The Great Importance of Education

THE true lover of humanity can today set no nobler task before him than to arouse the community in which he lives to a fuller conception of education, to a greater grasp of the potentialities which should be unfolded in the school instead of being narrowed and confined. It is in the school that the nation of the future is being born, the nation which cries aloud to us for a chance to live, for the right to inherit the earth and to fill it with human power and with human light. There are fortunately many signs that we are awaking to this most emergent duty and that we are seeking to bring a new life unto our children and to bring it more abundantly.

But how much there is to be done, how great is the incubus which we have yet to throw off. Mankind is essentially conservative, glorifying tradition, bestowing an undeserved halo upon prejudice and custom. Only by individual and independent effort can we throw off the national lethargy, the effort which cares not whether it be supported or unsupported, the effort which is the natural and irresistible expansion of the mind in its search for the truth which saves.

Let the Child Mind Develop

That mental expansion which for the adult too often comes stiffly and unwillingly is a necessary part of the child life. The love of motion is the main-spring of the child nature. The movements of the body are but the outside picture of the movements of the mind which unceasingly reaches out for knowledge and for acquisition. The child mind needs no teaching as the word is customarily used. It needs but permission to know; it needs only that we place within its reach the objects of knowledge; that we unfetter the mental limbs that they may run the race for which they are so eager. And every child will run that race in its own way according to the God-given stamp which has been placed upon it. Try to make it run in some other way and we shall so cripple it that it will never run at all, but only stumble lamely. It asks of us that we clear the course, that we indicate the goal. To that goal it will surely go in obedience to laws which were not taught in the schools of our youth, but which we must now recognize and learn if we are to save alive the soul of the nation.

The obstacles which we are to remove from the mind of the child are within itself and not outside. Education must ever remain the failure

The Dual Nature of Mankind

which it has been until we intelligently and practically perceive the dual nature with which we have to deal. Even "the wayfaring man, though a fool," knows of that dual nature in himself, of the contending forces which urge respectively to the right and to the wrong. So many of us have acquired the habit of yielding that we no longer recognize that in the child there is no such habit until we allow it to be slowly formed, that the child nature can so easily be regulated that the dominance can so easily be given to the pure and the good. Let us not suppose that the sign marks of the pure and the good are necessarily an obedience to rules and the due subjection to parent and teacher. Many a "model child" at school and at home has become a scourge in the world, and many a troublesome child has grown into the warrior and reformer. Many a childish reputation for good behavior has no other basis than cowardice and a clever self-interest, as many a reputation for ill conduct is born of a physical nature calamitously unexercised, cramped, misdirected and misunderstood.

Youth Holds the Gold of Life & Fate

The child whose mind is to flow outward and onward like a river is the child who has been taught to recognize his Higher Nature, and to appeal to it for guidance. Then the mind is truly unchained, then the human flower will grow, not because we are pulling it and goading it, but because the sun is in the sky and because the winds of heaven are its comrades and its guides. The child is already infinitely wise and infinitely rich, but our education drives it backward and makes it poor. Its hands are filled with the gold of life and by our pernicious alchemy we transmute it into lead. We rob it of its imagination and we give it "facts," which tomorrow will disprove. We take from it the memory of heavenly things and in their place we give to it the superstitions which we ourselves do not dare to face and to defy. We drive it forth from the garden of Eden and we set up the sword of fear to bar those portals evermore. Such indictment as this is brought against civilization by the child accuser, and there can be no other plea than that of guilty. Let that plea be at least accompanied by the promise of amendment, and let us make haste to be in earnest.

True Genius When the Soul Is Free

In the day that is to be there shall be miracles done in the land, the miracles of genius. Is not genius always a miracle, inasmuch as it flashes into the world and laughs aloud at all human laws and at the manner in which, with such solemn faces, we have tabulated and arranged the universe? Genius is the blaze of the unchained mind which has made stepping-stones of its dead selves, and so has reached up to the central sun-fire of the soul, clothing itself in flame. Genius is the intellect which has unveiled the heavenly secrets which it

knew long since, when the world was fresh and fair and young, and which for awhile were buried beneath the debris which education can remove. Genius is the entrance into the heritage of the past, it is the memory of the soul once more given to man, it is the fire-flash from the holy electric founts too long kept apart, it is the robe of flame, the rightful garment of the mind.

Shall we not allow our children to run this goodly race? Shall we commit their ways unto the Law? Shall we help, or shall we forever hinder?

STUDENT

Diamonds in the Garbage Heap.

THERE are some persons who eke out a not unprecarious livelihood by raking over the garbage heaps and exploring the sewers of great cities. Sometimes they find jewels, diamonds and the like, and always they discover objects which have been designedly thrown away as useless, but of which they know the adaptability, in which they see some unexpected value.

Would that we could apply some process of similarly intelligent selection to the human garbage heaps which, to our shame, grow larger and larger. Would that we knew some way to clarify our vision so that we might the more readily detect the jewel beneath its grimy covering, the more readily perceive the divine use to which we might put this soiled wreckage which is so tumultuously hurled upon our shores by an ocean of life which grows more cruel and more turbulent day by day.

Let us sort the heap for a moment, and we will select for our purpose the police court of a neighboring city. Seven children, little children, are the offenders before the awful form of outraged civilization. It may be that in that other greater court of an unseen justice, the positions will be reversed. Civilization will stand in the dock and these seven children will be found among the witnesses for the prosecution.

First of all come two little boys who are accused of petty theft. The defense is very slight, consciousness of guilt being also very slight. One of these desperate criminals possesses a mother, who is in court. He is decidedly unwilling to go home with his mother, but consents to accompany his grandmother, although he does not wish to stay even with her all the time as it was "so awfully lonely." His companion in guilt is thirteen years of age, but looks only ten. Some years ago his mother died and his father was injured. As the latter was quite indifferent to his children the loss was more apparent than real. This particular child had been adopted by a lady, who was in court, and who told the judge,

There is one thing that makes me feel certain there is good in the boy, and that is his wonderful kindness to children. My own little boy thinks there is no one like him, and it is the same with all children.

We also would express the belief that "there is good in the boy," much good. How long it will remain under the process of legal reformation remains to be seen.

And now come two little fellows under a charge of vagrancy. What is vagrancy? These two little boys had walked from Omaha earning their living from day to day honorably, and as best they could. There was no charge whatever against them except that they had a "mania for traveling." The same "mania" under any other conditions might bring glory to themselves and to their country. The remaining cases were those of young girls, against whom nothing whatever was alleged, except that they were unmanageable and had repeatedly left home to enter situations. *All of these children had one point in common: they were determined not to go home.*

The authorities of the United States are grievously perplexed, the Constitution seems to lack something which it should contain. A world in arms would find the American nation tranquil, resourceful and prepared, but the forces of law and order, the judicial system of this country, are disorganized and routed in the presence of a few little children, who have decided they will not go home. Doubtless they have their reasons.

These few cases are illustrations of what goes on in many other great cities. We do not know what the end of them will be, although we know what the end ought to be. One thing only we will say. As loyal Americans we trust that good care will be taken of the boy who is so kind to other children, and also of the two little fellows who have a "mania for traveling," and earning their living honestly. Here, at any rate, are diamonds in the garbage heap. America will want those boys, presently.

Success in Business

"A SUCCESSFUL business man!" what a full, rich flavor there is in that phrase. It stirs our respect in a moment—a respect not unmixed with a lurking sense of our own inferiority. But ought we not to know the man, to enquire into the reason of his success, before the phrase should be allowed to awaken any such feelings?

Suppose the success was achieved by a day-long and year-long concentration on business, as the one thing in life before all others to be done? Suppose the man has neglected the intellectual part of his nature, done nothing with the artistic, given never a thought to the spiritual, how then? May not his "success" be quite easily a disgrace to him, and that, notwithstanding that he has never harbored a single impulse to dishonesty? He may truly be said to have prostituted or submerged his fuller human nature.

We live in an age when business is for the majority a necessary and proper field of action. And the urgency of self-support may often really demand a full absorption in it. But it will do no harm if we withhold our contribution of respect for success till we know the price paid, till we know whether the impulse to scheme, to amass, to outwit, far outran any possible necessity, and was gratified at the expense of nearly all the other and higher impulses that arise in our complex nature. X.

Literary Merchandise

A NEW ENGLAND newspaper has come into possession of a trade circular of a very remarkable nature. It seems that there is a firm in Ohio which undertakes to supply literary matter of all kinds at regular prices, such matter to be used as the original composition of the purchasers. Sermons vary in price from 50 cents up to \$25, while high class political speeches may be purchased for \$30. The circular guarantees "original work" in all cases except the very cheap sermons, which, however, are probably dear at any price. We wonder if any of these machine made sermons are on the subject of the public apathy toward religion. We rather suspect that they are, and that by some mischance a number of duplicate copies have been turned out.

It is fairly certain that merchandise of this kind is not produced without a market to receive it, and that market is probably more extensive than is usually supposed. Judging from the nature of a large number of the sermons which are weekly inflicted upon the congregations of the country we should suppose that the firm in question and other firms of a like nature are doing a large trade, and chiefly in the 50 cent variety. S.

The Alaskan Boundary Decision

SPEAKING of the Alaskan boundary decision reached by the Anglo-Canadian-American board, and the honor it reflects upon both disputants, the *Philadelphia Press* says:

It has (hitherto) been the unspoken, but none the less accepted, view of all international arbitrations that no man could be expected to decide against the claim of his own country. In a century of such tribunals no arbitrator ever has.

We hope that a new and nobler standard of international honor may soon be everywhere raised. And we believe that the keynote struck by England and America will be heard no less clearly in any matter that may arise between the governments of France and England. The arbitration treaty just concluded between these two nations provides for the reference of disputed matters to an impartial tribunal at The Hague. If the Anglo-American precedent counts for anything, France and England will go one better than their treaty and the "impartial tribunal" will neither consist of outsiders nor meet at The Hague, but of Frenchmen and Englishmen meeting in London or Paris.

STUDENT

Cawdor Castle, Scotland

THE illustration on the cover page of the *NEW CENTURY PATH* this week represents Cawdor Castle, Nairn, Scotland, immortalized by Shakespeare as the scene of the murder of King Duncan by Macbeth. The castle is situated five miles south of Nairn amid scenery noted as much for its beauty as for its associations. The vicinity contains many objects of archeological interest, Roman coins having frequently been found. There are also many prehistoric stone circles and rocking stones.

STUDENT

Some Views on XXth Century Problems

The Armed Hosts of Civilization

IN Russia every man between the ages of 21 and 43 belongs to the standing army, which upon a "peace" footing, numbers 1,100,000 men. This is, of course, roughly representative of a very large part of the world which we are pleased to call civilized. The day will come when we shall look back upon the war preparations of this age in very much the same way that we now look upon cannibalism and human sacrifices. What should we say of a civilized community in which every man had to spend the greater part of his time in standing motionless as an armed guard over his property? We should say that such a community ought to be surrounded with a wall and placed under medical supervision. But the same form of insanity which we should thus condemn in a small community we exalt into the greatest of virtues when we find it in a nation, and the victims of such insanity as this are clothed in gorgeous uniforms and allowed to believe, in fact, taught to believe, that they constitute the living heart of the nation. And the ludicrous part of the thing is that the vast majority of these decorated and uniformed victims of militarism are those who have the smallest share in the national property which they are called upon to defend. It is a strange problem in collective psychology, but it is one which the world has to solve sooner or later.

STUDENT

Men Are Going Back to the Land

THE idea expressed in the phrase, "Back to the land," appears to be happily gaining ground. Several experiments on this line are under way. One of the most recent of these is in the beautiful English county of Surrey. The directors of the experiment have bought an estate of about 400 acres. This they sell in small portions to selected persons who intend to work the land themselves. The terms of sale are easy, ten per cent down of the cost price, and the rest in half yearly instalments over ten or fifteen years. The soil is rich and watered by a stream. People who avail themselves of such a chance to escape city life tend, of course, as much to better their health as to reduce their anxieties. But city dwellers fear lest in transferring themselves to the country they should get out of touch with the current of modern life, and lack society. That much of modern life which is valuable and which cannot be as well touched in the country as in the city, would appear to consist of music and the drama, and surely nine-tenths of the latter is quite worthless. Books, news, journals—these are to be had in the country.

There is the post, the telegraph, often the telephone. On the whole, we should say that getting out of the "civilization" of the cities would usually be the path towards getting into the true civilization of mind and soul.

STUDENT

Collective & Individual Cruelty

A CHICAGO Judge has expressed the opinion that the punishment of flogging ought to be administered to a certain man who was brought before him charged with cruelty to a child. Flogging is of course a detestable punishment degrading alike to every one concerned. In this instance we have, however, every sympathy with the judge's indignation, although we should be sorry to see the establishment of a precedent for corporal punishment.

There are, however, always two sides to every question and it is perhaps hardly to be wondered at if a few individuals here and there suppose themselves at liberty to do upon a small scale what is done by some of our mills and factories upon a large scale. There is no radical difference between the infliction of sudden and sharp torture upon a child, and slowly torturing that child into idiocy, disease and premature death. The law provides for one however and not, unfortunately, in all cases for the other. That is the fault of the law and of public indifference, both of which must be changed. In the meantime we hope that the law, such as it is, will be relentlessly invoked to punish the human fiends whose outrages upon defenceless children are a reproach to our religion and to our civilization.

STUDENT

The Modern Science of Medicine

DISCORDANT notes are becoming more and more audible in the complacent chorus of modern medical science. There is a process known as whistling to keep one's courage up, and we are reminded of this when we read of the triumphant march of Twentieth century medicine and the confident assurances that the armies of disease and death are already in full rout before the victorious anti-toxin. Facts are endowed with a stubborn determination to be recognized, and they are quite willing to wait until the shouts of self-advertisement have died away from sheer exhaustion. Fortunate it is that the medical profession possesses a larger proportion perhaps than any other body of men who combine a high intelligence with humane and disinterested motives, and it is to such as these that the public will ultimately accord the respect and the attention which they deserve.

Dr. Robert Jones has been speaking to the British Medical Association on the subject of insanity, and his statements have attracted almost as general an attention in America as they have in England. Dr. Jones has nothing to advertise, not even himself. He has no pills against the earthquake and no wares for the market. He says that there are more varieties of insanity than there were a century ago, that they are more severe, more chronic, more difficult to cure. He admits the enormous advance of preventive medicine, the increasing purity of food, air and water, the better care of infants. These things are facts. It is also a fact that the physique of the people steadily and obstinately deteriorates and that insanity is rampant. He deals not only with insanity but also with cancer. During the five years from 1861 to 1865, the annual death rate from cancer was 367.8 per 1,000,000 persons. In the five years from 1886 to 1890, it had increased to 599.7.

These figures will take a great deal of explaining away and they are not congruous with the placid assurances with which the air is full. What are we to do? Must we look for more anti-toxin, more serums, more inoculations, immolate fresh armies of animals in the slaughter houses of vivisection? Science has had its carnival these many years. It has had its notable triumphs; also, it would seem, its failures. The march away from materialism has brought us within sight of the remedies which we need. We have only to raise our eyes and to recognize that no man can do anything for us, but that we can do everything for ourselves. We do not need pure air and pure food half as much as we need pure thinking, and by pure thought we mean the thought that produces tranquillity. We are not afraid to advocate antiquated theories. We are not afraid to remind ourselves of the sorrows which await the people who forget God, and in saying this we are guilty of no cant expression. We mean that there is an all-pervading Law of which the recognition produces peace, and that he who learns how to perform duty and to rely upon that Law is hedged around with a protection against which nothing can prevail. We are reminded of the cry of the street patrol in medieval London, "Unless the Lord this city keep, the watchmen watch in vain." We have asked too much of the watchmen of science and they have promised more than they can give. It is of small value to strengthen the fortress of the body if within that body there are the ravening and devouring wolves of greed and dread and hate. I.

A Youthful Product of His Times

A LITTLE boy of 13, just arrested in the streets of Los Angeles, is surely a product peculiar to our own times. He has already been arrested several times, and is charged with being drunk on the night of the last occasion. On his person were a murderous looking set of brass knuckles and some loaded dice. His language was of the vilest sort, and on his release he proposes to murder his captor.

He is only a product of the times: of the dime blood-curdler, the prize-fight, the police columns of the dailies. These things are written on his face, engraved on his nervous system.

How soon shall we take hold of questions such as this and solve a problem which is now a peril to our national life? X.

Art Music Literature and the Drama

R. Machell, a Loma-land Artist

VISITORS to Loma-land, impressed with the scenic decorations which are being carried into execution in the Homestead Rotunda, make many inquiries as to the artist. They are being done by R. Machell, whose mystical paintings are already familiar, by means of photographs, to many students. From H. P. Blavatsky's old home at 19 Avenue Road, London, he came here some four years ago and has opened a studio permanently. He finds it impossible to overstate his admiration for this place, which truly does contain all that would inspire and delight the artist soul.

Mr. Machell is a Londoner. After some years of art study in England he went to Paris, where for four or five years he studied at Julian's, winning a number of medals and also exhibiting yearly in the Salon. Then he returned to England, and for some years painted chiefly portraits. He became a member of H. P. Blavatsky's London Lodge, when it was first formed, and it was shortly after that that he began the series of mystical paintings which have made his name so well known. All were the result of his Theosophical studies and in all he has expressed, in rare symbolism and still rarer color, some of the great truths of the soul and the soul's destiny, of which H. P. Blavatsky was the first Great Teacher in this cycle.

It was Machell who decorated the hall at 19 Avenue Road, when it was first opened by H. P. Blavatsky. Many years later, when Katherine Tingley took possession of the place, she invited Mr. Machell to occupy one of its rooms as a studio. Here, in an atmosphere which was pure and in the truest sense classic, within the vine-bowered old home and adjacent to the exquisite garden, some of the artist's best work was done.

Mr. Machell's keen sense of the fitness of things has made him unwilling to place his pictures into the usual style of frame. Most of his frames, therefore, he has carved himself, tinting or gilding the wood as best fitted the whole picture's harmony, the entire frame carrying out, as far as genius can accomplish, the conception of the picture itself. Some of the effects thus obtained are truly marvelous in their harmony of contour, color and design. It is a step toward that unity which is the aim of true art as it is and ever must be the aim of the true life. Mr. Machell has written more or less during the last twenty years, most of his articles dealing with Theosophical subjects. He has entered into the student life under Katherine Tingley in a spirit full of enthusiasm and glowing with high purpose, and it is his belief that Point Loma is destined to be, ere long, the art center of the world. STUDENT

DONIZETTI once wrote to his brother-in-law with regard to a piano he was about to send him—Donizetti's own instrument:

Do not sell it—no, at any price. It holds my whole artistic life from 1822. I hear whisper from it Anne Boleyn, Maria Stuart, Lucia, Belisar, Marino, Falerio, Kenilworth and all the others. Let it live as long as I live! It was my friend in the time of my hope, in the happiness of my marriage—in solitude. It was the witness of my joys, my tears, my ecstasy. It shared my confidences and my toil. With it dwelt my genius. Every part of it is alive with my life. It has been to me a companion—may it be such to thy daughter with its dowry of a thousand thoughts.

The Filipino Love of Music

THE Filipinos are an intensely musical people, and this taste is displayed in all sorts of ways, but mostly in their funerals and home entertainments, which are continuous performances and in which all sorts of instruments are drawn upon, and in their theatres, which are even more numerous than their cockpits. The music in the homes and the theatres of the Filipino people is one of the most hopeful elements in their character as well as the most refining and elevating. No people can be entirely depraved in whom the love of music is a passion. In the homes of the natives of Manila and in the provinces of Luzon, and I visited most of those provinces, the number of organs, pianos, guitars and zithers was a source of constant surprise and pleasure. . . . He

must be a very poor Filipino, indeed, who cannot have a brass band follow his remains to their last resting place. . . . Few Americans, however, attend the native theatres or the native churches, where the music is the best. . . . I have seen a little Filipino cantatrice, by an impassioned recital of an incident in the tragic history of her race, create a storm of applause which rose and fell like the lashed waves of an ocean, yielding its violence to calm gradually and reluctantly.

The Filipino voice, like the Filipino people, is very small and thin. What it lacks in force, however, it makes up in shrillness, and can easily be heard in the vast, flat, bamboo theatre, the roof of which is seldom more than ten feet high in the center. And the little actors are as lively as crickets, often awkward to the point of ludicrousness, which the indulgent audience blindly ignores while responding generously to all that pleases it. The critical sense seems completely subordinated to the abounding desire to be instructed and amused.

The civil authorities appreciate the Filipino intense love of music and seek to supply the demand for it in all reasonable ways. Wherever there is a military band, therefore, concerts are given regularly in the public square, and in Manila and the other provinces of Luzon I have seen the

whole population turn out to attend these concerts. In many places where there is no military band the natives have got together a band of their own.—*New York Evening Post*

PROPORTION is at the base of all manifestation; and proportion in form is the base of the material universe. Therefore Plato said correctly, that God geometrizes. But why stop at this assertion? May it not, with equal correctness, be said that God ciphers—numerical relationship being even more basic than form? And why not continue and say that God sings—proportioned tone, color and motion being likewise sufficiently fundamental to be considered divine attributes?

The Cabalists picture creation as beginning with *Sephira*. How strangely like the modern word *cipher* used above! And how curious it is—or something else—that the cipher should be the 0, the emblem of infinity, with neither beginning nor end, and alike in all its parts.

From the study of acoustics we have reawakened to something of the marvelous manner in which harmonious and melodious tones are related. Why then should it seem odd that Pythagoras made the study of music compulsory with his pupils?

H. T. P.

FROM A DRAWING BY GUERCINO
(Academy of Fine Arts, Venice)

TO few, either among men or women, is it given to become twice

famous during the narrow span of a single life. Mrs. Watts-Hughes is one of the few, at one time widely known as a singer, now, by her discoveries in the realm of acoustics, attracting the attention of the entire scientific world. By no means the first to investigate in this field, she is yet the first in modern times to make a distinct advance beyond the results gained by Chladni more than a century ago.

The latter, in his efforts to translate sound values into visible forms, succeeded partially only. He used a violin bow in securing sound-figures, the latter being formed—though not perfectly—by sand on steel plates. Mrs. Watts-Hughes, after experimenting with this and other more or less imperfect apparati, finally constructed the *eidophone*, the simplest possible contrivance, consisting of a tube, a receiver and a flexible membrane.

Various membranes, among them gold-beater skin, were tried, and while the results obtained were more satisfactory than those of Chladni, Mrs. Watts-Hughes continued to experiment until she hit upon india-rubber as an almost perfect means to the end she sought. With characteristic modesty she has said:

If others had not confined their attention to gold-beater skin, parchment and other membranes, they would probably have anticipated my discovery.

For use in producing the voice-forms themselves, Mrs. Watts-Hughes has used besides sand, various dry powders, microscopic seeds and lycopodium. In searching for some method by which the intensity as well as the pitch of voice sounds could be measured, she early saw that this must have relation to the weight of the substances which were to be influenced by the vibrations. It was not until after two years of constant experimenting that she was able to sing out the perfect sound-figures of

✻ The Lifting of Another Veil ✻

FRAGMENT FROM BROWNING'S "ABT VOGLER"

ALL through my keys that gave their sounds to a wish of my soul,
All through my soul that praised as its wish flowed visibly forth,
All through music and me! For think, had I painted the whole,
Why there it had stood, to see, nor the process so wonder-worth:
Had I written same, made verse—still, effect proceeds from cause.
Ye know why the forms are fair, ye hear how the tale is told;
It is all triumphant art, but art in obedience to laws,
Painter and poet are proud in the artist-list enrolled.

But here is the finger of God, a flash of the will that can,
Existent behind all laws, that made them and, lo, they are!
And I know not if, save in this, such gift be allowed to man,
That out of three sounds he frame, not a fourth sound, but a star.
Consider it well: each tone of our scale in itself is naught;
It is everywhere in the world—loud, soft, and all is said,
Give it to me to use! I mix it with two in my thought:
And there! Ye have heard and seen! Consider and how the head!

Therefore, to whom turn I but to thee, the ineffable Name?
Builder and maker, thou, of houses not made with hands!
What, have fear of change from thee who art ever the same?
Doubt that thy power can fill the heart that thy power expands?
There shall never be one lost good! What was, shall live as before;
The evil is null, is naught, is silence implying sound;
What was good shall be good with, for evil, so much good more;
On the earth the broken arcs; in the heaven, a perfect round.

the two diatonic scales from the lower E flat of the contralto to C sharp in alt. With this step—which made possible the translation of simple melodies from sound into form—a new step was taken and a new door opened. The next experiments were made with liquids and semi-liquids, and Mrs. Watts-Hughes found herself confronted with a quite different set of problems, to the solution of which her former discoveries afforded no clue. With water and color-pastes she obtained new wonders and even more remarkable results. Regarding this set of experiments she is reported to have recently said:

Perfect control over the voice is essential, and the petals are gradually coaxed out by alternating *crescendo* with *diminuendo*. I place a small quantity of color on the center of the disc, and this I surround with water. Then, as I sing, I see the pansy-petals of color move out into the water, without in any way mixing with it. I can, in fact, sing them in and out of the surrounding water, *which remains clear*. That, I think, gives a clue to the working of nature in plants.

One day, after looking at some of my results, a friend exclaimed, "Then God sings the flowers!" And, do you know, I think that is true. Again and again, when I am working, my thoughts turn involuntarily to the book of *Genesis*. God separated the waters from the earth! How easy that is to understand in the light of our new knowledge.

I once made a careful search through the Bible to see how often the "Voice of God" is mentioned. How often, think you? Four hundred and forty-six times! He exercises His power through His voice. No, today we little realize the power of the voice—the potency of sound.

Exquisite, simple, symmetrical in outline, pure, delicate as snowflakes, often as beautiful in their outline as a forest flower, these sound-figures give one a hint—more than a hint—of how the universe came to be, number, color, sound, form, and behind them God, life's Music-Master—God the Geometer.

STUDENT

Madame Le Plongeon

AMONG those who have, through archeological research, contributed most to our knowledge of prehistoric peoples are Dr. and Madame Le Plongeon. When the former began his researches among the ruins of the Yucatan Peninsula practically nothing was known of the ancient Mayas. One of the most remarkable races of antiquity, Dr. Le Plongeon has proven their intimate relation with the old Egyptians by not one or two evidences, but many. It was he who first succeeded in translating the hieroglyphics found upon the ruins and in the manuscripts of Uxmal. In all his work Dr. Le Plongeon has been ably assisted by his wife, and the book just published by her, *Queen Moo's Talisman*, has found its way, by courtesy of the authoress, to the editor's table. It gives us a romantic glimpse into the probabilities of these old days. At one time, during their researches, Dr. Le Plongeon discovered in the midst of an almost impenetrable forest, in the great square of the City Chichen, two ancient tombs. The hieroglyphics being translated, it was discovered that one tomb had been erected to the memory of Coh, a Maya ruler, by his wife, Queen Moo. Within it was found a white urn, containing what proved to be the remains of human flesh together with a talisman of rare green jade. Upon this Madame Le Plongeon built her romance, an exquisite tale of Queen Moo's devotion to her husband, of her sorrow at his death, of her placing within his tomb a white urn containing his heart and her own precious talisman. An interesting touch is given by the account, at the poem's beginning, of the earthquake which swept across the great island which once lay in the midst of the Atlantic and of its final submergence, one of the Mayan traditions.

Dr. Le Plongeon's life-work has doubtless been rendered doubly valuable by the devotion and assistance of his wife. Were true comradeships between husband and wife the rule instead of the exception, the world would be the richer, not only intellectually, but spiritually. The path of the pioneer on any line is a difficult path, lined with discouragements and filled with obstacles. Madame Le Plongeon is an example among women for her courage, ability and devotion to the ideal which is one with that of her famous husband.

Madame Curie

TO those who associate the great discoveries of the age with immense laboratories and gray-bearded scientists, it is something of a surprise to learn of the simplicity of the life of Mme. Curie, the discoverer of polonium. Just outside of Paris, in an unpretentious little cottage, live M. and Mme. Curie and their little daughter. Together they have experimented, he giving what time could be spared from his lectures and she from her housekeeping, for those who have visited their home say that Mme. Curie is a model housewife in every respect.

It was more than a hundred years ago that, in the mineral pitchblende of Bohemia, uranium was discovered. It was on this pitchblende that Mme. Curie made her experiments, separating it into its various chemical components. At last she began a series of experiments on the slag of pitchblende after the uranium salts had been extracted. The result was the discovery of the wonderful new element which, in honor of her native land, Poland, she named polonium.

There are those who declare, like Sir William Crookes, that Twentieth century scientists may reach a point where matter is resolvable into pure energy. Whether that be prophecy or mere speculation, Mme. Curie's discovery appears to be a step in that direction.

E. W.

The Lewis Palimpsest

WHAT is known among scholars as the "Lewis palimpsest" was discovered by the two sisters upon whom the University of Heidelberg recently conferred degrees—Mrs. Margaret Gibson and Mrs. Agnes Lewis, of Cambridge, England. It is a Syriac version of the four gospels, pronounced to be the oldest manuscript of the gospels yet discovered.

To find this precious bit of parchment these sisters made a caravan trip into the heart of the Arabian desert, and they discovered it in a Greek monastery which was probably standing when the Christian era began. Today it is a strange and lonesome old ruin, built on the side of Mount Sinai, and eighty miles distant from the nearest building.

Both Mrs. Lewis (from whom the famous palimpsest received its name) and her sister have a thorough knowledge of Syriac. Without it they would have achieved failure in their undertaking, not success.

"St. Catherine's Convent," as it is called, is a vast rock-bound pile, surrounded by an outer wall which was built when the place was fortified by Justinian, and the monastery itself is a labyrinthine conglomeration of stone buildings. It is today inhabited by a community of Greek monks who spend most of their time in raising vegetables, and who were as amused as they were mystified by the zeal with which the two archeologists pored over their old manuscripts. Possessing but little education, able to read and write modern Greek, of course, but ignorant of the ancient languages, they had not the slightest idea of the value of these old parchments to modern research. They would not, however, sell the palimpsest, so a careful photographic copy was made of every page of the precious vellum, both sisters being expert photographers. In this palimpsest ("twice written") the sisters discovered below the outer and most plainly evident writing, the faint traceries which betrayed an earlier record and this proved to be the four gospels, laboriously set down in Syriac, not later than one hundred and fifty years after the crucifixion. When the photographs were published they attracted the attention of the leading philologists and Biblical critics of the world.

Mrs. Lewis and Mrs. Gibson, on the occasion of a later trip to the monastery, discovered a number of valuable Arabic manuscripts, among them one called the "Palestinian-Syriac Gospels," a very ancient lectionary. Many years ago these sisters

together explored remote byways of Greece and Palestine. Their father was an antiquarian and both married men who not only are scholars, but who are examples of justice as well, for they encourage in every way the archeological investigations of their wives. Seldom indeed has fate conspired with heredity to work such kindness.

STUDENT

IT is interesting to record that Dr. Hilprecht, the archeologist, who is the translator of the Nippur tablets which are now in the University of Pennsylvania, has declared himself in favor of this line of work for young women. Never was archeological research more active than at the present day and there is great need of trained translators both in this country and in Europe. Particularly is this true of the Babylonian and Egyptian hieroglyphics. A number of the women students at Harvard and Cornell have already begun to train themselves for this work.

Miss Murray, who is assistant to W. M. Flinders-Petrie, the Egyptologist, was at one time practically alone in the field. Believing, however, that it offered to women unusual opportunities, she established a school of correspondence and is now teaching the science.

California Coast Islands Giving Up Their Secrets

A BODY of working men who make a living by archeological research of their own conducting is surely a sign of the times. Why the "man in the street" is so interested in archeology, he would probably find it difficult to say. It partially awakes a sleeping something deep in his consciousness, of whose significance he is hardly aware. The body of men of whom we speak consists of grave searchers, but as the graves are prehistoric there is no protesting necessary. Their work is confined to a few islands from 50 to 100 miles west of the Californian coast, mainly Santa Catalina and San Nicolas. These islands are filled with remains of prehistoric Indian residence, going back to the stone age; towns, villages, kitchen middens, and graveyards, showing (by their many layers of bones) at least centuries of use.

The deepest layers of some of these graves showed that the occupants were not civilized enough to have used anything metallic. Nearer the surface metal appears and signs of the effects of contact with Spanish traders and priests. It was fortunately the custom to bury the dead with all their possessions. Accordingly there are beads, carved shells, pestles and mortars, axes, earrings, pearl jewelry, and carved amulets.

Some of this "jewelry" is in cases, doubtless the property of the dusky women of the race, made of large shells placed together and apparently hinged. On the owner's death the junction was entirely sealed with asphaltum and the case buried with her. Bones are also in immense quantity.

It may be that at a depth considerably below any of these remains much more important finds are waiting, for these islands, like California itself, were part of the sunken continent of Lemuria. What civilizations, what rises and falls of the ever-restless waves and tides of human life that may have witnessed, science has yet to begin to learn.

Mystic Architecture—Ancient Buildings and Numbers

IN *C. R. Acad. Inscript.* Mr. J. Oppert publishes a very interesting paper on some arithmetical inscriptions discovered at Sippara, and which throw some light upon ancient architecture. Upon one of these tablets the problem is presented of the making of a building of which the surface shall be equal to the square of the sacred numbers 653 and to be composed of four squares and a rectangle. The number 653, known as the cycle of the phenix, is made by the addition of a sothiacal period of 292 lustra and a lunar period of 361 lustra. The application of these cyclic numbers to architecture was supposed to guarantee to the building a corresponding length of life. A curious Biblical parallel is pointed out by the author. The period from the deluge to the birth of Abraham is 292 years, and from the birth of Abraham to the end of Genesis is 361 years or the numbers of the sothiacal and lunar periods, forming the total of 653 years. The chronology of Genesis is therefore based upon the cycle of the phenix. Many other interesting calculations could certainly be made.

A Remarkable Cave in the Providence Mountains

MR. GEORGE L. BERG has found a remarkable cave in the heart of the Providence Mountains, California. Great peaks guard its entrance, and hooks and ropes are required for the descent to it. Mr. Berg thus describes his visit:

We wound our way through one of the several corridors, a distance of hundreds of feet, coming on a main hall or grotto. The floor was rough, and sharp-edged crystals of lime ground beneath our feet and cut our shoes. The roof soon disappeared from view and the walls, too, but they reappeared again further down, to the width and height of an ordinary door, bringing us out on what appeared to be a small balcony. Our dim lights seemed like a mockery in the gloom that hung

about us like a pall. By and by we found a winding stairway that took us down to the floor of the great grotto. No cathedral ever had richer carvings or more beautifully-tinted walls than this dark cave. Strange serpentine forms of petrified snakes and lizards of divers kinds, were encrusted in the walls of what resembled beds of delicately-tinted moss. Rich mosaics of design and pattern as regular as if fashioned by man after some geometrical plan, covered walls and pillars. Above us hung great stalactites of snowy whiteness, resembling huge circles. At the narrow entrance to the south grotto is a huge human face outlined on the wall.

The white limestone gives way to blackened walls, and the passage has the appearance of having been used as the flue of a great furnace. Masses of rock of different kinds appear fused as by heat. A faint smell of sulphur was noticeable.

One may hope the investigation will not end there. We want to hear about the furnace, what it was used for, and what traces were about it of the people who used it. X.

The Pygmies of Central Africa

A CURIOUSLY interesting little people are the pygmies of Central Africa, the race of which Herodotus tells us and which we have believed to be

a fable. These little people live in a village called Ndombe. They number about 5000 and inhabit huts like beehives with an entrance at the bottom. Curiously enough their king is not a dwarf but a giant, measuring six feet, six inches in height and with a proportionate breadth.

The pygmies live entirely by hunting, for which they use a bow and poisoned arrows. Mr. Samuel Verner, who probably knows more about them than any one else, speaks of their surprising skill with their weapons, having seen one shoot a running rat at a distance of twenty yards. They are so strong and active that fifty miles is an average day's march for them and their senses are so keen that they can compete with their own dogs. As to the origin of these extraordinary people, Mr. Verner confesses himself to be puzzled. There are no traces of any previous inhabitants and there seems to be little doubt that they have maintained themselves in their present condition for at least five thousand years. Their average height is less than fifty-two inches. S.

A CURIOUS skull was unearthed recently on Basket Mountain of the Blue Mountain Range in Washington. Evidently prehistoric, archeologists agree that it most nearly approaches the description of the skull of the *pithecanthropus*, or ape-man. It is ten inches wide, teeth projecting but parallel, the frontal bone slanting considerably.

SPECIMENS OF IRISH ARROW-HEADS

A RROW-HEADS have been found as numerous in Ireland as in any part of the world. The number now known to exist in collections is about ten thousand and an equal number have probably been taken out of the country. Arrow-heads differ very much in size and design according to the period at which they were made. In Wakeman's *Irish Antiquities* we find a great deal of interesting information on this head. He tells us that they vary in length from one to four inches and may be divided into the leaf shaped, the triangular and the stemmed. Those represented in our illustration are of the stemmed variety.

There are only two instances upon record of complete arrows having been found in Ireland. This of course is due to the perishable nature of the wood. One such arrow was discovered in the Ballykellan Bog in King's county. The flint head seems to have been fastened into the split shaft by some kind of cement and the wood was then bound with sinew. The tools used in making the arrow-heads have sometimes been found. They are blunt edged pieces of flint with a ridge on one or both sides. We are informed in the work to which we have referred that "the method was by pressure, and the finest flaking can thus be executed. Though this can be imitated with some practice, yet the best work on the faces of arrow- and spear-heads baffles imitation, showing the perfection of workmanship to which primitive man reached."

Nature

Studies

Begonias Need More Than Soil & Water

THE *Rex Begonia*, though known by hearsay to most people who have experimented with the so-called house-plant, has been successfully cultivated by comparatively few, and yet most handbooks describe it as of easy culture. To those who have failed in their attempts to grow this most beautiful house decoration the following experience is related as throwing a possible light on the cause of the failure, if such has occurred, in spite of the due provision of the requirements in the way of soil, water, light, etc. When the writer first was inoculated with the begonia fever he had it in the most virulent form, and visited his plants morning and evening, calling them all by name, watching and encouraging every new leaf as it pushed its velvet way from the parent stem, giving to all something more than a mechanical service, treating each as a sentient being.

The result was a general excellence that amazed even professional florists. The next year, inflated by the success of the previous season, and thinking that the requirements for begonia growth were an open book, the same attention was given minus the personal love, for it may be so described, and the result was almost complete failure. Who shall say that it may be truthfully said of a plant (of some species in particular) that as "a man cannot live by bread alone," so a plant cannot live to its perfection by soil and water alone. R.

WE hear that a species of *Mimosa* (the order to which the sensitive plant belongs) has been discovered in South America, whose achievements put those of the latter into an insignificant position. The sensitive plant merely droops when the bases of its leaves or petioles are touched. But the new plant is said to simulate being dead. Not only the leaves but the whole stem drops, collapses entirely and its green fades out. The apparently dead plant remains in this miserable condition till it judges that its intending consumer has been thoroughly taken in and has gone. Then it picks itself up and resumes its normal condition. X.

THY younger brothers, the beasts, to whom Zeus gave not judgment, expect justice from thee, and by that only canst thou win their trust. The essence of justice is surety; be thou, therefore, of an even mind, for an unjust beating, or an unearned reward destroys much faith.

—Chiron the Centaur

A LOMA-LAND REX BEGONIA

CACTUS SKELETONS

SPRIGS OF THE INTELLIGENT SHRUB LEGUMINOSA

Some Inside Information About Cacti

TO the curio hunter the most interesting part of the large cacti of the south is the interior framework which remains after the spines and the pulp have been removed. The illustration shows parts of this inside frame, from the tall post-like *chollas* cactus and from the broad, stemless prickly pear. The round, lattice-like stem is very tough and strong when properly cured and makes up nicely into many articles of use and beautiful oddity. It is a creamy white in color when freshly polished and combines very prettily with some of the rich red or brown woods native to this region.

The specimen in the picture is a small one, but some are found three or four inches in diameter, while the larger varieties of the same species are frequently two or three feet through and fifty or sixty feet tall.

The flat, lace-like frame is part of the skeleton of a prickly pear leaf. The fiber is white and very tough, though it readily peels off in thin sheets of filmy lace. It is used in many sorts of fancy work with excellent results. This plant sometimes grows twenty or thirty feet high, each leaf supporting the next and branching freely until it makes a perfectly impenetrable thicket. The rabbits and squirrels are very fond of it, however, and patiently nibble away the spines to reach the juicy, pulpy leaf.

The fruit is the famous prickly pear, which is about the size of a hen's egg, a reddish purple in color and of a pleasant subacid flavor. It is much relished by many, but is liable to produce very undesirable conditions of the nerves. The flowers are two or three inches across, of a golden yellow color, very beautiful, but without much odor. G. W.

A Leaf That Protects Itself

THIS *Leguminosa*, which is one of the shrub forms of the family, has leaves which are bright glossy green above and white-woolly underneath. Evidently it regards those glossy surfaces as vulnerable because when it is on short rations of water it turns the leaflets over and lowers them so that each comes face to face with the one opposite, with the woolly surfaces outward, thus affording each other a mutual protection. When water is again supplied the leaflets reopen to the original position. Such arrangements very strongly tend to confirm our belief that plant-growth is guided by some definite form of conscious intelligence. G. W.

Universal Brotherhood Organization

Central Office Point Loma California

THE announcement that Mrs. Tingley would speak at Isis Theatre last Sunday night crowded the building to its utmost capacity. Even the topmost gallery was well filled with an intelligent audience, which was prepared to appreciate to the utmost an address which added to the speaker's reputation as much as it unquestionably added to the knowledge of very many who were present. Mrs. Tingley presented a fascinating if an obscure subject with an admirable lucidity which left nothing to be desired, and she must certainly have succeeded in arousing a widespread desire to know something more of ancient Egypt, and to apply that knowledge to the world in which we live, and to our private and domestic lives.

The evening was rendered doubly enjoyable by the presence upon the stage of a considerable number of the child-singers from the Raja Yoga School at Point Loma. Those who heard these children in the early days may well have believed then that their performances could hardly have been improved. That they have improved the Sunday night audience is a witness, and their singing is alike a proof of the excellence of Mrs. Tingley's method and of the ability with which Mr. Neresheimer helps to put that method into execution. The Point Loma musicians, juvenile and adult alike, are a success.

To give a digest of Mrs. Tingley's speech would be to spoil it, and to attempt to make satisfactory extracts would be equally futile. From beginning to end there was a sequence so close and an argument so connected that only the whole address in extenso would suffice to convey an idea of the ground which was covered, or of the lessons which were conveyed. Mrs. Tingley began by saying that her object in being present that night, her object in all the activities which she conducts, was to let the sunlight into the lives of human beings that they may thus come into touch with all that is true, with all that is noble and divine. It is this intention, which hardly needed a declaration, which distinguished Mrs. Tingley's handling of her subject from those other disquisitions on Egyptian life with which modern discoveries have made us more or less familiar.

The speaker had obviously an intense interest in her subject and an intense sympathy with it, and by means of that sympathy she was able to bind together the past and the present and to make of the former a still living fact in the world of today. The address was notable, not so much for the information which it contained, although that was profuse and varied, as for the stimulus to study which it provided—a study which would result in breaking the mental fetters of prejudice and superstition and letting into the lives of men a flood of light which antiquity had in no way robbed of its brilliance.

The mere perusal of a handbook upon ancient Egypt and the ready absorption of a modern writer's conclusions was not Mrs. Tingley's idea of study. From very few authors was the personal equation wholly absent, a personal equation all too often made up of religious superstition and prejudice. The study must be undertaken, as she herself had undertaken it, with sympathy, with a recognition of the vastness and power of the civilization with which it deals, and with a knowledge of the relatively meager sources of our own information. The student must try to read between the lines and when he heard, for example, that the ancient Egyptians were animal worshipers because of some misunderstood inscriptions, let him ask himself what sort of a record of the present day will be written by the historians of three thousand years hence? Will the historians of that period recognize

KATHERINE TINGLEY AT ISIS THEATRE

Interesting and Significant
Address by the Theosophic
Leader on Ancient Egypt

Reprinted from San Diego News

and describe the true life of a liberty-loving people, the best and real traits of the nations of today; or will they not rather give prominence to the noisy crudities and absurdities of the age, to the foolish isms which force themselves into undeserved notice?

Mrs. Tingley held that the past, not of Egypt alone but of other nations, con-

tained mighty truths which remain hidden only through our lack of research and of sympathy, and which would as surely exalt the civilization of today as they exalted those other civilizations which have had their day and done their work. The sympathy which she asked for the study of ancient Egypt was a patriotic, no less than a humanitarian duty. When she was in India she had said to the savants of that country that ancient as was undoubtedly their civilization and their wisdom, it was not the most ancient of which the world had records. The civilization of Egypt was more ancient still and behind the civilization of Egypt came that of prehistoric America. Such a statement was not so startling today as it would have been a few years ago. Month by month new discoveries are throwing light upon the early glories of America and before many years were past the truth of her contention would be established by the researches of American archeologists.

There were those who brought against the early Egyptians the charge not only that they worshiped animals but that they were polytheists. As evidence of the religion of the educated Egyptian, Mrs. Tingley read briefly from a number of tablets which had been discovered in which many references to the one God were made and in terms which showed the exalted conception of the Deity which was entertained. These quotations were certainly of a most lofty nature and were abundant evidence of the religious culture and the broad and practical piety which must have existed. Still other quotations were furnished which showed the extent to which religious feeling was incorporated into the daily life of the people producing an active benevolence which must have given a tender charm to ancient life.

We wish that we could reproduce these quotations, many of them of a memorial nature in which, for example, it was claimed for the deceased that he had been a father to the orphan, had faithfully cared for the widow in his domain, himself laboring at the cultivation of the soil in order that the bereaved might not suffer material want. That a philanthropy so pure and so exalted should have existed long before the birth of Christianity was probably a surprise to many, but that it did so exist and that it was of a nature unsurpassable in unselfish beauty was abundantly demonstrated and went far to prove Mrs. Tingley's contention that whatever is best in human thought and human religion is not the birth of any one age nor the peculiar teaching of any one reformer, but has been handed on from civilization to civilization.

As we have said, the peculiar charm of this address was not so much its marked authority and erudition as the effort of the speaker to apply all that was best in ancient history to the practical thought and the practical problems of the day. She wished to make "a rift in the clouds," not by nebulous incitements to a sentimental fraternity, but by actually showing that Brotherhood is indeed the law of life, and that it can exalt the nations of today as surely and as certainly as it exalted and purified the nations of antiquity. The address was a long one, but it was not long enough to exhaust the patience nor to tax the attention of the immense audience which was so manifestly delighted with the ethical and intellectual treat which was afforded to them.

THE *Los Angeles Herald* supplement of Sunday, October 25th contains the following article on "The Lotus Buds of Loma-Land." The description is made more vivid by a number of very excellent photographs:

Considering the hot time the juvenile court is continually having with its obstreperous youngsters, considering the lack of training displayed in even an average home family of children, it would seem that a careful examination of the much-maligned Lotus Home, or Raja Yoga School, at Point Loma, might be salutary and useful. The late rumpus over the detention of the Cuban children at Ellis Island, has brought Mrs. Tingley and her work more before the public than ever and given rise to a wild variety of false ideas.

Mothers and guardians may radically disagree as to the proper education of children; the outsider is apt to listen unheedingly to their bickering and look at the results. Then let us, in watching these immaculate bright-faced children of the

✻ The LOTUS BUDS AT LOMA-LAND ✻

From the *Los Angeles Herald*

Lotus Home, admit that, however far-fetched the ethical outlook of the Point Loma Homestead adults may seem to the

outsider, the results in the children bid fair to be not only permanent but far-reaching.

There is that perfect background that first holds us, the setting in which these children live. From the quiet-colored town across the bay, with the blue water intervening and the distance wrapping all in a purple haze, the glinting white of the group of buildings on that ocean-fronted strip of land, Point Loma, appears to be an assemblage of Greek temples. We forget modernity. At a nearer view the outlook is no less beautiful, though the Hellenic ideal is dissipated. The pillared, porticoed, gray-stuccoed buildings, with their symbolically-colored shining domes and beauty of surrounding greenery and bloom, are conceived on an unusual plan, fantastically ornamental, smacking of Egypt and her lotus flowers, yet imprinted with a classicism that one is at a loss to account for. The eternal fitness of beauty

does not depend on architectural dogma. Over all sweeps the great, pure exhilarating breath of the Pacific, and the sound of her waters, the green and purple and blue of her long swells, are forever in the eyes and ears of these little children, gathered together from such widely different homes.

Thus, face to face with an outlook of unusual magnificence, trained into paths so pleasant that they have forgotten the training and accepted both work and play as life and enjoyment, these children are living their even lives and preparing to carry on the work by them but begun. Mrs. Tingley admits the vanity of expecting a hard-headed mercantile world to accept her ideals; but she expects these children and the children that follow them to announce in themselves the beauty of their lives of control.

In the life of the average child the school routine is the major part of its life. These children receive exactly two hours instruction a day — omitting the work in music and dramatic expression. And not only are the little ones far ahead of the average public school child, but they display a precision of speech, an appreciation of their work that is remarkable and charming. They have early learned to concentrate — that is the secret of what seems at first hearing mere precociousness. The schoolroom itself is a place beautiful enough for ideal childhood; the purple dome above sheds a soft, pale-violet glow over the great room of little workers. The walls are draped with cream hangings, embroidered at the deep hem in tortuous yellows and purples. The furniture is severe and, except for blooming flowers, the room is unornamented.

These children range in age from baby toddlers to children of 14 or 15. The little ones' schoolroom, where tots from 2 to 6 are taught, is separated from the large main schoolroom. These demure, fresh-faced mites, gravely displaying to the privileged visitor their first laborious attempts at grown-up sewing, are very captivating. The musical and dramatic training of the school is what Mrs. Tingley lays stress upon. "Children," she says, "make their own atmosphere; musical and dramatic expression are natural to them. The influence, especially of music, on these little lives is absolutely remarkable. It brings out other latent genius. We have had poor sulky little mites here, too timid to think, incapable of anything, until music awoke the dormant soul. All the children," she went on, "are taught two instruments, the piano and one other that they have the privilege of choosing, as soon as they are able. All of them read music as they read print, simply because they have been taught it with their letters.

"The absorbing interest they take in their little musical and dramatic performances would convince any one of their spontaneous enjoyment. The little colonial play that they gave sometime ago was entered into with especial abandon. It was as full of Indians and soldiers and colonial figures as a historical novel, with George Washington as the star part. The children helped in the costumes, in everything, in short. The play itself is the work of the little ones."

The life of the children outside the schoolroom is as carefully supervised as that within. They are taught from the outset the care of their own belongings and surroundings, and have charmingly come to consider what the average, petulant child considers "work," as a matter of course in an unusually pleasant scheme of things.

These ideas have been carefully fostered. The children are divided into groups of eight or ten, the boys and girls in separate groups, with an older child at the head of each group. Each little body of children lives in a tiny porticoed cottage fronting the palpitating blue and surrounded by a bright little flower garden, over which the little inmates have entire charge. The quaintly comfortable appearance of the long row of little cottages, occasional toy-littered porches, occasional laughing children, is a pleasant picture to remember.

The well-lit, airy interior of these dwellings, tended exclusively by the children themselves, excepting the baby home, is very pleasing. Here they work their little wills, decorate in greenery and pictures to suit their fancies and play their little plays undisturbed. The long room that flanks the big, happy-looking sitting-room, is the dormitory, a tidy row of blue denim-covered cots, each with a chest to match, fills it; the walls are a succession of muslin-curtained windows, open to the clean sweep of the sweet sea air. The great immaculate lavatory is below stairs in the well-finished basement. Each child takes care of its own little toilet belongings, fastened to the wall in a neat case, each with the owner's name, and the basins and tubs are as immaculate as if they were brand new. Such punctiliousness on the part of children strikes the observer as a little awful in its perfection; he thinks of his own Johnnies and Mabels with a sigh.

A system of rewards, so necessary, it would seem, in child-life, prevails here to a modified extent. The children who most readily adapt themselves to this charming scheme, who have shown their appreciation of beauty, have been allowed to erect, separated from the other children's houses, a mimic little temple delight, a beautiful little house with a miniature conservatory attached, the whole furnished with a childish extravagance of greenery and bric-a-brac that bewilders one. This is the playground of the goodest children — though they all seem too good to be true — the goal toward which all these little Lotus Buds, as they are prettily called, strive.

Not one useless thing has been taught these children. Their very play is toward an end. From the first they are expected to mend their own little garments, care for their own little persons, take care of their own little houses and gardens and so help carry on the great aims of the Homestead. And they do all because it has been shown them that it is best and right and eternally fit. There is an unquestioning and beautiful serenity in their young eyes, a happy lilt in their voices, that should go far to settle the sentimental doubts of all who see them. If Mrs. Tingley is not looked up to in the future as one who has settled many of the doubts connected with child training, it will not be because the Lotus home is at fault.

It is a large school and presents continually new problems. Each child must be separately considered. Many are foreign, some with an heredity behind them that must be overcome. Yet Mrs. Tingley admits with some puzzlement that these little Cubans show an even more precocious desire to learn than the American children. This is especially so in music. A few of these dark-skinned, pathetic-eyed little ones possess voices of a strange, high, weird sweetness that is really startling.

In this great work, against many odds, Mrs. Tingley does not ask for partisans. She is placidly willing to let time fight her battle for her — sure of victory in the end.

Everyone for His Gain

THE good housewife buys not more bread when she has a dozen loaves already in her store-room. Why do we, then, ask for more knowledge when that which is already in our possession is still unapplied? To draw conclusions from any meeting at which talks are given or papers are read, we evidently know what is right and what is not. We know the needs in our natures, we know what we lack, we should know how to set about to fill that need, to meet that want. There is small excuse for us if we do not do this, for we are not preaching salvation for a salary, neither are we supposed to be listening to the sermons of another and applying all its lessons to our neighbor.

All Christendom has been petitioning for twenty centuries for forgiveness of sins; but if the time had been spent in making practical the simple injunction, "Love one another," and "Do unto others as ye would that they should do unto you," there would, by this time, be very few sins to be forgiven.

Isaiah described the condition of most of humanity when he said, "Yea, they are all greedy dogs, which can never have enough, and they are shepherds that cannot understand; they all look to their own way, every one for his gain from his own quarter."

ANOTHER PICTURE OF THE CUBAN PARTY LEAVING LOMA-LAND

Monster Meteor Found

THE San Francisco Examiner says that the largest meteor which has ever been found in the United States, and which has laid hidden for centuries, has been discovered near Oregon City, Ore., by William Dale, has just come to light. The matter has been kept a secret for nearly a year. The meteor is of great value, as it weighs between 20,000 and 40,000 pounds (ten or twenty tons), and is composed of iron and nickel. It is one of the largest specimens of metallic meteors that has ever been discovered

in the world. F. W. Crosby, collector of geological specimens for the Smithsonian Institution at Washington, who examined the mass of metal, says:

"The mass is composed entirely of iron and nickel, probably nine or ten parts being iron. The specimen was pitted with holes, as it came through the air in a molten state. This is an invariable indication of a metallic meteorite. From appearances the meteor may have been buried in the hillside where it was discovered for many centuries. At any rate, its rusted condition is unmistakable proof that it was buried in the ground for many years."

The meteor measures approximately 9½ feet long at the base, 6½ feet wide and 7¼ feet thick. It resists the action of any but the best steel saws.

✻ "Except Ye Become as Little Children" ✻

BEAUTIFUL feet are those that go
On kindly ministry to and fro,
Down lowliest ways---if God wills so.

Beautiful shoulders are those that bear
Ceaseless burdens of homely care,
With patient grace and daily prayer.

Beautiful lives are those that bless
Silent rivers of happiness,
Whose hidden fountains but few can guess.

Beautiful twilight at set of sun,
Beautiful goal with race well won,
Beautiful rest with work well done.

“HAPPY little sunbeams” came ringing out through the bright morning air, sung by half a hundred little children’s voices. Mrs. Harding pulled down her window violently as frowning darkly she muttered: “Now that school’s started, I s’pose I’ll be pestered to death with the noise of those brats.”

“Oh,” cried Mrs. Perry, throwing wider her window, and looking out eagerly, “now I’ll be able to see the dear little things every day and hear all their songs. The words are so good and sweet, and their voices are lovely.”

Mrs. Perry and Mrs. Harding were neighbors; very near neighbors, too, for they both lived in the same house. A very snug and pleasant little house it was, just large enough for each old lady to have her cunning little kitchen and dining-room and a nice large bedroom. Then, besides, there was such a cosy, comfortable sitting-room with big, sunny windows and an open grate, a bathroom and a spare chamber; and these were for the common use of both.

The two old ladies were cousins and had been in close relationship all their lives. Mrs. Perry owned the house with its roomy yard, and Mrs. Harding’s son paid a liberal rent for the rooms occupied by his mother. His business was in a distant city and he loved to think that his mother was safe and happy with the dear old kinswoman who loved everybody.

Their circumstances were in many points alike; both were long past middle life and were cumbered with not a few infirmities. Both had to live alone, the one because her children had all gone before, the other because her one son could not be near her. Both had enough to live comfortably, but little to spare. In many points they were unlike. Mrs. Perry was cheerful and contented, while Mrs. Harding gave way to discontent and gloom. She brooded over and often spoke of her pains and misfortunes, while the former always declared that things might be, in every way, much worse. That which Mrs. Harding grumbled over as an added source of trouble the other smilingly welcomed as a new interest and pleasure. Mrs. Harding’s temper was uncertain and at times she was apt to construe an innocent proffer of kindness into officious meddling, or the omission of it into an intentional slight.

Mrs. Perry was so filled with good-will and the desire to help others that she never thought of any one wishing to offend or give her pain, and if any one did she immediately began looking for excuses for them, and generally found a sufficient number. The one cloud in her sunshine was that she could not, try as she would, avoid offending Mrs. Harding. Though she knew not how, she invariably knew when she had offended by her cousin addressing her as “Mrs. Perry,” though the two had been “Jane” and “Abby” to each other ever since they could talk.

Their bedrooms both looked across a narrow strip of garden to a little hall in which a new school had just been opened. On the first morning the singing had been greeted by the old ladies in the manner and with the exclamations above recorded. Both of them entered the sitting-room at the same moment, and Mrs. Perry cried:

“Oh, Abby, wasn’t the singing of the children delightful?”

“Good morning, Mrs. Perry,” returned Mrs. Harding, frigidly, and immediately passed into her own kitchen.

“Oh, dear! Abby is displeased again,” thought her cousin, “and I do wonder what it can be about. I can’t think of a thing I’ve done.”

A cloud rested on her face for a moment, and then she bustled about, setting her rooms to rights, sweeping off the steps, tying up some vines and gathering fresh flowers, while Mrs. Harding sat apart in her own room.

The old ladies soon learned at what hours the children were engaged in singing, and Mrs. Perry at those times went into her bedroom and threw up the window, or went into the garden and crept up to the fence to hear more clearly; but Mrs. Harding went into her kitchen on the other side of the house and closed the door.

One day the little tots came trooping out while Mrs. Perry still stood by the fence, her hands full of great purple and white and yellow chrysanthemums and asters.

“Oh, oh,” they cried, smiling up into the sweet old eyes, filled with a peace and

joy as simple and childlike as their own, “the lovely flowers! They’re so boo’ful; please, lady, let us smell ’em.”

“That you shall, you little dears; but they don’t smell as sweet as some flowers do, though they are so pretty. Wouldn’t you each like one?”

A score of little hands were stretched out eagerly, and every one filled. After this had happened several times the teacher came out one day to speak to Mrs. Perry and apologize for the children troubling her.

“Oh, it’s no trouble at all,” she declared, “but such a pleasure to me. I feel that I owe them so much for their singing, which I do so thoroughly enjoy. I have so many flowers, do let me give them to the dear little ones; and I’d so like to give them some of my figs and grapes.”

After that a large bouquet went into the schoolroom every day, and frequently a basket of luscious fruit.

“I don’t see how you can be so foolish, Mrs. Perry,” remonstrated Mrs. Harding, “giving away your flowers and fruit to those young ones. It’s ridiculous.”

“But I’ve nothing else to give them, Cousin Abby; and they’ve given me so much pleasure; I love to hear them sing.”

“Love to listen to their noise; indeed, I wish they had never come near us.”

“How strange Abby is,” mused Mrs. Perry. “I do wish she was a little like me. But no, I oughtn’t to wish that; for she was always much more pious than I. O dear! it’s so hard to please people—some people, I mean. She reads such good, improving books—I suppose it is foolish for me to be so taken up with the children and their singing; but I do love them, and it seems to do me more good to hear them than to listen to Abby and the minister’s talk of the atonement and original sin. Of course, if I was as good as Abby, I’d rather hear him read and pray than to listen to the dear little children; but I don’t.”

Matters went on in this way for several months; then Mrs. Harding met with an accident. She slipped on the garden path and sprained her ankle. She was confined to her room for three weeks and Mrs. Perry waited on her with the most tender assiduity.

“Oh!” she groaned, “if I were only where I could not hear those children!” She said this every morning for the first week, and when her cousin returned from listening and carrying them flowers she would address her icily as Mrs. Perry.

Then the complaint ceased, and at the end of the second week she asked her cousin to open her window, remarking that she could not smother for the want of fresh air, even if those children did sing.

At the end of the third week she hobbled to the window and opened it herself; and one morning when Mrs. Perry came in she found her cousin listening, leaning back in the big chair with her eyes closed and tears on her cheeks.

A few days after, as they sat in their pleasant sitting-room, Mrs. Harding said: “Jane, I have been wrong about the little children, I’m glad they are near us now. I know Jesus said, ‘Except ye become as little children,’ but I don’t think I ever understood what it meant. I’m going to try to be more like them; and then I’ll be more company for you, for you love children so.”

“O Abby, I’m so glad you like them now; but you’ve always been a more religious woman than I have. The ministers never care to converse with me as they do with you; and I never have read the books that you know all about.”

“That’s nothing, your kind of religion has made people happy and mine hasn’t. I am going to see if I can’t be more like you.”

After this Mrs. Harding listened every day to the happy songs of the children and watched their bright, merry faces while at play. One day she said to her cousin, whom she always addressed now as “Jane”:

“Why couldn’t we give the children a picnic in our yard under the trees? I think they would enjoy it, don’t you?”

“Why, surely. The pears and guavas are ripe and we can give them a real treat. You know, Abby, what lovely ginger cake you make, and you can bake a lot. I’ll make buns and cookies, and we can have chocolate and lemonade. Shall we speak to the teacher about it? they are all poor children, you know, and I don’t suppose they’ve ever had many good things.”

A few days after this conversation, the school was gathered in the yard of the two old ladies; and such a happy time it was. There were all kinds of games, and two swings had been put up; and few of the little ones had ever had such a meal before. They sang several of their Lotus songs before they left, and as the two old ladies stood at the gate watching them march down the street, the song they all loved, “Happy little sunbeams,” came floating back on the soft evening air.

The face of Mrs. Harding was almost as cheerful as that of her cousin.

“O Jane,” she said, “what a nice time it was! don’t you think they all enjoyed it very much?”

“Yes, indeed, and so did we, Abby. How fond they all seemed of you. Children are such dear little things.”

“Yes,” assented Mrs. Harding, and as they walked back to the house she whispered softly:

“Except ye become as little children.”

O. P. Q.

The Trend of Twentieth Century Science

The Almost Limitless Possibilities in Our Heredity

THAT was a charming experiment in heredity made forty years ago in the gardens of his monastery by the Austrian monk Mendel. He was working on plant life; but there is something of an application to human life, too, in his discovery.

He found that if a pea with *yellow* seed-leaves was crossed with one of *green* seed-leaves, the young plants resulting all followed the *yellow* type. But the green lay latent within them, and in a very exact proportion. For if two of such plants with latent green were crossed together, the result was always a proportion of *one* green plant to *three* yellow seed-leaves.

The same thing obtains with at any rate some animals. Certain experiments now going on at Harvard University show this very interestingly. There is a curious little mouse hailing from Japan whose great amusement it is to spin round and round as fast as he can, first in one direction and then in the other. He has never explained exactly why he does this, that is his personal affair. But the offspring of one of these and an ordinary mouse, are ordinary. It never occurs to them to spin. They have, however, a *leaning* toward spinning somewhere in their make-up. For *one out of four* of the offspring of two of these latent spinners spin like their grandparents—the same proportion as the green-leaved peas.

The problem of human heredity is of course far subtler than in the case of plant or animal. The parent mouse has nothing to say about the conduct of his offspring; he neither represses nor punishes. He has no strong conscious standard of the proper behavior fitting in a mouse. But the human parent has. And in the case of man there is moreover a vast weight of consciously made public opinion ingrained in every cell and fiber of us all from the first moment.

It is reasonable to suppose that if you could get the idea that it was a good thing to spin, into the mind of a mouse in whom the spinning tendency was latent, he would learn the spinning trick far more easily than would a mouse of perfectly staid and normal heredity of habit. And this would doubtless be true however far back his stream of heredity had been touched by a mouse of the spinning habit.

Carry the idea into human life. Four generations ago—120 years—64 ancestors contributed to the physical make-up of each of us. Eight generations ago—240 years—each of us had 1024 contributors. Surely there is enough material in all that number to furnish us with a latent streak of almost every possible potency now workable in normal human life. In other words, though the physical instrument on which we play through life, may be limited by its heredity, we have never even begun to touch those limits. There are a thousand strings on which we have never played. We can think of this in training the children; knowing that the child's soul is cooperating; and knowing that from the *right* training almost any results are possible.

STUDENT

IT SEEMS that a heart which has actually stopped beating for sixteen minutes can be induced to take up its work again, by means of massage directly applied through an incision in the chest wall. Dr. Kemp, the inventor of the method, thinks that several hundred human lives could be saved annually, specially from drowning and anesthetics. The manipulations are made in imitation of the heart beat.

The interrupted current has, of course, long been used in such cases, but not, we think, in imitation of the heart—that is to say, a double pulse transmitted through the organ about once a second. Contraction would certainly follow so long as the heart muscle had not entered upon its own actual death. M. D.

The Bed of the Atlantic Ocean—from West to East

THE accompanying cut is an approximate illustration of the bed of the Atlantic, the lower arc representing the sea level. A chart of this nature is necessarily somewhat conjectural, although its main features are based upon the very careful soundings which have been made from time to time. The science of oceanography is still in its infancy, but enough has been done to show that the bed of the ocean possesses all the physical features of the land and has its vast valleys and its mighty mountain chains, of which the summits constitute islands. In other instances the mountain peaks are barely submerged, a hidden and treacherous danger to navigation.

A Heart That Emits Two Clear Musical Notes

PROFESSOR REITTER of Vienna has produced before the Medical Society of that city, a young woman whose heart emits two sweet, clear musical notes. This phenomenon began when she was very young, increased during the next year or two, and can now be heard throughout the room. Two qualities of tone—only audible through a stethoscope—are generated in the heart. One is a dull tone made by the contracting muscular walls; the other a sharp tone emitted by the tense closure of the valves. The deep note of contracting muscular fiber has no audible overtones; they may exist, but are damped at once below the threshold of audibility. It is conceivable that they might become audible to us under conditions we do not now know, residing in the fiber. It seems quite possible that certain beautiful qualities of voice possessed by some few people, may be added by the muscles exceptionally yielding a mass of overtones in consequence of their perfect health, tension, limpidity of their fluids and of the blood, or what not. To much finer ears than ours, too, the tense valves must yield musical notes much higher than that of the muscles.

M. D.

Radium and Its Heat Force—Lord Kelvin's Theory

THE source of the heat emitted by radium is still a matter of some considerable discussion. According to the New York *Sun* Lord Kelvin believes firmly that the energy is supplied from without, and that etherial waves may perhaps feed it, as it were, while it surrenders the heat again to surrounding matter. M. Curie, the discoverer of radium, calculates that the heat emission is at the rate of about ninety centigrade calories per gramme per hour, and Lord Kelvin therefore points out that if such an emission of heat were to go on for 10,000 hours, there would be enough given off to raise the temperature of 900,000 grammes of water by 1° centigrade. That this should come from the store of energy emitted by one gramme of radium in 10,000 hours, seems impossible to Lord Kelvin. He illustrated his meaning in the following manner:

Suppose a piece of white and a piece of black cloth, hermetically sealed in similar glass cases, were submerged in similar glass vessels of water and exposed to the sun. The water in the vessel containing the black cloth would be kept very sensibly warmer than that containing the white cloth.

Here the thermal energy was communicated to the black cloth by waves of sunlight and was given out as thermometric heat to the water in the glass around it.

Thus, through the water there was actually an energy traveling inward in virtue of the waves of light, and outward through the same space in virtue of thermal conduction.

Here and There Throughout the World

RAILWAY STATION, CIEGO DE AVILA, CUBA

☞ Purchase Iceland from Denmark

THE New York *Independent* contains an article urging the United States to acquire by purchase from Denmark the island of Iceland, which, it seems, is a highly desirable country, with great resources still undeveloped. Its people are "a sober, industrious, hard working, God-fearing race," and they have, moreover, an ancient literature which ought to be more fully made known. Nor must it be forgotten that the original discoverers of America set sail from Iceland. It might, however, transpire that Denmark would be unwilling to sell.

"The Star Spangled Banner" in the Navy

THE United States Navy Department has issued an order which virtually establishes "The Star Spangled Banner" as the National Anthem. The regulations on American warships have for many years required that every man shall stand at attention when this air is played, unless his duties at the moment prevent his doing so. The new order, however, enacts that precisely the same respect shall be paid to the national anthems of all other countries when their official representatives are present.

A HEADLAND ON THE POINT LOMA BEACH

☞ A Broad-Minded Chinese Reformer

WHEN the lapse of time has brought events into a truer perspective the world will recognize the greatness of the Chinese reformer Kang-Yon-Wei. This venerable man is now living in exile at Tokio, having been banished from his own country for his advocacy of reforms, many of which are an advance of both American and European ideals. The pamphlet which he has recently published upon human life and conduct is in every way a remarkable production and the breadth of his teaching may be estimated from the fact that he advocates the equality of the sexes and the employment of women in the high affairs of state.

Welfare of Paris Railway Employees

THE Metropolitan Railway of Paris is showing an enlightened interest in the well-being of its employes which might be imitated with advantage elsewhere. Its latest move is the establishment of a vast *salle de conferences* which has been placed at the disposal of the staff for scientific discussions, lectures, etc., and the audiences of engine drivers and porters are certainly showing no lack of appreciation of the advantages offered to them. A sense of responsibility for the well-being of employes is an encouraging sign of progress and a proof of the abounding vitality of the French nation.

Growth of Anglo-American Alliance

THE eminent historian, W. H. Lecky, has lately contributed an interesting article to a French review on the Anglo-American Alliance. He believes that England has more in common with America than with any European power in spite of the points of friction which are rapidly diminishing in number. All future disputes between the two countries, Mr. Lecky believes, will be settled by arbitration, and although there may never be an actual alliance the two countries will grow closer to one another through an ever-increasing community of sympathy, principles and ideals.

Europe Regulates the Drink Traffic

MANY of the European governments have stringent laws which have been called into existence by the increase in the alcohol habit. In Switzerland the drink trade is a government monopoly and a portion of the proceeds are devoted to the support of hospitals. In Austria and Norway drunkards are sent to reformatories after a certain number of convictions, and the German government requires that all liquor sellers shall also provide tea, coffee and the like. It is also a punishable offence to give credit. Belgium and Holland are about to adopt restrictive measures.

Labor Problems in New South Wales

NEW SOUTH WALES seems to be in a fair way to the solution of its labor problems. The attorney-general has issued a report of the working of the Arbitration Act from which it seems that disputes have been amicably settled which affected 1,000 employers and 36,000 work people.

The Death Rate in the City of Chicago

CHICAGO is presenting a curious population problem, of which the explanation is somewhat obscure. The *Health Department Bulletin* for the week ending August 22, for example, shows that 483 deaths occurred, of which 291 were males and 192 females, which is a 50 per cent excess of males. In 1901 this excess was over 23 per cent; in 1902 it was over 29 per cent; during the first six months of this year it was 37, and now 50 per cent.

Russia's Navy Has Doubled in 10 Years

THE increase of modern armaments is perhaps nowhere better illustrated than in the case of Russia. During the past ten years she has doubled her navy, and by the end of 1906 she will possess twenty-five first-class battle-ships and fourteen large cruisers, exclusive of all ships more than twenty-five years old. The number of her blue jackets has also been doubled within the same period and now stands at 62,000.

Humanitarianism of the Jains in India

THE Jains of India have set us an object lesson in humanitarianism which we should do well to imitate. It has been decided at a meeting of this important body to discontinue the use of feathers for head-dresses and also of tortoise shell, on account of the cruelties with which they are associated. The Jains might perhaps send missionaries to the western world. They would probably find a foe worthy of their steel in the obstinate and determined cruelty which is so remorselessly advocated by fashion.

Physical Unfitness for British Army

SIR WILLIAM ANSON has recently introduced the subject of physical deterioration into the British Parliament. He asserted that sixty thousand children now attending school are in a condition of physical unfitness, while the director of the Army Medical Service reports that every third man who wishes to enlist in the army has to be rejected. As a result of these disclosures the government has appointed a royal commission to investigate the matter and to report with a view to remedial steps.

THE CHILDREN'S HOUR

The Legend of the Linden

DEAR CHILDREN: There is a quaint legend which relates how sad the linden tree once was because it was so plain, and how at last it became beautiful. Shall I tell it to you, as my old grandmother used to tell it to me? Once upon a time the linden was just an ordinary tree, in fact, not so beautiful as ordinary trees, and no one took the least account of it. Even the bees and birds passed it by and its heart was very, very sad, though no one knew just why, excepting the night wind. But the night wind was compassionate and told the Nature-Fairies and the Nature-Fairies were compassionate and said, "Let us make the linden beautiful."

So that very night they came. First of all they pulled all the leaves this way and that until they became, somehow, much larger and far more exquisite in form. Then they took their wee and wonderful paint brushes and painted the leaves, just a tender, warm green on the side which smiled at the sky and welcomed the raindrops, and a delicate silver underneath. Now, the paints that Nature-Fairies use, as all children know, are far better in every way than the ordinary kind that we buy at the stores; for one thing, they cannot be faded by the sun nor washed away even by the heaviest rains—in fact, the sun and rain only make them brighter. And when the leaves were all painted then the Nature-Fairies kissed the boughs and everywhere a kiss rested there came a little sweet-scented blossom, so fragrant that the birds and bees all came flying to the linden.

Oh, how happy the linden was, and how grateful! From its blossoms thousands of bees sipped honey, and in its branches ever so many birds built their nests. And one of these birds told the linden one day a great secret, for the tree had asked the night wind, and even the fairies themselves, how it came about that it should have been made so fragrant and beautiful; but the fairies only smiled and the night wind didn't know. However, one bird knew, and this is what it sang:

The Nature-Fairies made you beautiful because you were good when no one noticed you.

And that is why the linden is today the most beautiful and most fragrant of all forest trees—at least the bees and birds tell me so. And they ought to know.

COUSIN LOUISE

DEAR CHILDREN: Let me tell you a true story of a lion who must have known something about brotherhood. Some years ago, in a southern city, a cruel keeper had a bear placed in the cage of a big African lion. He believed the bear would be torn to pieces and he wanted to see the cruel sight. The lion was old and cross, so savage, in fact, that no one went very near him, and not even the keeper dared to go inside his cage. But to the keeper's amazement, the lion walked up to the trembling bear and put his paw on its head, as if he were trying to make friends. A little later, when the keeper brought food he shared it with the bear.

"LADY WASHINGTON"

One of the character studies in the Historical Drama given by children of the Raja Yoga School on July 5, 1903, at Isis Theatre, San Diego

THE LITTLE ELF

AN elf lived in a buttercup
And waking after dawn,
He donned his golden spectacles,
And stepp'd out on the lawn.
"Dear me," said he,
"I scarce can see,
The sunbeams shine so crookedly!"

He met a merry bumblebee
Within the clover gay,
Who buzzed "Good morning" in his ear,
"It is a pleasant day."
"Don't speak to me,
Sir Bumblebee,
Until you trim your wings," said he.

He saw an airy dragon-fly
Float o'er the meadow trail;
"Pray stop, Sir Dragon-fly," he cried,
"So upside down you sail!
The sight will make
My poor head ache
Fly straight or rest within the brake."

An owl so wise upon the tree
Blinked his great staring eye,
"To folks in crooked spectacles
The whole world looks awry,
To-whit! To-whoel
To-whoool!" said he,
"And some such folks I've lived to see."

Why Gossip Is Wrong

Extracts from Essays by Pupils of the San Diego Lotus Group

IF we questioned one whose principal conversation had been gossip, as to what she had been talking about or had learned, she would be rather astonished at the question and perhaps would not be able to answer it. People should not criticize their neighbors. If we were to try to sift down what gossip really is, I am quite sure we would find that it consists of unkind words without deep meaning. Gossip does not benefit the soul, it only hinders it from progressing, and people don't realize how much trouble and ill feeling it produces. When people gossip they are wasting precious time which could be one hundred per cent better spent in reading some good book or doing some kind deed. If people would speak only the words that are absolutely necessary there would be more happiness and no gossip at all.

L. W.

GOSSIP and the truth are like oil and water, very difficult to mix. Many women object to having their sons smoke but think it is all right to have their daughters gossip. But gossip is the greater evil of the two. One poisons only the body, while the other poisons the mind. A sharp tongue may wound as deeply as a dagger even though we do not realize it.

F. G.

GOSSIP is often talked over back fences, by women who think they are taking a rest from housework. The topic of these conversations is generally other people's faults, never their own, or else other people's business, while their own goes to the winds. Gossips almost always judge others by themselves. Schoolgirls, while they are walking home from school, are apt to gossip. If this talking of other people's faults could be turned to some good and made helpful, the world would be better.

Gossiping does the people who gossip great harm as well as those about whom they gossip. The unkind thoughts which lie behind the gossip influence the one found fault with and cause unhappiness.

M. R.

GOSSIP is a bad habit. Tell-tales have it and also other people who like to waste their time in idle talk. Think how much misery gossip has caused, and think how much better the world would be without it. Some of the great wars that have happened, when we trace them back to the first little things that caused them, we find were caused by gossip.

P. K.

GOSSIP is one of the worst stumbling-blocks in the world. It often leads to the destruction of the happiness of good people. Gossip is telling tales and saying unkind things—in other words, it is idle talk. People who are really industrious never have time to gossip. They are too busy with what they are doing to meddle with other people's affairs. When we say unkind things we are gossiping. We find this idle talk everywhere, in the home, in school and on the streets. We hear children three and four years of age gossiping. People say that just these little children talking about their playmates is not gossiping, because they do not know it is wrong. But every child knows when it is doing wrong, if it lets the heart guide. By gossiping we often lose friends.

If people would only remember the golden rule and practise it, there would not be so much gossiping. Let us commence now while we are young to never gossip. Why wait until we are grown up? It will be all the harder then to stop.

R. P.

Students'

Path

THE TASK

by SUSIE M. BEST

"SOME mighty task," I said, "I'd do for thee—
Some deed heroic, that the world may know,
Some sacrifice to stir the stagnant times."
And lo! the Lord made plain His will to me;
For in my heart I heard this answer grow,
Clear as the echo of the vesper chimes:
"Wouldst thou best serve me? This is my command:
Do thou the duty nearest to thy hand."—*Selected*

Giordano Bruno

THE criticisms of the *Life of Giordano Bruno*, by J. Lewis McIntyre, are unanimous in their praise of a very excellent piece of work, but they are by no means unanimous in their estimate of the astounding figure whose life that work commemorates.

In a newspaper, which is otherwise remarkable for its broad and progressive thought, we see that Bruno is described as a scholar and philosopher, and yet as something of the charlatan and poseur. We are told that his was a life "to inspire pity rather than enthusiasm, for the *defraque* Dominican monk, with his insatiable greed for learning, his colossal egoism and light-hearted skepticism, hardly evokes our esteem." There is much more of the same kind, not worth reproduction, but affording further evidence of our contention that the evil of newspaper critiques is very considerable, as being the *media* for an authoritative dissemination of opinions which claim to share the impartiality of an editorial chair but which are actually tinged, often indeed vividly colored, by theological animus of a very marked kind.

It is no part of our mission to defend Giordano Bruno. Time and history have alike combined to do this for us and it has been successfully done in spite of a time-spirit which hates enthusiasm and looks askance at all whole-hearted determination which has other object than self-gain. The world of Bruno's day hated him, and feared him, and murdered him because he proclaimed the liberty of conscience. The world of today is suspicious of him because he did it with enthusiasm.

We can well understand that the reactionary forces of today hate the memory of Bruno. They affect to despise him, but the sentiment is not of contempt but of a chilling fear. Bruno was not the only work fashioned in nature's hero factory, and there may be others who will throw themselves with a like determination against the recrudescence of the abuses which he helped to overthrow.

The verdict of mankind has already been passed upon the character and work of Bruno, and it is not likely to be reversed at the bidding of a few superior persons to whom all enthusiasm is an offense. The heroic figure of the Italian martyr will remain as an inspiration to the free and as a menace to mental despotism.

STUDENT

Long Sermons

A UNITARIAN minister has been making some pertinent comments upon the recent religious census which has been taken in London. He believes that laxity of attendance is partly due to the length of the sermon. Now that, of course, depends upon the kind of sermon. Some sermons become too lengthy almost at the moment of their start, and there are some preachers who leave us with a desire to hear more. The secret of good preaching is an overmastering desire to benefit the hearer. Intellect and eloquence are admirable additions to this, but they can never be efficient substitutes.

It was once remarked of a celebrated statesman, that he would go far in the world because he believed every word he said. We do not sufficiently realize that sincerity is a most captivating and persuasive power, and that

it creates an eloquence of its own which comes in no other way. The number of ministers who are conscious of insincerity is, of course, very small, but there are very many who allow themselves to become preaching automata and who would certainly reject their own doctrines if they permitted themselves to think about them.

The preacher ought to be very near to the needs of his hearers. He ought, in imagination, to experience their doubts, their trials and their sorrows, and so set himself with intelligence to minister to them. Sincerity, imagination and sympathy are the remedies for empty churches and also for the social maladies which grow every day more menacing. X.

Abstention from Worship

A WELL-KNOWN preacher has lately addressed himself to the subject of "Abstention from Public Worship," his text being:

I was glad when they said unto me we will go into the house of the Lord.

As usual he attributes the abstention which he deplores to every cause except the right one. No question arises in his mind as to whether the average church is truly the House of the Lord, and we can well imagine that the priests in the Temple at Jerusalem might have been preaching from this very text when Christ entered with the scourge of small cords and drove from the sacred precincts those who had turned the place of prayer into a den of thieves.

Frankly, we do not believe in the public apathy towards religion, of which we have heard so much and so often. So far from there being a public apathy we believe there is a public heart hunger for some teaching that will show the meaning of life and the golden promises which are hid beneath its sorrows and its pains. Let the object of the churches be to give and not to get, and they will find no lack of recipients. Many churches have reached this point, to their honor be it said, and it is not from them that emanate the laments for dwindling congregations, and the placing upon the shoulders of others the blame which should be placed elsewhere.

STUDENT

Inscription Upon the Grave of Robert Louis Stevenson

Under the wide and starry sky,
Dig the grave and let me lie,
Glad did I live and gladly die,
And I lay me down with a will.
This be the verse you grave for me,
Here he lies where he longed to be,
Home is the sailor, home from the sea,
And the hunter home from the hill.

Religious Liberty

THE religious controversy in England has produced a reminder of the expressed opinion of the Duke of Kent, the father of the late Queen Victoria, upon the subject of toleration. At a banquet given in 1819 the Duke replied to the toast of "the junior members of the Royal Family," and said:

I am a friend of civil and religious liberty all the world over. I am an enemy to all religious tests. I am a supporter of a general system of education. All men are my brethren; and I hold that power is delegated only for the benefit of the people. These are the principles of myself and of my beloved brother, the Duke of Sussex. They are not popular principles just now; that is, they do not conduct to place or office.

These opinions are not popular yet, nor do they now conduct to place or office. They are nevertheless the opinions which will yet rule the world, and they will one day be the only passport to the confidence of mankind.

STUDENT

IT is not only the Star of Empire that moves westward, but the Star of Commerce. No longer are New England and the Middle States of America the chief seats of her manufacturing industries. The center of these has long been wending westward, and is now in the State of Ohio. In iron and steel manufactures Ohio comes first, as also in some others. In other manufactures Illinois is first; in others Wisconsin, Texas, Minnesota, Missouri, Colorado and California, each in its specialty.

This steady march is very curious and interesting. Will California ultimately lead in all of them—she has every climate? Was it this same west-wending current whose advance thrills struck Japan and brought her of a sudden into the Nineteenth century?

STUDENT

THE ACCEPTED TIME

TOMORROW is full of bright promise,
It leads to the happy way;
But, just as a matter of fact, friends,
What of the harvest today?

The fields will be white with their harvest
Tomorrow, I hear you say;
Ye dreamers, when will ye awaken?
Tomorrow is far away!

Be your dreams as fond as another's---
Dreams dazzle the darksome way---
But, dreaming of blossoms tomorrow,
Gather ye roses today!—*Selected*

Question

What constitutes a Theosophist?

Answer

(2) Many are there in the world who have set up a standard of right living for themselves, who by their consistent following out of this may seem to be faultless, and yet they may fail of being Theosophists, may in fact, be narrow-minded and negative, and not helpful factors in the great onward sweep of human life. For a moral life, spent perhaps in charitable deeds, may be lived from an egotistical, selfish point of view, not from a sense of man's responsibility and unity. Very often arrogance and a strong feeling of separateness characterize much that is done in the way of charity, reform and so-called education.

But a Theosophist is one who acts from the spirit of true brotherliness. Befogged though it may have become, some trace of the lost knowledge of the "oneness of things" lingers in him, and this light in the heart leads him through many paths to the truth, and to greater and greater opportunities for unselfish work for humanity. It is this spirit that has supported the courage and faith of the martyrs and the great thinkers and reformers of all ages. It is an armor which if kept in constant use makes one a touchstone, a something positive and pure, that brings more light to life, and makes plain the dark and evil, even to the eyes that would fain not see.

Two of the characteristics of a Theosophist are the defense of the right and the protest against the wrong. In the moral life these are great forces in clearing the way for the revelation of the true. Sooner or later the Theosophist, the unselfish worker, he whose heart speaks, "can aught be saved and hear the whole world cry?" will be found in the ranks of those who consciously and under guidance of the Light of the world work to bring to all men the life of brotherhood. M. M. T.

(3) As life is many-sided, and at different points of evolution at different periods, we see life accentuated in action, sometimes in one direction and sometimes in another direction. So it would seem to me that in defining "What constitutes a Theosophist" we can only do so in very general terms; that is, only stating the foundation on which the life must be built, for as soon as we begin to specialize in any one direction, there is a tendency for dogma to creep in with its insidious work which would wreck the whole structure.

The Theosophist must naturally have high ideals, and these must be put into action, for unless they are put into everyday practise the idealistic person is merely a looker-on over a fence which he himself has built, and he cannot enter the wide field of a true life until this separation is broken down, and then the opening of the mind's eye to the necessity of practical work changes the whole view of life as to what we are here for and whither we are bound.

I believe that there are those in every line of life who are Theosophists and that there are many more becoming Theosophists. Some of these people are so conscious of it that it is filling them with a joy that makes life worth living even in these troublous times, and there are also those who are unconscious of it, yet the animating purpose that urges them on in the life they are leading is sometimes very wonderful. Often the environment of these people is something tragical, yet they go on with a

heroism unflinching, facing all before them, feeling that "whatever is right" in the sense it would not be theirs to do and dare if it did not belong to them, putting all obstacles under foot, actually adding a dignity to their labors and laying up uncounted treasure in heaven.

I have always felt that to the extent we can bend our lives to make them conform to the action of the Great Law, which is premised on the Eternal Truth of all things, do we make ourselves True Theosophists, as the Great Law makes for the good of all, and that would make a real Brotherhood—the goal toward which our faces are turned. G. A.

Civilization

TIME was—it was, in fact, till about yesterday—when the harassed business man could get on board a steamer and in mid-Atlantic, inaccessible to letter or telegram, forget in quitois his troubles, his deals, the bulls and bears. But no more. Marconi reported, when he landed at New York from the *Lucania*, that the ship had never been out of wireless telegraphic touch with England or America.

Wireless telegraphy is in its infancy. We can readily imagine its maturity. In a phrase, and hardly putting the case extremely, every place in hourly touch of every other. No place in any civilized country where you can be with people—or in an atmosphere—not a-pulse with the fever of the market-place. No village, mountain-buried, where, resting a summer week, you can be secure against knowledge—printed and spoken—of the last murder, prize-fight, maneuvers of war or diplomacy, deal in the market or giant trust. Every event echoed and shouted into every nook of civilization.

And that is civilization. Not invention or anything else; but units passing nerve-knit into an organism; everything in life thrown together in one boiling cauldron; no spots of peace. All must weary together of the riot; all together take action for the betterment of conditions; all together feel the appeal from the one soul beyond yet within.

So the things are what they must be ere they can better. We ought to keep our knowledge apace with all that men do and talk of, ill or good, lovely and unlovely—which in no wise involves *sharing* in the evil and the unlovely. We must stop the wish to get apart even for a moment, selfishly, from the whirl of the world. It is only by the full cognizance of it—compelled or voluntary—of those who, in their timidity and selfishness, will not face and know all that is going on, all the squalor, degradation, misery, wild confusion, vile and ignoble aims and pursuits, horrible amusements, that the evils of human life have any chance of being wiped out.

For those who would stand aloof are the very ones needed to help generate the force of deliverance. The desire to stand aloof is the mark of their appreciation of the horrors. When their barriers have been broken down, they will perceive that their desire can only be operative at all by being made operative for the whole. And at last it will translate itself into compassion, and they will work. It is no part of the exacting scheme of nature that any of her units, as such or in their groups, should shut themselves apart physically or mentally, and spend their days in the culture of fine emotions and delicate shades of feeling. The luxuries of religious and mystical sentimentality, even elevated into "science," are not religion and do not make manly men nor womanly women. And it is only such men and women that nature will at last permit; only such that can survive. To them only will she give her crown, her divinest and noblest light of feeling, earned by work, sustained by work, their inspiration to more work.

It is only when the devotees of the various cults and exclusive refinements have recognized that they cannot stand apart from the whole, that they will lend their energies, wealth, culture, whatever they have, to the one worthy task of raising the world. Then, touched with the spirit of Universal Brotherhood, they will find ready to their hand the instruments by which their compassion may find outlet. STUDENT

BOBBIE had been forbidden to play with the water in the bathroom, but one day the temptation proved too strong, and he turned on the faucet. Nurse, coming to the door a little later, beheld the rapidly filling tub, beside which knelt a small boy who, with clasped hands and a terrified voice was saying: "Oh, Lord, if you know how, please turn off this water; but if you can't, please send somebody that can." *New York Commercial Advertiser*

A VERY remarkable book has made its appearance and a special American

edition has already been issued. It is entitled, *Letters of a Chinese Official*, and purports to be the work of a Chinese now resident in England. We have seldom seen as trenchant an indictment of the spirit of modern civilization, which appears constitutionally incapable either of understanding or of sympathizing with any system which is unlike its own.

The author of this work does not apologize for being a Chinese. He does not look upon the place of his birth as being an unavoidable misfortune. Indeed he says, "I have yet seen nothing which could make me regret that I was born a citizen of the East."

His explanation of the position of the Chinese Government is very important. It is indeed essential to the comprehension of the problem which European greed is forcing to the surface. The Chinese Government, it seems, does not represent the nation, nor is it intended to do so. The Chinese are governed by their own consent and only by their consent. He says:

Government with us is based on the consent of the people to a degree which you of the West can hardly understand, much less imitate. What you have striven so vainly to accomplish by an increasingly elaborate machinery, happens among us by the mere force of facts. Our fundamental institutions are no arbitrary inventions of power; they are the form which the people have given to their life.

Neither the acts nor the omissions of the authorities at Peking have any real or permanent effect on the life of our masses, except so far as they register the movements of popular sentiment and demand. Otherwise, as you foreigners know to your cost, they remain a dead letter. The Government may make conventions and treaties, but it cannot put them into effect, except in so far as they are endorsed by public opinion. The passive resistance of so vast a people, rooted in a tradition so immemorial, will defeat in the future, as it has done in the past, the attempts of the Western Powers to impose their will on the nation through the agency of the Government. No force will ever suffice to stir that huge inertia.

It is, however, on the question of civilization that our author is most eloquent. So far from admitting that Chinese civilization has been surpassed, he holds that it is still in the forefront of the world, and that other nations are not undeserving of the epithet "barbarian," which is so often applied to them in the Celestial Empire. For his contention, expressed always with courtesy, he has much to say, and he says it in a way which compels both attention and sympathy:

We measure the degree of civilization not by accumulation of the means of living but by the character and value of the life lived. Where there are no humane and stable relations, no reverence for the past, no respect even for the present, but only a cupidinous ravishment of the future—then we think there is no true society.

The Chinese have both the instinct and the opportunity to appreciate the gifts of Nature, to cultivate manners and to enter into humane and disinterested relations with their fellows. The result is a type which we cannot but regard as superior, both morally and esthetically, to the great bulk of your own citizens in Europe. And while we recognize the greatness of your practical and scientific achievements, yet we find it impossible unreservedly to admire a civilization which has produced manners so coarse, morals so low and an appearance so unlovely as those with which we are constantly confronted in your great cities. Admitting that we are

Arbitration Treaties

BARON D'ESTOURNELLES is doing a work for international peace which may for a long time be unrecognized and which may even, for a season, appear to be unfruitful, but which is none the less solid and real. He announces that the Anglo-French Arbitration Treaty is but the preliminary to many others, and that France is entering into similar agreements with Italy, Holland, Sweden and Norway. The treaty with Italy will possibly be concluded before the visit of President Loubet to Rome. The Baron makes a reference to the United States which ought to be an encouragement to redoubled efforts on the part of those who are advocating international arbitration. He says:

The United States helped the cause of peace by submitting the first case to the Hague tribunal, and I believe American statesmen would do well to come into a closer contact with Europe. On this ground I have been invited to visit America next year. I shall go to the St. Louis fair and deliver a series of lectures on the subject. My main object will be to obtain the formation in America of a group of congressmen favorable to arbitration, who will afterwards visit France and help the great movement for the world-wide adoption of arbitration between nations.

A Chinese Criticism

not what you call a progressive people, we yet perceive that progress may be bought too dear. We prefer

our own moral to your material advantages, and we are determined to cling to the institutions, which, we believe, insure us the former, even at the risk of excluding ourselves from the latter.

Turning to religion he is no less unsparing, and it would certainly be hard to answer his indictment by any other plea than guilty:

Whether your religion be better than ours I do not at present dispute; but it is certain that it has less influence on your society. You profess Christianity, but your civilization has never been Christian; whereas, ours is Confucian through and through.

Trained—he says of the European—in the tenets of a religion in which he does not believe—for he sees it flatly contradicted in every relation of life—he dimly feels that it is prudent to conceal under a mask of piety the atheism he is hardly intelligent enough to avow. His religion is conventional; and, what is more important, his morals are as conventional as his creed. Charity, chastity, abnegation, contempt of the world and its prizes—these are the words on which he has been fed from his childhood upward. And words they have remained, for neither has he anywhere seen them practised by others nor has it occurred to him to practise them himself. Their influence, while it is strong enough to make him a chronic hypocrite, is not so strong as to show him the hypocrite he is. Deprived on the one hand of the support of a true ethical standard, embodied in the life of the society of which he is a member, he is duped, on the other, by lip worship of an impotent ideal. Abandoned thus to his instinct, he is content to do as others do and, ignoring the things of the spirit, to devote himself to material ends. He becomes a mere tool; and of such your society is composed. By your works you may be known.

What fills me with amazement, and even, if I may be frank, with horror, is the fact that the nations of Europe should attempt to justify their acts from the standpoint of the Gospel of Christ, and that there should be found among them a Christian potentate who, in sending forth his soldiers on an errand of revenge, should urge them, in the name of Him who bade us to turn the other cheek, not merely to attack, not merely to kill, but to kill without quarter! What further proof is needed of the truth of my general proposition that the religion you profess, whatever effect it may have on individual lives, has little or none on public policy? It may inspire here and there some retired saint; it has never inspired those who control the State.

Of the ultimate result of the Western irruption into China, the author of this remarkable book makes a prediction which has some similarity to a threat, and a threat not entirely unjustified:

And, irony of ironies!—it is the nations of Christendom who have come to us to teach us by sword and fire that Right in this world is powerless unless it is supported by Might! Oh, do not doubt that we shall learn the lesson! And woe to Europe when we have acquired it! You are arming a nation of four hundred millions! a nation which, until you came, had no better wish than to live at peace with themselves and all the world. In the name of Christ you have sounded the call to arms! In the name of Confucius we respond!

The civilizations which are now engaged in beleaguering the frontier of China are not likely to profit by information, by advice or by threats. Even though one rose from the dead they would neither listen nor learn. Nevertheless it is sometimes profitable to see ourselves as others see us, however uninviting the sight may be.

STUDENT

Drunkenness in Fiction

DR. G. H. R. DABBS, in the *British Journal of Inebriety*, deals very forcibly with the subject of drunkenness in fiction and the drama. He says:

I was once speaking to a man who held the record of police convictions for drunkenness. He was a gentleman born and had been a great athlete. I met him in a prolonged parenthesis of sobriety, and I believe his brain-cells were at the time he conversed with me fairly free from alcoholic soakage. He said, "Depend upon it, the habit that society has of treating drunkenness as a comic incident, has something to say in the matter of how the drunkard is led to regard it." I have often thought over this phrase, and not always with absolute equanimity. I took up an old volume of an illustrated comic paper, the other day, and I found allusion after allusion to drunkenness, and always from the laughable side.

Dr. Dabbs speaks a lamentable truth and we cannot expect an increase in self-restraint so long as its entire absence is so constantly viewed from a supposed ludicrous aspect which it does not possess. No form of so-called comic writing is so degraded as that which exhibits drunkenness as a subject for mirth, and which therefore gives to it a practical applause.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

His Idea of Prayer

Harold, the five-year old son of the Presbyterian minister of Dayton, Kentucky, was being prepared for bed. He had spent a very active day at coasting, and was weary and very sleepy.

"Now, Harold, kneel down by mama and say your little prayer."

"But, mama"—half asleep, with his head on her shoulder.

"Be mama's good boy, now," coaxingly. "Thank God for all His goodness to you."

But Harold was asleep.

His mama gently aroused him. "Harold, don't be naughty. Be a good boy, now, and thank Jesus for the nice home you have, the warm clothing and fire to keep you warm, and a mama and papa to love you. Think of the poor little boys who are hungry and cold tonight, no mama to love them, no warm bed to go to, and"

"But, mama," interrupted the sleepy boy, roused to a protest, "I think them the fellers that ort to do the prayin'."—Lippincott's

Out of Plato come all things that are still written and debated among men of thought. Great havoc makes he among our originalities. We have reached the mountain from which all these drift boulders were detached. The Bible of the learned for twenty-two centuries, every brisk young man who says fine things to each reluctant generation is some reader of Plato, translating into the vernacular his good things.—Emerson

If there be no reasons to suppose that we have existed before that period at which our existence apparently commences, then there are no grounds for supposing that we shall continue to exist after our existence has apparently ceased.—Shelley

Beneficence Carries Its Own Power

WOULD that it were possible to call into positive and combatant action all men of good will who are scattered throughout the world, and to awake them to a recognition of the power which awaits their claim. We psychologize ourselves into impotence by giving a wholly false value to physical isolation or to material weakness; we wait always for events to give to our beneficence the power which it is at no time lacking.

It is primarily by our thoughts that we make ourselves felt far more than by our visible deeds. It is that subtle force called character which gives to us a redemptive power, which forces attention and obedience from

reluctant humanity, and character is the building of which our thoughts are the stones. By our thoughts we make ourselves felt, and our words and acts are ballasted and freighted by the thoughts which called them forth. By thought the smallest act acquires commanding majesty, and by thought the expression of a wish may become a divine command. Let us no longer measure by events either our successes or our opportunities. Progress along the path of endeavor is not the less certain because there are no milestones, nor is it the less sure if the inscriptions are illegible. The thought and the intention are the true events. Let us not stand still and mourn for their visible expression.

■ The Power That Nature Lends ■

Power is not actually derived from any of the things which are today in vogue to that end in the world. The only power is that internal energy and light which are borrowed from nature, who gives her force according to her own rules and laws, and by which any man who will comply with them may be raised up to the very pinnacle of greatness. Nature cares nothing for the transitory and imitation forces which we acquire without her conscious aid. By application we may obtain wealth, by study we may acquire learning, or eloquence, or literary expression, but the world is full of those who have these things abundantly, but who are not thereby great, who cannot thereby win the hearts of men nor summon forth their discipleship. The world tolerates them for awhile, and the world forgets them, because they are not great, and their seeming to be so is but for a moment.

Nature has her own sublime consciousness, which moves onward to a goal. She thinks great silent thoughts of what shall be, and from the immensities of her imagination all future things are born. There is no man too poor, nor too unlearned, nor too obscure to attune his mind to the world-mind, to make himself transparent to the light which shineth in darkness, and so to stand forth greatly as an expression of the flame which never fades nor flickers.

■ The Holy Grail Is Still Unfound ■

It is alone such as these who understand the promises with which all Scriptures are filled, the divine promises which are a stumbling block and a perplexity only to those who do not know how to ask for their fulfillment. We become polarized to the world's ways and to the world's thought, and it is so hard to realize that even in a moment we may merge ourselves into the ocean of force which is above us and beneath us, the force which cares so tenderly for every blade of grass, the force which wrecks an universe and builds it again triumphantly in the profundities of space. The Holy Grail remains unfound, not because it is so far off but because it is so near. We are encompassed with power and with beauty, and our eyes are dimmed with needless straining into the distance. The Holy Wisdom of the Ages walks as a suppliant through the world asking but for recognition through her lowly attire, and offering her benediction to whoever will receive it. Naught knows she of wealth nor human honors, and her eyes do not discern the glory of the kings nor the tatter of the beggars. As of old time, even from the beginning of the world, she holds within her hands the Pearl of Great Price, and whosoever will may take it. STUDENT

After a Battle

A CERTAIN amount of encouragement, an increased belief in human progress, may sometimes be obtained from a glance at the recent past. Of this we are reminded by a book of reminiscences which has lately appeared, having for its subject the battles of a hundred years ago. There can be no doubt that there is today a more humane care of the wounded, a more real effort to mitigate some of the after horrors of a great struggle. The better nature seems to reassert itself more quickly than heretofore, and this is a phenomenon to which full weight should be given. The author speaks of riding over the field the day after the battle and finding the heaps of mangled dead and wounded entirely uncared for. The practise of indiscriminate attention to friend and foe alike was not then in vogue, for we are told that the enemies wounded were left largely to chance, and "it was only on the fourth day after the battle that the last were got in." Great numbers died "who would have lived could they have received care and surgical attention."

The plight of a wounded man abandoned upon a battle-field is almost too dreadful for contemplation, and it speaks something for human progress that such things can hardly now occur, and never through indifference.

What the Future May Hold for Us

JULIAN HAWTHORNE has been looking into the future, and what his prophet eye has beheld he records in *The Booklovers' Magazine*.

We believe we see the same things, but we think they lie a little further down the avenue of time than they perhaps appear to Mr. Hawthorne. Science, he thinks, is helplessly moving toward metaphysics, even toward the spiritual. For matter, which used to be made up of material atoms, now has to consent to be made up of *force* atoms, since the modern conception of an atom is a center of force. As "the distinction between force and spirit is less than that between force and matter," matter is in no small danger of being counted spirit, or at best, as being "run" by spirit.

Then the connection between vitality and will and consciousness, on the one side, and between life and electricity on the other, and the dependence of material phenomena upon electricity, suggest that we may be nearing "a condition where the mind or will of man should act directly upon matter." One might add that the condition already shows itself in full prevalence whenever we intentionally move an arm, close an eyelid, or emit a thought.

In the matter of flying machines, Mr. Hawthorne very rationally counsels us to go to the birds for exemplars, and consider that "there is nothing in the muscular system of a sea-gull which can explain its remaining for hours and perhaps for days on the wing." He suggests electricity in some form, and the possibility of the truth of this suggestion, coupled with the other consideration of the relation of life and electricity, leads to the question: "Why should not man walk on air, or cleave it with the speed of an arrow, without any material machinery whatever?"

Again, the telegraph and telephone may one day become obsolete because the secret of transmission of thought from brain to brain will have its thinning veil entirely torn. The mystery of radium opens to Mr. Hawthorne, as to all of us, a large realm of speculation. There is the question of the transmutation of the elements into each other, as the alchemists claimed to do. For if the radiations of radium are ultimate matter, given off at one pole, so to speak, whilst at the other pole is the point where ultimate matter is condensing to make the radium, why should we not seize these radiations and make them condense into something else, say gold? But again, radium may be one of the channels through which divine energy is rushing into the phenomenal world from a limitless fount, and the doctrine of the Conservation of Energy may be a mere figment of our minds.

And the Creator, consequently, would be relieved from the present charge of having set a machine going in the beginning which has been running ever since without his interference . . . and He would be shown in a state of constant and infinite activity.

It may be so; and anyhow, the doctrine of the Conservation of Energy has never been proved, and cannot be. Every act of will may not only use forces already in the body, but may add to them; may, in fact, be actually creative. But the most remarkable suggestion arises from the recently discovered fact that certain musical tones paralyze mosquitoes.

All animals, and even all material objects, are probably responsive to certain musical sounds. If this be so, nothing but a series of carefully conducted experiments lies between us and the discovery of the "key-note" of any given thing or creature. . . . It may be that life and death (within limits) lie between the extremes of the musical scale. . . . Vibrations which cannot affect the tympanum consciously may prove far more effective, through the brain, than any so-called sounds.

If we put ourselves back in science about fifty years, project a line on to 1903, and then carry it with the same velocity to 1953 and 2003, we may not find Mr. Hawthorne talking so extravagantly after all.

OBSERVER

Doune Castle, Perthshire, Scotland

THE illustration on the cover page of the NEW CENTURY PATH this week gives a good view of Doune Castle, Perthshire, Scotland, which is one of the oldest architectural relics of antiquity in which that country is so rich. Its age is uncertain but it was rebuilt by Murdoch, Duke of Albany. Among other ancient Perthshire castles may be mentioned Blair Castle, stormed by Oliver Cromwell and occupied by Claverhouse, and Castle Dhu, the great Campbell fortress.

Vivisection and Disease

STEPHEN COLERIDGE, of the English Anti-Vivisection Society, is one of those fighters who are certain to succeed. His determination is united with an extraordinary knowledge of the subject, and although he is appealing to a public conscience already stupefied by cruelty, we may rest assured that all such efforts are cumulative, their force being surely stored until it can be liberated.

In the hospitable and sympathetic columns of the *Daily News*, Mr. Coleridge furnishes the world with some figures to prove "that when the attention of the vivisectors is devoted to any particular disease the death rate responds to their interference with a marked rise." Mr. Coleridge deals with a number of diseases, and of these we may select two as best illustrating his contention. He says:

The discovery of glycogen, which was to pave the way to a total cessation of diabetes, has been followed by a rise in the death rate from that disease, culminating in 1901 in the highest ever recorded; and the concentrated attention which the vivisectors have recently devoted to cancer, entailing the artificially produced misery of innumerable animals, finds its sinister reflection in the following words: The deaths referred to cancer or malignant disease in the year 1901, numbered 27,487, and were more than the corrected average number recorded in the preceding ten years by 2,784.

His conclusions on the subject of hydrophobia are no less remarkable:

Thousands of pounds have been given to Pasteur Institutes in Italy and France, countless multitudes of miserable dogs have endured the extremest suffering in those institutes at the hands of the well-paid officials, with the inevitable result that the death rate for hydrophobia in both those countries has gone up and up.

Mr. Coleridge is well justified in pointing out that as sick people evidently derive no benefit from the trade in vivisection procured serums, and as it is equally evident that the wretched animal victims have nothing to gain, the profits, such as they are, must accrue to the profession and the vendors only.

With the motives of vivisection we have nothing whatever to do except to tax our credulity by ascribing to them all the virtue possible. Their intentions may be admirable or they may be very much the reverse, but the hard fact remains that vivisection has not lessened the sum of human suffering, and that it is a menace to the health and to the moral sanity of the community.

Mr. Coleridge says truly that the world is indolent and credulous. Indolence and credulity have to be paid for, and they are now exacting their full toll of human sorrow. The toll will continue to increase until we have learned to practise the righteousness which sets at defiance all disease and banishes all pain.

STUDENT

Religious Labels

THE Rev. T. Rhondtha Williams has been visiting America and has met with a particularly kindly reception in Boston. He read a paper before the Ministers' Union on "Theological Thought in the Churches and Their Relation to the Masses," and his main advocacy was for an increased fearlessness on the part of ministers and for a greater explicitness of utterance. Teaching, he said, must be squared with facts and there should be no more of the "terrorism of labels."

This of course is good, but how is it to be done, so long as preaching remains at its present low level as one of the various ways of "getting a living." Far be it from us to say anything that is offensive; indeed, we know well that we are but voicing the irritation which is felt by many able and sincere ministers at the shackles which the present system imposes upon them. By that system the pulpit tends in many cases to the level of the shop which must supply what its customers demand, or cease to do business. So long as the minister depends upon his congregation for the bread that he eats, so long there must be an undue deference to the prejudices of that congregation, so long must the minister adapt his teachings to the particular "label" which has been asked for. Even from the worldly point of view we believe that this deference is carried much further than it need be and that every congregation contains enough of the true religious element to support sincerity even when that sincerity seems to wound. We are, however, dealing with human nature and so long as we import the commercial factors of competition, and supply and demand into our religious life so long must we expect those factors to bear their usual fruit.

STUDENT

Some Views on XXth Century Problems

Confiscation in the Name of Religion

DR. TOYOKICHI IYENAGA has been lecturing in Chicago on the subject of missionaries to China. Dr. Iyenaga is a broad-minded and tolerant man and he handled his subject from the standpoint of common sense and not of religious bitterness. He believes that missionary efforts in China will be a failure and that there can be no lasting peace in the country "until the Powers cease to use religion as a pretext for confiscation." The Chinese mind is naturally a little puzzled at a faith which seems to have no influence upon conduct and at moral precepts which are not acted upon. Dr. Iyenaga says that there is no animosity in China against either the missionaries or Christianity itself. It is the methods which are employed which arouse the hostility of which we have seen so many deplorable evidences. It is possible to inculcate the beauties of Christianity without at the same time throwing ridicule upon the sacred writings of the people. "What," he asks, "would the Christians of America say if a man should come here and ridicule the Bible? I don't believe the stranger would be received with open arms." If Dr. Iyenaga has lived here long he knows exactly what the Christians of America would say. He probably knows very well that even among those who hold the Bible in equal reverence a mere difference of opinion as to obscure and unimportant interpretations will produce religious feuds which only the presence of the police can keep in check. And yet we are amazed and indignant when other nations resent the behavior of foreigners who hold up the national religion to contempt, and ridicule beliefs and customs of the most ancient and sacred nature.

Dr. Iyenaga furthermore asks very pertinently, "What do the Chinese masses care about the sufferings and persecutions of the ancient Jews?" That such subjects, interesting and important as they may be, should be identified with Christianity and should be presented as an integral part of the religion of Jesus is a melancholy commentary, not in any way upon the good faith of the majority of missionaries, but upon their good sense and upon their comprehension of their opportunities. Those opportunities are very great, but they are woefully neglected, and failure is the inevitable result.

STUDENT

Broken Homes and Broken Lives

THE Illinois State Reformatory seems to possess a superintendent whose intelligence is likely to carry him a long way in the mission which he has undertaken. He has lately delivered a lecture on "The Training of a Boy," and we would commend his ideas to some worthy people who by the inscrutable will of Providence have been placed in positions of authority and whose views of reformatory work are bounded by hard punishments on the one side and religious dogmas on the other. Here are some all too short extracts from the superintendent's speech:

The key-note of reformatory training is education, not only the acquisition of knowledge, but the training of the heart and brain, eye and hand, the development of all the elements of right living.

Punishment has no place in the Pontiac system except as a means to the end.

Nearly half the inmates committed crimes when homeless. Nearly half these had no homes. A great number ran away from home and became vagrants. More than half of the whole number had lost either father or mother.

Broken homes and broken lives are intimately associated. If a boy has wholesome home surroundings he will not reach the reform school.

Most of the boys sent to Pontiac have served sentences in some other institution. The worst possible thing to do with a boy is to put him in jail. The ordinary jail lacks every agency to make him better, but has many to make him worse. Shut up in the companionship of men experienced in all manner of wickedness, the boy's imprisonment may well mark the turning point of his life and determine his career as a criminal.

The home life here receives its due position as the cause and the preventive of juvenile crime. When this is better recognized the problem will be approached with a greater sympathy, but until then there will necessarily be many would-be reformers who are quite unable to understand that under certain circumstances the boy can no more help being a criminal than the reformers themselves can help being stupid. Y.

The Awful Increase of Insanity

IN Louisiana the insanity problem has reached an acute stage and with the end in sight. The Superintendent of the State Insane Asylum informs us that insanity is increasing *five times faster than the population*. In 1896 there were 850 insane persons in the asylum. There are now 1550, an increase of 80 per cent in seven years. During that time the population has grown 15 per cent. Several hundred lunatics are now confined in prisons and gaols, awaiting the completion of the new asylum, which will be instantly crowded. The Superintendent attributes this state of affairs to consanguineous marriages and to the use of cocaine.

A simple sum in arithmetic will show us how many years it will take to place the lunatic population of Louisiana in the majority. The problem is, of course, not peculiar to Louisiana. A visitor from another planet would probably conclude that lunatics are already in the majority when he recognized the complacent apathy with which such appalling statistics are everywhere received. Nor do the asylum statistics in any way represent the total problem. For every lunatic who is safely confined in an asylum there are many others who ought to be there. We meet such people every day.

The Superintendent expresses a mere truism when he says that legislatures throughout the country are not showing sufficient courage in attacking the insanity problem, and that they are too much afraid of public opinion and prejudice. The public opinion and prejudice which resist necessary remedial measures are themselves forms of insanity. X.

Corrupt Immigration Officials

THE supervision of immigrants is not so simple a matter as it might appear. Mr. and Mrs. Brandenburg have recently traveled to Italy and back in order to study the working of the regulations, and from their report it seems that it is possible to purchase fumigation certificates before embarkation. Speaking of his experiences at Naples Mr. Brandenburg says:

One of our party was approached by a man who said that for \$5 he would fix it so that the party and their hand baggage, which numbered eighteen pieces, would not have to be examined and fumigated. After dickering with the man we made a deal for \$2.

With the assistance of eight companions he huddled us together in plain sight of the police station and fixed the labels to our baggage for the benefit of the authorities at Ellis Island. The baggage passed through to the steamer without trouble. It then went to United States Vice-Consul St. Leger and I told him what had taken place. Three of the men were arrested. Seals and United States consular tags were found on them.

It remains to be explained how these certificates thus came to be placed upon the market, and to this the immigration authorities will doubtless give their attention.

STUDENT

Sensational Literature and Crime

A YOUNG girl, seventeen years of age, has been charged with stealing various articles of jewelry and clothing. Evidence of a hitherto irreproachable character was tendered with the explanation that her behavior had been caused by cheap, sensational literature and theatre plays of a similar nature. It is not easy to see how the law can interfere with sensational literature, and in any case the tendency is already too great to appeal to the law to make good our neglect of the elementary duties of life. The responsibility of this poor girl is certainly largely shared by those whose duty it was to give her a principle in life, a moral standard to which, at the age of seventeen years, she would turn as naturally as flowers to the sun.

In this instance the neglect of parents or guardians has taken the form of crime. How many other girls are there who, under the same treatment, have steered clear of actual crime but who have become worthless wives and worthless mothers, nuisances to themselves and to their community.

STUDENT

Art Music Literature and the Drama

'Twixt Priest and Profligate

THE struggle of the soul, pilloried between life's conflicting forces, has been the theme of artist, poet and musician ever since pictures have been painted or lyrics sung or symphonies written.

Some have found its solution, traversing all the soul's long weary path to the light and the golden portals. Shakespeare found it in his *Tempest*, Dante in the *Paradiso*, Beethoven in the *Ninth Symphony*.

Others state the problem, push forward to partial solution and then leave the soul to its battle—its apparent defeat—and the spectator with the question "Wherefore?" upon his lips. Ibsen does this in his dramas—most of them; this too, is the story told by Beethoven's *Fifth Symphony*. Few artists complete the cycle and picture the soul as freed.

In his symbolic painting, Machell takes up the same theme, the woman-soul crucified in life yet freed in death. On one side is the cathedral, on the other, the castle, where revelry is the order of night and day. On one side stands a chill, black-robed figure, calling the soul to the life which the church offers, a life of fruitless renunciation and betrayed ideals. On the other is the bejeweled figure of a woman of the world, calling to the dance, with humanity's old shibboleth on her lips, "Let us eat, drink and be merry, for tomorrow we die." But it is only the body which lies prostrate; the soul is freed and stands erect, "guiding the life toward its greatness"—in its hands the sceptre of power and the sword of truth, behind it the image of the living Christ.

'TWIXT PRIEST AND PROFLIGATE
Symbolic painting by R. MACHELL

A Choice Spirit in American Literature, Lanier

SIDNEY LANIER was one of the choicest spirits in American literature. Whether he speak in prose or in verse, he cannot soon be forgotten. Born and reared in the South, he belongs alike to the whole country. Two in every way magnificent volumes, *Shakespeare and His Forerunners*, remind one at once of how much we owe to him and how great was the loss in his early death.

Some of the books which have the very least suffusion of literary spirit, are books professedly on literature. Very different is the case with Lanier. Whether writing about literary history or literary criticism, he is still profoundly and keenly full of the literary instinct and poetic imagination. These two volumes contain two series of lectures delivered by the author in Baltimore during the winter of 1879-80; one in Johns Hopkins University, the other to a class of ladies at Peabody Institute. The aim has been to show what Shakespeare owed to his time, and what we owe to him. Inexplicable as his marvelous genius was, he did not drop down into the heart of Elizabethan England straight from the sky. He grew, and he grew by that he fed on. . . It is for the true poet-critic like Lanier to give us to see and catch the very heart of things. One is impressed with the fact that in his case both the poet and the critic were greatly indebted to his noble gifts for music.—*Exchange*

THEN called the artists' God from in the sky:
"This time shall show by dream and mystery
The heart of all his matter to thine eye.
So, study stars by looking down in streams,
Interpret that which is by that which seems,
And tell thy dreams in words which are but dreams."

—SIDNEY LANIER, *Psalms of the West*

was an old, old wound, that must have been there all his life, for the edges were old and hardened. But Death, who seals all things, had drawn the edges together and closed it up. And they buried him. And still the people went about saying, "Where did he find his color?" And it came to pass that after awhile the artist was forgotten, but the work lived.—*Olive Shreiner*

The Artist's Secret

THERE was an artist once and he painted a picture. Other artists had colors richer and rarer, and painted more notable pictures. He painted his with one color; there was a wonderful red glow on it; and the people went up and down, saying, "We like the picture, we like the glow."

The other artists came and said, "Where does he get his color from?" They asked him and he smiled and said, "I cannot tell you;" and he worked on with his head bent low. And one went to the far East and bought costly pigments and made a rare color and painted, but after a time the picture faded.

Another read in the old books and made a color rich and rare, but when he had put it on the picture it was dead. But the artist painted on.

Always the work got redder and redder and the artist grew whiter and whiter. At last one day they found him dead before his picture, and they took him up to bury him. The other men looked about in all the pots and crucibles, but they found nothing they had not. And when they undressed him to put his grave-clothes on him, they found above his left breast the mark of a wound. It

DR. ARNOLD DOLMETSCH has been lecturing in New York upon the subject of Ancient and Modern Music, and he made no effort to conceal his opinion that the world has not musically progressed during the last few centuries. In order to emphasize his opinions he produced examples of very many ancient musical instruments and performed upon them in order to illustrate his contention. He is satisfied that no progress has been made since the Seventeenth and Eighteenth centuries, but only change, and the change has been mainly in an increase of noise. The old requirement, he said, was quality but the modern requirement is quantity.

Like most enthusiasts, Dr. Dolmetsch goes perhaps a little too far. Inasmuch, however, as true music is the expression of the spiritual aspirations of its age it must be conceded that with the waning of high ideals, music must at best become imitative with the addition of mental vulgarisms such as the love of display and of approbation. In the new light that is dawning over the world—the light of a true philosophy of life—one reads the assurance that the retrogression of which Dr. Dolmetsch complains is but a passing phase. Unless all signs fail the music of the future—yes, even of the near future—will translate to us all that was best in the harmonies of the ancients, adding a something greater that ancient music itself did not possess. C.

F E A R N O T T H E N E W G E N E R A L I Z A T I O N

—Emerson

AS Thanksgiving time each year approaches, one's thoughts go back, in-

voluntarily, to the old Puritan days and to those ancestors of ours to whom we owe this new-old anniversary. History says little of the part taken by the women of those days, yet one can read between the lines and find there a record as inspiring as it is pathetic. Can we measure the heroism of those English wives and mothers who crossed the sea to build homes upon the shores of a wilderness? Great must have been their faith, serene must have been their love, for the pioneer heart must beat steady or failure will mark the dial instead of success. Picture to yourselves the courage of those women, toiling with their husbands in the building of homes, the tilling of hardly cleared fields, bearing and rearing children so bravely, that every hour of suffering became transformed into an hour of opportunity. Then go back in thought to their simple home life, with its poetry, perhaps, but with its hardships as well, the life bounded, for women at least, by prayer-book and spinning-wheel.

There was a strength in the women of those days which it is a good thing to feel in one's blood. It is a splendid heredity. Where there was one who, like the beautiful Lady Arbela, pined away from homesickness and finally died of sheer grief for her lost England, there were a dozen who resolutely kept the past at their back and worked with eyes on the duty before them and with faces to the future.

Women were persecuted in those times, as they are today, persecuted by those who professed to be followers of Christ, driven from their homes by those who stood sponsor for the Christian religion, imprisoned, even hanged. Why? Well, it was partly because they were women and chiefly because, being women, they dared to think!

In the hearts of the very people to whom we owe our custom of Thanksgiving, with all the joys that belong to it and all the memories that cluster about it as fragrance about a rose, there lay dormant the spirit of persecution. At the first opportunity it burst forth, a very flame. When the clergy of Boston convened a synod—which was an assembly of all the ministers in Massachusetts—for the express purpose of condemning Anne Hutchinson for daring to bring to the people a more reverent interpretation of the gospel than was brought by the ministers themselves, that was the beginning; when they finally drove her from her home into the wilderness, that was the next step, but not the end. It was all quite just, for of the exactly eighty-two erroneous religious opinions which the ministers found to be diffused among the people, Mrs. Hutchinson had been responsible for quite a number! Henry Vane, the splendid young governor, was her friend, *but he was powerless to aid her against the ministers.* So she was sacrificed. But Anne Hutchinson's work remains, her courage could not be banished from the thought world, her endurance made the path easier for all women, for all time.

Then, too, there were others; for the women of those days were not, without exception, content to expend their lives, to the last fair inch, upon the soap-kettle and the spinning-wheel. Mary Dyer was publicly hanged—because she was a Quaker. That was her only crime. Ann

The Women of Puritan England

Fisher and Jane Austin, for the same crime, had their trunks burned, their Bibles

seized and were themselves imprisoned. Even the governor's wife, beautiful, benevolent, was accused of being a witch. These are the pictures that come to our minds, though we might, for comfort's sake, prefer to forget them—when the Thanksgiving days return and we once again step backward into the life of old England. It is a sad picture and a harsh record, but the women of the present day will do well to read it when they drop into the fatal habit of self-pity. Not that the conditions which today surround the pioneer women are any easier than they were three or four centuries ago—if anything, they are harder. There are no paths to be cut through a wilderness of elm and oak, but there are paths to be cut through the more terrifying wilderness of our social customs. They do not, even the ministers do not, drive women from their homes, nor are women who dare to think contrary to inherited and established dogmas burned or imprisoned. But

be sure that that is only because weapons and means more torturesome are easily at hand—among them the pen of libel and the tongue of slander.

Yet, in spite of this, life today holds great opportunities for the woman who dares to think. Never before was the world so hungry for a little of the true light. Never before were people—everywhere—so eager to find a better interpretation of old truths. There is persecution, of course, but over and under and about it all is a great joy, for everywhere, on all sides, are waiting hearts.

Let us, as women, rejoice at this time and, reading in the Puritan past its deeper meaning, find in our hearts new occasion for thankfulness. Let us step upward into a deeper gratitude to that Law which has placed us here—or there—as justice has decided. Let us get out of our old state of passive endurance—for that is responsible for two-thirds of our troubles—and into a new state of active acquiescence, accepting the events of life, not only with equanimity but with gratitude.

Let us not forget that we are Souls and that the Soul is forever an Alchemist, capable of transmuting into the pure gold of opportunity every one of life's dull hardships, every one of life's leaden disappointments. Let us dare to think and, thinking; live.

We may not be able to do this at once, for the fears and the timidity which we have inherited from all the past, are hard to overcome in an instant. *But we can have the courage to try.*

STUDENT

LIBERTY

by EDITH M. THOMAS

HOW winneth Liberty? By sword and brand,
Or by the souls of those who strive and die?
Where dwelleth Liberty? Where lies the land
Most open to the favors of her eye?
Hath she her seat in empires, deserts wide,
Or most in little freeholds doth she bide?

What is the range that Nature gives her own?
With frost or fire she stays their flying feet,
And holdeth each within its native zone;
The pine its love, the palm, shall never meet;
Nowhere do roses bloom from beds of ice,
Nowhere in valleys laughs the edelweiss.

The races of the sea shall never fare
Beyond the moist and sounding element,
Nor any pinion, fledge and schooled in air,
On venturous errand through the waves be sent;
The cygnet to his nest of river flag,
The eagle to his eyrie on the crag.

Dwells Freedom with the spheric multitude
The vistas of the nightly sky reveal?
Each planet keeps the track it hath pursued
And shall pursue while ages turn and wheel:
Uncentered roves the guideless zroilite,
And drives to ruin down the steep of night.

With law dwells liberty; law maketh free;
Fly law, and dost thou forge thyself a chain.
Still wouldst thou pass the limits set for thee,
Still wouldst thou grasp strange honors and domain?
Behold, his liberty exceedeth thine
Who freely breathes in bounds where thou wouldst pine!

AMONG the exhibits being specially prepared for the St. Louis Exposition is a collection of thousands of photographs of men and women of Revolutionary and Colonial fame. They will be placed in Independence Hall, each accompanied by a brief biographical sketch, and will be later placed in the Congressional Library at Washington. The task of preparing this has been entrusted to Miss Marion H. Brazier of Boston. Miss Brazier is connected with the *Army and Navy Journal*, and recently was in Maine, witnessing the maneuvers of the army and navy, near Portland, as special correspondent.

Another Word

IN this age of highly evolved intellect and splendid achievement on material lines we, as women, are compelled to admit that modern life is often unbearably common-place. Why is this the case?

The foundation of society is the home. If general conditions show disharmony and division of interest, something is wrong at the basis, something is awry in the home-life. The woman who looks at the world as it is cannot fail to realize that a disintegrating force has been at work in her dominion.

Because the best in woman's nature has lain dormant for centuries, under a weight of ignorance and prejudice, her ideal of home-life has degenerated. Too many women have grown so accustomed to indulging the selfish desires of the members of their household, that they have grown to consider it their first duty to see that these selfish, even coarse, desires are gratified. And to just that degree the sweetness of soul-life is shut out of such homes.

But the awakened woman, through the power of the imagination, will create a more lofty ideal for her home-life. By determined effort she will fashion a new structure—a temple of purity dedicated to the service of the soul.

Knowledge of the possibilities of the imagination would enable mothers to better understand their children, and to assist rather than hinder the unfolding of the little lives. Children use this faculty naturally, and childhood is passed in quite a different world from that of later years when the soul has been shut out, by false education, from the beautiful realm where there was freedom and joy and light. The pictures of this realm are living realities but, when the faculty to create them is neglected or untrained, or trained wrongly, its power is lessened or entirely perverted. S.

Women in the West

IN the West woman has possessed more fully the dignity which equal share in responsibility as well as in success brings. Here she has helped to govern State and county, here more frequently than elsewhere she has been in office and been the responsible servant of the public, taking her part in the growth and improvement of the commonwealth, and bearing the burden and heat of the day with the same determination to do her duty and accomplish her allotted task as any other faithful laborer in the vineyard. The sense of obligation, the devotion to one's work, the enthusiastic belief in a future, this high ethical force which neither clamors nor commands, but follows us like a quiet whisper wherever we are and spurs us on, has prevailed in women's public service everywhere, and not least in the West. Their work is probably less known, but in no way less excellent and effective than that of their men coworkers.

Says an exchange: Having been from the first a real coworker in the labors of turning the wilderness into dwellings for a nation, the American woman has been fully as much a participant as the man in the growth of the national life on a sound and liberal basis. No nation need fear less to entrust its women with problems of far-reaching character than the American, in whose history women have long played the part of builders with wisdom, strength of purpose and political foresight.

IN a Washington paper, on Tuesday, March 5, 1889, appeared a notice advertising for sale at auction the grave of Mary, the mother of Washington. Ere many days passed, the Mary Washington Memorial Association was formed, and the grave, with adjacent land, was purchased, a fund being established for its perpetual care.

Anne Hutchinson

MOST prominent among those heretical characters at Boston who were said to be "as bad as Roger Williams or worse" was Mrs.

Anne Hutchinson, a woman of great gifts, who had come over in the ship with Sir Henry Vane. Moved by the spirit within her, she claimed the privilege of speaking at the weekly meetings. This was refused by the elders. "Women have no business at these assemblies, and most of them need their tongues bridled at times like common scolds," said they. Hereupon Anne Hutchinson became the champion of her sex and denounced the ministers for defrauding women of the benefits of the gospel. She called them Pharisees and was in turn declared by them to

be unfit for the society of Christians. She, with a large number of friends, was banished from Massachusetts—*sent forth to live or die as best they might*. The exiles made their way first to the home of Roger Williams. Miantonomah, chief of the Narragansetts, made them a gift of the beautiful island called Rhode Island, where in March, 1641, they founded a little republic of their own.—*Columbus and Columbia*

A PURITAN TYPE

With Puritan Courage

THERE is always a way where there is a good strong will. We are all familiar with the struggles of some of our great men and women to gain an education. The experience of a bright Maine girl is unique, at least. One summer she worked in an improvised kitchen making jellies, pickles and preserves. She picked the fruit and berries herself, and when autumn came she had enough money to keep her in an art school in New York during the winter.

