they are commanded by another and a higher science, which will give to life the majesty of eternity, which will break down the barriers of life and death, which will be above and beyond the sordid and the temporary.

The science of the future will include the full scope of life and not merely one aspect of it, and that aspect the lowest and the most transitory. It will show that the individual man has, indeed, a goal toward which he has been advancing for ages, and that his progress depends upon his power to subdue the base and the passionate within himself. It will show him the path which leads directly to that goal, and it will teach him the price which must be paid for every deviation towards self-indulgence. The price of physical pain he is willing to pay, because passion is stronger than this. Would he be willing to pay the greater price which is demanded by the greater law?

STUDENT

Harnessing the Dead Sea

FRENCH engineers are considering three different projects for turning the Dead Sea to industrial uses. Its level is more than 1,300 feet below that of the Mediterranean, and by cutting a canal between the two a great water-power would be obtained; while the enormous evaporation that always goes on in the Dead Sea would far more than neutralize the effect of the inflow from the canal. One project is to start the canal from the Bay of Acre, lead it south past Mount Tabor, and let it join, at Baisan, the waters of the Jordan. Another plan is to make it along the railway line from Jaffa to Jerusalem, which would involve a thirty-seven mile tunnel through the mountains of old Judæa. The third project is to start at Akaba in the Red Sea and pass through the desert of Wady-el-Jebel.

General View of Kobe—Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week shows an excellent bird's-eye view of Kobe, one of the principal cities of Japan. The photograph was taken from the hills back of the city, overlooking quite a large section of the metropolis and its harbor. Attention is directed to a further article on Japan which appears on pages 12 and 13 of this issue.

Theology for Weak Men

CONSIDERABLE attention has been excited by a recent article in the *New York Independent*, with the title, "Why I Gave Up the Ministry—a Soul's Tragedy." The writer gives three reasons for having done so, of which, for the moment, only the first concerns us. This reason is "a feeling of revulsion at the type of man with whom one must associate," both as a divinity student at college and afterwards. At college,

The strong men prepared to study law or medicine; weak ones theology. . . . The ministry today is not the profession that attracts the strongest men.

This phenomenon only reflects what is admittedly going on among the laity. The strong thinkers are rejecting the current religion, the current ideas about God. Their rejection is negative. It is not carried so far as the setting up of antagonistic conceptions. They shelve the whole matter as insoluble and unknowable. Professor Flint says:

As regards knowledge of God, religious and irreligious men take up the same attitude. Both endeavor to persuade men that there is and can be no such knowledge, that the best attainable is to be content with unreasoned and unenlightened belief.

In his recent book entitled *Christ*, the Rev. S. D. M'Connell says:

It is no mere phase of superficial skepticism through which we are passing. Half the men one meets are "agnostics," and this whether they call themselves that or call themselves Christians. The idea of God, as it floats in the mind of the average man, is compounded of three or four inherited conceptions, each of which has to a large extent ceased to fit in with the other portions of his mental furniture, and all of which have grown to be impossible.

A French writer, M. Albert Schinz, points out the result of this—a laicising of the church, the reduction of it to a sort of agency for the solution of economic and social problems.

The root of the trouble is in the pulpits. How can men teach others to find God who have not found God themselves? The man who has found God will not lack an audience, and he will send most of his audience away burning to enter upon the search on their own account. The man who is furthest from that finding will have the completest and neatest definitions of God, and the fullest assumed knowledge of God's feelings, purposes and past history. His hearers, after careful thought and search for any such being, naturally have to report a total want of success; retire from the search, and either become positive agnostics or indifferent about the whole matter.

The finding of God, the "Light of all lights," the sustainer of life and breath, the source of all the inspiration that ever descended upon any man, must be the most glorious attainment possible to humanity. Does the average pulpit occupant convey the impression that so vast a thing had happened to him? Do his words burn with splendor and intensity of the message that would in such case necessarily be his? If not, he has not truly, entered upon his calling.

The real teacher will say, look in, not out. He will not point to a definition, but to a fact of experience. He will call his hearers' attention to the moments when they were at their highest, when they were most stirred to some noble act, most filled with compassion, to all those moments in which the heart dominated, and the man became something beyond his common self. In such moments, he will say, the touch of God was upon you; and through them may the search for God be begun. Create them, recall them, repeat them, act according to their inspiration, overcome failings with their strength, and you will need no definition of God, nor any arguments to establish the existence of God. You will move more and more into the light of God. Beginning within, you will reach that which is beyond. Thus only can the quest have any success.

X.

Think About Thinking

ANDREW LANG recommends us to "think about thinking," which he says is not such dull work as some people suppose.

Even the thoughts of the most uneventful day may present us with problems not insoluble and well worthy of much consideration. Mr. Lang reminds us that even the most frivolous sometimes experience what they call "happy thoughts," and he invites us to a contemplation of their meaning. He illustrates his point with an anecdote:

In Sir Herbert Maxwell's *Life of the Great Duke of Wellington* is a report of his conversation by a lady. The Duke spoke of his own happy thoughts. In a military difficulty, he said, he would suddenly see, in his mind's eye, the whole

vast and perplexing situation spread clearly out before him, as in a panorama, so to speak. The amount of new knowledge which he got in this flash of vision was so great that to write it out for his use, he declared, would occupy him for two hours, and he could write succinctly.

There can be little doubt that the habit of concentration, and especially when it is joined with a trained and regulated imagination, produces results quite different from those obtained by ordinary thought. It is as though a mental barrier were suddenly broken down allowing a flash from some field of omniscience to enter the mind. It comes as lightning comes in a dark night, instantaneous, unheralded. It is a gift to the mind, from something which is not the mind, a gift from an interior realm of knowledge ordinarily inaccessible. If the mental science of today possessed attainments in any way equal to its claims it would be able to tell us what is this interior realm of knowledge and the precise steps by which we may be able to enter it.

STUDENT

About the Yaqui Indians

WE are hearing a great deal about the Mexican Yaqui Indians, but not very much in their favor. Dr. Stephen Bowers has just completed a trip through the Yaqui country, and he affords us a glimpse at the other side of the medal. There usually is another side. Dr. Bowers says:

The Yaquis are descendants of the Aztecs, and are an athletic race of people, industrious and brave. Those who live in the mountains are the ones to be dreaded. I found that most of the dispatches in relation to the depredations of these Indians are sent out by interested parties and have little foundation in truth. The Yaqui has no animosity toward Americans, but, of course, an American prospecting in their territory, or being found in company with Mexicans, would be in danger of losing his life. The Yaqui's fight is with the Mexicans, who he claims are his oppressors. This is presumably the reason that the stages running from Guaymas to Alamos, a distance of about 300 miles, are so seldom molested, as they usually carry some Americans.

When we got out two or three leagues from Guaymas, the ghastly sight of a naked Yaqui hanging from the limb of a tree, head downward, met our gaze. He had been left there by the Mexican soldiers several days previously. Before my return, three weeks later, the body had been taken down by the Indians and buried. Such inhuman acts excite a spirit of retaliation on the part of the Indians, and seem to have no deterring effect whatever.

I learned that one of the causes of the Yaqui war was the diverting of the water of the Yaqui River by the Mexican Government. It was sold to an English syndicate, which dug a canal more than forty feet wide and thirty miles long, almost completely diverting the water from its original channel.

The Mexicans have deported many of the Yaquis to Yucatan, but so great is their love for their native mountains that it is not uncommon for even their women to return carrying a child the entire distance.

The Mexicans have now been at war with the Yaquis for nearly twenty years, and it is believed that from twelve to fifteen thousand Mexicans have lost their lives in these contests. Who can say how many Indians have been killed, thus swelling the total to a frightful figure?

The Yaquis are human beings, industrious, brave and patriotic. It seems that the Yaqui children are loved by their mothers just like white children. Surely, some way could have been found to stop this long-waged war, to save the lives of these many thousand of Mexicans and Yaquis, and to prove that civilization can fetter the tiger in human nature and not merely sharpen its teeth and claws.

STUDENT

A Degrading Amusement

AN elevated and dignified entertainment was recently given at one of the large Pacific Coast cities. A fight was arranged between a cat and a dog, both animals having acquired a reputation for pugnacity under human tutorship. There does not seem to have been any particular concealment about the matter, the promoters possibly being aware of the prevailing taste of the community. The published report, accompanied of course by the usual picture of the principal ruffian, says:

The cat and dog were loosed on a vacant lot, the owner claiming that there would be no need of an enclosure. It was a very bloody affair, and the dog was ripped to ribbons, while the cat was chewed to death. The dog died the night after the fight.

Is there no law in the Pacific States against cruelty to animals and, if so, why is the law not enforced? Why was the atrocity permitted and why are not the authors of it punished? They appear to be well known by name and by reputation.

STUDENT

Some Views on XXth Century Problems

Too Many Sensational News Items

A CERTAIN man has committed suicide because of an entirely unfounded report that he had done so. No other reason is apparent, nor does it appear that he had ever previously contemplated such an act. It seems to be a case of suggestion pure and simple.

For one instance such as this there must be a very large number that are never heard of. Day by day our newspapers teem with horrors, luridly painted, and with every sensational detail represented, exaggerated or invented. Every kind of crime, every product of moral disease is flaunted before the eyes of boys and girls and of the nerve-wrecked products of civilization. What wonder that an increasingly large number of victims learn to believe that crime is something commendable because it is notorious, and that there can be no higher destiny than to be the subject of a newspaper column. Truly, we take our responsibilities very lightly, but the answer to them will be of a different kind. X.

Physicians Condemn Vivisection

A NEW YORK paper, acting upon the view of Dr. Maréchal, that "the anti-vivisection cause, to succeed, should originate in the medical body itself," prints a symposium of the opinions of a large number of eminent French physicians, all condemnatory of the practise. Most of them dwell upon its uselessness in throwing light upon human physiological processes; many regard its results as distinctly misleading; nearly all of them dwell upon its immorality.

For ourselves, we should compress the argument into one sentence. Even if results of value in saving human life or advancing knowledge have been attained or be attained hereafter in however great a degree, these are far outweighed by the degradation of the moral nature of the operators, student or diplomatized; all of whom have or will have the lives and often the minds of the sick in their care. No parent will be long in forming an opinion who will consider whether he would like to place his sick child in the professional care of a vivisectioner. X.

The Various Kinds of Memory

A SERIES of interesting researches have lately been made on learning and memory. The memories of different persons are by no means alike in kind, any more than they are in degree. If two pupils are observed, learning, say, the names of the towns in a State, one will be seen to be muttering, the other not. A third will have to go away and read them aloud. A fourth will learn them just as quickly if they are read to him. Here are at least three kinds of memory, but the time occupied by the four pupils may be exactly the same and the result equally good in all four.

One remembers by sight. He calls up the picture of the map and re-reads the names with his mind's eye.

Two others remember by sound. They have learned through hearing the names repeated, either by their own voice or someone else's. In their inner consciousness, they hear the sounds of the names once more and echo what they hear.

The fourth has stored in his memory the string of motions made by his lips in muttering. In repeating what he has learned, he goes through them again.

Most people, of course, use two or all of these methods. They look at the words they are memorizing; they say them aloud. And they say them aloud often enough to arouse both the memory of the sounds and of the motions. But even in these cases, one of the methods is easiest and most prominent for each person.

These three kinds of memory are used in thinking. As thought comes forward into clear consciousness, it passes through the storerooms of memory and clothes itself with what it finds there. Accordingly different persons find their thought going on in a sort of echo of their own words and voice; or in pictures of printed or written words; or in half-begun movements of talking. These last are the chatters; their memory is that of motions of lips and tongue, and so their thought—if it

Concentration and Memory

can be so called—passes out at once as chatter. They are chattering inaudibly or audibly all the time. Can there be thought without words? Of course. It consists of those deep, swift evolutions in consciousness that have not yet passed into the anteroom of memory to select the dress of words in which they will finally present themselves to the world. At that stage they are best regarded as feeling; and we can then keep the word thought for them after the robing process is complete. Some of them are, of course, altogether too subtle and spiritual for words at all. In the musician, many of these will prefer to robe themselves in pure sound, as music; in the poet, their verbal dress will be rhythmic. In great poets, the unutterable ones are made to suggest themselves by means of the elevated form which is given to those that are just barely utterable. In both artist and musician, the robing room is not only fitted with words heard, sounds heard, and colors seen physically, but with sounds and colors perceived with a subtler, inner sense of sight and hearing.

It has been found that memory cannot be trained by mere practise in learning things by heart. After years of that, persons may remain with no better or swifter memories than before. Memory is only trained by training the power of concentration. Anything is remembered on which attention was concentrated. But attention, besides its gross and obvious waverings, has a much more numerous subtle set, not noticed by the ordinary person. So, in learning a paragraph, for example, we have to go over it many times in order that the waverings of attention may be at different places. In the end, when learned, attention has rested over all of it. But a person of trained concentration will remember it at one reading. To train memory, train concentration. Memorizing things only trains memory in so far as the process is used to train concentration.

PSYCHOLOGIST

The Evil of Capital Punishment

THE governor of New Jersey has honorably distinguished himself by saying "If any effort of mine can prevent it, my administration shall not be stained with the hanging of a woman." It has been said that gratitude is a lively sense of favors to come and we therefore gratefully invite the governor of New Jersey to make a further pronouncement to the effect that if any effort of his can prevent it, his administration shall not be stained by the hanging of any one. The question of capital punishment is one which admirably illustrates the deficiency in nerve connection between the nation and the executive. There are, of course, some people who positively advocate the continuance of judicial murder, but their number is very small. They belong largely to that unfortunate section of the community who have reached a point in evolution where instinct is dead and intelligence not yet aroused. The vast majority of the nation, if questioned individually, would discourage and disapprove of capital punishment. In spite, however, of our representative machinery, the nation is inarticulate on matters of morality and lacking in determination to become articulate and to insist upon being heard. STUDENT

Old Age and Pauperism in England

IT has lately been shown that of every four persons in Great Britain—one of the richest countries in the world—over the age of sixty-five, three are paupers. Of these, some small proportion, of course, "deserve it;" some were spendthrift, some criminal. If we find any relief in so doing, we can put them apart. There will then remain the thousands who lived all their years on into age, earning only the price of bare necessity, and facing, notwithstanding all their struggles, the coming certain humiliation of pauper "relief." What that humiliation means, only those know who have seen the relief being distributed. Some day it will be recognized that there is a national consciousness from which no unit of a nation can disentangle himself and for which every unit is responsible, colored by the griefs, hopes, fears, anxieties, joys and pains of all. What these thousands of old people contribute to it needs no description. And it is the record book on which the divine Law founds its sentences, the sentences which are the fate of nations. X.

Art Music Literature and the Drama

Where Are Our Masters of Design?

WE have painters, sculptors and architects, but where are our designers?

Not long since I visited one of the largest theatres in America, just being decorated by a well-known firm of designers, and as I looked about I was forced to ask myself, "Have we any masters of design, such as the Greeks had, such as medieval Europe had, such as even the old Celts claimed in their own style, such as has modern Japan?" The design of the proscenium arch was a hybridization of old Celtic and classic Greek. Above it meandered panels in "rococo," as indefinite and irritating as that style ever becomes, which is saying a great deal. Here was a suggestion of old Egypt in the lotus *motif*; there, a border whose color and design traced its ancestry to the textures of old Persia; the boxes were fashioned and adorned like Moorish palaces, yet the color was not garish, and, as a whole, the theatre pleased the masses, for the majority in art, like the majority in music, rarely mind if the instrument is not more than a little out of tune. There are, however, those who do—that is the difference.

But the most inharmonious note in that theatre was the labored "feel" of the designs. How those designers had labored! That was written on every wall and its label rested painfully in almost every line. There was meagre blossoming of soul-speech there in color and tone! Why?

As a nation we are young, just struggling into art-life, because the heart is just beginning to feel its need. Our cities are growing up like mushrooms. We demand the beautiful, for the heart demands food, and we have millions with which to buy it—which is not, however, an unmitigated blessing. Our younger artists have been tempted, as few in any age have been, to rush into designing before they were trained. The result is—well, one result has been a dulling of the moral sense, the artist's and that of the public, for a fine moral sense is the compass and the guide of all art. For all that is feeble in design is *immoral*, and never can be anything but immoral, *because it breaks the law*.

Imagine a would-be "litterateur," wholly ignorant of French, but who, after struggling through *Chardenal's Elementary Grammar* or *Bercy's Livre des Enfants*, should consider himself perfectly qualified to produce masterpieces of literature in the French language. Imagine a teacher who would say to his pupils, "It is quite unnecessary for you to study masterpieces of literature in your own language or in any other. If you can conjugate the verbs and tell a noun from an adjective, the thing for you to do is to begin an original work at once, say a drama in five acts, or a three-volume novel." What masterpieces such training would produce!

Imagine, for instance, the great Joachim Raff saying to a pupil, "O, it's not necessary for you to study counterpoint, nor even to be familiar with the masterpieces of music. You don't need a knowledge of musi-

AND for the individual, as soon as you have learned to read, you may, as I said, know him to the heart's core, through his art. Let his art-gift be never so great, and cultivated to the height by the schools of a great race of men, and it is still but a tapestry thrown over his own being and inner soul; and the bearing of it will show, infallibly, whether it hangs on a man or on a skeleton. If you are dim-eyed, you may not see the difference in the fall of the folds at first, but learn how to look, and the folds themselves will become transparent, and you shall see through them the death's shape, or the divine one, making the tissue above it as a cloud of light, or as a winding-sheet.—*Ruskin*

NIKE LOOSENING HER SANDAL

cal theory or of musical forms. You have merely to begin by being original! Go ahead and make your own forms! You can play 'Home, Sweet Home,' and can tell a minor third from an octave. Now you are ready to start out as a composer!"

And yet we have today "teachers" of design who teach their pupils after exactly this fashion. "To be original"—that is their watchword, not realizing that they are themselves psychologized by the modern fever for novelty and the modern chase after "something different." The results we see all about us, in our public buildings, in our school-houses, in our private homes. The Japanese can teach us something there, for the artists of no modern nation have so marvelous a mastery over line and so wonderful a facility for design, and the reason is that the classic forms, the principles, or elements, so to speak, of their design are as familiar to them as speech is to the tongue. Imagine the mastery that would result if a teacher of design insisted that his students should study the recognized styles one by one, thoroughly, conscientiously, carefully, until he had mastered each in turn; *until he could absolutely think in it, translate his own thoughts into it, as if it were his mother tongue*. Let such a student begin, say, with the Greek, then pass to the design of old Egypt; then, perhaps, to a complete and close study of Gothic design, not forgetting the rare old traceries of the Celts. A student who had mastered the principles of design, not through slavish copying, but *through close and careful and impersonal study*, need not worry about originality. The man who can read and thoroughly understand Shakespeare is able to compose a letter to his grocer or write a paragraph about the weather, perchance even a sonnet to the Soul.

If this kind of study were the rule instead of the exception, we would have designers who are masters of line, not mere meanderers after it; designers whose work would not be labored apologies, but poems, songs, absolute dramas in color and in line.

STUDENT

SAFONOFF, the visiting Russian conductor, said recently:

All nations which have added to the store of human culture have at all times conserved their national folk-song. Peter the Great, when he ransacked Europe for artists and men of letters, guarded jealously the songs of the people as the sacred treasury of their soul life. Mathematics and science belong in common to all nations, but the folk-songs of a people are its distinguishing inheritance, the expressions of its peculiar genius.

HANS VON BULOW once remarked of a musician—and a volume could not have expressed more—"He plays the easiest pieces with the utmost difficulty!"

RICHARD STRAUSS recently said of the American public, "It is unique in its appreciation of art." What did he mean to convey?

IF WE WOULD WALK IN THE LIGHT WE MUST MAKE DUTY ONE OF OUR HIGHEST IDEALS

— KATHERINE TINGLEY

Sonya Kovalevsky

THE books of Tolstoy and Tourgenieff have made us familiar with the enthusiasm for advancement and freedom felt among some classes of the youth of Russia; but the world is not so well acquainted with the fact that a similar feeling has fired the hearts of many Russian women, and that their burning desire to help their country by the spread of knowledge, led, about thirty years ago, to a strong movement among the daughters of aristocratic families.

In departing from the accepted order according to which the Russian woman is wife and mother, or merely a woman of the world, these girls encountered parental opposition, and in order to overcome this and make it possible for them to leave home and study at foreign universities, they contracted marriages with young men in sympathy with their ideals, and then, as married women, pursued their studies abroad.

Among these pioneers in the cause of higher education was Sonya Kovalevsky, the great Russian woman mathematician. She and her student husband went in 1869 to Heidelberg. Already in Russia her talent had shown itself. From Heidelberg she went to Berlin where the university was, as now, closed to female students. The great teacher, Weierstrass, was astonished at her application for tuition in mathematics; but the acuteness and skill with which she solved some problems he had set for his advanced pupils, convinced him of her powers. She remained his pupil four years, and during this time wrote the three treatises that gained her a doctor's degree in the university of Gottingen. She desired to apply her knowledge in the higher branches of education and thus help to open the universities to women; and in 1883, when were opened the doors of the University of Stockholm, she gave there a course of lectures in private, and in consequence received an official appointment for five years. At the end of this time she received an appointment for life, but lived to fill it for only one year.

It was her custom to spend the time between terms in Paris and other capitals, where she received every mark of distinction due to her achievements. She frequently lectured at scientific congresses. Genius she adored, and her natural element was the companionship of mighty intellects.

Madame Kovalevsky delighted in literary work and was a successful author, publishing novels and magazine articles anonymously. In her book, *Recollections of Childhood*, she relates that her nursery was temporarily, while waiting for the outer paper, covered with sheets of lithographed lectures on the calculus, which she deciphered, working out for herself the order of the formulæ. These impressions returned vividly to her mind later. In 1888 this young Russian woman received in person, from the French Academy of Science, the *Prix Bordin*, the greatest scientific honor which any woman has ever gained and one of the greatest honors to which any student can aspire.

Though endowed with great strength and endurance in the prolonged consideration of the science she loved, and possessed of the will that overcomes all obstacles and works to its end, Sonya Kovalevsky had an almost childlike charm of manner and a sweet dependence upon those who loved her; these won for her the affectionate title, "our Professor Sonya," by which she was known in Stockholm.

Introspective and at times gifted with second sight, this brilliant woman

THE LAST SONG

by JOHANNA AMBROSIO

A SONG of my own creating,
A wondrous song I'd sing,
Which like the fragrant breeze of May
O'er earth its flight would wing.
From North to South, from East to West,
A way break in a trice,
And give to all mankind sweet rest,
Joy, Peace, and Paradise.

Unto the sick and dying
Sweet cordial it should bring,
The sound of its soft pinion's stroke
Still grief and suffering.
Mid clank of arms and conflict hot
Foa courage to a flame;
For woe men comprehend not
Comfort it should proclaim.

But where'er sin is lurking
With cruel serpent e'e,
To hurricane swiftly rising,
'Twill sweep it in the sea.
On every chink in house of pain
A cooling balm distil,
The temple cleanse from ev'ry stain,
And every want fulfil.

And if this song succeeded,
Nor fame nor gold to gain
I'd wish, but throw my lyre down
And sing no other strain.
Unto the pine woods stealing,
Lay me for death's repose
To no one e'er revealing
Who did this song compose.

was intensely interested in human nature and had intuitive insight into it.

Her biographer and friend, Anna Carlotta Leffler, says of her: "She had risen to heights to which genius and imagination alone can carry the soul. To others she had given instinctively of her knowledge, experience, phantasy and feeling. No one who knew her could remain unmoved by the influence ever exercised by the keen intellect and glowing feeling which spread sunshine and growth around. Her mind was fertile because her intellect was unselfish."

MARJORIE M. TYBERG

The Countess Tolstoy

ONE of the most remarkable women of the present age is the Countess Tolstoy. So completely obscured has she been by her husband's fame, few are aware to what an extent she has made his fame what it is. Twenty-nine years younger than her husband, but differing radically from him in most of his views of life, and herself possessing remarkable gifts as a social leader, one wonders how she could have led a life so serenely happy upon the lonely estate upon Yasnaya, Polyana, so far away from Moscow that a railway journey of some nine hours must be taken first, followed by a droshky ride of ten miles. The only near neighbors are the peasant inhabitants of a tiny little village of straw-roofed houses upon the estate itself.

One who is even slightly familiar with the work of the Countess Tolstoy must admit that she possesses rare adaptability and a perfect genius for unselfishness. Her husband quite willingly leaves to her the entire management of the sale of his books, and if he is not daily thankful for the fact that she differs radically from him in regard to his ideas of property rights, he ought to be. Excepting for that fact the Count might be peniless today.

The Countess spends a great portion of her time revising, correcting and copying her husband's manuscripts for the publishers, and her patience is apparently inexhaustible. One of his books, *War and Peace*, she copied entirely six times, and another one, *Life*, she copied a round dozen times before the Count decided that it was really fit to go to the publishers. In addition she translated the latter book into French.

To her children, eight of whom are still living, the Countess has been an ideal mother. English and music she taught them herself, for she speaks fluently not only English, but French and German, and it is only because she has kept herself in the background that she is not today better known. Her life with Count Tolstoy has covered a period of something like forty years, and she has borne him thirteen children. She has been the pilot-wheel and the anchor for the entire family, and now the Count declares that marriage is a failure—doesn't believe in it at all! Her own views on the subject the Countess has not yet expressed.

MADAME PUSEPP KONDUROFF, daughter of Colonel Maximoff Konduroff, has been enrolled in the Russian forces in Manchuria. Madame Konduroff will join the First Regiment of Sharpshooters. She leaves this week for the front. She is the first woman in the Manchurian army.

MISS EMMA HELEN BLAIR is editing a series of fifty volumes on *The Philippine Islands, 1493-1903*.

Woman's Status in Russia

"ABOUT ten years ago," wrote an American woman, recently, "I met a Russian lady of rank and wealth who congratulated me on being a citizen of a republic. As my allegiance to my sex is greater than it is to any theory ever established by men, I replied that I could not see that being a citizen of a republic was a matter for any woman to be congratulated on. She was amazed at this and asked me for an explanation, whereupon I asserted that I was confident that our sex had not fared so badly, either politically or legally, at the hands of the Russian government as at the hands of the United States republic. Each of us wagered that the other was wrong, and to settle the question we agreed to gather certain data concerning women in our respective countries. We found that, while in America millions of wives had had no individual control over their property for about two centuries, every wife in Russia had been the legal mistress of her own fortune; that while every woman householder in Russia had had the right to vote on all municipal matters for several centuries, millions of women in the American republic had no such rights; that 9,000 wives were deserted by husbands in the republic to 500 in Russia; that thousands of tiny girls were employed in factories in the republic, while no little girls can be legally employed in Russian factories."

Another View

ACCORDING to one of our exchanges a person living in the village of Petrowka, Siberia, recently sent the following extraordinary letter to the police at Irkutsk:

I have the honor to ask you to kindly make it publicly known that in the village of Petrowka I have a young wife, twenty years old, and two pigs for sale. The price for all three is only £2 10s. My wife is very pretty and young, but of a somewhat quarrelsome and capricious disposition.

The police at first thought they must be dealing with a madman or, if not that, with a person of weak intellect, but when the person himself came to light, they found him to be perfectly sane and of average intelligence. Such are our ideals otherwheres—and such is life.

Life of Japanese Women

JAPANESE women, unlike other women of the Orient, have never led enclosed and wholly shut-in lives. They have had an almost exaggerated patriotism and public service has been to them one of their sublime ideals. In the old days every Japanese woman was taught fencing and the use of the shield so that when the Samurai, those of the warrior clan, were off to the wars, she might defend the women's apartments and her own honor. The days when such emergencies arise may be past, but the higher patriotism remains in the hearts of the Japanese woman of today and there is sore need.

Patriotism in Japan is more than an ideal merely, it is a passion. At one of the recent teacher's conventions in Japan one of the questions up for discussion was, "What shall we do to inculcate among the youth of the nation the glory of war, the higher patriotism, and the endurance of hardships?" The Empress Haru, as is well-known, was the head of the Japanese Red-Cross Society organized during the late war. She was lavish in her gifts of money and, with the ladies of her court, she made thousands upon thousands of bandages and garments for the army hospitals. She herself visited the wounded, often distributing gifts. The work of the Japanese women as nurses has always been more than a success; it was and continues to be an inspiration.

MRS. RUSSELL SAGE recently said: "It is not the really wealthy who make the display. It is the people who want others to think they are wealthy."

It is announced that two new foreign universities for women will be opened next year, one at Tokyo and one at Moscow.

The Wife of Mendelssohn

OF Cécile Jean-Renaud, who became Mendelssohn's wife, Edward Devrient says, in his *Recollections*: "Cécile was one of those sweet, womanly natures whose very presence exerts a tranquilizing and beneficial effect on every one; a slender girl with features of dazzling beauty and delicacy, hair of deep blonde and eyes blue and large, she showed even then signs unfavorable to a protracted life. She spoke very little and that little very softly, having that voice which Shakespeare so praises in woman, and that charming silence which Shakespeare, in the utterance of Coriolanus, extols no less highly than does Lear, Cordelia's soft low voice."

Hensel, the son of Fanny Mendelssohn, wrote of his aunt, Cécile, "It was not the presence of strong and marked peculiarities which made her so lovely; rather, it was the absence of these, the harmony and complete roundness and balance of her character. She was not especially brilliant, not wonderful in her wit or learning or in any particular gifts, but she was refreshing as a breath of mountain air or a draught of pure, cool water; it seemed as if this woman was created for Felix. No one could have been better adapted to his temperament, no one could have secured him such unbroken joy."

THE WIFE OF MENDELSSOHN

Through Chinese Eyes

HUAN HSIANG-FU, an eminent Chinese lawyer, recently published a book in which he jotted down his observations of our western life. The book is unique, it is needless to say, and well worth reading. One of the strangest of our customs, in his eyes, is our habit of kissing. He remarks that "the most respectful form of this courtesy consists in applying the lips to the lower part of the chin and making a smacking sound." He notes that women commonly do this, "which is exceedingly strange." "Husband and wife," he says, "go arm in arm along the street, yet no one smiles. . . . The husband will perform any menial service for his wife and nobody will jeer at him. . . . No man may smoke while women are at the table, but occasionally when they have finished eating the women leave purposely, letting it be known that this is done out of compassion." The author was also much astonished at the fact that women "must go out walking in the streets every day!"

Exhibition of Women's Dress

CRYSTAL PALACE, London, is just now housing a great international exhibition of women's dress. Not only are the finest and most elaborate of modern gowns in evidence, but also hundreds of typical peasants' costumes from all the European countries. Also medieval and ancient Japanese and Chinese gowns are there, rivaling in beauty and elaborateness costumes of the marvelous richness characteristic of Sixteenth century Venice. The exposition has its practical side as well, demonstrating by means of hand and power looms and various machines all the processes used in the making of feminine attire.

It is more than likely that this exposition will be significant in its results otherwise than commercially speaking. It is as absurd to under-rate as to overrate the importance of women's dress. If the body is the servant and handmaid of the soul, it is but common sense that it should be properly clothed; and it is quite likely that the cardinal laws which govern all earthly things govern also the realm of the wardrobe. Ugliness is never appropriate and carelessness is as great a sin as over-fastidiousness. To be neglectful of one's personal appearance is the reverse of a virtue, and may be even more disintegrating in its effects on one's self and the characters of others than vanity. Women must find the middle line, where beauty clasps hands with usefulness, where there is made an honest and loving effort to adapt the garments to the soul's highest needs, where the soul is neither outraged by the uncouth, the ill-fitting or the neglectfully-fashioned garment, nor denied expression by over elaborateness and the showiness that is merely sham. The Trend of Twentieth Century Science

The Mountains and Valleys of the Moon—Earth's Tides

OUR picture shows the Moon's principal features when she is a little more than a week old. The comparatively smooth, dusky plains, called seas, the brilliant mountainous regions, the hundreds of strange ring mountains, and a few of the mysterious bright radiating streaks, are well seen at this period. A little above the center the long curved line of the lunar Apennines is seen, a range about twenty-nine thousand feet in height. Still higher up is a curious straight streak, the shady side of the deep, clean-cut valley through the Alps; and above this, a little to the left, we find Plato, a great walled plain about sixty miles across, whose variations in color as the sun rises higher upon it may be due to the growth of some low form of plant-life. Not far from the southern pole the lunar surface is extremely rough and pitted with many huge cavernous depressions, and here we notice one of the centers from which the bright streaks radiate.

The Moon presents the appearance of a dead world, a burnt-out or frozen corpse, slowly disintegrating; but H. P. Blavatsky tells us it is not completely dead, though its spiritual principles have fled. Recent observations have convinced many scientific men that certain periodic changes take place upon many parts of the lunar surface, and the idea is growing that they are partly due to vegetation and partly to the melting of frost precipitated during the long lunar night. It is not improbable that some low forms of life exist, and the brilliant whiteness of the mountain regions is strongly suggestive of frost or snow.

The influence of our Satellite upon earth-life is well known. Its attraction is the chief cause of the tides, though the theoretical explanation of the high tide, on the side of the earth farthest from the Moon, is not clear. The text-books give the curious hypothesis that the earth is pulled away from the sea, leaving a body of water heaped up behind it, but this idea has been seriously doubted of late. We would respectfully suggest that the attractive force may change its polarity upon passing through the body of the earth, and may become a repelling force, pushing up the waters a little above the mean level of the sea.

It is held by many that the Moon is the parent of the earth; she had her life culmination at a time when the earth was not fit for habitation, but ultimately the Moon's vital energy and spirit passed over to our globe, and now there is little left but an empty shell. The knowledge of this intimate connection between the two planets throws light upon the inexplicable problem of the seven, fourteen, twenty-one and twenty-eight-day cycles in many diseases, in the life histories of animals, in the weather, etc., etc.

PROFESSOR HALE is investigating the climate of Southern California with the intention of erecting a gigantic and improved Spectroheliograph. He concludes the conditions are ideal upon the high peaks of the Sierras.

Modern Science Associates Electricity With Human Life

IN the minds of scientific students, electricity is being more and more closely associated with life. A recent book, *The Signs of Life*, by Augustus Waller, M. D., F. R. S., accentuates this point very markedly. It might almost be said that, in the author's words, the thesis is "that the electric responses . . . are a token and measure of vitality. . . ." This result was reached from an examination of very diverse objects, the retina, the lens, the entire eye-ball, the skin of animals and its equivalent in plants, and many other living tissues in both kingdoms.

But electricity, so far as we know, and as we suspect with more and more confidence, does not differ in essential nature from the other emanations we call light, X-rays, N-rays, and all the other alphabetically-named rays of which a new one is now discovered every few weeks. It is probably a question only of length and rapidity of vibrations, grading downwards from the highest invisible light to the comparatively slowly vibrating electric rays or currents. And it is probable that the whole of them, those we now know and reaches of octaves yet to be discovered, are emitted by all things that have life, different portions of this vast spectrum predominating according to the different forms of life and the different rapidities of life-changes. These are all *forces*, emitted and absorbed by Life, the master-workman, from and into his countless laboratories of molecule, crystal, cell and organ, absorbed where he builds, emitted where he unbuilds. Though in truth both processes go forever hand in hand. They are messages or messengers between living things, continually entering into and leaving service. STUDENT

THE MOUNTAINS AND VALLEYS OF THE MOON

Clouds in the Sun's Atmosphere

FOR some reason astronomy seems to be the science that has produced more distinguished men than any other in America. The Royal Astronomical Society of England has just recognized the brilliant work of Professor George E. Hale of the Yerkes Observatory, Wisconsin, by

awarding him the gold medal of the society, the highest honor an astronomer can receive. His special achievement has been the perfecting of the Spectroheliograph, a powerful spectroscopic telescope which sifts out and separates the light emitted by various glowing substances floating in the atmosphere of the sun, and so enables photographs of the brilliant clouds of hydrogen, or masses of calcium vapor, for instance, to be taken independently of the other constituents of the solar atmosphere. Of course, these dazzling vapors cannot be distinguished by the eye with telescopic aid, however powerful, as they are merged together in the general brilliancy. But the Spectroheliograph has marked a new epoch in astronomy and opens the way to important new discoveries about the condition of the sun's surface. Possibly we shall get some clues concerning the period of sun-spot frequency to which less attention has been given.

Studies

IVY

by CHARLES DICKENS

WHOLE ages have fled and their works decayed,
 And nations have scattered been;
 But the stout old Ivy shall never fade
 From its hale and hearty green.
 The brave old plant in its lonely days
 Shall fatten upon the past:
 For the stateliest building man can raise
 Is the Ivy's food at last.

The Question of Protective Mimicry in Insect Life

THERE can hardly be a more fascinating pursuit in natural history than the study of protective mimicry. Protective mimicry is an insect's imitation of its surroundings, so that it may not be perceived and consequently eaten by its enemies. Some insects precisely resemble dead leaves, living leaves, twigs, thorns, bits of moss, flowers, seeds, pods, lichen, spots of mold or decay, fungi, grass blades, anything whatever upon which they feed or on which they have a habit of resting. They even mimic each other. There is, for example, a little beetle which the birds will not eat, because his weapon of defense consists of a very bad smell and taste, when he is crushed or even irritated. Another beetle, which has not even this to defend himself with, has taken care to make himself so exactly like the first that the birds are deceived and let him alone.

No one can have failed to notice the slighter cases of mimicry. Pulling off a dead twig, taking up a handful of dead leaves, or scraping a bit of moss from a tree-trunk, one will constantly notice a moth or two fly away from under one's very eyes, previously entirely unnoticed.

There is a species of butterfly called the "leaf butterfly," from its exact resemblance when at rest, to a withered leaf. The shape, veining and shading are marvelously close and deceptive.

An English caterpillar achieves a very remarkable athletic feat in his successful efforts to disguise himself. His scheme is to resemble a little twig growing from a larger one. He feeds at night, and when daylight comes he seizes the twig firmly by two pairs of legs at the extreme hinder end of his body. Holding on by them he causes the rest of his length to stand off at what he considers a suitable angle from the twig so as to look like a little branch. This position, swaying in the wind with his twig, he can retain for hours, bearing his whole weight on the two pair of legs. But as a rule he spins a silken thread from his head end to the twig, so as to take some of the weight.

The twig insects, *Phasmida*, carry the resemblances to twigs much further, as our drawing shows, and can hardly be distinguished even on close scrutiny.

The zoology of today is beginning to suspect that its explanation of protective mimicry may be at any rate incomplete. Its explanation is comprised in the magic words "natural selection." Out of a large brood of young insects, born one summer morning ages ago, one had a slight accidental resemblance to a twig. When the family scattered over the neighboring trees, all got eaten by birds except this one. A bird standing

at some distance and being a little short-sighted, mistook him for a twig. So he lived long enough to marry and had many offspring, most of whom had their father's slight resemblance to a twig. One, however, carried the resemblance a little further, and, as it chanced, he alone escaped being eaten and became a parent. And so, through a vast length of time, the thing went on, until at last the present perfectly deceptive twig insects were evolved.

We do not see why that explanation may not go hand in hand with, and be completed by, another. May not the consciousness of the insect be so affected by the constantly present picture of his surroundings—in this case the slender twigs he lives on—as to influence the form of his offspring? How the influence would be conveyed to the egg and so to the future insect is no more mysterious than any other problem in heredity.

This suggestion would cover the admitted flaws in the doctrine of natural selection. It would explain why the variations in offspring are not in all directions, as they would be if the affair were chance only; why they tend to be along a favorable direction. And it would explain the absence, in such innumerable cases, of the transition forms which the doctrine of natural selection, standing alone, requires. We suspect that science will soon find itself forced into some such hypothesis, and that even proof of it may be forthcoming very soon. ZOOLOGIST

The Appearance of a New Plant Type

READERS of this page will remember the strange roses which consisted only of the petals; the whole central structure of the flower being replaced by a very vigorous twig-stem. Since then other cases of the same nature, in other genera of plants, have been brought to our notice. One species of geranium seems to be especially addicted to the habit, and now the gaillardia-like types have taken it up and produced several samples of flower stems transformed into twigs, quite contrary to the usual practice of such plants. Indeed it really begins to look as though Nature is experimenting with a view to introducing elsewhere the plan; already successfully used by one species of fern and by such plants as strawberries and myrtles; of producing new plants directly from the branches of the old.

It can be done now, with roses and other shrubs; under artificial conditions, by "layering" and "slipping," but there will certainly be some curious developments if

Nature begins it on a large scale. Imagine a rosebush with tiny rosebushes fully formed, roots and all, growing on its branches, all ready to pick off and set! Or suppose the lemons and other citrus fruits do like the one described on this page about a year and a half ago, which grew a little lemon tree inside the lemon rind while it yet hung on the tree. Such a departure is certainly not explicable by any theory of "accumulated variations," "natural selection" nor "survival of the fittest," but must be regarded as a definite action by the intelligences ruling Nature for the purpose of introducing a successful plan into new fields of operation.

As yet we have failed to secure any separate plants from such twig-flowers but we shall continue until the experiment succeeds. Perhaps we did not leave them on long enough to mature sufficiently. N.L.

Universal Brotherhood Organization

Central Office Point Loma California

A LARGE audience was highly pleased by the very interesting program presented at the regular meeting of The Universal Brotherhood and Theosophical Society, in Isis Theatre last Sunday evening. Two very admirable addresses were presented, one by Miss Bonn entitled "The Angel of Hope," and "The Drama," by R. W.

Machell. Most of the music was furnished by the boys and girls of the Loma-land Raja Yoga Choir, and this was so thoroughly enjoyed by the audience, and the applause so frequent and prolonged, that encores were absolutely necessary. There was also a violin quartette by Raja Yoga boys and other instrumental music by students of the Isis Conservatory.

In his remarks on "The Drama," Mr. Machell began by quoting Shakespeare's lines "All the world's a stage —." Continuing he said:

"Could we but realize more fully how true this is I think we would be a little more tolerant to one another, and a little more tolerant to the destiny that throws us into so many difficulties and so many troubles.

"We look at life too narrowly. We see but a small part of the great drama in which we play our part, and seldom succeed in getting even a faint perception of the purpose of the whole great play, or even of one act of the drama. We have lost our sense of unity and have become so narrow in our individualism that we are not able to see our own place in life and realize how our own work fits in with the work of others, to make up a great act in the constantly evolving drama of human progress. Could we but realize more fully the unity of the human family we would find our interest in life vastly larger and more entertaining than we do at present.

"If you will think a little you will see that this individualism has been steadily fostered by most of the professed teachers of the Christian religion, which claims to be based on the precepts of Jesus, who constantly sought to teach the very opposite. For all the teaching of Jesus is the teaching of Human Brotherhood, and all the teaching of his professed followers is how to save your own soul.

"It is this constant appeal to man's selfishness that makes this form of religion popular and at the same time makes it worthless, for it fosters the very evil that is the cause of human misery, the sin of selfishness, the only sin there really is.

"The great teachers of men, whether they have been called Saviors or prophets, philosophers, poets, sages or men of genius, have all tried to show men how to be happy; but the priests and the pedagogues have never understood this, and have turned the wise teachings into hard and cold dogmas or laws and called it duty.

"Now, I think it is like this: a wise man sees that there is a natural way for

LOMA-LAND STUDENTS AT ISIS THEATRE

Two Admirable Addresses, "The Angel of Hope," and "The Drama," & an Interesting Musical Program

Reprinted from the San Diego News

men to live, and that if they live that way they will be happy, and he tells them so. He tells them what to do and what not to do; he shows them the safe and smooth path, and warns them of the dangers that come to all who follow any other path.

"But his hearers think that they are living naturally already, and that the Teacher

wants them to do some difficult thing in order to please some imaginary Being who will reward them if they do what pleases him and punish them if they do what pleases themselves.

"The wise Teacher sees the Unity of all, and how beautiful is the great drama of the evolution of the Soul of Humanity; and he tries to show men how to live their lives according to the natural law and the fitness of things. He tells them of the joy that comes to each one who feels himself a part of this great Unity and the misery that comes to those who get shut up in their own blind wilfulness. And they think he is asking them to sacrifice all that makes life worth living and offering them a reward as a bribe to induce them to follow an unnatural and superhuman path of pain and suffering.

"I remember being deeply impressed with the spirit of the old epic of Sigurd the Volsung, which is the remains of one of the oldest epics in the world perhaps, in which a great king who had done many evil and many glorious things, speaks when his death is near of the joy to come when in the halls of All-Father Odin he shall sit at the feast with his brother whom he has slain and they shall talk of the great deeds done upon earth when they loved and fought and saved or slew as it chanced or as the gods willed. And another of the heroes in his hour of despair is told by his wiser counselor that the day of his enlightenment will come and he shall know the meaning of the tragedy and see the purpose of the part he has played, and she tells him he shall look on the face of all earthly ill

And the foul shall still seem foul and the fair shall still seem fair,
But thy wit shall then be awakened and thou shalt know indeed
Why the brave man's spear is broken and his war shield fails at need,
Why the loving is unbeloved and the just man falls from his state,
Why the liar gains in a day what the sooth-fast strives for late.
Yea and thy deeds shalt thou know and great shalt thy gladness be
As a picture all of gold thy life days thou shalt see,
And know that thou too wast a god to abide through the hurry and haste,
A god in the gilded hall, a god on the rain swept waste,
A god in the battle triumphant, a god on the heap of the slain —
And thy hope shall arise and awaken and thy love be quickened again.

"This nobler view of our destiny was once in the world and shall be again when we have learned the dignity of our calling and our true position in life."

Splendid Reports from the Raja Yoga School at Santiago de Cuba

ANNIVERSARY CELEBRATION

ONE year ago today Mrs. Katherine Tingley officially opened the Raja Yoga School in Cuba. At that time she was in Santiago on the fourth Cuban crusade. With the announcement of the opening of a Raja Yoga Free School came hundreds of applications. Many were received and on the morning of the 13th of April, 1903, several hundred children were enrolled, and immediately two large buildings known as Raja Yoga Free School, Departments I and II were filled. Mrs. Tingley personally conducted the installation of the essential principles of Raja Yoga, and the children and their parents cheered the initial results with loud applause. Far too soon for the pleasure of the children came the summer vacation, and all regular work was suspended until the opening of the September term.

The first day of the term saw all the familiar faces in line, and in due time the classes were graded and the school work well organized and in full operation. The months have passed very quickly and the anniversary day was celebrated with a fiesta suggested by the children.

Besides regular class work, violin and piano solos were given by the pupils, wand drills by the girls' classes and military drills by the boys. Calisthenics and setting up exercises were also given; and the different classes interspersed the program with two, three and four part songs. Mayor Bacardi and Sr. Daniel Fajardo Ortiz of the *Cubano Libre* were present, and both expressed their appreciation of the children's exhibition,

especially in the mental arithmetic classes and spelling competition. The problems were given to the children in both English and Spanish, and without confusion or hesitancy the answers were given and with amazing rapidity. In the spelling competition each child spelled the word in English and then giving the translation spelled the Spanish word also. The competition ended in a draw and neither side was spelled down. Perhaps the most interesting part of the program was the reading of the school paper, edited by the children, *El Siglo de Raja Yoga* (The Raja Yoga Century). It is a semi-monthly paper, and besides the editorial and literary departments there is a girls' department, school department and department of foreign news. The programs were artistically gotten up, having covers of various original designs done in water colors and executed entirely by the children. At the conclusion of the program Mayor Bacardi responded to a request for a speech by the Drill Company, and in part said:

It is true, as has been read from your school paper, that this is the first anniversary of the founding of this school by Katherine Tingley. It is a year ago today that she gathered you together. Remember the condition of ignorance that you were in a year ago — your lack of everything that you have now. It is like planting seeds, which even now are putting forth shoots, soon to grow and blossom and bear fruit. And you are the ones who will gather this fruit.

There are not many persons who would leave all their friends, their work and their pleasure, to come down here to teach such a disorderly rabble as we are, for it is useless to deny it, we have no education, no culture here.

You are the fortunate ones, for this is as yet the only Raja Yoga School in Cuba. Santiago will always have the glory of saying, 'We had the first Raja Yoga School in this country.' The gratitude you owe to your teachers, and most of all to Mrs. Tingley, for it is only her love for Cuba that has made possible the Raja Yoga School, can only be expressed by unceasingly working and studying, that you may add to the influence and the glory of the school. So I advise you all to apply yourselves diligently, have a good deportment and be very, very grateful to Mrs. Tingley who has and is giving you so much.

Sr. Fajardo Ortiz made some friendly remarks and concluded by saying that he was always determined to help the school.

The fiesta closed with singing and a grand march by the school, during which the children received pretty boxes of candies, and then were gone—to commence a second year of Raja Yoga. SECRETARY

Santiago de Cuba, April 13, 1904

FIRST MUSICAL RECITAL

CONSTANT reports from Cuba speak of the gratifying progress which is being made by the Raja Yoga Schools which are now the educational feature of the Island. Everything which is inspired and organized by Katherine Tingley, everything which officially emanates from Point Loma, carries with it the stamp of its origin, and the Raja Yoga Schools at Santiago are worthy of their source. Certainly no higher praise than this could be given. The teachers are of exceptional ability and energy, the pupils respond to their efforts as was to be expected from Cuban children, while the parents and all the best elements of Cuban society give their moral support to an educational activity which they have seen in such successful operation, and which they know to be animated by motives which command their respect.

The latest evidence of the remarkable progress which has been made is afforded by a most tastefully executed program, bearing upon its front page the following announcement:

We have the pleasure of inviting you to attend the first recital given by the students of the Isis Conservatory of Music, the Santiago Branch of the Conservatory of the same name established at Point Loma, California, on Wednesday, April 20, at 8. P. M. The recital will be given in the Raja Yoga Academy, Heredia Alta, 3, Santiago de Cuba.

The program itself is of so admirable a nature, and so eloquent of the substantial work which has been done, that we reproduce it in full:

PROGRAMA

Etude	TERESA KINDELAN	Kohler's Method
Etude	JOSEFA GARCIA	Kohler's Method
Two Etudes	MARIA HECHAVARRIA	Gurlitt
At the Fair	ENRIQUE RIVAS	Hollaender
Slumber Song	ISABEL GONZALEZ	Gurlitt
(a) Home, Sweet Home	EMILIA DE MOYA	} Dana
(b) Waltz	ADELAIDA BACARDI	
Hand in Hand March	ENRIQUE PEROZO	Rummel
German Air	LUISA PERALTA	Lichner
Tulip	MERCEDES DE MOYA	} Th. Kullak
(a) The Pixies Waltzing	LUCIA BACARDI	
(b) The Brave Tin Soldier	MANUEL ARTIGAS	Hollaender
Gavotte	(a) Tarantelle	} Arthur Brown
	(b) The Pixies Sliding Down Hill	
Sonata Op. 62 No. 1	ROSA BUSTILLOS	Kuhlau
(a) La Fontaine	MARINA BACARDI	C. Bohn
(b) On the Meadow	ISABEL D'ESPAIGNE	Lichner
Le Secret	ISABEL SIERRA	Gautier
Butterfly	FRANCISCA SIERRA	Merkel
Fifth Nocturne	MARIA SIERRA	Leybach

That an effort of such magnitude was warmly appreciated by those who heard it, goes, of course, without saying. If, however, any evidence upon the point is needed, it is afforded by the following translation from

the columns of *El Cubano Libre*:

The Isis Conservatory of Music of this city gave a brilliantly successful recital last evening at the Raja Yoga Academy, Heredia Alta, 3. The distinguished and numerous audience which gathered at the Academy gave evidence of their appreciation of the progress made by the students of the beautiful selections on the program, which were severely classical.

The piano and violin numbers were interpreted by the Misses Teresa Kindelan, Josefa Garcia, Maria Hechavarría, Isabel Gonzalez, Emilia de Moya, Adelaida, Lucia and Marina Bacardi, Luisa Peralta, Mercedes de Moya, Rosa Bustillos, Isabel d'Espagne, Isabel, Francisca and Maria Sierra, and by the lads Enrique Rivas, Enrique Perozo and Manuel Artigas. It may be said that each and every one merited the hearty applause which each number evoked, for the correct execution shown by them.

The excellent musical ability demonstrated by Miss Bolting, teacher of piano, and by Mr. Reinemann, violin master, both of the Conservatory, was much admired. It will be remembered that this Conservatory is a branch of the magnificent institution existing at Point Loma, California. As a tribute to justice, and an expression of the pleasure and satisfaction afforded the audience, the loud and continued applause of the latter was noteworthy.

"Vivisection" at Claremont

POMONA COLLEGE, CLAREMONT, CALIFORNIA, March 19, 1904

Editor of the NEW CENTURY PATH, San Diego, California:

My Dear Sir—First of all, let me express my appreciation of the high tone and beautiful sentiment of your publication. Somebody has done me the courtesy to send it to me recently, but making the natural mistake of sending it to Pomona, where Pomona College is not, instead of Claremont, where the college is.

Because of my general pleasure in the exceptionally high tone of the paper, I am the more troubled by the paragraph, a copy of which I enclose:

FROM NEW CENTURY PATH

A REPORT from Claremont notifies us that the vivisection season has begun and that a large number of live cats are about to be dissected for the benefit of the junior class in biology. We are told that this process, which is an annual function, is looked forward to with great interest, and the laboratory was crowded with members of the class and visitors during the opening ceremony. The newspapers have, of course, no space to record the sermons of protest which must have been preached by the ministers of the neighborhood at these disgusting proceedings. STUDENT

A paragraph could hardly be more misleading than this one. Let me point out your errors. There is no "vivisection," as that term is usually understood, at Pomona College. It is not true that "a large number of live cats are about to be dissected." There are no "disgusting proceedings." We here at Claremont have heard of no "sermons of protest which must have been preached by the ministers of the neighborhood." The ministers of the neighborhood know that there is no occasion for such sermons, and we only wish that that knowledge reached a little further.

Now, what are the facts? In the first place, Professor Cook, who is at the head of our department of biology, is one of the gentlest and sweetest spirits in the world; I know no man in the range of my acquaintance less capable of doing a cruel act.

Second, once a year, for about a week, he does have dissections in the line of teaching his biology class. In this case they use fresh bodies instead of pickled ones, and they use the bodies of cats freshly killed instead of the bodies of human beings some time dead, as the medical colleges do.

He gathers in from the neighborhood perhaps a dozen or fifteen supernumerary cats, in no case taking any except those which are contributed by families who have cats to dispose of. The chances are that they would be disposed of far less humanely in some other way if Professor Cook did not take them. But this is not the main point.

There is no "vivisection." All these cats are absolutely killed by chloroform, so that they are as dead as they ever could be before they are touched—with one exception each year, and that is practically no exception. To illustrate the action of the heart, one cat is chloroformed until his breath absolutely stops; that is, he is subjectively absolutely dead. It is a well-known fact that the heart continues to beat some seconds, or possibly a minute or two beyond that. The heart is quickly exposed and a tube inserted to indicate clearly the action of the heart in throwing blood; but in *this* one case the knife does not touch the cat until he is as unconscious as one of the cats that lived in the time of the Pharaohs is today, and forever beyond the possibility of awaking to any feeling.

Now, that is all there is to this horrible story. It seems, therefore, a little unkind that so sweet-spirited a paper as yours should use the uncompromising language of the enclosed paragraph. Will you not agree with me that if anything whatever was to be said in your pages about the matter it would have been wise and fair and infinitely more in accordance with the general spirit of your excellent paper (and particularly with the clear intelligence and especially high spirit of the one who signs himself "Student") to have found out the facts before reports were sent out, which are not facts at all, but the exact opposite of facts?

Please do not understand that I am writing discourteously, for, if I understand the spirit of your paper, I am writing in that spirit as I should be glad to have you do in case I had in any wise misunderstood you. Cordially yours,

GEORGE A. GATES

The Transformation of Japan---Glimpses of the

From the NEW CENTURY PATH Special Correspondent

THE Inland Sea of Japan, who can adequately describe its manifold scenic wonders; what pen is capable of transcribing in mere black and white the marvelous and enchanting aspect of its thousand isles and islets? Picture to yourself an expanse of water, of varying width, some times half a mile, sometimes three times that, mottled with shifting and changing coloring, from the deepest ultra-marine blue, to the daintiest pearl-gray, dancing and frothing softly, in crispy white caps, as the wind strikes it. Picture to yourself this expanse of water, begemmed with an abundance of little islands, some rugged and harsh as if millenniums of storms had tortured it; others mantled with greens, grays and browns, telling of Nature's most lovely dreams and of her gentlest caprices. Imagine an artist's dream of dainty loveliness; marry it to the noble vision of harmony conceived by a seer; then take this and realize it, translate it into actuality upon earth; thus only, perhaps, will you obtain an idea of what this remarkable and superbly fascinating portion of the surface of our dear old earth is like.

Your correspondent has seen a new thing in nature, he has seen wherefrom the Japanese artists have drawn the exquisite tints, and the beautiful, oddly quaint imagery, which has rendered them so justly famous wherever their productions have gone; that is, the world over. I am aware that I am laying myself well open to the accusation of being an enthusiast, and that it will be asked: "If all this be so, why is it that the world in general has heard so little about this Inland Sea, and why is it that writers have not more chosen Japanese life and Japanese scenery as the object of their praise?" The answer to that is simple enough, and is contained indirectly in this question itself. Excepting the intuitive and brilliant mind of Sir Edwin Arnold, so few novelists, poets and writers of note, know anything worth considering, about Japan, that their silence, and the lack of a literature doing justice to this country, are by no means remarkable. It is only a couple of years since, that, according to modifications in the treaties of the Empire with other powers, the cumbrous and annoying system of passports, before so vexing to the occasional traveler in Japan, has been done away with, and the interior thrown open to all who wish to journey inland. So, those who did come to Japan, rarely saw more than the wonderland of the coasts, the Inland Sea, and from the time of passing through the straits of Akashi, until leaving the country at Moji, contented themselves with marveling at the gorgeous panorama slowly spreading and changing before their eyes.

Besides, the little Japs have aroused no end of what seems a carping criticism, on the part of those with whom they are thrown but little into contact, and these folk seem to take no end of pleasure in detailing and rehearsing the petty bothers they have been subjected to; as if, forsooth, the foreigner, ignorant of the language and ways of any people whatsoever, could expect to find things running as smoothly as they would in his own native village at home. So might a Martian, or a Mercurian feel, were he to suddenly appear on earth, and sojourn for a time among any one of our most progressive and law-abiding peoples.

On the other hand, not a few are those who know Japan, who have lived among the Japanese, who know something of their customs and traditions, and these, I may say, are almost invariably just and open in their views; often they wax enthusiastic too. It is refreshing, to say the least, to meet with an absence of that specious "chauvinism," which so mars the judgment of many balanced minds in discussing things and folk foreign to their own blood.

The fact of the matter is, that the Japanese know very well what they are about, and have not the slightest intention of being interfered with in what they have set out to do. They recognize fully what they may make of themselves and of their civilization, backed by the temper of the race, and by the great natural resources of their country; and this is just what the White Man either does not, or will not, recognize. How common it is to carelessly class the Chinese as they are today with what the Japanese are today, and to dismiss the whole question with a semi-contemptuous shrug of the shoulders, and a mild wonder as to what the dickens does it matter anyway; Great Britain, or France, or Germany,

or Russia, or somebody will see to all that; besides (they say), the Japs are only imitators; they have produced nothing of themselves besides curios and domestic servants and a few pretty cloth goods and some green tea!

Now, just exactly there, is the proof of the coming greatness of this little mighty Island Empire. All progressive civilization is only a process of adaptation, and adaptation is cousin germain to imitation; and just in proportion as a people are capable of assimilation of the new, the novel and the extraneous, may that people be classed as progressive and enlightened. One may trust without fear to the natural protective instinct in the human breast to prevent this faculty of assimilation from overreaching itself. Indeed, I do not hesitate to assert, to challenge contradiction, in saying that what is colloquially termed the "American genius," is but a wonderfully keen and balanced faculty, innate in them, of utilization through adaptation. Indeed, all lessons in life possible to be learned by humans are grasped and digested solely in this way. I tell you that the destiny of Japan is a greater one than our tardy men of State yet seem to understand, and than we Westerners conceive of; and if one were not a believer in a Spiritual Power making for Right and Justice in, and through, the works of men, I should say that there has come into the breast of the Japanese a propelling force, which might, and probably will, one day, be a terrible menace to the White Man's arrogant conceit in his own special racial invulnerability, and to the lands on which he lives and builds. For Japan will awake the terrible power sleeping in the Chinese Empire. But, thank the Law, I think that that gloomy picture will never be realized, for history seems to forewarn us that the dawn of even a higher and nobler universal civilization is whitening the East, in which day men of every race and of every clime shall hold out the gospel of international peace and good-will to each other.

Kobe, or Hiogo, is the first stop of the transoceanic steamers, after the coaling stations of Moji-Shimonoseki, a distance of about 240 miles through the islands of the Inland Sea. Seen from the deck of a steamer anchored in the bay, it looks a more pretentious place than Moji or Shimonoseki, as, indeed, it is, being four or five times as populous, and ranking as the second city of commercial importance after Yokohama, possibly even preceding Yokohama, if purely commercial interests be taken into account. Backed by high hills, which might easily reach to the dignity of the name of mountain, it runs along the water-front for some little distance, but is less straggling than other towns along the coast. Many are the houses of European construction, of brick and kindred building materials, and they stand out very quaintly from among the surrounding native dwellings, shops and offices of different kinds. The hills pale away into the horizon on right and left in delicate shadings of color, while to the back shines the sparkling water of the bay. Here, too, is seen the snow of the recent fall, clinging to the hilltops like a white fur mantle; but in patches, for snow at this season of the year is by no means the rule, and is accounted as rather a joke on Nature's part, by the people, than as usual end-of-March weather. The sampans, small native boats, surrounding the vessel, are many, and all are spotlessly clean, the wood of which they are made being in every instance most carefully scraped; the yellow color of the wood, and the odd curves of the boat, making them look like big toys run into the water.

As far as I can make out, the costume of the lower-class Japanese is invariably the same. He wears a sort of short "kimono" over the upper part of the body, sometimes two, or even three, in cold weather; from the waist down, clothing the legs, clinging, dark-blue nether garments, reminding one irresistibly of similar clothing worn in Europe during the Elizabethan age. These tights come down as far as the ankle, where they are covered by a pair of soft, closely-fitting cloth footwear, like moccasins worn up to the ankle, and of the same dark-blue color and cloth as the "trousers." Occasionally the footwear is white, always clean, by the way; and in the case of the women, white is the usual color. These latter wear garments which seem to be but the kimono of the man, except that it, or they (for they sometimes wear more than one), reach as far down the leg as the ankle, which is covered by the footwear aforesaid. This clothing, varied by a cape worn over the shoulders in

Island Empire That May Rule Eastern World

cold weather, is worn by all Japanese, apparently, out of doors, except the better classes. It does seem that the European clothing adopted by many Japs is by no means an advance upon their own native costume, nor is it by any means becoming to them; quite the contrary. Fortunately, the women are evidently more conservative than their brothers of the "sterner" sex, for they abstain from the sartorial misdeeds of European ladies.

What a bright, cheery little people they are, anyway! Laughter, jokes and fun seem as natural to them as their peculiarly "yellow" skin. Their work is accompanied and lightened by a constant good humor, which seems never to fail them. One little fellow, who scrambled aboard our vessel, whose sampan had been damaged by a collision with the steamer's rudder, while he was demanding compensation therefor, did it with so much amiability, and with such profuse bowings, that it was an object lesson in brotherhood in itself to me.

Kobe is blessed with several good hotels for Europeans, which is probably an unmixed blessing to the latter, for I am told that native cooking is very unpalatable to the Western palate. Salted cherry blossoms may be very nice, and very dainty, but the dried fish that accompanies it would prove poor fare to most.

Motomachi street, the main thoroughfare of the place, is very picturesque; a ride through it in a jinrikisha enables one to study Japanese life at its doors. The shops are not pretentious, in the Western sense of the

word, but a short time spent in the interior of a good representative of them is like a short time spent in fairy-land. The bowing, smiling, polite little proprietor, his equally deferential little wife, and as often as not a red-cheeked maid servant, welcome an intending purchaser with all possible courtesy. Chairs are produced, an oddity to Japanese eyes, but understood to be a necessity to us; and then begins the inspection of what the shop holds. Prices are so absurdly low, in most instances, that one feels like purchasing the entire stock of the place, and before one knows what he has done, presents for everybody he knows of, and many for his own use, are laid aside. Boxes with mysterious springs, that open in one way and shut in another; little "banks," which seem to produce more than was put into them; marvelously and beautifully worked and polished articles of wood, that both charm the eye and are of positive practical use; other articles in wood that have been so treated that they both look and feel like satin to the touch; the curio shops, are certainly very attractive.

But there are no horses, no cabs, no street tram cars; everywhere the running 'ricksha man, with his high-wheeled little vehicle, threading the crowd here and there and everywhere; never the slightest sign of impatience, though more than once did my man run right into a group of chatters and gossipers. Nor are the policemen numerous; indeed, in a ride of three hours, I saw but two, and they looked half ashamed of themselves at being on "duty." I am given to understand that crime is rare, while the necessities of the Japs seem to be so very little that probably cases of thieving are scarcely considered worth while to prosecute.

Kobe has fine wide streets, often bordered with trees, and they are as clean as one could wish to find. Whatever the faults of the Jap, he is not a dirty fellow, and he bathes as frequently as the proverbial "tubbing" Englishman.

One would scarcely realize that the country were at war. There is not the slightest excitement or commotion in the streets, and it is only when approaching the governmental departments that the fact becomes again uppermost in the mind as a real thing. It is in the post offices, in the railway service, that the fact is remembered, for here both departments are to some extent disorganized, which is not a thing to marvel at.

Kobe is the foreign settlement, adjacent to Hiogo, one of the ancient cities of the island. The commercial center of the Empire is Osaka,

about twenty-five miles inland. At this place there is one of the old feudal castles of the country, one of the largest at that.

It sounds odd enough to speak of feudal castles in Japan, yet that just describes what it was.

The Samurai of the days gone by were mighty men of renown! Kioto, the capital of the ancient régime, has an abundance of temples and shrines, which cannot be equaled elsewhere. But even in this land of the cherry blossom and the chrysanthemum time waits for no man, and your correspondent feels his impelling finger very strongly just at present. "Sayonara," as the Japanese say.

G. DE PURUCKER

IKUTA (SHINTO) TEMPLE AT KOBE, JAPAN

SIR WILLIAM RAMSAY, the eminent English scien-

tist has written an interesting letter to Professor Baskerville of the University of North Carolina. Professor Baskerville was successful in discovering two new luminous elements and this is the ground of Sir William Ramsay's congratulation. He writes:

I certainly regard the discovery as a most important one, but I cannot say that I was very much surprised over the news. I have always admired Professor Baskerville and as I knew that he was experimenting in this line I was rather expecting that he would sooner or later discover new elements. I have myself conducted experiments of the same nature and had hoped to discover just what Professor Baskerville has. But I do not feel jealous in the least. I shall continue my experiments, and now that the new instrument, the electroscope, has been perfected, it is more than likely that still more new elements may be found.

THERE seems to be some tendency in medicine to go back to nature, after all, for remedies and preventives. We have already noted the use of watercress as preventive of the disease known as beri-beri, and the use of apples in the alcohol and tobacco habits. Now comes Professor Celli with an observation that in portions of Italy where the tomato is largely cultivated and used, the people are practically free from malarial infection, even though such regions be very malarious. Years ago it was found that the acid of lemon juice (citric acid) was, even in very minute proportions, destructive to the cholera germ. The majority of people do not regard fruits as food, and superadd them to a meal already sufficient or excessive. When this is no longer the case, and wide selections of fruits are used as foods, very much will have been gained physically and even morally.

STUDENT

"NO sugar, please—the lemon will be sufficient," said Mrs.

Verlaine, as the maid handed her the fragrant cup. From the little bonnet to the dainty Russian boots; from the cameo-clasped sables of her carriage cloak to the hem of her tailor gown, everything declared Mrs. Verlaine to be one on whom the luxuries of life rested lightly from long and easy habit. "I wonder that people in general can be so apathetic."

"I know, my dear," was Miss Delavan's quiet reply. "I agree with you fully. The bill reads well, but—well, you know, it is a theory of mine that we have no business to tear down unless we can build up, and"——

"My dear, you have been too long out of the world. You must come to the club meeting this afternoon and post yourself."

When her caller had gone and the maid had carried out the cups, Miss Delavan took up half mechanically the bill in question—"For the Abolition of Child Labor in Factories"—and began once more to read it. Miss Delavan was one of those rare types of whom heaven is not lavish—perhaps because the world needs them so much. Hers was a character for the perfecting and chastening of which, time and sorrow had clasped hands. In her girlhood, the perfidy of one to whom she had poured out her all—her heart—with that utter trust of which only the deep, rich nature is capable, was the first shadow that fell upon her life. Then came others in quick succession. And on the day of Mrs. Verlaine's call, we find her alone, in the great Fifth Avenue house; alone, save for Leo, her brother's Scotch hound; alone, save for Rags, her little fox terrier, and Mimi, an Angora kitten, which appeared to have slight need of any owner at all. Miss Delavan, as she gradually faced her loneliness, determined that her life should not be useless. But what should she do?

In these days, women gravitate toward clubs as stars slip into their orbits. Miss Delavan had belonged to Sorosis in the old days, and the membership dues, kept up during many years of absence from club life, had served as a link. What more natural than that she should turn to the club again? She went, at first half-heartedly, for futile, indeed, seemed literature and "classes" in the face of the world's needs. She began to think and soon all her old theories were at risk. It was at this time that Mrs. Verlaine called to discuss with her the club's latest project—that of securing the passage of a radical child-labor bill.

"You wish to secure my promise then?" It was Senator Stewart who spoke, and his guests were Miss Delavan and Mrs. Verlaine.

"But you will admit, Senator, surely, that this matter of child-labor in our factories is an outrage?"

The Senator was courtesy itself, a born gentleman of the old school; but beneath the courtesy there was a keen grasp of situations. He had a large way of looking at things.

"Ladies, if you will permit me, your bill is too sweeping. Even if I should be able to secure its passage, which I know is extremely doubtful, you would be building upon sand. It has always been a theory of mine that we have no right to tear down, unless we can build something better in the place of the old."

Miss Delavan's face flushed; those were almost her very words.

"Yet, Senator, you will agree with me that the matter of child-labor in our factories is one of the most terrible wrongs of the age?" continued Mrs. Verlaine, reassured by his kindness.

"I admit all that, Mrs. Verlaine," replied the Senator, "but permit me to ask a question. After the children are dismissed from the factories, what do you intend to do with them?"

"Do with them?" repeated Mrs. Verlaine. "Why, we have nothing to do with them."

"Who is to take care of them?" continued the Senator.

"Their parents, of course."

"But," rejoined Senator Stewart, "has it not occurred to you that if their parents had been able to care for them, probably very few of these children would be sent out to work?"

"But they ought to go to school."

"They ought to, certainly," said the Senator. "But can they? Will

Miss Delavan's Reform

they? Have they proper clothing? We know that in the cases of thousands of families they have not. We know

that already, in cases where the parents are employed in factories, the only alternative to having the children in the factory with them, is the slum playground, that is to say, some reeking alley or other. Bear in mind, ladies, that I disapprove of the employment of children perhaps more strenuously than you do. Many improvements can be made and will be, at the next session, but your bill is impractical. You cannot annihilate a stream and if you turn it abruptly in another direction, how much better is likely to be the outcome?"

"Of course, Mr. Pierce, I must know before deciding upon the sale of the farm, just what use is to be made of the property."

"I thought you knew, Miss Delavan," said her lawyer, "the state intends to utilize it as an industrial training-school for homeless children."

The flush left Miss Delavan's face. What passed through her mind was less like an idea than a feeling.

"Mr. Pierce," she said, rising, "I have changed my mind. I have concluded to keep the farm."

That afternoon Miss Delavan was unusually preoccupied. All that evening she sat before her desk, pencil in hand and before her paper, on which a half-finished drawing might have developed something like a building plan, had she followed its lines to their completion.

The next morning found her in the office of her favorite cousin, an architect. "There will be one little home only to start with, all windows, Frank, and not far from the brook, you know, in that bend beyond the maples, room for perhaps a dozen children or so."

"Well, I suppose you have struck something new in education. It is a pretty idea."

"The only way to really help humanity, I am convinced," was Miss Delavan's reply, "is to take homeless children—and there are so many of them, Frank—out of their terrible environment and—" "Just lift them bodily, I suppose, and drench them with love. But seriously, Sue, Sweet Briar Farm is an ideal place. Do you remember the old days when we used to go berrying—and the old rail fence with the great sweetbrier bushes in every angle?"

"And the old rail fence will never be pulled down for the bushes' sake," Miss Delavan replied, "and the clematis and Virginia creeper. It is all just as it used to be, Frank, and I shall never change it now—it is ideal."

Two years passed away, and one winter's day the Academy of Design gave a great reception to its patrons. Among the guests were Senator Stewart and Miss Delavan herself. They had not met since that memorable day in the Senator's office. "I beg your pardon," said the Senator, when at last they were face to face over the teacups, "but rumors have reached me of your home for little children on Sweet Briar Farm. You have something more than a hundred there now, I believe."

Miss Delavan smiled and her face lighted up with a rare sweetness.

"But will you not tell me something of your work?" replied the Senator. "I am more interested than I can tell you."

"Will you not come to Sweet Briar Farm some day as my guest?"

"With pleasure," said the Senator. "When is your day with the children?"

"My day?" replied Miss Delavan. "I live there with them all the time."

The Senator looked as astonished as courtesy would permit. "But your home on Fifth Avenue?"

"Well, if confessions are in order, I sold it something like six months ago. For a long time I have felt that that gloomy old house was nothing more than an encumbrance."

There was a moment's pause. Senator Stewart placed his teacup on the table and looked at the big Rembrandt over Miss Delavan's shoulder. Then he said, "Miss Delavan," and there was something between a twinkle and deep sympathy in his eyes, "of course you are too busy now-a-days to care about legislation or—or—bills. But if you ever should present a bill, suggesting that the state should adopt some such system as that of Sweet Briar Farm, for the care of its homeless children, I can promise you my support!"