The next summer she started a truck-garden, but, as it did not pay as well as she expected, the third summer found her casting about for something new. As it happened, there were near her home, which was on the coast, a number of small islands

on which were summer cottages. The one convenience lacking was a private ferry and, as a man in the neighborhood owned one, she rented it of him.

All that summer she ran the boat, a demure but brave little skipper in her short-skirted gown and sailor hat. Many tourists patronized her boat, knowing the object she had in view in running it, and in the autumn she again had a snug sum of money. At last she is established permanently in New York in her chosen work which is decorative design.

Rebecca Motte

THE Charleston, S. C., Chapter of the Daughters of the American Revolution has adopted the name of Rebecca Motte,

a Revolutionary heroine of that State, who made untold sacrifices to aid the cause of American Independence. She was a woman of wealth, and at one time her magnificent home was seized and occupied by the British. Seeing that the American soldiers were unable to dislodge them, she suggested that the building be destroyed, and herself conveyed to the American officers the fire arrows to be used in its destruction. The British, however, at that juncture evacuated and the home was saved. M.

PRINCESS THERESA of Honolulu, has recently taken a radical stand, declaring that the native home-rule party has nominated men who are unfit for office and that she does not intend to support them. Princess Theresa is a woman of remarkable ability and energy and is said to be a born leader. She is a direct descendant of the great King Hamehameha who conquered the Hawaiian Islands one by one and united them under an absolute monarchy.

HUMANITY calls for aid. Who has the strength, the will to go forward? To these I call and upon them is already the flush and the light of the victory beyond conception. KATHERINE TINGLEY

Brief Glimpses of the Prehistoric World

Archeology
Paleontology
Ethnology

The University of California and Egyptian Research

TO the University of California belongs the credit for discovering the important fact that the mummified bodies of crocodiles were frequently used for the preservation of papyri. The mummy was, of course, a sacred animal in the land of Khem, not for the fanciful reasons usually ascribed, but because it was accustomed to rise from the waters at sunrise, basking in the warmth, and with the lower part of its body immersed in the mud of the Nile. The crocodile was thus typical of man's higher or spiritual, and lower or material nature. The discovery of these strange receptacles for manuscripts was made by three Oxford scholars who have been conducting excavations in the interest of the Californian University. They have embodied the result of their labors in a book entitled *Tebtunis Papyri*, and the record is certainly both interesting and important.

The discovery was, of course, made "accidentally" by a careless workman who broke the body of a mummified crocodile with his spade and found that the interior cavity was filled with papyri. Sometimes the papyrus was wrapped around the body between the cloths. Sometimes it was simply inserted into the mouth.

The documents dealt with in *Tebtunis Papyri* are of the most varied description. Fragments of literature, private letters, tax bills, surveys, royal commands, all unite to throw fresh light upon the public and private life of this great vanished civilization. Here, for instance, is a proclamation which doubtless caused joy to the heart of many a captive:

King Ptolemy and Queen Cleopatra, the sister, and Queen Cleopatra, the wife, proclaim an amnesty to all their subjects for errors, crimes, accusations, condemnations and charges of all kinds up to the 9th of Pharmuthi of the fifty-second year, except persons guilty of murder or sacrilege.

That human nature was very much the same then as it is now is shown by a complaint addressed by Menches to Ptolemaus, to the effect that a certain individual for his own private purposes, had carried away the earth from a dyke, and that the dyke was therefore in danger.

Here, too, is another literal translation from the papyrus replete with human interest:

To Menches, komogrammateus of Kerkeosirus, from Harmiusis, son of Sarapion, cultivator of Crown land and inhabitant of same village. On the 8th of Mesore of the fourth year, my house was invaded by Pyrrichus, son of Dionysius, a catœcic cavalry soldier, and Heracleus, son of Pisodippus, inhabitant of the said village, with many other arms and swords.

They effected a forcible entrance, and after bursting open the lock of my mother's apartment, carried off the articles mentioned below, though there was no dispute whatever between me and them.

I therefore present this complaint to you in order that you may subscribe to my statements and further forward a copy of this petition to the proper officials, so that I may recover my property and the accused may receive the punishment which they deserve. Farewell.

A woman's robe worth 1 talent, 4000 drachmae. A woman's sleeved tunic worth 4000 drachmae. A jar containing 1600 drachmae of copper.

STUDENT

OFFICIAL arrangements have just been made for a search in the archives of Spain and Mexico for any records and notes relating to the early history of the Philippine Islands. The Spaniards must have found and recorded much in the way of tradition and even archaic remains not now existing. Since the Spanish landing there has been plenty of time for the disappearance of much native legend and legendary oral history. And the invaders of that time would not have been too particular to preserve the ruins that may then have remained.

Ruins in Mexico to Be Further Explored

THE latest archeological discoveries in Mexico are receiving some of the attention which their importance merits. The federal government has instructed Mr. Rodriguez to visit the ruins and to make a report upon them, and Dr. Nicolas Leon will accompany him. Dr. Leon says that these ruins are the most ancient which have yet been found in Mexico. The following statement from him, which appears in the *New York Sun*, will give some idea of their scope and interest:

In a range of small hills that extends from north to south from the high neighboring mountains we found a very numerous series of pyramidal constructions guarded by elaborate trenches and connected, for purposes of communication, by wide avenues, which were set off at intervals by sloping acclivities, platforms and staircases. All the pyramids were found to be quadrangular and to have been built with especial reference to the cardinal points. Those important monuments were constructed entirely of rocks and sandstone cut and laid in juxtaposition. The surface dressing of the pyramids is small stones worked into cubical forms of very ornamental appearance and laid close together.

As a rule, every four of the pyramids surround a court. All of them are so grouped that each and every one of them guards the entrance to the courts. But if in any case the entrances are not protected, great walls with bases much wider than their summits reinforce the pyramids. These walls are of such sizes that their summits are really streets. They are well paved with flat stones and have platforms, staircases and sloping acclivities like the avenues.

We found also many sculptured scenes in bas-relief of prehistoric times. Figures of human beings and animals in stone and iron were quite numerous. Domestic utensils of stone painted rose color were scattered over the ground. Stone knives and arrow-heads of the obsidian epoch were encountered in great abundance. Leagues of the mountainous country are covered with ruins.

Stones, Jewels, Colors and Scents in Antiquity

AT the recent gathering of the British Association, an interesting paper on *Jewelry* was read in the Anthropological Section by Professor Ridgeway. He pointed out that jewelry was primarily worn for magical reasons, and that esthetic considerations came much later. Jewels were regarded either as protecting the wearer from injurious occult influences, or as attracting favorable ones.

Each planet and each zodiacal sign once had its precious stone; and each planet its metal. Probably before the use either of stones or precious metals for esthetic reasons, there was also a use of them in various forms and combinations to indicate the exact standing of the wearer in religious and social rank. Some of these symbolic forms may be found among the remains of nearly all prehistoric civilizations, and their use in that way has survived in fraternal orders to our own times.

It is probable that colors and scents were also employed for defined reasons of like character, and

in various rituals, religious and fraternal, this use of color still remains.

One wonders whether recent and future researches into the psychology of color, and into the various "rays" emitted by natural objects may not show a certain scientific basis for these prehistoric origins of custom.

All strongly aromatic bodies containing members of the camphor group are antiseptic, and it is more than possible that this fact may have been more or less crudely known from the earliest times. K.

SOME important archeological discoveries have been made in France, in the Vendee, by Drs. Lacouloumiere and Baudion. They relate chiefly to the period of Roman occupation and consist of tombs, treasures, pottery, leather clothing and a number of agricultural implements. At Salvatolle, in the same neighborhood, still more ancient finds have been made, antedating the Roman period.

THE GREAT STONE CIRCLE AT BALLYNOE, IRELAND

Plants, Like Men, Have Higher and Lower Natures.

EVERYONE at all acquainted with plants knows that those which we call "vines" differ very much in the strength of their climbing instincts. Some, like the myrtle, much prefer not to climb at all, but rather to run along the ground and take root every few feet. Others, like the chilicothe or wild cucumber, stand up alone as long as possible and then grow straight away from the main root, never taking root anywhere else, but going to the very top of everything in the way. Still others are so determined to climb that though they have no grasping tendrils they resort to many different expedients, some of them almost intelligent, to hold themselves up wherever an opportunity offers. Considering these facts in connection with the now acknowledged duality of plant nature leads unavoidably to the conclusion that we may expect to find definite characters among them. Gardeners have always known that every individual plant has peculiarities of growth and habit which distinguish it from others of the same sort, but have scarcely dared to say so in the face of materialistic science. But now that science itself acknowledges that plants have overshadowing or indwelling animal natures, as men have Divine natures, the expression "training a plant" will have a fuller and more apt meaning. Perhaps if this line of thought is followed with the object of finding likenesses rather than differences it will prove the unbroken line of life from clods to gods, and possibly may open fields of knowledge not at present even suspected. Life can be viewed mechanically; every living or "dead" object is a complex machine; but—what guides it? Y.

A Little Green-clad Hunter

THERE is a little green humming bird which constantly patrols the vines and shrubs in this end of the garden. Many times a day he makes the rounds, carefully searching each blossom for insects. By watching him one may learn something of the habits of the flies and other insects he searches for. One of the stations on his route is a large lattice, covered with an evergreen morning-glory which is always in bloom. In the morning the little fellow looks in the wide end of each flower, but towards evening he inspects the base of the flower where it joins the sepals. An investigation revealed a slit cut in each near the base of the petal on the lower side. Probably he thrusts his slender, agile tongue through this to sweep it around inside the flower in search for something to eat. Whether it is a different sort of insect at this time of day, or some peculiarity of the same sort we do not know. He is a beautiful little fellow, and by concealing one's self behind the lattice it is possible to see him at a distance of only two or three feet. He knows we are there, but doesn't mind so long as we are not too plainly visible. His home is not far away, but we cannot find it; very likely he prefers that we don't. Just at present the garden plants are nearly his only hunting ground, but in a short time the rains will bring out the wild flowers and then he will flit far and wide and will often be met busy among the bushes. STUDENT

Nature Has Many Fixed Rules—Why?

WHILE observing some of the snail shells which strew the shores and hills of Loma-land so plentifully, the question obtrudes itself why they are all right-handed spirals; that is, why they twist in the same direction as an ordinary screw? Now, flounders and flat fish generally, which live with one side down and both the eyes on the upper side, are about equally divided between the left-sided and right-sided, and one might quite reasonably expect that spiral shells would also be indiscriminately random in this respect, but they are not so. Not one of all the many varieties has a left-hand spiral. Nature seems unable to "evolve" across this apparently trivial interval. Even an individual shell with a left-handed twist is so rare as to be very valuable for museum collections. Nature seems to have unalterably selected the right side to incline towards, and again comes the inevitable question, Why?

There certainly must be a web of causes underlying our inert, mechanical world of Effects. Science has laboriously collected a vast amount of data about the effects, but the causes are still vaguely classed as "Laws of Nature." Why? NATURE-LOVER

GLIMPSE OF THE NEW FOREST HAMPSHIRE, ENGLAND

A Dainty Little Visitor

A FEW days ago a new arrival added itself to our family. It is a beautiful bright yellow bird about half the size of a canary, who introduced itself as a golden wren. It was very friendly from the first, and gave a standing order for flies three times a day, which it catches for itself, and only asks not to be bothered while busy. Just at present it is a few feet away diligently hunting the honey-suckle vine for gnats. We have warned it not to trust too implicitly to the kindly attentions of the cats, because we know that, while their hearts are full of Brotherhood,

the temptation may prove too strong, although so small a bird would scarcely be a mouthful. It must have been very kindly treated by some one or it would not be so fearless in a strange place. We hope that it will bring friends and start a colony, because all the pretty songsters are welcome in Loma-land. STUDENT

Some Quaint Old English Ideas About Roses

FOLK-LORE furnishes us with many curious ideas about flowers and modern medicine owes no small part of its knowledge to sources which are now called superstitious. Roses have figured largely in the folk-lore of many nations and of many periods. Camden, in 1603, speaks of some old English ideas about roses, of which we shall find the parallel in many other places. He says:

There is a classical custom observed time out of mind at Oakley, in Surrey, of planting rose trees on the graves, especially of the young men and maidens, so that the churchyard is full of them. It is the more remarkable since it was anciently used both among the Greeks and Romans, who were so very religious about it that we find it often annexed as a codicil to their wills—as appears by an old inscription at Ravenna—by which they ordered roses to be yearly strewed and planted on their graves. Old Anacreon, speaking of it, says that it doth protect the dead.

Universal Brotherhood Organization

Central Office Point Loma California

THE Isis Theatre was well filled on Sunday evening. A paper by Dr. Gertrude Van Pelt entitled "An Appeal to Parents," had been announced, and Dr. Van Pelt's intimate connection with the Raja Yoga School and her competency to deal with any educational question sufficed to draw a large audience of persons interested in the well-being of children. As usual, the Point Loma musicians and several of the children themselves produced some very admirable music, instrumental and vocal.

Dr. Van Pelt believed that the annals of today would be marked with gold letters by future recorders as the period when the Raja Yoga system of education was introduced to the world. It was a system which would produce a new kind of man and woman. After an experience in many parts of the world she had never known children learn with such avidity or with such an absence of friction. Her appeal to parents was not in aid of any particular school or institution, but that they might themselves awaken to the realities which the system represents, that they might the better help their children to be strong and happy and pure and clean. The great advantages of the Raja Yoga system could not be dealt with within the short compass of a paper, although some essential points might be indicated. It was preeminently based upon Brotherhood, and as such it aimed at the root of all human difficulties. Let them compare a civilization founded upon brotherhood with the disconnected life which we now see around us. Let them imagine every member of the community trying to build up a beautiful and perfect social system, so that even the most humble could be in touch with all that was high and so be filled with the richness and sweetness of life. What a heaven on earth that would be! And it was attainable if humanity would arise to its opportunities. So many people were in the habit of decrying high ideals on the ground that the human heart could not be changed.

The human heart could be changed and the Raja Yoga system could do it. If only a few would begin an example would be set and the work would proceed apace. Half the world would probably already profess to believe in Brotherhood, but how

LOMA-LAND STUDENTS AT ISIS THEATRE

An Interesting Address by Dr.
Gertrude Van Pelt and Songs
by the Raja Yoga Children

Reprinted from the San Diego News

does that belief show itself in human life? By a gigantic system of competition; and so it followed that our conception of Brotherhood must be wrong. Pretty sentiments did not constitute brotherhood, nor flattery, nor moral soothing syrup. These things could not bridge the chasm of separateness between man and man. Nor was Brotherhood the mere

supplying the needs of another, nor what is commonly known as doing good, nor even advocating and working for reform, beautiful as these things were. By Raja Yoga we could learn what is the real thing, deeper, more interior and eternal in its nature. Brotherhood might for the moment cause happiness or unhappiness, pleasure or pain; it might produce friends or foes. These things were all incidentals, but behind them was the real thing, a fact in nature, a part of the life of every soul. True Brotherhood was the perception of a common inner life with a common purpose. The part of ourselves which was merely human was saturated with the idea of separateness. It was woven into every cell of the body, every fiber of the mind. Our whole civilization was built up upon intense individualism. To very many it was unthinkable otherwise. Even our very charities were often but an apology to ourselves for being what we are. There must be a magic change in the heart, an entirely new conception of life in order to bring about new sets of conditions. Such a task was great, but it was by no means hopeless. It would not even be difficult if entered upon with enthusiasm. The Raja Yoga system was capable of this and would accomplish it. Those who had come under its influence would enter life with a grander, a diviner conception than had ever been dreamed of.

And so she would appeal to mothers and fathers to look for the soul in their children and to be satisfied with nothing else. To brush away the foolish little vanities which obstruct the soul and to stop when they were tempted to smooth over and cover up the weak spots in their children. Let them not lend their influence to the making of moral cripples, but let them think how humanity was suffering for the need of true and strong men and women who love their neighbors as themselves and who have gained the power to serve them royally.

Christmas Gifts---A Suggestion

CHRISTMAS is preeminently the time for the giving of gifts, of which the selection is usually a task demanding much anxious care and much lost time.

The essentials of a worthy gift are value and permanence, and in the search for these qualities works of literary and lasting worth naturally take a foremost place. A good book is an unfading treasure, a storehouse of which the contents become more valuable with time, an instrument for the increase of intellect and for the making of character, a link between the giver and the receiver which grows stronger day by day. A year's subscription to the NEW CENTURY PATH is surely a Christmas present worth giving and worth receiving, a weekly reminder of the good will which called it forth. Subscriptions sent in now will be in good time to enable us to deliver the first number at Christmas.

The Lotus Group at Wavertree, England

Work progresses splendidly and both interest and attendance increase as the weeks go by. Recently, in connection with the Everton Lotus Group, we had a picnic at Wallasey Sandhills. There were, besides teachers and children, a number of visitors, who joined in our songs and games with most sympathetic enjoyment.

The Everton Group on that occasion gave the little drama, *The One Law*. The nature surroundings made the whole thing beautiful and, as we listened to the sweet strains of "The Angels," the children's voices echoed with a sweetness that suggested fairyland rather than earth. Not a single jar or misadventure spoiled the outing. During the last month we have been journeying with the "Pilgrim" through the vegetable kingdom, reading in connection with our study, Hans Christian Anderson's *Dream of the Old Oak*, the "Story of a Tree," from the *International Theosophist*, and the *Coming of the King*. We have recently learned the "Tree Song," and also the "Fairies," a song that is a great favorite with the children of the London Raja Yoga School. Each Sunday, as well, there is read some appropriate selection from the NEW CENTURY PATH.

Last Tuesday we started a painting class for the children, and their interest is only equalled by their delight. With songs and the reading of a letter written by one of the Raja Yoga children and published in the NEW CENTURY PATH, the evening closed. Faithfully,

KATE LITTLEWOOD, *Superintendent*
Member of Everton Lodge No. 4, England

Responsibility---A Lodge Paper

RESPONSIBILITY seems to be the bearing in our minds of the sense that we are answerable for something, and that we shall be to blame if that undertaking is not successfully attained. Distinctly if we have responsibility given us it is taken for granted that we can make the necessary effort and use the necessary powers. The said powers may be lying asleep and unused, but to begin and use them is the way to wake them up, and herein will lie our blame if we fail.

Meditating upon what those powers are that make a man able to take up responsibility, at first I thought it was the power of the mind to grasp the object as a whole and keep it before the consciousness, directing and controlling the performance. But the mind works very slowly without the will urging it on. Then it seemed to me that if the will, above all the selfless, spiritual will, were involved it would soon call the mind to action and that it was the most important power. What will bring about this will, this supreme determination for the achievement of some object entirely outside of any low motive or self-interest? Is it not the heart? And here I seemed to have got to the central power that must be in action. We must care for the object and then our share of the responsibility will be rightly performed.

This power of taking up responsibilities, then, is something very important and marks a very important stage in man's development. Only those with some depth of character will do it, for it means the using of the powers of the Heart, Will and Mind impersonally. Here is nature's essential inner distinction between the master-man and the one who works under direction of another. The latter is concerned only to perform certain allotted tasks, or to put in so many hours of steady work a day, but responsibility demands of a man that he works from a different center. His spring of action must be from these inner powers, and the deeper a man's nature is stirred to take part the more satisfactory will the work be.

What a different type of work comes from these two classes of men! Take the man who works with a true sense of responsibility. He will be caring and thinking of every detail, yet the actual doing of the work does not seem to him as labor, it is almost lost sight of as he works from these inner powers. First his heart has been touched and he cares for the object so that he lovingly wakes his will to determine that it shall be done. Then he broods over it in his mind, imagining and picturing the undertaking already accomplished; until before he knows it all his faculties are quivering with the stored up energy the mind has sent to them for the

doing of the work. The man is drawn out of himself in his interest and care for the achievement of that for which he is responsible. As the picture lives in his mind the methods of work and lines of procedure grow up naturally round it. And when it comes to the doing of any manual work he hardly knows he is working, for his hands and feet instinctively and rapidly move to carry out his ideas. The mind is commanding the man. His faculties are urged to action with that great force of the heart that has taken up responsibility worthily.

We are sometimes surprised at the quickness with which a piece of work has been done. It seemed like magic, we say. Was it not because of the unusual alertness of the thought that conceived it?

We need not be worried or restless with responsibility if we are only concerned to bestir ourselves in the right way, with no self-interest whatever, no desire to shine in the performance or gain any position for ourselves.

If we cannot do as well as we should like and the limit of our capabilities keeps coming between us, I think we shall best serve the work by putting all such thought on one side and not wasting our energy on them, but forgetting ourselves in the doing the best we can.

STUDENT

Equable Climate of Loma-Land

THE even temperature of Loma-Land has often been noted in these pages, and in the accompanying chart, consisting of the continuous record of the thermometer for the week ending November 7th, we present a striking

proof of the truth of our oft-repeated assertions. At no time was it hotter than 66°, nor did it ever grow colder than 56°, giving a range of variation of only ten degrees. It will be noticed how gradually the changes occurred. About sunrise the curve begins to mount and then continues nearly on a level until sunset, when the radiation of the heat acquired during the hours of sunshine brings on a steady decline during the night. This same instrument exposed in other and less favored regions would produce a "curve" resembling the teeth of a saw, or a range of mountain peaks, caused by the rapid fluctuations of heat and cold, but the mildness and constancy of our weather conditions are very strikingly indicated in the chart here presented. The instrument hangs on the north wall of the Homestead, where it is protected from direct sunshine.

STUDENT

REDUCED FACSIMILE OF LOMA-LAND TEMPERATURE CHART

Mind

MAN'S complex nature is the exact expression of his dual mind, the lower mind that would ever dominate, the higher Manas that bridges to the spiritual. His will vacillates between the two—impelled by the will of his master, Desire. And the bridge is a very frail structure, for man seldom crosses to his Real Self.

In truth, in the world today, mentality develops at the risk of closing the gates of the soul. It is an abnormal type that present educational systems are fostering, a sort of an intellectual intemperance. Of what real value to the evolution of the eternal I could be the ordinary college course? How could it profit one to spend years developing brain power when man cannot properly use what he has? Such an education does not produce a strong body to do for others. It adds nothing to mind contentment. It but crowds the spiritual farther and farther out.

Mind, overgrown with intellect, burdened with unassimilated learning, has no room nor opportunity for originality to assert herself. All the attributes of mind are poised into false positions. Will started wrong becomes a wall of obstinacy; memory cannot choose her cargo but goes freighted with useless matter; intellect overfeeds till a giant ambition grows up, eventually obscuring those glints of light from over the way.

Else why are so many of our so-called intellectual men the materialists? How else can we account for the unnatural conditions, of unrest and inharmony that appeal to us on every hand?

This must man learn—life, not books. Life—living—not past and gone. And the world is beginning to know that there is a philosophy which gives immediate answer to all of this. Just realizing that there are *master minds*, minds so clear from dross that they are able to accomplish through the heart what the intellect has never done—the seemingly impossible—that the many may also know.

Minds so accurately balanced that the lower is merged in the higher; wills so just that memory and desire are willing agents, intellects so pure that intuition dwells therein, passing down to us the knowledge that man is a trinity, that mind is not a pack-horse but the messenger of the soul, not to be stunted by overwork, nor gluttoned by indulgence. That memory shall store away only the wholesome and useful. Then shall will, unfalteringly as a task master, hold the nature in its place till desire, transmuted, has crossed the bridge and the seventh faculty can awake, for mind has found her balance, is ever on guard lest the enemy break in, has become the faithful medium between man and his God, and the trinity is complete.

Courage

TRUE courage arises from the warrior quality of the soul, and all of us possess it in a greater or less degree. It seems clear that what humanity needs at the present time, is courage, that it may free itself from its weaknesses and master its selfishness. For humanity is so deeply engrossed with personal and selfish affairs, that its individual units care neither for the living nor the dead, further than to the extent that they may serve personal ends.

To live as we know and feel we should live requires a superb courage in itself. Few of us are courageous enough to face ourselves as we really are, and to have our faults and weaknesses pointed out to us, even by those who may understand them and therefore be able to give us real help in overcoming them.

It is impossible for the element of fear to find a homing place in the courageous soul. Courage born of pure motive and expressing itself in right action, is eternally superior to that recklessness sometimes miscalled courage, and which usually takes rise in the wrong side of human life.

The larger proportion of humanity has come to regard life as a very serious problem. Why? Because with eyes heavily overshadowed with ignorance, the transitory and empty side of it only is seen. And although in our hearts we know and feel life is a great joy and a sacred privilege, we do not possess the courage to cast aside lack of faith in our divinity, timidity, and the cravings of the body.

To Theosophists, as students of the better and higher life, a courageous attitude, tempered with discrimination, is at all times of the greatest importance.

This not only promises success for all right undertakings, but it prepares the way for a fuller expression of our highest attributes. It helps us, also, to deal more honestly with ourselves, with the conditions of our environment, and with our fellow beings. Is it not true that we often find each other doing and saying things which call for immediate action, unpleasant though it may be?

Yet we lack the courage to speak or act. And why? We love praise better than right action for its own sake.

If our position is that of exemplars of the better life, then we have a great duty to perform, in public and in private, regardless of praise, criticism or public opinion. If we have not the courage to act, then we are forced to admit that the soul is not equal to all demands. Our moral cowardice crushes the very qualities which make character strong and self-reliant. We need have little fear of mistakes in judgment if our hearts are honest and motives are right, and if we permit the exercise of a little discrimination and common sense.

Man's Dependence on Artificial Light

THE following account of what happened in the fourteen-story Memorial Building, Chicago, shows how helpless is civilized man in the dark:

"The trouble occurred about dusk in the afternoon. The numerous offices, banks, salesrooms, studios and elevators were crowded with the throngs which had business there, when suddenly every electric light in the building was extinguished. The dynamo had broken down. There was black, total darkness everywhere.

"In the jewelry salesrooms, before the visitors and customers were aware of what happened, they found themselves locked in as a precaution against theft. The same thing happened in the safety deposit vaults in the basement. Surgeons who were operating on patients on the top floor of the building had to suspend their critical work at the risk of their patients' lives."—*Rochester Democrat*

How Elder Gifford Learned Toleration

WHAT is the cheer of the passing year ---
 What word to the lives of men?
 The same old burdens for hearts to bear
 Over and over again.
 The same old burdens in paths we've trod
 But love to lighten them all --- thank God!

What is the cheer of the passing year? ---
 A little of joy, and then
 The sigh, the sorrow, the falling tear,
 Over and over again.
 And roses will bloom from the thorny sod,
 And the dark will lead to the light of God.

— Frank L. Stanton

ELDER GIFFORD pushed back his chair and rose angrily from the supper table. His wife sat opposite, pale and trembling, while their son stood beside her.

"Don't father," she pleaded. "Robert means well, and we must be patient with him."

"I have been patient—too patient," rejoined the Elder. "There is a time when patience ceases to be a virtue, and that time has come now. I tell you now, Robert, once for all, this folly has got to cease. I've waited for you to come to your senses long enough. You've got to stop going to these silly Theosophical meetings and reading books that deny God and Christ, and would overturn the church to revive Pagan rites and worship. All my life I've looked forward to seeing my son in the pulpit, and you shan't disappoint me now. This is my last word."

"Stop, father," said Robert, as Mr. Gifford was turning away; "I am sorry to disappoint you, but you will never see me in a pulpit."

"And why not sir, after all the money I have spent on your education?"

"Because, father, I cannot accept the church creed and so many of its teachings—and especially its practises—are in direct opposition to the teachings of Christ."

"And where did you learn all this, young man? from your precious meetings and Pagan literature? This is what this accursed new teaching is doing for our young people, is it?"

"No, father, I have learned that this new teaching, as you and others call it, is not new, but old as the race, far older than the teaching of Jesus, but identical with it; for there is but one Truth, and that was taught by Jesus and all other true Teachers."

"Then why are you railing against the teaching of Christ and His church, and going outside of them to find the same truth?"

"I am not railing against anything, but I do say the church does not preach nor live up to the true teaching of Christ. I couldn't do it if I entered the church."

"So the church your ancestors have worshiped in for so many generations is not good enough for you! Is that it?"

"I believe, father, that the church, awful as it is today, is not the best place in which to live a truly Christ life, or do the best work for Humanity."

"More of your heathen doctrines."

"Need we look further than the church itself to see this?" replied Robert. "Any one who will read the Scriptures—mistranslated and wrested from their true meaning as they have been—must see at once how little the church is in accord with them. Besides a study of the history of the church shows how century after century it has gone farther and farther from the teachings of Christ and dropped, one after another, His most essential doctrines."

"Stop!" cried Mr. Gifford. "Such false and blasphemous words shall not be uttered in my house. Go your way to ruin if you will, I am done with you until you renounce such shameful opinions, and return to the duty and obedience due to a parent!"

"O, Robert!" cried Mrs. Gifford when her husband had left the room, "you have offended your father beyond hope of forgiveness."

"I'm sorry, mother, but how can I give up my honest convictions? You wouldn't respect me if I did. Half of those in the church do not believe what they pretend to and the other half don't believe what they really think they do. If they would only read the Scriptures carefully and study the history of the church and the works of the early Christian writers they would find that they could not believe what they have always supposed they did; and also that they do believe the most essential things taught in Theosophy."

So Robert went away and the days were sad and lonely to his mother. If Mr. Gifford missed the presence of their only surviving child he made no sign. Mrs. Gifford had always been a gentle, patient wife and seldom thought of disputing the stern, imperious will of her husband.

Her heart ached for her boy. Her first and her last waking thought was of him. Where was he and how did he fare? A few letters had reached her; but the last one had disappeared from her table before she had time to reply to it and she could

not remember the address. She had carefully gathered all Robert's belongings into his own room and here she spent many hours of each day. In a little bookcase were his school-books, and in lovingly dusting and arranging them she came across several of the books his father had so bitterly denounced.

First she glanced over them; then she read them, and finally she studied them with an intensity of interest which she had never been able to bestow upon any theological volume.

Three years had gone by and Mrs. Gifford had obeyed her husband's command in never uttering, in his hearing, the name of their son. Then she was stricken with sudden illness, pneumonia of the most violent type. From the first it was evident that the disease would be fatal. Then Mr. Gifford was aroused from his bitter, selfish brooding over his own wrongs and disappointments. He had loved his wife; he never realized how well until he saw her so rapidly slipping away from him.

Only three days and it was over. She was gone and he was indeed alone. She had asked for Robert; but even had there been time none knew where to send for him.

"James," she whispered painfully an hour before she breathed her last; "James, you were wrong and too hard with our boy. I have read his books and I believe as he did. The church has not told us all the truth. There is more—much more—in the Wisdom Religion. Read for yourself and see."

The months following his wife's death were heavy with unavailing sorrow and regret. He recalled her long years of unselfish devotion to his comfort and interests and the little gratitude or appreciation which he had ever manifested. He had been content to receive it all as his right without any return in kind; and his will had been the law in all things from which there was no appeal.

It was the first time in his life that Mr. Gifford had looked himself squarely in the face, and he was forced to admit that he had been narrow, selfish and intolerant; nay, more, he had been cruel and unjust. He had claimed the right to direct and control the mind, conscience, soul, of both wife and son. In his anger and wounded self-love he had separated the mother from her boy; and only now he began to realize something of what she had suffered, of how her step had grown feeble and her hair white.

He was the possessor of ample means, yet he had sent his only son out, unprovided for, to earn a living as best he could, because of a difference of opinion. Now he was left alone in his great house with his fields and gardens. Sometimes he would shut himself up for days in his study, and again he would wander restlessly about through the silent, deserted apartments. At such times his wife's last words were ever in his mind: "You were wrong. Read for yourself and see."

One day he opened the door of his son's room and entered. It was the first time since he had driven him from his home. There were the books Robert and his mother had read and had found wholesome, pure and true; the books which he had condemned unread, and knew nothing of excepting the denunciations of those equally ignorant. He carried them back to his study determined to find out for himself what they contained.

A few months later, in a distant city, Mr. Gifford sat among the audience at a Universal Brotherhood meeting. One speaker followed another with addresses, brief, pithy, pointed. Then Robert Gifford came forward and told in simple, moving terms of the work in the slums; of the miserable men and women who had been shown something to hope and strive for; of the little children gathered into schools and homes. In concluding, he said:

"What we must try to provide—what we most need is a pleasant country home for the sick and weakly ones."

"They shall have it," whispered Mr. Gifford, with bowed head.

Next day he sought the places where the children, gathered from the worst portions of the city, were being taught the great Law of Universal Brotherhood, while at the same time their poor little bodies were clothed and nourished. He noted the hollow, eager eyes and the pale, pinched faces; also the earnest endeavors to put into practise the teaching they had received by showing love and kindness toward one another.

In the evening there was a meeting for the older people and again Mr. Gifford sat in an obscure corner and took a lesson from the faces about him; wan and careworn women, men imbruted, sullen, despairing; ill clad, hungry of body and soul. Yet, in most faces, there was already something like a glimmer of hope and a desire to push on to better things.

After the meeting was over the father sought his son and the night was spent in a heart-to-heart talk which brought them so close in the desire to help humanity that they could never more be separated.

Larger and better rooms were provided in the city. The great house and beautiful grounds in the country were no longer empty and silent, for weary, overworked mothers found rest there, and pale, sickly children there grew strong and rosy, while among them all Mr. Gifford learned to talk and laugh and sing. In making others happy happiness came to him and he grew young again. O. P. Q.

The Trend of Twentieth Century Science

Hygiene, Physical and Moral—The Bugbear of Microbes

SANITATION and antiseptics seem to be one of the most characteristic features of these times. They correspond, in our civilization, to the propitiatory ceremonies and purificatory rites observed by other races.

The spirit of modern science does not foster a belief in evil spirits or any of the malign influences of unseen beings which have such terrors for other races. But in place of all this we have our science of microbes and infection, of sterilizing and disinfection.

Is not our belief perhaps the very same as the more ancient belief in evil spirits, only clad in a materialistic garb and expressed in terms of scientific knowledge? When we search for the cause of an epidemic, we find a microbe, because we use as our instrument of research a microscope. This microbe is the physical expression of the destructive influence that causes the epidemic. Other peoples, having no science like ours nor any microscopes, would describe the facts in another way, speak of evil spirits, and use exorcisms instead of antiseptics.

But our science of germs is daily adding new terrors to life. We read, for instance, that some one has been pointing out "several possible sources of infection with cancer."

One suggested source is the blowing into paper bags to open them for the reception of provisions. Statistics as to the number of grocers and grocer's wives who have died of cancer are given. Another source is the bite of fleas which have previously bitten cancerous people.

Several reflections are suggested by these remarks. One is that a healthy body is equipped by nature with an armory (or medicine-chest) against all minor assaults on the citadel of life; and that the delicacy and impurity of blood engendered by wrong modes of living deprive us of this natural immunity. Thus one man goes about ready to catch death from the first barber's razor or tainted mosquito, and another goes unscathed through hospital wards.

Since sanitation has been improved the length of life has increased, so careful insurance statistics assure us. But we doubt if the standard of health has improved. Moreover, we doubt if the discoveries in sanitation can keep pace with the growth of disease and infirmity fostered by our artificial city life.

Another point is that this elaborate precaution in external details is so utterly out of proportion with the heedlessness and neglect that marks our dealings with the inner and more essential circumstances of life. Physical hygiene has altogether outstripped moral hygiene. The causes generated by self-indulgence, vice, passions, and all the wrong habits of thought and action are so numerous, so powerful, so continuous, in comparison with the puny precautions taken in the hope of escaping effects.

So long as these causes exist in such power and profusion in our midst, the attempts at hygiene, however excellent, are but as the laborious pumping at a ship with a bad leak. The most frantic efforts, continued unremittingly, may just serve to keep the vessel afloat. But the size of the leak grows.

The mind and body react on each other, a wrong mind producing a wrong body, and a wrong body a wrong mind; but the mind is the first sinner and stands superior to the body in power and capability. There will be no general condition of health in our civilization until the moral standards are elevated and the tone purified.

The Maximum Period of the Great Sun-spots

A GAIN these tremendous outbursts of solar energy are creating widespread interest. We are now at the maximum period of the cycle of sun-spots, and in consequence auroral displays and considerable electrical disturbances upon our earth are prevalent. The maxima occur at intervals of about eleven years, and this eleven year period curiously coincides with the time taken by Jupiter to travel round the sun. Probably it is not an accidental coincidence. The sun being the heart of the solar system, this regular pulsation or systole and diastole of the great life-giver bears a striking resemblance to the throbbing of the human heart with its opening to receive the impure blood and its closing to send out the oxygenated blood into the circulation.

Some of the recent sun-spots have been enormous in area, many of them measuring over 160,000 miles in diameter. So vast are they that it would take twenty worlds the size of the earth to make a bridge across some of these vast abysses.

The spots appear very dark but that is the effect of contrast, for, in reality, they are brighter far than our strongest artificial lights, such as the calcium light or the glow of molten steel.

By protecting the eye with a carefully smoked piece of glass the existence of the largest sun spots may be made out, but they may easily be seen with the smallest optical aid. In any case great care should be

taken not to expose the eye to the direct rays of the sun without protection, or the effect is likely to be disastrous to the eyesight. M.

SOME GREAT SUN-SPOTS, SHOWING DARK CENTERS AND FORMATION OF BRIDGES

Radium and the Universal Life-Principle

MATERIALISTIC science regards bodies, both animal and mineral, as creators of the life energies which they manifest. But the fact is the reverse. As W. Q. Judge has written:

Life is not the result of the operation of the organs, nor is it gone when the body dissolves. It is a universally pervasive principle. It is the ocean in which the earth floats; it permeates the globe and every being and object on it.

Thus material substances are centers for the manifestation of the universal life-principle—transformers, as it were, of this energy into various modifications. Radium illustrates this view admirably, and is exceedingly difficult to explain under any of the materialistic notions. Says *Engineering*:

An atom of radium can constantly produce an emanation that is something like a gas, which escapes and carries with it wonderful properties; but the atom, the thing which cannot be divided, remains and retains its weight. The emanation is truly wonderful. It is self-luminous; it is condensed by extreme cold and vaporizes again; it can be watched as it oozes through stop-cocks or hurries through tubes, but in amount it is so small that it has not yet been weighed. Sir William Ramsay has treated it with a chemical cruelty that would well-nigh have annihilated the most refractory or permanent known element; but this evanescent emanation comes out of the ordeal undimmed and undiminished. Not content with manufacturing so remarkable a substance, the radium atom sends out three kinds of rays, one kind being much the same as Röntgen rays, but wholly different in ionizing power, according to the experiments of Strutt. Each of these consist of particles which are shot out, but they have different penetrative power; they are differently deflected by magnets and also by electricity, and the quantity of electricity in relation to the weight, is different; and yet the atom, the same atom, remains unchanged and unchangeable. Not only this, but radium or its emanations or its rays must gradually create other bodies different from radium; and thus, so we are told, one at least of those new gases, which but yesterday was discovered, has its origin.

Here and There Throughout the World

A VIEW OF SITKA, ALASKA

TAKOU GLACIER, ALASKA

Admiral Cotton at Portsmouth, Eng. THE English papers contain many complimentary references to Admiral Cotton who was in command of the American squadron at Portsmouth. The Admiral is described as not only a fine sailor but as a diplomatist and an orator of no mean order. When the German Emperor was on board the *Kearsage*, Admiral Cotton distinguished himself by his graceful sayings and his reception of the Prince of Wales was tactful in the extreme. At the dinner given by the Mayor of Portsmouth the Admiral, replying to the toast of the American Navy, extended a greeting to his hearers as friends and brothers in whose veins flowed the same blood. He referred to himself and his comrades as naval ambassadors bringing a message of peace and love from the President and the people of the United States to the English sovereigns and to the English people. It is occasions such as this and men such as this that draw tighter the threads of human fraternity. Admiral Cotton takes a large and creditable view of his position and if all public men felt a like responsibility and demonstrated it by their tact and graceful geniality the international world would be more at ease than it is.

A Chance for Ex-Convicts in France OF ALL the great French criminal judges none is better known than Louis André, and certainly we should have to look far before finding one whose vast experience has been utilized in a nobler manner. M. André has devoted all his fortune to the purchase of lands near Chartres, and upon these lands he is creating large settlements where ex-convicts can make a fresh start in life and learn an occupation by which they can once more make themselves honorable members of society. The skill and ingenuity so often displayed and misused by criminals is a loss to the nation and it might be an asset of national wealth.

There May Be Snakes in Ireland IT SEEMS that there are snakes in Ireland, and we must therefore assume that St. Patrick's injunction was never made absolute or that it has grown weak with age. A number of snakes were discovered some few years ago at Douglas near Cork. We are not informed as to the variety but they were probably of the beautiful and harmless kind sometimes found in England. It will be necessary to revise the Encyclopedia article upon Snakes in Ireland which consisted of the words, "there are no snakes in Ireland."

Important Mineral Discovery in Berlin IT IS announced from Berlin that a new compound of aluminium has been discovered which seems to have great possibilities of usefulness. It is known by the name of meteorite. It is as light as aluminium itself, and is unaffected by chemical influences. It is also very pliable so that it can be readily used for pipes, horseshoes, etc. Its cost is about the same as brass.

Cruelty to Natives in the Congo THE frightful disclosures which have been made in reference to the ill treatment of the natives in the Congo Free State are likely to result in an official inquiry, and indeed the whole matter may be brought before The Hague tribunal, as King Leopold naturally holds that the inquiry should include the adjacent territories held by other powers. Some writers have believed that the moral nature of the white man deteriorates when brought into contact with the natives of tropical countries, and that this is due to causes not entirely under his control. In other words, they hold that he becomes hysterical and irresponsible and those who are most familiar with the conditions are inclined to look favorably upon such a theory. It is, at any rate, a charitable explanation of many acts of which the normal white man ought to be incapable, and of which most savages are incapable.

Japan Will Exhibit at St. Louis JAPAN means to make a notable showing at the St. Louis Exhibition. Mr. and Mrs. Goodman King have just returned from their visit to Japan, Mr. King having been appointed as special commissioner to that country with a view to arousing interest in the forthcoming centennial. He reports that the government has entered enthusiastically into the matter and has made a very large appropriation in order that Japan may be well and worthily represented. International exhibitions have not done all that was expected of them in the way of international amity. None the less they have been a factor in the better knowledge which makes for peace and at the present time we cannot afford to lose any influence which may advance fraternity of nations.

France and the Peace Movement FRANCE has certainly assumed the leadership of the International Peace movement. The congress which has just been held in Rouen and Havre was attended by over four hundred delegates and was inaugurated with the direct approval of President Loubet and the French government. There are always prophets of evil who are ready to predict the failure of every movement for the well-being of men, and the efforts for international peace have not been spared. These congresses cannot, however, be failures. The fact that they have been held is itself a success, and however the present political turmoil may result a page has been turned and a victory has been registered.

Chicago's Relief to Scandinavia's Need THE Chicago *Scandinavian* prints a summary of the fund given by its readers for the famine sufferers of Finland, Sweden and Norway. The total is \$38,129.26—certainly a generous response from the Scandinavians of America to the cry of distress from their motherlands. Thus suffering plays its part in calling forth a sympathy which will remain when the suffering has passed.

THE CHILDREN'S HOUR

DEAR BOYS AND GIRLS: Next Thursday is Thanksgiving Day.

How are you going to spend it—just the way some people do, by eating as much as you possibly can, and then feeling uncomfortable for two or three days afterward? Nonsense! I hope not.

I've been thinking about the first Thanksgiving Day lately—the very first one that ever was. It was held by the Pilgrims, you remember, less than four hundred years ago, on the bleak, snow-covered coast of New England. One might wonder what they had to be thankful for, with only little log houses to live in, with often not enough to eat and with so much sickness among them that before they had been in old Plymouth a year more than half their number had died. In England they would have escaped all these privations and lived in comfortable homes, and yet they left England, glad to get away from the persecution of the church, glad to come even to a wilderness for the sake of freedom. All they asked was that they might be free to live and act as their own hearts taught them to do. Now, if they felt thankful, how do you suppose you and I ought to feel, for we have all the freedom that they won for us, and many, many comforts besides, and many opportunities and privileges that these brave Pilgrims never even dreamed of.

And what a splendid true note they struck for Universal Brotherhood! Many histories do not tell about one fact—which was a fact, nevertheless—that the very first Thanksgiving dinner that ever was eaten was shared by the Pilgrims with their guests, the great Indian chief, Massasoit, and ninety of his warriors. The Pilgrims had reason to be grateful, for the Indians—the friendly tribes—had given them corn to plant and had taught them how to raise it and convert it into food. Without this help

it is quite possible that the Pilgrims could not have survived the first year on that cold and desolate shore. And then, too, what an inspiration it is to think of that great Peace Treaty Massasoit so sacredly kept! It was broken later, but by white men.

Do you know, boys and girls, I don't believe the Pilgrims and their Indian comrades loaded their Thanksgiving tables that first day, just to show how much was to be eaten. No, they heaped up the fruits and cereals rather to show how much they had to be thankful for. The selfish way in which so many people today spend Thanksgiving all came later. You see, people forget, and then they become ungrateful and selfish. And one thing that Raja Yoga boys and girls have to do is to teach people how to remember.

Why not each one be a Raja Yoga this Thanksgiving? That means first of all to be a Warrior. It means to know what is right and true

The New Thanksgiving

and defend it, and teach others how sensible and how beautiful Truth is so that they will want to defend it too. The real truth is that people are mistaken when they think a big dinner, with a nap in the afternoon, is all they need to make them happy on Thanksgiving Day. It never *does* make people happy—often it gives them a headache—and why do people keep it up? They wouldn't if they knew about Raja Yoga.

Let's have a new kind of Thanksgiving Day this year, the kind that will show that we really are Warriors, and that we *do* know what gratitude is. In the first place, let's not sleep late in the morning—no, let's get up half an hour earlier than usual instead, and take the birdies out a nice breakfast. And then, suppose you surprise mama and papa with a song. You've no idea what a beautiful golden pathway that song will make right into their hearts, and you've no idea of the beautiful thought-fairies that are always waiting to get into people's hearts on just the little golden pathway that music makes. Try it—it will make the whole day different.

Then see if you can't get mama to make it a whole rest-day instead of a work-day. You can easily take most of the steps for her and you can convince her, I am sure, that it isn't necessary to have so *many* things to eat, just because the neighbors do. Isn't a bouquet of ferns and golden rod, or a great mass of frost-painted sumac, ten times prettier than a pumpkin-pie—and don't the flowers really make you happier, (something

like songs, aren't they?)—and no possible chance of their giving you a headache the next day. And wouldn't a fringe of soft trailing forest vines make the table look prettier—and make every one happier, too—than a lot of heavy rich pudding that nobody needs?

And in thinking over things you are grateful for, don't forget that each one of you is a real Warrior and that fighting for the right is the most glorious thing in the world. And don't forget that we should be grateful even for the struggles against our own lower natures—they try our mettle and they wake us up.

The true Warrior is just as grateful for the battle as he is for the victory, because the true Warrior knows that it is his duty not only to defend the right but to protest against the wrong—against all that is ungrateful and selfish and unbrotherly.

And then, too, don't forget the songs. Make the Thanksgiving Day a day of music as well as of happiness and love.

What do you say to this, boys and girls? Who will be the little pioneers—the Raja Yoga Pilgrims of the New Thanksgiving Day?

UNCLE FRED

RAJA YOGA CHILDREN REPRESENTING THE VISIT OF THE INDIAN CHIEF MASSASOIT TO THE PILGRIMS ON THE FIRST THANKSGIVING DAY

Lines from Whittier's Famous Poem "My Triumph"

THE autumn-time has come;
On woods that dream of bloom,
And over purpling vines,
The low sun fainter shines.

And present gratitude
Insures the future's good,
And for the things I see
I trust the things to be.

Hail to the coming singers!
Hail to the brave light-bringers!
Forward I reach and share
All that they sing and dare.

The airs of heaven blow o'er me;
A glory shines before me
Of what mankind shall be,
Pure, generous, brave and free.

A dream of man and woman
Diviner but still human,
Solving the riddle old,
Shaping the Age of Gold!

I feel the earth move sunward,
I join the great march onward,
And take, by faith, while living,
My freehold of thanksgiving.

DEATHLESS

by H. C. WARNACK in *Los Angeles Herald*

YOU will not die and I will not die---
That is but sunset there in the sky---
The light returns to us by and by,
For life goes on forever.

You will not die and I will not die---
Was that a tear? Did I hear you sigh?
Come, why is God's rainbow in the sky,
If life is not forever?

You will not die and I will not die---
This body may swoon and in dust lie,
But afraid of the sunset? Nay, not I,
While life goes on forever.

A Larger View of History

WE have already commented upon the history of France of which M. Gustave Hervé is the author. A recent writer in the *London News* says of M. Hervé:

He begins by placing France in her natural place in the West Europe system, and then brings out her connecting link with the rest of the world in ancient and modern times. The author shows the genesis of these connections. Thus, the valleys of the Euphrates, the Tigris and the Nile contributed to Egyptian, Phœnician, Jewish, Greek and Roman evolution, and indirectly to that of the West. Then comes a succession of strongly and vividly sketched periods of Western evolution from the Celtic or Gallic period to the present day. The kings are relegated to a tabular chronology filling a short chapter, and successive movements or periods of evolution take their place. Thus we have the Druidical time, the Roman and the Frankish Conquests, feudalism, the adoption in the Thirteenth century of the Civil Law, the Reformation, the uprise of the printing press, of the bourgeoisie, of the Bourbon monarchy, and the Revolution and the present day Republicanism which take their places.

The author says in his preface that history has, so far, been the most immoral and perverting branch of literature. It exalts greed and wholesale murder when greedy and murderous lusts are satisfied in the names of nations. Fraud is taken as evidence of clever diplomacy. What is counted immoral down low is held admirable in courts and on thrones. The memories of pupils are stuffed with names and dates of secondary or less importance, and the forward movement of the nation is hidden by the prominence given to kings and the pageantry with which they surrounded themselves.

Further, we are glad to learn that the author is "distinctly hostile to the kind of patriotism that has been inculcated in schools within the last twenty years, and which has been held up to admiration as civic and moral." Nations are kept in a state of perfectly artificial and unnecessary jealousy and suspicion with regard to each other by the false patriotism taught in some histories. This, acting on the minds of people at the most plastic age, becomes ingrained in the character in after life with all the fixity of a conviction; for how many of our firmest convictions spring from nothing but a prejudice implanted in days that have utterly vanished from the memory!

When people of different nationalities actually meet, all this professional patriotism is forgotten and they consort amicably together like the perfectly ordinary men and women they are. But there are even loftier (and truer) views of history than that of depicting the life of the people as it appears from an ordinary view-point. History considered from the view-point of a historian who believed in the divinity of man, in rebirth, and in all those grander views as to human life and destiny revealed to us by Theosophical teachings, would be very different from history as viewed by a writer of limited and materialistic ideas. All the discrepancies and inconsistencies would vanish before the clue that such belief and knowl-

edge affords. William Q. Judge, in *The Ocean of Theosophy*, discusses the question as to what part the Helpers of Humanity have played in history, and, quoting from the words of a great Teacher, he says:

How do you know they have made no such mark? . . . How could your world collect proofs of the doings of men who have sedulously kept closed every possible door of approach by which the inquisitive could spy upon them? The precise condition of their success was that they should never be surprised or obstructed. . . . All that those outside their circle could perceive was the results, the causes of which were masked from view.

Various historians, he continues, have had to invent various theories to account for these results, such as the interposition of gods, special providences, and fate. The ordinary historian could describe the rise and growth of a great movement or ideal, and the appearance of a great leader, but without any satisfactory explanation of the cause.

Think, for example, what a stupendous issue hung in the balance when Elizabethan England turned back from Europe and from the New World the terrible black power of persecution and bigotry and enslavement of the human mind and will; and when the sturdy people of the Netherlands, under the indomitable William the Silent, waged a forty years war against the same power and won a freedom which we today inherit!

Events which seem unimportant and disconnected from each other are seen to be vital parts of a great drama of liberation. If space permitted we could plead for liberation from the tiny, puny, outlook upon the human drama which conventional historians give us. What are a few centuries of local history in comparison with the history of those mighty civilizations of an immense past whose records have been forgotten or ignored, or (as has often happened) wilfully destroyed? And what the plans and schemes of a brief modern period in comparison with the eternal purposes of the human Soul?

STUDENT

Athletics---Good and Bad

WE have more than once called attention to the extraordinary confusion in the minds of most people between large muscles and large health. One often sees a young man who would succumb to a touch of pneumonia in forty-eight hours, rolling up for the admiration of his friends a most superb biceps.

The single point to be kept in mind in the matter of athletic exercises is that they shall enable us to do perfectly those things which fall to us in the path of our daily life. But muscular development beyond the requirement of daily life may easily be a nuisance.

Where is the line to be drawn? Well, every joint should be perfectly free in all its movements. Exercises to this end are good; but there is no need to swing 5-pound clubs or dumb-bells. Every muscle should be tightly strung and ready in an instant to clasp its work. Again, exercises and skin-friction are good; but there is no need to grow the muscles by artificial pullings and liftings, to a degree that can never be wanted in daily life. One's daily tasks will of themselves require that the muscles shall become adequate in size. It is perfection and ease in that which they already do, that we want.

Full, deep, breathing, from the bases of the lungs upward, is wanted; but there is no need to acquire the chest capacity of a diver. These overdeveloped lungs and muscles may easily give much trouble one day. They cannot always be in this artificial use and then they will give somewhat the same trouble as would a man's horse to which he had been wont to give much exercise and could now suddenly do so no more.

Develop muscles therefore mainly in quality rather than quantity. Free all joints in all movements. Learn to stand perfectly upright. Learn to breathe fully, and get enough lung and heart power and capacity to permit quick strong walking for an indefinite time. Athletics to this point are nothing but desirable.

PHYSICIAN

TWO PERSONS labored to a vain and studied to an unprofitable end; he who hoarded wealth and did not spend it, and he who acquired science and did not practise it. However much thou art read in theory, if thou hast no practise thou art ignorant. He is neither a sage philosopher nor an acute divine, but a beast of burden with a load of books. A kingdom is embellished by the wise, and religion rendered illustrious by the pious. Kings stand more in need of the company of the intelligent than the intelligent do of the society of kings.—*The Gulistan*

ALADDIN

by LOWELL

WHEN I was a beggar boy,
 And lived in a cellar damp,
 I had not a friend or a toy,
 But I had Aladdin's lamp;
 When I could not sleep for cold,
 I had fire enough in my brain,
 And builded with roofs of gold,
 My beautiful castles in Spain.
 Since then I have toiled day and night,
 I have money and power and good store,
 But I'd give all my lamps of silver bright
 For the one that is mine no more.
 Take, Fortune, whatever you choose—
 You gave, and may snatch again;
 I have nothing 'twould pain me to lose,
 For I own no more castles in Spain.

Question

Why is Theosophy better than any other religion?

Answer

(1) For the simple reason that a whole is better than a part, and that pure gold is better than alloy. It is in no wise at variance with any other religion as at first taught, though it is a more full and comprehensive statement of truth than has been given at any previous time.

One of the missions of Theosophy is to show the absurdity of the idea that there can be in reality many religions. Sometimes the truth has been emphasized in one way, sometimes in another, but no one expression of truth, or, as it is called, no one religion, can ever detract from the light of another, but must of necessity add to it. Every message which has ever been given to men supplements and illumines every other.

When Theosophy came, the various religions had in men's minds grown further and further apart. There was little thought of uniting them. And what was more sad, every religion was in the process of burying itself under a brush-heap of man-made theories. The time had come when it was necessary to clear these away and rescue religion and amalgamate religions. Theosophy never has had the idea of wiping out or supplanting any religion, but of clarifying it and so making it, not only shine more brightly in itself, but also, by throwing on it the light of all the other religions, multiplying its brilliancy a thousand fold.

Another mission of Theosophy is to extend the scope of religious influence. Through this very illumination I have been speaking of, it is causing to be made plain the absurdity of reserving one day a week for religious forms, under the delusion that that is religion, while the rest of life is regarded as something different and separate. It is changing the whole color of life by awakening a conception of its purpose, and when it has accomplished its mission, and cleared away the rubbish which is no integral part of any religion, each will step forward and say of Theosophy "That is myself."

G. V. P.

(2) The question is such as would arise in the mind of one to whom some particular creed appeals, and where form of belief is considered to be the essential thing.

Theosophy is not a creed or form of belief which must be accepted by those who would join the ranks of Theosophists; if it were, it would mean that one more sect had been added to the world's already large supply—another line of cleavage instead of a unification—and as such, would, like all other forms of belief, resolve itself into nothing more than an expression of opinion. Nevertheless it is boldly stated that Theosophy is the accumulated knowledge of the ages, and as such must be tried and proven. It is also the essential basis of every form of religion; a basis, however, which has become so encrusted with dogma and doctrine as to be hidden from all but those who really seek to know the truth which underlies them.

If we assume the questioner to be a truth-seeker, he, by the very nature of his search admits the existence of the truth, which, in other words, means the knowledge of all things. As he seeks, he finds portions of it here and there, in religion, in poetry, in literature, in the lives and sayings of noble men and women—truths which stand the test of the needs of his own spiritual nature and his life's experience; and to him, that which

he has found to be true is no longer a matter of belief, it is knowledge.

In like manner Theosophy is claimed, by its custodians and students, to be the truth as a whole; that it stands every test which may be put upon it, whether spiritual, mental, moral or physical; that it is logical, consistent, practical and soul-satisfying; that it solves the mysteries of life, consciousness and death; explains the nature of man and the universe; restores to mankind its birthright of divinity, and shows man's possibilities as a consciously active, immortal part of the great scheme of universal progress. It further shows the universe to be guided by divine law, law which ever tends to restore disturbed equilibrium, and which is the law of unerring justice and divine compassion.

All this is claimed for it by those who have tested it in their own lives and experience, and in the lives of men and nations. Yet they do not offer it as a form of belief, nor do they wish it to be accepted upon their statement nor upon the statement of any being whatever; to them it is an established fact which only needs verification at the hands of the one who would know it.

R. C.

(3) Religion has to do with the deepest, strongest feelings of the human heart, those with relation to the universe, to God and to the duty of man. The best and most inspiring religion must be the truth concerning these matters. Nothing else will satisfy forever the yearnings of the human being who is himself a mirror in little of the great whole, and the object of whose existence is to consciously work in harmony with the universe, under the laws governing its life and his. That religion which is the truth about God, the universe, man, his destiny and duty, that religion through which is revealed the law of life, is the best. All other religions fall short in that they give only a part of the truth, and that part in so veiled and obscure a way that they do not persist in appealing to the hearts of men. From time to time a well-spring from the source is needed to reveal the spirit of all the religions known to man. This source is divine wisdom—Theosophy—which cannot in justice be compared to other religions because it underlies them all. Through Theosophy alone can be obtained absolute knowledge of what the universe is, how it was formed, man's place therein, and the grandeur and responsibility of the human part in the life drama of the whole.

Mr. Watson's Poems

MR. WILLIAM WATSON has issued something of a counterblast to the numerous poems of recent years which have done so much to intensify war feeling and to inflame human passion. Mr. Watson's poems are unfailingly beautiful because they seem to spring from a deep religious sentiment, a religious sentiment that wishes well to the world. Here are a few stanzas which deserve to live "till the war drums throb no longer, and the battle flags are furled:"

Here, while the tide of conquest rolls
 Against the distant golden shore,
 The starved and stunted human souls
 Are with us more and more.

Vain is your Science, vain your Art,
 Your triumphs and your glories vain,
 To feed the hunger of their heart
 And famine of their brain.

Your savage deserts howling near,
 Your wastes of ignorance, vice and shame,—
 Is there no room for victories here,
 No field for deeds of fame?

Arise and conquer while ye can
 The foe that in your midst resides,
 And build within the mind of Man
 The Empire that abides.

Confucian Analects

CHUNG-KUNG asked about perfect virtue.

The master said: "It is, when you go abroad, to behave to every one as if you were receiving a great guest; to employ the people as if you were assisting at a great sacrifice; not to do to others as you would not wish done to yourself; to have no murmuring against you in the country, and none in the family."

Chung-Kung said: "Though I am deficient in intelligence and vigor, I will make it my business to practise this lesson."—Page 63, Part I, Chapter 11

"To Live Fully"

A CALIFORNIA paper, which prints at the foot of one of its columns a little quoted sermon every day, the other morning had this:

The thought of getting safely out of the world has no part in the life of an enlightened man. To live fully while he is here is his problem.

Very good; but what is "to live fully"? One wants to know whose mouth utters those sentences, for similar ones have often been used to apply to lives of calculated sensuality. To "live fully" at any particular moment is to have the intensest consciousness of life. And there are ways of having this which are drafts upon the capital of life. Every form of sensualism is such a draft. The young man's process of "sowing his wild oats" is a succession of these drafts. And the result is likely to be a sterile, senile and semi-conscious old age. A man cannot kill his life, but he can nearly kill his consciousness of it. He can also increase his consciousness of it in such ways as are additions to capital instead of drafts upon it. The problem then is how to spend life so that the consciousness of life broadens on into old age, up to death, and through it.

We want plenty of time in which to do this, so health should be preserved and cared for. And the pleasure got out of "sowing wild oats" can be got by doing things that increase health instead of injuring it—sports and recreations that add to vitality. These have no reaction, and consciousness is clearer for them the next day. As fast as you get energy make more with it. The principle applies to reading. We can read a newspaper so as to increase mental vitality or squander it. One column has an account of a murder. Why read it? We get a set of mental pictures that will assuredly come again when we do not want them—in fever or old age. And they are pictures that have in them something of the quality of jar or shock; they actually take from vitality. In another column is an account of a discovery in science; and in another is recorded some change in the great international relations that are slowly making and unmaking empires. Both are tonic to the mind, widen thought, give mental vitality. Both are prophylactics against senility.

The same rule applies all along. Shall you go to see a prize-fight or to a symphony performance?

The rule is to be worked in doing of duties. Done perfunctorily, they are exhausting vitality in every direction. Done because they are duty, done with the feeling of oneself as *commander* of unwilling mind and body, they become tonic. They may exhaust the body and mind; they may even be almost killing; but done in that spirit they are actually adding to the vitality of that part of the nature which death cannot touch.

It applies to the field of life into which the conceptions of duty do not so much enter, the hours of spare time. What is to be done with these? We owe a debt to bodily health that should be paid. We owe one to our own higher nature, partly to be discharged by proper reading, thought, music and activities called spiritual. But there should be activities in which humanity is concerned, the advocacy of some great cause, the service of the state or the city, done in the largest, least local and most unselfish spirit. All these things greatly feed the inner vitality. They will build up that sort of consciousness which old age and death cannot touch.

Whoever has seen many deaths will have seen something of the working of the inner consciousness. The body may be semi-conscious, dazed and muttering. The patient knows nothing of what is going on in the room. If he is spoken to he returns with effort, unwillingly. He is in an inner world which death is not touching. His foothold and freedom and action there must now be in accordance with the use he has made of life, with his conservation of his spiritual, inner vitality during life. Has he followed that guide, nourished his deeper nature, fastened his attention upon the great currents that run in human life, and ever expanded himself by unselfish work; or has he lived a little personal, local, pleasure-seeking life that had no points of contact with anything high and permanent?

At every moment, we are offered the choice between the more enduring and the greater, to which to attach our minds—or the transient, and the little; which shall it be?

K.

An Indian Writes About Canoes

THIS sort of boat, which is said by many books to be especially the one used by Indians, is the most beautiful shape of all boats. The ribs are made of fine cedar, which is strong and light, and over the frame of ribs is sewed with roots many large sheets of birch-bark, and the seams are made tight with much pitch and balsam gum. These things are told in the *Song of Hiawatha*, how he built a very fine canoe. When one is floating empty, it seems to not sink in at all, because it is so light that a canoe in which five men can ride does not weigh any more than half as much as one man. The smooth bottom makes it very easy to tip over when empty, and for one man to manage it then is very hard to do, may be as hard as to ride on a bicycle, may be more so. Like all the sorts of Indians' boats it is made to go by a paddle, the man sitting in the stern, or if there are two men one of them sits in each end, but they both paddle on the left side most of the time, steering the canoe by twisting the blade of the paddle as it strikes or leaves the water. Indians never use oars as white men do, because they are too clumsy and one

cannot see to know what is before him or where he is going. The canoe is to be best used in narrow, crooked little rivers where the banks are bushy and there would be no room for oars such as white men use. It is in those parts of America toward the sunrise that the canoe is much used, because there are so many small streams

THE BIRCH-BARK CANOE

and lakes. Such a light boat is easy to carry from a lake into another one and in many places this is often done. Such a place where boats and their loads are carried, is called a portage, and the trails at those places are very wide and deeply trodden.

There are many lakes west of the Great Lakes, where the great ices left many hills, and there the canoe is also used. In the State of Minnesota, where the falls of Minnehaha are, one-fifteenth part of the surface is water. But further toward the sunset there are no lakes and the streams are too large and swift for canoes, so those Indians use different sorts of boats which they call one sort "bullboat" and another sort "dugout," but they are very much more clumsy than a canoe, which is very beautiful and light.

HY-AS LE-LOÓ EÉ-NA

Mohammedanism

A REPRESENTATIVE of the *Daily News* has interviewed a Mohammedan professor on the subject of his religion, and the result is not altogether without its lesson. The professor spoke as an avowed and unashamed adherent to his own faith, as every man should do, and sincerity is always pleasant to witness. He says:

There is one thing in Mohammedanism which you don't find in other religions. It is a reality; it is a motive power. With you Christians religion is merely a name. I have not met one in a hundred who really believes what he says! But we really believe in our religion, and act up to it. Every Mohammedan prays five times a day. Whether it be in a railway train or on shipboard, he is not ashamed of his God. I think one of the reasons why *Christian ministers are so against us is because we are so earnest in our religion that they have little success with us.*

Recent events have furnished more than one illustration of the intensity of belief which characterizes the Mohammedan. Those who were in Pekin during the recent fighting are not likely to forget the spectacle of a Mohammedan regiment offering up prayers at the appointed hour while exposed to a hot fire. A hardly less striking scene was witnessed in London, where a large body of Mohammedan soldiers betook themselves quietly to their devotions in the presence of a vast crowd of sight-seers. The London crowd was astonished and a little awed at such a proceeding on the part of these fierce warriors, and the warriors themselves were astonished that the simple duties of religion should excite comment from any one. It may be that London received a lesson that day in Christianity, which was more efficacious than many sermons, and that the Indian soldiers taught a lesson in sincerity, without which no faith can have any weight whatever in the world.

SKEPTICS are generally ready to believe anything, provided it is only sufficiently improbable; it is at matters of fact that such people stumble.—*Von Knebel*

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

The Religion of Reason

To love justice, to long for the right, to have mercy, to pity the suffering, to assist the weak, to forget wrongs and remember benefits; to love the truth, to be sincere, to utter honest words, to love liberty and wage relentless war against slavery in all its forms, to love wife and child and friend, to make a happy home, to love the beautiful in art, in nature; to cultivate the mind, to be familiar with mighty thoughts that genius has expressed, the noble deeds of all the world; to cultivate courage and cheerfulness, to make others happy, to fill life with a splendor of generous acts, the warmth of loving words; to discard error, to destroy prejudice, to receive new truths with gladness; to cultivate hope, to see the calm beyond the storm and dawn beyond the night, to do the best that can be done and then be resigned—this is the religion of reason, the creed of science. This satisfies the brain and heart.—*Ingersoll*

Quite Remarkable

An excited orator, discussing at some length on what he considered to be the principles of his opponents, finally wound up with this astounding and sweeping assertion: "Believe me, friends," said he, "if it were possible to place these men on an uninhabited island, where human foot had never trod, it wouldn't be five minutes before they had their hands in the pockets of the naked savages."

At a dinner party the Archbishop of Canterbury was much more bored than edified by a young lady who told him a long story of her aunt's escape from a railway accident. "Owing to a block at the corner of Park Lane, my lord, she just missed the train at Victoria which was wrecked at Croydon. Wasn't it providential?" "Can't say," snapped the Primate in his grating voice, "didn't know your aunt."

Have We a Worthy Ideal?

AT a time when advanced civilization is the boast of a large part of the world, it may not be unbecoming to inquire if we have even partially attained to a worthy ideal, if we indeed possess any worthy ideal at all. Some of the best minds of the day are beginning to ask themselves whether civilization as we know it is an advance or a retrogression, whether it does not entail a misery altogether incommensurate with its benefits, whether an external evolution can be anything else but a calamity, unless it be accompanied by an internal or ethical unfolding.

Civilization is defined by Emerson as the result of highly complex or-

ganization. May we not somewhat expand this definition by saying that true civilization is the *harmonious* result of highly complex organization? Because it is a complex organization, because it is so intricate a machine, a true civilization needs a peculiarly fine adjustment of its parts, of its human units. That fine adjustment, that admirable lubrication which no constitution nor legal supervision can give to it, is the finer moral sense without which civilization is a failure. The civilization of today is largely a failure because it possesses intricacy without moral adjustment, because it possesses complexity without fraternity.

Brotherhood the Only Civilization

Humanity is indeed at the parting of the ways. There are divine laws which we cannot abolish by our denials or repeal by our revolts. By these laws we have arisen from barbarism, and by those same laws we must return to barbarism, unless by fraternity we can make our civilization permanent. Every nation has its patriots whose sentiments are too often heard rather than felt, but how many are there in the world who recognize that the highest patriotism, indeed the only patriotism, is to lead the brotherly life without which no nation can endure?

Let us read history more and try to understand it better. Let us recognize how often the divine law has raised nations to the very pinnacles of civilization, only to hurl them down again into the dark valleys because they could not breathe the pure air upon the mountain top, because they remembered not God nor loved their fellow men. Civilization brings obligations which must be fulfilled, and these obligations are not nebulous fancies nor theologic whims. They reverberate through the hearts of men with a thus saith the Lord, and the only alternative to obedience is national death. There is, perhaps, no acre of ground within the world which has not witnessed the plowing in of civilizations which have failed, the civilizations which have been weighed in the balance and

Search the Records of the Mighty Past

found wanting at the eternal judgment beam of justice. They have failed in spite of a material grandeur greater than we know today, in spite of their science and their art and their armies which shook the earth. Their mighty records are around us and their works, which seem to defy the very hand of time itself, were the evidences against them, the proof of the greatness of the opportunities which were theirs and which they lost.

If one today were to arise from the dead, even the greatest of the mighty ones, and were to walk through our civilization he would have no new message to give to the world, no new revelation of the mysteries of God. Such an one would say to the fevered masses of men, the nations of the world, choose now this day whom ye will serve, the eternal law of brotherhood, mighty to save and to destroy, or the self-love, which is already a blight within your hearts, and which must at the end be a desolation and the maker of waste places upon the earth. STUDENT

A New Baptist Church

THE Baptist denomination of one of our western cities is to build a new church. It will be a "great office block and a house of worship combined," and it will probably cost nearly a million dollars. It seems that it is possible to worship both God and mammon in spite of high authority to the contrary, but the candor with which the combination is announced is refreshing and surprising.

The main feature of the "great office block and house of worship combined" will be the baptismal pool, which will, we assume, be attached to the latter half of the combination. It will be a scenic reproduction of the River Jordan, and the convert will be led to the water by elders in Biblical costume, who will repeat passages from the Scriptures. The scene will be "as realistic as possible, without being spectacular"; smart, but not gaudy. In addition to the "house of worship" and the offices, the building will contain stores, cafes and roof gardens. It will, in fact, be a bond of union between heaven and earth, and, as a going concern, it will pay 6 per cent on the capital outlay.

The study of the human mind is as bewildering as it is fascinating. A belief in high motive is a part of our philosophy, and we must therefore accept the existence of an order of mind which believes that it is rendering a service to religion by such frivolous prodigality as this. But we do not understand it. STUDENT

"**T**RUTH, Light and Liberation for Discouraged Humanity!" Perhaps no thought is

commoner in men's minds than this. It is probable that no words appeal more to men than these; but how? Many think that the thoughts therein expressed are the fruit of unwholesome nocturnal lucubrations; that Humanity is by no means discouraged, and they indicate, with perhaps a pardonable pride, the really extraordinary achievements along material lines of our later Aryan peoples.

Many, on the other hand, take another view of men and their works, and deplore these very achievements, demonstrating with labored argument, supported by innumerable individual "proofs," the complete rottenness of our civilization.

In point of fact, however, what are "Truth, Light and Liberation?" Are these subject to definition? Are they to be found and applied to the social evils of the day? If they be but a vain figment of man's imagination it is a sad irony on the lessons the ages have left us. It was the Prussian philosopher Kant, who said that the only thing which to him proved indubitably the existence of the human soul, was the dwelling in man of the moral sense, that power to distinguish between what is right and what is not right. Light and Liberation are the children of Truth, which is the essence of Law, and in proportion as man strives to inform the soul within him with the reality of it, do his fellows realize what Light and Liberation are. For these last are of such peculiar kind that it is by reflection we see them, not directly. An honest man is not merely "God's noblest work," but he is his fellows' savior.

The Humanity of the day is discouraged without knowing it, and in that fact may not its greatest danger lie? The man in the street pursues his daily duties, or his wrong, in a very indefinite sort of way. He feels that something is not as it should be, but seeing no way to remedy the trouble he feels, but does not recognize, he allows himself in the main to fall into a state of moral languor. Take an example from the nation, which perhaps more than any other, in later times, has espoused the cause of human advancement and well-being.

The modern Frenchman is surrounded with an atmosphere in which the spirit of the Revolution is yet alive. He sees written and smeared on nearly every public building in the country, three words, which some few score of years ago ran from mouth to mouth and aroused all France from end to end: "Liberté, Egalité, Fraternité!" Liberty, Equality, Fraternity! "Oh, Liberty! How many crimes are committed in thy name!" Yet this Frenchman, taken as from a class, is really the type of the modern cynic. Those who know, say that at no time has France been in so critical a condition as now, as regards its vitality as a people. Religious feeling has become partially extinct, or is but the handmaid of a ruthless fanaticism. Brittany may exemplify the latter, Paris the former. France today is expectant of something, it knows not yet what, and the French people are drifting with the tide most hopelessly. This country sees and feels one thing, however, that its government is striving mightily to stem the tide of national decay, and that its task is not an easy one.

The minds of men today are in an inchoate state; prophets in Israel are many, and, in the conflicting opinions of the time, one is obsessed

Truth Light and Liberation

with a sense of moral incertitude as to what ought to be done, and what should be left undone. Governments pro-

tect the powerful; the doors of the churches are closing to the masses; anarchy, with its brilliantly false and illusive ideals, is misleading many; and deceit, subterfuge and menace, with the "mailed fist" form the diplomacy of the age, by which we settle questions both among ourselves and with those weaker than we.

Are not these signs of a discouragement? Are they significant of peoples confident in themselves, in destiny, and in right as might? What, indeed, must be the aftermath of it all? Has our civilization led us to nothing better than moral decrepitude and spiritual weakness? It is no wonder that men turn with relief to the traditions of a time when peace and concord reigned over all the earth; when men were of one speech, one family and one universal natural religion; when divine knowledge was had not by revelation, but by direct inspiration, and by walking with the gods? Paris has today twenty thousand fervent Buddhists; Europe and America own untold thousands of men who are seeking light and spiritual and intellectual liberation wherever it may be found; untold thousands, again, seek it no more, but, in complete mental misery, enter by their own will the valleys of despair.

From the land shadowed with wings, from the mystic past of an unknown race, come to us moderns rays of no uncertain quality. Before the days when Manu Vina left the plains of Punjab with his thinned host, to settle in the valley of the Nile, to build up the civilization of which our knowledge is yet but incipient, Egypt, a puissant and matured colony from the lands in the west, lived a national life of which greatness was the lesser part. Arts, sciences and literature flourished, under the direct guidance of the Kings Initiate of that far-away day, and beauty, peace and strength were studied and particularized in the life of the people. From archaic Egypt spread to Europe, to certain parts of Asia, and elsewhere, everything that is beautiful and useful, which through the marching ages have come down to us. It is probable that wars in those times were wars of civilization, not of conquest; for Egyptian civilization had then that innate and peculiar power in itself which was welcomed by all peoples not savage, as an uplifting and refining force.

Initiates were sent as messengers and instructors to the four quarters of the globe, and carried with them the learning and mystery-knowledge of the sacred colleges. Have thoughtful men never asked themselves seriously why it is that a similarity of religious and philosophic thought, so great as to amount to almost oneness in primaries, should be now found in all countries of the earth, and why this similarity should be most observable in places the most distant one from the other?

Hence the question: will not our present chaotic civilization one day unify these scattered elements of one common truth, one common tongue and one common thought; will they not be gathered together to form an Universal Religion of humanity, wherefrom shall flee incertitude and despair? That it will come, that it cannot fail to come, is the firm belief and hope of many.

In that day, there will be no discouraged humanity, for truth, light and liberation shall reign in the hearts of mankind. STUDENT

The Story of Columbus

MR. HENRY VIGNAUD, Secretary to the American Embassy at Paris, has long been known for his researches into the history of the discovery of America. Mr. Vignaud believes that in a short time he will be able to prove conclusively that Columbus was not an Italian but a Greek, and that he was associated with the Columbi, or Greek rovers, who fought a battle with the merchant navy of Venice off Cadiz, toward the end of the Fifteenth century.

These statements have attracted much attention in Paris, and a number of French investigators are preparing to make a minute examination of the Greek archives, which have never yet been fully explored. The story that Columbus was the son of a Genoa wool-comber has been entirely disproved, and may be left out of account, but with the true story of his birth and parentage Mr. Henry Vignaud hopes soon to be able to furnish us. STUDENT

The Right Use of Medicine

THE selfish and groveling ideals that have such large sway must inevitably lead to disease and poverty and violence, however much these effects may be staved off for a time. The proper use of medicine is for people who are striving to reform and elevate their whole nature and who thereby earn and deserve the assistance of medical science. On all others the arts of medicine are wasted, because they are all the while undoing with their minds what is done by the medicine.

Where Stevenson Lived

THE illustration on the cover page of the NEW CENTURY PATH this week represents the home of the late Robert Louis Stevenson, Vailima, Samoa, and is of special interest, as including, in the foreground, the figure of the great writer himself, whose death the world is likely long to lament.

Some Views on XXth Century Problems

The Law of the Increase of Suicide

IT is not easy to understand the laws which govern the prevalence of suicide in particular localities. Why, for instance, should Lisbon and Madrid have the lowest suicide rate of any large European city and why should Dresden have the highest? Lisbon and Madrid have only two and three suicides annually per one hundred thousand of population, while the rate for Dresden is fifty-one per one hundred thousand.

The suicide rate in American cities still compares favorably with that of most European cities. London has a suicide rate of twenty-three per hundred thousand while the New York rate is twenty-two. The New York suicide rate has, however, increased from fourteen to twenty-two within the last ten years, which is a frightfully rapid advance.

It is almost entirely in the large cities that this increase is to be noted. Thus the suicide rate for Paris is forty-two while for the whole of France it is only twenty-two and a half. This is, of course, in no way surprising when we consider the circumstances and conditions of life in big cities. It is in cities that the struggle for life is most severe and that the separation from nature is most complete, and it is in cities that the mind-destroying influence of hypnotism and drug-taking are most rampant. It is easy to see that we are approaching a point where the problem of suicide will become one of national preservation. As we have previously pointed out, the number of those who actually take their own lives is but a small part of the mischief. The real tragedy is the far greater number who are brought within the sphere of despair which sometimes culminates in self-destruction.

STUDENT

Christianity and Drunkenness

A LADY who is well known for her strenuous efforts to promote the cause of temperance in India, writes a remarkable letter to a contemporary. It consists of a few lines only but it constitutes an indictment which will probably be unnoticed because it is unanswerable. She says that the drink habit which has been introduced among the three hundred millions in India proves an "appalling hindrance" to the spread of religion. The natives consider that "Christian" and "drunkard" are synonymous terms, and she states that a gentleman walking through the streets of a great Indian city overheard two little native children at play. One of them said, "Let's play at being Christians." Curious to see what form this play would take, the gentleman watched. The children "reeled to and fro, fell down, etc., imitating the drunkard."

The heart of the lady who indicts this letter is in the right place. The more the pity that she allows herself to be creed psychologized into calling India "the land of idolatry." But perhaps she means the idolatry of alcohol, the western Juggernaut, whose cult has been introduced by western civilization into lands which never knew it, and which has been a greater blight upon human hopes and aspirations than Kali of the "heathen."

Unightly Buildings & the Law

EUROPE is not yet so effete that she has no lessons to teach, even to the newest of new worlds. Paris, for example, allows no new buildings to be erected until the plans have first been submitted to an official architect, whose duty it is to say whether the building in question will detract from the beauty of the neighborhood. If it will so detract, then it is an offense against the higher usefulness and must not be tolerated. This is one of the points from which we may learn a lesson not only of beauty, but of human freedom. The man who erects an unsightly edifice is infringing upon the natural rights and liberty of his neighbor to nearly as great an extent as the man who possesses a disorderly back yard. They are both of them public nuisances and should be dealt with. We suppress unhealthy odors, or profess to do so, and why should we not also suppress unseemly sights? Why should the nostrils be protected by law and not the eyes? When we recognize the larger liberty we shall do as Paris does, and we shall refuse to allow individuals to inflict their uglinesses upon an unwilling community.

X.

Increase of Temperance in the Navy

ADMIRAL COTTON, of the *Kearsage*, who created for himself a permanent esteem and affection during his recent short visit to English waters, has written to an English correspondent on the subject of the personnel of the American navy. Among much that is of interest, he says:

The qualifications for men who enlist in our service today are high, physically, mentally and morally. We aim to secure men of good average ability, but many have excellent abilities; and no one of known bad character, especially as to the intemperate use of spirits, is enlisted; but if occasionally such succeed in getting by the recruiting officer, and if afterwards they show no sign of reform or improvement, they are discharged as incorrigible and undesirable.

To the men serving in our navy today the spirits ration is a dim tradition; they do not expect it, the temptation to tipple is not placed in their way, and those who have not already, before enlistment, formed the habit of drinking, do not have the opportunity to acquire it on board our ships of war. The abolition of spirits from our navy was a distinct advance in the right direction, and there is no doubt that we are reaping the benefit of it today. I can conceive of no conditions under which the reestablishment of the spirits ration in our service could be advocated; and I speak from personal knowledge and experience, as my period of service covers both its use and its non-use.

Much has been done in recent years to mitigate the horrors of warfare and Geneva conventions and the like deserve the gratitude of mankind. It has, however, yet to be realized that the individual characters of soldiers and sailors, is a great factor in aggravating or minimizing the miseries of warfare. To raise the ethical standard of navy and army is a work worthy of all recognition and aid.

STUDENT

Indictment of the Social System

FOR a compressed indictment of a social system we commend to our readers a four-lined paragraph in an English contemporary. From this paragraph it appears that an inquest has recently been held on the body of a woman, aged 62 years. This woman began to be a criminal at the age of 12, and from that time until the day of her death she spent her whole life in prison with the exception of eight years.

Only these bare facts are recorded, but they are enough. All the learning, the resources and the power of civilization were inadequate to deal with this one woman except by an almost constant imprisonment, and it is hard to imagine any worse use to which a human being could be put. What was the cost to the community of this one criminal, the cost in hard cash, which is the only argument we seem able to understand? It may be that there is another law in nature than the human law and another code than that of our courts of justice, and that before that other tribunal this wrecked life may speak with a terrible eloquence of accusation. X.

The Cause of Much Skepticism

THE problem of Sunday-school teaching is receiving some little of the attention which it deserves. There can be little doubt that much of the skepticism of the present generation is due to the religious teaching which it received in its youth, a religious teaching which is still being imparted in too many directions.

The authorities of our Sunday-schools make a very general mistake in failing to recognize that the children whose minds are now so passive to their instruction will one day bring all the critical faculties of adult minds to bear upon those teachings. A Sunday-school scholar once defined faith as the power to believe what you know is not true. So strong is the imagination of some children, that they really acquire this faculty of believing what they know is untrue, or they are psychologized into its semblance, but it is a power which rarely accompanies them into life. The critical faculties become intellectualized and then there is a vague sense of contemptuous indignation at the fairy tale follies which were given to them as sacred truth. Some minds are strong enough to break their way into the light, but the greater number simply exclude religion from their lives as something associated with narrow superstition and the credulity of mistaught childhood.

Art Music Literature and the Drama

Robert Schumann

A rosy light is dawning in the sky; whence it cometh I know not; but in any case, O, youth, make for the light.—ROBERT SCHUMANN

"If everybody read Jean Paul," Schumann once wrote, "they would be better natured, but they would be unhappier; he has often brought me to the verge of desperation, still the rainbow of peace bends serenely above all the tears and the soul is wonderfully lifted up and tenderly glorified."

The child who pored over the works of Jean Paul, fascinated, when he could hardly read their meandering words and their still more meandering sentences; the child who loved Bach and who, when picking out his music on the old clavier, could not keep back the tears—is it strange that such a child should compose music at the age of seven, and should more than realize every prophetic dream?

The ordinary details given in the stereotyped biography are of slight interest compared with that subtler and but seldom read glyph which the soul writes upon the personal life. Whether Schumann studied music in Leipzig or Patagonia is of less value to those who love humanity than the facts that betray his real relationship with his fellow men. The fact that he studied in Heidelberg University is of some importance, to be sure, but of greater importance is the fact that his student life was pure, an example in unselfishness and self-control. The students' club seemed to him coarse and shallow, so he resigned, and his innate purity shielded him from the moral degradation that is so frequently concomitant with student life in Germany. Had this not been the case would the beautiful comradeship that later crowned his life, been even a possibility? Never! What insight do we gain from the simple fact about this law-student, as he then called himself, studying law, his compeers tell us, by practising the piano seven hours a day!

A well-defined human interest was characteristic of Schumann. When but a lad, he aroused a few student friends to protest against the existing state of music.

Weber, Beethoven and Schubert had died, and Mendelssohn was but beginning to be known. The public loudly applauded what was bad and unmusical. The musical criticism of the day was nicknamed by Schumann *bonig-pinselei*—"smearing with honey!" The result of this student protest was a publication *Neue Zeitschrift für Musik*. Under various pen-names Schumann became a contributor, and for some years edited the publication, heart and soul working together to lift the musical thought of his day, and the pent-up poetry of his soul poured itself out in these essays and critiques, as later, in musical composition. Says his biographer, "His soul was entirely too noble and his ideal aims too high to have any purpose in view but the advancement of art." In 1836 Schumann wrote to Moscheles:

If you only knew how I feel, as though I had reached but the lowest bough of the tree of heaven, and could hear overhead, in hours of sacred loneliness, songs, some of which I may yet reveal to those I love!

The words were prophetic. Four years later he became the husband of Clara Wieck and, as impelled by the soul itself, he suddenly threw himself into vocal composition, a new and untried field. Critics agree

ROBERT SCHUMANN

that that year was the most remarkable of Schumann's musical life. He wrote more than one hundred songs, perfecting the form of the song with pianoforte accompaniment. The twelve songs from Rückert's *Liebesfrühling* (op. 37), were written by Clara and Robert Schumann together. Then, his heart having expressed itself in this rare outflowing of joy and long pent-up love, he went back to instrumental composition:

When we look through the words of his songs, it is clear that here more than anywhere, love was the prompter, love that had endured so long a struggle and had at last attained the goal of its desires.

Whether this be true, the fact remains that Schumann's work blossomed into an unforeseen richness and recorded a mighty advance after his marriage, which was so ideally blessed.

It was Schumann who, in his writings, first proclaimed Brahms as the one whose vocation it would be "to utter the highest ideal expression of our time"—Brahms, then young, poor and wholly unknown.

For nine years he had been wholly absorbed in musical composition and during that period had written nothing. As incapable of jealousy as he was of selfishness, Schumann could not remain silent while such a musician as

Brahms was unrecognized. In an article published in the *Zeitschrift* he speaks of Brahms not as

A youth or beginner, but welcomes him into the circle of masters as a fully equipped combatant. When before or since did an artist find such words of praise for one of his fellows? It is as though, having already given so many noble proofs of sympathetic appreciation, Schumann could not leave the world without once more, after his long silence, indelibly stamping the image of his pure, lofty and unenvious artist-nature on the hearts of his fellow-men.

A. V.

THE voice carries with it the synthetic expression of the singer's entire being as it stands, the result of his own past. Consequently, the more one has suffered or enjoyed the better will one be able to give rise to similar impressions in others. You remember Shelley's words, "They learn in suffering what they teach in song," a one-sided expression of a great truth. If a man has had a wide experience in suffering it is stored up within him, and unconsciously to himself, both in speaking and in singing, he expresses his unwritten past and so evokes a corresponding sentiment in those present who have also suffered. A superficial or unformed character will unmistakably reveal itself in this way. Good music always brings us in closer touch with the ideal.

E. A. NERESHEIMER

AND what is our failure here but a triumph's evidence For the fulness of the days? Have we withered or agonized?

Why else was the pause prolonged but that singing might issue thence?

Why rushed the discords in, but that harmony should be prized?

Sorrow is hard to bear, and doubt is slow to clear,
Each sufferer says his say, his scheme of the weal and woe;
But God has a few of us whom he whispers in the ear,
The rest may reason and welcome. 'Tis we musicians know.

—Browning

TO MAKE a home out of a household, given the raw materials—to wit: wife, children, a friend or two, and a home—two other things are necessary. These are a good fire and good music. And inasmuch as we can do without the fire for half the year, I may say music is the one essential. Late explorers say they have found some natives that have no God; but I have not read of any that had no music. Music means harmony, harmony means love, love means—God!—*Sidney Lanier*

How music, that stirs all one's devout emotions, blends everything into harmony, makes one feel part of one whole which one loves all alike, losing the sense of a separate self.—*George Eliot*

MUSIC IS LOVE IN SEARCH OF A WORD

— Sidney Lanier

DOMESTIC unhappiness has so often characterized the lives of those who have done

most in art and music that it is refreshing to find Clara Schumann's life an exception.

The greatest woman pianist of her day, and a composer of note, Clara Schumann will never be forgotten, yet to those who love the human, the most beautiful phase of her life was her simple and yet perfect comradeship with her husband, Robert Schumann.

Clara Schumann's father was a teacher of music, the noted Herr Wieck, and from him Clara received her training. At nine she made her debut in concert and at eleven gave at the *Gewandhaus* a concert in which she played one of her own compositions. Her career was remarkable and when Schumann, then a shy young lad, his genius undiscovered even by himself, asked Herr Wieck for permission to marry his daughter, this gifted girl who was decorated with medals from a dozen Courts, it was not strange that Wieck refused. To see her settle into the traces as does the ordinary German *hausfrau* was not to be thought of. But Clara and young Schumann loved each other devotedly and after four years of constant struggle on the part of both, all obstacles were surmounted and the marriage took place. Robert Schumann, instead of taking the traditional attitude of German husbands, encouraged his wife in her musical work in every possible way. Musically she stepped into a greater life, and so did he. Year after year she visited the principal cities of Europe, appearing in concert, and her work as a composer was even and excellent if not great.

And what was her husband's reward? Clara Schumann gave her husband's compositions an interpretation so perfect and sympathetic that she everywhere attracted attention, causing public recognition to come to him far earlier than would have otherwise been the case. It was she who first brought his compositions to the notice of the public. It was upon themes of her composition that some of his best works were based. Musically their lives were interblended. And when his health failed, his wife became his nurse and devoted companion.

Neither cared for personal display, musically or otherwise. Both were pure and honest by nature, Madame Schumann, however, being devoid of that extreme sensitiveness and shyness that characterized her husband. Both were strongly domestic in their tastes and were never happier than when in their own home among their children, and each life was richer musically, because of the simple and just comradeship upon which their marriage was based. Says one writer, of Robert Schumann:

He created and wrote for his wife, and in accordance with her temperament; while she looked upon it as her highest privilege to give to the world the most perfect interpretation of his works. The deep joy of his married life produced the direct result of a mighty advance in his artistic progress and his most beautiful works in the larger forms date almost exclusively from that time.

Madame Schumann's repertoire was enormous, ranging from Scarlatti and Bach to Chopin and Brahms. Mendelssohn was her own and her husband's close friend and his music she played with rare feeling. It is believed by some critics, however, that she was greatest in the performance of her husband's compositions. This is not improbable, for though

Madame Schumann

the heart touch was in all she did, she must have been peculiarly sympathetic in interpreting the work of one with

whose life her own was bound by so many ties. Said Taylor:

Madame Schumann's playing evinces great warmth of feeling and a poet's appreciation of absolute beauty, so that nothing ever sounds harsh or ugly in her hands. This is no doubt partly due to the peculiarly beautiful quality of the tone she produces, which is rich and vigorous without the slightest harshness and is obtained, even in the loudest passages, by pressure with the fingers rather than by percussion.

Madame Schumann is to the piano what Joachim is to the violin, the greatest of modern interpreters of purely classical music.

When one sees the wrecked home-lives of so many of our greatest virtuosi and composers the picture of the home life of Clara and Robert Schumann stands out in bold relief. It is worthy of being better known.

Because of their comradeship which was so pure, so unselfish and so just, each was able to do far more than would have been possible otherwise. For true comradeship is an actual creative force on the higher planes of thought and of aspiration. It is not a mere sum in addition, *i. e.*, the ability of one comrade plus the ability of the other. By no means.

It must be written in terms of the ability of one comrade reinforced by all that is best in the other, plus the ability of the other, reinforced by all that is best in the one. And if each grows in beauty and strength of character as the years pass, what will be the resultant? Not even the soul itself could measure or set bounds to it.

JULIA HECHT

IN the "heart touch" is the saving quality that will redeem humanity and bring about Universal Brotherhood.

KATHERINE TINGLEY

CLARA SCHUMANN

This story is told in an Edinburgh paper, as illustrating "a characteristic trait" in the West of Scotland farmer. A dairy farmer who had lost his wife, called to see a Glasgow Bailie on a matter of business.

The Bailie expressed his sympathy with him, and the farmer replied: "Ay, Bailie, the loss of a wife's a sad thing, especially about a place whaur there's sae mony beasts as I hae. But to tell you truth, she was a wee thing licht for my wark onywee."

A Woman Honored

ONE of the diplomas awarded by the international judges at the Paris Exposition of 1900 read "à Monsieur Katherine Evans von Klenner." Evidently the judges did not believe that a woman had carried off such an honor—and an American woman, too—but such was the case. It was the first time that a vocal teacher had been so recognized.

Mme. von Klenner is a woman not only of unusual genius, but of the highest education. A university graduate, music was but part of a course of study which went deeply into psy-

chology, chemistry, astronomy, physics, Latin, Greek, French, Italian and German. But, devoted before all else to her music, Mme. von Klenner finally went to Europe and studied under Mme. Viardot, the daughter of Garcia. She is today a remarkable exponent of the Viardot-Garcia method, of which it is unnecessary to speak, so well is it known.

We are generally too low in our aims, more anxious for safety than sanctity, for place than purity.—George Eliot

Lady Malcolm of Poltalloch

THE following is a reprint of an article upon Lady Malcolm of Poltalloch which appeared in the *Universal Brotherhood Magazine* of May, 1898. Lady Malcolm is not likely to be forgotten, but it may be of interest to recall that she was at that time the only International Representative of the Society named as such by W. Q. Judge and the work she did in that capacity was invaluable to the cause to a greater extent than many are perhaps aware:

You can visit Poltalloch—Lord Malcolm's estate—by journeying to the west of Scotland, a land of mist and heather, of lonely hillside tarn and mountain torrent. The family homestead is a fine old place—a kind of feudal castle where the Malcolms for generations back have lived and died.

That home has been bereft of the sweet presence known as Lady Malcolm, but in many an humble heart she lives—a bright and lasting memory. Lady Malcolm possessed many of the peculiar qualities of the Gael—that mysterious race whose last heritage seems to be a perception of life's infinite pathos, ever lit by the Beauty of the world. We can see her as a child playing on the dimpled beach, pausing to hear what the ocean murmurs to the fairy of the shell, or running races with the wild sea horses who lash their white tails in fury against the resisting rocks. We can see her, when little more than a child, entering Lord Malcolm's ancient home as its youthful mistress, a bride of twenty summers. In imagination we can fill in the future of Lady Malcolm's life story—but this is neither a time or place for such a portrayal; we can best recall the happy memory of a strong, unselfish soul who "did what she could" for the Cause of Brotherhood.

Time, thought and money—all that she had and was, were gladly given to the work. W. Q. Judge has written, "To fail would be nothing, to stop working for humanity would be awful," and so thought Lady Malcolm when the doctors had whispered "We can do nothing more for her," whilst the nurse wet her parched lips with the drink she could not take.

Propped up in bed, her fragile hand scarce able to hold the pen, she wrote letters full of suggestions and plans for the work—cheery letters—no weeping, or saying of farewells—rather a call to arms than a bugle note of retreat. Not till death quietly took hold of that hand, did it relinquish its noble work. Let us look long and earnestly at Lady Malcolm's strong, sweet face; her eyes look to us like one of her own mountain tarns, in whose dark liquid depths the blue of heaven is reflected. At times a light, not born of sea or land, shone rapturously, then passed, leaving them as before, dark and inscrutable, yet withal tenderly compassionate; she was graceful as a fawn, stately and dignified, with that old-world air so seldom seen of late. "A lady every bit of her," simple and unaffected, homely of speech and manner, she won the entire confidence of all who met her.

Lady Malcolm was one of H. P. Blavatsky's pupils at Avenue Road, in London, faithful to her as to her successor—W. Q. Judge. The "Great Sister" has been kept busy since the Theosophical Society was founded. "The useless chaff it drives from out the grain, the refuse from the wheat!" Such a process took place in 1895 at the Convention of the "European Section." Lady Malcolm, although at that time an invalid, attended the Convention, and with many others testified for Brotherhood by withdrawing from that scene of intolerance; it was she who invited all who had thus left, to her house in Cumberland Place, where a new Society was organized which elected W. Q. Judge President for life—thus showing to all the world that Brotherhood was not only a theory but a fact to stand by.

This is now a matter of history, as is also her warm-hearted reception of the Crusaders, who visited London whilst on their tour round the world.

During this time Lady Malcolm threw open her house to receptions, dinners for the press men and social gatherings, joining in all, with an enthusiasm born of loyal zeal for the Cause of Truth and Brotherhood; during these memorable ten days, one of her carriages was set apart for Mrs. Tingley's use. A bond of deep sympathy existed between her and our dear Leader, which needed only the quickening of her presence to fan into an abiding faith and trust. As a proof of this Lady Malcolm bequeathed a considerable sum to the S. R. L. M. A., which she felt was a beacon-light towards which all discouraged souls might look for comfort.

And now let us consider Lady Malcolm's life work, what she accomplished, single-handed and isolated, for the Cause of Brotherhood. Neither an eloquent speaker nor a literary genius—just a quiet unselfish worker, whose heart was a well-spring of Compassion. A mind attuned to the harmonies underlying life's discords—a voice speaking of what it knew in the language of the heart. Such was Lady Malcolm, and through all she said and wrote ran a vein of sparkling humor which brightened the dullest fact, making the darkest outlook seem like a game of hide and seek. She wrote on an average five long letters a day. To use her own words, she wrote "As a soul, a heart, never as a person." North, south, east and west flew these white birds, bearing messages of loving counsel, of hope and abiding faith in the Soul of things. She always strove to awaken in each soul she wrote to a belief in their own divinity, in their own inherent power to conquer and subdue.

I will quote a few sentences from the *Irish Theosophist* of November, 1896, in which Lady Malcolm gives a few "Hints on Theosophical Correspondence:"

"Let your correspondents know that their confidences will be respected. Ever appeal to their better nature; approve, more than blame. Tact and tenderness are necessary; realize to yourself your correspondent's hopes, fears, environment, daily life, before you sit down to write."

Thus she wrote, and thus daily fresh channels were found through which the life-giving currents flowed. To those who were beyond the reach of her pen, she sent books, the writings of those who, having passed through the struggle, turn back to extend a helping hand to those who need it. Such books are earth's priceless treasures. So this wise soul bought countless books and scattered them broadcast through the land—books suited to all ages and conditions. Parcels of these were sent to Lodges and Centers throughout Great Britain, to public libraries and reading-rooms, not to speak of those "isolated members" who were all of them known to and helped by Lady Malcolm.

In the *Theosophical News* of November 23, 1896, we read the following statement:

"The Theosophical Society has lost the visible presence of one of its very best and most devoted workers. Lady Malcolm of Poltalloch died on Monday, October 12th, at 1 A. M., quietly and painlessly, after a three-months illness of terrible pain, borne without murmur or complaint." Shall we mourn for her who has gone? Nay, rather should we rejoice that "the pilgrim" is at rest if only for a little.

This age—this epoch in life's history, needs strong souls—demands them, whether they be powers of good or evil. The host of heaven and hell, of light and darkness confront each other as the iron gates of the Nineteenth century close. Let us raise a song of victory, a full harmonious note of peace and good-will.

A MOVEMENT is on foot which has for its object the opening of the French Academy to women. Among the eminent women who are deemed worthy a place beside the Immortals have been mentioned Carmen Sylva, Queen of Roumania, the Countess Martel, who writes under the pen name of "Gyp," another who is known as "Daniel Lesneur," and Mme. Severine, editor of *La Fronde*.

LADY MALCOLM OF POLTALLOCH

FROM BROWNING'S "SAUL"

COULD I wrestle to raise him from sorrow, grow poor to enrich.

To fill up his life, starve my own out, I would—knowing which.

I know that my service is perfect. Oh, speak through me now!

Would I suffer for him that I love? So wouldst thou—so wilt thou!

So shall crown thee the topmost, ineffablest, uttermost crown—

And thy love fill infinitude wholly, nor leave up nor down One spot for the creature to stand in! It is by no breath. Turn of eye, wave of hand, that salvation joins issue with death!

As thy love is discovered almighty, almighty be proved Thy power, that exists with and for it, of being beloved! He who did most, shall bear most; the strongest shall stand the most weak.

'Tis the weakness in strength that I cry for! My flesh, that I seek

In the Godhead! I seek and I find it. O Saul, it shall be A face like thy face that receives thee; a Man like to me. Thou shalt love and be loved by, forever; a Hand like this hand

Shall throw open the gates of new life to thee! See the Christ stand!

Brief Glimpses of the Prehistoric World

Archeology
Paleontology
Ethnology

Prehistoric Fireplace in Lost Dog Canyon

SEVENTY miles north of the Nebraska line is a cañon rejoicing in the name of Lost Dog. Down this cañon run various little creeks, discharging into the White River. As the cañon approaches that river it broadens, becoming almost circular. The water is consequently shallow. It has eaten a number of channels for itself, and between these it has left various mounds still standing. The bases of these are, however, partially eaten through, and they are therefore mushroom-shaped in appearance. This action is very slow, and residents say that in fifty years they hardly see any change. The top of the mounds represent what was the original level of the cañon's floor. Evidently it required many, many, centuries to eat away the floor to its present level and leave the somewhat harder mounds standing.

Well buried in the side of one of these, several feet from the top, a fireplace has been found. How old is it? In the first place it is covered by a few inches of black soil.

On this is another layer, full of periwinkles, showing that water once stood there. On this are several distinct strata of clay. Therefore, since the fireplace was in use, all these layers have been deposited one after another. And then came the river erosion which has left it all exposed in section. The estimates of the age of the fireplace vary between twenty thousand and fifty thousand years. Our vista backwards of the prehistoric habitation of America is extending rather rapidly. In the middle of the Sixteenth century, Vasquez de Coronado, invading Mexico, heard of a tradition that somewhere far north on the continent was a kingdom of vast wealth, where dishes of gold were on the tables of the nobles, and where the monarchs and their aristocracy sailed the rivers in gold-canopied canoes with twice a score of rowers.

Coronado did not find this pleasing state of things. He only came upon some tribes of Indians, though he journeyed as far as Nebraska. According to the view of ethnology given by Theosophy, that tradition was correct, and the remains of that civilization are yet to be found.

The Indians of the fireplace, of Coronado, and of today, represent the trough between two wave crests of civilization. The second crest is what our own civilization will be when its present baser features shall have disappeared. The value of such finds as that of the fireplace will become more obvious when we begin to see that the line running backwards from them runs also upwards.

STUDENT

THE Egyptian Department of the British Museum has just received an ostrich egg which has been unearthed from the sands of Egypt, and which possesses the curious feature of having been pierced for the purpose of suspension. This remarkably preserved, perhaps prehistoric, egg bears also unmistakable traces of hieroglyphic writing and was doubtless used either as an ornament in the same way as ostrich eggs are used today or as a religious symbol. The latter purpose would seem the most probable, in view of the almost universal use of this symbol.

ASSYRIAN ARMCHAIR OR THRONE

The great excavator of ancient Ninevah, Dr. Layard, found on some of the tablets he unearthed on the site of that famous city "representations of chairs supported by animals and by human figures, sometimes prisoners, like the Caryatidæ of the Greeks. In this they resembled the armchairs of Egypt, but appear to have been more massive."

THE BELL OF CHUMASCACH

The bell of Chumascach, found in County Armagh, Ireland. This bell of cast bronze is 12 inches in height and 8 inches across the mouth and the translation of the Irish inscription which it bears is, "Pray for Chumascach, son of Ailello." As an illustration of retrogression, instead of advance, in mechanical arts, some of the ancient Irish bells are remarkable. Mr. John Cooke, the Irish Archeologist remarks, "considering . . . the skill that had been attained in metal work in Pagan days, it is strange that the earliest examples in Christian times were of a very rude kind."

Professor Petrie's Discoveries in Egypt

PROF. FLINDERS PETRIE has enriched the world by his discovery of a statuette of King Cheops, the builder of the great pyramid at Ghizeh, which is not only the largest building in the world but which seems likely to be also the most permanent. The statuette is of ivory and was found upon the site of the ancient Temple of Abydos.

Other discoveries of Professor Petrie are likely to carry bewilderment to the minds of those who have been accustomed to describe the attainments of ancient Egypt as the lisping of an infant humanity. These discoveries date from about 5000 years before Christ and consist of exquisite pottery and carvings, comparable in every way to the very finest work of Greece and Italy. Models of a camel's head and of a bear show these animals to have been known in Egypt long before the date usually ascribed. Specimens of iron also prove that this metal was in use at least as early as the Sixth Dynasty. X.

Italy's Trouble in Rebuilding the Campanile

A LITTLE trouble seems to have arisen in connection with the rebuilding of the campanile at Venice. Political intrigues have interfered and brought the work to a standstill. Signor Boni, to whom the work was entrusted, has now resigned and no one else seems willing to face the difficulties. Signor Boni contended that the remaining base of the tower should be removed down to the pile heads, as the stones composing it were so rounded and damaged that it was impossible to use them for rebuilding. This the authorities have forbidden and Signor Boni has therefore withdrawn and all work has ceased. The excavations which have been already done have brought some curious things to light. A thick foundation wall has been found some little distance below the surface and this has been identified as a part of the hospital built by Doge Orseleo in 976. At a greater depth a still more ancient and interesting discovery was made. The workmen found the stakes and wattlework which belonged to a canal built by the first lagoon inhabitants before the invasion of the Huns caused the migration of the people of the mainland.

The wattlework bears the same artistic designs as those which were subsequently used for vases and carving in the Eighth and Ninth centuries. These curiosities are being carefully preserved in the ducal palace and will be examined and studied very carefully. In the meantime we hope that the restoration of the campanile will not be indefinitely delayed.

STUDENT

A REMARKABLE book has just been issued by Gen. Di Cesnola. Limited as the edition will be to two hundred copies, it will probably be little known outside the great libraries and museums of Europe and America. When General Di Cesnola was the United States

Consul he turned his attention to archeological research in Cyprus. Through his explorations many sites were explored and hundreds of the most exquisite examples of ancient Cypriote art and craftsmanship were brought to New York and placed in the Metropolitan museum. It is to a minute and detailed description of these that the book is devoted.

Studies

The Dooryard Orchard—the Fig Tree from the Orient

THE Eastern phrase, to sit under one's own fig tree, has much the same meaning that the fireside gathering has to the northern mind; it means home. The tree is of widespread growth, with a thick foliage giving a cool and comfortable shade, while the fragrance of the leaves and the abundance of the fruit complete its list of merits. The picture shows the shape of the leaves and growth of the fruit better than description could. The fig is an anomaly in fruits; it has no blossom, or rather it is itself a blossom folded into itself. When immature it is green and hard, having a thick, white juice, which will take the skin off the lips and tongue like an acid, but as it ripens it softens and the juice becomes thin, clear and sweet. Then it is the joy of the birds, which keep the tree relieved of all ripe fruit unless it is guarded.

There are many different sorts, some remaining green in color even when ripe, with a bright red interior; others become a beautiful purple.

The Smyrna figs are of the green skinned sort, and owing to a peculiar habit of growth require the presence of wild or capri fig trees in the vicinity to give the Smyrna its delicate flavor, which the others cannot attain by any means. So closely was this secret guarded by the Syrians that it cost the United States government many years of experiment at a cost of many hundreds of thousands of dollars to discover it.

But now that it is known, Smyrna figs equal to the best are raised in California, the branch shown in the accompanying illustration being from the Point Loma Homestead orchard. Unfortunately figs are so perishable that they cannot be shipped far fresh, and the dried ones have a very different flavor. Delicious as the fresh fig is, nearly every one dislikes it at first and has to learn the taste for it.

THE Romans were well known as lovers of roses, using them at their banquets, funerals and triumphal processions. The modern student is often perplexed to find the same symbol used for life, for victory, and death. This refers doubtless to the mystical death of the passions and is derived from the ancient mysteries, where physical death is sometimes intentionally confused with the spiritual life. STUDENT

THE *Scientific American* tells of a spider which captures moths, etc., by throwing at them a sticky ball of gum with a line attached.

The gum spreads and sticks when it strikes and the spider hauls in the game. We never saw a spider do that, but we have one here that uses a net, both for self-defense and to capture prey. When anything approaches he throws out several inches of line, which is deftly caught by the hind legs and kept separate in parallel lines across them, they being held nearly half an inch apart. This is his weapon, and his manner of attack is to hold the legs aloft and if possible bring them, with their cross-lines, down over the victim or intruder. If the stratagem is successful the captive is rapidly wound up and attended to. STUDENT

Leigh Hunt's Breakfast Bouquet—The Nature Touch

LEIGH HUNT always used to declare that no breakfast table was complete without flowers, and rather than go without, he would gather a few heads of clover from the nearest grass-plot, or pick a sprig or two of grass from between the railings of a public garden. A single head of pink clover may give color to the whole day's thinking, and a blade of grass may serve as a mental tonic for our duties of the day. What is the subtle magic of the nature touch? Partly perhaps because a single blossom puts us into touch with the whole green and growing world of which it forms an integral part. It does in a sense bring into our room the waving forests, the prairies aglow with flowers, the fragrant orange groves of California and the gardens where the roses grow.

The flowers do not preach any particular virtue that I know of, nor do they, like Moses, tabulate sins to be avoided, but they shed an influence, they exercise a charm and in the atmosphere they bring with them, our grosser thoughts are starved and have no place.

It is hopeless as well as useless to try to put their message into words for another's ear; they have a special and a private message for each, a secret that cannot be communicated.

Why not put Leigh Hunt's method to the test and give the flowers a "hearing"? STUDENT

A BRANCH FROM A LOMA-LAND FIG TREE

The Mystery of a Chirrup

AS the night air thrills, and, as it were, sparkles with the musical chirrup of innumerable crickets, one falls into a curious speculation.

If the voice of a man were to his mass as is the noisemaking machine of a cricket to his mass, what could he not do? Islands and even continents would shake! Darwin says:

The stridulation produced by some of the locustidae, is so loud that it can be heard at night at the distance of a mile.

A well-known writer on sound calculates that the chirrup of one such insect

Excites, according to the condition of the atmosphere, sonorous tremors in no less than from five to ten million tons of matter. And yet the insect that accomplishes this extraordinary work does not weigh more than a quarter of a pennyweight.

Rightly does he call it one of "those innumerable mysteries of the natural order which hitherto have baffled all attempts at their solution."

Now, sound waves are propagated in all directions from the sounding body. Therefore, as these "five to ten million tons of matter" (Zahm) are set a-thrill, a part of that thrill consists in a lift of them through the space of a vibration against gravity, and a certain amount of molecular separation against cohesion, as well as lateral movement against inertia. And it is done by one insect! If we think it out, we shall perceive that radium is not the only miracle-worker in the universe.

We live in present touch of the vibrations set going by every word ever spoken by man, every sound uttered by beast and insect, or made by tree or stone. The universe is never precisely the same after a single tick of a clock. H.

Universal Brotherhood Organization

Central Office Point Loma California

A GOOD audience was present at the Isis Theatre on Sunday evening to hear the two addresses which had been announced and which were as usual accompanied by some very excellent musical selections. Miss Bonn's address was entitled "The Choice of the Ways," and she said, in part, as follows: "We have all heard that 'There is no Royal Road to Learning.' Most of us have probably found by this time that it is true, and also that there is no royal road to anything worth having—the roads that seems royal to 'the lame and the lazy,' lead down hill to the swamps and pitfalls; they are smooth and slippery and very hard to climb up again.

"In every walk of life—in literature, music, art, science and business—success comes only through earnest and indefatigable effort—the all unestimated pains that go to make success the world may see."

"Look through the annals of time at the lives of those illustrious ones who, in one way or another have saved their race, have elevated human thought and feeling, have achieved something for which men called them great. We read of poets and musicians starving in garrets, of scientists and inventors undismayed by lack of means to carry on their work, of explorers and discoverers suffering privations, exposure and death, of patriots often misunderstood, laying down their lives for their country, of great teachers being persecuted and defamed—toiling, suffering, sacrificing, enduring, striving, daring and aspiring on that road which is a royal road, because the real pangs of men trend thereon.

"There is another road through life—it is called the easier way. It is the way of self-indulgence and mediocrity, of the comfortable millions who jog through life in a state of animal well-being, saving themselves trouble or fatigue or hard work—you know the kind, you see them all around you; they are what Browning calls

Finished and finite clods,
Untroubled by a spark.

"That is a splendid description, for the divine spark in us does trouble, and sting, and urge, and goad, until it arouses us to seek the higher path of growth and effort. And Longfellow says:

Be not like dumb driven cattle,
Be a hero in the strife.

Going out of the Crusaders

LOMA HOMESTEAD was the scene of a general social gathering of students on the evening of Nov. 21, in honor of the going away of the three International Crusaders. When it was announced that Mrs. Tingley had appointed Dr. Gertrude Van Pelt and Professor de Purucker to accompany her on what will doubtless be the greatest Crusade ever yet undertaken, there was general rejoicing among the Students.

The gathering of Saturday evening was but one of many evidences that the Crusaders were to go forth a thousand fold strengthened, because of the loyalty, courage and devotion of those who remain at their posts of duty in Loma-land.

The great Homestead Rotunda was decorated with flowers and greenery, the stairway being hidden behind a mass of palms and eucalyptus. Roses and flowering shrubs lent color and fragrance to the scene, and the soft music of the student orchestra made the whole complete. The scene was characteristic and usual, but an added dignity and heart touch was apparent, because of the interblending in all hearts of sadness and of joy over the Leader's departure—sadness that we must miss her for a little time, joy that she is going out unto humanity with her message of wisdom and hope and love.

The program was opened by the Egyptian dance, with garlands, cymbals and the stately majestic Egyptian music. Then the Raja Yoga children gave their "Rainbow Play," the streamers of rainbow tints, with the flowers and rainbow costumes giving a pretty note of color to the scene. Encircling them stood the tiniest tots, wee "Lotus Buds" holding the great white cable-tow. These represented the young Republic of Cuba. This was followed by songs from the children and from the ladies' chorus and music from the orchestra. The evening closed with a second stately Egyptian dance, serene and dignified, its beauty prophetic of the day so soon to come when all that was best in the life of the ancients shall again become a part of humanity's life.

A. V.

AND Jesus said, For judgment I came into this world that they which see not might see, and that they which see might be made blind.—*John, 9 ch.*

LOMA-LAND STUDENTS AT ISIS THEATRE

Two Interesting Addresses: "The Choice of the Ways" and "The History of Egypt"—Music

Reprinted from the San Diego News

"Then we have the two roads stretching out before us—the one apathy, paralysis, death; the other interest, energy, action. These two roads are before us from childhood, when we sit with books or other tasks in hand and look out into the sunlight and long to drop our work and run away to play—then if the temptation is too often yielded to, when examination day comes, there are tears and disappointments and vain regrets for those golden hours of play, that now weigh like lead upon our hearts.

"And as the years pass and we are children grown with responsibilities deepened, it is just the same—if we take work-time for play, 'for everything there is a season and a time, for every purpose under heaven'—the examinations come and the heartaches are more bitter when we are 'weighed in the balance and found wanting.'

"But sometimes the choice between these two roads is more subtle—we become perplexed and do not see clearly, which is the right one. A wise Teacher has said, 'When two conflicting duties present themselves, choose the harder.'

"How we often fool ourselves with the thought that we are making a sacrifice of our life to others, when in reality we are choosing the easier way—we are simply enduring negatively and benefiting no one—rather than take the harder way of a positive effort, to make which may tax our powers to the utmost, but which will free us and help all concerned.

"The easier way is not sacrifice—sacrifice lies in the harder way—the sacrifice of the lower to the higher, and the exercise of courage, determination and will, which are drugged to sleep along the easier way."

Mr. Sidney Coryn also read a paper on the "History of Egypt," which was interesting and well received. The paper is the first of a short series on Egyptian history, which will be continued every Sunday evening during the next few weeks. The paper which was read last Sunday evening was mainly preliminary, and dealt with the duration of the history of Egypt and the manner in which it has been deciphered.

He was despised and rejected of men, a man of sorrows and acquainted with grief. And as one from whom men hide their faces, he was despised, and we esteemed him not.—*Isaiah, 53 ch.*

CHRISTMAS GIFTS---A Suggestion

CHRISTMAS is preeminently the time for the giving of gifts, of which the selection is usually a task demanding much anxious care and much lost time.

The essentials of a worthy gift are value and permanence, and in the search for these qualities works of literary and lasting worth naturally take a foremost place. A good book is an unfading treasure, a storehouse of which the contents become more valuable with time, an instrument for the increase of intellect and for the making of character, a link between the giver and the receiver which grows stronger day by day. A year's subscription to the NEW CENTURY PATH is surely a Christmas present worth giving and worth receiving, a weekly reminder of the good will which called it forth. Subscriptions sent in now will be in good time to enable us to deliver the first number at Christmas.

Retributive Justice --- Called Karma

A REMARKABLE story, several centuries old, is told in a historical paper now included in Lord Montague's London collection. It reads as follows:

A boy seven years old came up into a gentleman's chamber and prattled to him and drew his sword and flourished with it. The gentleman, being in bed, wondered to see the boy toss his blade so, and said: "So, good boy, thou hast done well. Put in the sword." The boy persisting, the gentleman rose and held him the scabbard, and the rude handed lad, thinking to sheath the sword, lustily chopt it into his belly. Company were called. One offered to strike the child. "Let him alone," quoth the gentleman. "God is just. This boy's father did I kill five years since and none knew. Now he hath avenged it." And the gentleman died the second dressing.

Homer as an Historian

IN the Baron de Mandat-Grancey, author of *Aux Pays d'Homere*, we have a distinguished writer who does not hesitate to express his exultation at the discoveries in Crete, which so clearly prove the existence of writing at that early age. The Baron is an enthusiast of the first water, and as such he is a refreshing figure in literature. He believes that the heroes of Homer were realities, and not mere vague abstractions, and he is now able to triumph over those who have contended that written records of their achievements were impossible, and that the thirty thousand verses of the *Iliad* and the *Odyssey* could not thus have been handed down to posterity. The Baron de Mandat-Grancey expresses his delight in the following words:

I admit that I was glad to see this crushing blow fall upon them, having always detested those people who have a mania for explaining away things, and who are never content until they think they can prove that everything is mean and ugly, when it is so much simpler and so much more agreeable to believe all the legends one hears if they are beautiful and poetic, especially if there is nothing to be gained by disputing them.

While we have every sympathy with our author we would venture to mingle with it a word of caution. In a problem such as this, it is possible to err in two directions, and it would be as unfortunate to go too far in the direction of realism as to trespass too deeply into the domain of allegory. The enormous value of Homer's writings, as of so many others of a like nature, is the blending of history and of allegory, the utilization of actual events to convey a deeper and a spiritual lesson. Nor is there here an outrage upon or perversion of history. The true poet recognizes the profound spiritual meaning of events, and for him the progress of a nation is also the story of a soul. That Ulysses and Troy and Argive Helen were historical figures does not prevent Homer from conveying by their story the most profound spiritual teachings, and it is because we fail to comprehend this combination of the historical and the spiritual that we are alike perplexed by both. It is this same cloud which overhangs our interpretations of the Old Testament, and it will never be dispersed until we learn that there is a spiritual law underlying human history, and that to divorce them is to destroy our own powers of right and understanding. It is quite as unjustifiable to look upon Homer as a mere catalogue of events, as it is to entirely dissolve its historical element into allegory. It is both history and allegory and to be understood in no other way.

STUDENT

ALL nature is in motion. He who improves a little each day, advances; he who deteriorates a little each day, retrogrades; no one stands still.

The Roots of Speech

THE *Academy* has a suggestive article entitled "Recreations in R." It is based on a study of all the words in a dictionary beginning with the trilled *R* and the short *a* after it. These, says the writer,

Make a sound which is often wonderfully suggestive of the thing described by the word which they initiate, or of the mood of the speaker using such a word. You feel this in words of very diverse meanings—in rapture and in racket; in ransack and in ravage; in rally and rampageous; even in raffle. . . . When a man relates that he was very hungry, hear how he *rasps* on the first syllable of *ravenous*.

Then he instances a number more of such words: rankle, riff-raff, rabble, rascal, rattlebrain, and so on. The characteristic of this short syllable *ra* is obviously a sort of coarse energy. And energy of other varieties is conveyed by the replacement of *a* by other vowels, as in roar, ruin, rage. Even where no vowel follows, the same effect is sometimes obvious, as e g in energetic. The weak effect of negro speech, and of the once (ultra) fashionable English substitution of a sort of *w* for *r*, is due to the absence or faint presence of this consonant.

It is obvious that this is on the line of a study of the very roots of language. In the learning of the art of dramatic recitation, the pupil is taught to picture that which he recites. If in saying "the billows roll," he does not picture to himself the rolling, his words will lack convictive force. The *Academy* article goes one layer deeper and begins the study of the feeling-pictures that lie in the elemental roots of the words themselves. Words are continually changing their accent and pronunciation, and it may be that one reason for this is an unconscious attempt to bring the sound closer to the feeling they denote.

K.

Hackneyed Quotations

SOME one has been writing to one of the English religious papers urging preachers to read the poets more, in order that their quotations may be less hackneyed.

The hackneyedness of quotations does not rest on the frequency of their use. It rests on their use to cover gaps of thought and deficiencies of spiritual experience. Many preachers seem to think with their memories instead of their minds. While the mind is engaged in its usual occupation of wandering, it is so easy to cover its momentary absence with a quotation. And the quotation therefore naturally sounds empty and becomes presently intolerable.

The writer we refer to quotes two fragments which, he suggests, should now be given a rest:

Closer is He than breathing, and nearer than hands or feet.—*Tennyson*

Men may rise on stepping-stones, etc.—*Longfellow*

Would the first sound hackneyed on the lips of a man who had realized the tremendous significance of the words, experienced the transcendent uplifting of consciousness that would come of such a realization?

Could the second be uttered flatly or tediously by one who had consciously risen on the stepping-stones of a dead self?

There is an old story of a professor of rhetoric who criticized his pupil's rendering of "the billows roll" from the ground that, as he uttered the words, the billows did not roll.

By all means let preachers read the poets, and all great writers, to "take the taste of newspaper and magazine slovenliness out of their mouths," and to raise their thought generally. But this is not enough: the thought thus raised must stay so. The preacher who does not live the strenuous inner life, who does not keep the chords of feeling tense that they may yield ever higher and sweeter music, is false to his trust. He may be a good lecturer, a good rhetorician, a well-arranged storehouse of quotations; but he does not discharge the function of his profession; he is no light in the darkness. To the preacher more than to any other, "every dawn of morning" should be kept sacred "as the beginning of life, and every setting sun as its close."

A.

Revival in Georgia

THERE have been some revival meetings at a city in Georgia and large crowds seem to have been attracted. The chief features were apparently furnished by a clergyman from a neighboring city, whose conceptions of religion and of Deity took the form of vivid descriptions of a material hell in which many "will be burned and roasted." He was "as certain that there is a place called hell" as that he was at that moment standing upon the platform. There is therefore no more to be said. After the reverend gentleman had thus delivered his glad tidings of great joy we learn that many persons pressed forward to grasp his hand and to ask for his prayers.

That it should be possible to gather together a number of professedly intelligent persons to listen to such heathen ferocity as this is nothing less than a satire upon our education and upon our civilization and an insult to God. Very many were doubtless attracted by a natural love for the antique, and indeed we feel that our comments would be more congenially located in our archeological department than elsewhere. In a few years time such sermons as this will be much more rare than they are now, and we may be discharging a duty to posterity by preserving some contemptuous record of the way in which a religion of love can be perverted and debased. If this be the God who "created man in his own image" small wonder that cruelty flourishes throughout the world. It must indeed be painful for those faithful ministers who are preaching the love of the true God to see their teachings confounded with such as these.

STUDENT

"WHAT did Robert Louis Stevenson believe? So simple a system of morals was never more simply set forth. 'To owe no man anything, pay scot as you go; to consider your neighbor's happiness; to live cleanly and honest; to do no scamp work; to sing loud at your task, and moan, if you must, under cover; and above all, to obey: the creed of the soldier and the gentleman.'"

AMONG the chief rulers many believed on Jesus, but because of the Pharisees they did not confess him openly lest they should be put out of the synagogue, for they loved the praise of men more than the glory of God.—*John, 12 ch.*

* Good Work Is the True Prayer *

HAVE been talking to that nice Mrs. Seymour this afternoon," said little Mrs. Kennedy to her husband, as she poured out his tea.

"And who might Mrs. Seymour be?" asked the big handsome young fellow, who calls the little woman sitting opposite to him, wife.

"Oh, Geoff, what a memory you have! Why, don't you remember I told you all about her and her husband—the very good young curate, with a very gloomy face. Oh, dear I am so sorry for her; he must be a dreadful man to live with; but she worships him. She says he is so good, and so clever, and so far above her in every way."

"Just like me," murmured Geoff, sotto voce.

"And she says," went on his wife without heeding his interruption, "that he doesn't care what he wears or what he eats."

"Just like me again," said Geoff, helping himself to a second serving of steak and kidney-pie.

"And she can only tell whether he likes things or not that she cooks for him, if they go quickly or slowly. She thinks that shows what a great mind he has, because he is above talking about his food and things, but I should not like that at all. I wouldn't like it if you didn't say how good that pie is that I made—'tis, isn't it?"

"Rather," said Geoff. "I've given this piece of steak more than the thirty-nine bites, advised by Mr. Gladstone, and it isn't half done with yet. There's something very sustaining and lasting in this pie of yours, little woman."

"Geoff," laughed his wife, "do be sensible for once. I don't care," she went on, "I don't think it shows a person is great, and lofty, and superior, and things if he can't be thoughtful enough of others to recognize even little things like that, the duty of appreciating that it means a lot of loving thought and time, and even fatigue, to cook dishes that he would fancy. I call him a selfish pig."

"Why, Marjorie, what language!" said Geoff, raising hands and brows in mock horror.

"So he is. Now I know some really great and noble and big-hearted people —"

"One is now before thee," interrupted Geoff.

"O Geoff dear, truly, do be serious. I do mean it really. People who are doing big work for the world, and they would not 'be above,' or 'have no time' to say how good a thing is, or to tell the one who cooked it, so."

"I have a solid half hour to spare, little woman, and I'll spend it in telling you your pie was awfully good, it really was."

"I think that the greater a person is, the nearer he can get to the small people and small things, and I think that if a person thinks"—("Hold on," said Geoff. "I can't follow, there's too much of the think")—"he is too big, and too far above such little things, to notice them, he is generally a self-satisfied and completely selfish man like Mr. Seymour. And he, poor fellow, thinks he's 'living the life,'" she added, with a smile.

"Oh! wad some fae the giftie gie us
To see oursel's as ithers see us,"

quoted Geoffrey. "In my humble opinion, of course I'm only a man, and may be wrong; in my opinion, Mrs. Seymour is almost as much to blame herself for being such an adoring slave to him. Why doesn't she stand up straight and shake all that nonsense out of him?"

"I don't know," said Mrs. Geoff, "I would, if it were you."

"So you would," laughed her husband, "although it would be five feet nothing against six feet two."

Marjorie had taken up the weekly paper and was glancing casually down the columns. "Oh! how terrible," she suddenly cried, "just listen to this—a poor little child found on the step outside the great door of St. John's Church, frozen to death, and oh! the pitifulness of it, she was a little match-seller, and there was found around her all her store of matches burned. Think of it, Geoff, the poor mite had tried to warm herself by them," and Marjorie burst into tears. "And they found her there dead, leaning against the closed door of the 'House of God'—why can't they at any rate leave the door always open, so that poor starving creatures can find some shelter where they have a right to look for it?"

"That wouldn't do at all," said Geoff, "some of the poor wretches in their dirt and rags might sit on the plush seats of 'My Lord and Lady,' and soil them. You mistake, too, in saying they have a right there; in the world of today they have no right there, and would not be allowed to enter. But, to be just, one or two big-hearted men have thrown open and warmed their churches in the city during week days, for the use of those who have no place to shelter, or to eat their poor meals, and who else would have to walk the pavements, in spite of frost and wet."

"But that poor little child, Geoff, think of her alone, in the great busy, cold world, having to earn her own living, and only nine years old. Thank God she is away from it all now, and when she comes back again, she will find the child world will mean a world of love and warmth and happiness both for her and all other children."

* * * *

"Is Peter really such an obstinate old sinner," said Mrs. Kennedy to Mrs. Seymour as they went down the irregular old village road.

"He is perfectly hopeless," said her companion. "Why, my Harold has worked with him, and prayed with him, and talked for hours, and it's no good. And if Harold can do nothing, why"—and she raised her hands to suggest the hopelessness of the case.

"Oh what a little lump of love," shrieked Mrs. Kennedy, delightedly, as she darted forward and picked up a little bronze-haired rosy checked child standing in the road.

"Who is she?"

"Why that's old Peter's little grandchild, she lives here, and that's her aunt, the slovenly daughter I told you of," pointing to a dirty cottage, and a correspondingly dirty young woman standing on the step, "but I must leave you here, good-bye."

Mrs. Kennedy stood by the pretty daintily clean little child thinking—then with an "I'm going to try any how, if she keeps the child so clean there's plenty of hope;" she walked up the path, and with a pleasant "May I come in and talk a bit," she entered the cottage and after half an hour's chat, chiefly about the child, and how fond Jenny was of her, her dead sister's child, and how she loved to see her look clean and pretty, Mrs. Kennedy went away.