STUDENT

THE CHILDREN'S HOUR

With the Children in Loma-land

DEAR BUDS AND BLOSSOMS: The Lotus Mother has at last returned to Loma-land after her wonderful Crusade around the world. O, the many lands she visited, the many thousands of little children that she has seen! Her journey has brought her great sadness as well as joy, Buds and Blossoms, for few, indeed, are the children in any land who are not in some way neglected or misunderstood! Have you ever stopped to think of that, of how many little ones whose bodies are so well cared for are yet starved—that is, deprived of all the things that go to nourish and build into beauty the real heart-life?

How I wish that you might have seen the Lotus Mother this morning when she spoke to the children in the Temple! I flew in at the great door—for my nest is built just outside against the Temple walls—and high above the heads of all the people I flew, away up into the great purple dome, and there I listened to every word that the Lotus Mother said.

I have lived in Loma-land a long, long time, and I have seen the Lotus Mother more times than there are leaves and roses together on the great vine that climbs up over her office window. But I have never seen her face so filled with real happiness, so shining with deep, deep heart-joy, as it was this morning. When she rose to speak, after the singing of such a song as only birds and Raja Yoga children know how to sing, her whole sweet face was aglow as with some rare pure light.

She told the children that she never thought of them but she thought of the stars, each a glowing, living sun, each doing its own work, living out its own duty, fulfilling its own life; each one giving light to those who needed it. She told the children—and how true her words were, for I live in Loma-land and I know—that something new had come into their faces since she had seen them last, and that every face told the story of greater effort and purer trust, of a deeper love for each other and for all humanity, of a greater unselfishness. Then she spoke to the children—and underneath the love-note in her voice was the Warrior-note, too—she spoke to the Raja Yoga boys and girls about the thousands and thousands of children in the world who were neglected and forgotten and misunderstood; of how these little children were waiting for the love and help that only Raja Yoga could bring them. And she spoke of how the grown-ups, too, were waiting for the lessons and the help that only little children could give—lessons in purity, in justice, in Brotherhood, in love and in joy. For grown-ups need Raja Yoga as well as children. And as the children listened I could feel the earnestness and the joy and the deep resolve glowing and singing and leaping up in their hearts until all the Temple was filled with fairy, silent music—and I was part of it.

ALICE climbed a tree near her home every day to look at a bird's nest containing three speckled eggs. One morning after her usual visit she rushed into the house and called out to her mother excitedly, "Oh, mama, the eggs have all blossomed into little birds!"—*Exchange*

Harmony and the Heart Life

Essay by a Young Lotus Group Member

HARMONY is like a sweet sound that comes directly from the heart. We know that if our thoughts do not come from the heart they are not really good and beautiful. When they come from our ugly feelings and our temper they never do anybody any good. A great many people have thoughts that do not come from their hearts, and that is why we have so much discord in the world. That is why we have war. Yet when countries are at war they are always anxious

for peace, but they do not want to get it the right way. The right way is brotherhood. We cannot possibly have harmony if we do not earnestly try to be good and kind, and help other people.

I was once in a garden where the flowers had not been taken good care of. There was one place that was all weeds, except for one flower. I think that the flower came there to help the weeds to grow beautiful and to teach them about harmony. Harmony is the food of the soul. Many people do not care whether the soul is starved or not, if they are only able to feed the body. Raja Yoga tells us how important it is to feed the soul, for the soul grows by love and kindness and gentle, harmonious thoughts.

We mean by harmony the blending together of good and beautiful things so that they give us pleasure. For instance, in music, if different tones are sung together and make a pleasant sound, that is harmony. Harmony probably means love, and when people really believe this in their hearts they will begin to practise it. That is Raja Yoga, and then we will not have wars, but the world will be a beautiful place to live in.

DEAR CHILDREN: I have recently been visiting in Ocean Park, and I want to tell you about a little mocking-bird who came into the window of the hotel one day, attracted by the sweet notes of a singer who was rendering Mendelssohn's "Spring Song." The little woodland mocking-bird was attracted by the trills. First, he flew about the open window; then he hopped up on the windowsill, and then—will you believe it—he took up the song himself and answered trill for trill. It was like a duet. As the singer sang on, the little brown wood-bird imitated her almost exactly, and did not seem to know that a dozen or more people were close by watching him.

But at last, when the song was over, they began to clap their hands and the noise frightened the little songster back into the woods. A LOTUS GROUP TEACHER

DEAR CHILDREN: A few days ago a fire broke out in the house of my neighbors. It was night and all the people were sleeping, when suddenly the daughter was awakened by the big Saint Bernard dog. She tried to drive him away but he would not go and finally when she became thoroughly awakened she smelled smoke. By the time she had succeeded in arousing her two sisters and their mother the house was a mass of flames and they barely escaped with their lives. If it had not been for the dog they would have perished.

ONE SONG

by CHARLES KINGLEY

MY fairest child, I have no song to give you.
No lark could pipe to skies so dull and gray.

Yet, ere we part, one lesson I can leave you
For every day.

Be good, sweet maid, and let who will be clever;
Do noble things, not dream them, all day long;
And so make life, death and that vast forever
One grand sweet song.

A BIRD OF LOMA-LAND

THOUGHTS IN VERSE

If you your lips would keep from slips,
Five things observe with care—
Of whom you speak, to whom you speak,
And how, and when, and where.

And we all have known
Good critics who have stamped out poet's hopes;
Good statesmen who pulled ruin on the state;
Good patriots who, for a theory, risked a cause;
Good kings who disemboweled for a tax;
Good popes who brought all good to jeopardy;
Good Christians who sat still in easy chairs
And damned the general world for standing up.
Now may the good God pardon all good men!

—Elizabeth Barrett Browning

Have ye seen when spring's arrowy summons goes right to the aim,
And some mountain, the last to withstand her, that held (he alone,
While the vale laughed in freedom and flowers) on a broad bust of stone
A year's snow bound about for a breastplate—leaves grasp of the sheet?
Fold on fold all at once it crowds thunderously down to his feet,
And there fronts you, stark, black, but alive yet, your mountain of old,
With his rents, the successive bequeathings of ages untold.—Browning

What do you think has become of the young and old men?
And what do you think has become of the women and children?
They are alive and well somewhere,
The smallest sprout shows there is really no death,
And if ever there was it led forward life, and does not wait at the end to arrest it,
And ceas'd the moment life appeared.
All goes onward and outward, nothing collapses,
And to die is different from what anyone supposed, and luckier.—Walt Whitman

Modern Uses for Plato

THE President of Bowdoin College is to be congratulated upon his course of lectures explanatory of ancient philosophical systems.

So far as somewhat meagre reports have testified, they seem to have been delivered from a broad and tolerant mental base, and without those intolerable genuflections to modernity, science and religion alike, which all too often mar such work. We wish these lectures were more frequent, and that our young men were encouraged to study Stoicism and Platonism not in the light of ancient moral curios or mental athletics, but as containing the broad principles of ethics which will never be out of date, or out of tune with modern life.

Perhaps the President's most important discourse was that upon Plato's distinction between vice and virtue. He asks why man should do right and avoid the wrong, or, in other words, what is Right and what is Wrong? These are questions of considerable magnitude and questions which have not yet been answered by any of the codes and creeds ingeniously but futilely invented for the purpose. We like to consider Right and Wrong as principles indissolubly connected with certain specified acts. To regard Right and Wrong as abstract principles which may or may not apply to a given act, or which may apply to the act today and not tomorrow, or which may apply to the act of one person and not at all to the same act when performed by another, implies an extension of mental liberty and a right of conscience which, since Platonic days, we have been slow to admit. Hence our need of the basic considerations which Plato gives to us. The question of Right and Wrong may conveniently be approached from the point of view of the State as well as from that of the individual. The immoral State is one which is largely made up of individuals whose actions are governed by self-interest rather than the

interest of all. The immoral man is one who gratifies certain aspects or facets of his nature at the expense of others, who fails to subordinate every part of his nature to the welfare of all. Unity of interest is therefore Right whether in the community or the individual. Disunity is Wrong.

Now, we shall learn nothing from Plato, or from anyone else, unless we apply it by introspection, and thereby lift it into the realm of knowledge and away from the arena of mere discussion. Not until we know our own nature can we care for its cultivation and government in every part. Not until we recognize the unifying principle within ourselves, the moral nature, or the Soul, can we give to it its rightful dominance over passion and desire. And so we are speedily carried past the point where we can be helped by books or by teachers; we reach the place where conscience alone becomes philosopher and friend. Then for the first time we gain the realization that we are in very truth disorderly persons, and that our interior citadel is rent by feuds and dissensions as the various parts of our being clamor for selfish gratification. Every mental and bodily disease is caused by this misgovernment or absence of government, is caused by the unchecked encroachments of parts of the nature upon the domain of other parts. It may be that the wild beast of mere physical appetite is seated upon the very throne itself, it may be that a specious and subtle intellect has chained the wild beast upon one side and the Soul itself upon the other. Wherever any other hand than that of the Soul is laid upon the rudder of life, wherever intellect or passion are aught else than servants, there also is disease, calamity and misery, insidious perhaps, but none the less sure and implacable. This is the house divided against itself, and there is no middle course between reform and ruin. Here is religion without creed, religion which is self-evident, religion which is so lofty that the saint can still aspire toward its height, and the sinner, however ignorant he may be, can still understand it and be comforted. Plato will not be outworn until the Soul in man is also lord and master in man.

STUDENT

Kind Actions

KIND actions seem so small that sometimes they appear to us hardly worth doing and perhaps inconsistent with what we suppose to be our strength. Our minds are often so filled with the intention to do great deeds that the little ones appear to be unimportant and even to necessitate a deviation from the path. But let us remember that the cooperation of the eternal Law is a factor which we cannot afford to overlook. With that cooperation the smallest action becomes momentous. Without that cooperation our supreme efforts flutter helpless to the ground. The small act of kindness is the planting of a seed in the ground, and there is all the difference between a seed which is planted and a seed which is unplanted. The former receives the cooperation of the vast forces of nature, and even though we have forgotten that we have ever placed it in the ground, its flowers may one day cover a continent.

We cannot afford to neglect a duty, a heart impulse, and in matters of duty there is no such thing as great and small, there is at any rate no criterion by which we can judge it. If we had the power to trace the links of the magic chain of cause and effect, we should find that there was never yet a human calamity which had any other root than forgetfulness of duty, never yet a pure human joy which was not born by the performance of a duty. And these duties may well have seemed so very small, and yet the results have shown that they were actually great beyond our computation. Our attitude toward duty is the hand which we lay upon the levers of fate. In the unbreakable chain of cause and effect, the first link is duty and the last link is destiny. There is nothing inscrutable in nature, fate least of all.

STUDENT

Science of Souls

THERE are signs in the land that the great science of human souls is being restored to its right position at the head of all the sciences. It is a monstrous thing to comprehend the stomach of a dead fish and misjudge, through ignorance, your brother's soul. I take the liveliest interest in the anatomy of the dead fish, but it cannot be compared for a second with the everlasting importance of a passing mood in a neglected beggar.—John Oliver Hobbes in the Academy

THE BEAUTY QUEST

by CHARLES JACK

BEAUTIFUL faces never wear
The look of hate or selfish care.

Beautiful eyes should ever show
The kindly thoughts that dwell below.

Beautiful lips have words of love,
For all below and all above.

Beautiful hands no work will do
That is not earnest, good and true.

Beautiful feet with gladness go
On helpful errands to and fro.

Beautiful shoulders ever bear
Of some one's daily cross a share.

Beautiful souls are those that shine,
Filled with the love we call divine.

Conducted by J. H. Fussell

Question

There is no doubt, as you say, that we are affected by cycles, of the day, month, year, the cycles of the seasons, etc., but it is not so clear how man's life and evolution are governed by cycles. Please give a little more light on the subject.—*Extract from a letter*

Answer

In answer to the above request, the following extracts are given from the writings of William Q. Judge:

A cycle is a ring or turning. . . . The beginning of a cycle must be a moment, that, added to other moments, make a day, and those added together constitute months, years, decades, centuries. Beyond this the West hardly goes. It recognizes the moon cycle and the great sidereal one, but looks at both and upon the others merely as periods of time. If we are to consider them as but lengths of time, there is no profit except to the dry student or the astronomer. . . . The Theosophical theory is distinctly otherwise, as it must be if it carries out the doctrine of Reincarnation. . . . Not only are the cycles named actual physical facts in respect to time, but they and other periods have a very great effect on human life and the evolution of the globe with all the forms of life thereon. . . .

Reincarnation being the great law of life and progress, it is interwoven with that of the cycles and Karma. These three work together, and in practice it is almost impossible to disentangle Reincarnation from cyclic law. Individuals and nations in definite streams return in regularly recurring periods to the earth, and thus bring back to the globe the arts, the civilization, the very persons who were once on it at work. And as the units in nation and race are connected together by invisible strong threads, large bodies of such units moving slowly, but surely all together, reunite at different times and emerge again and again into new races and new civilizations as the cycles roll their appointed rounds. Therefore, the souls who made the most ancient civilizations will come back and bring the old civilization with them in idea and essence, which, being added to what others have done for the development of the human race in its character and knowledge, will produce a new and higher state of civilization. This newer and better development will not be due to books, to records, to arts or mechanics, because all those are periodically destroyed so far as physical evidence goes, but the soul ever retaining the knowledge it once gained, and always pushing to completer development the higher principles and powers of man, the essence of progress remains, and will as surely come out as the sun shines.

Further discussion of this subject and additional extracts will be given in a subsequent issue.

Life's Schoolmaster

IT is open to question how far one man is able to teach anything whatever to another. Experience is, after all, the supreme schoolmaster, the angel with whom every man must wrestle, refusing to let it go until it has blessed him. The wisdom which we gain we may bestow upon others as a benediction of good-will and of encouragement, but each one must stand for himself alone in the darkness of experience until he can draw away the veil of his own ignorances and so dispel the darkness by the light from within.

When we understand that experience is educative, we shall be masters of our fate. We are as children in a school who must either learn the lessons of the class in which they have been placed, or give up the hope of promotion. The Soul seeks constantly to draw us forward into wis-

dom, and what we call the conditions of our lives do but represent the facts of our own nature with which the Soul has confronted us. They are the milestones upon the road, the only possible road of progress. We can either walk past them manfully or we can stand still and revile them. The latter alternative, however, has its disadvantages which we are fortunate if we perceive in time.

Our mental attitude toward our life conditions either changes them or perpetuates them. Are we friends with our destiny or are we its enemies? If we recognize the golden heart of experience beneath even the most uncouth exterior, then have we learned its lesson. That experience has played its part and will be dismissed. But to revile our destiny, to mentally rebel against it, is of all actions the most stupid. Then our own forces of revolt, which we ourselves have emitted, take up arms against us and coalesce with the very destiny which we are trying to fight. Our protests against fate are recruits for the armies of fate. It is not possible to evade the lessons of the Soul. We may seem to do so for a time, but they will come back to us again and again, swollen and embittered by the very forces of our evasion and reluctance. But we may learn them; it may be in one flash of recognition, and so have done with them. It would seem that by thought and imagination we can forestall the teachings of material experience. Destiny, after all, is nothing but the condition into which the facts of our natures have brought us. These facts are subject to our own control, to destroy or to intensify. It is they who reach out hands into the future, selecting for us the conditions which are like unto themselves. They draw around us the forces to which they correspond, either legions of angels or the dark hosts of pain. The divine, artistic hand of imagination can fashion for us our characters so that they will have no longer an affinity with pain, no longer cry their summons to adversity. To the beautiful mind nothing unbeautiful can come. Unto love all lovely things draw near, and beauty searches out those things which are like unto itself.

By imagination we can open our minds to the consciousness of humanity, to the hopes and fears which agitate mankind. We can become one with our race and so learn compassion from the hands of love instead of from the hands of pain. By imagination we can destroy the fetters of self-love before they lengthen for us into a chain of misery, we can melt our prison walls before they crush us.

The imagination is not less real than the world which it portrays. In the mind of the artist the picture stands forth more true, and its colors are more brilliant than the pigments upon the canvas. The imagination is the birthplace of events, the home of all experience, the creator of what shall be.

STUDENT

A Wail of Despair

MR. ALFRED AUSTIN, the English poet laureate, has sounded a note of warning, which it would perhaps be more correct to call a wail of despair, over the spirit of the times. It is as appropriate to many other countries as to the country in which it was delivered, and we therefore reproduce a few of its more trenchant lines. Mr. Austin says:

This is not the place nor this the occasion to inquire if trade be slipping from our grasp. But this is the place, and this peculiarly the occasion, to note that the entire thought, the whole anxiety, the raging controversy, of the hour is not if we are growing less intellectual, less spiritual, less wisely serious, but wholly and solely whether we are or are not growing less wealthy and less materially prosperous.

We should like Mr. Austin to tell us what he proposes to do in the matter, if indeed he has any proposition to make. There is sometimes a facility in diagnosis which is not extended to the prescription, and this is especially true when we are dealing with the passions and greeds of men. Civilization is given over almost entirely to material self-aggrandizement. It wishes to have it so, and while we are willing to pray continually that a clean heart be renewed within us, we have absolutely no general inclination to begin the process of renewal for ourselves. It is so much easier to pray. Inasmuch, however, as material self-aggrandizement is contrary to the law of nature it will not and cannot persist forever upon any wholesale or national scale. We can either ourselves apply the remedy or nature will apply it for us without any very deferential regard to our vested interests or what it pleases us to call our rights. Confucius said that he who knows the past knows also the future, and the history of the world is certainly rich in nature's methods of inserting new interests and new pursuits into the plan of human life.

STUDENT

An Object Lesson in Visions

SOME time ago, an employé of a large electrical company, at work in a gallery of the power-house, slipped from a plank on which he was standing, and, to save himself, unthinkingly placed one foot on a leash of live wires. Other wires were over his head at a distance of a few inches. The current, seeing a chance to short-circuit itself, roared across this gap in a blazing column at an intensity of 3300 volts, and as it went down his body from head to foot, stiffened every muscle to absolute rigidity. Some ironwork above was melted and many splashes of it on their way to the ground seared the back of his scalp to the bone. A fellow workman in the same gallery leaped from his feet, and to save his comrade, hurled both himself and the victim on to the ground.

The current was twice the strength used in electrocutions. Though there seemed no doubt that the man was dead, artificial respiration was used for 28 minutes. At the end of that time the heart began to move, and after a long subsequent illness recovery was perfect. The man was of course practically dead, and he sincerely believes that during the period of his physical unconsciousness he actually visited both hell and heaven. His description is very vivid:

I found myself in a vast volcanic plain of rocks and hills with tremendous buildings of massive construction towering on every side. They looked like fortresses almost as big as mountains. But they were full of fire and flames came out on all sides. Between the buildings and out in the open country, everywhere, were rivers of blood, tumbling and dashing over cliffs and breaking in whirlpools around those dreadful buildings. In every direction as far as I could see were millions of scaly green devils of all sizes. Most of them were dwarfs and hunchbacks, little and big Brownie looking creatures, but all monstrous and horrible. Every face was wrinkled.

Beyond the millions of monstrosities near me were others, and long processions stretching away in serpentine lines to the very clouds, and above them were others rising in multitudinous masses, in tiers and amphitheatres, and all were coming toward me. At every burning building they were tossing in their victims. The structures, vast and appalling, were at white heat, with flames roaring from them like volcanoes. What seemed millions of devils, crowded together as thick as ants, in the air, on the ground, swarmed around the furnaces. I saw them dancing and gibbering as they caught their victims crawling from bloody pools, and hurled them like ninepins into the furnaces.

Finally the monsters made a rush for me. It was a nightmare race to get away. Many a time I was far in advance, when a cloud of devils swooped out of space and cut off my retreat, dancing and making hideous grimaces. I managed to escape, until at last a squad of fiends, more crooked and greener than the others, caught me in their long slimy arms, on which the scales fairly rattled, and sticking their claws into me, dragged me to a big furnace, belching fire from roof and windows. They got me so near that I was scorched, my hair on fire, and I thought

the end had come. Just as they were tossing me into the flames, I must have prayed for help—at any rate help came. I saw the bloody landscape and the green monsters fading as in a dream, as the most beautiful music came to my ears.

The scene had changed to "heaven." There was music, there were glittering palaces with domes and pinnacles reaching to the very sky, dazzling golden pavements, crystal arches, all constantly changing.

What does it all mean? The first thing that strikes us is that we have here the materials for the making of a new prophet with a new vision of heaven and hell. If the victim had been a man of less modesty, and if the visions had been due to an attack of epilepsy instead of electricity, the conditions would have surely ripened. Other "revelations" would have been forthcoming, followers would have accumulated, and we should have witnessed the birth of one more cult.

We do not know if this young man had seen the play of Faust, the illustrations to *Paradise Lost* made by Doré, or if he had read Dante or Fox's *Book of Martyrs*. Some similar readings and pictures were evidently stored in his brain cells. And these cells were excited by the fearful current to the extreme limits of possibility, just as they are in epilepsy, and as they are to some extent in the pernicious psychism of our day. But we can dissect the visions more closely. The "tremendous buildings" were doubtless partly what we have said, partly his immensely stimulated space-sense applying itself to the great building he was in with its titanic machinery; the "flames" the actual flame roaring into his brain; the "scaly devils," the flashing omni-colored sparks; the seared and tortured victims, himself. He is "tossed into the flames," hurled by his comrade from the gallery. Then of course there was peace, reaction; the roars and shrieks change to "music"; the blazing buildings of "hell" become the equally tremendous but now merely luminous or crystalline palaces of "heaven." The red fire pales to the "gold" of the pavements. There are no cutting sparks, and therefore no "devils" to reappear as angels. There are no searing drops of molten iron. The throb of his brain cells is passing away.

There would be fewer religious fanatics and psychic cult founders if people would but examine the material of the visions and revelations. Some are sincere, but is that any reason why we should blindly take them at their own valuation, follow them as receivers of a true inspiration from the divine, or pay them our money? He who is truly inspired does not rant, does not make his visions his pedestal, and does not demand from those who look to him that they shall suspend or paralyze their judgment, their critical faculty, or their intellect.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Observations taken at 8 a. m. Pacific Time

A MEDICAL man, who can now afford to tell a story against himself, relates the following anecdote:

"I paid a morning visit to a patient who was being nursed by his sister. 'Well,' said I, 'and how is our patient this morning?'"

"'Oh, he is much worse, doctor, was the answer. 'He has been delirious for several hours. At two o'clock, or thereabouts, he said, 'What an old woman that doctor of mine is!' and he hasn't made a rational remark since.'"

A CORRESPONDENT sends to the *Watchman* of Madras the following letter from a Madraai Chokra:

"Master Esquire.

"Respecting Sir,

"Master's honors Chokra humbly making petition master's feet very poor boy plenty big family man consisting of fourteen souls including too old very no use female grandmother eating daily too much rice. Master giving very little pay Chokra now keeping all peoples."

A LIGHT green leaf flutters from the willow into the pond. You see it mirrored on the shining surface. But sometimes you see the real leaf between the image and yourself. And then you know that there is a real tree as well as the image.—*Suff Philosophy*

Pioneers in Humanitarian Movements

THE difficulties in the way of obtaining an unprejudiced consideration for the truths of Theosophy must be removed one by one. The word itself must not be regarded as sacred when it makes more difficult the task we have undertaken. New methods must be adopted as conditions change. We are called to be pioneers in one of the greatest humanitarian movements of the age. Personal limitations must not obscure the possibilities of the hour, and the criticism of the cynic should not be allowed to paralyze our efforts. To be in a position to do even the most insignificant thing to raise the veil which hides the divine from the vision of men should be regarded as an

inestimable privilege. We should not for one moment overlook the fact that only as we are true to ourselves can we be true to our trust.

A new energy is being liberated from the center of life. This stream of force, for such it is, is felt at first as a mighty Niagara, rushing forward with such rapidity that it threatens to engulf everything, but as it approaches a climax it spreads out in every direction; its currents circulate over the whole earth, and its influence pervades all things. Nothing can rest still; all things are pushed forward by the great solar energy now being set free. Care should be taken that it is not misdirected and all personal barriers should be removed before they are ground to powder. This force acts everywhere; the gods are its ministrants. There is no need to retire to the woods for the inspiration which it gives, for where the needs of humanity are greatest the presence of the Helpers can be felt most.

The hero of today must be a hero of heroes. The ideal must no longer be remote from life, but made divinely human, close and intimate as of old. Now is the day of resurrection; man looking up will see the old ideals raised, and seeing live. The son of God is the son of Man.

In the "heart touch" is the saving quality which will redeem humanity and bring about Universal Brotherhood. The word "charity" should be eliminated. In the name of charity, men and women have been treated like so much personal baggage and labeled accordingly. Out of the great heart of Nature all things proceed, and all things lead back there at last; all worlds and systems of worlds, from the great central sun to the smallest particle in space, must thrill responsive to the pulsations of that infinite heart of compassion. The great mother reaches forth to receive her own. All efforts to retard are less than insignificant.

All Nature Obeys the Command

In every act which partakes of that divine quality of infinite compassion lies concealed the potency of all the spheres, and all nature obeys the command of the one whose heart beats constantly for others.

A new hope is dawning on humanity as the new century goes on. This hope is the mainspring of progression and the evidence of it can be seen everywhere; the great heart of nature pulsates with joy, as it did in the days preceding the dawn of the dark age. Men and women who have so long borne the heavy burden of life, whose hearts have been well-nigh broken by the weight of many sorrows, feel the new joy awakened by the great symphonies of harmony which are now being sounded. It is felt in the heart of man and gives rise to a constant aspiration; it is the quality which makes him great. The golden light is shining; the herald of the morning proclaims the message of love anew; the ripples of the waves on the sea-shore lisp the glad song; the breeze bears it on its bosom; the tints of the flowers convey it; it shines forth from the stars in their sparkling brilliance; the great blue dome above suggests it; the birds warble it forth from every tree; the new born babe is a complete revelation of it; the eyes of the loved ones passing into the great beyond, impart the strength and courage of that great hope and point to a future day when they shall return again to carry on their work, for hope incarnates from age to age, and where hope dwells beauty and love abide for ever.

The law is immutable, and love is eternal. KATHERINE TINGLEY

Insanity in New York

THERE are nearly 36,000 insane persons in the State of New York. These persons are actually confined in institutions, and no estimate has been made of those other insane persons who are not in institutions but who ought to be there. The number of these must be very great.

This problem ought to commend itself to the commercial instincts of the nation inasmuch as the cost of taking care of these people for this one State was over four million dollars for the year. During that one year five thousand new cases developed themselves, whereas in the previous year only 434 new cases were registered. Is this what we mean when we boast of our national progress?

The State of New York is, of course, not in any way peculiar in this respect. Other States could show somewhat similar statistics, and in the presence of these frightful figures we seem to be absolutely helpless—or absolutely indifferent.

STUDENT

To Unite the Churches

CAN the creeds of conflicting sects be stripped of their non-essentials, thereby practically abolished, and preached only on the basis of their greatest common factor? The Rev. Dr. Hillis, of Brooklyn, contributes to a contemporary an eloquent plea for "a consolidation of churches." He is justly scandalized at the spectacle so common in small country towns of fifteen or twenty churches, at the best half empty, a few boarded up or used as storerooms, and all poor.

He wants one large church building, centrally situated, the focus of the religious, social, musical and literary life of the town. As to the religious doctrine expounded therein, he would have unity achieved by the lopping away of all non-essentials in creed. "The Ten Commandments and the Sermon on the Mount and the teachings of Jesus Christ are no more denominational than the multiplication table. The principles of ethics are no more Presbyterian or Episcopalian or Congregational than are the laws of light and heat."

It is a pleasant dream, but Dr. Hillis must know that it is at present utterly impracticable. Hardly a sentence could be uttered from such a pulpit, beyond the barest ethics, that would not crack the surface of unity to fragments. People do not live in the essentials but in the non-essentials of religion. They are not content with that direct consciousness of the divine that is the only real religion, even those who have in some measure touched it. They must have words and much talk around that which is as essentially unwordable as a strain of music. They will deliver over to be tortured in the arena of mind that still intuition which beginning as feeling ends as highest knowledge. In a little while nothing remains of it. This has been the trouble, the crucifixion, of every great teacher the world has ever known. His words have been seized, argued over, and that to which they pointed, namely, a becoming, forgotten in the resulting war.

Suppose a great religious teacher—even Jesus Christ—arose today and declared, "Ye are children of God." The sentence would be the directest and shortest rendering into words of the greatest of facts. What would his followers make of it? The basis of fifty sects and centuries of wrangling! "Ye are children;" then it is only we favored ones, or all mankind? "Ye are children;" were we always so, or was there a moment of regeneration? "Ye are children;" then did we come into existence at some point in time, or were we always in existence? Were we created, or were we parts of God's essence? If created, in what state was God previously? And so on.

But if the living fact of experience pointed out by the words had been held and developed as feeling, and all the other sayings of the teacher thus treated, they would have led to the uttermost light. The true place of the intellect in relation to them would have been found, and the other danger—that of making idols and fetishes of them—would never have arisen.

What can be done? Perhaps nothing till there is a new race of preachers, men so penetrated with the presence of God that they will not permit their minds to extinguish the divine flame lit within them, will not permit the Christ born in their hearts to be nailed to any intellectual cross; men who will use words only to awake in their hearers the same consciousness, compelling them to relegate their reasoning machines to their proper place till that consciousness is won. STUDENT

The Multiplication Table

A CONTEMPORARY describes an interesting old arithmetic book now in existence in America. This book was printed in 1677, and contains a copy of the multiplication table. Our contemporary remarks:

The fact that the multiplication table appears in the book gives some force to the common expression, "As old as the multiplication table." Primary pupils of today who are inclined to believe that this combination of figures was especially prepared to rack their memory should find some satisfaction in the knowledge that children of at least two and a half centuries have drilled upon it.

We should like to point out that children were taught the multiplication table more than two and a half centuries ago. In ancient Babylon, over 5,000 years ago, children studied the multiplication table, which did not then finish at twelve times twelve, but was extended to sixty times sixty. STUDENT

Imitation Theosophy

THERE is, of course, no patent upon the word Theosophy, nor any restraint upon those who choose to use that word as a cover for their own speculations. There is, therefore, all the more need for discrimination on the part of those who sincerely desire to know what Theosophy really is and who may be perplexed by some who profess to teach in its name from a supposed platform of knowledge not shared by others. It matters not whether that teaching be of the mysteries of sleep, or whether it claim an easy but exclusive familiarity with the marvels of the human Soul.

To all of such would-be teachers and to those who hear them, we would commend the words given to the world by H. P. Blavatsky, surely not without some premonition that their lesson would be needed: "False learning is rejected by the Wise and scattered to the Winds by the Good Law. Its wheel revolves for all, the humble and the proud. The Doctrine of the Eye is for the crowd; the Doctrine of the Heart for the Elect. *The first repeat in pride, 'Behold, I know;'* the last, *they who in humbleness have garnered, low confess, 'Thus have I heard.'*"

If this test of the true from the false be not enough, it may be supplemented by a further one. Let us ask of all those who profess to teach in the name of Theosophy, whether or not their lives and their teachings are directed with a one-pointed and forceful sincerity toward lifting the burden from the weak and the oppressed, or whether they are merely ministering to a craving for the weird and the mysterious, a craving which the spiritual and the intellectual would alike disown. X.

Indian Dances

THE curator of Anthropology of the Field Columbian Museum of Chicago has championed the right of the Indians to perform their religious dances. He says:

I have taken this matter up with the United States Commissioner of Indian Affairs, and I believe I have convinced him nothing harmful would result in permitting the Indians to continue their old religious ceremonies. These dances constitute a religious ceremony in which the events in the creation of the world are dramatized. It illustrates the creation or the rejuvenation of the world. Most prominent of these dances is the sun dance of the plains. The Indians do not so call it, nor is there any evidence of the sun in the dance itself, which continues eight days.

In this ceremony they think they actually recreate the world and all life. They believe it necessary, for without it they imagine neither world nor themselves would continue in life.

So long as these dances are of a peaceful nature, we have no more right to interfere with them than with any other religious ceremony. The Indians are as much entitled to religiously dance as other people are to religiously sing hymns, and we do not remember any clause in the Constitution which precludes Indians from the enjoyment of religious liberty. It no doubt seems very dreadful to some people that the great astronomical movements and the majesty of natural law should provoke a religious sentiment, but they should keep their consternation within the limits of United States laws. Even an Indian has rights, startling as it may seem.

STUDENT

National Characteristics

IT would appear to take little time for national mental characteristics to reflect themselves in a facial type. In the April *Atlantic*, Mr. H. D. Sedgwick, basing his conclusions upon the recent exhibitions of portraits in the American Art galleries, considers the outward and visible effects of our devotion to material advancement. The mental poise and calm shown in the portraits of the age of Reynolds has given way to a shrewder, quicker and more nervous temperament. And correspondingly, the faces of today show power to deal quickly and vigorously with the present, but small traces of imagination, faith, or the kind of intellect required in the treatment of larger and remoter issues. X.

The Moon Temple---Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week gives a view of the celebrated Moon Temple of the Buddhists at Kobe, Japan. This is one of the great temples of Japan and is visited by all tourists. A continuation of the interesting articles on Japan will be found on pages 12 and 13 of this issue.

Some Views on XXth Century Problems

Apples as a Remedy for Alcoholism

MR. STENSON, director of pomology at the St. Louis World's Fair, is an enthusiast in his own department. He is of the opinion that the apple is a remedy for the alcohol and tobacco habits, and proposes to give away a million of that fruit in order that his view may be tested. "If a man feels a craving for a smoke or a drink of liquor," he says, "let him take an apple in its place. If he has a tendency to do something desperate, let him sit down and quietly reflect upon it, meantime munching an apple. It is a cure that never fails." This is a strong, blunt statement which has our good wishes for its substantiation. As a food, apples rank fairly well, containing about seven per cent of albuminous matter and nearly the same of sugar. The supporting framework is, however, very dense, and to some people not easily digestible uncooked. We wonder that by this time there is not an industry devoted to the crushing under powerful pressure of this and other fruits, and the evaporation to dryness at a low temperature, without added sugar, of the juices obtained. The great reduction in bulk thus effected would much facilitate experiments on the food and medicine values of fruits. Some of them, alone or blended, would yield natural sweetmeats infinitely preferable to any now obtainable—tinted, scented and flavored masses of cane-sugar.

We note that a Colorado fruit-grower has produced a seedless apple, but so far he keeps the stages of his production a secret. They are curious tricks on nature, these seedless fruits. She produces her fruits with a strict eye to the welfare of the contained seed. Then, by infinite coaxing, we induce her to forget all about her original object, the seed, and concentrate her whole luxurious attention on the incidental, the fruit. There is a beautiful cradle, but no infant. STUDENT

Parental Incompetence Responsible

A WRITER in a popular daily newspaper draws attention to the increase of child suicide. No statistics are given, but that there is an increase is unquestioned, and the extent of that increase constitutes a terrible indictment of our civilization. The writer in question believes that there are two main causes for the suicide of children and these causes are parental injustice and the competitive system of our schools. They might of course both be included under the heading of parental incompetence, because the perpetuation of educational follies is entirely due to the indifferent acquiescence of the parents.

Very few people realize the depth to which injustice strikes home into the child nature and all the deeper because the sense of injury finds no relief by reflection or by speech. Children have a keener sense of justice than adults, who very often have none whatever. Adults are themselves the victims of their own distorted childhood and they hasten to perpetuate the injuries which they themselves have received.

The competitive examination system is of course a part of the atmosphere of injustice which so often surrounds the child life. The child knows far better than we do that true knowledge and real progress cannot be ascertained by any examination system which has ever been devised, and a humiliating sense of injustice is therefore the direct result of the order of supposed merit which is so much a part of our school methods. This humiliation has culminated in suicide in very many instances and it must be remembered that when a child commits this frightful act it is very rarely under passion or sudden impulse, but is nearly always premeditated and calculated.

We are accustomed to say that men are taught by experience, but if this is true the process is at least a very slow one. Otherwise the competitive system would long ago have been found out and discarded. The great men of the world have not been stars in the school firmament or at any rate they have been dark stars. They have not been remarkable for that kind of precocity in which the teacher so often delights and which the parent erroneously supposes to be genius. So markedly is this the case that we are not unjustified in wondering how many potentially great men are prematurely crushed under the Juggernaut wheels of education.

Profits from the Death of Children

FROM the east comes one of those reports which are so peculiarly the product of civilization. Five children belonging to one family have suddenly died and apparently from the same cause, which seems to be poison. It is said that the lives of these children were assured, and the forthcoming inquiry may throw some light as to a possible connection between the assurance of the victims and their death. It may, of course, be shown that there was no connection whatever, but it is none the less an axiom in this "year of our Lord" that whenever crime is made pecuniarily profitable that particular crime will most certainly be committed. It may seem a little paradoxical, but it is none the less tragically true that in a very large number of cases to assure the life of a child is also to assure its death. Without doubt there are very many parents whose only object in assuring the lives of their children is to provide for possible funeral expenses, but there are other parents, the mothers and the fathers of the poor little unwanted children, to whom the prospect of accruing profit converts the assurance policy into a veritable death-warrant.