"I'd loike 'er to come more," said Jenny to the child, "she makes me feel kind 'er warm, an' she aint prayed neither, nor left no traks for us to read, an' she don't make ye feel she's so powerful good an' different loike some o' the gentry does."

"Have you ever used Hellis's whitening for your doorstep?" said Mrs. Kennedy one day on leaving, looking at the grimy step that certainly had never seen anyone's whitening for many years.

"No'm," said Jenny.

"Well I'll send you a cake, we always use it, and you can see how you like it."

When old Peter came home from the "Dolphin," he was startled to see a daz-zlingly white door-step. "'Ullo, turnin' gentry are ye?" he growled, but at the same time going round to the back door to avoid soiling it. "Better use some on that face o' yourn—needs it."

When Mrs. Kennedy came again, Jenny was brushing the child's beautiful hair. "Ain't it a lovely color 'm," she said, smoothing it lovingly, "looks a'most like gold sometimes."

"Yes, she has your hair," said Mrs. Kennedy.

"Mine, 'm," said Jenny, putting her hands up to her tangled untidy hair, "oh no, mine's all rough an' dull."

"Yes, 'tis now because you give all your time to little Gracie here; if you were to brush and wash yours as often, it would be just as bright and lovely. Do, and I will show you a much prettier way of dressing it when I come again."

It was not many weeks before Mrs. Kennedy had thoroughly won the girl's heart and confidence—of how mother and Sister Rose, both dearly loved, had died; of how "feyther" had taken to drink, and now never came home except to meals and to sleep, and then the biggest trouble of all, when young Jim North went to "Lunnon" to get work and she had never heard from him since. So that now the only thing she had to care for and love was the little Gracie leaning against Mrs. Kennedy's knee. "I do like to be clothe to you," lisped the child, looking up in her face, "you do thmell so nithe and clean alwayth."

Mrs. Kennedy laughed, but Jenny looked distressed, and sending the child away, the girl's real friend took the opportunity, with the child's little speech as a text, to talk to Jenny seriously of the wrong she was doing in living as she did. "It is just as much 'worth while' to do our duty whether we think it is appreciated or not, and it will be appreciated when it is seen that you are trying to pull yourself together and keep tidy and bright. Didn't your father tell you, the other day, that 'Tha' face wadn't zo bad when the dirt were off'n it'? You see he notices. And I don't believe you've seen the last of Jim, either. Why, suppose he should come in at this minute, wouldn't you like him to see this change in you and the old cottage?"

It was the talk of the village, of how old Peter's Jenny was "made over again." And old Peter himself would occasionally brighten (?) the cottage of an evening with his surly old presence and strong old pipe.

"And I've never prayed a single pray," laughed Marjorie to her husband, "that is to say, not out loud," she added, more quietly.

BLESSED are the merciful, for they shall obtain mercy.—St. Matthew

✻ The Trend of Twentieth Century Science ✻

The Ancient and Modern Use of the Magnet in Disease

THE magnet seems to be reentering a field of usefulness in the treatment of disease. We say reentering because its history in that connection is rather checkered. Paracelsus lauded its curative properties, and his cures proved what he claimed. But he was a reformer in many things, an annunciator of new and uncomfortable ideas in medicine, philosophy and religion. So he had to be—and duly was—discredited in every convenient way. His real enemies made use of the jealousy of the medical profession, and the magnet shared in the general discredit into which his whole reform ideas were made to fall. Since then it has never, we think, been seriously considered by the orthodox as a therapeutic agent. To use it is indeed today a mark of medical quackery. Von Helmont had something to say about it in the Sixteenth century; Mesmer used it in the Eighteenth; Hahnemann “proved” it in the Nineteenth; and Reichenbach studied its action on his “sensitives.” Some years ago Edison took up the matter. He placed a boy between the poles of a powerful horseshoe electro-magnet for a long time, but noted no physiological change. So he concluded that the instrument had no action of that kind.

But it has now been shown by two French scientists that the magnet has a marked action on infusoria. These minute organisms, placed in a powerful magnetic field, soon began to slow their ciliary movements, ceased gradually to move about and to reproduce themselves, and finally died. Many varieties were subjected to experiment, but they all showed various degrees of these phenomena. The magnetic influence seemed comparable to that of the violet rays.

The next step will be to try these experiments on animal life, and on the organisms of fermentation and disease. In regard to the latter there seems little doubt that the results would be the same. Paracelsus claimed that the magnet would cure cancer. Modern science may yet establish his facts. But doubtless without acknowledgment, for in medicine he is still the “arch quack.”

Scientific Study as a Means of Broadening Character

IN his recent Presidential address to the British Association, Sir Norman Lockyer did not select a very high nor a very dignified ground for his advocacy of scientific study. It may be that tariffs and reciprocities have invaded the silences of the laboratory or it may be that the president was trying to speak in the language understood by the people. He succeeded. He pointed out that money spent in the advancement of science would pay a good dividend and that the nation would make a sound financial investment by a more liberal endowment of research. It may be so, but it is a point too unimportant to discuss in view of the wider and the grander results which can so easily be made to follow the true study of true science. Certain it is that Huxley would have held himself proudly aloof from such advocacy, holding as he did throughout a long and strenuous life that the supreme end of scientific training is to mold the character and to enrich it by high ideals.

Scientific training naturally begins with the acquisition of facts and these facts having been acquired, may be utilized in two ways. They can be coined into money which is the basest use to which we can put them and a degradation of science, or, they can be used as thought material, as the keys with which to unlock the doors of actual knowledge and thus reach a comprehension of the great laws of nature of which the human soul is as much a part as is a blade of grass.

The capacity of acquiring facts is an affair of memory, and of memory only. It is a preliminary to science, but it is not science itself. The ability of the true scientist will show itself in his power to recognize the laws underlying those facts, to comprehend those laws in greater laws, and so finally to perceive the trend and intention of the evolutionary tide which carries all things within itself. To the scientist of the future, every ascertained fact in visible nature will be related to a corresponding fact in human consciousness and there will then be no longer a conflict between religion and science because each will then have found the Gnosis.

The Source of Pain—Mental and Bodily Causes

SOME interesting researches are now being made and published concerning the real seats of pain. These are often quite distinct from their apparent seats. The mind constantly makes erroneous judgments in this matter. For example, the pain of early disease of the hip is often felt in, that is, believed by the mind, to be in the knee. The mind is not in the same sort of touch with the internal organs as it is with the skin. They have a large measure of local government, and so as the mind is not in the habit of sending messages to them, it does not expect to get messages from them. Therefore when it does get an agonized message it misinterprets it and assigns the source of it to some part with which it is in close touch, mostly the skin. Recent research is therefore concerning itself with the question! Which skin-pains denote disease in internal organs?

Bodily matters have their analogies in mental ones. And so we are constantly making wrong assignments of the sources of mental pains. We are in mental pain a good deal of the time. Accordingly we assign our pain or discomfort to our surroundings, to the presence of some one, to something said by some one, to our duties, or to the necessary limits set by society to our actions. It is often due to none of these, and if we escape them all, the discomfort would soon return. The only cure is to look within and make health there.

There are moments when a profound silence of mind and body comes upon us. It is in these that the mind is healing itself. It should not during these moments be let to wander, but be held to its highest, to the Light of life. They are its expansion, its diastole, after long contraction upon purely personal and limited matters. We get such moments of intense fullness after the cessation of high music. But whenever they come we are using them wrongly if they do not elevate, if they do not make all outer and transitory discomforts less, if they do not show us the emptiness of our little personal ambitions, vanities and irritations, if they do not make us larger, nobler, and more tolerant, more compassionate. But if they do that, then we have found the path of cure.

A.

Some Specious Arguments of the Vivisectionists

THE arguments of vivisectionists are devious in the extreme, and their “facts” are usually put forward with a calm reliance upon popular ignorance. We are, for instance, told that the discovery of the causes of myxoedema and its consequent successful treatment are largely due to vivisection. The fact, however, is that in 1882 it was noticed that when the human thyroid gland had been removed in the operation for the cure of goitre, myxoedema generally supervened. This fact was well recognized and established, and it was not until 1884 that Sir Victor Horsley removed the thyroid gland from monkeys and found that the result was the same as in the case of men. And yet we are told that this knowledge is due to vivisection. Apart from the moral ground that we have no right to derive profit from the torture of animals it will be usually found that the profit is either non-existent or of the most shadowy description.

STUDENT

Scientific Theories of the Martinique Disaster

THE scientific investigators who have been inquiring into the nature of the volcanic outburst which so devastated the islands of Martinique and St. Vincent, have now come to the conclusion that the fiery clouds which swept over the land did not contain explosive gases as originally supposed. The generally received scientific opinion is that these clouds were composed of steam charged with burning ashes, and hurled with tremendous violence by the explosive force of the volcano. It is, of course, only within recent years that volcanoes have been made the subject of scientific examination, but it is believed that there has been no other recent illustration of damage resulting from such a cause. The destruction of Pompeii, however, had many features in common with that of Martinique, and the same deadly forces may also have been operative there.

STUDENT

Here and There Throughout the World

HISTORIC MELROSE ABBEY, SCOTLAND

Scotland's Famous Ruin MELROSE ABBEY is one of the most charming pieces of ancient architecture to be found in Scotland as well as a monument of vicissitudes which it would not be easy to equal. Its origin is somewhat obscure. It is known that there was a Columbite Monastery near the village of Melrose which was destroyed by Kenneth McAlpin in 839. King David's Abbey which was cared for by the Cistercian monks was dedicated in 1146 and was destroyed by Edward II in 1322. Bruce did his best to restore it, but Richard II ordered it to be burned in 1385. The Abbey as it now stands probably therefore belongs to many different periods but chiefly to the Fourteenth century. The many priceless documents which it once contained are now preserved elsewhere and form the authority for a great deal of Scotch history.

Finland's Wrongs and the Higher Law THE pressure upon Finland continues unabated. Ex-Senator Mechlin, now resident in Stockholm has received an order from the authorities forbidding him to return to Finland. Mr. Mechlin was a prominent publisher in Helsingfors and professor of Constitutional Law at the University in that city. For eight years he was a member of the Senate and while there he filled many important administrative offices. Finland has among her sons many who will counsel her to patience because they know that patience is a direct appeal to the higher forces, an invocation of the divine law. Many are the instances in history where national suffering has occupied no inconspicuous place in the perfecting of a people for a great destiny.

American Statue to Poland's Hero A MOVEMENT is on foot to erect a statue to Kosciusko in the United States and the project seems likely to be carried out. Funds are to be collected in Poland, America and France, and it is said that Secretary Hay warmly approves of the idea and has pointed out a suitable spot facing the Rochambeau monument. An international exchange of heroes has much to recommend it if only as a reminder of the unseen storehouse of valor from which all nations have drawn in their hour of need and which is not empty even in this age of mediocrity.

Dreyfus' Counsel to Be at St. Louis THE St. Louis Exposition will have a distinguished visitor in the person of Maitre Labori, the eminent French lawyer whose defense of Captain Dreyfus at the Rennes court martial is not likely soon to be forgotten. Maitre Labori risked not only his name and fortune but also his life, and his undertaking was a work of chivalry of which the bar has not furnished too many illustrations. We trust that Madame Labori, who is an Englishwoman, will accompany her distinguished husband.

Italy's King and Queen in France THE rapprochement between Italy and France is as gratifying as that between England and France. King Victor Emmanuel and Queen Helena have been worthily received in Paris not only by the President and the official representatives of the Republic, but by the dense masses of the people who have been vociferous in their welcome to the royal visitors. The King of Italy is well known as a collector of rare coins and the city of Paris has accordingly presented to him a beautiful cabinet of unique medals. The General Council of the Seine also made a presentation to the Queen.

Guard the Royal Family of Germany THE German police are envious of the comparatively light duties which fall to the lot of those whose mission it is to guard the safety of the rulers of some other countries. Almost incredible as it may seem the arrests of those suspected of designs against members of the German Imperial Family average one per day. These arrests are not usually chronicled as the German authorities have learned what we have not yet learned, the power of suggestion upon minds unbalanced and prone to mischief. The "liberty of the press" has sometimes a wider significance than we suppose.

U. S. Cruisers to Go to East Africa THE American Government, desirous to mark its interest in the commercial development of Abyssinia, has decided to send two cruisers and a gunboat to Jibuti, on the east coast of Africa. Mr. Skinner, the United States Consul at Marseilles, will pay a personal visit to the King of Abyssinia, with a view to the conclusion of a commercial agreement, and will probably start upon his mission in the course of a few weeks. The warships which it is intended to send are now in Turkish waters, and their despatch is of course conditional upon the state of affairs in eastern Europe.

No More Chaplains for British Navy THE British Admiralty is introducing some reforms into its personnel, and one of these reforms is the abolition of the chaplain. It has been decided that the duties of the chaplain can be performed equally well by the captain; and we can well believe it. In the days when the church had greater power than it has today this decision might well have been reversed on the ground that the duties of the captain could be equally well performed by the chaplain. A naval officer of high character can exercise a power for good over his men to which very few navy chaplains can aspire.

Sleeping-Car System for Cuba THE sleeping-car system is to be introduced in Cuba without delay. The first one ever seen upon the island is now on view at Havana, and it will be forthwith put into operation on the line between Havana and Santiago. The Cuban railway authorities are showing conspicuous wisdom in thus improving the transportation system in every way possible. A railway is a great force for unification, bringing the people into touch with one another and promoting a community both of merchandise and ideas.

THE WILLAMETTE RIVER AT SALEM, OREGON

THE CHILDREN'S HOUR

Are Flowers Warriors?

"MURIEL, will you arrange, and we will hand them to you," said Kathleen, as they stood beside a heap of newly plucked flowers lying on the garden seat.

"Very well," answered Muriel, brightly.

"And put the three white lilies in the center," suggested Eva.

"Muriel!" said Susie suddenly, with a puzzled look on her face, "what is the war-fire of lilies?" "War-fire of lilies!" repeated Muriel, "I never heard of it." "But the words came right into my head just now."

"War-fire must mean fighting of some kind," observed Eva, "but lilies look so peaceful and still."

"Meg says," chimed in Kathleen, "that nature is always doing things that we are too stupid to notice, because we talk so much; so perhaps lilies do something that we don't know anything about."

"Perhaps," agreed Muriel. "Well, you know," she continued thoughtfully, "they are really warriors all the time, by just being what they are—so beautiful and pure. Perhaps their purity is their war-fire. I expect it is; because purity kindles a light in the heart that is always fighting against what is impure. I expect, Susie, that purity is the war-fire of lilies. Why, it must be the war-fire of all flowers. I remember Meg told me once about some one who was so wicked that nothing could be done with her, and one day when she was walking along a lonely country road, her eyes fell suddenly on a cluster of primroses and violets, and the very next minute she was kneeling beside them crying as if her heart would break, and after that she gradually changed. And all the people who had talked at her thought they had changed her. The woman said nothing, but she knew that the flowers had done in a flash what life-times of talking could never have done at all." "So the flowers really fought and won the battle!" exclaimed Susie. "They have war-fire, and how beautiful it is. Only their pure beauty." "Yes," said Muriel, "and Meg said, too, that some day we will be able to do as much as the flowers—when we have learned to love silence and purity as nature loves them." A. P. D.

The Old Tree

DEAR CHILDREN: Few people love just a green tree better than they love money, but the members of the council in Le Claire, Wisconsin, do. There is, on the side of a river near that city, a large green tree, so large that its spreading branches measure nearly a hundred feet in diameter. Not even the oldest man in the village can remember when it has not stood there and the people love it as if it were their best friend. Not long ago the railroad company asked for a franchise on some city property on which to locate their depot and switcher. To make room for the tracks they intended to cut down the old tree, but when the council heard of that the franchise was refused. Finally the railroad company guaranteed that the tree should not be harmed, and thus obtained permission to lay their tracks. A. W.

What Boys Need

Extract from a paper read by a Raja Yoga boy at Isis Theatre, San Diego

THE boys of the present day need more self-respect. They will be much more useful when they have a polite and manly bearing and a good personal appearance. These are small things, but the small things are often of great help because, by observing them, we set good examples to others. Every boy who tries to do his duty and strives to be self-respecting is helping to build up a higher order of boyhood, and that means a higher order of manhood in the future.

Think how much depends upon holding one's self in an erect, manly position! When you see a boy slouching along with his shoulders bent over and his eyes on the ground, what is the impression that you get? You can see that he is sowing the seeds of a careless, shiftless, selfish manhood, for the way he walks is a sign that there is something wrong in his nature.

On the other hand, the boy who walks up straight and has a manly air shows that he has very few real faults. You know when you see him that he is the one who will succeed in life and be of some use in the world. The very mental attitude that he takes means that half the battle is won. Boys have no idea of what life means or they would try harder to be good examples to other boys.

Many boys have false notions about having fun. With some it is the main object of their lives to have what they

call "a good time." Such boys do not know the peace and true happiness that comes from good hard work and from service to others. Such boys do not have enough regard for home and for their fathers and mothers.

They constantly try to get something from their parents instead of constantly trying to do something for them and to help the home life to be more beautiful.

The Throstle's Nest

AN English friend writes to tell me of a pair of throstles that last summer built their nest right among the machinery of a stone quarry. Day after day they busily worked, carrying bits of grass and hay, until the little home was finished. Almost directly underneath was a steam engine from which the steam came up in clouds all about the nest. But the birdies did not seem to mind it, for four little green eggs were laid and after a time four little hungry mouths were fed by the devoted father and mother

throstle. The workmen had watched the nest with interest and had done many little services to protect it, and they were sorry when the nestlings were grown and the whole bird-family flew away. A. W.

NOTHING could be more beautiful than the exquisite lace made by the women and children of Paraguay—yes, and by many of the men, too. It is delicate as gossamer, and the designs used in it are borrowed, so the natives will tell you, from the curious webs of a certain spider.

A LITTLE RAJA YOGA STUDENT OF LOMA-LAND

THE WAY TO DREAMLAND

HUSH, Baby, hush! It is lullaby time.
The stars are all blinking their eyes;
On a silver moonbeam my baby must climb,
And sail away up to the skies!
On bare little toes,
As pink as a rose,
Creeping up there where the dream-tree grows,
Hush, Baby, hush-a-bye;
Lull, Baby, lullaby,
Hush-a-bye, lullaby! — Selected

Students'

Path

HOMELY COUNSEL

by MARGARET E. SANGSTER in *Girl's Own Paper*

IT isn't worth while to fret, dear,
To walk as behind a hearse.
No matter how vexing things may be,
They easily might be worse;
And the time you spend complaining
And groaning about the load,
Would be given to going on,
And pressing along the road.

I've trodden the hill myself, dear,
'Tis the tripping tongue can preach,
But though silence is sometimes golden, child,
As oft there is grace in speech,—
And I see, from my higher level,
'Tis less the path than the pace
That wears the back and dims the eye,
And writes the lines on the face.

There are vexing cares enough, dear
And to spare, when all is told;
And love must mourn its losses,
And the cheek's soft bloom grow old;
But the spell of the craven spirit
Turns blessing into curse,
While the bold heart meets the trouble
That easily might be worse.

So smile at each distaste, dear,
That will presently pass away,
And believe a bright tomorrow
Will follow the dark today.
There's nothing gained by fretting:
Gather your strength anew,
And step by step go onward, dear,
Let the skies be gray or blue.

Back to Christ

BACK to Christ, says (in effect) Professor Peabody, is the cry of the religious world to-day.

The most conspicuous aspect of contemporary Christian thought is the renewal of popular interest in the character of Jesus Christ. . . . The construction of systems and the contentions of creeds, which once appeared the central themes of human interest, are now regarded by millions of busy men and women as mere echoes of ancient controversies, if not mere mockeries of the problems of the present age.

It is true. There is a general demand for a fuller conception of the personality of Christ. And that demand will draw forth what it needs. It may seem to be a somewhat mystical idea that a demand for fuller data about such a matter will call those data forth from somewhere; but we believe it to correspond to a fact. The laws that govern humanity are very like those that apply to a unit. And when a man fixes his mind upon something, avenues leading where he wants open daily. People fill lacunæ in his knowledge by chance remarks; his friends unconsciously become his hands; he picks up in a bookstall in a back alley the precise book he needs; he finds ideas in his mind that came he knows not whence. Just in that way came about the chance of discovering the key to the Egyptian hieroglyphics, in response to the demand when it has reached a due point of urgency.

Well; till lately men have been much concerned in erecting their structures of dogma around the fragments we have of Christ's teaching. But the tendency which Professor Peabody describes, is creating a new force, a magnetic force. And the reply has begun. We have had one or two advance drops of the shower, one or two new pictures of him, some "sayings."

One cannot point definitely to such or another place as that from which will come what we want. Of possible places there are plenty. There are unexplored libraries of old monasteries in Greece, Syria and Asia Minor. Something may turn up from Egypt, where Christ is said to have stayed. There are a thousand possibilities, and among all it will doubtless be the unthought of or the entirely improbable that will happen.

According to such data as we have, Dr. Peabody speaks very refreshingly. He asks what conception we can form of the character of Christ. The note of that character is he says, the note of strength:

This is no ascetic, abandoning the world, no dreamer . . . no gentle visionary, no contemplative saint, no Lamb of God, except in the experience of suffering.

One may safely predict that the more the coming years reveal the picture and personality of Jesus Christ, the more we shall find him to satisfy our utmost ideal of noble and comprehensible manhood, showing himself tender, sternly denunciatory, teacher, spiritual chieftain and fighter against evil seen and unseen, comrade, friend. The feminine aspects of his character have been too much in our minds; it is with the others, the virile, that the picture will be splendidly completed. STUDENT

Corporal Punishment in Schools

IT is well known to those who have studied the methods of education used in the Raja Yoga School at Point Loma that corporal punishment is neither necessary nor permissible. It is an appeal to the lower nature of the child, through fear; and the Raja Yoga system consists in appealing to the higher nature, so that the faults may be overcome by calling into play the superior intelligence and the will.

Yet we read that recently teachers in this country, on being asked their opinion, have unanimously agreed that for a certain class of boys corporal punishment is necessary. What is the reason for this difference of opinion?

The answer is not difficult to find. It is not to be expected that in the world at large the Raja Yoga principles can be so easily applied as they are in Loma-land, where the teachers are themselves trained in the same school, where no pernicious street-life or unhappy homes counteract the efforts of the teachers, and where all circumstances and surroundings aid instead of hindering. Hence it is easy to see that the flogging is a substitute—the only resource the teacher can hit upon—for experience and skill and care in carrying out the system.

Not that we advocate corporal chastisement under any circumstances; we merely regret that circumstances should be such that teachers should prefer to resort to it. It simply means that in the worst cases they do not find themselves able to evoke the higher nature, and so resort to the forceful appeal to the fear of the brute. Amid the influences and surroundings of a properly conducted community, however, potent appeal can be made to the conscience and will, and corporal punishment need not be used. E.

A Material Hell

A WELL-KNOWN San Francisco clergyman has delivered a sermon in which he states his views on a material hell. He says:

Thank heaven, the doctrine of a material hell is now no longer taught by our churches. We no longer condemn to everlasting punishment all those who venture to disagree with us in religious matters. The belief in a material hell does not square with the doctrine of an all-wise and loving God.

This seems to be a moderate statement of the position occupied by nearly all intelligent clergyman. In order to test the matter, however, the *Weekly Examiner* has addressed a communication to a number of well-known preachers in order to ascertain whether this view of hell is, or is not, in accord with their theology. We are glad to see that with trifling exceptions they all of them concur. As a forceful and representative reply we may quote from the letter of the Rev. C. Miel of Sacramento. He writes:

As to my own opinion concerning what I have called the popular idea of a material hell (at least it was the popular idea until comparatively recently), I utterly repudiate these crude and ghastly travesties upon the love of God, the father of the universe. I arraign the popular idea of hell as merciless and brutal ignorance, and I impeach it as a hideous, heartless lie against Christ's universal and absolute redemption; as a blasphemy against the eternal love of God.

THE SOVEREIGN POET

by WILLIAM WATSON

HE sits above the clang and dust of Time,
With the world's secret trembling on his lip.
He asks not converse nor companionship
In the cold starlight where thou canst not climb.

The undelivered tidings in his breast
Suffer him not to rest.
He sees afar the immemorable throng,
And binds the scattered ages with a song.

The glorious riddle of this rhythmic breath,
His might, his spell, we know not what they be;
This savors not of death,
This hath a relish of eternity.

Heaven on Earth

DOES humanity ever stop to think how much it may be missing? May there not be possibilities in life, beyond the most sanguine dreams, and almost in our grasp, but of which we are unconscious? Are we not perhaps like blind people, who do not know they are blind, and live in fatuous contentment with their own dark world because they cannot conceive anything brighter?

We are fully conscious of the material advantages which our civilization brings us, but what if these are purchased at the price of being shut out from gains a thousand times better?

Poor man is always speculating as to his chances of future bliss—a sure sign that he is not happy in the present. If he could know what LIFE is, he would not need to try and comfort himself with such wistful and anxious speculations; for he would find all the answer he wanted in life itself.

"Life is Joy," says the proverb; and life is an eternal divine spirit that pervades the whole world and animates every being and every atom. To partake fully of the life, to breathe it, to feel and know it, would be all the heaven man would need. But not knowing what life is, we try to imagine all kinds of extraordinary states and paradises in the dim future, by way of consolation for our present dreary and unsatisfactory lot.

But why jump at a bound from earth to heaven, when there are so many unexplored mysteries, so many untapped sources in this earth? We think that nothing short of eternal bliss will do for us, when it is practically certain that any one of us would find his wildest expectations more than realized by a comparatively slight betterment of his circumstances. Our conceptions of eternal bliss are probably foolish enough to make the gods smile, for they can only be founded on what we know of present life. A child's idea of manhood is a dollar a week to buy fire-crackers and candy with; and our ideas of eternal bliss are much the same.

The idea of heaven in the future and in another sphere is a pitiful substitute for the happiness and perfection we ought to find in life here and now.

The ancients believed that man's nature was divine as well as earthy, and that the mind could be brought into union with the divine soul, thus raising man to the level of godlike wisdom and bliss in this life. H. P. Blavatsky and W. Q. Judge, the great teachers of Theosophy, have proved that the Egyptians, the ancient Greeks, and even the Founder and Apostles of Christianity, taught that man's soul is two-fold—one part divine, the other animal—and that the human mind can blend itself with either, thus becoming divinely wise and free or else bestial and miserable. But bigotry and dogmatism have turned men aside from this quest of liberation and perfection, and offered them instead a fanciful heaven after death.

Jesus, Buddha, Confucius and other great Teachers came to show man the way to freedom and happiness through recognition of his own divinity. Men of compassion, they saw the world groaning and struggling in the bondage of ignorance and lust, and they strove to remind man of his own destinies and potentialities. But churches, which should have been the guardian of sacred truths, have taken away the promise and given instead vague and demoralizing hopes of an illogical heaven, and threats of an impossible hell.

We are only half alive, dreaming a troublous dream, dwarfed and stunted, blind to the freedom and fulness of life that might be ours if we, as human beings, were as complete and perfect as the flowers and birds are in their kingdoms. Little does modern culture know of what

man really is, making him (as it does) a mere intellectualized animal without even an animal's peaceful joy of life.

We talk of the soul as if it did not belong to us, but was merely a remote possibility; when the soul is the real man, and what we call our "self" is only a nightmare hallucination. Instead of invoking our God within, as directed by our Teachers, instead of making clear the Temple of our heart that He may enter and dwell, we supplicate an imaginary deity away among the distant stars. When we might grasp our wayward mind and heart and master their moods and purge them of the distractions and afflictions that fill them up, we prefer to lay aside our will and appeal for help from external powers.

It is time the dogmatism and superstition of religious bigotry and materialistic science, which have so long blocked out the light, should come to an end; and the old quest be revived, which in the past so many sought and not a few won—the quest of the Great Secret of how to LIVE. One day mankind as a whole will win that secret and the human race have achieved its triumph. So far those individuals that have won it have pointed out, and still point out, to us the way, and the next step lies immediately before us.

Question

Putting aside all sentiment, for we all know we derive a sense of pleasure from doing things for others and from practising a certain degree of unselfishness, why should it be necessary to always insist upon it as a rule in life; are we not all conditioned by our Karma, and must not Karma necessarily work itself out on certain lines? Is there not therefore a danger of interfering with Karma?

Answer

H. P. Blavatsky replies to a similar question in *The Key to Theosophy* as follows:

Theosophist—It is the very law of Karma that gives strength to all that I have said. The individual cannot separate himself from the race, nor the race from the individual. The law of Karma applies equally to all, although all are not equally developed. In helping on the development of others, the Theosophist believes that he is not only helping them to fulfill their Karma, but that he is also, in the strictest sense, fulfilling his own. It is the development of humanity, of which both he and they are integral parts, that he has always in view, and he knows that any failure on his part to respond to the highest within him retards not only himself but all in their progressive march. By his actions he can make it either more difficult or more easy for humanity to attain the next higher plane of being.

Enquirer—How does this bear on the fourth of the principles you mentioned; viz, Reincarnation?

Theosophist—The connection is most intimate. If our present lives depend upon the development of certain principles which are a growth from the germs left by a previous existence, the law holds good as regards the future. Once grasp the idea that universal causation is not merely present, but past, present and future, and every action on our present plane falls naturally and easily into its true place, and is seen in its true relation to ourselves and to others. Every mean and selfish action sends us backward and not forward, while every noble thought and every unselfish deed are stepping stones to the higher and more glorious planes of being. If this life were all, then in many respects it would indeed be poor and mean; but regarded as a preparation for the next sphere of existence, it may be used as the golden gate through which we may pass, not selfishly and alone, but in company with our fellows, to the palaces which lie beyond.

On carefully analyzing the question, "Why should it be necessary to always insist upon it (i. e., unselfishness) as a rule in life?" is it not plain that such a question can arise only from the promptings of the lower nature, which is selfish and does not like to be disturbed or brought into subjection? And, too, following the good advice of putting aside all sentiment, if we look fairly at the matter, we find that Brotherhood and unselfishness are not a matter of sentiment, but the carrying out of the deeper laws of life, and if we take the teachings of all the great helpers of humanity, and if we will but follow their teachings and so gain the direct experience, as we may if we will, of their truth, we find as the Scripture says, that "if a man love not his brother whom he hath seen, how can he love God whom he hath not seen?" And the experience that may be ours, if we will but make Brotherhood the rule of life, will be that it becomes for us a key that opens the way to the "love of God," the knowledge of the divine which is the basis of and includes all knowledge.

AT THE PIANO

by ANNA KATHERINE GREENE

PLAY on! Play on! As softly glides
 The low refrain, I seem, I seem
 To float, to float on golden tides,
 By sunlit isles, where life and dream
 Are one, are one; and hope and bliss
 Move hand in hand, and thrilling kiss
 'Neath bowery blooms,
 In twilight glooms,
 And love is life, and life is love.

Play on! Play on! As higher rise
 The lifted strains, I seem, I seem
 To mount, to mount through roseate skies,
 Through drifted cloud and golden gleam,
 To realms, to realms of thought and fire,
 Where angels walk and souls aspire,
 And sorrow comes but as the night
 That brings a star for our delight.

Play on! Play on! The spirit fails,
 The star grows dim, the glory pales,
 The depths are roused --- the depths, and oh!
 The heart that wakes, the hopes that glow!
 The depths are roused; the billows call
 The soul from heights to slip and fall;
 To slip and fall and faint and be
 Made part of their immensity;
 To slip from Heaven; to fall and find
 In love the only perfect mind;
 To slip and fall and faint and be
 Lost, drowned within this melody.
 As life is lost and thought in thee.

Ah, sweet, art thou the star, the star
 That draws my soul afar, afar?
 Thy voice the silvery tide on which
 I float to islands rare and rich?
 Thy love the ocean deep and strong,
 In which my hopes and being long
 To sink and faint and fall away?
 I cannot know. I cannot say,
 But play on, play on.

Where Shall the Indian Find a Refuge?

THE old men of the tribes tell us that when their fathers were young, the Indians owned all this country for very many days' march in every direction from the great pipestone quarry in the land of the Sioux. There were many buffaloes, many fish, many deer and elk, many rabbits and ducks, chickens and beavers.

The white men came and killed the buffaloes; killed all of them, leaving none for us. They built their houses in the deer-runs and drove them away. When the Indians resisted they were killed also, though first they killed some white men because they would not go away. Then the Indians that were left were put on "reservations" to stay there. They could not go to the plains in autumn to hunt buffalo, they could not go to the woods in winter to hunt deer. The whites killed the antelopes and beavers and their towns poisoned the fish.

We must stay and be fed like sick women; we, who owned the land and had always been hunters and warriors. We were very angry. The men sent to govern us stole from us and cheated us, and we hated them. They took our children and made them to live in another fashion and learn the white men's writing till their own they did forget how to read, and forgot how to hunt and fish. Our hearts were mad with hate and fear. Then they made us to be on farms, and said to us, "It is better to grow corn than to hunt." It was all lies, but because we must eat we did grow corn and kept tame cows, while our bowstrings rotted and worms ate the shafts of our arrows.

Then came the white men and said, "This land is good, too good for Indians. We will put you in another place." So like beaten women we went to another place. Why should we live, since the Great Spirit has forsaken us? The white men spoil our children, ruin our women, steal our goods and sell whiskey to our young men. They have plowed up our camas valleys, killed our game and emptied the streams of fish. Even we, who once were strong warriors, now clothe ourselves in cast-off rags and cringe and beg like sneaking dogs. Our hearts are sick; why

does not the Great Spirit take us where there are no white men? Are there none found to teach our children rightly in the new manner of living which we cannot learn? Who will tell them the truth about the white man's evil gods? who will revive in their hearts the love of the Great Spirit? We are old, and our hearts are sick; our council fires burn no longer, our legends will be forgotten; the only kindness we ask is to be left the remainder of our days in peace, but they will not. It is better to die, than to eat scraps like coyotes, or work like women.

SOL-LEKS CHÓPE

The Basis of Empire

AN eminent scientist, Professor Karl Peterson, has just given the annual "Huxley Memorial Lecture," taking for his subject the alleged decline of mental and physical stamina among Englishmen. In the main, he regards the charge as established:

Looking around dispassionately from the calm atmosphere of anthropology, he feared there really was a lack of leaders of the highest intelligence in science, in the arts, in trade, even in politics.

Whether the case is as bad as he stated it, and whether other countries are open to the same indictment we need not inquire. But whatever the degree and geographical area of the malady, he assuredly puts his finger upon the right cause:

For the last forty years, the intellectual classes of the nation, enervated by wealth, or by love of pleasure, or following an erroneous standard of life, had ceased to give us in due proportion the men we wanted to carry on the ever-growing work of our Empire.

And he did not seem to think that more universities and colleges would remedy the matter. The only remedy is a rebirth of ideals in life. Ideals are more a matter of feeling than of intellect. Feeling is life itself, and power. Intellectual culture is but adorning and cutting and complexifying the banks through which one of the branches of a man's river of life shall flow. It does not increase the river's volume. The men who have made empires and made them great, were not university men.

And we predict that the forces under which the next great empire arises, and the empires that will in their turn succeed it, will not be the same as in the past. They will come forward into greatness and supremacy because they are guided and officered and largely even peopled by men who have for their objective the *welfare of humanity*, and whose principles are justice and compassion. Thus they will have the fully-invoked and ever more fully present Divine Law on their side; a law which while in its working it may avail itself of the "big battalions," has often enough in history demonstrated that it can give victory without them.

It is only such ideals that can now reduce to their proper subordination the everywhere present worship and love of wealth, "pleasures" and luxuries. Then intelligence, and health of body and mind, will not be far to seek.

STUDENT

The Monument to Servetus

WE have already drawn attention to the remarkable monument to Servetus, which has been erected in Geneva by followers of Calvin. We have now received a copy of the inscription upon this monument, of which the translation is as follows:

As dutiful and appreciative followers of Calvin, our great reformer, but condemning an error which was that of the century in which he lived, and firmly attached to liberty of conscience according to the true principles of the Reformation, we have raised this expiatory monument the 27th October, 1903.

Far be it from us to speak slightly of a sincere act of expiation, however late in the day it may come. The martyrdom of Servetus, however, was not the act of an age but of a theology, and because that theology is still alive it is as capable of acts of persecution as it was three hundred and fifty years ago, when it burned Servetus at the stake. A theology which deifies cruelty is itself cruel, and will predispose its followers to cruel acts. So long as cruelty remains a part of a religion we shall believe that the cruelty of its followers is restrained by lack of power and not by lack of inclination. This we say without impugning the sincerity of some whose lives are better than their creed. S.

Before the soul can see the harmony within must be attained.—*Voice of the Silence*

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

A Giraffe's Throat

Here is a story of Goldwin Smith:

Goldwin was apparently wrapt in thought one morning at breakfast, and one would suppose he was contemplating writing a brilliant essay. His father, somewhat impatient of his silence, said, "A penny for your thoughts, Goldwin." To this challenge I heard Goldwin reply: "I was just thinking what an awful thing it must be for a giraffe to have a sore throat, what an amount of gargle it would have to swallow, and what length of bandages it would require."—*Selected*

True Reform Begins in the Heart

NEVER has there been so much talk of reform as at the present time, never have there been so many persons who have reduced all the world's evils to formulas and who are prepared to concentrate the millennium into an Act of Congress. True it is that most of our reforms consist in forbidding others to do the things to which they are inclined, and to which we ourselves are not inclined, but a vague good-will is none the less present, and we must consider it as a growing demarcation between the forces of good and evil.

Acts of Congress and of authority have their place in an evolving world, and it would be as foolish to minimize their importance as to ex-

aggerate it. At present the tendency is to exaggerate it and to expect from the Government what it cannot possibly perform. To compel men to cease from sinning by the expedient of putting them into prison, and by otherwise penalizing them is enticingly simple, but only the most unreflective minds can suppose that the process is in any way curative, or that it at all partakes of the nature of a true reform. We cannot take the love of violence from the human heart by chaining the human hands, however necessary for our own protection the latter process may be, nor can we promote the brotherhood of men by dark cells and strait-

Individual Effort the True Basis

waistcoats. It may often be necessary to forcibly prevent our fellows from sinning, but to confuse forcible prevention with reform is merely folly and a policy of mischievous laziness. To reform a man is to take from him the desire to do wrong, and to evolve in him the desire to do right. Governments cannot do this or only to a secondary degree. It must be done by individual effort or not at all.

Theosophy is above all else a philosophy of optimism, because it recognizes the common divinity of men, and because it endows the individual with the irresistible power of reform. He who recognizes the divinity in himself can never be blind to the God in others. In that light all vice becomes transient and all virtue eternal, and to such an one it is given to walk and talk with God, not only in the Garden of Eden, but also in the prison cell, in the haunts of crime, and in the waste places of human selfishness. He is hedged around with divinity, and in the presence of the darkest clouds he searches the more earnestly for the golden glow which proves the Sun.

The condition of the world is not so hopeless as some would have us believe. It only seems so to those who have not assumed the divinity of

Men Will Follow True Divinity

man. The universal force of good in men remains voiceless because we have not called upon it, it remains hidden because we have not fetched it forth. Let us cease to evoke government and authority and become these things for ourselves. The world is very tired of its selfishness, very wretched beneath its burden, and waits only for individual example and for the call of a moral idea, the call of an incarnated truth, which assumes the existence of its like in every one it meets.

But it may be said, there are already many who lead the moral life and the world shows no enthusiasm to follow them. That is indeed true, but it is a very different thing to lead the moral life in obedience to the conventional moral axioms and to lead the life which is entirely subservient to the supreme and recognized divinity. It is divinity which men will follow and not its imitations, the divinity which will, if necessary, cut itself loose from all conventions, refusing to be bound by anything less divine than itself. This is the only thing which can give tranquillity and serenity and these are among the tests of power. These are the qualities which men will follow, and they cannot be assumed. We cannot climb up to them by a back way. The true reformer does not meddle.

For Love Is Alive in the World

He knows that the supreme will of nature is to amend and to adjust, and that no more sublime duty can be his than to clear away all the obstacles which prevent him from becoming the instrument of that will. From him goes forth a power which compels attention, a power which may express itself in eloquence, in art or in literature, but which will be none the less commanding because it uses none of these things. That power we cannot define nor describe, but there has never been a time when men have not made obeisance unto it. Even at this moment all nations are eager to capitulate to truth and to be governed by justice, but truth and justice must be presented in vessels of absolute purity or they will not be recognized or obeyed. We give a solidity to evil which it does not possess. We complain that the walls of wrongdoing will not fall down and we do not recognize that our own unwillingness to claim the power and the glory is the buttress which supports them. The great surrender awaits but the challenge, for love is alive in the world, even though it has been abashed and shamed. When one strong man becomes a standard-bearer he may be assured of serried ranks behind him. He need not wait for governments nor rulers. Let him lay hold upon his own divinity and so himself become both government and ruler, and he shall not lack for subjects and followers. X.

The Highest Type of Manhood

MANHOOD, as here used, of course includes womanhood. Let us define and map our ideal, that we may the better realize it in ourselves.

We all know that there are some people under whose care plants grow and flourish; and others who, do what they will, can hardly get a bloom on a geranium. Studying the two types, we find that the first really love plants, and the second only seem to. The second want a fine show in their gardens; or to make money, or to have praise. They work according to a consciously framed motive, defined in the brain.

But the pure type of the first have little or no regard for these ends. They work in response to a *heart* desire to cause something to grow, and are almost indifferent what it is. All that they do for their plant with their hands—and it may be but a single weed in a pot—is accompanied by an unseen essence pouring from the heart, creative and nutrient. In the arising and coming forth of that, they get their joy, the only joy they want. They are *givers*, and *take* nothing, not even in imagination, neither praise nor money. How can a plant grow under the hands of one whose key-note is *taking*?

Such pure workers—that is, heart-givers—are beloved of children, who are happy and good in their presence. The children get from them the same pure life-stream as the plants—though it is a stream that enriches the giver as well as the receiver.

So also the sick like to have such a person present. Medicines given by their hands do more good. People in trouble come to them and somehow feel better. Yet though they sympathize, and have pain in their sphere of thought, yet deeper in their heart is ever that one divine pleasure of giving, the joy of the setting forth and continuance of the divine all-nutrient life-essence, creator and sustainer.

It is evident that they stand quite apart from emotionalists and sentimentalists of every kind. And it is equally clear that they are not necessarily connected with any religious creed, nor necessarily possessed of any kind of intellectual culture.

But in process of time they acquire *wisdom*. Their consciousness enters into closer and closer relation with the life-energy going through them, so that they follow it and feel through and with it as the consciousness of an insect through its antennæ. Thus they come to feel the character and the needs of those they touch, even if they do not think out into set terms what they know in *feeling*. So their growth-causing power is guided only towards that which is good in the world of men and events about them. And as said, a good deal of this work—till they become the Masters of Life—goes on somewhat outside their intellectual consciousness. But they become keenly aware that any lapse from any duty on their part lowers the tension of the general moral atmosphere, and lessens that general pressure toward good and duty which—perhaps for the majority—is the mainstay against utter lapses, and indeed the secret binder of society and organized civilization.

So these people stand like lights through the dark of time; though few of us can trace the gleams in our hearts and lives to their true source. Any of us can join them, but the first step is to lay aside all hope or motive or acceptance of recognition or praise or reward. STUDENT

The Religious Revival

THE idea that the world is about to experience a great religious revival, is spreading among thoughtful men, although there is, of course, the tendency to associate a religious revival with the spread of one's own religious opinions and creeds. We shall neither understand, nor can we prepare for a religious revival until we realize that the whole of religion is comprised in human brotherhood and all which that implies. As soon as we can comprehend this we shall know that the religious awakening is already upon us, even though it now show itself only by the turmoil which inevitably attends the reach for lost ideals.

An Episcopal bishop has recently preached a sermon upon the "shaking up" which our systems are about to receive. He believes that no reform can be permanent "which divides sacred from secular things." It is not easy to understand quite what he means, but it is very certain that man cannot create a division which does not exist in nature. Sacred and secular are entirely human terms, and they have no meaning. Every human action is either in accord with duty or it is not in accord with duty.

As duty is the divine guide to life, all action and all life should be sacred, including the pursuit of rest and recreation and the daily work which our needs demand of us. There can be no greater religious revival than a new recognition of duty, a recognition which comes from within. We shall then recognize the folly of paying another either to tell us what is our duty or to encourage us to do it. Of one thing we may be well assured, whoever may be the beneficiaries of a religious revival, our self-interests will not be among them. They alone have everything to lose and absolutely nothing to gain. C. S.

Japan's Discrimination

LAFCADIO HEARN'S *Kokoro* gives us a new picture of Japanese life in which there is some little to deplore and very much to admire.

The material progress of the country about which we have heard so much has made but little mark upon the externals of the country. Western machinery and western usages have been imported without the western haste and fever, and the Japan of today to the ordinary observer is almost indistinguishable from the Japan of long ago.

You might journey two hundred miles through the interior of the country, looking in vain for large manifestations of the new civilization. In no place do you find commerce exhibiting its ambition in gigantic warehouses, or industry expanding its machinery under acres of roofing. A Japanese city is still as it was ten centuries ago, little more than a wilderness of wooden sheds—picturesque, indeed, as paper lanterns are, but scarcely less frail. And there is no great stir and noise anywhere—no heavy traffic, no booming and rumbling, no furious haste. In Tokyo itself you may enjoy, if you wish, the peace of a country village.

The simplicity of life is not the least of the charms of a fascinating land. Simplicity means liberty as complexity means bondage, and Japan has here learned a lesson which older civilizations doubtless once knew and must now relearn. Here is a picture which has an allurements all its own and which does much to explain Japanese success. These are a mobile people, living without anchors and without drags.

Before a Western man can move he has many things to consider. Before a Japanese moves he has nothing to consider. He simply leaves the place he dislikes and goes to the place he wishes without any trouble. There is nothing to prevent him. Poverty is not an obstacle, but a stimulus. Impediments he has none, or only such as he can dispose of in a few minutes. Distances have no signification for him. Nature has given him perfect feet that can spring him over fifty miles a day without pain; a stomach whose chemistry can extract ample nourishment from food on which no European could live; and a constitution that scorns heat, cold and damp alike, because still unimpaired by unhealthy clothing, by superfluous comforts, by the habit of seeking warmth from grates and stoves, and by the habit of wearing leather shoes. . . . The Japanese man of the people—the skilled laborer able to underbid without effort any Western artisan in the same line of industry—remains happily independent of both shoemakers and tailors. His feet are good to look at, his body is healthy, and his heart is free. If he desires to travel a thousand miles, he can get ready for the journey in five minutes. His whole outfit need not cost seventy-five cents, and all his baggage can be put into a handkerchief. On ten dollars he can travel for a year without work, or he can simply travel on his ability to work, or he can travel as a pilgrim. You may reply that any savage can do the same thing. Yes; but any civilized man cannot, and the Japanese has become a highly civilized man for at least a thousand years. Hence his present capacity to threaten Western manufactures.

The author tries to account for the uniformity of Japanese progress, for the unity of its national life. Japan has "moved unitedly in the direction of great ends," and this, Mr. Hearn tells us, is because of the "rare unselfishness and perfect faith" of her people. It is a pleasure to believe that this is entirely true, and to express the hope that this wonderful nation in imitating whatever in other nations is worthy of imitation will neither lose nor forget the "rare unselfishness and perfect faith," without which there can be no permanence and no real glory. Z.

A Group of Samoans

THE illustration on the cover page of the NEW CENTURY PATH this week represents a group of Samoan natives engaged in their popular native games. The scene is taken from a place near the residence of the late Robert Louis Stevenson, whose influence has done much to favorably introduce Samoa and its people, among whom he lived so happily, to the rest of the world. The Samoans are a gentle, peaceable and affectionate people, deeply appreciative of sympathy and kindness.

Some Views on XXth Century Problems

Chance and the Law in History

A REVIEW of the late historian Lecky in *The Nation* praises him for his willingness to admit among the factors of history the element of chance. Chance is said to show its hand in those cases, "in which," to quote the historian, "a slight change in the disposition of circumstances, or in the action of individuals, would have altered the whole course of history." We think, on the contrary, that it is precisely at those points where "chance" seems to have operated that the real operator has been divine law. For want of a nail the shoe was lost; for want of a shoe the horse was lame; and so the general rode up late to the battle; and so the battle was lost; and so perhaps "the whole course of history" was altered.

Large consequences from a loose nail! But if the defeated and humbled army and nation needed a humiliation, or if its ill-used power had become too great for the world's good, and if there is that which watches over the world and helps it from time to time, surely it would be easier, and therefore wiser, for that "that" to work by means of an overlooked nail than by swaying the courses of a great battle?

History will never be intelligently written till historians learn to look for the meaning of events; till they see that history is guided by a Power which has human evolution, human ennoblement, for its aim. Great nations are permitted to arise in order that their consciousness may attain something not previously present in humanity. When that is achieved comes the hour for the commencement of their decay, or for entering upon a new era of progress—which depends on causes sown by themselves. If they have sown evil, no amplitude of military preparation, no breadth of university extension schemes or colleges of science, will delay their fall a year. Cyrus of Persia had the largest force of war that earth had or has ever seen, but the little Greek people totally overthrew him. Have the accidents and chances that made the battle of Salamis end as it did ever been recorded? Doubtless they looked pure accidents to those who saw them, but had they not happened, we should probably now be barbarians. Nations, like men, are free to will and do. But when they have willed and done, and when the time is ripe, the Law will make its comment. And it will be well for them if they have willed and done with right and justice.

STUDENT

Along the Path to Freedom

WE could perhaps find no better illustration of the decadence of philosophy than a comparison between the ideals of the Greek stoics and the theories held by the advanced schools of today. Zeno, the great stoic philosopher furnishes us with a list of the things to which we should be indifferent and in this list we find life and death, pain and pleasure, riches and poverty, sickness and health. This is, of course, a counsel of perfection and was so intended. Even among the stoics themselves there were probably none who claimed to have attained, but it was none the less an ideal conscientiously striven for and there were many whose progress upon this path was not inconsiderable.

If these are the things which should be eliminated from the world of our individual thought what shall we say of the ideals, even of the philosophic ideals which surround us now? To the vast bulk of humanity the adoption of Zeno's list would mean the extinction of life itself. Those things to which we ought to be indifferent contribute for us the whole of existence. We know of nothing beyond them. They are for us the very edge of the world. Beyond them is the falling off place, the great darkness, nothing.

And yet the path which Zeno paints for us is, after all, the road to freedom. These things are the burdens with which we weight ourselves down, the prison walls which make the only home we know, the paralysis which is the negation of power. The horizon of our own self-love is not the horizon of the universe, and the fitful glitter which we follow is not the glory of the sun. There are universes of thought and power awaiting the navigator who will sail on and on beyond the illusion girt islands of our lives, there are seas of aspiration and of attainment across which the sun has marked a golden path of progress.

What Is Accuracy in Education?

PRESIDENT WOOLLEY pleads for a greater accuracy in education. Such a plea will be received with hearty sympathy by every true educationist, but it implies a great deal more than may meet the eye. So long as education consists in imparting facts instead of in awakening a love of knowledge, so long will many of those facts be received unwillingly, without interest and therefore without accuracy. The President quotes an answer to an examination paper as illustrating his point. It illustrates our point also. It seems that a student expressed the opinion that "Mount Carmel is the place where Elijah sat when he was fed by a crow." Such an answer obviously proceeds from a mind entirely uninterested, perhaps contemptuously indifferent. Why should it be otherwise, and why should we waste the time of a student by a dead-letter rendering of Biblical allegories, which both teachers and pupils alike are unable to understand? President Woolley pleads for keenness of vision and clearness of hearing. When we give our students something worth seeing and something worth hearing, we shall no longer complain of a lack of avidity.

STUDENT

The Sensible Treatment of Convicts

IN their treatment of criminals, the French are beginning to pass easily in advance of other nations. They have struck the key-note in their new penitentiary at Fresnes, about 8 miles from Paris. This is an eminently healthy situation; the cell windows are large and so are the cells. In every one is electric light, and there are hot water and shower baths throughout.

The inmates are well fed; various kinds of education are provided for them: they may work at trades and earn money. In the prison is a great hall where lectures on various subjects are given, and the prisoners gladly attend. The evils of drunkenness and the alcohol question are favorite topics, and the late marked diminution of crime in France is attributed in part to these.

This is all on the right line, and it might go much further. Concerts might be given, singing classes held, and some of the simpler musical instruments taught. To become owner of one of these would be a stimulus to the people to work.

We shall hear on every hand the cry that prisons must not be made too comfortable, or people will want to get into them. There is, however, no need to treat all prisoners alike, or to give to those with short sentences all that would be given to those with long ones. For some criminals, the disgrace, and rupture of ties; and for nearly all, the loss of liberty, are leading elements in the treatment.

For most criminals there will ultimately arrive the moment of release. What sort of person do we propose to liberate? A man hardened by years of iron severity, with a mind sterilized by years of grim monotony of tasks, utterly out of touch with any of the finer influences of life? or one whose mind has been widened by education and access to books, and refined by music and art? Which will you have in society? You must choose, for society receives back daily into itself a thin stream of released criminals.

And we do not argue for luxuries, or for comfort as an end in itself. We would have criminals housed, fed, clothed, and regimined so as to conserve and better their health. We would have the doors of education of mind and feeling thrown open to them along many lines. And we know that if this were done, even the worst would return to our world with ideals they never had before, and with new conceptions of the possibilities of life. Whatever their subsequent falls and failures, they could never again be as men who had not faced those ideals and conceptions; and we should have done something towards the discharge of duty to those who in many cases are the victims of the fierce social stress of our time.

STUDENT

WITH consistency a great soul has nothing to do. He may as well concern himself with his shadow on the wall. Speak what you think now in hard words and tomorrow speak what tomorrow thinks in hard words again, though it contradicts everything you said today.—Emerson

Art Music Literature and the Drama

The Messengers of Light

IN one of the largest of his symbolic paintings, which at present hangs in the rotunda of Loma Homestead, Loma-land, Mr. Machell has given a richly symbolic interpretation of Love as a divine and impersonal force.

Three-fold is the vesture of pure Love, and its mystic garments are Joy, Beauty and Truth.

Joy, in its divinest aspect, is represented in the painting as a queenly woman sending out into the world the bearer of her message. Joy, active, positive, glorious, is the message of her who steps bravely into life's flood, garlanded with red roses. Joy in its dreamy, passive aspect, is hers who shrinks and holds back, carrying the poppies which have ever been symbolic of pleasure in its negative aspect.

Truth, crowned and stately, sends forth the Sage, the man of science, conqueror in the world of thought; and also the Warrior, conqueror in life's battles for compassion's sake. Beauty, veiled and mystical, sends forth the Artist and the Bard. Not the least remarkable feature of the entire picture is the carved frame; the boatmen below, waiting to ferry these messengers across the dark river, foiled by the joyous, triumphant child-figure above.

THE MESSENGERS OF LIGHT, by R. MACHELL

A. V.

Indian Decorative Symbolism

DR. CLARK WISSLER has undertaken a work of very great value to the domain of art. He intends to spend six months in the study of the decorative methods in vogue among the Indians of the plains. It is his purpose to spend most of his time among the northern division of the Dakotas and also to give a share of his attention to the Gros Ventres and the Blackfeet. These tribes were once connected, and it is a generally accepted theory that they freely exchanged their customs and decorative ideas. Dr. Wissler intends to examine that theory and to study generally the meanings of Indian decorative symbolism.

We have certainly not yet learned to properly estimate the value of symbolism as an interpreter of religious and philosophical conceptions. A great writer once spoke of symbolism as a disease of the infancy of humanity. We shall yet recognize it as a means for the expression of ideas which are too lofty for words, a system so scientifically accurate as to appeal alike to all minds of equal development.

It is the brain mind which prefers the pabulum of bare cold statement and insists on expressing itself in chill and literal "facts." The symbol is ever the language of the soul, and those who speak disparagingly of the symbolism current among our so-called savage tribes would do well to ask themselves what civilization would do without the symbol. What is music but the purest of symbolic expressions? What is art, architecture, the drama? X.

Utility and Beauty

THE chief approach to Rome lay between the magnificent arcade of the Marcian and Claudian aqueducts not more than a hundred yards apart; and through their arches, thirty feet high on one hand and fifty on the other, the wide Campagna stretched away to purple distances, to shadowy Monte Cavo and white Soracte. Not less than the power was the beauty. And here is a fact on which the education of the future will more and more have to rest. We shall never be really a great people until we have learned to take account of beauty as of religion.

Beauty is in itself a religious influence; they who systematically leave it out of the account remain barbarous, and nothing is truly well done which is not beautifully done. The time will come when every work of utility will be a work of beauty, like the Roman aqueducts. This it is which makes their enduring charm, which causes something to spring to the eye and touch

the heart at sight of those silent miles of arches, as no other Roman ruin, temple or holy place can do. You cannot look upon them without realizing the giant streams of life and strength and joy they bore to ancient Rome. The palaces were for the Cæsars, the churches were for the purple Hierarchy, the temples were for the gods and the trophies of the conquerors; the water was for all, the one copious blessing of the wretched pleb.

Who can call that uneconomical which rears at a certain present cost an object lesson of beauty to last two thousand years, which plants an influence of work silently upon a race throughout the generations of men? And who can justly declare that any work is economical which permanently neglects this element of the enduring beautiful?

If there is one development of art left for America, it must be in the line of the beauty of the useful—in the ennobling of all which serves the noble common uses of life and humanity. This is art and work worthy a great democracy; not palaces for any emperor, but fair homes for a free people; not cathedrals for any hierarchical priesthood, but schools, colleges, libraries, for the new religion of humanity, built and adorned as the temples and the churches of an elder day; not great gardens for any prince, noble, cardinal or millionaire, but great parks for the whole people.—*Grace Ellery Channing in "Out West"*

SINCE the public mainly knows of Max Bruch as the composer of the G minor concerto for violin, a surprise is now awaiting it. Mr. Bruch has under preparation music which will adapt the Iliad and the Odyssey for concert purposes. The poems are dramatic in all their details, and with an adequate musical setting, might easily become the year's masterpieces. Mr. Bruch's *Ulysses* is a remarkable work, particularly the banquet of Phæacians, with its rhapsodic songs.

FROM "ONE WORD MORE"

by BROWNING

WHAT of Rafael's sonnets, Dante's picture?
This: no artist lives and loves, that longs
not
Once, and only once, and for one only.
(Ah, the prize!) to find his love a language
Fit and fair and simple and sufficient—
Using nature that's an art to others,
Not, this one time, art that's turned his nature.
Ay, of all the artist's living, loving,
None but would forego his proper dowry.—
Does he paint? he fain would write a poem,—
Does he write! he fain would paint a picture,
Put to proof art alien to the artist's,
Once and only once, and for one only.
So to be the man and leave the artist,
Gain the man's joy, miss the artist's sorrow.
I shall never, in the years remaining,
Paint you pictures, no, nor carve you statues,
Make you music that should all-express me;
So it seems; I stand on my attainment,
This of verse alone, one life allows me;
Verse and nothing else have I to give you.
Other heights in other lives, God willing;
All the gifts from all the heights, your own, Love.

Christ's love rebukes no home-love, breaks no tie of kin apart:
Better heresy of doctrine than heresy of heart.

—Whittier

Señorita Antonia Fabra

WHEN Katherine Tingley went to Cuba in 1899 to relieve the suffering that always follows in the trail of any war, one of those whom she met there was the father of Señorita Fabra. A Cuban patriot, on his death-bed he begged Mrs. Tingley to take with her to America his daughter. She at first demurred, not having organized at that time the Institution at Point Loma; but so well did he plead that she finally consented. Accordingly, when Mrs. Tingley returned to her home in New York, with her returned Antonia Fabra, and from that hour her life-work began. She and her brother Felipe are both to-day students at Point Loma.

Señorita Fabra accompanied Mrs. Tingley to England in the next year, when she attended the Brighton Congress, and traveled with her through Germany, Denmark and Sweden. In the latter country Mrs. Tingley presented her to King Oscar as a representative of Cuba, and with him she had the pleasure of conversing in her native Castilian. She was with Mrs. Tingley when the latter came into possession of Madame Blavatsky's old home at 19 Avenue Road, London.

In 1901 Mrs. Tingley sent Señorita Fabra to Cuba on a special mission, and she was a member of the last Cuban crusade, that marvelous undertaking which has resulted in the permanent establishment of Raja Yoga schools in the Island.

No student is more enthusiastic over the results of Raja Yoga training, no one more hopeful of Cuba's future, now that the new life of a true philosophy is being poured into it. Señorita Fabra says:

I have seen Cuba in distress and in war, and I well remember how, when everything looked dark, Mrs. Tingley and her workers came with medicine, food, clothing and words of cheer. I saw her working in the heat and disorder day after day, nursing the sick, clothing the needy, feeding the starving. I have seen her for many years giving her life to the unfortunate and to friendless little children. Words cannot express my deep gratitude to her for all that she is doing for my people. Only the future can record the fullness of her work. She is bringing to Cuba a hope that my people have never known and a service more unselfish than anything they have ever experienced. She is teaching us the true meaning of liberty.

Señorita Fabra is one of the head assistants in the department which is devoted to the arts, crafts and a revival of the ancient industries, the Woman's Exchange and Mart of Loma-land. With a diligence and energy which is an example to her own people she is perfecting herself in her studies, preparing to become a worker in Cuba later, in assisting those who purpose to help that country, among other ways, along the higher industrial lines.

A. W. H.

DR. SOPHONISHA P. BRECKENRIDGE, who is a professor in the University of Chicago, has recently published a book, *Legal Tender*, which has been reviewed with special praise by J. L. Laughlin, among others. One reviewer states: "We have on our table a volume prepared by a woman . . . that in ability, research, grasp of intellect, boldness of thought and lucidity of statement cannot be surpassed by any lawyer in America."

THE GOAL

by EMILY DICKINSON

EACH life converges to some center
Expressed or still;
Exists in every human nature
A goal.

Admitted scarcely to itself, it may be,
Too fair
For credibility's temerity
To dare.

Adored with caution, as a brittle heaven,
To reach
Were hopeless as the rainbow's raiment
To touch.

Yet persevered toward, surer for the distance;
How high
Unto the saint's slow diligence
The sky!

Ungained, it may be, by a life's low venture,
But then,
Eternity enables the endeavoring
Again.

A New Departure

IT is reported that a new bill is soon to be presented to the Minnesota legislature. It provides that "any printed report of a crime, except according to the rules provided, shall be considered a misdemeanor and the publisher or manager of the offending paper shall be fined not less than \$100 nor more than \$500, or in default of fine, shall serve not to exceed ninety days in jail." The rules provide that, among other things, reports of crimes shall be printed in small type, that is, type of the ordinary size, that they shall be printed without headlines, that a mere statement of facts shall be given and that the reports shall be unaccompanied by either pictures or sketches.

The framer of the bill is said to be a woman, Mrs. McGowen, a resident of Minneapolis. Is it a straw showing which way the tide is certain to flow when good women are awakened? And what will the yellow journals do then?

RECENT examinations in the Paris Conservatoire reveal a state of affairs that is alarming. One musical paper refers to it under the heading, "Cruelty to Men Students." Of the four first cello prizes, three were won by women; in the piano department they stood far higher than the men; and of the five first prizes in the violin classes, they won three.

Woman's Legal Status in Louisiana

MRS. CATHERINE WAUGH McCULLOCH, a practicing attorney in Chicago, has recently pointed out certain statutes of Louisiana which discriminate against women. For instance, while the law states that marriage produces partnership in property, the management of the wife's property is placed solely in the hands of the husband. The mother's rights over her children are less than the father's, although—oh, the exquisite injustice of some of our laws!—in case the father dies, and in case the father's relatives give their joint consent, and in case the mother does not marry again, she is *allowed* to have the care of her own children. What a commentary on some legislator's ignorance of the treasured wisdom and the stored capacity for suffering that lies within the mother's heart! Mrs. McCulloch also mentions two statutes which, when contrasted, tempt the sanest to fly to extremes: one of which places the maximum penalty for criminal assault upon a child at five years, while the maximum penalty for burning cotton is twenty years! Possibly an amendment to the former statute would have some weight in abolishing lynch law in that State.

It is interesting to know that Mr. and Mrs. McCulloch are law partners. The latter has made an exhaustive study of the statutes of Illinois with reference to their bearing upon the position of women, and has published a book upon the subject, which plainly shows that if most men were not better than the laws the position of women would at times be difficult if not intolerable. In Illinois, however, and in other States as well, many laws which formerly discriminated against women now no longer exist by reason of legislative repeal or amendment. The subject is complex enough and one who attempts to look into the subject of the statutory enactments of our different States, however, is likely to conclude that what we really need is "fewer laws and better ones." A.

MISS ALICE FLETCHER, whose work on *Omaha Music* is almost a classic, has been associated with the Smithsonian Institution at Washington as well as with the Indian Bureau for many years. Her work among the Omahas deserves wider recognition, for she has often done what is usually considered man's work, and she has done it so tactfully as to minimize and sometimes eliminate all difficulties. It was she who surveyed the government lands for the Omahas and had charge of their division. We are beginning to understand that the American Indians have innumerable songs which conform to a definite melodic system—many of them connected with tribal legends, myths and ceremonies or religious rituals of the greatest poetic and dramatic beauty.

MRS. CHARLOTTE COMSTOCK GRAY has recently won her third degree from the Chicago University, that of M. A. Five years ago she took the degree of Bachelor of Divinity, being the only woman student in her class. She has given special attention to theology and homiletics and is proficient in Arabic, Hebrew and Greek, in addition to several modern languages.

At the conclusion of Mrs. Gray's examination for the degree of M. A., the faculty did not even retire from the room for deliberation, an unusual proceeding, but gave her the degree on the instant without a dissenting suggestion.

SAID Rachel, who has been characterized as "the mightiest Jewess since the time of Deborah and Miriam," in one of her letters, written as she lay upon a bed of pain: "My success is wonderful, but purchased at what a price! The price, alas, of my health and life. The intoxication of applause passes into my blood and burns it up! The public—the world—sees the artist, but they forget the woman!"

Woman in Hausaland

THOSE who have traveled in Hausaland, observes the *African Review*, "cannot help being struck by the very free and independent position occupied by the women. They also appear to have a good deal of time to spare." Among the precepts esteemed by the people are the following:

Farm work is not becoming for a wife; she is free, you may not put her to hoe grass as a slave.

If thou hast not a boy to take her pitcher, do thou endeavor to escort her to the water in the evening.

There are communities in some of the most advanced countries of modern Europe that might emulate with profit these, their "inferiors."

SENORITA ANTONIA FABRA

WOMEN'S incursions into astronomy are rare enough to make us give them an extra welcome. An Englishwoman, the Hon. Emmeline M. Plunket, in her recent book *Ancient Calendars and Constellations* has made her astronomical knowledge interestingly subserve the purposes of history.

The point she makes is that the zodiacal calendar of old Chaldea was made when the *winter solstice*, not as now the *spring equinox*, coincided with the sun's entry into the constellation Aries. She supports her theory by the results of wide knowledge of Persian, Indian, and Chinese mythological and astronomical lore. The solar epoch

referred to took place about 8000 years ago, and this of course shows the Chaldean knowledge of astronomy to date much further back than has hitherto been anywhere admitted. K.

Loyalty

WHEN we awaken to a realization of life's true meaning it is then that we begin to live. A new faith in humanity springs up within our hearts, a greater trust in ourselves and a pure and enduring loyalty. We then become able to discriminate, with an un-

failing clearness of vision, between principle and the will-o'-the-wisps of desire that ever seek to lead us back again into the old selfish past. But to be loyal to principle merely for the sake of keeping one's own house swept clean—to make of personal purity a fetish—is but another form of selfishness, more poisonous as it is more subtle.

Let us not allow the joy of our life in Lomaland and the beauty of our surroundings to lead us into forgetfulness of the world. Because we

are happy, it does not follow that the misery of the world is lessened, though it yet will be, for we, as true students, are unselfishly happy. In fact, the world's suffering seems to have grown more bitter from contrast. What are our personal struggles or trials or discomforts compared with those of the thousands who are waiting without the portals, longing, pleading to enter? What is our loyalty to the Teacher who has brought us a new hope and taught us how to live a greater life, what is our loyalty to her but another aspect of the compassion that we feel when we think of humanity and its sorrow?

Let us live as the soul would have us live, on the heights, where our every thought is pure and unselfish. We are our brothers' keepers, and if we lived more earnestly we would realize this more fully. Let us begin each day with our eyes looking up to the heights, not upon the ground. So living, every duty will be a joy, and every responsibility will be a privilege.

Let us not narrow our thoughts down to the little circle that bounds only the personal self. To do so is to be disloyal to all the principles that we profess to serve, disloyal to all that we claim to defend. The very fact that we are gathered, a united body, at Lomaland, is a sign of our trust in principle and our loyalty to those who are giving their lives in humanity's service.

Professor Petrie on Household Life in Egypt

A REPRESENTATIVE of the *Daily News* has been so fortunate as to secure an interview with Professor Petrie at University College, London. The Professor was busy with the results of his Egyptian explorations but was courteously willing to talk. He addressed himself more particularly to household life in ancient Egypt, and furnished his visitor with a plan showing the method of arrangement most usually in vogue. We reproduce this plan which the Professor considers to be an ideal one for Egyptian houses.

Among the treasures displayed by the eminent explorer were a number of agricultural implements of which we reproduce the cut appearing in the *Daily News*. There was also a chicken-coop, combs with hanks of thread, ink palettes and pens and a fine collection of personal ornaments with mirrors and glazed pottery. The toys were perhaps the most interesting from some points of view. They included tops, clay figures of animals and dolls with hair. Most of these toys date from about 2500 B. C. Commenting upon some pictorial designs on stone the Professor called special attention to the beauty of the lines. "Sometimes," he said, "you will see a line uninterrupted from the top of a figure's head right down to the toes. The Egyptians never made a shaky line."

Egyptian discoveries follow each other in such rapid succession that the work of classification and translation is necessarily very much in arrear. Nevertheless, enough has been accomplished to entirely overthrow many a theory which was firmly held until a few years ago and to place our knowledge of human evolution upon an entirely new basis.

Important Ruins in Mashonaland, South Africa

ARCHEOLOGISTS are beginning to realize how vast is the field opened up to research in Rhodesia, South Africa. Like most new territories, and especially gold bearing territories, Rhodesia is overrun by speculators and prospectors, and science finds some little difficulty in coming into its heritage.

None the less, busy hands are at work, and occasional reports show that their work is by no means in vain. One such report recently received records the finding of a soapstone beam nearly four and a half feet high, surmounted by a bird carved from the same material, and bearing upon its face a representation of a crocodile or lizard about sixteen inches long.

A museum has been opened at Salisbury, the capital of the colony, and this, and other archeological discoveries have been placed therein.

STUDENT

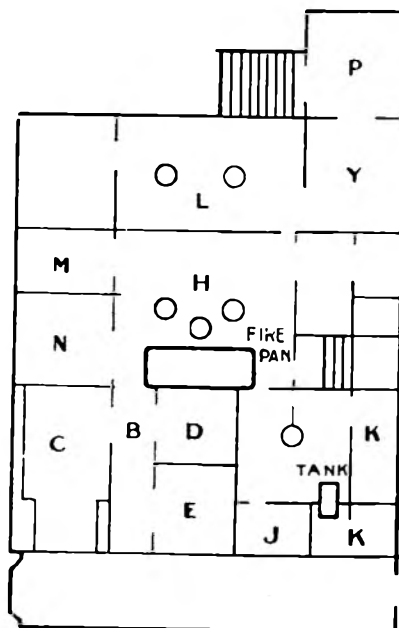

The Dinosaur Was Big Enough to Have Two Brain Centers

TO find an animal with two brains we must go very far back into the prehistoric period. Professor Oliver Farrington, however, vouches that such an animal did exist, and that it was no other than the dinosaur. Of this creature he writes:

This vast creature actually had two brains. He had only one small set of brains in his head and an extraordinary enlargement of the spinal column which must have performed the functions of a second brain. It was a second nerve center of great importance. That is clear from the evidences of enlargement seen in the bones of the animal. The brain was only a continuation and enlargement of the spinal column.

The dinosaur was seventy feet in length and weighed more than twenty tons, so that it was not unreasonable that so vast a bulk should have two directing centers.

Remarkable Silver Helmet Found in Tennessee

THE excavators of an Indian mound about twenty miles south of Paris, in Tennessee, have discovered a metal helmet, which seems to be made of silver. It is beautifully made and artistically carved, and its weight is about eighteen pounds.

There is naturally much speculation as to its origin. Copper articles of rough workmanship have often been found in Tennessee, but nothing of silver nor of such fine craftsmanship has been previously found. It is suggested that it may have belonged to one of the early Spanish explorers under Hernando Soto, who penetrated this territory in 1582. How then did it find its way into an Indian mound unless it can be shown that the mound is of the same date? The problem should be easy of solution, but the helmet is not unlikely to be a relic of bygone ages, and to have been a treasured antiquity in the hands of the Indians who made the mound.

Fossil Hall, a New York City Museum

FOSSIL HALL, New York, has lately been reopened to the public after having been closed for a few months for cleaning and rearrangement. A number of additions have been made and the Vice-President states that the collection of fossils is now the most complete in the world. The most perfect specimen is perhaps that of a mammoth, which was discovered in Texas, and of which the tusks are nearly fourteen feet long. Another valued possession is a skeleton of the three-toed horse, known as the *Messohippus*. The Vice-President has recently stated that Fossil Hall contains a complete picture of the evolution of life upon the American Continent during three millions of years, and the collection is therefore of very great educational interest.

STUDENT

The Pharaoh of the Israelites' Captivity

THE way in which theology is being compelled to follow upon the footsteps of archeology is curiously shown by a recent Egyptian discovery. We are all familiar with the story of how "Pharaoh and all his host" were destroyed by the sea while pursuing the victorious Israelites. The fact that the mummy of Menephthah, the Pharaoh in question, was missing from the otherwise complete series, was triumphantly quoted

as proof of the Old Testament narrative. But now the mummy has at last been found, and it is left to the reluctant theologians to discover that the Biblical record does not expressly state that Pharaoh himself shared the fate of his army. It is well said by an able commentator that every pit that is dug in Egypt becomes the grave of an exploded theory; so as the spade goes deeper the creeds have less to lean upon.

Remembrance of the Sacred Fires of Ancient Ireland

THAT the ancient Irish were sun-worshippers, and that they keep alive some remembrance of the pagan belief to this day, is beyond doubt. Tonight is "Bonfire Night" in Ireland, and under the influence of the Gaelic League it is being celebrated in some places more in accordance with the traditions of Beltane than has hitherto been the case. On a mountain near Dublin great bonfires have been made by the Gaelic Leaguers, and around these there will be Irish music and dancing. In ancient Ireland the Pagan Beltans was held on May Day, and all fires were lit from the sacred flame at Tara. In Christian times, instead of abolishing the Pagan festivals outright, their dates were altered and their purposes were, so to speak, Christianized.—*London Daily News*

Kindness to Dumb Brutes

THE following, reprinted from the Los Angeles *Herald*, are some extracts from an address delivered by Miss Helen Mathewson at a teachers' convention at Denver, Colorado, where she resided. She is now living in Los Angeles. We regret that we cannot publish the remarks in full:

"The suffering of the flesh will ever be the same, whether it be the torture of a brute or the agony of a king, and yet some people regard the kind treatment of animals as only a matter of sentiment. So it is. The highest and best things in life are all matters of sentiment; however, the greatest men known to the world were those who loved animals. . . .

"The most wonderful thing in the world is human stupidity; next to that is human conceit. We pride ourselves on our articulate speech, yet they understand our language better than we do theirs, although in one respect their language and ours is the same. Brute or human, a cry, a groan, a shriek, the voice is the same as the pang that gave it birth. . . .

"Farther, who are we, who know so little of the life that is to come, but who look forward to it despairingly as the place where the wrongs of this life shall be righted and sorrows recompensed? Who are we to deny the same hope to these lesser brothers of ours, children of the same father, whose wrongs are no less than ours and whose deserts are sometimes greater? Shall the injustice done us here be evened up there? Shall the pain we suffered, the labors we endured, be made up to us there, and yet the same justice be denied to them? If so, where shall the poor, lame, starved, beaten and tortured horse, who gave his life in the service of a cruel master, have justice done him?

"Where shall the hunted and wounded thing, dying in the hidden brake, take up again his joyous life? . . .

"Is there no place, no time, where the awful mystery of pain shall be solved for the dumb? Shall He who 'heedeth the sparrows when they fall' give justice to some of his creatures and deny it to others? Is there no place where the despairing 'Why? Why?' asked by the agonized voices of all ages shall be answered for the brute's inarticulate cry as well as for our articulate one?

"For that which befalleth the Son of Man befalleth beasts, even one thing befalleth them; as the one dieth, so dieth the other. Yea, they have one breath so that man hath no pre-eminence above the beast for all his vanity.'"

A JAPANESE newspaper announces the discovery in the southern portion of Taiwan of a forest of camphor trees, covering an area of 50,000 acres and containing about 120,000 trees. This forest should produce about 6000 tons of camphor, and the discovery is therefore one of very great pecuniary value, besides providing employment to a large number of persons.

Cocker Spaniel Puppies

THE four Cocker Spaniel puppies in the picture show plainly that dog nature is as diversified as human, if only studied closely. Taking the liberty of interpreting these puppies' thoughts from their expressions, it is evident that the two in the middle were amused, the one on the right indifferent and the one on the left frankly indignant. Like some people again, some dogs easily become posers, and it is only necessary to point the camera at them to assure absolute stillness and a dramatic attitude, but at the age of these four—two months—the patience of the photographer has to be Job-like and his plates many to get a subject with the natural number of heads and feet.

GOD IN NATURE

YOUR voiceless lips, O flowers, are living preachers.
Each cup a pulpit, every leaf a book,
Supplying to my fancy numerous teachers
From loneliest nook.

'Neath cloistered boughs each floral bell that swingeth
And tolls its perfume on the passing air,
Makes Sabbath in the fields and ever ringeth
A call to prayer.

Not to the domes where crumbling arch and column
Attest the feebleness of human hand,
But to that fane most catholic and solemn
Which God hath planned.

To that cathedral, boundless as our wonder,
Whose quenchless lamps the sun and moon supply,
Its choir the winds and waves—its organ thunder—
Its dome the sky.

There amid solitude and shade I wander
Through the green aisles and stretched upon the sod
Awed by the silence, reverently ponder
Upon the ways of God.—Selected

LOMA-LAND CHRYSANTHEMUMS

Chrysanthemum, Royal Flower of Japan

TO those who live in colder climates than Loma-land the chrysanthemum is a very valuable flower, because it blooms so much later in the season than most others and will endure so much frost. Also it is a very adaptable flower and may be, and is, cultivated into a great variety of shapes, sizes and colors. Some are formed of such long petals that the whole bloom is as large as a man's head, while others are quite small and compact.

It is a close relative of the daisies and sun-flowers, so far as the flower is concerned, but has been made so very "double" by careful selection that nearly every flowerlet in the bloom has its gorgeous long petal.

Most of the compositae have only the outer row of flowerlets developed into the single petal form, the others remaining small and fine-petaled. But in the chrysanthemums, dahlias and such species, nearly every flowerlet produces a gorgeous banner-petal, sometimes four or five inches long, though the flowerlet itself is scarcely more than an eighth of an inch in diameter.

This process or method of "doubling" is quite a contrast to that of the roses or carnations and their kin. With them the "doubling" process consists in adding more petals to a single flower; for a very much double rose is only one flower; while a double dahlia or chrysanthemum is composed of many little flowers which are greatly developed, each producing one great petal instead of five tiny ones. The centers of most composite flowers, such as daisies, marguerites, etc., are composed of these tiny five-petaled flowers, while the large petals are from the specially developed single-petaled flowerlets.

It speaks well for the good order of the flower elves that they never make the mistake of putting the large petals in the center of the bloom nor of scattering them about in a disorderly way. There are a few of these tiny five-petaled flowerlets in the center of a chrysanthemum, but they are completely hidden.

To those of the students who come from more northern lands the profusion of flower growth at Loma-land is a never-ending astonishment. This picture shows only a part of one picking from a bed of thirteen chrysanthemum plants which are growing in the open air in October.

Universal Brotherhood Organization

Central Office Point Loma California

I SIS THEATRE was well filled Sunday evening at the regular meeting of The Universal Brotherhood and Theosophical Society, by a very appreciative audience which bestowed unstinted applause upon the sentiments expressed by the speakers and upon the delightful instrumental work of the students of Isis Conservatory of Music.

The speakers of the evening were Mrs. Tyberg, on "A New Era for Women," and Mr. Sidney Coryn, who delivered the second address in his course of essays on "Ancient Egypt." Mrs. Tyberg's paper was in part as follows:

"To the woman who knows the principles of Theosophy, and is striving to apply them in her daily life, the whole world is made over anew, for she acts from a hitherto inactive, hidden part of her nature and the circumstances and relations of her life are so illumined by her philosophy that they seem to offer a fresh and broader field for work.

"For hundreds of years life has been colored by the belief that man lives but one life on earth, followed by an endless existence in heaven, or hell, as the case may be. It has never been quite certain that those who have loved on earth will ever know each other again, even in heaven, and many tender-hearted people have pondered sadly on how happiness could be theirs, if one they loved were suffering eternal torture. It is a proof of the depth of the darkness of the age from which the human race is just emerging, that such beliefs could be accepted by many. A great mystic asks, 'Can it be aught but suffering, to love for one life only?' Many faithful, sorrowing hearts, oppressed by their belief in narrow creeds, can give the answer.

"It is a help in throwing light on the painful relations in life, to know that in doing our duty in them, in living them out, without allowing ourselves to be overwhelmed or discouraged by them, we are paying our just debts and freeing ourselves from influences and bonds brought about by our past mistakes and failures.

"When a woman sees in those she loves immortal souls, her view of life is broadened in every way. The pettiness of life, the gratification of personal desires and ambitions, the struggle for wealth or fame, or even the evanescent popularity that is all that can be achieved by most, the anxiety about worldly interests, the intense competitive spirit that usually enters into life, and wears out the body and mind, all tend to disappear when the larger view is held. While failing in no duty to herself or others, alive to every real interest and pursuing these along temperate lines, a woman with the true philosophy learns from her belief and trust in the law underlying life a serenity and calmness of spirit very different from the 'diseased indifference' that passes for resignation among those who for lack of insight and understanding and true philosophy, have really abandoned the battle-field of life and settled down just to get along as best they can.

"An appreciation of the working of the Law does not, however, do away with difficulties or solve all the problems of life at once. Human relations are not purified and elevated in a day. Character, as we have all observed, is building slowly, and great love and patient effort do not always win even those who are nearest to us, to noble ways. Love has been blind for ages and has failed to help, where a wiser love, seeing the whole nature, facing every tendency and still continuing faithfully, may work wonders. 'Never to tire, never to grow cold, to be patient,

LOMA-LAND STUDENTS AT ISIS THEATRE

**Large Audience Well Pleased
With Interesting Addresses by
Mrs. Tyberg and Mr. Coryn**

Reprinted from the San Diego News

sympathetic and tender, to look ever for the budding flower, the opening heart, to hope always, to love always like God, this is duty.' But there must be an uncompromising attitude to wrong that there has *not* been in the past. Women must *be* something that it is difficult for evil doers to face. They must turn away, having seen themselves in the

light of something pure and clear, knowing themselves as they never have before. What think you would be the condition of the world, if every time a woman had encountered what she knew to be wrong, 'feeling the Eternal Law' as her support, she had protested against it? Silence and patience and endurance are all golden in the right place, but sometimes by practising these virtues too long women may rob a soul of the opportunity for which it has incarnated, the opportunity to face the lower nature and move on with more light.

"The lives of many women are full of monotony. Having no true conception of what life is for, no knowledge of their power for good, full of fear and apprehension and helplessness, they look along the dreary stretch of existence and almost with a feeling of relief see the white tombstones gleaming at the end of it. But to the woman who believes she is a soul, and acts on her belief, all this is a thing of the past. She is not afraid to begin new things, it is *never too late* for her to begin to attain to the broadest culture; she knows that only an effort of her will in any helpful direction may be needed to call forth the fruit of effort made in other lives, to awaken skill and power lying waiting for her call. She will find that she is in truth an undiscovered country to herself. She will find not only undreamed of faculty for helpful work, but if she looks honestly at herself she will see the seeds of what in others she may have shrunk away from. Her blindness to these things in herself may be the chief reason for feeling separateness from others, and when they are faced, behold a barrier broken down, more unity, more will, more tolerance, more power to help. For the woman who faces evil tendencies in herself and has the strength to hold them under control, to give them no headway, to be vigilant over herself, wins a heart-force to which those who have succumbed to weaknesses, those in the depths of overcoming, turn in their distress.

"There will be a time when the hearts of the Raja Yoga women all over the world will be so strong and warm, that their weaker sisters will thus turn to them saying, 'Guard us from ourselves!' This will be one of the reformatory systems of brotherhood life on earth, and it will be an effective system, for it will be based on sympathy, and unity, and self-control.

"A woman whose whole life is lived from the standpoint of the soul, will not enter lightly upon any new relations, whether of friendship or marriage. In her heart she knows that whether it is present in her life or not, there is a joy of true companionship—the love of comrades who have battled for the right together, worked side by side in the great past, and she will not accept any unworthy substitute for this. As pure lives offer more and more freedom for the soul to act, the knowledge that has been ours, of the laws of life, will return to us. We shall win our way to the heights reached by the ancient peoples of the earth, of whom more and more will be heard as time goes on, and then having awaked what is now a hidden and almost unsuspected resource in ourselves, we shall pass on to the new joyous future."

CHRISTMAS GIFTS---A Suggestion

CHRISTMAS is preeminently the time for the giving of gifts, of which the selection is usually a task demanding much anxious care and much lost time.

The essentials of a worthy gift are value and permanence, and in the search for these qualities works of literary and lasting worth naturally take a foremost place. A good book is an unfading treasure, a storehouse of which the contents become more valuable with time, an instrument for the increase of intellect and for the making of character, a link between the giver and the receiver which grows stronger day by day. A year's subscription to the NEW CENTURY PATH is surely a Christmas present worth giving and worth receiving, a weekly reminder of the good will which called it forth. Subscriptions sent in now will be in good time to enable us to deliver the first number at Christmas.

A Thanksgiving Play

THE children of the International Brotherhood League Colony celebrated Thanksgiving Day by a dramatic performance which those who saw it are not likely soon to forget. We can give it no higher praise than to wish that it may be prophetic, as indeed we believe that it will be. The scene represented child life in the coal mines. First of all three children, so small, so ragged, and so work-stained, appeared upon Melita, the Colony donkey, to whom all praise is due for a steady and realistic piece of acting. Melita was led by a fourth child, and the little group joined a crowd of other children similarly attired in the melancholy costume and grime of the coal mine. A discussion upon their hard lot ensued; the constant hunger and the miserable wage, the necessity of helping to support the home, and the unending, pitiful struggle to make both ends meet. It was admirably and faithfully done, and even the babies seemed to show an intelligent comprehension of the parts that they were playing. Then appeared another little actress clothed in white, and representing the Raja Yoga School, of which she explains the beneficent work and the love which it expresses toward all children, and especially those into whose lives the sunlight has never yet come. She promises

that they shall all enter the school and be taught how to be brave and strong, and as a material expression of the good things to come a real Thanksgiving dinner is even now awaiting them.

And then the curtain was drawn aside and there was certainly no acting and no make-believe, either, in the feast of good things which was disclosed, nor in the sincerity with which they were made to disappear. It was a very admirable little play, and as we have already said, we can wish for it nothing better than that it may be a promise of things to come. We believe very heartily that it will be.

OBSERVER

Observer Notes

¶ The news from Cuba is eminently satisfactory. The schools have now been established upon the firmest basis, and to hundreds of children an education is being given which will make of them useful and capable men and women, who will not look upon the world merely as a nut to be cracked by hard blows, but as a world to live in, to be happy in, to be loved and to be improved.

¶ That the schools which Katherine Tingley has established in Cuba should have won their way into popular esteem is not to be wondered at. The Cubans are a practical people, and a people who value education more, perhaps, than any other nation upon earth. They know how to estimate the teaching which the Raja Yoga Schools are providing for their children, they know that it means success in life for those children, and a success which will be won by character and not by cunning, the success which is free from the cruel friction of competition. The Raja Yoga system is itself free from the spirit of rivalry and of competition, which does much to mar so many otherwise excellent efforts. From its very nature it can antagonize no one who has the well-being of children sincerely at heart, and for this reason it is winning its way in Cuba as it must do wherever it is introduced.

¶ The Cuban schools are now floating so buoyantly that Miss Wood will soon be once more in Loma-land.

OBSERVER

Vigilance

ETERNAL vigilance is the price of safety. We cannot be overvigilant, but our vigilance may be of the wrong kind. We must guard it so it may not turn into black suspicion, its evil half-sister, who so often masquerades as watchfulness. Wherever she is allowed to enter, there joy in life departs, for she brings with her pictures of only the dark, the evil side of nature. Unfortunate is the man or woman who falls a victim to that habit, for it spreads a pall over their whole life and makes them lose faith in all that is divine in human nature.

Vigilance is of a different stamp. It is the attitude of the fearless mind, open and alert, ready to see, ready to believe, and ready to know. No uncertain, timid doubt and fear, no distrust, but frank and free recognition of things and men and conditions as they are. It sees the evil, but also the good, which it loves, and through this love it remains uncontaminated in spite of all it sees.

Vigilance is a quality of a positive mind, suspicion that of a negative. Yet, in so far as sensing wrong is concerned, vigilance, in a sense at least, is passive and suspicion active. Vigilance may recognize evil as soon as it begins to exist, even before it is yet manifest, but it does not anticipate it. It waits until it discerns an attack; suspicion imagines one and by this very attitude often provokes it.

This is true in relation to others and toward ourselves. In our constant warfare against our lower nature vigilance is more important than ever, but here, too, it is wise to keep out all anticipation of trouble. Let us *trust ourselves*; let us always keep our face toward the light. If we stumble and fall, as we often do, this should simply make us more vigilant for the future, but nothing is gained by turning around to gaze at the obstacles. We will always do just that to which we rivet our attention. Let us then lift our minds, and our actions will follow, surely and naturally. From above we can take a more clear survey; a sentinel is always placed in a com-

manding position. Sentinel is a post of honor; spy is not. A spy has to partake of the nature of that which he is spying upon, for the time being, and gradually this becomes habitual to him, and he falls to the level of the evil he has endeavored to check. A sentinel places himself squarely on the side where he belongs, and shows his true colors.

Let us stick to the heights! Let us be sentinels, vigilant!

Living by Insight

A paper read before the Sidney, N. S. W. Lodge

LIVING by insight is living the soul life. To live the soul life we must find our true center and live in and from this center. To gain a true idea of ourselves and to concentrate our thought upon it, is to get back to our fixed center. When we rule our daily lives according to the true self-idea, making every thought conform to it, we have found the kingdom within. Humanity is lifted up only as its idea of self is lifted up.

We can never see the divine in mankind until we first see it within. We lack the insight which reveals the truth, because we are blind to it through natural sense. We seek here, there and everywhere for truth, with many a stumble by the way, and all the while it is right at our hand waiting for our eyes to open. The new world simply awaits our discovery. The way thither is within. The light which illumines it "lighteth every man that cometh into the world." This light is soul-perception. We must cast aside our sense-perception and encourage and strengthen soul-perception instead. As soul-perception grows, it becomes feeling. Through this feeling we rule our existence. It is religion. We have to find our religion within, which is of the heart, and not of the head. It is inward recognition and appreciation of our relation to the divine Being, rather than a profession of faith in a human doctrine.

Do we see the connection between thinking and feeling? Do we think according to our insight or only according to our intellect and oversight? "As a man" — a soul — "thinketh, so is he." As we think, we — as souls — are. When we think love and purity and goodness and truth, we fill the inner world with these creations, and the outer world becomes changed, even glorified. If we keep the inner eye fixed on the eternal, then, little by little, the within will become the without. The soul can never rise higher than the level of the thought it embodies; hence, as we think, so are we in soul. What we think we sometimes experience, and according to the quality of our thought will be the kind of our experience.

The outward acts are expressions of the thoughts. To be clean in thought is to be clean in life. To become clean in thought we must let go the past and start anew. The dead will always bury its dead if we let it. If we are shut out from heaven it is because we have ignorantly shut ourselves out. The way to heaven is within us, and the entrance is right thoughts.

When we suffer and feel the woes of the world we are not living from within. All our sufferings are self-created, hence we are punished by our sins and not for them. "It is the law that as souls we must fulfil our destiny, and not one jot or tittle will pass from the law till all be fulfilled." When we live by insight we feel the blessedness of heaven and we can look upon the seeming woes of the world with peace and security.

As souls we must grow, and the higher order is from the within to the without. Only in this way can we live our lives in the midst of misunderstanding and misjudgment or even condemnation, because we have that inner within by which we will find our consolation. When we live by insight we are living in a world of light, a world which is luminous with the consciousness of our God-being.

We are living souls on our way to the Father's house, and as such we must bring forth, but it is with us to choose what we will bring forth. We have it in our power to bring forth the Son of God. If we make this choice, He will rule our daily lives, for He is within and at hand. It is a glorious thing to know that every effort we make for ourselves is equally an effort for the whole race.

THE Chancellor of an eastern University is reported to have said

in the course of his recent annual address: "I wish we could require from every freshman a Sunday-school diploma, that would certify that he knew by heart the Ten Commandments, the Sermon on the Mount, a church catechism of some kind, a score of the Scripture Psalms and best classic hymns. This University will join any association of the universities and colleges that will demand this as an entrance requirement. So much as in us lies we will make the College a place for preserving and strengthening reverence for things divine."

The Chancellor of this University is evidently a very remarkable man. We are well aware that the spirit of religious persecution is by no means dead, having ourselves encountered it upon many occasions. It is, however, usually ashamed of itself, and borrows all sorts of plausible costumes to hide its detestable identity. But here we find it entirely naked

Religious Tests & Disabilities

and entirely unashamed, and we would suggest to this educational (!) luminary that he would be better fitted for his position if he were to study history a little more and church catechisms a little less. He would then learn that the day of religious tests and disabilities has passed away, loaded down with the curses and the execrations of men, and it is not likely to dawn again. Cotton Mathers and Archbishop Laud belong to past ages, and we only remember them as examples of what to avoid.

It seems almost a pity to waste any time upon such proposals, but yet it may not be altogether amiss to put it upon record that there is still to be found in the intellectual museum of the world an educational authority who wishes to refuse instruction to those who are unwilling to subscribe to definite religious creeds and dogmas. The Chancellor may perhaps believe that the sun stood still at Ajalon, but he is mistaken in supposing that it has been motionless ever since.

STUDENT

Done Without the Flare of Trumpets

IT up a little further, Jimmy, so I can git a better view; there is another bloomin' little Boer with 'is bloomin' little pop-gun playing 'I'm the King of the Castle.' I owe 'em one for poor old Bill." And the jolly voice deepened with feeling as he mentioned the name of his other chum, shot dead that morning.

The two men were lying half way up the hillside, under cover of some big stones and cactus, and fairly tall scrub. And very uncomfortable they found it. As Jimmy said, "They 'aven't even the decency to grow grass for us to lie on so we can fight comfortable." Every unwary movement sent a sharp thorn of cactus spike into their anatomy, which produced cast-iron language of various color and strength.

"There 'e is, the pritty," said Dan, "don't 'e look a picture with 'is little face peeping out between the graceful wavin' cactus. Keep quiet just like that little man; there now, steady. Keep still and look pleasant. There you are," as the rifle rang out. "Old Bill's paid for. I'm sorry for 'is old woman, though," he said soberly, as he dropped the empty shell from his rifle.

"Yes," said Jimmy, rolling over on his back, as he took his black little pipe out of his mouth. "It makes me think of my girl, Polly, and our little Bess, sometimes, when I roll 'em over; it's jolly 'ard on the wimmin, bless 'em. I 'ad a letter from Polly yesterday. Took eight months to git to me. She 'opes I 'aven't forgot wot old England's like.' My Gawd, Dan, forgit wot old England's like? wot do they think it's like out 'ere, that we'd forgit the only country that's worth living in?"

Dan grunted sympathetically, then shouted a "Look out!" as a bullet whistled past them, knocking Jimmy's pipe out of his hand.

"Now, look at that," he said eyeing the pipe sadly. "I've 'ad 'er ever since we left 'ome. Now I'll 'ave to pawn me uniform to git another." Then, returning to the subject which had been filling their minds and their hearts with a longing they could not put away, for weeks past, the old country, and—for Jimmy, Polly and the kid, for Dan, the girl he was going to marry when he came back from the war.

"Think of it, we was comin' out on a little 'oliday treat for a few week's change, for our 'ealth, an' while we was 'ere we was to teach these Bible readers 'ow to be 'ave; an' we've been teachin' 'em for nearly three years. An' they're be'avin' their own way yet."

"Three years," still gazing at the shattered pipe, "three years of pom-pom and powder, food when ye can get it—an' the meat like injer rubber at that—an' look at the state of me tools," looking at his rusty rifle and bayonet, "that used to shine like Polly's Sunday brooch, an' I 'aven't a single stud left for me evenin' dress shirt, an' now me pipe's smashed," and he threw his arm back with a dramatic gesture, leaping to his feet however the next instant, with an "Oh!" and several long cactus points decorating the fleshy part of his arm.

"Down, you silly," roared Dan, but as he shouted, Jimmy fell a crumpled heap behind the pile of stones.

"You'll tell Polly," he whispered, as Dan bent over him, "and in my satchel there's a little old doll I picked up at that farm'ouse at Bloemfontein. I was savin' it for little Bessie. You'll take——"

"Oh shut up old pal, wot's the good of torkin like that, you'll take it yourself, and tell Polly all about it. Now git a good grip roun' my neck, an' don't let go fer yer life. I'm goin' to take you down the 'ill to camp. I was gettin' sick of this myself." And the plucky fellow started down hill, staggering under the dead weight of his wounded chum, the two making a target that only by a miracle, could escape the sharpshooters concealed at all points. A dull thud, and a faint "You'd better drop me Danny, I'm 'it again," from Jim, was answered by a growling "Don't tork, you worry me."

Then they reached the bottom of the hill, and Dan went at a canter across the flat ground in the direction of the ambulance van, and dropped the now fainting man from his shoulders into the arms held out for him.

"That was a plucky thing to do, my man," said an officer, "and how you escaped being hit is a marvel."

"You see, sir, Jim's my chum, and 'e's got a wife and kid over the water. It don't matter so much about me if I never get 'ome again, besides I was born lucky, I 'aint likely to get 'it."

Every bullet has it's billet, and as Dan was speaking, the bullet marked for him had left the rifle, and as he spoke the last word it found it's mark in Dan's side.

* * * * *

"Nurse, can you find me a pen and paper?" asked Jim who, after eight weary weeks in the comfortless improvised hospital was at last able to sit out a while. "I want to write to my little woman."

"Why didn't you ask me, Jimmy? I've got a dandy pen, only 'e's lost 'is nib and me pencil's got no point," came a voice from a narrow little bed near by, where lay our friend Dan, thin, wan and bloodless looking, but still trying to joke and to keep up the spirits of both of them. They had been talking of home, and the expected hospital ship that was to take them away from the scene of so much misery, on board of which they would have cool, *clean* linen, cold drinks, easy beds and be rid of the suffocating heat and tormenting flies, and mosquitoes, which swarmed everywhere.

"Just think of it, Jimmy, a thin tumbler full of lemonade, with *ice* tinklin' against the sides," chuckled Dan, "an' bath, an' clean clothes, an' books to read, an'

all the time on our way 'ome. The perfume they use 'ere ain't exactly up to the 'oneysuckle in our lane, is it, old man?" snuffing dejectedly at the mixture of disinfectants, dirt and heat, with which the air of the shed was filled.

Jim didn't smile. "Oh, don't tantalize a fellow Dan. I'll never see old-England again. The ship's seven days overdue now, and I'll never 'old out to board 'er. Can't even 'old this blessed pen to write good-by to my girl, God bless 'er," and the weak voice broke, and big slow tears of disappointed hope, and longing for what he felt he would never see again, rolled down his thin face.

"Don't you believe it, old chap. I'll bet she'll be in before tomorrow's through," said the ever cheerful voice of Dan, who stifled his longing and homesickness for the sake of his chum.

There was a stir at the door and the bright-faced nurse came in. "Good news, boys, she's in sight!" she cried, "and you shall have your mea' and go to bed and to sleep at once, Jim, and you, Dan, must sleep as soon as you can. You'll all have to be up early tomorrow."

Not much sleep did the two friends get that night, and never was music sweeter than that of the distant sounds of the vessel as she came into port, the faint voices of the officers, and the slowing down of the screw.

Early in the morning Jim was up and dressed waiting in his chair for the arrival of their escort. Dan, not so far on the road to recovery lay dressed on his bed. Their eyes shone with excitement but neither spoke. The nurse came in and went to Dan's bed.

"Dan," she said, "what shall we do? All the sick are on board but you and Jim, and—oh! I can hardly tell you," tears filling her eyes, "there's room for but one more."

She thought he had fainted with the shock, but after a minute in which his white face went whiter if possible, he said, "Don't tell old Jim, he *must* go. Let him think I'm coming along."

"You're a hero," said the nurse, as she kissed him, then turning to Jim, "Now Jim they're waiting for you."

"And Dan?" said he.

"I'm coming along after you in me carriage," said Dan with a wave of the hand, "I'll be there before you now if you don't git along."

"All right, 'ope they'll put us together, we'll 'ave that lemonade first thing, eh?"

"Yes," laughed Dan. Then as they left the place, and the forced smile left his lips, he turned on his bed to face alone the disappointment that was bitter as death.

AN OLD FASHIONED GIRL

by L. M. MONTGOMERY

NO clever, brilliant thinker she.
With college record and degree.
She has not known the paths of fame.
The world has never heard her name.
Home is her kingdom, love her dower—
She seeks no other wand of power.
Around her childish hearts are twined,
As round some reverend saint enshrined,
And find all purity and good
In her divinest motherhood.
She keeps her faith unshadowed still—
God rules the world in good and ill.
This sad old earth's brighter place
All for the sunshine of her face;
Her very smile a blessing throws.
And hearts are happier where she goes.
A gentle clear-eyed messenger,
To whisper love—thank God for her!

"HULLO!"

by S. W. Foss

WHEN you see a man in woe
Walk right up and say "hullo!"
Say "hullo" and "how d'ye do!"
How's the world a-using you?"
Slap the fellow on his back,
Bring your hand down with a whack;
Walk right up and don't go slow—
Greet, and shake and say "hullo!"

Is he clothed in rags? O sho!
Walk right up and say "hullo!"
Rags is but a cotton roll,
Jest for wrapping up a soul;
An' a soul is worth a true
Hale an' hearty "How d'ye do?"
Don't wait for the crowd to go—
Walk right up and say "hullo!"

When big vessels meet, they say,
They saloot an' sail away;
Jest the same as you an' me—
Loosesome ships upon a sea;
Each one sailing his own jog.
For a port beyond the fog.
Let your speakin' trumpet blow—
Lift your horn an' cry "hullo!"

Say "hullo" and "how d'ye do?"
Other folks are as good as you;
W'en yer leave your house of clay,
Wanderin' in the far-away,
W'en you travel through the strange
Country t'other side the range,
Then the souls you've cheered will know
Who you be, an' say "hullo!"—Selected

The Trend of Twentieth Century Science

Some Notes on Sound, Form, Color and the Mind of Man

IN this issue we reproduce some of the sound pictures resulting from the careful and valuable experiments which have been recently conducted and to which reference has already been made. With the details of these experiments we have at the moment nothing to do, concerning ourselves only with their outcome, and with some few deductions a little further afield than those which have usually been drawn.

These experiments have conclusively demonstrated the fact that there is a correspondence between sound and form, and that they are mutually expressive. Her experiments are simple and are necessarily limited in range and complexity. However elementary and even crude our present apparatus may be, enough has been done to justify the belief that all sound may be expressed in terms of form, and that Sound and Form are different manifestations of the same force. This by itself would be sufficiently startling, but there are still considerations and conclusions not less justified, and which open up a boundless field of research. If there is a law of correspondence between sound and form, is there not also a correspondence between sound and color, and between sound and states or conditions of consciousness? If this can be proved, then indeed the problem of man's place in nature and unity with nature is on the high road to solution. Now, if there is a correspondence between a single note of music and a form, the same law must hold good with all notes of music however combined and however arranged. That is to say, if the simple air "My Country, 'Tis of Thee," can be expressed by forms, the classic music of an orchestra is equally expressible had we but the finer mechanism with which to do it. Now, probably there is no force in nature which has so great an influence upon consciousness as that of music.

At the bidding of music we become sad or joyful, hopeful or despondent. By the magic of music we ascend into heaven or descend into hell. The correspondences between sound, or music, and consciousness, are too apparent to need indication. It would seem, therefore, that sounds, forms and states of consciousness are mutually expressible; that there is, for instance, a corresponding form to every state of consciousness as there is to every sound or combination of sounds. Given the necessary apparatus, as indicated by the simple mechanism of Mrs. Watts Hughes, and the classic music of an orchestra would translate itself into complex forms as readily as it now translates itself into the states of consciousness of those who hear it.

In the domain of color we are on less demonstrable ground, but perhaps not the less certain. That notes of music do evoke a color idea is the experience of a very large number of persons, although we believe that the results have not been carefully tabulated. That color combinations produce a marked effect upon consciousness is, however, indisputable by any one who has ever looked upon a great picture or upon the colors of nature. The whole gamut of feeling finds its correspondence in the colors of sunrise and sunset, the tints of the ocean, the glories of sky and landscape. Color still awaits the classification which Mrs. Watts Hughes has given to sound. It is none the less possible, and that it will be done is none the less certain.

We may then justifiably believe that there is a law of correspondence which connects the mind of man with the natural departments of sound, form and color; that there is a vast consciousness in nature which expresses itself in these ways, and that through these familiar channels

the consciousness of nature declares its unity with the consciousness and the mind of man. So brief are our limits that we must confine ourselves to briefest suggestion where it might be possible to elaborate almost indefinitely. The temptation to take one step more is, however, very great.

We have so far spoken of the normal as regards consciousness and also as regards sound, form and color. We are, however, reminded that there are colors invisible to the eye, the chemical and the actinic rays, as there are also sounds inaudible to the normal ear. Does the law of correspondence persist also in these unseen and unheard departments of nature, and are they related to states of consciousness of which we have at present no knowledge? It would seem that they must be, and that we may here have an indication of a spiritual consciousness as far removed from the ordinary and passion-bound mind as the ultra violet rays are removed from the scope of the normal eye.

We have scant interest in scientific discoveries which have no bearing

upon human happiness and the higher human thought. Mrs. Watts Hughes' investigations belong emphatically to the ethical side of science. If we examine them understandingly we can never again look upon nature as we have done heretofore. We see a unity where previously there was diversity. We see one mighty pulsating consciousness expressing its phases, here as sound, and there as color, and elsewhere as form.

Visible and audible nature throws off for us her guise and declares her secret thought in the tint of every daisy, in the murmur of every wind. All nature becomes for us a vast conscious effort, a willed ascent to the spiritual sublimity which awaits her, and all visible phenomena are the milestones upon that road. Man once more takes his place in the ranks which he deserted long ago. He is no more divorced from the life of universes; the estrangement of eons is at an end.

The Omniscient Scientist at Work

HERE is a little lesson worth learning by those who are inclined to bow down too humbly before the dicta

of science. Two doctors tried an experiment in telepathy, desiring to know whether thought could be transmitted a distance of one hundred and thirteen miles. We are not concerned with the experiment itself, but with a comment made upon it by a well-known scientist, Dr. Carleton Simon. It is this:

"The truth or falsity of this method of communication can never be proved because"—now you think there is a reason coming—"because there is absolutely no means of communication between man and man except through the special senses."

Dr. Simon must suppose himself to be omniscient. The reason following the "because" only turns out to be an unproved and untrue dogmatic assertion. Possibly ten years ago the same omniscience would have said that wireless telegraphy was impossible, "because there is absolutely no means of communication between transmitter and receiver except a wire." In another place, another scientist, Sir Herbert Maxwell (quoted in the *Revue Scientifique*) makes a like statement. He is discussing the psychology of animals and quietly remarks: "at birth animals are automata and unconscious." . . . How does he know that they are unconscious?

STUDENT

AMERICA possesses one or two mountain laboratories. For several years the University of Montana has had a biological station and laboratory at Flathead, Lake Montana. The work includes field study, collecting and classifying specimens.

The Cost of Selling Morphine in Paris

A PARISIAN druggist has been fined \$1000 for selling morphine to a victim of that habit. To be more accurate, he has had to pay that sum to the victim's husband. In this country, where the morphine and cocaine habits are becoming so fearfully prevalent, this might serve as an excellent precedent. But why not go further, and make it illegal to sell either of these poisons in any other way than as part of a signed and dated medical prescription; and then no more than once for one date? It will be urged that both drugs are usual and useful components in anti-catarthal snuffs, etc., and that it would be unfair to deprive the public of the legitimate use—by self-prescription—of these remedies. Well, in the first place it may be said that much good would still be done if, to the enactment we have suggested, an exception were made for "patent" remedial compounds. More yet would be achieved if the compounds were smartly taxed. But to take higher ground, on every hand, brilliant minds are being wrecked, lives made useless, homes ruined. Are we going to weigh against this our liberty to self-treat our catarrhs by these dangerous and seductive *palliatives*? For they are only that: they are no part of the *curative* elements in the snuffs and sprays.

The Periodicals of America

THE *Scientific American* gives an interesting list of the periodical publications of this country, in all about 18,000. Of this number, more than two-thirds are weekly; whilst the dailies are only about an eighth. About 15,000 are devoted to news, politics and general "family reading." Next on the list, but a long way off, comes religion, represented by about 1000 periodicals. Then comes finance and commerce, with 700. At the bottom, with 62, come the law papers; and close to law, with 66, we get science and mechanics. "Society, art, music and fashion," all together, get 88—out of 18,000? But if you separate the "society" and "fashion," how many will remain to art and music? Apparently so small a number as not to be worth counting. It is time we did better. "General literature" is given as 239, and "education and history" as 259. It will be interesting to compare the picture of the national mind, thus given, with its picture in 10 and 25 years. We venture to predict much change.

Great Emigration from Finland

THE emigration from Finland has risen to an average of 40,000 per month and this must speedily mean the depopulation of the country. A recent edict makes it a criminal offence for more than three persons to assemble in the street, while the singing of national songs is prohibited. There is an old saying that he upon whom the hand of God is laid, hath God at his right hand. It is not always easy to understand the way in which the law of evolution works amongst men, but if the sufferings of Finland are the preparation for a glorious future it will not be the first time in the story of humanity that nations have passed through storm to peace.

Consumption of Alcohol in France

THE activity of the French government in counter-acting the alcohol disease comes none too soon. The revelations are terrible, and we may fairly assume that they are typical of many other countries of which the governments are not yet sufficiently aroused to grapple with a very menacing problem. There are places in Normandy where the daily consumption of brandy is over one quart per head of the adult population, and the women drink nearly as much as the men. The canton of Tourouve is described as "fairly temperate," and here the average weekly consumption of raw spirits is three and a half quarts for each male and over two quarts for women and young people. Well may Mr. Debove of the Paris Faculty of Medicine say that the use of alcohol is producing a degenerate race.

Supply of Camphor Giving Out

A TRADE report tells us that the supply of camphor is falling short and that the supply of this useful material is no longer equal to the demand. We do not usually go to trade reports for ethical lessons, but sometimes even a trade report may become the voice of the Law and the Prophets. Why is the supply of camphor falling short, and why is there a prospect that humanity will be deprived of a commodity of such extraordinary and beneficent utility? The answer is not far to seek. Camphor is one of the chief ingredients of smokeless gunpowder, and the supposed necessity of killing our fellow-men is greater than the desire to heal and to save. The means for extermination must have priority, and all passages of human life and communication must be cleared for the gun-carriage.

Cause of International Brotherhood

GREAT are the mysteries of human nature, and who can explain them? The latest award of the Nobel prizes reminds us of one of the strangest bequests ever made. One of these prizes is for bestowal upon "the person who renders the greatest service to the cause of international brotherhood, in the suppression or reduction of standing armies, or in the establishment or furtherance of peace congresses." Alfred Nobel died in 1896. He was a Swedish chemist and engineer, and his name will go down to posterity as that of the man who thus endowed the cause of international brotherhood and as the discoverer of dynamite, cordite and other military explosives. Was it penitence or was it eccentricity?

Happiness Within the Reach of All

A EUROPEAN doctor entertains a very well-founded theory that happiness is within the reach of everybody, and that he may make this admirable belief more widely known he intends to give a course of lectures upon the subject. Holding precisely this opinion ourselves, we should much like to hear these lectures, which will doubtless inculcate benevolence and unselfishness as the only possible road to the end in view.

THE CHILDREN'S HOUR

Do It Now

DEAR CHILDREN: Did you ever stop to think when you say "In a minute I'll do it," what a queer world this would be if everything said "In a minute," instead of being right on time? Suppose the sun should rise just a little late sometimes, or once in a while would sleep till noon, just because it felt like doing so. Or suppose the spring flowers waited until November before beginning to bloom. Or suppose the tiny grains of wheat which the farmer places in the soil should not put on their spring dresses quickly, when they hear the raindrops pattering on the doors of their earth home. Where would be the harvest? What would you and I do for bread to eat? And wouldn't we lose faith in Nature and all her helpers if they acted that way? It would be terrible!

Yet that is just what some little boys and girls do, day after day, thinking, "Oh, well, it doesn't matter!" But it does matter. It inconveniences everybody about them, it spoils all the day's beautiful plan which (so they say) the fairies weave every night, and it spoils their own characters.

If you ask the children of the Raja Yoga School what is the finest thing in the world, they will tell you "duty." And if you visit the School you will soon discover that the largest half of every duty is *promptness in doing it*. No child who knows about Raja Yoga ever "puts off till tomorrow what ought to be done today." That's why these Raja Yoga children are such splendid little Warriors. That's why they are even now going out into the world, brave Crusaders, teaching people about Raja Yoga. For Raja Yoga means helping and sharing—not tomorrow nor next week, but *now, now, now*.

What do you think, boys and girls, of having a little crusade of your own, a crusade against this terrible habit of saying, "In a minute," or "Wait a minute"? It is so easy to conquer this habit, or any other habit when you know the Raja Yoga secret—and I'll tell you what that is. It is just this, to put a good habit in its place. So why not begin forming a new good habit of promptness right away. Don't wait till tomorrow. *Begin now*. You have no idea what splendid helpers you will become if you do.

UNCLE FRED

About Animals

DEAR CHILDREN: Every week there comes to my table such a welcome paper. It is edited by Mr. Angell, who lives in Boston, and it is devoted to making life happier for dumb animals. Mr. Angell loves animals and is giving his life to the work of teaching other people to love them, too. For many people think so much about themselves that they have no room left for thoughts about others, and that is why there is so

TWO OF THE FAMOUS "ELEVEN CUBAN CHILDREN" who were detained at Ellis Island by the Gerry Society, representing Colonial Characters in the Historical Drama recently given by Raja Yoga children at Isis Theatre, San Diego

much loneliness in the world, and why so many animals are ill-treated and forgotten and neglected. When I read Mr. Angell's paper it seems to me I can feel a great warm heart beating beneath every word. Have you ever stopped to think, children, about what our duty is to the little creatures that we meet about us? What comrades they are, how faithful to one who loves them, far more faithful than human beings. And how lonely this old world would be if we had no little fourfooted playmates and no big four-footed friends.

What would our world be like without birds? And how would we ever know that summer had come without the butterflies and beautiful moths? When I see a child kind to animals I always know that that child has Raja Yoga in his heart, even though he may never have heard of the name.

For Raja Yoga is like a great light. It shines out of the heart upon everything and we see so many things then that before the light shone on them we could not see. That is why Raja Yoga children are kind to animals. They understand them better, and so, of course, they love them more.

AUNT EDDYNE

What Is a Heathen?

Extracts from Essays written by Children of the San Diego Lotus Group

WHAT is generally known as a heathen is one who does not believe in Christ.

But I think that a heathen is a person who has no brotherly love, such as cannibals and some kinds of Christians.

M. R.

WHAT is a heathen? The dictionary definition of a heathen is a person who is irreligious and does not worship God. Supposing there was a man who was ignorant, who had never heard of God or Christ, but who did his duty by all and was always kind and gentle. Then supposing there was a man who knew all about Christ and God (or at least thought he did) and knew the Bible by heart,

and who every night prayed to God to save him, and went to church every Sunday, and all that, but on week days went around making trouble for everybody and himself also, which would you call the heathen? Which one loved God? I think the latter was by far the most a heathen, and the first really loved God, although he did not know it.

F. G.

WHAT is a heathen? People must not think that a person who isn't conscious that he has bad habits when he has them, is a heathen. It is the one who is conscious of his bad habits and keeps on with them, getting worse all the time, that is a heathen, whether he belongs to a savage tribe or goes to church. People must not think

either that those who do not believe in certain special things are heathens, for people have their own ideas which sometimes are good and true. A person who is rich, for instance, and it is in the winter and the snow is on the ground with the poor people out on it, starving and freezing, while he is in the house having a hot dinner by the fireplace, and perhaps giving a glance or two outdoors to see the poor—but not helping them—he is the real heathen.

THE DAY OF A THOUSAND YEARS

For a thousand years in thy sight are but as yesterday when it is past, and as a watch in the night.
— Psalm xc. 1-4

AND one star calls to another
The full strains of a song
Till the deeps of space glow with its grace
And echo it full strong;
And whirling out of the silence
A world of worlds appears
In an onward rush through the endless hush —
And a day is a thousand years.

And one star sings to another,
And sun holds speech with sun,
While the drifting veil of a vapor pale
Shows another world begun.
But we count time by a dawning
Or mark by a twilight fall —
Yet the stars sing on when the years are gone,
And what are we, after all?

The words and the hopes and doubtings,
The joy and the dreams and dread,
And the puny lives in the puny hives
Where toil is done for bread;
A day, a night, and another —
A round of the spinning ball;
A sigh and a smile for the briefest while —
And what are we, after all?

And one star calls to another
A song we may not know;
Calls a distant sun to a dying sun
As the ages come and go,
And we mark time by a minute,
And croon over smiles and tears —
But the stars sing on when the worlds are gone,
And a day is a thousand years. — *Chicago Daily Tribune*

William the Silent

THE well-known character of William Q. Judge, the Leader of Universal Brotherhood and Theosophy before Katherine Tingley, reminds us of the character of another famous William, whose heroism, utter unselfishness, and exhaustless persistence make him seem like the same man.

William the Silent, liberator of the Netherlands from the blasting tyranny and throttling bigotry that menaced Europe and the New World colonies during the Sixteenth century, is said to be one of the most admirable characters portrayed in history.

His steadfast and unselfish devotion to the cause of his country deservedly won for him the love of all classes. His people fondly called him "Father William." As long as he lived he was the guiding star of a whole brave nation; and when he died, the little children cried in the streets.

He was hereditary Count of Nassau and Prince of Orange, and was educated at the court of Brussels. The Emperor Charles V employed him in military and diplomatic services. The surname, "The Silent," is apt to convey the impression that William was a habitually taciturn man; but, on the contrary, his disposition was frank, open and generous, without a touch of moroseness. The title was earned by his wonderful discretion on a certain great occasion, which formed the turning point of his life and determined the nature of his mission; and this conduct affords us a valuable lesson in the power of *silent* resolve. While William was at the French court on a diplomatic mission the King, Henry II, misunderstanding his character, revealed to him a plan for the massacre of all Protestants in France and the Netherlands. The Prince was horrified by this disclosure, *but said nothing*.

From 1568 to 1584 he waged heroic and persistent war against the

might of Philip II, wearing out one by one a succession of the ablest generals sent against him. After the final victory, when all the northern provinces of the Netherlands had been liberated and united, Philip proscribed him by the issue of a "Ban," in which any one who would assassinate him was promised wealth and nobility. To this the Prince replied with his famous "Apologia" — "the most terrible arraignment of tyranny that was ever penned." He scorned and ridiculed the King's attempt to frighten him with a ban, and closed with an appeal to his countrymen, resigning himself to death or exile, if thereby he might secure their deliverance from the tyranny that oppressed them,

If you, my masters, judge that my absence or my death can serve you, behold me ready to obey. Command me — send me to the ends of the earth — I will obey.

After escaping several attempts at assassination he was shot by an assassin, whose family was ennobled according to the pledge of the ban.

William of Orange was tall and well formed, of a dark complexion, with brown hair and eyes. He was a man of a singularly upright and noble character. He has been charged with excessive ambition; but his ruling motive was undoubtedly a love of justice, for the sake of which he often risked his life and willingly sacrificed his wealth and leisure. He was a born statesman, capable of forming wise and far-reaching plans; and, as always happens in similar circumstances, traducers have sought to fix upon the noble hero the opprobrium of double-dealing, which belonged to the treacherous foes he was circumventing. In moments of difficulty he displayed splendid resources and courage, and he had a will of iron which misfortunes were never able to bend or break. STUDENT

The Finding of Another Gospel

THE lost Gospels, of which there are many, are beginning to creep out of their hiding places. The process will go on, and one day we shall not only have all of them that are necessary to complete our most scanty knowledge of the teachings and personality of Christ, but also data enough to answer the question how they got into those hiding places, and whose vested interests were served by having them disappear.

The *Pistis Sophia* got into daylight some years ago, claiming to be the lost Gospel of Philip. The Gospel of Thomas is beginning to stir now.

Doctors Grenfell and Hunt have found a rich Ptolemaic necropolis at El Hibeh, one hundred miles south of Cairo. Many documents were unearthed, of which the most part consists of a set of "sayings" of Jesus, addressed to Thomas and mainly new to us. They commence, "Jesus saith," and though in many cases the ends of the lines are obliterated, enough is legible to make this a very remarkable and valuable find. Some of the "sayings" vary in a peculiar manner from those familiar to us, and thus constitute an extraordinarily interesting gloss. *Luke 11: 52*, reads:

Woe unto you lawyers, for ye have taken away the key of knowledge yet entered not in yourselves, and them that were entering in ye hindered.

In the papyrus it runs:

Ye have *bidden* the key of knowledge; ye entered not in yourselves and to them that were entering in ye did not open.

One wonders who were these "lawyers" that had and did not use, and hid, the "key" of the door which men have ever since been trying to enter, the door of real knowledge of the mysteries of life. Perhaps humanity's case would not have been so sorry today if it had not been for those "lawyers." They shall "have their reward." Another "saying" is:

Let not him that seeketh cease from his search until he finds, and when he finds he shall wonder; wondering, he shall reach the Kingdom of Heaven, and when he reaches that kingdom he shall have rest.

One fragment contained a discourse of Christ's resembling passages of the Sermon on the Mount. One of the disciples asks Christ when His kingdom will be realized, and Christ answers:

When ye return to the state of innocence which existed before the fall.

A thick veil hangs over Christian history of the first century and a half after Christ's death. A little rent is beginning to show. We think it will not be long in spreading from end to end so that the broad daylight can illumine those vitally interesting years of western and eastern history. STUDENT

NIGHT

BLANCO WHITE's famous sonnet on *Night* is perhaps more talked of than known.
It will repay reading more than once.

MYSTERIOUS Night! When our first parent knew
Thee, from report divine, and heard thy name,
Did he not tremble for this lovely frame,—
This glorious canopy of light and blue?
Yet, 'neath a curtain of translucent dew,
Bathed in the rays of the great setting flame,
Hesperus, with the host of heaven, came,
And lo! Creation widened in man's view.
Who could have thought such darkness lay concealed
Within thy beams, O Sun! or who could find,
Whilst leaf and fly and insect stood revealed,
That to such countless orbs thou mad'st us blind!
Why do we then shun death with anxious strife?
If light can thus deceive, wherefore not life?

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question

I heartily agree with what you say, that one of the principal ways in which the world needs help is through the exercise of toleration, and to arouse a spirit of toleration. It is in this respect especially that I am attracted to Theosophy; but, tell me, is there not a limit even to this, otherwise would it not become a sign of weakness rather than of strength? Will you not let me have your views on the subject?—*Extract from a Letter*

Answer

(1) If we tolerate in ourselves only that which is in harmony with the higher nature and make unpromising warfare against all that opposes and darkens our light until we have conquered in ourselves the enemy, we shall have the wisdom, the compassion and the courage to practise true toleration towards others. We shall then so conduct ourselves toward them that we shall aid them in overcoming their enemies and not aid their enemies in overcoming them, as is too often done through selfish fear of how others may feel towards us. The true friend will do the true kindness, even though he suffer for it. This does not imply harsh condemnation or a spirit of uncharitableness, but just the opposite. We must have true charity and act in the spirit of love and service of the Divine Self, and not in a self-righteous spirit, or we shall do more harm than good.

The forces of darkness are warring against the Divine Light in the world, which would make humanity at one with itself, and if we tolerate them we aid the enemy of humanity, which is our own. We must buckle on our armor and do battle against the common foe.

We would not for a moment think of tolerating some dangerous physical disease if we could rid ourselves of it. No more should we tolerate mental and moral diseases, but make every effort to remove them. No false sentiment of brotherhood should guide our action, for that would only increase the evil. A certain amount of pain must sometimes be inflicted to save from greater pain. We must think of what is best for all, for that is what is best for each one. In order to think, feel and act aright, everything must be looked at from the standpoint of the higher self and not from that of the personality. Doing this, that toleration which we would have others practise towards us, we shall practise towards them. By a constant endeavor to act in this way, we shall in time gain the light and strength that will enable us to act aright. B. W.

Answer

Probably to the majority of us the word toleration conveys to our minds a sense of the use of a pitying contemptful manner, or a feeling of "well, I can put up with it if I have to." This is, however, far from being the meaning of the word. It can be best interpreted as meaning the exercise of patience; patience with our fellow-man and a feeling of respect for what he thinks is truth as long as he is honest in his beliefs. According to one of the authorities the word means freedom from bigotry and severity in judgment of the opinions of others.

Toleration for others can only come when we begin to gain knowledge of ourselves, when we begin to understand a little of the purpose and laws of life, when we begin to realize to some degree Nature's mighty purpose in forming this diversified Universe, whose entities are so varied

and in some cases so different from each other, that toleration becomes a necessity.

The intolerance so noticeable in the past ages was due to the fact that the philosophy of life was unknown, to the fact that mankind did not possess the knowledge and feeling of universal kinship, which alone is capable of broadening our minds sufficiently to exercise toleration towards our less fortunate companions, who, lacking this knowledge, cannot be expected to use toleration towards anything, not even towards themselves. Mankind is only just emerging out of this age of intolerance, the latter disappearing hand in hand with its fellow-companion, Ignorance. As a few of the brave souls forge ahead on their onward and upward march it is but natural that they should meet the opposition of those who, while living at the present age, yet properly belong to those eras of darkness now vanishing from the sight of man.

As long as man is completely wrapped up in his personal affairs, in a personal religion and in his personal self, so long will he be intolerant and a bigot, for he cannot see anything except what pertains to him personally; the whole world becomes tinctured with his personal ideas, he is looking at it through the tinted glasses of personal arrogance and he naturally refuses to believe that it has yet other colors, tints more delicate and harmonious than he ever realized.

Intolerance will cease only when humanity awakens and throws off this mask of personality. In our endeavor to practise toleration towards others, do not let us forget that there is a line of demarcation to be drawn. Whilst always showing respect and patience for the ideas of others let us be always ready to combat and fight to the death the evil, the hypocritical and the corrupt wherever we find them, for them there can be no tolerance; tolerance of such would be the height of intolerance, intolerance towards our higher selves. H. S. T.

Transplanted Materialism

IN receiving the blessings of western civilization, Japan is getting no ineffective dose of its darker ingredients. In receiving our Christianity, she must receive therewith our sectarianism and our negations. With our science she gets our materialism; with our inventions our applications of them in war.

A year or two ago we noted and preserved an account of a native funeral in *The Japan Times*. It was "that of one of the greatest free-thinkers of the era," was headed "unique" and "unprecedented;" and the uniqueness was explained in the account as lying in the fact that the funeral ceremony "partook of no religious nature whatever, but was entirely an intellectual leave-taking." It was conducted by Mr. Daihachi Ito and Count Itagaki, aided by a well-known leader of the Progressive party and attended by a thousand people of the capital, politicians and literary men. The dead free-thinker's "disciples" read an address from which this is a passage:

We believe that our teacher's remains will soon be scattered throughout the universe. We shall inhale them as gases through our nostrils; we shall receive them as liquids through our lips. Thus we may yet come in contact with the material portions of his remains. But his soul has already flown away, has become annihilated and leaves not even a trace behind it. Alas! how sad!

"Alas! how sad" indeed—that Japan should be introduced to the trash of a western materialism that has already in the west passed the hour of its influence! We would urge and urge again upon Japanese thinkers that they look warily upon the thought of the west. Might they not occasionally look even eastward, towards the light of Theosophy shining more and more strongly from Point Loma? Materialism sits ill upon their lips. Even in the funeral phrases we have quoted, an ill-faced absurdity stands cheek by jowl with the truth. In the very same sentence the soul is made to have "flown away" and "become annihilated."

Paradoxically one is inclined to suggest to Japan to take only from the west what the west as yet has not got. H.

THY master, Zeus, doth not reward thee for the shining of the sun, nor punish thee when it is darkness, because thou hast no power over the sun. Thou shouldst not, therefore, reward thy horse because thou hast been favored of the king, nor beat him for thy loss at gaming; for over these things he hath no power; but for his own deeds return him compensation. — *Chiron, the Centaur*

AND Jesus said unto his disciples: I have yet many things to say unto you but ye cannot bear them now. — *John, 16 ch.*

The Boat for Swift Rivers

VERY far to the westward, between the Great Hills and the Great Salt Water, in the land of the Idahoes, Yakimas, Spokanes, Umatillas, Oregons, Chinooks and many other tribes of Indians, there is a very great river of sweet, cold water, and a lesser river of dirty, warm water which joins together with it, two days march south of Zappenish village, where some Yakimas live. The Great River has very many children which join with it from both sides; the Okanagan, the Spokane, the Yakima and more, all sweet water; but the lesser river receives no water streams for more than a month's march. In all this country there hardly is to be found any birch trees such as the Manitowacs, the Chippewas and Onandagoes used to make canoes, and these rivers are so swiftly running and so full of many stones that a canoe soon would be broken. Because of these things the tribes in that country make boats of big logs of trees. The tree they use is of soft wood, long and straight; this they take and with much cutting and burning, a log four or six or even ten times the length of a man is made into a boat. Of one single piece it is made, a very great boat, five or ten or twenty steps long, and that is

two or three times a length of a canoe. This boat they make as deep inside as from a man's knee to the ground, and the same, or perhaps a hand's breadth more, in wideness. The sides are twice the thickness of a hand, and the bottom double, so they are much too heavy to be carried; not even two of the strongest women could carry one. They use poles to push these canoes along the edge of the rivers, sitting in the back end or in each end, and paddles in deep water. These boats will not tip over; but will quickly throw out a person if he stands up, so everybody must sit in the bottom. They go very fast and are not broken if they strike upon rocks, for the bottom is smooth and slides over. When a chief dies they sometimes put him and his clothes and his wicknip (house) in a boat and let it float alone on the river. This do they for burial, for the river to take him away.