It is not our habit to clamor for the passing of laws, but a good many of the enactments which now cumber our statute books might profitably be exchanged for a law by which it would become impossible for parents to profit pecuniarily by the death of their children. STUDENT

Prehistoric Creatures Still Living

WERE one told that his grandfather's great-grandfather was still living somewhere, it would hardly cause him more surprise than to hear of the ichthyosaurus as alive. Yet it may be the case. Natives of New Zealand are declaring that a huge mammal is to be found in the inland waters of their country. They call it the *waitoreke*. It is clawed, swims, lays eggs on shore, and has mighty jaws armed with saw-like teeth. The description is certainly that of a link between reptile and beast, such as was the ichthyosaurus. A "link," in the sense of the zoologist, is not an animal which stands at the head of one natural order and at the foot of the next above. A "link," for example, between the animal and vegetable kingdoms would not be the highest plant just merging into the lowest animal. In this sense a link is a common ancestor from whence two diverging forms branched off, becoming more and more unlike at each step.

Investigations into the *waitoreke* will be undertaken to see if he is the ichthyosaurus under an alias. The okapi still exists; the great bird *æpyornis* probably exists; a prehistoric giant sloth probably exists; all, till recently, thought extinct. Why not then the shy ichthyosaurus? STUDENT

Perverted Energies and Talents

IT is said that a counterfeiter, who has recently been captured, could have commanded a salary of \$25,000 a year as an engraver, but he seems to have preferred a criminal occupation with its incessant dangers and doubtful profit. A contemporary points out that such instances are not isolated, and that they constitute a problem hitherto unsolved. Unsolved, perhaps, but not insoluble. A glance at this man's childhood might reveal much. We might see a nature persistently and stupidly misunderstood, dominant faculties steadily ignored, and a disposition twisted into a shape which it was never intended to assume. Under such treatment we might see a growing resentment, unvoiced and perhaps unconscious, but finding a calamitous expression as soon as the opportunity presented itself, but at a period too late to undo the mischief and to rectify a radical injustice.

Of this particular man we know nothing whatever, but we do know that the misdirected force of a child is often tortured into criminal directions by the sheer stupidity of parents and guardians, and often by their determination that the child shall walk in their paths rather than in his own. THE first of the Theosophical duties is to do one's duty by all men.—H.P.B.

Art Music Literature and the Drama

The Modern Drama—What Is the Prospect?

FREDERIC HARRISON, the distinguished essayist and philosopher, makes an appeal in one of our London magazines in behalf of the British stage. He agrees with Mr. John Hare, for example, who is convinced that "the stage is sinking into an abyss," and says: "The evil is an impatience of continuous attention, of serious thought, of any hitch in our ease, our luxuries, or our indulgences. We are all afflicted with a sort of tarantula of restlessness, which makes us skip from one pleasant spot to the next without quietly enjoying any one in peace. We hurry from one crush to the next, glance at one 'short story' after another, 'drop in' to see the new acrobat, a skirt dance, or a lovely *feerie*, smoke a cigarette, and arrange a party for tomorrow. The number of people who will sit steadily through three hours of an intellectual drama without 'stars,' gorgeous robes or nauseous sensations is very limited."

And another who is not our best dramatic critic, but perhaps our best known, has also delivered himself of a startling philippic against the modern stage. He says that our actors are mainly "veterans who totter and mumble," "supers of yesterday who are stars of today," and others "who rasp the welkin with the screeching of the peacock;" he speaks of the "slimy mush" of Ibsen and the "lunacy" of Maeterlinck, and pays his respects, finally, to the dramatists "who manifest the brain of the rabbit and the dignity of a wet hen."

As long as the motive of the majority of our actors is greed or ambition, there is and will continue to be some slight basis for remarks like these. That does not, however, indicate that our critic is painting the picture at all skilfully. He is, this time, looking at things from the wrong point of view, with the logical result. Those who look down will see centipedes and mud; but those who look up, these days, will see the sunrise. One need not turn faint over criticism such as this, notwithstanding that it has considerable basis. It is conditions themselves that should frighten us into examining our motives, not the mere fact of our being awakened to them. That the awakening has come proves that the time for regeneration is at hand. If, which we do not quite believe, the English stage were sinking into an abyss, even that would be no evidence that it intended to stay there.

Those who know human nature know that beneath all that is careless, unwise, selfish and frivolous, lies a strong moral sensitiveness, a steady determination to climb, and an innate love for the sunshine. To climb requires effort, of course, and the stage will not be regenerated without much effort, great sacrifices and a vast amount of "giving up"; but that all this will come to be is as certain as that the sun shines. A new philosophy is spreading over the world and touching the hearts of men even though their minds are turned away from it; and when the heart is touched, lo, the work is done.

Japanese Art—A Glimpse of Asiatic Ideals

A VALUABLE book has recently been written by Kakasu Okakura, a Japanese art critic, who, in common with most of his countrymen, is by no means provincial in his views. In his book, *The Ideals of the East*, Mr. Okakura gives us a fascinating picture of the genius of the Japanese race, a genius which is capable of assimilating the new without sacrificing that which is best in the old. It is this, he tells us, which keeps Japan true to the ancient and pure Oriental ideal while she still rises to the highest rank as a modern power, and the history of Japan art is the history of the march of an ideal. He says:

The Confucian ideal with its symmetry born of dualism, and its repose, the result of the instinctive subordination of the part to the whole, was necessarily restrictive of the freedom of art. Enchained to the service of ethics, art naturally became industrial. Indeed, the Chinese art consciousness must always have tended towards the decorative—as shown in its extraordinary development of textiles and ceramics—had the Taoist mind not imparted to it its playful individualism.

But even if it had remained at the decorative, it could never have sunk to the bourgeois level, since from the remotest danger of such a failure of sympathy, Asiatic art, by her vast life of the universal and impersonal, stands eternally redeemed.

The idea of line and line composition has always been the great strength of Chinese and Japanese art, though the Sung and Ashikaga artists have added the beauty of dark and light—without forgetting that the artistic and not the scientific was their goal—and the Toyotomi epoch has contributed the notion of composing in color.

The sacredness of calligraphy, which attains to great heights in this Laoist period, is the worship of the line, pure and simple. Each stroke of the brush contains in itself its principle of life and death, interrelated with the other lines to form the beauty of an ideograph. It must not be thought that the excellence of a great Chinese or Japanese painting lies only in its expression or accentuation of outlines and contours, nevertheless these do, as simple lines, possess an abstract beauty of their own.

CRITICISM and the critics assume a very high position in letters and in society, and so they are entitled to do if they are critics

in the sense of the word that Matthew Arnold and Sainte Beuve and Morley are ranked as critics of literature; Berlioz and Schumann and John S. Dwight, critics of music; Sarcey and Lemaitre, critics of the drama. They wrote as if they held it their mission and function ever to appreciate rather than to belittle, to build up rather than pull down, to impart the enthusiasm growing out of their fine perceptions, rather than to chill and destroy all enthusiasm by cynical insinuations and caviling unbelief in the genuineness and credit of any artistic effort except that attaining the highest degree of success.

There is such a thing as effort not quite successful that is yet to be encouraged for the earnestness and devotion of its endeavor and the promise therein revealed.—*Exchange*

THE SIBILLA DELFICA OF MICHELANGELO
on the Capella Sistina, Rome

OF a verity the poet's greatness is mostly to be measured by what he leaves unsaid, letting us breathe in silence to ourselves the things unspeakable; the musician it is who brings this untold mystery to clarion tongue, and the impeccable form of his sounding silence is cadless melody.—*Wagner*

Be not ashamed women, your privilege encloses the rest and is the exit of the rest,
You are the gates of the body, and you are the gates of the soul.

—Walt Whitman

The Dramatic Work of Katherine Tingley in Cuba

“THE Cubans have marvelous dramatic ability. There is a genius-touch about much of the work which they undertake. They have much yet to learn, and much to unlearn, for they are stepping into freedom but now, after centuries of worse than merely physical slavery. Never have I entered upon a work which has so touched my heart and given me, in the real sense, inspiration.”

Thus said Katherine Tingley about a class of Cuban young women whom she had been training in dramatic art. To see their eager faces, to understand the glow that she set alight in their hearts, is to understand Katherine Tingley. And who can hope to understand her? Like H. P. B., she is, verily, the Sphinx in one sense. Ever making new departures, ever winning victories where others would win naught but defeat, often disappointed but never discouraged, often heartsick when she sees some promise unfulfilled, some student just miss a great opportunity, yet never disheartened—on she goes from each step to the next higher, carrying this great movement with her. The Cuban training class is but one of her many new departures.

Those who know something of the practical workings of Katherine Tingley's philosophy, know that she considers that the drama should be one of the great educative factors of the present day. That it is not, is due to the fact that the dramatic life of today is out of touch with humanity's life as yet. The masses know little of even inferior drama. Of the best and the really pure—where is it, verily, either for the masses or for the few? Yet, that the drama will be the great educator of the future, Katherine Tingley promises; and she will yet, through her students, make it a factor of hitherto undreamed-of importance in the life of the race. When she builded the great Amphitheatre in Loma-land four years ago, she took the first step toward laying the foundation-stones of a something similar to the old Greek ideal, but yet greater. Nothing like it had been seen in the modern world, though, as in all other departments of her work, the idea was of course destined to have, and already has had, its imitators.

Already the great drama that is to be is ripe in its beginning, through the work of the Raja Yoga children. Who that has seen them in their dramatic representations has not felt the thrill of promise, which is greater than promise, for it is prophecy. Four years ago *The Travail of the Soul* was given in Loma-land, a drama written by Katherine Tingley, whose leading part was played by herself. Later came *Hypatia* and *The Conquest of Death*, exquisite dramas of the old Greek philosophy and life.

With these, too, something new came to be written in the hearts of her students, for it is alone of the message written upon the heart that the world may even rightly read. Her classes in dramatic art in Loma-land have brought out unexpected results, have brought to light undreamed-of gifts, particularly among the young women students. Now that similar work has been begun among the young women of Cuba, who may venture to predict results?

There is in the Cuban character, a sympathy and richness that responds quickly to the heart touch. Their sufferings have, to a great extent, purified them of the intellectualism that stands so in the way of the Teutonic races. They have been so united in service to their little land that the separateness, which is such a barrier to the receiving of any real help—the separateness which is universally existent among the nations which we count the most progressive—is not so apparent there.

There have been in the world, here and there, great dramatists, great dramatic interpreters. Rachel is a name to conjure with, Dusé is another. But why are they so few? Where are the masses? In the collective heart of the common people—the “average” people—there must be buried genius—great genius—which is only waiting for the Master Mind to call it by name, only waiting for the Master Hand to bring it forth. Some day that will be done, and not until then can we hope to have the drama become that universal moral leaven which it is destined to become.

The first step toward the doing of this is, of course, the bringing of great dramatic presentations to the masses. This was what, verily, in part, made Greece the rich nation that it was. And if the drama of Greece had been kept at the point to which Æschylus had lifted it, if it had been kept close to the heart of the common people, it might have tided over the reactionary period and Greece might not have gone down. However that may be, it was a factor of recognized importance in the life of the Greek people.

To make the drama, the pure, the higher drama, a living factor in the education of the masses, is one of Katherine Tingley's great aims. Toward that goal she is moving rapidly. It will not be, it cannot be long, before the people will be reached and touched in ways that they do not dream. The words of Eleanor Dusé are significant: “Since Shakespeare and the Greeks there have been no dramatists. I want Rome, Athens, the Coliseum, the Acropolis. I want beauty and fire.

“Some day, however, a woman will come—a young, beautiful woman, all fire and flame—and will do what I once dreamed to do but failed. I am too tired now.” And the time is near. E. M.

An American Composer

MRS. H. H. A. BEACH (Amy Marcy Cheney) was born in the town of Henniker, Merrimac County, New Hampshire, on September 5th, 1867. She is of American parentage, the descendant of some of the earliest colonial settlers. From the same ancestry came William Larned Marcy, who was successively Governor of New York, U. S. Senator, Secretary of War and Secretary of State; Randolph Barnes Marcy, Inspector General U. S. A., explorer of Red River; Charlotte Cushman, the eminent tragedienne, and Major General Dearborn of Revolutionary fame, who buckled on his sword at Exeter, N. H., marched with his company all night, and fought at Bunker Hill on the following day.

Mrs. Beach's musical inheritance appeared to be a natural sequence of the great love for and devotion to music by her mother and maternal ancestry, while her strong taste for the scholastic and mathematic side of her art seem like a reflex of her father's mental qualities.

Gifted with absolute pitch and an accurate memory, the child constantly surprised and excited her family and their friends with startling feats, from the time when she was a year old. At that period she had unmistakably memorized forty separate tunes which were always accurately sung by her. At times, she would insist upon their being sung to her, until her mother was exhausted. One of her favorite anthems was, "The moon shines full at His command and all the stars obey." Of the songs sung to her she always remembered the way in which they were first rendered, and never permitted any variation from the original version. All substitutions and cadenzas were met with the stern reproof, "Sing it clean."

Her extremely sensitive nature was much distressed at the sound of people laughing, or at the sight of rain-drops on the window, when she would beg her mother to "wipe the tears." Music in the minor keys made her sad and disconsolate. No other punishment was needed for the little hands that occasionally were mischievous than the playing of Gottschalk's "Last Hope." Violin music gave her great pleasure, and she would sit quietly for hours listening to it with keenest enjoyment.

At the age of three years she was accustomed to show her preference for certain pieces of music that her mother played, by designating it as the blue, pink or purple music. Little attention was at first paid to this manifestation of musical feeling, because it was supposed to be connected with the color of the outside paper, with which musical publications were covered. Afterwards, it was clearly demonstrated that the music played was not satisfactory to the child because it did not correspond with a scheme of color that she had in her mind, and had no correspondence with colored wrappers. When carefully questioned it was found that she associated certain colors with certain keys. For instance,

Key of C, white; F sharp (minor) G sharp (minor) black; E (major) yellow; G (major) red; A (major) green; A flat (major) blue; D flat (major) violet; E flat (major) pink.

This association of keys and colors continues to the present time. When four years old she was allowed, after much begging, and to her great joy, to stand on a hassock at the piano and play and improvise secondly to a primo played by her aunt. From that time she had daily access to the piano. Her mother was her teacher.

When seven years old she made a limited number of public appearances, playing works by Beethoven, Chopin and others, introducing a waltz of her own composition. At this time the writings of Bach attracted her warm interest which later developed into the greatest enthusiasm, especially for fugal compositions.

Her accurate ear and unfailing memory made it easy for her to grasp important and difficult compositions, and play them correctly after one or two hearings. In this way she has been known, when ten years old, to

reproduce a Beethoven Sonata after hearing it repeated by a pupil who was learning it, although she herself had never seen the notes. Later, she frequently played by ear, after only a few hearings, important parts of Liszt's concertos, as well as various choral, orchestral and operatic works, of the most elaborate contrapuntal construction, to the great surprise of her friends.

An interesting fact connected with her possession of absolute pitch was her contribution to ornithological science by her record of *California lark songs*. These were secured by the late Professor Sill, who took the child into the fields where she could hear and register on paper the songs as they were sung. These were afterwards embodied in a scientific paper by a colleague. Mrs. Beach has continued these observations where and when it is possible for her to hear the singing of birds, and now has a volume of bird melodies representing many of our native songsters.

When she was eight years old, her parents settled in Boston where her general education was added to her musical studies.

Her first public appearance in Boston as a pianist was October 24th, 1883, she being then sixteen. On that occasion she played Moscheles' G Minor Concerto Op. 60, with orchestra, and as a solo, Chopin's Rondo in E flat. During the ensuing winter she gave several recitals. At the age of seventeen she played Chopin's F Minor Concerto with the Boston Symphony Orchestra under Mr. Gericke, and the Mendelssohn D Minor Concerto with Mr. Theodore Thomas' Orchestra. Since then she has appeared at concerts and given recitals in Boston, New York, Philadelphia, Chicago, Brooklyn and various other places almost every season, the programs of some of her concerts and recitals being made wholly of her own works. With the Boston Symphony Orchestra she has played Concertos by Beethoven, Mozart, Chopin, Saint Saens and herself, under the direction of Messrs. Gericke, Nikisch and Paur.

In December, 1885, she was married to Dr. Beach, and has since resided in Boston.

Her first large work was a grand mass in E flat Major, brought out by the Handel and Haydn Society in February, 1892, under the direction of Carl Zerrahn. On the same evening Mrs. Beach afterwards appeared and played with the society and orchestra the piano part of Beethoven's *Choral Fantasy*; upon her appearance the audience rose and she received an ovation.

Following the Mass, she composed a scena and aria for contralto and orchestra, taking for her text the *Ellende Wolken* from Schiller's *Maria Stuart*. It was sung for the first time in the same year as the Mass, by Mrs. Carl Alves at a concert of the New York Symphony Society, under the direction of Mr. Walter Damrosch, and was the first work written by a woman produced at those concerts.

In the following year, Mrs. Beach was invited by the Executive Board to write a composition for the dedication of the Woman's Building of the Columbian Exposition at Chicago. As the occasion celebrated in the Nineteenth century the enterprise of the Fourteenth in discovery, Mrs. Beach felt that her share of the music should in some way represent the union of the two centuries. She therefore selected themes characteristic of Gregorian writing, augmented, harmonized and orchestrated in the modern style, and produced the Festival Jubilee, for chorus and orchestra in exactly six weeks. It was successfully performed in Chicago under the direction of Theodore Thomas and later in New York City.

Soon after she began the Gaelic Symphony, so called from the use of a number of genuine Gaelic themes. It was finished in the spring of 1896, and first performed by the Boston Symphony Orchestra under the direction of Mr. Emil Paur, in October. A sonata in A minor for piano and violin, was written in the six weeks following the completion of the symphony. Mrs. Beach played the work with Mr. Franz Kneisel at one of his quartet concerts in the following January (1897). Mrs. Beach has performed it on numerous occasions with other violinists. It was given in Berlin by (Continued on page 18)

Archeology
Paleontology
Ethnology

Another Great Prehistoric City Unearthed in Mexico

THE great city of Cantona, once more populous than San Francisco, covering an area of 12 miles by 8, is not yet upon the maps. Discovered only six months ago, it will be at least another six before it has been fully explored. It is in Mexico, but the Mexican government hardly yet knows of its existence. It is close to the town of Tepeyahualco, on the estate of Señor Bruno Osorio, but neither the town nor the planter nor any of his officials knew anything about it till the end of last year. It was discovered buried in a forest, by Dr. Leon, anthropologist of the National Museum of Mexico. Coming upon the remains of an old well, he followed it up and presently came upon a great pyramid surrounded by stone platforms. Further search revealed more pyramids, fragments of walls and temples, carved granite blocks, monuments, roads and the city's remains. Every square yard of the rugged district had been utilized, and a superb granite road, running from a mountain top down into a valley, passed through the city and out beyond.

From the sculptured stones something can be learned of the ways of the people. Their costume was like that of the ancient Egyptians, like that of the prehistoric Yucatanese, like that of the Atlanteans if legend speak truly. It was a sleeveless cotton tunic, worked and dyed, supplemented by a mantle thrown across the shoulders. On this were sometimes embroidered figures of animals and it was hung with shells. A sort of wire head-dress, also of a very Egyptian appearance, appears to have been used at ceremonies. These rites appear to have been very complicated and devoted to sun-worship. Their food was roots and grain, and they seem to have made a wine from maize.

So far, their hieroglyphics cannot be read, and the name Cantona was of course conferred by Dr. Leon.

Who were these people? When did they live? As yet there can be no answer. We do not know whether they migrated in a body, or by degrees; or died of some plague, or dwindled away gradually. And so we cannot even guess where, if anywhere, are their descendants. Sometime, of course, the mystery will be solved, and with it many another. Mexican antiquarians say the city was there in the days of Julius Cæsar. But it may have been there when Atlantis was sinking. STUDENT

Some Ancient Roman Warriors Unearthed in England

DURING the past few days an interesting discovery of supposed relics of Roman warriors has been made in a field off Morden-road, Mitcham. A group of seven skeletons, with spearheads near, was found, and after further exploration close at hand three more skeletons in a fairly good state of preservation were unearthed. These three were buried in their martial attire and with their weapons. At the left side of one, which had spurs at the heels, was found the blade of a two-edged broadsword, about eighteen inches in length, and on the chest were several three-inch lengths of brass or bronze rod with eyelets at the extremities, and fragments of a glazed vase about six inches high and four in diameter, finely scored from top to bottom. Another of the three had a spearhead at the left of the skull and a buckle and knife or dagger at the waist.—*London Daily News*

Tomb of Queen Hatshepsu Discovered by an American

THE *London Times* gives an account of the recent discovery of the tomb of the great Queen Hatshepsu, the builder of the Temple of Der-el-Bahari. This interesting find is due, so says the *Times*, "to the lavish expenditure and American tenacity of Theodore M. Davis," and Mr. Davis is certainly to be congratulated upon this important addition to our knowledge of early Egypt. The tomb consists of a passage which slopes into the heart of a limestone mountain. Three separate chambers were opened before the actual was found. Within it were two sarcophagi of hard sandstone, beautifully polished and covered with finely carved hieroglyphics. The mummy of Queen Hatshepsu was accompanied by that of her father, King Thotmes I.

"Some Recent Discoveries in the Roman Forum"

A PAPER by Dr. Russell Forbes was read at yesterday's meeting of the Royal Archeological Institute by Mr. R. E. Goolden, F. S. A. The subject was "Some Recent Discoveries in the Roman Forum." The paper gave an account of primitive tombs, containing cinerary and ex-votive vases, very early Italian pottery, and bronze articles, below the pavement of the Sacra Via. In one tomb was a skeleton, with three jars containing wheat and husks of beans—offerings to the Manes. In connection with this subject Dr. Forbes quoted Ovid:

Scatter fruit and a small grain of salt,
With corn soaked in wine, and loose violets;
A jar holding these leave in the middle of the way.

Other discoveries were the remains of buried children, animal and fish bones, a hut-shaped cinerary vase similar to those found under the lava in the Alban hills, the remnants of a burnt hut, such as shepherds in the Campagna still use, and the skeleton of a colt, the last-named covered by a tumulus. The Sabines sacrificed horses to Mars.

An interesting question as to the boundaries of the ancient city is raised by some of these discoveries, as bodies were rarely buried within the walls. Sir H. Howorth, F. R. S., who presided, said he could not but think that after the destruction of Rome by the Gauls a large re-arrangement of the city took place.—*London Daily News*

Many of the "Antiquarian Relics" Are Made in Paris

A PROPOS of the recent frauds practised on the experts of the Louvre, M. J. Oppert, the eminent Assyriologist of the Académie des Inscriptions et Belles Lettres, relates that when, some years ago, he was commissioned to prepare a map of Ancient Babylon he spent three years in Asia Minor collecting the material. On his return his friend Renan informed him that he could have found all he wanted at the shop of an antiquary in the Rue de Lille. M. Oppert went to the antiquary's and examined the plan, which he was assured was of the period. But when he came to look into the map he saw that it bore a Latin inscription and other evidences of its unmistakable origin. It had been made in Paris.

On another occasion a rich collector let it be known that he wanted an Assyrian obelisk, and an antiquary promised to procure one. He kept his word and received £240. Shortly afterward the collector gave a dinner to several of his friends, to whom he proudly exhibited his latest acquisition. But his mortification was profound when one of them proved to him that his Assyrian obelisk had come from Montmartre. The swindling antiquary was prosecuted and condemned to two years' imprisonment for obtaining money by false pretenses.—*Pall Mall Gazette*

American Ethnology Exemplified at California University

THE collection of Indian life casts now at the University of California will doubtless be studied with great interest when the aboriginal tribes of America have disappeared or been merged. This collection has taken three years to secure, and it includes over fifteen Indian tribes extending from Maine to California, in addition to Esquimaux and Siberians, whose masks were obtained for purposes of comparison with the typical American aborigine.

As may be supposed by those aware of the Indian character, very considerable difficulty was experienced in persuading the natives to undergo the necessary operation of taking the mask. Tact and kindness, however, eventually prevailed, as they always do, and the Indians finally consented to allow their faces to be greased and the wet clay to be spread. The busts were then rapidly modeled by an artist.

The Esquimaux masks were taken when Lieutenant Peary returned from his northern travels, bringing with him a number of Esquimaux guides. They display the same characteristics as the southern groups and appear to form part of the same general type. STUDENT

ONE OF THE FINEST VIEWS OF THE KILLARNEY LAKES, IRELAND, EVER REVEALED BY THE CAMERA

By Neptune's Favor, Under Perpetual Summer Skies

OF the many unique privileges enjoyed by the students on Point Loma perhaps none are so enjoyable, in their way, as the men's bath so kindly provided by the ocean by its action on a bed of semi-slate. Here the beating of the surf has carved the rock into a basin about a hundred and fifty feet wide and two hundred feet long, of polished slate throughout, without any barnacles or corals to offend the feet of bathers. On one side the basin slopes gently out of the water, so that the timid or inexperienced can adjust the depth to an inch. On the other side is a depth of five or six feet, and the wall rises with a graceful swell to three feet or so above the water, thus affording the more expert a fine diving and swimming pool. Indeed, this wall or cornice is so artistically curved, and so regular in its sweeping grace, that it is difficult to remember that it is not artificial. To complete the illusion a pair of bosses, which at first glance appear as ornaments to relieve the eye, prove to be also a most convenient flight of steps whereby to ascend from the basin to the wide, smooth platform above. That no one may be injured against the sides by the tumultuous waves, the rim of the basin curves round the sea-end at a depth of two or three feet below water-level, thus permitting only the echo, as it were, of the wild surges to invade the inner tranquillity. The stone itself has numbers of pieces of iron pyrites imbedded in it, and here and there the impress of a trilobite, or similar creature, reminds us of the long past period when the slow sedimentation of ages formed the oozy mud since hardened into slate.

That no attraction may be wanting, there is a nearly smoothly-sloping beach of fine sand whereon the surf thunders with unchecked fury, where the more venturesome dive through the incoming breakers, and all enjoy the luxurious sun-baths under shelter of the towering cliffs. N.

Friendship in the Fields Among the Children of Nature

STORIES of "happy family" groups of domestic animals are common, and we are apt to regard them as the exceptions which prove the rule of antagonism, but we are strongly inclined to believe that there is much more kindness of feeling and even personal friendship among animals than is usually supposed. We have more opportunity to observe such cases among those of which we have the care, but there is no reason to believe that friendly attachments are less common among the wild creatures of the field. Remarkable stories are told of wild animal attachments, by naturalists and others, and here in Lomaland observations go to prove that friendly instincts are not monopolized by man.

Two Point Loma students had recently the rare pleasure of witnessing an incident of such a nature. A rabbit and a squirrel were having a royally good game of tag taking turns at being "it," when the approach of the wagon frightened them away. Reports from investigators are to the effect that animals whose habits and needs do not bring them into conflict, are usually on good terms with one another. So then it appears that man, instead of being a teacher of peace and mutual good-will among his younger brothers has, in fact, been quite the reverse and these isolated cases of peaceful friendship are survivals, rather than predictions, of the natural relations among the animals. Indeed there appears to be seldom any anger or resentment even, between the hunter and his victim. Each considers the other simply as an abstract fact and there is no ill will so far as we can observe. It is the terrible habit of killing things for amusement which has earned us the hate and the fear of the brutes and taught them to dread us as their worst peril.

Each of us who wishes to do so can help to hasten that time of peaceful trust. S. E.

White Lotus Celebration at Los Angeles

A GREAT MOVE FORWARD AND A NEW TRIUMPH ■ TWO SUCCESSFUL MEETINGS LAUNCH GREAT WORK IN NEW FIELD

THE activities of Point Loma have once more brimmed over and a further outpost has been planted at Los Angeles, where already so much sincere and devoted work has been done. White Lotus Day has never been more effectively celebrated than by the two immense meetings held at the Mason Opera House, Los Angeles, on Sunday, 15th of May. The magnitude of the work which has been done there it would be impossible to estimate, but it will become even more apparent than it is now when the seed which has been planted in the minds of thousands of people, comes to its inevitable fruition. Our own comrades in every quarter of the world will at least know what is implied when we say that every step of this forward movement has been planned with minute care by Katherine Tingley herself, and every detail arranged by her, in such a manner as to command the utmost possibility of success.

The Mason Opera House is the largest and best in Los Angeles with beautiful interior accommodations and admirable acoustic properties. The Point Loma children and, to a certain extent, the Point Loma students, are not however so dependent upon the acoustic advantages of a building as is many a trained actor and elocutionist. They have been taught to use the human voice as it should be used, and to give to every word the buoyant vitality which belongs to it, and many and varied were the resulting compliments from the audience. The writer himself was seated upon the back seat of the topmost balcony, veritably in the clouds, but every word from the stage, even from the two-and-a-half to four year old children, floated up like the note of a bell. If such elocution should become general, the front seats of the theatre would lose something of their usual value.

The party from Point Loma was large and representative. Over forty children were included, and many of them were very small. Let it not however be supposed that this implies the trouble which it would elsewhere. The Symposium of *The Little Philosophers* which these children were presently to perform was not all aeting. To see "the little philosophers" at their very best it would be necessary to accompany them during the trying conditions of a long railway journey. Many an old traveler would carry therefrom a lesson in life's philosophy which would be to his benefit. Help and protection all children require, although they do not all get it, but to what a wonderful minimum this labor of love can be reduced when no child is querulous, or fretful or selfish! If the great audiences of the afternoon or evening could have seen "the little philosophers" in the train and on the road they would understand Point Loma training even better than they do now, and that is saying a great deal.

We will not reproduce the printed program, both because it is too lengthy, and also because it was improved upon up to the very last moment. The afternoon meeting was at 3 o'clock and crowds were awaiting admission long before the doors were opened. Upon every seat was a little bouquet of flowers with a suitable motto attached, mainly from the writings of H. P. Blavatsky, and many a visitor must have wondered at the words of gentle wisdom from the woman whom they now know to have been maligned and persecuted. In addition to the flowers every visitor was presented with a copy of the special Los Angeles edition of the *NEW CENTURY PATH*, elaborately prepared under the supervision of Katherine Tingley herself, and profusely decorated with views of Point Loma and of its activities among the children, and otherwise.

The program, as has been said, was extensive and more than usually delightful. The immense audiences were charmed, captivated, from the very first moment, and throughout the whole of the meetings the applause would have been embarrassing had it not been so spontaneous, so sincere and so kindly. A detailed description would be as impossible as a criticism, where everything was perfect, where every feature was so faultlessly effective. The addresses were few in number, brief, and pointed, and each one seemed to give the audience some desired information about Theosophy; each one was listened to with appreciative attention.

Miss Wood's address covered the ground of Raja Yoga training, of course in briefest outline only, but it would be hard to imagine anything more effective than the crowded background of happy children and their Headmistress explaining the methods of such marvelous work and the plan of education devised by Katherine Tingley of which these particular children were but a few of the forefruits. Miss Wood is at all times a pleasing speaker, but with such a subject and with such a background she was more than pleasing.

No less interesting and charming was Mrs. Hanson's address, written from the standpoint of the Wife and the Mother. Raja Yoga training was not, after all, entirely for children, but for all who wished to live their lives truly and well. If

Theosophy were but more generally known and practiced, how many a record of failure would be unwritten and how many breaking hearts would be filled with the joy of life instead of its despair! Certainly a paper overflowing with the value of sincerity.

The other addresses were by the Rev. S. J. Neill who spoke admirably on "Theosophy and Christianity," by the present writer on "What Theosophy Is Not," and a thoughtful and valuable address on "Fatalism and Pantheism," by Dr. Herbert Coryn.

The children's performances were so varied that it would be impossible to follow them. Whatever they did, they did well. The two little people, Frances Hanson and Geoffrey Barborka, in their piano and violin duet, were irresistible. Little Alice Ewing's recitation was admirable. Thorley von Holst spoke as well as usual, which is meant as the warmest kind of praise, while the appeal which was made by the little Cuban girl, Octavia, on behalf of the Cuban Raja Yoga Schools, was received with sincere kindness and response. The chorus singing simply fascinated the audience, while the children's and the adults' orchestra evoked genuine and deserved applause. May it moreover be said, in passing, that at the very time that this imposing program with its scores of performers was being carried through in the Mason Opera House at Los Angeles, the Isis Theatre at San Diego was also served by Point Loma students with equal efficiency, with equally good addresses and equally good music. In order that this duty in Los Angeles might be performed, no other duty was left unperformed, and it would have been quite possible to simultaneously draw upon Point Loma resources for two or three other educational entertainments just as full and admirable, had there been the need for them. What a tribute to the memory of H. P. Blavatsky and of William Q. Judge! But all that will come, and we shall see many things.

The Symposium of *The Little Philosophers* was performed at both the afternoon and the evening meetings. It was intended to give it in the afternoon only, but the disappointment of the evening audience would have been too great had it been omitted. Only those who have witnessed this Symposium can form an idea of what it is to see the stage so beautifully crowded with children and to hear the vivacious conversation, which flashes from one to another, with a spontaneity which must certainly have more than a tinge of the impromptu. Certain it is that there was no training for this display in the sense in which that word is ordinarily used, but it is true, obviously and undeniably true, that these children are trained to think, even the youngest of them, and to express their thoughts in the right words, words that are so very right because they are so very childish. The one disappointment of the day was in Katherine Tingley's inability to be present, but she sent a telegram to say that there would be other lectures and entertainments in Los Angeles in the near future, and that then she would speak.

The Theatre decorations were beyond all praise, having been carried out by Miss Edith White, the well-known artist, now resident at Point Loma. Miss White and her devoted co-workers transformed the stage into a perfect garden of flowers.

And now, glancing back at this description with the fear of the inexorable printer before his eye, the writer is distressingly aware of so many other things which ought to be mentioned, but which must be overpassed, so many other points of excellence which must be inferred and left untold. Certain it is that it will be long before the visit to Los Angeles is forgotten, with its sight of great and generous and kindly audiences, of happy children, and of a good work so well and lovingly done by all. This successful work so unselfishly done, augurs well for a closer union between the cities of Los Angeles and San Diego, which must result in the general development of the great State of California. It is but the first scene of a new act. There will be many other scenes in many other acts, and the same benediction will bring the same triumphs.

SONGS OF CHILDREN FROM LOMALAND

Object Lesson Given in Stumbling Blocks—Wisdom of Aryan Sages Brought Down to Date—Theosophical Brotherhood Faith Explained

CHILDREN from Point Loma, or "Lomaland," as the members of the Theosophical Society love to call their seat of learning, entertained a large audience at the Mason Opera House last night. There were other features, including lectures by members of the Brotherhood, but it was the work of the children that held the attention most and won round after round of applause.

The teachings of Theosophy inculcate a love for the beautiful, and following out this idea, the stage setting was a bower of beauty and fragrance such as could scarcely be found outside of California. Scattered about on the stage were a number of square objects, the symbolism of which was revealed when the children took their places.

So thickly were these blocks scattered about that the children had to avoid them when coming on the stage. They seated themselves and began to repeat a symposium on "stumbling blocks," and at once the meaning of the squares was made clear.

The Symposium was a collection of sayings handed down from the sages of hoary antiquity. The language was simple, direct, classic, and as rendered by the clear childish voices, held the close attention of the audience.

Following the Symposium the children sang a number of songs, their voices showing excellent training, and in some cases giving promise of great development. The song "Abide With Me," was rendered in a very sympathetic manner. The children ranged in ages from little tots of three or four years to boys and girls of fourteen or fifteen years.

A unique feature of the entertainment was an address by Miss Octavia Franco, a Cuban girl. The young lady told in brief but graphic phrases the sufferings of her people, and the manner in which the American nation had come to the rescue in their hour of need. She paid a high compliment to the heroes of the American army and navy that made the big auditorium ring with cheers.

Then she told of the sorrow in the island when the people learned that the man they regarded as their best friend, President McKinley, had been stricken by the hand of an assassin. Miss Franco told of the efforts of the Theosophical Society to establish schools in Cuba, and closed with an appeal to the audience for financial aid for those schools. The response of the audience was prompt and generous.

Among the addresses by members of the society were "Theosophy and Christianity," by Rev. J. S. Neill; "What Theosophy Is Not," by S. G. P. Coryn; "Theosophy Unsectarian and Universal," by J. H. Fussell; "What Theosophy Has Done for Women," by Mrs. Walter Taylor Hanson, and "Fatalism and Pantheism," by Dr. H. A. W. Coryn.

One paragraph in Rev. S. J. Neill's address may be given as a key to the others. He said: "Modern Theosophy is the restoration of the teachings of Christ in their purity and simplicity, but it is more than that. It is fitted as well for a scientific age such as ours. There are many things in this philosophy that were not taught in the first century of the Christian era, because they were not needed then. The time has come now to teach these things. The early Christian church was a reflection of the life of Christ, but within two or three hundred years ecclesiasticism had taken full possession of the church. This change was the cause of the horror of the long age of religious wars."