HY-AS LE-LOÓ-EE-NA

The Dry Bones of Theology

"STATIONARY truth turns out not to be truth at all," says a well-known Boston preacher. He is speaking of orthodox theology:

"It has lost touch with reality. . . . The demon of system has possessed it, and in this mood it has, with prodigious labor, and endless ingenuity, spun itself into a world of wearisome, and even monstrous detail."

That, of course, is why no one will read theology, and why it has no practical power over men's lives. It is so easy, in thinking, to get away from reality. The moment that such words as God, the Soul, Life, are used without a profound feeling of their meaning, that moment they are empty, and the talk, however learned-looking, is mere chatter.

God, the presence felt by man in his highest moments; his sustainer—if he will cultivate the relationship—through all pains and difficulties; that which awakes his heart to unselfish compassion; that which, held to throughout life, or for years, becomes a bridge of Light over the valley of death; all this and a thousand sacred things more: what does God come to when you begin to argue? Those who do not argue or read theology, but steadfastly cultivate the relationship ultimately reach knowledge and experience with which words have no relation, which words can no more express than a baby's rattle can express a symphony.

And so with the soul. In his higher moments man knows himself to be something essentially beyond the clamor of sensual desire, even though in those very moments their voices break in upon the full silence. He knows that the mere act of holding himself as a soul is generating strength to conquer, and that the strength comes upon him from the presence of God. If he will go on doing or attempting this through the days and years, he will come to know the relation of the soul and God—but he will not write a book of theology. He knows that the mind must be silenced in its chatter, for the comprehension of real truth. Mind can, as it were, but assimilate the crumbs that fall from the table of knowledge or realized experience.

It is because theology has forgotten this, and uses words that have lost touch with that immediate feeling which is knowledge, that men will no longer read of it. They are right in thinking it not practical. "Theology," says Dr. Gordon, "must be made to know that she is nothing of herself, by herself; all that she is for herself she becomes through her service to life"—that is, to the reality of experience. The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Breaking the Barriers of Nations

IN the politics of today one cannot fail to be struck with the ever growing importance of international questions. It is not possible to take up a paper without finding among the most prominent head-lines some which announce dealings between nations on questions concerning the adjustment of some common human interest. The great broadening of man's intellectual horizon, produced by modern science with its enormous extension of the means of intercommunication, and its discovery of so many links, historical, geographical and otherwise, in humanity's cable-tow of brotherhood, has been responsible for the first step;

and the great Nineteenth-century movement towards altruism has contributed the next step.

It is no longer possible, so closely interwoven are man's interests, for nations to confine their interests and their enterprises to themselves. The radical and eternal oneness of humanity has become too obvious, the link that unites us is now too palpable to be ignored, and by this we are learning the great lesson that *my* interest and *our* interest are one and the same. The difference between the crude and commonplace thinker and the intelligent observer of history and contemporary events is this: that, while the former confounds principles with personalities, the latter stands in serene and lucid detachment from such confusion of ideas. Macaulay says of Milton that, though he identified himself with a party so long as it was fighting nobly for freedom, he proudly held aloof from that party when, after winning its cause, it in its turn fell into intolerance and narrowness; and that he took sides against the king, not because the king was a king, but because he believed him to represent the cause of tyranny and enslavement.

Principles Instead of Parties

Thus the wise and well-poised soul refuses to be misled by personalities and parties, and ever wages war against wrong, whoever or whatever may chance to be the representative thereof at any given time. When a sovereign seems to him to be on the side of evil, he is against that sovereign, but not against sovereigns in general nor against the institution. He knows well that he may be called upon one day to fight the same enemy entrenched in some aristocratic league or some democratic organization.

Nor does the wise man label a nation for all time with a badge of infamy because at one particular time the cause of oppression may have been associated with its name. At another time he knows the cards will have changed hands, and the liberators have become the oppressors, and the oppressors the champions of freedom.

Boundaries Alter With Circumstances

In the smaller affairs of individual life and social intercourse, the same distinction between the wise and the foolish, between the seeing and the purblind, can be discerned. The fool judges harshly of a man's whole character because at one time that man may have allowed himself to be a channel of evil; the wise regardeth his own heart and judges wisely because charitably.

Nations, personalities, parties, all such distinctive denominations, are loose and variable boundaries marked out in the human family for convenience. They are intensified to the point where they become barriers by bad feeling and ignorance.

As humanity grows in generosity of feeling and generosity of idea, these barriers fade and melt. Great causes, that once would have been regarded as national causes or party issues or personal interests, are seen to be international causes—human interests.

Let us, therefore, try to read our newspapers in the light of this expansive view, and to judge events and enterprises in their human relation rather than in their narrow national or party bearing. And above all let each human reader beware of the lurking whisperer and the insinuator, whose calling it is to stir up strife and foster the disharmony by which

For Men Are Still Brothers

they live. Let us try to drop all the mere labels of nationality and party and creed and station, as in daily life we try to tone down our too obtrusive personalities; and let us learn to regard the whole human race as fellow-men. For is it not a well-known fact that hostile armies will fraternize on the field during the intervals of hostilities; and a well-known conclusion therefrom that distinctions and antagonisms are largely confined to that wonderful and unnecessary region—the inflated popular imagination, and to that king of busybodies—the irresponsible yellow press?

STUDENT

THE Emperor Menelik of Abyssinia, is determined to suppress the slave-trade and has made a number of vigorous laws to that end. Menelik has shown himself to be superior to many other rulers whose claims to civilization are more noisy and far less justified. He is a firm believer in religious liberty, herein differing from his predecessor, who converted Mahomedans to Christianity by branding a cross upon their hands. The results were more apparent than real, but that is not uncommon to proselytism.

An Unmerited Compliment

SOME recent essayist, enumerating the keynotes of civilization, all of which he could of course hear sounding clearly today, noted *respect for human life* as the chief of them. Human life, he thought, counted for very little, till quite recently, even in the West; and counts for very little now, in the semi-civilizations of the East.

He is right about the past; but does life count for much more to-day? What is the difference between thinking nothing of its sudden extinction, and nothing of its extinction by somewhat—not greatly—slower methods? This is the age of steam and of machinery; and because of the lives yearly offered up to the goddess of machinery, it will certainly be known one day as the black age. Let us hope it may not also be known as the hypocritical age, the age when men, professing respect for human life, were content to know that to clothe them, house them, feed them, and transport them, an unintermitting procession of other men, women, and children, had to be quickly worked to death. We do not see how our work and civilization is to go on without this procession of victims; and so we agree to say nothing. Very good; let us then say nothing, not talk about our respect for human life! And our consciences are also appeased by the pretense that the victims are “voluntary.” Are they—the hundreds of thousands of children in the factories, for example?

But apart from them, is it fair to call the anæmic seamstresses in the sweat-shops voluntary victims? Is it fair to call the many thousands of stokers in our great liners, whose lives *average four years*, voluntary victims? To gain that four, they have to barter the other forty. Our disregard for human life is very general; very few of us are quite without it. But we have reached the stage when the sacrifice must either be out of sight—say down a stoke-hole, or very gradual.

We are accustomed to use the term “impossible” respecting projects involving immense difficulty or expense. If we would regard as “impossible,” in this sense, projects involving waste and degradation of human life, we should save ourselves from the charge of hypocrisy. And we should get along, somehow, without realizing the latter projects as we do without the former. Our fathers somehow managed without much that we regard as necessary. It is our new “necessities” that waste more and more human life. Let us label each new necessity impossible, if, when proposed, it involves sacrifice of life. Till there is a general instinct along that line, the genial essayist we have quoted is offering our civilization a compliment to which it has no claim whatever. K.

The Fulfilment of the Law

IN an East Indian book of prophecy, several thousand years old, the present mechanical material era is minutely described and its evils foretold. One of the horrors which it predicted is that there would be no outward difference between the good and bad persons. This has plainly come to pass. Traversing the cities and highways of any land it is impossible for one of ordinary perception to distinguish the good from the evil. There are certain lines and signs, it is true, visible to the skilled eye, which indicate the condition of physical health, and, inductively, of moral rectitude, but it requires a keener insight than most of us possess to perceive the true worth and nature of a person. Nor is this due entirely to our own blindness, it is partly because of the distressing scarcity of truly worthy persons to observe. But now the tide has turned, science has exhausted its resources in the futile effort to abolish the consequences of gluttony, drunkenness, idleness and folly. Day by day the mark of bestiality is more difficult to hide by powders, poultices, and treatments; day by day the drunkard is less completely sobered by drugs, and day by day do those who have clung to and obeyed the laws of life become more conspicuous among the melting wrecks around them; in proportion to the degree of their obedience they now show forth as superior men. Is it not written in the Scriptures that “to him that hath shall be given and from him that hath not shall be taken away what he hath?” And also that “what is done secretly shall be rewarded openly?” This is one of the Lost Mysteries of Antiquity. Soon there will go forth from the Raja Yoga School at Point Loma and from its branches elsewhere, a new generation of men and women whose purity of life and nobility of purpose will be so clearly visible in their outward appearance that even the dullest can see that they are the examples and leaders of humanity in the New Age now painfully emerging from the ruins of the old. H. R.

Libeling a Dead Man

TO invent a suicide for a man to correspond with what you think ought to have been his mode of exit is a maneuver which Talleyrand would have said lacked “finish.” The invention of the last words of “infidels” appears to have been once quite an industry. A thrilling “lesson” had to be drawn from them, and it did not so much matter whether they were invented to suit, or whether they were actually the automatic murmurings of the dying lips. They had to be shown as expressing either recantation and repentance, or the agony of remorse.

An “evangelist” recently made the statement in Cincinnati that Colonel Ingersoll had committed suicide. Of course, it would prove nothing if he had; no more than the suicide of a Christian would be anything against Christianity. But the statement was untrue. Asked for his authority, this worthy “evangelist” named a Presbyterian divine of Philadelphia, who being questioned in his turn, replied: “I never said or heard that Robert Ingersoll committed suicide.” Is the matter to be allowed to rest there? Can we afford our dead no better protection against the libeling of their memory? Whatever his views and expressions, few men have had a warmer love for their fellows than Ingersoll. We only hope that our “evangelist” may yet infect into moral health as many as did this man, who said that if he were making the universe, he would have made good health catching instead of sickness. D.

The Prosperity of Cuba

PRESIDENT PALMA'S message to the Cuban Congress is encouraging, but in no way surprising to those who realized the enormous and progressive forces which were liberated by national independence. Prosperity is the order of the day in Cuba all along the line. On November 1, the cash surplus in the treasury was \$3,843,439. Even this large sum is rapidly increasing, the income for the last seven months amounting to \$1,205,000. The president is therefore abundantly justified in recommending an expenditure of \$1,500,000 in the making of roads and other public improvements.

In the domain of education the advance is no less rapid. There are now 3,552 schools and constant additions are being made to the number. Not only are the public schools well attended, but higher education is becoming increasingly available to those who are fitted.

The love of education is, of course, a most marked feature of Cuban life, a love in which the children share quite as much as the parents. Wherever there is the desire for knowledge there is the guarantee of success, a guarantee more positive than can ever be furnished by a mere hunger for material prosperity. STUDENT

The Authority of the Preacher

A RELIGIOUS contemporary laments the absence of a note of authority in latter-day preaching. The preacher, we are told, “fails to assert his rightful claim to speak as the ambassador of God.” Confronted by a situation so tragic, we hastily turn to the reasons which are adduced and we find as usual that these reasons are the perversity of the public which refuses to recognize authority, and the pernicious influence of the higher criticism. An unregenerate world makes light of the power “conferred by the laying on of hands,” and the honest search for truth dethrones the god of truth. We are sincerely anxious to help, and to make suggestions which will restore authority to the ministry and enable its members to “speak as ambassadors of God.” We would therefore question the efficacy of the laying on of hands, and would rather recommend a search within the heart for the fountain of power which never fails to flow when its channels have been cleared of the love of self of which creed and dogma are signal expressions. We would also suggest a recognition of truth as the highest of all human endeavor, and that hostility to truth, by whatever name it may be called, can have no other end than impotence. STUDENT

A Cattle Market at Johannesburg

THE illustration on the cover page of the NEW CENTURY PATH this week represents the cattle market at Johannesburg, South Africa. Before the recent war Johannesburg was the most important commercial center of the Transvaal, its proximity to the gold fields attracting large numbers from all parts of the world.

Some Views on XXth Century Problems

The Hand of the State in Religion

JOHN MORLEY, whose *Life of Gladstone* is now attracting so much commendatory attention, has expressed his views upon the present religious controversy with a clearness and force which leave nothing to be desired. He says:

My own view has been ever since I began to think about public things, that you will never come to a wise settlement until you have removed altogether the hand of the State from religious instruction. Religious instruction is a thing for the parents, it is not a thing for the State, and I for my own part can never be cordial towards any policy, any changes in policy, which do not recognize the principle that the State is concerned with secular things and has no concern with religious things.

Such opinions are not, of course, surprising from a statesman of Mr. Morley's sagacity, and their application has no mere national boundary. There are two classes of persons who agitate for State influence with the religious teaching in schools. The first class includes all those who have a direct or indirect personal interest pecuniary or otherwise, in the clerical invasion into educational circles. The second class is composed of parents and others who are themselves indifferent or even hostile to religion, but who wish to be on the side of caste and authority.

In every controversy of this nature we hear very much of the parents with whom it is supposed to be a matter of conscience to secure State religious instruction for their children. There are practically no such parents. Even a glimmering of true religious sentiment in the parents would bring a recognition of their own duty to their children, a duty which no one can render for them. Every movement in favor of State influence is a proof of the ebb of religious feeling and not of its flow, of the decay of religion and not of its growth.

STUDENT

University Life & Its Abuses

UNIVERSITY life has found a trenchant critic in Henry E. Boltwood, the principal of the Evanston Township High School. There is certainly much truth in what he says, but he says it too forcibly, and his onslaught is too inclusive. Athletics and societies

are his special *betes noires*, and social distinctions, he tells us, are carried to a point altogether intolerable in educational institutions "where all class distinctions should be laid aside, and nothing count but merit." Further, he is reported:

The self-conscious air of pride with which fraternity boys and girls ignore the outside "barbarians" who are often their intellectual and moral superiors, is simply exasperating. In this direction the girls are worse than the boys, or perhaps the girls feel the social slights more keenly. Mothers with tears in their eyes tell of the heartless and cruel ways in which their daughters are slighted and snubbed by the society girls. Five columns of newspaper glory to a game between Yale and Harvard; 20 lines to an intercollegiate debate!

A great athletic victory is made the occasion for a general debauch. Not always, but far too often.

Specialized assaults of this nature have their uses, but they should not be allowed to cloud the real issues. In other words, the symptoms ought not to be mistaken for the disease. Our colleges ought not, of course, to be miniatures of the world, but they must certainly be so unless we take steps to counteract it. The evils against which Mr. Boltwood crusades are by no means the evidences of new and original sin. They simply mean that the students are guilty of the imitation which is the sincerest form of flattery. So long as whole communities become insane with excitement at the arrival in their midst of some disgusting prize-fighter, it is inevitable that college athletics should suffer degradation. The children are imitating their parents, the colleges are imitating the world.

It is none the less deplorable that the human seed-time should be so misused, and every lover of his race must look forward with apprehension to the harvest. We have, however, the consolation of knowing that the moral government of the world will not always be carried on by majorities, and that the prayers of action of one righteous man will avail much. One wise man can govern many fools, because the fool draws only upon his own folly, while the wise man has all nature to support him. X.

To Preserve the Native Languages

WE have more than once called attention to the fact that the Indian tribes of this continent are rapidly passing away, carrying with them their languages. Now, as it may become possible by an extensive collection of these idioms to arrive at some knowledge

of the root or roots of them, at some lost mother tongue or tongues, it is clearly of the utmost importance that the various dialects should be rescued before they are irretrievably lost. The University of California is rising to the occasion, and training students to enter on this most interesting and valuable line of research. It has also issued a circular calling upon all Californians not only to send in information about old prehistoric burial sites, caves, villages, sites and remains of every kind—but to search for themselves. We hope that the circular may get an ample response.

STUDENT

Sunday for Man or for the Church?

A POPULAR preacher, in fact many popular preachers, have been addressing themselves to the subject of Sunday observance. One such minister says: "Our complex and varied life seems to lead many to think of Sunday as a day of rest and recreation, in which all religious duties are postponed." It would not be easy to find any justification for this assumed antagonism between rest and recreation, and religion, seeing we are told that God himself observed the first Sunday by resting. The fact of the matter is, that it is a custom far too common to assume that religion necessarily assumes the form of church support. Those who are most loud in their laments at Sunday decadence would do well to put their own houses in order and to ascertain definitely whether it is the churches or the people who are neglecting the Sunday and misapplying its advantages.

That "the Sabbath was made for man," needs a fuller application than it has yet received, and to this we might with much reason add the corollary that the Sabbath was not ordained for the benefit either of the churches or the ministry.

STUDENT

Suicide Comes from Selfishness

WITH suicide clubs we are becoming increasingly familiar, but without any earnest attempt to understand their meaning. The latest instance comes from a great western city, where it seems a number of wealthy women have banded themselves together into this grim union. The rules of the club have been found in the rooms of one of its victims, together with a list of the names of the surviving members. May we hope that these latter will be placed under restraint in order that others may escape the infection of their intended crime.

We believe that it would be possible to help these poor wealthy and demented creatures who so mistakenly suppose that the death of the suicide can be preferable to the very worst fortune which fate can inflict upon the living. They cannot, of course, be helped by the application of any kind of social machine, scientific or otherwise, but they might be aided by individual and painstaking sympathy in conjunction with a season of restraint.

They believe that their lives are valueless and that they should, therefore, be destroyed. They are valueless, truly, but they need not remain so. They have probably never tried to give to their lives the value of unselfishness. Indeed, we may be certain they have not, because insanity and self-destruction are kept at arm's length by altruistic action. If these women could but be shown the power which they possess for good, and how that power is increased by their wealth, their lives would be endowed with a new and unaccustomed value. To invoke the love and the gratitude of another is to add a beauty to life which makes it desirable and holy, a thing to be preserved and to be used. We do not explain nor account for suicide by talking about insanity and the pressure of competition. We shall, however, be upon the verge of comprehension and of cure when we understand that by selfish thought, long continued, human life shrinks to dimensions so pitifully small as to seem unworthy of preservation.

STUDENT

Art Music Literature and the Drama

The Genius of Beethoven

WHERE today are the artists who look reverently upon their work as upon something divine, something which must grow ever more divine as they themselves draw nearer to the God within?

Some there may be, but not many, in an age of self-advertisement, of egotism, of competition. In other times there were artists, painters, sculptors, and musicians, who made no secret of their need for the silence of the mountain top, and for communion with that which passeth all understanding. They brought precious fruits from a promised land, not that they themselves might be glorified, but that their people might be inspired to go onward and upward.

There has recently appeared in a Belgian magazine a curiously intelligent and sympathetic study of Beethoven's music.

The writer, Monsieur Vincent d'Indy, divides the musician's life into three portions, and traces his career through the experimental, the passionate, and the thinking stages. He would perhaps have been better advised had he called the third stage the "spiritual" instead of the "thinking."

It was at this period of Beethoven's life that the musician recognized his illusions and saw for the first time clearly that all inspiration must come from within, that all external aids were but bitterness and disappointment. He wrote:

I have no more friends. I am alone with myself, but I know that God is nearer to me in my art than he is to all the others.

Not long afterwards, and exactly a month before he died, he wrote to Prince Galitzin:

I don't want to die yet, for it seems to me I have only written a few notes up till now.

Why must genius so often be combined with pathos and tragedy? Why must the path of glory unspeakable remain hidden until the shining shadows of death throw their barrier upon it? From age to age the greatest and the best have sighed as they see the work they have not done, the work they might have done had they but known—had they but known.

Mayhap a new age will dawn when genius will no longer spend itself in its own discovery, will no longer sink from physical exhaustion with its hand upon the door. That age will be already upon us when religion and philosophy recognize the genius of the child, when parent and teacher see to it that the "trailing clouds of glory" are no more banished by those other clouds of self and greed which wait tumultuously to enshroud the mind. Then genius will be normal and of lost opportunities there will be none. There will be no more the pathos of the steps which grow so weary before the road is found, and when death comes it will be to those who have fought the good fight, who have finished the course, who have won. STUDENT

THE pupil must regain the child state he has lost ere the first sound can fall upon his ear.—H. P. Blavatsky

I hold that every composer has a merit of his own which is determined by the intrinsic value of his works. Neither eulogy nor criticism can effect it.—C. P. E. Bach

BEETHOVEN

FRAGMENT

by MATTHEW ARNOLD

THE Spirit of the world,
Beholding the absurdities of men—
Their vanities, their feats—let a sardonic smile.
For one short moment wander o'er his lips.
That smile was Heine!—for its earthly hour
The strange guest sparkled; now it pass'd away.

That was Heine! and we,
Myriads who live, who have lived,
What are we all but a mood,
A single mood, of the life
Of the spirit in whom we exist,
Who alone is all things in one?

Spirit, who fillest us all?
Spirit, who utterest in each
New-coming son of mankind
Sach of thy thoughts as thou wilt!
O thou, one of whose moods,
Bitter and strange, was the life
Of Heine—his strange, alas!
His bitter life!—may a life
Other and milder be mine!
Mayst thou a mood more serene,
Happier, have utter'd in mine!
Mayst thou the rapture of peace
Deep have embreathed at its core;
Made it a ray of thy thought,
Made it a beat of thy joy!

"Richard Wagner in the Mirror of Criticism"

A SECOND edition of *Richard Wagner in the Mirror of Criticism* has just been published in Leipsic. It announces itself to be "A Dictionary of Impoliteness, containing rude, sneering, spiteful and libelous expressions used against Richard Wagner, his works and his friends, by their enemies and other unbelievers." The collector of the various and fairly innumerable items of "impoliteness" contained in this unique book—one William Tappert—has placed those who have eyes to see and ears to hear, under distinct obligations. From it one may easily estimate just about what contemporary criticism is usually worth regarding the work, on any line, of those who are ahead of the age in which they live. Here are a few of these "items," to use the mildest possible term:

Charlatan, scandal-monger, *claqueur*, fanatic of realism, addlepate, a literary lackey, hireling, fool, a modern Nero, a churmer of phrases, barbarian, pigmy, the Marat of music, and others, some of which are too abominable to be mentioned in these columns. So much for Wagner himself.

The following words are descriptive(?) of Wagner's music:

Hocus-pocus, dog-music, Jesuit music, humbug, teapot music, caricature, Katzenjammer music, plague wishwash music, bestialism, indecency, musical weeds, irresponsible, straw sentiment, blasphemy, mollusc music, a musical sand-heap, and so on for page after page.

One scarcely wonders that Tappert speaks of Wagner as living in a "miasma of rudeness." So eminent a critic as Prof. Max Müller wrote of this creator of the marvelous Dramas of the Soul:

Wagner proved that he is no poet by his maltreatment of the Nibelungen and Parsifal Cycles. For this he deserves what happened to Homer in the nether world, according to Diogenes Laertius, viii, 21.

This, however, is reasonably compassionate, seeing that the soul of Homer met no more unpleasant a fate than being merely hung to a tree surrounded by writhing snakes!

Even Hiller, a musician and Mendelssohn's friend, characterized the *Meistersinger* as "the craziest attack ever yet made on art, culture, music and poetry." Kalbeck called Wagner "a musical Heliogabalus," and Franz Hille naively inquired: "Is Wagner not a demon who poisons all budding artistic life?" And one German musical critic remarked, *apropos* the memorial medal struck in Bayreuth after the first festival performance:

The malicious say that this medal, worn after the fashion of a cholera charm, will render one immune

from all attacks of modesty, common sense and regard for classical music—maladies which have recently appeared among Wagnerians in rare and isolated cases!

Now what claim can such criticism set up for respect? It is a pity that the rack and the thumbscrew and the hot iron are so old-fashioned. They aren't more than half as torturesome as the pen of libel and the tongue of slander have often been, and I'll venture that, up to the present moment, the former are not responsible for half as many wrecked lives. H.

The American Woman

A STORM of discussion has been provoked because of the criticisms recently made by a Mr. Marriott Watson concerning the American woman. Mr. Watson is an Englishman. Among other things, he says:

"The character of the American woman of today is a product partly of racial modifications and partly of the social conditions of a commercial age. We have many opportunities of studying the American woman, for she has undertaken to annex as much of Europe as practicable and has succeeded very fairly. A little time back some enthusiastic journal in New York was at pains to compile a list of American women who had married, not Europeans merely, but Europeans with titles. A large majority of these ladies were confessedly wealthy, and it would be absurd to ignore the obvious bargain upon which many such matches are based; on one side money, on the other influence or position. It is considered by the taste of the day creditable to think that some pork packer's dollars from Chicago should buy a coronet in Mayfair.

"The American woman is claimed by her admirers as being independent, but she is more than that, she is anarchical. The state has been built upon certain sociological facts as a foundation. The American woman is destroying these, and with them, therefore, the structure of the state as it exists now. Evidences that American women are deliberately turning their backs on natural laws have accumulated of recent years. It would seem that, while the American man unnaturally devotes all his days to money-making, the American woman, as unnaturally, devotes her days to pleasure. Whereas the savage woman acted as a beast of burden to her lord, the American man works like a beast of burden beside his triumphing lady. Unless American civilization alters it would seem to be doomed."

Mr. Watson appears to have gone to extremes, and one wonders what class of American women he has become acquainted with. That his criticism, when a certain class is considered, is reasonably just, must be

A NEW hope is dawning in the hearts of men. The great heart of nature pulsates with joy, as it did in the days of life's dawn. Men and women whose hearts have been well-nigh broken beneath the weight of many sorrows feel the new joy of this great symphony whose harmonies are now being sounded. It is felt within the heart and gives to man a new inspiration. The golden light shines ever: the herald of the morning proclaims the message of love anew: the ripples of the sea-waves lisp the glad song: the breeze bears it in her bosom: the tints of the flowers convey it: it shines forth from the stars in their sparkling brilliance: the great blue dome above suggests it: the birds warble it forth from every tree: the babe is its completest revelation: the eyes of loved ones who are passing into the great beyond speak of an abiding hope and of a future day when they shall return to carry on their work. Where hope dwells beauty and love abide forever. Immutable is the Law and eternal is hope itself.

KATHERINE TINGLEY

admitted. But that class is by no means so large as Mr. Watson evidently believes.

The lump is leavened by a more than fair sprinkling of glorious, selfless and beautiful examples of the higher womanhood, the nobler wifehood, the truer motherhood.

It is because of this that the selfishness which *does* dominate a certain class—and selfishness is anarchy in its deepest and most logical interpretation—stands out in such bold relief. But to include in the category more than just one certain type of American women (many of whom are not by birth Americans, by the way) is absurd. What about the thousands who are interested in all educational movements and who are giving time and money—a great deal of money, too—to help humanity according to their best light, through various philanthropies? If Mr. Watson chooses to ignore this class and point out only the faults of a certain few, why does he not speak of the parasitic tendencies which are becoming more and more apparent—the willingness to receive everything and give nothing? Those who can look a little bit below the surface

can see in this a greater danger than lies in incipient or actually existing "anarchical tendencies." But Mr. Watson in his essay made one fatal mistake. In pointing out the degeneracy of the woman who would exchange her dollars for a "coronet in Mayfair," the reader draws the inevitable conclusion that there are in England men who offer coronets for sale! Can it be possible?

A. V.

The Reign of Isabella

IT is wonderful how much the doctrines of countries depend at times upon the virtue of individuals, and how it is given to great spirits by combining, exciting and directing these latent powers of a nation to stamp it, as it were, with their own greatness. Such beings realize the idea of guardian angels, appointed by heaven to watch over the destinies of empires. Such had been Prince Henry for the kingdom of Portugal, and such was now for Spain the illustrious Isabella.—*Washington Irving*

The Empress Eugenie

"I COME then, gentlemen, to say to France that I have preferred the woman whom I love and whom I respect, to one who is unknown, whose alliance would have advantages mingled with sacrifices. Without testifying disdain for any one, I yield to my inclinations, after having consulted my reason and my convictions. In fine, by placing independence, the qualities of the heart and domestic happiness above dynastic prejudices and the calculations of ambition, I shall not be less strong because I shall be more free."

With these words Louis Napoleon, Emperor of the French, announced his approaching marriage, and defended against those who would have preferred to see their Emperor wed a daughter of one of the reigning houses of Europe, his beautiful fiancée, Eugenie, Countess of Theba.

The present time is significant because the inner and unseen ties that have for centuries bound France, Spain and the English speaking peoples are now beginning to be manifest on outer lines. Of especial interest are the lives of those who have played a part—whether themselves conscious of it or not—in strengthening and preserving those unseen ties. France can boast of two women whose influence was far greater than historians dream, Josephine, the wife of Napoleon Bonaparte, foundress of the order of the Eastern Star, the first woman who, since Joan of Arc, brought inspiration to France, and who yet lives, more than others, in the affections of her people; and the Empress Eugenie. It is significant that neither was of royal birth, and that both were married for love alone.

The Empress Eugenie was born in Spain, and in her veins mingled the Castilian blood of her father, Count of Theba and Montijo, with the Scottish blood of her mother, a Fitzpatrick. It is worthy of record that her education, which was received in Spain and in France and England, was directed by her mother. Later, when as Empress, she was received with marked cordiality by Queen Victoria, the circle of this inner influence was completed. This visit was not without its significance, being the first instance in history when a reigning French monarch set foot within the domain of his hereditary foes. It seemed as if England wished to atone for the wrongs she had heaped on France for so many centuries, from the burning of Joan of Arc to the exile of the first Napoleon. Yet Eugenie, a Latin by birth and education, loved England deeply. Why? For answer, one must read between the lines of history's record.

That Eugenie was recognized by her husband as more than just the idol of the people and of her Court, is evidenced by the Emperor's appointment of her as Regent during his absence while in command of the army of Italy. The form of the Imperial announcement is interesting:

Napoleon, by the grace of God and the National will, Emperor of the French:

TO ALL PRESENT AND TO COME, GREETING: Wishing to give our well-beloved wife, the Empress, marks of the great confidence we repose in her and, seeing that we intend to take the head of the army of Italy, we have resolved to confer, by these presents, on our well-beloved wife, the Empress, the title of Regent, that she may exercise its functions during our absence, in conformity with our instructions and orders, such as we shall have made known in the general order of the service that we have established, which will be copied into the Book of State.

We desire that the Empress shall preside, in our name, over the Privy Council and Council of Ministers.

During Napoleon's absence all decrees and State papers were signed by Eugenie in this form:

For the Emperor, and in virtue of the power by him conferred. EUGENIE

An account of Eugenie's charities would fill a volume. Her heroism, in throwing herself before the Emperor to protect him at the time of his attempted assassination, was only equalled by her calmness during the hour which followed, when the dead and dying lay on all sides and when the populace was panic-stricken and tumultuous. The Emperor's words spoken of her before their marriage, were prophetic: "By her grace and her goodness she will, I firmly hope, endeavor to revive in the same position, the virtues of the Empress Josephine."

AH, beautiful Spain
With thy skies ever bright,
Thou hast formed her for us,
From a ray of sunlight.

THE EMPRESS EUGENIE

This Week

SEVEN days of opportunities! Twenty-four hours each day filled with golden moments! Each moment given to us to work out in glorious service! What a rare chance to practise what we preach! "And the key-note is really this," as Katherine Tingley has said, "the recognition of the soul in men, whether they be black or white, despairing or hopeful."

We are souls. The mind is an instrument for the soul's use. In our hearts lie the germs which grow into good and evil actions from the mental attitude we take. "Think three times before you speak." How easy it seems. Try it, and find what a task for a woman to take upon herself. But the woman is a soul, and the soul has power to command every situation. Suppose the woman to be on duty in a position that requires perfect service—and what woman is not in such a position? How many realize that the mental attitude of those who ask for service will determine, ninety-nine times out of one hundred, the character of service they receive?

Ask and ye shall receive. One there is who calls out the soul itself in spontaneous service, with a concentration of will that removes every obstacle. Some there are whose paths are beset with trials, yet they ask service with such impersonality that the heart gives ready response. Then there are others who call out antagonism, irritation or indifference to their demands, instead of the perfect service they seek. When those with personality dominant, ask for service, if we respond impulsively, do we not swing right into their current and reflect in our actions the thing we would reject in theirs—the very personal element we should seek to control? In giving and receiving service, if we mutually recognize the soul as the key-note, would not all friction cease? And right here would there not be a solution of every difficulty, if women would learn to hold themselves in silence—to "think three times before you speak"?

Then perhaps when duty knocks at the door of the personal nature, it would open to show to the

woman herself the germ lying within her own heart.

Her silence would be an appeal to the soul to take command of the situation. The personal element would be nipped in the bud within her own nature. There would remain no connection by which the personal element in another could gain entrance in herself. The woman who is secure in her recognition of her own self as a soul, is led diligently to seek the soul in others. Thus only may she find the light and walk in it.

ELIZABETH WHITNEY

Two Dreams

TROUBLED, I fell asleep.

In dreams through unknown spheres, in restless flight, I sped—
seeking, ever seeking.

I woke—weary with sadness from sorrow unremembered, and on my lips the whisper,

Is there no unity?

I fell into a dreamless sleep.

Returning, through that state neither dreaming nor awake, I came, bringing sweetness, peace, unspeakable—from joy unremembered.

I awoke with arms outstretched towards the dim gray dawn, and on my lips the whisper,

There is unity!

A. P. D.

MISS ANNIE S. PECK, who recently attempted to scale Mount Sorata in South America, is one of the most daring and successful mountaineers in the world. She is a graduate of the University of Michigan, and for some years studied archeology in the American school at Athens, Greece. Later she became professor of Greek and Latin in Smith College. She is also a highly accomplished musician. Within the last few years she has climbed Mounts Hymettus and Pentelicus, near Athens, the great Matterhorn, the Jungfrau, Mount Shasta in California, Popocatepetl and Orizaba in Mexico, and others.

Brief Glimpses of the Prehistoric World

Archeology
Paleontology
Ethnology

A Land of Mystery—Beyond the Valley of Mexico

WHETHER one surveys the imposing ruins of Memphis or Palmyra; stands at the foot of the Great Pyramid of Ghizeh; wanders along the shores of the Nile; or ponders amid the desolate fastnesses of the long-lost and mysterious Petra; however clouded and misty the origin of these prehistoric relics may appear, one nevertheless finds at least certain fragments of firm ground upon which to build conjecture. Thick as may be the curtain behind which the history of these antiquities is hidden, still there are rents here and there through which one may catch glimpses of light. We are acquainted with the descendants of these builders; and, however superficially, we also know the story of the nations whose vestiges are scattered around us. Not so with the antiquities of the New World of the two Americas. There, all along the coast of Peru, all over the Isthmus and North America, in the canyons of Cordilleras, in the impassible gorges of the Andes, and especially, beyond the valley of Mexico, lie, ruined, desolate, hundreds of once mighty cities, lost to the memory of men, and having themselves lost even a name. Buried in dense forests, entombed in inaccessible valleys, sometimes sixty feet underground, from the day of their discovery until now they have ever remained a riddle, baffling all inquiry, and they have been muter than the Egyptian Sphinx herself. We know nothing of America prior to the Spanish Conquest—positively nothing. No chronicles,

not even of the comparatively modern ones now survive; there are no traditions, even among aboriginal tribes, as to its past events. We are as ignorant of the races that built these cyclopean structures as of the strange worship that inspired the sculptors who carved upon hundreds of miles of walls, upon monuments, monoliths and altars, these weird hieroglyphics, these groups of animals and men, pictures of an unknown life and lost arts—scenes so fantastic and wild at times, that they involuntarily suggest the idea of a feverish dream, whose phantasmagoria suddenly crystallized into granite at the wave of some mighty magician's hand, to bewilder the coming generations forever and ever. So late as the beginning of the present century the very existence of such a wealth of antiquities was unknown. The petty, suspicious jealousy of the Spaniards had, from the first, created a Chinese wall between their American possessions and the too curious traveler; and the ignorance and fanaticism of the conquerors, and their carelessness as to all but the satisfaction of their insatiable greed, had precluded scientific research. Even the enthusiastic accounts of Cortez and his army of brigands and priests, and of Pizarro and his robbers and monks, as to the splendor of the temples, palaces and cities of Mexico and Peru, were long discredited.

As regards prehistoric buildings, both Peru and Mexico are rivals of Egypt. Equalling the latter in the immensity of her cyclopean statues, Peru surpasses her in their number, while Cholula exceeds the grand pyramid of Cheops in breadth, if not in height. Works of public utility,

such as walls, fortifications, terraces, water-courses, aqueducts, bridges, temples, burial-grounds, whole cities and exquisitely paved roads, hundreds of miles in length, stretch in an unbroken line, almost covering the land as with a net. . . . Of the long generations of people who built them, history knows nothing, and even tradition is silent. As a matter of course, most of these lithic remains are covered with a dense vegetation. Whole forests have grown out of cities' broken hearts, and, with few exceptions, everything is in ruin. But one may judge of what once was by that which yet remains.

With a most flippant unconcern, the Spanish historians refer nearly every ruin to Incas times. No greater mistake can be made. The hieroglyphics which sometimes

cover whole walls and monoliths from top to bottom are, as they were at first, a dead letter to modern science. But they were equally a dead letter to the Incas, though the history of the latter can be traced to the eleventh century. They had no clue to the meaning of these inscriptions, but attributed all such to their *unknown* predecessors; thus barring the presumption of their own descent from the first civilizers of their country. . . . —H. P. Blavatsky, in the "Theosophist," March, 1880.

Huichol Indians of Mexico and the Flood

EVERY now and then the religious world enjoys a slight thrill at the discovery of flood traditions among the various aboriginal peoples of the world. We now learn that the Huichol Indians of

Mexico have such a myth, and even point out the mountain top upon which the ark rested after the subsidence of the waters. So far from this being a substantiation of the particular account which we call the Mosaic, it is the strongest evidence in support of the Theosophic teaching, that every part of the world has at some time or other been subject to natural cataclysms, either by flood or fire, and that through these agencies civilization after civilization has been destroyed, either leaving no trace whatever behind, or only the ruins which are now so plentifully coming to light. In this connection it may be interesting to recall the statement made to Solon, the Greek lawgiver, by the Egyptian priest. Solon is represented as inquiring the origin of Egyptian knowledge and history, which seemed to so far transcend that possessed by other peoples. The Egyptian priest replied that all other parts of the world had been successively destroyed by natural catastrophes, but that from these the land of Egypt had escaped through its peculiar geographical position, and had thus preserved an unbroken record extending over a very vast period of time. Of these catastrophes every nation has its myths and traditions, and that the Huichol Indians should also have preserved the story is not surprising.

STUDENT

CAPTAIN NEWTON H. CHITTENDEN, the southwest explorer, says that the Indians of Arizona and New Mexico cremated their dead until quite recently. The lodge and personal effects of the deceased were also burned. The cliff-dwellers wrapped the bodies of their deceased in robes and buried them under their dwellings.

DRUIDS ALTAR, HOWTH, IRELAND

THE Druids Altar at Howth in Ireland is typical of very many prehistoric structures to be found throughout Ireland. It will be seen that one end of the covering stone seems to have slipped from its position, and this may be due either to the passage of time or to the inability of the original builders to raise it to its proper position. Some archeologists have believed that these cromlechs were once the centers of tumuli, and that they have been left bare by the action of rain, etc. This point will probably never now be decided, but the fact remains that the majority of the Irish cromlechs are free. So rich is Ireland in these relics of a prehistoric race that nearly nine hundred dolmens and tumuli are now known to exist.

Some Stories the Dust Can Tell

OFTTIMES, of a summer morning, the dust of the pathway, or country roadway, is found marked with many tiny trails, some intricately interwoven, with many an interlacing loop, and others regular and straight. They are the record of the little people who do their traveling by night; the bugs, worms and such small creatures. There goes a furrow, often crossing itself and after many windings losing itself abruptly, or else terminating in a little conical pit. That was made by an "ant-lion" in search of a new hunting ground. Perhaps he may not find one to suit him and then he simply goes underground for the day. It would be hard to find him because he is exactly the color of the dirt.

Here is another track, a double row of tiny footmarks with now and then a smooth bit of furrow between them. Follow it along and possibly the creature can be found, though he is quite a rapid traveler. He is a black insect about an inch long, who feeds by choice on decaying vegetation, though he does not disdain other food. He scorns concealment, being certain that his shell and disagreeable odor will fully protect him, a belief in which he is seldom mistaken. Another track often found is that of the cutworm, who has entirely too many bird friends to dare to appear above ground in the daytime, so, by force of habit probably, he keeps just below the surface when he travels at night, leaving a little ridge of loosened earth which leads to some juicy plant, where he has, after many windings about, finally settled himself for the day, ready to come up at night for supper.

Other tracks there are which abruptly begin and end, an indication that the insects making them had wings which could be used, and occasionally a mouse track, gigantic by comparison, shows that larger beasts have been abroad. N.L.

The Beautiful Lily Dahlia

THIS beautiful member of the dahlia family is unique, not only in the tree-like size and form of the plant, but also in the pendent, bell-like position of flowers, which are four to six inches across. This arrangement is somewhat unusual among the compositæ, most of which face upward. But this dahlia hangs its white, pink and light purple flowers with such exquisite airiness that it is doubtful which to admire more, the harmony of the color shadings or the graceful beauty of the arrangement of the flowers, which are grouped in trios and bloom in succession in such order that the whole plant is full of blossoms at once by the simultaneous opening of one flower in nearly every triad. There are often fifty or more open at once on a single plant, some of which are almost perfect candelabra in form while others are of a closer growth. The exquisite shape of the blossoms and the relatively large size of the petals prevents the empty look so common in large non-double compositæ. Y.

NATURE

by JONES VERY—Selected

THE bubbling brook doth leap when I come by.
Because my feet find measure with its call:
The birds know when the friend they love is nigh,
For I am known to them, both great and small.
The flower that on the lonely hillside grows
Expects me there when spring its bloom has given:
And many a tree and bush my wanderings knows,
And e'en the clouds and silent stars of heaven:
For he who with his Maker walks aright
Shall be their lord as Adam was before:
His ear shall catch each sound with new delight,
Each object wear the dress that then it wore:
And he, as when erect in soul he stood,
Hear from his Father's lips that all is good.

Perhaps the Fairies Could Tell

WE are by this time forced to the conclusion that plants are inhabited or overshadowed by animal natures dwelling in them, as the human family is inhabited or influenced by the Self. This immensely extends the scope of the questions which are suggested by the very common orchard operations of grafting and budding. To take the stem of one species or genus and put it upon the roots of another, as an apple upon a quince, or a pear upon an apple, is surely astonishing enough. It is still more astonishing that the roots which are thus forced to give all their life to a stranger and are never permitted to produce a single twig of their own, yet will continue so long as they live to retain their own natural character and will, if allowed, produce their own fruit; then the twig,

totally deprived of its own roots, and compelled to receive its life from the sap intended for a much different sort of fruit, and yet never losing its own character nor producing any other than its own sort of fruit; surely this is wondrous chemistry.

Or, to go yet further, and grow several sorts of fruit upon a single tree, as has been done, even five or six wholly different species or even genera as, for example, apples, quinces, pears, grapes and roses, all growing from the same stem, we are compelled to admit that this trenches very much upon the realm of plant-psychology. It is wholly impossible to explain it by any facts in our knowledge, unless we take the unorthodox views of Theosophists, that "nature" is the domain of constructive lives who, by superlative chemistry, transmute to their own use the sap, whatever it may be, which their hosts furnish. And how does the root, buried all its life, remember to grow only the proper sort of twigs and fruit when it can? Y.

A Vegetable Calendar

ONCE more the chillicothe is confronting us with its great problem, or so it seems to us, of plant intelligence sufficiently great to tell the time of year. There has been no rain for many months, and even if there had been it would not penetrate the hard earth to the

depth of three to six feet, to where the chillicothe keeps its root.

Yet every year, at the proper time, the great roots, which often weigh two hundred pounds, send up each their dozens of vines which grow with almost visible speed for a few weeks, mature the spring "cucumbers" and wither, the root then beginning to prepare for next season. Quite apart from the greatest mystery of plant life, the fact of growth; is the particular mystery of how this huge, shapeless root buried so deeply can elaborate from its own substance the beautiful, wonderful life of spreading vines, the marvelous beauty of vine-stem, of leaves, of flowers and of perfect fruit; and, most incomprehensible of all, how it knows just when the right time of year comes. SOME LOMA-LAND LILY DAHLIAS

Universal Brotherhood Organization

Central Office Point Loma California

IN spite of the threatening weather last Sunday evening the regular meeting of The Universal Brotherhood and Theosophical Society in Isis Theatre was very well attended by an audience which seemed to thoroughly appreciate the excellent music rendered by the Students of the Isis Conservatory and the two interesting and instructive addresses of the evening. The first of these was by Mrs. W. T. Hanson, on "The Higher Motherhood," while the other address was by Mr. Sidney Coryn, who gave the third of his papers on the "History of Egypt."

Mrs. Hanson began her address by the following quotation from Katherine Tingley: "If women only knew their power, what mighty things they might fashion in this land of freedom, for they are the mothers of men. Let them study, read, think, as they rock the cradle. Let them spend less time over their own fears and troubles and more time on the great problems of life, which their little ones must some day face. Let them live as if life were divine and eternal, not merely a short recess between the future and the past. All women may use their power to help humanity, all women may live the larger life right in their own home and with their little ones at the knee. In fact if the world is ever to become a better place, mothers must begin to think and act and *live*, as if they were divine souls. For the homes of a nation are its foundation stones, and not until they are made truer and better, is it possible to have a better civic and national life."

Mrs. Hanson then continued: "As Christmas-tide approaches, year after year, one's thoughts instinctively go back to that scene in old Bethlehem, which the Christmas festival celebrates. We see the sweet-voiced mother, the kindly father and the little Child, that Child whose birth was so in harmony with the Divine Law, that He became easily and soon a Redeemer—one of humanity's Great Teachers. And in thought we see the boy Jesus growing into youth and on into manhood, under the influence of Mary, the sweet, pure girl-wife, and of Joseph, the builder and the learned man, for Joseph was a writer of history—a man far in advance of his time. And the heart leaps in gratitude to Mary for the example she set, to all women for all time. Mary, to whom motherhood was more than a privilege, to whom it was a benediction, a revealer of all that was divine in her own heart. In the thought of Mary and of the higher motherhood, which was to her not an ideal merely, but a living and daily proven fact, one reads a new reason why the Christmas festival is the one joy-time of all the year to which the mother is indispensable. The center of the home-life, as she always is, ten-fold is she its center at the Christmas-time. It is she who plans the surprises; it is she who is the general confidante of all the secrets that with children constitute such a fruitful means of character building—if the mother understands child-life and rises to her opportunities. It is the mother who skilfully leads the children away from little

With Interesting Addresses by
Mrs. Hanson and Mr. Coryn

Reprinted from the San Diego News

temptations to selfishness, and into the path where the one great joy is that of sweet and simple giving.

"In just the proportion that the Christmas festival becomes in each home, what it should be, does motherhood itself become glorified. The mother in her own self-forgetfulness is probably unconscious of this fact. But it is a fact, none the

less, and by every effort that the true mother makes to establish in the minds of her children and those of her household true ideals, by every effort she makes to bring the family a little nearer to living on high and right lines, by her every resolve to sanctify the Christmas-tide by feeding her children's souls a little more and their bodies less—by every such effort does she take a step upward, a step toward the realization of Katherine Tingley's greatest ideals—the higher motherhood. After effort comes insight. The mother who has blessed the Christmas festival in her own home with the right spirit and true ideals, finds herself at the dawning of the New Year, a wiser woman than she was before.

"Some doors which she had supposed herself destined to go in and out of for all time, she finds to her joy are closed, and where, perchance, she saw only a blank wall, new doorways have opened, and through them she glimpses a larger life than even that of her dreams. She may not step into it, to be sure, but the opportunity is hers, and the mother who is wise as well as unselfish, will seize it and step outward and upward into a greater life. What is the Higher Motherhood? One might as well undertake to answer the question, What is love, or What is light? It is not something that can be labeled and then laid away for use in case of emergency. It can no more be comprised within the limits of a definition than the sun could be harnessed to a plow, for it is something that is never fully realized, but is ever becoming. It is simply one avenue through which the soul expresses itself. The higher motherhood is the soul's own expression—not the expression of the brain-mind alone, or of the appetites, or of caprice. Now, the ideal of the higher motherhood is not particularly new to the present day. In almost every age, excepting perhaps the ten centuries during which Europe was in almost total spiritual darkness, the ideal of a higher or spiritual motherhood was voiced by this or that philosopher. Plato taught in that marvelous 'Republic,' in which he gave us a picture, an absolute picture of his dream and his ideal—an ideal which was not realized in his own day, which *could not be*, for where were the mothers, where was the awakened womanhood, even in Greece? An ideal which the philosophers ever since have preached, but which not one in all the ages has ever had the courage to absolutely put into practice among their followers, an ideal which never until now has been realized. For it is realized today in your midst, because there has at last come among men a Teacher who does have the courage to face the persecution of half the world. And she does this because she loves humanity."

Thinking a Thing and Then Acting It

A Three-Minute Lodge Paper

SUPPOSE, on general principles, I think it would be a good thing to get up early in the morning (say, 5 o'clock), but I feel tired, and do not waken easily, so I do not get up until absolutely obliged to, and then hurry to breakfast with a feeling of something having been neglected, I don't exactly know what. But suppose I think I will get up at 5 o'clock and then do so. I find time for gymnastic exercises and dress with ease. From an open book on the table I catch a new meaning in the printed words, and have time to stop and take in a mental breath that gives great vigor to my brain. New ideas, full of life and beauty come to me, and I go to breakfast feeling ready to meet any event, strong enough to uphold any principle.

In the first instance I have drifted in with the negative side of nature, which tends to inaction, indolence, carelessness, selfishness, love of ease and gratification of the body, or of the personality that rules the lower side of my nature.

In the second case, the positive side of my nature, the soul forces, have been called into action, and in league with these, the higher nature takes command of my body for the day. For the body is the battle-field in which Thought and Act cause the warfare between the higher and lower nature until harmony, the law of compassion, is established.

It is this experience in contrasts that teaches us the way the world is governed by law. It shows also our responsibility for every act of our lives, and that our responsibility starts with the thoughts we create, or that we allow others to create for

us. And, we can also see in what a very practical way we need to apply the advice, "Think three times before you act."

If we start with the wrong thought, we give the law time to check it in our nature before action has caused greater harm, and if the thought is all right the law simply reinforces it in our nature, and in action we become absolutely invincible, because we are allied with the soul-force of nature, and co-workers with the law.

E. W.

CHRISTMAS GIFTS—A Suggestion

CHRISTMAS is preeminently the time for the giving of gifts, of which the selection is usually a task demanding much anxious care and much lost time.

The essentials of a worthy gift are value and permanence, and in the search for these qualities works of literary and lasting worth naturally take a foremost place. A good book is an unfading treasure, a storehouse of which the contents become more valuable with time, an instrument for the increase of intellect and for the making of character, a link between the giver and the receiver which grows stronger day by day. A year's subscription to the NEW CENTURY PATH is surely a Christmas present worth giving and worth receiving, a weekly reminder of the good will which called it forth. Subscriptions sent in now will be in good time to enable us to deliver the first number at Christmas.

Man, the Master

It matters not how straight the gate,
How charged with punishments the scroll
I am the Master of my fate
I am the Captain of my soul.

THE divine scheme ordains that each human unit shall, to attain to the perfect stature, assume his masterhood. It is the many differing degrees of recognition of this fact in nature that marks individual traits and stamps the man as positive or negative.

The battle royal in life lies in the persistent effort to maintain the positive inner attitude, and it is accumulated bits of conscious effort that increases, strengthens, and vitalizes the inner subconscious fund.

Man's positive nature may thus acquire a momentum that will carry him over many a period of discouraging fight against his lower nature in its efforts to crawl up and exhibit itself in his daily life. The average man, yes even he on the borderland of the Master's mutual realm must keep a constant conscious watchfulness on the maintenance of his positive domination, for he has not only his own weaknesses to ward off but those of every one else. A man may partake of another's strength, if he will, or he can, in a measure, shut himself up to it. If he wills to avail himself of the vitalizing currents that emanate from strong ones, he may consciously open himself to them and imbibe them, thereby adding greatly to his own strength. But most subtle is the contagion of evil influences that beset him upon all sides; they steal in upon him unawares, and, before he realizes it, he is drifting off, drawn by the undertow of sense impulse gotten from he knows not where.

Nevertheless every rift in the fortress of his character is fordable, and once recognized, the break may be filled. Probably the most potent agency that works for susceptibility to weakness, and consequent evil thought and deed is incompetent judgment of others. Nothing saps the vital energy of man so much as allowing himself to drift into a concentration on some phase of his own lower nature, extracting sense pleasure from it; he arouses into action other like faculties and is whirled away into a mental debauch.

He is then wide open to similar forces emanating from others. Just so surely as this process is a natural one, is the fact that a judgment on the weaknesses or *fancied* imperfections in others, if it be made by one less than a master, carries with it the inevitable awakening of the same qualities within himself, and he adds fibre upon fibre to the cords that bind him down.

The Galilean's injunction, "Judge not that ye be not judged," sprung from a knowledge of the great law, and was never intended as a divine fiat. Who, less than a master *dare* openly or privately judge another? He who does it blinds himself to the consequence, for no one courts the resulting pain and anguish which is the wrench that accompanies the effort at restoration of a state of harmony within himself. A large knowledge of divine law marks those masters who assume to give to the world epitomized truth with self-conscious authority, and each and every one have declared the same growing potentiality in every human being.

Mark the words of Jesus, "I say that ye are gods!" Is it not a slur upon human reason that brilliant minds of a dogmatic age have to be again and again reminded of the absurdity of the extra cosmic God? The ecclesiastic condemns the idea of worshipping a "principle," then slips his hold from the one concrete expression of God, the compassionate human heart, and worships primarily a God of his own fancy, endowing him with many of his own frailties and holds him firmly in his grasp as a mind idol to be appeased or cajoled. Shirking, selfish human nature is at the bottom of it all; it is the vain effort to avoid the climb of the stern rocks that face *duty*, and a fallacy of motives fraught with weakness.

The restoration of the Master in man to his rightful throne in the human mind is the goal to which the highest forces are striving at this beginning of the Twentieth century. That this will be attained is confidently averred and the rapid trend of human thought attests it.

Once attained, man will assume his kingship and then will be purged from him

Comfort

A Three-Minute Lodge Paper

PIONEER work needs Warrior souls. It needs men and women grown straight and untrammelled, who are looking " . . . Not for delectations sweet, not the cushion and the slipper . . ." but for opportunity to serve.

Our work here is in a new country, yet pioneer work is not in fields and woods alone; most of all it is in a new world of thought. And just as the pioneer who clears the forest must do without many a comfort and luxury which he has been accustomed to before, so the pioneers who are clearing away mental and moral rubbish have need of the true Warrior-heart, for they, too, will have to leave many a comfort behind. No longer may they lean on their friends for comfort. They have to cut loose from many a friend and many an old idea which gave them comfort before.

To be successful in any kind of pioneer work a certain disdain for comfort is necessary, a wish and a will to get along on simple lines. For the usual case is more than merely unnecessary; to most of us it is a positive hindrance. Luxury always begets desire for more luxury, and there is an ever-present danger that such a desire may overpower us and totally incapacitate us for useful work. It has been the death of nations as of individuals, and the reason is not far to seek, it lies in the thought for self.

If H. P. Blavatsky had thought of herself, she would never have left her comfortable home for a life of such constant hardships as she knew hers must become. If they had thought of personal comfort, W. Q. Judge would have continued in his lucrative law practice and Katherine Tingley would never have gone to Montauk, to Cuba, nor to Point Loma. But these Warrior souls lived and live for a higher ideal. Their one thought has always been for others, and such a paltry thing as mere personal comfort has never for one moment been allowed to hinder their work. We students call our-

selves warriors. Let us then be warriors. Let us rise above the valleys, up to the lofty mountain tops. Let us live as souls and accept events and conditions as we meet them, caring nothing for the outward convenience nor for comforts to ourselves, intent only upon the fulfillment of our work and duty. Then and only then will our army be really strong and victorious, a useful instrument in our Leader's hands.

E. T. S.

I DO not see Thee, God!
A soul made plaint;
O for an angel hand to tear the veil apart!
Hide not from me Thy face---I strive, I faint!
The silence whispered,
"Art thou pure in heart?"
—Martha Gilbert Dickinson in "Outlook"

the debris of fault and weakness and perpetual wrong doing begat of passion and desire, and which had for so long obscured *himself* from himself.

The one organization that specifically presses toward this end is The Universal Brotherhood, and under its wise Leader, its membership is striving for and are working with a school wherein are taught and lived the essential truths.

The world will be shown by precept and example that it is possible to bring into daily life a constant and growing joy, but that to attain it man must cleave unto that which is noble and pure in life to the exclusion of aught else. The Raja Yoga lump will leaven the world; it is showing man the only open way to the life that really is, and this by constructive methods, the gross in the nature being refined and the residuum eliminated by its own gravity.

Man but comes to his own when, freed from the web of his own faults and frailties, he stands upon the heights of the mountain, that symbol of the level of the highest and best in himself, and exults in his divine strength and godhood. Then, looking down upon the sorrow and darkness in other human hearts he repeats the law "not alone," and with "truth, light and liberation" emblazoned on his forehead, he turns back to those struggling ones who with upturned faces seek the truth. Even are there now amongst us such as these. A. C. McA.

CHILDREN OF AN OLD SWEDISH COMRADE IN THEIR NATIVE COSTUME

What Led to Dunleith's Reformation

ROBERT DUNLEITH had climbed up from the sandy beach and threw himself down on the jutting edge of the cliff. He was a rich man with nothing to do but enjoy life, and another hundred thousand had just been added to his ample fortune. Yet he was not happy. He was an invalid, moody, gloomy and discontented; and though he would not admit it to himself, the acquisition of this last hundred thousand was troubling him not a little. He knew that it should have gone to his cousin Douglas, and but for his influence with the old uncle who had reared both the boys it would have done so.

The old man had, like so many others, been prejudiced against Theosophy by the false reports so industriously circulated by its enemies; and when he heard that Douglas had joined the Brotherhood League, he was bitterly angry. Robert, being with him during his last illness, had fanned the flame until his uncle had at the very last struck out the name of Douglas from his will.

Robert knew this was altogether unjust, and that the old man's mind was obscured, but he had hated his cousin ever since he had won the girl to whom they both were suitors; and he had vowed sometime to pay off this old grudge. He had chosen this way to do it; but he was no happier and as he lay lost in gloomy thought he was aroused by voices on the sands below. Two girls had sat down on a convenient rock that lay at the base of the cliff. They had brought their work-baskets and evidently intended to spend the morning.

"I shan't go," muttered Dunleith. "I was here first, and I needn't listen to their silly gabble. I know girls' talk."

Drawing his hat over his eyes to shut out the soft blue sky and fresh, joyous ocean, he sank back among the shrubs fully determined to be as cross and miserable as possible; but before he at all realized it, he had forgotten everything in listening to the fresh young voices below.

"I was just thinking, Ruth," said one, "how dreadful it is that people should give out teaching that will rob poor humanity of its faith in a Savior and hope in a better life hereafter."

"That would be bad indeed Edith; but who is doing such a thing?"

"Why the Theosophists are doing it."

"How have you learned that, dear? I didn't suppose you knew anything about them."

"I don't, and I'm glad of it," replied Edith. "Walter Ross told me that they believed and taught the very things that Christ did. I was so pleased and interested, especially in the idea of each person bearing his own sins and rising above them life after life. It is so just and sensible! Then by living many lives we could reach such heights of goodness and wisdom, and you know we can do so little in one short life. It's like trying to get an education by going to school one day, isn't it?"

"Yes, Edith; I fully agree with you, but what is the trouble with it now?"

"Well, it seems that Walter is mistaken and that their beliefs are really very wrong and dreadful. Mother says I must have no more to do with Walter unless he gives up these horrible people and things. I don't believe he will, even for me," she added, trying to keep her voice steady. "I promised to go to their meeting with him tonight, too; but now I shan't go."

"Why, you poor child, whatever have you been told, to make you think Walter can be so dreadfully mistaken?"

"Well, Ruth, you know I went to church with mother Sunday morning, and Mr. Trew's sermon was all about how the Theosophists are trying to destroy the belief in Christ and revive the old impure, soul-destroying rites and doctrines of paganism."

"Yes," how did he *prove* this? or did he only *say* it was so?" asked Ruth quietly, but with a sudden gleam in her grey eyes.

"He read quotations from one of their books which seemed to horrify everybody; and I do think such teaching abominable."

"But what did he quote, Edith?"

"Mr. Trew read the lines from the book and I have the exact words, for mother wrote them down, and I saw others doing so. This is what he read:

"Pray not! the darkness will not lighten! Ask
Naught from the Silence, for it cannot speak!
Vex not your mournful minds with pious pains!"

"Now just tell me, Ruth, could anything be more hopeless, helpless and heartbreaking than that? why, we are even commanded *not* to pray; and now listen to this:

"The Heart of Boundless Being is a curse!
The soul of Things fell pain!"

"If we believed that, wouldn't it take all the hope and brightness and joy out of life? Isn't there enough pain and suffering already, and how is it going to help things to teach people such stuff as that? O Ruth, it makes me so wretched! I shall always hate Theosophy."

"Evidently that was the intention of the Rev. Mr. Trew. But you have been grossly deceived and imposed upon, Edith, along with the other thousand poor souls who heard this man preach. Theosophy teaches no such thing."

"But the minister read it from the book, Ruth."

"Yes, they are in a book; I have read them many times. They are from Arnold's *Light of Asia*, a splendid poem, admired by many Theosophists, though it

is not one of their books. Much of its teaching is beautiful and true."

"What do you mean, Ruth? Your words are so contradictory! How can I, or others, be deceived if what the minister read is true?"

"Edith, your minister reminds me of the man who was trying to prove from the Bible that suicide is right. This is what he quoted: 'Judas went out and hanged himself. And Jesus said, go thou and do likewise.'"

"O Ruth, there's nothing like that in Scripture."

"Yes, there is. I have read those exact words."

"But not together—not in that connection."

"Ah! you innocent child, that's the point. Your minister read the exact words, but *not* in their proper connection. And he left unread the lines that teach the direct opposite."

"Have you this book he read from, Ruth?"

"Yes; I put it in my basket the other day and I think it is there yet. O yes," after rummaging a few moments, "here it is, I'm glad I forgot to take it out. Now I will read the Rev. Mr. Trew's quotations to you. Listen." Turning the pages quickly she read:

"Pray not! the darkness will not brighten! Ask
Naught from the Silence, for it cannot speak!
Vex not your mournful minds with pious pain!
Oh, brothers, sisters! seek
Naught from the helpless Gods by gift and hymn,
Nor bribe with blood, nor feed with fruit and cakes:
Within yourselves deliverance must be sought—
Each man his prison makes."

"O," cried Edith breathlessly, "that is different. We must look within ourselves and change the wrong there—otherwise prayers will not help us."

"Yes, we imprison ourselves, Edith, building walls by our evil thoughts and acts to shut out God and Christ. Even *they* can't help us until we try ourselves to break down these walls."

"Yes, I see. Now read the other quotations."

"I will; now listen very attentively: mark the first word, that little '*if*,' which changes the meaning so entirely:

"If ye lay bound upon the wheel of change,
And no way were of breaking from the chain,
The Heart of boundless Being is a curse,
The Soul of Things fell pain.
Ye are *not* bound! the Soul of Things is sweet,
The Heart of Being is celestial rest:
Stronger than Woe is Will! that which was Good
Doth pass to Better—Best."

"Why that is grand! cried Edith, with sparkling eyes. "I must show it to mother. You will loan me the book won't you?"

"Certainly. There are many stanzas here and they are crowded with beautiful truths. I'll read one or two more and then we must go back to lunch:

"Before beginning and without an end,
As space eternal and as surety sure,
Is fixed a Power divine which moves to good
Only its Laws endure,

"Is that hopeless and heartbreaking?"

"I should say not. There's nothing in the Bible stronger than that, is there?"

"No, and this teaching was given long before our Bible was ever written. This power is the law in nature, the divine will that is working to bring everything to perfection. To me it seems childish absurd to suppose it can be bribed by presents or prayers to cease or turn aside. The only way is to cease working against it and work with it for good."

"Yes," said Edith thoughtfully, "Walter told me about the law of Karma. He said it was just reaping what we sow, Jesus said that, too. Is there anything about that?"

"Plenty," replied Ruth, Listen to this:

"It will not be contemned of any one;
Who thwarts it loses, and who serves it gains:
The hidden good it pays with peace and bliss
The hidden ill with pains.
It seeth everywhere and marketh all:
Do right—it recompenseth! do one wrong
An equal retribution must be made
Though Karma tarry long."

"It seems sure one cannot escape the Law," said Edith gravely, "and to work this out one must live many lives."

"Yes, that is a foregone conclusion," replied Ruth as they walked slowly away.

"A foregone conclusion!" murmured Robert Dunleith, sitting up and gazing after the retreating forms. "The law—and equal retribution must be made. Yes, I believe it, I'll begin it at once," and he also went back to the hotel.

A week later Douglas Dunleith, trembling on the verge of financial ruin, was surprised by receiving a letter from his solicitors informing him that one-half of his late uncle's estate had been placed at his disposal by his cousin.

At the end of a year Robert visited his cousin. He, too, was now a Brotherhood worker and old scores were forgotten in their mutual efforts to benefit humanity.

Walter Ross did not renounce Theosophy, nor did Edith's mother insist that she should renounce him.

O. P. Q.

The Trend of Twentieth Century Science

The March of Science in Fruit Culture

THE science of the culture of fruits and flowers does not make so much noise, is not so showy, as chemistry nor electricity. But it bids fair to be at least as useful, and, in the last ten years, has made as much progress.

In no small measure, this progress is due to the genius and untiring research and experiment of Luther Burbank of California.

When, in a quarter century hence, we have fruits of a thousand forms and flavors and colors now undreamed of; when all our stone fruits grow with a larger and more delicately flavored kernel devoid of a prohibitively sheathing shell; when the problem of a perfect and digestible purely fruit diet is solved; it is to this man's work that our thanks will be mainly due. He read a paper on his methods, once, and here are some words from it:

In pursuing the study of any of the universal and everlasting laws of Nature . . . some conditions are necessary before we can become one of Nature's interpreters or the creator of any valuable work for the world. . . . Preconceived notions, dogmas, and all personal prejudice and bias must be laid aside. . . . Mother Nature conveys her truths only to those who are passive and receptive . . . accepting truths as suggested, wherever they may lead, then we have the whole universe in harmony with us . . . At last man has found a solid foundation for science, having discovered that he is part of a universe which is "eternally unstable in form, eternally immutable in substance."

Speaking of the old botanists, he says:

They thought their classified species were more fixed and unchangeable than anything in earth or heaven that we can now imagine. We have learned that they are plastic in our hands as clay in the hands of the potter or color on the artist's canvas, and can readily be molded into more beautiful forms and colors than any painter or sculptor can ever hope to bring forth.

It is this fact which his work proves. By cultivation, and by incredible blendings of species and genera, he provokes the appearance of infinite variations. And by selecting among these, and by further interblendings, he makes permanent whatever novelty in form or size or color he chooses.

There is not one weed or flower, wild or domesticated, which will not, sooner or later, respond liberally to good cultivation and persistent selection. . . . Weeds are weeds because they are jostled, crowded, cropped and trampled upon, scorched, starved, and chilled. Most of them have no opportunity for blossoming out in luxurious beauty and abundance. Feed them, warm them, protect them, blend them, select, and you can have what you will.

What then has he done with his cross-pollinations, cultivations, and selections? We can only name now a few examples and by way of example, selecting them from his work among fruits.

There is a little worthless fruit known as the "beach plum." But it will grow in any soil, and a month later than other plums. Without loss of these valuable qualities, it has been blended with the far richer Japanese plums, its fruit acquiring their size and richness.

He has developed a plum whose blossoms will resist frost and whose petals and young leaves may even be frozen without injury.

He has prolonged the season for plums and grapes by as much as four months, by accentuation of the qualities of early and late bloom. He has developed fruits which will remain on the tree in prime condition for two months in the hottest weather.

In many fruits he has gotten rid of the seed, or reduced it to insignificance, or made away with the shell that encloses the delicately flavored kernel.

He has enlarged fruits, added to them the flavor of others, enhanced their own. He has blended them, as for example in the "plumcot" which is plum plus apricot.

In a sentence, he has not only added enormously to the range of human fruit dietary, but has shown us that by extension of his methods there is perhaps no fruit and no nut that may not be placed within our easy access throughout the year. His work is in fact one of the most notable contributions ever made by science to the welfare of humanity.

HORTICULTURE

New Views of Disease—How to Cure Them

IN some of the journals devoted to physical culture, and wherever else the subject of health is intelligently regarded, one can see the happy intrusion of quite new conceptions of disease. They can be condensed somewhat as follows:

There are no acute—i. e., fever-attended—diseases; only chronic ones. Those that manifest fever are not themselves diseases, but the burning up of the small or large rubbish piles accumulated during previous long or short time. These *accumulations* are the true disease. When they are small in amount, we know nothing of them. When large, they give us uneasiness or pain.

Two things may happen in the presence of the accumulations. They may give rise to a conflagration (more or less fever), and if it is not violent enough to burn the patient also, and if he is careful thereafter to accumulate no more, the way to perfect health is open to him.

Or, if in small amount, and kept up for a long time, they slowly deplete the vitality of his cells. And the time comes when the cells are no longer able to restore what they lose, with proper tissue, but with a lower order of living stuff ("connective" tissue). Thus their functions are more and more blunted, and some of the myriad phenomena of chronic disease set in.

The conflagration seems to depend upon the invasion of the rubbish-piles by bacteria. It is they that effect the destruction of them. If they do not invade, then the chronic diseases of some sort must occur. For some time the cells themselves can destroy the rubbish, though at a great cost of vital energy.

Upon this view depends the increasingly prevalent modern treatment of so many diseases by starving them—that is, by not adding anything to the rubbish piles, whether they are burning or quiet. If they are burning, if there is fever, the food will be necessarily ill-digested. And by this abstention the cells are compelled to consume the accumulations for their food—which does not in that case appear to harm them.

The practical morals of this theory are obvious. Don't accumulate rubbish by a single act of over-feeding. See on how little food and how simple, you can keep health. Cultivate much acquaintance with sunlight and fresh air. Introduce yourself daily to mother earth, if you can, with a spade and rake. Pay her the delicate attention of nurturing some of her plant-children for her. And be habitually cheerful and beneficent, so that the cells may do their constant building while bathed in the inner sunshine of an unclouded mental sky. One may readily have faith that few diseases will resist such a program.

PHYSICIAN

Science and Religion—An Enlightened Clergyman

THE churches are slowly beginning to recognize that science is not an enemy of religion, but rather an ally. It has taken them a long time, and the road of their progress is strewn thick with the ruined and discarded dogmas which they have been compelled to drop, but at which they still look back somewhat regretfully. It is all the more refreshing to find a minister who uses the facts of science to break down the narrow walls which have so long cramped and tortured human thought, and the preacher who can preach such a sermon as is reputed from Chicago has deserved well of his congregation. He says:

The geologic record of the earth's crust has been estimated anywhere from 100,000,000 to 200,000,000 years, and human life upon this planet 100,000 or 200,000 years.

In the presence of these figures, how unseemly are our schemes of salvation! What conceit in our formulas of creation and destiny! What arrogance in our creeds!

This is plain and healthy speaking and we would that there were more of it. There is no such cure for religious conceit and self-complacency as a glance at the mightiness of nature. If we would but look at nature a little more frankly it would be impossible for us any more to besiege the throne of God with our miserable personalities, and we should know it to be blasphemy to exalt our ambitions into objects of divine solicitude. True religion has no such support as true science.

Here and There Throughout the World

A NEW BUILDING IN CONSTRUCTION, AT WRANGLE, ALASKA

AN OLD TIME MILL ON THE GLUNIE, BRAEMAR, SCOTLAND

English and French Pharmacists THE good feeling that inspired the recent Anglo-French arbitration treaty seems to be working out in various departments. The Pharmaceutical Societies of the two countries have just foregathered in Paris, and the English representatives were greatly affected by the cordiality of their reception. The English *Pharmaceutical Journal* says: "The effect of the celebration in bringing about a nearer relationship between the two societies—that of Paris, which is a century old, and that of Great Britain, which is also growing in years—cannot be overestimated. Irrespective of political differences and different languages, *la science pacificatrice* brings nations closer together; and science is, indeed, mightier than the sword. May the friendly relationship between Paris and London, between the representative societies of each city, ever continue."

Industrial Revival in the Emerald Isle THERE are distinct evidences of an industrial revival in Ireland. The high price of coal which has proved something of a drag upon the commercial wheel is to be counteracted by the use of peat, an admirable fuel when properly prepared. Capital is being attracted to the country and the manufacturers of machinery report the receipt of many large orders. Such facts as these are evidences which the real student cannot afford to overlook. They show the pulsations of the national life and are an index to other movements far more important if not yet so clearly in sight.

Policy of the Jews of Russian Poland IT is to be hoped that there is no truth in the report that the Jews of Russian Poland are organizing outrages for the purpose of terrorizing Russia into a more humane policy. Such a movement would have a precisely reverse effect. Any government which allowed itself to be so influenced would cease to exist in a week. It would be already dead of its own weakness. The Russian Jews have the sympathy of the world. By moderation they will retain that sympathy. By excesses they will alienate it.

Revival of the Old Irish Language THE revival of the Irish language is showing itself in various ways and some of them are embarrassing. At the recent revision of the Dublin voting list a claimant and his witness both signed their names in Irish characters, a proceeding vigorously objected to by the revising solicitor who denounced the strange characters as "foreign" and "gibberish." Of course a spirited protest followed and the publicity thus secured will doubtless suggest to many other voters to do the same.

The Shortest Sermon on Record ONE of the shortest sermons upon record has just been preached at a Parish church in an English agricultural district. The text was, "Wherefore it is lawful to do well on the Sabbath day," and the sermon was as follows: "There is no pit here for life destruction, but the staff of life is this year partly housed, partly lost, and part today in danger. Go and help to rescue this last, for yourselves and for your neighbors." We are gradually learning that Sunday was intended for the well-being of man and ought to be so used, leaving every man to be the judge of what that well-being consists.

Many Fatalities in the Alps—The Cause THE Alpine death-list grows day by day, the French Alps alone having caused three hundred fatal accidents this year. The general atmospheric disturbances have been especially felt in these regions, even the experienced shepherds having often been caught and imprisoned by unexpected snow falls. Alpine climbing is sufficiently dangerous even when due precautions are taken, but it is an especially regrettable fact that very many of these accidents are caused by improper clothing, such as fashionable dresses and shoes, etc.

King of Spain May Visit England IT is stated on what appears to be good authority that the King of Spain is likely to visit England at an early date. The Spanish ambassador has lately arrived in Spain from London and it is believed that his mission is to arrange the necessary formalities. If the "necessary formalities" of these visits of rulers could be reduced to a minimum it would tend very much to the world's advantage. It might then be more possible to arrange international affairs with the same expedition as is used in the commercial world.

Deterioration in Italian War Material IT is not one country alone which has cause to lament the deteriorating physique of its young men. The Italian Minister of War has recently stated that not fifty per cent of the army conscripts are medically fit for training. There must be something wrong with our glorious civilization when its young men are not physically strong enough to kill each other.

Inebriety Punished in Madagascar THE French Colonies are in no way behind the mother country in their war upon the alcohol habit. Any one who allows himself to become drunk in Madagascar is fined seven bullocks and seven francs, and whoever is convicted of making or selling alcohol is fined ten bullocks and ten francs. In Madagascar the way of the inebriate is certainly hard.

THE CHILDREN'S HOUR

I DIDN'T THINK

by Ella Wheeler Wilcox

IF all the troubles in the world
Were traced back to their start,
We'd find not one in ten began
From want of willing heart.
But there's a sly, woe-working elf,
Who lurks about youth's brink,
And sure dismay he brings alway---
The elf, "I didn't think."

I half believe that ugly sprite
Bold, wicked, "I don't care,"
In life's long run less harm has done
Because he is so rare.
And one can be so stern with him,
Can make the monster shrink;
But lack-a-day, what can we say
To whining "Didn't think?"

This most unpleasant imp of strife
Pursues us everywhere.
There's scarcely one whole day in life
He doesn't cause us care;
Small woes and great he brings the world,
Strong ships are forced to sink.
And trains from iron tracks are hurled
By stupid "Didn't think."

When brain is comrade to the heart,
And heart from soul draws grace,
"I didn't think," will quick depart
For lack of resting place.
If from the great unselfish stream,
The Golden Rule we drink,
We'll keep God's laws and have no cause
To say, "I didn't think."

IT had been pouring with rain the entire day, and the children had played all the games they knew. Dorothy and Winnie had overhauled their dolls' clothes and washed and ironed the soiled ones, had played school with Roy and Phil until the boys refused to play such a "girls' game" any longer. The fat, old half-blind poodle had been chartered to personate various characters in their "wild forest" games, being at one time a hungry lion, at another a wild horse of the desert, and yet again a coyote, in which last character he was at his best, acting in a very abject manner. As a wild horse of the desert he presented a very undignified and spiritless appearance, while as the lion, as Roy said in a disgusted voice, "any one can see he's only a fat old dog; he can't act a bit." So poor old Prince retreated to the furthest side of the room, feeling that he was in disgrace. And now the children were sitting around wondering what they could do next. It was only two o'clock, and the rain still came steadily down, so there was no hope of being able to go out.

"Oh, dear," yawned Phil, "I wish God would make it rain only in the night."

"I fink it would be nice if Dod was a littou dirl and not a gempleman, 'cause then he would always know what littou dirls like, and littou dirls don't like ve wain," said little Winnie, looking mournfully up at the gray sky. The children shouted with laughter. "Why do you laugh?" she said reproachfully, "'t isn't funny."

"What's the joke, children?" mother's voice was heard saying, as she came up the stairs. "Oh, mother," chuckled Roy, "Winnie is so funny; she called God a 'gempleman,' and wished he was a 'littou dirl'!"—they started off again into shouts of laughter. Winnie sprang into her mother's arms. "Why do vey laugh so, mummie?" she said in a grievous voice, "it isn't funny one bit. I fink it would be vethy nice." "You blessed baby," said mother, kissing her, "yes, it is a lovely idea, and not one bit funny," and then to the other children, "how would you like to have little Maggie Chester to play with you this afternoon? She must be lonely, and you can have tea all by yourselves up here."

"I'd rather have the Chester's big dog," said Phil, "he'd make such fine wild animals. Prince is so lazy," with a glance at the little dog, who pricked up his ears and feebly wagged his tail. "I don't care much for tea parties. Of course, if we could have a fire and make out we were camping on the prairie it wouldn't be so bad, mother?"

"No, not today, my boy," said his mother. "We'll go out to the woods the first fine holiday and you shall have your fire then, and camp out, and play all sorts of exciting games. Just put on your cap and run in next door for Maggie, and Dorothy can come down to the kitchen for the tea."

Dorothy's Goblin

So, while the other children prepared the table and put chairs, and Phil went for their little neighbor, Dorothy went down stairs with her mother. There was a plateful of delicious little cocoanut biscuits and a dish of great, big, golden plums—three each; so delicious and juicy looking.

"O—h, mother! what beauties!" cried Dorothy, as she skipped around in her excitement, "I want to eat one this very minute."

Mother looked just a little bit grave, for one of Dorothy's failings was—it is an ugly word—it was greediness. She did like to see that she got her share of everything, and would take the largest apple or the biggest piece of cake.

When the tray was filled Dorothy lifted it and began steadily to mount the stairs. At the first landing she sat down to rest a little, and smoothed the golden fruit with her fingers. Then she bit a little piece out of one just to see how it tasted. How the juice trickled down her cheek! She put it down and went as quickly as she could up the second flight of stairs and again rested.

"I believe I'll just finish the plum," she said to herself, "then I'll still have two to eat upstairs." It was so good that she ate another, and then she was sorry, for she would have but one left to eat, while all the other children would have three. Then an idea was flashed into her head by the ugly little goblin Greed. "Why not eat three more plums, then you'll all have two each—the others will never know."

So she started to eat them, and the little goblin chuckled, and hopped about in glee. She did not enjoy them, for she had to eat them so fast, and every time there was a sound she thought there was some one coming, and by the time she had finished she was not feeling very comfortable where her heart was. Once more she picked up her tray, but she was not at all the happy little girl who had started at the

foot of the stairs. "Oh, Dorothy, what a jolly tea," from the boys, and "am I doin' to have two whole p'ums?" from little Winnie; and Maggie's "Oh, how lovely," made Dorothy feel more and more remorseful.

"Well, little folks, have you had a good time?"

"Lovely." Oh, it was good," all chorussed.

"But what have you done with your stones, you greedy children? I believe you have swallowed some."

"No, mother, here are my two;" "and mine," "and mine."

Poor Dorothy, her face scarlet with shame, could bear it no longer, and sobbing she confessed: "Mother, dear, I e-eat s-some on the s-s-stairs."

"Oh, Dorothy," said Mrs. Drew in a shocked voice, "I am sorry."

But the child was in such agonies of remorse that to say more would have been cruel. Since that day Dorothy's goblin Greed has had many a good try to make himself heard, but without much success. A.C.

IF I CAN LIVE

by HELEN HUNT JACKSON

IF I can live
 To make some pale face brighter and to give
 A second lustre to some tear-dimmed eye,
 Or e'en impart
 One throb of comfort to an aching heart,
 Or cheer some way-worn soul in passing by;

If I can lend
 A strong hand to the fallen, or defend
 The right against a single caving strain,
 My life, though bare
 Perhaps of much that seemeth dear and fair,
 To us on earth, will not have been in vain.

The purest joy,
 Most near to heaven, far from earth's alloy,
 Is bidding clouds give way to sun and shine,
 And 't will be well
 If on that day of days the angels tell
 Of me, "She did her best for one of thine."

Reading

AN article in the *North American Review* treats lucidly of the vice of reading. To recognize that reading may easily become a vice is surely a step in advance. The deification of intellect is certainly higher than the deification of money, but let us discriminate between intellect itself and the mere creations of intellect, let us recognize that intellect has no color except what it borrows from the angel above or from the demon below.

It is a good practise to question our motive in reading, if it be done frankly and honestly. Too often we shall find that we read because we dread to allow the mind to look at itself. We must occupy it constantly with an external object lest it gaze upon the self-created spectres which encompass it. Another and a very common motive is a false deference to the opinions of others especially when those opinions have gained the glory of print and binding. We read instead of thinking, but it is a very bad substitute.

Is it possible to formulate an ideal in such a matter as reading, an ideal by which we can test the value of a book? There are, at any rate, certain requirements upon which we can insist and they will form at least the outline of an ideal. Let us then read no book which does not seem to be some sort of expression of the world consciousness, which does not in some way show how the good passes into the better, and the better into the best. Let us avoid those books which describe the sun as moving backwards instead of forwards. Let us avoid dogmatic books whether they be religious, scientific, or social, the books which tacitly claim to think for us and to give us our wisdom in a predigested form. Let us select our books, not with a view to learning from them—for we are either self-taught or not taught at all—but that we may occupy a point from which our thought may extend, a jumping off place, a diving board from which we may the speediest reach the ocean of thought, and so swim for ourselves. Let us give a largely added scrutiny to new books and to books with a large circulation. The chances of value are immeasurably against them. Let us too begin rather nearer to the beginning than the Twentieth century and assert our kinship to the past by reading the best that was produced in Greece and Rome. These writings have proved their wisdom by defying old age. They are not upon the plane of time at all. They are as young as they are old. They are like the sea, and the hurrying years have no footprints upon their face. Reading should be a sacrifice to God and an invocation. It should be preceded and followed by the prayer of right thought.

The Two Paths

THERE seem to be two ways by which men may lead this life spiritually. One is an inward-going path. By this, attention is withdrawn more and more from the outward world into the inward. An inner devotion and light are cultivated; as it were a steady and deepening communion of feeling with a divine center. A great sweetness is attained, an indifference to anything external, pains, pleasures, and events generally, especially to death. It has been sometimes the path of saint-hood, and was especially an ideal during the stormy times of the Middle Ages. But it left the times stormy and dark. For its devotees went inward out of the world; the world was perhaps neither helped nor hindered. It is the path of the separated and cloistered unit. But what of the many?

The other is the outward-going path. By this, faults are not grown away from, but overwhelmed where they stand, overwhelmed in right action. A selfishness is not abstained from, but drowned in a beneficence. Weeds are not rooted up, but crowded out by fruit-trees. There is prayer; there is meditation; but they are coincident with action. Their fruits are not stored as bees store the still honey; but in the very same moment feed the pulse of deeds. The body and mind are not wan, lax, and anæmic; but tense, alert, on strain, like those of a soldier. The blood is not distilled into heaven, but all a-pulse on earth. The mood is not yearning, but positive and creative. The senses and faculties are electric with life; but they are *dominated* like perfect steeds by a perfect driver.

Nevertheless we may have been wrong in setting these two as one against another. There may be a higher unity in which both are comprehended. Both may belong to the perfect life in its several periods, even to the well-lived day with its strength of morning and noon, and its peace of evening and night. And there may be times in the history of a nation when the presence of men and women of one path especially may be fitted for its inspiration. We grasp our truths in halves; and the half usually seems the whole whilst we busy over it. Prayer sometimes needs her white robe, and sometimes a suit of mail and a sword—or is it always the first with sometimes the last over it? A.

Church and State in Spain

THE people of Spain are arousing themselves to the evils which have never yet failed to attend a union between church and state.

The government is overwhelmed with petitions demanding this sweeping reform and also advocating the expulsion of the religious orders, the nationalizing of their property and the universal establishment of schools which shall be free from religious domination and influence.

An article in the *Contemporary Review* by Joseph McCabe, an ex-Franciscan monk, gives us a vivid idea of the ecclesiastical burden under which Spain is staggering, and from which she is trying to extricate herself. The writer says:

The mendicant orders flaunt their idleness before the people. The profession of begging is almost consecrated by the clergy.

Education may be neglected; sanitation may be attended to so inadequately that Spain, with all its glories, retains one of the highest death-rates in the world; the navy may be committed to the lumber-yard; the spectre of bankruptcy may show its head above the Pyrenees; but the church will not abate one centimo of its claim upon the people. The editor of the *Revista Christiana* calculated some years ago that the church of Spain spent some 29,200,000 pesetas (about \$5,675,000) a year on incense and candles alone. Vast as the sum is when we recollect what Spain spends on education and other secular purposes, it is only a tithe, though a significant tithe, of the economic parasitism of the church. The peasant who earns three pesetas (about sixty cents) a day must pay that sum for a mass; even for a simple prayer, occupying a minute or two over a sick child, he has to pay about two or three pesetas, as well-informed residents have told me. According to the census of 1897, there were 72,077 priests, monks and nuns in the country. Large numbers of these priests have no regular spiritual charge, so disproportionate is their number. They are familiarly known as *saltatumbas* for it is their practise to run from place to place where funerals are announced and masses for the dead are to be distributed. Travelers in Madrid hotels find them scanning the artistic death notices in the papers as eagerly as our out-of-works run down the advertisement columns.

THERE are two things you never want to pay any attention to—abuse and flattery. The first can't harm you and the second can't help you. — *Letters from a Self-Made Merchant to His Son*

IN THE HAPPY RANKS

by FRANK L. STANTON

CAN'T be always roamin' in the valleys o' the May;
Any sort o' weather, so we're happy on the way!
Same sky bends above us, or whether blue or gray—
Night is always driftin' to the mornin'!

Can't be always rollin' in the wealth that will not stay;
Poverty—what is it if we're happy on the way?
Sweetest songs for singin', sweetest words to say,
Night is always driftin' to the mornin'!

For all our little blessin's, a heart that thrills with thanks.
We're crossin' o'er the country in the hallicujah ranks
An' singin' songs of happiness on Jordan's stormy banks,
Night is always driftin' to the mornin'!—*Atlanta Constitution*

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question In these days when more and more attention is being given to Theosophy, the question of greatest moment is to obtain a right basis on which to build. The world is beginning to know that a new system of education has been put into operation by Katherine Tingley, and I find that more and more people are asking, "What is the basis of this new education?" Will you not state this in general terms?

Answer The fundamental basis of education from the standpoint of a Theosophist must always be the same. A child must learn that he has a higher and a lower nature, and must gain the power to distinguish between the two in himself, and in others. Furthermore, he must learn to govern the lower by the higher. In other words, he must learn the principles of self-government, before he can be expected to apply these to the government of the town, State or nation to which he belongs.

He must learn to feel the unity of all life; to consider others at all times; literally to love his neighbor as himself, and not simply to talk about it as a desirable thing. This general instruction imparted by precept and example, must be the foundation upon which everything else is laid; the atmosphere with which everything else is permeated, even from babyhood. Without this basis everything else would avail little, the child or man. But with this, he would be able to apply himself to any of the problems of his time to advantage.

Theosophical education leaves out of its curriculum nothing that concerns human life. Eating, drinking, sleeping, dressing, work and recreation—all are considered worthy of the attention of the teacher.

The two essential differences between education as it is generally conceived and as it is considered from the standpoint of a Theosophist, consists first, as I have said, in the basis upon which it is founded, and secondly upon the range of instruction. It covers the minutest detail and the largest issues of human life. In short it is a process of character-building. And placed upon this as a superstructure are the various intellectual and physical accomplishments needed for the full expression of life as it exists at any time. These necessary acquirements are learned in a practical way, not theoretical only. By bending toward a given purpose all the faculties at once instead of the mental or some other alone, the result is attained more rapidly and thoroughly.

Twentieth century life is very complex, and true education today would be of such a nature as to fit one to enter any department of modern life, master its details and turn the energies of that work in the right direction, or in harmony with natural law. One who had been Theosophically educated today could never rest with things as they are, for he would see clearly the need for reform. In fact he would master the details of modern life for the purpose of remodeling them, and gradually creating order out of the modern Babel. The needs of the hour are what concern the Theosophist, who must be not only a philosopher, but a practical worker.

G. V. P.

(2) The general idea and practise in the education of today is to fill the mind with a mass of undigested material and facts, apparently in ignorance of the facts that true knowledge cannot be thus acquired and that theory is not knowledge. Under this practise the student's mind

is kept in the grooves of current thought and action and rarely frees itself from them. Such "education" does not "lead out" of anywhere, but leads into existing conditions and fastens them upon the mind as the best possible product of civilization.

As a matter of fact one cannot be said to be educated until he has put into practise whatever he may have mentally acquired, and what the mind retains is usually but a small part of the so-called educational course. The object of this kind of education appears to be that which will enable the student to further his own desires in a world of people similarly educated. The point of failure lies in the fact that the system is not based upon any great principle of life and being. Life is accepted as a struggle for the survival of the fittest—the fittest meaning the one who can best take advantage of the ignorance or necessities of his fellow-men.

Theosophy as applied to education, recognizes first of all the common origin, nature, history, development and destiny of all mankind; that each human being is a soul which has come down through the ages, life after life, seeking experience on this earth; that the soul knows—and that to evoke this knowledge so that it may be expressed through brain and body, the higher nature must be appealed to, and made the ruler in thought, speech and action; that we learn with and through others, and that all are bound in one common tie of brotherhood in which the suffering or happiness of each individual affects all the rest; it recognizes the great law of existence, the law of adjustment, which is expressed in the words, "As a man sows, so must he also reap"; it awakens the soul to its high mission of service to humanity.

Under its teachings—the true education—life becomes no longer a struggle for existence with our fellow-men, but an opportunity to learn, through service in the common cause of human progress, the way to true happiness.

R. C.

What Is Right?

A CHICAGO newspaper asks: "Why is Right Right?" and opens its columns to the stream of wisdom which is always seeking a journalistic channel. A great Teacher was once asked: "What is Truth?" and because he was a great teacher he kept silent. The imitation teachers of the present day keep everything except silence. Truth is the commodity which they claim to have in the greatest abundance, and they proclaim it from the housetop and sell it in the best market. How indeed can there be an universal standard either of Right or of Truth? The eternal law, speaking through conscience, urges every man forward to the next point from where he now stands, but the position which for one is a point of advance, may for another be a point of retreat. One man's virtue is another man's crime.

Some communities have reached a place where the moral view of their units seems in many respects to coincide, and that collective moral view they try to express in their legal systems. The effort may be largely unsuccessful, but the ideal is present, if somewhat dumb. A legal system cannot, however, represent absolute right or absolute truth, but only the fugitive conceptions of Right and Truth as they appeared at a given time. As we advance, Right and Truth recede; ever in front, ever beckoning, but ever unattainable in a finality which they do not possess.

To illustrate is easy. There was a time when a collective moral sense urged us to confine capital punishment to certain grave offenses instead of inflicting it for trivial ones. Such restriction was then a point of virtue and therefore "right." The collective moral sense has now, however, progressed, and instead of prompting to the restriction of legalized murder it urges us to abolish it altogether. In days gone by it was therefore "right" to restrict it; it is now wrong to restrict it or to do anything else, except abolish it. Webster's dictionary tells us that Right is "conformity to human laws, or to other 'human standard of truth,' etc., which is perhaps all we can expect from a dictionary, but there is a confusion here between right and expediency. The latter has its uses, great uses, but it must not be allowed to conflict with the moral sense. If human law is the standard of right and wrong, how shall we defend the Declaration of Independence? Charters of liberty have always been in defiance of human law and always will be. Right and Truth are indefinable, but they are not nebulous. There is a "thus saith the Lord" in every human heart, and sorrow shall be his portion who disobey. No man can deceive himself by words. Upon the wilderness of life there stands in front of every man, well known and seen by him alone, the pillar of cloud by day and the pillar of fire by night, and the inexorable law shall judge every deviation from the path. We may deceive others by mental juggleries, but not ourselves.

STUDENT

The Boat For Small Whirlpools

IN the great land where live the Dakotahs, Cheyennes, Mandans, Sioux, Gros Ventres; eastward even from the land of the Idahos, flows a great and very evil river of muddy water. The spirits of this river have, without doubt, been cursed by the Great Spirit, for their ancient lands may be yet seen, blasted and naked hills where no good grass lives, nor trees.

These hills are brightly painted with many colors like warriors, and in some of them the ancient council-fires are still burning. These cursed lands which the white men call "the Bad Lands," are manys days' marches long, but the evil spirits have been driven into the river. It is certainly true that they have eaten loco, because they do all the time run around in circles like cattle which

have eaten of it. These whirling circles which the mad spirits make in the water will tip over a canoe, or any sort of a long boat such as Indians make, and then these wicked spirits take the people and hide their bodies in the mud so that they cannot be found. But the Great Spirit gave the Indians wisdom to make their boats round that they use on this river, so that when the whirls catch them they spin around, but do not tip over, and when it stops they go on their way.

These boats are made with a frame of branches tied together, and over it rawhide is sewed on with sinew and the joints made close with soft buckskin or with fat. When one person rides, the boat is balanced with weights and he kneels in the front and pulls the boat with his paddle, but two people sit on two sides and paddle forward, striking very exactly at the same time together.

These boats are a little more than the height of a man's knee in deepness, and about three times as far across, and so light that a strong squaw can carry one, even one large enough to float five persons.

It is very bad to use a boat that cannot be made to look beautifully, and the Indians use others, log-canoes ("dugouts") on the good streams which flow into this evil river.

HYAS LELOO EENA

AND many of Jesus' disciples went back and walked no more with him. Then Jesus said unto the twelve, will ye also go away?—*John, 6 ch.*

The Sale of Thought Waves

AN enterprising person on the Pacific coast announces that on receipt of one dollar he will transmit to the sender a series of powerful thought waves which will be a guarantee of business success. That his thought waves have been a guarantee of his own success in thus trading upon the vicious credulity of the public is shown by the masses of letters which have reached him, the greater number of which doubtless contain the desired dollar. There seems to be no abyss of folly without its occupants, and the intense desire for money breaks down every barrier of sanity and common sense. The world seems to be full of people who are haunted by the dread that they will one day be required to do some honest work and who are abjectly ready to sink into the very depths of superstition to avoid it.

STUDENT

THE following anecdote is related of Oscar I, of Sweden: It was during the Crimean war when the western Powers were about to declare war against Russia. A Russian ambassador arrived in Stockholm to inquire into Sweden's intentions with regard to the question at issue?

"I intend to remain neutral," said Oscar.

"But what if my sovereign should not consent to your neutrality?" inquired the ambassador.

"I declare myself against any power that challenges my neutrality."

"But," said the ambassador, graciously, "Suppose my sovereign should then send one hundred thousand men?"

"Be pleased to say to your sovereign that in such case he would do well to send one hundred and fifty thousand, eight days after, to inquire into the fate of the first hundred thousand."

The neutrality of Sweden was not attempted.

HER chief difficulty, she said, was to get the women to say they were sinners, and there was no use trying to offer them salvation when they would not say they were sinners. And they would not.

We have never eaten with any one outside our own caste, have never uncovered our heads except in the presence of our "husbands," they would say, or anything else that to them was sin.

One day, after a struggle to make them say they were sinners, Mrs. Bandy saw as she glanced through the door some branches that the gardener had trimmed from the trees. Going out, she brought one in; then, asking them if they were sinners, she shook the stick at them, and, lo! in a chorus came the answer: "Je Hung! Yes, your honor, we are sinners." From that time on it was easier, and they came to have a head knowledge of the fact that they were sinners.—*Report of missionary meeting in the Los Angeles "Herald"*

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Train and the Children

George Francis Train sat one spring morning in Union Square, as was his custom, surrounded by children to whom, contrary to his attitude toward adults, he was always affable and agreeable. On the outside of the group surrounding Mr. Train stood a small colored girl looking wistfully at the white children who were receiving all his attention and hearing his wonderful tales. After they had dispersed and Mr. Train was alone, the black child advanced timidly and said to him:

"Do you love children?"

Looking at his questioner in some surprise, Mr. Train admitted that he did.

Then in a low voice she said: "I am a child."

THERE are many impudent persons whose notion of ill-temper in another person is that he will not endure their impudence.—J. V. Blake

Nearer the Christ Ideal of Christmas

WE have still to wait awhile for the Christmas which will be a worthy celebration of a peace upon earth, or of any very general good-will toward men. Yet even now, amid much that is tumultuous, and menacing we may still record an advance, we may still welcome some ideas which are altogether Christlike, and which have not only been born into the human mind but have even attained to a notable and vigorous growth. International peace has stirred the imagination of men as it has never done before. A fire has been lighted which may perhaps be hidden for awhile, but which can never again be extinguished,

because it is the breaking forth of a divine flame which, being divine, is also eternal and quenchless.

In the world of religion a new ideal is being born, an ideal which is shaking itself contemptuously free from the outworn creeds which have lain like a miasma on the human heart. Men are learning to step forward into liberty and into the sight of a new wisdom, they are learning that in the search for God they are sufficient unto themselves, and that no other can stand between them and the heights to which they dare to aspire. We do well to be filled with a high hope for the future, a hope which can pass swiftly over whatever darknesses may be upon the road which surely ends in light. It is well with the world because Christ is born within the human heart, because he calls all men unto him, and because that divine summons will not forever be made in vain. Y.

FROM the heart of the world has gone forth a cry

Inarticulate, mighty and menacing,

'Tis the voice of the awakening soul of humanity.

Through the dull roar of the ceaseless toil,

And the rolling murmur of discontent

Pierces the cry of the imprisoned soul seeking light.

'Tis the cry of the mother in labor giving birth

To the Hope of the world.

And with it there comes the tone of a bell resonant, vibrant, pure,

Ringing the knell of the passing night,

For the darkness and sorrow of ages must die in the dawn of the day
that is born.

'Tis Christmas—

Above the roar of the endless toil and the murmur of discontent,

Above the chime of the Christmas bell

A young voice rises in song joyful, triumphant,

The young Christ-soul of the world is singing a victory song—

This is Christmas!

Look up, my brothers and listen!

Do you see the light that is near?

Do you hear the voice of the singer? Listen!

The light and the darkness mingle and the wind blows cold:

The good and the evil are blended, men die in despair:

Their hearts have grown cold and hopeless, evil is everywhere.

Let the light shine!

Where now is the darkness?

See the light and the shade are blended and the darkness has disappeared.

The light is lord of the day.

This is Christmas. That bell is ringing

And a new tone threads its way through the chime.

'Tis the note of the joy of life.

Does it seem to you far away? Listen!

Be still for a moment, forgetting yourself: you may hear it ring in your
heart.

For all hearts are linked to the heart of the world, as if they were one.

But the victory song of the Christ you cannot hear

That song is the soul within you stirring the depths of your heart:

'Tis the courage that makes you struggle against despair:

'Tis the love that will make you fight for the right:

'Tis the new life waking within you in strength and purity.

All souls are as one.

This is Christmas.

The American Flag at Honolulu

THE illustration on the cover page of the NEW CENTURY PATH this week gives a glimpse of the memorable scene enacted in Honolulu, H. I., upon the formal raising of the stars and stripes, when the provisional government of the little island nation ceased and Hawaii became an integral part of the United States of America.

Herbert Spencer

THE death of Herbert Spencer removes a very great figure from modern life. It is possible that in another quarter of a century his works may have practically ceased to be read, but it is certain that their effects will endure for centuries. These are the sustained attempts of a supremely powerful reasoning machine, equipped with vast stores of fact of every kind, to comprehend the universe.

He represents the culmination of an epoch of thought, and is the door to a new one. The epoch of thought represented and almost closed in him is the materialistic. In its most crude forms, materialism takes no account of consciousness, either denies it altogether, or represents it as a secretion of matter. That is not Spencer. For him, consciousness was an aspect of "the Unknowable." As such, it was neither initiator nor cause of anything. Existing primarily as the bare sensation-side of living matter, it was gradually modified, by the sensations it received, into a knowledge of its environment; and this knowledge became gradually abstracted into thought and reasoning. Though therefore constantly evolving and complexifying, it was the mere lining of the molecules and cells in which it lived. It was mere witness of the changes of the material world, to which answered changes in its encapsulating cell, of which it was the subjective side. And all its feelings and concepts were the result of this process. They became more and more complex, abstract, ingrained, and instinctive; but that was all that consciousness could achieve.

And the *other* aspect of the "Unknowable," which thus on one side welled up in (or as) consciousness—was the reality beneath the phenomena of the eternal world. Such was the curious place in which this great thinker landed. A bi-polar Unknowable. One pole (our consciousness) not knowing itself, but only its changes; not knowing the other pole, but only that pole's veil, the phenomena of nature.

Spencer was clearly not a materialist; he took a step ahead of that, opening the door into—Theosophy. For Theosophy is the science of God in and beyond nature. By his word "Unknowable," Spencer denies the possibility of such a science; but that does not make it impossible.

Consciousness does know itself, "I" is not a mere meeting-point of sensations. Each of us can grasp in the hand of his soul—the full "I"—the whole of his personality, the complex body, the changing moods, the wavering sense-led mind; and, while fully living in them, dominate them. And by that very attitude he opens the door of a new chamber of life. From there, he becomes a causal factor in the universe, and enters upon the science of Spencer's "Unknowable."

Our real debt to him is that he cleared the air of the surviving ghosts of medieval theological creeds. Christians of little thought have held it necessary to attack him, often venomously and foolishly; but those of larger view now know better.

He gave the mind an intelligible guide in the vast complexities of the universe, and when we have gone as far as that guide will take us, we find that the way on further is in no way closed to us.

And finally, he gave us the example of a life of more than 80 years unfalteringly devoted to the service of humanity, to the work of intellectual path-clearing. He rejected all public honors, let nothing turn him aside, and, when publishers were afraid to venture on his books, with his own small means became his own publisher. By 1860 his immense outline of thought was fully mature and drawn, and then, for 30 years he calmly proceeded to fill in that outline to the last particular. And against constant ill health, often temporarily stopping his work, he refused, as it were, to die till it was accomplished. May his next life give him the light he so nearly reached in this.

Two Cuban Patriots

DECEMBER 7th was observed as a national holiday in Cuba, it being the anniversary of the death of Maceo, who was killed in battle seven years ago. The eldest son of Gomez was also killed upon the same occasion while trying to recover the body of his chief. We are well assured that the Cuban people will regard the celebration of this memorial day as a mere outward and visible sign of an interior and national determination to live for the principles of freedom as valiantly as these men died for them. In too many countries we find that anniversary celebrations such as this are but empty and meaningless forms. It will not be so in Cuba.

Young Indians and the Indian Arts

OFTEN and often have our parents and grandparents told us about the happy freedom of the Indians' life before the white men came. They sit by the fire mourning the passing of a condition we have never known. We were born on the reservations, we went first to the mission schools and later to the government schools; some of us have received the higher training of the Carlisle school. Some of us had fathers or grandfathers who were white men. We are part French, Irish, English, German, Spanish, by blood, and our teaching has made us to some extent like our fathers' people in thought, manner and custom. But after the schooling is over, what then? We go back to our homes on the reservations and find ourselves unfitted for them. The game has all been killed, our hereditary enemies have ceased to be so, the lives our Indian fathers and mothers led is now impossible, even were we desirous of it. What shall we do? We cannot be wholly white men because in our blood a hundred generations of campfires light up the legends of the past of our people. The forests beckon us, the plains invite us, the streams call to us and we cannot live in the artificial tumult of cities. Neither can we bend ourselves to the machine-like factory life nor to the routine of domestic service. We young men know much of the life of the wilds and their inhabitants, for we ourselves are born to that freedom. We cannot use archery nor paddle canoes nor hunt game nor make war as our ancestors did, but we can be the rulers of the forests, we can be foresters, rangers, game-wardens and stock raisers.

We young women cannot bear the burdens our mothers did, cannot make camp, chew rawhide, nor submit to the slavery our mothers endured, but we know how baskets are made, we can tan leather as soft and white as cloth, we can make mats and weave blankets, and we know many medicinal properties of wild plants.

Is there not some way by which we can avoid sinking back into the listless, purposeless savagery which is all that is left of our ancestors' freedom? Is there not a possibility of a Board or Commission of Indian Arts and Employment which could give us an assured opportunity to earn an honest and respectable living by work suitable to our anomalous, intermediate position in life and the peculiar natures, habits and crafts we have received from our ancestry? We hope so, because we have no wish to become lazy, dirty, aimless "Agency Indians," nor can we, as a whole, compete with our white brothers and sisters in their manner of life, with customs strange to our blood. We hope that some definite place will be found for us in the new order of things.

JOHN OPITKEGH SMITH

Veiled Individuality

IN his address to his sons on the occasion of their recent confirmation, the German Emperor gave them some very good advice, and some that might easily work out very badly. The latter was that it was their duty to be "personalities;" the former, that they should live a life of unceasing toil.

There is no need for any one to try to be a "personality." He will become one by following the other part of the advice. It is in passivity, in purposelessness, in idleness that men lose their individuality. A lot of hungry men fiercely eating seem to be very active. But as a matter of fact they, as men, are now passive to their appetites or palates. Their marks of individuality as men are out of sight. Any passion that sways a man throws him into uniformity with other men of the same acting passion. The uniformity is greater the lower the passion. Thus ambition does not submerge individuality so much as gluttony. But it does veil it, and in the classification of mankind that might be made by some being of a higher sphere, the whole mass of the ambitious might be contemptuously lumped together as men of more or less submerged individuality. The only way to free one's individuality is the steady performance of whatever duty is immediately in front, without letting any personal aims intrude; counting, among duties, all works of compassion and service. Living this kind of a life from hour to hour, letting no clouds come in, the man gradually raises himself into the sunlight of life and completes his individuality. Powers and faculties hitherto folded up within him will expand, and he will himself become surprised at the richness of his own nature.

Some Views on XXth Century Problems

Arbitration Between the Nations

AT a time when the moral atmosphere is pulsating with ideas of international arbitration, it is a little pitiable to find a well-known writer in the *Atlantic*, dogmatizing on behalf of international force and displaying an ignorance alike of ethics and of history.

What, for instance, are we to say of such a judgment as this, if indeed a mere empty assertion can be dignified by such a name?

Among nations there is but one way in which the possession of the prizes of nature can be determined, and that is by force. Arbitration can only serve where strength is equally balanced, and the matter in dispute is not worth the price of the conflict.

If such a statement as this be true, then there is no such force as evolution in the moral world, and religion is but a useless phantom.

Why should the aggregates of human beings, which we call nations, differ so widely from the individuals who make up these nations? why should collective consciousness cling forever to characteristics which we have agreed to detest in the individual? What should we say of the proposition that force is the only possible arbiter between individuals of unequal strength in order to decide the possession of the prizes of nature? If the individuals of a community are capable of framing legal systems for the settlement of disputes without recourse to brutality and animalism, why should not the national members of the great world community do the same? Surely we can become internationally civilized as well as nationally, there is surely no prohibitive tariff upon common-sense and fraternity.

So far from merely hoping for international peace we are confident that it must come. Savagery is not a permanent institution. Brutality and bloodshed are not among the eternities.

The Moral Element in Education

THE recent meeting of the New England Association of Colleges at Boston was productive of some educational opinions which are worth preserving, although the hope that they will be at once acted upon is perhaps too sanguine. Prof. MacDonald, for instance,

believed that our colleges are becoming overfilled, and that a great many are receiving college education who are unfitted for it. He was inclined to think that the next great educational reform would have a moral direction and that it was a gross delusion to suppose that men and women could be fitted for the world without a due consideration being given to the moral element.

This is, of course, admirably true, but we should have liked a definition of moral education. There are, unfortunately, so many people whose little minds can conceive of no other kind of moral education than an invasion of catechisms and creeds and of the people who are paid to teach them, and remedies such as these are worse than the disease.

The intellectual cycle, like all other cycles, will run its course and pronouncements of this kind mark the beginning of the end. Then we shall recognize that there is no such destructive power in the universe as intellect which has never known the restraining power of the soul. Our colleges today are building and perfecting magnificent intellectual engines, but if these engines are to be thrown wide open and sent out into the world without a driver, it is not difficult to predict the mischief that will be done. We have to understand that intellect is force which is neither good nor evil except as it becomes so through attachment to the higher nature or to the lower nature. The object of moral education is to give to intellect a gravitation toward the higher, a perpetual bend toward the good, strong enough to last through life. So long as the mind of the student is susceptible to this power of upward or spiritual gravitation, it is not possible to train his mind too much, but unless that gravitation can be induced we are only creating oppressors and tyrants by our education, we are only perfecting a mechanism which we shall presently be unable either to guide or to control.

WHAT grace is to the body good sense is to the mind.—*Rochefoucauld*

Society Crime & the Individual

IN spite of his long contact with the law Judge Abram H. Dailey has not allowed his mind to be tied up by legal formulas, nor does he seem to suppose that a divine halo radiates from the criminal code. He does not appear to believe that penitentiaries and strait

jackets are the best possible expression of the Sermon on the Mount, nor that prisons and police courts are reliable milestones upon the road to the millennium nor to the kingdom of heaven.

That the millennium is actually attainable the Judge seems to firmly believe. He has no startlingly new panacea to offer us, no new social medicine to advertise, no new code to make his name famous. He simply repeats to us what is perhaps the oldest piece of advice in the world, "Man, know thyself." However old the admonition, the results would be none the less new and startling. He tells us that there would then be a better administration of justice because lawyers would have the interest of the community at heart, there would be a better judiciary because we should have learned that prevention is better than cure, and last but not least, there would be a better conception of God because the churches would preach a consistent doctrine.

Judge Dailey uses his immense experience to some purpose. That experience has opened his mind instead of closing it. He recalled the case of a certain man who had committed murder. The prisoner's father was an epileptic of cruel tendencies, and running right through his ancestry were criminals and epileptics like knots upon a string.

Truly we may well ask whether this man sinned or his parents that he was thus morally blind. Except upon a plea of insanity what has a criminal court to do with this darksome heritage? And yet crime and epilepsy are tangible facts to be proved or disproved. What about that other and more subtle insanity which is surely conferred upon the children of those who are hopelessly selfish? Selfishness may never break a human law, it is consistent with what the world calls good citizenship, it more often flourishes in respectability than in the slums, and it places the brand of Cain upon those cursed by its parentage. What does the criminal court know of this, and if it knows of this, what does it care,

If a Man Live After Death---

and if it cares, what can it do? It may cut off the excrescences but it can never cure the disease. It is unjust to ask it.

But to return to Judge Dailey. He remembered another murderer whose only plea was that he "could not help it." The same story again. Father, mother, aunts and other relatives had been drunkards and epileptics. Of course, he "could not help it." He was not the real criminal. The indictment was in error. Society was the criminal; the whole community with its respectabilities, its organizations, its churches, its pieties was represented by that one man in the dock. But we are wandering once again and Judge Dailey has something more to say. He is conscious that he may be amusing, may even be laughed at, but he does not seem to mind. He says:

I do not believe in putting people to death for any crime. They should be properly confined so they can hurt no one. But if a man lives after death, by putting him to death we only transfer him to another state of existence. May he not be just as mischievous there as he was here? That may be an amusing suggestion, but it is logical. What right have we to put him into this other existence?

We can well believe that the suggestion will be received with amusement by a community which is either ashamed of believing in a life after death, or which refuses to recognize that a man may perhaps cross that darkling river, still bearing the bitter burdens of passion with the added load of hot anger against those who had never raised a finger to aid him, who had never even acknowledged his existence except by judicially murdering him. This may perhaps be strong language, but it is at least an expression of strong feeling, the outcome of a philosophy which is not afraid to be enthusiastic nor to be indignant, and which dares to place tenderness and pity ever higher and higher upon the ladder of human aspiration.

STUDENT

Art Music Literature and the Drama

"THE character of Dante has always appeared to me as a central figure for a strong drama," Sir Henry

Irving is reported to have recently said. "I have had the idea for a number of years, but have never been able to find a playwright who would undertake to dramatize the author of the *Divine Comedy*."

"Several years before his death Lord Tennyson offered to write me a play on any subject that I might furnish him. I suggested *King Arthur*, but he refused on the ground that his poem fully covered the subject, and he did not feel equal to putting it in dramatic form. I had *Enoch Arden* also in my mind's eye, but Tennyson refused again on the same ground."

"Then I suggested *Robin Hood*. I pictured him in Sherwood forest, surrounded by his men, and I fancied that a play might be written round him as a sort of pendant to *As You Like It*. Tennyson approved my idea, and I spent several months in collecting material about *Robin Hood*, which I sent to him."

"The result was not quite what I expected when Tennyson sent me the play which Augustin Daly produced in this country. It was called *The Foresters*, and was modelled on the line that I had sketched, but there was no adequate role for me, and I was compelled to decline it. It was then that I suggested Dante to the poet. The idea seemed to appeal to him immediately. He pondered over it a few seconds, murmuring the title to himself."

"Dante, Dante," said he, "that is a fine theme."

"Then, with a natural shrewdness and remarkable common sense, he added, 'but where is the Dante to write it?'"

The poet's modesty, so characteristic of his genius, compelled Irving to wait many years before his dream of producing a dramatic representation with Dante as the central figure could be realized. But when the theme was suggested to Sardou, the latter had no compunction about plunging into the elaboration (or condensation, as you please) without delay. For more than a year *Dante* has been produced in London, and within the last two months it was put upon the boards in America.

The fact that this drama is being produced at just this time is not without its significance. There have been for a score of years Dante clubs and Dante societies, "students" of Dante galore, and commentators have not been idle. That Dante has a message for us, today and now, voiced through *The Vision*, those who have read his poem understandingly, are perfectly aware. The public in general has been too busy to dip into Dante, and so this drama, spite of what the deeply philosophical student will consider imperfections and inadequacies, has a certain mission and is performing it. It is easy to imagine that the spectacular appeals more convincingly to Sardou than the purely mystical. However that may be, the drama is doing what a dozen Dante clubs have failed to do, in directing the attention of the public to the personality, the career, the philosophy and the mystic prophecies of a remarkable man.

Irving pictures to us the persecuted, liberty-loving Dante, in the midst of those Fourteenth century days, which, in their inner unrest, their political corruption, their protest against clerical domination, and their spirit

The Vision of Dante

Beatrice says (Canto xxix of the *Paradiso*), to Dante, as she instructs him in religion:

SO that men, thus at variance with the truth,
Dream, though their eyes be open; reckless some
Of error; others well aware they err.
To whom more guilt and shame are justly due.
Each the known track of sage philosophy
Deserts, and has a by-way of his own:
So much the restless eagerness to shine
And love of singularity, prevail.
Yet this, offensive as it is, provokes
Heaven's anger less than when the Book of God
Is forced to yield to Man's authority,
Or from its straightness warped: no reckoning made
What blood the sowing of it in the world
Has cost; what favor for himself he wins,
Who meekly clings to it. The aim of all
Is how to shine: E'en they, whose office is
To preach the Gospel, let the Gospel sleep,
And pass their own inventions off instead.
One tells how at Christ's suffering the wan moon
Bent back her steps and shadowed o'er the sun
With intervenient disk as she withdrew:
Another, how the light shrouded itself
Within its tabernacle and left dark
The Spaniard and the Indian and the Jew.
Such fables Florence in her pulpit hears,
Bandied about more frequent than the names
Of Bindi and of Lapi in the streets.
The sheep, meanwhile, poor witless ones, return
From pasture, fed with wind; and what avails
For their excuse, they do not see their harm?
Christ said not to his first conventicle,
"Go forth and preach impostures to the world."
But gave them truth to build on; and the sound
Was mighty on their lips: nor needed they,
Beside the Gospel other spear or shield,
To aid them in their warfare for the faith.
The preacher now provides himself with store
Of jests and gibes: and, so there be no lack
Of laughter, while he vents them, his big cowl
Dinsteads, and he has won the meed he sought.
Could but the vulgar catch a glimpse the while
Of that dark bird that nestles in his hood
They scarce would wait to hear the blessing said,
Which now the dotards hold in such esteem.
That every counterfeit, who spreads abroad
The hands of holy promise, feds a throng
Of credulous fools beneath. Saint Anthony
Fattens with this his swine, and others worse
Than swine, who diet at his lazy board,
Paying with unstamped metal for their fare.

has, quite overshadowing its spectacular features, a deeply religious significance, recording as it does Dante's own protest against the mere letter, and his appeal to all humanity for the sake of the "spirit which giveth life." Dante's own words, as he emerges into Purgatory, give

of religious inquiry, so closely parallel the conditions of our own time. The poem, as Dante wrote it and as Irving presents it, the unrecognized, keynote: "And Thou, supreme in mercy as in justice, whom in that woful hour I did blaspheme; who, from thy throne on high beyond the clouds readest my penitence, aid me, O God, vouchsafe to me thy guidance."

But quite outside of his philosophy, Dante the man was worthy of being remembered. Born a Guelph—the Guelphs being adherents to the Papal party—he, finally driven to defiance by persecution, renounced his ancestral party and became a Ghibelline. Of great personal courage, for he had distinguished himself in battle when but little past his twenty-third year, Dante was better known to the Florentines as a warrior than as a man of letters. Petrarch's friend, he was a man quick of perception and slow of speech, his life blessed with one great joy, the meeting with Beatrice, and shadowed by one great sorrow, her death. It was Beatrice who, as an ideal, became the guide of his life, the goal of his hopes, the inspiration of the *Purgatorio* and the *Paradiso*. Dante's religious doctrine was the doctrine of the heart. The life beautiful was to him the heart life; love was to him not a possession personal but a benediction universal, and if Dante spoke his dream in symbol it is because the symbol is the language of the soul, and to read it is given, in this age as in his own, but to the few. STUDENT

Voice Figures

JAMES RUSSELL LOWELL once mournfully remarked, concerning the perilous facility with which certain hack writers poured forth rhymed sentences and called them poetry:

All can have the flowers now,
For all have got the seed.

Since Mrs. Watts-Hughes gave the world of science the *eidophone* all may translate voice-tones into many-colored forms, for all have got the recipe. The *eidophone*, as scientific apparatus, is simplicity itself. In form it resembles an inverted bell, from the base of which issues a sort of hollow stem, capped with a mouth-piece. Over the mouth of the bell-shaped portion is stretched an elastic membrane. (Mrs. Watts-Hughes uses for this India-rubber.) It is upon this that sand or lycopodium, or possibly a semi-liquid substance, is placed. If the rubber be evenly stretched and the voice-tone perfectly sung, remarkable effects are produced. Divided and sub-divided by the vibrations produced by the sound-waves upon the membrane is the mass of lycopodium or other substance until, when the tone has died away, there is a beautiful geometrical figure—a flower, perhaps, or a form as marvelously intricate and exquisite as that of a snowflake. More depends upon the quality of tone produced than amateurs, either in science or in song, are aware. All the properties of a perfect voice must be under the control of the singer. STUDENT

“GOD IS IN ALL CREEDS LIKE THE THREAD IN A STRING OF PEARLS”

WITH the coming of the Christmas-tide the true mother finds

herself face to face with a great opportunity, and, intuitively she reconnoitres a bit, glancing backwards over the year that is past and forwards into the year that is about to dawn. If her motives are unselfish, if Christmas is to her a time not of mere getting, but of gratitude and of sweet and simple giving, then does she step easily upward into a greater usefulness, a wiser ministry, a clearer insight; and her heart goes out in gratitude as she thinks of that ideal of the Higher Motherhood, of which every Christmas-tide is an apotheosis.

Intuitively her mind dwells upon the thought of Mary, the sweet pure girl-wife of Bethlehem, upon the kindly husband, who helped her to make the home atmosphere what it should be for the coming of the little child. For Joseph, as manuscripts recently discovered have proven to the astonishment of a few, was not alone a builder, but a writer of history, a man, as Mary was a woman, far in advance of his time; and both were worthy parents of the Great Soul who was destined to become a World Teacher. How much would the child Jesus have been hindered had Mary not been an example of the Higher Motherhood?

How much do we, as women, not owe to her today for the example that she set? How many of humanity's sorrows have not been due to the fact that certain dogmatists, in their efforts to “prove” that the Son was Divine—(as well might one attempt to prove by the brain-mind that light is light, or that immortality is a property of the soul!)—have forgotten that Mary also was a Soul, that the Soul is ever divine, and that, therefore, in so far as the soul guided her mother-life, Mary fulfilled the Higher Motherhood. The true mother is ever the heart center of the true home. At the Christmas-tide she becomes indispensably so. It is she who becomes the general *confidante* of all secrets, particularly those of the children. It is she who inaugurates the festival-plans, it is she who fashions the surprises.

It is to her comes the privilege, nay, the duty, to lift her children's ideals out of the sordid depths into which the world's commoner ideals would psychologize them, so that the Christmas-tide may be to them not a time for mere merchandizing, a time for getting as much as possible out of their elders or parents. It is the mother's opportunity to tell her children, as the heart would have it told, the simple story of the coming of Jesus, and of how the world needed him when he came, of his childhood, his wonderful boyhood, his manhood, whose every act so perfectly reflected and interpreted the Divinity of his own nature; and of the assurance he gave to all humanity that those who, like himself, made the divine the guide of every act, the judge of every thought, *should do even greater things than he did.*

It is the mother's privilege and duty at the Christmas-tide to lead her children into a closer companionship not alone with Jesus, but with all true Teachers, for the world has never been left in utter darkness; humanity's heart-cry has never yet failed to find response. Some were Great Teachers, others have been not so great, but all who have had within their hearts the one consuming desire to make the world better,

✧ The Higher Motherhood ✧

regardless of what the cost might be to the personal life, all such have been Teachers,

and all such ever shall be. Is there not inspiration in this thought—the thought that the most unlearned mother, the simplest father, the most untaught little child, whose heart yet pours itself out in some little, utterly self-forgetting service for another, becomes one of that Hero-Company of Souls who come to the world's darkness and dwell therein for the sake of bringing light?

Is there not inspiration in the thought that the mother who finds at the Christmas-tide the Christ within her own heart and who makes of every difficulty, every stumbling-block, a Mount of Transfiguration, becomes actually a link in that chain of divine influence that had its beginnings in the Golden Age, whose end is not yet, and which exists, unbroken, for the binding together of nations and the saving of worlds?

She who fulfils the duties, as well as lives out the joys, of the Higher Motherhood at the Christmas-tide will look well to the pitfalls that hedge the ways of the world before she follows these ways. With good reason will she feed her children's bodies a little less and their souls a little more, for she knows something of human nature.

It is within the mother's power to feed her children's appetites, to cultivate their selfishness and to push them a step lower on the soul's long path—and, honestly, do not thousands of well-meaning mothers through sheer ignorance do just this?—or she may so lift her children by that lever which rests upon the Christmas festivities that her girl will enter the New Year with purity's own seal upon her brow, and her boy with the hero-light in his eyes. Mothers, two ways are before you. Which will you choose?

What is the Higher Motherhood? As well might one attempt to answer the question, “What is light?”

It can no more be confined within the limits of a definition than the sun can be harnessed to a plow. This we do know, however, that it stands in absolute, even though silent, protest against all that is selfish, all that is degrading, all that is unjust. Let us, as mothers, fashion for the coming Christmas-tide a higher order of home life, a higher avenue for the expression of our motherhood.

Let us not think and plan less, but let us feel more. Let us first find our own hearts and the peace that dwelleth therein. Then will the hearts of others be to us as an open book, and the fathers will find a new inspiration in their own hearts and a new reason why they should stand as comrades beside us.

For the mother alone, without the father's comrade-help, can never make the Christmas-tide what it should be, though many a mother tries to do so, year after year, with an aching heart, the pain and despair of which even she does not understand.

Let us, as mothers, fashion the home Christmas-tide lovingly, following not our neighbors' customs, but our own hearts' laws; building the beautiful day as the artist buildeth a poem, as the bird weaveth her nest. Let us make of the Christmas day a prophecy, its every event a thought-glimpse of that future time when every mother and every father shall rise to the fulness of their parenthood, when every home shall entertain the Christ.

STUDENT

Clotilde de Surville

ONE of the sweetest and, withal, one of the simplest, among the women who, down the centuries, have given their best to France is the poetess, Clotilde de Surville.

Marguerite Eleonore Clotilde de Vallon-Chalys was born in Languedoc early in the Fifteenth century, and before she had fairly passed her childhood had won the recognition of French savants. When but eleven years of age she translated so admirably one of Petrarch's *Odes* that Christine de Pisan exclaimed, on reading it, "I must yield to this child all my rights to the sceptre of Parnassus!"

When but sixteen Clotilde married a young knight to whom she was devotedly attached, one Berenger de Surville. Their marriage was ideally happy, and for seven years not a shadow passed across their life's sky. Then, shortly after the crowning joy came to them in the birth of their child, the husband fell in the defense of Orleans against the English, and Clotilde was left a widow. All the richness of her deep nature poured itself out in love, love for home and husband, love for France, love for her babe. Her intellectual gifts but served and ministered to a deep heart life. As the little poem written by her would suggest, she found her true place in that wise and selfless ministry which today we name the Higher Motherhood. STUDENT

RING out, ye crystal spheres,
Once bless our human ears,
If ye have power to touch our senses so;
And let your silver chime
Move in melodious time;
And let the bass of heaven's deep organ blow;
And with your nine-fold harmony
Make up full concert to the angelic symphony.

For, if such holy song
Enwrap our fancy long,
Time will run back and fetch the age of gold.
—Milton

Christmas-tide

CHRISTMAS-TIDE with its hoary traditions must always be a time welcomed by those who face life's problems and hope for the time when humanity will recognize a true basis on which to build a civilization worthy of the name. For it is a season when the hearts of all peoples in all lands throb in unison to the tones of a universal song—joy bells heralding and pealing forth the glad tidings of the triumph of Light over Darkness, and for a space at least the earth is encircled with feelings of peace and good-will. Rejoicing is universal. Not a little does the heart of Mother Nature contribute when she provides the traditional emblems to crown and garland the festal halls and homes.

Ever sacred are her offerings. Gifts that guide the thoughts to grander possibilities and to the deeper and more lasting happiness of the soul.

From ancient times the mistletoe has been revered as an emblem of spiritual vision. And the holly! Is that, too, not emblematic of the immortality of the soul?

Through all the seasons it remains green, never is it without foliage. The destructive elements with withering disintegration in their breath spread barrenness, desolation and decay over woods and vales, but the holly survives, not only untouched, unharmed, but gloriously defiant, yielding its richest beauty to grace a time sacred to truth, a time of unity.

With deeper significance perhaps than ever before do these offerings intertwine Christmas joys. For slowly and in silence has the true spirit of the coming Christmas-tide been unfolding, to blossom in the new age, through the higher type of womanhood, women in whom compassion overcomes the personal, that the truer and more perfect love of the soul may shed its healing light over sorrow and pain. In her heart divine love shall triumph over selfishness—the Christ-spirit shall be born, and over the earth will spread the glad tidings of great joy, in deeds of mercy and peace.

CLOTILDE DE SURVILLE

Mlle. Cecile Chaminade

"SHE is not merely a woman who writes music; she is a composer." The remark made by Ambroise Thomas but mildly measured the commendation of the musical world, in general, for the remarkable compositions of Mlle. Chaminade. Born in Paris and living today in its suburbs, Cecile Chaminade is a thorough Parisian. Yet her compositions, inventive, daring, spontaneous, have a certain universal touch that is always the hall-mark of genius.

Cecile Chaminade was exceedingly precocious as a child, particularly in music, and when but eight years of age composed some things which won words of praise from Bizet, who predicted for her a brilliant future. In her own Paris she is almost better known as a virtuoso than as a composer, brilliant, forceful and facile in her playing, and in her interpretation essentially a romanticist. As a composer of songs, Mlle. Chaminade deserves to be better known. Says one of her critics, Rupert Hughes:

Certain of her songs breathe the very fire of genius and deserve a place among the greatest lyrics. Mlle. Chaminade's accompaniments are not usually independent of the song, though they are given a unity of their own; nor are they often contra-melodic. They are gorgeous streams of harmony. Some of them have an impressionistic richness equal to a sun-thrilled poppy-field of Monet's. Their high scale of color is emphasized now and then by striking dis-

TO MY BABE

CLOTILDE DE SURVILLE—Translated by Long fellow

SWEET babe! true portrait of thy father's face,
Sleep on the bosom that thy lips have pressed!
Sleep, little one; and closely, gently place
Thy drowsy eyelid on thy mother's breast!

Upon that tender eye, my little friend
Soft sleep shall come that cometh not to me!
I watch to see thee, nourish thee, defend;
'Tis sweet to watch for thee—alone for thee!

His arms fall down; sleep sits upon his brow;
His eye is closed; he sleeps, not dreams of harm;
Wore not his cheek the apple-ruddy glow,
Would you not say he slept on death's cold arm?