A telegram was received from Mrs. Katherine Tingley expressing her regret at being unable to be present owing to a pressing engagement which she was unexpectedly called upon to attend. In her message she stated that she would hold other meetings in this city, at which time she hoped to be present.

One of the best features of the entertainment was the music. This included the prelude to *Parsifal*, from Wagner; *The Seasons*, from Hawley, and Sullivan's *Lost Chord*. The harp accompaniment to *Oberon in Fairy-land* won great and deserved applause.

The complete program included an entertainment in the afternoon. This consisted of a tableau representative of the work of the Society and an introduction by Thorley von Holst. Miss S. Ethelind Wood spoke on "The Resurrected Christ." The children sang several part songs, after which there was a violin obligato, a quartet for violins and a number of other musical selections.

The Isis Theatre Meeting, San Diego

Reprinted from the San Diego News

THERE were two strong addresses given by older students of Point Loma at the regular meeting of The Universal Brotherhood and Theosophical Society in Isis Theatre last Sunday evening, and also a very interesting little paper on "Raja Yoga," by a very bright and pretty little lady of the Raja Yoga School—Miss Alice Westerland. The musical numbers by the students of the Isis Conservatory of Music were especially well selected and rendered. The youthful address on "Raja Yoga" was as follows:

"In the Raja Yoga School we are not taught as children in other schools. We do not do as we please always, but we do what we know to be right. The study is one of our pleasures, for we are very fond of our books and our music.

"In our school we do not often get sick, and then we get well very soon, for we have so many things to help us—the exercises every morning which give us such healthy bodies, and the play times and the duties, too, for they are our pleasures and keep us happy. We watch the flowers blossom, and we love the birds as they sing all day long at Point Loma.

"Raja Yoga teaches us to stand straight, to walk firmly and to hold our heads up so that we can see the right, and look people straight in the face.

"We have loving teachers who do not punish us, but show us what is right and help us to do it. When we think of our school, and remember that we have everything that we need to help us, good food and exercise to make our bodies strong, pleasant lessons to make our minds bright and kind love to guide us, it makes us very glad, for other little children have seen how well and happy we are, until now there are several large Raja Yoga Schools, and many, many children waiting to learn Raja Yoga.

"And we try and try every day to study harder and to do better, for we know in that way we are doing something to bring nearer the time when all the little children in the world can be as happy as we are—and have Raja Yoga."

Under the title of "Bogus Christianity and Bogus Theosophy," Mr. H. T. Patterson said, among other things:

"The lie which approximates most nearly to the truth is more deceptive than crass misrepresentation. A perverted teaching is harmful in proportion to the amount of truth which it contains.

"There are those who regard the Christian teachings as the most fundamental of truths. We are of those.

"There are those who regard the Theosophical teachings as the most fundamental of truths. We are of those also.

"There are those who say that the teachings of Theosophy and Christianity are antagonistic. This we deny; and, in lieu of it, assert that any Christianity which is not Theosophic is bogus, and that any Theosophy which is not Christian is likewise bogus.

"The history of the development of religions is instructive. They have all followed similar lines. First comes spirituality, truth, reform, self-abnegation, subjection to persecution. Then, increase in power and decrease in virtue; the original

truth, though obscured, being the basis on which the power is acquired and held. Then, new reformers, regarded as anti-religious by the now-established bodies, and in turn persecuted by them, as they themselves were originally persecuted. Though Jesus insisted that he came not to destroy, but to fulfill the law and the prophets, yet he was unorthodox in the eyes of ecclesiastical Judaism.

"Again, did not Jesus say 'blessed are the meek,' 'blessed are the persecuted,' and the like? Who tries to live up to these conceptions? O, who, in sincerity, endeavors to abide by the Golden Rule? Yet, surely, Jesus must have meant what he said. The trouble is that Christ's teachings have been so interwoven with dogmas and so mixed with incredible nonsense that we have become as incredulous in regard to them as to the pernicious stuff with which they have been overlaid. Suppose it were seriously claimed for some one, today, that he had the power of performing miracles—raising the dead, for instance? Yet, Jesus did these things, and told his followers that they would do greater things. Ah, yes! but that was over nineteen hundred years ago! Yet, miracles are facts, and those who disbelieve in their possibility are dupes misled by false teachers—teachers who, century after century, have been dealing out spurious coin until our faith has been destroyed. Miracles! Why, the last forty years has been a steady record of miracles. We are in the midst of them—wireless telegraphy, telephones, X and N-rays—an almost endless category. They would drive our forefathers mad with confusion if they were suddenly brought amongst them. 'But,' you say, 'these things cannot raise the dead.' Ah, no! for this is merely the beginning—the penumbra of the light of true knowledge. When we are in the effulgence of illumination this miracle, no longer a miracle, will come to pass.

"As to bogus Theosophy the story, so far as it goes, is much the same as to that of other distorted revelations. Being a revelation—one of the great, spiritual, practical, uplifting unveilings, perhaps the greatest of them—it has suffered as the others have. There has been on the one side of it the persecution by the established, ecclesiastical orders; on the other, subtle invasion by those who, in their diabolical greed and selfishness, would appropriate its truths, so far as their meagre natures are capable of appropriating them, and then pass out such counterfeits as would best suit their ends. And don't imagine they lack in cunning, for they have the devil as their chief adviser—the devil not being a bogus article, but a genuine and frightful entity, the head of a legion—selfishness, hypocrisy, egotism, lust, obsessing this earth. And they are the real enemies of truth—the persecutors.

"Ezekiel, in the record of one of his wonderful visions, speaks of the wheels within wheels. Do you not recognize this as applying to the heavenly bodies, moving in their rotary paths of vari-colored luminosity? Pythagoras spoke of the music of the spheres. Is it impossible that he had access to the same fount of knowledge as that known to Ezekiel? Katherine Tingley makes art, in color and in sound and in concrete form, a prominent feature in her work. Peradventure she, likewise, has access to the same fount. Are you familiar with the story of Joan of Arc? Have you in mind her wonderful career? May not the same spirit which led her on from victory to victory, which inspired Moses and Ezekiel and Pythagoras also overshadow Katherine Tingley and other spiritual leaders?"

The Transformation of Japan---Glimpses of the

From the NEW CENTURY PATH Special Correspondent

YOKOHAMA, March 29th, 1904

It is just fifty-one years since Commodore Perry of the American Navy sailed past the site of the present city of Yokohama, which was then little more than a bare stretch of sandy beach. What his four vessels signified to the Japanese of the past generation is most quaintly and graphically told in an article called "Japan," which I have clipped from a paper published in English, by a Japanese gentleman, and which I shall send you, with accompanying cuts; probably nothing could be more interesting to the readers of the NEW CENTURY PATH the world over, at this present juncture. If Yokohama was then nothing but a stretch of sandy waste, lapped by the waves of Tokyo (or Yedo) bay, the present city well demonstrates the spirit of development which has assumed a controlling power over the Japanese people. Were it not for the beautiful mountain of Fujiyama, the Sacred and Holy Mountain of Japan, which rises so majestically, far inland, that its snow-clad sweep seems to cast a protecting influence over the surrounding country, Yokohama would be decidedly disappointing from an artistic point of view. The shipping in the harbor, and the clusters of low brick houses along the shore, suggest Japan not at all; while the bluffs running to the left are but uninteresting compared with the unusual treat afforded one by the sights of the Inland Sea. Still, it would be injustice itself to say that Yokohama possesses nothing to interest or amuse the visitor from abroad; quite the contrary. Its wide streets of the more native quarter, lined with the little shops, eating houses and theatres, with their picturesque and striking advertisements, and cut and intersected by innumerable smaller thoroughfares, possibly hold out as many inducements to a stay in the city, and excursions here and there and elsewhere, as any other place. But travelers, after a stay here for a few days, leave usually for the capital city of the Empire, Tokyo, which is only about a score of miles inland, and which has so many and unique features of its own that it demands the greater part of the time of the tourist.

A SHINTO TEMPLE AND ITS WORSHIPERS—Today your correspondent paid a visit to the Shinto Temple of Tenshido. After entering a jinrikisha at the door of the hotel, he was whirled rapidly through a part of the town which offered subjects for study in human life at every turn, but which it is not in place to comment on here. A ride of some thirty minutes brought him to the bottom of a stairway of stone steps, at the top of which, some hundred feet up, could be seen the Egyptian-like gateways of the Temple. These gateways are remarkable, from an architectural standpoint, and I have often wondered why it is that our own builders have not grasped the artistic and impressive effect they produce, and why they have not incorporated it into western canons. The eye is caught and held for a time by them; while they also serve as a frame, through which perspective assumes really charming proportions. They bear the same relation to temple building here that the massive and gigantic temple pylons of the ancient Egyptians did to the Houses of the Eternal Spirit in that old land. There the pylons were huge and overpowering in their expression of strength and stability; here these square gateway entrances suggest grace, lightness, and the fleeting, transitory aspects of human things.

At the top of the stairway I have mentioned, which, by the way, was not continuous, but interrupted with irregular platforms, from which the next flight of a dozen or more steps arose, was the Temple itself, an unpretentious affair enough, but evidently a favorite religious resort, for the coming and going of the worshipers was practically unceasing. A squarely built, low structure, some thirty feet wide, by about as many in depth; with open rooms at the sides where sat the attendant priests, reading and smoking the little native pipe, holding scarcely half a dozen whiffs. In front of the shrine hung the usual big bell of the Temple, from which a long triple cord hung. Flush with the floor of the Temple, and outside the latticework, screening the interior from too curious a gaze, was a long box, half as long as the Temple itself, and standing some two and a half feet high. Boards covered this box for its whole length, leaving a long narrow slit only, between; this was the receptacle for offerings.

Now comes the worshiper. He approaches the Temple, until within two feet of the offertory box. There he stops, throws a copper coin into it; a second passes, the coin is heard sliding down the interior; another second, and it is heard to drop somewhere within the Temple itself, on the floor. The man seizes the bell rope, strikes the bell itself three times, claps the palms of his hands together three times, and while the soft deep tones of the bell echo in his ears, bows his head or kneels in prayer. Sometimes the prayer is silent; then, again, the suppliant, or giver of thanks, bursts forth into a litany, recited in a monotonous tone, which appears to have no ending. A woman follows him; then another, and another, while during the whole, the priests in the little rooms at the sides are reading, smoking, talking or laughing, in what strikes the European as the most indecorous way.

Little children toddle up to the shrine the while, and, imitating their elders, kneel, and with joined palms and bent head are a striking lesson in the power of psychology over the mind of youth.

In a short time the worshiper rises and leaves the place, while his face bears the same stamp of relieved anxiety, which is familiar to those of us who have seen the comfort derived, in moments of sorrow or trial, pictured on others' faces, by a few moments silent communion with the God within.

Within the Temple itself may be seen the sacred vessels in bronze and copper, many in number, and, apparently, carelessly enough strewn around the interior. Back of the first sanctum is another smaller one, the doors of which are locked and barred with wood; on religious festivals such are thrown open to the crowds who throng to the Temple. A practical-minded soul, from down East possibly, who was standing near me, was heard to remark that he wondered how much the coffers of the Temple were swollen by the unceasing stream of offerings which dropped so resonantly into the sounding wooden receptacle. Without in the least touching the tenets of pure Shintoism, there was too much of the "filthy lucre" atmosphere about it all; it degraded the whole affair. On both sides of the Temple, on the very grounds, were a number of booths, open, with couches covered with matting, where the devout might recline or sit, and drink the weak, straw-colored green tea and eat sweetmeats and gossip. To the right, was a handsome stone monument, some twenty feet high, erected to the memory of those who lost their lives in certain naval battles. On three sides, Japanese inscriptions, cast in copper, commemorate the event; on the other, three lines in English immortalized the story by a quotation taken from the *Psalter*, to wit, quoted in substance: "To the memory of our brave Sons, 'they that go down to the sea in ships, that do business in great waters.'"—*Psalms cvii, 23*

I wondered what good, church-going folk would think, were they to find on a similar monument, erected, let us say, to the memory of the sailors who perished during the Revolutionary War, a quotation from the precepts of Gautama Buddha, or an extract from some sacred Shinto work; and that in a sectarian church yard!

HOW DO THE JAPS ADVERTISE?—The answer to that is simple enough, for they seem to have realized the fact that advertising done well means business, and they are beginning to deface some of the most beautiful spots their country affords, with the gigantic lettering so well known with us. The following ad. I have taken from an enterprising paper, published by the same Japanese gentleman I mentioned above, from which I culled the article "Japan." It reads:

O Komai, Manufacturer & Dealer in Damascene Ware. Orders promptly executed at moderate price. No. 3 Furumonzen, Kyoto, Japan. This is the work which is used by O Komai on his damascene ware. The damascene work is only manufactured in Kyoto in Japan, and O Komai is the pioneer of the line in all Japan. When Japan was governed under feudal system O Komai worked on sword mostly, but by marvelous change which came over Japan within past generation, and he turned his attention to the Manufacture of those which useful article, thus cigarettes, cards, watch, match cases, stick handles, vases, pictures, boxes and other ornaments, and this is only the man who get prize at Osaka exhibition for the exhibits of the same class.

That ad. is a gem; nor, in spite of its English, will its value be the less from an advertising point of view.

Island Empire That May Rule Eastern World

JAPANESE JOURNALISM IN ENGLISH—The extract which follows, is taken from the *Excursion Journal*, published at Tokyo, by Mr. T. Minami and Sons, who have established in Japan a Tourists' Agency, which seems to be a leaf taken out of the note-book of the founder of Cook's. He speaks of Japan as follows:

It is our desire that our good friends of the world will come and see the country for our proverb says, "Seeing once is better than hundred hearings." We believe hearing often misleads and is forgotten. We have another proverb, "A pet child should be made to travel." It seems to us that seeing different things and mixing with other people is the greatest education to us. Being for people of progressive countries do travel and those who dislike them retrograde. To prove this fact we can show you with an account of Japan.

After the suppression of Christianity by the Shogun Ieyasu in 1614, the country was entirely closed to foreigners and the Japanese were prohibited from going abroad, so Japan lost the opportunity of mingling with the world, and allowed herself to remain in a stationary condition, until she was forced to recognize the existence of the outside world in 1853.

By way of explaining the struggle of the country and ignorance of foreign countries at that time, allow me to introduce my own account connected with it. In 1864, Japan refused to make a treaty ratification with foreign countries although she was running a great risk of war which was declared by the Imperial court. I,

In a short time now, the great annual cherry blossom festival will be held at the capital, Tokyo, which I am informed affords one an incomparable opportunity of studying the Japanese *en fete*, and of realizing the profundity of the artistic temperament of the people in general. This is almost a national affair, and crowds flock to Tokyo for the occasion.

JAPAN IN WAR TIME—Scarcely is it possible to realize the fact that this knightly little nation is at war with one of the greatest military powers of the western world. Conspicuously absent, are demonstrations of any kind, and the newspapers are treating the question with a reserve and a calmness which would do credit to the most enlightened western journalism. In the streets there are no flags, no streamers, no badge carrying of any kind. Outside the offices of the native papers, may be seen crowds and groups of the poorer classes, quietly perusing the latest news from the front; but it is greatly to be feared that the news they do read is not the most authentic, for the stand taken by the Government with regard to publishing war news, and about allowing newspaper correspondents to stay at the front has been unequivocal, firm, and as far as the latter are concerned, occasionally most provoking. Indeed, it reminds one irresistibly of the fact that but too often do the lurid writings of the men at the front, react even upon the conclusions of those at the

head of State. Japan seems determined to do her own carrying on of war, and in her own way, without the prick and spur, the lash and whip of newspaper comment upon the operations conducted at the "Theatre of War."

The Government is most alive to all the requirements for the public safety, which might be endangered by modern methods of making war upon the enemy. The harbors are laid with mines, and the vessel that tried to enter without the Government officer, told off for that purpose, would in all probability suffer the same dreadful fate which sent a shudder of horror throughout America, when the news of the destruction of the "Maine" was given to the world.

The theatres, with an enterprise which seems quite foreign to the Oriental character, as we understand it at least, are running in plays dealing with the war.

It is astonishing how accurately the pictures on the canvasses exposed to attract attention, have been painted. There is about them, too, that inimitable dash, that spirited representation of a thing, which to me is the life and soul of what we call Japanese art. Indeed, while it is scarcely probable that either Japanese or Russian officers ever assume the fiery and magnificent poses given them on canvas by these artists, the heat and struggle of the actual fighting is brought home to one's mind in a very positive way by these pictures. I have heard many people criticize Japanese art very sharply, and even go the length of refusing to call it "Art;" for myself, I cannot admit that such a criticism is a just one. Judged by western notions of what "Art" is, it is possible that if western art were the *ne plus ultra* of the appeal to that faculty which recognizes art as such, then indeed, Japanese art is barbarous; but is it? The true standard of art varies with different peoples, and so does technique; but a true technique again, depends upon a canon of proportion, and when this latter is followed consistently, without any reasonable departures from it, and when there is life, and spirit, and Nature, in a production, then I hold that that child of the artistic faculty is a child of true art. Japanese art has both the canon and the life, and as such, should, and does, deserve the name of art.

It is coldish, and rainy here; has been so for the last few days. But as fickle April has been known from time immemorial to play pranks with one's wishes, one can only bow in acquiescence, and wait for golden-haired May to teach us that disappointments may have a glorious recompense following them.

G. DE PURUCKER

AN OLD SKETCH OF KURIHAMA BEACH, SHOWING AMERICAN ENVOY'S LANDING AND SHOGUN'S GUARD AND RECEPTION ROOMS (KINDLY LOANED BY COUNT II NAOTADA)

Reprinted from the *Excursion Journal* of T. Minami & Sons' Tourist Agency

myself followed my father Kagesuke Minami, who was then Inspector of war under Lord Mori, at Shimonoseki in the province of Nagato, and took part in the defence of the fort and in the attack upon the foreign ships. After we had lost our ships and forts in September an armistice took place, I immediately returned home and one day happened to find a map of the Eastern Hemisphere in my father's bookshelf. Looking it over I was so much interested in it that I was determined to go abroad for personal investigation. I consulted upon my resolution with my brother-in-law and cousin Shinsaku Takasugi, who was then the Military Governor of Shimonoseki, and obtained his consent. In the spring of 1865 he gave me a little money, with which I escaped from Shimonoseki for England. Since then I have toured round the globe three times, and each journey has strengthened my conviction that traveling is a valuable education and that ignorance and misunderstanding are sad blights both upon the life of a man or of a country.

But the rapid growth of Japan since the Restoration of 1868 has been the wonder of the world; Japanese were sent to learn, and foreigners came to teach the Occidental civilization in all its spheres; and by their endeavor worked upon the people: everything has undergone a complete change. In a word, the Occidental civilization has been transplanted in the Far East, and seems to have taken firm root. Now we are very glad to say that foreigners who come to this country are welcomed and are received with all courtesy throughout the land and that we, our family and our members together with the assistance of our influential friends will do the best within our power for the tourists' convenience and comfort.

CHERRY BLOSSOMS—The plum-trees have begun to bloom, and now the cherry blossoms, those cherry blossoms which have made Japanese art and Japanese real scenery so famous and so well-known to us, have begun to break from the bud into the bloom in their turn. In a very short time the country sides will be a mass of color, or so, at least, is the promise, for the cherry is ubiquitous, and as one speaks of the oaks of England, so does one associate the cherry with the land of the Mikado.

O-Iné, Samurai, of Japan

O-INÉ lifted the cover of the little lacquered bowl and looked at its lower surface. Her cheeks paled and her hand trembled as she replaced it, but she gave no other sign—for she was Shinto, born and bred. Quietly she carried away the little feast which she had been daily placing before the east window. It was a pretty custom, the daily placing of a miniature meal, like the “shadow feast,” which the Japanese place in memory of their dead. O-Iné never doubted the legend must be true, which said that if no vapor collected on the under surface of the bowl’s cover, it was a sign that the absent one—her husband—was dead. Close beside the tiny tray and above the kneeling cushions was the shrine that is seen in every Shinto household, the *Miya*. Before it were tablets written over with curious ideographs, so graceful that they seemed to have been limned upon it by the sweep of a bird’s wing. Above it hung another of the sacred symbols, the rope of rice straw.

O-Iné—the name itself meant “ear of young rice”—was one of the old Samurai clan. She was born of a race of warriors. In her girlhood she had been not like other girls; she had dreamed dreams. Her ideals had been greater than even the greatest of the ideals her brothers held—“to die for His Majesty, the Emperor”—yet differed not, save as the greater differs from the lesser. She had dreamed of helping her nation, of helping those less fortunate than herself, less wealthy and even less proud—of helping all humanity. But before her ideal had time to blossom into anything like expression, she married. It was all very simple—arranged by her parents—and she went away from her own home to live in the home of her husband, an old Samurai residence from whose windows she could see in the distance *Fujiyama*.

O-Iné was happy. Kunusoki was handsome, young and strong. How proud she was of him and the two swords which he always wore, for he was a warrior. And as for O-Iné, she became as the very light in his parents’ home, beautiful as a cherry tree in full bloom. The dream of her girlhood came to be soon forgotten, for new cares clasped hands with new joys, and her days were full.

It was true, then. O-Iné looked again at the vaporless under surface of the tiny cover. Kunusoki was dead. It must be so. Slowly she turned from the window and carried out of the room the little tray. The matting was soft as a cushion under her feet. A faint odor of incense filled the room and all about her was silence as of a temple. She went into the garden, one of those typical, grand old places so often seen about the homes of Samurais of high rank. In the center was a lotus pond, from its depths arising little green islets covered with dwarf oaks. There were rocks, moss-covered, here and there; miniature hills, a wonderful fairy-like grotto with a swirl as of clouds and dragons graven upon its curving inner walls.

O-Iné sank upon the sand at the edge of the pool. A feeling of sudden weakness had come over her. The big laurel shaded her figure but partly as she looked down into the pond. Upon the sand and upon the pond’s still waters quivered the tremulous shadows of the laurel leaves. They beckoned like fingers and she thought they were mocking her.

O-Iné looked across at the nearest little islet where stood a dwarf pine. It was three hundred years old, they told her, and not more than a foot high. Would she grow old too? It was impossible. Water lilies floated upon the surface of the quiet waters; the pink and white lotus buds lifted their heads above it. She looked again down into its depths; a dozen golden fish were swimming about, water beetles and snails were clinging to the sand along the edge and even a tortoise paddled slowly past. She wondered if it, too, would grow old, like the dwarf pine and if sea-moss would cling to its back and stream behind, as on the old tortoise in the Temple. O-Iné sat very still. It seemed to her as if the breath had already left her body and that there was now no future, just as there seemed to be, for the moment, no past. Kunusoki was dead—that was all. The news—the bare, full truth—would come by messenger in a day or two. There was nothing else in life to wait for. A little lizard crawled over her foot and tiny green frogs hopped up on the lotus leaves and eyed her.

The water-snakes, who knew O-Iné well, slowly floated up and then back. She was faintly conscious of hearing the *cicadae* in the trees and the call of the wild dove, distant and clear, as if it came over miles and miles of rice field. Still she sat silent and brooding. Why should she live? Why need she ever move again, even?

O-Iné heard a laugh at her side and felt a light touch upon her arm. She started—it was her baby son. The mother had forgotten him. His wee, right hand held a stick, at the top of which streamed one of those wonderful kites, like a big Japanese carp, the immense distended form undulating and flapping in the wind like a great streamer.

O-Iné roused herself and smiled. Her training had made this easy, for she was Samurai and Shinto, too—that religion which makes proselytizing such a difficult matter for our missionaries—for Shinto is the religion of character and courtesy itself. It had been part of her training to conceal pain from others lest they be also affected; but with the smile that she forced to come, she was conscious of something like the opening of a door within her heart. Perhaps, after all, the sign upon the tiny lacquered cover might not speak true. Yet, even if it were true, her child had the warrior blood of a thousand generations of old Samurai in his veins. It was glorious—she would live for him; she would bring to him ideals even greater than the one great ideal of the Samurai, “to die for His Majesty, the Emperor.” The child pulled at his mother’s silken sleeve.

She rose, not wearily and with unwonted dignity. His Majesty, the Emperor! What was this new hope that had come into being within her heart? It was really the old dream returned but she did not know it; the old dream which had not been lost but had merely been curtained away by the love that came into her life. But the curtain had fallen at last, torn away as by a terrible hand. And the future? O-Iné only knew that she must live for the child’s sake. She found, then, that she wished to live, even as she thought again of Kunusoki. Three days later the news came. It was as she had feared. O-Iné’s face had already grown less rosy and less plump. She had suffered as women suffer when some deep and awful conviction does battle with the feeling “perhaps after all it may not be true.” The news came almost as a relief—as the placing of a period when the thought has been expressed. O-Iné was dimly conscious of the opening of another door. In that sense alone it was a relief, as the opening of a door always relieves one who suffers, even though the air be chill and the night without thick and lightless.

That afternoon she unbound her glorious hair, the hair of a true Samurai. Carefully, lovingly and almost hesitatingly she cut it off and carried it to the Temple on the hill. It was the sign of her love for Kunusoki, it was her vow of perpetual widowhood. Then she returned to her home and took up the duties of life again. Every morning thereafter she carried the little “shadow feast” to his favorite window—and often she lingered over it lovingly—but there was a new light in her eye, a new dignity in her step, a new reserve in her manner.

“Strange that she doesn’t grieve—that is, as other women grieve,” said Kunusoki’s mother.

“It is because of the child,” said Kunusoki’s brother, himself a Samurai.

O-Iné heard them, for only the *shoji*, with its thinnest of thin Japanese paper, stood between them and the little window where she was placing the consecrated “shadow feast.” She started. Then for the first time she understood; it was the dream of her girlhood, her dream of a higher ideal, of a greater Japan, of a path to be trodden by herself in humanity’s service, of a great work to be done, not alone for His Majesty, the Emperor, but for the thousand, thousand women of his land, for all humanity—and to be done by her. It was the dream of her girlhood and she looked upon it again and took it back into her heart, forever thenceforth to become part and substance of her very life.

O-Iné looked up and out through the window. Before her, in the vapory, azureless morning light rose *Fujiyama*, silver-pink in the sunrise, like the bud of an opening lotus.

STUDENT

THE CHILDREN'S HOUR

A Letter From Fifi

DEAR CHILDREN: I am Fifi, and I live at Loma Homestead in Lomaland. I have wanted to write you a letter for a long time.

You will remember, perhaps, the letter my brother Lucifer wrote, or, rather, the letter that Madame wrote for him. But Madame is not writing this letter. One of the Raja Yoga children is writing it for me as a surprise to Madame! I am gray and white, as you see in the picture, and Lucifer is coal black. The other day Madame came into the butler's pantry. We had just been singing again. When she saw us she looked so surprised, and then she laughed and said, "C'est magnifique! C'est précisément le tableau que je désire avoir!" And that is how I am able to send you our picture.

Lucifer has told you, I believe, how we often sing together. Well, sometimes he sings alone to me, and he has one song that goes something like this (at least, this is the best translation I can make out of our own cat language):

Happy little kittens,
Sunshine all the day,
How we play together!
Brotherhood's the way.

Jolly little kittens,
Here's a song for you,
Brotherhood's the happy way,
Won't you try it, too?

Sometimes Lucifer takes a long nap in the sunshine that comes into the kitchen afternoons. I am nervous, as perhaps Lucifer has told you, and easily frightened, but I am never afraid of Lucifer, and when he is asleep I always pull his tail to tease him. At first he wakes up just a little and waves his long black tail over my head. Then I pull it harder, and you should see him jump up quick and give me a big hug before I can get away. He pretends to be very cross—but then I understand *that*.

One day, when we were playing this way, Madame came into the dining-room. She had an armful of flowers, beautiful roses and lilies and heliotrope, and a big bunch of violets, and a *whole lot* of trailing vines.

When she saw us playing this way, a real Brotherhood way, she laughed and said, "O Fifi, Fifi!" Then she turned to the lady who was with her and said: "Ne-c'est-pas drôle? Je ne crois pas que Lucifer sache ce que c'est d'être fâché."

I understand Madame when she speaks French just as well as when she speaks English. That is Raja Yoga—to be able to understand everything. Good-bye. Yours for Brotherhood,
FIFI

DEAR CHILDREN: Most of you have read *Black Beauty*, and now that this terrible war is being fought out in far-away Asia,

I have found myself thinking many times of the following sentence from that little book: "*I, with my noble master, went through many actions without a wound, though I saw horses shot down with bullets, pierced through with lances and gashed with saber cuts, left dead on the field or dying in agony of wounds.*" You know the story of *Black Beauty* is told by Black Beauty himself, a noble horse. Most people, when they think of war, feel sad at the terrible suffering that comes to the soldiers and to the families that are left behind, but how many think of the noble horses who suffer on the battlefield, and who are oftentimes more patient and sometimes more heroic than their masters? Yet they are our comrades, are they not?

UNCLE FRED

Mabel Lockwood's Lesson

(Written by a young Lotus Group student)

ONE cold winter's day in New York a bright-faced young girl walked briskly through one of the side streets leading to the slums. She picked her way through the gathering crowds until she came to a cheerful building with a big sign over the door, "The Brotherhood School." It was a place where the little children of the tenement houses

went to learn about life being joy, and to have marching and singing and love and sunshine and happiness brought into their hearts. As the young girl, Mabel Lockwood, entered the room with her bright smile, a sunbeam seemed to come straight from the hearts of those children like an answer. All the children were her pupils and she was looked up to and loved by them all. It was the day of the children's Christmas merry-making, and they were all enjoying the few little sweets that had been carefully prepared for them by their devoted teacher, when Charley, a little lad of ten years, came up to her and said: "Miss Lockwood, you have been teaching us that helping and sharing was what Brotherhood meant."

"I would like to act that out, so I am going to give my bag of candy to Jimmy, the little sick boy."

Mabel smiled and said, "I am so glad that you want to do this, dear. I would not have asked you, and I was wondering if you would think of it."

Now, what was the secret of Mabel Lockwood's influence over the children? It was simply this, I think?

She had given up many enjoyments every week in order to come down to the Brotherhood school and teach the poor little children, and so unselfishness had become a part of her character and had shone out through all her actions just like a light, so that she did not need to tell the children in words to be unselfish.

She could tell them through her silent influence.

TWO CATS OF LOMALAND

HOW TO BE HAPPY

ARE you almost disgusted with life, little man?
I'll tell you a wonderful trick,
That will bring you contentment, if anything can ---
Do something for somebody quick.

Are you awfully tired with play, little girl?
Weary, discouraged and sick?
I'll tell you the loveliest game in the world ---
Do something for somebody quick.—Selected

A Street Car Cat

THE street cars in a western city have small stoves in the center of each car for the additional comfort of passengers in cold weather. The driver on one of these cars had reached the end of his route one cold day last November, and was changing his horses from one end of the car to the other, when a half-grown, half-starved and bedraggled looking kitten came mewing across the road and ran into the car. It curled up under the stove in

great contentment, and the kind-hearted driver, who was also the conductor, allowed it to lie under the stove during the down-town trip.

He begged a saucer of milk for the little waif at the other end of the route, and after lunch, for which she was manifestly grateful, kitty went back to her snug place under the little stove, and during the next day she and the conductor became such good friends that he left her in the car when he went off duty that night.

He did not put her out the next day nor at any other time, but fed her every day. She was a pretty, playful little gray and white kitty, and made friends with all the passengers. When the weather is fine she often rides out on the platform with the driver who has been such a true friend to her, and whose conduct is proof of the fact that there is a kindly, generous heart beneath his rough garments.—*Harper's Young People*. And I fancy that the little kitten, in just giving these busy care-worn men a chance to be tender and kind, brought to them even more real happiness than they were able to bring to her.

SUNSHINE AND MUSIC

A LAUGH is just like sunshine,
 It freshens all the day,
 It tips the peaks of life with light,
 And drives the clouds away;
 The soul grows glad that hears it,
 And feels its courage strong---
 A laugh is just like sunshine
 For cheering folks along.

A laugh is just like music,
 It lingers in the heart,
 And where its melody is heard
 The ills of life depart;
 And happy thoughts come crowding
 It's joyful note to greet---
 A laugh is just like music
 For making living sweet.—*Our Dumb Animals*

Life an Eternal Present

DUTY is always simple. The complexity is in the artifices we invent to avoid the simple duty. For want of a little courage, energy and faith at the outset, we shirk the obvious first step and try to achieve the result by an easier means.

An arithmetic pupil will spend hours of time, give himself a headache, and use up sheets of paper, in trying to do the problem in a shorter and easier way than the one he is shown. By neglecting nothing and making quite sure of each step before proceeding to the next, the problem may be solved quickly and easily. But to attempt a short cut is almost invariably fatal; and a mistake in the early stages means that *all* subsequent work is useless toil, time and labor wasted in multiplying up the small error. How true is this of our life in general! We complain of the dimness of our vision, the complexity of our duties, the difficulty of our work; and it all comes from our refusal to do the thing in the obvious and simple way. And this refusal, in its turn, springs from a lack of faith and courage at the outset.

Then again, our fears often prevent us from beginning until we think we can see the whole way clear before us; when, if we would only start by boldly doing the little we already see and know, the subsequent steps would become clear. Here again the arithmetical analogy is instructive; for the pupil who, face to face with a problem, bravely sets down the data, usually sees the next step, and then the next, and so on to a successful ending; whereas the timorous one who will not make a figure until he thinks he sees the end, never starts at all. Thus one might enunciate the aphorism, "The way to solve a problem is to write your name on the top of the sheet."

We all have to learn to walk in the dark, as well as in the light; and the only way to do that is to take the first step and trust that each successive step will be equally easy when it comes.

Great men do the simple and obvious things which other people balk at, and the record of their deeds is a story of simple actions which excites wonder as to why nobody else thought of doing them before. Nobody else had the faith, the courage, the dash.

The first thing I ought to do in the morning is to get up. But instead of that I lie there thinking what I shall do *when* I get up. And when I do get up, I do not do as I decided after all, because then I am engaged in planning what I ought to do after that.

We all long to conquer the great illusion which deludes the eye of the soul and keeps us fettered in a dull and painful life when there are broad realms of joy and peace waiting for those who can solve the enigma of life. Yet how we neglect our chances! Here, for instance, is one phase of this illusion. It diverts our gaze from the now which is the point of

action, to the imaginary future which is a dreamland that never comes true; and thus we drift helpless in the current of events.

A mighty secret lies exposed here; it enfolds us around, it towers above us; but we search the dirt at our feet with a microscope. It resounds through the æther, but we strain our ears. Who shall have strength, steadiness, courage, restraint, to concentrate all his energies on the NOW and take that first step?

And oh! the excuses people make for themselves. Perhaps there is some person whose lot in life is so difficult, character so complex, karma so mixed and peculiar, and so forth; and all the while he is just an ordinary person who has spent all his life edging away from a goose in the road, and is still using his extraordinary gifts in trying to devise a way of getting to the other side of that goose without passing it. Lucky it is that necessity often mercifully drags us out of bed by the hair, or we should be in bed yet.

Then let me always keep trying to shut my eyes to those wearisome but alluring mirages, the Past and the Future, and to realize that life is an eternal Present; and I shall discover the secret of happiness, success and freedom.

STUDENT

Dechristianizing Europe

THE *New York Independent* contains an interesting article by Mr. Vandervelde, of Belgium, upon the present religious situation in Europe. Mr. Vandervelde's immense knowledge of the trend of popular thought entitles his opinion to some consideration, especially when it is supported and confirmed by the visible signs of the times. With the main trend of the author's contention we have at the moment nothing to do, but his general verdict upon the condition of European religion is striking and suggestive. He says, in fact, that Europe is dechristianizing herself:

Slowly, but surely, with the irresistible movement of a geological subsidence, faith is waning among the industrial workers, and even among the peasants. In Belgium, in France, in Germany, the workmen who follow no particular creed number hundreds of thousands—yes, millions—and as their hopes of any heavenly kingdom dissolve, other hopes assert themselves with a growing intensity.

What a spectacle, and how fraught with all tremendous issues! Upon one side the Kingdom of Heaven upon earth, and upon the other side the Kingdom of Hell upon earth, and the people in their "hundreds of thousands—yes, millions"—waiting for some voice of indubitable meaning that they may choose quickly before it be too late, and, above all, that they may choose wisely.

Who would suppose from the religious literature of today that issues so tremendous were on foot, that, indeed, anything were on foot except revisions of creeds and the like? Yet here is a whole continent, teeming with lives innumerable, with community neither of language, nor affairs, nor religion, taught from their very cradles to hate one another, nurtured upon suspicion and revenge; here, we say, is a whole continent of men, "hundreds of thousands—yes, millions"—of them, turning their backs upon a heavenly kingdom which no more interests them and seeking a kingdom of heaven upon earth. This, surely, is a portent not without its significance, proving at least that there must be some kind of community of souls amongst men, above and beyond their miserable politics and creeds. Human brotherhood is then a fact in nature, as real as subterranean fire, and this, as we know, has a way of showing itself, a way disastrous to human speculation and contemptuous even of the rights of property.

But why does Mr. Vandervelde say that Europe is dechristianizing herself? Have not these people been taught to pray "thy kingdom come," and yet as soon as they begin to ask themselves with a terrifying unanimity when this thing is to be they are told that they are dechristianizing themselves? We should have supposed the contrary to be the case, and that the phenomenon of millions of people turning themselves with one accord toward such a quest as this contained possibilities of very many kinds not without interest and importance even to organized religion. It depends, of course, upon the point of view, and we are aware of many employments which have good reason to dread the sunrise. In the meantime, we shall watch with some interest the quickening of new hopes among these "hundreds of thousands—yes, millions"—whom hope of any kind has not thus far been a dominant life factor.

The Trend of Twentieth Century Science

True Science and True Religion Are Always in Concord

THE assumed antagonism between Science and Religion has still an attraction for brilliant writers upon both sides of the controversy.

The field of dispute is however growing narrower day by day with the slow dawn of recognition that both Science and Religion are but other names for truth, and that neither of them can by any possibility be in hostility to any ascertained fact whether it be about God or about material nature. Religionists of the best type have willingly admitted that a proved fact, of whatever nature it may be, must necessarily take its place as a part of the law of God and therefore of religion.

Scientists upon the other hand must and do admit—those among them at least who recognize their lofty calling—that there are realms of possible knowledge to which the laboratory can never admit them, and that there are secrets which the scalpel and the test tube can never disclose. It would now be quite easy to find religionists and scientists of the highest order who would search in vain for points of antagonism between their respective beliefs. It is only in the lower ranks that hostility can be found, among religionists who have no clear conception whatever of the meaning and purpose of science, and among scientists who are seeking for popularity and for sensationalism rather than for truth, and who are overinclined to assert that what they have not found does not and cannot exist.

It is indeed possible to find many men who in themselves worthily represent the worlds both of religion and of science. Such an one is Professor William North Rice whose book upon *Christian Faith in an Age of Science*, contains so many good things that it tempts to an unduly lengthy consideration. The author seems to infer that had the assaults upon science been less precipitate there would have been an opportunity to discover, what is now generally admitted, that the essentials of Christianity were entirely unaffected and that science had indeed done no small service to religion by displaying the wonders and the orderliness of the universe.

Upon the subject of prayer, Professor Rice has some peculiarly pungent remarks to make. He refers to the old-fashioned prayer which was "merely teasing," a form of prayer which we fear is perhaps not quite so out of date as the author supposes. He says:

If we believe in a God at all, we can believe in a God who is competent to manage the universe in gross and in detail.

And yet how numerous are those who profess a belief in an omnipotent and omniscient God, and who nevertheless assail that God with their selfish importunities and with their demands that the laws of the universe be set aside in order that they may personally profit thereby. Professor Rice well says:

If I could fancy that God was willing to abdicate the throne of the universe in my behalf, I would not accept the tremendous responsibility.

A very small amount of positive testimony has a value in excess of a very much larger amount of negative testimony. It is no small thing that a scientist of eminence should declare that he is unaware of any scientific fact whatever which militates against a belief in the God in man. No such fact will of course ever be known or can be known, and if all religion were but to base itself upon this unassailable truth it might with confidence stand ready to receive from the laboratories of science every ascertained fact and every proven theory.

STUDENT

Cancer and Its Lessons—Unregulated Desire the Cause

LITTLE by little, the essential nature of cancer is clearing up. It is now generally agreed that it does not owe its being to any special germs, though various germs may take up their abode there. In the building of a house, each brick takes the position that belongs to it in the architect's plan of the house. If one brick, after being duly laid, took to multiplying itself without regard to the plan, produced an increasing bulge on the wall inside and out, so that at last part of the excrescence fell outward leaving a hole that rendered a part of the roof

without support, and the rest fell inward on to the floor, crashing through that and the lower stones on to the ground, so that the house was ruined and even the unruly brick and its progeny smashed to bits—we should have a type of architectural cancer.

For such is the behavior of the cells that make up cancer. They riot and multiply and spread and steal food, altogether without regard to the rest of the body. And their mode of cell-multiplication is of a peculiar type, a type only followed among the mass of cells of the body, by that small group from one of which the whole body arises. They possess the same cell-energy in self-reproduction as that, but they are not of course subjected to the method by which in that case the lines of a fixed plan are presently stamped in to regulate the activities.

Cancer is in fact the physiological analogue—perhaps the result—of unregulated desire, desire which has no relation to real need. And to this we are of course all subject. If cancer be the result of this, as well as its mere parallel, then it will not disappear from humanity till we have learned self-control—or, still more important, till we have learned to rear our children in habits of self-control of appetite, temper and mood, till it is absolutely instinctive.

The Vacated Beds of the Moon—A Narrow Theory

PROFESSOR DARWIN, of Cambridge, is of opinion that the mighty pits which now contain the Atlantic and Pacific oceans once contained the moon. The "White Lady of the Sky" arose out of one or both of those beds not less than 50,000,000 years ago.

The maneuver was effected in this way. It was when the surface of the earth was molten lava, and the future oceans floated in her atmosphere as uncondensed gas. As she rotated, she flung off from opposite sides of her mass two great pieces, of which one or both became the moon. When she cooled yet further, water condensed in the pits, and thus came the two great oceans.

This theory can only have been reached by neglecting some results of the sciences of geology and zoology. For both point to the probability or certainty that at some time past both these ocean pits contained a continent and islands, sometimes referred to as Atlantis and Lemuria.

As to the moon herself, Professor Darwin thinks she has never been the scene of life, because of her lack of water and free oxygen. Here we have the usual assumption that there can be no other life than that which our earth-conditions permit. We require water and oxygen, but it does not follow that on other planets there may not be lives as highly organized as our own which can only flourish in carbonic acid or nitrogen or even incandescent metallic vapor. Even on this planet we know of certain bacterial lives which do not use free oxygen, or need light.

Notwithstanding her behavior, it may one day be surmised that the moon is older than the earth. Her condition certainly suggests it, and it may not always be considered a sufficient explanation that a small body cools more quickly than a larger one.

STUDENT

The Radiations of Flowers and Their Scientific Value

IT would seem that the universal instinct of civilized man to surround himself with flowers, has a scientific basis. In other words, flowers have a measurable electric effect on the body. A French scientist has found that the petals of several odoriferous flowers give off certain rays having the property of rendering non-conductors of electricity conductive. Ultra-violet light, X-rays, and the radiations of radium do the same thing, and their effects in causing and curing diseases of the skin is explained by their power of breaking down lines of electrical resistance. One naturally wonders whether skin diseases could not be equally effectively and far more poetically treated by the application of scented blossoms. It seems also possible that a part of the refreshment one experiences from the presence of flowers may be due to some infinitely subtle physiological harmony which the irradiations produce. May they not in this way harmonize us to Nature's harmony?

THE WHEAT

INFUSED with The Spark, my shell ---
 Pained with the mighty swell
 Of being, and life that woke ---
 Travailed: fibres broke.
 Green shoots slender,
 Powerful, though most tender,
 Pushed upward --- a crust gave way ---
 Earth opened --- and I saw day!

On the bare, brown land,
 In level, close-bound sheaves we stand;
 And this is the end,
 Till the fine, dry film from the blade's unfurled
 And we go forth,
 From East to West, from South to North,
 Bread --- for the world.

— From the "Song of the Wheat," by Marie Van Vorst

The Force of An Ideal

HOW little we appreciate the extent to which the whole nature, the physical as well as the mental, may be purified and perfected by persistently following a spiritual ideal! How little we understand what it means for us to saturate ourselves with a divine impulse! As the blood pulsates through the physical body, carrying health and vigor and capability to its confines, so also the spiritual forces should vibrate throughout the being, impressing upon each part of it, even upon the lowest, the stamp of an appropriate perfection. We say of some ailments that they are caused by imperfect circulation of the blood. Of these, and of all other human incapacities, we might well say that they are produced by an imperfect penetration of spiritual force. Somewhere a channel is atrophied or inefficient; perhaps all channels are inefficient.

The time will come when we shall recognize that every action will lack its possible perfection unless it be preceded by an invocation of a spiritual ideal, unless it be touched by the fire of an aspiration. The orator will not neglect to invite the force which only comes to him when he realizes that the glory of divinity rests upon the heads of those who hear him, and the musician will remember that all true music is a prayer, and that there can indeed be no other music than the reflection of spiritual harmony. The mechanic will know that he is denying to his hands their rightful and exquisite skill unless by a reverent thought he unites

them with some ideal which he has made the pole star of his life, and the writer will recognize that he labors in vain, unless by his side there stands the vision of humanity with its hopes and with its needs all too often unuttered and unheard.

All work is divine if it be at all worth the doing, whether it be the work of orator, or musician or mechanic. But we have ceased to do it divinely because we no longer offer it as a sacrifice to the inner ideal. Our usual sacrifice is to quite other and baser things, which have infected it with their nature and so destroyed the perfection of its beauty. When at last by pure motive and by pure thought we have opened the inner channels of our nature, when we have seen the vision of the Soul, then its divine force will strengthen and uplift the mind and every fiber and every nerve will vibrate to an even more splendid service. Then at last music will be reborn upon earth and art and oratory. Then at last the labor of our hands will express divine things.

Carreno and HALIR, in Paris by Pugno and Ysaye, and in London by Henry Bird and Sigmund Beel. At all these performances the work was well received by the public and won cordial words of approval from various European journals. These favorable mentions from foreign lands have also fallen to the piano pieces, the "Violin Romance," and many of the songs over which Italian audiences have been especially enthusiastic.

In 1898, Mrs. Beach was invited to compose the music for the Song of Welcome, written for the dedicatory exercises at the opening of the Trans-Mississippi Exposition, Omaha, Nebraska. It was successfully performed by a large chorus supported by a military band.

Two years after, she completed her piano-concerto and played it for the first time with the Boston Symphony Orchestra under the leadership of Mr. Wilhelm Gericke in April 1900. In 1902 Mrs. Beach was elected an honorary member of the Browning Society of Boston, in recognition of the musical setting which she had given to some of the master's poems. In the course of her musical life, she has had occasion to correspond with many poets whose words she has chosen for setting, and now she has an interesting collection of autograph letters bearing famous signatures. Among the poets who have shown especial interest in her musical work at various times, have been Mr. Longfellow, James Russell Lowell and Dr. Oliver Wendell Holmes.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Life's Battle

Know you not that our business here is a warfare? And one must watch, and one go out as a spy, and one must fight. All cannot be the same thing, nor would it be better if they were. But you neglect to do the bidding of the Commander, and complain when He hath laid somewhat rougher than common upon you; and you mark not what, so far as in you lies, you are making the army to become; so that, if all copy you, none will dig a trench, none will cast up a rampart, none will watch, none will run any risk, but each will appear worthless for warfare.—*Epictetus*

Had Him Fast

It was only recently, according to an exchange, that in St. Paul's Cathedral a London guide held forth thus to an American gentleman:

"That, sir, is the tomb of the greatest naval 'ero Europe or the 'ole world hever knew."

"Yes?"

"It is, sir, the tomb of Lord Nelson. The marble sarcophiggus weighs forty-two tons. Hinside that is a steel receptacle weighing twelve tons, and hinside that is a leaden casket, 'ermetically sealed, weighing two tons. Hinside that is a ma'ogany coffin 'olding the ashes of the great 'ero."

"Well," said the Yankee, after reflecting a moment, "I guess you've got him. If he ever gets out of that, telegraph me at my expense."

California's Splendid Possibilities

THE State of California, in its political and commercial life, already is coming to the front in connection with the Orient. To realize this, one must either have been in the Orient, or closely in touch with its real life. Bancroft, in his *New Pacific*, lately published, has to a degree grasped the forward life of this Golden State. The collection of ideas embodied in this volume are prophetic, verily an inspiration for those who believe that California has a great future. Mr. Bancroft has given strong proof of the State's possibilities, but there is a field here unexplored, undreamed of, which is destined to astonish the world. Mineral wealth alone forms the basis for the State's coming greatness. Southern California will be first recognized in this connection;

for in the bowels of Mother Earth lie untold treasures. Discoverers are at hand, and these will come as though led by the hand of Destiny.

Think what this will mean for the prosperity of America; for the millions of peoples who are now struggling for existence in crowded districts of our great cities! Industries are the building forces of the nations. Where there is industry, there is prosperity; where there is prosperity, there is happiness; where there is happiness, there is a hope for the realization of a more perfect life.

San Diego Lies Nearest the Orient

The commercial life of China and Japan are linked with America in a unique way. Their relationship in commerce with other nations does not prevent them from looking eastward to this Pacific Coast, with a hope born of the intuitive grasp they have of their countries' commercial future.

San Diego, so close to the Far East, has its place: the first and most accessible port on the Pacific Coast to the countries of the Yellow Man. And he, the Yellow Man, as the world now knows, has eyes to see and ears to hear, while other nations slumber in the egotism of security, doing his best and pushing on to create a larger life for himself, and a closer connection with America.

Those who have the welfare of California's permanent life at heart, must feel the impetus of this new energy coming toward us, and will naturally see the necessity of grasping opportunities and now meeting it. How easy it would be to make San Diego the most beautiful city in America! Its picturesque location and commanding view of sea and mountain; its magnificent land-locked bay; its climate, the most perfect in the world; America's nearest point to the Orient; and the approaching time when the sandy wastes of the back country shall be covered with flourishing towns and cities, and acres of forest and floral life in full. Behold the picture of what it is, and a glimpse of what it shall become!

International Center of the Young Life

Southern California holds no small position in educational life. On the heights of San Diego stands the State Normal School, while the public schools in this city rank with any in the country. One of the greatest features in stability and promise for the best interests of the State is the Point Loma Raja Yoga School, an international center of young life. In this Institution are being trained young folk by a new system; new to us, but old as the ages. This system affords most unique ways for the upbuilding of noble manhood and womanhood; and is prophetic of newer and more just politics; of kinder and more humane laws; and of a more honest and promising commercial life. To build for the prosperity and commercial supremacy of our State, the intellectual and spiritual life must be accentuated. These are the refining and uplifting factors in human life. Without these the moral vitality would be lacking; right principles would be perverted.

KATHERINE TINGLEY

Religion of Unselfishness

THE Rev. R. S. Campbell has united his testimony to that of others in declaring that there is a waning of interest in a future life, and an increase of interest in the present life. He says that conventional religious sanctions are disappearing, and that in their place is appearing an unselfish communal enthusiasm. We should like to hear Mr. Campbell use plainer language and better understood by the multitude. We should like to hear him say that creeds are dying and that fraternity is very much alive, for this is actually the meaning of his words. We should also like to hear him say, as a minister of Christ, that this is as it should be, and that the Kingdom of Heaven can come in no other way, nor can men in any other way go to the Kingdom of Heaven. Certain it is that there can be no Kingdom of Heaven hereafter except for those who have helped to bring it to pass upon earth.

Mr. Campbell says also that human life is becoming increasingly secular. The word is an unfortunate one and ought to disappear. If by secular we mean something unreligious, then we assert that an "unselfish communal enthusiasm," that is to say fraternity, is eminently religious, and is indeed the only kind of religion for practical men. Wherever there is unselfishness, there is also divinity. We have had too much of the pernicious assumption that ethics may or may not accompany religion. We even hear it said that children should be taught a "definite religion" and not "mere morality."

STUDENT

A Chattering World

VERILY is ours a civilization of babble. We talk and talk forever upon everything, and then complain that we have no nerve energy. Building, whether of continents or brain cells, is done in silence, and there is no silence anywhere in town or country. We cannot even have silence with ourselves; the chatter of mind is then even more insistent than that of tongue. A newspaper is a picture of our minds, a welter of shrieking nothings. We are the very incompetents of the ages.

It is an age of doubt. Why should it not be? We cannot hold our minds still long enough to know anything, cannot hold any thought steady enough to sink it down on to truth. When shall we learn that truth does not arise from the mind, does not originate there, but enters like rays of light in the momentary pauses of chatter? Only in mental silence can the soul speak.

Our bodies are prematurely worn out by the ceaseless rattle of mind. Brain cells give way; we have no memories. We are universally victims of neurasthenia, insomnia, headache, and in front of us is always the abyss of drug taking.

All our ways and behavior show our servitude to our incompetent but dominant minds. We walk hurriedly, uncertainly. We surround ourselves with an ever increasing perplexity and profuseness of possessions, the suggestions of ceaselessly acting minds over which we have utterly lost control. Our food must have a hundred flavors, and we need ten dishes where one would suffice. Dress becomes more complex, and its fashion changes weekly. We read in our magazines and newspapers of all things on earth, understand nothing thoroughly and remember nothing. We found clubs and join associations with absurd objects. We patronize and invent a thousand time-saving devices, and do nothing with the time saved. We rush upon schemes to make money, and do not know what to do with it when it is made.

In a word, it is an insane civilization. It is a civilization that has lost control of mind; and mind uncontrolled, mind dominating, is mind insane. Judgment and will are not of the mind; they have a higher source.

We must teach our children silence—if we are too far gone to learn it ourselves. They at least can be led to understand that real truth comes into mind listening to its own central voice, not into mind chattering with itself, making plans, throwing up the debris of memories, or racing forward along the blind paths of anticipation. They can learn from the silence the forgotten art of holding the mind upon what they will, holding it till it sees, till it unfolds all the implications and connections of that on which it is placed; of making it an instrument of understanding, a lens, a mirror, instead of a screen with a thousand changeful and delusive iridescences of its own. Thus they can know where we fitfully hope, be assured where we doubt, and drink spiritual life in the waters of the silence that to us is nothing.

STUDENT

Never Plead "No Time"

EXPANSION means life and growth; contraction means decay and death. We are constantly being urged to expand and enlarge, to avoid rigid plans which limit and circumscribe our possibilities, and to strike boldly forward on new lines.

Let no one shrink from a call to new work on the plea of having "no time." Time is elastic; the more you put into it, the more it will hold. There is always room for one more occupation, one more interest. The world's great workers have always found it so.

The more you put into your life, the more it will expand. But alas for the fearsome one who refuses claims and calls because "he has not time." His life will be elastic too, but of the shrinking kind. He will have to keep dropping out occupation after occupation, until he is able to do scarcely anything.

A new occupation may merely fill up time that before was wasted in idleness or sleep. It may quicken the general energies and thus enable the other work to be accomplished in less time. Another point is that an active man breeds activity in all around him, so that others, before idle, will bestir themselves and take on any work that he may have been obliged to drop. In all ways it works out so that he who boldly undertakes *makes* time for his undertakings, while he who refrains finds himself with scarcely time enough to eat, drink and sleep.

X.

Two Hundred Years of Progress

A CONTEMPORARY draws attention to the fact that two centuries have now elapsed since the establishment of the first American newspaper. We are, of course, invited to hold our breath in speechless awe at the progress which has been made in these two hundred years. We are reminded that when the *Boston News Letter* was first issued, "popular education, freedom of speech, religious toleration and government by the people were unknown;" that only members of the established churches could hold office; that "it was a criminal act for any person to ride, or children to play, on Sunday; men and women were obliged to confess before congregations, and any one who did not attend church could be fined, according to law."

We are, moreover, asked to remember that half a century before this "ears had been cut off, noses slit, tongues bored, faces branded, Quaker women whipped, and men banished for words spoken or opinions held. Moreover, twelve years had elapsed since the last of the witches died at Salem."

It is, of course, easy to draw comparisons between one period and another in such a manner as to procure any desired verdict. Special pleading is not confined to the law courts and self-admiration is an eloquent and persuasive advocate. It is, however, sufficient to note that certain abuses which once existed no longer exist, without using such facts as a yard-stick with which to measure our progress. Flattery has no reputation for accuracy and self-flattery least of all. If we must form estimates of our progress we should aim at net results, and to obtain these we must estimate retrogression as well as advance. We can well imagine that if the first editor of the *Boston News Letter* were now to visit the scene of his labors, he might be a little reluctant to join in the Twentieth-century chorus of self-congratulation. He would doubtless rejoice that the crude and brutal forms of persecution of his own day had disappeared, but he would not fail to note that a more insidious intolerance had taken their place, and that a vast machine of extra legal persecution was doing the work of the Salem torturers as remorselessly and as effectually as of old. He would find vivisection established and approved, and he would find a large section of the press inciting and ministering to an ingenious depravity to which he would now be introduced for the first time. He would no doubt draw our attention to the increase of insanity which is turning our great cities into lunatic asylums, and he would pay a horrified visit to our slums in search of the progress of which he had heard so much. What would be his verdict? Would he imitate the fervor with which we fall down and worship the Twentieth century, would his praise of our present civilization be quite so ecstatic as is our own? Or would he be filled with consternation at the evils which had been born since he edited the *Boston News Letter* two hundred years ago, at the magnitude to which those evils had grown, and at the almost unanimous indifference with which we view them?

STUDENT

Insanity Statistics

THE statistics of insanity in this country afford a striking indictment of city life. They can be found in the official report of the Government Hospital for the Insane at Washington. Throughout the States, the proportion of insanity "is highest where there is greatest congestion of population." From which the deduction is drawn that a quiet country life is a specific against some forms of insanity. For this reason the proportion of mental disease among North American Indians is very low, even after they take on our civilized vices. Among Negroes, so long as they remain in the country, there is 1 insane to every 1764. In New York the figures rise to 1 in 330, which is the same as among the city-dwelling whites. Think of it, 1 person in 330 definitely and registrably insane! Around these stand about five times as many who are moving on towards insanity; and, say, an equal number again who have marked mental twists that do not amount to insanity.

Indisputable Evidences of the Antiquity of Civilization

SO far as the question of time is concerned, it deserves notice that not merely geology, but almost every form of inquiry into the past, throws further back the limits usually assigned. Egypt, for instance, is continually furnishing fresh proofs of the antiquity of civilization. Professor Flinders Petrie expounded at Owens College, Manchester, England, a few days ago, the results of recent explorations at Abydos, in Upper Egypt, from which it appears that the ruins at that one spot tell a continuous story that carries us back to 5000 B. C.

Abydos was the first capital of Egypt, and remained for forty-five centuries the religious center, the Canterbury of the land, and there the Egyptian Exploration Fund has unearthed the remains of "ten successive temples one over the other." From the age of the first temple a group of about two hundred objects has been found, which throw surprising light on the civilization of the First Dynasty. A part of a large glazed pottery vase of Mena, the first king of the First Dynasty, about 4700 B. C., showed "that even then they were making glaze on a considerable scale, and also inlaying it with a second color. The ivory carving was astonishingly fine, a figure of a king showing a subtlety and power of expression as good as any work of later ages." At about 4000 B. C., an ivory statuette of Cheops, the builder of the great pyramid, was found, the only portrait known of him. Making every possible allowance for the marvelous rapidity of art development, must not many thousands of years have rolled over between the pristine dwellers in the Nile valley and the men who carved ivory statuettes and manufactured glazed work inlaid with second colors? It is a long, long march from flint implements to the solemn temple, ivory statuettes and human portraits.—*Daily Telegraph*

Discoveries in Honduras—Is There a Buried City?

AT a meeting of the Royal Archeological Institute a paper by Dr. T. Gann on "Prehistoric Ruins in British Honduras" was read.

The ruins described were discovered in the bush. Two platforms supported mounds on which temples previously stood. A terraced platform, 300 yards in length by 70 yards in breadth, and varying from 6 to 20 feet in height, supported a second platform 100 yards long and running the length of the main platform. Both were faced with stone.

Upon the top platform stood six mounds, the largest being 37 yards square and 33 feet high. All were covered with exquisitely squared blocks of hard crystallized limestone. Excavations revealed quantities of bricks, made for the purpose of filling up the centers of the mounds.

The structure showed that an enormous population once dwelt in the now desolate bush. Hundreds of men, working years, must have been required to square and lay the stones, to say nothing of the labor of quarrying them. When it was remembered that the stones were quarried and exquisitely chipped with flint instruments, the immense labor involved was evident. Judging by what was known of similar structures, Dr. Gann thought these buildings must have been used for religious purposes. Probably the terraces were used for processions. He thought it possible a ruined city would be found near by.

To Protect the Cliff Dwellings of America

THE proceedings of the Senate have been adorned by the passage of a bill authorizing the Secretary of the Interior to take steps for the preservation of the cliff dwellings and other prehistoric ruins in Colorado and other States. Judging from the tardiness of this measure, one would suppose it to have been among the most fiercely contested of bills. It seems, however, to have passed without particular comment or opposition, and it is perhaps but another illustration of the things which are left undone because no one was sufficiently interested to do them. We have, of course, yet to see of what the "steps" will consist. Let us hope that they will be prompt and efficacious. The cliff dwellings of Colorado have already been sufficiently despoiled and desecrated by those who would cheerfully carry away the State of Colorado itself if there were any effective way to do it.

STUDENT

An Altar Dedicated to Marcus Curtius at Rome

THE modern historian who tries to be above all things accurate and succeeds in being dull, is particularly fond of scoring out the most picturesque incidents related by ancient narrators and declaring them legendary. Once—says a "legend"—a chasm suddenly opened in the Roman forum. The affrighted citizens consulted the oracle, and the soothsayers declared that the gulf could only be filled by the pouring into it of the chief possession of the people. There was much discussion. Was it money that was meant by the god? Jewels? Arms? Suddenly a noble youth, Marcus Curtius, fully armed, appeared in the forum on horseback, rode to the edge of the chasm and leaped in. It was the youth and bravery of Rome that made her chief possession, and the pit closed.

This would never do. It was far too picturesque and interesting to be true, and it was accordingly relegated to the foot-notes as a legend. For all we know, it may be a solar myth by this time. It is some years since we bought a Roman history.

But it turns out to be true. That untiring archeologist, Giacomo Boni, excavating in the forum, has not only found the chasm, but an altar dedicated to Marcus Curtius. The mouth marking the place of the chasm is formed by twelve large sculptured stones; and near the altar is a hole which held the sacrifices made by the grateful people to their deliverer. After this perhaps Romulus and Remus may be permitted to have existed.

STUDENT

The Temple and Chambers Under the Sphinx of Egypt

THE American archeologist, Colonel Ram, has been carrying out some important excavations in the neighborhood of the Sphinx, and the discoveries which have been announced have certainly a very great interest. The temples and chambers surrounding the base have been uncovered together with many tombs of the priests engaged therein. A stone cap bearing the sacred asp upon the forehead, has also been brought to light, and it is plausibly suggested that this cap once covered the head of the sphinx.

A minute examination of the statue itself shows that while the body and head are cut from the solid rock, a good deal of masonry has been employed in the composition in order to give a more perfect finish to the outline and to make good certain defects in the rock material. These additions were, of course, originally invisible as there is very good reason to believe that the whole surface was once enameled and the cap probably gilded. Faint traces of enamel are still to be found adhering to the stone, and if these suppositions are correct the Sphinx must have had an even more impressive and tremendous appearance than it has today, after the vicissitudes of so many thousand years.

Fine Specimen of Mastodon Found in the Yukon District

A DISPATCH to the *Post-Intelligencer* of Seattle says the complete form of a mastodon has been discovered at Hillside, on Quartz Creek, Dawson, Y. T. It was imbedded thirty feet in the earth when found, and the use of a steam thawing plant was necessary to unearth the immense animal. The hair and the skin of the beast are in a perfect state of preservation, although the flesh is somewhat decomposed, and the big tusks which remain fastened to the skull are in good condition. The mastodon was discovered buried in an old channel, well in the zone of almost perpetual frost, which accounts for its excellent preservation.

"SVEN HEDIN has furnished additional evidence of the Chinese invention of paper," says the *Scientific American*. "On his recent journeys he found Chinese paper that dates back to the second half of the Third century after Christ. This lay buried in the sand of the Gobi desert near the former northern shore of the Lop Nor sea, where, in the ruins of a city and in the remnants of one of the oldest houses, he discovered a goodly lot of manuscripts, many of paper, covered with Chinese script, preserved for some 1,650 years.

Art Music Literature and the Drama

Richard Strauss, the Monarch of Modern Music

RICHARD STRAUSS, the most noted modern composer, has just brought his three-months' visit to the United States to a close. He appeared as conductor in thirty-two concerts in twenty cities, where he was honored and fêted as have been no other of our contemporary musical geniuses. He was the guest of Senator Elkins in Washington, and made the acquaintance of many of our most important public men. The President and Mrs. Roosevelt and Baron von Sternberg were among those who had the pleasure of receiving Mr. and Mrs. Strauss. The great composer said many complimentary things about America before sailing, and from his manner it was evident that he was sincere in his utterances. Richard Strauss is too reserved and too honest, both with himself and with others, to flatter obligingly where the truth would be better or silence more considerate.

As conductor, this genius of the new century is recognized as possessing great magnetic powers; of few but telling gestures, he exercises spontaneous influence over his orchestra when passion and enthusiasm break through the barriers of usual reserve. He so controls his players that he achieves untried effects on the spur of the moment and communicates his individuality to a hushed and almost breathless audience. As an interpreter of the music of Richard Wagner, he has come among his contemporaries as one with a new and rare message, while his creative versatility as composer is so enormous that, though but forty years of age, his *opus* register has passed the mark of four hundred, mostly large works.

It is much to the credit and speaks resonantly for the intelligence and progressiveness of the musical contingent in America that we have so readily acknowledged an advance messenger of the art of music while yet he is among the living.

E. A. N.

A NEW departure which borders very close to the realm of the romantic is being made in the transformation of a Cambridge, Massachusetts, theatre, into a typical Elizabethan playhouse. The word "Elizabethan" brings to our mind a few "strips of scenery," the roughest of wooden benches, the bare floor of the "groundlings" and no roof at all. But this theatre is to be more than historically probable; it is to be historically accurate, one of the Harvard professors having discovered, in the unearthing of old theatre contracts of the Elizabethan age, one which contained a drawing in detail of the Old Swan Theatre of Elizabethan England. Rising over the stage will be a small hut-like structure, from which, as in the old days, the trumpeter will announce the beginning of the play. Flanking the stage are the "roomes" or boxes on one side for the orchestra and on the other for "gentlemen to sitt in." The "hut" over the stage will be a real affair and not a mere painted reproduction, and the whole is to bring back as nearly as may be the spirit as well as the letter of the old Elizabethan days. The first drama to be presented is *Hamlet*.

WHEN Thorwaldsen, the great sculptor, was asked in his old age which he considered his best work, he replied, "My next." Methinks there is a lesson in his attitude of mind.

Wagner's Prophetic Vision Concerning the Future of Art

RICHARD WAGNER maintains that the destiny of art is to become a means for the portrayal, through the drama, of the soul-life of humanity—that it is for this high purpose, and for this alone, that art exists. This master also holds that the different branches of art (under the same law which governs mankind) only find their true path when united in comradeship; thus the arts of music, painting, dancing, etc., each first attains freedom and scope for the fullest expression of its own intrinsic strength and beauty, when unitedly dedicated to the sublime purpose of the drama.

After speaking of the glorious art of ancient Greece, the "great united utterance of the religion of a free and lovely common life," and which "reached its zenith in the tragedy," Wagner continues: "We have to turn Hellenic art to human art; to loose it from the stipulations by which it was but an Hellenic and not a universal art. The garment of religion . . . we have to stretch out until its folds embrace the religion of the future, the religion of *universal manhood*. (*Prose Works, Vol. 1, p. 90*)

"Only the great revolution of mankind can win for us this art-work. Only on the shoulders of this great social movement (known by us today as the Universal Brotherhood Movement) can true art lift itself from its present state of civilized barbarism and take its post of honor." (*Prose Works, Vol. 1, p. 56*)

"Art is not an artificial product, but the inbred craving of the natural, genuine and uncorrupted man" (*Ibid p. 89*); neither is art born of the "lonely spirit," but rather is it the song of a people whose heart is a wellspring of joy, the fruit of loving deeds; for "the art work of the future is an associate work," (*Ibid p. 196*) and "fellowship its foundation and first condition."

And the artist of the future, Wagner describes as one who wills the universal, true and unconditional, who yields himself not to this or that particular object, but to wide love itself. "Thus does the unit become all, the man God, the art verily art." (*Ibid p. 94*)

"Heart to heart ye mortal millions! This one kiss to all the world! And this word will be the language of the art work of the future." (*Ibid p. 126*)

RICHARD STRAUSS

WAS ever work like mine created for no purpose? Am I a miserable egotist, possessed of stupid vanity? It matters not, but of this I feel positive: yes, as positive as that I live, and that is, my "Tristan and Isolde," with which I am now consumed, does not find its equal in the world's library of music. Oh, how I yearn to hear it; I am feverish; I am worn. Perhaps that causes me to be agitated and anxious, but my "Tristan" has been finished now these three years and has not been heard. When I think of this I wonder whether it will be with this as with "Lohengrin," which now is thirteen years old, and is still dead to me. But the clouds seem breaking, they are breaking—I am going to Vienna soon. There they are going to give me a surprise. It is supposed to be kept a secret from me, but a friend has informed me that they are going to bring out "Lohengrin."—Richard Wagner, in a letter to Praeger

IN an article recently contributed by Adelina Patti to the *Independent*, the diva said:

The most familiar question I hear today from women who are interested in my singing, or who have daughters of whose voices they are proud, is, "Madame Patti, how high do you sing?" As if the altitude of the note that could be reached were the be all and end all in the art of music; as if the human voice, which comes from the living throat, were the product of some machine, whose limit need only be the infinite number of vibrations at which sound becomes inaudible to the human ear. I never sing higher than D; throughout this tour, the highest note I have habitually sung is C. Because of my moderation—because of my moderation alone—I have been able to preserve in all its fulness and its roundness the middle register, which is the bone and sinew, the heart and the very soul, of the singer's artistic power. So many wrecks I have seen, so many promises of grandeur unfulfilled, so many realizations of grandeur miserably abandoned. And all because the singers were eager to be misled by the popular cry for something over which the public shall wonder instead of the true things of the singer's art, through which it shall feel and thrill and live.

WOMAN'S WORK

WE WILL NOT ADMIT THAT THE PEOPLE OF TODAY ARE INCAPABLE OF COMPREHENDING WOMEN,
WHEN WOMEN ALONE CAN REGENERATE THEM

—Hindu Scriptures

A Woman's Heroism

DAILY are recorded heroic deeds of men and women which show such utter forgetfulness of self, in times of danger to others, that one feels a steady faith in the real virtue of humanity. Forgetfulness of self to the extent of risking one's life to save that of another surely springs from the higher womanhood or manhood in us.

Woman frequently astonishes us by her bravery and unselfishness in critical moments, especially when danger threatens those whom she loves; but when that effort is directed towards rescuing the life of an entire stranger, heroism is revealed. Such an act of heroism recently occurred in New York city, when one woman saved the life of another at great personal risk, and then quietly disappeared in the crowd before her name or whereabouts could be ascertained.

The sister of the one rescued said, "There can be no doubt that my sister would have been killed or very seriously injured if it had not been for this brave woman's act. We can never thank her enough for what she has done."

The woman's daring act was to spring from a vehicle and catch the bridle of a runaway horse from which the rider hung head downwards, her skirt having caught on the pommel of her side-saddle. The rescue was remarkable from the fact that the terrified horse, galloping rapidly in his fright, had passed a number of men, none of whom had collected sufficient nerve to catch the horse.

This one woman, never thinking of her own danger, realizing the imminent peril of the other woman, rushed fearlessly to the rescue, and—a life was saved. Think what might have been the consequences had this woman allowed fear to enter her heart at the critical moment.

Just one such brave deed gives all women inspiration to do more, dare more and suffer more, if need be, for the benefit of others.

Quite similar in character was the noble act of a New York policeman recently, who seized the bridle of a big runaway horse as he was dashing through a crowded street filled with children who were just dismissed from school. The brave man was dragged for a block and a half and was injured, though not seriously, but he saved the lives of all those children, though his own life was in momentary danger.

Is it not the divine unity which links together all the members of the human race, that compels men and women to do deeds such as they had not dreamed they could ever do? At trying moments of peril the soul realizes more keenly than ordinarily, that the suffering of one is the suffering of all, that the happiness of one is the happiness of all. Then the soul which knows no fear takes command, and the body becomes what it really should be, a plastic instrument governed by the higher power for good which is in each and all.

E. C. S.

THAT the Queen of Holland's visit to Italy may revive much her impaired health and spirits is the sincere wish of all who remember her, but a few years back, as the youngest and most vivacious of European royalties. But the cares that hedge a throne have already left their mark on Queen Wilhelmina's once bright face, and though she has gained much in regal dignity and grace, she looks prematurely aged.—*Selected*

A WELL-KNOWN New York clergyman is now telling us that "the woman of today smokes, swears, gambles and drinks." Cannot some one introduce this clergyman into reputable society?

The New China

H. P. BLAVATSKY wrote in 1889, "Japan is taking its place in the new order of things. China will soon do so." In New York there has recently been founded a society for the advancement of Chinese women. They have founded it themselves and are carrying on its various departments of work without help. What will be accomplished in the matter of revolutionizing the customs of centuries it is difficult to predict.