Awake, my boy! I tremble with affright!
Awake, and chase this fatal thought! Unclose
Thine eye but for one moment, on the light!
Even at the price of thine, give me repose!

Sweet error! he but slept. I breathe again;
Come, gentle dreams, the hour of sleep beguile
O, when shall be, for whom I sigh in vain,
Beside me watch to see thy waking smile?

sonances that are not mere foils to the concords, but have a meaning of their own. Mlle. Chaminade finds a charm even in those discords that are so pronounced that their beats are strongly felt, and at these places writes down *vibrato* or even *vibrato dolce*.

Not a few of her songs have been presented by Nordica, Plançon and other artists. Among her compositions for the pianoforte there are those who pronounce her group of "Airs de Ballet" as being first in value, particularly No. 1, which is not a mere dance tune but an exquisite drama:

It begins with an *entrada*, a cymbal-like jangle of chords over one long deep horn-tone. These chords (formally chords of the eleventh, with the third omitted), have the effect of strongly discordant, unprepared, secondary sevenths, over raucous pedal-note. Now, after a tentative preparation, there is an outbreak of sprightliness that melts into a seductive entreaty, and turns strenuous until the main dance-motif is caught upward most fascinatingly from a downward rush. A sort of woodland scene intervenes, as if a rout of nymphs surrounded the *premiere danseuse*; then the same fantastic cry, in chords of the eleventh, announces a mild repetition of the main ballet. Throughout are daring harmonic and melodic *tours de force*.

One of her minor compositions, "La Lisonjera," is played—after a fashion—by nearly every school girl, but her more ambitious works are still best known in Europe. It was not many years ago that the Boston critics referred to her as a man. In the course of time, however, they became aware of their mistake.

Mlle. Chaminade is still so young that, in all probability, the critics will not presume to say their final word for many years to come.

Brief Glimpses of the Prehistoric World

Archeology
Paleontology
Ethnology

Disagreement Between Archeology and the Old Testament

IT seems hardly worth while to slay the slain, or to compute the chronology of Archbishop Ussher, who laboriously reached the conclusion that the world was created in the year 4004 B. C. Dr. George S. Duncan contributes an article to the *Biblical World* entitled, "Archeology and the Old Testament," in which he summarizes some of the discoveries which point to the almost immeasurable age not only of the world but of civilization. He admits that Egyptian discoveries now take us back to at least seven thousand years before Christ, far into the reigns of the predynastic kings, and he quotes Professor Hilprecht as placing the founding of the Temple of Nippur at Babylon as not later than eight thousand years ago. The memorial tablets of Eannadu and of his father, Akurgal, certainly date from 4500 B. C., and nearly all Assyriologists place the reign of the powerful King Sargon I at 3800 B. C.

Dr. Duncan adduces some additional and independent evidence of the age of the world which is interesting and suggestive. He points out that Eridu was once upon the Persian Gulf, and is now one hundred and thirty miles inland. The debris fills in at the rate of about one hundred feet per annum, and this would indicate a period of about 8500 years since Eridu was founded. The Nile deposits average about four inches of mud per century, and the depth is now about thirty feet. Thus we have here an indication of about eleven thousand years.

However vast these figures may seem they are, of course, insignificant compared to the realities. Archeology is itself an infant science, and short as has been its life it has been very full of surprises, and many more must certainly await it. It still hails the "dawn of humanity" with something of its old enthusiasm, and it is not yet quite accustomed to the discoveries of still vaster antiquities which inevitably come with the morrow. It will, of course, one day discover the beginnings of Egyptian life, for instance, but they will only be the introduction to the endings of other civilizations as vast, as powerful and as mysterious. X.

Vesuvius & Its History—Prehistoric Villages

THE recent unwelcome activity of Vesuvius has drawn renewed attention to the ruin wrought by the celebrated volcano in past ages. Archeologists have long been at work on the slope of the volcano and they have recently discovered the remains of a villa dating from the time of Augustus. This villa had been completely covered by fields now under cultivation and its examination showed that it had not been destroyed by eruption. This confirms Pliny's statement that during the great outbreak the wind blew the ashes to the north, leaving the eastern portion uninjured.

Underneath the foundation walls, however, at a depth of over a yard a stratum of volcanic ash was found, and in this ash were a number of prehistoric tombs.

The eruption which produced these ashes must have occurred centuries before the great historic outbreak. In this connection it is noteworthy that the Sarno Valley contains the remains of many prehistoric villages destroyed by Vesuvius, and these are now to be excavated. Here, as elsewhere, it seems to be evident that to peep within a door of antiquity is to disclose other doorways in an endless vista. X.

The Roman Wall Around London—Its Last Remnant

THE removal of the ancient Newgate Gaol in London has disclosed another fragment of the original Roman wall which once incircled the city. It runs through the center of the Gaol and is 15 feet in height and 9 feet wide. Its preservation is perfect, but it must unfortunately be removed on account of the buildings which are to be erected upon the site of the old prison. There are still some well preserved fragments of the old Roman wall in other parts of the city and these are enclosed and well guarded.

The world moves, but one is occasionally tempted to question whether it moves ahead or backwards. The tendency to sacrifice any and everything to the demands of our modern spirit of commercialism is one that all admit and few deplore. It plants its standard in many quarters and flaunts its colors on many fields. There exists with some architects and a great many property owners a fatal propensity to tear down and get out of the way whatever of historic significance happens to be in their way, to erect in its place nice, square, ugly, steel-frame modern structures. Many of our old landmarks, both in England and America, are being sacrificed yearly and scarcely a voice is raised in protest. This is by no means an argument in favor of preserving old and insanitary buildings just because they happen to be old, when the ground on which they stand is really needed by men and women and little children. That would be going to the opposite extreme.

The sensible middle line would be to seek for a rational balancing of the esthetic and the commercial extremes. The architect who can find this middle line and hold to it will become one of the real builders, of which no age has ever had more than a few. STUDENT

Many Tiles from Ancient Babylon

THE further excavations upon the site of Babylon are proceeding expeditiously.

The great gate of the palace has now been fully exposed and a large number of inscribed bricks have come to light. Over two hundred were found in one place and these are believed to have formed part of a public library. Six hundred cases of glazed tiles have now been made ready for shipment. These tiles were taken from the gate of Nebuchadnezzar's Palace and are of beautiful design and workmanship. It must necessarily be many years before we are fully in possession of the results of recent Babylonian Archeology. The number of inscriptions to be deciphered is enormous and the work is necessarily slow and laborious. STUDENT

Discoveries That Substantiate Theosophical Teachings

THOSE who hold that human civilization ascends in a direct line from the earliest ages would do well to consider the results of Professor Petrie's researches on the site of the Temple of Abydos. He has uncovered the foundations of ten successive temples, and he tells us that the naturalistic ivory carving of the First Dynasty surpasses anything which is to be found in subsequent ages and that the delicacy and power of expression is as good as in the best classical work. The whole of modern archeological work tends more and more to substantiate the teachings of Theosophy, that evolution has advanced in successive waves, and that we have not yet reached the development of races.

The Family Friend—The Olive Tree

A SUBTROPICAL tree which is rapidly proving itself to be of the utmost value, is the olive, now one of the staple orchard trees of the Southwestern United States, whither it has been introduced from the coasts of the Mediterranean Sea, where it is extensively cultivated. Those familiar with the Bible will remember it as one of the trees most frequently mentioned, and it is considered to be a symbol of peace and plenty. Surely the fruit on a healthy, vigorous tree is plentiful enough in a properly hot climate, though the branch in the picture hardly did its share.

The fruit contains, besides the well-known oil, a bitter principle somewhat similar to quinine in medicinal value, superior, some say, and which is so bitter as entirely to prevent any one from eating fresh olives.

The oil is wholesome and very nutritious, and is rapidly earning a title to popular favor wherever it is known, though in many places it is unjustly condemned for the faults of the cotton-seed or peanut oil with which it is frequently adulterated. Those oils are wholesome enough but are very much inferior to olive oil.

The fruit, which does not seem at all oily when examined, is prepared for the table by a long soaking in strong lye, which is afterwards carefully washed out. Then it is pickled in brine, but doesn't remain in good condition many months.

The wood of the olive is very hard, and both it and the bark are very beautiful when polished, the wood often having a curious appearance of fleecy softness, which is due to the peculiar fibrous structure.

The leaves and bark of a healthy tree are quite grayish in color, because of a dust exuded from the skin, but below it the bark is tinted in rich browns and the leaves are green.

These trees live to an age of several hundreds of years, thus becoming a very valuable family inheritance for many generations. The small white flowers are arranged in loose clusters like grape blossoms.

An "Above the Clouds" Effect on Point Loma

PPOINT LOMA was recently treated to the experience of being above the clouds for several hours. A thick, low fog drove in from the ocean just a short while before sunset, and spread itself in gigantic fleecy billows over all the adjacent sea, except where the warm current from False Bay made an open valley between towering cliffs of clouds. From the Homestead elevation of nearly four hundred feet we could see right over it all, just as though we had been on a mountain top, and the sun had left behind him many beautiful effects of gray and white. Next day the sun set perfectly clear, behind the even ocean line. Indeed, one evening is no sign whatever of what the next will be; there is a constant and never-tiresome variety of splendor.

WINTER CALLED THEM

by GEORGE COOPER

"**C**OME, little leaves," said the wind one day;
"Come over the meadows with me and play;
Put on your dresses of red and gold,
For summer is gone and the days grow cold."

Soon as the leaves heard the wind's loud call,
Down they came fluttering one and all;
Over the brown fields they danced and flew,
Singing the sweet little song they knew.

"Cricket, good-bye, we've been friends so long,
Little brook, sing us your farewell song;
Say you are sorry to see us go;
Ah, you will miss us, right well we know.

"Dear little lambs in your fleecy fold,
Mother will keep you from harm and cold;
Fondly we watched you in vale and glade,
Say, will you dream of our loving shade?"

Dancing and whirling the little leaves went,
Winter had called them and they were content;
Soon fast asleep in their earthly beds,
The snow laid a coverlid over their heads.

BRANCH FROM A LOMA-LAND OLIVE TREE

Slanders on the Wild Things

TO one who knows anything of wild life it is a constant irritation to hear some of the expressions of comparison, based upon the habits of wild animals, which have become so perverted and warped from their proper significance that they are now used in a manner directly contrary to the truth.

One of these phrases is, "Crazy as a loon," or "He's a looney" (idiot). Now the fact is that the loon is one of the most intelligent and wary of birds, as many a hunter knows, but its call is like a harsh, mocking, foolish laugh, which it frequently utters at such appropriate junctures that the baffled hunter is excusable for taking it as a direct insult. But a pair of loons talking to each other at a distance of half a mile, as they are fond of doing, certainly does suggest insanity; hence the expression, so often wrongly used.

Another victim of this ignorant libel is the Canada goose. We often hear a hopeless effort referred to as "A wild goose chase," and "You're a goose," means "You're a fool." Yet the fact is, that the wild or Canada geese are very careful and suspicious birds. Therefore, these slighting expressions properly refer to the hunter rather than the hunted.

There are other such expressions equally baseless as, for example, "Weak as a cat," often used in perfect faith by people who know, if they stop to think, that a cat is really extremely strong for its size. In the interest of accuracy and good sense, let us be more careful in our similes.

N. L.

Vivacity in Dead Animals

MR. HUDSON, a very well-known and accurate naturalist, supplies to a contemporary some remarkable instances of what we may call vivacity in dead animals. He tells us that he has a small piece of snake skin which he has used for years as a book-marker. At intervals a color fading sets in, then the outer scales drop off and the original vivid colors are gradually resumed. This process continued for ten years

and then finally ceased. Nearly as remarkable was the behavior of a glowworm which Mr. Hudson discovered, dried and shrunk some seven or eight months after the time for live glowworms had ceased. Its light still shone strongly, and this was the cause of his finding it among the dry rubbish among which it lay. He carried it home where it continued to shine, but on the following day its little lamp went out forever.

If Mr. Hudson could but discover the secret of the cold light of the glowworm, science might thereby be able to confer a very notable gift upon humanity.

STUDENT

THE report of Marcellin Pellet who has just returned from Guatemala, tells of curious fish who are able to live in hot water. The particular fish described by M. Hellet is the *Pacilia dorri* which lives in the nearly boiling Lake of Amatillan, of which the waters are hot enough to badly scald the hand.

Universal Brotherhood Organization

Central Office Point Loma California

THERE was a large audience in Isis Theatre Sunday evening, at the regular meeting of The Universal Brotherhood and Theosophical Society. As usual there was a fine musical program by the Students of the Isis Conservatory of Music, and the very artistic decorations had a seasonable touch. The two subjects of the evening were "The Builders," by Miss Ethelind Wood, and the fourth paper in Mr. Sidney Coryn's interesting series of lectures on the "History of Egypt." Miss Wood began her address by quoting the following verses:

"A gentle boy, with soft and silken locks,
A dreamy boy, with brown and tender eyes,
A castle-builder, with his wooden blocks
And towers that touch imaginary skies.
A fearless rider on his father's knee,
An eager listener unto stories told
At the Round Table of the nursery,
Of heroes and adventures manifold.
There will be other towers for thee to build,
There will be other steeds for thee to ride,
There will be other legends, and all filled
With greater marvels, and more glorified.
Build on, and make thy castles high and fair,
Rising and reaching upward to the skies;
Listen to voices in the upper air,
Nor lose thy simple faith in mysteries."

Continuing, Miss Wood said: "There come to all times when it rests us to call to mind some of the bright memories of childhood days, and no thought-pictures are brighter than those which come to us of the times when we spent the rainy days, and sometimes the sunshiny ones, too, building.

"Sometimes we built card-houses, which a breath would throw down; again we built beautiful castles of our alphabet blocks, and if, perchance, we were able to find the bits of board that carpenters sometimes leave behind them, our cup of happiness was full. And the children that we see about us—what do they love best? Is it not to build? What is the sweetest sight in all the world? Why, it is a little child happy with his blocks.

"It is not an accident that this is so, nor is a child's play the meaningless thing that most people believe. The child's building is deeply symbolic. It alone is proof of the presence of the soul, for the soul is ever the builder. Is it an accident that the child, so fresh from heaven, so plastic to the impress of the divine—and the Sage, the Wise Man, should in all ages choose to be known as builders? Their signs are the same, the compass and the square.

"That children build is one proof that they are souls. That so many forget to build as they grow up and learn instead to tear down and destroy, proves only that the soul takes leave when it can no longer be heard. It is but another evidence that there is something radically wrong with the present day methods of teaching children.

"Think what would be the result if fathers and mothers and teachers the world over knew how to preserve that beautiful tendency which is so usual among children and so unusual among men and women—that tendency to create, to form, to reform, to fashion, in a word—to *build*.

"To the builder his fellowmen are not objects to be hunted or victimized or outstripped; no, not even objects to be jealous of. To the builder, he who builds not merely houses with his hands, but the greater temple, which eye doth not see nor

With Interesting Addresses by
Miss Wood and Mr. Coryn**

Reprinted from the San Diego News

destined to build the temple of a new and better and purer civilization is life's crown-glory, its highest ideal.

"Why, then, you will ask, do Theosophists do—or appear to do—so much tearing down? And I answer it by asking you, why does the sower first tear up the hard crust with his plow and scatter the weeds before he sows the seed? What kind of a harvest would he have if he did not do this? Why does the builder of the temple first clear away the rubbish from the place on which the temple is to stand?

"The preliminary work must be destructive or he will build his temple upon a foundation which later will weaken and overthrow the whole structure.

"And thus it is today with those who have come among us as builders of a better civilization than the one we have at present. I refer to H. P. Blavatsky, W. Q. Judge, to Katherine Tingley and to those who earnestly want to see more happiness in the world, and who are willing to live purely, work unselfishly, in order to bring that about. They do not find the soil free from weeds. On the contrary, a great many mental and moral weeds have to be cleared away first, and of course the weeds think that Theosophists are terribly destructive.

"Nor do Theosophists find a splendid clean rock foundation in men's minds all ready for them to build upon. On the contrary, the best qualities of the mind and heart all through humanity are deep-hidden beneath a veritable rubbish heap of prejudices and dogmas. Their first duty is to clear away this rubbish, and of course, to those who are so used to rubbish that they like it better than clean square stones, this clearing away process is very disagreeable and terribly destructive.

"What does the child do when his little block house doesn't suit? He tears it down and builds a better one. The first is just as much a part of his work as a builder, as the latter. But let us be very careful never to tear anything down unless we can build something better in its place.

"The mental and moral roof which shelters humanity today may not be very satisfactory, but let us not dare to tear it down unless we can build for humanity a better one. To do otherwise is to become not a builder but the opposite, an agitator, a disintegrator, a curse.

"Who are then the builders of the future? We ourselves to an extent, but to a greater extent the children. And what is our duty to them? Surely it is to surround them, as far as we are able, with all the conditions that make a pure environment. It is more than a privilege, it is our duty to go before them as pioneers and cut a path for them through this wilderness of the world's life.

"We won't be able to do so very much, after all, for day after day we find the children going ahead of us, surpassing us in unselfishness, outstripping us in love, shaming our jealousies by the sweetness of their own lives. And yet they need our help so, there is so much that none but ourselves can do. Let us give to the children—the builders of the future—all that is purest in our natures, all that is best in our hearts.

"Let us find no higher joy than in helping them to become builders. Builders of a new life on the highest and most ideal lines—whose aim is

"To build a future fairer than the past,
And make the past appear a troubled dream."

Christmas Gifts—A Suggestion

CHRISTMAS is preeminently the time for the giving of gifts, of which the selection is usually a task demanding much anxious care and much lost time.

The essentials of a worthy gift are value and permanence, and in the search for these qualities works of literary and lasting worth naturally take a foremost place. A good book is an unfading treasure, a storehouse of which the contents become more valuable with time, an instrument for the increase of intellect and for the making of character, a link between the giver and the receiver which grows stronger day by day. A year's subscription to the NEW CENTURY PATH is surely a Christmas present worth giving and worth receiving, a weekly reminder of the good will which called it forth. Subscriptions sent in now will be in good time to enable us to deliver the first number at Christmas.

Conventions and Manners

A Short Lodge Paper

THE worlds are ruled by Universal Law, but the laws of men are mere arbitrary regulations. This arbitrary nature is especially a peculiarity of all the rules which relate to conventionalities and manners, which very often have no meaning at all in themselves, but which through the decrees of usage and fashion have come to have all the force of inexorable laws. Well-bred persons would almost as soon think of committing real crimes as of breaking these rules. Many of these conventions have their foundation simply in a desire to be different from people of another social grade; they are based on the idea of separateness, and they accentuate all the natural differences between persons.

Most conventions are nonessential, and have no real meaning of their own, yet

some of them are based on better grounds, often on consideration for the feelings of other people. Such are, then, more than mere conventions, and their observance goes far toward bringing about a good understanding and harmonious relations between mankind.

Like all laws, conventions may be observed in many different ways, and each person observes them according to his own nature. Some will carefully avoid offending against any one of them and yet exhibit a total lack of manners. For good manners do not consist in the negative quality of not breaking rules; they are rather the result of an innate desire of doing everything right. The one is a grudging submission to the will of others, the other is a frank, open gentleness shining through the usual crust of reserve wherewith men are ordinarily clothed. The one acts one way in company and quite differently when alone, or when concealed by being a stranger in a strange place; the other never feels that he is alone, for not only has he always himself watching over all his actions, but to him no one is a stranger, and he will always conduct himself as he would in the midst of his habitual surroundings. The one avoids breaking these unwritten laws for fear of ridicule or disrepute; the other is careful of his conduct in order to make things more pleasant for others, in fact, he hardly *can* act differently, for his actions are in perfect accordance with his whole nature.

Really good manners radiate like from a center, and like radiating light they dispel much of the gloom in the world and cheer every one who comes in contact with them. Still, tact is necessary even in the exercise of manners, and the well-bred man of experience finds constant need for the exercise of it. "Be ye all things to all men" holds good here, as well as "When in Rome do as the Romans do." Like all wise sayings, these are helpful if used honestly. Be ye all things *that are good*. Do in Rome all things *that are good*. When necessary, drop such conventionalities which, while perhaps indifferently good in themselves yet, observed, would at the time cut us off from our companions. Always avoid everything which would merely seem to say: see how much better I am than thou.

It is as difficult to lay down any hard and fast lines for our conduct, which would apply in all cases, as it is to acquire manners for one who has them not. Time and good-will and experience will bring this treasure; good-will not merely to gain it as an accomplishment, but good-will radiating out to others all the time. It is idle to talk about loving humanity while we are constantly offending our neighbors through the *little* things in life, those which are so often looked upon as unimportant and trivial. If we let all our actions spring from the heart, then our manners will never be mere empty form but they will be the true, vivid expression of the brotherliness we feel within, and which streams out to all around us.

STUDENT

AMONG THE COLLEEN BAWN CAVES, KILLARNEY, IRELAND

The Death Farce

An Australian Lodge Paper

WHY is it we are shadowed through life by a dread fear—that of death? Sleep is a symbol of death, and yet we fear not to take our rest in sleep, yet we know nothing of our state during that rest. Are we able to tell what journey the soul may have taken during that short rest while our body lay unconscious? None of us fear that, but the terror of death stalks by the side of most people. It is on account of false teaching—false ideas put into and kept in the mind of men by those who would reign by terror and fear, instead of Compassionate Truth.

Grief and fear naturally fill us when we have only thought of death as a parting from all we love and going out alone to an unknown place where we were taught that we might meet with awful retribution for our sins and follies. Surely, this view of a future existence is enough to account for such a fear of death, as prevails in the Christian civilized world today.

The Chinese and many other eastern nations have no dread on parting from this world, they have much less education and intellectual training now than the average European or American, but they listen to the voice of Nature, the voice from within, which teaches wisdom and not folly. Theosophy, which is Divine Wisdom, shows us that there is no death. Life is continuous and the Soul eternal. We must have a body to dwell in on earth, a body of matter suitable to this earth. The soul must have a rest; "Ye must have rest, ye children of Light," and the body wears out like the garments in which we clothe it. The rush and strain of modern so-called civilization, no doubt wears out the body much sooner than need be, and when it becomes unfit for a temple for the soul—the God—then the soul leaves it, and the force that kept it together no longer acts, and we say, "He is dead," but it is a wrong phrase. We should say, "He has left the body, gone to rest." For even the body then is not free from life, but is quickly overrun by the life of myriads of atoms consuming and ravaging, atoms that were kept in their place of necessary labor and usefulness before.

We may grieve that the comradeship of a soul we loved is separated from us for awhile, but we can never again mourn and bewail that that comrade has gone to rest, especially if he was living in a body racked with pain, or a body over which he had not sufficient command, and should hope that after the period of rest he might inhabit one less sickly or sinful.

If we view this so-called death in a true way, the common-sense way, we shall be ready and willing, when our bodies can no longer serve us as they should, to enter into the heavenly rest.

It is as easy unwittingly to deceive oneself as others.

The Temple of the Body

I conceive that no Self of which we can here have cognizance is in reality more than a fragment of a larger Self, revealed in a fashion at once shifting and limited, through an organism not so framed as to afford it a full manifestation.

THIS is the admission of a "Psychic Researcher," displaying an aspiring mind hampered by materialistic conceptions about the human body and by a spirit of despondency. What do we know of the "organism" after all? All that we do know goes to show that it is infinitely elastic and adaptable.

The old materialistic ideas about the solidity and fixity of matter, especially that of the body, are fast disappearing. The body is not a hard, rigid shell, unalterably restricting the mind and soul; it is the visible and tangible manifestation of the soul—the soul as it appears to our senses.

The body acquires a certain fixity and rigidity from the long habit of submitting the will to its dictates; for, so long as man permits the inertia of the physical atoms to overcome him in sloth and lust and greed, he strengthens the binding power of the body and weakens the will.

But the body should be the servant, ruled by the mind, which in turn is ruled by the will. When we consider how we use our bodies and how

our parents and grandparents used their bodies, we shall cease to wonder that the present human organism is not all that it might be or might be made to become.

How could that larger Self be manifested through an organism that, vitiated and stunted at the outset, is daily abused and polluted by wrong living?

There are in that body powers and capacities that qualify it for its true purpose—that of a temple of the divine presence—powers which we have long forgotten the existence of, capacities which we have perverted. The body is the temple of the Holy Ghost, but how pure it needs to be first!

Hence the vital importance for Raja Yoga training of the body in cleanliness, harmony, and strength. It is lost labor to preach holiness to people with such cramped and disturbed organisms; the result would be a fresh crop of noxious cranks of all sorts.

STUDENT

The Blemish in the Window-Pane

It was the twilight time of Christmas eve, and Margaret Daintree was sitting alone in her pretty little drawing-room—alone with the soft light and the stillness—alone with her thoughts. Three years ago, again on Christmas eve in the twilight, she had walked from that room with the air of an injured empress, carrying her head haughtily, but at the same time almost choking with the heavy, quick beating of her heart, and the repressed sobs in her throat, which she had barely strength enough to keep down till she reached her room. She could recall it so clearly—the bitter, passionate, quickly spoken words, the shocked look on her husband's face and then his gently spoken "I do not believe you mean that, Margaret, but until you yourself tell me so and ask me to return, I must leave you if I wish to retain my self-respect. You know in your heart that I have always loved you and cared for you, and done all in my power to please you," and then she had broken in:

"If you really wish to please me you will go now, this very minute," and after one long steady look into his eyes she had proudly walked from the room.

She recalled her longing to rush down stairs, to tell him she had not meant all she had said, to beg him to forgive her; but her pride stood in the way, and she had let the opportunity slip by. An hour later the maid had brought her an envelope which contained an address to which she could write if she should wish; nothing more. She looked back through the three long years as she sat dreamily watching the glancing firelight that threw such soft shadows in the half-light of the room; then, like a flash, she seemed to see, stretching away through the time, just herself. How clearly the figure stood out—herself, through all the months and days, and not only through the three years, but herself through the whole of her married life, and herself still before that, as far back as she could remember.

Self, self, self! It was what *she* had suffered that she remembered; what *she* enjoyed that had been of importance; what *she* had wished that had ruled others; and with a feeling almost of terror she saw how vague and shadowy the joys and sorrows of others appeared to her in contrast to her own. She sat upright in her chair with tightly locked fingers, and for the first time in her life tried to see her true self. She saw the three years devoted to brooding over her trouble. She saw that it was to save her pride she had allowed her husband to leave his home. She saw her gentle old mother made unhappy and heart-broken at the sight of her daughter's self-made misery, and the revelation was such a shock to her that she almost wished that she could have lived on with closed eyes. She rose and walked the room with quick steps. She stood by the window and watched the busy crowds passing through the rain which was pouring steadily down, all looking happy and, to her newly awakened and conscience-stricken mind, all bent on some errand of love for others. Some for Christmas delights for their children; others on errands of mercy amongst the poor and suffering; and she alone, surrounded with every comfort, with ample means, had given no thought to any one save herself.

She sat down again by the redly-glowing fire, and once more her thoughts traveled over an entirely new road. She began to realize that Christmas day, the anniversary of which is now devoted to having a good time and plenty of fun and good things to eat, by those who can afford it, was a day of great and sacred import, was the day that saw the birth of the great Master; that with his birth saw also the birth of renewed hope for the world; the great day that brought with the birth of the Christ fresh fuel to keep burning the light of truth and love; the radiance of which is now spreading so surely and strongly over the whole world: and Margaret felt suddenly a great uplifting of the heart and a strong determination that that day should also be the birthday of a new life for her.

In a little time the maid came in to lower the blinds and light the lamps.

"Not now," said Margaret, "I will ring when I want lights," and she sat on in the growing darkness, the soft patter of the rain on the windows and the crackling of the fire being the only sounds in the quiet room that had seen the awakening of a soul. Margaret was feeling the joy and wonderful sense of safety that comes after an escape from a great danger. She had no desire to kneel in prayer, or to talk, or to weep for joy. She wanted to just sit still and hold tightly to herself that new happiness which filled her whole being. Presently she began to put together in her mind her letter to her husband, spending his Christmas over there where the fighting had just begun. How she would strive to make up to him for the miserable past; and how she would do her best to give comfort and brightness where she had given nothing but gloom and discomfort. She reached for her writing pad and with a pencil began to write by the light of the flames. She was so happy and engrossed that she did not hear the newsboy in the quiet street crying his "Extra speshul piper! Third edition! 'orrible loss er life!" and she looked up smiling, when

the maid, with frightened face, carried in the little evening paper, damp with the rain, that brought to so many a joyful Christmas, and to others one to be remembered forever as all black and empty of joy. Poor Margaret, her new found happiness and courage were to be put to the test without much loss of time.

"Why, Mary, is anything wrong?" she asked the girl kindly, seeing her white face.

"No'm, only—please'm, it's the master'm—'e isn't to say killed'm, don't be scared, only it do mention 'is name in this paper and—"

Margaret snatched the paper, and bending low to catch the firelight she read where the girl's finger pointed, "Captain Daintree, 1st Hussars, mortally."

"Go, Mary," she said, quietly, "and do not let me be disturbed," and the terrified girl withdrew.

She sat simply stunned by the blow. Unable to think, she sat staring at the rain-drenched window, in front of which the street lamp had just been lighted. She watched in a numb sort of way the drops running down the pane—there was a heavy one just gathering for a start; she wondered would it go with a rush, or slowly and heavily, and when it reached a blemish in the glass she was dully curious to see whether it would go round it or over it.

An hour passed, the door opened and her mother came in to her.

"Why, mother," she said, rising—then, with a little laugh, "Graham's dead—did you know—and I did it." Then, as her mother stretched out her arms to her, the pitiful little ghost of a smile left the stiff white lips, and with a moan of "Mother, mother, how can I bear it?" the healing tears streamed from the heavy eyes.

Margaret Daintree's illness left her weak in body, but strong in her determination to live for others. She bore her great grief nobly, and when she took up again the threads of life they wove themselves into patterns of breadth and beauty that made her former life look pitifully small. There are many grateful women amongst those made widows by the terrible war, whose hearts glow with gratitude when her name is mentioned; but the sight of that little blemish in the window-pane brings back so keenly the agony of that Christmas eve, that she cannot yet trust herself to sit in the pretty little room.

It was November in Cape Town, and terrifically hot. An officer in khaki had just tumbled off his steaming mount, and had called up a Tommy to try to find him a cool drink.

He stood wiping his crimson face as he waited for the man's return. He was a fine looking man, English to his boots, and simply adored by his regiment who would go through fire and water for him, and he was pretty sure of getting his drink, whoever might have to go without. Sure enough the man came back in a very little time. Carefully balancing a glass of warm, thick looking, grey colored liquid in his hand, he grinned, as he offered it to his captain.

"Shure they call it liminade in Ballyhooley, yer honor," he said, "but if it's iver shtared a limin in the face oi'm an Irishman, an no wan could take me for that, could they, yer honor?"

"Why no, Paddy O'Flynn, your very name betrays your French birth, doesn't it?" laughed his captain.

Paddy's eye twinkled as he saluted and turned to go, then returning he said: "Oi've an ould paper here from England, yer honor; it was wrapped around a parcel. Perhaps yer would loike to rade it?" and he handed out a torn discolored evening paper.

"Indeed I should, and thanks," said the officer, as he turned to go to his quarters. It was indeed an elderly edition, nearly a year old, but the captain, who had not handled one for nearly that length of time, opened it and prepared to enjoy his reading. He laughed once or twice at the absurd reports of the war that were sent home, and then suddenly looked again and closer at something he had read. "What horrible clumsiness!" he said. "They have put down that poor lad, Reginald d' Haintree, as 'Daintree,' and they will be thinking at home that I am dead. Margaret—I must go to her at once, and the dear old mother—a whole year—I must go at once," and Captain Daintree was as good as his word, for a very short time was allowed to pass before he was on board and en-route for England.

Fragments from Shelley's "Julian and Maddalo"

See this lovely child; blithe, innocent, and free:
She spends a happy time, with little care;
While we to such sick thoughts subjected are
As came on you last night. It is our will
Which thus enchains us to permitted ill.
We might be otherwise; we might be all
We dream of, happy, high, majestic.
Where is the beauty, love, and truth, we seek,
But in our minds? And, if we were not weak,
Should we be less in deed than in desire?

We are assured
Much may be conquered, much may be endured,
Of what degrades and crushes us. We know
That we have power over ourselves to do
And suffer—*what*, we know not till we try,
But something nobler than to live and die.
So taught the kings of old philosophy
Who reigned before religion made men blind;
And those who suffer with their suffering kind
Yet feel this faith Religion.

Do you think there was a happier woman in the world than Margaret Daintree that next Christmas eve, as she stood with her husband in the little drawing-room and showed him her never-finished letter, and told him the story of that eventful other Christmas eve?
A. C.

Crystals Living and Unliving—A French Experiment

A FRENCH experimenter has been studying what happens when some salt, dissolved not in water but in gummy or gluey ("colloid") matter, is allowed to crystallize.

A drop of such a solution, when dry, shows in its middle the salt crystal, and around this is a field. But the field, instead of being clear and uniform, as it would be if it were of colloid matter only, is modified and thrown into a pattern set for it by the salt crystal in the middle. We have in fact what may be regarded as an inorganic (or *unliving*—but not *dead*—) cell and its nucleus. In organic, or living, matter, the nucleus sets the key-note of the cell, initials its changes, growth, and subdivisions, in fact sets its formal and physiological pattern; and is the storehouse and emergence-place of its life-force.

Salt is a very simple chemical compound, and its crystallization-form is simple. Common salt has but two atoms (of sodium and chlorine) to make up its molecule.

Modern chemistry speaks of a molecule of protoplasm (elementary living tissue), and this molecule consists of hundreds of atoms (carbon, hydrogen, nitrogen, sulphur, etc.); but it has never been shown that an aggregation of such molecules exhibits any tendency to crystallize. But it does something analogous. Cells have form. Nuclei have form. And no one who has ever seen the elaborate process (under the microscope) of a cell undergoing division into two, will quickly reject the view that in the changes the nucleus undergoes we may be getting crude glimpses of what is essentially an elaborate and perfect set of geometrical changes.

There are then several differences and resemblances between the crystal of salt in its drop of colloid, and the nucleus in its cell. The latter is infinitely complex; the former simple in its forms. The latter changes form constantly in response to inner impulses; the former does not change in form. Both rule the pattern and movements of their fields; the latter's field being the cell; the former's the drop. The latter's movements are purposive, the purpose being to preserve and expand its life-history, assimilating, excreting, and reproducing. And it shows a response to an impulse of evolution, as when a simple, embryonic, cell becomes a highly organized nerve or muscle cell. The former's movements end with its simple crystalline form. If we study the examples of the latter that make up the human body, we find it in intimate touch with human consciousness, varying in response to the lights and shades, hopes and fears, of that consciousness.

And finally, one is tempted to suggest that even in examples outside the human body, it may yet be in touch with our consciousness. There are some people who cannot touch plant life without provoking bloom, whilst the similar work of others seems foredoomed to failure. STUDENT

Can Force Be Generated?—The Wonders of Radium

AS we have before remarked, the scientific world is so overwhelmed by the fact that radium can give off continuously the force known as heat, that it forgets the similar behavior of many other substances, which continuously radiate other forces. There is the magnet, for example, which can hold up its keeper against gravity almost while time lasts. There are the ferments, such as pepsin or ptyalin, which go on doing the work of digestion without themselves being lessened or altered; the only condition being that the products of their activity shall be removed. We have the similar phenomenon of the alteration of starch into sugar by acids, the acids remaining unchanged.

Other phenomena of like kind are the explosive combination of oxygen and hydrogen in presence of powdered platinum, and the reduction of peroxide of hydrogen to water and oxygen in presence of powdered silver.

In all these cases work is being done, and continues to be done, without the doer undergoing any ascertainable diminution or alteration.

One begins to question whether the law of the conservation of energy is actually true after all. In view of some of these phenomena, it ceases at any rate to be manifestly true. STUDENT

A New "Serum" Supposed to Prevent Drunkenness

OF the making of serums there is no end. The latest is one that combats alcoholism. Of course it reminds one of the celebrated pills that were good against earthquakes, but there is no real reason why it should. Horses are given daily doses of alcohol. After awhile, serum is taken from them and injected into the tissues of a man subject to alcoholism, that is to say, a drunkard. It is injected during a sober interval. The experiment was made by two French doctors, Sapelier and Dromare, and they claim (*Jour. de Med. et de Chir.* June 23, 1903) that the patient loses his cravings and his acquired tolerance of alcohol. In some cases he develops a disgust for it. And his physiological condition is restored.

Comment is not easy. The thing does not seem to be in line with other examples of acquired immunity. In these cases, a bacterial disease, such as any fever, is given to an animal, whose serum, injected into man, renders him immune to that disease. This is, so to speak, the condensed general formula of the process.

Now in the case of drunkenness, what is the disease? Is it the craving, or is it the set of morbid changes in the tissues? If the alcohol experiment of the French doctors is to stand in line with the examples we know of acquired immunity from bacterial disease, then the serum of the alcoholized horse should not only render the patient immune against the craving but against becoming either drunk or subsequently diseased, even should he take alcohol. For if you are immune, say against scarlet fever, you may take as many germs of it as you like.

This can hardly be the case with the serum-effects derived from the unfortunate horse. A perfectly healthy organism should be immune to all diseases. Any invasion would be promptly met by an equivalent reaction. The various serums and lymphs, which are probably but the disease in a dilute form, call forth the reaction to the disease they represent. But it may well be supposed that this artificial process is effected at the expense of the general vitality, and that there is a permanent lowering of general health with lessened power of resistance to other invasions. That it is, in other words, an outrage against nature, carrying its own retribution.

The alcohol craving is an appeal of the vital currents to be reinforced and coarsened in a particular way. And as with the other diseases, the abolition of this craving by some subtle change effected by the serum would surely be a very costly process, and one involving a highly artificial condition from that time onward. We want the future history of subjects treated in this way. STUDENT

How the Early Cretans Made Their Purple Dyes

WE shall have to give up saying Phœnician purple, for the celebrated dye of that name. It was the Greeks who attributed to the Phœnicians its first use; but they were wrong. The real pioneers in this and some other things were the mysterious Minoans of Crete, the people of whose origin we know so little, or, as the little boy said, "so nothing."

Mr. Bosanquet, of Athens, explored Crete early this year, and among some sand hills on the north shore found a bank of shells of that mollusc (*mure trunculus*) which yields the purple dye, or did so, for it is no longer used for that. Scattered through the heap were fragments of pottery and a bowl, together with some old Cretan vases, which showed that the accumulation took place not only in pre-Grecian but in pre-Phœnician times and established the precedence of the Cretan dying art. It was practiced 1600 B. C. at any rate—doubtless much earlier.

The mollusc in question is a spiral-shelled creature, and the dye resides in a gland-sac beside the intestine. As the dye comes out it is colorless, becoming purple after exposure to the air. It was the description of the animal by Pliny that enabled us to recognize the species, but the dye is not now used. There are better purples, both for pigment and dye. Indeed, the omni-colored anilines bid fair to do everything that the modern dyer and painter require. STUDENT

Here and There Throughout the World

A ROOM AT THE HEADQUARTERS OF INTERNATIONAL BROTHERHOOD LEAGUE, SANTIAGO DE CUBA

Amity Between England & France THE visit to France of the King of England and the return visit to England of the President of the French Republic, have produced a most gratifying amity between the two nations. This has been intensified by another visit which ought to have an even further reaching social effect. One hundred members of the British Parliament, accompanied by their wives and daughters, have been entertained in Paris. They were received at the Elysée by Baron d'Estournelles, who presented the members and their families to President Loubet. There are no national misunderstandings which will not melt away before a better acquaintance, and for this purpose nothing could be better devised than this visit of British members of Parliament and their families.

France Can Impose no Religious Dogma M. CAMILLE PELLETAN is one of the moving spirits of the French Government. That he is the Minister of Marine does not hinder the lucid expression of his opinions upon education. He says that the Republic can never impose a dogma, that it respects all religious convictions and assures every liberty—except that of destroying the liberty of others. That however is the only conception of liberty which so many people possess. The State, however, according to M. Pelletan has the right to interfere in matters of education seeing that the very existence of the State depends upon those who are now the children of the nation.

The Czar of Russia to President Loubet THE Czar of Russia has written a letter to the President of the French Republic in which he expresses his "profound sympathy" with the understanding between France and England, and at the better relations which now exist between France and Italy. Although this may seem to be opposed to Russian policy we believe it to be a sincere and heartfelt expression from the founder of the Hague Tribunal who sees clearly that the true interests of every nation are founded upon peace, and that no other policy than this can be either sane or patriotic.

Improvement of Philippine Islands FROM the fiscal point of view the Philippines are certainly on the march. For the five months ending May 31, 1903, customs revenues were \$3,759,833 while for the corresponding period of 1902 they were only \$3,539,866. This increase is a feature which has attended every successive year of American occupation. The Philippines will evidently be a factor in the commercial affairs of the world, and we doubt not that they will play a part in other and nobler directions.

Vivisection Crimes in Vienna THERE seems to have been trouble among the medical circles of Vienna. Various members of the Landtag have accused the doctors of violating the restrictions of the Vivisection Act, and also of experimenting upon poor patients and inoculating them with diseases. As to the truth of these accusations we have of course no knowledge whatever. It is however in no way surprising that those who are known to be guilty of vivisection should be also suspected of extending their horrible methods to the human kingdom especially when we consider the frequency of medical demands for human subjects. When the lust for cruelty is once aroused the barrier between animal and man is not likely to be effective, and suspicion becomes not only natural but commendable.

Lord Curzon and the Missionaries LORD CURZON is probably the first Governor-General of India who has been reproached for partiality to the native faiths. Such however is the accusation which has been brought against him at the Calcutta Missionary Conference. It seems that the missionaries resent the advice to adhere to their own religion which was given by the Governor-General to the natives of India. They also resent his kindly references to the Sikh religion and his proposal to officially recognize the Buddhist Archbishop of Burma, and they remind his Excellency of his duty of religious neutrality. We do not at the moment remember any missionary protest against favoritism to themselves. It is surprising to observe the height to which moral sentiment can soar in defense of self interest.

The Powers & the Congo Cruelties THE European powers have been requested to state whether in their opinion the Congo State has been governed in accordance with humane principles, and whether the obligations of civilization to native race have been complied with. We have, of course, every desire to withhold harsh judgment. We are, however, only expressing an almost universal sentiment in saying that if only one-tenth of the horrors which are reported upon unimpeachable evidence from the Congo State are founded upon fact, an organized crime against humanity has been committed for which adequate reparation seems almost impossible.

No Missionaries for the Soudan THE British authorities in Egypt, as represented by Lord Cromer, are inflexible in their determination to allow no missionaries to enter the Soudan, nor do they hold out any prospect that this prohibition will be relaxed. Lord Cromer has recently written: "I entirely concur with Sir Reginald Wingate, and with, I believe, every responsible authority in this country, in thinking that the time is still distant when mission work can be permitted among the Moslem population of the Soudan."

SOUTH PACIFIC ISLANDERS AT FAKARAVA, IN THE NAIRISA GROUP

THE CHILDREN'S HOUR

The Christmas-tide Bell

ONCE upon a time, in a far-away city, there stood an old, old church, and within it hung a wonderful bell. Once, when men were kind to each other, it rang clear and sweet, but for ages it had been silent and the story went that it would never ring again until the greatest gift in the world was laid upon the altar just beneath it. So it was silent, although every Christmas the great and the wealthy came with their jewels and their gold and laid them proudly upon the altar and then listened; but the bell was silent.

Near this city, once upon a time, there lived a poor little boy named Beppo. He was a shepherd and for years it had been the dream of his life to earn a silver piece that he might go to the great church and lay it upon the altar. At last he earned it and on Christmas morning, so early that the stars were still shining in the sky, he stole out of the yard and turned toward the great city. On and on he walked, rapidly, for the snow lay on the ground and he was not too warmly clad. Suddenly he heard a queer muffled sound. He stopped and listened, then went out of the path, following the sound. Behind a group of trees fluttered a wounded bird. It was a young wild swan. Some careless, selfish hunter had shot it and then left it there to die. Its wing was broken. Beppo lifted it and it looked up at him with great beautiful eyes which seemed to say "I was waiting for you to come." Then a queer feeling came into Beppo's heart. What should he do? If he carried the wounded bird they would think he was a beggar and would not let him into the church. And besides, it was so heavy! What should he do? The poor wing lay limp and open. Beppo carefully folded it and bound it close to the body. The bird looked up at him. The tears came.

"Well," said Beppo, and he gathered the bird up in his arms and pressed his lips to the soft warm head, "if I can't go into the church I can at least see the people go in, and if the bell should ring"—he choked back the tears—"I, I—can hear it."

Beppo took off the little scarf that he wore about his neck and covered the bird, "it mustn't get cold," he thought. Then he went on.

By and by the sun came up over the hills. Beppo took from his pocket the cakes he had placed there the evening before and, breaking one in his hand, fed the bird. Then he ate the other. He looked for the silver piece. Yes, it was safe. "I will ask some one to put it on the altar for me," he said, and he was almost happy. Then the bird looked up at him again and he

kissed it once more and held it closer and laughed. Soon he reached the noisy city and made his way to the great church. It was as Beppo had thought. They wouldn't let him carry the bird into the church and he wouldn't go in alone and leave it behind in the snow. So he waited, for he dared not ask the fine and proud and wealthy people who were going into the church to take his silver piece and lay it upon the altar for him.

At last Beppo saw a little boy who seemed just a wee bit cold and hungry too. So Beppo asked him.

The little boy laughed. "I wish I had a bird," he said. Then he took the silver piece and went into the door. The rich people went, one by one, to the altar and he watched them pass. Some left gold, others jewels, the court painter left one of his great pictures, others took the rings from their fingers and the pearls from their robes. Each waited as his gift was laid upon the altar—each waited and listened. The bell was silent.

Finally, when all had passed, the little boy stole up quietly, timidly, and slipped under one of the great money bags on the altar Beppo's little silver piece. It seemed so little to give he felt ashamed. But hark! Hark! The people were silent—silent. The great church echoed with the voice-tones of that wonderful bell. The miracle had happened. The bell had rung once more.

Beppo heard it too, outside the door. The bird again looked up at him with its wonderful eyes. He held it closer. He was happier than ever before in his life, that he, Beppo, should have heard the bell. But he never knew why it rang. COUSIN LOUISE

CHRISTMAS IN LOMA-LAND
"Roses and jasmine and sunshine and love
The old, old year and the new."

"QUOTH LITTLE GARAINÉ"

"WHERE do the stars grow, little Garainé?
The Garden of Moons—is it far away?
And the Orchard of Suns, my little Garainé?
Will you take us there, some day?"

"If you shut your eyes," quoth little Garainé,
"I will show you the way to go
To the Orchard of Suns and the Garden of Moons,
And the field where the bright stars grow."

"But you must speak soft," quoth little Garainé,
"And still must your footsteps be,
For a Great Bear prowls in field of stars,
And the moons they have now to see."

"And the suns have the Children of Signs to guard,
And they have no pity at all.
You mustn't stumble; you may not speak
When you come to the orchard wall."

"The gates are locked," quoth little Garainé,
"But the way I'm going to tell;
The key of your heart will open them all,
And that's where the darlings dwell!"

—From the French

The New Christmas

DEAR CHILDREN: Why is Christmas time always a joy-time? Some little children say, "O, I know, it's because Santa Claus brings us candy and tops and dolls and sleds and lots of things to eat!" Deep down in their hearts they know that isn't the reason, for some of the unhappiest children I have ever known have been those who received whole armfuls of presents, while dear old Santa Claus himself who, as we all know, must be the very happiest person in the world, never receives one. Why is it? The answer is one of our Raja Yoga secrets. It's brotherhood, and brotherhood means thinking about others and helping others and being kind to others and giving to others. That is why wise people make Christmas Day one beautiful gift-day the world over.

BE STRONG

by HELEN HUNT JACKSON

BE strong!
We are not here to play, to dream, to drift,
We have hard work to do, and loads to lift;
Shun not the struggle---face it; 'tis God's gift.

Be strong!
Say not, "The days are evil. Who's to blame?"
And fold the hands and acquiesce---oh, shame!
Stand up, speak out, and bravely, in God's name.

Be strong!
It matters not how deep intrenched the wrong.
How hard the battle goes, the day how long.
Faint not---fight on! Tomorrow comes the song.

A New Story of the Revolution

BY his story of the American Revolution, Sir George Trevelyan has added immeasurably to his reputation as an historian and as a statesman. We have here an instance of the new way in which history will be written when it is no longer regarded as a mere record of the doings and sayings of kings and rulers, but rather as a story of national thought and movement. To how great an extent the two may be in conflict and how far history may thus be violated, Sir George Trevelyan has succeeded admirably in showing. Because his work makes directly for international fraternity we hope that it will be widely read and studied.

The point to which the author especially directs his attention was the extent to which the war of suppression was a national war, with the heart and the will of the English people behind it. His verdict is that the war was not national, that it was a war waged by the King and his ministers alone, and that it excited immense antipathy among the people in whose name it was conducted. Among the many interesting incidents which he quotes in support of his contention, the following may be cited:

A Whig in Devonshire wrote out to Philadelphia that the whole nation was mad, and that he could scarcely meet one man in twenty who did not wish to see Great Britain, or himself, bankrupt rather than not bring the Colonies to the feet of Lord George Germain. John Wesley, on the other hand, while heartily agreeing that the nation was mad, gave as a proof of it that a great majority of Englishmen, Irishmen and Scotchmen were exasperated almost to insanity against the King and the King's policy.

At the time of the Revolutionary outbreak the English Government was already lying under a cloud of unpopularity. Sir George Trevelyan tells us that that cloud was deepened and darkened by the war, and he has but little difficulty in substantiating his point by evidence of the most conclusive nature. That evidence he divides into three heads: First, the state of the public press; secondly, the impunity with which opponents of the war held public meetings in protest, and thirdly, the astonishing number of military officers who refused to take part in a war which they felt to be fratricidal. With regard to the press, the author makes out his case without any difficulty at all. He tells us that:

Among London newspapers the largest, the most attractive and quite incomparably the most in request, were opposed to the American policy of the Cabinet. The *London Evening Post*, the *Public Advertiser*, the *Morning Chronicle* and *London Advertiser*, and the *Gazetteer and New Daily Advertiser*, gave the Court and the Bedfords superabundant cause of regret that they had not left Wilkes and his newspaper alone.

If we except the damaging advocacy of the *Morning Post* and the official sterility of the *London Gazette*, Ministers had not much for which to thank the newspapers. The little *London Chronicle*, a square foot in size, treated them with a friendliness, tempered by its abhorrence of Lord Bute and the Scotch, whom (like English mankind in general) it persisted in regarding as the secret inspirers of

George III and his Cabinet. The *Public Ledger* announced itself as a political commercial paper, open to all parties, and influenced by none, and it bestowed on Lord North an occasional word of praise, accompanied by much good advice, which he seldom heeded. And yet even the *Ledger* excused the American invasion of Canada as a step to which the Colonists had been driven in self-defense. There were journals which, while they disapproved the war, still continued to speak well of the Government; but in the whole circuit of the London press no newspaper could be found which adopted the line of being in opposition to the Government, but in favor of war.

If we remember that at this time the Ministerial censorship of the English press was "continuous, inquisitorial and harsh almost to barbarity," the impunity which was accorded to newspaper clamor against the King and his advisers, is strangely significant of the heated and threatening state of public opinion. There were hardly any political trials and so strong and unafraid were the opponents of the war, that we read that "The ministerialists of Taunton were accused of having taken a liberty with the parish church by ringing the bells in honor of Howe's victory on the Brandywine."

Perhaps the list of officers who refused to serve against the American Colonists is more significant than all else. Moral and political feeling must indeed be strong when it prevents soldiers from fulfilling their military obligations and imposes a distasteful inactivity upon brave and resolute men. And yet such action on the part of army officers was not only exceedingly common, but it failed to excite hostile comment or indignation:

A General or a Colonel who had refused to take a command against the Colonists, lived comfortably and pleasantly with his country neighbors. The strong Tory politicians among them might grumble against him as fanciful or factious; but much harder things would be said about him if he had shot foxes or given a piece of ground for the site of a Nonconformist chapel.

Sir George Trevelyan has succeeded in showing to what erroneous conclusions we may be driven by the mere statements of events which have hitherto passed for history. We have now to learn how few nations are really represented by their representatives, a fact far more startlingly true a hundred years ago than it is today. The wars of last century were the wars of a few individuals who were able to commit crimes in the name of their nation. Let us see to it that we do not neglect the responsibilities which have devolved upon us through the broadening basis of popular representation, and that neither national prejudice nor national greed are allowed to accomplish the iniquity for which individuals alone were once responsible.

STUDENT

THERE are many kinds of love, as many kinds of light,
And every kind of love makes a glory in the night.
There is love that stirs the heart, and love that gives it rest,
But the love that leads life upward is the noblest and the best.

— Henry Van Dyke

Universalism

IN our anxious and hopeful search for signs of the growth of religious tolerance, we note with satisfaction that seven pulpits extended hospitality to members of the Universalist Convention which recently met at Washington. On the occasion of the last convention, which was held in Buffalo in 1901, only one evangelical church opened its pulpit to a Universalist preacher, and there are various New York churches at the present time who have declined to admit Universalists to their Thanksgiving services, on the ground, we presume, that Universalists refuse to limit the love which they attribute to Deity. President Nash declares that the mission of Universalism is "to reveal the divine Fatherhood, with all that it implies touching the well-being of men," and while we have no concern with any special creeds or dogmas, the object which we have quoted seems to be a basis sufficiently broad for a worthy edifice of human brotherhood. The President goes on to say that Universalism is "a truth rather than a tenet, a comprehensive affirmation, not complex dogma; it is a doctrine of salvation." We have, of course, no sympathy with the idea of an offended deity from whose wrath any salvation is needed, but the "doctrine of salvation" is at any rate an immeasurable advance upon the doctrine of damnation which has so strange a fascination for a certain undeveloped order of mind.

X.

FRAGMENTS

HAVE you found your life distasteful?
My life did, and does, smack sweet.
Was your youth of pleasure wasteful?
Mine I saved and hold complete.

Do your joys with age diminish?
When mine fail me, I'll complain.
Must in death your daylight finish?
My sun sets to rise again.—*Browning*

LOVE is the root of creation; God's essence; worlds without number
Lie in His bosom like children; He made them for this purpose only.
Only to love and to be loved again. He breathed forth His spirit
Into the slumbering dust, and upright standing, it laid its
Hand on its heart, and felt it was warm with a flame out of heaven.
Oweach, oh ewench not that flame! It is the breath of your being

men, then we must say, Yes; Theosophists approve of pleasure as much as flowers approve of sunlight, or the heart approves of love.

But what is pleasure? Obviously, it is that which gratifies, that which meets a want, even though it may not fulfil it. But the word itself has been so long associated mainly with those experiences that gratify the lower desires that it has lost its expressiveness and we have tacitly substituted another word. We speak of the pleasure of the flesh, but the joys of the spirit.

But there is a certain serene happiness to which pleasures of the right kind give birth that Theosophists not only approve of but simply could not live without. In fact, it is one of the signs by which they may know that they are Theosophists, and not charlatans, or hypocrites, or saints. Take the great pleasure that comes from the simple doing of the daily duty. Of course Theosophists approve of it. They can't help the coming, for it is of the Law that "joyful shall be the harvest sown in honor, though in pain," and no Theosophist would think of disapproving of any evidence—and such true pleasure always is—of the working out in our own lives of the Great Law of cause and effect.

And the pleasure that comes from comradeship—comradeship that is the real thing and that can only exist among those who *know* that all men are brothers, linked by the golden cable-tow of soul—what has the world to offer in comparison with that? And how the light of this heart doctrine illumines our minds and our hearts as well as the path we tread, leading us to discriminate between the true and the false, bringing the sweetness of real pleasure into the darkest hours of our lives as the rays sometimes pierce the clouds on the gloomiest day.

We approve of pleasure, let us therefore show that we do by a springing step, a wholesome appearance, a bright serene face, an honest steady glance. And let us keep our personal worries out of other people's way, yes, even if they seem larger than all the rest of our life. Mrs. Wiggs, of the *Cabbage Patch*, spoke like a Theosophist when she said:

Fer my part, I hold that folks kin always be happy if they'll make up their minds to be and then keep right at it. When I hev' worries I make it a pint to jest put 'em all down in the bottom o' my heart and then set the lid on an' smile.

A. V.

(2) The desire for pleasure is so universal that it extends to all times and peoples, yet the ideas of what gives us pleasure are radically differ-

ent. They range all the way from a bull-fight or a prize-fight, gambling, drinking and still more vicious things on the one hand, and pure, noble pleasures of the higher nature on the other. The kind of pleasure we enjoy is of the greatest possible importance, and so is also the manner in which we enjoy it.

There are a thousand things good in themselves, which yet are converted into wrong through our way of using them. Pure, wholesome food is good and of inestimable value, yet the glutton, through his intemperate use of it, makes it positively harmful to himself. To him eating is a pleasure and nothing more. He makes it one of a very low order, pertaining entirely to his lower nature, and dragging him downward.

We all know the wholesome influence of good music, yet many a one will go to the best concerts and simply become intoxicated by the beautiful music he hears. The same holds true even of good company and in fact of everything within the whole range of the things that ordinarily bring people pleasure.

Where, then, is the difference between that which is good and that which is bad? Where is the difference between the right way and the wrong way of extracting pleasures? If this difference does not lie in the nature of that which gives us pleasure, then it must surely lie within ourselves, and therein may we find a key to the whole situation. Why do we like the good things? To gain them for ourselves, or because they are good? Is it from a love of the good, the true, the beautiful, a love to see and to make others happy, or is it to satiate ourselves with that which we consider desirable? Therein lies the difference, a distinction which may not always appear at the surface, yet it is there and the line is drawn sharp and clear if we only look for it keenly enough.

Theosophists are wont to closely analyze their own motives, and so they would approve of only such of their own thoughts and actions, such of their own pleasures as were for the good of others besides themselves. And Theosophists endeavor to enter into every undertaking with a mind undivided; they will therefore find pleasure in everything they do, as long as their conscience tells them they are doing their full duty.

That is for themselves. As to others they realize that for many even a somewhat selfish pleasure may be a real necessity, and that we must provide pleasures of a wholesome nature for those who would otherwise satisfy their craving for pleasures in a worse way, such as will help the mind or the body and so keep both busy in the right direction. This holds particularly true for children, and their play is often much more than mere fun; in it their minds learn to imagine, that is, to create, and their bodies are built strong and vigorous and healthy.

Theosophists therefore approve of every pleasure which makes men better, nobler and wiser than they were before.

E. T. S.

Presence of Mind

WHAT is presence of mind? What is the power which enables us to do the right thing at the right time and to do it better than if we had given to it a long reflection? An old soldier recalling many signal acts of presence of mind says of the men who did them:

They just did them. They were in fact done, and not thought of; not thought of first, in which case they would never have been done at all.

Acts of this kind are called forth by emergencies so sudden that the mind has no time to operate and to interfere. That they are more effective and more successful than the acts which are dictated by the mind shows that there is in man a faculty superior to that of the mind, a faculty which is willing to operate when it is for the moment freed from mental interference. Is it not possible to so control the mind that it shall interfere only when commanded to do so, and that at other times it shall stand upon one side and allow the greater light of a greater consciousness to pass unobstructed? That greater light is willing to shine and to direct at all times, and it will be well for us when we know enough of practical mental science to enable us to give it the liberty which it seeks.

in the Leadership of Theosophy, W. Q. Judge and Katherine Tingley.

Any one who will open H. P. Blavatsky's *Key to Theosophy* or W. Q. Judge's *Ocean of Theosophy*, will see at once that The Theosophical Society was established for the direct object of helping and saving humanity by combating destructive errors and proclaiming once more the true laws of health, spiritual, mental and physical. The essence of Theosophy is Duty, says H. P. Blavatsky:

True brotherhood and sisterhood, in which each shall live for all and all for each, is one of the fundamental Theosophical principles that every Theosophist should be bound, not only to teach but to carry out in his or her individual life.

First Duty of the True Theosophist

The Theosophist must be a center of spiritual action, and from him and his own daily individual life must radiate those higher spiritual forces which alone can regenerate his fellow-men.

He must "control and conquer, through the Higher Self, the lower self," and seek by every means in his power to identify himself with the cause of human progress and the alleviation of suffering.

All this is made very clear by H. P. Blavatsky and her successors, and they also make equally clear what are the signs of a bogus Theosophist. People who have entered the movement with secret ambitions and, finding themselves unable to gratify these, have left it with wounded vanity rankling in their breasts, to carry on a little propaganda of their own with a band of foolish admirers. By their fruits are they known. They do no work for humanity and ignore the evils that are eating at the root of society and of individual character. Instead of doing all possible both by teaching and by the example of their lives, to infuse the spirit of brotherhood into every part of human life, they are giving amusing lectures with gaudy lantern pictures, on their own fantastic conceptions of the "inner" nature of man, or dishing up a rehash of stale Eastern philosophy gathered here and there.

The Seeds of a Real Brotherhood

The real Theosophical Society and Universal Brotherhood, as founded by H. P. Blavatsky, has carried out the plans for which she labored in her great work for the future; it has cherished and cultivated the seeds she sowed; and it has, for the world to see, a stable and permanent center of the Brotherhood Life as described and longed for by H. P. Blavatsky. It has centers throughout the world, which cherish and diffuse the same spirit, and all its members are vitally interested in the daily life of actual men and women and the troubles and hopes and fears that beset them. It has organized a school where children are being trained in body, mind and soul on the Theosophical principles laid down by H. P. Blavatsky, and having branch schools in other countries.

The Theosophical Society has no time to waste over silly theories about "auras" and "inner bodies." Its members believe that all needful knowledge of nature's secrets will come as a result of duty nobly done in the cause of brotherhood, and that knowledge gained in any other way is no knowledge at all, but merely additional delusions for the mind.

A true Theosophist may always be known by his putting duty and brotherhood in the first place; the gaining of knowledge and powers being considered as only secondary, and desired only in order to qualify him the better for the service of his race. But the sham "Theosophist" pretends that he will elevate humanity by lecturing and writing to it about fantastic mysteries—a work which he finds more congenial to his nature than taking off his tail-coat and going to work.

The world is at a most vital and interesting stage of its development, and the many problems that confront us today call for men and women, practical, common-sense, full of love and enthusiasm for their race; not for more lectures or more books.

STUDENT

Balmoral Castle, Scotland

THE illustration on the cover page of the NEW CENTURY PATH this week gives a good view of Balmoral Castle, the favorite Scotch residence of the late Queen Victoria. The Castle itself is of great architectural beauty, while its natural surroundings are among the most picturesque of North Britain. Balmoral Castle has many historical associations that not only endear it to the Scotch people, but to all British-born people. During the reign of Queen Victoria it was often the scene of festivals and notable gatherings.

Shall Be Known by Their Fruits

IN this age of frauds and bogus imitations, it is necessary to keep constantly before the public eye the signs and tokens by which Theosophy and The Theosophical Society can be readily distinguished from fraudulent imitations. Unfortunately the name Theosophy is not copyright, and cranks and adventurers of all kinds are liable to use the word to bring grists to their own private mills. But it is easy to distinguish the false from the true by comparing the teachings and doings of such people with the teachings and duties of Theosophy, as laid down by its founder, Mme. H. P. Blavatsky and her successors

Higher Uses of Physical Drill

TODAY our papers are full of articles on various systems and methods of physical self-development; the advertisement pages teem with pictures and descriptions of them, and magazines are devoted to the subject.

But there is a vast difference between solitary exercise and exercises performed in company under an instructor. In self-development it is practically certain to be a case of the blind leading the blind; for, though I may be sufficiently aware of many of my faults to be able to overcome them, there are other faults (and these the more serious) of which I am not aware, and these latter will only be strengthened.

Again, the best intentions will not wholly prevent me (in solitary drill) from going easy on the weak points. In drill under a director, on the other hand, little faults of which I am not aware will be at once detected and dealt with, as I shall soon find out by the discomfort and resistance felt during the process. And again, I shall be swayed by a will that is not, as my own will is, weakened by the physical defects of my body.

There is in military drill a use far more important than that of mere muscular development and tactical instruction. This use may be described as follows: To get out of me those little *personal* kinks and tricks that my little personal tricks and kinks of character have stamped on my frame. Not by pump-handling behind my chamber door can I eliminate these. I have to *know* of them first.

Obvious as these considerations must be, even from the common view point, yet, when looked at in the light of the wider and more intimate knowledge of human nature which Theosophy gives, they take on a greatly extended importance. For who realizes like a Theosophist what an intimate connection there is between all the parts and functions of human nature, and how faults of character are linked up with faults of bearing and movement?

Let us illustrate this by some cases. Suppose that my chief fault is a lack of vigor, alertness and decision. This runs through my whole character; and causes hesitancy and failure at the moment of action in all that I do. I am undecided and lackadaisical, and approach things like a cat—sideways and roundabout. I need vigor and decision in my attack.

When I drill this fault becomes apparent in my movements, which are of the same character. If I try to drill myself, I do not discover the failing and so continue to repeat it. But when I am drilled, the instructor points it out and I have to correct it. The result is that, not only physically, but mentally, morally, all through my character, I acquire the same new alertness and vigor as I have learnt to display in my physical movements. The connection between habit of body and habit of mind is much closer and more important than is generally imagined. While of course neither drill nor other things will be of any use to a person who does not wish to improve his character, yet, in the case of those who do wish to reform, it is not too much to say that obstinate faults can be *drilled out of them*. For very often these faults hold on by their roots in the substance of the body; and so, as often as they are killed in the mind, they are ready to sprout up again from the contorted body. But break up the set and awry conditions in the body, and the mind is reinforced and has a chance. The old forms having been dissolved, the body will then mold itself on the new pattern furnished by the mind.

From the point of view of Brotherhood, the importance of military drill is obvious. It teaches people to act in consort and to subordinate personal impulses to a common motive. It does this physically and thereby enormously facilitates the doing of the same thing morally and in all the pursuits of life. People who are studying how to live and act in concert

THIS IS OUR NEW YEAR'S GREETING to the World:

Peace to all Beings!
We have worked too long in the shadow,
We have lain too long in the dark—
Let the Light shine!
The nations have battled for glory,
The people have fought for food,

The strong have grasped at power,
Each against each has struggled, seeking his own salvation.
Let the strife cease!

The heart of the World is Peace, and its light is Love.
A New Year dawns, a New Age opens;
It is a New Order of the Ages.

Shall we cease from work, or from battle? No!
Shall we be idle at all?

Shall we bask in the Sun and say, "It is well?"

Not so shall Peace be established;

The wrongs will not right themselves,

Nor will peace come for the praying.

But the Battle is now for Freedom;

The war shall be waged for the Right,

Right here where the wrong is nearest—

Here in ourselves we begin to fight for the Right,

Each one fighting the causes of evil in the only place he
can reach them,

Right here in ourselves is the battle we have to fight.

Those who fight this battle are the friends of all mankind;

The victors in this struggle are the Builders of the Race,

The pioneers of a Nation of nations, with Peace in its heart.

The crumbling creeds may perish and tottering thrones go
And mighty nations fall from their place, [down,

And the seas may engulf great cities,

And the face of the earth be changed,

But a New Age is open and the New Race has appeared:

The war is now for the Right,

And the fight is for Brotherhood.

A Nation of nations is building.

A New Year dawns on the Earth.

Brothers in every nation, awake! and join the fight.

Each over self a victor, Each a brother to each,

Seeking not wealth, nor honor, nor even salvation for self,

But victory over the wrong in self,

That blocks the path of the Light shining deep in the heart
of the World. Let the Light shine! It is peace.

This is our New Year's greeting to all mankind: Peace.

And this is our battle-cry, Truth, Light and Liberation.

cannot afford to miss anything conducive to that end, and here is a noble opportunity of learning to move in concert.

Perhaps the most important advantage of drill is as follows: So many worthy and gifted people limit their abilities to merely theoretical work, and always break down at the point where theory turns into practise and intention turns into action. These unpractical individuals have a defect of the nature of fear, weakness, or paralysis, which, like dust in a wheel, steps in and clogs every undertaking at the very start. Now, on the parade-ground, this defect manifests itself in the form of a ready mental grasp of the movements required, coupled with an almost total inability to actually execute them. The man feels proficient and believes he can do everything without trouble; and yet somehow the limbs do not act up to expectation. The skill stops just short of actual application. And so this individual learns a lesson that no book can ever teach—the lesson of how to actually *do* things. He has perhaps spent his life in doing deeds in imagination, but ever failing to reduce them to a practical denominator. Now he finds out the trick of bridging the chasm.

STUDENT

Some Views on XXth Century Problems

Athletics & the Higher Education

THE attitude of some American universities towards athletics is attracting a good deal of adverse criticism. It seems to be an undisputed fact that the universities are so anxious to secure the services of athletes that they are admitted practically without reference either to their mental attainments or to their scholastic intentions. The authorities excuse themselves on the ground that if they fail to secure athletes they lose prestige in the world of sport, their institution becomes unpopular, and they lose ground in every direction.

We see here another illustration of the prevailing tendency to depart from principle in order to avoid certain phantom disadvantages. The object of an university is educational, and athletics should have neither part nor lot in it except as subsidiary means to an educational end. To that end good health is a requisite, and so is recreation, *esprit de corps* and many other things, and athletics have therefore their proper and subordinate position. No greater mistake could be made than to court popularity by submerging principle, and success won in this way is unreal and transient. There is, after all, a very large body of both parents and students who believe that an educational institution ought to educate, and the support of such as these will create a reputation which will remain as a valuable asset when exaggerated athleticism has lived its short day and ceased to be. There ought to be no competition between universities, but if there must be rivalry, let it be that of learning and not of biceps.

STUDENT

The Only Cure for Alcoholism

A PROMINENT English clergyman describes his country as sinking down into a fetid swamp of alcoholism. As a remedy he advocates more popular amusements in order that work-people may be taken out of themselves.

With every desire to encourage a recognition of the social evils of the day, we would suggest that alcoholism pervades nearly all classes and not one only, although it may be more obvious in one place than it is in another. We also question if popular amusements, useful as they are, can be more than a surface remedy. The only cure for alcoholism is the practise of self-restraint, and this must be so taught that it becomes a duty valuable in itself and for its own sake, and not merely an unpleasant necessity. How far self-restraint can be taught to adults who have for so many years been accustomed to an unchecked self-indulgence, is of course a matter for conjecture and experiment, but it can certainly be so taught to children that it will become as natural to them, and as pleasant to them, as is now self-indulgence.

We have yet to learn that the habit of self-indulgence is in itself noxious, quite apart from the particular way in which it manifests. At present we confine our condemnation to certain forms in which it shows itself, and we do not recognize that seeds can be planted in the nursery of which the resulting fruit and thorns will one day horrify us.

It may seem a hard saying, but there is no easy and royal road to the eradication of social evils. We may trim the branches without much difficulty, but if these growths are to be uprooted we must dig long and toilsomely.

STUDENT

Suicide Among the Immigrants

JUDGE WHITE, of Cleveland, Ohio, states that insanity has increased twenty per cent in that city during the last five years. Should a season of bad trade supervene he believes this percentage will be largely increased. It seems that the majority of asylum inmates are of foreign birth. They come to this country expecting to immediately get rich and the disappointment produces melancholia, alcoholism and suicide.

The experience of Cleveland is that of most of our large commercial centers. Hardly a day passes without its contribution to the threatening statistics of insanity and suicide, but even those most alive to the situation have no remedy to suggest, or only remedies which would be alike pernicious and ineffective.

STUDENT

The Way to Discourage Vivisection

BERNARD SHAW expresses himself forcibly and if he wounds at all it is such a sharp, clean-cut wound that it soon heals, nor does his vigor ever conceal a warm good-will. He has lately addressed himself to the subject of vivisection and he deprecates mere intellectual argument upon a subject which either appeals, or does not appeal, to the moral sense of each individual. He says "vivisection will not be crushed by argument, but by the frankly intolerant abhorrence of all genuinely virtuous persons." It is certainly refreshing to find a frank admission of the existence of a judging faculty which can sweep away mere intellectual subtleties and directly face the problem of good and evil. The supreme court of the soul can decide in a moment many a question over which the inferior court of the mind will argue away an eternity, and to confine such questions as vivisection to a purely mental tribunal is to play directly into the hands of cruelty.

X.

The Public Admiration of Criminals

CHICAGO is to be heartily congratulated upon a measure which we hope to see imitated throughout the country. The City Council, being of opinion that the recent epidemic of murderous assaults is due to the "brazen admiration of the so-called courage of criminals has passed an order directing an investigation into the city's power to prevent the exhibition of persons and things connected with criminal events. Should the existing power of the city be found sufficient the necessary ordinance is to be drafted. Alderman Young declared that a recent and particularly brutal murder was directly incited by exhibitions intended to illustrate the marksmanship exhibited in a previous murder.

He drew attention to the series of murderous assaults which have been perpetrated recently, describing their peculiarly imitative nature, and very rightly said that,

It requires no stretch of the imagination to believe that the perpetrators of these more recent crimes received their inspiration from the flaunting of brazen admiration of the desperadoes.

It is certainly time to do something when persons connected with crimes are placed upon public exhibition and the crime itself reproduced by vivid pictures. Such displays are nothing more nor less than a glorification of cowardly wickedness and the community has not only the right to protect itself from them, but it is its absolute duty to do so. Freedom is a good thing, but a mere license to manufacture murderers is an intolerable evil.

STUDENT

The Foreign Population of America

ADDISON B. BURK, in *Pearson's Magazine*, draws attention to the alien population of Pennsylvania. A century ago the state was inhabited by English speaking people and some German. At the present time Pennsylvania contains nearly a million foreign born persons, of which about one-third come from countries alien in respect of language and political principles.

American hospitality to people of all nations and tongues needs neither assertion nor proof. The duties of hospitality, however, imply reciprocal obligations, and these latter are not fulfilled.

A very large number of these people, especially those from eastern Europe, enter the country not as guests, but to possess it. The idea of adapting themselves to their new home is, of all others, the last to enter their minds, and their habit of forming communities is a direct incentive to the preservation of the least desirable of the characteristics which they have brought with them.

Mr. Burk considers that they have become a danger to the peace of the commonwealth and that the labor troubles of Pennsylvania have acquired an added intensity through their presence. Happily there are indications that the government is alive to the situation and that some scheme will be formulated to exclude those who may be the means, not only of physical infection but of the far more serious moral and social infection which is no small menace to the nation.

X.

Art Music Literature and the Drama

The Sistine Frescoes

EVER since Michelangelo completed the marvelous decorations of the Sistine Chapel, artists have come from the four quarters of the globe to wonder, to study, perchance, to imitate. The artist began the work in 1508, and within four years it was completed. Pope Julius II commanded Michelangelo to limit the theme of his conception to the Twelve Apostles, but the latter calmly insisted that he should decorate the chapel as he thought best, or he must decline to have anything to do with it. So the Pope left him free to follow his own ideas, and the result the world knows. The entire design is a wonderfully planned architectonic scheme of pillars and cornices, painted in imitation of bronze and marble, rising from the side walls towards the center of the roof, upon which they form nine compartments. Within each of these Buonarrotti has painted one of the episodes of The Creation and the Fall.

Recently it has been discovered that the roof is crumbling, and that the frescoes are threatened with destruction, and the work of restoration has been already begun. Investigation revealed a state of affairs that was appalling. Many of the great beams of the roof were in such a state of decay that disaster has been imminent. These are being removed with the utmost care and replaced with supports of iron.

A close examination of the paintings themselves has been rich in surprises. Not only are there many large cracks in the plaster, but in some places it has bulged ominously. Those who have charge of the work, however, are sanguine of saving the pictures. *Apropos* the cracks, so well known to tourists, and without which the photographic reproductions of any of the Sistine pictures would look very strange indeed, some of these ominous-looking cracks are not real but were painted by Michelangelo himself as a practical joke at the expense of his friend and rival (!) one Baccio Pintelli, the architect. When he had finished the Sistine Pintelli remarked, boastfully, that it would last forever. The cracks—the painted ones—were Michelangelo's not wholly compassionate rebuke.

AN old German legend about the origin of song speech: The god of song, Wannemunne, descended on the Donberg, on which stands a sacred wood, and there played and sang. All creatures were invited to listen, and they each learned some fragments of the celestial sound; the listening wood learned its rustling, the stream its roar; the wind caught and learned to reecho the shrillest tones, and the birds the prelude of the song. The fish stuck up their heads as far as the eyes out of water but left their ears under water; they saw the movements of the god's mouth, and imitated them, but remained dumb. Man only grasped it all, and therefore his song pierces into the depths of the heart, and upwards to the dwellings of the gods.—*Language and Languages*

THERE is no doubt that the seed of many virtues is in such hearts as are devoted to music; those who are not touched by music I hold to be like stones.—*Luther*

An Ancient War Chariot

A Parisian recently remarked: "Perhaps I may be permitted to observe that it is only in Europe that an adequate idea can be had of what the Metropolitan Museum really amounts to."

It is indeed not a little humiliating when Alexander Stuart Murray, of the Greek and Roman section of the British Museum and the greatest living authority in the world on Greek art, expresses his astonishment at the utter ignorance betrayed by American students of the Greek treasures they have at home in their Central Park. He says he cannot understand how it is that these students flock to the collections in Berlin and to that

under his care when they are yet unacquainted with one of the finest collections in existence under their very noses at home. Every one in Europe who has studied Greek art knows the collection in the Metropolitan Museum in New York."

One of the recently acquired treasures of the Metropolitan Museum is of as great interest to the artist as to the archeologist. It is a bronze *biga* or ancient Graeco-Etruscan war chariot, of peculiar interest to students of early Greek art, and all Europe may be searched to find another so rare an example. The directors of the Louvre tried to obtain possession of it, but did not succeed.

Upon the arched front as well as the two sides of the chariot are figures in *bas relief*, very suggestive in their outline of the queer old "Lyon of Mycenæ," which in our school days we were told was characteristic of a certain "epoch." Surpassingly rich and beautiful is the incised or graphitic ornament as well. The figures, curiously conventionalized and yet most naively treated as to outline, suggest the crescent Egyptian art no less than the decadent Byzantine. Are they symbolic or merely historic, or both? Who shall determine?

A. V.

PATTI tells you that she never studied the art of producing or emitting the voice, writes Klein, in *Thirty Years of Musical Life in London*. Nature alone, and unaided, accomplished that marvel. To keep the organ in perfect condition she has but to run over the scales ten minutes every morning. Her vocalization is one of those miracles that cannot be explained. Its wondrous certainty and finish are assuredly not arrived at without some labor; but in the end the miracle seems to have accomplished itself.

Her "ear" is phenomenal. She never forgets a tune, and will instantly name the opera or composition in which it occurs. Another mystery is the perennial freshness of her voice, which, after half a century of constant use, retains well-nigh unimpaired the delicious sweetness and bell-like timbre of early womanhood. No other example of perfect preservation stands on record in the annals of the lyric art. To analyze its secret one can only say, here surely is a singer of marvelous constitution, heaven-gifted with a faultless method, who has sedulously nursed her physical resources, and has never, under any circumstances, imposed the smallest undue strain upon her vocal organs.

"THE CREATION OF MAN," by MICHELANGELO, IN THE SISTINE CHAPEL, ROME

O my God, my God.
O Supreme Artist, who as sole return
For all the cosmic wonders of thy work,
Demandest of us just a word—a name;
"My Father, thou hast knowledge, only thou!"
—Elizabeth Barrett Browning

STUDENT

IN the *Kalevala*, the national epic of Finland, the maiden Marietta is described as the destined

mother of the Great Hero. Brooding, filled with anxiety for the future, fearful of taking a single outward step, the maiden pleads with her mother for an answer to her questions, for something that should still the wild unrest of her heart. Receiving no reply, her heart is crushed, life seems a hopeless mystery, the future a dreary waste. At last, resolutely, she gathers up the bodies of her fears and carries them, like living things, to her father's feet. Then, turning aside from them and away, she passes on and out into a new life. Until then she has been bound by the old.

The legend is not all a myth. Fears are living things, as real and actual as the garments women wear. They are the demons which destroy and which are determined to destroy, and they reserve their onslaught until just the moment when one is about to seize victory. No one who can read even a little of the whole sad secret of humanity's heart can fail to see that but for their fears, men and women would rise to absolute godhood here and there. So near to the goal seem some—but a step and all the striving of a noble life will receive its reward—freedom and peace. How often at that point is the arm paralyzed, the resolution stilled—by what? By fear, an outside, hideous force which plays upon some weakness in the nature, accentuates it, drags it forth to view until it seems to fill the whole horizon, and—what then? In nine cases out of ten the one so beset loses sight of everything but that giant fear, loses sight of his own obligations, even his very soul. He becomes unable to tell the friend from the enemy. He becomes unable to distinguish in his own nature between those currents which are life-laden and those which carry death. He is as one in the midst of a battle, so blinded by smoke and dust that his brain reels and he cannot tell enemy from friend.

There come periods in the life of every one when the supreme reward is at last placed within grasp. We have but to stretch forth our hands to easily take it. Why do we fail at this point, again and again? The answer is simple. It is because fear steps in. Before we realize it the thing has us in its power. The will is paralyzed. The opportunity is lost. The pendulum swings again far outward, and we are left stranded, weeping, possibly wrecked.

The Bodies of Our Fears

FEAR nothing, for every renewed effort raises all former failures into lessons, all sins into experiences. In the light of renewed effort the Karma of all your past alters: it no longer threatens: it passes from the plane of penalty before the soul's eye up to that of tuition. Fear nothing for yourself. Fear only to fail in your duty to others.

KATHERINE TINGLEY

Then comes the agony of remorse, of which only those who have gone through hell to reach the heights can

ever be fully aware. Would that its energy had been put into the will at the time when fear first seized the mind! Then it might have availed and the victory would have been won. But afterwards—of what avail then?

Those who have watched the progress of what might be termed the "Woman Movement" of the present time, must often wonder that the advance has been so slow and so unsteady. Writ large, in it we may read the story that may be read in the lives of some individual woman, there writ small. Analyzing, we see that great opportunities have been lost, again and again, because fear lifted its ugly head at the critical time. The result is that the advance, instead of being steady, is spasmodic.

Great gaps exist because periods which should have been utilized in active upbuilding have been allowed to become times of relaxation and "resting on one's oars." The result is that the foundations have weak stones here and there, and when the strain comes something gives way. Then the woman—or perchance the organization of women—becomes discouraged. Fear steps in and in no long time the strong stones, too, are leveled, the whole foundation is torn away and every bit of the upbuilding must be done over again.

Women, looked at from the standpoint of race heredity, have some advantages which men do not possess. On the other hand they have one tremendous disadvantage which at times outweighs everything that is in their favor. It is an inherited timidity, an inherited fear, bequeathed from a past so terrible and so dark that one wonders why the human race did not go down and out in those days, like the light of a snuffed candle.

It is this which must be absolutely conquered before we as women can step into our true position and command our true strength. What shall we do then? Sit down and weep, terrified? No. Let us take up the bodies of our fears as if they were living things, and cast them out of the path. It is the only way, the one condition. Until then we cannot take a single step beyond the level of custom—which is not a high level, usually. And let us not be afraid of our fears either. Let us challenge them. The soul is greater than they, and even if it were not it is better to fall in battle than never to have fought at all.

STUDENT

The "Voices" of Jeanne d'Arc

WANDERING among the curiosities of history, Andrew Lang, in his recent book *The Valet's Tragedy and Other Studies*, takes up the question of the "Voices" of Joan of Arc, the "Voices" upon which her villainous judges relied for their proof of witchcraft or demoniacal possession.

In this case the hypothesis of deception or lying is out of the question; we do not think that anyone has ever been either foolish enough or base enough even to mention them. And it is obvious that her "Voices" guided the doings of the Maid with the utmost skill, and evinced knowledge of military technique and of diplomacy of a very high order. What were they?

Mr. Lang regards Joan as an example of a very rare phenomenon—that of a sane person seeing visual hallucinations and hearing unreal voices. "In the cases of Jeanne d'Arc, as of Socrates, the mind communicated knowledge not in the conscious everyday intelligence of the Athenian and of *la Pucelle*. This information, in Jeanne's case, was presented in the shape of hallucinations of eye and ear. We are not encouraged to suppose that saints or angels made themselves audible and visible. But, by the mechanism of such appearances to the senses, that which was divine in the Maid—in all of us, if we follow St. Paul—that 'in which we live and move and have our being,' made itself intelligible to her ordinary consciousness, her workaday self, and led her to the fulfilment of a task which seemed impossible to men."

Who has measured the possibilities of intuition? To the best of us, hardly more than the very feeblest of its activities are known. Intuition may guide us at points of choice, with an accuracy and speed beyond those of the operations of reason. But in Joan of Arc we see its essentially spiritual quality. It emerged full-armed from its deeps, and inspired her, of its own strength, to her whole life's work. And it not only showed itself as a steady current of general inspiration, but as a specific inspiration with respect to each act and problem of her career. Through her purity and utter freedom from any of the limitations of mind that are imposed by selfishness, she had related herself to the Force that works always for human welfare, the specialized force of evolution, that which is the guiding energy in what Matthew Arnold called "the stream of tendency making for righteousness."

And by it, her intuition was called out and strengthened. Whether she knew it or not, or however she may have phrased it, she belonged to that Brotherhood which is made up of all those who have reached a like point of freedom. For perfect unselfishness is perfect freedom, and it includes perfect purity. A similarly inspired Greek, in like circumstances and of like education, would perhaps have ascribed to some of the gods or dead heroes the sources of his inspiration; a Scandinavian to his gods or heroes; an Aztec to his, and so on. Joan only knew of and believed in the Angels of the Christian Hierarchy.

Mr. Lang is answerable only for as much of the above as we have directly quoted and marked from his book; but it is significant of the advancing spirit of our time that such a view should be thus openly suggested among a set of historical studies. More and more evident, as the years pass, becomes the willingness of our scholars to admit the existence of a higher wisdom than that of the brain-mind.

STUDENT

Students of Life

WE students at Point Loma are students of life; of life not only in its worldly aspect, and as the common laws of society approve of it, but in another way also. We know there are higher laws than those governing men and women as the world goes, and it is this higher way of living that we, as students, are studying. We have a higher than the ordinary life in view, and with this purpose in our hearts, we are asking for enlightenment on our way.

The truest way of asking lies in quickening our aspirations; in a constant and cheerful attendance to duty. The constant and continued aspiring—the never letting go of our efforts and striving—this is the knocking at the Temple of true life, the asking and the seeking. And we shall receive if we will obey and follow the law.

We have learned that we are creators, preservers and destroyers. We

have the power to build and preserve our bodies and lives, and we have also the power to destroy them. And our training here teaches us something about this construction and destruction. We know what a fit of temper will do toward wrecking a human being; how it will wear him out and tear him to pieces; how it will devitalize his energies; how mind and body are weakened, and how the evil consequences are often carried along over distant stretches of time.

Ambition, jealousy, envy and lust, belong to the same kind of destructive forces as temper. Every thought and act on the plane where these things live, lead us away from our goal; away from the up-building forces of life and down to destruction. These are the stumbling blocks in the way of the soul. The soul has no chance to illumine our lives as long as we

feed these lower instincts. We cannot hear the soul-voice while we listen to the passions; we cannot see the soul-light while we look upon the darkness of the lower regions. We do not need instructions to teach us that personality or selfishness is the cause of all sin and human sorrow.

Now, as we are here, students in Loma-land, for the very purpose of lessening the sin and the sorrow of the world, it becomes our first and sacred duty to purify our lives of all the destructive elements in our natures; these very things that are eating out the life-energy of millions of human beings. And when we have done our duty to ourselves, then we can go out and help to make others pure and strong, leading them along the pathway of the soul to freedom.

Each of us has a mighty store of will power in the heart; let us take possession of it and use it—and go upward. Then we shall have the freedom we long for, the freedom to help humanity.

YOUNG STUDENT

AT a recent meeting of the faculty of the School of Comparative Jurisprudence and Diplomacy of Columbian University, Washington, D. C., it was decided that to the course leading to the degree of Master of Diplomacy no woman should be admitted. The faculty announced openly that this action was taken wholly without reference to the fitness or unfitness of any woman who might apply, but because there exists no place in the consular or diplomatic service of the United States for members of the "weaker sex." As places which do not exist could not very well be occupied by anybody or anything, not even by women, the faculty's decision, if the reason on which it stands is correctly reported, appears to be somewhat superfluous.

And a height beyond the height.
Our hearing is not hearing,
And our seeing is not sight.—Tennyson

Brief Glimpses of the Prehistoric World

Archeology
Paleontology
Ethnology

Prehistoric Inscriptions in New Mexico

SLOWLY and reluctantly this civilization of ours has conceded that there were others. The literature of India, the manufactures of China, the architecture of Greece, and the wonderful structures and records of Egypt, have perhaps released us from a greater conceit than we now possess. If the papyrus records of Egypt had not been preserved and discovered we would still consider ourselves the first people to keep double-entry bookkeeping, use receipts, checks, bills of lading, letters of credit, and the like, but now we know better. Indeed, future discoveries may be humiliating to us—possibly there are some which would be suppressed if the explorations were carried on by men less honorable.

We Americans have not yet fully digested a certain truth, namely, that ages ago a civilization existed in our own country. We think of Columbus as its "discoverer," or at least do not go behind the Vikings. The Indians antedated these comparatively recent events, and, although they have been here for centuries, still they know nothing of the mound-builders, the cliff-dwellers, the cities of Cibola, or who irrigated the deserts of the southwest. Colorado, Arizona and New Mexico abound in ruins which are not only prehistoric, but pre-legendary. Until their "Rosetta" stone is found they, like those of Easter Island, will furnish us little information of themselves.

In his last official report, Governor Otero of New Mexico, devotes some space to a discussion of recent archeologic research in his Territory, and pleads for more stringent Federal protection of the ruins which are being despoiled of their treasures by vandals. The ruins are not scarce by any means—there are many cities of them, and not a few of the buildings contain five hundred rooms.

If these old settlers left any written records on skin or parchment, they have not yet been found, and at the present time we have only the stone carvings and painted pottery. These have braved the elements for centuries, and will be in good condition when the key to their interpretation is found and for centuries after those who regard them as meaningless picture writings are dead.

The inscriptions which are illustrated herewith were found in Lincoln County, New Mexico, near Carrizozo, east of the great flood of lava known as the Mal Pais. The topography of the spot is interesting and suggestive, being that of a circular hill fifty feet high with smaller hills on two sides and six hundred feet distant.

The three hills range in a straight line exactly north and south and have a total length of twelve hundred feet. Upon the summits are numerous large irregular angular rocks on which the carvings are found.

The natural position of these curiously marked rocks do not suggest that they mark the site of a ruin, but rather that these particular inscriptions were made on the rocks as they lay. All kinds of symbols and emblems are represented. Serpents are quite numerous, and there are many birds and mammals. In other parts of New Mexico and the great Southwest, notably in Arizona and southern Utah, there are many similar inscriptions awaiting translation.

WE see by the light of thousands of years,
And the knowledge of millions of men,
The lessons they learned thro' blood and in tears,
Are ours for the reading; and then
We sneer at their errors and follies and dreams,
Frail idols of wood and of stone,
And think ourselves wiser, forgetting, it seems
That the future may laugh at our own.—M. J. B.

PREHISTORIC ROCK CARVINGS IN NEW MEXICO

Cliff-Dwellings in the Grand Canyon

THE mummy of a cliff-dweller has been found in the Grand Cañon of Arizona, during some excavations on the site of a buried village. It is said to be the most perfect of its kind which has ever been discovered. It is that of a man of medium height, with a profusion of soft, brown hair upon one side of the head. The teeth are in a most perfect condition and the body was wrapped in coarse sacking. This interesting discovery has been carefully removed to Chicago, where it will be placed on view after a proper examination has been made.

The mystery of the cliff-dwellers has not yet been solved, nor is it likely to be until more systematic efforts are made. In many instances these curious and often well constructed dwellings seem to have been abandoned suddenly, either as a result of some natural catastrophe or the attack of foes. There can be little doubt that a more careful examination would disclose much of interest as to the origin and history of these strange people.

STUDENT

PROFESSOR ALFRED EMERSON has returned to California after spending three years in Europe. His mission has been to collect archeological material for the University of California, and very considerable success has attended his efforts. The Berkeley University already possesses a museum of remarkable value and there can be no doubt that it will soon rank among the best in the world.

A portion of Professor Emerson's collection has already arrived and the remainder is on the way. Special buildings have been set apart and no time will be lost in making the exhibits available for public inspection.

THE St. Louis Exposition is likely to be remarkable for the famous men who will visit it. It is particularly gratifying to notice that Giacomo Boni, the Italian archeologist and the director of the recent excavations in the Roman forum, has accepted an invitation to be present and to deliver a lecture on "The Origin of Italian Civilization." How long will it be before American archeologists are in a position to adequately instruct the world on the civilizations which once so magnificently occupied the American Continent? X.

A CAVE has been discovered near Roswell, N. M., which contains three chambers, and they show undoubted evidence that each chamber was used by the Aztecs, or people anterior to them, for Masonic purposes. One chamber contains emblems of the first, or Entered Apprentice degree; the second shows that it was devoted to the second, or fellow-craft degree, while the third chamber bears unmistakable evidence of having been used for raising candidates to the sublime degree of a Master Mason.—*Masonic Sun*

AN antique burial urn, which undoubtedly belongs to the Bronze Age, has been unearthed at Staylittie, Llanidloes, Montgomeryshire, England. It was found in an inverted position, beneath less than eight feet of soil, embedded in blue clay. Within were charred human remains. It measures fifteen inches in diameter, with a depth of thirteen inches.

The Irrepressible Eucalyptus at Loma-land

THERE has been a curious and conspicuous instance at the Loma-land Homestead of the almost total indifference of the eucalyptus to water—at any rate, to rain.

Early in the year a few boughs intended for a bonfire were carried to the crest of the hill, the highest point, near the flagstaff. The soil there is practically little other than the dry, red "hardpan," almost utterly destitute of any vegetable ingredients. The boughs were brought up before the winter rainfall, such as it was, but that high ground was soon quite dry. Moreover, the crest is without any sort of shelter, bare to all winds from all points of the compass, especially from the eastern deserts and the southern and western ocean.

One of these boughs must have flowered, and, after it had lain awhile on the ground, dropped seed capsules. In due course a delicate eucalyptus shoot broke through the surface of the soil, and all through the absolutely dry succeeding months to this date it has been serenely growing. It is now (December) a healthy little double sapling of about seven feet in height, a growth, say, of six inches a month. Once it had started, its steady growth all through the subsequent months in that baked and unpromising soil must have been achieved on dew only. For there were, I think, but a couple of trifling showers. Now the rainy season is at hand, and there must be great rejoicing and preparations among the delicate green leaves.

To another little sapling, then about three feet high and visibly parched and crinkled as to its leaves for want of water, I began fifteen months ago to give a daily pailful of water, and continued to do so for fourteen months. In addition, it got the dew droppings from the roof of a house near at hand. In two or three days it had perked up, and looked glossier and fatter. In a week it had thrown out hundreds of new leaves. Since that time, to now, it has grown about thirteen or fourteen inches a month. If I had not a personal and paternal attachment to it, I should dig it up and examine its roots. For the daily dose of water

was placed in an earth-pit of a couple of feet in diameter which I had dug around the trunk. To follow the water the roots must therefore have grown straight down and down and down—how far? I really think I must take a spade, after all, in the interests of science, in spite of lacerated affections! For eucalyptus roots are usually quite shallow and extend widely beneath the surface of the soil.

They are, however, great travelers when in search of water, and instances are cited where eucalyptus roots have gone from one hundred and fifty to two hundred feet for their water supply.

H.

THE ORIOLE'S SECRET

by EMILY DICKINSON

TO hear an oriole sing
May be a common thing,
Or only a divine.

It is not of the bird
Who sings the same, unheard,
As unto crowd.

The fashion of the ear
Attireth that it hear
In dun or fair.

So whether it be rune,
Or whether it be none,
Is of within:

"The tune is in the tree,"
The skeptic showeth me:
"No, sir! In thee!"

A Queer Little Felt House in the Trees

AT first glance one might quite naturally mistake this for an oriole's nest because of the similarity of shape. The resemblance, however, extends no further. No oriole would deign to place his home in such a stiff and unpoetic framework of branches; but would swing it airily at the end of a twig. The little bush-tit couple who built this had other ideas. They did not understand weaving well enough to make a hammock in which it would be safe to trust the family, and, even so, weaving materials are hard to find. Therefore they used what they had as well as they could.

They gathered bits of lichen, tiny stems, bits of leaves, old bark-fibre, and the cotton from tansy stems, and here in among the stiff branches of a bush they built a house, which, comfortable as it is, could scarcely sustain its own weight a week if it were not supported by several twigs.

The birds themselves, who look like small sparrows with long tails, like to go about in little flocks of ten or a dozen. One of them is perched on a branch at some distance above the nest in the picture, though it is difficult to find him because he looks so exactly like the leaves.

In these curious homes they hatch out a great many eggs, sometimes a dozen or more. They are cheerful little fellows, these bush-tits, and their actions are much similar to the "snow-birds" of the North. N. L.

A Mystery of Plant-Life

ONE of the curious features of Point Loma is the cliffs and cañons of hard red gravel which sheds water like stone, though when once wet it is very soft. Upon the very tops of these cliffs, along the edges and on the peaks of detached masses, grow many plants and shrubs apparently healthy and vigorous, but of course stunted. But the question is, how do they grow at all? There is absolutely no possibility of their roots reaching any moist earth anywhere, and the soil they grow upon will scarcely yield to a pickax, yet there they are. If this were a rainy region one could at

least form a theory of rock crevices, etc., to account for a water supply, but it is not; our very limited supply of rain falls in the winter, and for about eight months in the year the total rainfall is less than an inch.

Where do they get the moisture to circulate their sap? How are they able to extract from the dust-dry soil the materials for leaves, flowers and fruits? And when secured, how is it made to flow through tissues already as dry as parchment? Dare we suppose that the habit of the cactus and of the bulb and root-stock species of plants, in laying up supplies in time of plenty, is done by other species—these plants and shrubs?

A BUSH-TIT'S NEST IN LOMA-LAND

Universal Brotherhood Organization

Central Office Point Loma California

ISIS Theatre was well filled Sunday evening, at the regular meeting of The Universal Brotherhood and Theosophical Society, and the large audience thoroughly enjoyed a most interesting and instructive program, the main features of which were songs by the Raja Yoga children and addresses by Miss Wynn and Mr. Sidney Coryn, the latter delivering the fifth and closing essay in what has proved a most entertaining and instructive series on the "History of Egypt."

The Raja Yoga children have never been in better voice, singing with great effect such selections as the "Angelus," by J. Macy, "Messengers of Peace," from the opera *Rienzi* by R. Wagner, and the "Largo," by Handel. They were warmly applauded, the audience demanding even a second encore.

Miss Wynn's address was entitled "The Warrior Spirit." She said: "Some good people are afraid of encouraging the warrior spirit. They want to be good and spread goodness in the world, but they build their ideas of goodness upon what they have been told and upon what other people think. They would not dare rely upon what they feel.

"What a meek and mild, tame kind of goodness is developed in this way. Does it awaken any enthusiasm or even admiration? Don't we rather find this kind of good person somewhat irksome? They are negative and empty, good because they are afraid to be bad; anxious to be thought good by other people and to think themselves good—selfish, you see, if the truth be told.

"When we talk about the warrior spirit we must be careful to distinguish between the two kinds. The true warrior spirit is protective and helpful, it wants to build up and establish a great and good kingdom, and it tears down the enemies to the cause. It is positive and will conquer evil that it may change the power of evil. The bad warrior spirit is destructive. It seeks for place and position, and will tear down others to climb itself.

"One who has the warrior spirit strongly will show it in one of these ways. Look how St. Paul went about trying to destroy the Christian church with his warrior zeal until he became converted and saw he was fighting against the truth; then he turned the same energy into the opposite channel and worked to build up the Christian body.

"The great Rameses fought to establish his kingdom in which it was his boast that a woman could go unmolested from one end to the other.

"David was a true warrior. He began as a shepherd boy, who slew the lion and the bear to protect his flocks. He destroyed the power of the enemies of Israel and established a condition of peace in which the Temple of Solomon could be built. The Psalms of David breathe out the true warrior spirit. 'Let God arise and let his enemies be scattered.'

"The enemies of righteousness are his enemies, and he has no lingering sentimental reluctance to hit straight at them:

"Let mine adversaries be clothed with shame, and let them cover themselves with their own confusion as with a mantle."

"Let the saints be joyful in glory. Let the high praises of God be in their mouth and a two-edged sword in their hand: to execute vengeance upon the heathen, . . . to execute upon them the judgment written."

"Among the noble company of warrior heroes are, Garibaldi, Mazzini, William the Silent, Joan of Arc, Lafayette, Washington and Grant. These men boldly drew the sword in the cause of righteousness. Such men as these do great things for humanity.

"While for a specimen of destructive evil warfare we have only to look at what is going on in Turkey now; where life and property is wantonly destroyed that

Reprinted from the San Diego News

a selfish, evil power may live at ease.

"Leaving the great heroes on one side for a time, what is the effect upon a man when he is possessed with a little of the true warrior spirit? Let a man step out for some cause or some principle and have a little fight about it. How it changes him! Something has lifted him out of the ordinary level. His own com-

fort and concerns take a secondary place. He feels there is something to be worked for and defended at all costs, and he and his warrior comrades are at one on this point. Is there anything knocks the nonsense out of people and brings them closer together than being in some real danger together?

"Men who are afraid of fighting when it is necessary in a righteous cause, are selfish sentimentalists. Great warriors are the most tender-hearted men; for one who cares enough to fight for his cause will also have the heart that feels for every human creature.

"Children often show a keen appreciation of the warrior spirit. Let us not discourage this but turn it into the right channel. It is the germ of that fine manly quality that we want in our citizens. Children will forget fatigue and work earnestly in all their studies if they catch on to the idea that something is expected of them in a great cause. How they are fascinated by the idea of being soldiers! The sense of duty, the *esprit de corps*, the discipline, all appeals to them. No child is ever a lax disciplinarian. And the leader of their choice they will be true to.

"What is it that makes the great general, the warrior that can lead to victory? Is it not the spirit of enthusiastic devotion that can step out first and inspire others to dare to follow? A calm, cold, calculating man of iron discipline may do very well up to a certain point, but he will never make the moves that are stamped with genius, for this needs the touch that draws the fine qualities in other men, that kindles heroism and enables men to attempt the impossible.

"Compulsion never called forth the true warrior spirit. The spark of life that will transform dull heavy men into inspired beings needs to be kindled within them and it is caught from seeing another man who has it. Let one man step out in a righteous cause and a hundred find they have grit enough to follow. It may even be that a man may have no better way to serve a cause than to appear to fail and lay down his life for it. At the moment of his death thousands feel what it was he had at heart and now they are constrained to go on with it.

"The greatest battles are not fought out in the world at all, they are struggles on the inside in the world of feeling. And the warrior souls who fight and fight for principle in spite of mockery and abuse go through a greater strain than a general on a battle-field.

"Some have pictured Christ as merely meek and gentle, but do you not think he was a fighter, too? What a storm of opposition and persecution he raised. It was the dust and noise of a great struggle on the inside. Those who did not want to yield to the pure principles he urged were driven to protect themselves. He was stern and strong when he rebuked hypocrites and turned the money changers out of the temple.

"Such a battle has recently been fought out here in your midst by our warrior leader, Katherine Tingley. If it were not for such fighters there would have been no Universal Brotherhood—no Lotus Home on the hill—and no Raja Yoga Schools to train your children into the path of right living.

"What do we not owe to the invincible spirit of those great warriors, H. P. Blavatsky, who attacked the strongholds of bigotry and prejudice; and W. Q. Judge, who held on till his death against enemies within and without. Their cause stands before the world now and it remains to be seen where will end the fire they kindled in the hearts of men."

Culture of the Mind --- Methods in Concentration

A Short Lodge Paper

WE are often told what to do to acquire strong minds, or subtle ones, or cultured. What not to do is less often—or not at all—indicated to us.

Doubtless minds differ in the amount of vitality or energy they possess. But no one can complain till he has used what he has, to the utmost.

From morning to night, and even during the night, and from birth to death, the mind is active, spending forth. It is thinking thoughts, having feelings, throwing up memories and anticipations, developing wants, likes, dislikes, hates, prejudices. It is never still for one waking moment. In the course of the life years of the

most commonplace of people it must expend energy enough to create a universe.

No one therefore should complain of the weakness or inadequacy of his mind till he has grasped it and made it work to some purpose.

This is hard, of course. In every age people who tried have lamented the immense difficulty of mental concentration. But the task is made infinitely easier if one or two things that we all do were not done. In a year, enough force would be saved, which was hitherto squandered, to double the value of the mind as an instrument.

One of them is the habit of recapitulating in memory scenes and events that are past. Let go the past. Many people pour veritable floods of living energy into the past, robbing the present and the future, and absolutely without profit to themselves or others. Store these emotions; do not let them be stolen by ghosts of the past. The present needs all our love, our will, our power. If we look back, let it be to learn, not to throw away life in emotion.

Another is the holding of imaginary conversations with absent people. These may be pleasant, even luxurious; or they may prolong and intensify quarrels and hates. In either case they are cruel robbery of the present and the actual. Any imaginary picturing of one's self in relation to others may thus be a robbery. The only good thing is to hold an ever ready attitude of comradeship and helpfulness. The waste of creative force comes in the development of imaginary situations and talks.

And the last is the desiring of that which one has not. The mind fastens upon the picture of something not possessed or experienced, and pours more and more of its life into that thought with every occasion that is permitted to it. It is the

Invaded Humanity

THE recent researches of the famous Dr. Behring on tuberculosis have aroused much attention, not only in Germany, but everywhere else. But the point which attracts most attention is the assertion that in the body of everyone dying over 30, whatever the ostensible cause of death, tuberculosis may somewhere be detected. Tubercle is, in a way, *the* disease of our day; the germs are well-nigh omnipresent.

Of course Professor Behring has a remedy to offer, of the usual kind. He would inject tuberculosis matter into the veins of a cow, or rather of a million cows, and give their milk—which then would contain an anti-tuberculosis something—to all infants. Thus they would be, as it were, gastrically vaccinated against, and immune to, tubercle.

Picture the youth of the future. He will grow up immune to (because vaccinated against) tubercle, small-pox, typhoid, diphtheria, glandes, cancer, and the various other leading maladies. Why stop short of vaccinating him or "serumizing" him against *all* usually fatal maladies? And is there not a bacillus waiting to be detected in the blood of all very old persons? Why not run this through a horse, and so, with the serum of that horse, *vaccinate against old age itself?*

From birth onward, we are the subjects of the constant invasion of the forces of King Death. These we let in at one place, and they immediately proceed to open the doors to their friends outside, at another. The invasion of death is permitted almost at every moment. We do not recognize the invaders for what they are. But at last the bodily citadel of life is so weakened that it falls victim to a grand assault.

We have let in an exhausting invader by the door of feeling each time that we are angry. And lesser invaders come in the case of bitter criticism or hostile mood. We let in invaders as "the blues," or as fits of general moroseness. We are consciously letting in invaders by the door of feeling whenever, at a meal, we let ourselves be carried an ounce beyond need. The presence of an invader is shown by the crave for alcohol and morphine, or any form of sensual indulgence. The very word indulgence implies that we are indulging an invader who is inside, and permitting him to open a gate. The thirst for power, place, money, regard, respect, veneration, is an invader by the door of mind. Some will smile at the idea that these have anything to do with death. But the old Teachers who warned us against these things were not simply preaching morals. They knew what they were about, and when they said they were showing the path to life, they meant it, and they did not only mean life hereafter, but here.

These invaders, by the doors of thought, feeling and sensation, begin to open the doors of body; and then comes some definite disease. It is a pity we do not apply the same word to the symptoms of the other invaders. An attack of rage or gluttony may easily kill a patient just recovering from typhoid. That extreme case shows the way these invaders aid each other. But in lesser degrees it goes on all the time in all of us. And all the serums and vaccinations can hardly do more than make the invaders change their form, or the door by which they enter the bodily citadel. Their true destroyer is sunlight, physical sunlight, and sunlight of mind and feeling. "I am the *Light* of the world," said a Teacher; and it was with symbolic reason that some of the gnostic medallions picture Christ as a sun.

STUDENT

self-centered building of castles in the air, and is a robbery of the present by an imagined future; just as sentimental retrospect is a robbery of the present by an imagined *past*. Both are vampire phantoms. Hold the mind into the thing now being done; discard the phantoms, and in no long time we shall find that, diverted from the unprofitable, it is betaking itself to the profitable, and understanding gathers within us. The light of the indwelling soul shines into each man's present moment, present duty. It is not seen or felt by him who longs backward or forward. As the noblest music, the grandest pictures, are useless to him whose mind is wandering and burrowing, so is the light of the soul, that light which can be felt in each present moment.

But it is light on what I *am* doing; it can neither inspire what I *have* done, nor what I *shall* do.

Yet there can be both wise retrospect and wise anticipation, not achieved in moments of mind-wandering, called up by will, held steady, and dismissed. These call forth energy, not waste it, and these are helped by the soul. X.

The "Imprecatory" Psalms

IT appears that an expurgated edition of the Psalms is contemplated. That such a thing is wanted, will surprise many excellent people who have read these ancient hymns, as it were thoughtlessly, for years.

The Psalms are a collection probably made from older collections. They are the ritual hymn-book used at the services of the second temple. It is natural, therefore, that they should contain several key-notes of thought and conception. The idea of God changes in human history from age to age, and as expressed in some of the Psalms it is not ours today. Thus:

Unto whom I swear in My wrath
That they should not enter into My rest,

is not what most people who will think carefully would desire their children to read. On the same line, the *Christian World* remarks: "It is perhaps time that Christians ceased to triumphantly rejoice that God 'smote the first-born of Egypt, both of man and beast.'"

And at a recent church congress, a prominent clergyman protested against any further public use of the "imprecatory" Psalms. He was thinking of their effects on the minds of the boys whose headmaster he is. Here is an example of a psalm to which he objects:

Let them fall from one wickedness to another, and not come into Thy righteousness.
Let them be wiped out of the book of the living.

Let there be no man to pity him, nor to have compassion upon his fatherless children.
Let his posterity be destroyed, and in the next generation let his name be clean put out.

Neither did this prayer appear to be very edifying:

Destroy thou them, O God,
Let them fall by their own counsels.

Let them be ashamed and confounded together,
That seek after my soul to destroy it;
Let them be driven backward and put to shame
That wish me evil.

Let them be confounded and consumed,
Let them be covered with reproach and dishonor.

Mine eyes shall see my desire on my enemies,
And mine ears shall hear my desire of the wicked that rise up against me.

It is clear that we have outgrown the conception of God which was in the mind of the writer of that prayer. That writer's God had nothing to do with the God of whom Jesus Christ taught. Why then should we poison our children's minds with any such conception? X.

Know you not that our business here is a warfare? And one must watch, and one go out as a spy, and one must fight. All cannot do the same thing, nor would it be better if they were. But you neglect the bidding of the Commander, and complain when he hath laid somewhat rougher than common upon you; and you mark not what, so far as in you lies, you are making the army to become; so that if all copy you, none will dig a trench, none will cast up a rampart, none will watch, none will run any risk, but each will appear worthless for warfare. . . . Again, in a ship, if you go as a sailor, to take up a place and never budge from it, and if you are wanted to go aloft, refuse, or to run upon the prow, refuse—what captain will have patience with you? Will he not cast you out as some useless thing and a bad example for the other sailors?—*Epictetus*

* New Year's Eve in Pancake Canyon *

“APPEN to have any tobacker 'bout ye, stranger?” asked the grizzled old miner as he dropped into a seat near the Eastern man setting on the piazza of the Golden Eagle hotel in Pancake Cañon.

“Uh! thankee,” biting off a large quid and slipping the remainder abstractedly into his own pocket; “lived here long? ye ask. Well, consid'ble time—nigh onto twenty years now. Nice place, don't ye think? an' sich a climate! Just think, tomorrow's New Year, an' the boys 'ill serenade tonight dif'rent from anything you ever heard. Next nights' the concert. Do I know the singer? Well, ye better b'lieve I do. Little Bird Howard! She b'longs to this here cañon an' she haint the kind to forget her old friends.

“Tell ye her story? Well, it haint much of a story. It was kind o' curious though the way she got here. There'd been a rush over here 'cause Dandy Jim Jones had struck it big in the Golden Chariot. There'd been a big strike over at Gray Mule an' some pay dirt taken out round Brown Jug; but in less'en six months it all petered out.

“The boys was all pretty blue an' some of 'em had left, an' when news of the big find over here come it struck like lightning! 'Twas just after supper an' by sunup every mother's son had struck the trail for this here gulch, an' before sundown there warn't narry one 'at hadn't staked out a claim.

“All good ones? Well, stranger, Pancake Cañon's a good minin' gulch, but its just like it is everywhere. Some claims brought out pay gravel from the first an' some never showed a color.

“What kind did I get? O fair to middlin'. I had a pardner 'at was a good miner an' I reckon as good a feller as ever camped round these diggin's. Fact, Jack had one fault; he did like whiskey too well. But when he was sober he was all there an' every inch a man. His drinkin' made me feel blamed bad, too. Talk to 'im? Course I did, but then ye see, all the fellers got boozy an' so did I, so it hadn't much effect.

“Well, men came pourin' in an' some tried to jump claims, so play with six-shooters got to be most as common as work with picks an' shovels. An' then first thing we knew a strange feller was boardin' here at this hotel—'twas only a little shebang then, just a saloon an' eatin' house—an' every night after supper an' when the boys had got down a few drinks he'd get 'em into a game o' cards and win most o' the nuggets they'd dug out all day.

“How did the boys like it? Well, not a bit! 'specially when they thought the feller wasn't playin' fair. I was pretty mad too, when I saw he was always tryin' hard to get it in on Jack, an' he was just fool enough to drink till he'd go silly. Anyhow it could only come to one thing, an' that come mighty sudden. The gambler got to cheatin' awful one night, it was New Year's eve, too, when a lot of fellers was a layin' for 'im an' pretty soon the liveliest, promisc'ous free fight was on that you ever saw. It seemed like bullets was whizzin' in all directions. I saw that card manipulator take aim at Jack, so I tripped up my pard an' he went sprawlin' under the table. The bullet just missed him an' smashed through a lookin'-glass behind the bar. Old Syme kept the Golden Eagle an' he'd just brought out a widder from Marysville to make it seem more homelike for the boys, an' had hired two squaws to help her. Them three was all the women folks in the camp.

“Old Syme told her that he 'lowed it 'ould be pretty rough like, but the boys were all good fellers; an' she 'lowed she didn't mind an' wouldn't be afraid of hardly anything. Maybe she wa'n't afraid, but I reckon she was some rattled that night. Syme had gone out to the corral and when that bullet whizzed through the glass only a few inches from her head she jumped clean over the bar and scooted for the kitchen, screamin' like a bear was after her.

“When the boys saw Jack go down they thought he was shot sure, an' they all made a rush for that gambler, swearin' they'd lynch him then an' there. I knew Jack was all right—only too drunk to get up—an' I didn't want the feller hung if he did cheat at poker an' seven-up, so I yanked him under the bar, chucked him thro' a winder and told him to git! He didn't wait to be told twice an' before the boys had got onto it he was a half a mile up the hill among the chaparral.

“Well, the widder hadn't more 'an got the broken glass swep' up an' her back comb straight when the Yuba stage came prancin' up. It was half an hour late too, but we'd all been too interested in home affairs to notice it before. Course we all went out, for we liked to hear the news from below, and Syme took the mail bag, for he was postmaster.

“‘Hello!’ yells Dutch Dick, the driver; ‘is Jack Howard 'round here? I've brought him a New Year present.’

“‘Here he is,’ said somebody, pushing my pard forward. They'd found out he warn't hurt an' got him out in the cool night air, which kinder revived him.

“‘What ye want?’ says Jack, stupid like.

“‘I don't want *nothin'*’ says Dick, ‘but I've brought you your kid, an' a little daisy she is, too;’ an' he walked straight up to Jack an' put a little girl four or five years old into his arms.

“Jack just stared 'round, helpless like for a minute, an' none of us could do much more. Then Jack muttered like he was talkin' in his sleep: ‘I never had no kids; this here ain't mine.’

“‘Now, look here,’ says the driver, ‘this here kid has been sent up all the way from Sacramento by her mother when she was dyin'. She wanted her brought to her father, John Howard, an' that's you, hain't it?’

“‘I'm not her father, any how,’ says Jack.

“‘Well,’ says Dutch Dick, an' his face was gettin' pretty red by this time, ‘I 'lowed you was about as mean as they make 'em, but to go back on a kid, a poor little gal critter, too, why, I didn't 'pose even a low down, theiven' gambler'd do that.’

“‘He ain't no gambler,’ yelled a dozen men at once, ‘yer off yer rick'nin', Dick.’

“‘I 'low it's that villyan you ought to a-hung,’ says the widder. ‘Come here to me, you poor 'lorn little critter;’ an' she went to take the child.

“‘But the kid shook her head an' says, ‘I want to stay with my daddy.’ An' then she took a firmer grip round Jack's neck and nozzled her face down in his whiskers.

“Just then Syme come out with a lantern an' Dick got a good view of Jack. ‘W'y, no,’ says he, ‘this hain't the gambler.’

“‘He called himself Parker,’ says the widder, ‘but I saw some of his things marked J. Howard.’

“‘Well, who's goin' to take care o' the kid?’ says Dick. ‘I promised to take her to her daddy, but you all say he's skipped out; an' her mother's dead.’

“Everybody was mighty quiet for a minute; then Jack says, ‘This here kid's been brought to me for a New Year gift, an' I'm goin' to keep her.’

“Did he do it? Well, stranger, he did. He took the little thing right up to our cabin an' wouldn't let me carry her narry a step; an' he put her in his bunk an' slep' on the ground himself. After that you never did see any two critters carry on like Jack an' that kid. If he'd been her father forty times over he couldn't 'a' been any fonder of her. An' for her there was nobody on earth like daddy.

“How could he bring up a girl in a minin' camp? I'll tell ye, stranger, how he did it. That widder 'lowed she'd leave Syme's as it was too excitin' like, even if she warn't afeard, an' so we persuaded her to come an' keep house for us an' take care o' the kid. She was kind o' oneasy though, 'bout keepin' house for just two men, so I told her if it would make things any comfortabler she might annex me. She 'lowed that would do and Syme gave us a wedding supper an' my wife an' the two squaws cooked it.

“Well, Jack had teachers up here for that kid and then sent her to Sacramento an' I reckon she got about all that's goin'. An' sing! Why, stranger, no nightingale can't touch her. That's how we call her Bird. Her name's Nellie. Jack sent her to Europe an' he went to bring her home an' she's been givin' concerts all along. But all her travels an' study an' the praise she's got haint spilt her one little bit; an' she's comin' right back here to sing to the boys tomorrow night an' shake hands with every one of 'em.

“What become of her father? Well, now, stranger, you'll think it queer, but it's how things go out here. That mean or'nary gambler is in a good post at Washington. When he got prominent in politics there was some stir 'bout the way he'd treated his kid. He met Jack at Marysville an' wanted him to give her up—she was seventeen then. Well, Jack told him to come up here an' see her an' if she wanted to go to take her. He wouldn't come up with him, 'cause if he had to lose her he didn't want to say no goodbys; an' he wouldn't stand in her light no-how.

“An' she didn't go? Not much, stranger. When she heard the feller's story an' me an' my wife had told our'n, you ought to 'a' seen her cheeks flame an' her eyes flash.

“That gambler got out o' Pancake Cañon most as quick as he did t'other time. Jack came home that night, climbin' 'most as slow as a old man an' lookin' pale an' sick. He came in hesitatin' an' stumblin' till you'd most thought he was drunk. But if you'll b'lieve me he'd never touched a drop since he took the kid. Nellie'd hid on purpose an' when she run to him he just dropped his head on her shoulder an' cried like a baby.

“What's such a crowd gatherin' for? Why, the fellers are all comin' to meet Jack an' Bird. Hurrah! there's the stage! Here they come with Jack an' our girl outside! Hain't she pretty as a pictur', stranger? An' wavin' her little hand an' throwin' kisses at all these old chumps! There, she sees me! Hello, girlie! Hurrah for Birdie! Hurrah for Pancake Cañon! This is the best New Year's eve it's ever had!”

K. P. Q.

LET us think, as we lay stone on stone, that a time is to come when these stones will be held sacred because our hands have touched them, and that men will say, as they look upon the labor and wrought substance of them, “See! this our father did for us!”—*Ruskin*

The Trend of Twentieth Century Science

Other Forms of the Interesting Radium Problem

"S. W.," in *Nature*, asks a couple of pertinent questions which, if they throw no light upon one of the problems connected with radium, at least bring them into line with some with which we are all well acquainted.

"When a small magnet in my drawer has been ready to act on a compass any time during the last twenty years, and has not altered its appearance in any appreciable way, I ask, whence comes the continuous magnetic supply?" Let us add that, so far as is known, it has not altered in weight; and that, if the compass had been all that time in a neighboring drawer, the magnet would have been actually manifesting force in holding the needle of the compass steadily deflected.

Suppose we are dealing with an electro-magnet instead of a fixed one; that is, a magnet that is only a magnet while an electric current runs along a wire wrapped round it. To make that electric current, work must be done, coal must be burned, water must fall, the wind must blow; in some way force must be made to disappear somewhere to reappear as electricity.

Let us generate the quantity required to make an electro-magnet equal in strength to "S. W.'s" magnet, by means of coal, running a dynamo. Let it run twenty years. How much coal shall we burn? Allowing for waste of force inevitable in all such transformations, the force generated by the amount of coal we shall burn in twenty years, is equal to that radiated without coal or "any visible means of subsistence" by "S. W.'s" magnet.

Clearly we are confronting a mystery in the case of every magnet; and the mystery of radium is no greater.

Yet though we must consider that the magnet is doing work of a sort in holding the magnetic needle in a strained position, it is also true that, so far, we only know how to use magnets practically as transformers. When the coils of a dynamo are whirled in the magnetic field, the electricity generated in them is theoretically equal (only) in work-doing power to the power we expend in whirling the coils. It is now merely in a convenient form for storage, carriage, etc.

"Again, when a lady has had for a great many years a cedar workbox, which has never failed of its characteristic odor, it is a natural question to ask, whence comes the smell? The statement in books, both of physics and physiology, is that something material is given off from the wood which alights on the olfactory membrane of the nose. This is purely gratuitous, as the statement is without a shadow of proof. . . . If the hypothesis, for it is nothing more, fails, how does the case differ in principle from that of radium?"

The usual text-book example is a grain of musk, not a workbox. And no one has ever shown that the grain is less in weight after radiating scent for twenty years than before. It looks as if scent was like sight—a mode of receiving ether vibrations; and as if a scented body was, so to speak, luminous to the nose. It may also turn out presently that the ether has something to do with hearing.

STUDENT

THE high speed electric car experiments which have been carried out upon the Marienfelde-Zossen line in Germany seem to have been a triumphant success, according to the detailed reports furnished by the American Consul. Upon a recent trial a speed of nearly 126 miles per hour was easily attained, both machinery and roadbed remaining entirely uninjured. The engineers believe that they can easily reach a speed of 140 miles per hour.

According to the present opinion of experts, however, it is not desirable that regular traffic should exceed a speed of 93 miles per hour between Berlin and Hamburg, and they have based their recommendation upon this estimate.

The electric current used was between 13,000 and 14,000 volts, the car having four motors of about 1100 horse-power. The twelve men who accompanied the car upon these experimental trips describe the sensation of so extraordinary a speed as being in no way whatever disagreeable.

The Ever Present Headache and the Coal Tar Powders

THERE are signs of a healthy awakening to the dangers of the general use of the coal-tar derivatives, anti-kammia, acetanilid, phenacetin and the rest. Some years ago there was a number of deaths from these drugs, due to heart failure. This led to the addition of heart stimulants, and the deaths became less numerous. Accordingly the market is full of these combinations, and in every drug store window you may see the "Headache powders" freely on sale, with the added legend, "guaranteed harmless." In nearly all cases these "harmless" powders consist of a coal-tar poison, and some variety of heart stimulant.

The coal-tar products do stop a large proportion of pains. But they do it by lowering the whole organism below the level at which it is sensitive to pain. They take it, let us say, one-tenth to one-quarter of the way down to that level at which there would be death. Along with this the heart is poisoned in another way. Its reserves, or capital, of vitality, are drawn upon—in most cases never to be replaced. The coal-tar poisoning passes and the patient is perhaps as before, less that much capital of heart vitality.

Pain is a symptom. When it occurs, its cause should be hunted for. In the case of our almost universal American headache, the causes are usually late hours; far too little exercise; and overfeeding, especially of sugars, but also of all other things. A walk before breakfast with some athletic exercises, an earlier retirement to bed, fresh air by day and night, a lower house temperature in winter, three smaller meals and a removal of sugar and sweets from the diet, would quickly bring to a final end the vast majority of headaches, and add thousands of years annually to our collective life.

M. D.

The Innate Perversity of Inanimate Objects

A GENTLEMAN writes a curious query to the *Scientific American* respecting the behavior of watches. It appears that he is one of those not very exceptional people whose watches will not go. He lends his errant watches to friends, who find them to do very well. He borrows a steady watch of a friend, and it becomes errant. He sends his watch repeatedly to a watchmaker for cleaning and regulation. In the shop it goes very well, and he perceives that the watchmaker suspects him of neglecting to wind it, since in his case it does admirably.

The *Scientific American* refers the query to a wholesale watchmaking firm. The answer is that the querent probably winds his watch at irregular times, lays it down at bed-time in different positions, and sometimes leaves it hanging in his waistcoat. All of which errors, says the firm, may derange watches.

This may be true. But we venture to maintain that there are people who sin against their watches in all these grievous ways, but whose watches remain steady. And we would also suggest with some confidence, that there are people who do none of these things, whose watches are very errant while in their possession.

We hope that the querent to the *Scientific American* will undertake some researches. We feel that the problem is in line with those others: why some people immediately find lost things; why pencil cases come unscrewed in some pockets; why fountain pens behave differently in different hands, and so on. He should read (we think it was) De Quincey's essay "On the Innate Perversity of Inanimate Objects." But are they inanimate?

QUERENT

WHAT a wonderful place is Chicago! It is not satisfied with a monthly discovery of the elixir of life, but we now learn that one of its science institutions has produced a new food by which human growth can be increased to the extent of sixty per cent. This, at least is the result which is produced upon white rats, and we are assured that the effect will be the same upon human beings. If Chicago will now produce some kind of scientific nutriment which will stimulate a desire to keep the ten commandments, the cup of human attainment will surely be full and we shall owe it all to Chicago.

Here and There Throughout the World

CONGRESS HALL, TOKYO, JAPAN, SHOWING MAIN ENTRANCES

✧ *The Bible in the Nebraska Schools* ✧ THERE is some trouble in Nebraska in consequence of the Supreme Court decision against Bible teaching in the public schools. The people of Lincoln have refused to comply with the judgment and a mandamus has been issued to compel them. These disobedient citizens believe that they are imbued with the spirit of martyrdom, but they are mistaken. The sentiment under which they are acting is one which, if extended, would make all government impossible and which would be the prelude to anarchy. The Supreme Court has not forbidden Bible teaching. It has only forbidden it in a public building, in public time and at the public expense. If these people have a sense of duty which is so keen as to prevent them from obeying the laws of their country, we wonder that they do not expend some of their energy in doing their duty to their children, instead of demanding that it be done by other people at other people's expense. They surely have leisure to teach religion to their own families, although it may be readily admitted that if defiance to the law and Constitution is a part of that religion, their families are certainly better off without it.

✧ *Mommsen & the Strenuous Life* ✧ IN Theodor Mommsen the world has lost another of its intellectual giants. Of late years the great men of the world have seemed like the survivors of a historic battle; they pass away one by one and they are not renewed. Truly, the dead are very many. Mommsen, himself a strong man, believed ardently in the rule of strong men. He believed that the world would do well to recognize that the strong man rules, whether it pleases us to crown him or to leave him in his garret. In such advocacy, Mommsen and Carlyle have planted seed in the soil of human thought which Nature will care for, which she will bring to fruition in her own good time. One of the last acts of Mommsen's strenuous life was an appeal for international fraternity, an effort to close ancient wounds which ought never to have been inflicted, which ought now to be healed.

✧ *France and the Peace of Europe* ✧ THE French Minister for Foreign Affairs, M. Delcassé, speaking recently to the Chamber of Deputies in Paris, ascribed the existing good feeling between France and England to the peace pronouncement of the Czar five years ago. He took occasion to felicitate his country also on the better understanding which now exists with Italy. Asked as to the action which France was taking to lessen the military burdens of Europe, M. Delcassé replied that his country was taking the best of all possible action by setting a good example, inasmuch as every year witnessed a decrease of French expenditure upon armaments.

✧ *Only Education Can Help Russia* ✧ THE forces of reform in the Russian Empire are not always articulate, but they are none the less alive. Their vitality is shown by the trial of the persons implicated in the recent massacres, and also by the report on the poverty of the peasants, which is in the hands of the Czar. This report is of so radical a nature that it declares education to be the only way in which the misery of the peasants can be removed, and that by no other means can they be strengthened against the tyrannies under which they suffer. Russia's Czar has the power of independent thought and action.

✧ *Gambling and the Police of Paris* ✧ THE Paris police are taking energetic measures against the betting evil which thrives so enormously among the wine shops of the lower class. A series of raids has been organized and they are very seldom unproductive of incriminating evidence. In most European countries the laws against betting were enacted before the mischief had become so colossal as it is now. The result is that the profits are so large that the legal fines are no longer deterrent and a new law will probably be introduced into the French parliament.

✧ *The Pauper Lunatics of London* ✧ LUNACY returns from London are fully as grave as those from some of our own great centers. Last year the County of London was called upon to support nearly 23,000 pauper lunatics, and the number is increasing to the extent of 500 per annum. The London Council has now eight large asylums, several holding over 2000 patients and further accommodation is now being built as fast as possible. These figures refer only to pauper lunatics. Who can estimate the number of lunatics who are not paupers?

✧ *Cuba Honors Memory of Prof. Bovis* ✧ A DISPATCH from Rome indicates that the late Professor Bovis, who distinguished himself as a champion of Cuban independence, is not to be forgotten by the people whose liberty he so strenuously advocated. A special address wrapped in a Cuban flag has been forwarded to Madame Bovis, and the Cuban Government has decided to purchase two complete sets of the Professor's literary works, one of which will be preserved in the National Library and the other in the Havana University.

✧ *Cathedral of Toledo Going to Ruin* ✧ THE great Cathedral of Toledo in Spain which was built in 587 may almost be said to be representative of the ecclesiastical life of the country—and it is in danger of falling. A part of the roof collapsed a few weeks ago, and the remainder is in a condition so perilous that it may collapse at any moment. The Toledo Cathedral is the metropolitan church of Spain. It is 404 feet in length, and has been for long one of the great sights of Spain.

A CHARACTERISTIC LOG CABIN CHURCH AT JUNEAU, ALASKA

THE CHILDREN'S HOUR

DEAR CHILDREN: The other day I received a letter from a little Lotus Bud

who lives away off in New Zealand and this is one of the things I read in it: "Dear Cousin Edythe, won't you please tell us what New Year's day is like in Loma-land?"

Well, the picture will tell you better than words how good Mother Nature celebrates New Year's day in Loma-land. She just holds a great reception and her guest of honor is, of course, the sunshine. There are many, many flowers too, for the gardens about the great Homestead and among the little group homes of the Raja Yoga school are bright with bloom the year round.

Only the wild flowers wait; they are just beginning to wake up in their earth homes, I fancy, at New Year's time. It takes several weeks for them to fashion their gowns of pink and white and yellow and blue and purple; and no flower ever thinks of going to one of Mother Nature's receptions without being dressed in her very best. But the grand old eucalyptus trees, just as you see them in the picture, always make it a point to look their handsomest at New Year's time in Loma-land, and when you add to all this real sun-warmed sand to dig in, beautiful little birds for comrades, and the sweet home-life and mother-love that belongs to every real Raja Yoga School the world over—why, what more could be needed to make little boys and girls happy? "Every Raja Yoga School!" I hear some Lotus Bud say, "why, cousin Edythe, I thought there was only one!"

Bless me, there are ever so many. There are several in Cuba, and the Raja Yoga School in San Diego is—well, the sweetest place one can find in a week's journey; and then there is to be one opened in—but that's to be a surprise. Just wait! Some day I shall have such good news for you, for everything that changes little sick children into well ones, and unhappy boys and girls into happy ones, must be good news, of course. And that's just what Raja Yoga does, as you know.

But I am forgetting about New Year's. What do we do in Loma-land? Well, every day is a "kind of" New Year's day in Loma-land, because every morning we just shut the door on the day that is past and we step into the new day like warriors. You see, it isn't Raja Yoga to carry all our worries and regrets over with us into each new day. No, we just carry in our hearts the lessons we learn from

New Year's Day in Loma-land

win if he felt he had to carry with him wherever he might go, all the enemies that he had defeated? How far would a traveler journey if he loved his friends or his beautiful home so much that he felt he couldn't go on a journey without taking them along? No, the wise soldier just carries with him from the battle the wisdom and the strength he has gained, and the wise traveler just carries the sweet picture of home

and friends in his heart, as we might carry a lesson learned or a beautiful song in the memory.

That is the Raja Yoga way and to do that will make every day a real New Year's day—that, and sunshine.

Sunshine is a Raja Yoga secret, too. We know that if

we keep our hearts filled with it—just like a glorious burning light—

some day every child in the world will have sunshine and heart-light, too. Of

course there are millions of little children in the world, and only a few, as yet, are Raja Yogas. But that's nothing.

Have you never seen a great many fires lighted from one little flame?

That's Raja Yoga, and the flame gets larger all the time, too.

So, just as one little boy or girl whose heart is filled with happiness and sunshine and love can bring sunshine into the hearts of ever, ever so many, so

we, in Loma-land, just take the heart-light of one day like New Year's day and light with it every day of the whole year. Now isn't that a splendid way to do? Try it and see what

happy days you will have all the year through! Raja Yoga children all know a great deal about "stumbling-blocks" and about how to lift them out of the way. (A little bird told me the other day about a wonderful new Raja Yoga Symposium that,—oh, it's a

secret, too! I forgot.) But this thinking about one's self at New Year's is one of the "stumbling-blocks" that every true boy and girl must lift out of the way.

It's so easy to do it.

Just think about others!

There is no fun in the world like the fun of being a really, truly Raja Yoga, one's own self.

There won't be a stumbling-block left after awhile, only stairs to climb by, and that would be splendid!

Happy New Year to all the Buds and Blossoms in the world! Happy New Year to the little children everywhere who don't know about Raja Yoga, and so need our love even more. COUSIN EDYTHE

Always Time

THERE is always time to find
Ways of being sweet and kind;
There is always time to share
Smiles and goodness everywhere;
Time to send the frowns away,
Time a gentle word to say;
Time for helpfulness, and time
To assist the weak to climb;
Time to gather a little flower,
Time for friendship any hour;
But there is no time to spare
For unkindness anywhere.—Selected

Path

THE VISION THAT RECEDES

by S. W. Foss — *Whiffs from Wild Meadows*

FORWARD, on the same old journey, let us follow where she leads,
 Let us chase the beckoning glory of the Vision that Recedes.
 Still abides the same old magic in the waving of her hand,
 Motioning tow'rd higher regions of her misty table-land;
 Still abides the same old purpose still to follow and draw nigh
 To the fulness of the glory of the promise in her eye.
 Down the vista of long valleys, through the brook-melodious meads,
 Up the thunder-blasted mountains, floats the Vision that Recedes.

Onward through the tumbled gorges, onward till the quest is done.
 See! she beckons to new empires tow'rd the setting of the sun.
 See! her robes float in the distance, borne upon the onward breeze,
 Red with kisses of the sunset, white with blanching of the seas.
 See! she beckons, We are coming! We will follow where she leads;
 For we still believe the promise of the Vision that Recedes.
 We will follow where she leads us, through the wild and up the slope,
 Through the many tangled valleys to the table-land of hope.

Through the many tangled valleys we will chase the Vision fair,
 Till we see the golden sunset mingled with her floating hair.
 Yonder, there, beyond the chasm, see her standing in the crest
 Of that twilight girdled mountain at the threshold of the west.
 We will follow without resting, we will follow and draw nigh
 To the fulness of the glory of the promise in her eye.
 There are higher ranges yonder, and she plumes her wings for flight
 Tow'rd those visionary mountains on the borders of the night.
 Tow'rd those visionary mountains let us follow where she leads,
 Let us chase the beckoning-glory of the Vision that Recedes.

Atheism in Fiction

THERE is an atheism of thought which often stands concealed (may be, even from its owner) behind profuse verbal expressions of belief in God or in Providence. And some men have a profound and practical religious faith who with their lips profess an atheism.

In fiction and drama, one comes upon the same thing, especially in those forms belonging to the realm of tragedy. Some examples of these teach lessons of the highest spiritual and philosophic value, yet, it may be, with never a word of religion or philosophy from cover to cover.

All men who have not taken pains to kill it, or whose mode of life is not such as to stifle it, have the primal intuition that justice somehow ultimately prevails in the universe. The old-fashioned novel reflects this intuition in a simple form. Virtue and courage come by their own; the villain falls over a cliff by night. Goethe's version of the mediæval *Faust* legend has the same finale in a yet more popular and elemental way. The devil comes for Faust, and Margaret ascends to heaven. We feel that things end as they should; and the final hint of Faust's ultimate salvation reconciles us to his temporary damnation. We need that hint, because we feel that he was not wholly bad. Had he been so, we should want him swept immediately away.

Nowadays we are beginning to be satisfied with a dramatic retribution for the ill-doer which does not necessarily take so crude a form as an event or calamity. It is enough if an adequate mental condition develops upon him, a despair, misery, loneliness. Our satisfaction rests in a deep intuition, often unconscious, that this mental state is not anything in the nature of retributive revenge, but has a curative tendency. We dimly foreview the man in some future life or state as existing cured of that evil in him for which the pain came about. *Richard the Third* and *Macbeth* were not tragedies so much because the men were killed, as because of the potentially curative mental agony that came upon them. They had to die, not because it was physically painful to do so, or that they might be got out of the way of some one else's happiness, but because death would bring the crown and consummation of their misery.

Indeed, when Shakespeare made them face the ghosts of their victims, he made them in life have a foretaste of the terror and remorse of after-death. Shakespeare's ghosts are an introduction of the living to death and the dead; not of the dead to the living. And we think that in the characters of Hamlet, of Timon of Athens and of Lear, is made to appear a sort of reason and just explanation, of what befel them mentally. The beginnings of the cure are shown through the clouds and smoke. That was the message of Shakespeare—Karma, curative Nemesis.

But no such thing can be said of many of the novels and plays of to-day, whose end is tragedy. Some of the most popular work of the day appears to us to be essentially atheistic, traitorous to the divine law of justice, of compassion, which we feel, which we intuit where we cannot see. In such stories, the misery and calamities are devoid of any inner relation to the characters. Their skill and workmanship and imaginative setting and interest blind us to the utter inconjunction. In one compartment of the authors' mind are so many characters; in another so much misfortune. The contents of the two compartments are emptied into one. From the mixture arise the exhalations of despair and pain, powerfully shown us. But it is not nature; it is not art. It is as if an artist were to mix lurid colors on his palette and put them upon his sketch anyhow. This is teaching godlessness; infusing into weaker minds, nay, into the minds of nearly all readers, the idea that there is no God or law or adjustment in the world. And the poison works the deeper, the more hypnotically, because the idea is not phrased.

STUDENT

The Lesson of Gladstone's Life

COMMENTS on the life of Gladstone, owing to John Morley's recently published Biography, are necessarily rife in the press.

One may read the details of the lives of great men for the sake of adding to one's knowledge of history; or as a character study. And, whether consciously or not, we study all characters with one eye on our own and the other on that of the man studied. Otherwise we have no proper standard of comparison. Though we may seem to be comparing two others, our own as we know it is the yard-stick.

Most of the comments on Gladstone note that the double life—inner and outer—was his key-note. Externally he was of unparalleled diversity of interests, intense in each, and of exhaustless power of work. Within was a center of profound spiritual and religious feeling to which he constantly retreated and from which he sustained his energy. From very youth he built himself upon this spiritual center. Behind the usualness of his religious expressions, we cannot fail to see the mystic; but he made this inner consciousness intensely practical in its effects. Here is an extract from his diary when he was but 26:

March 31. Spoken on the Irish Church—under forty minutes. I cannot help recording here that this matter of speaking is really my strongest religious exercise. On all occasions, and today especially, was forced upon me the humiliating sense of my inability to exercise my reason in the face of the House of Commons; of the necessity of my utterly failing unless God gave me the strength and language. It was, after all, a poor performance, but would have been poorer had He never been in my thoughts as a present and powerful aid.

And another, also from his youthful period:

Spoke thirty to thirty-five minutes on University Bill with more ease than I had hoped, having been more mindful or less unmindful of divine aid.

"*Or less unmindful*" seems to give the entry an exquisite touch of humility. Here is an extract written in connection with a speech that was an appeal for justice towards some oppressed people, when he was 29:

Prayer, earnest for the moment, was wrung from me in my necessity. I hope it was not a blasphemous prayer for support in pleading the cause of justice.

And this was the spirit in which he lived and worked his 90 years. If, in studying his nature, we are inclined to be overwhelmed at the contemplation of so much mental energy, let us remember that the secret is conservation and concentration. If we could measure the work done by our minds and memories in futilities, personalities, mind-wanderings, quarrelings, schemings after nothing, and useless regrets, we should find it not far short of Gladstone's. He used his energy of mind as it came; most of us dribble away ours as it comes. But we need not go on doing so.

STUDENT

HOW TO KNOW

THE rounded world is fair to see,
 Nine times folded in mystery:
 Though baffled seers cannot impart
 The secret of its laboring heart.
 Throb thine with nature's throbbing breast,
 And all is clear from east to west.
 Spirit that lurks each form within
 Beckons to spirit of its kin;
 Self-kindled every atom glows,
 And hints the future which it owes.—*Selected.*

Question

What difference is made in Theosophy between the soul and the reasoning man? Surely, the reason is the highest of man's powers, and to get beyond it is to get into a region misty and vague, where there can be no sure foothold. Yet I have heard some say that the reasoning man is not the soul. Where, then, lies the difference?

Answer

Is it not easy to see that there does exist a difference, a great difference, such as that which lies between the workman and his tool, or the musician and his instrument? Back of all our reasoning lies our "Self," which directs, looks on, judges; and it is this "Self" back of which we cannot go, that is the Soul. The reason is but one of its powers, but to get beyond it, back of it, we do not come into anything misty and vague; we get nearer to the soul itself and that which is true and real. It is through the wrong use or the misuse of reason, dropping below it, not rising above it, that we lose foothold and go astray in the realms of phantasy. The worship of the reason as the supreme faculty of man, which has reached such proportions during the past century, has stifled the higher faculties, and has reached its *logical* conclusion in the theory of a mechanical, material universe. Yet there are powers in man that the reason cannot comprehend, and it is through direct knowledge, through feeling, through direct experience that we make true progress.

Let us put reason in its right place, as a valuable servant—not as master; and thus giving freer action to the soul's higher powers, the deeper knowledge of life will become open to us. But this freer action can come only through purification of the nature, which again follows upon the practise of altruism. William Q. Judge has said:

The power to know does not come from book-study nor from mere philosophy, but mostly from the actual practise of altruism in deed, word and thought; for that practise purifies the covers of the soul and permits that light to shine down into the brain-mind.

Question

Do Theosophists approve of pleasure?

Answer

(3) "I am glad I am not a Theosophist, for you Theosophists don't believe in pleasures," said a friend to me some years ago. Upon inquiring the cause of this remark, I found that this person had failed to get another friend, who happened to be a member of this organization, to go with her to "shoot the chutes"—this friend saying that she did not enjoy that exercise and therefore would not waste her time going with her.

"And you are all alike. Not one of you would go with me to shoot the chutes. You know very well *you* wouldn't go with me next Saturday."

"No," I said, "neither would I enjoy that form of pleasure, not because I am a member of the Theosophical Society, but because naturally my pleasure lies in an entirely different direction. If I cared for that particular exercise, I would gladly go with you; but I don't care for it, I shouldn't enjoy it at all. Besides, I have so many other things to occupy my time that I couldn't think of taking time to go with you."

"Well," said she, "that settles it. I shall never be a Theosophist; I shall never join your society, for I should hate to get so I wouldn't enjoy shooting the chutes and all similar pleasures. They are just life to me. Why, I wouldn't live through my week in school, if I didn't have something of the kind to look forward to for my Saturdays and Sundays. I'd simply die."

And she left, and for all I know she is still shooting the chutes; for she never came back to borrow any of our books and magazines as she had been doing for some time.

I believe a true Theosophist will enjoy all right pleasures that come his way; but I do not believe he would be utterly lost and miserable without them, or if circumstances or duty deprived him of them.

I believe a true Theosophist must have found within himself that fount of joy that will make of every duty, small and mean though it may be, a pleasure; that will keep him content and happy, though deprived of all that one ordinarily calls pleasures. He will feel himself to be a part of a great movement, that is destined to bring light and peace and joy to all the dark places in the world; and he knows that every thought he thinks may be of a quality to help on this work.

Because he has felt surging through his entire being, a grander, truer, deeper life, that is not dependent upon externals, but is born of, and nourished by, service to others, he will find his greatest pleasure in "making all humanity feel the grandeur of the life" he has glimpsed—or rather perhaps in being given the opportunity to help, ever so little it may be, in bringing about this result. M. E. B.

(4) A class of people, one of whose principal watchwords is "life is joy," may be pardoned for wondering that the question has been put. A Theosophist would not assume to himself the power to say, "This is right and that is wrong," but he might with truth assert that the theatre and the dance are too often pernicious agents; that much of the music the average person listens to tends to awaken the lower emotional nature; that too often social gayeties are demoralizing in their influence.

But he also knows that each one of these may become a powerful factor for good. Usually, pleasures and divertimento are sought to distract a mind that cannot endure its own companionship and has no other resources to fall back upon. Pleasures are many times an attempt to stimulate an interest in life through festivities and noise and laughter. Men are so separated, one may almost say opposed, in their interests the greater part of the time, that when they do meet in hours of relaxation, the reaction is so great they run to excess; then the music-hall, the ball-room and the athletic field present pictures far from elevating.

But Theosophists nowadays need not speak in the abstract, for they are even now living the life where these same pleasures play an important part—but what a contrast! The hour of pleasure becomes an hour for drawing still closer the same bonds of comradeship that knit us to each other and our purpose during the sterner duties of the day. Because we live on the right footing with each other and in mutual helpfulness, the spirit of emulation and jealousy that mars so much of social life is absent.

In the "Life Beautiful" one can imagine that there would be no line of separation between duty and pleasure; duty would be the joyous expression of our obligations to each other and to the law, and pleasure the duty we owe to our souls of expressing this higher comradeship in the purest way. S. L.

The Kaiser's Sermon

READING the Kaiser's broad and manly address to his sons on the Christian life, on courage, and on conscience, one cannot but look with respect upon the man who uttered it. And one would have said *a priori* that there could hardly be a living Christian who would quarrel with any of it.

And we should have been wrong. The Kaiser forgot to speak about eternal damnation, never mentioned predestination, did not tell the young men that their hearts were by nature black with sin, nor referred even once to blood and vicarious atonement. He merely told them to try to imitate Christ, to try to get Christ's touch on their hearts, to try to act as they thought Christ would wish, to take the living spirit of Christ as their conscience.

For these horrible omissions he is duly taken to task. Thus one religious journal, the *Kirchliches Volksblatt*, lodges its complaint that the Kaiser delivered himself only of generalities, dealt not at all in good old orthodoxy, and taught his sons an "undogmatical Christianity of works." One can imagine the tone in which the word "*works*" would be uttered. To try to take Christ as your living guide is nothing, a mere conceit of the flesh, leads to mere noble conduct and heroic life. *Dogma* is what we want, crusted dogma. STUDENT

"Discounting the Sayings"

SIX years ago, excavations at Oxyrynchus, a buried city of ancient Egypt, resulted in the discovery of some new sayings of Jesus Christ. Further research has unearthed further sayings.

This is very alarming. There is no knowing what uncomfortable things may come up, unsettling, dogma-shattering. Whole systems, edifices of creeds, may be set a-quiver and even laid low, if this sort of thing is allowed to go on.

But there is no way to stop it; Doctors Grenfell and Hunt seem to have no regard whatever for venerable apex-resting pyramids. All that can be done is to discount in advance the value of whatever may forthcome. The early indications of this little move are already to hand. In a recent criticism we read:

The hypothesis that newly discovered sayings ascribed to Jesus should be accepted as authentic will not bear scrutiny.

Why not? Because, among the numerous gospels and records afloat up to the end of the Second century, "only the four gospels now accepted withstood the criticism of the fathers and of the councils of the church." Charges of heresy were already flying about, and the four gospels were selected from among the fifty then extant because they happened to meet the doctrinal approval of the absolutely uncritically minded persons who made the selection. Says *The Am. Encyc. Brit.*, art. "Canon:"

The exact principles that guided the formation of a canon in the earliest centuries *cannot be discovered*. Definite grounds for the reception or rejection of books were not very clearly apprehended. The choice was determined by various circumstances, of which apostolic origin was the chief, *though this itself was insufficiently attested*, for, if it be asked whether all the New Testament writings proceeded from the writers whose names they bear, criticism cannot reply in the affirmative.

In other words, we know that these early fathers were even in error as to the very authorship of the writings which they so unhesitatingly affirmed to be inspired and to be the *only ones* inspired!

Most—and the most valuable—of those collateral records are lost. Discountenanced, mostly, by the early church, they disappeared; it may be, were suppressed; some, it may be, hunted up and destroyed or abstracted. And it may be that fragments of these are coming back in the sayings, anticipatory of the whole works.

Christ, at any rate, said of himself that he taught two doctrines, one for "the multitude," the other containing the "Mysteries of the King-

dom of Heaven." And Valentinus "is recorded as asserting that he had received an esoteric doctrine which Jesus imparted only to the most spiritual among his disciples."

It is that doctrine which we may expect to come out from its (forced) hiding place, and we think it will be found to fit exactly the needs of this hour.

STUDENT

Campanella, Poet and Patriot

AN age in which freedom has become an avowed ideal, ought not to be unmindful of Campanella, the Italian patriot poet who paid for his love of liberty by twenty-seven years of imprisonment. Campanella was born in 1568, two hundred years before Garibaldi, the man of action, gave material and national expression to the inspired dreams of the poet. Campanella wrote of freedom for a world which seemed almost incapable of either wanting it or of understanding it. His own land of Italy was ground between the millstones of Austria and of Spain and the national spirit which was one day to awake so triumphantly hardly stirred in response to a summons which it could not comprehend. How far in advance of his age was Campanella his poem of "The People" is a witness:

The people is a beast of muddy brain,
That knows not its own strength, and therefore stands
Loaded with wood and iron. The powerless hands
Of a mere child guide it with bit and rein;
One kick would be enough to break the chain.
But the beast fears, and what the child demands
It does, nor its own terror understands.
Confused and stupefied by bugbears vain,
Most wonderful! With its own hands
It ties and gags itself, gives itself life and war
For peace doled out by kings from its own store.
Its own are all things between earth and heaven;
But this it knows not, and if one arise
To tell this truth, it kills him unforgiven.

It is good to remember that Campanella eventually found in France the peace and toleration which were denied to him in his own land.

STUDENT

THE American Medical Association has drawn attention to the lists of killed and wounded which are the result of our Fourth of July celebrations. In 1903 not less than 4449 persons were injured upon that occasion. Of this number about 470 persons died, while the accidents involving loss of sight and of limbs were very numerous.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Friendly Advice from Ecclesiasticus

Blame not before thou hast examined.

Understand first and then rebuke.

Answer not before thou hast heard.

And interrupt not in the midst of speech.

Strive not in a matter that concerneth thee not, and where sinners judge, sit not thou with them.

My son, be not busy about many matters, for if thou meddle much thou shalt not be unpunished; and if thou pursue, thou shalt not overtake; and thou shalt not escape by fleeing.

JAMES CLAY, M. P. for Hull, who had traveled with Disraeli, as a young man, in the East, said to him, "Who would ever have thought that you would be Prime Minister?" "Who, indeed!" replied Disraeli. "But, as we used to say when we were in the East, 'God is great, and now he is greater than ever.'" — *Meynell's Life of Disraeli*

"You promised mother a letter. Write it now," is one of the mottoes on the walls of the Nagasaki Home for Seamen—a motto that, it is asserted, has restrained more men from going wrong than almost any other influence of the place.—*Exchange*

EVERY step that we take upon our way is a step that brings us nearer the goal, and every obstacle even although for the moment it may seem insurmountable, can only for a little while retard, and never can defeat, the final triumph.—*Gladstone*

SEARCH thou the path of the soul, whence she came or what way, after serving the body, by joining work with sacred speed, and thou shalt raise her again to the same state whence she fell.—*Zoroaster*

The Sunday of the Year

WHO shall deny the inherent virtue of an anniversary, and especially of the New Year's anniversary which we may perhaps call the Sunday of the Year? For one moment the world pauses and forgets the disfigurements which it has scrawled upon the page which is turned. For one moment it looks with something akin to hope upon the new page which is opened before it. Has that page been already filled by the unseen hand of fate, or what space can it yet hold for the illuminated records of good will?

In company with the whole world of Christendom we are inclined to

ask ourselves, what shall the New Year bring to us? The pointer upon the dial of futurity seems to veer now one way and now another, as though the winds of Nemesis were uncertain of their course. For these many centuries the world has asked itself that question, and the gifts which have fallen from the lap of destiny are with it yet, and so many of them we would fain forget if we only could. There need have been no uncertainty about the future. Seed-time and harvest have never yet failed, and when we sowed the wind did we not reap the whirlwind?

And so as the New Year is the season for all wholesome change we will ask ourselves no more what the coming year shall bring to us, but

Man's Part to Dominate Nature

rather we will ask what we ourselves shall bring to the New Year. Let us no longer be the recipients but the givers. Let us take the vacant places which are ours by right. Let us ourselves be the creative and the regenerative forces of nature. We will not sit and tremble and wait for the leaden shod events, but we will go out crowned with flowers to meet them, and however threatening they may seem we will charm them into benevolence and garland them into beneficence. We will not crouch and be subservient, but rather we will dominate and rule. We will link ourselves with the inevitable, and whatever things are inevitable shall be done by our will and not against it. No event shall trample upon us nor abash us. Every circumstance shall be our bondsman, and nothing shall anywhere occur which is not our opportunity. What matters it how many bolts shall come out of the blue so long as we have their direction? We will harness them into usefulness, and they shall be no more destructive. If all things are in motion and threaten the world with chaos, it is we who will set a tune, and with our music they shall eddy and whirl themselves into order and harmony. Let us ask for nothing better than an abundance of raw material, no matter how raw nor how rough, that we may the better show our craftsmanship.

Fate Will Capitulate to the Strong

And so the New Year shall find us better ready to welcome the achievements of men and to multiply their hopes into some kind of fruition. For these many centuries the poor worn Sisyphus of mankind has rolled the boulder to the mountain top only to see it once more crash down into the valley, leaving but bruises and ruin in its wake. There must be a great valor hidden somewhere in his hard heart in spite of the ages of folly which have encrusted it. Presently he will learn the secret of that ascent and the task will be done and the debt will be paid. That will be New Year's Day. And so upon this particular anniversary let us resolve to be no more submissive to events, but instead to be those events. The future after all holds nothing more terrible than ourselves, and if there be threats within the darkness they have gone out from ourselves to precede us. Men are the world builders, and in their aspirations is a great creative architecture, and the very stones which bruise their feet are the materials with which they may upbuild the stateliest city ever known on earth. If fate has made war upon humanity, then let humanity make war upon fate and prove that at heart she is a coward, terrifying only the weak and ready to wear any livery which is thrown to her with a strong hand. No matter the seeming with which events are clothed. We will be blind to everything except our opportunities, for truly nothing else exists.

Not then without some meaning, indeed not without some very strong and unswerving intention, we send a glad New Year to all the world.

STUDENT

Lord Beaconsfield and Reincarnation

HARDLY to be expected among the believers in Reincarnation would be Benjamin Disraeli, Lord Beaconsfield, yet he did so believe. He was once asked by a great church dignitary if he believed in "grace." "Yes," he said; "I believe in grace as I believe in fortune; and that we get just as much as we have earned for ourselves in past existences, or as others have earned for us in past eras." (Quoted from Wilfrid Meynell's recent biography of Disraeli.)

Incidentally one may perceive that his lordship had no very clear idea of "grace;" for he evidently regards it as something earned, either by ourselves or others. In the latter case it would come under the head of fortune.

But surely the idea of "grace" is that of something *not* earned—an act of pure favor; asked for, it may be, but not as earned recompense. S.

Revivals Good and Bad

IT is pretty generally admitted that revivalism is played out. We imagine there are few who will regret its disappearance.

Its methods are open, of course, to the obvious objections of unhealthy emotionalism, hysteria, and transience of effect with injurious reaction after more or less time.

But though these objections are well taken, there is one more serious than any. The avowed aim of the "revival service" is to arouse the people to "a consciousness of guilt;" that is to say, to awaken *fear*. And fear we take to be no proper part or basis of religion.

The revival sermons speak much of the "new birth." How does that event come about under their influence? It is effected by a method of violent and lurid contrast and antithesis. A series of vivid pictures are drawn, the pigments being "sin," "guilt," "hell," "wrath" and "judgment." There are a few minds in every audience instantly susceptible to the influence of words and tones confidently and hypnotically emitted. These minds succumb to fear at once, and the contagion spreads from them to the less susceptible, breaking down whatever healthy intellectual positivity they may have, so that they too succumb to the verbal pictures and to fear. The infective panic spreads and soon strikes down, with various degrees of completeness, all the persons present.

When the process has gone far enough, another keynote is suddenly sounded with equal power. Another set of verbal pictures are sent in pursuit of the first, obliterating and reversing them. The pigments now used are "grace," "redemption," "atonement," "salvation," "love." Minds rendered utterly negative and non-resistant by fear, with profound relief accept the new pictures, gladly label their fear "repentance," and confidently move under the soothing influence of the new hypnotic current. The whole process is effected below the plane of the intelligence, whose otherwise protective influence has to be paralyzed by the induction of fear. The key to the process is the presence of a multitude of people. There must be a nucleus of intellectually weak, emotional and negative people with whom to start the current.

There is no calling of men to the real "new birth" in this. Fear is *not one of the gateways* to divine life. Fear must be conquered, outgrown, not appeased. It is conquered only by stepping out of that part of the nature where it lives; then it begins to die. The world is humanity's college. What happens is a lesson, not a punishment; a light, calling our attention to some weak or dark spot in our natures; a problem set for healthy use of intuition and understanding; a task set to give us strength; never an act of vengeance; never rooted in "wrath." Let us rise like men to welcome all that comes or shall come, here or hereafter. By this attitude, we calmly step up higher than that region of our nature where fear skulks, where pain is felt. By this royal courage we learn to dwell forevermore in peace and joy.

We men and women who feel fear and suffer pain and love pleasures, feel also in our hearts from time to time the touch, the presence, of something higher. Having felt it, we can encourage it, stopping the rush of thoughts for a minute or so while we hold it and let it breathe throughout our being. Having learned to recognize it, we can create it—or so it seems, for it is always there—night and morning and at other times. At last it will become a constant presence, which is the true "new birth." It is no longer in the man, but the man himself.

But long ere that, it has begun to throw its light on every problem; what fear is, and where arising; the meaning of pain and of life itself; immortality and death. And it shows that its encouragement, as the days go by, eats up weaknesses and lusts and clears the whole path of life. This is the true revival service, and those who wish to serve their fellows will hold it constantly in themselves. We think that the pulpits of the not distant future will contain only such men, men whose egotism has utterly dropped off, egotism spiritual, intellectual, or physical. No other men will be tolerated there, least of all jugglers who play on fear. X.

The Lyell Glacier

THE illustration on the cover page of the NEW CENTURY PATH this week represents the Lyell Glacier in Alaska, which was named after the eminent scientist, Sir Charles Lyell. From its conformation and direction the Lyell Glacier presents many features of special interest and importance, and is much sought by tourists and scientists.

Religious Wars

WHAT is a "religious war," and how does it differ from an irreligious war? In view of the recent and present condition of eastern Europe these are questions which are often asked among western peoples to whom religion has become merely a custom, if not a fad, and who cannot readily understand how any nation can forsake the sublimities of money-making and actually engage in bloodshed for the sake of religion, and this not only on Sundays, but on week days too.

The question is at once answered by the fact that among eastern peoples, religion is not merely a custom nor a fad. However savage, fanatical, or erroneous their religion may sometimes be, it is none the less the one central and dominant fact of life, overriding all other facts and laying its impress upon every act and thought. The result of this is obvious. Religion becomes a line of division, not only in matters of thought and belief, but in every department of human activity. The votaries of opposing faiths do not merely differ in creed but in every circumstance of life. Every act of their existences brings them into conflict one with another and mutual relations become therefore almost impossible. A religious war is therefore prompted not merely by a bigoted desire to convert, but because the opposing forces are intolerable to one another.

All war, except the war undertaken for abstract justice, is hateful and abominable, whether it be a "religious" war or that other irreligious variety, so well known in Christendom, which has for its object pure and simple theft. The oriental wars of religion are perhaps more ruthless, more merciless, but that again is due to the fact that the opponents often place the same value upon their enemies' lives as upon their own, that is to say, no value whatever. They do not view death as a culminating catastrophe, but rather as an incident, nor do they conceive that life can be extinguished.

War is, as we have said, an abomination, but in our contemptuous perplexity at what is called a religious war let us remember that the same spirit of personal and intimate religion which produces these frightful excesses would, if it were modified, purified and restrained, make all war impossible, alike in the East and in the West. X.

Goblin Theology

WE are not prepared to admit that the theological views of a millionaire are likely to possess a greater measure of divine wisdom than those of ordinary people, but it is certain that they get a wider advertisement. To what extent this is due to their inherent value we may judge from the following gem which is being extensively reproduced throughout the press:

Imagine where you or I would have been if we had not been saved. What service then do we not owe the church?

It seems almost a pity to give further currency to mere silliness, but we fear it is representative of much that passes for Christianity among those who have never learned to think. One of the problems of the future will be to determine how it was ever possible for an institution to obsess humanity with a needless and foolish fear in order that it might pose as a deliverer from a danger which never existed. It is certainly regrettable that these goblin tales should still have the power to terrify grown-up children and that the all-pervading force of money should be used to give them circulation. STUDENT

The Talamancans of Panama

THE *Scientific American* gives an account of an almost unknown people inhabiting the Isthmus of Panama. These are the Talamancans, who occupy a few square miles in the mountains almost midway between the two oceans.

These primitive people remain in the same state as when Columbus came, the surrounding Spanish influence not having succeeded in either exterminating or changing them. They are peaceable and hospitable, live by hunting and domesticating animals, preserve their own language, and are almost unclothed. They build huts which are masterpieces of the art of thatching, and are ruled over by a king who is an absolute despot, and whose power is transmitted by primogeniture.

"The Talamancans present an instance of a nation without doctor, lawyer or priest," having only a functionary called a "sokee," a kind of medicine-man who combines the functions of all three.

Some Views on XXth Century Problems

The Money Kings and the Church

THE voice of the Rev. Frederick E. Hopkins may be as that of one crying in the wilderness, but if so, it is all the more welcome upon that account. Very great reforms have been begun by just such means. Mr. Hopkins thinks that:

In these days, when the church and the masses are in none too close touch, it is unfortunate for any one professing special gifts for spiritual leadership to create the impression that he is doing his best to be a millionaire.

Any man has the right to make money out of almost anything except religion.

The ministry of today needs to cry aloud and spare not that class of men who endeavor to ride a good cause to reach purely selfish ends. Unlimited religious, as well as political authority, is a menace. Self-denial in its best and highest expression means refusing to accept or profit by what one might possibly secure by the power of a selfish will.

It was once said by one not altogether without authority even in the Twentieth century, that it is not possible to serve both God and Mammon. Some of our churches—by no means all—have indeed lived the strenuous life in order to show that it is possible to render this double service. An increasing popular neglect ought now to show them that even the wealth of civilization cannot repeal Divine law. The church which seeks to flatter the world by imitation incurs the contempt of the world, which, however sordid it may be, respects a high ideal and applauds its pursuit. The churches will never fully regain their lost position until they pronounce an eternal divorce between themselves and money-getting; but even the ordinary system of salaries, bad as it is, is harmless in comparison with the mercenary evils against which Mr. Hopkins protests so well. The all-providing law of God, which cares even for the sparrows, can never be successfully preached in churches dependent upon the money market.

STUDENT

The Power of Self- Control

A SPEAKER at a recent Sunday-school meeting in Chicago was entirely right in saying that the ancient Greeks regarded patriotism as a part of religion and no better idea could be given to children than that of responsibility for their country and city. In dealing however with the alcohol question, the speech was perhaps not quite so happy. This question is not to be solved by government regulation. Very few social questions can be solved in this way. Government regulation may often be necessary as a palliative, as an aid, as a temporary substitute, but we must eventually rid our minds of the superstition that government can perform our private duties for us. A government is after all but an agent or representative of the people, it can but voice their will and express their aspiration. The alcohol problem can only be solved by the inculcation of self-restraint. Government action may be useful in aiding those who have lost the power of self-restraint, but if we will but take ourselves in hand in good time the coming generation will not include any such poor unfortunates who have lost free will, which is the essence of our human nature. Sunday-school teachers have a great opportunity as well as a great responsibility. Let them cease to teach so many unimportant trivialities, so many creeds, so many things which children cannot believe, simply because they are not true. Let them teach their charges the habit of self-control and self-denial, not only in respect to certain evils such as alcohol, but because self-control and self-denial are in themselves virtues, irrespective of their application. It is within the power of teachers to so influence the children under their charge that they will go out into the world and into the midst of all temptations absolutely proof against evil. How many teachers there are whose hearts would thrill with joy if they could but realize their power and break away from tradition and custom. A child who can repeat the names of all the kings of Israel and their dates is just as likely to lead a vicious life as the child who never heard of them, but the child who has been taught to discriminate between the higher nature and the lower will go out into life thrice armed against all moral enemies. Our Sunday-school teachers have intelligence and the power of thought, and best of all, very many of them have devotion. Let them use these powers and generations to come shall bless them.

Another Product of Civilization

A YOUNG man, 20 years of age, has just been arrested in New York on his discharge from Bellevue Hospital. This product of Christian civilization has been in confinement practically since his infancy, and the report naively states that he is supposed to be now insane as a result of the solitary confinement which he has undergone. The English language seems to lack the necessary vigor with which to adequately describe the cruel stupidity of which this is one illustration out of very many. We first of all allow a child to become a criminal, and in order to remedy this colossal folly we turn the criminal into a criminal lunatic. We wish that civilization had a collective pair of eyes which it could turn understandingly upon its handiwork. All that now remains for us to do is to take care of this poor ruined human being for the rest of his life which will probably be a long one. An estimate of his cost in money to the community would be interesting and enlightening. We have applied to his case our whole machinery of reformatories, hospitals, policemen, judges and gaols, and the net result is a criminal lunatic. The expenditure seems scarcely justified by the result. X.

Child-Labor and National Conscience

CHAUNCEY B. BREWSTER has preached a sermon in Boston that ought to touch the national conscience. His subject was child-labor, and he is reported as saying:

These reputable men who are receiving their dividends from mills, making money out of child-labor, will meet with a day of reckoning, as surely as there is a curse on money coined out of flesh and blood; out of the aching, failing flesh; out of the thin, impoverished blood of little girls of tender years, who have their rights to pure air and sunshine.

The churches have been by no means conspicuous in their denunciation of this scandal, but Mr. Brewster has done what in him lies to remove a reproach which was lying heavily at their doors. We should have supposed that the protection of children would be recognized as one of the most sacred duties that would fall to the lot of those who profess to follow Christ. We hear a very great deal about the forces which are supposed to menace Christianity; but the charge that the churches are indifferent to the fate of thousands of stunted, tortured and murdered factory children, will weigh more heavily against them than all other accusations put together.

STUDENT

White Man's Burden in Philippines

THE white man's burden is being cheerfully carried in the Philippines. Two years ago there were less than two hundred native instructors who were qualified to teach English. There are now more than two thousand. Criticism of American methods is, of course, only to be expected, the race of critics being not yet entirely extinct. We must, however, confess to some sympathy with the ideas of Dr. A. E. Chamberlain who believes that,

To educate the Filipinos, without using to the full their language and their literature, the thousand-fold stimuli of their environment, their racial temperament and ideals, their past history and natural ambitions for the future, is to stunt them in body, mind and soul.

Enthusiasts generally use strong language, sometimes excessively strong language, and we do not believe that there is any likelihood that the Filipinos will "be stunted in body, mind and soul." It is at the same time essential to remember that every nation has its individuality, which is its priceless possession, and that true education consists in developing that individuality along its own lines. The difference between nations are not only geographical, and it would be as disastrous to try to produce uniformity among the world's peoples as to attempt to force the keys of a piano to produce the same sound. Americans are Americans and Filipinos are Filipinos, and the charm is in the legitimate and natural difference. Let us not try to turn the Filipinos into Americans, but rather into good Filipinos, while we ourselves relax no effort to become good Americans. There is still some small room for progress. STUDENT

Art Music Literature and the Drama

The Irish Harp

THE harp has ever been identified with celestial harmonies, and the rays of truth now permeating man's earth-bound conception of the soul, are beginning to clear away the mists that have for ages dulled his hearing and clouded his vision. Once more the strains of the true immortal harp are sounding soft and clear, waiting to guide him back again to his long forsaken ancestral home.

In ancient legends we read of the harp of Apollo, "the lyre of the radiant god," and the seers of all times and of all peoples have revealed to us that it is the chosen instrument of the gods, of those "redeemed from the earth," who have attuned themselves to receive their divine birth-right in the kingdom of heaven within.

But it is from the legends of the glorious sun-god Apollo, that we learn the true nature of the heavenly harp. Its strings are the magic notes of the soul—compassion, love, unity—that vibrate their silver-toned radiance to the heart of man, ever calling him to claim his divinity. In the far past, when humanity began to wander from its birthplace—realms divine—the memory of those living, undying strains sought to create its counterpart on earth, and one became "the father of all such as handle the harp and organ." The most ancient nations have used the harp in their religious ceremonies, and in Erin it has ever been sacred.

Erin's history relates many wars between the gods of Light (the Matha de Danann with their god, Dagda), and the gods of Darkness (the Fomorians, under their god, Lethra). After one of these mighty battles, at which the Fomorians were defeated, the sword of the Lethra fell into the hands of Ogma, a divine champion warrior.

The Fomorians compensated themselves for the loss of this sword by carrying off the harp of Dagda. Lug, the Dagda, and Ogma went in pursuit. When the chiefs of the Fomorians thought they had left the battle-field far behind and were out of danger, they made a halt for the purpose of refreshing themselves. They were gathered together in the banqueting hall, and had hung the harp of the Dagda upon the wall, when in rushed Lug, the Dagda and Ogma. Before they had time to get to their feet the Dagda called out to his harp to come to him. The harp knew its master's voice and leaped straightway from the wall to meet him, killing nine men on its way; and it placed itself in the god's hands who made wonderful music upon it. At that time there were three strains, the execution of which was the distinguishing mark of a great artist. The first produced sleep, the second laughter and the third tears and lamentations.

First of all the Dagda played the third strain, and there was great weeping and wailing among the Fomorian women. Then he played the second, and the women and young men burst into laughter. Then he played the first strain, and the women and children and the warriors fell into a deep sleep. Thereupon Lug, the Dagda and Ogma, seizing the opportunity, went out from the hall and returned safe and sound to their own people, without receiving wound or blow from the Fomorians, who had sought their lives.

In comparatively recent times the music of the Irish harp has filled with inspiration the hearts of the Christian warriors in their Crusades.

When we know the antiquity of its origin we better realize the deep significance of the harp, and when we see it, the emblem of Ireland, speaking to us of the deeply poetic and richly musical nature of the Irish people, whose history as a nation is so full of pathos—we pause—and listen.

IRISH HARP

FRAGMENT

by SIDNEY LANIER

A VELVET flute-note fell down presently
Upon the bosom of that harmony.
And sailed and sailed incessantly.
As if a petal from a wild-rose blown
Had fluttered down upon that pool of tone
And boatwise dropped o' the convex side
And floated down the glassy tide
And clarified and glorified
The solemn spaces where the shadows bide.
From the warm concave of that fluted note
Somewhat, half-song, half-odor, forth did float.
As if a rose might somehow be a throat.

Empress and Musician

THE following story is related of Maria Theresa, Empress of Austria. Glück, while Maria Theresa was still Archduchess, was a young man, and his compositions, just beginning to be known, were the cause of more or less jealousy and ill-natured criticism. At one time a certain trio from one of his operas was to be rendered by three well-known singers, one of whom, at the last moment when the audience had assembled, refused to sing, declaring that the part would ruin her voice.

To the audience this was a disappointment, but to the young composer it was a severe blow. Suddenly a young lady arose, and, accompanied by her husband, advanced to the piano. Addressing the two other singers, she said, "My husband and I have studied this aria, and he thinks that I sing it fairly well. Will you sing it with me?" The singers smiled. They were professionals and the young lady was unknown. The young lady hesitated and then said, in a lower voice, "I'm the Archduchess Maria Theresa." That made a difference. They sang, and, so it is said, a more charming performance of that beautiful aria has rarely been heard. At the conclusion the Archduchess said to her husband, laughingly, "Now, my dear, *now* are you convinced that I could earn my living as a singer?"

It was Maria Theresa who, as Empress of Austria, later gave her patronage to the "wonder-child" Mozart. The tiny Wolfert was very fond of her and said at one time, "I love her. She kissed me just like mother."

Preeminence of the Folk-Song

IT has often been remarked that many of the greatest composers have used folk-songs in their compositions, thus attesting the value of these melodies; also that few if any great composers have succeeded in imitating folk-songs. An explanation given is that the folk-song is not composed, but is a product of gradual growth, being elaborated and added to by successive generations; a process which a single composer can scarcely emulate. To this we might add that the folk-song, being the work of many people, expresses a wide and impersonal spirit, whereas the work of a single composer is often narrowed and tinged by his personality. In fact, the folk-song is the voice of a whole people, and the voice of nature speaking through her denizens. In the folk-song, as in all great works of art, simplicity and beauty become identical. Elaboration and complexity too often conceal a deficiency of essential virtue. Egypt is being made

in a number of European countries to collect and preserve the folk-songs, many of which, except for this precaution, would either disappear or hopelessly degenerate. Just in so far as these folk-songs have sprung from the real heart-life of the people who gave them origin, just in so far as they reflect that which is best in human nature, are they inspirational and true. A few melodies which are dignified by that name are destined to disappear of their own coarseness and inanity. But the true folk-song is a witness and a record that no nation can afford to lose.

In ensemble instrumental work, though individual excellence is a *sine qua non*, individual prominence is intolerable. One of the beauties of such work is the blending of tones. This forces each player to act as an integral part of a whole and coerces him, for the time being, into some measure of self-forgetfulness and harmony. He must bear his own part but he must relate it to the other parts. In choral work these points are still more pronounced, which explains why in both orchestral and choral work, but particularly in the latter, the resultant is often higher than the average.

H. T. P.

"LIFE IS A PROGRESS AND NOT A STATION"

Julia Hecht

"BUT, seriously, I haven't any history," Miss Hecht smiled; "the most important part of my life has been spent at Point Loma, and the last five years have been years filled with the joy that must come from conditions which make possible an ideal musical life."

"But before you came to Point Loma—tell me about your musical study."

"My musical life differed little from the lives of many of my student friends," said Miss Hecht, "until it was darkened by a great disappointment. My health broke down and my cherished dream of music-study in Europe had to be given up. But what seemed to me then such a disappointment was really the greatest blessing. Except for that I should not have come to Point Loma so soon, perhaps not at all. And I am convinced that nowhere else could I have entered into a musical life on the broadest and most spiritual lines."

Miss Hecht's girlhood was spent in the pretty little village of La Porte, Indiana. Music has always been her passion, and she could sing before she could talk. Most of her musical training was received under Carl Wolfssohn, one of the most eminent teachers of piano in America, and before coming to Point Loma she several times played in public with marked success. Great was the teacher's disappointment when Miss Hecht, whom he considered one of his most promising pupils, broke down from nervous overstrain and was obliged to give up all musical work for a number of years. This occurring while she was contemplating a trip to Europe to continue there the study which she early determined to make her life-work, was a severe blow to both pupil and teacher. But it proved to be most fortunate. In 1899 she came to Point Loma, hoping to regain her lost health, and that journey proved to be a turning-point in her career. Shortly afterward she accepted her present position in the Isis Conservatory of Music.

"And your health?" This time the questioner smiled, for Miss Hecht is the picture of health. "You can see for yourself," was her reply. "I found here, of course, the ideal conditions on physical lines, for nowhere can this climate and this ozone-laden air be equaled. But what is of vastly greater importance, I found here all the conditions necessary to a musical life of the fullest, most ideal description. When I came here I was in the depths of unhappiness, almost despair, feeling that I should be grateful, indeed, if I could recover my health. Not only was that restored, but something a thousandfold greater has been added in an ideal musical life."

Miss Hecht's work with the Raja Yoga children is worthy of notice. She has had the advantage of Katherine Tingley's direction and advice, and the results are little less than marvelous. To speak of but one instance—that of a child of seven years who plays difficult compositions from Clementi, Beethoven, Schubert, Mozowski and other composers. And these selections were not merely ground out as exercises might have been. Some of them were played from memory, and with all the *rappor*t and delicacy of shading that characterize genius. I have heard many "child-pianists," but never one whose playing had, quite outside of the matter of advancement, that indescribable artist touch. I have never seen a child in the dozen musical conservatories with which I am familiar, who preserved, in connection with such unusual ability, the sweet unconsciousness of pure childhood. "It is the Raja Yoga training," said Miss Hecht. "I could not do one-half so much for the children except for that."

"Is it possible," I questioned, "that the music schools of the world cannot achieve such results?"

"I would not say that they *cannot*," replied Miss Hecht. "I only know that they *do not*. And yet," she continued, "when you consider the conditions under which the music-study of the world is carried on—how the principal schools are located in the midst of the noise and con-

fusion of great cities, how the very life the students are compelled to lead keeps them under constant nervous strain—one wonders not that the teachers do not accomplish more, but rather that they accomplish so much. Many gifted lives are wrecked year after year just because of the false conditions under which students try to carry on their musical work; and many, who do not utterly break down, struggle through life handicapped from the same cause. My experience with the Raja Yoga children has convinced me that there is more musical genius in the world than we realize, and if musicians from their childhood could study in an environment which was a help rather than a hindrance, I believe that before long all humanity would spring into a new life." E. H. V.

Enid Yandell, Sculptor

IT is estimated that there are, in the United States alone, something like one hundred young women who are professional sculptors, a statement which indicates that one more of the barriers which have shut women out from their possibilities has been broken down. When Harriet Hosmer studied, in the early days, she stood almost alone. Today the woman sculptor finds a comradeship among her sisters that has meant much for her work.

Enid Yandell is a member of this brilliant and younger group. She early gave such evidence of artistic ability that she was sent by her father, Dr. Yandell, one of Kentucky's most famous surgeons, to the Art Academy at Cincinnati. From there she went to the Art Institute, where she became a pupil of Lorado Taft; later to New York, then to Paris. As a pupil of Rodin and of MacMonnies for three years she had unusual opportunities, for Paris is the inspiration of all art students, and she was fortunate in choosing her teachers from that younger and remarkable group whose work has been such a distinct advance over that of their predecessors. Miss Yandell's most remarkable work in point of size is her figure of "Athena," executed for the Tennessee Centennial Exhibition at Nashville. Forty feet it measures from tip to base, and it was completed in the short space of ten months. It is a copy of the Louvre Athena. The work was done in Paris.

But Miss Yandell's most remarkable original work, in some respects, is perhaps the Bajnotti Memorial Fountain, a \$10,000 commission. It is a large central group of figures representing "The Struggle of Life," depicting the struggle of the soul to free itself from the entanglements of its earthly environment and its final triumph over the snares of the intellect and the clamor of the passions. Life is symbolized by a woman, the soul by an angel and the earthly influences by three draped male figures.

Miss Yandell was one of the three women who received medals from the directors of the Chicago World's Fair, chiefly for her sculpturing of the caryatids of the Woman's Building.

Less imposing, but more remarkable in point of design, is a tankard designed by her, the original of which was sold to Mrs. Harriman and a copy of which is in the Vanderbilt family. Miss Yandell is passionately fond of music and has said that the idea of this design came to her while listening to the music of *Les Trois Serpentes*.

Among portrait busts by Miss Yandell are those of Emma Willard and the late Augusta Holmes, of Professor Ricker, of Chancellor Garland of the Vanderbilt University and of John G. Carlisle, Baroness de Brunecker and Governor Goebel of Kentucky. The work upon which she is at present engaged is a large figure of "Victory" for the St. Louis Exposition.

Miss Yandell is a sweet-faced young woman, yet with strong and well marked features. She impresses one at first glance as being possessed of unusual strength of character as well as common sense. In Paris, as elsewhere, she was a favorite with both teachers and pupils. For many years she has exhibited in the Paris Salon although her studio is at present in New York.

A. W. H.

Miss Ward, Sculptor

MISS ELSIE WARD, a young sculptor, has recently won the \$3000 prize for the design for the drinking-fountain to be erected at the St. Louis Exposition, and has received also the commission for a large group representing Daniel Boone and other characters of historical pioneer days.

Miss Ward is of Southern parentage, her ancestors being from Virginia and Kentucky. Like so many who have achieved marked success, she was born on a farm and grew up with "animals and other children," very much as a farmer's daughter usually does. But on that farm was a rich clay deposit. The child early discovered it and began modeling it into the semblance of her beloved pets and would-be portraits of her friends. By a fortunate chance her parents removed to Denver, Colorado, where she had the opportunity of studying under one or two famous European artists who had come to that city for their health.

One of them advised her to enter the Art League of New York and, in no long space of time, with a great deal of courage and very little money, she made her way to New York and began the study with St. Gaudens. Nothing could discourage her. She took care of the modeling room and looked after the supplies to help pay her expenses, and she studied unceasingly.

Those who know the joy that comes to such a teacher as St. Gaudens, when a really promising pupil chances to enter his class, know that Miss Ward received every encouragement and every aid from him. Before long she had won the first prize in a student contest. A little later she studied with Daniel C. French, and during her last year at the Art League she was made a member of the Board of Control.

At last, some five years ago, Miss Ward managed to go to Paris. Her funds were limited, but not so her aspirations and her determination. She remained there a year, winning honors, then returned to America, and at St. Gaudens' request entered his studio in Windsor, Vermont, becoming his pupil and assistant. At the Charleston Exposition she received a prize for a Huguenot group, and later another prize for the group "Mother and Child."

Miss Ward is in earnest. To her art is not a pastime, nor yet a mere enterprise, still less a means of gaining wealth or honor. To her it is something sacred, the expression of all that is best and highest in her nature.

With so much bad art in the world and so many artists who frankly own to motives that are not the highest, it is indeed refreshing to find a young artist so sincere and true in her work as is Miss Ward. The hunger for fame and the desire for the dollar are the two diseases which are the curse of the world of art today. Miss Ward appears to stand securely beyond the blight of either.

MISS JULIA HECHT

of the Isis Conservatory of Music, Point Loma

A Woman Scenic Artist

AMONG the scenic artists of New York one of the most successful is Miss Grace Wishaar, formerly of Seattle. Her success did not, however, come without a struggle. She found a wall of prejudice against woman's work in that profession and encountered a second wall of professional jealousy. From theatre to theatre she went, looking for a chance to show the manager what she could do. Time after time she was refused. At one place all the men who were employed rose in a body and told the manager they would leave if he employed a woman! At another place, where some forty scenic artists and their assistants were engaged, the manager told her frankly, "I would not dare to employ a woman. The men object."

One, however, Mr. Dodge, said, "I will give you a trial." So into his studio Miss Wishaar went, and her work was so satisfactory that she has had more work offered her than she could do ever since. Miss Wishaar is a water colorist and a miniaturist as well. Her miniatures are frequently exhibited, bringing favorable notice. But the scenic work is her delight, and her career began when she was but sixteen. It appears that a certain manager in Seattle, her home, needed a "drop curtain" and Miss Wishaar offered to paint it for him. So successful was she that she soon opened a scenic studio in that city, and later went to New York.

It is interesting to see the slender young woman working way up on the "paint bridge," close to a canvas so huge that one could not possibly see the whole of it at the artist's close range. The departure is a new one. Whether others will follow in this young woman's footsteps remains to be seen. The work is laborious in the extreme, often unpleasant, yet withal fascinating and, to one who is really competent, always a labor of love. E. H.

Annie Laurie

FEW are aware that the "Annie Laurie" of bonnie ancient Maxwellton really existed. So much of romance has clustered about the name that it has taken its place beside the "Chloes" and "Marys" of the old Stuart poets and is usually regarded as fictitious. Yet, far

from being a myth, Annie Laurie was a daughter of the old Scottish family of Cochrane. There are those today who declare that she lives again in the person of her descendant, Lady Grizelle Cochrane.

Among the portraits in Maxwellton House in Forfordshire today hangs a picture of "Annie Laurie," a beautiful face framed in golden hair, whose wonderful hazel eyes make it altogether one of "the fairest that ever sun shone on." It might be taken for a portrait of Lady Grizelle herself. Not long ago she was requested by her family to have her portrait painted, that it might be hung beside that of her famous ancestress. She laughingly replied, "It would be absurd! I was painted once, and though that was many generations ago, surely once should suffice."

NEW ORLEANS, it is said, is the first city to erect a statue in honor of a woman. The statue stands in one of the public squares and is that of Margaret Houghery, a woman whose best garments were a cheap dress and shawl, and who never had on a pair of kid gloves in her life. She was ignorant, as well, barely able to write her name, but no one in the city was a greater benefactor to the city's children or to the poor. From the first, she divided her money with poor children, often giving all she possessed to some family that was in need, and at her death she divided her entire fortune—not a small one—between the charitable institutions of the city. She started without a dollar or a friend, but made a fortune in the milk and bakery business. New Orleans both honors and loves her memory.

MRS. JOSEPH PENNELL will write the authorized biography of James McNeill Whistler, the artist. All of his papers and letters have been given over to her. Mrs. Pennell, as Elizabeth Robins, made a name for herself as a writer, and since her marriage to Joseph Pennell she has continued her work in connection with his. Mr. Pennell is a well-known artist, better known perhaps, from his magazine illustrations than from his sketches. Together, Mr. and Mrs. Pennell have written and illustrated several volumes besides numerous short articles. Both have traveled extensively, particularly throughout southern Europe.

Brief Glimpses of the Prehistoric World

Archeology
Paleontology
Ethnology

Archeology and the Glacial Drift—New Discoveries

MR. FRANCIS W. Doughty of Brooklyn, has made a discovery which is likely to have far reaching effects upon scientific thought in its relation to the age of human life upon the globe. He is, of course, fiercely attacked by those to whom theory is more sacred than fact, but the evidences by which he is fortified seem to be of remarkable strength.

For a long time Mr. Doughty has been engaged in the study of the glacial drift which is found so abundantly throughout America, and of course elsewhere. He has paid special attention to the glacial drift of which Long Island is composed, and in the course of his examination he has found a large number of curiously shaped stones, ordinarily known as clay iron stones, which he believes to have been shaped by human agency.

How far he is justified in his supposition our readers may themselves judge from the illustrations of some of these stones which we reproduce. Mr. Doughty's contentions have been scientifically summarized as follows:

(1) There are to be found in the Drift stone implements of known and unknown patterns; (2) tablets of stone of various shapes, upon which clay has been spread, molded and painted with quaint pictures, groups and scenes; (3) that the so-called clay-iron stones of the Long Island Drift, known mineralogically as hematite, limonite and siderite, and regarded as natural concretions of clay and iron, are, on the contrary, artificially prepared, and of the highest archeological interest possible.

These clay iron stones may be described as consisting of a center of dark red clay which has been coated with other layers of clay of a different nature and color. Both the center and the exterior layers show signs of human manipulation and sometimes the impress of human fingers. Mr. Doughty is himself skilled in the manufacture of artificial stone, and his opinion upon this point is therefore of special value. He has, however, submitted the stones to other authorities who unanimously agree with him in attributing them to human agency.

The tablets are usually of argillite which has been supposed to be of natural formation. Mr. Doughty contends that it is manufactured, and that the clay has been artificially placed upon the slate in various colors and has then been molded into groups and scenes. Not only are the pictures themselves to be found but also the molds with which they were made. The animal figures include those of the turtle, horse, cow, pig, sheep, fox, etc., as well as the now extinct mylodon, and megalosaurus. A large number of them are pierced in such a way as to invariably bring the head to the top when suspended. Mr. Doughty has thousands of these figures and they are open to the inspection of all who are interested.

That a discovery of this nature should meet with opposition from a certain kind of scientist is only to be expected. If these objects are of human manufacture, then man must have existed in America in pre-glacial days, in the Tertiary period, that is to say, before those animals had been evolved from which he himself is supposed to have sprung. For this reason we are told that the figures represented in our illustration, as well as thousands of others which have been collected, are the unaided work of nature and due to the ordinary processes of nature. Not long ago we were told the same thing of the gigantic fossils from which we have now learned so much.

STUDENT

Archeology in California—Branch of National Institute

IT is to be noted that a San Francisco Branch of the Archeological Institute of America has just been organized and will get to work without loss of time. The parent Institute was founded in 1879, and has now over 1200 members. Its work has been varied in nature and always valuable.

We believe that California is destined to be the most important center in America for archeological work, if, indeed, it does not already occupy that position. Californian energy has not occupied itself only with American research. In the domain of Egyptian exploration, Californian scientists are perhaps almost as well known as any others, and Californian museums are already rich in the silent records of Egypt's past.

The increase of organized archeologic work in California will certainly awake a popular interest which can easily be turned to good account. There are large numbers of persons in California whose business it is to travel much in those parts of the State where interesting discoveries may reasonably be expected. The existence of an organization will be an encouragement to such people to promptly report and to preserve whatever of seeming importance or interest may come under their observation, and in this way the science of archeology may be effectively and willingly served by those who have not themselves the leisure to do more than cursorily study a most fascinating science.

Egyptians Used Stenography Ages Ago

WERE one asked to name an obviously modern invention, we suppose shorthand would come into one's mind as soon as any.

Not at all; they had the art in old Egypt! A papyrus has been discovered by Dr. Grenfell containing a contract for the teaching of it to a slave boy. The business arrangement was quite modern: 40 drachmas were to be paid to the teacher in advance, 40 more on the boy's showing of progress, and another 40 when he had reached proficiency.

Any one who has ever studied Egyptian will not wonder that they had a way of simplifying its complexity. The wonder would be rather in the fact that having invented a shorthand, they ever used anything else.

Egypt in America—Remarkable Find Near Birmingham, Ohio

WE reproduce a photograph of a remarkable discovery which has been made near Birmingham, Ohio. It consists of the head of an animal carved from stone. The body is probably somewhere in the neighborhood, and the finder is excavating in the hope of unearthing it.

The workmanship and design of this carving bear a remarkable resemblance to that of Egypt, as will be at once seen by comparing it with Jupiter Ammon or Zeus Ammon, of which we produce a rough illustration. Another notable feature is that the stone of which this figure consists is found nowhere in the neighborhood, and must have been brought from a distance.

We believe that the discovery will be one of very many which will establish the connection between America and Egypt. To establish the connection will be the first step. The second step will be to show that Egypt obtained both her civilization and her wisdom from America, and not America from Egypt, a contention which has been made and for which, we fully believe, time and research will surely bring ample justification.

Nature and the Poet—Matthew Arnold's Miscomprehension

MATTHEW ARNOLD'S poems on Nature present to us a picture of a strong man intensely desiring to know and to understand and yet not daring to reach forth and to take. He was the product of the materialism of the day, which looked only at externals, and he dared not obey the Soul within him, whose imitations he recorded but would not accept.

"In harmony with Nature?"
Restless fool,
Who with such heat dost preach,
What were to thee,
When true, the last impossibility—
To be like Nature strong, like
Nature cool!

How few of us there are who can look straight at Nature and understand her! At the best, we gaze upon our environment as upon some strong and selfish organization with which we must be ever in conflict. We divide the universe into man and Nature and declare an antagonism which exists only within ourselves. When the true poet is born once more among men, he will interpret for us a thousand voices to which we are deaf, or to which we listen only in consternation; he will read for us the riddle of a thousand pictures, which are now only sensuous and whose meaning and message we exclude from our real selves, to which alone they speak understandingly.

Matthew Arnold's poems are almost dreary in miscomprehension, which the sympathy of a moment would have dispelled. He seems to want Nature to stand still and to explain herself, to tell him why she is strong while we are weak; why she seems to taunt us for our infirmity.

Nature will not respond to intellectual questionings, but there is no boon which she will not give through the doors opened by our sympathy. Power and peace are hers to give, and by our imagination we break the barriers which are our weakness, and her strength will fill us with a new vitality straight from the fount of all life. It is not Nature who goes upon her way unheeding and unknowing. It is we who stand upon one side with our self-communings and our futilities; and who will not share in the wisdom which is hers? Calm, indeed, is she; but it is the calmness of knowledge, the tranquillity which comes from obedience to law, with goal assured and path illuminated. The soul of man is the soul of Nature; but we hide away our divinity, gazing out with unseeing eyes, and knowing naught of the realities behind the changeful ghosts which we mistake for Nature.

Ah, child, she cries, that strife divine,
Whence was it, for it is not mine.
There's no effort on my brow—
I do not strive, I do not weep;
I rush with the swift spheres and glow
In joy, and when I will I sleep.
Yet that severe, that earnest air
I saw, I felt it once—but where?
I knew not yet the gauge of time,
Nor wore the manacles of space;
I felt it in some other clime,
I saw it in some other place.
'Twas when the heavenly house I trod,
And lay upon the breast of God.

There is no strife in Nature, as we understand strife—nor is there strife in the Soul of man. The "heavenly house" is not a far-away beginning nor an unseen ending, and "the gauge of time" and "the manacles of space" are but the futilities which we ourselves have fashioned, in order that having eyes we may see not.

STUDENT

The Higher Education of Corn—Scientific Selections

IT is now some time since work comparable to that of Luther Burbank has been done upon corn. For that matter, the very existence of corn itself, as of all the other cereals, testifies to the fact that unnumbered ages ago humanity itself followed some such methods of selection. For corn, rye, wheat, and the rest, are all of them only modified grasses (*Gramineae*), grasses in which the originally minute seed has, by selection and cultivation, been raised to abnormal size and importance. It would be interesting to know how long corn, left to itself, would require to degenerate into some much simpler grass form.

Of corns there are more than three hundred varieties already, and so there was plenty of room for the special experiments to which we refer. Corn, as food for man and animal, is wanted in various conditions. Its constituents are oil, starch, saline matters, and protein or nitrogenous stuff. And the protein is itself of two kinds: that contained in the germ (the analogue of the yolk of an egg), and that of the rest of the kernel (analogue of the egg white).

It is now found that by scientific selection and breeding, each of these ingredients can be specialized. At any rate it has been done with the starch, the oil, and the protein. And if desired, either product could be got at the expense of the other. This has, of course, nothing to do with the fact that modern methods enable us to separate these ingredients in the gathered grain, whatever their proportions.

It does not seem to be recognized by the corn-growers that for human food it is the *germ* that should be specialized and enlarged. Its starch is little; its oil is thirty-five per cent; and its protein is very rich in saline matters. It is in this that the seed life is highest; it is the center of growth; it is, as it were, the electric battery; it is to the whole grain as is the nucleus to a cell. Hence the large saline element; hence the minute amount of inert starch.

So far, no corn has been produced that will stand any frost whatever. Will not some one "take hold" and produce a variety that will not be open to this objection?

Considering all such plant-work as this, it would certainly seem probable that some one of today who suddenly got the power of looking forward a hundred years, would hardly recognize a large proportion of the contents of the flower and fruit gardens of that date.

STUDENT

LOMA-LAND POMEGRANATE

The Mystic Fruit of the Southlands, the Pomegranate

PROBABLY our Northern readers will be interested in this picture of the pomegranate flower and fruit. It is of special interest because of its importance in the symbolism of the oriental countries. In the Old Testament it is frequently referred to, and the likeness of it was to be freely used in the decorations of the Jewish tabernacle and the robes of the priest. This is probably due to the many mystic numbers supposed to be found in the parts and proportions of the flower and fruit. The blossom is a beautiful orange-red, about an inch and a half long and an inch across. The fruit is as large as a small fist and the seeds are the edible part, each being surrounded by a little sack of red pulp, which looks somewhat like candied cherries. There is an indescribable look of dignified completeness about the ripened pomegranate which makes a person good-natured only to look at it.

STUDENT

A good horse, when he hath found a true master, rejoiceth greatly; exulting in his fullness of strength and yearning for action he obeyeth with eager vehemence; but a reluctant mind maketh a slow foot.—*Chiron, the Centaur*

Universal Brotherhood Organization

Central Office Point Loma California

A PHENOMENALLY large audience assembled at the Isis Theatre on last Sunday night, when a number of the Raja Yoga children were announced to be present. The songs which they rendered and which were of unusual excellence, were as follows: "Lost Chord," by Sir Arthur Sullivan; "The Harp That Once Thro' Tara's Hall," and "Kathleen Mavourneen." The singing of these children seems to give an increased pleasure upon every occasion, and the crowd which entirely filled the Theatre were not backward in expressing their appreciation of the musical treat which was afforded them. The first paper was in the form of a "Christmas Greeting from the Raja Yoga School," and which we are able to produce as follows. It was admirably read by little Margaret Hanson:

"The children of the Raja Yoga School greet you all tonight with love and kind wishes. Christmas time always brings so much happiness to the little boys and girls. We Raja Yoga boys and girls are busy for weeks before, making gifts for other children who have not yet shared all our joys.

"We love Christmas Day. We love to make others happy.

"Of course you all know the pretty little story about the Christ-Child who was born so many years ago. He loved little children.

"Most boys and girls naturally love to do right, but we can try so much harder if we have a good example to follow.

"You know we can all be examples of truth and honor. The Raja Yoga girls and boys are trying to bring the Christ-Child back again to live forever in the hearts of little children.

"He cannot live where there is selfishness, envy and jealousy, or among children who are disagreeable.

"We must make our bodies strong and healthy, our minds pure and our hearts true. Then the Christ-Child is born in each of us—a new light shines in our eyes, and we feel as happy as the birds.

"The Christmas tree, lighted with pretty candles, and laden with gifts, is such a beautiful symbol of the love that always surrounds us and gives us all the good things.

"The world seems so large to a little child, and there are so very many little boys and girls who live in it, that we must all help and share, and so make one Brotherhood. Then the Christ-Child will be like a great shining light and the whole world will be filled with happiness.

"Even little children can bring the Christ-Child into the world. They can bring tidings of peace on earth and good-will toward men."

The second paper was entitled "What Christmas Means to a Raja Yoga Boy," and was delivered by Master Thorley Von Holst:

"It is the business of the Raja Yoga boy or girl to try to find the real meaning in things, and I am sorry to say that modern customs have, I think, almost covered this up for Christmas Day, so that a child would never guess from any thing he sees that there ever was any deeper significance than having a good time. Christmas Day to the average child of parents who are not poor, suggests first a lot of presents which he is going to receive, and secondly a big dinner of which

LOMA-LAND STUDENTS AT ISIS THEATRE

Splendid Chorus Singing by the
Raja Yoga Children --- Addresses
by Two Loma-land Children

Reprinted from the San Diego News

he intends to eat all he can possibly hold. Other children get presents, of course; but, strange to say, instead of this exciting and unselfish pleasure, the spirit of desire for possession is so encouraged on Christmas Day that other gifts are apt rather to bring out a feeling of competition. Each one hopes secretly (if he thinks of others at all), that his presents

will compare favorably with or be a little better than any one's else. I say, if he thinks of others at all, for usually the day is one of ecstatic pleasure, but self-absorbed. The child is lost in the satisfaction of his personal gratification. Now, a Raja Yoga boy cannot rest in such an interpretation of Christmas as this implies.

"What is the event we celebrate? And what should be the pure ideal of this day?

"It is the anniversary of a day when Christ was born many hundred years ago. But we know perfectly well that Christ existed not only in Jesus of Nazareth so long ago, but that he exists in each one of us now. In Jesus he was born; in us, as yet, he is unborn. We are conscious of him; he overshadows us; we owe to him what there is of good within ourselves; but he has not yet fully entered our minds and bodies. We have not yet become the Christ. We have not yet found ourselves.

"To let this Christ principle be born within us, is the real object of our lives. So when the anniversary time rolls around of the birthday of a man who actually did this, it is, at least, a time to stop and think of it. What has been done before, can be done again. A noble example arouses our courage. We know that such an overcoming of all the human weaknesses as to surrender them to the Christ and let him enter the body as Master, meant an overcoming by which all the world has been benefited. So when we think of that and what it means, we cannot but have our hearts filled with love and gratitude.

"All this does not imply that a Raja Yoga boy has any inclination to spend Christmas in simply meditating, or does not enjoy all that any child does. But one who feels the meaning behind a thing, enjoys more deeply. We have gifts and pleasures in abundance, and all the pretty myths about Santa Claus are made as real as anywhere; but we know it all means something.

"A little child-brain cannot understand all this, but it can be helped to use its toys and pleasures as the Christ-Child would have used them. They can be made the means to make him more unselfish, more thoughtful of others, rather than the reverse.

"The festivities of Christmas can be made innocent. Instead of being the means of turning our thoughts inward toward ourselves, they may liberate our thoughts so that little by little they may reach out, to our family, to our friends, to those in our country, and finally to all the world.

"As we grow older and learn to give as well as take, we can make our gifts the carrier to each one of the desire that the Christ-Child may come within him, that he may indeed find himself.

"If all, all over the world, should ardently send this desire with every gift, I think the Christ-Child would really come to live among us."

Beautiful and Interesting Christmas Exercises of the Raja Yoga Day School in San Diego

From the San Diego Evening Tribune

AT 7 o'clock Wednesday evening was held the Christmas exercises of the Raja Yoga children in the assembly hall of the school in the Isis theatre building, Fifth street side. Decorators had been busy all day in beautifying the rooms, the corridors and stairs, and by evening, when the lights added their part, the scene was a most beautiful one.

Great masses of palms, smilax and poinsettias in tasteful arrangement made a bower of the entrance down-stairs, while the balustrade was looped and twined with the lighter greenery. The hall itself was hung all about its walls with portieres of pendant smilax, while radiating festoons of the same extended overhead from the central chandelier. The brilliant poinsettias were made use of in the scheme and potted plants in profusion. The arrangements were all kept from the children and a surprise was in store for all as they went into the hall. Of course the feature of the whole scene was the big Christmas tree, the decorations of which were beautiful.

On a table in the hall were a number of presents sent by the children of Point

Loma to their comrades of this city. They included things made by the children in their regular courses, and showed some fine examples of basket weaving and other fancy work. Following was the program:

Song, "Christmas, 1903," School.

Greeting from the Raja Yoga School of Point Loma, Albert Spalding.

Calisthenics, Girls.

Reading from *Ben Hur*, May Ryan.

Raja Yoga Class Work, Primary Grade.

Recitation, Jeanette Dowell.

Spelling match.

Recitation, Eileen Christency.

Recitation, Stewart Reynolds.

Boys' Drill.

Roll of Honor.

Song, "America," School.

Entrance of Santa Claus and distribution of presents.

Presentation of oil paintings to the Raja Yoga Day School.

These paintings include nature studies, Hawaiian landscapes, sketches of New England, and the beautiful flowers of California. They are the work of Miss Edith White, the gifted California artist. These pictures are uniquely framed by the Raja Yoga children of Point Loma.

The hall was crowded by the parents of the school children and the whole affair passed off most successfully.

Observer Notes

THE beautification of the Homestead grounds proceeds apace under the untiring energy of those who have devoted themselves to this work. It would be well if the authorities of some of our American cities could pay a visit to Point Loma and so get an object lesson in practical decoration, and learn how very small an expenditure of money is needed for the production of the best and most lasting results. The effect of reducing to order an untidy corner seems almost magical to those who have never tried it, while the removal of an unsightly or in-

congruous building redeems a landscape. There is after all nothing so practically beautiful as order, and there are very many towns and cities which could secure for themselves a greater charm by cleaning up their back yards than by the most costly and ornate public buildings or the most tasteful public parks. One day we shall recognize these things for ourselves and wonder why we have never done them before.

The improvements at Point Loma are so varied that to describe them would be impossible. There is an endless movement everywhere, and to follow up any particular activity would result in the recognition that something is now being done better than it was before, that something is being made more beautiful than it was before, that some little point of friction has been removed or lubricated, that some time has been saved, and that the opportunity for work has consequently been increased.

With the exception of a few small showers we have had no rain, but all the indications point to a speedy and welcome visitation. The irrigation system upon the Homestead grounds is now, however, so perfect that our land is a green oasis and nothing is allowed to droop for want of water.

The eucalyptus trees are a peculiarly valuable feature of our gardens and especially of the School grounds, and they grow in stature day by day. Apart from their extraordinary health-giving properties they need no irrigation. If they cannot get rain they are satisfied with dew, and if they cannot get dew they make no visible complaint. True it is, that they lie under the accusation of obtaining their nutriment of moisture by dishonest means, and that some other plants make of their proximity an excuse for not growing as they should, but we must leave these arboreal disputes to settle themselves or be settled by others. Perhaps we must not expect to find a perfect moral nature even in eucalyptus trees.

The avenue of pepper trees which stretches from the Homestead away past the amphitheater is showing every day more and more clearly what it will presently be. No tree is more appreciative of attention than the pepper, and no tree responds more quickly to the care of the gardener. It seems but yesterday since the tender shoots were put into the ground and now they have become sturdy young trees, many feet in height and luxuriant in the exquisite feathery leaf which is their great charm. This avenue will be one of the sights of California as it is already one of the most beautiful features of our grounds, with its exquisite curve and the tasteful buildings upon each side.

OBSERVER

Crime in Illinois and Elsewhere

CHICAGO seems to be not unnaturally alarmed at the outbreak of crime which has been so widely chronicled. A mass meeting is to be held at one of the churches in order to decide what can be done to remove a very serious reproach from the city. An assembly of citizens for the common good is always to be welcomed everywhere. It might, however, have been better to hold such a meeting in a public hall rather than in a building devoted to one particular kind of thought, and that thought not always of the most practical or even disinterested kind.

Rabbi Hirsch, as usual, lays his finger upon a weak spot. He says:

Yellow journals, which publish every incident in the daily life of criminals who are awaiting trial for terrible crimes, which describe with minute detail the way in which they eat and sleep and, in short, their every action, are, among other things, responsible for criminals. Unconsciously, perhaps, these newspapers present these criminals to their readers in the light of heroes, and so the newspaper stories are an inspiration to youths who read them to become, as they are led to believe, heroes through the commission of crime.

The science of criminology is, of course, very much in its infancy, if indeed it has yet been born. An age which has so notoriously neglected or mishandled the whole subject of mind, cannot be expected to know much of those sub-mental conditions which produce crime. Most of those who are now so exercised at its increase would be sorely puzzled to define what they mean by crime. To the great majority of persons, crime is simply an infringement of human law, and those who rely upon such a definition are at once confronted by the fact that the criminal acts of one century are not criminal in another, and that the world is never weary of erecting statues to those who were criminals in the age in which they lived. To adopt a purely ethical definition of crime would, however, cause a very serious embarrassment to a large number of "respectable" people, including possibly some of those who are now devising means to purify their cities. Suppose we were to say that all those acts are criminal by which it is attempted to procure a personal advantage at the expense of another. We are compelled to regard crime as either a legal problem or as an ethical one. If the former, then it is not easy to arouse enthusiasm for human codes which have so consistently identified criminals and heroes. If the latter, then we must accept some such definition as the foregoing, and we must recognize that the difficulty of arresting crime is infinitely greater than we supposed.

The fact of the matter is that we are actuated by a spirit of self-protection rather than of abstract virtue. Our attitude toward crime is not the result of comparison with any clearly viewed ideal, but is an expression of distaste for methods and not for motives. We have no objection whatever to gaining personal advantages at the expense of another, but we object to the methods, such as violence, etc., by which that advantage is sometimes gained. With a different education the violent criminal might have become a forger, and then his misdeeds would, perhaps, not receive so much attention as those of the highwayman. With a still more different education he might have become a dishonest—although not legally dishonest—company promoter. The criminal might then have been a member of a church and prominent in his efforts to suppress crime.

What we need is not so much a panacea as a definition of terms and an ideal. When the founder of Christianity was dealing with the subject of law his words were remarkable for simplicity and directness. He said, "Thou shalt love thy neighbor as thyself," and He said that *all* law was contained herein. So far from this precept being impracticable, we believe that it is the only refuge for humanity, and we believe that sooner or later humanity must face it, even though as a preliminary we have to recognize that modern society, with its respectabilities and its pieties is largely criminal, and that our human criminal code applies to methods and not to motives. It does not punish robbery, for instance, but it does punish certain methods of robbery. It does not punish murder unless the murder is committed in some more or less specified way.

We sincerely hope that Chicago, and other cities, will be successful in stemming the torrent of crime. We hope that sensational journals can be persuaded not to inflame the neurotics who swarm in our midst. But most of all, we hope to see a keener civic sense, a keener ethical perception and a keener hearing of that inward and divine monitor which is not afraid to say, even to the best of us, "Thou art the man." X.

LE ROI S'AMUSE

by H. H. BASHFORD

WHEN I draw the curtains I am king;
 King am I and emperor and lord,
 And the ghosts
 Gather meekly to my scepter at a word.

When I draw the curtains I am king.
 Arbiter of all that is to be,
 And my dreams
 At my bidding compass mountains, span the sea.

When I draw the curtains I am king;
 Youth is mine, immortal, unafraid,
 And the crown
 That is clasped about my forehead cannot fade.

When I draw the curtains I am king;
 Love is mine, old love that cannot die,
 And the years
 Shrink away before its stainless majesty.

When I draw the curtains I am king;
 I, the slave, am emperor and lord,
 And a world
 Does me homage with a humble sweet accord.

Ah! when I draw the curtains I am king.

The Saving Power of Love

YOU will hardly hold to your silly ideas that the world is ruled by justice after this," and Frances flung herself down on the sofa with her face in her hands, and began to sob, stopping now and then to further rail at a cruel fate.

Moira did not reply. The blow they had received was a severe one, and perchance meant loss of home and separation for the little family, but she never wavered in her trust in the "good law" which "brings to each one that which is his due in perfect equity." Only a few months back had Theosophy come into her life, and her heart was full of thankfulness for that steadfast rock on which to rest her feet in the hour of trial. Presently their brother came in.

"I see you have heard the news already," with a glance at Frances; "the pater is quite broken up," he added gloomily. "Told me to be off home and tell you, and not to expect him till late tonight."

Moira rose and came over beside him, and he put his arm across her shoulders as they stood together, for they were great chums, these two. "I will go back with you to the office after lunch," she said presently. "I don't like to think of him there alone, Dick."

"Father said there was no use in me coming back today, there was nothing to do," returned Dick hesitatingly.

Frances dried her eyes as the lunch-bell rang, to return to the attack at its conclusion.

"If instead of railing at Moira's ideas you thought a little less of yourself and more of others," Dick was finally provoked into saying hotly; "it's to be hoped you will have a quieter tongue and more cheerful face for the pater tonight."

"For love of him let us make an effort to be cheerful," said Moira, softly. "He has always been such a dear, good father to us and worked so hard that we might have comfort and luxury, and if we show great disappointment it will break his heart. Come down to the office with me and help to cheer him up."

"I couldn't," replied Frances tearfully. "It's too hard to be reduced to beggary. I suppose we shall have to live in some poky little cottage in a back street. How can I feel cheerful? Of course, I'm sorry for father as well as you."

"You show it, then," said Dick grimly and left the room, and Moira, finding it impossible to arouse her from her self-absorption, followed him.

Moira found it difficult to keep up a brave heart as the train whirled her along towards the office. Her heart ached for the pretty, selfish, spoilt little sister she had left behind, and for her father. It was sad for Dick, too, just growing to manhood; but then he and she didn't look at life the same as the others, and they would manage to find something somehow. But her father, a sensitive, warm-hearted man, he would feel the changed position keenly, for his life was bound up in his children and work.

A sudden thought struck a chill to her heart, and as the train stopped, sent her flying swiftly up the office steps. A gentleman was speaking to the head clerk, who looked troubled. "Master gave strict orders he was not to be disturbed," she heard him saying, and her trouble grew deeper as with quick steps she crossed the outer office and knocked firmly upon the inner door.

"I am engaged," her father's voice replied.

"It is I, father, Moira," she answered, "and I must see you; please let me in."

There was the sound of rustling papers, a short delay that seemed an eternity to

the girl, then the key turned in the lock and Moira grasping the handle swiftly opened the door and entered the room. "Why did you come?" he enquired fretfully. "I told Dick —"

Moira, with a sharp heart-pang, noted the trembling fingers that told of nerves all unstrung. "Father dear," she asked pleadingly, "how could I leave you all alone to bear our trouble, thinking and thinking, as I knew you would, until your dear head would be in a whirl," and she threw her arms round him and kissed him affectionately. "What does the loss of the money matter, dear? we are all young and strong; let us put a brave face upon it. 'The gods help those who help themselves,' you know."

With a restless movement Mr. Morton knocked over a pile of papers that were heaped upon the corner of the table, and with them a tiny bottle which they had hidden. Both stooped to pick it up, but Moira was the quicker. Her shocked eyes met his defiant ones, then fell on a letter addressed to her on the table. There was another knock at the door and Moira hastily slipped the bottle into her hand-bag. The old clerk stood hesitatingly upon the threshold.

"Please, sir," he began, "there is a gentleman here who says he has most important business and he must see you."

"Must is just the word," said a cheery voice over his shoulder, and the stranger Moira had passed in the doorway, stood within. The old clerk promptly vanished. "I see you have forgotten me, Dick; but then you had not the same incentive to remember," he added gravely. The elder man put his hand to his head, looking about him in a bewildered way. "I'm Robert Williams who, thanks to your helping hand when all the world seemed against him, can count more dollars his own by many thousands than cents in the old days."

Moira quickly grasped the situation and rose. "Father, dear, since the gentleman is an old friend of yours I hope I shall have the pleasure of welcoming you both home to dinner tonight."

"I shall be delighted," replied the stranger, bowing low as he opened the door.

The Mortons did not lose their home, for with the addition of a wealthy partner to the firm the crisis was averted, and the business largely increased. Moira has been Mrs. Williams many years now, and a firm adherent to the philosophy of life, which her husband brought back with him and his fortune from California.

The incident of the father's temptation in his hour of trial remained a secret between the three, but often the two men feel in their hearts that the happiness of the prosperous present would not have been theirs but for the devoted unselfish love of a noble-hearted woman.

E. I. W.

Tribulations of the Clergy

A COUNTRY clergyman who had delivered an eloquent appeal on behalf of a foreign mission one Sunday was surprised on entering the village store the following week to be greeted with marked coldness by the worthy dame who kept it. On asking the reason of this strange treatment, the good woman produced a half-crown from a drawer, and, throwing it down before the astonished rector, exclaimed, "I marked that half-crown and put it in the plate last Sunday, and here it is back again in my shop! I knowed well them niggers never got the money!"—*Exchange*

The story is told of a Scotch preacher who gave his people long, strong sermons and delivered them in a remarkably deliberate manner. One Sunday he asked a friend who was visiting him to occupy his pulpit in the morning.

"An' were you satisfied wi' my preaching?" asked his friend as they walked home from the kirk.

"Weel," said his host slowly, "it was a fair discourse, Will'm; a fair discourse, but it pained me at the last to see the folk looking so fresh and wide-awake. I mistrust 'twasna sae long nor sae sound as it should hae been."

A lot of unclaimed freight was recently sold at Liverpool. Among the goods there turned out to be some hundreds of manuscript sermons written by a once famous clergyman. The purchaser discovered some very curious notes on the margins such as the following:—"Deliver this passage in solemn tone," "Scornful smile after the word 'never,'" "Close Bible with violent slam after this passage," "Contemplate the ceiling in attitude of adoration at this point," "Sarcastic wave of the hand."—*Exchange*

Lincoln's Insight

THE truth is, unless I am greatly mistaken, Abraham Lincoln never studied hard at any period of his life. He did not need to study *hard*. With him a single reading was sufficient to afford a clear insight into any ordinary subject. It almost seemed as if, in a previous existence, he had acquired a knowledge of things, and in this life he needed only to refresh his memory, now by reading and now by colloquy with others.—*From Recollections of Abraham Lincoln by Gibson William Harris.*

✻ The Trend of Twentieth Century Science ✻

The Strange Confusions of Modern Scientific Prophecy

WE know that a prophet has no honor in his own country, and one sometimes doubts whether he ought to have it in any other country, at any rate a prophet in matters scientific. Yet it is very difficult to resist the temptation to prophesy. Professor Newcomb has recently called attention to an article that appeared in *Harper's* in 1856. This depicted some features of life in A. D. 3000. It is easier to prophesy 1,000 years ahead than 30, and the writer of the article casts his vision so far ahead that he omitted to predict the telephone, which was just in front of his nose.

Professor Newcomb is not deterred by this, and makes a sort of prophecy of a negative kind himself. He says: "So far as mere material progress is concerned, it may be doubtful whether anything so epoch-making as the steam-engine or the telegraph is held in store for us by the future." A curious doubt, in view of what almost every week brings forth!

Pessimism produces a school of prophecy of its own. Not so long ago, we were told that extinction faced us because the coal supply would shortly fail. It is welcome to do so. We have learned to use oil. We have learned the capacities of the eucalyptus tree as fuel. More than all, we are beginning to get electricity from wave and wind and sun and falling water, and to use it to get heat with.

We were presented with arguments and calculations showing that the heat of the sun was generated by his steady contraction, and that the time-limit to the future possibilities of this was about ten million years. Before that we should have frozen to death.

But then they carried the argument backward, and showed that according to the rate of contraction they had assumed, twenty million years ago that which is now the sun was a nebula filling what is now the solar system. To which the geologists replied that it was nonsense, for "the study of the earth . . . makes it certain that the earth must have existed much in its present condition for hundreds of millions of years." (Newcomb.) There is no evidence that the sun's supply of heat has diminished his bulk; nor any present telling whence he derives it; no more than there is any present telling where a bit of radium gets the heat it radiates, or evidence that it loses bulk in so doing.

Malthus told us that we should ultimately starve to death, because population always tended to outrun subsistence, being a geometrical or multiplied increase while subsistence was an arithmetical or merely added increase. Now science has taught us how, by adding the right kind of bacteria to it, to make even sterile and sterilized sand a rich soil—the kind of bacteria that absorb nitrogen from the air and make of it food for the plants. And Professor Nobbe, of Tharandt, in Saxony, has trees *a quarter of a century old* that have never touched *any* kind of soil. Their roots hang down in large vessels of water. In water their seeds were placed twenty-five years ago, and soon sprouted. Once a month the Professor dissolves in the water a small quantity of a mixture of chlorate of potassium, phosphate of iron and three or four other chemicals—in fact, exactly those which the plant needs. What else it wants, it gets from the air. Has not the Malthus difficulty vanished? Indeed, it was probably never more than a delusive, mind-catching formula.

The universe is not so badly looked after as these prophets would have us think. Its underlying purpose, to be a nursery and school and spiritual university for human, and then superhuman, life, is not going to be stultified just as it begins to work out. Deity is not to be imagined as objurgating itself for having forgotten to make the sun last long enough to allow the vast plan to come to fruit. On the whole, we may safely prophesy that what is, of good or useful, will grow from more to more; and that what will be will also include the rich growth of countless seeds of whose existence and character we have now no suspicion or conception.

STUDENT

IT MAY be that the humble glowworms and fireflies are destined to place science upon the track of a discovery which would be of inestimable benefit to mankind. Certainly the method by which these little insects produce a cold light ought not for long to be beyond our reach.

Modern Science's New Conception of the Atom

THE new conception of the atom affords an interesting example of the steady approach made by science to the teachings of Theosophy as we had them from H. P. Blavatsky.

Sir Oliver Lodge has pointed out that the electrical theory of the atom—largely due to a study of the behavior of radium—involves the consequence that each and every atom is in a process of slow disintegration. It is returning to that root of matter years ago named Protyle by Crookes.

Said H. P. Blavatsky fifteen years ago: "The matter of which the objects (of the phenomenal world) are composed is continually returning to the primordial condition of matter, where it is invisible to mortal eyes. The earth, water, air and fire that we think we see are respectively only the effects produced on our senses by the primordial matter held in either of the combinations that bring about the vibration properly belonging to those classes."

If evolution be going on in the inorganic world as well as in the organic—also a Theosophical postulate—it would seem necessary to assume that if some atoms are disintegrating, others are forming; or that if an atom is giving up its substance at one pole, at the other it is drawing in from the primordial to replace that which it loses—in fact, feeding and excreting. Very slow changes in its constitution, thus coming about, would allow of the process of evolution. And it might easily be imagined that atoms forming part of the body of man would, during their sojourn with him, find their evolutionary changes greatly quickened by reason of the incessant electric and magnetic phenomena attendant upon thought.

The Finsen Light Treatment Is Proving Beneficial

THE Finsen "Light Cure" proceeds steadily upon its beneficial work, rarely failing in a large group of previously almost or quite incurable diseases of the skin. Most of these are lupus, cancer and rodent ulcer; but there are also a number of lesser maladies.

Meantime, the price of the apparatus goes down. The newer lamps now cost only \$75, and \$7.50 a year to run. But it is said that a lamp has just been made costing but \$15, and doing the work of previous lamps in one-third of the time.

Strong diffuse sunlight itself will kill bacteria in a few hours, but not when they are embedded in the skin. The light must therefore be concentrated by a lens, and the lens must cut off the red or heat rays. This is accomplished by using a hollow glass lens about a foot in diameter, filled with a water solution of the blue ammonia-sulphate of copper. But where sunlight cannot be got, the electric light is used in the form of the arc. The lenses (of quartz) are in a tube, and between them, for chilling the rays, is distilled water constantly changed.

At the Finsen Institute in Copenhagen, this treatment has been used eight years. Down to the end of last year the number of cases treated was 804. Half were entirely cured; 200 nearly so.

M. D.

WE learn that some researches are about to be undertaken at one of our laboratories in order to settle the question, upon how little albuminous food an average man doing a fair day's work can support his strength and health.

The question is very important. Nearly all people eat much more than they need. Their vitality is wasted in digesting the surplus; the products of its imperfect digestion derange the organs and dull every activity of consciousness; and some sort of chronic or acute disease is steadily brought into being—but this is never attributed to its proper cause.

The people who fasted for weeks, on public exhibition, did us—if we only would accept it—an immense service. But we will not see. We live on with muddy minds, muddy feelings, dim and imperfect faculties, half formed and unnamed diseases, when we might reverse it all in a few weeks. We wish well to their researches, but we have little hope that their investigations will diminish the universal load of alimentary excess by an ounce in two continents.

HYGIENIST

Here and There Throughout the World

AN INDIAN CAMP NEAR OGDEN, UTAH

The Armenian Church in Russia THE stream of religious sentiment in Russia seems to run with very considerable force. As a protest against the seizure by the Government of some religious property belonging to the Armenian church, a committee has been formed which announces its intention of assassinating some thirty Russian officials. Religious zeal is, of course, a virtue, but the church which summons assassination to its aid seems to be somewhat lacking in that inward and spiritual grace which ought to characterize it. If the Armenian Christians retaliate in this way for the loss of some of their property they need not be surprised if the Government confiscates the remainder. Assassination has never yet been a cure for anything, and its advocacy by Christians in defense of material property is singularly hateful and insanely futile.

American & English Fleets to Maneuver A SUGGESTION has been made for joint maneuvers of the American and English fleets in West Indian waters. The spectacle would certainly be one of intense interest and might be followed by the happiest results. Mr. Archibald S. Hurd, the English author of *Naval Efficiency*, says of the project:

British sailors have a very sincere admiration for the navy of the United States, and I believe such joint maneuvers would be productive only of good. We on this side realize that the American fleet is certain to be a great naval force in the near future. Naval power is largely a question of a long purse, natural resources and technical skill. In these respects no other nations have the staying power of Great Britain and the United States.

Religious Riots in Liverpool, England LIVERPOOL is rapidly acquiring a reputation for religious riots and disturbances. One of the inexplicable stupidities of human nature is the superstition that the cause of religion can by any possibility be served by physical violence. It is not possible to render a greater service to religious error than by the resort to violence, nor is it possible to more effectively resist it than by toleration. Well may the Liverpool magistrate have remarked, "Now let us get out of the atmosphere of religion," after he had disposed of a number of cases of brutal assault which were the result of the rival theologies.

Italian Monarchs Visit Great Britain THE visit to England of the King and Queen of Italy has been uniformly pleasant, and it is certain to result in an increase of friendliness among the great European powers. The King was accompanied by Signor Titoni, the Italian Minister for Foreign Affairs, and during his visit to the English Foreign office international affairs were amicably discussed. The ancient comradeship between England and Italy is not likely to be disturbed, and the personal character of the King and Queen of Italy must be reckoned with as one of the forces which make for the fraternity of nations.

The Coldness of Christian Europe MR. HALES is the trusted and reliable correspondent of a great European newspaper. He is now in Macedonia and writing from that sink of blood and misery he says:

We know for an actual certainty that in the mountains there must now be from 60,000 to 70,000 people roaming wild and homeless, existing how they can, dying where they must. They will not rot in the snow; wolves will be the sextons.

These people are Christians and they live in Christian Europe which does not seem to care one straw how or where they die, or whether the wolves which destroy them are quadrupeds or bipeds. They themselves have probably no more earnest prayer than that they may fall into the power of the beasts rather than into that of men.

German Emperor and Army Officers THE German Emperor is laying a somewhat heavy hand upon those petty officers who have been found guilty of ill-treating the private soldiers under their command. At the same time he has expressed the eminently sensible opinion that the commanders of regiments are more to blame than the petty officers, and he has followed this up by entirely disgracing the Colonel of one of the regiments in which some very abominable abuses had been committed. The General of Division also received from the Emperor a forcible expression of Imperial views by which we trust he will profit.

The British Armed Mission to Thibet THE British armed mission into Thibet will be watched with some interest. Thibet is an almost entirely unknown country and no one can safely predict either an easy march upon the one hand or a stubborn resistance upon the other. The causes of the invasion seem at the moment to be a little obscure, but Thibet occupies the unenviable position of being a buffer state between two powerful countries. Apart from the questionable fighting capacity of its people, the mission may confidently anticipate the hostile forces of nature in the shape of intense cold and a rugged and inhospitable country.

Brain Fag, the New London Disease A LONDON contemporary draws attention to a new ailment called Brain Fag, which is attacking "the higher strata of society," whatever that may be, and we fear that the complaint is by no means confined to London. The chief symptom is "a condition so languid and lifeless that only the use of alcoholic stimulants restores the body to normal." This is certainly a serious state of affairs for "the higher strata of society," and we trust the medical profession and the police will give to it the attention which it deserves. But why call it brain fag? We do not see how it can be.

OKU-NO-IN (TOMB) NIKKO JAPAN

THE CHILDREN'S HOUR

Insect Musicians

IN Japan, it is said, there are tiny insects that sing, and their trills and musical notes are so harmonious that they are often kept as household pets, much as we keep canary-birds. Some people keep them in tiny cages of bamboo, and hang them in the rooms or on the verandas of their houses.

One insect called *suzumushi*, or "insect bell," gives forth sounds like delicate bell-notes. It is difficult to believe music so exquisite could come from a rather ugly black beetle, but such is the case. Another, the *kirigirisu*, is like a large grasshopper. The *enam-korogi* resembles a cricket. Then there is the *kautau*, which sings only at midnight, and the *kanetetaki*, whose musical notes resemble the ticking of a distant clock.

In Tokyo there are merchants who deal in these little creatures just as in our country bird-fanciers deal in song-birds.

I wonder if we have not musical insects also? There are those who say that we have many, but that we are not able to hear their musical notes because of their extreme delicacy. The cricket and katydid—is it not probable they are just like the big bass-voles in an orchestra, and that there are other insects whose exquisite tones are like beautiful violin or flute-notes?

We already know that there are colors in Nature which we cannot yet see. Would it be so strange if we should discover that there are sounds which we cannot yet hear?

E. M.

A Lesson in Kindness

DEAR CHILDREN: I am a Lotus Bud and I live in Canada. The other day I saw something that made my heart glad. A vehicle filled with people and drawn by four handsome horses was coming up the street when suddenly one of the horses fell. The driver shouted at it; he whipped it. Although the poor animal was entangled in the harness and could not move, the driver sat still and made no effort to help it. Suddenly a lady approached. "Give me your whip!" she said, and the driver, too astonished to demur, handed it to her. "Now," said she, in a determined voice, "get down and cut the harness and help the poor horse upon its feet!" She held up the whip in a threatening manner and the driver obeyed. In a few moments the horse was extricated and was on its feet. Then she took some biscuits out of her satchel and gave one to each horse. You should have seen them prick up their ears and nod their pretty heads! And then the vehicle passed on. There were several men in it besides the driver. I wonder what they thought! ETHEL.

DEAR CHILDREN: Let me tell you about a rook who died of grief. It was in Essex during the recent floods, when all the roadways were like rivers. On a stump near our house sat this poor old rook, paying no attention to the people who were going past, but occasionally giving forth a mournful sound like a deep sigh. There he sat all day. The next morning there he was, dead. Did he die of a broken heart? W.

In the Arctic Circle

MY DEAR LOTUS BUDS: Here I am, away up North at Point Barrow, the home of the Esquimaux, where it is night the winter through and day all summer. And how the Buds and Blossoms of this far-away land have crept into my heart! Bright and happy, to see them having one of their frolicsome dances in the Northern Lights makes one half believe them to be a troop of little furry-coated Brownies. They wear bear-skin coats, of course, and deer-skin mittens, and sometimes glossy fox-tails fastened to their coats. *Kioya ke, kioya ke* runs their queer little song, and they tell me it means, "Welcome, welcome, Northern Lights!"

Then they have a snowball game which they play, not as we do, but with their feet. The great aim is to keep the ball in the air as long as possible. And to see them "slide down hill!" On sleds? No. Boards? No. On their knees—think of it!

And when they are tired of outdoor games, then they go into their queer little homes and, by the light of a seal-oil lamp, play with their toys—tiny canoes, drums and dolls. A favorite game is played with a string, much as we play "cats' cradle." Not so different from ourselves, are they, spite of their brown faces, their little beady eyes, their queer customs and their shut-in lives? They are Buds and Blossoms, too, not so beautiful and strong as if they knew about Raja Yoga, but still

with the same love in their little hearts and the same light in their eyes. Why not send them a letter some time—or at least a big, beautiful Golden Boat?

A LOTUS GROUP TEACHER.

A Dog Honored

A SOCIETY met recently, in Paris, for the purpose of paying honor to those who had befriended animals. It was the Paris Society for the Protection of Animals, and the Minister of Agriculture was the chairman of the meeting. Awards were distributed to many cabmen who treated their horses particularly well, and also to policemen who had arrested those who ill-treated horses. But the one who received the greatest honor of all was Tram, a beautiful great shepherd dog. Tram has saved a number of people, among them his master, from drowning; he has saved several children from accidents, and has even found objects which his owner had lost. His

award was a handsome collar, and the great audience applauded as he bounded about the platform and barked with delight when the collar was clasped about his neck.

DEAR CHILDREN: A few evenings ago I arranged some flowers in a large, shallow dish. Around the edge one row hung its little heads merrily over, and another row close to these, the center being filled in with flowers and leaves. In the morning I noticed that all the flowers were standing nearly upright on their stems, having left the edge to come closer to their brothers and sisters in the center of the dish. Do flowers know about Brotherhood? A. W. H.

ONE OF OUR LOMA-LAND COMRADES

MY LITTLE CRICKET

I HAVE a cavalier.
At dusk he draweth near,
To wait outside my wicket.
I hear him draw his bow,
He playeth soft and low,
Hid in the maple thicket.

The listening leaves are stirred,
The dreaming flowers have heard
His strain from out the shadow.
The broad moon, white and still,
Climbeth the dusky hill,
The mists dance in the shadow.

My faithful cavalier,
At dusk he draweth near,
To wait outside my wicket.
I hear him draw his bow,
He playeth soft and low,
My dusky little cricket! --- Selected

Path

WHICH IS HUMAN, WHICH DIVINE?

by EMERSON

THIS is he, who, felled by foes,
 Sprung harmless up, refreshed by blows:
 He to captivity was sold,
 But him no prison bars would hold:
 Though they sealed him in a rock,
 Mountain chains he can unlock:
 Thrown to lions for their meat,
 The crouching lion kissed his feet:
 Bound to the stake, no flames appalled,
 But arched o'er him an honoring vault.
 This is he men miscall fate,
 Threading dark ways, arriving late,
 But ever coming in time to crown
 The truth, and hurl wrongdoers down.
 He is the oldest and best known,
 More near than aught thou call'st thy own,
 Yet, greeted in another's eyes,
 Disconcerts with glad surprise.
 This is Jove, who, deaf to prayers,
 Floods with blessings unawares.
 Draw, if thou canst, the mystic line,
 Severing rightly his from thine,
 Which is human, which divine.

The True Spirit of Religion

THAT the pure in heart can alone see and commune with the pure Divinity, was the sublime instruction of ancient sages as well as of inspired prophets. It is, indeed, the lesson of daily experience. To understand a great and good Being we must have the seeds of the same excellence. How quickly, by what an instinct, do accordant minds recognize one another; no attraction is so powerful as that which subsists between the truly wise and good; whilst the brightest excellence is lost on those who have nothing congenial in their own breasts. God becomes a real Being to us, in proportion as His own nature is enfolded within us. To a man who is growing in the likeness of God, faith begins even here to change into vision. He carries within himself a proof of a Deity, which can only be understood by experience. He more than believes, he feels the Divine presence; and gradually rises to an intercourse with his Maker, to which it is not irreverent to apply the name of friendship and intimacy. The Apostle John intended to express this truth, when he tells us that he, in whom a principle of Divine charity or benevolence has become a habit and life, "dwells in God and God in him."

It is plain, too, that likeness to God is the true and only preparation for the enjoyment of the universe. In proportion as we approach and resemble the mind of God, we are brought into harmony with the creation; for, in that proportion, we possess the principles from which the universe sprang; we carry within ourselves the perfections of which its beauty, magnificence, order, benevolent adaptations, and boundless purposes, are the results and manifestations. God unfolds Himself in His works to a kindred mind. --- *W. E. Channing*

THIS quotation expresses the ideas of the essential divinity of man and of the immanence of the Deity in all the universe very clearly; but there is unfortunately a point where this lofty conception falls short and begins to be tinctured with the old dogmatic idea of the personal God of theology. "He feels the Divine presence; and gradually rises to an intercourse with his Maker, to which it is not irreverent to apply the name of friendship and intimacy." This is where the devotee is only too apt to cease the expansion of his nature and fall back into an attitude of self-satisfaction. In our nature there are many powers and grades of powers, ranging from the highest and purest unification with the divine and abstraction from self, down to the most personal and debased condition. "Only the heart can see and commune with the pure Divinity;" and should the unenlightened mind step in with a stereotyped picture of man as the craven sinner and Christ as the personal mediator between him and a personal Deity, then the light from the heart may be dimmed.

It would be well to study the further teachings of the ancient sages, regarding the nature of man and the universe; for the science of antiquity did not run counter to true religion, as the materialistic science of today does, but explained it and was explained by it.

There are many noble souls in the churches, in whom this light from the heart shines, but their creeds confine them instead of helping, and they have difficulty in effecting a workable compromise between what

they see to be true and what they consider themselves bound to believe.

If such people dared to say out all that they find in their heart, they would be obliged to make short work of many narrow dogmatic conceptions. The knowledge that God dwells in us ought to give us back the dignity of the ancient sages, and set us free from the craven and self-debasing attitude towards God which has been grafted upon our minds through so many generations.

The Book of Discipline

THE proceedings at a recent meeting of the Methodist Episcopal Church in the east are of such a nature as to cause a feeling almost akin to hopelessness. We are told that a "violent stir" was caused by a proposal to expunge from the "book of discipline"—whatever that may be—the paragraph which prohibits dancing, card-playing and theatre going. An animated discussion ensued, and it was eventually decided to postpone the frivolous argument to the "quadrennial session general," when the waste of time is to be resumed.

What manner of men are these who are violently stirred at the idea of leaving such matters as theatre going and dancing to the good sense and the conscience of the people? If they are so agitated by puerilities of this kind, what mental cataclysms may we not expect should they ever happen to hear of such things as child-labor, and the increase of suicide and insanity? It may, of course, be that matters of this kind are altogether beneath the attention of the Methodist Episcopal Church, or perhaps they are merely postponed until such real essentials as the Amusement Code have been definitely settled.

In the Methodist Episcopal Church there must surely be many men who lament such childishness as this and who are eager to make their influence felt against the real evils of the day. If such men would but be more audible they would not only render the most substantial service to their church but they would find an enthusiastic support and following from the congregations. There were never such opportunities for real men as there are now. Are they to be wasted? X.

MAN is his own star: and the soul that can
 Reader an honest and a perfect man,
 Commands all light, all influence, all fate:
 Nothing to him falls early or too late.
 Our acts our angels are, or good or ill,
 Our fatal shadows that walk by us still.—*Beaumont and Fletcher*

The Fall of Man

THE Rev. Dr. Minot J. Savage has expressed himself with some freedom upon the story of the Garden of Eden and the fall of man.

He says that "evolution has forever removed these stories and kindred ones to the land of myth where they belong." It appears further that Dr. Savage believes that we have already heard too much about the fall of man and that it is now time to pay more attention to the ascent of man, and to do what in us lies to hasten that process. He tells us that there are thousands of churches where these stories have been quietly laid upon one side, and while it is gratifying to hear this, it would be still more gratifying if ministers were to openly denounce these myths which have been so perniciously misunderstood. Something more than silence is needed to correct dangerous errors into which men have been born and in which they have been educated. So far from their being ignored by enlightened ministers we would suggest that they ought not to be ignored so long as any human minds are enslaved by them, so long as an antiquated theology maintains its destructive hold upon any human minds. We have had too much of the policy of silence in the presence of dogma. We want more speech, strong speech, denunciatory speech. We want the churches to tell men that they are free, that the Garden of Eden is in front of them, that their sufferings are from within themselves as also is their salvation and that no curse can lie upon them from a long dead past. There can surely be no more sublime privilege than to lift the loads from the backs of others.

If ministers of intelligence did but realize how real is that load and how heavy where perhaps they least expect it, they would rise to their opportunities, and they would become liberators. But this cannot be done by silence; it must be done by speech. STUDENT

TRUE FREEDOM

Some verses from an unacknowledged poem by LORD TENNYSON

A FREEMAN is, I doubt not, freest here;
The single voice may speak his mind aloud;
An honest isolation need not fear
The Court, the Church, the Parliament, the crowd.
No, nor the Press! and look you well to that—
We must not dread in you the nameless autocrat.

I feel the thousand cankers of our State,
I fain would shake their triple-folded case.
The hogs who can believe in nothing great,
Snoring bedridden in the down of Peace
Over their scrips and shares, their meats and wine,
With stony smirks at all things human and divine!

Poor soul! behold her: what decorous calm!
She, with her week-day worldliness sufficed,
Stands in her pew and hums her decent psalm
With decent dippings at the name of Christ!
And she has mov'd in that smooth way so long,
She hardly can believe that she shall suffer wrong.

Alas, our youth, so clever yet so small,
This dilettanti deep in nature's plan,
Who make the emphatic One, by whom is all,
An essence less concentrated than a man!
Better wild Mahmud's war-cry once again!
O fools, we want a manlike God and Godlike men!

Conducted by J. H. Fussell

Question

What relation does Theosophy hold to the progress of the World?

Answer

To the average mind, progress means advancement in material and intellectual knowledge, with perhaps a little consideration for such discoveries as have been made in psychology. The world prides itself on this progress, and fails to see that the real problems of existence have been left untouched. Life is regarded only from the selfish, personal standpoint, and even those who are religiously inclined, hold "individual salvation" as the highest aim. Birth and death are mysteries, and the cause of sin and suffering in the world is held to be beyond all possibility of human knowledge.

For many centuries a narrow and bigoted religious conception has limited the view of past civilizations, shut out the accumulated wisdom of the ages and left the world in spiritual darkness. Because of this, our civilization has had an anomalous development of great material and intellectual advancement with a corresponding increase in selfishness and evil. What we call "reason" holds sway, uninfluenced by religions which are unable to present a scientific basis for the ethics they would teach.

It was in the height of such conditions that Theosophy was again presented to the world in its purity. The preliminary efforts of its great teachers have already been the means of advancing human thought along higher lines; even religious creeds are endeavoring to amend their teachings in order to retain their influence; the best scientific minds are gathering their inspiration from it; and so-called "advance-thought" schemes, hait their fads and isms with its teachings.

Today, Theosophy marks the record of the path of true progress. But the enemies to progress, seeing its inevitable adoption, use portions of it to serve their own ends; some of its teachings are offered for sale under some name which is expected to appeal to purchasers; these enemies to progress cover up the source of their knowledge, and invariably vitiate whatever of truth they may have stolen.

Fortunately for humanity, a strong safeguard exists in the organization founded by Katherine Tingley, the successor of H. P. Blavatsky and William Q. Judge, "The Universal Brotherhood and Theosophical Society." Its students and their practical Theosophic life under her teaching and direction, hold the truth as it was and is given—pure and undiluted. It is to her, to her teachings and demonstrations of true progress that the world must look for the necessary steps and the right direction, for Theosophy as a living power in the lives of men alone merits the name of Progress.

R. C.

(2) A thought that has often come to sadden earnest thinkers and workers in the world has been of the apparent gaps in the continuity of human progress. The more that is known of the history of the human race, the more certain are we of the rise and fall of nations and civilizations. Students must acknowledge that the key to the harmonic progression of humanity, if there be any, is at least unknown to them. Facts pour in from all quarters of the earth to confuse the theories concerning men and races, that have seemed stable enough for many books to be written about them, but the world at large is still in comparative darkness about man's place in the universe, his progress to the present state, and his future. Nothing is known of the thread of his life that runs through all, bridging all gaps—even that of death—which has been widely believed to divide us forever from further labor in earth-life.

To lovers of truth and light, who cannot be bound by any theory or creed, but seek the star of human progress, Theosophy offers the key. Theosophy tells of the path by which in gradual steps man has come to his present state and points out the way he must travel to realize his destiny. The great lost knowledge of cyclical law, explains the rise and fall in the affairs of men, and in fact each successive stage in the growth of men and nations.

The knowledge that man *is* a soul, reborn in earth-life countless times dissipates further the darkness and robs death of its sting. The life of humanity is found to be a continuous development governed by law, the knowledge of which has never been lost, but only obscured to the many at certain stages.

It is knowledge of the law, the opportunity to begin to work with the law that The Universal Brotherhood Organization offers to the world at this time. Thus will Theosophy discover to man the heart life that persists through all, and is the golden thread of human progress. M. M. T.

(3) Theosophy and what it stands for, may be compared to the charioteer, who guides and controls the movements of his steeds. Without this guiding hand the horses would undoubtedly run, but they might run riot. Abundance of activity there would be, but without the purposeful master, the end of the journey would never be reached.

Life, in infinite variety and luxuriant abundance is being constantly poured into the human arena. Like a river that is overflowing, like the verdure in the tropics it is bursting forth at every spot, from the illimitable and inexhaustible inner world, to be arranged, ordered, evolved according to the plan.

It is the soul which must handle all this untrained energy, and the soul is the living expression of Theosophy.

Every atom of this undeveloped life is charged with its share of soul-energy, and so has its little individual guidance. But as all belong together, each in his own place, there is, there can be, no perfect progress until the concentrated soul-energy, in the person of the charioteer, draws up firmly his reins, which he has spun from his own fiber, and which lead out to every atom of this overflowing life, forming a web of soul nerve-stuff; and until they answer to his touch.

Without this there must be confusion, and even the seeming progress will be lost. But when he sits in command, the mighty caravan moves, and moves forward.

G. V. P.

ON two days, it stands not to run from thy grave,
The appointed and the unappointed day:
On the first, neither balm nor physician can save,
Nor thee, on the second, the universe a-lay.—From the Persian

Japanese Courtesy

IF a government press censorship must exist, it is well to conduct it upon lines of courtesy. We learn from Mr. Brownell's book on *The Heart of Japan* that the Japanese authorities have brought this art to perfection. When the censor recognizes the painful necessity of suspending a paper he uses the following formula:

Deign honorably to cease honorably publishing august paper. Honorable editor, honorable publisher, honorable chief printer, deign honorably to enter august jail.

Mr. Brownell tells us that "the honorable editor, with his honorable co-workers, bow low before the messenger of the censor, acknowledging the honor of the august notification, and then accompany him to the honorable jail, chatting the meanwhile of the weather, or of the flower shows, or of the effects of the floods on the rice crop. Centuries of breeding under Japanese etiquette have rendered it impossible for them to show annoyance. They do not know how."

The Ripple of Effect

THERE is a clause in Lyman Abbott's recent "appreciation" of Henry Ward Beecher, which we ought all of us to keep carefully in mind. He refers to his friend as one "whose influence will outlive his fame."

The influence of the least of us is unqualifiedly eternal; the fame of the greatest of us has but the duration of a moment. The voice of some unknown man rises from a crowd in a public park, uttering a protest against an impure illusion or innuendo from the platform. No one knows whence it came; the man had never before emerged, and may never again emerge, from utter obscurity. But the protest did its work. It stopped impurity; it set one man thinking; it woke by example the courage of another.

Where is the ripple going to stop? An eye that could see spiritual effects could watch it broadening, generation after generation, till at last there would be no man born on the planet whose character had not been touched and raised.

One may think that as the long drama of life on this earth begins to draw to its close, and a relatively perfect humanity is almost ready to enter upon some grander cycle of being elsewhere, humanity's true aristocracy may have come into view and recognition. Amidst it will be some few of those whom short-sighted fame has crowned with a crown by then long since dust. But the greater number by far will be of those to whom fame has never offered, or who have never accepted, that crown. It will be of those whose voices, age after age, have been heard in the crowd, or whose deeds have been wholly unnoted by any multitude at all, the centers of the widening ripples. Any word or deed, spoken or done with courage by any of us today and forgotten tomorrow, will not only come then assuredly into view, but, by the deepest tendency of our nature, begets the next—and so forwards through our days and years and lifetimes.

Great Britain and France

FRANCE and England literally, observe, buy panic of each other; they pay, each of them, for ten thousand thousand pounds worth of terror a year. Now suppose, instead of buying these ten millions' worth of panic annually they made up their minds to be at peace with each other, and buy ten millions' worth of knowledge annually; and that each nation spent its ten thousand thousand pounds a year in founding libraries, royal art galleries, royal museums, royal gardens, and places of rest. Might it not be better for both French and English?—*Ruskin*

The Reading World

ONE learns several things from a study of *What the World Reads*. Professor Otlet of Brussels has given us a very valuable list of figures on this point. Per million inhabitants: Germany publishes 350 books a year, France nearly as many, Switzerland also nearly as many, Belgium nearly as many; then come Italy and Sweden with 300 each, Norway with 250, Great Britain with 170, Russia and America with about 80 each, and Spain last with 66.

But the ratios alter when we come to newspapers and periodicals. Germany publishes one of these to 3 books, America 3 to one book, Great Britain 5 to 7, France one to 2, Switzerland one to 1½, Belgium one to 2½, Spain one to 1. America is therefore the newspaper reader of the world. She does not allow herself time for many books as yet.

"In creative works England leads the world," says Mr. A. Growall, editor of *The Publisher's Weekly*, commenting upon Prof. Otlet's figures, "having by far the largest output of novels, romances and works of pure imagination." "In Germany educational works, theological works and books for the young predominate. The largest number of historical works appear in France, and Italy leads in religious publications."

Japan occupies an extraordinary position in respect of books and pamphlets, namely at the head of the list with Germany, or just second to Germany. No better proof could be got of her determination to come up to the civilized front ranks.

OBSERVER

PERSPECTIVE in life, as in art, gives clearer vision—the right perspective.

The Significance of Salt

WHAT is the mystical significance of salt? Some such significance there must be, if any weight is to be attached to the proverbial philosophy of nearly all nations. Biblical references to salt are too well known to need repetition, but what is the meaning of the old French saying that the civilization of a people may be gauged by its consumption of salt and soap? Among many of the ancients a salt spring was a divine gift and therefore a place suited for prayers, and every meal of which salt was a portion had a sacred significance. "There is salt between us" is expressive of friendship, and in some parts of the East today to eat salt in the house of an enemy means a cessation of the feud. Salt was one of the great principles of the alchemist, and who can doubt that so universal an attribution of virtue to this mineral must have its origin in some scientific truth perhaps deeper than we now know of? X.

The Raja Yoga Edition

THE Special Raja Yoga Edition of **THE NEW CENTURY** contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to **THE NEW CENTURY CORPORATION**, Point Loma, Cal., the papers will be mailed for you without extra charge.

Observations taken at 8 a. m. Pacific Time

The Artist's Fault

A little girl, to whom was shown a picture of Christian martyrs in a den of beasts, observed that there was one poor lion who had no martyr. The artist of that picture had evidently failed to convey the impression warranted by the history of the scene, and had created instead a fine sympathetic study of the king of beasts set off by a background of the degenerate human form. The lions were the more imposing from the purely physical point of view, and hence commanded all the sympathy.

More Sugar!

It is not generally known that a new sugar plant has been discovered in South America—the *Eupatorium Rebandum*—containing twenty times more sugar than ordinary cane. The kind of sugar is not yet known, nor the difficulties to be overcome in the cultivation of the plant, so it is too soon for the cane and beet sugar people to become alarmed.

THE MYSTERIES OF THE HEART DOCTRINE

Prepared by
KATHERINE TINGLEY
AND HER PUPILS

*The Theosophical
book of the
Twentieth century*

Tells the story and the history of the Theosophical Movement Throughout the World; tells what it is and why it is —reveals the mystery of the Doctrine of the Heart.

The prices are \$2 in cloth and \$1.50 in paper, which barely cover the cost, for it is printed and bound, not gaudily, but with such carefulness and thoroughness of art and craft as to make it unique among modern edition books.

It Is Well With the World

LET us begin the New Year with a conviction that it is well with the world and that a divine ideal is surely unfolding itself in the human mind. The pessimist, because he looks only upon the surface, will lament the storm and stress which surround us, but to the optimist the storm is but the evidence of the strength of human advance and of the tidal force which foams over the obstacles which it intends to destroy. To the true student of human affairs it grows increasingly evident that the struggle between good and evil has entered upon a new and an enlarged phase. There is no longer the mere skir-

mishing to which we have been accustomed, and which we have mistaken for the battle. The outposts upon both sides have been driven in and to both forces has come a mutual recognition of identity and of purpose. The strong hand of destiny has affixed labels to human movements and he must indeed be blind who cannot distinguish between the broad flood of main and persisting intention and the petty streams of human measures, which are but its tributaries and feeders.

In identifying with ecclesiasticism the power which wills that man shall be enslaved, we use the term in no narrow or restricted sense. There is an ecclesiasticism of science as well as of theology, and there

■ The Eccle- siasticism of Science ■

is both a science and a theology which opposes ecclesiasticism with all the fervor which we could desire. In using this term we refer to the force under whatever name it may masquerade, which has for its object the imposition of a mold upon human minds, the force which consciously intends to make the mind inflexible in the presence of new truth. The ecclesiasticism of theology is, of course, more dangerous than that of science, because it is defending a position which has never yet been effectively assailed, while the other merely covets a power of which it has barely yet tasted the sweets. We believe that mankind has not only begun to recognize its own ability to advance, but that it has also identified the armed forces of inertia which are determined that there shall be no advance if progress can by any possibility be averted. Our watchwords of freedom have after all been little more than a narcotic. Only as we wake from slumber and begin to stretch our mental limbs do we realize how actual are the bonds which have been laid upon them. Only with the desire to move comes the perception of restraint. And now a new order of consciousness has incarnated in humanity, and under its progressive stress we are beginning to idealize. Upon every side we see that men are stretching out their hands toward

■ The Past Must Bury Its Dead ■

the radiant pictures which have touched their dreams, and which have aroused them to a fresh energy. A new order of ages, a new heaven and a new earth have become possibilities, because their wondrous reflections have been seen, however dimly. Small wonder if the ideals of the soul have become distorted in brain minds too long inured to unreceptiveness, small wonder if men stumble awhile in the dazzling light which seems at first as darkness. From the old to the new is a passage which opens with perplexity, and there must be many a glance backward at custom which we have grown to love, and at the mental habits which have been a veil before the sunshine. But the past has been full of the dead, and it must bury its dead.

The light which has come into the world will not leave its work undone. It has been laid as a hot iron to our eyes, as a hot iron it has left a brand upon our hearts. It has awakened the world from its lethargy, and the turmoil which has followed its call to vigilance and arms will be followed by order and determination. Bonds are not broken without effort and conflict. Never yet has the road to freedom been broad and easy to the feet. Never yet has the birth of an ideal been a painless one. But we will recognize that humanity does not fight as do those

The Path Is Narrow and Strenuous

without hope. We will recognize the unending purpose of the ages of which the stream sometimes runs so tranquilly underground while men sleep in the sunshine, and which sometimes bursts into view and carries humanity onward upon a torrent which none can turn aside. This truly is the "Law which makes for righteousness," which breaks down the molds of mind, overthrowing those who have fashioned them and setting free those who sit in darkness. Well shall it be for mankind if it can recognize the destructive power which saves, and that other power which breathes deceptive words of peace and which would have men sleep on and dream the dreams of death. X.

Bird Millinery

THE London Humanitarian League has at any rate the courage of its convictions. It has introduced a bill into Parliament which provides for the prosecution and summary punishment of any one found guilty of wearing the plumage of rare and beautiful birds. The bill also provides that the offending article shall be seized and confiscated. The bill has of course no chance of becoming law, but its introduction may none the less serve a useful purpose.

Ireland at the Cross-Roads

MR. FILSON YOUNG has sketched for us a picture of Ireland which he calls "Ireland at the Cross-Roads." The author evidently loves his subject, and because he writes as a lover and not as a mentor, it may be that he will be heard, and that the thought which he inspires will be a fruitful one. We are all tired of hearing Ireland scolded because her ways do not happen to be our ways. We are tired of hearing the prophets of despair, and we are beginning to long for some authoritative voice which will tell them that their wares are no longer in demand—in Ireland or elsewhere.

As may be judged from the title which Mr. Young has given to his work, he believes that Ireland stands at the parting of the ways. He says that she is "ready now, as I believe she has never been ready before, to be guided and directed in a more prosperous way." Of that work it is not the intention here to attempt a critique nor a description of the two ways which Mr. Young believes to lie in front of the Irish people. Perhaps the most religious people upon earth, they have for centuries fixed their eyes upon a far-away Kingdom of Heaven, and they have never yet realized that of all pieties the most worthy is that which recognizes that the disordered stones which lie at their very feet are the only materials out of which that eternal kingdom can in any way be builded. The poetry and the imagination of the Irish people have carried them into a divine future, but is not the present equally divine? Is it the mission of religion to attain or to transmute, to abandon or to change and to glorify?

Mr. Young says that Ireland, "encompassed by estranging seas, brooding on her own tragic fate, lies outside the range of affairs and beyond the world's notice or interest." This is perhaps a word of pessimism which the author might have modified. Ireland is not outside the range of affairs, although a very stupid world may seem momentarily neglectful of those "affairs" in which she is preëminent and in which a glorious future may lie. The world may yet awake to the fact that it is itself starving for that very poetry and imagination of which Ireland has ever been the storehouse; and if the day should come when humanity cries out to Ireland for aid, it would not be the first time in history that a nation has discovered with surprise its own great possessions, the treasures of its mental soil.

It may be that through suffering Ireland has been led the more speedily to the turning of the ways. Happy, indeed, are they who suffer if they can but see the great intent which lies behind the seeming severity and the great opportunities which are never altogether veiled by the strong, swift wings of pain.

Bull-Fighting by Description

BULL-fighting has not yet become popular in America, but this is not for lack of journalistic stimulus, and it might well seem as though some of our newspapers were a little envious of the facilities afforded by one or two European countries for this abominable amusement. A Chicago newspaper prints from the pen of its special correspondent in Spain a long and lurid account of a fight between a lion and a bull with details calculated to shock the feelings of a vivisector. This description is of course copied into other newspapers, so that their readers may have the double satisfaction of pharisaical comments upon European depravity and at the same time in imagination gather around the Spanish arena and participate in a depraved and brutalizing excitement. Newspapers are now so universal that it is practically impossible to keep them even from the youngest classes of the community who are thus mentally fed upon cruelty and hypocrisy and all too often given a start upon the road to crime.

STUDENT

Cigarettes and Sunday-Schools

THE injunction to go out into the highways and compel them to come in, is illustrated in a somewhat distorted manner by a story which emanates from an English town. The boys of the neighborhood, being somewhat coy in their attendance at Sunday-school, are induced to a more regular appearance by the gift of packets of cigarettes. The scheme is naturally very successful, large numbers of names having been added to the register. We assume that the destruction of the pupils' bodies is of small importance compared with the "salvation of their souls."

STUDENT

A Vital Problem

A QUESTION of soul-stirring import has rent asunder the Congregationalists of Massachusetts. We are told that the controversy has been bitter, and that pamphlets, sketches and letters have been poured forth upon both sides. There has, however, been no bloodshed. The cause of this domestic strife is the problem of true heirship, spiritually and historically, to the Pilgrim Fathers. Two rival sections claim the laurels, and they seem to have been worked up, or down, to that point of fraternal hatred to which only theologians can ascend, or descend. They have now appealed to the General Conference, which, to its credit, seems to think that the question is a small one compared to that of Christian unity, and that it might be well to let the dead bury its dead.

We are reminded of that equally famous theologic controversy which raged some few centuries ago as to the number of angels that could dance upon the point of a needle. Then, as now, the depths of the theologic mind were stirred, and theologic missiles hurtled through the theologic air. We forget how the question was settled, but it must have been well handled, seeing that the earth still revolves upon its axis. This corresponding and latter-day problem will, we trust, be likewise solved, so that the disputing churches may be restored to their natural labors of founding the Kingdom of Christ upon earth, from which they have been momentarily and reluctantly diverted.

STUDENT

Taking the Records of a Dying Tribe

THE New York Museum of Natural History has hit upon an ingenious and somewhat unusual method of securing exhibits of contrivances used by the Indians of Vancouver Island. An old Indian was brought to New York for the purpose of superintending the construction of models of the various forms of fish-traps, deadfalls, etc., used by the hunters of his people. There were twenty-three models made, each a copy of some form of trap actually used by them. The fish-traps are all based upon the idea of letting the fish get easily into a place it could not get out of. It seems that the Indians used no nets, probably because of the lack of suitable cordage material for making them, sinew or tree-bark being wholly unfit. The animal-traps were all variations of the deadfall. There is probably very little essential difference between these things among different tribes throughout the whole of Canada and the northern part of the United States. The needs were everywhere similar and the resources also, and naturally the resulting contrivances would be. Some of the fish-traps may still be seen in small streams, even in fairly-well settled districts.

There is something pitiful about the idea of this old man thus recording the habits of a tribe of which few beside himself yet remain. His presence in New York on this errand was in itself a picturesque episode in museum exploration, and it would seem as though the plan must yield better results than the usual system of searching.

STUDENT

The World Needs Men

DISTRICT ATTORNEY JEROME of New York was recently received at a Greek society dinner at the Waldorf-Astoria. In response to the toast "The Duty of the Citizen," he said:

After my fifteen years of public life in this city, it is hard for me to talk about anything but the need of decency in public life; and educated men, you men of the colleges and universities, are under peculiar obligations to furnish that decency. Ethics alone won't do it. Thinking beautiful thoughts and embalming them in quarterly reviews won't do it. How far do you suppose Christianity would have gone if the principles had not been incarnated in one loving personality, in a Leader? Without that Leadership we should have had merely another school of ethics.

It is not enough to believe in decency. You must get out and fight for it; and if your own sense of honor doesn't force you to do that, nothing will.

Bertramstown, Johannesburg

THE illustration on the cover page of the NEW CENTURY PATH this week represents a bird's-eye view of Bertramstown, one of the suburbs of Johannesburg. The latter city is well known as the commercial center of the South African gold mines, and during the recent war it was the center of much of the hostile operations in the Transvaal.

Some Views on XXth Century Problems

An Enlightened View of History

PROFESSOR HAECKEL'S *Riddle of the Universe* deals with the problem of education in a manner which is not so popular today as it will be in a few years' time, when public ideals will have somewhat changed for the better. Everything which this eminent thinker may say is of course worthy of attention, but his remarks upon the study of history are especially enlightening and have already made a marked impression. History, he tells us, concerns itself far too much with kings and rulers and not enough with the mass of the people who are usually but ill-represented by those who act in their name. We want to know more of the mental changes in the life of the nation, the nature of those changes, and from what causes they were born. We want to know more of popular movements and of the forces which produced them. We want to understand the heart-beats of a people and whether they were for good or evil. We want to know about the ebb and the flow of conscience, and how it has operated in the dealings of man with man.