It is well known that Madame Wu Ting Fang, the wife of the famous minister, has carried back ideas to her own land that have made a strong impress upon the minds of her countrywomen. It is significant just now that the wife of the vice-imperial commissioner to the Louisiana Purchase Exposition is Mrs. Wong Ku Kah, the first woman from the Kiang Su province to visit our shores. She is intensely interested in all that pertains to the advancement of women, particularly the women of China. She is a member of one of the aristocratic families of China, and that means, of course, bound feet; but she says, with considerable firmness, "Not one of my daughters' feet shall be bound. There is no reason in a woman being so helpless. My own were made small when I had nothing to say about the matter. But the custom is worse than absurd, it is harmful." She is studying the subject of education with the keenest interest, and is particularly interested in the way our young women are taking up different professions and different lines of business.

"How I wish all the women of my province," she said, "could come here and see for themselves." Her husband is a Yale graduate, and his views on the woman question are very far advanced. In all matters concerning the education of children and the advancement of women he supports his wife's views very strongly.

Dr. Yamei Kin is another woman who has broken the bounds that hedge in members of the aristocracy of her native land. She has received in this country a thorough education, both in belles-lettres and medicine. "When I can afford to," she says, "I shall return to my native country and help the women of China. They have much more power than is generally believed, but now it must all be exerted through their husbands. The time is near, however, when they will become aware of their own possibilities, and will exert the power they have more directly and I prophesy that the world will be surprised at the new China."

STUDENT

MRS. FANNY BLOOMFIELD ZEISLER, who is undoubtedly one of the greatest living women pianists, recently expressed herself upon a subject quite other than musical, the old, old subject of "woman's sphere." Among other things she said: "The business or professional woman can minister to the needs of her children with that rare and wiser love that a woman feels after she has rubbed shoulders with the outer world. The woman who has learned to appreciate the blessings of the family hearth is vastly more competent to raise children to be useful to the state than is the woman who comes home from a dance early in the morning, sleeps until noon, goes to the theatre in the evening, and the next morning, may be, asks her maid if the children are still in school."

MISS GIBSON, a young woman who has graduated from the Massachusetts Institute of Technology, has entered into partnership with her father in Indianapolis. Both are architects.

Selma Lagertop

SELMA LAGERTOP is one of the most celebrated authors in Sweden, her fame, because of her writings, which are translated into five or six foreign languages, extending throughout Europe. Her style is original and forceful, her tales being told with that simplicity which is the highest art and ever the hall-mark of genius.

The story of Selma Lagertop's own life is very simple, in fact, pathetically so. Her father was a retired army man, and the young girl grew up in a simple rural home surrounded by much that was imposing and beautiful in nature. Both friends and environment conspired to give her mind a serious turn.

One characteristic of the province in which she lived was its wealth of weird fantastic legends. These the young girl breathed in, so to speak, with her native air, and they fed the glowing imagination which later forced her to write. Adverse circumstances, however, placed apparently insurmountable obstacles in the way of a literary life. As she herself has said, "The tale which desired to be told had almost given up knocking at my mind, importuning me with its whispers." At last the opportunity came when a friend procured for her a year's vacation from the school work which was wearing out her life, and during that year, "The happiest in my life," she says, her first book was written. It is a series of legends, tales and stories, and when published, it proved to be the greatest literary success. Since then she has written many books, though still the same quiet unassuming woman as in the days when she was teaching school, and longing for the time and the opportunity to put her thoughts upon paper. Disliking the society life of the great cities, she lives with her widowed mother in Delarna, a secluded and interesting place where she can write undisturbed. The only relaxation she allows herself is travel.

SELMA LAGERTOP
Sweden's Famous Authoress

Delarna, Sweden

NORTH from Stockholm, some five or six hours ride by train, is Delarna, literally "The Valleys," one of the most picturesque and interesting provinces in Sweden, inhabited by sturdy, honest, laborious land-owners and peasants who dwell in little, low-roofed cottages, living contentedly and quietly the same simple and natural life that their ancestors have lived for always and always. They are quite *sui generis*, having nothing in common with the other peasant communities of Sweden, their language, customs, manner of life all being quite unique. The province contains about fifty parishes, each with its own church and rectory, and the parishioners of one never mingle with those of another, and almost never intermarry. Curious as it may seem, they even speak and dress differently, understanding each other, however, although their own dialects are not understood by any other community in Sweden. They are probably offshoots from the old Scandinavian or Icelandic tongue. The clothing of both men and women is for the most part home-made, Sunday or holiday garments generally lasting a whole generation, often being passed as an inheritance from father to son or from mother to daughter. In some of the remoter parishes the women's dresses are particularly beautiful, being elaborately embroidered, the white linen chemise with its long sleeves being adorned with fine home-made lace of an ancient pattern.

Delarna has magnificent scenery, high mountain ranges, deep, wide forests, clear navigable streams, thrifty valleys and prosperous villages clustered here and there. One of the provinces boasts of a large beautiful lake of unusual clearness, called poetically "Delarna's Eye." E. H.

A WRITER who has spent many years in Japan tells us that the idea of the inferiority of women in that land is not nearly so marked as in England. Many of the industries of the country are carried on by women.

About Mothers

AND now Marie Corelli has told the mothers of England that they do not—some of them, at least—know how to bring up their babies! The newspapers are wildly criticizing her, and the mothers (so they say) are up in arms,—but as I read her account of the way in which a certain defenceless little baby, who was perfectly happy before its parents began to pull it about, at last expressed its opinion of this management by screaming, and as I recall the number of similar instances I myself have seen, I find it a little difficult to join in the general hue and cry that Miss Corelli is all wrong and that every mother is just exactly right! "When we think of the physical mistreatment that babies go through in the way of dress, and the mental torture they must endure when they observe how hopelessly they are misunderstood, can we wonder at the look of age and care that settles so early on their infant brows?"

Marie Corelli may have gone to extremes. Not having read her book, it is impossible for us to say that she has not. But the only reason that we, as a nation, are not alive to the fact that the average child is so often misunderstood by its parents, is because the condition is so common that our senses are dulled to its significance. It goes without argument that a child's character is made for good or for ill during the first seven years of its life. These years are spent under the care—almost without exception—of its mother or foster-mother.

If this care is what it should be, and if children, as a rule, are *neither neglected nor misunderstood*, then how is it possible to account for the conditions existing in the world, the immorality, the wickedness, mental and moral, the insanity, the criminality, the fanaticism and the selfishness? Katherine Tingley sounded a very warlike call when she said once to her students, "We need not look for other worlds to conquer when this world is full of neglected and misunderstood children." Mothers need not to love more, but to love more wisely. They need to learn to discriminate between the higher and lower tendencies in their children's nature, and, in fact, *to learn what child-nature is*. They need more compassion and less mistaken over-consciousness. To hold that there is no need of criticism is absurd, for every condition that we meet proves that position false.

STUDENT

Woman's Great Work

THEY say women have one great and noble work left them, and they do it ill. That is true; they do it execrably. It is the work that demands the broadest culture and they have not even the narrowest. The lawyer may see no deeper than his law books, and the chemist see no further than the windows of his laboratory, and they may do their work well. But the woman who does woman's work needs a many-sided, multiform culture; the heights and depths of human life must not be beyond the reach of her vision; she must have knowledge of men and things in many states, a wide catholicity of sympathy, the strength that springs from knowledge, and the magnanimity that springs from strength. *We* bear the world, and *we* make it. The souls of little children are marvelously delicate and tender things, and keep forever the shadow that first falls on them, and that is the mothers' or at best a woman's. There was never a great man who had not a great mother—it is hardly an exaggeration. The first six years of our life make us; all that is added later is veneer; and yet some say, if a woman can cook a dinner or dress herself she has culture enough. The mightiest and noblest of human work is given to us, and we do it ill. And yet, thank God, we have this work. It is the one window through which we see into the great world of earnest labor. The meanest girl who dances and dresses becomes something higher when her children look up into her face and ask her questions. It is the only education we have and which they cannot take from us.—*Olive Shreiner*

France and the Rights of Man

From an Address Delivered in Aryan Memorial Temple by the International Representative of The Universal Brotherhood

Were half the power that fills the world with terror,
 Were half the wealth bestowed on camps and courts,
 Given to redeem the human mind from error,
 There were no need of arsenals or forts.

THE old fires of the Revolution are still smoldering in France. Pools of human blood, and scores of human victims, offered to that modern Moloch of human Justice (!) the legal taking of life, have not yet obliterated, and never will, the memory of how these fires flamed up so fiercely; so fiercely, indeed, that men lost their heads under the stress and travail of the time, and worshiped not Freedom but Tyranny. The fires died down a little; leapt heavenward again, and again died down for a time; again and again in the years following did they scorch and sear the national conscience, but in spite of it all, the saving power of common sense outlined a way for their passage, even unto this day. It has been a struggle between the eternal and inalienable Rights of Man with the Unrights of Human Egotism and Human Bigotry. History offers us no grander demonstration, nor ever one on so magnificent a scale of the working of a Law in Nature towards the enfranchisement of the Human Mind from (un)natural bonds, than that of a country aflame with a new spiritual conception of life, and of the Destiny of Man, as France was in those days. This spiritual idea was the declaration of the UNIVERSAL RIGHT OF CONSCIENCE, unshackled by dogma or law; by prejudice or misconception; by misconduct or by righteousness. Loyalty or disloyalty in act, to this positive and perfect right of Man, was considered as an indifferent thing, for it was the *principle of mental freedom*, which held the soul of the people. According to one of the most illumined minds of the epoch, it was construed that neither tolerance nor intolerance were justifiable attitudes to take in regard to this superior Natural Law of Right, for, says this same brilliant mind:

The French Constitution hath abolished or renounced Toleration and Intolerance also, and hath established Universal Right of Conscience.

Toleration is not the opposite of Intolerance, but is the counterfeit of it. Both are despotisms. The one assumes the right to itself of withholding Liberty of Conscience, and the other of granting it. The one is the Pope armed with fire and fagot, and the other is the Pope selling or granting indulgences. The former is church and state, and the latter is church and traffic. (*Thomas Paine*)

Has a fiercer challenge ever been recorded in known time, than this, cast by the Soul of Man at the feet of his lower self? It was no child of an invirile and flabby brain, dazed with over-much of other men's thoughts; it was no offspring of the demons of selfishness and sensuality, borne from the womb of the nether place.

The fires flaming so, then, that their roar and blast shook Thrones, Empires and Principalities, was, is, and will be forever known and recognized as Revolt; Revolt of the indwelling God in man, which, rising in fire from a trance of ages, shook itself with a shout that startled the earth, and clad in vesture of light, took its seat among the Councillors of Life as a Son of the Morning-tide.

The Rights of Man, covered at the time, a reserve ecclesiastical. It meted out justice to all with unfailing hand, and with unerring knowledge. Such was the conception of it as a collection of principles to guide and direct human relations; but, unfortunately, Destiny had it otherwise. Spite the rare quality in the men who gathered together so strangely at this critical time in the world's history; spite the blood shed for an idea; spite the first quaffing at the chalice of Divine Human Right; Nature, in her inscrutable decrees, willed it otherwise, and the pendulum of change swung back again, nearly as far back as the place whence it had issued.

The fires of the Revolution are still smoldering in France.

Here is the latest proof to that effect. It is a telegram from Paris, stating that the Minister of Justice has ordered the Declaration of the Rights of Man to be posted in the Courts and schoolrooms throughout the Republic. No explanation of the Ministerial order is given; it is interesting, very, in that this glorious defiance of narrow ecclesiasticism, takes the place formerly consecrated to religious emblems and texts. The Assemblée Nationale of France, in 1790, passed this instrument, containing seventeen clauses, of which a few, the principal ones, are here enumerated:

I. Men are born, and always continue, free and equal in respect of their

rights. Civil distinctions, therefore, can be founded only on public utility.

II. The end of all political associations is the preservation of the natural and imprescriptible rights of man; and these rights are liberty, property, security, and resistance of oppression.

III. The nation is essentially the source of all sovereignty; nor can any INDIVIDUAL, or any BODY OF MEN, be entitled to any authority which is not expressly derived from it.

IV. Political Liberty consists in the power of doing whatever does not injure another. The exercise of the natural rights of every man, has no other limit than those which are necessary to secure to every *other* man the free exercise of the same rights; and these limits are determinable only by the law.

V. The law should prohibit only actions hurtful to society. What is not prohibited by the law should not be hindered; nor should any one be compelled to that which the law does not require.

VI. (This states that the law must be equal for all.)

IX. (Every one is to be considered innocent until he has been convicted; and that undue severity, during indispensable detention, is to be provided against by law.)

XV. (The State, or Society, has the right to exact from every public servant an account of his conduct in civil matters.)

XVII. (To the effect that no one can be deprived of property except when public necessity requires it.)

Such are the principal matters embodied in this Declaration. Now, whatever may be said about the abstract truth of these tenets of liberty, they, at any rate, struck a chord in the human breast which had been lying stilled for ages. The deification of civic, or political liberty, nevertheless, had its own results, in the making of fair France a battleground, whereupon were fought out the pros and cons of this absorbing question; I say fought out, and I err, for these perennial battles are by no means ended, nor do they bid fair to cease.

Perhaps no other word has so illusive a sound as "Liberty." What the word means, is still the debate of the most brilliant minds of this, and has been of other ages. The fact is, that it is a thing, like other things, having many aspects; not one gives the whole vista of Truth. While it may be succinctly defined as the inalienable right of man to possess, and use all power and every faculty Nature endows him with, freely and fearlessly, providing such action do not harm another, yet this definition, to the eye of the mystic and spiritual seer, gives place to another, so untranslatable that only he who conceives it may explain his view. Liberty, in its essence, may only be conceived of as TRUTH. Who has uplifted the veil of Isis? Who has stood in the blinding radiance of absolute REALITY? What man hath seen God? Such questions deal with infinities, and the mind of man stands affrighted at it. We live in finity, are finite, and our mind deals but with finite things. So, therefore, the nearest approach to conceiving Liberty that has been made, stands incorporated in such human instruments as this Declaration of the Rights of Man.

Nevertheless, in this very declaration, lies another: the Declaration of Human Wrongs; the one counterbalances the other, as Nature seeks always her antidote. If, therefore, this declaration be but a rebuttal, a rebuke, a denouncement, an arraignment of human wrongs, it is a child too soon delivered; incomplete and imperfect. A new Gospel of Peace is needed, a Creed of International Good-will, under the ægis of which not only national, but likewise racial barriers shall fall to the ground, to be no more raised again on earth. Is there no nearer approach to civic liberty than that embodied in these Rights of Man? Yea, verily, there must be, or that cry in the heart is something born of nothingness; a longing sprung into existence from *nil*; a burning to attain, sprung from and fathered by its opposite, which is an impossibility. Nature abhors a void; she makes no leaps ahead in her cyclic course; the effect is of the same stock as its parent cause. Why not admit, once for all, that Nature never would have implanted in the heart of man these thoughts, contrary to his apparent constitution, were they not the premonition of things to come? Truly, there is in life a better, sweeter, stronger creed, than that of the Declaration of the Rights of Man, great as that surely is in parts. And this is neither the creed of Man's Rights, nor that of his Wrongs. It is the Creed of the laws of his spiritual Being, which take not into consideration his Rights, for that implies conflict, which is

antagonistic to Truth; nor his Wrongs, for that implies spiritual servitude. In the great doctrines given to the world by Helena Petrovna Blavatsky, originally, may be found the seed of a civilization to come, before the glory of which all past shall fade into nothingness; and in the bosom of which, Man, a regenerated Being, will recognize, understand, and consciously demonstrate in his life the laws of his existence.

The posting of the Rights of Man in the Courts and schools of France, in place of the religious emblems, shows, as I have tried to say above, that the fires are still smoldering at the core of the life national of France. No people, possibly, of our own day, can accept a glorious idea, and adopt it into the national life, as France has done, and does still. And she does this out of sheer love for the ideal; from the feeling that the best and noblest in man's nature has not yet been attained by any means, and that efforts, great national efforts, are needed to help along the general welfare of human kind.

France today stands, as before, a battle-ground between the forces tending towards light and freedom, and those grouping themselves under the standard of ecclesiasticism and dogmatic theological dicta. So that

this last action, emanating from the Ministry of Justice, is a sign; it is like a trumpet blast, blown in the very face of wrong, and spiritual littlenesses. What is France about, may it well be asked?

She has disbanded the religious Congregations; she has taken, practically, public control of the national educational system; she is abolishing religious symbolism throughout the land, and has substituted therefor a formal declaration of certain inalienable civic rights of man. What is working in her so subtly, so strongly, so seemingly sure of an end in view? What spiritual force is this, which, not affecting one man, or a body of men, but a whole nation, causes social phenomena to be, of such a character, that a few years ago, only, they would have aroused all the antagonism and latent evil in the people?

The recent Crusade of the Leader and Official Head of the Universal Brotherhood, which included France, may, possibly, not be innocent of these happenings, in the sense that any pressure brought to bear at the center, is felt throughout the mass. The work of Katherine Tingley will be better and more fairly known as the years fly by, taking with them the scales from men's eyes.

G. DE PURUCKER

Different Systems of Race Defence Adopted by Plant Life

EVERY one who has anything to do with the cultivation of plants, and possibly also some students of text-book botany, have been forced to observe the characteristic methods adopted by different species for their own defence. There are some plant forms which, like the cactus and the pineapple, depend upon the vital tenacity of the upper portion, which readily form new roots if opportunity permits. Yet the cactus roots are unable to send up a new plant to replace the one removed. Others rely upon the living power of the roots which will send up new plants to take the place of the old. Oaks, apples, lemons, etc., etc., thistles, dahlias, and, in fact, all tuberous or bulbous-rooted species, do so. Yet the tops have no power to put forth new roots, except under most favorable conditions.

There are other species which place their trust in the number of their seeds, as, for example, the Canadian thistle, the ragweed, the iceplant, etc.; and many of such plants are not able to either renew their tops from the root nor put forth a new root from the top. Still others, such as wild hoarhound, California sumac, pigweed and many more, use two methods, while such species as the conifers, junipers and melons appear unable to use more than one of these expedients, and even that imperfectly.

When we find such radical divergences in human characters, or in mental processes, we consider such comparisons as legitimate objects of metaphysical and psychological research to determine why and how they were adopted to accomplish the same purpose of race-perpetuation. If we revert to the old "nature-ideas" of the Greeks, Indians, negroes and our own Teutonic forefathers, and consider each genus and species as being produced and governed by some definite intelligence, the problem again becomes one of mental rather than physical study. Possibly we may be driven at last to believe that differences of character are not confined to the human scale of life. Meanwhile, we recommend such features of plant-life to the consideration of those who would have us think that all is said when the component parts of the blossom have been counted and classified.

A Wonderfully Fine Spun Spider-web That Will Hold Water

SPIDER'S-WEB is usually considered to be the very frailest and flimsiest thing possible, yet we have at Point Loma, a species which weaves a web so fine and close that it will hold water. The separate strands are so fine as to be barely visible in good light, but of them the spider weaves a cloth of such perfect texture that it appears almost like a sheet of metal, so smooth and even are the tiny meshes. The webs are composed of two or three thicknesses of such cloth laid together. The web is, by preference, placed almost horizontally in some corner or cleft and after a rain is sometimes found sustaining a tiny pool

of water. In one case we noticed the quantity must have been at least two tablespoonsful, which remained in the web for several days and seemed to disappear entirely by evaporation without any leakage whatever. This phenomenon may be due to the fact that the silk is a trifle oily which keeps the water from wetting the threads and thus prevents it from passing through the meshes.

Trying to Pull Itself Up—Curious Habit of the Alfilerilla

AMONG its many peculiarities the alfilerilla has one curious habit which we have never found in any other plant. Its fern-like leaves always, if possible, lie close to the ground, but when it begins to feel thirsty the tips of the leaves press so hard upon the earth that they will lift more than the weight of the plant, which is then actually pulling at its own root. So great does the tension sometimes become that if the root be cut quickly with a sharp knife the plant appears to leap from its place, and the leaves, bent almost straight down, support the plant an inch or more above the soil. What advantage it gains thereby we cannot surmise; possibly it is merely an incidental effect of some arrangement, which is, in some other way, a distinct benefit to the plant.

In fact, we strongly incline to the opinion that many of the characteristics of species are such incidental results which should, in reality, no more be counted as being purposely produced than a man's footprints. For it must naturally follow that the association of so many living factors of structure as a plant includes will produce some such useless results, the same as a man makes footprints, without any intention to do so; certainly it could not hope to transplant itself.

Healing Virtues Accredited to Watercress in New Caledonia

ALL the New Caledonia mining companies are now cultivating large crops of watercress. A short time ago this little herb was suddenly lauded as a remedy for the disease known as beri-beri, common in New Zealand and some other places. It now appears that it is not actually curative, but that its steady use does a good deal to render its consumers immune to the disease. Modern medicine has for years been making such a headlong rush after serums, lymphs, vaccines and synthetic coal-tar products, that it is getting more and more out of touch with the vast resources of living nature. Even when herbs are used, the pharmacist's product is as far away from the basis as he can manage. A few drops of an extract of an extract, or a grain of a crystal alkaloid, is regarded as containing the healing virtue of the pounds of leaf, flower or root that yielded it. And even when the preparation is simpler and nearer home, the infusion or tincture is from some specimen dried, mummied, packaged and shelved months before.

Universal Brotherhood Organization

Central Office Point Loma California

THE announcement that Mrs.

Katherine Tingley would speak at the Isis Theatre on Sunday evening, had its unfailing result in crowding that capacious building from floor to ceiling. Mrs. Tingley has just completed her second tour of the world in the cause of human brotherhood, and the greeting of the immense audience was as much a tribute to her successful labors as to the beauty and persuasiveness of her speaking.

LOMA-LAND STUDENTS AT ISIS THEATRE

Two Notable Meetings---Crowded House---Raja Yoga Children & an Address by Katherine Tingley

Reprinted from the San Diego News

Last Sunday's meeting was, however, unusually attractive, not only from this cause, but also from the participation of a large number of Raja Yoga School children, who were announced to repeat the educational entertainment which they had given on the previous Sunday afternoon and evening in Los Angeles. One meeting being entirely inadequate for so extensive a program, it was divided into two parts, and this arrangement was repeated at the Isis Theatre on Sunday. The afternoon meeting was more particularly devoted to the children of the city, who were not slow to take advantage of the invitation extended to them.

Altogether delightful and valuable as was the afternoon meeting, the evening session was still more so. Something more than a threat of rain seemed in no way to diminish the immense crowds which filled the Theatre to its utmost capacity, and which loudly applauded the rise of the curtain disclosing the beautiful grouping of the little ones upon the stage. The people of San Diego take a kind of proprietary interest in these children, whom they thus see growing up before their eyes and so manifestly increasing in knowledge and wisdom day by day. The applause has an affectionate tone, showing a heart interest in addition to the natural appreciation of a clever performance.

To describe the program in extenso would be impossible, but that the people of Los Angeles were captivated is in no way surprising. The singing was exquisite, while the performance of *The Little Philosophers* was surprisingly impressive. A new feature was the appearance of a considerable number of the very smallest children, some of them not three years old, who recited scraps of simple religious and philosophic wisdom with an earnest gravity which showed purpose and comprehension. No less effective was the appeal for help made by the little Cuban girl, Octavia, for the enlargement of the Free Raja Yoga Schools in her country. No

one could question that she had the recollection of intense suffering and an equally strong and heartfelt determination to some day carry to her Cuban home the advantages which she has gathered at Point Loma. Her little speech was pathetic in the extreme, and it certainly struck a resounding chord in the hearts of those who heard her. All other

parts of the program were carried out with equal perfection, all other little performers doing their share with the same tranquil ease and entire absence of self-consciousness.

The paper read by the Rev. Mr. Neill was, as usual, sincere and scholarly, and we regret that we are without the means to make it known as widely as it deserves. Mr. Neill's papers are always appreciated by a San Diego audience.

Mrs. Tingley's long absence from home has certainly not lessened her power to charm her hearers. Her address was all too short, but it was couched in her best style, and it certainly carried with it a conviction of the changed conditions which must at once result in the world if the true and simple philosophy of life were substituted for the clinging to creeds upon the one hand and the feverish search for new things upon the other.

Basing her remarks upon the children whom she has taken under her care, she carried her audience completely with her in asserting that if only a very small proportion of the children of the world could receive the pure teaching which these little ones were getting, the whole condition of things would be changed, there would be peace instead of discord and the age-long sounds of pain would become songs of joy. Throughout all her travels she had studied child life and she knew that there was everywhere something missing, something which could not be supplied by a religious teaching confined to certain specified hours. It could only be done, as it was done at Point Loma, by imparting a knowledge of the soul every day and every hour in such a manner that even the smallest child could understand it.

In her summary of the world's progress Mrs. Tingley is optimistic in spite of the war clouds in the east. She declared that the soul of humanity was asserting itself more today than ever before, that the divine rights of all men have been successfully struggling for the light and that all outward appearances notwithstanding there was a surging, impelling power of love and justice in the hearts of men and that it would surely be manifested because men were divine.

Full Text of Katherine Tingley's Address at Isis Theatre

I FIND myself excessively embarrassed at having to say anything tonight after such an entertainment as these little children in the charm of their innocence have given to us. They have preached a sermon far more eloquent than could have come from the lips of our greatest orators. There can be but one thought that we must have of these souls thus launched out into life, that they are beginning that life under remarkable circumstances. I can assure you that if but a small portion of humanity could have had their surroundings in the past, if only they could have had the touch of what these little ones have had, the nations would have been bound together by a tie of brotherhood such as no power on earth could break. If you will think at all about it I am sure you will feel that all this would be possible, or would have been possible in the past, and it will be possible now, because these children have started out understandingly, tiny as they are, hardly able to raise their tiny hands, yet teaching love in their infant language. Young as they are, they know that they are a part of the great divine scheme of life. We have taught them that they are souls and, like the stars in the heavens, they have come to guide humanity into a better way.

Now in saying this it does not mean that there is no other education in the world for children, but it does mean that they are taught the soul life every hour and every moment. These little ones are such precious treasures in the eyes of the teachers at Point Loma, such sacred charges, that they lose not a moment in touching their hearts with that compassionate love which imprints the truth upon the minds of little children. And thus it follows that day by day, and week by week, and year by year, these children are growing up in soul wisdom to preach a real salvation to the world, a common-sense salvation. They are taught to care

for their bodies because they are the temples of the living Christ, the Christos, they are taught to care for their minds as treasures, and to keep them free from blemishes, or from anything that can lead them astray; they are taught that they themselves are souls, and that soul life is the real, lasting life, the peaceful life.

And so when they come before you, it is not only to entertain, but to help. Each one of these children feels a great responsibility. They are serious, as you see, but they are also very joyful. They are the happiest children I have ever seen. Possibly I realize this from the fact that I have just returned from a trip around the world, and I have made a close study of children of all nations so far as the short time would permit. I have been in some of the world's greatest cities, in Paris and in Rome. I have been under the shadow of the great churches. I have been where in almost every square of ground was a church with great spires reaching towards heaven. I know the devoted efforts of the people who work in the churches, but in spite of all that has been done with money, energy, and love, for the little children, yet there are thousands upon thousands of them overlooked. There are thousands upon thousands of children throughout the world on the downward path, and surely if we were to think but for a moment we must necessarily come to the conclusion that there is something lacking, something missing, in our Twentieth century work for the little ones. We are part of the great human family, we do desire to uplift our fellows, and we must see to it that there is something more done, the lost word must be recovered, for the knowledge was possessed by the ancients. That knowledge must come back to humanity before it can find its place, before the shadows of heavy suffering and death can pass away. It is so simple.

We wonder why the world is running after new teachers, and new light, and new truths, and well we may. This we do while the Sermon on the Mount, so simple and so beautiful, is ignored. Christ's simple wisdom has been misunderstood, for are we united as brothers? Do we love one another? If in the ages since Jesus was born humanity had been drinking in the spirit of his words and that of other great teachers, if these compassionate teachings had been applied, the nations of the world today would be at peace, the whole world would be one united family, we should stand and declare that verily we are our brothers' keepers. You have thought all this, I know. How easy it is to see that humanity as a whole is going out of the way, away from the simple truths, so far away from the path of righteousness that the great law has made possible for us. We depend so much upon the mind, and so little upon the higher knowledge which is a part of the soul life. Look at the teachings, then look around at the many creeds, at the "isms" of the Twentieth century, each one declaring itself to be right and the others wrong. We could change the whole aspect of things if we would; we could give the secret through Theosophy; we could give the simple knowledge that would change the whole aspect of the world. Theosophy has interpreted the *essential teachings of these different religions and has bound them into a Universal Brotherhood* for all peoples and for all times. If we as a people here in America could for one hour or for one day unite in the thought of Brotherhood, and bend our efforts to its aid, then a mighty swaying, surging force, a spiritual light would go out to the world from our land of liberty.

Although our country is one of the greatest of the world, it possesses more "isms" today than any other I have visited. A real sifting process is needed, a compassionate work to weed out the "isms."

The world is going mad, for while it proclaims freedom and liberty, all too often these words are used for license only, and this is one of the

saddest facts for those who try to help. The duty of a true teacher is to try to attract humanity to its divinity, its heritage, to the knowledge that it is a part of the great divine law, and that if it will but work with this law it will find its way to the paths of peace. When this knowledge is understood, when it is applied to human life, it will be impossible for us to live in discord one with another, it will be impossible for us to forget our duty to ourselves and our brothers, for as the knowledge comes forth, as the soul stands out in all its spiritual dignity, and declares its possibilities, then the mind becomes illuminated, and intuition and a higher discrimination follow. The soul life is accentuated; intuition works hand in hand with mind, and the man is changed, the world is changed, all shadows are changed into sunshine, and the sounds of pain become the songs of joy.

Behind all the shadows yet about us which we have to meet today, and in spite of the great struggles which we know are going on, the warfare and the bloodshed and death, there are signs. Souls are more awake, they are nearer to real life than they have been for ages. This mighty divine law which guides human life is manifesting in a new way. It is striking a new note, and while the warfare is in the east, and death follows in its wake, behind the dark clouds there follows a new manifestation of the divine law. It is like a re-sounding of the cries of the ages, the sorrows and the heart-aches of the millions in the past, a cry of agony from other times for justice, and that justice shall be manifest.

Yes, a new manifestation of the Law in the Twentieth century, and you shall see it and be amazed! Then shall come forth the divine soul of man on its onward march from the beginning. This we shall have in spite of all the shadows, all the clouds, and all the darknesses. In spite of all the outward aspects of error, a manifestation of the surging, impelling power of love and justice in the hearts of men shall come to pass because man is divine.

THE next issue of the NEW CENTURY PATH will contain a special illustrated description of the educational work in Cuba, and it will therefore be of unusual interest. A detailed account will be given of the Cuban Raja Yoga School Exercises in the largest theatre in Santiago, together with a general review of the extraordinary results of the last year's efforts.

Spencer and Carlyle

HERBERT SPENCER'S *Autobiography* has disclosed a very severe criticism of Thomas Carlyle, which is undoubtedly very interesting, but which will certainly not diminish the almost despotic power which the writings of Carlyle exercise on so many. Spencer says:

Considering that he either could not or would not think coherently—never set out from premises and reasoned his way to conclusions, but habitually dealt in intuitions and dogmatic assertions, he lacked the trait which, perhaps more than any other, distinguishes the philosopher properly so-called. He lacked also a further trait. Instead of thinking calmly, as the philosopher above all others does, he thought in passion.

With all possible respect for Mr. Spencer, it seems to us that he is attaching a greater importance to the means than to the end. Carlyle wrote for a definite purpose, and in that purpose he succeeded to an almost unprecedented degree. Whether he reached that success by setting out from premises and reasoning his way to conclusions, or whether he habitually dealt with intuitions matters not in the least. These things are of importance to those who write for the sake of writing, and also to those who write for the very limited number of minds which cannot be approached in any other manner. A logical garb is in no way necessary for the writings which are intended to promulgate great ethical truths which will be recognized as truths by those who hear them. Indeed, under such circumstances a display of logic is likely to dull both point and edge. Carlyle, it is true, "thought in passion," and wrote in passion, but it was the passion of a great and strong soul, aroused by the bitter and cruel wrongs of the age which clamored for redress. Carlyle was above and beyond the machinery of logic. He spoke from the heart and not from the head, and therefore he was heard gladly by the great democracy of the heart and not alone by the aristocracy of the head. For Mr. Spencer's learning and for his character we have the most profound respect, but it may be that Mr. Carlyle will leave a far deeper mark upon a far greater audience.

Neglected Child Life

IF the present epidemic of juvenile crime does but draw attention to the neglected child life of our cities we shall recognize it as one of the stern reminders which nature gives to us of our neglected duties. Attention, however, is not sufficient. It must be intelligent attention, and not merely an extension of reformation and prisons. It must in other words be a recognition of individual responsibility which prompts to something more effective than the appointment of an official or the casting of a vote. Of all the social machinery which we have created the reformatory system is perhaps most in need of a critical examination. Its worst condemnation is the fact that it is a machine, ill calculated to do anything else than crush the life of its victim into some regulation pattern. Order and system are of course necessary, indispensable, but they will fail unless they are devised and governed by individual compassion, and by that variety of it which gives wisdom. We live in an age of machinery. We boast that we have harnessed and controlled the great forces of nature, but the forces of human life are still *terra incognita* to us. Our reformatories are of no value unless they can take a bad boy and turn him into a good boy, but there is no lack of those well qualified to judge who say that they take bad boys and turn them into worse ones, that they take stupid criminals and translate them into educated and clever criminals. If we knew half as much about training boys as we do about training dogs and horses we should improve the breed as effectively in one case as in the other. There are many men who would shrink from the responsibility of training a valuable puppy who yet undertake the duties of parenthood without even being aware that any responsibility whatever is attached to them. The problem of juvenile criminality will of course never be solved by city ordinances, by police regulations, nor by reformatories until all these things have been shaped and controlled by a sense of individual responsibility so strong that it would impel to action even though it stood entirely alone. Our present institutions are the faithful expression of the public mind which called them forth. When the public mind recognizes that the criminal is a part of itself, and therefore something to be heartily ashamed of, we shall see an improvement, but not until then.

The Transformation of Japan---Glimpses of the

The following text and illustrations are reprinted from the *Excursion Journal* of T. Minami and Sons' Tourist Agency, Japan

On the 8th of June 1853 a long sleep of 300 years was awakened by the whistle of steamers which appeared on the sea off the coast of Uraga, then the most important port on the peninsular of Sagami province, the entrance of Yeddo or Tokyo bay. The black ships which as we commonly called them consisted of 2 steam gun boats and two sailing transports for the first time seen by our people. The governor of Uraga ordered many junks to hasten to the black ships and to make a regular blockade of the passage in the bay and ordered the steamers to stop and anchor. The Japanese officials made inquiries on board the black ship concerning the name and nationality of the men on board, and their intention through a Chinese interpreter who came with them. It was then found that they had come from the United States of America with a letter from the president under the command of the envoy Commodor Perry with the intention to make a friendly treaty with Japan and the Commodor envoy wished to hand the letter to the ruling regime. He also told them the state of the outside world and concerning the recent Opium war between England and China, but it was said that owing to insufficient interpretation both parties could not clearly understand all the conversation but however the message from governor that the vessels should not go in further in the bay until an answer came from the government at Yeddo, was clearly understood.

The governor Mizuno sent a special message to the Shogun's government at Yeddo with an account of this extraordinary event.

At Yeddo the Shogun's Government was much struck by this sudden emergency and called together Council of Roju or elder statesmen and sat day after day but no decision was arrived at upon the matter, as they feared that if they accept the offer of the treaty more difficulties would follow besides the present one, but if we refused it would mean war; for which Japan was not then prepared for any immediate danger like the present. Mean time the 2 million of inhabitant of Yeddo had collected in consequence of the uncommon emergency and all sorts of rumors had spread that immediate war with the foreign country was indispensable. Old and young moved to the country and everything was deserted; but high and low were active in preparation for war, and the confusion was quite indescribable. A comic poem of Yeddo at the time conveys how the state of the disturbance was as it said "America ga tatete (prepared) motekita (brought) Jokisen (name of Tea or steamer) tatta (only) nihaide (by two cups) yorumo (even night) nerarenu (can not sleep)—Meaning by only two cups of Jokisen tea that was prepared and brought by Americans allow us no sleep even at night (of strong flavour). The Shogun government ordered all the daimioes to defend the parts assigned to them and retainers of Daimioes had marched under their respective commanders and the daimioes attend the castle of Shogun. Special representative of the government was sent to the Imperial court at Kyoto and all daimioes despatched their messages to their own dominions ordering the defence of coast &c.

The United States envoy, Commodore Perry at Uraga waiting the government's answer every day in his baking cabin under a strong sun of the summer months, as they were not allowed to land nor did the Commodore permit any access of Japanese except the government officers, but the reply did not come until the 10th of July. At last it was communicated to him that the letter would be received by the representatives of the government at Uraga, but the Commodore perceived danger in landing at Uraga as it was much inhabited and also the inconvenience being out of range of his Guns from his squadron in case of bombardment so he preferred a spot next to the port where it was quite open and safe which was the beach of Kurihama about 1 Ri South from Uraga.

On the 14th inst then envoy with about 300 men landed at the place where temporary reception rooms were erected for the occasion and the governor of Uraga assisted by two other representatives of government to receive them with a guard of about 4,000 men from Fudai daimioes.