If we were to study history in some such way as this, we should find that geographical boundaries and limitations became less and less noticeable. For human thought there are no custom-houses and no frontiers. An idea laughs at all our politics, passing easily under them and over them. Ideas are, after all, the true life of men, and all else is but their effect, too often distorted by prejudice and pride and ignorance. What is now called history is responsible for most of the animosities of the world and for all the falseness of its patriotisms. A true history would introduce us for the first time to a true patriotism which can be nothing else but the recognition of a geographical specialization of duty and of moral obligation, and not at all of self-interest. True patriotism indicates to us the natural and peculiar field for our self-sacrifice and not for our self-assertion. History ought to be the artillery which moral intelligence brings to bear for the destruction of illegitimate boundaries; it ought to level the ground for the advance of our common humanity. The extent to which it accentuates the boundaries and increases the obstructions is the extent of our inability to grasp its meaning and our unwillingness to apply it.

STUDENT

Worse Than the Death Sentence

THAT a man should be allowed to remain in prison under sentence of death for four years, is a legal scandal and it ought to be made impossible. This is the fate of a man named Ross, now in San Quentin. That no pains should be spared to secure justice is right and proper, but these long delays are usually due to no such cause but are the result of legal legerdemain and a horrible juggling with technicalities. Individuals are, of course, not to blame except for tolerating a system which turns life and death into a forensic game and encourages crimes by creating innumerable back stairways to immunity.

The man who has passed through a four-years ordeal such as this has suffered death a hundred times, and the law that plays with its prisoner as a cat plays with a mouse, is unworthy of American civilization. None of the civilizations which we are accustomed to call effete would tolerate such a thing. Why do we?

STUDENT

Why Our Food Is Adulterated

A MEDICAL contemporary "fails to see the reason" why more efficient steps are not taken to prevent the adulteration of food by so-called preservatives. Our scientific friends should reflect a little, and they will no longer "fail to see the reason" why human life, often in its most helpless forms, is denied the protection to which it has a sacred right. The God Moloch—although it may be a slander—is said to have demanded the sacrifice of children. The more real modern Moloch of Gold demands and receives a similar propitiation, and there seems to be no effective force to overthrow its temples and to trample upon its altars. The medical writer in question will receive illumination upon this and very many other murderous abuses if he will realize that they pay, they pay.

STUDENT

Power of Observation in Children

A RECENT writer on education has been conducting some experiments with a view to ascertaining the extent to which the power of observation had been developed in a certain number of children. Out of thirty-eight children only three knew that a coat of arms was painted over their school-room door. Some believed that it was colored yellow, while others held that it was painted black. All of them had noticed cows passing on their way to the slaughter-house, but only two out of twenty-eight knew that a cow's hoof was cloven. Questioned as to the rainbow, one child of twelve years of age thought that "it was mostly white and brown." Many of the children could not describe the way to the Town Hall, to the Post-office, nor to the Parish church, although these buildings were close to their homes.

Education which does not include the power of observation is largely wasted. We might very well dispense with a great deal that children are taught as useless to them now and hereafter, but the power of accurate observation is a teacher that will accompany them all through life, making that life not merely wise but beautiful.

We are told by a writer who was familiar with the life-story of the late Herbert Spencer, that the great philosopher's father seemed to be quite indifferent to the education which his son was receiving so long as he was taught to draw. By the art of drawing, the powers of observation are peculiarly called forth and this object once obtained all other things would be added.

STUDENT

Prayer and Money Grabbing

TRULY the children of darkness are wiser than the children of light. Some recent proceedings in reference to a defunct public company in which immense sums of money seem to have been lost, disclosed the fact that the stockholders' meetings were opened with prayer, while one of the officers of the company was well known for his activities in the Sunday-school. This combination of God and Mammon was naturally successful in extracting money from the pockets of the pious, to which there seems little likelihood of its ever returning. We are told that a committee has been appointed to see that justice is done. To a certain extent justice has already been done, and the religious people who have lost their money may have learned that even prayer and Sunday-school teachers cannot persuade the Deity to favorably interfere in the affairs of money-making companies. It is a nauseating picture, and, it is to be feared, by no means a solitary one.

X.

Intelligent Treatment of Convicts

IN the presence of an almost universal increase of crime, it is pleasant to turn from those who advocate a mere accentuation of the bad old methods of retributive punishment to those who recognize that a new and more enlightened departure is necessary. Along the latter lines an experiment has now been inaugurated at a great English prison. It is based upon the recognition that up to the age of twenty-one a truly criminal character cannot have been formed, and that those who have lapsed into crime before that age can be and ought to be reclaimed. For the purpose of this experiment a department of the prison has been set aside. Its occupants will be specially taught the virtues of cleanliness as a preliminary step to self-respect. They will also be taught to read and write, and they will be given a trade. The results so far have been of the happiest description, so much so that the Prison Commissioners are justified in their description of the experiment as "the most important work of prison reform for the future." That it will be a continued success goes without saying. If it is conducted without the interference of faddists and fossils, it will solve one of the most distressingly dangerous problems of the age.

It is time for civilization to grow away from panic and also from penal cruelty. The noisy people who cry out for the mere infliction of increased pain ought to be ignored. They are usually the very people who are most acquiescent in those features of our social system which a more intelligent legal code would classify as crimes.

STUDENT

Art Music Literature and the Drama

What Does Leadership Mean?

AN interesting case, brought by one of the violinists of a certain orchestra against the conductor of the same orchestra, has recently been decided in one of the New York courts in favor of the latter. Concerning it, the conductor says:

Unimportant as this matter may appear to be to the general public, it has a deeper significance than appears on the surface. In Europe such a suit as this would be practically impossible, for there a conductor would hardly be placed in a position where he would find it difficult to induce the members of his orchestra to follow his suggestions with regard to the musical selections rendered. The member of my orchestra, who has recently lost the suit which he brought against me, is pleased to say that my conception of the Mozart symphony in E flat is not in accordance with tradition. The remark *per se* I ignore, because, generally speaking, in musical interpretation there is no such thing as tradition. In fact, it becomes with some a convenient excuse for intellectual sluggishness and absence of spontaneity. In order to give adequate expression to any musical composition, it is necessary to imbue it with genuine, pulsating life—to recreate it, as it were, for no one has yet invented a system of notation capable of expressing more than the bare framework of that which is vitally essential in a musical work. To quote the opinion of but one of the great composers, Liszt, we find that he says in the preface to his *Symphonic Poems*: "In spite of my endeavor to make clear my literal meaning, nevertheless I must confess that much of it, perhaps even its very essence, cannot be expressed in symbolical notation. These works can be rightly interpreted only when they find on the part of the conductor artistic inspiration and sympathy, and on the part of conductor and players a unified, harmonious and vitally sympathetic interpretation."

The point at issue in this controversy was ostensibly whether the conductor of the orchestra or the player in question was most capable of deciding upon the phrasing of the first theme of Mozart's symphony in E flat. The real issue was whether the conductor of an orchestra is its conductor actually as well as in name, or whether any individual in the ranks, be such an one narrow but well-intentioned or merely quarrelsome, has the right to ruin the whole performance at his personal whim or caprice.

The condition of humanity today is a fair sample of what will happen to any collection of units when left entirely without the unifying influence of a leader on right lines. The one absolute condition for the production of any work of art which calls for the combined efforts of a number of people is that these place themselves willingly and enthusiastically and impersonally under the direction of some one who becomes their leader. That one, for the sake of the whole, must reserve unquestioned authority as to all matters concerning the particular work in hand. Otherwise, everything will go to pieces.

It would be difficult to find, among the potentates of the world, one whose word is so absolute and unquestioned as, for instance, the *dicta* of any of our really great stage directors concerning the staging of the one particular drama under their direction.

Where would the Chicago orchestra be today had Theodore Thomas ever, even for once, found it necessary to concede to the disintegrating tendencies of any one of his members, even though that one might have been able to play his particular instrument some twenty-five times better than Mr. Thomas could do?

Where would be the Symphony Orchestras of New York and Boston, the wonderful Philharmonic, the Joachim Quartet, that cannot be surpassed in Europe—what would these have amounted to without

a leader who knew how to lead and players who knew how to follow?

There is a deep and fundamental law which the recent suit has, in a measure, served to reveal. It is time that we recognized it.

If the work is worthy—whether it be art or music or philanthropy matters not—and the leader true, then let us put aside our pet and personal prejudices and find our true places in the ranks.

If, however, our prejudices are dearer to us than principle, then let us quietly withdraw. We shall not be missed.

To do otherwise—to remain in the rank and file of a body that is steadily advancing under a worthy and courageous leader toward the consummation of some great and noble work, merely that we may indulge our love of power or our propensity for finding fault—is an assault upon a Universal Law which will, when it gets ready, teach us better by the stress of penalty and of pain.

FRENCH NATIONAL HYMN

From the French of ROGET DE LISLE

YE Sons of Freedom, wake to glory:
Hark, hark, what myriads bid you rise:
Your children, wives and grandsires hoary—
Behold their tears and hear their cries!
Shall hateful tyrants, mischief breeding,
With hireling hosts, a ruffian band,
Affright and desolate the land,
While peace and liberty lie bleeding?
To arms, to arms, ye brave!
The avenging sword unsheath!
March on! March on!
All hearts resolved on Victory or death!
O Liberty! can man resign thee,
Once having felt thy generous flame?
Can dungeons, bolts and bars confine thee,
Or whips thy noble spirit tame?
Too long the world has wept, bewailing
That falsehood's dagger tyrants wield;
But Freedom is our sword and shield,
And all their arts are unavailing!
To arms, to arms, ye brave!
The avenging sword unsheath!
March on! March on!
All hearts resolved on Victory or death!

tended merely for the select few, a great mistake has been made somewhere in the divine plan, in distributing so lavishly among the masses such benefits as air, light, sunshine and the affections of the human heart. A.

FEW buildings in Europe have a greater interest for the thoughtful tourist than the old Flemish town-halls which were built in pre-Renaissance times and have, to a great extent, fallen into decay. Recently the Municipal Art Association of Brussels has taken up the work of restoring them. The Ypres Town Hall is already being restored, and work is soon to be begun on the Dudenarde "Maison de Ville." It was an exact copy of this famous building which was erected to serve as the Belgian building at the Paris Exhibition in 1900. The original building is famous for the exquisitely minute sculptures of the façade. At a distance they resemble the finest lace.

THE artistic production of a single tone and the ability to reproduce it at will is a great achievement.—E. T. Myer

A Common Phase of Selfishness

FROM a current magazine we clip the following:

Among the charming properties of the Roentgen rays is, it is said, that of artificially ageing violins. A new instrument exposed for a few hours to the rays is supposed to acquire the rich tone which it has been thought only the mellowing influence of centuries could impart.

The writer, with a cynicism worthy of a more desperate cause, adds:

Hereafter anyone may be as great an interpreter as Wagner or Seidl if he will only submit his baton for half an hour to the action of the Roentgen rays.

The above remarks were evidently called forth by the writer's anxiety lest the market be flooded with violins which really are criminally modern but yet which, owing to their remarkable qualities, will be mistaken for genuinely "old" violins—as if an old violin were necessarily a good one.

One might quickly criticise if the process described does not give the results claimed, for those who make such claims become, in that case, parties to fraud. But this contingency appears not to concern in the least the writer of the criticism. What worries him into ill humor is the awful prospect that there might possibly come to be within humanity's reach hundreds, perhaps thousands, of good violins instead of merely scores. This argues a curious kind of philosophy. If the best things of life are in-

IT IS FOR YOU TO DARE ALL

—Emerson

"THE partialities of women are needed," said Emerson many years ago, "to balance the partialities of men." When Emerson uttered these words what might have been termed the "Woman Movement" was then in its infancy. Today no contrast could be more complete than that between the situation of women then and now. Many factors have worked to accomplish this, among them the women's clubs, but it would be impossible to trace particular results to particular causes in this case, because the whole woman movement has been afloat, so to speak, upon the great general tide of advance. In one field alone has women accomplished wonders in the way of being recognized, and that is in the field of journalism. When thirty years ago it was almost impossible to find in the newspapers any particular reference to women's work or women's interests beyond, of course, fashion notes, today scarcely a department exists that is not conducted with the end in view of pleasing women readers.

It was a great advance when some bold editor ventured to have a "Woman's Department." At first it was modestly tucked away in a corner, and its contents consisted mainly of "receipts," receipts for cooking this or that, or for keeping the mirrors shining, or for removing fly-specks from furniture, etc.; all important to be sure; but the absence of other matter was a clear indication of the boundaries placed by the editor upon "woman's sphere." Then this department increased in size and changed somewhat in the character of its reading matter. The home, and woman's work in the home, came to be considered as of greater importance than editors had heretofore dreamed, and the "Woman's Department" began to branch out into a broader life and one of greater usefulness. It was not long before there came to be woman editors for this department and a new life followed this new departure.

Those who know something of the lives of women in the country—those who live on the small farms, whose lives are filled with work, crowded with care and yet oppressed with loneliness—need not be told that a woman's department in the weekly paper opened out to them a new life. They read its articles and discussed them. For the first time to many women there came a feeling that, after all, their work was important as well as necessary, perhaps even interesting. With that feeling, life itself began to take on a new dignity. These women were doubtless unconscious of the fact that that was the case, but the home gave its own proof. For it must not be forgotten that in many a country home the woman is excluded to an extreme degree, and often her one outlook upon life is through the window of the weekly paper. That is less frequently the case today than twenty-five years ago, and the woman's departments in our papers have been an important factor in making the change. Many a little country woman's club, reading circle or study class owes its existence to the suggestion given in some woman's department. Many a country girl has found her way to college by the light of the inspiration of some article in the "Woman's Page." Many a funeral parlor, "kept for company," has been thrown open to the members of the family and to the sunlight because of some suggestion read by the house-mother and followed.

But at the present time it is quite impossible to limit woman's work to one department in any paper or magazine. Her touch is recognized in all. Along educational lines her influence is more wide-reaching than one dreams, until one follows the telegraphic and other reports in the daily papers. In civic work—look for a moment at the reforms carried

Women in Journalism

through by our women's clubs, reforms in matters of education and philanthropy, such as the securing of women physicians in insane asylums, the appointment of matrons in police stations, the influence of women in the juvenile courts, the establishing of vacation schools, etc. All these things the newspapers chronicle, and it is impossible, therefore, that there should not be the woman influence on every page. It is due partly, perhaps, to the increasing number of young women who are entering the newspaper field. Some of our best newspaper and magazine writers are today found among our women. Their influence is greater than they dream, and the thought of this should be enough to lead every one among them to approach her work with reverence and with care.

Each word written has its weight for evil or for good. The barest sentence that fills the most inconspicuous corner may change the course of a whole life. Not one of us but can recall some critical period in our lives when we stood at the parting of the ways. We were not conscious of it at the time, perhaps. More than likely we did not dream of the momentous results that would follow the taking of a single step in either direction. A word or a sentence came before our eyes—the outlook changed, a new ideal entered our minds, a greater hope. We stepped outward and upward. Or, on the other hand, a word here, a word there, had its weight in leading us to take the wrong course, to make the wrong choice.

Did women writers realize the extent of their influence, they would approach their work with less unconcern than is often now the case. A gospel of hope may be preached even in the report of a conference or the "write-up" of a fire, not in the bare words, but in that which one feels written between the lines. Greater opportunities involve greater responsibilities, and responsibilities which react on others as well as on ourselves. Women, in entering a broader life and a work which so much affects public thought as does newspaper work, must, if they are true women, grow into a deeper realization of their responsibility, day after day.

STUDENT

THUS IT IS

by JOHANNA AMEROSIUS

ONCE unto me a rose thou gavest,—
Meseems today again I take
The bud; and as a sharp thorn pierced me,
You trembling asked, "Oh, does it ache?"

You took your kerchief, that wound binding,
'Twas white and soft as fair snowflake:
I laughed away your childlike terror,
And only said, "It does not ache."

But when you bruised my heart so sorely
I longed my kind all to forsake,
Like stricken deer, you never thought of
Asking the question: "Does it ache?"

A WELL-KNOWN woman physician recently said, "Health is just as contagious, more so, I think, than disease. Both as physicians and as women we study disease too much and health too little. During all our student years we devote one, perhaps two, hours a week to the study of physiology or hygiene; all the rest of the time we are studying disease. Is that method thoroughly rational? And do those of us who are really working for humanity realize the potency of simple good health? Take the temperance cause, for instance. It is useless to talk temperance after your third cup of tea, or your one too many helpings of pie or roast beef. What is dyspepsia or a sluggish liver but the label that our own intemperate appetites place upon our bodies? Such ailments are unchristian and disgraceful. I hope to live to see the day when it will be considered as ill-bred to ask after last month's dyspepsia or last week's sick head-ache as it would be to make inquiry of a reformed ex-convict as to his former experience in the penitentiary."

A PROMINENT figure at the meeting of the Iowa State Bar Association held a few months ago in Des Moines, was Miss Grace Ballantyne. Among other guests was Justice Brewer of the United States Supreme Court. Miss Ballantyne is noted for the victories she has won in some hotly contested court cases.

Women's Clubs

ONE of the signs of the times is the gradual branching out of women's clubs along lines of humanitarian work. First organized, in most cases, for literary study and personal culture, they have so broadened, year by year, in their aims and the scope of their work, that, to many clubs, the original ideal must seem like something foreign. It is to the women's clubs that we owe the departments of manual training and domestic economy in many of our public schools. It is club-women who have done most to preserve our bird-life and to secure to children the education that will render them humane in the treatment of animals. They have organized school-children's savings banks, vacation schools, supplied books, clothing and food to needy children, libraries for homes and schools, rest-rooms for teachers, lecture courses, works of art for school-rooms and many of the poorer class of homes. One Illinois club has paid the university tuition of something like a score of girls; others have been instrumental in preserving historic landmarks. The tendency of all evolution at the present time is from the purely personal toward the universal. Those who move with this tide step into enormous opportunities. Those who hesitate, or selfishly work against it, are destined in the end to be swept down by it and possibly destroyed.

Chicago Woman's Club

YEAR by year grows the tendency among members of women's clubs to step out of purely literary work into the broader ways of practical philanthropy and social reform. The Chicago Woman's Club, while from its inception giving attention, through various committees, to practical humanitarian work, made a new departure during the recent hot season. The terrible infant mortality in the poorer districts of Chicago, as well as all great cities, is a matter which forces itself upon the attention of every woman who has a heart, summer after summer. Babies in the slums die like flies as soon as the heat becomes intense. In studying this question the members of the Woman's Club discovered that, while poverty and ignorance were the two main causes, the most tangible cause was usually impure milk.

It is well known that no other article of food may be so deceptive when judged merely by appearances, none other may be doctored with preservatives, from borax to formaldehyde, with so little danger of detection from the unexpert, and no article of food is better adapted for carrying and propagating germs of disease. With their usual determination, certain members decided, at a meeting held some time ago, to make an effort, at least, to furnish pure milk to families in the poorest districts, and if need be, to erect a bottling and sterilizing plant. Besides this there were to be established milk depots at various places in the tenement districts where pure milk may be purchased at cost.

For many years the Chicago Woman's Club has been a recognized agent of sensible and judicious reform. Its members have secured the passage of new laws and the enforcement of old ones in many instances, as, for example, in the problems of juvenile crime and punishment, and child labor.

A NEW departure has been made by Mrs. Alfred Clifford Barney, one of the society leaders of Washington. She gave a house-warming reception to all those who had had a share in the building of her new house artists, artisans and laborers. The house itself was designed in all its details by Mrs. Barney and she personally superintended the building of it.

PERSONAL limitations must not obscure the possibilities of the hour and the criticism of the cynic should not be allowed to paralyze our efforts.

KATHERINE TINGLEY

A LOMA-LAND MOTHER AND CHILD

For the Birds

THE Roxbourn Club of Roxbury, Massachusetts, is engaged in one line of work which might be adopted to great advantage by other clubs the length and breadth of the land. During the last year its Tree Committee has planted something like one hundred trees, among them many of the mulberry and mountain ash. The latter was chosen as being adapted to sustain bird life. Through its year book the club appeals to club women everywhere to think of the birds when trees are planted about their homes or in the streets of their cities.

Here and there we see signs of an increased interest in the preservation of our song birds, and an increased reverence for bird-life. The Legislatures of many States have passed laws which have for their object the protection of birds, and at last fashion decrees that women shall no longer deck their bonnets with slaughtered innocents. When one thinks of humanity's sordidness, its selfishness, its push and greed, one comes back to nature and nature's ministers—for such birds

are—with a feeling of utter thankfulness. As Katherine Tingley has said, "There are times when the sorrows and the sins of humanity so press on my heart, that if I could not look out at the blue sky, the glorious trees, the flowers and the birds, I could not bear the picture."

STUDENT

Women in Germany

MRS. FENWICK MILLER writes in the London *Daily News* of recent date:

The idea of higher education, the opening of newer and wider occupations, any idea of independence for wives, and so on, is all extremely unpopular in Germany. Our two noble-minded and great-hearted Princesses who married to live in Germany, the late Princess Royal, the

Empress Frederick, and Princess Alice, Grand Duchess of Hesse, did what they could to make a beginning for German women to step out into a wider life; and the educational institutes which they founded, and the benevolent organizations which they supported, were unquestionably the first step through the tangle of masculine prejudice and arrogance for German women.

That clever English woman, Mrs. Austin (wife of John Stuart Mill's friend, John Austin, whose lectures on jurisprudence she wrote out and published), tells indignantly in 1841 of the state of affairs that she, accustomed to the society of the greatest thinkers of the day in England and France, found in Germany. She says: "The condition of German women, their intelligence and moral station, is so immeasurably lower than the condition of English women, that it must take a long time to bring them up to our level. Imagine that it is the universal custom in what they call society for the men to go into a separate room, or if there is none to assemble in a corner while the women sit round the table. No man thinks of talking to a lady. I have told them that I am not accustomed to be insulted in this way, and that if such men as — have not disdained to speak to me as if I were not quite a fool, I will not take such an assumption of superiority at the hands of little Court Chamberlains, etc. Not that I want or value their conversation, but my English blood boils at seeing women so degraded; we in England are oppressed, but not contemned."

The codification of German laws three or four years ago even took away the rights that the women of some of the various States affected previously possessed, and riveted more firmly than before the chains of the rest.

RECENTLY eight highly educated Polish women, all members of a well-known woman's club, were fined at Guesen, Province of Posen, for refusing to submit to the police a copy in the German language, of the constitution of their club. They offered to furnish the authorities with a copy of the document in Polish, but their offer was refused. Is this one of the signs of the times?

The Ancient Celt—What Archeology May Teach Us

IT would seem as if our time would presently want a new word. Archeology is one form of the *study* of the spirit of the past, of the consciousness and life of the past. The word we want is to express *in practise* the consciousness of the past. Both tendencies mark the stirring of the past from its sleep.

"The stirring of the past"—is that a mere metaphor, a useful phrase in a peroration of a speech at some national festival, a sonorous half-line in a patriotic poem? Or is it something more definite? As the present is moved to go back to the past, can we in the same real sense say: so is the past moved to come forward into the present?

"The present" is made up of ourselves—of men. So was the past. Where are its men?

Remains of old and evidently splendid civilizations are daily being unearthed. And when we consider the destructiveness of time's hand; and that with advancing knowledge, the period when such civilizations bloomed is being constantly pushed back, we can understand that we have as yet but a poor idea of what they were at their height.

And there are other civilizations behind us whose remains are not represented by implements, and architecture and sculpture; but by legend and myth almost solely.

Especially is this true of Celtic and pre-Celtic epochs. May not the whole mass of Celtic legend, myth, and tradition, as we have it, whether from Iceland, Ireland, Brittany, Wales, and Cornwall, be but the remains, the indices of a civilization that was; standing to it as do the stone remains of the Aztecs and Egyptians to the old civilizations of Mexico, Peru, and Egypt? Furthermore, looking with dim and almost unseeing eyes into the past, we must expect to meet with their own peculiar traces of civilization to which our own is no guide, civilizations that never marked their course in stone and iron. Our own civilization, which we almost unconsciously use as key to all others, is a material one, and one of intellect.

May there not have been old civilizations which were spiritual, and of feeling? And if there were, it is clear that their remains would be wholly different from those which our archeologists study. It would be precisely among legends and myths that we should have to look.

Yet these, as we said, would be but indices from which we should have to infer and construct, as Cuvier inferred and constructed an extinct animal from a bone. The people might have lived in huts or tents, and walked half naked. They may have carved nothing on stone.

Yet they may have known in feeling, in direct intuition, what we speculate on and hope for. Their religion may have been their life. It may have stood to ours as does the feeling of a man who loves humanity to the speculative intellection of some cold-hearted, over-brained writer on ethics. And with some it may also have taken a perfect intellectual dress as well, and yet have left no written or recorded trace. It may have known the meaning of life, the mysteries of the soul and the after-life, have faced and understood God in and beyond Nature where we but speculate and reason. It may have seen that to which our mentality is blind. And the myths and legends may mark but the survival in poetic form of what were to those people direct acts of feeling.

Where are their men? Where are the wise and great of any and all past epochs? Is there no significance in the world-wide impulse to get back the past, and get back to the past? It burns in some hearts strongly,

and inspires a peculiar and poetic patriotism, such as we now see in Iceland, Wales and Ireland. There is something of it in the poetry of the neo-Gaelic and neo-Irish movements. Indeed, its most marked sign is the attempt to re-live, in feeling, the old Celtic life; to get back to the old Celtic heart and soul. Little enough from the prehistoric Celtic life has thus far come to us; what little there is, is overlaid by Scandinavian and Romance strata, or comes to us feebly through Roman veils. But all signs point to some far more perfect recovery of this bygone Celtic and perchance pre-Celtic past.

H.

Remains of Four Hundred Ancient Irish Forts

THE ancient people of Clare, in Ireland, must have been of a war-like disposition if we may judge from the remains of the forts which they built. From *Wakeman's Irish Antiquities* we learn that the remains of no less than four hundred of these fortifications are

known to exist. The most astonishing is perhaps that of Moghane, a few miles south of Ennis. There are three stone ramparts, of which the greatest dimensions are 650 feet. The united length of the walls is nearly 8000 feet, and the area enclosed is nearly twenty-seven acres. The estimated quantity of stone used in this remarkable structure is no less than 1,177,000 cubic feet. The fort known as Ængus, on the coast of Ineshmore, is perhaps still more wonderful and justifies Petrie's description of it as "the most magnificent barbaric monument now extant in Europe." It stands on the edge of cliffs nearly three hundred feet in height, and seems originally to have consisted of four enclosures. The inner wall is eighteen feet high and twelve feet, nine inches thick.

ANCIENT CASTLE AT DAREHIEB, EGYPT

The shape is that of a horse-shoe, although some authorities believe that it was originally circular, and acquired its present form through the falling away of portions of the cliff upon which it stands.

Another interesting fort is that of Dunbeg, which was made by building a massive wall or rampart across a headland. This rampart varies in thickness from fifteen to twenty-five feet. Wakeman tells us that,

Near the middle the wall is cut by a passage, the entrance of which is three and a half feet high, three feet wide at the bottom and two feet at the top. The passage widens to about eight feet, and becomes corbelled. The original entrance was seven feet wide, but it was thus reduced, and a barricade about four feet thick added, leaving a space between it and the original wall to the right and left of the entrance for defense with a heavy timber log. The recess to the right was larger than that to the left, to receive the log when not in use. A hole in the top of the wall opened into the recess, in order to wedge the block when in position. About half way through the wall were similar recesses for like purposes. Two guard-rooms in the wall opened into the court within.

It is not easy to understand why fortifications of such great strength should be needed to resist enemies unprovided with artillery.

X.

THE discovery in America of various prehistoric flint mines has been curiously paralleled by an almost precisely similar discovery in England. It was made during the construction of a new railway line near High Wycombe, and the nature of the quarry cannot be questioned. The chipped flints lie in every direction, while some of the larger blocks bear unmistakable evidence of the pick. Archeologists who have visited the place are of opinion that the quarry was in use for a great many years, and that it was the source of the finished implements which have been found in the vicinity in very considerable numbers.

How May Lower Animals Classify Us?

MY tentmate is a little brown lizard, whose share of the housekeeping is to catch the flies and other insects of an agreeable flavor. Sometimes he gets thirsty and runs out as though in search of water. Then I spill some on the floor and he comes and drinks. He views my proceedings with the utmost interest and seems to be particularly fascinated by the toilet operations. He is absolutely speechless with astonishment when an article of clothing is donned or doffed, and takes so evident a scientific interest in me that it would be well worth much effort to be able for a moment to see through his eyes. His conclusions would probably be something like this: "Here is a huge creature whose vast bulk when he walks, shakes the very floor of the great cotton cave where I live. He is so slow in his motions that he certainly cannot catch flies, and it is a wonder what the creature feeds upon. As he stands upon his two hinder feet, and has a great quantity of black grass upon the top and sides of what is probably his head it is perfectly self-evident that he cannot possess any form of intelligence and it is therefore necessary to refer all his motions to reflex action, though the connections between causes and effects are sometimes very difficult to determine. He can remove portions of himself and reattach them. A chart of the reflex impulses which cause this action is now being prepared. On the whole, he appears to be a harmless beast, although his roar is most terrifying." It is my hope that by the time my little friend completes his observations of me that we will have become friends, and understand each other better.

N. L.

Even an Oyster May Adapt Itself

AMONG some oddities brought up from the sea by one of the students, was a large abalone shell, long empty, in which a colony of rock oysters had settled. Some had grown in such a way as to use the old shell as one of their own. They had merely covered as much space as they required with a film of shell material, thick enough to glaze it perfectly smooth. This layer was welded on to the large shell and was in size and form exactly what their own shell would naturally have been, and was covered by a perfectly ordinary outer, movable shell. Some smaller oysters of the same sort had attached themselves later, between the others where there was no room to lie flat, so they stood out with both shells of the natural style.

Those which lay flat had simply obtained a much stronger shell than usual at much less trouble. If a man were to adapt his house so cleverly and artistically to its surroundings we would admire his taste and skill, but as they were only oysters we are to consider it merely as reflex action, quite automatically orthodox.

UNDER THE LEAVES

by FANNY F. BATES, in *Great Thoughts*

OFT have I walked these woodland paths,
Without the blest foreknowing
That underneath the withered leaves
The fairest buds were growing.

Today the south wind sweeps away
The types of Autumn's splendor,
And shows the sweet *Arbutus* flowers—
Spring's children pure and tender.

O prophet souls, with lips of bloom,
Outvying in their beauty
The pearly tints of ocean shells,
Ye teach me faith and duty.

Walk life's dark ways, ye seem to say,
With Love's divine foreknowing,
That where man sees but withered leaves,
God sees the sweet flowers growing.

A LOMA-LAND SUNSET

THIS beautiful sunset view is typical of those to be seen almost every evening from the heights of Loma-land, only the picture fails to give the rich wealth of color. Of course the sunrises are splendid; a stretch of bay with the port city spread upon its curving shores, with a white, hazy sea of light mist spread over all, and, far beyond, the great mountains piled range on range, all dim with the purple haze of distance; the sun could not rise dully over such a scene. But the sunsets have a charm all their own, when the myriad colors of boundless sea and sky, embossed with gleaming kelp and strewn with clouds, when all burst into a blaze of contrasting and blending colors, beauty seems too tame a word, and splendor sounds too coarse. And nearly always the sun changes its apparent form, just before disappearing, and takes what we call "the temple shape" of dome surmounting dome; though sometimes it assumes a pyramidal or a boat form.

W.

An Informal Luncheon in Camp

AFAMILY of field-mice lives under my doorstep and this evening one of them made me a call. I offered cracker-crumbs as refreshments and they proved satisfactory. A piece of apple, however, was utterly disdained, and water seemed so repugnant that even wet crumbs were not accepted. The supply of cracker being constantly replenished, my little visitor filled his cheek-pouches nearly to bursting, went off to unload, and was back in less than half a minute. That seemed impossible, so it may have been another one, though there was only one at a time, and the two, if there were two, were so exactly alike that I could not tell one from the other. The number of times those little pouches were filled was marvelous. Comparatively speaking, they were enormous sacks, reaching back to the shoulders, and when they were full they made the face look quite ridiculous, and entirely hid the tiny front feet.

One would think that these tiny creatures would discover every seed and leave none to grow, but they do not. Indeed, they left a full sowing of oats in the fields last year so that there was a crop without sowing, besides lots of weeds to the seeds

of which they would have been perfectly welcome. He is back again, now, for another load of crumbs; beginning to be tired, but staying with his good fortune like a business man.

Wanted—A Closer Study. of Nature

IN a recent newspaper some one displayed his ignorance by suggesting that "cow-slips" were so called from the idea that cattle are fond of them, although, as he points out, cattle do *not* eat them. We would suggest that he consider the name "cow's-lips" a little more carefully. The real reason for

the name is, as many a farmer boy knows, the resemblance of the odor of these flowers to that of a cow's breath.

About on a par with the above was a paragraph announcing the discovery of an easy way to make butter by filtering the cream. The moisture being thus removed the residue would be all ready for the market. The plausible inventor evidently forgot that butter is cream which has been, in some way, *pounded* so as to break the fat-globules, and that *dried* cream is not such a product. A great deal of such fantastic nonsense is done by space-writers who go unrebuked because those who know better don't take the trouble to correct it.

PRO

A HORSE which is untamed, or is badly treated, may be kept by a strong fence; but if he were well taught and well treated, he would stay in his place without any fence. Therefore, it is known that if people are fenced about with many laws, they receive scant justice.—*Cheron the Centaur*.

Universal Brotherhood Organization

Central Office Point Loma California

ISIS Theatre was again crowded last Sunday evening, the occasion being a special New Year's program by The Universal Brotherhood and Theosophical Society. The evening's service was most interesting and enjoyable, the various numbers of the splendid program being warmly encoored by an appreciative audience. The children of the Raja Yoga School at Point Loma played a prominent part in the service, being led by Mr. Neresheimer through several of their most delightful musical numbers. Their part of the program included the special chorus of Joachim Raff's exquisite song, "Sunset," with string quintette accompaniment by students of the Isis Conservatory of Music; the "Angelus," and other favorite selections.

Another special feature was the recitation of a group of poems by Mrs. Jessie E. Southwick of the Boston School of Oratory, one of the best-known reciters in the East. The poems she selected were:

- "Ring Out Wild Bells," Tennyson.
- "The Dawn," by Edward Howard Griggs.
- "Life and Song," by Sidney Lanier.
- "The Bugle Song," by Tennyson.

And in answering the final encore she recited most effectively "The Swiss Good Night."

The students of Isis Conservatory of Music gave "Jadassohn's Sextette," for piano and strings, in three movements: (a) Allegro, (b) Adagio, (c) Allegretto.

Master Albert Spalding presented an admirable address entitled "A Raja Yoga New Year's Greeting." It was delivered in that clear, strong and dignified man-

LOMA-LAND STUDENTS AT ISIS THEATRE

Large Audience Delighted With
Fine New Year's Program --- Mrs.
Southwick and Raja Yoga Children

Reprinted from the San Diego News

ner so characteristic of the youthful Loma-Land orators. He spoke as follows:

The Raja Yoga boys and girls send their New Year's Greeting to you all. It is their wish that San Diego shall be more richly blessed than ever before. So many good things have happened to San Diego during the past year.

We boys have taken much interest in this city and the citizens. We honor justice and truth. Raja Yoga teaches us that an ideal city can be built by honest, unselfish men and women. We shall live to see San Diego a great center of education.

The Raja Yoga boys and girls do not wait until New Year's Day to make new resolutions. We are taught that each day begins a new year in our lives. If we resolve to rid ourselves of a bad habit, and fail, we are not discouraged, but try again.

Raja Yoga teaches us that today should be better than yesterday, that the mistakes of yesterday are valuable lessons to us today.

This new year let us start in with fresh courage. Let us erase our past mistakes, and profit by the experience we have gained through them.

Our aim should be to lead a life that will help the world, not one that will be a hindrance. We need more self-control. Our tempers and passions too often get the best of us. Sometimes a week's perseverance to overcome a fault is just knocked all to pieces when we lose control for one minute and have a temper.

We must show more love to the people about us. It is brotherhood to show them their mistakes, but do not let us forget our own faults. One of our Raja Yoga quotations says: "Be more severe with yourself than with others; be more charitable toward others than toward yourself."

✻ ✻ A Letter from the Secretary-General to "Camp and Plant" ✻ ✻

THE following extract from *Camp and Plant*, 28th of November, 1903, will be read with interest:

A LETTER FROM LOMA-LAND

Camp and Plant takes pleasure in printing the following letter from Mr. F. M. Pierce, Secretary-General of The Universal Brotherhood. No one regrets more than the writer any inaccuracies, if there be such, which may have been contained in the article on "Point Loma and the Theosophists," which was printed in *Camp and Plant* for September 12th, 1903, and which was based upon personal observations and upon statements made by residents of the colony and officers of The Universal Brotherhood. It was written not in the spirit of criticism, but rather in that of setting forth the facts and conditions as they appeared:

POINT LOMA, California, October 14th, 1903

Editor Camp and Plant—DEAR SIR: The paper by Dr. Corwin appearing in your issue of September 12th, has been read with appreciation, because of its intelligent and apparently friendly presentation of such points as a casual visitor might observe in a two hours' visit here, regarding our great Institution and world-wide work; and it is regrettable that the doctor did not avail himself of the suggestion of our guide, "To make an appointment with some of our busy officials, who would gladly take the time to show him the Raja Yoga School and its workings, and explain to an extent the methods and workings of our Institution." His available time, it is presumed, made this inconvenient, though he gladly accepted the suggestion and said he would do so.

Had so sensible and evidently so fair-minded a man done this thing, necessary to writing intelligently of anything new to him, and especially of a great humanitarian work like this, it would have enabled him to write harmoniously, one part with another, avoiding the evident errors into which he stumbled on several minor and some vital points. As he in general commends the work, judged from results he saw evident, of course it cannot be faulty basically nor in method, for good results cannot fruit from bad methods, foundation or purpose.

His errors began with the introductory paragraph, by suggesting an absurdity of antique memory, for which he found no basis among us during his cursory visit.

Second: If the entering of open spacious grounds, and the sound of a bugle blown by the gate guard to notify the guide to be on hand to escort and explain to the entering visitors, suggested an "air of mystery and unreality," it must have been the mystery of suggested law and order, with its appropriate courtesy, both of which are practised and required here. Unusual, certainly! but none the less right and proper to well ordered life.

Third, and vital: Idle or malignant gossips may have informed the good doctor

that "a person joining the Order gives up all his worldly possessions and asks no questions;" but be assured that none of our members, nor any outsider who has taken the pains to inform himself, ever gave voice to such absurd falsehoods. The basis and superstructure of this Organization are the "voluntary" offerings of services, time and money to the work, and absolute freedom to withdraw oneself and services at will. The only compulsory requisite during membership is an active, clean, pure, upbuilding daily life. When this ceases—the honest effort to so live—then the autocrat power of the Leader is exercised, and invariably, in striking the name of the weakling from our roll of membership. Would not all organizations, both secular and religious, be safer and more efficient in their respective fields if thus conducted? Ours is an organization of intelligence based upon and conducted by "practical" intelligence in every department.

Fourth, and vital: The doctor implies that "there is but one—Katherine Tingley—in the organization who dispenses funds, and that she renders no account of expenditures." The facts are that Katherine Tingley absolutely refuses to receive funds from any one for any purpose! But she does of her own private monies contribute thousands of dollars every year to the general work, besides her entire time, unremitting labor and very life. Her reward is the consciousness of having done her utmost duty to her fellows—even those who ignorantly or maliciously slander her.

All funds are received, handled, banked, checked out and disposed of by myself as treasurer, and under the supervision and direction of a financial board which I ceaselessly require to do its full duty. Its chairman, Mr. Clark Thurston, but recently President of the American Screw Company, Providence, Rhode Island, being a business man of national and international repute, of unquestioned honor and sagacity, insures that he will neither be hoodwinked nor loan himself to the unintelligence of anything which can in the slightest be questioned, save by ignorance and maliciousness.

I am not lacking the same reputation as the past head of several large and successful business concerns, one of which was the Ingersoll Rock Drill Company, now the Ingersoll-Sergeant; and many of the leading mining machinery concerns of Denver know me in connection with the Kennedy and Pierce Machinery Company some fifteen years ago.

This is mentioned as presumptive evidence, at least, of the business practicality, experience, intelligence, level-headed sanity and integrity, which are the basis and outworking of this Universal Brotherhood Organization in every department of its individual and organic life throughout the world. We are not "theorists," but "doers" of right work, for we all have learned how in battling for ourselves, and now find real life and its substantial happiness in doing this for others, weaker and

less experienced than ourselves. What other kind of people can do other than to "theorize" about "doing" real uplifting work for humanity? let me ask.

Fifth, and *not* vital, is the insertion of the imaginary names of two cats, "Isis" and "Osiris." Kindness to animals, even to the degenerate specimens on two legs sometimes called human, is among the numerous virtues we are guilty of practicing, but we do not burden them with other than ordinary cat names for people to make themselves absurd over.

Sixth: We have no "Italian" or other national colony. The Universal Brotherhood Organization is essentially an "Autocracy of Intelligence" from top to bottom, and as such it commends itself to the careful and unprejudiced examination of all who are intelligently attempting to wrestle with the great economic, ed-

ucational, social and moral—yes, even with the broadly spiritual problems of the day; for here at Point Loma they have already been solved, and *practically!* For we are living out their solution in "peace and good-will," which proves our *established* success.

Believing in Dr. Corwin's right intentions as a gentleman of honor, we feel that he will be glad to have this additional information wherewith to correct his own erroneous impressions, and of the numerous readers of your publication, among whom the doctor is doing such a magnificent work—so exceptional and commendable in the labor undertakings of our large corporations. The spread of error among any people on any subject results in evil to them. Yours faithfully,

F. M. PIERCE, *Secretary-General, Universal Brotherhood*

Man's Nature & Theologic Science

PROFESSOR ELIE METCHNIKOFF of the Pasteur Institute is one of those scientists for whom the boundaries of his legitimate sphere are all too small. He represents that element in the scientific world which, with all due respect, we would call the conceited element. He and those of his kind remind us of the precocious child who, having said something clever, must at once be silenced for fear he shall be encouraged by applause to say something foolish. Professor Metchnikoff has shone so brilliantly in the world of material science that he is encouraged by applause to believe himself similarly luminous in the realm of mental science. That is his point of error.

The Professor has written a book which he calls *The Nature of Man*. Had he entitled his work *The Physical Nature of Man*, and confined himself to his subject, he would doubtless have been saved from many mistakes of which we trust he will repent in due season. He tells us for instance that the instinctive fear of death is only absent in fanatics and in simple or primitive persons. He does not submit this as a theory or offer it to us for our consideration. He simply tells us that it is so with the same easy confidence which he would display in describing the shape of a bone or the direction of a nerve. He might, however, have expanded his dogma so that we could better appreciate its circular form. He might have said that all persons who are not afraid to die are fanatics or simple and primitive people; we should then have been better prepared to digest the formula that the fear of death is only absent in the classes named. We might still have asked for a definition of the word fanatic, a definition which must evidently be sufficiently wide to include nearly all the greatest men and women who have ever lived, and who have found at any rate one point of agreement in their tranquil contemplation of death. If the world's saviors, reformers, philosophers and poets are all fanatics we must either regard fanaticism as the highest of virtues or beg the Professor to deign to revise his terminology. It would be still more satisfactory if he would momentarily stoop into the domain of historical fact and so ascertain for himself that so far from the fear of death being either natural or universal it is, like so many features of Pasteurism itself, simply a mental aberration of very modern origin and existing in a very limited locality. It is in fact a disease. But Professor Metchnikoff does not stop here. He hastens to tell us that "the idea of a future life is not supported by a single fact, while there is much evidence against it." How strange it is that those who have been drilled in the rigid accuracy of the laboratory are the first to throw off all pretence of accuracy as soon as the laboratory door is closed. It is however unfortunate that they carry their popular reputation for accuracy with them and so deceive many. That reputation should certainly be left in the laboratory inasmuch as they lamentably cease to deserve it as soon as they get outside. Without entering too deeply into a question so profound we would like once more to ask the Professor for a definition. What does he mean by a fact and what is his idea of evidence? Is it a fact that the existence of life after death has been the immemorial belief of the whole human race and does that immemorial belief constitute evidence or does it not? In asserting that it does constitute evidence, and of the strongest kind, we are supported by the ablest thought of the century although it is so self-evident as to need no support.

With so brief a glance we must leave a book which is certainly the result of good intention. The scientific arrogance which is its defect is due to the system and not to the individual, but we none the less regret the influence which it may have upon minds which are still too immature to discriminate between authority and dogmatism.

STUDENT

The "Sayings" and the Gospels

WE have more than once referred to certain gospels that were afloat during the early Christian centuries which are now lost, but are, so to speak, exhibiting a tendency to be found.

But in addition to formal gospels, it would seem reasonable to suppose that notes of isolated sayings and conversations of Jesus must have been taken by some of the apostles and hearers. These also are exhibiting the same tendency.

In consequence of recent and forthcoming finds, it is not too much to hope that after another few years we may be able to supplement with heretofore undreamed-of completeness the meager bits we now possess of the teachings of one to whom we already owe so very much.

It is probable that in the vitally interesting *Pistis Sophia*—a fairly recent find—we have the previously missing *Gospel of Philip*.

There are several gospels of which we know something, but which must be found in their entirety if we are to regain the full doctrine taught by Jesus Christ and complete our picture of him.

There is the Gospel according to the Hebrews, in use among the mystical Ebionites.

There is the Gospel according to the Egyptians. This, as also a Clementine Gospel, as also one of the "sayings" of Christ just found by Dr. Grenfell in Egypt, contains an answer given by Jesus to a question as to when the "Kingdom" he had spoken of would be realized. Christ's answer is:

When ye shall trample on the garment of shame; when the two shall be one and the male as the female, neither male nor female.

There is the Gospel of Thomas. This is believed to have related to the childhood of Jesus. It must not be confounded with the recently unearthed "sayings," which appear to be notes taken by Thomas of Christ's lectures and talk. The first of the "sayings" is known to be contained in part in the Gospel according to the Hebrews, and greatly inflames one's wish for the speedy finding of that gospel. It runs:

Let not him that seeketh cease from his search until he find, and when he finds he shall wonder; wondering, he shall reach the Kingdom of Heaven, and when he reaches the Kingdom he shall have rest.

These "sayings" are evidently part of the same set as was published in 1897, and no one who knows anything of the spirit of orthodoxy will doubt that from that inspiration a determined attempt will be made to have it that the "sayings" are not notes taken by the disciple Thomas, but of much later date. In fact, the attempt is already in hand.

There are also the Gospels of Basilides, (who says that Matthew communicated to him certain very esoteric teachings of Jesus), of Bartholomew, of Matthias, of Apelles, and the one used by Marcion.

Others, too, were once afloat. It is clear that by the time the four now canonical Gospels became fixed in that position, the stream of teaching that had issued from Christ had been assimilated in parts by various bodies of people, each taking that to which it was inclined, or was within its comprehension; and that there are many of these parts or aspects which have not reached us through the canonical Gospels. What we have there is as much as was understood by, or as much as harmonized with the predilections of, the men who ultimately fixed the canon. So we await the rest. In the meantime, the "sayings" found by Dr. Grenfell will be published in 1904.

Some More or Less Valuable Information on How to Pray

by SAM WALTER FOSB—Selected

"THE proper way for man to pray,"
Said Deacon Lemuel Keyes,
"And the only proper attitude,
Is down upon his knees."

"No, I should say the way to pray,"
Said Rev. Dr. Wise,
"Is standing straight, with outstretched arms
And rapt and upturned eyes."

"Oh, no, no, no!" said Elder Slow,
"Such posture is too proud;
A man should pray with eyes fast closed
And head contritely bowed."

"It seems to me his hands should be
Ansterey clasped in front,
With both thumbs pointing to the ground."
Said Rev. Dr. Blunt.

"Las' year I fell in Hodgkin's well,
Head first," said Teddy Brown,
"With both my heels a-stickin' up,
My head a-piatin' down;

"An' I made prayer right then an' there---
Best prayer I ever said,
The prayin'at prayer I ever prayed,
A-standin' on my head."

Way Over There in the Mountains

AY over there in the mountains is a snug little homestead, resting half way up one of the great, kindly, protective monsters of the chain. Although it is absolutely alone, (the trail has to be followed for more than fifteen miles before the nearest neighbor is reached) there is an air of complete safety and peace to be felt in the presence of those majestic many colored guardians, in the soft yet cheery silence, broken now and then by the far away noise of the breakers on the coast, in the glorious sunlight, with the shadow thrown by an occasional turkey buzzard flitting across the face of the mountains as, with heavy, slow-moving wings, he glides quickly through the golden air. So that when Garth Manville turned in the saddle for a final wave of the hand and a shouted "good-bye," he felt fairly comfortable in his mind as to his enforced absence of a few days from his wife and children. "Nothing *can* harm them," he said to himself as the little homestead slipped from his sight, "and a week will soon fly around."

Four days had passed, and it was with a happy heart that Kate Manville ticked off the days in her mind as she moved quickly about the kitchen, removing the remains of the evening meal, and keeping up a running stream of fun and laughter with her four children.

There was Kate, the eldest girl, called Kitten, aged ten, and the joy of her father's heart; then came mischievous, impudent, manly little Bobbie, aged eight; then the delicate, big-eyed Hugh, lame, and for that reason, the very core of his mother's heart; and last, Poppet, the baby, nearly two, a bunch of dimples, curls and kisses.

"Say, Kitten, you'll have to hurry up with dad's 'surprise' if you want to have it finished against he comes home," said Mrs. Manville. "Four days are gone now, and you are not half through, are you?"

"I know, mother dear," said Kitten, "but it is so *'stremely* difficult to remember all the time, that dad's fingers are bigger'n mine. I made this little place to hold the matches, twice over, 'cos I *would* make it just big enough for me, I *couldn't* remember; but now I've made it all right 'cos I've used two candles to measure it by, so dad can for sure get two fingers in, don't you think, mother?"

"Why, yes, dearie," said her mother, with great difficulty keeping back a smile, "that was quite a lovely idea, and the 'surprise' *will* be a surprise to him when he sees it."

She bent over the table to examine the curious work of art on which the child had expended so much time and patience. It was a kind of "hold all" for a smoker, and contained a pocket large enough to hold quite three matches, a little piece of sand paper, feather-stitched on, on which to strike the three matches, another little receptacle for cigarette ends, and again another for fresh tobacco "for when he's used up the cigarette ends." This was all her own idea, and was to be presented to dad on his return.

"That's getting on famously," said mother with a loving pat on the bright head.

"Why, Bobby, man, you've forgotten to bring in the kindling wood. No, never mind, I'll go," as the boy started to run to the yard, "you look after Poppet," and giving her patient little Hugh a tender kiss as she passed, she went through the door, turning back on some unaccountable impulse to kiss them all again, and with a strangely full heart.

"Why, mother dear," laughed Kitten, "seems like you're going away."

"So I am, all the way to the kindling pile," she laughed back.

The sun's setting rays were thrown with a warm glow directly into the shed in which was the wood pile. And with her eyes dazzled by the shimmering light, she took up the basket and with both hands began to fill it with wood, smiling to herself as she heard the children shouting with laughter at some of Bobbie's pranks or Poppet's funny ways.

"Bless them, my darlings," she whispered. Then, in a flash, the smile fixed itself, the color faded from her face, and she stood rigid, with open lips and staring eyes, too dazzled by the light to see from whence came that sound which is so often the forerunner of a terrible death. There it was again, a rattle, and then a long hissing sound like that of steam escaping from a valve. A sharp, sudden prick on her instep! And there at her very feet lay the angry reptile which she had disturbed.

Quick as thought she threw a heavy billet at it, but with a quicker movement it slid into the pile and was lost to sight.

Then in one vivid moment there flashed across her mind all that this tiny pin-prick meant. Her husband—away for three whole days yet, no one within helping distance, and the helpless little children—oh, she could not think of it. "God in heaven, Father of mercy!" she cried, "show me what to do! Oh, my little children, my little children!" and then again came from the house a merry peal of laughter which made her shiver with agony. In frantic haste she filled her basket, and with a powerful effort she calmed herself, and from the kitchen door called to Kitten.

"Kitten, darling, listen. Mother has to go away really this time, and you will have to take her place till dad comes home." And then she told the half-frightened child how to manage. "Don't be frightened, darling. Nothing can harm you; dad will soon be back, and I *have* to go away tonight—but I will make plenty of cake and bread before I go, so you will not need a fire; and do not go outside the door for *anything* till dad is home. And tell dad—tell dad,"—Here the hard lump in her throat caught her voice, and little Kitten threw her arms around her mother's neck and sobbed. "Oh, mother, what is it, what is it? I'm frightened!" And the mother's arms tightened around the little form, feeling that it was for the last time—that it was the last time she would feel the loving, clinging arms around her neck.

"My girlie, it's nothing; only I didn't—quite—like going away without saying good-bye to dad. I will leave him a note. Now be my brave little woman, and we'll get the children to bed so I can begin my work."

Never had the mother fingers flown more quickly over the undressing and bathing of the little ones. And who can tell of the suffering of that mother's heart, as at the completion of each little task she whispered, "For the last time, for the last time!" And when she bent over the bed of her lame Hughie, she could almost have prayed that she might take him with her. But there was no time to linger over the loved little figures now sleeping so soundly—she must work, work, work while she could stand; and soon the smell of baking bread and cake filled the air, and a passer-by, chancing to look into that cheerful fire-lit kitchen, and to see the busy figure passing quickly to and fro, would never have guessed of the tragedy that was being acted in that quiet little home.

The time flew by, pain and fatigue again and again would nearly overpower her. Once she fell, then breathing, "God help me to finish!" she raised herself to her feet and with one more heartbroken, yearning look at her children, one more kiss filled with the love of the years to come when she would still be "gone away," the burning tears pouring down her face, she tenderly raised Hughie's head and smoothed his pillow, and the little fellow half opening his eyes smiled and put one fragile arm around her neck.

"O God," she murmured, "let it be soon, I suffer so to leave them!"

Midnight saw the piles of cooked food on the table, the fire deadened with water and a little note on the window sill: "My husband, please God, you will find our darlings safe. I have been bitten by a rattlesnake. Do not let the children go near the wood pile—it is in there. My love, my dearest love, I am going away now to the"—and here the writing became illegible.

The morning broke. The sun shot up over the mountains, the children stirred. Little Kitten fully dressed, came into the kitchen full of importance, and with a strong sense of responsibility. Then she suddenly cried out:

"Bobbie, Bobbie, come here, dear old Mumsie hasn't gone away after all. She was so tired after baking all these things that she's gone to sleep on the floor."

"Don't wake her," said Bobbie, "let's put a pillow under her head and we'll creep and creep, so's not to 'sturb her, and we'll eat our bre'kfas' in whispers. Aren't you glad she isn't gone?"

It was so, she lay sleeping peacefully and naturally where she had fallen.

The noble self-sacrifice of the mother had worked in another direction too, it had worked the poison out of her system and she awoke from her long sleep to a life of love and happiness to which she thought she had said good-by forever.

"There is one thing, Garth, that we can never be too thankful for," she said to her husband, "and that is that Bobbie forgot to go to the wood pile." A. C.

✧ The Trend of Twentieth Century Science ✧

Study of Radium Corroborates H. P. Blavatsky's Teachings

H. P. BLAVATSKY, the founder of the Theosophical Society and Universal Brotherhood, spoke with true prevision when she said that though her message would be rejected for a while, yet "in the Twentieth century of our era scholars would begin to recognize that the doctrine has neither been invented nor exaggerated, but, on the contrary, simply outlined." And now we find archeology awakening to the knowledge that advanced civilizations existed in far-off times, hitherto thought to be absolutely barbarous. Also, in physics and chemistry our ideas are extending so rapidly that the "mighty atom" has almost ceased to be considered a material thing at all, but is being transmuted in scientific imagination into a whirling center of electric energy.

Further confirmations of the Theosophical teachings as to the nature of matter are coming thick and fast by means of the "Miracle of Radium," as Mr. Vernon Boys, the President of the Mathematical and Physical section of the British Association, calls it. This "unorthodox" metal is seemingly the means by which, as H. P. Blavatsky anticipated, a great rent would be torn in the veil of materialism in the early years of the Twentieth century. It has quite lately been discovered, by Sir W. Ramsay, that the element helium, the lightest of the gases, is being continuously evolved from Radium, transmuted or decomposed through a series of "break-downs" or changes in its atoms. It is also considered that the highly volatile helium, and perhaps other constituents of the globe, are flying off into space, owing to the attraction of the earth being too feeble to pull against the high velocity of their molecules. No doubt they will be captured by some other planet or center of attraction. Perhaps the terrestrial helium gravitates to the sun and forms the corona which is suspected by science to be partly composed of it. In this connection, though long before scientific men had any experimental basis to speculate upon, H. P. Blavatsky said:

The atmosphere of our earth, as of every other globe, has become, so to say, a crucible of its own. . . . There is a perpetual exchange taking place in space of molecules, or of atoms rather, correlating, and thus changing their combining equivalents on every planet.

Further, in connection with the transformation of the dense element radium into the extremely light element helium, the following quotation from one of the monumental works of the same teacher, published fifteen years ago, will prove decidedly interesting as an unmistakable prophecy of the researches and conclusions of science today:

This leads to the direct inference that . . . even the metals themselves on earth are formed owing to the condensation of hydrogen or some other primitive matter, some ancestral cousin to "helium" perhaps, or some yet unknown stuff.

This is the problem that chemistry is trying to solve; and it must succeed sooner or later in the task, accepting *volens volens*, when it does, the esoteric teaching.

With the rapid return of the old teaching and the advance of modern thought towards the wisdom of the ancients, it cannot be long before science recognizes that conscious Life is at the base of all substance. Already many of the teachings of the past are being recognized as true as far as they relate to the physical plane. With the knowledge that eternal life is inherent in every atom, our eyes must open to the sensitive nature of everything around us, and an infinitely greater sense of responsibility will inspire us. Every particle of our bodies, as it remains for a time immersed in our consciousness, is stamped ineffaceably with the character of our thoughts, and who dares to limit the distance at which they may affect other minds or "matter" for good or ill? R.

Wherein the Force of Speech Consists

NOW that it is scientifically discovered that the human brain is an electrical instrument, capable of sending or receiving impressions direct, we seem to be in a fair way to solve the mystery of "expression" or "tone" in the voice. If electricity can be made to follow a ray of light, why not a ray of sound as well? It certainly seems reasonable to suppose that the intangible "tone" which gives life and meaning to the voice, often conveying more than the spoken words, is the feeling,

the emotional condition of the speaker flashed along the current of his voice. The uttered voice is the exercise of the desire to communicate, but we, in our mental blindness, have lost sight of the fact that spoken words are only intellectual and are, by themselves, wholly incapable of appealing directly to the emotions as the tone does. Screams of rage or pain, the purring chuckle of pleasure or the whine of desire; pleased or not according to the prospects of attainment; all these express the essential facts more plainly, and very much more quickly, than a wordy statement could possibly do. The tone expresses the condition, the words designate the cause. And the tone is also a means of communicating to, or arousing in others the condition of our own minds.

Sooner or later it will be recognized that voices have psychological effects similar to the physical effects of drugs. When this is known evil will have lost half its power. S. E.

A New Book on "Galileo: His Life and Work"

A NEW book upon *Galileo: His Life and Work*, makes us better acquainted with a philosopher whom the world has delighted to honor. The author, Professor Fabie, calls him "one of the earliest and perhaps one of the greatest of the experimental philosophers of the modern world." The fact that the true motion of the earth was most accurately known and measured ages before the time of Galileo, detracts nothing whatever from the fame of the Florentine martyr. He at any rate re-discovered a great truth and gave it to a world not more than now unwilling to receive anything without the stamp of recognized and bigoted authority. That he had to suffer for his temerity goes of course without saying. Truth-finders must still suffer, not by fire and sword but in ways no less painful and none the less deserving of our sympathy and aid.

We cannot help wishing that Galileo had not detracted from his glory by a recantation, although we are far from understanding the crushing force which was directed against him, the psychology of superstition from which he so nearly extricated himself. "I do not," he says, "refuse to call these thoughts of mine chimeras, dreams, paralogisms and vain imaginations, submitting the whole to the absolute wisdom of my superiors."

The story of Galileo is a story of failure which from its very beauty has been transmitted into triumph. And so, in the words of his memorial stone in Santa Croce we may offer our tribute to the "holy memory and well spent pious life" of Tommaso Galileo.

The Glass House in Which Modern Science Dwells

CAN it be that the ancients knew something of chemistry after all? "What!" we can hear the scientific youth saying; "why they divided matter into four absurd elements, fire, air, earth and water!" Let us be careful before we laugh too much. It is true that fire, air, earth and water, as we know them, are not elements; that fire is incandescent particles of matter, that air is a mixture, that earth is many varying mixtures, that water is a compound. But some of the things we have discovered and named elements, have also turned out compounds or mixtures; and it may yet appear that helium is but gaseous radium. And at this moment, whilst adding to the number of "elements" every year (in fifty years we have added about thirty), we are about to find that there is not a real element among the whole lot. In fifty years, moreover, our present idea of the atom may look as absurd as what we supposed to have been the Greek philosopher's idea of an element looks to us. And it is quite likely that the case is worse for us, and that there is nothing at all in the ancient conception for us to laugh at.

"Element" may have meant *state*; and their "earth, air, water, and fire" may have been matter in solid, fluid, gaseous or incandescent condition. "Chaos" was when matter was in none of these states; "cosmos" resulted from the assumption by matter of all of them.

It seems that, living as they do in the very flimsiest of glass houses, our scientists are very careless at what they cast their numerous stones.

STUDENT

Here and There Throughout the World

THE FAMOUS YASHA-MON GATE AT NIKKO, JAPAN

Restrain French Workingmen THE manager of some large factories in France hit upon a neat method of inducing some of his workmen to spend less on alcohol. Two days before each pay-day the men were furnished with slips of paper, stating the exact amount of money to which they would become entitled. The wives, of course, knew of these slips, and the workmen could not conceal them without thereby betraying a preformed intention to drink more than their income at all warranted. Such cases are comparatively rare, and much waste of money was thus saved. It was found to be no small support to those easily led to drink excessively, that their wives would know the exact amount spent.

Prussian Protestants and Duelling THE General Synod of the State Protestant Church of Prussia is indignant, from which it might be supposed, erroneously in this case, that impious hands have been raised against their revenues. No; their ire has been aroused by a suggestion that the practice of duelling is opposed to Christian principles. The General Synod believes that duelling is allowable and righteous. We have heard a good deal lately about the revision of creeds, and we would suggest to the General Synod of the State Protestant Church of Prussia, that they cultivate consistency and proceed forthwith to a revision of the Ten Commandments and the Sermon on the Mount.

Dr. Workman Scales Himalayas THE greatest altitude ever reached in recorded history has been climbed by Dr. W. H. Workman in the Northwest Himalayas, being 23,394 feet. With his wife, a friend and two guides, and a number of coolies, Dr. Workman traversed various glaciers, pitching tents from time to time. Being summer, the weather was favorable, and the only obstacle to still further ascent seems to have been mountain sickness on the part of the coolies, who could not be made to go any higher. Ultimately, Dr. Workman with the two guides reached the above altitude, which is 300 feet higher than the summit of Aconcagua.

Some Wise Indians in New York State THE National Indian Association has just celebrated an anniversary in the University Place Presbyterian Church at New York. One of the speakers stated that very many Indians are living in ease on the incomes derived from leasing their lands, and that the remedy for this is to instil a certain amount of selfishness into them by education. Putting upon one side the high compliment to Indian nature, which is thus implied, the speaker need be under no apprehension. If contact with white civilization will not induce the desired selfishness it is certain that nothing else will or can.

International Exhibition in Russia THE Czarina contemplates a novel international exhibition at the St. Petersburg Winter Palace. This is to be an exhibition of child-life, and is intended to represent the period of childhood from birth to school-days, and to comprise every known method of teaching and physical development. The idea is, of course, an admirable one, but it ought certainly to include moral as well as mental and physical education. The world needs morality more than it does mentality, and we are not without hope that its children will one day be universally blessed by a combination of the two—that is to say by Raja Yoga.

Women Monsters in Budapest FIVE women have been arrested in Budapest on a charge of poisoning their husbands. It appears that they are members of a club which has been formed for the purpose of facilitating such crimes, and that a district coroner is also a member, his function being to supply the poison and to arrange for a suitable verdict. It is of course easy to express horror at such a disclosure, but how many people realize that crimes like this are but the fruition of a loss of moral sense which is more and more pervading every community and every nation, and which may or may not take the form of legal crime.

Insanity Cured by Colors in Italy THE authorities of the hospital for the insane at Al-les-Andra in Italy have now made special arrangements for the use of color as a cure for insanity. Blue is the remedy for violent mania, while red has been found to have a marked and beneficial effect upon melancholia. There can be no doubt that the happiest results would follow upon an extension of this system and that by its means a key might be found to the use of color, not only in cases of insanity but of very many other diseases.

Spanish Books in California MANY rare and valuable Spanish books are finding their way into the public libraries of California. Most of these books come from Mexico, but not a few are direct from Madrid. The libraries of Spain are said to be far richer in ancient books than is usually supposed. These libraries have been practically inaccessible for various reasons, but when their contents are disclosed a new light will probably be thrown upon history and much that is valuable in philosophy and science will be given to the world.

French President to Visit St. Louis WE hope we shall hear more of the contemplated visit of President Loubet to the St. Louis Exposition. No doubt there are many official formalities to be overcome or satisfied, but such a visit as this would have an immeasurable influence for good and would enable the American people to show that they have not forgotten the ancient amity which unites the two Republics, an amity which rests upon something more substantial than treaties, more durable than trade convention.

A New Religion Evolved in Europe EUROPE has evolved a new religion which is to be known as "Free Thought," and its apostles have begun their propaganda in the usual way by lively attacks upon every one else. It seems that these people desire to worship the "God of Reason," to which there can of course be no possible objection. We can only express the hope that this new deity will persuade his followers to act reasonably, but current reports seem to indicate a bad beginning.

Fears Methods of the Gerry Society WE note that Herr Von Veesey objects to bring his famous little violinist son to America. He would like to do so, says the *New York Musical Courier*, were it not that "he has been told about the Gerry Society," and fears lest the boy should be treated by that body in accordance with its now familiar methods.

THE CHILDREN'S HOUR

Hester and the Flowers

IT was early morning and Hester, as she walked slowly along the garden path, felt that never before had she loved the flowers so well.

They seemed so very, very beautiful, that thrill after thrill kept rising in her heart as she passed them.

"I wonder what makes people feel nearer to the flowers and trees at one time more than another!" said she to herself. "I have never loved them so much before, and it makes me feel so happy, and it doesn't seem as though I ought to be when I was so naughty and horrid yesterday. Nursie said I was the naughtiest girl she had ever known.

"How is it, I wonder! Of course I was sorry and ashamed but I *was* naughty. I do long to be like Auntie. She is always like a queen, but she told me she, too, feels naughty sometimes, but not nearly so often as when she was a little girl and that is because she hated so much to feel a coward, and being anything she didn't want to be, always made her feel like one. She wanted to feel noble and brave, and getting into moods and tempers made her feel like being conquered, so she just wouldn't have it.

"I feel like that too, but I suppose Auntie didn't go on being so stupid as I am.

"It is really stupid not to be yourself. There is no need for anyone going on being what they hate and are ashamed of.

"Auntie says we can learn from the flowers. They always grow into the most beautiful thing they can become. I wonder! Perhaps that is the reason I feel near to them! I really am trying to grow into my most beautiful longings—to be like Auntie! And Auntie says when people think the same and have the same longings in their hearts they are very near to one another, they really become united.

"So perhaps it is the same with flowers. I do believe it is!" A. P. D.

The Play Hour in Loma-Land

HAPPY as the day is long are the Raja Yoga children at Loma-land. The play hour always finds them out of doors beside their little homes, playing with dollies, perhaps, or romping on the grass. Every morning they have their "exercises;" that is, their callisthenic drill. The picture was taken while they were drilling, playing they were great, strong forest trees, with waving, leafy tops. Some of the children in the picture were among the "Eleven Cuban Children," of whom you have heard so much.

They have come to love their Loma-land home better than any home in the world.

Every morning they rise with the birdies and with the sun, and begin the day's duty and lessons and play.

AUNT ESTHER

Some Words to Boys

Extract from a paper read at Isis Theatre by one of the young boys of the Raja Yoga School at Point Loma

BOYS, let us stop being selfish and disrespectful. Let us face our faults and then conquer them; and let us stop trying to deceive ourselves into thinking that it does not matter what we do. It *does* matter a great deal. We would laugh at a farmer who said it didn't matter what kind of seeds he planted in the Spring, he would have a fine harvest anyway. Yet that is what careless and selfish boys say every day by their actions.

Let us stop demanding so much from our parents and begin to help them now, not wait until we are men. We may make some mistakes at first, but we should acknowledge them and then try even harder, not invent excuses to hide behind.

It is by purifying our own characters and helping others that we can fit ourselves for the great work that will rest on us in the future.

How much use can a boy expect to be to his nation if he spends his boyhood running the streets, playing truant from his school, smoking cigarettes and being disrespectful to his parents?

No one who does not build up a strong and pure character in his youth can expect to do

great things when he is a man. And when we read history we see that our great men became great because they began right when they were boys. Think of George Washington, and President Lincoln, and Thomas Paine, and Lafayette, and William Q. Judge.

They honored their fathers and mothers when they were boys, and they had self-respect.

And we boys of the Twentieth century can do even greater deeds and be even more useful to our nation if we will begin as they did and build strong characters while we are young.

I would not feel this so deeply if I had not had the advantage of Raja Yoga. And while all boys cannot have these advantages, all have opportunities to do their best every day, and that will build character.

Boys do not realize how much our nation needs them now, and how much it will need

them in the future. If they did, they would try harder to be self-respecting and pure.

THERE are a number of butterfly farms in France, and an effort is being made to acclimatize species that belong to other countries.

The farms have oak, ailanthus, pine and plum trees, and castor oil plants, on the leaves of which the caterpillars feed. Cocoons are hatched on branches protected by gauze, and, for the sake of uniform temperature, the insects are often kept in a room until after the first moulting, when they are placed on bushes in the open air, protected by coverings of tulle. A beautiful idea, isn't it?

SOME LITTLE CHILDREN OF THE RAJA YOGA SCHOOL AT PLAY NEAR THEIR GROUP HOME

THE QUEER LITTLE HOUSE

THERE'S a queer little house on the bush so green,
Its walls are a rosy red,
All built in a circle, with never a roof
But the blue sky overhead.

In the very middle the mother stands,
Around her the fathers keep
Their watch, while in a green room at her feet,
The dear little babies sleep.

The beautiful house is a red, red rose,
The mother a pistil small,
And the yellow stamens are fathers bold,
That grow by the rosy wall.

The children are seeds in a cozy room ---
Some day they'll open the door
And build for themselves such a dainty house,
As their parents had before.--- Selected

KING AND MASON

Some stanzas from *The Palace*, copyrighted 1903 by RUDYARD KIPLING: *The Five Nations*, published by Doubleday, Page & Co., New York

WHEN I was a King and a Mason---a Master proven and skilled---
I cleared me ground for a palace such as a King should build.
I decreed and dug down to my levels. Presently under the sill,
I came on the wreck of a palace such as a King had built.

There was no worth in the fashion---there was no wit in the plan---
Hither and thither, aimless, the ruined fottings ran.
Masonry, brute, mishandled, but carved on every stone:
"After me cometh a Builder; tell him I, too, have known."

When I was a King and a Mason---in the open noon of my pride,
They sent me a word from the Darkness---they whispered and called me aside.
They said: "The end is forbidden." They said: "Thy use is fulfilled.
And thy palace shall stand as that other's---the spoil of a King who shall build."

I called my men from my trenches, my quarries, my wharves and my shears.
All I had wrought I abandoned to the faith of the faithless years;
Only I cut on the timber, only I carved on the stone:
"After me cometh a Builder; tell him I, too, have known!"

Statistics of Conversion

SOMEWHAT to our surprise, we find that statistics are procurable which will tell you---given your age---what are your chances of conversion. We must confess that we did not know that the actuary had invaded this peculiar field.

A Chicago pastor, the Rev. William Barton of Oak Park, recently made some remarkable statements about the phenomena of conversion, saying that they were "based on the tables of expectancy in statistics of evangelists, prepared by experts; which are, to their field, what mortality tables are to life-insurance companies." Clearly, therefore, there is no gainsaying statements which have so indubitable a foundation. We turn eagerly to see what they are. The most noteworthy outcome of Dr. Barton's researches is this, in his own words:

There is little chance of converting any man after he has reached the age of 23.

What then is the best age for converting him?

In the spiritually perfect period of human life. Between the ages of 12 and 17. The spiritual period of girls is 16 years, and that of the boys 17. This is the giggling and gum-chewing age of girls, and the awkward age of boys.

We should hardly have thought that a specially spiritual period of life would be marked by a tendency to giggle and chew gum; but we fear that our notions of spirituality and those of Dr. Barton are rather far apart. He appears to identify spirituality with susceptibility, with impressionability, which conditions do, of course, obtain at the ages mentioned. And Dr. Barton very properly says that,

Too much emphasis cannot be placed on the teaching of a child to distinguish the coarsening influence of such things as low vaudeville and the penny arcade, with its indecent pictures.

It is precisely because the nervous system is in that unstable condition that we object to its being submitted to the influences that lead to conversion. We object to a strong and hypnotic appeal to its emotions. We protest against its being thrown into a state of terror about its fate "hereafter;" or to its being introduced to a conception of God as a Power whose "wrath" is to be appeased. We maintain that the coming manhood and womanhood of the child is hurt at its life center by any such manipulations. And we maintain, also, that the very fact that "there is little chance of converting any man after he has reached the age of 23"---that is after he has reached the age when he can *think!*---throws a very unfavorable light upon this same "conversion."

Teach the child religion as soon as you like, the religion of his own

nature. Teach him that whilst he himself is divine, he has in him something evil, and awaken in him the joy of fighting and overcoming that. Then, from what he knows of himself, teach him of that from which the divine self of him came, that which is in all the universe. And he will grow up, penetrated with the thought of that conscious Presence, looking for it in nature and finding its touch in his own heart. In a word, he will grow up knowing God and himself even more fully as he ripens into manhood's thinking and into manhood's powers, needing no "conversion" and incapable of fear.

STUDENT

A Simple Creed

THE *Memoirs of M. de Blowitz*, just published, will not repay a very fervently close perusal. He was a journalist pure and simple, and lived in events as they moved on from day to day. But he had a sort of philosophy of life, which he condenses into one page of the book. And this philosophy included the idea of Reincarnation, at any rate so far as great men are concerned. Everything, he says, moves by a fixed law, and man is master of his own destiny only because he can accept or refuse, by his own intervention and action, the place he should fill and the path traced out for him by the general decree, which regulates the movements of every creature. . . .

. . . . We know at what time the comet moving in infinite space will reappear, and that the smallest stars, whose existence escapes us, obey the fixed law which governs the universe. Under various names, in changing circumstances, by successive and coördinate evolutions, the great geniuses known to the world, those whose names have escaped oblivion, reappear. Moses is reflected in Confucius, Mohammed in John Huss, Cyrus lives again in Cæsar, and Cæsar in Napoleon. Attila is repeated in Peter the Great, and Frederic the Second in Bismarck, Louis le Débonnaire in Philip VII, and Catalina in Boulanger.

He considers that "Charlemagne and Joan of Arc alone have not yet reappeared"---why? Because authority and modesty have vanished, and it will be the duty of these two to revive respectively the two vanished virtues! But why is it alone "the great geniuses" that reincarnate? What of us humble people?

I cannot suppose that anything to do with mankind goes by chance, and that every individuality composing it is not governed by a definite and inflexible plan. The great men whose names escape oblivion are like the planets which we know by name, and which stand out from among the multitude of stars without names.

We do not know whether M. de Blowitz pressed his analogy logically, and permitted smaller persons also to reincarnate.

In the matter of conduct, M. de Blowitz tried to put into practise his view that the Universe and its individual inhabitants were governed by "a Supreme Power," acting through immutable law. He "endeavored to divine the intentions and designs of the Supreme Will . . . to enter on the path which it seemed to point out." And he looked for that guidance in the apparently accidental events and coincidences of life, regarding them as pointers. If the way unexpectedly cleared for a particular course of action, he took that to be the way marked out for him. The world would go better if we all had such a belief, and studied the "accidents" of our lives in the same spirit. We should find the "accidents" fewer and fewer, for they would more and more obviously translate themselves into opportunities and warnings.

OBSERVER

Panama

A CONTEMPORARY prints the following facts about Panama, which will be read with interest:

Panama has an area of 31,571 square miles---nearly the size of the state of Maine.

Its population is 285,000, almost the same as that of the District of Columbia.

Its commerce, including both imports and exports, amounts to about \$3,000,000 a year. That is about \$11 for each inhabitant. The rest of Colombia has a foreign trade of less than \$1 a head.

Colon and Panama, its principal ports, have mixed populations of 3,000 and 25,000 respectively.

The United States leads all nations in the amount of its trade with Panama.

A weekly steamer connects Panama with San Francisco.

Cable lines connect both Colon and Panama with the United States.

Between Panama and Colon two passenger trains run daily, distance forty-seven miles, time three hours.

Silver is standard Panama money.

WAGES

by TENNYSON

GLORY of warrior, glory of orator, glory of song,
 Paid with a voice flying by to be lost on an endless sea—
 Glory of virtue, to fight, to struggle, to right the wrong—
 Nay, but she aimed not at glory, no lover of glory she,
 Give her the glory of going on and still to be.

The wages of sin is death; if the wages of virtue be dust,
 Would she have heart to endure for the life of the worm and the fly?
 She desires no isles of the blest, no quiet seats of the just,
 To rest in a golden grove, or to bask in a summer sky,
 Give her the wages of going on and not to die.

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question

What view do you, as Theosophists, take of criticism?
 There is so much harm done, so many lives wrecked, so much talent is nipped in the bud by harsh criticism and condemnation, that surely there is need to revise our standard of judgment.

Answer

(1) "And why beholdest thou the mote that is in thy brother's eye and considerest not the beam that is in thine own eye. . . . Thou hypocrite, first pull out the beam from thine own eye and then thou shalt see clearly to take out the mote from thy brother's eye."

A complete answer to the question is contained in these words of Jesus, and the means shown whereby we can attain to a position that will enable us to pass right judgment. And except where at least an attempt is made to follow Christ's injunction, our criticism is not only worthless, it is harmful. Is there not also a lesson to be learned from the use of the word "brother" in the above quotation? If we realized that it is our brother whom we were criticising, would it not make us more temperate, more careful to be just and impartial? Theosophy does not teach us to exercise our judgment and discrimination less, but more; it teaches balance, harmony, it insists that judgment shall be judgment so far as in us lies and not partiality. It teaches us to recognize in ourselves the same human nature and the same divine nature as in our fellows, with the same tendencies towards evil, but also the same promptings towards good. And the injunction given by H. P. Blavatsky, to be more severe with ourselves than with our fellows; to be more charitable towards the weaknesses of others than towards our own would, if followed, prove a safeguard against harsh and unjust criticism.

There can be no true standard of criticism which does not recognize the brotherhood of man, and work with that as a basis and towards it as an end. When we learn that we are our brother's keeper, that "the sin and shame of the world are our sin and shame," when our hearts are touched with divine compassion, and our lives actuated by the spirit of helpfulness, we can then criticise justly and helpfully. But shall we then call it criticism? Perhaps there will be a new word, and instead of being mainly destructive, it will be constructive.

(2) This is a power of the mind which has played a conspicuous part in the progress of knowledge, from the darkness of the middle age of Europe. Like all other powers of the mind it may be used rightly or wrongly. It is the power of judging which presupposes knowledge on the part of the critic of the subject or object of it. The power of analysis, synthesis and comparison are necessary to its use. It is a power which in Europe slumbered for a thousand years, while enlightenment was in abeyance; but for a thousand years its use has been gradually broadened. But if criticism be not balanced by good judgment and directed by a sincere desire to help, it leads to censure and personalities, whereas the right use of it is a calm and impersonal application not only to the fine arts, music and science, but to the problems of daily life. That criticism which is simply fault-finding, should certainly be protested against, but that criticism which, in a helpful spirit, seeks to get at and understand hidden motive, is legitimate and a necessary safeguard. It is a part of that vigilance which is the price of safety externally; and internally applied to oneself, by it we search our own thoughts and motives to the awakening of the right alertness, but not of base suspicions. The

right use of criticism will tend to make not only oneself more careful of one's own thoughts, and more thoughtful of the power and value of words as a means of expression, but will also serve as a check to the fever of imagination in self and in others, which leads to exaggeration. The tendency and aim of right criticism is toward truth and better endeavor.

H. P. P.

(3) Criticism may be either helpful or harmful, according to the spirit and manner in which it is made. It affects directly the one who is criticised and the one who criticises, besides having to some extent a universal influence.

In general, we should criticise acts and not persons. Then we should make fewer mistakes. We are not always sure of the authors of certain acts, even though we think we are, and may ascribe them to the wrong source and do an injustice. And even when we are sure of the authors of the acts we criticise, we are by no means sure of their motives, and of all that impels them so to act; and to condemn or criticise harshly the person would be doing wrong to them and harm to ourselves. We should be making the conditions that would justly lay us liable to the same condemnation. All criticism should be made with knowledge and in the spirit of helpfulness, and then it will be a power for good.

There is a little danger of our being too critical of our own actions, and when we feel inclined to criticise others we should do well to scrutinize closely ourselves, and see if we do not find the same fault there, and we surely shall. When we have corrected it in ourselves we shall know how to help others to do the same. We can then work with sympathy as well as with knowledge. All criticism that arises out of selfishness and ignorance does harm. Unless we know, we have no right to criticise. But that criticism which arises out of wisdom and compassion is most beneficent, and we should give it hearty welcome when it pertains to our acts.

B. W.

(4) It seems to be accepted as an axiom that criticism is necessarily condemnation. It would be a sort of sacrilege to criticise favorably. The reason which is often ascribed to such unfavorable comment is that we fear to feed the vanity of the other person by too much praise, quite overlooking the fact that our fault-finding is only too frequently feeding our own vanity and jealousy. It is one of the marks of true greatness to be able to reprove without offense, or to praise without flattery. This is possible only when the criticism given is moderate and temperate as well as just. We cannot listen patiently to absolute condemnation, nor without shame to unlimited praise. The kind of criticism which we value and pay heed to is that which, while it points out a fault, recognizes whatever efforts may have been made in the right direction, and also our limitations; and while it praises holds up to our gaze the yet un-reached ideal. Then, too, the critic should continually remember with all humility that in the same circumstances, and acting under the same limitations of ability and knowledge, he might have committed those same acts which are now the object of his criticism. Criticism that is to be helpful must still further have the quality of good judgment. The man who ascribes our successes to the wrong causes is scarcely less contemptible in our sight than the man who charges our failures to the wrong errors. But he who, with true discrimination and just moderation, points out our errors of action, quickly becomes to us a mirror wherein we stand revealed to ourselves.

R. W.

A CORONER'S verdict states that a certain woman died because she thought she had been poisoned. She had not been poisoned, and her imagination was quite at fault, but it was as fatally efficacious as the most active of real poisons.

A good many people allow their imaginations to eventually kill them and to render them intolerably unhappy in the meantime. We spend a large part of our lives in brooding over misfortunes which never happen, and a very large proportion of those which do occur are self-invited by the same means. The imagination is a signal flag by which friends and foes are attracted, and many an enemy discovers our whereabouts by the device which we have ourselves hoisted. By the imagination we give a direction to our lives. It is the rudder by which we steer, and the man who imagines is veritably laying his hand upon the very wheel of life.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Observations taken at 8 a. m. Pacific Time

Not a Philosophical Age

Many optimistic writers would fain make of this mercantile century of ours an age of philosophy and call it its *renaissance*. We fail to find outside of our Society any attempt at philosophical revival, unless the word "philosophy" is made to lose its original meaning. For wherever we turn we find a cold sneer at true philosophy. A sceptic can never aspire to that title. He who is capable of imagining the universe with its handmaiden Nature fortuitous, and hatched like the black hen of the fable, out of a self-created egg hanging in space, has neither the power of thinking nor the spiritual faculty of perceiving abstract truths, which power and faculty are the first requisites of a philosophical mind.—H. P. Blavatsky (in 1889)

Men, Not Nations, Make War

AT the moment of writing there are many millions of men who are preparing themselves for war, and before these words are read the first and fatal move may have been taken, from which it will be impossible to recede. The columns of our newspapers are filled with speculations as to international interests and the claims and counter claims of rival governments. To however great an extent some few individuals may pose as the representatives of vast masses of their fellow-men, however weightily they may impose their wills upon their respective nations the fact remains that those nations are composed of the men who will do

the actual fighting, of the women who will do the weeping, and of the children who must go out in the world under the dark shadow of orphanhood. If it were at all possible to look into the hearts of men—and even the humblest fighting unit is as divinely human as the statesman—we should like to know the cause for which these millions of men thus hold themselves in readiness to fight, and especially the cause which animates the hosts who are seen now in battle array. These men are largely drawn from the classes which have but small share in the material prosperity of their nation. Do they believe that as a result of war that share can by any possibility be increased, can by any possibility be anything else than diminished? They cannot possibly believe it. Can they suppose that any one of the hardships, that any one of the restrictions under which they now labor, can be removed by war? Such a supposition is surely incredible. The period at which we have arrived is

Victory But Little Better Than Defeat

peculiarly a period of peace movements, of which the propaganda has permeated the civilized world, and of which the arguments must be well known to all who have the intelligence to understand them. That national war is national calamity, and that victory is but one grade less calamitous than defeat has been proved up to the hilt, and even amongst the most ignorant there can be found few who would deny propositions which have become so self-evident. We have been told that humanity is eager to escape from the supposed compulsion of war, and that it was but necessary to point out a more excellent way to secure for it an unanimous adhesion which would forever relegate war to its proper position among the things which have been. We have been assured that the fighting masses of every nation have been deluded into the belief that their material interests will be advanced by conflict, and that it is but necessary to show that this is indeed a delusion to wean them from the error of their ways. But it has now been shown conclusively and beyond

Because Men Love to Fight

all possibility of contradiction, that all legitimate material interests suffer from warfare, and that generations yet unborn must be poorer alike in wealth and in health because of it. How then shall we account for the sinister fact that nations still spring to arms not only with the same readiness as ever, but with an avidity to which every year of our Christian era seems to add? It is a question which we shall do well to answer and to answer rightly, if we would see peace upon earth, and the love of peace within men's hearts.

But to answer it aright we must go far below the surface of things, far beyond the mere intellectual measures which we have supposed to be sufficient. We must recognize that warfare continues its hateful existence, not because those who fight are forced into bloodshed against their will, not because they have been deluded with regard to their material interests, not because they choose war as the lesser of two threatening evils. We are forced into the perception that men fight for none of these causes, but rather because they love fighting for its own sake, as an end in itself and not as a means. Man is essentially a fighter and he must

Let the Battles Be for Humanity

remain so if his evolution is to continue. If he is not fighting against the lower forces of his own nature, or against the social evils of which he is alike the creator and the victim, he will fight for evil and for the base ideals which pass current in the world. The love of fighting is a natural force diverted into evil, a force which can never be extinguished, but which can most surely be directed into pure and regenerative channels. Herein lies the true work of the reformer, whose mind is large enough to recognize that it is men themselves who need to be changed and not merely methods. War-cries and the call to arms will not disappear from the world, but they can be sounded once more for high ideals and in support of a new chivalry, which allows no wrong to go unredressed, no injustice to be triumphant.

Then we shall at last see that perfect valor which comes only to the pure in heart.

STUDENT

AN experiment which promises to transform into a garden one of the now waste places of the earth is that which is being carried on in a corner of San Diego county, where a young date plantation is being carefully watched. If the experiment proves as successful here as in the Salt River Valley and elsewhere in Arizona great tracts of the Colorado Desert will be planted with this most valuable fruit.

Murdered Macedonia

WE have already quoted from the letters of Mr. A. G. Hales, written from Eastern Europe and within sight of the horrors which he describes. It will not, however, be amiss to give our readers a still further extract in order that they may understand something of the events in the presence of which the whole of Christendom seems to be so passive and so impotent. Mr. Hales says:

It is beyond question that since the 20th of last July fully eight and thirty thousand souls have perished, and of these nine-tenths are women and little ones. . . . In the mountains there must be from 60,000 to 70,000 people roaming wild and homeless. . . . They will not rot in the snow; the wolves will be the sextons.

Christian men, Christian women, Christian infants, all perishing because in Christian England, Christian France, Christian America, there is not enough of the old-time manhood to bid this devil's work cease. . . . Our fathers had bigger hearts and bolder. . . . I tell you that hour by hour, day by day, I get this news hot from the lips of couriers from the snow-covered hills, news of men and women perishing like vermin.

Is there an ascertainable law which governs the waves of popular indignation and sympathy which are so refreshing, however unintelligent they may sometimes be? Within the last few months a large section of this country has been aroused to a white heat of denunciation because of the massacre of Jews in a Russian town. However diabolical and detestable that wicked outrage may have been, what was it in comparison with the long drawn-out horrors in Macedonia? The former was the result of a brute passion on the part of the populace, it was speedy, and it was repressed and denounced. The misery in Macedonia, even in its most acute phases, has been going on for months, is going on now, and is likely to continue. Around this blood-drenched cockpit, filled with murdered, outraged, tortured women and children, the nations of Christendom have placidly grouped themselves with the cruelty of the vivisector, but without his interest. Any one of the Christian nations of the world could have stopped this holocaust in twenty-four hours without difficulty and without expense. Not one of them seems to care whether it is stopped or not so long as their interests and their revenues are unmolested. We hear very much of the dangers which threaten Christianity, but who can doubt that the despair of these slaughtered thousands in Macedonia, of the hunted and outraged women with their mutilated and murdered babies, must arise like an incense around the throne of a blasphemed God, crying aloud for justice and for retribution, not upon the human hyenas who have but acted according to their kind, but upon the smug self-interests and the abominable theologies which have allowed these things to be done, which have preserved the ring of murder and which have held the garments of the assassin. X.

To Discourage Hunting

A PROMINENT American whose experience gives weight to his judgment has recently said that in matters of sentiment—using that word in its best sense—the world is led neither by America nor England, but by France. We are reminded of this by the reports of the movement against hunting which owes its inception to that brilliant writer Pierre Loti, and which is receiving a surprising amount of support in a country where the chase ranks high amongst national amusements. Pierre Loti says that he has never touched a gun since he wounded a monkey which “died in his arms in an attitude of confidence and an infant's pose.” Many other eminent writers have joined in this most worthy crusade against cruelty. “What use is it anyhow?” asks one:

Does it contribute to health? Certainly not. It is well for man to amuse himself and while there are innocent amusements there are horrible ones, and these should be abolished. Modern conscience exacts it. It says man is not a sultan to use all living creatures for his pleasure. Is blood necessary to train the eye and arm? Time will come when hunting must be abolished. Indeed, future historians will be astonished to learn that in the Twentieth century pacific, honest people sallied forth with guns on their arms, filled with balls and powder, to massacre hundreds of innocent birds and animals as a means of distraction.

There are, of course, many different kinds of hunting. The most popular consists of killing merely for the sake of killing, and is usually undertaken by those who have the keenest concern for their own physical comfort. Such a movement as that which has been started in Paris is a gratifying evidence of an upward move in public feeling. S.

The Pass of Glencoe

OUR frontispiece represents the Pass of Glencoe, one of the most notorious spots of Scotch history; the scene of a tragedy almost unsurpassed in the annals of Great Britain. Macaulay says:

In the Gaelic tongue, Glencoe signifies the Glen of Weeping; and in truth that pass is the most dreary and melancholy of all the Scottish passes, the very Valley of the Shadow of Death. Mists and storms brood over it through the greater part of the finest summer; and even on those rare days when the sun is bright, and when there is no cloud in the sky, the impression made by the landscape is awful.

During the early part of the reign of William and Mary, Glencoe was the home of Mac Ian and his clan Donald. Surrounded as they were by unfriendly and hostile tribes, their internal broils added materially to the turbulence which had been caused by the misgovernment of James II and the accession of William and Mary. The English government had made strenuous efforts to secure the allegiance of the Highland clans, and the announcement had finally been made that those who submitted on or before December 31, 1691, would be fully pardoned and amnestied, while those who were still in resistance would be treated as enemies and traitors. Mac Ian, while fully intending to make the inevitable submission, gratified his pride by postponing this act until the very last moment. On repairing, however, to Fort William, he found to his consternation that there was no magistrate available who was empowered to administer the prescribed oath. Journeying in hot haste to Inverary, he was delayed by inclement weather, and did not arrive until January 6th. The oath was none the less administered to him, but not in time to prevent the despatch of advices to Argyle and Breadalbane, his hereditary enemies, that Mac Ian had neglected the proffered means of grace. Eager to gratify their hatred, these noblemen arranged for a midnight massacre of the inhabitants of Glencoe, which was carried out with every circumstance of ruthless cruelty. The Glen was secretly surrounded, men, women and children were put to the sword, and the most terrible of all chapters was added to a record already overburdened with violence and tragedy. STUDENT

A Prescription for Long Life

OF the various prescriptions for living 100 years there is almost no end. One of the simplest and best that we have seen is given by Dr. Sir Hermann Weber, who, as already an octogenarian, and a hale one, has some title to speak. The elements of it are:

Early rising. Probably we all wake for a moment close to sunrise, or before. But we neglect it, and finally hardly notice it at all, drifting into a dreamful state that is neither sleep nor waking, throughout which vitality seems to be steadily lost.

Eating slowly a minimum of food, of which meat is a very small ingredient.

Persistent cheerfulness, and even joviality.

Much *fresh air* at all times, and exercise therein. And one whole day a week devoted to a long walk, during which very little food is eaten, mainly fresh fruit. Sir Hermann states that as much as seven pounds of useless weight is lost during this day. Alcohol he condemns. And he finally winds up:

“Then again—cheerfulness and a happy mind. ‘A merry heart does good like a medicine; and a broken spirit drieth the bones.’”

“A merry heart” is generating an order of electricity to which the elixirs and magnetic belts will hardly make pretence, an electricity which is life itself. Mark Tapley has found the philosopher's stone, and merely not worrying is but the negative half of it. M. D.

White Aggressors

IN the fatal fight with Indians which recently occurred in Wyoming, the Department of the Interior asserts that the whites were the aggressors. It seems that the Indians were trespassing, and for this heinous offence twelve were killed and about the same number wounded. Is the matter to be allowed to rest here, and are the Indians to understand that they have no redress except a pronouncement from a State Department? If the case was reversed and two dozen whites had been killed or wounded, we should hear enough of “massacres,” Indian treachery, etc., and retribution would be speedy and unstinted. X.

Some Views on XXth Century Problems

Juvenile Crime and Sociology

THE boy murderers of Chicago have set us a problem in sociology, which it will not be easy to solve. The difficulty is not, however, an intellectual one, but it arises from the fact that the more closely we examine it the more unmistakeably do we see that the finger of accusation points at ourselves and at the system which we have created. Here are a number of boys who have been educated in the heart of a Christian country, and who have been surrounded with the average conditions of that country, and who yet seem to be absolutely devoid of morality and to rival all lower animals in ferocity and greed. It is, of course, easy to denounce them and to kill them, as being outside the pale of human pity, but our very readiness to do this is due to a feeling of self-reproach, which we would banish at all costs. The fact remains that these boys have grown from a soil which favored their growth, that all hideous elements in their natures have been furnished by that soil, and that however effectively we may pluck the fruit and destroy it, so long as the social fields remain the same we may expect these growths with the regularity of the seasons.

Let us clearly understand the accusations under which these boys are lying and the crimes for which they are to suffer. They are accused of robbery and murder, but do we use these terms according to their legal and narrow definition, or in that wider sense which we universally recognize as the Law of God? We know very well that acts of robbery and of murder are generally sanctioned and permitted as parts of our social system, and we know equally well that the murder and the robbery which we permit are ethically indistinguishable from the murder and the robbery which we punish. We know very well that a war of aggression constitutes wholesale robbery and murder, and to such wars the world is not only well accustomed, but it is also in the habit of invoking the divine aid for their special success. It seems, then, that Christian nations regularly commit crimes which are ethically identical with those of these boys, but upon a scale infinitely larger. They not only commit the same crimes but they seek to make an accomplice of their God. All this we shall see clearly enough when we have wiped the hypocrisy from our eyes. We shall see more than this. We shall see that very much that we now call commerce and finance is robbery unadulterated, and that the human misery and the human death therefrom resulting, is murder unadulterated, and committed with a long drawn out cruelty in comparison with which the revolver bullet is merciful and kind. The mill owner who employs children in such a way that they prematurely die has murdered those children in order that he may possess himself of the only valuables which they have, their labor and their strength. These things are true and we know they are true, and we shall do well to recognize that these Chicago boys are not accused of robbery and murder as such—because we generally practice and approve of these things, but because they have robbed and murdered in a particular way.

These boys are presumably to be killed in a Christian country in spite of Christ's explicit and direct command to the contrary. That is bad enough for us and for them, but let us at any rate pray that even upon this pathway of evil we be spared the crowning infamy of hypocrisy.

STUDENT

The Moving Picture and Exhibitions

WE hope that there will be a contagion about the action of the Chicago authorities in deciding to keep a watchful eye upon the moving picture exhibitions which are becoming so much a feature of our large cities. These exhibitions may be made of the highest educative value. They may also be debasing and corrupting to the last degree. As usual, we are assured by self-interested parties that liberty is threatened. We fully agree that it certainly is threatened when showmen are allowed to demoralize young boys by realistic pictures of shameful crimes, and thus to manufacture criminals who must be cared for at the expense of the community. The action of the Chicago authorities is a movement in the direction of liberty and we hope that it will be imitated and extended elsewhere.

STUDENT

Religious & Dogmatic Newspapers

SEVERAL religious newspapers are asking themselves the question whether religious journalism is, or is not "played out." There is, of course, the usual difficulty about defining our terms, and a question of this kind cannot possibly be answered until we know what is meant by a religious newspaper. There are many journals calling themselves by this name, which seem to have no right whatever to it. The newspaper which devotes itself to upholding some particular kind of dogma, the newspaper which is a mere record of the theologic opinions, communicants and incomes of some one church, has no claim whatever to be called religious. It is a trade organ, pure and simple, and its influence is opposed to true religion rather than in favor of it. Upon the other hand there are many journals which make no claim whatever to be religious, but which none the less are so in the best sense of the word, inasmuch as they represent interests and thoughts which are above the average instead of below it. The existence of an avowed religious journal, as such, is a perpetuation of the ancient mischief which regarded religion as something apart from the work-a-day world, as something to be kept distinct from the thoughts and the occupations of the week. We are now beginning to learn that whatever is not religious, in the best sense of the word, has no right to exist at all; that what is morally wrong on Sunday is probably equally wrong on Monday, and that the real mission of religion is so to blend itself with human life that it is never absent from it.

The true religious journal is the one which recognizes that it has a moral duty to perform for the community, but which does not say so; the journal which confidently assumes the existence of moral ideas in its readers and appeals to those ideas; the journal which helps men to live instead of to die. So far from this kind of journalism being "played out," we wish we could be sure that it has, in any general sense, been "played in."

STUDENT

The Real Cost of War

A GREAT war brings with it many side issues which we are apt to overlook. We think that we have reached the end of the chapter when we have counted up the killed, wounded and missing and when the financial cost has been reckoned and paid. But there is a tragical undercurrent of which we lose sight, there are unidentified spectres which for long years keep step with our civilization, staining it and degrading it. Some of these social tragedies have been indicated in the *British Medical Journal* as a result of the Boer war. Thus in the years 1901 and 1902 the lunacy returns showed a terrible increase. What wonder that war and lunacy should go hand in hand? Murder statistics went up with frightful rapidity, and, again, what wonder that respect for human life should wane and that the passions of individuals should be fanned by the passions of nations. The murder of newly born children at one time showed an increase of over six per cent. We presume these were the children from whom the bread winners had been taken. The writer says:

Combining homicidal, suicidal and sexual offences under one heading as crimes of an impulsive or passional kind, the temporary decrease of these in the winter of 1899 was followed by their increase to a normal level in 1900, and in December, 1900, there was an increase of 12.5 per cent, and in the following year the increase was 9 per cent.

Let us remember that every one of these registered crimes is but one visible ripple from the stone which is cast into the pool of human hate. Countless other ripples, unregistered, unmarked, unclassified, flow outward and onward, the burden of tragedy is lifted upon the shoulders of heredity and is carried on over the sea of human life, and because of this and every war, the shores which we have not yet reached must be covered far and wide with human wrecks. If we but realized the cost of it all, if we could but see the total of the bill which we must face, we should so lock and bar the gateways of war that only sublime and selfless duty could ever again throw them open.

STUDENT

Art Music Literature and the Drama

The Scotch Bagpipe

TO the average American the bagpipe stands for all that is shrill and uneuphonious, for outside of Scotland it is rarely well played. More than that, it seems to be invariably out of harmony with its environment, and ourselves out of harmony with it. There are those who declare that, musically, it ranks above the banjo—which we might be quite willing to believe—even above the mandolin and guitar. Yet when do we hear it when it does not seem hopelessly out of place?

Probably that is not the fault of the bagpipe. Vernon Blackburn writes interestingly of it in the *London Musical Times*, pointing out that while, as an interpreter of the light or the humorous in Scotch music, it makes little appeal, it finds rich and wholly appropriate expression in death music, the dirges of the people of that brave and many-hilled land. He says:

The musical wail of the Gaelic Muse is among the ineffable realizations of tragedy in the world. She touches the depth and height of sorrow; and fit companion in that expressed grief is her national instrument.

As you wait by the coffin of the dead, you hear the dim sound of the Coronach as it grows keener to your hearing. The pedal note is a long monotone of grief, an enduring moan for the thing that has been. The melancholy and windlike harmonies that are blown above that note hither and thither fall to the varying mood of the mourner, who finds, it may be for the first time, with wonder and dismay, that to the human heart even the sense of loss must, in its acutest knowledge of the present, take a relief and a change which seem almost a treachery. Such music as this, thus played, and on this instrument, once more, in its gloomy and magnificent completion, shows that in the mourning over the dead Scotland triumphed unto the attainment of the culmination of her musical art.

THE most unique and possibly the most valuable collection of Whistler's etchings extant belongs to the artist, Mortimer Menpes.

It does not include many of the later etchings, but it contains very many of the undeniably best; "most of them," says Menpes himself, "being first impressions in the most perfect condition, with the bloom upon them." Certain of the dry-points are unique in their perfection. One of these is "My Mother," the artist's mother standing, as pathetic in its simplicity and as simple in its beauty as Whistler's painting of his mother that was purchased many years ago for the Luxembourg. The crowds that fill the Leicester Galleries, London, today, for the purpose of seeing these etchings are a curious commentary upon certain critics of a generation ago, who were wont to declare that Whistler painted by throwing palette and brushes at the canvas, and that his etchings were intelligible only when upside down.

THE theme of a recently published novel is the life history of a certain musician who had two souls. But why do so many musicians, who presumably possess one, contrive to keep that one so strenuously in the background?

Goethe and Mendelssohn

RELLSTAB, the great musical critic of his day, and a contemporary of Goethe, the old man, and Mendelssohn, the young boy, gives us the following fascinating picture of an episode in Mendelssohn's life:

"Goethe went out and after a few minutes returned with some manuscript music in his hand. 'There is something from my own collection, Felix; now we will try you. Can you play this?' He laid the sheet, covered with clear and small notes upon the desk. It was Mozart's writing. Felix's countenance glowed visibly at the sight of the name. With perfect security he played the manuscript at sight, although not one to be easily read. The skill was as great as if he had known it for years, so secure, so clear, so well considered.

"'Well,' said Goethe, 'that is nothing. Others can do that. Now, here is something that will gauge you.' Jestingly he brought out another leaf and laid it on the desk. It had indeed a remarkable look. One could scarcely tell whether they were notes or a page lined and spattered with ink in countless places. Felix burst into a laugh of wonder.

'Is that writing?' he asked. Then suddenly he grew earnest as Goethe said, 'Guess, if you can, who wrote it.' Zelter (young Mendelssohn's teacher), advanced to the instrument and, looking over

the lad's shoulders said, 'That is Beethoven's; one could see that a mile away. He always writes as if he used a broomstick for a pen, and then brushed down the fresh notes with his sleeve!'

"At the name of Beethoven Felix became visibly earnest, yes, more than earnest; a holy awe was disclosed in his features. He looked upon the manuscript without turning away his eyes, and then a visible gleam of surprise played over his features. This lasted but a few seconds, for Goethe allowed no time for preparation; he would have the lad sharply tested. 'Did I not say to you that this would catch you?' he said. 'But try it; show me what you can do.'

Felix began to play. It was a simple song, but the notes had been so rubbed out and scratched over that it required wonderful skill to read them at a glance. Felix often had to correct himself, laughing when he would strike a false note and then correcting himself with a 'not so!' Then he cried, 'Now I will play it as it should be!' and the second time he did not fail a single note. 'That is Beethoven, Beethoven alone!' he cried, as he fell into the true melodic movement, which revealed to him the characteristics of the great master. And with this last trial Goethe surrendered."

A NEW musical instrument, invented by Severino Perez, was recently shown to a group of musicians in Madrid. It somewhat resembles a flute in which the part of the lungs is taken by an air-box, with a metallic plate against which the lips silently make the vowel movements. The sounds resemble those produced by the voice; the range is three and one-half octaves. The inventor holds that its use will make possible now unknown harmonies.

LANDSCAPE BY COROT (LOUVRE, PARIS)

If the difficulty of estimating the age of the music of the Lowlands is great, it is as nothing compared to what is met with in considering that of the Highlands. When a Gael speaks of an ancient air he seems to measure its age not by centuries; he carries us back to prehistoric times for its composition. . . . The airs are simple, wild and irregular, and before their beauty can be perceived they must be sung or hummed over again and again.—*Selected*

In Maoriland

MOST of the authors who have written about the Maori people have not been very well fitted for the task. They have been limited to the notions of the missionary or else by the materialistic ideas of many so-called scientists, who believe the first races were apes, then savages, etc. A few later students seem to be getting nearer to the right lines, and the facts now coming to light regarding this interesting people are quite different from those of former days. But all authors agree in the opinion that the Maori is brave, honest, truthful and most compassionate.

These qualities were especially shown in their wars with Europeans. Perhaps no people ever withstood the English troops with greater valor and craft than did the Maori. Their fortifications could not have been surpassed by Europeans skilled in the art of fortification. In war they were very open and brave. "I will fight you on such a day," was the open, chivalrous method of the Maori.

The investigations of late authors point to the Maori as having come from some place in the direction of Southern India—from Egypt, or may be before that—to New Zealand by way of the Straits-Settlement, Northern Australia, etc. Katherine Tingley holds that the Maori is an off-shoot of the ancient Egyptians. There is so great a similarity between the language spoken by the Maori, Samoan and Hawaiian, that it is said they can understand each other to this day without very much difficulty. The Maori word for Love, *Aroha*, and the Hawaiian *Aloha*, is an example of the similarity of speech. They possess, in part at least, many of the teachings given by H. P. Blavatsky—*e. g.*, about the North and the Sacred Lands there, and many other things. They have always taught the immortality of the soul, and their distinction of the different parts of man is very similar to the old Egyptian.

The men still, but especially those of the last generation, are fine types of manhood in many cases. The old chief was, in features, very like the ancient Roman. The women are, as a rule, not so well formed, but there are some notable exceptions.

It is a matter of record that with the Maori native after marriage, there is hardly ever a case of infidelity. The tattooing after marriage distinguishes the married women from the young girls.

A very notable fact is that while, generally speaking, so-called savage races vanish before the white man, the Maori of late is rather increasing. Perhaps no native people has ever been treated so well, in many respects, by the white rulers as the Maori. In fact, he has been particularly favored, and has suffered from it. In New Zealand the Maori have

for a long time been members of both the lower and upper houses of Parliament, and the present Maori King, Mahutu, has lately been made a member of the Cabinet.

Maoriland is full of interesting spots, famed in Maori song and story. In the Hot Lake district in the North Island, is the classic lake of Rotorua. Here the Maori natives hold their aquatic contests. The sacred island of Mokoia rises from its waters, and it is said that around this spot "cluster legends and stories that would make a Maori *Iliad*, had they a Homer." One legend is told of how the beautiful Hinemoa swam across the lake to the Island of Mokoia, at the sound of her lover's lute, a distance of perhaps one and one-half miles. She was pretty cold when she arrived, but there was quite close to the shore a pool of hot water in which she had a bath. This is known still as Hinemoa's Bath. It is within about three feet or so of the lake, and those who have taken a dip in it say it is a curious experience to sit up to the neck in the hot water, and feel the little waves of the lake water, fresh and cold, now and then splashing over your head.

Through all these charming stories runs a delicate strain, telling of woman's unselfish and enduring love, and man's noblest and most heroic deeds. Surely the secret of the increasing prosperity of the Maori lies in the fact that they are renewing their old customs and holding to the higher ideals of their ancient days.

E. C. S.

HOW we have suffered, been almost strangled, by the ideas of other minds which we have allowed to settle over ours. It is as if some cruel and mighty arbiter had formed a cast-iron mould of thought and thrown it around the minds of the people, saying, "Thus far shall you think, and no further;" "So shall you regard life and not otherwise;" "In these grooves you shall think and act, and there remain." But cast-iron is soft and flexible, in comparison with the rigidity of custom, and is transparent in comparison with the pall of darkness which surrounds the mental life.

G. V. P.

IT is interesting to know that of the memorial windows placed in the All Souls' Church at Biltmore, the Vanderbilt country estate at Asheville, North Carolina, seven were designed by Helen Maitland Armstrong. The windows are elaborate, the designs being carried out in stained glass. Miss Armstrong is but one of many young women in this country who are engaged in this line of work. Many of the handsomest windows to be found in the churches and public buildings of our great cities have been designed by young women artists.

Reform

WE begin to realize the necessity of reform. This means much. It is the awakening of the mind to conditions which threaten our very existence; conditions which are so perverse of the divine law, so contrary to nature's beneficent healthfulness and blessing, that rogues, criminals and fools usurp today these human temples—these glorious living temples of the living God. The arrogance and presumption of our age forbid the search for absolute knowledge. Our civilization has its strength and its weakness; it means advance, yet builds upon quicksands. The strength of our times is given to cultivate and refine the human mind.

The air is replete with reforms—reforms in education, reforms in creeds or dogmas, reforms in diet, civil and civic reforms. The root reform, from which should radiate all others, is that of a more perfect art of life. We are conscious enough of a yearning for better results, yet how slow we are to recognize that the cause of our failure is rooted deep in self. So deep is it bedded in the human mind, so subtle is its power, it holds fast to individuals, then binds them together with the strong, remorseless bonds of a common accepted ignorance and prejudice. Upon this rotten foundation is constructed a fortress almost impregnable to any advancing thought, and this fortress is surrounded by the deadly ditch of self-satisfaction. Nearly all fall into the suffocation of this moat. It takes a brave one to attempt to cross the muddy, slimy divide.

Emerson says in one of his poems, *Blight*, "I am weary of the surfaces—give me truth."

O yes! our great ones—our poets and philosophers—have ever urged the search. The sacred, spiritual books of the world keep before us the truth that the law—the divine, immutable law—demands that we seek, "and ye shall find; knock, and it shall be opened." The *Bhagavad Gita* repeats this message, adding its power to enforce the law: "Seek this wisdom—by doing service, by strong search, by questions and by humility."

There is much to learn. The statement I make here is a statement of fact. I offer here no pet theory of salvation. But I state that in repeating the written law, "Seek, and ye shall find," there is a common enemy that knows no distinction of wealth, or care, or moral influence; that works subtly, and untiringly, with determined zeal to pervert the children of men. And we, in our self-satisfaction, keep right along in the same old way, fixed in our ignorance, building asylums, prisons and schools of reform.

O women of today, pioneer a great reform! Free your minds from darkening prejudices and the psychology of accepted methods as to the care and protection of children, and *really protect them*. From nature's productive bosom are created both poisons and their antidotes. God alone is beneficent. Nature is a manifestation of God; but, as manifested, nature exists for the evolution of the finite to the infinite. Through that process is fashioned, by and through nature, the fruit of the tree of knowledge—which is both good and evil. As there is nothing inorganic in nature, and as the universe is embodied consciousness, space is teeming with organic centers of force sprung from nature. Added to these whirling centers are those emanated by the human—Man, created in the image of God—of the God-force, whose part is to spiritualize matter.

This is the work of evolution. This is to be accomplished. This is the meaning of life. No one lives to himself alone. From the known we must reason to the unknown. "Vaster is the Inner than the Outer; greater is the Unseen than the Seen." Let us, as women, live by the guidance of the Soul!

KATHERINE RICHMOND GREEN

A Victim of Child-Marriage

SUKHIVA VANNERJEE, twenty-seven years of age, but a grandmother of several children, is expected to arrive in Los Angeles today with Mrs. Josephine Holmes, of this city, founder of the Indo-American Woman's Restoration League, says the *Los Angeles Herald*.

Sukhiva Vannerjee is a Hindoo woman, who has suffered the excruciating tortures hurled at the child-wives of her country. She was married to a man thirty years of age when she was but six. At the time of her marriage she was taken to the house of her husband, who cross-questioned her on several matters in order to ascertain whether the girl was to his liking or not. He decided to take her and she was turned over to her mother-in-law. The mother-in-law gave her the menial work of the household to do and made her life as much of a burden as possible. Contrary to the custom of this country, the wife is made to obey the mother-in-law.

At the age of eleven years the girl gave birth to a child. It was a girl, and the wrath of the irate mother-in-law knew no bounds. It is considered a disgrace in India to give birth to a daughter.

Two years later the girl was unfortunate enough to displease her mother-in-law in the same manner. Another girl was born.

Unable to control her temper any longer, the old woman ordered her son to get rid of his wife. The gallant husband, fearful of displeasing his mother, drove the girl out of the house and into the dense forests of the country.

For several days the child wandered through the jungles until the roaring of wild animals and screeching of birds drove her mad. She was discovered in her pitiable condition by agents of a commercial company doing business in India, and taken back to her home.

When she arrived at her home her parents were afraid of taking her into their house, but handed her a scant supply of food through a window. They were punished the following day for their kindness. Later on the girl was picked up by missionaries, who cared for her until she was asked by Mrs. Holmes to come to this country. Mrs.

Holmes says that she intends keeping the woman in Los Angeles, in order that she may study medicine.

After listening to the pitiful story told by the woman, the Chicago branch of the Indo-American Woman's Restoration League is up in arms and will take immediate steps to abolish the outrageous custom of child-wives.

[And is it THIS, THE CUSTOM OF CHILD-MARRIAGE, which is endorsed by a certain woman who calls herself a teacher of "occultism," and by members of a certain society which presumes to call itself "Theosophical?"—A. V.]

A CURIOUS occupation for women is chain-making, an industry that exists, however, in some parts of England, although little known. The "Anvil yards," or "hearths," as the little smiths upon which these women work are called, are chiefly set up in neglected out-of-the-way places. From morning until night they toil, the young girl of twelve, her mother, even her grandmother, hammering into shape and then welding the chain-links. Nearly all the small chains are made by women, of whom, in the Cradley district, there are nearly one thousand workers.

It is reported that the Santa Barbara Chamber of Commerce is to open its doors to women, admitting them to membership. It would be not merely a just but a wise step, for in no State do women occupy a more honorable and honored position as factors in the world of commerce and industry than in California.

Hidden Treasures and Ancient Glories of Central Asia

SPEAKING of the ancient civilizations, mightier than our own, whose traces, so long lost, are now being everywhere discovered, H. P. Blavatsky, writing many years ago, said:

The traces of an immense civilization, even in Central Asia, are still to be found. This civilization is undeniably *prehistoric*. And how can there be civilization without a literature in some form, with annals or chronicles? Common sense alone ought to supplement the broken links in the history of departed nations. The gigantic, unbroken wall of the mountains that hem in the whole table-land of Tibet, from the upper course of the river Khuan-Khé down to the Kara-Korum hills, witnessed a civilization during millenniums of years, and would have strange secrets to tell mankind. The eastern and central portions of those regions . . . were once upon a time covered with cities that could well vie with Babylon. A whole geological period has swept over the land, since those cities breathed their last, as the mounds of shifting sand and the sterile and now-dead soil of the immense central plains of the basin of Tarim testify.

The border-lands alone are superficially known to the traveler. Within those table-lands of sand there is water, and fresh oases are found blooming there, wherein no European foot has ever yet ventured, or trodden the now treacherous soil. Among these verdant oases there are some which are entirely inaccessible even to the native profane traveler. Hurricanes may "tear up the sands and sweep whole plains away," they are powerless to destroy that which is beyond their reach.

Built deep in the bowels of the earth, the subterranean stores are secure; and as their entrances are concealed in such oases, there is little fear that any one should discover them.

Sven Hedin's *Central Asia and Tibet*, just published, affords ample verification of these statements of H. P. Blavatsky, both as to visible remains and the rumors of concealed treasures. It will be noticed that the regions visited by the explorer are the very same as those mentioned by H. P. Blavatsky.

This book is said to form perhaps the most magnificent record of exploration since Livingstone and Stanley, and has all the advantages which numerous illustrations produced by the most up-to-date facilities in photography can give. The traveler spent three years in his explorations, the real work of which began at Kashgar, in Eastern Turkestan, whence he journeyed by caravan to the Tarim river, mentioned in our quotation above. Floating down this river through the desert, he finds himself in a land of mystery and romance. We quote from a review in the *London Daily News*:

It was a still, peaceful journey through a lonely land, varied by the excitements of fighting the gathering ice and journeys through "the enchanted forest" and "the land of everlasting twilight." At the end a district is attained of forlorn loneliness, sand-dunes, and a vast desert, with not a vestige of life or habitation, and the temperature sinking thirty degrees below freezing—a kind of vision of one of the scenes of *Dante's Inferno*. Here the travelers disembarked, after what the author enthusiastically calls "our peaceful and fairylike journey." "I had been carried, as it were, on a triumphal car to the very heart of Asia, and which ever way I turned there was the unknown beckoning me with its finger." He met his caravan and went into winter quarters; and from this center started a series of expeditions into the desert in the almost incredible cold. It was a strange land of sand and thorns, like the land Percival came upon in his quest of the Holy Grail, weirdly depicted in the photographs as a kind of great ocean of waste sands, "an ocean of desolation."

"Tales about towns and treasure said to be buried in the desert were incessantly being repeated to me, but although I questioned the natives exhaustively, I was unable to obtain any definite or trustworthy information about it. They were afraid I should go to the place and discover all the gold which their wild imaginations depicted as lying hidden underneath the sand-dunes."

There are mysterious stories also of a moving tower of blue pottery, which shifted over the desert, and of ghosts that haunt the ruins of ancient cities. The indomitable traveler pushes on, though the thermometer registers fifty-eight degrees

of frost, and he is in the saddle ten hours, with breath freezing on the face, and the eyes blocked with tiny icicles. One of the weirdest sights found in these lonely regions were bodies in coffins, still preserved, though buried for three years, of some unknown Russian people—mysterious dead, whose names and origins alike had been forgotten in "their last long rest in the wilderness." All the winter and following spring the author is wandering in these wild wastes, among unknown lakes and the ruins of dead cities and clay towers of a civilization long passed away.

Next the traveler strikes out for the highlands between the Himalayas and the Kwenlun, "the most stupendous swelling on the face of the earth," and finds rivers, lakes, and mountains nameless and unexplored. Then he makes journeys across the desert of Gobi, and examines the ruined towns of Lou-lan.

Amid the chaos of a region, forgotten alike as it seemed of God and man, there are weird evidences of old things, unmistakable highways and traces of shadowy people that have vanished from the earth. The record of the ruined towns of Lou-lan and its evidences of these old races is one of the most interesting portions of the volume. He finds here clay towers, copper lamps, ruined houses and Buddhist temples. There are even tablets of wood in which every letter is sharp cut and distinct, written in India ink, but in no known language.

Finally a dash for Lhasa is made, but, as usual, the Thibeto-Chinese government is found to be fully aware of the project, and the adventurer is politely but firmly bowed out. Says the gorgeous Chinese official:

"You need not think you can frighten me. I am going to do my duty. I have just had express orders from the Dalai Lama with regard to you, and I know better than you do what I have got to do. You will not go to Lhasa. You will not go another day, not another step, towards Lhasa. If you do you will lose your heads," and he drew his hand significantly across his throat. He added that if he allowed us to go he would lose his own life. "It doesn't matter in the least who you are, or where you come from. Your actions are in the highest degree suspicious. You have slunk in by a back road, and must go back to your headquarters."

STUDENT

THUNDER BIRD TOTEM AT FORT RUPERT, VANCOUVER

Prehistoric Animals in America

IT will not be the fault of the American Museum of Natural History if we remain uninformed as to the early animal life upon the American continent. The work of the Museum has been extensive and successful and a very large consignment of fossil and other remains will soon be available for public inspection.

Four separate expeditions have been hard at work but the most important seems to have been that to the Bone Calcine Quarry in Wyoming. Excavations have been carried on here for many years and so far from the ground becoming exhausted the discoveries have grown more plentiful and more valuable. Professor Osborn, the chief of the Department of Paleontology speaks enthusiastically of the results which have been secured. Among these are the fore-legs of the allosaurus and also remains of the plated stegosaurus, the great four-legged lizard and very many other extinct reptiles. The Professor accounts for the richness of the locality by the fact that thousands of years ago there was a bar in a Surassic stream which caused the accumulation which is now delighting his heart.

The expedition to Fort Bridges was hardly less successful. Two entirely new animals were discovered in addition to the remains of six hundred other animals now extinct. The fossils of extinct varieties of the horse have come to light in considerable quantities including the three-toed horse which had the dimensions of a Virginia deer. The nearly complete skeleton of a camel was also found. An expedition to South Dakota was especially fruitful in marine skeletons, including minosaurs. Complete skeletons were found of the most perfect description, the average length being about 40 feet.

What Conditions Are Essential to Plant Life?

IT is generally supposed that plants, ordinary plants anyhow, require four elements for their successful growth—air, earth, sunlight and water—but the exceptions now known are so many that we must amend the list and say that plant life may be sustained by any three out of the four, and there are some forms which seem to require only two.

The orchids are air plants, requiring no earth; the lichens need no soil, and many fungus growths require no sunlight, in fact it kills them. In addition to these natural divisions we find also that many sorts of plants which ordinarily use the four elements can, at a pinch, do quite thriftily on three. A curious instance of this offered itself some time ago, in the form of a wild tobacco plant, or *nicotiana*, which was growing in a four-quart tin pail about one-third full of soil. In that locality, far away from Point Loma, the summers are not only absolutely rainless but also extremely hot, so that the young plant seemed to be facing certain failure in its attempt to grow.

Nevertheless it did grow into a handsome, well-branched plant about three feet high, with every evidence of good health. The pail was moved several times to be sure that no root had crept through a hole into the equally arid soil beneath.

At last it was taken out and examined, when it was found that the roots were very well grown, quite filling the earth in the pail.

With the soil all removed the plant was left to an apparently as good opportunity of living and thriving in the open air.

Instead of doing so, however, it drooped at once, and soon died. The earth in the pail must have been frequently heated by the sun to 150° Fahrenheit, and was as dry as flour; yet a large and juicy herb grew therein and found that parched earth necessary to its life.

But why?

What nourishment did it secure from the soil, and how was it obtained?

Or was its rooting in the earth a necessary part or factor in a current of vital force? Did it constitute an image electrically precipitated from the atmosphere, under the guidance of the elves?

THE middle of December in California valleys and lowlands means the beginning of the plant season. The mahogany bushes have their buds all ready to open, the violets are blooming wherever they have had a little water, and from the black, shapeless roots the fern fronds are beginning to uncurl their dainty beauty, glad to arouse themselves after the long dry summer.

Everything is gathering itself for the rush when the rains come. Then there will be a transformation so swift as to astonish even one accustomed to the rapid springtime of northern latitudes. All the open spaces will be sheets of purple, white and gold—acres of it—and many of the bushes will soon look like snowdrifts in their fleecy, feathery covering of clematis. Then the air will be full of the hum of bees and the clatter of birds. Nooks of ferny sward and flowering shrubs will marvelously appear where the long summer has now left only bare brownness. Everything will renew its life in the welcome rain.

FLOWER AND FLAME

by ETHELWYN WETHERALD

BETWEEN the flowering and the flaming woods,
All greening in the rain,
The fields unfold,
The sun upon the grain
Outpours its gold,
And sweet with bloom and dew are nature's moods,
Between the flowering and the flaming woods.

Between the flaming and the flowering woods
The wind bemoans a host
Of withered leaves,
The winter is a ghost
That grieves and grieves
Around a ruined house where none intrudes,
Between the flaming and the flowering woods.

O woods that break in flower or in flame,
My winged days and hours
Shall meet their doom
Like to your leaves and flowers;
Let not your bloom
And brightness put my flying years to shame,
O woods that break in flower or in flame!

AS THEY GROW IN MEXICO

Some Wild Folk of the Northern Woods

LAST summer our holidays were spent at a wilder part of the lake shore than previously, and we had an opportunity to become acquainted with some of "the little wild folk" of the woods, and especially the squirrels.

To see a little squirrel on a tree-branch near our cabin, his whole body quivering, and scolding at the top of his lungs, one would think that *we* had no right in the woods at all. But they soon forgot their anger when their bright eyes and sharp noses told them that there were nuts to be had by coming a little nearer to the strangers.

They usually preferred to take a nut and run up a tree to what was, to their idea, a safe distance; but sometimes, if we stood very quietly in the doorway, we had the pleasure of seeing them enjoying their meal.

They have so much curiosity, always want to know what is going on, and when we were at the playground near the cabin, we often saw them jumping from branch to branch, coming nearer and nearer in the hope of getting something to eat.

Until the acorns ripen they will eat bread and crackers if no nuts are given them, but after the acorns become eatable they rather disdain bread, but they always have a keen relish for raspberries and blackberries. Great games of tag they used to have, up and down a tree, around another and back and forth so fast that the eye could scarcely follow them. It is truly wonderful how so much energy can be developed from a few acorns. They did not seem to be a bit friendly toward the chipmunks with whom *we* were on such very good terms, but perhaps they had their own reasons. We hope that next season we can teach them to eat from our hands, as we hear that others have done. We cannot understand how any one could have the heart to hurt such happy little creatures which do no harm. Y.

These Are Hungry Times for the Birds

THIS is the hardest time of year for the wild birds and many are dying from hunger. In fierce silence the struggle for existence continues day by day. There are no battles to the death, no conquests, but those who find food live, and those who do not find food die.

All the daisy heads and such, have been picked clean months ago; the cypress cones have been nearly worn out by repeated searchers for seeds. There is no life in the vegetation, it is all dormant until the rains come, consequently there are no insects that any self-respecting bird could eat. It is really wonderful how they live at all under so many difficulties and adversities.

Of course, the northern and eastern birds are just beginning their troubles. The snow has not been long on the ground and the hedges yet hold rose-apples, and many other such sources of food are still accessible. Here at Point Loma they have literally worn out every food-supply during the summer, and are making shift the best they can until the rains bring life and activity to all wild life. Whether the cause of their privation be snow or dryness, it is now that every bird-lover should do the best possible to feed them until natural resources are available. The kitchen soft-scraps; or dry pieces of bread ground or pounded as small as wheat grains will give heavenly joy to many hungry little birds.

NATURE-LOVER

Universal Brotherhood Organization

Central Office Point Loma California

A GOOD audience was present on Sunday night at Isis Theatre to hear the two addresses which had been previously announced, and the music of the Isis Conservatory students, which was fully up to the usual standard. Miss Bonn's paper was on "The Spirit of Childhood." Some few passages which we reproduce, will serve to

give an idea of a very beautiful appeal for the preservation of the child spirit: "Do we, who love children, ever consider the source of the wonder-light about them? Ever ponder the secret of their brightness and beauty and joy? And have we not, most of us, come to accept the fact and think it natural, that as children grow up and become men and women, they lose their divine something that they brought here with them?"

"But is it right, is it natural, that growth should mean the loss of what is most precious?"

"This spirit is the divine heritage of childhood, it is like spring time and the dawn—a beginning, a hope, a promise. And what of the broken promises we see around us? Who is responsible for them? No one can escape, for it is time that we were awakening to the fact that in the higher sense, each man is his brother's keeper."

"Think what the world would be if we could keep this beautiful spirit of childhood, and let it shine through us to the end! Some have done it, and they are like stars in the darkness of the night. For is not this spirit the presence of the soul, the immortal part of us, the source of light and love and power, which dwells in the child and shines through it in brightness and joy and love and purity—until the clamor of the world deafens it, and the selfishness of man blinds it, and the lower nature of the child, growing strong through its education and environment rises to stifle it. 'Except ye become as little children ye cannot enter into the Kingdom of Heaven.' Is it not plain what this means, and do we not wish to enter? To give up some of the surfeiting pleasures of the body for the joys of the soul?"

"Men and women, who have become sodden with materiality, and encrusted with avarice and selfishness and sensuality, look back, oh, look back through the years, to that green time when your hearts were pure and loving, when you held out your little hands in trust, and when your mother believed that nothing so beautiful had yet come on earth as that which the future held in store for you—look back, and if the picture has not altogether faded out, if you can catch one glimpse of it, surely it will enter your heart and soften it, and refresh it with love toward your fellow beings. Let humanity regain the child-heart it has lost, and again there will be heard on earth the celestial music, and eternal youth will be ours as we hear in our hearts the refrain, 'Peace on earth, good will towards men.'"

The Rev. Mr. Neill's address on "Brotherhood and War" was a particularly beautiful and scholarly production, which was listened to with intense interest and appreciation, and of which we reproduce a few sentences:

"In the golden age of long ago men did not slay each other, nor did they prey

LOMA-LAND STUDENTS AT ISIS THEATRE

Interesting Addresses by Miss Bonn and Rev. Mr. Neill—Music by Students of Isis Conservatory

Reprinted from the San Diego News

upon the lower animals. According to the legend which Ovid recorded in his *Metamorphoses*, the earth, too, was regarded with a tender and sacred feeling, and the rude plowshare had not as yet torn the bosom of the earth, but men lived on the bounty of nature, as supplied by the trees and plants. Why did not that happy condition of things continue? If

Brotherhood be the great basic law of Nature, as we believe it is, why did the brotherhood cease? What set man at variance with his brother? What made strife begin? We can only reply that the golden age did wane, and then passed away as the result of selfish desire. We cannot say why it was that man, being entirely without any selfish feelings, should, in time, grow selfish, but such is the fact.