The envoy handed them the letter in a box with the request that it should be opened before the presence of the Shogun and a friendly treaty should at once be

made. The envoy made many presents to the Shogun and officers among which a model of a railway engine was numbered and the government representatives presented him and his officers in return old lacquer wares, silks and boxes of eggs &c. for the men on board. It is said that at the meeting the representatives requested the envoy not to come to this part of the country any more but to come to Nagasaki in case of further negotiations, but the envoy expressed his determination that he must have direct communication with the Shogun's government and requested an audience with the Shogun. For the request the representatives gave many excuses and the envoy thinking it better to give them time for consideration and said he would come to receive the reply at the beginning of next year. On heaving anchor on 21st inst. the envoy made his passage into Kanagawa then an opposite town and now the next railway station from Yokohama which was then a sandy beach. The governor of Uraga was greatly surprised, sent out a swift boat to catch the squadron and reached them near Kanagawa. The officers sent asked the envoy why he had broken the order of the governor the envoy answered that by the international custom when a credential received from one country to the other, it means that the two countries are on friendly terms with each other.

The Shogun government translated the contents of the American letter and sent it to all daimioes with the request to receive their free and impartial opinion on the best way to deal with the matter for the country's sake. This act of the Shogun, of course, gave a peculiar sensation to the Imperial court and daimioes as to the duty of Shogun and opinion he requested to hear would of course be divided for entire rejection of the American's proposal or make a treaty. The government also commanded daimioes to prepare for defence of their provinces and allowed them to build any large vessels—which were prohibited since the extirpation of Christianity in 1614. Thus the tight reign of Tokugawa's regime was loosed; all daimioes especially not Fudai Daimioes (retainers of Tokugawa Iyeyasu the founder of the dynasty) were very active preparing for war without any fear of superstition of Shogun's government which hitherto prevented a proper organization of the daimioes forces.

Much reenforced Squadron of U. S. A. came to the port of Shimoda in the province of Izu, in February 1854 and demanded the government to make a treaty of commerce as promised last year and after some long negotiation a temporary treaty was signed which was to be revised at request of either party.

English, Russian, Dutch and French all followed the example of the Americans and the difficulties on the Tokugawa government was daily increasing. This was, we may venture to say the topic of Japanese ignorance of foreign affairs and this was the time for a great man to stand out and save the country from this immediate danger. And this man, who signed the treaty, was Ii Kamonno Kami Naosuké whose descendant is count Naokata whom we know. One day we called on him and

told him our intention of writing the history he gave us the books called Kaikoku shimatsu in Japanese or an account of the opening of the country by Mr. Saburo Shimada and the other was named agitated Japan or life of Ii Kamonno Kami based on Kaikoku Shimatsu by Mr. H. Satoh and revised by Mr. Melliot Griffes. And also he kindly lent us a sketch drawing of the landing of Commodore Perry at Kurihama with permission for publication.

Therefore we herein put extracts of the Life as his life is much connected with the event or agitated Japan as Mr. Griffes says.

The Great man Ii Kamon no Kami Naosuké was, says the Life, the fourteenth son of Baron Ii Kamo-no-Kami Naonaka, Fudai Daimio and the Lord of Omi province. He was born on November 30, 1815 at Hikone near Biwa lake. On the Christmas day, 1850, Naosuké was publicly authorized by the Shogunate to succeed to the Baronetcy of Hikone and to assume the title of Kamon-no-Kami.

Extract of the Life "Here it is worth while to notice that, at a time when so much importance was attached to the traditional usage, Naosuké's sudden departure against the remonstrances of aged followers and also against common custom, was no slight presage of that strength of will and keenness of foresight which afterward showed themselves in his political and diplomatic career. In an age of dangerous conservatism, these two qualities placed him beyond the clutch of the so called cus-

BARON II NAOSUKE

This portrait was painted by order of the Baron himself, in his imperial court costume, and he wrote a poem on the top. The portrait and poem are now preserved in the temple of his family at Hikone.

Island Empire That May Rule Eastern World

toms and traditions. He rose superior to these and at the sacrifice of his life, opened for his country a way of progress and development hitherto unattained.

Because of the firm stand he made against his political opponents, Naosuké has been represented as too obstinate and proud to receive advice. On the contrary, a letter which he personally wrote, in response to a representation made by one of his retainers, fully shows that he not only kept the gate wide open to any sincere advisers but also encouraged them to tender suggestions freely. The amount of confidence he placed in his two secretaries also fully indicates his capacity to avail himself of the views of others. He encouraged his retainers, irrespective of their class, office, or condition, to be ready to open their mind on anything of political or social importance. "Nothing," he said, "is worse than a barrier against the communication of thought. Let any and all of you be free and outspoken on matters of importance."

When in 1853 the question of foreign intercourse was referred to the Barons of the land, most of them were in favor of exclusion, while some of them expressed the inadvisability of seclusion at the expense of peace. But none of them proposed a scheme whereby the interest of the nation could be upheld. Naosuké's answer to this query of the Shogunate distinctly stated among other things the tendency of the times which made it difficult to adhere to the traditions of the land; and he also proposed to rescind the law issued early in the Seventeenth century, prohibiting the building of large vessels suitable for foreign trade. He again advised the Shogunate to build navies for the protection of the coasts. "Thus prepared," he writes, "the country will be free from the menaces and threatenings of foreign powers, and will be able to uphold the national principle and policy at any time."

The reigning Shogun, Iyesada, had no male issue. It therefore became necessary to appoint the Heir Apparent from one of the three Princely families related to the Tokugawa, Mito, Kii and Owari.

There were two candidates. One was the Prince of Kii or Kishiu, and the other was one of the sons of the Senior Prince of Mito.

Those who supported the candidacy of Prince Hitotsubashi were actuated by different motives. Some thought that his cleverness and ability being admitted on every side, he would be able to keep Japan insulated from foreign contact and thus uphold the dignity and sacredness of the land.

Others wanted to strengthen the power of the Shogunate by putting the man of universal popularity into the Shogunal office. They hoped in this way to open the country to intercourse with foreign nations. Others again knew the power and influence of the Senior Prince of Mito with the Imperial Cabinet and the Barons.

They also knew that in Kioto and among the Fudai Daimio, the Shogunate had strong opponents.

Meanwhile the coming of the Mikado's sanction was awaited with anxious suspense at Yedo, but as it did not come, Naosuké dispatched a special message to Kioto.

Just at this unfortunate juncture, an express message reached Yedo, that two American men-of-war had come to Shimoda and that one of them proceeded up the Bay of Yedo as far as Koshiba. On the 16th day (July 27,) another message came reporting an arrival of Russian war-ships, and saying also that they were soon to be followed by English and French squadrons which had been victorious in their war with China.

Shall Naosuké, by virtue of the power vested in him, decide the question before obtaining a formal sanction of the Imperial Cabinet? The unsuccessful mission of Baron Hotta to the Imperial City was too recent an event to be forgotten by anybody. The renewed presentation of the same question would not only involve delays, but would surely meet with the same fate as on the former occasion. Naosuké believed that the investment with the power of government carried with it the right to meet emergencies according to the judgment of the person so invested. He also knew that the national safety and dignity were involved in this question. He therefore decided to assume the entire responsibility. No sooner was the decision made than he immediately dispatched Inouyé and Iwasé to Kanagawa, authorizing them to sign the provisional treaty which has since been called the Temporary Kanagawa Treaty.

The moment the conclusion of the Temporary Treaty was made public, the exclusion party began to show an increased vehemence in their opposition.

Prince Rekkō blamed Naosuké for concluding the American treaty before the Imperial sanction had been received. But when the Tairo explained the irrepresible tendencies of the times and professed his confidence of meeting with Imperial approval under the circumstances, this subject could not be pressed any further.

The three Princes then began to show the need of the times for a full-grown able prince for the Shogun's heir. They said that none would be better qualified than Prince Hitotsubashi.

To this, Naosuké simply replied that the right of appointing the Heir Apparent rested solely with the Shogun, and this rule left no room for any of his relations or of subjects to say aught against what he had appointed. He also stated that the matter of heirship having been already settled, and being ready for formal announcement on the following day (25th), it would be improper now to further discuss that affair.

On the 25th day (6th month) the appointment of the Prince of Kishiu, aged thirteen years, to be Heir Apparent to the Shogun was publicly announced.

On the 2nd day of the 7th month, (August 11), the formal congratulations of the Barons were presented in person, and were received at the Castle in Yedo by the Shogun, and his Heir, whose name was Iyemochi. On the night of this auspicious day, (of congratulation) the Shogun was suddenly taken ill, and on the following day, his illness became serious.

On the 6th day, (August 15), an order was received from Kioto, requiring either the Tairo or one of the Princes of the Three Houses of Tokugawa to appear at the Imperial Court in reference to the question of foreign intercourse.

On the night of the same day the Shogun breathed his last.

Two days before this (on 4th) three English ships arrived at Shinagawa, a suburb of Yedo, while the Russians come in to the city itself and took up their temporary abode in one of the Buddhist temples.

Placed in the midst of these complications, Naosuké dispatched Senator Baron

Ota to hold a conference with the British representative, with whom the business was facilitated by the previous treaty with the United States. A messenger was sent to Kioto at the same time, stating the circumstances which made it impossible to comply with the Imperial order.

A copy of paper sent to the Imperial court from Shogun Government:

"The question of foreign intercourse is pregnant with serious consequences. The reason why the treaty was concluded with the United States was because of the case requiring an immediate answer. The English and French squadrons after their victory over China were very soon expected to our coasts, and the necessity of holding conferences with different nations at the same time might cause confusion from which little else than war could be expected. These foreigners are no longer to be despised. The art of navigation, their steam-vessels, and their military and naval preparations have found full development in their hands. A war with them might result in temporary victories

on our part, but when our country should come to be surrounded by their combined navies, the whole land would be involved in consequence which are clearly visible in China's experience. This question of foreign intercourse had been referred to the Barons, and most of them knew the disadvantages of war with foreigners. Under these circumstances no other recourse was found than to conclude a treaty and open some of the ports to them for trade. Trying this policy for ten or twelve years, and making full preparation for protection of the country during that period, we can then determine whether to close up or open the country to foreign trade and residence. To commit the nation to the policy of exclusion before any experiment, appears to be highly inadvisable.

"If it were only one nation with which we had to deal, it would be much easier, but several nations, coming at the same time with their advanced arts, it is entirely impossible to refuse their requests to open intercourse with our country. The tendency of the times makes exclusion an entire impossibility.

"Compliance with their requests will tend to bring safety to the whole land, and thus we shall be able to keep His Majesty free from cares and anxieties for his subjects."

The relation between the Shogunate and the party of Exclusion may well be likened unto that of fire and water. The antagonistic feeling had almost reached its acme.

On the last day of the same month, (February 3, 1859) an Imperial answer in reference to foreign affairs was received by Baron Manabe in which it was stated that the said question had been a constant source of anxiety to His Majesty, inasmuch as it concerned a departure from a long tradition, and also the dignity of the Empire, but the unavoidable circumstance of the time having been fully recognized by His Majesty, and the intention of the Shogunate to resume the policy of ex-

WHERE PERRY FIRST LANDED

From a photograph of the unveiling ceremony of the monument erected at Kurihama on the entrance to Tokyo Bay, in memory of the first landing of the Envoy Commodore Perry in 1853.

clusion having been assured, time is granted for that purpose, and the Shogun is authorized to take temporary measures to suit the requirements of the present time.

Time went on in this state, and in the 3rd month (March, 1860) the paper could not be received back, for on the 3d day of that month, the Tairo Naosuké on his way to the Shogun's Court, was suddenly attacked by a band of assassins and met a cruel death at their hands.

Naosuké was forty-six years old when sad event cut him off, but according to the orders of the Shogunate, his death was not announced until the last day of the following month.

The 3rd day of the 3rd month (March 25) was one of the five annual festivals, when the Princes and Barons of the land had to present themselves at the Shogun's Castle to offer congratulations of the occasion. Being the last month of Spring, it is usually not cold, but on this special day nature seemed to portend by an unusual phenomenon the dark event which was to make it a black day in the annals of Japan. She seemed to show her sympathy for the heavy loss about to fall upon the whole empire; for instead of a bright clear day, the sky was overcast with gloomy clouds, the temperature was exceptionally low, and snow began to fall thick and heavy.

The whole tragedy was the work of only a few minutes, and when other retainers of Naosuké prepared to march to the place of attack, it was all over, and they met the return of their master's kago.

Baron Matsudaira of Yada, who was an intimate friend of Naosuké, personally came to persuade him to resign and thus get him out of the impending danger. The Tairo while thanking him for his kind advice said that his sense of duty would

not allow him to evade his personal danger in times of great difficulty. "My own safety is nothing," said he, "when I see a great danger threatening the future of my country." When he was advised to resign his office by his retainers he always said.

"Resignation is easy, but the times are difficult. I will not, and must not avoid both danger and difficulty on the simple ground of seeking personal ease."

From the above paragraphs the reader may understand how the Shogun government was standing between the Imperial court which was generally opposing, relative princes who were disagreeable to the chief council arousing jealousy or ambitions and multitude of ignorance and jealous people and that through such numberless difficulties the government had to steer on the high tide of the world. Without such a great man like the Baron of firm decision, high education and sufficient experience of ruling people, Japan might have been the prey to foreign nations and perhaps it has had no opportunity of development by its own integrity and wisdom.

In 1900 late Rear Admiral B. C. Beardslee U. S. Navy came and visited this country for the second time and we give him a grand reception at Ueyeno park in his honour for he was the only survivor who came with that Commodore Perry as midshipman; and through his pointing out the spot where the American first landed we find out many old traditions concerning that event.

Through particular effort of the Beiyu Kai (the American Association of Japan) have erected a stone monument at Kurihama and unveiling ceremony took place on July 14th 1901, when two U. S. and two Japanese men of war were present to salute the occasion.

ONCE upon a time there was a Sage, and it came to pass that as he sat down by the wayside to rest under the shadow of an old, old olive tree, there came before him a man, and a woman who was his wife. After they had made salutation, the man hastened to speak, as if fearful the woman should speak before him.

"Master," he said, "is it not written that woman is the weaker vessel and should therefore be obedient unto man?"

The Sage did answer him question-wise, saying, "Are then all things that have been written by man, true?"

"No," said the man, "but this must be true."

"And wherefore must this be true?" said the Sage.

"Because man is a creature of reason and woman—or else I mistake—is one of impulse and impulse—is not it true, Master—woman is blind, and born of instinct merely? Surely blind impulse must be ruled by reason, or it bringeth harm."

"Knowest thou not how, in the beginning, all forms came into being from the formless? Master, guided by spirit, from its own life fashioned all, mineral, vegetable and animal, and still we see this work going on about us, from the olives above thy head to the pebbles under thy feet. And is all this due to reason or what thou callest instinct?"

"By instinct, of a truth," said the man.

"Then knowest thou, that this principle is the soul's own cupbearer—call it by whatsoever name thou chooseth."

The man bowed his head, and asked, "This principle which I have erred in calling instinct—what is it? From what great universal principle doth it come?"

"It cometh from the soul of the Infinite," said the sage. "Knowest thou not that the very basis and core of things, the divine source, is the eternal Woman-Soul, the great deep, the abode of the World's Mother, primeval, Infinite Chaos, the mystic Mother Principle, which, overshadowed by Spirit and Fire, gives birth to worlds? It is the matrix wherein abides the essence, the potentiality of all forms, out of which floweth the world of ideal beauty."

"From whence, then, cometh the reason that moveth the brain of man?"

"It comes from Universal Mind," replied the Sage. "It can work only through the brain."

"Surely, of a truth. But instinct, which in the human being we call intuition, useth not the brain mind alone."

✻ The Heart Light ✻

"No," answered the man reluctantly, "it's instrument is the heart."

Which, then, is highest, which is the most godlike, intuition or reason?"

said the Sage. But the man was silent, and the Master turned to the woman.

"Intuition—is it highest, O Master?" the woman questioned, lifting her shining eyes to his face, "and yet it cometh from the heart and the heart is greater than the brain-mind. I know not if it be higher. Mightest one say, O Sage, that the right hand is nobler than the left?"

"Thou sayest well," said the Sage. Then turning to the man he continued, "Which hath more of the divine, the Heart Doctrine or the Doctrine of the Eye?"

"Surely, the Heart Doctrine, Master."

"Then why should man rule woman?"

The Sage grew very silent. Over the hillside swept the gentle breeze, laden with fragrance. It caressed the gnarled branches of the olive trees as if it loved them and longed to bring them beauty.

The soft and shining folds of hair that escaped the white head-dress of the woman it kissed in passing, as a mother might kiss swiftly a waiting child and hasten on. The olives bent low their branches as if to hear and the grass was green and glad. There were tears in the eyes of the woman, but fear had left her heart and dignity dwelt within her. The man waited.

"Know ye, my children, that intuition is the soul's own voice which man seeketh ever and ever to find. Always without, do men search, knowing not that it lives within their own hearts. Reason governeth the brain-mind life, intuition is of the heart. Without it, believe me my child, we would but plunge into the abyss. It is more

than beauty, more than reason, more than mere intellect. How then, is there room to question which is superior? Think—reason and intuition, the mind and the heart, man and woman, they are truly one. When separate, but as warring, shapeless arcs—unfit, unfitted—fragments. United in selfless service to all humanity, then, and then only, findeth each completion. Then, and then only, findeth each arc its place in the mystic circle. Then, and then only, may be born Unity, Compassion, Service and Peace."

The Sage bent his head and the final words dropped from his lips, as after a shower, the last reluctant raindrops fall from the sky. The man took the woman's hand hesitatingly, as if he would speak. Then he looked at the woman and he spoke not. In her eyes shone something he had not seen there before. It was heart light.

THE CHILDREN'S HOUR

A Letter From Japan

MY DEAR LITTLE READERS: I am sending you pictures from beautiful Japan. It is April Fool's Day, a real festive day here, for old and young; for dear Mother Nature puts on her springtime dress, and comes forth with a cheery smile, in a glory of color and beauty.

Delicate and winsome seem these rosy cherry blossoms, as they look out with glad eyes into the bright sunny day—silent they are, but their loving message is felt by all the Japanese hearts in the land; and in return they send back to these dear tiny blossoms their tribute: "Yes, Life is joy, dear Cherry Blossoms; this we know, and you have the secret to hold the Joy and make it grow in your Hearts, so that you gladden all the land with your rosy smile. You come to us, dear little friends, every year, over and over again. Like the great tall Fuji Mountain that kisses the blue sky of our fair land, you are singing to us all the while, 'Dear Children, Mother Nature is your Teacher. If you would be like us, you must look skyward and blossom in love for the whole world.'"

Jap children, here in Yokohama, seem to be doing this. Their little bright faces tell the story of their heart-life. They are so simple and gentle. Looking into their tiny houses, where they live with the grown-ups, one can see that they do not have many wants. They live out of doors nearly all the time. Their rosy cheeks, bright eyes and pretty little Jap costumes seem to take on the dainty colors that blend in the sky, and are in the flowers that they so love. These they wear in their hair instead of ribbons.

I fancy I see them at night, looking out from their little homes, talking to the stars, and dreaming sweet childhood dreams, that will some day make them real helpers in the world. I couldn't imagine that they ever whimper for candy, or lose their tempers with their little brothers or sisters; they live too close to Nature to do that.

Bless their little hearts! I know you would love them, if you could see them; and I am certain that some of you might learn some real Raja Yoga lessons from them, too.

In my next letter I will tell you more about them, for I am very fond of the dear little hearts.

LOTUS

MR. KIPLING, the father of the man who writes so many books, has often closely observed monkeys in their own forest homes, and he relates that, at one time, a showman gave a performance not far from some trees in which the wild monkeys had their homes. Among the performers were a number of trained monkeys. At first the wild monkeys went away, frightened, but by and by they crept up, one by one, and saw their kinsfolk dressed up in curious garments and dancing about the ring. They were not only disgusted, but pained, and soon went sadly away, as if unwilling to see what they evidently thought to be such degradation.

What Is the Path?

Essay by a young Lotus Group member

THE Path is the way to happiness, but some people think it is full of thorns and rocks. That is because some of us suffer in getting rid of our faults, but all of us can see the beautiful sun shining overhead, and all of us can feel the joy that comes into the heart when some ugly habit is conquered. We know it is a great mistake to

talk about the path being hard and unpleasant. The Path is the heart-life and it is Raja Yoga, and no other way of living could possibly be so pleasant and so full of joy. Raja Yoga children, who walk on the Path, find the true meaning of life and they can teach this to others who are living selfishly.

We cannot walk on the true Path if our lives are selfish and shiftless and careless. We must keep happy and continually battle within our own hearts against our faults. Then we can be purer every day, because every day will bring us more chances to do kind things to others. In reading of the lives of great men and women, such as Franklin, Garfield, William Q. Judge, Madame Blavatsky, and Joan of Arc, we find that they gave up a great many pleasures to help humanity. And yet they were happier than the people who just wanted to have a good time. That proves that the Path is joyful. The faults in our own character are like stumbling-blocks in the Path, and we cannot go forward in helpfulness until we lift them out of the way. We have to do this *some*time and we might as well do it now.

Some people find that the stumbling-blocks before them are selfishness and vanity and jealousy, and others find other faults which stand in their way, but even while we struggle with these things and may not seem to be helping others at all, our example is before them and they feel the influence of our courage and they see how much better it is for people to be honest with themselves. If we would follow the example of Jesus we would understand better how great our influence is for good or for ill, and we would understand better what he meant when he said, "I am the way, the truth, and the life."

A Nest in a Broom

SOME time ago, says a writer in the *London Daily News*, a coachman at Woking left a broom in the coach house. Soon after he found some leaves on it, which he shook off. He then saw a robin fly in with some more in his mouth, so he left the broom as it was, and in a short time it was completely covered with leaves and twigs, and the robin chose the snug-gest corner for its nest. The coachman put a nail at the foot of the broom to prevent it slipping, and also nailed up a piece of wash leather to protect the nest. The robin flew in and out through a little window in the coach house door, which was left open for it.

CALENDARS are probably the oldest form of literature in the world. The Aztecs had the most wonderful and accurate calendars. They were carefully graven on stone, and many of them are preserved to this day.

THERE IS NO DEATH

by LORD LYTTON

THERE is no death! The stars go down
To rise upon some fairer shore;
And bright in heaven's jeweled crown
They shine forevermore.

There is no death! The dust we tread
Shall change beneath the summer showers
To golden grain or mellowed fruit,
Or rainbow-tinted flowers.

The granite rocks disorganize,
And feed the hungry moss they bear;
The forest leaves drink daily life
From out the viewless air.

There is no death! The leaves may fall,
And flowers may fade and pass away;
They only wait through wintry hours,
The coming of the May.

There is no death! An angel form
Walks o'er the earth in silent tread;
He bears our best-loved things away,
And then we call them "dead."

He leaves our hearts all desolate,
He plucks our fairest, sweetest flowers;
Transplanted into bliss, they now
Adorn immortal bowers.

The bird-like voice, whose joyous tones
Made glad these scenes of sin and strife,
Sings now an everlasting song,
Around the tree of life.

Where'er he sees a smile too bright,
Or heart too pure for taint and vice,
He bears it to that world of light,
To dwell in Paradise.

Born unto that undying life,
They leave us but to come again;
With joy we welcome them the same---
Except their sin and pain.

And ever near us, though unseen,
The dear immortal spirits tread;
For all the boundless universe
Is life---there are no dead.

Philosophy of Kant

THE celebration of the one-hundredth anniversary of the death of Immanuel Kant has served to draw renewed attention to the writings of this great philosopher and to place at an enhanced value his contributions to the thought of the day. It may be that Kant will never be more widely read than he is now. His books are perhaps only for those who have the leisure to master a most abstruse terminology, but this will not prevent his teachings from saturating current thought based as they are upon far older speculations and supported as they are by the experiences common to all thinking minds.

The main principles of the Kantian philosophy are by no means difficult to understand, nor are they far removed from the ordinary conduct of life. Every truth in nature has a bearing upon every other truth, and not one of them is too sublime to be applied to the routines and to the drudgeries of the day. It would, indeed, be well for us to cultivate the habit of bringing divine philosophy into daily life, for such is its mission and its purpose.

The philosophy of Kant shows us that the world as it actually exists is unknown to us. We know our experience of the world, we know the interior changes of our own consciousness, and from them we may

speculate as to what has caused those changes. The mind can look at the pictures which have been cast upon its surface, but it cannot look upon the actual causes of those pictures. Human experience, with its burden of pleasure and of pain, is the meaning which we ourselves have placed upon our sensations, upon our changes of consciousness. Nature has no power to inflict pain upon us, but we ourselves have the power to extract pain from the sensations which nature gives to us, a power which we certainly exercise to its full. Two men may receive identically the same set of sensations, and while one will extract pleasure from them the other will extract pain. Nature presents us, as it were, with the raw material of sensation. It is we ourselves who mould it into pleasure or pain. That set of beautiful mental sensations which we call a landscape may for one observer be a pure joy, while for another it may be but a reminder of past regrets. So true it is that we suffer from ourselves, and only from ourselves, by the interpretation which we give to our experiences. This is, after all, the philosophy of every-day life which Kant has presented to us with extraordinary insight and profundity. So far as he has succeeded in giving it to the world, and that part of the world which needs it most, he has rendered a service of which the anniversary of his death is a reminder.

The Heritage From the Past

THE great deeds, the love, the heroism of the past, come down to us as a river with a thousand branches. The knowledge of uncounted ages and the self-sacrifice which called it forth are the heritage of every man who will but open his heart and receive it. But are there no obligations also, and does not duty walk side by side with acquisition? We have freely received, must we not also freely give? There are two doors to the human heart, the door of entrance and the door of exit. Will not our condemnation be great if we merely store the gifts of the past, if we make of our hearts a barrier to the waters of life and knowledge, if we allow the river bed which runs on into the future to be dry and profitless?

From out of the past has come to us nothing which is worth receiving except the means of service. It is not worth our while to receive anything which it is not also worth our while to give to another. Whatever we have retained we have stolen. The human heart grows rich only upon what it has given away, it is nourished only by the waters which pass through it and away to other fields which still await the quickening touch.

THOUGHT IN VERSE

The pale, grey Priests of Morn and Eve
 Pace corridors of peace.
 And reverential songsters weave
 Bright thoughts that never cease;
 The censers of the blossoms burn
 On altars swept with dew---
 I have a church to worship in
 A sermon ever new.—F. G. Bowles

Measure thy life by loss instead of gain;
 Not by the wine drunk, but the wine poured forth;
 For love's strength standeth in love's sacrifice,
 And who suffers most has most to gain.—Elizabeth Barrett Browning

Follow you the star that lights a desert pathway, yours or mine,
 Forward till you see the highest Human Nature is divine.
 Follow Light, and do the Right—for man can half control his doom---
 Till you find the deathless Angel seated in the vacant tomb.—Tennyson

STUDENTS' COLUMN

Conducted by J. H. Fussell

(Continued from issue of May 15th, 1904)

Question How are man's life and evolution governed by cycles?
 How can there be progress if we continually come back
 to the same point?

Answer We quote again from the writings of William Q. Judge:

What is a cycle? It is a circle, a ring. But not properly a ring like a wedding ring, which runs into itself, but more properly like a screw thread, which takes the form of a spiral, and thus beginning at the bottom, turns on itself, and goes up. It is something like the great Horseshoe Curve in the Pennsylvania Railroad. There you go around the curve at the lower end; you go down into the horseshoe, and as you turn the grade rises, so that when you arrive at the opposite side you have gotten no further than the beginning, but you have risen just the distance between the two ends of the grade.

But what do we mean by a cycle in Theosophy, in our own investigations of nature, or man, or civilization, or our own development, our own origin, our own destiny? We mean by cycles, just what the Egyptians, Hindoos and the philosophers of the Middle Ages meant by it; that is, that there is a periodical return or cycling back, circling back of something from some place once more. That is why it is called cycle, inasmuch as it returns upon itself, seemingly; but in the Theosophical doctrine, and in the ancient doctrines, it is always a little higher in the sense of perfection or progress. That is to say, as the Egyptians held, cycles prevail everywhere, things come back again, events return, history comes back, and so in this century we have the saying: "History repeats itself."

But where do Theosophists say that cyclic law prevails? We say that it prevails everywhere. It prevails in every kingdom of nature, in the animal kingdom, the mineral world, the human world; in history, in the sky, on earth. We say that not only do cycles pertain, and appertain, and obtain in and to the earth and its inhabitants, but also in what the Hindoos call the three kingdoms of the universe, the three worlds; that is, that below us, ourselves, and that above.

Now, if you will turn to Buckle, a great writer of the English school, you will find him saying in one of his standard books, a great book often quoted, that there is no doubt cyclic law prevails in regard to nations, that they have come back apparently the same, only slightly improved or degraded, for there is also a downward cycle included within those that rise; but Buckle did not discover a law. He simply once more stated what the ancients had said over and over again. And it has always seemed to me that if Buckle and other people of that kind would pay a little more attention to the ancients, they would save themselves a great deal of trouble, for he obtained his law by much delving, much painstaking labor, whereas he might have gotten the law if he had consulted the ancients, who always taught that there were cycles, and that there always will be cycles.

As a further illustration of the meaning of a cycle, that it includes the idea of progression and that we do not come back to the same point, we may turn again to one of the great cycles of nature, that of the Zodiacal year, or of the precession of the equinoxes. The cycle of 25,000 years was known to the Egyptians and the Hindoos by observation, and they have left the records of their observations. According to this cycle the sun returns to the same relative position in respect to the zodiacal

constellations after a period of some 25,000 and odd years. But do we come back to the same point in space, or return to the same conditions?

Now, the sun is the center of our solar system and the earth revolves around it, and as the earth revolves she turns upon her axis. The sun, it is known now by astronomers, as it was known by the ancients (who were ourselves in fact), revolves around a center. That is, while we are going around the sun, he is going around some other center, so that we describe in the sky not a circle around the sun, but a spiral, as we move with the sun around his enormous orbit. Now do you grasp that idea exactly? It is a very important one, for it opens up the subject to a very large extent. There is a star somewhere in the sky, we do not know where—some think it is Alcyone, or some other star, some think it may be a star in the Pleiades, and some others think it is a star somewhere else—but they know by deduction from the known and the unknown, that the sun is attracted himself by some unknown center, and that he turns around it in an enormous circle, and as he turns, of course he draws the earth with him. In the course of 25,000 years in going around the signs of the Zodiac, he must take the earth into spaces where it has never yet been, for when he reaches this point in Aries, after 25,000 years, it is only apparently the same point, just as when I came around the curve of the Horseshoe, I started around the first point and went around the curve, came back to the same point, but I was higher up; I was in another position. And so, when the sun gets back again to the point in Aries, where he was on the first of April this year, he will not be in the exact position in the universe of space, but he will be somewhere else, and in his journey of 25,000 years through billions upon billions of miles, he draws the earth into spaces where she never was before, and never will be as that earth again. He must draw her into cosmic spaces where things are different, and thus cause changes in the earth itself, for changes in cosmic matter in the atmosphere, in the space where the sun draws the earth, must affect the earth and all its inhabitants. The ancients investigated this subject, and declared long ago this 25,000 years cycle, but it is only just lately, so to speak, that we are beginning to say we have discovered this. We know, as Nineteenth century astronomers, that it is a fact, or that it must be a fact, from deduction, but they knew it was a fact because they had observed it themselves and recorded the observations.

If our solar system, with our earth, and therefore ourselves, are continually coming within the influence of new cosmic conditions, the whole system and therefore our earth and ourselves must be affected. And we can find through observation that what occurs on this vast scale in Nature, occurs on a small scale in our own lives, and that though we return to similar conditions, they are *similar*, not identical. In reality we ourselves are different through the added experience of the past and therefore, however slight the change may be in ourselves, or in the *similar* conditions, the change is there and our experience is correspondingly modified.

The subject of personal cycles will be discussed later.

The Curse of Cant

IN Sir Archibald Geikie's *Scottish Reminiscences* we find regrets over the blighting influence which the infusion of a hard, stern creed has exercised over the natural character of his countrymen; especially that rigid Sunday discipline, which has turned the first day of the week into one on which all joy and sweetness are driven from the heart and a funeral gloom settles down on everybody. Penetrating to the Western Highlands, this influence has destroyed all the old singing, dancing, love of music, and old customs which had survived from time immemorial.

The ruinous effect of such an influence is shown in its inevitable concomitant—dissipation and coarse vice; for is it not matter of common experience that cant and vice go together, and that in places where there is this kind of heartless austerity there is secret vice and drunkenness, near by? The effect of such a blight upon a fine buoyant character has been to produce that addiction to strong drink which, sadly enough, forms a fruitful topic for jest at the expense of that country. And the drunkenness of Glasgow has been described, in comparison with that of other places, as being, not hilarious or boisterous, but bestial, sodden and morose.

Religious bigotry, and austerity, and cant, are hideous in their vices as in their so-called virtues; and this curse is surely one of those which used to be rooted out from the life of man. For it is no more representative of true Christianity than the wolf in sheep's clothing, and it has degraded into the very depths the sacred names of Christ and religion.

We recognize in this so-called "religious" spirit, which turns a happy, healthy, moral human being into a churl, a villain, a debauchee and a jaundiced pessimist, a part of that conspiracy against Brotherhood which can be traced in various forms all through history, and which has been responsible for so much cruelty and misery.

STUDENT

A Tribute From Point Loma Students

Nay, but as one who layeth
His worn-out robes away,
And taking new ones, sayeth,
"These will I wear today,"
So putteth by the spirit
Lightly it's garb of flesh,
And passeth to inherit
Its residence afresh.

THERE is no death, there is naught but life, life glorious, infinite and eternal, which changeth, but which does not pass nor cease, which floweth on and on, transmuting but the substance of its garb.

Those who know the meaning of the future and who feel within their own hearts the thrill that proclaims life changeless and eternal, look upon death as the warrior messenger from the king of life, and yet, in spite of philosophy, in spite of the greater hope that deep convictions bring, in spite of the knowledge that death is a blessed relief, the opening of a new doorway and the entrance into that life which is complete—the news that Mrs. Katherine Dille had passed away, was to her comrades a sorrow and a shock. Yet deep beneath the grief that this news brought to each heart from the sense of personal loss, there sounded a joy-note for the sweet release that death has meant for this comrade.

Mrs. Dille was one of earth's true souls. It was in the nature of things that she should be beloved by those among whom she lived and worked. The very lines of her face told the story of one who had passed through the fire and whose soul had been well-nigh burned pure. The foundation-stone of her character was loyalty, loyalty to the principles in which she believed, loyalty to those who battled for those principles by her side, loyalty above all to her friends and to those whom she loved. Yet she had not that lack of discrimination which allowed her to close her eyes to the faults which were destroying all that was best in the hearts of those who looked to her for help. Deep beneath the kindness of her nature lay the warrior's courage and the warrior's strength. Small wonder that she gravitated, during her life here in Lomaland, towards the children's work, and that all the sweet motherliness of her nature found its expression in her joyful caring for some of the motherless little ones on the Hill.

To the husband and son, the hearts of all the comrades go out in deepest sympathy. To both, the memory of her life and of her pure service will be, must be, a sustaining force, a very shield armor. To the students themselves Mrs. Dille's life was an inspiration.

It is difficult for us, in the first heart-ache that the news of her death has brought to all her comrades, to believe that her place here can be easily filled. We miss her, and yet how much more she was to husband and son, how much more than even to the little children. Yet her influence we know remains. Death has been far kinder to her than to us, for, released from a suffering body, she has stepped through an open doorway into the life that is real, a life whose inspiration and whose influence presses more closely upon our own than we are aware. There is no death, there is naught but life.

Those who are wise in spiritual things, grieve neither for the dead nor for the living. Never did I not exist, nor thou, nor all the princes of the earth, nor shall we ever hereafter cease to be.

HAIL to the coming singers!
Hail to the bright light-bringers!
Forward I reach and share
All that they sing and dare.
I feel the earth move onward,
I join the great march onward,
And take, by faith, while living,
My frehold of thanksgiving.

Perjured Affidavits

A DECISION very important to the child-labor problem has just been made by a judge of the New York Municipal Court. A certain company was prosecuted for employing a child under the statute age. In defence it was shown that the girl's parent had made an affidavit that the child was over the necessary age. The court, however, ruled against the company, holding that it was responsible for the accuracy of the affidavit. A contemporary remarks:

If this decision is sustained these perjured affidavits, which have in years past afforded so common a means to unscrupulous employers for evading the child labor laws, will lose their value.

It should of course be impossible to render a statute entirely nugatory by the mere expedient of a false affidavit, but is there no way in which the parent can be reached? A learned judge once remarked that truth will sometimes come out *even in an affidavit*. STUDENT

WHEN some one asked Socrates if he could tell him how to go to Mt. Olympus where the gods lived, he answered, "Certainly I can tell you: do all your walking in that direction." The same truth still holds good.

The Raja Yoga Edition

THE Special Raja Yoga Edition of **THE NEW CENTURY** contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to **THE NEW CENTURY CORPORATION**, Point Loma, Cal., the papers will be mailed for you without extra charge.