"We see that unity underlies the phenomena of the natural world—unity of purpose; unity of life; unity of force. We feel there must be unity underlying human life also, and that happiness is the result of living in harmony with the Great Law, which is stamped on the very heart of all creation. We perceive that unhappiness is, and for ever must be, the result of living at variance with this fundamental principle of our being, and the being of all things. The Message, or one of the great messages which Theosophy now brings to the world, is this: that Brotherhood is the basic, or universal, law. Other forms of religion have brought the same message. In the New Testament we read, 'One is your Master, even Christ, and all ye are brethren.' And again, 'Ye are many members in one body.' It was regarded by Jesus as the summing up of all religion, 'Love the Lord thy God with all thy heart, and thy neighbor as thyself.' But never before has the full scientific, philosophical proof of Brotherhood been so clearly and forcibly given as in this age. I do not forget that 'an ounce of practice is worth a pound of theory;' and that the best way of teaching Brotherhood is to be brotherly—without this nothing else avails much—we are but the sounding brass and the tinkling cymbal."

"Look at the world today. Look not only at the wars which have been lately, or now threaten, but look at the terrible greed, the fearful selfishness, which is the seed, and of which war is the fruit. How many people think that the chief end of life is to gain as much gold as you can, no matter how you get it—no matter who loses and suffers! How many are there who can see that to injure another injures oneself most of all? Would that all could see that all unbrotherly action leads to suffering—leads to war in some form."

"The thing ever to keep in mind is that hate, selfishness, unbrotherliness, is supreme folly, and will bring misery to the doer. It is our duty, therefore, to help our brother in the best way possible to kill out the hate; to change it into love, and to transmute the selfishness into self-sacrifice."

"If we will but do our best, and keep doing it, we can all do more than we think in bringing back the golden age, and in preparing the hearts of our brothers, the whole world over, for that reign of peace, and love, and joy, when we shall all feel and move in perfect harmony—many members in one body."

The Two Concentrations

Three Minute Lodge Paper

THERE is a higher concentration than that of thought; namely, that of feeling. The two stand in no necessary relation to each other. High character is possible without the first, but not without the second. And a strong character consists of the second. Strength is not necessarily height and nobility.

It is quite common to meet men of utterly unselfish and duty-loving nature—men who are blessings to their neighborhood and to their dependents—whose minds are of the last possibility of incompetence. These men may take a week to learn five sentences by heart, and an hour to write a one-page letter, because they cannot restrain their minds from straying in every direction. But with their feelings it is quite otherwise. In feeling they never stray, never are impatient with their subordinates, never have aimless moods, never lose their large brotherliness, never become bitter, or caustic, never slacken towards their duties.

They do not rank high in the common opinion, because we mostly reckon men by their minds rather than their characters. These men will not slip on the path of human evolution. They may go forward slowly, but they do not turn aside to the places where the wrecks happen. And because they are not obscured by the clouds of selfishness, they often see where others must reason. They are nearer self-knowledge, and it is often but a veritable humility that prevents them grasping their minds by set practise and discipline and so achieving concentration there also.

Notes by the Observer

THE rains promise but hold off, showing how the good things of nature have some of the characteristics of the things which we are pleased to call evil.

We have been encircled with rain clouds which have advanced upon us in battalions only to again withdraw as though some great army were carrying out evolutions before a decisive action. Almost can one believe that the dust dry hillsides are watching the weather with something of the same intelligence as men, and that expectation and hope are characteristics also of the plant world. Certain it is that the hillsides are already somewhat greener than their wont as though with invisible hand they were grasping an advance supply of the moisture which hangs so tantalizingly overhead. Some forms of plant life are refusing to wait for the rain and are already beginning to send forth shoots. They at any rate will do their part. They will learn how to do without and so by a brave independence persuade the fortune which glances and stands aloof.

One of our cañons rejoices after the rain in an unusual display of fern life making a brave show of maiden hair and the commoner varieties. Before the rain the cañon sides are dry and leafless, the withered fern leaves of last year alone showing the wealth of life which lies beneath. Turning aside the soil with careful hands we see that the tight coiled fronds are beginning to uncurl themselves, and if by accident we should snap one of them—and how fragile they are—a bead of sap exudes, showing that they at any rate know of a water supply. Yet the soil in which they are

buried is as dry as the summer sun can make it and the ferns themselves will tell nothing of the love which they have learned in silence. Very carefully we will dig up some of these roots and plant them in a box within a tent and so see what we can do to encourage them by artificial heat and occasional water. May be they will repay our kindness by greater speed of growth and by an added delicacy and beauty.

To eastern ears the idea of Christmas and New Years in a tent will come as something of a surprise, whatever theoretical knowledge we may possess of the climate of California. Yet there is many and many a student at Point Loma who sat under canvas on Christmas day with the tent flaps drawn back for the cooling ocean breeze and in that most enviable of positions read the newspaper accounts of snow and sleet and rain in less favored quarters. Overhead was the brilliant blue of a cloudless California sky. In front perhaps, is the cañon, its rugged sides tapering away as it nears the ocean which stretches away right and left as far as the eye can see, a vast rippling field of color, while the medley of its sounds comes up from the shore but half a mile away where its waters are awash upon the pebbles, chattering of the things which they knew long ago and wondering why men will never, never understand. Tent life has truly a charm which is indescribable and those who are so favored as to share in it wear a certain air of superiority toward their comrades who have not yet escaped from mere rooms and who have never seen the tent roof swell up as the evening breeze passes beneath it like the sail of a ship which is in no hurry whatever so long as it moves. But the uninitiated one may ask, how about the

rains, and to such we would reply that a canvas roof should be as weather tight as the more orthodox roof of wood. The tent homes of Point Loma have two roofs, each on its own frame and thus separated one from another. The outer cover has been saturated in oil and from its surface the water will run as from the proverbial back of the proverbial duck. Those who have never lived in a tent probably do not know that we have here the only absolutely perfect system of ventilation without draught, and without this we must remain strangers to the correct sensations of awaking in the morning. The canvas is just sufficiently porous to make the inside air as fresh and pure as the outside and we thus ensure all the advantages of an entirely outdoor life without any of its disadvantages. There is now a little city of tents upon the crown of the hill, tents which have a serious purpose in life, with their strong wooden frames and floors and double roofs, while nearer the Homestead and upon the slope which faces the ocean there are yet other tents, veritable homes, and full of the tranquil energy of home life. Close at hand is the new Industrial building, immense in size, vast in its ambition, hive-like in its activity. At the moment of writing the observer has inspected it only from the outside and through its open windows. The powers that be may one day extend to him an invitation to enter and become acquainted with the ways of making the many most beautiful things of which it is the birthplace. The beautiful and the useful are here most indissolubly joined upon the principle that the full development of utility necessarily implies the beautiful, and that nothing can be wholly beautiful if it lack the element of utility.

“LIFE IS JOY!” This is the short and simple statement of a truth. Let us read it backwards, “Joy

is Life!” We are accustomed to think so many other things are life, that the simplicity and directness of a true statement seems absurd, at first. “Life is Joy,” is such a statement. Now we pause to ask, what is life? There is the answer, “Joy!” Do we dare to think that pain and sorrow, misery and strife are life? Are worry, doubt, anxiety, fear and longing, life? Is the confinement in prison, or hospital or asylum, life?

We know they are not life. Are the overcrowded heads and empty hearts life? Are the deceptions, excitements, rush and restlessness and all but craziness of modern society life? We know they are only the signs of imperfect existence.

What are we? Are we only jabbering animals with insatiate desires, whose gratification only increases them and brings about restlessness, sickness, lunacy and destruction? Are we only brain minds whose function is endless suspicion, jealousy, envy, cruel judgments and their resultant fear? Let us look round the world and see if we are not living a huge nightmare. Everywhere we see the terrible struggle for existence and nearly everybody striving for money as if its possession were life. In every civilized country prisons, hospitals and asylums are increasing in number and size to accommodate the mentally, physically or morally unsound. Modern education has multiplied its subjects of learning, modern religions have increased the number of sects and modern science is making wonderful discoveries. Yet in spite of these the ugly side of life has increased. Any one with a little insight can see that the result of the past methods of life spell ultimate destruction.

It is at such a critical moment in the world's history as this that a world Leader comes to stem the tide of vicious destruction. And what simple, beautiful means Katherine Tingley uses. She announces “Life is Joy.” At first we do not hear it. Then it seems absurd, because we know that our life so far has not been joy. We've had some moments we thought were joy, and we found we had to pay a big

✻ Life Is Joy and Joy Is Life ✻

Read at a recent public meeting of U. B. Lodge No. 1, Sydney, Australia

price for those moments in after effects of pain, loss, worry or fear. Next we begin to wonder if life really is joy! Then we

conclude it ought to be. But if we continue our old way of living, it never will be joy, for we have been living on narrow, selfish, personal lines, vainly imagining that how we lived our life did not affect our neighbor nor fellow citizen.

Now, Theosophy teaches us that we are not really separate, and that it is because we have tried to live a separate, disunited, irresponsible life that the world has got into the state it has—all the result of ignorance and selfishness. In this we have been aided by the teaching of our time. But the great teaching of Theosophy brings hope, of which joy is the offspring. It declares us to be divine souls, all collectively forming the one world; that as souls we can think for ourselves, and that by living on brotherly lines, becoming more and more unselfish we can conquer our failings and realize the true joy, which is real life. The soul is our real self, and as we listen and heed its admonitions we become master in our own tenement—our body; we will feel and know it is the practice of the virtues; of love, of gratitude, and of brotherhood that brings true joy, of which real life—soul-life is made. How our hearts will thrill with love and gratitude to those great messengers of Truth, Light and Liberation, who rebrought us Theosophy and showed us once more how to live the life beautiful, and to know life is joy. We will aid and bear our share of the responsibility, and the joy will spread to all, till the great human family shall know its unity and interdependence as true souls.

It is not the seeking for joy for our individual selves that brings joy. That would be only a higher form of selfishness and only accentuate the paralyzing and fear, creating sentiment of separateness. It is the whole that requires help and healing—the whole world—and if we will think of ourselves as intrinsic parts of the whole and live our life as joyous, brotherly, courageous souls for the whole, endeavoring to do our daily duties simply and gladly as soul-set tasks, we catch a little of the meaning of Theosophy's message of true joy which is Life. S. A. A.

Another Heretic

THE great social evils of the day having at length been overcome, a number of Methodist clergymen in the east have found the necessary leisure to bring a charge of heresy against Dr. Borden P. Bowne, Professor of Philosophy in Boston University. The precise nature of Professor Bowne's heresy we are unable to discover, but it would seem that his views on the atonement are not sufficiently stupid, and it is moreover whispered that his views are not in accord with those of Professor Townsend, who believes that heaven is a cube, because the “length and the breadth and the height of it are equal,” and that each side of it is about as long as the railroad from Boston to Omaha. We trust, however, that the accusation of unorthodoxy upon this latter point is untrue. People are so malicious.

The New York *Independent* says that “it would be fun to hear the trial.” We think that there would be a good deal of tragedy mingled with the fun. Tragical, indeed, it is, that at such a time as this, when the world is at death grips with the forces of social destruction, it should be possible for a handful of obscure people to raise themselves into notoriety by an attack upon such a man as Professor Bowne. X.

“Mens Ecclesiastica”

TO the following extract from the writings of Macaulay we might give a wider application than the eminent historian intended. It admirably expresses the ecclesiastical state of mind, both in its theologic and scientific varieties:

“Now, in the mind of Mr. — reason has no place at all, as either leader or follower, as either sovereign or slave. He does not seem to know what an argument is. He never uses arguments himself. He never troubles himself to answer the arguments of his opponents. It has never occurred to him that a man ought to be able to give some better account of the way in which he has arrived at his opinions, than merely that it is his will and pleasure to hold them. It has never occurred to him that there is a difference between assertion and demonstration, that a rumor does not always prove a fact, that a single fact, when proved, is hardly foundation enough for a theory, that two contradictory propositions cannot be undeniable truths, that to beg the question is not the way to settle it, or that when an objection is raised it ought to be met with something more convincing than ‘scoundrel’ and ‘block-head.’”

MISS BYRD, I hope you have some money for me this morning," cried the sharp-faced, shrill-voiced landlady, as Esther was opening the hall door to pass out.

The lodger turned a frightened face toward Mrs. Lamb—sadly misnamed—but then she was as poor as her lodgers, and had as hard a time as any of them in eking out a bare subsistence.

"I'm sorry, Mrs. Lamb, but I haven't found anything to do yet." Mrs. Lamb tossed her head and sniffed incredulously. Esther turned to escape, but the shrill voice pursued her:

"I guess you're not very anxious to do anything. Where do you get your fine clothes and eating? You get money somewhere for that, and I want what's due to me out of it, too. D'ye hear?"

Esther did hear, as she closed the door and ran down the steps to the sidewalk. The "fine clothes" were a cloth cape and a muff, relics of better days, and her "eating" had for days been stale bread with a little cheese and weak tea.

It was bitter winter weather and the girl was alone in a great city, friendless and penniless, where poverty and loneliness are ever accentuated by contrast with the gayety and affluence around one.

Pausing at a news stand where a kindly old woman permitted her to look over a paper, for she could not afford even the few cents to buy one, she hastily jotted down a few of the most promising advertisements and started out on her weary round.

Her first call was at a dry-goods establishment where a score had already been before her. Then a clerk was wanted in a bookstore. Had she any experience in that line? Then why had she applied? The holiday season was approaching and only experts were wanted. Next a shoe store was tried and then a toy store, but always with the same want of success. The places were already filled or only experienced hands were wanted.

So the day went by, one of the days she and thousands like her are constantly passing. Esther had walked all day as she could not pay car fare, nor had she the wherewithal to buy a dinner though she was faint for want of food.

The dusk was gathering when she turned her lagging steps toward home. Home! What a very mockery the word seemed to her now. Perhaps the door of the small cold room on the garret floor would be barred against her. If so, what could she do? As if in answer to her thought, a handsome carriage drew up to the curbstone beside her. In it sat a woman, large, fair, handsome, richly dressed, with the sparkle of diamonds about her person. She smiled at Esther and beckoned her to approach. But the girl shuddered and drew back into the nearest doorway.

"What! not ready yet?" whispered the occupant of the carriage. "Ah! well, a little longer and you will be glad to come to me. You are cold and weary and heartsick. Why keep up the useless struggle? You are bound to fail at last. Take this, girl, and buy a dinner."

As she spoke, she held out a piece of silver, but the girl shook her head and shrank further back.

"Oh! well, please yourself," said the woman with a shrug and a good-humored smile, and the carriage rolled away.

Esther stood a moment, weak and despairing, and then she was startled by a wheedling voice behind her:

"What would the young lady like? Would she puy someding, or may pe sell someding?"

Turning around the girl found that she stood in the doorway of a pawn-shop, and the proprietor stood smiling and rubbing his fat hands together. Yes, she might sell her muff or mantle or both. She must have food and a bed, and her worn old shawl would do to wrap around her.

When Esther reached her lodging-house her teeth were chattering with cold; but she put a few dollars into the eager hand of Mrs. Lamb, and passing on up the four long flights of stairs, she soon had her teakettle merrily bubbling over the little coal-oil stove, and dined luxuriously on the slices of boiled ham and the hot rolls she had brought home with her.

That night Esther missed the heavy warm mantle, for she had used it to supplement the insufficient covering of her bed. Next day being Sunday, she could not go out to seek employment, so she busied herself with her pen. Perhaps some one would pay something for her poor little stories and sketches; but in the end this effort proved futile as all the others.

On Monday, she resumed her weary tramp and by the middle of the week had secured the agency of a recently published book. But securing subscribers was the work she soon came to heartily loathe. To force herself into private houses required more effrontery than Esther had counted on; and to enter the places of business was even worse. To state her errand and meet the cool, careless stare of lounging men, or the hasty, impatient glance of the busy was something that made her face burn and her heart beat to suffocation.

Some men put down their names with the most unmistakable its-only-to-get-rid-of-you air; others with a sort of pitying manner and others still with an air of easy

Not an Isolated Instance

jocularity that was almost unendurable. Then the books had to be delivered and the money collected, which was not the least fatiguing or trying part.

At the end of a month, Esther found that her health and strength was failing, and that Mrs. Lamb was again clamoring for money which she could not pay, as what she had earned had scarcely sufficed to keep her in food.

So Esther was obliged to give up the book agency and it happened one day that she found herself seated in a long, dimly lighted, basement room, along with a hundred other girls and women, where garments were cut and made-up to be sold in the rooms above. A parcel of blue and white muslin was put into Esther's hands.

"What am I to do?" she asked of a girl who sat next her.

"O, just baste it," was the reply.

After working awhile Esther again ventured to address her neighbor, and learned that the girls who had machines stitched for those who had none, and all were paid by the piece for what they could do during the week.

The air was close and stifling, most of the workers, hurried, haggard and careworn. But some young girls who had homes and friends were only working to earn a little spending money for trifles they coveted. The forewoman treated these with more consideration than the others. She often spoke insultingly to the hardest workers and dismissed them for what seemed to Esther the most trivial causes.

She herself was soon made to feel that she was no favorite. She was often kept waiting while stitching was done for those who came after her, and although she carried work home to do evenings, her account on Saturday night never came up to enough to cover her expenses. She knew the pieces she did were not counted correctly, and at last, when she ventured to expostulate that she did not receive what was her just due, was told that she need not come again as there would be no work for her in future.

Where could she turn next? With a million human beings around her, she was alone. There was no one to pity or aid. She had wandered aimlessly on until the low, lopping murmur of the river fell upon her ear. Ah, that was it. There was the place for her. She walked slowly along the wharf. How black and cold the water looked—darker by contrast with the twinkling lights. But no matter! it would soon be over. It *must* be ended now, for there was absolutely no way or means of renewing the contest. Everything had failed—she had come to the end—there was no use in hesitating, the sooner the thing is over the better. At that moment, as the girl stepped on the edge of the pier, a heavy hand was laid upon her shoulder.

"See here, young woman," said the burly policeman, "I've been follerin' you for some time an' I don't like your actions. It's mighty suspicious like, you down here alone this time o'night. Now if you don't want to be run in you better git home on double quick time. Come now, face about an' move on, 'less you want me to take you."

Esther turned and sped swiftly up the nearest street leading from the wharf. Here was a new terror menacing her; to be arrested! taken to a police station—locked up—perhaps with drunken and dissolute women.

She walked on rapidly until she found herself in wide, well-lighted streets again, and then a sense of her friendless condition again pressed upon her. She was fainting with weariness and hunger. What should she do? Where could she go?

And then again the temptress came. Again the luxurious carriage drew up beside her and the handsome, smiling face looked out.

"Come, child," said the kindly voice, "you must come now with me. There's nothing else, you see. Come, it's no use to struggle any longer; get into the carriage."

Then in the mind of the girl rose two pictures—one, the dark, dreadful road along which she had so painfully groped and stumbled. The cold, the hunger, the scanty raiment, the cruel taunts and bitter insults, the hardness, the cruelty, the injustice. The other, warmth, light, luxury and ease; but at the end, what?

With a low, stifled moan she turned away. As she did so, she stumbled and half fell against a tall man. Instantly his arms were about her and he whispered brokenly:

"Esther! Esther! Thank God, found at last!"

"O Frank! Take care of me, I'm so tired!" she moaned piteously. "I thought you were dead."

"But you see I'm not. They got some other fellow's name mixed up with mine. When I got back from the Philippines, expecting we'd be married right away, I found your uncle had failed and was dead, and you'd gone to the city, thinking me dead. I've been two months looking for you. Come, little girl, how tired and ill you look! We'll go to a hotel now and you can tell me all your story, and when you're rested and ready we'll be married and see about getting settled in a little home of our own."

"O Frank! there *is* a God; and just now I thought there wasn't," said Esther an hour later as they sat at a well-spread table before a blazing fire.

"And remembering what you have suffered," he replied, "we will do all we can to make the world a better place for poor friendless girls and women."

✻ The Trend of Twentieth Century Science ✻

Medicines and Men—Nature Is the True Physician

ADAILY contemporary reproduces a letter from a correspondent upon the subject of the true value of medicines in which he refers to the two classes of the community who are the firmest believers in the efficacy of drugs. These two classes, he says, are the aristocratic, and the very poor. With all due deference to the holder of very sensible opinions we think he would have been better advised to say the very ignorant, instead of the very poor. The poor, especially in great cities, often resort to drugs not because they have a supreme faith in them but because the natural remedies of fresh air and good food are out of reach. The aristocratic classes usually take medicine, not because they are unaware of nature's laws, but because they have no intention of keeping them. They are too generally, the peculiar representatives of that perverted civilization which has been wittily described as the effort to acquire luxuries and to dispense with necessities. The writer continues:

In many serious diseases, such as fevers, consumption, and cancer, it is a settled thing that there is no hope of cure by drugs, and that Nature is the only doctor. It is beginning to be understood that the old-fashioned simples, that were the stock-in-trade of the Lady Bountifuls who prescribed for the ailments of their tenants, or the old woman's remedies, as they are sometimes called, have been displaced for the most part by powerful poisons, heroic remedies which more often than not mean murder.

The effort to imagine the conditions of an ideal civilization is one which has been made by many writers with more or less edifying success. In that ideal civilization the healing art will probably not be greatly needed, not only because the laws of material nature will be more faithfully observed, but also because the human mind will no longer be allowed to passionately destroy its habitation. Before bodily diseases finally disappear they will be known by other names such as greed, discontent, hate and ambition. Then we shall recognize that the true malady has laid hold upon the body, not with the appearance of the first physical symptoms, but at the moment when the mind allowed some shattering thought to explode within its dwelling, changing or destroying the subtle avenues of the force which we call life. Obedience to the material laws of nature will not come by rule nor schedule, but because the mind has acquired the habit of asserting its identity with nature. There will be a law of gravitation in all human affairs and it will be obeyed because it is the law. To acquire health by the taking of medicines may now be sometimes necessary, but let us then recognize it for what it is, as the lesser of two evils, and let us do what we can to make straight the path for the ideal life wherein tranquility and joy shall be the creators and the guardians of health.

Problems of Earthquakes and Volcanic Phenomena

THE study of earthquakes and volcanoes still presents many problems which we can do but little more than record and some such problems have just been furnished by Mauna Loa, the celebrated volcano upon the Island of Hawaii. Mauna Loa has been in eruption for some time past, and sailors believe that this activity is in some way responsible for an extraordinary ocean whirlpool about twelve miles southwest of the Island of Koohalawe. This whirlpool is ten miles in length and five miles wide and is moving with considerable velocity. A still more remarkable phenomena occurred off the southern coast of Hawaii and therefore in immediate proximity to the volcano. Upon one occasion, recently, the tide went out as usual and remained out for twenty-four hours. It then returned with unusual rapidity and rose many feet higher than ordinary. The seismic events of the last few years have certainly added very largely to our knowledge, but there is still much to be discovered and understood.

STUDENT

IT HAS now been shown that hay-fever is not due to local mechanical irritation of the nasal mucus membrane by the pollen of grasses, but to a poison soluble in water residing in the pollen. This is absorbed from the surface of the membrane into the blood, affecting the whole system.

Intelligence and Matter—An Enlightened View of Consciousness

PROFESSOR SHALER of Harvard University has advanced some theories with regard to plant intelligence which are not yet likely to meet with general acceptance, but which are none the less a prelude of a new order of thought. He protests against the idea that intelligence—that is to say, consciousness—is necessarily confined to the human kingdom, and he writes:

Looking toward the organic world in the manner above suggested, seeing that an unprejudiced view of life affords no warrant for the notion that automata anywhere exist, tracing as we may down to the lowest grade of the animal series what is fair evidence of actions which we have to believe to be guided by some form of intelligence, seeing there is reason to conclude plants are derived from the same primitive stock as animals, we are in no condition to say intelligence cannot exist among them. In fact, all we can discern supports the view that throughout the organic realm the intelligence that finds its fullest expression in man is everywhere at work.

This is of course eminently Theosophic, but why draw the line at plant-life, or at what we are pleased to call the organic? Why exclude the mineral kingdom, or what we call inorganic? However coy science may be, she must presently recognize that matter without life and consciousness is an impossibility. Who now shall draw for us the line between animal and vegetable, or between vegetable and mineral? and why must we suppose the infusion or the evolution at some given point of the new element of consciousness? Is it less logical to suppose that consciousness upon the one hand and matter upon the other are the constituents which go to make up the whole of manifested nature? When we have reached that point, we shall begin to understand that matter is the index to the evolutionary point which has been reached by the consciousness which it encloses, and that the brain of man is complex because the consciousness of man has evolved that complexity as a necessity for its own expression. We may be unwilling to grasp the key which Theosophy offers to us, but until we do so, we may continue to peep through the key-hole and through the crevices, but we shall never open the door.

STUDENT

Dogmas of Science—Can Consciousness Be Abolished?

THE recent execution of three brothers by electrocution has afforded an opportunity to an eminent brain specialist to make a post-mortem examination. While he seems to have discovered nothing remarkable in either case, he naturally seizes the opportunity to make an authoritative statement upon a subject of which he can know nothing. He says "the instantaneous abolition of consciousness naturally renders the death a painless one." If consciousness is indeed abolished, there can of course be no pain; but by what right can any one profess to say that consciousness is destroyed because the instrument which that consciousness used for a particular purpose is put out of action? We might as well say that the skill of the mechanic is destroyed because he has broken his tools. The placid dogmatism of some scientists transcends that of the average theologian and is just as dangerous. We are not now very far from the recognition that consciousness is indestructible and in no way dependent upon the vehicle which it may temporarily use, and with that recognition will come the abolition of capital punishment as being not only cruel, but entirely useless and mischievous.

THERE appears to be yet another mystery connected with migratory birds. A student of this matter, Father Victor, states as a result of several years observation that they are never to be found settling in places where there is epidemic or endemic disease, and that their chosen spots are the very healthiest to be found. Thus they evidently have a sense that man lacks, but which it appears to us that he ought to have. They feel the presence of cholera, yellow fever, plague, or what not, as we detect a smell. Indeed it may be by the sense of smell in a very enhanced degree that they know of these fermentations. Many diseases are characterized by special odor, easily noted in a room, and once noted, not easily forgotten. And an extension of this might detect even the whole local area of a disease.

The Fate of a German Lion Tamer

WE wonder if it would be too great an interference with the theoretical liberty of the subject to suggest that performers be not allowed to enter the cages of wild animals in the presence of the public. A woman in a German menagerie has just been torn to pieces by a lion in full view of a great crowd of people which included her own children. Of course we read vivid accounts of the horror and consternation of the spectators. Nevertheless the great majority of them were attracted by this very possibility. Even without the elements of a tragedy the sight of performing lions is unnatural and revolting and ought to be discouraged.

Scotland to Have a Model Town

ANDREW CARNEGIE is determined to make a model town of his birthplace in Scotland. The pursuit of ideals is of course an eminently worthy one and the attempt to create model communities is greatly to be encouraged. It may, none the less, be advantageously pointed out that model towns must be created and maintained by model people and that to confine our efforts to material conditions is merely to build a beautiful engine and ruin it with bad fuel. If we were to turn our attention to the evolution of the model man he would himself create the model city and the money which he would need to do it would be surprisingly small in quantity.

Red Rain in Europe from African Plains

DURING the last few years the mysterious red rain has made its appearance in many parts of Europe and it is now reported from Capua, Salerno, Naples and throughout Sicily. The peasantry are considerably disturbed, believing it to presage a national calamity, but prosaic science explains the phenomenon as being due to sand and volcanic ashes which have blown across the Mediterranean from the African desert.

The Funeral of Herbert Spencer

HERBERT SPENCER is not to be buried in Westminster Abbey. The authorities have been approached upon the subject but have entirely declined to accede to the request. There may, of course, be a legitimate reason for this decision and one in no way due to the religious beliefs of the great philosopher. Certain it is, that his own wishes would have been averse to anything in the nature of ceremonial or display.

English Lawmakers to Visit Canada

A NUMBER of members of the English Parliament are arranging for a tour through Canada. It is proposed that Washington be included in the trip in order that the members may have an opportunity to pay their respects to President Roosevelt. It is to be hoped that this will be done.

Reports of Congo Horror Confirmed

THE reports of atrocities upon Congo natives has been fully confirmed by Roger Casement, British Consul, who has made a long tour of investigation through the country. His report will show that the most horrible outrages are committed by European officials, and that slavery and barbarism exist in their most revolting forms. The great need of civilized governments in their dealings with natives is for officials who can be trusted not to be cruel. We are gradually learning that the opportunity for cruelty and the commission of cruelty are practically synonymous terms.

The Straight Jacket Abolished in Italy

It seems that we may have something to learn even from effete Europe. The King of Italy has just signed a decree abolishing the use of the strait-jacket in Italian prisons. Inasmuch as we in America profess to find that this torture is still necessary, we must conclude either that our criminals are of a worse order, or that we are still behind the Italians in prison management. And yet there are those amongst us who cry out for still further ferocity in the criminal code and in its administration.

Infanticide in Germany & Britain

DURING the last ten years no less than fifteen thousand babies were "overlaid" in bed and killed in Great Britain. In all these cases evidence was produced to show that the tragedy was done unintentionally, but it is none the less fatally easy in this way to dispose of little new-born children whom nobody wants. We do not know what are the statistics for other countries. In Germany, at any rate, it has been made illegal to sleep with any child under two years of age and there is therefore no mortality in that country from so preventable a cause.

The Czar Rebukes Cruelty & Violence

THE Governor-General of Kieff has been compulsorily retired by direct order of the Czar for the violent manner in which he repressed the riots which recently broke out in his district. The Czar is reputed to have said: "I cannot have that man at Kieff any longer. His hands are stained with human blood." An action such as this fully illustrates the humanitarian policy of the Russian ruler, a policy which cannot fail of its effect in mitigating the elements which make for discord throughout the vast empire which he rules.

Manila Post-office Curio at St. Louis

A POST-OFFICE curiosity from Manila will be exhibited at the St. Louis Exhibition. This consists of a chart which was hung upon the walls and which bore the names of those for whom mail matter was awaiting delivery. If the name did not appear upon this list there was no advantage in enquiring at the delivery window. Similar contrivances are said to be still in use in Spain and in some parts of South America.

The Yuma Apaches Make Fine Baskets

THE occupation of basket-making is very general among Indian tribes. It is said, however, that the Yuma Apaches surpass all others in the fineness of the stitches, the colors of the material and the beauty of the design. A very large quantity of this basket-work has a religious significance, and much good work waits to be done in the intelligent and sympathetic interpretation of the designs.

Increase of 13 Millions in Ten Years

THE United States Census authorities have just issued an interesting publication from which it appears that during the years from 1890 to 1900 the increase in population in the United States proper was 13,046,861 or 20.7 per cent. This increase is nearly twice that of any European country and is only exceeded by Argentina. These figures, of course, are exclusive of Alaska.

THE CHILDREN'S HOUR

The Fairy Tales of a Queen

DEAR CHILDREN: Did you ever hear of a really truly Queen who wrote really truly fairy stories? There is such a Queen, and she lives today, in far-away Roumania. Her name is Elizabeth, but to all the stories she writes she signs the name "Carmen Sylva," and that is the name I like best.

This Queen is much beloved by her subjects, and once upon a time the National Superintendent of Schools in Roumania came to her and begged her to write a book for his school-children, something that he could offer to them as a prize. The Queen loves to help others more than anything else in the world, so she began to write, and in just a few weeks the book was finished, a book of fairy-tales. She has written many books since that time and many other fairy-tales—and she has made little children all over the world happy by the word-pictures she has painted, about little Hans; about brave little Arnold and the Fairy; about the Harp-girl, Carma; about the wonderful things that happened one Christmas-time away up in the Eifel mountains; about the children and the Swan-lake, and ever so many more. But to me the most beautiful of all her fairy-tales is the story of her own life. When she was a little girl, even in Kings' castles—for Queen Elizabeth of Roumania was born a Princess—they had no matches, as we have, and no electric lights, for no one had in those days discovered the way to make them. But they did have what the little Princess Elizabeth cared for very much more—great, glorious forest trees all about her home, among them the beautiful silver-linden. She called the flowers and trees her brothers. She tells us that the linden tree told her many stories that only birds and little children could possibly understand.

All winter long she used to feed the birds that fluttered about the castle windows, and all summer long she fed them under the forest trees, talking with them as if they were all little comrades together. She tells us what great friends the blind-worms were, and how, when she talked to them, they would lift up their wee heads and twinkle their bright golden eyes quite as if they understood. And then the glow-worms! Often would the little Princess Elizabeth place several in her hair and pretend that she had a coronet of sparkling diamonds. It was such fun! But she never took them away from their forest home as some do, and this is what she herself wrote about them, many years after she played under the big beeches near her castle home on the Rhine: "I think glow-worms are sad at being carried far away, for their lamps are nothing but love-signals which the little comrades light to let each other know where they may be. . . . One sees how much cleverer such little creatures are than any of us. It

A RAJA YOGA TEACHER AND PUPIL IN ONE OF THE LOMA-LAND ROSE GARDENS

LITTLE-OH-DEAR

by EUGENE FIELD

SEE, what a wonderful garden is here,
Planted and trimmed for my Little-Oh-Deard!
Posies so gaudy and grass of such brown—
Search ye the country and hunt ye the town
And never ye'll meet with a garden so queer
As this one I've made for my Little-Oh-Deard!

Marigolds white and buttercups blue,
Lilies all dabbled with honey and dew,
The cactus that trails over trellis and wall,
Roses and pansies and violets—all
Make proper obeisance and reverent cheer
When into the garden steps Little-Oh-Deard.

And up at the top of that lavender-tree
A silver-bird singeth as only can she;
For, ever and only, she singeth the song
"I love you—I love you!" the happy day long—
Then the echo—the echo that smiteth me here!
"I love you, I love you," my Little-Oh-Deard!

The garden may wither, the silver-bird fly—
But what careth my little precious, or I?
From her pathway of flowers that in springtime upstart
She walketh the tenderer way in my heart.
And, oh, it is always the summer-time here
With that song of "I love you," my Little-Oh-Deard!

took men centuries to find out such a light as this, and then they called it electricity. These little insects found it out by love, and give it no name at all!"

Do you wonder that this little Princess grew up to be such a sweet, beautiful, kind and helpful woman? Do you wonder that when she became a Queen all her people rejoiced and said, "She is kind, she loves us!" AUNT EDYTHE

The Bees of Loma-Land

DEAR CHILDREN: Did you ever watch a honey-bee? The children of the Raja Yoga School go every afternoon to the bee-hives east of Group House No. 2, and there make the acquaintance of the bees of Loma-land.

Recently a new variety has come to the bee-hives—a full swarm. Where they came from no one knows, but evidently from some part of Loma-land where they may have been waiting—who knows—for the students to come here and build them a little home. In one curious respect they differ from the other bees; they always prefer the purple flowers. They will pass by the sweetest blossoms of yellow or white or pink to hover about purple flowers, even if far in the distance, and less sweet.

Did you know that bees have five eyes? Well, they have, two of them placed on the sides of the head for use out of doors, the other three placed on top, for use in the dark hive. Is that not curious?

There is a tradition—and I think it is true—that bees were brought to man on this earth from another planet by the Wise Ones, those who live only to help humanity. This was many ages ago. However that may be, we do know that bees are wonderful little teachers and that they have a life of their own, which is regulated in a marvelous way. We know that they are law-makers and never law-breakers, and that they could teach us many lessons in order, in industry, in punctuality and in brotherhood.

All of the great peoples of the world have kept bees. The Egyptians kept them and so did the Greeks. And they are part of the life of Loma-land.

AUNT ESTHER

The Prisoner's Mouse

DEAR BUDS AND BLOSSOMS: Papa was on a railway carriage, a little while ago. We live in England. Suddenly one of the passengers jumped up and said, "Oh, I've lost my mouse!" Then he explained that

the mouse was a pet mouse. Papa helped him look for it and they found it in a corner. The little mouse cuddled down in the man's pocket.

The man who took the tickets told papa that the mouse man was a prisoner who had just been discharged from prison. He found the mouse in his cell one day and fed it crumbs, and it remained with him.

LOOKING FOR GOD

by FREDERICK D. HUNTINGTON

THE parish priest of austerity,
Climbed up in a high church steeple
To be nearer God
So that he might hand
His word down to his people.

And in sermon script
He daily wrote
What he thought was sent from heaven,
And he dropped this down on his people's heads
Two times one day in seven.

In his age God cried,
Come down and die,
And he called from out the steeple,
"Where art thou, Lord?"
And the Lord replied,
"Down here among my people."

The Halls of Tara

THERE was a time when the Hill of Tara was the chief nerve center of Irish life, both civil and religious. History and authentic tradition will carry us back a long way, but at the very dawn of history Tara was ancient. We may, indeed, reasonably believe that King Dermot, against whom the curse of St. Ruadan was launched, nearly fifteen hundred years ago, was as ignorant of the origin of Tara as are we today. Otherwise that curse would, perhaps, have been unavailing in laying desolate and deserted the erstwhile seat of Ireland's learning and Ireland's power.

The Hill of Tara is in County Meath. Time itself has shown an unwonted reverence for this ancient glory of Erin, and the centuries in their passage have perhaps done more to preserve and to bury than to destroy. A succession of circular mounds marks today the spot whereon stood the royal residences of the kings, and a rich tradition ascribes to these mounds the various functions for which they were once famous. The most important of these structures is that known as Rath-na-Riagh, measuring from north to south no less than 853 feet. A ditch and rampart enclose it, and inside the enclosure is the place of meeting where, every three years, was held the great gathering known as the *Feis of Tearnhair*.

Next perhaps in importance is the Banqueting Hall of Tara, the Teach Miodhchuarta which consists now of two lines running north and south with openings which show the places once occupied by the doorways. This capacious hall measured in length 759 feet, and the magnificent scenes once enacted therein have been preserved by tradition.

Among the remaining ruins we may mention those of the Rath na Seanadh or the Rath of the Synods. Close at hand, are the forts known as Rath Grainne and Fothach Rath Grainne, the former having belonged to Grainne, daughter of King Cormac Mac Art and wife of Fin Mac Coul.

The Hill of Tara possesses a pillar stone, perhaps the most remarkable of its kind which exists. It now stands in the center of the Forradh, but previous to 1824 it stood within the enclosure known as the Rath-na-Riagh. There seem to be some good reasons to believe that this stone is the actual Lia Fail, or Stone of Destiny, upon which all Irish kings were crowned, the true coronation stone, which is now supposed to be at Westminster after having been removed from Ireland to Scotland for the coronation of Fergus Mac Earc. George Petrie refers to a manuscript of the Tenth century in which the coronation stone is spoken of as being still at Tara, although its removal from Ireland to Scotland is supposed to have been accomplished in the Sixth century. He remarks:

It is in the highest degree improbable that, to gratify the desire of a colony, the Irish would have voluntarily parted with a monument so venerable for its antiquity and deemed essential to the legitimate succession of their own kings.

Whether the true Lia Fail is to be found at Tara or at Westminster will, perhaps, never be finally decided, but we are not without hope that archeological research, which is becoming increasingly active, may yet somewhat restore the buried records of Tara and the beautiful country of which it was the heart and the glory.

There is a tendency in human affairs to repeat what is good and beautiful. With the desolation of Tara began the desolation of the Irish nation. In the supremacy of Tara lay the seed of an united and central government from which all glorious possibilities might have sprung. With the fall of Tara came the dominance of the tribal system, disharmony and disintegration. Maybe the ancient harp has not lost its power of melody if but the master hand shall strike its strings once more.

STUDENT

Teachings of Druidism

THE current opinion that Druidism has left no record of itself except in stone, may or may not be correct. If as Cæsar says there were poems which every Druid had to learn, is it not likely that at any rate fragments of this old literature should have persisted orally to the days of the earliest extant MSS., and in MS. form even to our own day? Among the oldest Welsh literary remains are some seventy-seven poems attributed to Taliesin, supposedly a Sixth century bard. But this name would seem to be rather an initiation title, such as is still given in the Gorsedd of Bards in Wales, rather than the name of an individual. These poems are for the most part evidently pre-Christian, and so archaic as to be unintelligible; yet passages in them are not without interest to the student. Such passages as, for instance:

"I am a Druid, I am a mason, I am a serpent."

"I have been in many a shape
Before I attained a congenial form," etc.

One of the most interesting figures in recent Welsh history is that of Iolo Morganwg, a bard and clergyman of the Eighteenth century. Iolo declared himself to be the occupant of the chair of Glamorgan, a chair of the Bardic School which had, as he claimed, remained intact and secret from Druid days. He published several books purporting to embody the teachings of the Chair, and to have been handed down first orally and then in MS. by his predecessors. These are supposed by the critics to have been a literary forgery on the lines of Chatterton; but there are those who doubt whether little Wales in the Eighteenth century could have produced a genius capable of inventing such teachings, which are, it must be confessed, a sublime presentation of the Theosophy of all ages. Again, that such teachings did come down is distinctly suggested by the fact that the famous hymn to the God Hu Gadarn, "The Smallest of the small is Hu Gadarn," was written by Iolo Goch, the bard and friend of Owen Glendower, in the Fifteenth century, by numerous references in poems of that period.

FOR we know not every morrow can be sad,
So forgetting all the sorrow we have had,
Let us fold away our fears,
And put by our foolish tears,
And through all the coming years,
Just be glad.—*Selected*

Bribery No Use

A BALTIMORE girl was to have a lawn fete in honor of her eighth birthday, which occurred last week, and all her little companions were invited. It was a momentous occasion to the tiny hostess. All indications pointed to a joyful fete, save the weather. Although the afternoon when the entertainment occurred proved all the most exacting hostess could desire, the morning broke with heavy clouds and occasional gusts of rain.

The little girl was in despair. She drew her mother aside. "Now, mamma," said she, "I don't want this repeated, but I lay awake half the night praying for a clear day. I prayed straight to the Lord, and I told him if he would give me a clear day I'd give him a quarter, and now look at this rain. He don't get my quarter!" — *Baltimore Sun*.

BRILLIANTS

Selected

FOR the love of God is broader
Than the measure of man's mind;
And the heart of the Eternal
Is most wonderfully kind.

If our love were but more simple,
We should take him at his word;
And our lives would be all sunshine
In the sweetness of our Lord.—*F. W. Faber*

TENDER handed, stroke a nettle,
And it stings you for your pains,
Grasp it like a man of mettle,
And it soft as silk remains.

'Tis the same with common natures ---
Use 'em kindly, they rebel;
But be rough as nutmeg graters
And the rogues obey you well.—*Aaron Hill*

I READ on the porch of a palace bold,
In a purple tablet letters cast ---
A house though a million winters old,
A house of earth comes down at last;
Then quarry thy stones from the crystal All,
And build the dome that shall not fall.—*Ibn Jemini*

WHO are the blest?
They who have kept their sympathies awake,
And scattered joy for more than custom's sake;
Steadfast and tender in the hour of need,
Gentle in thought, benevolent in deed;
Whose looks have power to make dissension cease;
Whose smiles are pleasant, and whose words are peace.—*Anon*

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question The Theosophical teaching of Brotherhood and Altruism must, I think, appeal to very many in this age of competitive warfare, but even when we try to be unselfish do we not all have, as it were, a selfish mental reservation that of course we intend to look out for ourselves, and that it would not be right to jeopardize our interests by our unselfishness? And I have wondered whether to become really unselfish one would have to give up his individuality.—*Extract from a letter*

Answer No doubt very many people do make the mental reservation referred to, and just to that extent they are selfish and not unselfish. But at times they forget it, or something within them makes them act unselfishly in spite of it. Such a reservation can have origin only in the lower nature, but when the higher nature has sway, it pays no heed but acts entirely independent of any calculations or intentions of the lower. It is true also that our lives are compounded of the good and the bad, but we all know from actual experience that we live most truly, most happily, when we follow the dictates of the higher and hold the lower in subjection. In such case our life is fuller, richer. How then can the question come up of the fear of losing anything really worth having by being unselfish? Which of our real interests could be so jeopardized? Are we not frightening ourselves with a shadow and putting ourselves under the dominion of the lower nature by admitting such a thought?

Most truly, unselfishness implies the giving up or rather the domination of the lower nature, but this is not the individuality, though to most of us it seems such an important factor in our make-up and sometimes, indeed, to be our real self. It is natural that it should call out against anything that threatens its existence, but one or the other, either it or the higher nature, must give way and we must choose which it shall be.

What is the individuality? According to Theosophical teachings it is the real, immortal man, the soul. If, then, it be real and immortal, how can it perish, and how can we, by doing right, by living nobly and unselfishly, give up our real selves. No, but there is a danger of losing our real self by being selfish and by living evil, sordid lives.

The word individual means indivisible, and that which we possess in common with all men, the divine spark, indissoluble, indivisible, eternal is the true Individual. Do we lose this as we become unselfish? We have hardly yet come to know it. The only way in which we can know it and realize it, is through unselfishness, devotion to the interests of others, regard for the welfare of the whole, "and not by seeking to confer benefits on one's own unimportant personality" [not individuality], to use H. P. Blavatsky's words.

Let me give a simple illustration which has been used again and again, but which more clearly than anything else will, I think, answer the question. Does the musician lose his individuality in a great orchestra? Does he not, on the contrary, become a sharer in the larger life, adding to it, but in a greater degree partaking of it? In a perfect orchestra the whole power of the whole orchestra exists for each one of the musicians; for the time being he becomes the orchestra and the orchestra becomes him. Has he lost anything? Has he not rather gained immeasurably? And so it is in the great orchestra of life; the conscious life and power of the whole lies waiting for us to take up and use when we have attuned our hearts and minds to the deeper harmonies of life.

Instead of jeopardizing our interests by unselfishness, we jeopardize them by selfishness, and stifle the natural impulses of the higher nature, and the wider life, the true individual life, can never be ours until we burst the narrow bonds of self and live a life of Brotherhood and Altruism.

School Theology

A PLEA which has been recently made in this country for denominational schools is based upon the statement that "we are bringing up all over this broad land a lusty set of young pagans who, 'sooner or later, they or their children, will make havoc of our institutions.'" Before we allow forebodings of this kind to make our flesh creep, let us first ask for the ecclesiastical definition of paganism, and let us also remind ourselves that even in the Twentieth century there are still some few institutions of which havoc might be made with a very solid advantage to the community.

The *Outlook* has, however, an inconvenient thirst for evidence as well as for definitions. The editors have therefore written to nineteen American colleges asking whether they have noticed any difference in the moral character of the students who have come from the common schools as compared with those from the church and denominational schools. Needless to say that these nineteen American colleges are almost unanimous in saying that there is a difference in the moral character of these schools and that it is in favor of the common or undenominational education.

This is exactly what we should expect and is a support to our contention that the theology of the denominational schools is in no way an aid but an enemy to religion. We say this in no unkind sense but only from a well reasoned conviction that as creed and dogma come in by the door, religion and morality fly out at the window. The theology of the denominational school does not actually teach that creed is everything and conduct nothing, but the weight and dominance which it gives to creed inevitably lead to that conclusion.

The President of Cornell University is especially illuminating in his reply to the question put by the *Outlook*. He states that out of nearly 600 freshmen 65 per cent of those trained in the common schools declared themselves as church members, while of those trained in private or denominational schools only 56 per cent were church members. Well may the learned President declare his disbelief that "the American people will ever consent to vote public moneys for denominational schools."

The President of Leland Stanford Junior University is no less emphatic in saying that the character of students from the common schools is higher than that of those from the denominational, while the President of Tulane sees no difference between the two classes except that the pupils of the public schools seem to have a wider view and to be on more intimate terms with the life about them. The country is indebted to the *Outlook* for its enterprise in thus obtaining a body of opinion so wide and so authoritative.

STUDENT

THE city of Brussels has limited the speed of motor cars to three and a quarter miles an hour. The regulations say that these cars "may not advance" beyond that speed, but, as a Belgian humorist points out, there is nothing to prevent cars running backwards at any speed they please.

Religious Tests

WE have already drawn attention to the statement of the Chancellor of the New York University to the effect that every university freshman should be required to know by heart the Ten Commandments, the Sermon on the Mount, a church catechism and a score of the psalms and hymns. In our charity we supposed this suggestion to be but a fossilized piece of persecution miraculously preserved from the middle ages as a reminder of the spiritual night from which we had emerged. But we were mistaken. The inquisition drum was not beaten in vain and the summons to persecute has aroused a corresponding yearning in many an ecclesiastical breast. The *Church Standard* is thrilled with delight, while the *Churchman* thinks it greatly to be desired that every student should know these things. It may or may not be desirable, but that is not the point. The suggestion is that unless a student knows these things he shall be deprived of University education, that is to say that he shall be persecuted in the good old way. The *Presbyterian* is no less delighted at the thought that even at this eleventh hour it may be possible to revive a system of religious tests and disabilities. They would like, they say, to see the officials of all our universities and colleges take a like stand. No doubt they would. The love of persecution is the basis of ecclesiasticism, indestructible, ineradicable.

So far as the Presbyterian body especially is concerned, we should have supposed that the extent to which they have themselves been persecuted in past times would have lit within them a fire for religious equality which nothing could have extinguished. It has had no such effect except in certain magnificent exceptions. Let us imagine what would happen if the spirit of the age should once more allow of the authoritative intolerance for which these newspapers seem to yearn. How long would the denominations be satisfied with the persecution of outsiders, and how long would it be before they would light the fires for one another? They would do it today were they not restrained by that very liberal spirit which they themselves are accustomed to describe as the enemy of religion. It is that liberal spirit—which is sincerely religious because it is sincerely liberal—which protects them from one another, which protects the weaker from the stronger. We are perfectly aware that the churches contain many enlightened men whose hatred of tyranny is as sincere as we could wish. We can only regret that they are not more articulate and that they are not yet in a position to prevent expressions of intolerance which profess to be representative of their churches.

STUDENT

The Ideal of Culture

A RECENT lecture by Dr. Gunsaulus, of Chicago, on "The Ideal of Culture," must have implanted the seeds of new ideas in some of his hearers. It was, of course, strongly opposed to current and popular ideas upon culture. Otherwise it would not have been worth hearing. The keynote of the whole lecture was perhaps contained in the one sentence, "It is the ability to do without that makes men rich and strong."

The ability to do without, that is to say, the wish to do without, is perhaps the faculty which of all others is today the one most out of sight. The aim of modern civilization is to acquire and to possess, and how many are there who recognize that the culture which they profess to seek can be shown in no other way than by behavior? Culture is a mental attitude which enables us to turn ourselves understandingly towards every condition which awaits us, instead of being a veneer for times and seasons, or an external polish for the concealment of the inferiority beneath. Culture is a recognition of our supreme adaptability, the assurance of our rightful place in nature, the power to perceive that we are eternally at home, and that neither space nor time can remove us from its friendly bounds. No hostility can ever await the man of culture. Misfortune is for him but the kindly hint that something within himself is out of place, the knowledge of his ignorance is but nature's gracious invitation to know all things without money and without price.

And so the mark of culture is an unbreakable tranquillity as becomes one who sits always within a home circle. All personal possessions to such an one become a loss, because they are a denial of his ownership of all those greater things which can belong to no man personally. He to whom the whole of nature is a living voice of wisdom takes no heed to grasp some infinitesimal part of nature and to imprison it within four walls that he may call it his. He thereby does but grasp at a shadow, and the substance which was his becomes his no longer. By our material acquisitions we but multiply our poverty, but to him who has learned to do without, all the vast store-houses of nature are thrown open and personal desires are lost for ever in the plenitude of real possession.

There is nothing in nature which has not its affinity in man, and the doors which open upon unsuspected vistas of knowledge are all within ourselves. We may open them whenever we will, but, first of all, we must clear away the debris of the personal treasures which we have mistaken for the real, the abiding, and the true.

The Raja Yoga Edition

THE Special Raja Yoga Edition of **THE NEW CENTURY** contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to **THE NEW CENTURY CORPORATION**, Point Loma, Cal., the papers will be mailed for you without extra charge.

His Idea of Prayer

Harold, the five-year-old son of a Presbyterian minister, was being prepared for bed. He had spent a very active day at coasting and was weary and very sleepy.

"Now, Harold, kneel down by mama and say your little prayer."

"But, mama"—half asleep with his head on her shoulder.

"Be mama's good boy, now," coaxingly. "Thank God for all His goodness to you."

But Harold was asleep.

His mama gently aroused him. "Harold, don't be naughty. Be a good boy, now, and thank Jesus for the nice home you have, the warm clothing and fire to keep you warm, and a mama and papa to love you. Think of the poor little boys who are hungry and cold tonight, no mama to love them, no warm bed to go to, and"—

"But, mama," interrupted the sleepy boy, roused to a protest, "I think them's the fellers that ought to do the prayin'."—*Lippincott's*

Sunday-school Teacher—I hope all the little girls in my class love God?

Eva Brown—I do.

Common Interests of Humanity

WHO can doubt that the crisis toward which so much of humanity seems now to be moving must also affect America? Science has thrown a bridge across the geographical distances which once were so effective and so formidable, and the nations of the world are no longer able, even were they willing, to preserve the isolation which might seem to be a safeguard. We must perforce live in sight of one another and the common interests of humanity must ever be stronger than political considerations. What part will America play and by what standard will she measure her actions?

It is not merely an unwarrantable pride which makes us believe that America represents, potentially, if not actually, the aspirations of mankind. Somewhere deep within the heart of every human unit in America is the fire of enterprise, and hope and daring which drove its possessor or his forefathers away from the old world and into the new. These things may now be dormant, they may be overlaid by the crust of mean and sordid living, but they are none the less there, otherwise the American nation would not now be upon American soil. Somewhere within the nation must slumber a great and worthy ideal, the ideal of liberty and of progress which was its dawn, and such ideals as this do not quickly nor easily die. How best can we revive it; how best can we fulfill the responsibilities which weigh no less heavily upon the individual because they are national and vast? This at least we can do. We can ask ourselves if our own lives give anything of beauty to our land and

Build First the Individual Character

if we would willingly believe that the national character is as we know our own characters to be. And inasmuch as we ask this question within the secrecy of our own hearts there is no need for the self-excuse that we are but doing as others do, that we are but following a crowd. To the eyes of the great Law no man's identity can be lost in a crowd, the great Law which has filled the records of the world with the wrecks of kingdoms, of empires and of republics. In the flush of material triumph we have forgotten that the civilization which would be permanent must be internal as well as external and that without this equilibrium it cannot exist. Unless there is a civilization of the heart nothing else can at all avail. Nature will have no unbalanced civilization, but will sweep it away in her own manner which cannot be resisted nor hindered. If we would harness the forces of nature so also must we put a curb upon the forces of self. Compensation there must be and we must choose between balance and shipwreck. Of that interior civilization, the civilization of

Men Not Afraid to Think

the heart, the index and the guide is man's attitude to man. A nation is such but in name unless there be the cohesion of brotherhood among its members. The absence of that cohesion is nature's sentence of dissolution. No Sinai thunders are needed; the law works automatically. Destiny is a word which we apply to our country as though it were a force which places us beyond the moral laws which govern success. It is we say the destiny of America to lead the world in international progress and freedom, and this will indeed be true when we have once more arisen to the height where destiny dwells. Destiny does not descend upon nations but nations may rise into the sphere of destiny, as indeed they may also sink to those other realms where other and destructive destinies are ruling. Unto those higher regions we cannot attain unless our ship of state be made buoyant by aspiration. In the days that that are coming America will need all the great and the strong men which she possesses. She will need men who are not afraid to think, men who are willing to be carried onward by the will of nature which is a spiritual and a divine will. Nature has her own test for the great and for the strong and she will bear such to the surface by other machinery than that of which we know. There is a spiritual force of gravity which carries into the front rank of leadership those who are wise enough to do all duties great and small, for this is the secret of power and the conquest of fate.

Ten righteous men would have saved the Cities of the Plain and who shall place a limit to the contagion of one noble life? STUDENT

Samurai of Japan

COMPARATIVELY few people are aware that the feudal system in a very pronounced form existed in Japan until 1867, and consequently that very large numbers of the people are still saturated with its ideas and its traditions. Like all systems which have been outworn, the Japanese feudal system contained many elements which were in themselves permanently good, but which have necessarily been swept away with the abuses in which they were encrusted. The caste of the Samurai, the fighting caste, for example, had many features which were in every way admirable, and to its teachings the Japanese army owes the characteristics which make it so formidable a force. The training of the Samurai began with infancy, and its whole object was to build up the character rather than to develop the intellect. The pupil must be so

trained that he could tranquilly and worthily meet every condition which might confront him, that he might know "how to die when it was right to die, and how to strike when it was right to strike."

In such a system of discipline the inculcation of courage took naturally a very prominent place. The children were taught to rise before dawn and without food, to walk barefoot through the snow to school. To confess either to hunger or fatigue was a disgrace, and even with young children such precepts were practically applied and were not allowed to be merely theoretical. In one of the most popular of Japanese plays the little Prince of Sendai is made to say to his companion, as the two famishing boys watch the sparrows:

Look at those tiny birds, how wide their yellow beaks are open, how eagerly they eat; but for a Samurai when his stomach is empty, it is a disgrace to feel hunger.

It is especially interesting to notice that self-control in the presence of pain was taught to the Samurai as being not only in itself the duty of a man, but it was also recommended as a matter of courtesy towards others whose happiness might be marred by the sight or knowledge of another's troubles. The training of the Samurai was thus of a kind not only to develop a magnificent soldier, but it was likely to produce the ideal man, morally as well as physically. To seek revenge was far below the dignity of a Samurai. Injuries against himself he must unfailingly forgive, unless they affected his honor, which it was his duty to protect. Honor indeed became something of a fetish and a superstition, and from its undue growth many errors eventually sprung. Kamazawa is the author of a noble precept which found practical expression in the life of the Samurai. He said:

When others blame thee, blame them not; when others are angry with thee, return not anger. Joy cometh only as passion and desire part.

How eloquent, too, are the references to the "tenderness of a warrior," which are found in this wonderful code. With the disappearance of the Samurai training the world will be visibly poorer, if indeed it does disappear, instead of merely reincarnating in other garb and in another land. Beneath and beyond the crudities of an ancient civilization we see here an ideal which the world cannot afford to lose. We see a system of training which is intended to dislodge from the mind of the child everything which cannot be cultured into magnificence. We see a splendid picture displayed before the imagination of the child in which there is nothing base and nothing unworthy. Here we find a true order of character. It may be soiled, perhaps brutalized, by the hand of time, but it is none the less instinct with nobility and resplendent with an ideal which must glorify all nations in which it is permitted to dwell. X.

To Recover the Gospel

THE *Recovery and Restatement of the Gospel*, by Dr. Loran David Osborn, is an effort in the right direction, although the path upon which the author seeks to walk is somewhat narrow, and his visible horizon is more restricted than it need be. The aim of Dr. Osborn is to discriminate between Christianity and Theology, and to restore the former to the position which it occupied before it was dethroned and uncrowned by political and ecclesiastical agencies and ambitions. The author points out that what is usually called the historical development of the religion of Jesus is nothing more nor less than its defacement, and that to see it in its true colors we must get behind its historical record and look upon it as it actually was. The most pleasing feature of the book is the emphasis which it lays upon the radical difference between Christianity and the religion of the churches. That difference is, of course, so pronounced that there are hardly any points of resemblance between them, as must be painfully obvious to anyone who will honestly compare the actual teachings of Jesus with the theology which has been ponderously built around them.

All this has, of course, been done most copiously by H. P. Blavatsky, with a greater wealth of knowledge and detail than is possessed by any other writer. Christianity can never be understood without the science of comparative religion and without a recognition that humanity has existed for untold ages before the birth of Jesus. If we start upon our quest with the incredible and untenable theory that mankind was left without spiritual light or guidance through these unfathomed vistas of

years and until the Christian era, we shall not do very much to elucidate our problem. The fundamental laws of the Soul do not vary from age to age, although they may be presented in different and varying facets in accord with the needs of times and peoples.

STUDENT

Lutetia Urbs Parisiorum

LUTETIA was a city of the Parisii. Even in the days of the Roman conquest of Gaul, Lutetia, a large town on the island of the same name, was an important place. A center of commerce for traders going both north and south, it slowly grew until about the time of Charlemagne, when, under his masterly direction it rapidly took, perhaps, the most prominent place among the cities of France. Those were troublous times, and the evidences of this are still apparent in the remains of the fortifications, and even in the very aspect of Paris itself. It was not many centuries before Paris became the heart of all French life and energy, and until a few score of years ago, to speak of France was to speak of Paris. During the days when France struggled with England for dominion over her own people, when many parts of France preferred the English power to that even of Paris, then Paris was the heart and soul of the country, and it grew more so with every passing score of years. About the time of the great Revolution, France was absorbed in its principal city, and it was only about the moment which Victor Hugo has so graphically described in his *Histoire d'un Crime* that the provinces first began to feel that they, too, represented France, and the greater part of France. The country under the present Republican Government, has incessantly aimed at accentuating this feeling, and here the student of affairs may see a very curious and interesting anomaly—an apparent anomaly, at any rate. That is, that while power is decentralized so far as the capital is concerned, and while the nerve force and blood of the national life are diverted from the heart of the country—Paris—yet by that very condition, France is stronger and more united in national feeling than ever before. France is now for Frenchmen, not merely for Parisians. It promises well for the people, for it has awakened them to a sense of national responsibility which they did not have before. At no time in France's history, possibly, does her outlook appear so bright. Napoleon's conquests, coming after the Revolution, when Frenchmen saw that they, and not England, possessed the key to European peace, or European war, had the effect of instilling into their hearts a worship of national unity, which latterly has taken the direction of an international understanding, a fraternity of the peoples of Europe, which has had a most salutary effect on their neighbors. Behind the present Government stands an united body of patriotic Frenchmen, who are at the same time earnest and devoted Masons. Their one object, and it is proved past cavil by recent events, is not only to keep their Fatherland well in the forefront of European civilization, but also to promote in every way a better understanding between the peoples of the Continent. The Franco-Prussian war has this glorious responsibility to its account, for then the statesmen of the country realized how near they came to a national downfall. They believed Napoleon III was more a son of the church than a good Frenchman. Is not the trend of events very perceptible indeed? France is, however, still in a very critical period, and all well-wishers of the country can watch with interest events which will be forthcoming in France in the next ten years, and after.

Why should not Americans, especially, feel a keen interest in what takes place in France? There is not a little which unites the two countries in numerous ways; there is one thing preeminently which calls American attention to what passes in France, and that is the religious congregations. They are abandoning France and transporting their power and influence—where? To England and America. G. P.

In Portuguese East Africa

THE illustration on the cover page of the NEW CENTURY PATH this week represents the buildings of a native hut at Quillimane, in Portuguese East Africa, at the mouth of the Zambesi River. A finished structure is seen to the right, these huts being characteristic of the Kaffir homes which abound throughout the country. Quillimane is one of the Paradises of the South African hunter, the territory abounding in elephants, lions, hartebeestes and occasional giraffes.

Some Views on XXth Century Problems

When and What to Teach

THE writings of Mr. H. G. Wells often produce a feeling of uncertainty as to whether or not they must be taken seriously. The weight of prejudice and custom sits very lightly upon his shoulders, and he has therefore a buoyancy of judgment which may not inexcusably be confused with extravagance. With a recent remark of his upon the education of children we are, however, in very full agreement. He says:

I know very well there are a good many misguided persons who imagine that the less the brain is exercised in the earlier years the better for the child. I have heard myself ridiculous talk about the inadvisability of educating a child till it is ten or twelve years of age. *It is pernicious nonsense, and comes originally from that fountain of errors, Rousseau. Provided the right things are taught, and in the right way, all children are greedy of knowledge of all kinds.* They are always "wanting to know," and the lamentable thing is that their parents, owing to their own inadequate education, are seldom capable of satisfying their thirst for information, even in elementary subjects.

The methods which Mr. Wells advocates are fortunately fast growing in favor. Education is not now so generally regarded as the preparation of mental *pate de foie gras* in which the victim's feet are to be nailed to the ground while he is forcibly gorged by a machine. We are beginning to recognize that the mind of a child possesses an appetite of its own fully equal to its bodily appetite, and that the child who needs to be mentally or physically fed by compulsion, is either seriously ill or is receiving the wrong kind of food, and usually the latter. Education does not consist in giving the child something which it has not got and does not want, but rather in placing within its reach the mental nutriment which it needs, and in seeing to it that the lower forces of its own nature do not prevent its acquisition. For this reason no education can possibly be effective which is not also ethical. The child must be taught to discriminate between its real needs and the mere animal clamorings with which those needs are so often confused.

STUDENT

The Opium Traffic in the Prisons

THE resources of civilization ought not surely to be altogether exhausted by the fruitless effort to prevent prisoners from obtaining opium. It would, however, seem that we are here confronted with a problem which cannot be solved, at any rate by those whose business it is to solve it. At a certain prison we are told that the opium evil is one of the worst with which the officials have to contend. The officers are constantly in fear of the possible act of some opium crazed convict, who frequently attempts murder for some real or imaginary wrong. The obvious remedy is to prevent the convicts from getting any opium, and the assurance that this cannot be done with the machinery of a prison is a tax upon our credulity of a somewhat severe nature. Some light is thrown upon the problem by the further statement which has the tint of childlike simplicity that the drug is smuggled into the prison through the connivance of certain officers, and that handsome profits are said to be realized by those who are engaged in the traffic. That some one is making a handsome profit is so obvious that it can hardly be called an explanation, although some persons may think it a very valid excuse. Let us hope that a trust has not been already formed and that to put a cessation to the profits may not prove to be too great an interference with vested interests.

STUDENT

Poor Joke of a New York Jurist

A NEW YORK Judge has pronounced the sapient opinion that one of the main causes of juvenile crime is the failure of parents to provide their children with pocket-money. It is surprising to find that what is perhaps the greatest problem of the day has a solution so simple, and that the murderous exploits of boy-bandits and the like, of which our newspapers are so full, could be ended by a trifling weekly donation of a few cents. Let us by all means give our children whatever they ask for, in order that they may be spared the necessity of taking it by force.

STUDENT

Crime and Its Punishments

AN epidemic of crime invariably produces a number of social wiseacres who are confident that the only possible remedy is to devise a series of new and ferocious punishments. These people seem to write grammatically and to spell correctly, and their ignorance in other directions is therefore the more surprising. There is no better established principle of penology than that the punishment which is of a revengeful nature never succeeds and the reason is not far to seek. A vindictive scale of punishment invariably excites the sympathies of the jury who refuse to deliver verdicts which they know will be followed by penalties of which they disapprove. Capital punishment, for instance, for all offences except murder, has been abolished for this very reason, not only on the score of humanity, but because it was found to defeat the ends of justice. The people who thus advertise their own ferocity in print are themselves providing illustrations of the same spirit which actuates the violent criminal.

STUDENT

Methodism and Self-Denial

THE Methodist Body is still exercised in mind over the proposal to permit a little more latitude in the matter of dancing and theatres. One prominent eastern minister expressed himself as follows:

What we want is quality, not quantity. Is cross-bearing to be banished from church life? Indulgent church life always has been a failure. When Methodism abandons self-denial and courts favor from the applause of pleasure-loving persons it will be left forlorn on a tideless beach and will rust under every sun and become a byword for hissing mankind and inexpressible sorrow to the Lord.

The fate which is so graphically described in the concluding sentences would already have overtaken Methodism but for the devotion of some of its adherents who have resolutely entered into the real conflict between good and evil, and who have therefore found no time to play with such straws as these.

Self-denial is of little value unless it is carried out in the service of others. Of still less value is it when it consists of abstaining from social agencies which might be powerful engines of social reform. If the stage is not all that it should be the blame rests with the modern Pharisees who have passed by upon the other side of the road instead of exercising a wise discrimination, which would be an encouragement to the good and a rebuke to the bad. There was one who stood at the street corner and thanked God that he was not as other men, but we are now commonly agreed that that man's cause for thankfulness was somewhat slender.

STUDENT

The Church & the Labor of Children

A PROMINENT Milwaukee clergyman has lectured upon the evils of child labor and his forcible language certainly leaves nothing to be desired. He says:

To strike a death-blow at this monstrous evil of child labor we will have to look to our educational institutions, our public schools and colleges, an untrammelled press, fearless statesmen and preachers.

It would, of course, be a magnificent thing to enlist these powerful agencies to the side of good, and especially the agency of the churches. The speaker was, however, nearer to the mark when he referred to public opinion as the real engine which alone can make a breach in this fortress of cruel greed:

As public opinion in the past has played such an important role in diminishing the number of child laborers, we must look to the cultivation of a still more satisfactory public opinion in the future if we are to practically abolish child labor.

The churches are, probably, themselves unaware—for their own credit we hope so—of how immediately a reform would follow upon an united effort on their part. If they were but imbued with what we may call a more enlightened spirit of self-interest, which is perhaps all we can at present hope for, they would recognize how public sentiment would leap to meet them and to follow them upon such a question as this, and how immeasurably they would gain by a general recognition that their force is, after all, one which makes for righteousness, the righteousness which exalteth a nation.

STUDENT

Art Music Literature and the Drama

"Parsifal" and the Voice of the Critic

QUEEN VICTORIA, although under the influence of the Italian School of music which prevailed in her youth, was one of the foremost to encourage Wagner at a time when he was almost in despair from neglect and harsh criticism. Wagner once said of her to Klindworth, after one of his concerts which the Queen and Prince Consort attended, "The Royal Pair were almost the only ones who showed me any kindness or any real appreciation."

That was many years ago at the time when one who knew a wee bit about human nature might have easily predicted the storm of ill-natured and abusive criticism that burst upon Richard Wagner's head. He spoke as one who loved humanity, who knew something of that now desecrated temple of the human heart. He had seen the vision—the vision that John saw on Patmos, the vision that Dante saw, the vision that has guided every real teacher and has led them to count all sacrifice as joy—"A new heaven and a new earth," builded on a universal brotherhood; a new humanity to whom love should be not a shrouded excuse for sensuality, but a gateway unto the life that is compassion absolute.

Wagner saw the glory of the soul's long pilgrimage and never once did he lose sight of the sunlight that flooded the mountain top. He was one of the few of his day who read in the old legend of "The Grail," humanity's own heart story. This he dramatized in *Parsifal*, the perfectest expression of his life.

Parsifal has recently been presented in New York. The press criticisms have been interesting, to say the least. If Wagner himself lived in a "miasma of rudeness," what about his fame?

One of the most mystic and withal sweetest touches in the whole drama is Wagner's picture of Parsifal when, at sight of the wounded swan, compassion touches his heart and opens before him the portals of the warrior life. It is purer in its beauty, fuller in its message, than even his meeting with the wounded Amfortas. Yet the critic of one of the largest dailies in America sneers at the "pity doctrine preached in the pother made over the killing of a swan!" Would to God we had a little more "pity doctrine" in our great cities, and a little less of the doctrine of jealousy and greed. "Kundry," says another critic, "is the deputed and bewitched instrument of a Wahnfried Cagliostro"—Cagliostro, whose name the Twentieth century is doubtless destined to drag out of the slime with which the jealous, the sensual and the insane have covered it.

And still another critic groans because "nowhere in *Parsifal* do we see the primeval man and woman gaze upon one another in the naked, barbaric splendor of desire. Instead, we see a man who is incapable of passion, who loves no woman as men love, who knows but one impulse—an inane pity!"

This critic is honest, at least—that is what we want—flesh and desire. No wonder Wagner was persecuted. Every teacher who dares to challenge the "barbaric splendor" of the world's ideal (which is a reasonably low ideal) has invited the bitterest persecution and ever will—until humanity is purified. The lawsuit and the passion for the dollar did their tragic best, before *Parsifal* was presented, to dull our perception to its message. What was so well begun our critics—that is, some of them—will beautifully finish.

A. V.

The Orchestration of Chopin's Music

WHEN George Sand prophesied that in time Chopin's piano compositions would be orchestrated, few believed her. It was the poetry of the musician's soul which appealed so to her own—so said those who smiled at her extravagant praise of Chopin's music. George Sand might pronounce the final word upon a poem—but upon a musical work—no. Thus said the critics.

Time, however, and the serener impulses of the human heart, have been known to bring to pass prophecies even more remote than George Sand's; and now that hers has been realized, one wonders chiefly that no one thought of it before.

Chopin's life was pathetic, even tragic, in its simple beauty, labyrinthine in its search for the heart's ideal, stainless its trust in that law whose mission it is to place the Life Beautiful within the grasp of the courageous and the pure in heart. And his life has recently been dramatized in the form of an opera, the words by an Italian poet, the music, Chopin's own, orchestrated. The opera has already been presented in Milan.

The first scene is laid in Poland on Christmas eve, the second in Paris, with Chopin at the height of his fame, the third, in dreary, storm-swept Majorca.

To the libretto, Chopin's own music, adapted and orchestrated, adds the final dramatic touch. One of the duos is taken from his Berceuse in C flat, and during Chopin's death in the last act, the music rendered by the orchestra is the Nocturne in F minor. Those who have heard the opera, say that the effect of singing the melodies of his piano compositions is magical.

These are George Sand's words, her criticism overdrawn doubtless, but certainly, at this time, interesting:

Un jour viendra où on orchestrera sa musique sans rien changer à sa partition de piano, et où tout le monde saura que ce génie aussi vaste, aussi complet, aussi savant que celui des plus grandes maîtres qu'ils était assimilés, a gardé une individualité encore plus exquise que celle de Sébastien Bach, encore plus puissante que celle de Beethoven, encore plus dramatique que celle de Weber. Il est tous les trois ensemble, et il est encore lui-même.

FREDERICK CHOPIN

The Music of Ireland

ONE of the signs of the times is the present effort being made by a few loyal men to bring about a revival of ancient Irish music.

That Ireland once had a richly musical life will be proven before the passing of many years. What we ordinarily consider history takes no account of this, to be sure; but history, in the usual sense of the term, is a very youthful aid, indeed, to the student of truth. What our archeologists are beginning, not alone in Ireland, but all over the world, and particularly in America, students of the true philosophy of life will yet finish.

The present movement is part, naturally, of the general *renaissance* of the literature and ancient artisanship of that old land; and now a regular musical festival is held in Dublin, known as the "Feis Ceoil," the chief aim of which is the reclamation of Erin's traditional music. Through its efforts some seven thousand ancient melodies have been rescued from virtual oblivion.

Enough has been done even at this date to show that the musical standard of ancient Ireland was high.

STUDENT

The New Aurora in Egypt

ONE of the most complicated but vital problems of today in the "Woman Movement," is the enfranchisement of Eastern women, and the pity of it all is that habits and customs have brought about the now existing conditions, not the religions.

The contrast in the life of the Eastern and Western woman is daily becoming more noticeable, and that this is growing apparent to the Eastern mind is evidenced by a movement which is already now under way in Egypt. This movement, which has been started by a group of advanced, energetic young men, is to restore, if possible, the former glory of Egypt. They recognize that in order to make their effort a successful one, woman must become an active factor again in the life of the country. They realize that she cannot do this until she has regained her former freedom from environment, as was the case when Egypt led the world in greatness. In that day woman took an equal position with man.

Mr. Attia Wahbey, the leader of this group of young men, has delivered some very eloquent lectures on this subject before the Egyptian Institute. He states most emphatically that no other people of antiquity recognized so fully the rights of woman, as did the ancient Egyptians under the Pharaohs. He appeals to the modern Egyptian woman to awaken to this knowledge, regain the self-respect of the ancient woman, and hopes that "like the ancient statue of Memnon, she will respond to the rays of the new Aurora." All those who have the welfare of humanity at heart will certainly wish success to such a glorious effort, which would result in a new era for Egypt.

While Egypt seems the most ancient of the countries in that Eastern world, yet she is very closely in touch with the evolving modern Western world. The flood of travel during the winter months carries thousands of visitors there annually from the West. The continual presence of cultured Western women, especially the American and English, though often extreme types, cannot but present a new and interesting phase of womanhood to the Oriental mind.

The next step taken in this remarkable movement in Egypt will prob-

ably be the sending of Egyptian women to America to be educated.

Recently three Greek maidens were sent to this country to spend four years in study to become nurses. On their return to Greece they will take positions as matrons in hospitals. While the condition of woman in modern Greece is far in advance of what it is in many countries, especially in the Orient, yet we consider the above incident as one of the "signs of the times." It is but a step from Greece to Egypt, and in the recurring cycles of events, the past may repeat itself in the present.

While it is true that as yet, perhaps, but a few sense the rays of the "New Aurora," still the consciousness of the lofty purpose of the endeavor must be so fully recognized and felt by all who are active in the matter, that it will give a wonderful impetus towards ultimate success.

The unusual aspect of this movement in Egypt is, that instead of being a "woman movement," started by women for women, it is in reality a "man movement," instituted with the same purpose in view, the uplifting of women.

Does not the necessity for such a work afford pitiful proof that the power of woman has become so helpless and atrophied through abused habits and customs that she is unable to make this effort for herself?

The fact that men have at last awakened to this vital truth, that their country can achieve its greatest glory and fulfillment only when its women are developed on higher lines, augurs untold promise for the future of Egypt. E. C. S.

A Woman Lawyer 4,000 Years Ago

WHOWER said that a civilization could be tested by the amount of education it permitted to its women was probably merely designing a compliment to our own epoch. But tried by that test, we must admit that we have only recently come up to a point reached in Babylonian civilization 4,000 years ago. Vincent Schell, investigating some relics of a school in the ruins of an ancient Babylonian city (Seapur), a school in which, just as today, were taught reading, writing, arithmetic, geometry, grammar and weights and measures, finds evidence that girls got about the same education as boys. The school course occupied from 7 to 14 years. Moreover, the profession of law, at any rate, was open to women. One of them, Amat Baon by name, attained great eminence in legal learning; and Father Schell found contracts in which both the language and law had been revised by her. C.

The Devil's Glen, County Wicklow

Be ye wise as serpents

COUNTY Wicklow has been called the garden of Ireland, and among its poet-sung glades is the Devil's Glen. From the shady pathway that winds along the edge of the river, richly wooded slopes tower high and grand. It is a spot where nature has chosen to freely bestow her gifts. But, through all the seasons, from the silent winter with its mysterious inner life, that finds rebirth in the unfolding mantle of spring, through the summer with its wealth of foliage and flowers, to autumn resplendent in her farewell robes, there is something apart; something which thrills the heart with a strange awakening as though it throbbed in the presence of an unseen spirit; and slowly the imagination is unchained from the beauties that come and go and in its freedom wonders how such a favored spot received its name.

Judging from the many places of interest baptized in honor of the Devil, Erin must be a favorite abode of his satanic majesty. But it may be that the name honors the serpent, the "Dragon of Wisdom," found in every religion and philosophy as the symbol of Regeneration and Immortality. "I am a serpent, I am a Druid," was a saying of the wise men in Erin—men, descendants of mighty races wise in soul-knowledge, the guardians and preservers of the sacred fires.

Who knows but the immortal presence of these ancient Druids and Priestesses still lingers, breathing hope and courage through the stillness that echoes the voice of the soul? for mankind has suffered long in its search for the knowledge of good and evil which tempted Eve to renounce unconscious bliss in the garden of Eden.

May it not be that the fruit which Eve chose for us is ripening and bringing us near to the destiny foretold by the serpent, and that the light bearing humanity's divinity is already clearing away the blinding mists, so that our eyes "shall be opened."

A. P. D.

QUEEN AMELIA of Portugal has always been one of the most progressive women in the unprogressive country over which her husband rules. Recently she has taken her degree as Doctor of Medicine. For many years she has written articles on various scientific subjects, and has also published a volume of poems. She is passionately fond of animals and dogs, and is said to be the most humane as well as the most energetic woman in the kingdom.

MISS ZARROHIE KARALGIAN, who is the daughter of Dr. S. C. Karalgian of Adabozar, Turkey, recently graduated from the Chicago University School of Medicine. She has already sailed for Constantinople, where she will enter upon a practice among the women of her native land. This will bring to hundreds of women benefits which, so iron-clad are eastern customs, they have never yet received.

THE recent report of the London census shows that in London alone there are 252,371 more women than men. In the British Colonies there are some three millions more men than women. The principal reason given is the continual stream of male emigration. In the United States, by the report of 1901, there is an excess of nearly two million men.

ONE of six women receiving last year the degree of Doctor of Medicine from Johns Hopkins University is Miss Margaret Long, daughter of John D. Long, Secretary of the Navy. Miss Long formerly took the degree of A. B., at Smith College.

Events Unfold

THOSE who indulge in prophesies, if not regarded with derision, at least are not apt to be considered seriously. Yet it is not so very difficult to observe which way the wind is blowing, and some have the power of reading the signs of the times.

To those who are dozing, nature may seem to move abruptly. But as a matter of fact all of her processes take place smoothly, gently. There are no sudden upheavals, and no sudden reformations. Silently, steadily an unbroken chain of effects follows an unbroken chain of causes. Events unfold themselves after a natural sequence, and moments of crises are but the results of one more step, neither longer nor shorter than the others. We cast the sands of time into the balance, grain by

grain, and lo! in a twinkling it turns. In this connection it is interesting and suggestive to observe that news items of a certain character regarding women, are occurring more and more frequently in our daily papers. The following are examples:

An article headed "A Jury of Women," calls attention to the fact that for the first time in the history of the United States, a jury of women sat in Chicago recently.

Another entitled, "Woman's Grasp of the Law," tells of a young woman who leads the junior law class in New York University, in competition with nearly 200 men. Moreover, in this article, Professor Ashley, dean of the school, states that

since he has been connected with the school there has been no class in which the most brilliant man has not been rivalled or surpassed by a woman. "I might mention," he says, "a number of instances of girls with exceptionally fine legal minds. The most brilliant student in law we have ever had at the University was a woman. Some of our students are stenographers in down-town offices. For these we have a night class. The girls are very much in earnest. Tired though they are from their day's work, they come here evening after evening, sacrificing almost all social pleasures."

And this rather new development does not represent, in the professor's mind at least, an abnormal, diseased growth of some sort, for he adds that the characteristics suggested by the word "strong-minded" have been wholly absent from most of their best women students. Something else is happening. What is it?

G.

WOMEN, who see the light a great life throws
Across our darkness! --- light that grows and grows!
Let us, too, serve the world as God desired,
With broad devotion, that each soul bestows
In honor of the helpers of mankind.

—Charlotte Perkins Gilman

SIGNORA RINA MONTI recalls the golden age of learning for Italian women. She is the first woman in modern times to be appointed to a University chair in Italy. She has the chair of zoology and comparative anatomy at Messina, and that of professor extraordinary of comparative anatomy at Bologna.—*Exchange*

THE Egyptians have an odd way of choosing a baby's name. They light three candles, giving a name to each, but they always call one after some deified or exalted person. The baby is called by the name borne by the candle which burns longest.—*Selected*

THE French Government has complimented the Marquise de Wentworth of New York by purchasing for the Luxembourg her portrait of the late Chalmel-Lecour, former President of the Senate.

DEVIL'S GLEN, COUNTY WICKLOW, IRELAND, WHERE MRS. TIGHE LIVED

Brief Glimpses of the Prehistoric World

Archeology
Paleontology
Ethnology

The Changeful Verdicts of the Ethnological World

THE changeful verdicts of ethnological science are very perplexing to a humble student who merely desires to know facts. For as a rule these contradictory verdicts are given quite positively. For instance, as to the origin of the Red Indians of our western coast, Retzius, "the founder of scientific craniology," connected them with the Mongolians of Asia. Virchow called this in question. Then a little race, the Tchuktchis, on the northeast coast of Siberia was discovered. It was perceived from their characteristics that they might be a link between the Mongols of Eastern Asia and the Red Indians of West America. Accordingly the theory that our Red Indians immigrated from Asia revived again, the migration being by way of Bering's Straits. It confidently flourished alongside of its opposite; for (says *The New American Encyclopedia Britannica*), "It may be asserted with some confidence that there is nothing in the physical and mental condition of the aboriginal Americans which requires us to postulate for them a foreign origin."

Then Lieutenant Palander asserted that these Tchuktchis "undoubtedly" descended from the Greenland Eskimo. This shook up the immigration theory, for it had been agreed that the Eskimo, on account of the shape of their heads, could not be related to the western Indian. So the link, the Tchuktchis, ceased to be regarded as a link.

Now comes Dr. Franz Boas, curator of ethnology of the American museum of natural history. He asserts that the Eskimo, and the other "isolated tribes of east Siberia, and those of the northwest coast of America, are one race, similar in type, and with many elements of culture in common." This, accordingly, stands unabashed beside the other assertion that the types are dissimilar. What shall we do? Dr. Boas considers that the remains of one race occupy "the northeastern part of the Old World and the northwestern part of the new."

While the difficulty is settling, we may stand a little ahead and remind our readers that according to the history of our globe and races thereon, given by Theosophy, there was once a double connection between Asia and the two Americas: one northward, where are now the Aleutian Islands and Bering Straits, between Siberia and Alaska; and the other from India and Siam, across the Pacific to South America. Hence the connection between—and once unity of—the inland Chinaman and northwest Red Indian. They are the remains of a civilization of vast remoteness, to us at present almost incomprehensible, shared also by the pre-Aryan population of India.

The civilization of prehistoric Mexico and Peru, of which traces and remains have been coming to light was, we believe, far later, Aryan, and connected with that of Egypt. But even this was enormously anterior to any date which science would so far be willing to assign to it. For science, emancipated as she thinks herself, is still under the remains of the influence of Archbishop Usher and his 4004 years. STUDENT

SOME of the earliest history of Venice is likely to be disclosed by the reconstruction operations now being carried out upon the floor of the Basilica. Remains of ancient buildings have come to light, including a crypt and a tomb, and Signor Manfredi, the architect, believes that these finds may result in a very important addition to our historic knowledge of Venice.

Wanted—A "Prehistoric" History—Facts Await Collation

ARCHEOLOGICAL discoveries follow each other with such startling rapidity that even the most earnest student can barely keep himself abreast with the facts; still less can he attempt any coordination of the elements which are already sufficient in quantity to justify a new history of humanity which will conclude where our existing histories begin. Sooner or later, however, this work will have to be done. It is not enough for us to know that great civilizations once existed in America, that Egypt had already a history which antedated her first Dynasty, that there are ruined cities scattered throughout Asia about which even myth and tradition are silent, that the story of a nation is being excavated from the mounds of Crete. It is not enough for us to know that in every quarter of the world the spade of the archeologist is disclosing traces of a humanity more ancient than we have ever imagined, of civilizations more splendid than those of today, of a wisdom to which we

have not yet attained. We need some attempt to arrange these discoveries in chronological order, we need to know the relation borne to one another by those various parts of a humanity to which we are slowly and wondrously being introduced. This is, of course, necessarily a matter of time. It is one thing to make an archeological discovery and it is quite another to decipher the inscriptions, historical and otherwise, which may be disclosed. The Babylonian libraries will certainly take many years to translate and the interpretation of the Cretan records will be a labor of very considerable difficulty. The same delay is inevitable in many other quarters, and we must wait in patience for the historical digest which must be so powerful a support for the teachings which Theosophy has advanced. STUDENT

MATAAFA, A CELEBRATED SAMOAN CHIEFTAIN

The Ancient Palace at Knossos

SIGNOR TARANELLI, Italian archeologist, has written a very interesting account of the discoveries in Crete to which we have already drawn attention. He seems to believe that the origin of the people represented by the astonishing remains which they have left, is too remote even for conjecture. He holds that they had already reached a position of importance during the

Twelfth Egyptian Dynasty, and were perhaps at their height about fifteen centuries before Christ, coming to a violent end six hundred years later. Signor Taranelli is not satisfied with Mr. Evans' identification of the palace at Knossos with the fabled labyrinth, and also joins issue with him on various other points. The fact, however, remains that in Crete we have the remains of a civilization which, at any rate externally, must have been of very great development and of which the origin seems entirely lost. Upon this, however, we may receive an unexpected illumination from the patient work which is being so steadily carried on. STUDENT

It is satisfactory to learn that Dr. Arthur Evans, the explorer of Minoan antiquities in Crete, is establishing a museum at Candia, where these priceless relics can be stored in the possession of the Cretans, instead of being appropriated by one or more of the great national museums belonging to the great powers.

THE opening of a tumulus at Buttelborn near Frankfort, has disclosed the perfect skeleton of a Merovingian Warrior, and with it were found all his weapons, including dagger, lance, bronze belt, and knife.

Nature

Studies

The Sea and the Shore by Night—Communings With Nature

THE ocean always seems more tremendous by night than by day. But to understand how true this is, you must not be satisfied with listening to it from the top of the hill. Choose a dark night and the darker the better, and go down on to the shore. It is an experience not soon to be forgotten, unless the element of imagination has been quite omitted from your make-up. By night a different order of vitality seems to possess both land and sea. Nature has just put away her sunlit candor and is doing something secretly. The night noises, the animal noises seem to suggest a thousand other furtive activities which make no noise. Instinctively we quiet our footsteps and as for speaking aloud, it would be a profanation and an intrusion.

Nature by day, knowing herself to be observed, has borrowed color from the sunlight, and the warmth of the sun has summoned forth all creatures who love it. But at night it would seem that a more serious and a more mysterious work has to be done. The great life of nature seems nearer to us than by day. It presses upon us from all sides, from above and from below, as though it no longer needed the covering of its forms but was out abroad, all pervasive, so subtle and so mysterious. Almost we expect it to take voice and to be communicative, confidential. At such times, more than at any other we feel our own artificiality which forces us to stand outside the charmed circle of life, to be spectators, intruders and not participants. If we could but break down that artificiality for one moment, the isolation which now seems so crushing, what wisdom might not come to us out of the darkness, which would not then be vastly reproachful as it is now.

But let us go very gently down the pathway which is at the end of the cañon and then, descending a few roughly cut steps, we are on the shore. The inclination to be silent is greater now than ever. A single sound and the sea might find us out, might find out that it is being watched when it too, like the land, is doing the things which it does not do by sunlight. Who can question that the language of the sea by night is not the language of the sea by day? The waves and the cliffs are discussing the eternal question of their boundary marks but their speech is more earnest, more intense. They seem to speak more confidentially, now whispering to each other with a seething ripple, and now raising their voices with persistence and strenuously. After a while the waves will give it up and slip away seaward chattering to the pebbles as they go, and the breakers out beyond, the great sea-horses, will stamp their white feet upon the uncovered rocks and rush onward to the land. Only the cliffs are unmoved, silent, pondering darkly upon what the waves have said to them. But the waves will triumph in the end.

Come, let us go back. The soul of the sea is abroad and it is calling, calling, calling, and we are deaf indeed if we cannot hear amid its tumbling harmonies a human voice which rises far away where the waves break upon the outer rocks, a human voice which has borrowed something of the fierceness of the sea, something of the restlessness which is its guiding law. Or is it that the soul of man can claim kinship with the sea and translate into human speech its purpose? STUDENT

SOMETIMES a horse is unruly and plunges about merely because he has nothing else to do; and many a colt has become vicious for want of a well-fitting harness.

The Ways of the Monkey—Experiments by Prof. Garner

PROFESSOR GARNER is determined to solve the problem of monkey talk if patience and perseverance can do it. Without doubt he deserves an even fuller measure of success than he has yet won. It will be remembered that upon his last expedition the Professor furnished himself with a large cage in which he suspended himself in the forests of the Gaboon District in Africa, in order to record simian conversation which went on around him. The resulting vocabulary was certainly remarkable, and its accuracy was proved by experiments upon monkeys in captivity. Upon the present occasion the Professor's outfit is more elaborate. He has provided himself with some very delicate instruments, including one of the most beautiful phonographic instruments ever manufactured, and which was specially prepared for him by Edison. It is Professor Garner's intention not only to observe the language of monkeys, but to study them psychologically, with a view to determining their ability to distinguish between various forms, colors and sounds.

Experiments of this nature are, of course, of intense interest as likely to add largely to our scientific knowledge. They have, moreover, an ethical value, as indeed has all worthy research. Anything which seems to narrow the gulf between animal and man, is to be warmly welcomed as tending to create the sympathy which is the most effective enemy of cruelty. X.

A State That Breathes With Life & Joy

IF ever a State might be said to breathe, that State is California. It has a magnificent lung action, says the *Sunset Magazine*. Deep and long-drawn are the breaths of ocean air taken by the great valleys. And you can almost see this breathing if you will go to the top of any of the hills bordering the Bay of San Francisco. In general, air movement or wind is initiated by difference of temperature. Therefore, on summer afternoons while the broad ocean lies tranquilly sleeping at a temperature of 55° F., the inland valleys are basking in the same sunlight, but

the air a few feet above ground is quivering at a temperature of 100° F. In other words, there is a temperature gradient of 1° per mile, and this brings about a marked movement of the air, the motion being from the cool to the warm locality.

Interesting Facts Concerning the Flight of Birds

THE speed at which birds fly has long been the subject of conjecture and wonder. It has now been shown that the northern blue throat, for instance, travels from Central Africa to the German Sea, a distance of 1600 miles, in the space of nine hours. It appears to make a start after sunset and to arrive in its summer home before sunrise on the following morning.

The reason for the migration of birds is still a mystery. A recent authority has pointed out that the causes for migration which are usually given, in no way apply in very many instances. The ancients were accustomed to draw auguries from the flight of birds, and if superstition is the result of ignorance we may, perhaps, draw some small satisfaction from our possession of the ignorance without the superstition, at any rate without the same kind of superstition. X.

How the Big Basin redwoods were saved from the sawmill is told in a very interesting and instructive article in this month's *Out West*.

SUNSET ON WILLAMETTE RIVER, OREGON

Universal Brotherhood Organization

Central Office Point Loma California

THE Universal Brotherhood Organization at Isis Theatre had a particularly large audience on Sunday night. The program was even more excellent than usual, as in addition to the music by the Isis Conservatory students two very admirable papers were announced, one being by Mrs. Grace G. Bohn on *Parsifal* and the second by a lady student on "The Woman Question." Mrs. Southwick, of the Boston School of Oratory, was also present and gave some masterly recitations in the manner in which Isis audiences are already so delightfully familiar. Mrs. Southwick is always sure of a warm welcome in San Diego. Mrs. Bohn's address on *Parsifal* was evidently the work of a profound student, and it was especially appropriate in view of the recent production of this drama upon the American stage, and the widespread interest which has been evoked. She said:

"Probably no one has ever read the mystery-drama of *Parsifal* understandingly who has not wished that others, too, might glimpse its great ideals, for it pictures an ideal of which humanity has been deprived for ages through its own carelessness and its own fault.

"Thinking back to the days of the mystery-dramas of Æschylus, when all Greece was touched and lifted by the truths they taught, the student of *Parsifal* realizes that if this great drama could be placed before the public under the right conditions and in the right way, the sunlight would exist for the many that now exists only for the few.

"*Parsifal*, at last, is before the public. And what have the critics done for us? Have they brought us nearer to the true ideal than we were before? Unfortunately for the public, too many writers prefer to say the brilliant thing rather than the true thing, and some, it must be confessed, cannot recognize the truth when they see it. For it must be borne in mind that where one has been able to witness the performance of *Parsifal* in Bayreuth or New York, a thousand have gained their idea of the drama from the criticisms in the daily paper and the reports of the lawsuit and the protests of the ministers. What, after all, have we gotten from this *Parsifal* performance, the Grail ideal or something else?

"What is *Parsifal*? It is what the ancients would have called a mystery-drama, that is, a drama that pictures the struggles, the temptations, and the conquests of the human soul, in symbol of course, for the symbol is the language of the soul and only those who live the heart-life can read it. In *Parsifal* Wagner has placed before us the pure ideals humanity has held in its heart since time began, the ideal of the soul's long search for the Grail, the pilgrimage toward the goal of the heart-life and of the battles which make of every soul who dares and wins, a Redeemer.

"We see *Parsifal* first in the drama among the Grail knights, his coming heralded by the swan which he has ignorantly killed. *Parsifal* is grief-stricken when he realizes what he has done. For the first time his compassion awakens. It is one of the sweetest touches in the entire drama, of which compassion is the key-note.

"The Grail knights welcome *Parsifal*, for they were waiting for the new teacher who was destined to come. Amfortas, their king, had failed them and his failure is pictured to us as illness from a wound which would not heal, a wound which his own moral weakness had brought upon him. The coming of a teacher had been prophesied, and believing *Parsifal* to be this teacher or at least his forerunner, the knights invite him to enter the castle, even into the room where the Grail is shrined. There they hold the *Liebesmahl*, or comrade-feast. It is this feast that certain ministers are protesting against; declaring that to present anything so much resembling the ceremony of the Lord's Supper on the stage is a usurpation of the privileges of the church, for in the drama the bread and wine is pictured as being miraculously furnished by the Grail itself. But the protest is somewhat curious, as the ceremony which this *Liebesmahl* or love-feast resembles is by no means the property of the Christian church or of any one religion. We find it in the Temple ceremonies of ancient Egypt, among the old Druids and in the rituals of certain brotherhoods not connected with any religion, today. To those who are well-informed the protest is reduced to shreds.

"Then, as now, there were many who desired to find this treasure, this Grail, and become its guardians, but there were only a few who were willing to pay the price—which was the living of the pure life. Klingsor was one of these, at first one of that band of warrior knights who were guardians of the Grail. He aspired, and dared, but forgot that only the pure in heart have ever looked upon the Grail cup or ever will. At last his own immorality shut him out of that brotherhood of knights and he becomes their bitter enemy.

"It is into this domain that *Parsifal* enters on his way to the Grail castle. The

LOMA-LAND STUDENTS AT ISIS THEATRE

Addresses on "Parsifal" and the
"Woman Question" & Recitations
by Mrs. Southwick---Vocal Solo

Reprinted from the San Diego News

flower maidens make him merely impatient, for the coarser temptations have no hold upon him. But Kundry is there, whom Wagner pictures as the legendary Herodias, the woman who laughed at the Christ and who for her sin was condemned to wander the earth, the slave of evil, until one should cross her path whom she could not tempt. Only such an one could deliver her from the bondage in which she was held. We see her as Klingsor's slave. She tells *Parsifal* that she brings him a message from his mother, the mother who has died. *Parsifal* is grief-stricken and he listens to the message that she tells him his mother sent. At last she gives him what she tells him is his mother's kiss. This, Kundry's final appeal to the lower nature, arouses *Parsifal* and he spurns her. Then she tries other tactics. She calls him her Deliverer, her Redeemer. She pleads with him to unite himself with her, reminding him that he alone can bring her release. She appeals to the very highest attribute of his nature, compassion, determined through it to drag him down. *Parsifal*, the simple boy, whom the Grail knights drove out of the castle because they considered him stupid, is wiser than Kundry. She has failed. Klingsor comes to the rescue, determined that *Parsifal* shall not escape, thinking to strike him down, as he has stricken many another, with the Sacred Lance. For the Lance was the secret of Klingsor's power, the Lance which belonged with the Grail cup which had become separated and lost through the weakness of the Grail king himself, Amfortas. He hurls it and it remains suspended over *Parsifal*'s head. *Parsifal* grasps it and with a word the castle falls into ruins. Klingsor's garden becomes a desert and *Parsifal* has won. For the Lance stands as a symbol of the warrior-will as the Grail cup stands for the Christos.

"And so the drama proceeds and we see *Parsifal* entering upon a long and weary pilgrimage, overcoming obstacles, defeating enemies, protecting this Sacred Lance, which he must never use in his own defense, only in the defense of others. *Parsifal* reaches the Grail castle and the condition of the knights is typical of the condition of humanity today, deprived through the failure of their king of the sight of the holy Grail, for the sight of it gave them a miraculous sustenance.

"*Parsifal* reaches the castle carrying the Sacred Lance. Kundry recognizes him, the knights hail him as their deliverer. He heals the wound of Amfortas with a touch of the Sacred Lance and the drama closes with *Parsifal* in his true position as Leader and Teacher of a band of warrior souls, once more united, once more consecrated to all high service, once more working together; for it must not be forgotten that united effort and that alone is the sign and proof of the soul. And the Grail chalice is again unveiled in their midst.

"The story of this drama is simple, the lesson is certainly plain. We have in the New Testament parables that are not half so evident in their meaning. Why are so many critics unable to understand it? The answer is very simple, and we find it in the drama itself, that 'no one can find the Grail castle save he whom the Grail directs.' As Jesus taught, no one can comprehend the heart life, the heart doctrine, save he who lives it. What is the Grail chalice but the symbol of the heart itself? What is this feast of the knights, this breaking of the bread and wine, but the comrade-sharing of love and faith and joy, of which the only conditions are true service? What is the Lance but the warrior-will? What is *Parsifal*'s pilgrimage but the picture of the long quest that every soul must make who thinks more about humanity than he does about himself; the long journey that all great souls have made and will ever make for humanity's sake? And the redemption of Kundry, the healing of Amfortas, the finding of the Grail itself, what is this drama but a drama of love, that love which is a benediction, a spiritual not a physical thing, which we call compassion.

"Is there a higher ideal than is symbolized by this search for the holy Grail? No. Might there be a truer interpretation than Wagner gave it? Yes. I have always been a little rebellious over the old Grail legends and over *Parsifal* as well, because in them woman has been so persistently denied true place. She is pictured either as the temptress or as the woman who, like Guinevere, succumbs to temptation, and by doing so puts up a barrier between humanity and light. Now we know that is only a half-truth. We know that time was when women stood side by side with men, when in fact she was his teacher, his guide, when woman herself was warrior for humanity's sake, when it was woman who kept burning the light upon the altars of humanity's heart, when woman was the guardian of the Grail. We also know that all our Grail legends without exception, date from medieval times, from that time when woman's position was so unjust, so unworthy and so disgraceful that one wonders how the race ever lived through them. How could they be written right—coming to us so out of the darkness?"

Language of the Soul

A Macon, Georgia, U. B. Lodge Paper

MUSIC is the language of the soul. Of all arts music is the most divine; while painting, poetry and sculpture express external material effects, music gives forth the innermost feeling of our being, and appeals directly to the soul. There is unlimited power in music; its refining, softening and unifying influences have been recognized since man evolved; even by the most savage races. With right the poet speaks, "Music hath charms to soothe the savage breast." However, music is dual in its nature; certain kinds arouse in us states of feelings that are debasing, and others awaken the higher and nobler side of man's nature. The Greeks' idea of music was quite different from the modern; it was the basis of real esoteric teachings. Pythagoras, in his school of philosophy, admitted no pupil unless he was acquainted with music, astronomy, geometry and arithmetic, the four component parts of mathematics.

H. P. Blavatsky, in the *Secret Doctrine*, says the universe was constructed according to principles of musical proportion. Beethoven speaks of music as the mediator between the spiritual and material life. Richard Wagner, in his music dramas, has demonstrated the wonderful possibilities of musical sound; there is no emotion which cannot be expressed in melody. The human voice is the most perfect musical instrument. A German saying is, "Wo man singt, da lass dich ruhig nieder, böse Menschen kennen keine Lieder." (Where one sings, there you may find quiet rest; the evil with songs are not blest.)

Katherine Tingley, in her untiring efforts for the betterment of humanity, calls our attention to the importance of the study of music in all its various forms as an educator and builder. She insists on an early beginning of musical training. Music is one of the principal features of the Raja Yoga system, instituted by her. To observe what has been accomplished on these lines in Loma-land is most astonishing. Educators of recognized judgment, who have visited Point Loma and heard the children sing and play, are amazed at their perfect intonation, rhythm and expression. Speaking from my own experience, there is something in the music of this place that differs widely from that of other places; it is purer and therefore more effective. I believe one main cause is the absence of selfishness and gain, and the love for music, the art; the soul is free to express what it feels.

The music of today is so different from that of a century or so ago. Our great musician of the past lived for the art of music alone; his creations in consequence were the expressions of the highest and noblest ideals. Today talent and genius are sacrificed to the accumulation of wealth. The successful artist and composer is the one whose material gains are the largest. Our modern soloists are ranked according to the sum their services control. We read constantly that some great performers would not play or sing a note unless a certain sum of money has been forthcoming. To satisfy the excitable taste of the public and to offset the exorbitant prices of admission, the concert as a rule becomes rather a pyrotechnic display of technique than real music. The domains of musical literature are overflowed with all sorts of cheap compositions. The product of a ragtime, this popular craze of today, brings fame and wealth to its author, while the work of true merit is little appreciated.

Another great drawback for the development of the art is the prevalence of incompetent teachers. Many parents have their children "take music," for this is the phrase generally used, because it is fashionable. They are placed under instructors whose knowledge is most superficial, and thus very often a talent, which under right care could have been properly developed, is a failure. It is a common belief that every piece of music must have a story and tell something. This is erroneous, because in doing this we are feeding the brain-mind, and in order to understand music it must appeal to the soul. There is much misconception of the terms popular and classical music. To my mind it depends solely upon the development of the listener. To the vulgar ear a popular ragtime march may be the acme of excellence, while the nocturne of Chopin or sonata of Beethoven is totally boring and monotonous. The reason that classical music is so little appreciated is, there are so very few who really know how to interpret it.

The true musician, to reach the hearts of his audience, must feel the music he plays. F.

The Woman Question

Read at Isis Theatre, Sunday Evening, January 17th, 1904

DO you remember the story told by Lincoln, many years ago, about a man who on his farm, had a log that was too soggy to burn, too rotten for wood and too heavy to drag off. So he just "plowed around" it year after year. The woman question is very much like that log. Men have "plowed round" it for ages, not knowing just what in the world to do with it.

Today—the time has come when something must be done. Humanity needs the lot, so to speak, on which it stands—and there is nothing to do but haul it off—or, in some way, utilize it. The time has come when the solution is near at hand, for the lever of a true philosophy is being placed beneath it, and in no long time it is certain to be lifted out of the way. It is in the order of things that it should be so.

Many attempts have been made to solve this woman question, and yet it is not solved. Better and more just laws have done a great deal. Higher education has opened out new and splendid paths. The opening of many, in fact practically all, the various industries and professions to woman, all these have given that log a push *this way* or *that*, but it lies in the field still.

The *real* solution rests with women themselves. They must individually and in the mass, face honestly and squarely the situation in which they find themselves. And they will discover that it is a situation not so much of sorrow, as of misunderstood opportunities and the calamities that have come about through fear.

Things are focussing in these days, and the debts of the ages are being presented for payment. Not until they are *paid to the last farthing* will woman ever be free. Not until *then* can she claim the opportunities of which she now feels so keenly the deprivation.

That women have not been equal to the demand is evident. Had they been, the debts would have been cancelled long ago, and *women* today would be comparatively free to act *and to help*. We are not free.

What women must do is to put down the personal wants, and look at things and at events and at each other impersonally. They *must* be less emotional and more just, and less eager to force things their own way along personal lines, and more eager to walk along lines of least resistance—which are *never* personal lines—more willing to stop worrying and concentrate their attention on their duties—more willing to look ahead than backward. If the past could be dropped out of the mind women would, with a single effort, stand face to face with their own souls.

Then they could have no fear, because no matter what tendencies might have to be met in their own natures, no matter what obstacles might have to be encountered, they would stand firm in the knowledge that, *as souls*, it was in their power to meet and absolutely conquer all.

The Raja Yoga Day School

From the *San Diegoan-Sun* of January 11th, 1904

THE local Raja Yoga school, in the Isis theatre building, is making fine progress, as a *Sun* reporter found out this morning. The total membership of students is now about 130. A playground has been fixed up on the vacant lot opposite the school on Fifth street with swings, hurdles, settees and other things, and there every noon the children play and eat their lunch.

The superintendent reports that the children are making a good deal of progress. Besides their studies they are at regular intervals put through a drill on the playground, and are getting to have quite an erect and military air about them.

Many tourists are applying for the admission of their children to the school during the winter. So many have applied, in fact, that the superintendent declares San Diego must be flooded with tourists. Colorado seems to be the star state in the number of applications. There are already four children in the school from that state, and in the last two weeks there have been eleven other applications. The mothers say that the high altitudes of Colorado do not agree with them and the low altitude and sea air of this city "suits them to a T."

Last Friday was the first of the regular reception days, to be held at the school on alternate Fridays. The parents listened to the children recite and saw them perform physical exercises and go through their drills.

A TYPICAL PICTURE OF COUNTRY LIFE IN THE EMERALD ISLE

A Real Incident in Pioneer Life

MARGARET DURAND sat, one cold November evening, rocking her baby. Though rude and frontier-like, it was a pleasant homelike scene on which the firelight danced.

The spacious log-cabin was built of timbers roughly squared and hewn with a broadax. The boards, or puncheons, which covered the joints overhead and formed the floor beneath had been riven from great tree trunks and smoothed in the same way. The great fireplace would hold logs which required the strength of two men to drag in and place on the tall andirons; and one of these huge "backlogs" would last a week. The fire never went out from October until April, for it was thus the early settlers kept themselves comfortable through the long winters of ice and snow. The broad hearth was formed of wide, smooth stones, worn smoother yet by constant use and many scourgings; for Margaret was a notable housewife. Jasper Durand had taken great pains in preparing this nest in the wilderness before he brought his young bride to it, where the nearest town was more than thirty miles distant; and it was eleven miles to the nearest white neighbor.

For companionship, bears and wolves prowled through the dense forest surrounding the few acres of cleared land constituting the farm. Game of all kinds abounded; the kindly soil yielded abundantly, the pioneer had his trusty team, a couple of cows and a small flock of sheep.

They had the necessities of life, and Margaret thought many blessings, as she sat in the homemade, splint-bottomed chair, waiting for her husband and playing with her baby, laughing at its contented gurglings and inarticulate cooing.

Suddenly the door opened noiselessly behind her and a pair of moccasined feet stepped quietly up to the fireside. Looking up Margaret met the steadfast gaze of a tall comely Indian woman. She was slightly startled, but neither frightened nor surprised, as she knew that a large band of Indians had made their winter camp in a sheltered spot in the woods scarcely two miles distant.

For a moment they regarded each other, then the woman pointed to the child saying in a sad low voice:

"Pappoose?"

"Yes," said Margaret, "my baby."

"Me pappoose," said the woman. Then suddenly holding out both hands while her face bore the expression of bitter grief she said insistently: "Pappoose—sick."

Margaret instantly comprehended. "You have pappoose and it is sick?" she inquired kindly.

The woman bent her head affirmatively.

"Do you want something for the pappoose?" asked Margaret.

"Pon," replied the woman, again holding out her hand.

"Pon" was the name the Indians gave to all kinds of bread, taken from the word pone as the settlers called a loaf of bread made of Indian meal. Mrs. Durand instantly rose, and, placing the child in its cradle, she took from the cupboard cornbread and a piece of a wheaten loaf and gave it to the woman, who wrapped it carefully in her blanket. Then she asked:

"Little pappoose or big pappoose?"

"Squaw pappoose," said the woman; "big—so—" and she held up her hand on a level with her breast.

"O, a great girl," murmured Margaret. So she filled a small tin basin with a savory stew from an iron kettle that was simmering near the fire. The great somber black eyes of the Indian mother lighted up with joy and gratitude as she took the basin and with a few words in her native tongue she opened the door and passed out. The white woman stood on the threshold looking after her until her form was lost in the gloomy depths of the forest. Then she went in and set about preparing the evening meal for her husband and his brother, who soon came in, cold and hungry.

The winter proved the most severe that had been known for years. The forest pools and streams were beds of solid ice; the snow was so deep that scarcely any wild game could be found. Consequently there was much suffering among the Indians.

Mrs. Durand, accompanied by her husband, had visited the camp and found the invalid, a frail, slender girl of fifteen, slowly wasting away in consumption. She was supplied with pillows and a warm flannel gown, and nearly every day her mother presented herself at the cabin to receive whatever Margaret could put aside for the sick girl; and the few eggs with the small quantity of milk were shared faithfully between Soonetah and her own child.

But the tardy spring came at last, and then the pretty Indian maiden was laid to rest under the forest trees, and the band departed in search of game and a favorable place to plant their corn and raise the next winter's supply.

Things went well with the pioneers during the following spring and summer. Crops were abundant; pigs, lambs and chickens multiplied, and the baby was now a sturdy little toddler.

"Margaret," said Mr. Durand one bright morning in October, "I must go to

town at once on this business about the land. I can't wait any longer for John to come back, so I'll go over to Marton's today and get Polly to come and stay with you while I am gone."

"I can stay alone," replied Margaret; "you know I've done it before."

"Yes, but I don't like it, so I'll go over and get Polly."

But Jasper returned without Polly; her mother was ill and she could not come. The next morning he started on his trip expecting to be absent at the least two nights.

The first day passed pleasantly enough with Mrs. Durand, the many things to be attended to, both indoors and out, keeping her busy. When it grew dusk she closed and barred the door, stirred up the fire to a bright blaze, and sat down to eat her supper and feed the child. Then he must be undressed and put to bed, and feeling weary she lay down with him.

But a strange wakefulness possessed her. The howling of a wolf seemed frightfully near; and several times she was startled by a movement among the cattle that were safely penned in a strong stockade. She could not bring herself to undress, but pulling a quilt over her she lay beside the sleeping child, sometimes dozing, but waking at every noise. It was almost morning before she sank into a quiet, restful sleep.

The next day passed as the one previous had done, and many times Margaret thought how foolish she had been to allow useless fears to disturb her, and resolved to sleep peacefully through the coming night. But when darkness came she was again haunted by a feeling of impending danger; nor could she reason it away.

Suddenly, as she sat with the sleeping child in her arms, she heard a faint tap at the barred door. With wildly beating heart she listened. Yes, it was repeated—three cautious, yet distinct, raps. Who could it be? Polly Marton come to stay with her? No; for any of them would call out to her at once. What should she do?

She crept close to the door, listening intently. A soft voice whispered:

"Listen, white squaw; me friend—Soonetah's mother. Open quick!"

Margaret knew the voice and instantly drew back the heavy wooden bar. The Indian woman slipped in silently and closed the door.

"Danger for white squaw," she whispered; "me help; must leave house; come quick! Bad red man here soon—must take pappoose and go fast!"

Margaret took in the situation in a moment. Tearing the blankets from the cradle she wrapped them around the child and hurried to a door at the back of the house. The squaw pulled a quilt from the bed and followed her, but once outside she took the lead.

Crouching in the shadow of the outbuildings and the fence, they quickly crossed the clearing and gained the shelter of the wood. Soon they halted beside a great oak tree, still vigorous but hollow at the base. The woman spread the quilt over a pile of dry leaves and motioned her companion to enter. She did so and found it was a resting place not to be despised.

Then the Indian woman told her story in such broken English as she could command, from which Margaret gathered that the mother had joined a small party of Indians coming this way for the purpose of visiting the grave of her child; that they were camped in the old spot, and the men had planned to rob and burn the house and either kill or carry into captivity herself and child. She had opposed them, and was now going back to the house to prevent them carrying out their purpose.

Leaving Margaret and her child snugly ensconced in the hollow tree, the woman went back to meet the Indians, who did not belong to the band of the previous winter, and knew nothing of the kindness of the white people. Her eloquence prevailed; for though they hung around the place all night, they at length departed without doing any damage.

In the morning the friend to whom she owed so much, accompanied Mrs. Durand back to her home, and remained with her until her husband returned. They noted with real commiseration how grief and sickness had wasted her once strong and vigorous frame. But it was in vain they offered her a home and begged her to remain with them.

"Go back to tribe," she said. "Come some time—die by Soonetah."

But time passed; many times the flowers bloomed and the snows fell on the grave of the Indian girl, and still the mother did not come.

One day in autumn the children—for there were several now—came running in breathlessly crying: "O, mother, mother! an old Indian woman has come and sat down by the hollow oak where we were playing!"

For a week Margaret tended the old woman as a daughter might have done, and then they laid her in her forest grave by the side of the child she had loved so well.

✻ The Trend of Twentieth Century Science ✻

When the Atom Is Mastered What Then?—Ultimate Science

AND what then?—must surely be a question sometimes asked of himself by every student of science. What then?—when the nature of the atom is known, and the path and behavior of its constituent lesser atoms; when the currents pulsing in the ether are known, and the interrelations of all forces; and when all this knowledge is drawn into the service of mechanism, and the last possibilities of machinery placed at the disposal of man; what then? Man remains but man.

So for a moment the flush of the excitement of research would pale out. The ordinary man, who is not a student of science, can see the force of that position, can intelligently wonder whether, after all, the one function of science is to make life mechanically easier, or merely longer.

Has science no relation to religion? In the main, the preachers seem to patronize science. Except for its commercial and facilitating effects on life, they seem to think the study of it is only valuable as "revealing to us the wondrous handiwork of God:" but what that handiwork is actually doing that is of obvious value among the molecules and planets, we do not hear from them. For many of them the only really important thing is the culture of the soul. "When the soul stands in the presence of its Maker, the question will be, not: What do you know of the constitution of the atom? but: What sort of life have you lived?"

Do we then almost utterly waste time in studying the structure of the atom? Has such knowledge no relation to "eternal life?" We know the world of atoms in two ways, both, so far, in the last degree imperfect. We know it as science knows it, from without, by what we see and infer. We know it from within, by sensation. The sensation that makes one stretch his arms arises among the cells of the muscles, which find that the blood is not stirring fast enough amongst them, or that the lymph is stagnant. If the cells are very much perturbed, the result is pain. To that extent is our consciousness intimate with the cell life. But the cell is built of thousands of molecules, specially arranged; just as organs are built of thousands of cells, specially arranged. And the molecule is built of many atoms; the atoms of perhaps hundreds of lesser units; and these in their turn?—we do not know.

How far into these worlds within worlds does our consciousness go? Not very far; further in the case of sensitive and artistic people than others. But if we carry our conceptions of evolution to its extreme, we must assume that man—*pari passu* with growing consciousness of himself as a soul—will grow into more and more perfect consciousness of his body, till he pushes the light of his knowing into every cell, into every molecule, every atom, and touches the little flame of consciousness in each. Then he will find himself in a populous world of dominion which will afford him ten million sensations of life where now he has but ten. He will touch the exquisitely living ultimates of nature with one pole of his consciousness, and the other will be in relation with the absolutely spiritual, his self-conscious thought reflecting both. But every atom of the universe is in relation with every other, so that a movement of the hand disturbs Sirius.

We spoke of man's body—as he and it will be—as the "world of his dominion." More and more perfect will be his control of it, into its very ultimates, more and more perfect its receptivity to his consciousness, as the relation becomes closer. And as his conception grows of the meaning of the aphorism: "A stone becomes a planet, a planet an animal, an animal a man," he will see that the cells of his body are nature's nursery for the peopling of future worlds. Nature's atoms come to him for education, for that touch of higher consciousness which he alone can make dawn in their dimness. And then she takes them back into her mixture—never again the same—giving him others for higher and higher education as his spiritual growth perfects itself.

To a corroboration of this ancient idea, we think that modern science will lead. It will blend with religion, showing man as leading the march of nature and responsible for the lives of future worlds; enriching our ideas of brotherhood; enforcing the idea that only as man expands his conception of himself as a soul, and of the spiritual world, can he appreciate the profound beauty and harmony of the physical world. Y.

German Scientists Who Fancy They Can Restore the Dead

TWO German scientists believe that they are on the road to a great discovery, which is nothing less than restoring the dead to life. The old familiar salt solution is, of course, well in the foreground, and by its aid a human heart was persuaded to resume its pulsations some days after death.

Such experiments are, of course, interesting, and may even be useful in cases of disease. To speak of them, however, as a restoration of the dead, or even as a step in that direction, is a display of ignorance of which no real scientist could be guilty, and for which we imagine a sensational daily press is alone responsible. The prominent newspapers of America claim to be in the van of human progress, and whatever sins may be charged against them, to be at least up-to-date. What, then, are we to think of a journal, newly established and one of the largest in America, which allows itself to preface a description of the experiments in question by such a sentence as this: "Ever since the discovery was made a few years ago that life is a mechanical process?" etc., etc. It is not easy to determine whether this is due to mere foolish ignorance on the part of the writer, or whether the said writer is assuming an ignorance on the part of editors and readers which they may or may not possess, and so seizing an opportunity to express his antiquated opinions which might otherwise have to go unexpressed. It is needless to say that no such "discovery" was ever made, or ever will be made, and that there is no first-class living scientist who would be capable of writing such folly. Statements of this kind may seem to be smart, but they are bad journalism.

STUDENT

The Exigencies of War and the World's Supply of Nitrogen

A CURIOUS oblique indictment of war comes from the U. S. Department of Agriculture. Part of the 1902 *Year-book* deals with the problem of the loss of nitrogen from soils, the supposedly threatened "nitrogen famine." It enumerates the causes of the loss of nitrogen. First, there is the removal of crops from the soil. The way of nature, so to speak, is that the fruits and foliages should fall upon the soils and decay there, thus returning year by year all that the growing vegetation took—and more, for it has built much of its texture from air. But man removes the crop and consumes it.

Second, comes "the vast waste of nitrogenous material that is involved in modern sewage methods," being taken to the ocean. Liebig called this "a sinful violation of the divine laws of nature."

Thirdly, comes the making of explosives for war. "About twenty-three pounds of nitrate of soda will yield an increase of one bushel of wheat per acre." And in every war, hundreds of thousands of tons of nitrogenized explosives are used, more or less directly built from natural nitrates. Beds of nitrate of soda, made by countless centuries of bacterial action from aerial nitrogen, occur in Chili and Peru. In 1860 it was thought that these beds would last 1500 years. At their present rate of exhaustion, however, nothing will be left of them in forty or fifty years. Part of this use is legitimate—for fertilizing soils. The rest is for mutual slaughter.

K.

BACTERIA are now known to be capable of enduring for an indefinite time a temperature of 250 degrees Centigrade below zero, and of resuming their activity as soon as the cold is removed. They can also go on with their work at the high temperature of 76 Centigrade above zero. From these facts it has been suggested as quite possible that some of these life germs may have come to the earth from other worlds. They may have arrived with meteorites, or with some of the cosmic dust constantly falling on our planet from its relatives in space. This "infection" of the earth with her life germs is part of the teaching of Theosophy; but Theosophy also asserts that spontaneous generation was once in full swing.

STUDENT

It has been found that cave air, cellar, and subterranean air generally, is radio-active. Especially so is air drawn by aspiration from rock masses.

Here and There Throughout the World

INDIAN DOCTOR HEALING THE SICK AT FORT WRANGEL, ALASKA

The Great Famine in Southern China SOME idea of the Chinese famine is conveyed by a letter lately received from Mr. Norman Mackenzie, who has been engaged upon relief work in the southern part of the country. He writes:

The distress was certainly more acute here than in any place visited subsequently. It was here where human flesh, usually that of executed criminals, was sold in open market; women and girls were sold by the hundred and taken to Canton and elsewhere, until it was estimated that some 10,000 or more had been sold. . . . In going about the streets or upon the city wall it was no uncommon sight to see those who had died from starvation, beside many others whose pitiful appearance showed that, although relief had come, it had come too late for them. Frequently also on going round to open the doors of the temple where rice was given, men and women were seen dying right at the doorway. Almost immediately after their last breath a rude coffin would be brought, the body roughly thrown in, and the whole carried away, to be given a hasty burial outside the city.

In countries more highly favored by nature such misery is inconceivable and should induce a greater charity of judgment than we have been in the habit of showing toward the celestial empire and its peculiarities.

Uncleanliness & the Plague in India FROM India comes the grave information that the government has decided to cease its efforts to check the plague among the natives. Since the outbreak of this terrible disease seven years ago, more than two million people have died and the government now finds that it can do no more in the presence of determined resistance from the whole population. Every method known to science has been tried and no labor has been spared to show the people that the plague is pre-eminently a dirt disease and that the remedy is absolutely in their own hands. The authorities are confronted with solid and sullen resolution on the part of 300,000,000 of natives who already show signs of dangerous restlessness in the presence of sanitary measures and regulations which they distrust and detest. It is a distressing problem and one which does not concern India alone.

Democracy & Plutocracy in the U.S. THE true principles of democracy do not seem to be well illustrated by the ten thousand well dressed men and women who recently fought like demons in order to witness a wedding ceremony which had nothing to recommend it except caste and wealth. To the worship of money we are unfortunately well accustomed, but the waves of the Atlantic ocean ought to be a bar to the adoration of social caste. In any European capital the wedding in question would have passed comparatively unnoticed, but it is left to democratic America to crowd this function with the same public enthusiasm which is usually reserved only for prize fighters and desperate criminals.

Germany's Army Lacks Enthusiasm JUDGING from a recent article which seems to have the stamp of authority, the German army has lost some of the *esprit de corps* which once distinguished it. This is certainly equally true of some other European armies. When war becomes purely commercial and aggressive it ceases to be magnificent. It has lost something which cannot be replaced either by uniforms or by resounding and meaningless phrases. There was once a military ideal and national chivalry had a meaning. Wars which are waged for bondholders and missionaries may still appeal to certain classes of the community but they do not appeal to the private soldier—nor to his wife.

Paul Kruger's Big Zulu Diamond It is small wonder that superstitions die hard so long as such remarkable stories are told as that which is connected with a magnificent diamond now in possession of Mr. Kruger, lately the President of the Transvaal Republic. This stone which weighs over 200 carats once belonged to the Zulu chief Chaka who was assassinated by his brother. The brother was subsequently himself assassinated and within the course of a few years the diamond changed its ownership fifteen times, the possessor in every instance dying a violent death. Mr. Kruger himself is said to have obtained it by force.

The Increase of Crime in Egypt LORD CROMER and Mr. Wilfrid Blunt unite in deploping the marked increase in crime which the last few years have witnessed in Egypt. The former draws attention to the problem without any very definite attempt at a solution. Mr. Blunt however seems to think that the administration of the law has been left too entirely in European hands and that the natives ought to have the direct interest which comes from a direct control. He says "the best native intelligence needs to be enlisted for the direction of the departments and to be endowed with responsibility and authority."

Heavy Penalty for French Chemists THE Paris courts have just inflicted a salutary lesson upon various chemists who have been found guilty of supplying morphia to a customer without the prescription of a doctor, whereby the said customer became a morphiomaniac. One of these chemists was fined \$100, the second was sentenced to two months imprisonment and the third to one month's imprisonment. They were moreover required to pay a sum of \$1250 for "wounding by imprudence." To create a disease for the sake of pecuniary profit ought to be a punishable offense in America as well as in France.

Russian Church Dislikes Algebra A YOUNG peasant in the Russian province of Minsk, has been arrested for having in his possession a book on algebra. His acquittal by the local magistrate was, however, accompanied by the warning not to buy books which tended to make of him an atheist and an anarchist. Can it be that the study of algebra is responsible, all unsuspected, for the Higher Criticism, the decline in the number of theologic students and the waning power of the churches? Even from the Russian Province of Minsk may come a ray of light upon one of the problems of the day.

The Size of the Louvre in Paris THE discovery that a public building is one-third larger than has been supposed, must certainly be gratifying to the nation which owns it. This is the case with the Paris Louvre, an architectural expert having found that the external walls have been buried to a depth of about twenty-four feet. The stonework thus disclosed is exceptionally fine and is described as being equal to the basements of the finest Florentine palaces. The necessary funds for restoring the Louvre to its original proportions are at once to be provided.

THE CHILDREN'S HOUR

Our Houses

DEAR CHILDREN: They are building many houses in Loma-land these days, for many people, all over the world are begging to come here to live. And today, as I took a walk past the eucalyptus row that is just west of beautiful Students' Home, No. 2, it occurred to me that people were very much like houses after all. Badly built houses we are, most of us, for we didn't have Raja Yoga when we were young, you know, and so when we come to Loma-land to live we find that the most necessary thing is to build ourselves all over again.

Many of us—and even little children out in the world can see how true this is—have the wrong kind of foundations, for when we built the foundations as little children there was no one to tell us how to build them right. Besides, there are not very many windows in these houses which are ourselves!

And when we look into some of the dark corners we find ugly, ill-fitting pieces, so ugly that they would spoil the best house in the world—they are jealousy, and envy, and curiosity, and oh! so many bad habits.

Still, when we look farther, we see some good strong beams—great blocks of good will and unselfishness. That gives us courage to go at the work of making over our houses and so those of us who really want to do right, just tear out the ugly, ill-fitting pieces and replace them with the splendid great blocks that seem to grow larger and stronger the more we cut and shape them.

Even little children sometimes have ugly blocks in their houses—little children, I mean, who don't know about Raja Yoga. For those who do know about it have the great secret, which is, to transform all the ugly parts of our houses—that is ourselves—into strong and beautiful parts. M. W.

NOT long ago, says one of our German papers, two storks came to a little village called Poppenhofen and built their nest on the roof of the schoolhouse. One of them appeared to be exhausted by its long flight and the next day the schoolmaster found it lying on the ground before his door. He carefully lifted the bird, took it into the schoolhouse, and cared for it until it was rested. Then he carried it out to a nearby field where the other stork was waiting for it with food. After that he carried it back into the schoolhouse to rest. He did this for several days until the stork was cured, when he left it to fly to the nest with its mate. It flies down every evening and walks with the schoolmaster on his way home. A. W.

About a Mongoose

DEAR CHILDREN: This is a true story of how a man's life was saved, just because he was kind to an animal. It was in India, and a friend there recently wrote me about it.

One afternoon, while eating his lunch, a soldier saw a bright-eyed little creature coming up to him across the veranda. He tossed it a bit of fruit and then some biscuit. The little thing was pleased, and the next day came again. Soon he became a regular visitor, and he and the soldier were great chums.

One day, the man was lying in his hammock, half asleep, when he saw a great snake enter the room and creep towards him. It was one of the deadliest varieties in India, and was more than seven feet long. The man dared not call for help, and as he was just recovering from a fever he was too weak to defend himself. Just as it had reached the foot of the bed there was a skurry of little feet across the room and there was "Tommy." He attacked the snake with his sharp teeth and at last killed it. Then, after it was all over, the soldier learned that Tommy, his little four-footed friend was a *mongoose*, a kind of animal that is famous for its courage in killing venomous snakes. And that was the soldier's reward for just being kind to one of God's creatures. AUNT EDYTHE

SOME OF THE TINY LOTUS BUDS OF THE RAJA YOGA SCHOOL, POINT LOMA, AT LUNCH IN THEIR GROUP HOME

THE SNOWFLAKE

by MARGARET E. SANGSTER

IT was a little snowflake
With tiny winglets furled;
Its warm cloud-mother held it fast
Above the sleeping world,
All night the wild wind blustered
And blew o'er land and sea,
But the little snowflake cuddled close,
As safe as safe could be.

Then came the cold gray morning,
And the great cloud-mother said:
"Now every little snowflake
Must proudly lift its head,
And through the air go sailing
Till it finds a place to light,
For I must weave a coverlet
To clothe the world in white."

The little snowflake fluttered
And gave a wee, wee sigh;
But fifty million other flakes
Came softly floating by;
And the wise cloud-mothers sent them
To keep the world's broad warm
Through many a winter sunset,
Through many a night of storm.

A Robin's Nest

A LITTLE girl named Agnes writes to an English paper an account of how a pair of robins built their nest in an old lantern. She says: "I will tell you a true story about a robin which built its nest in a farmhouse on the banks of the river Ribble. It being an old hall, there were several rooms unoccupied. In one of these rooms hung an old horn lantern with most of its panes broken out. It was suspended from the ceiling by a cord and could not be reached except by the aid of a chair or ladder. In this cosy cot I found a robin's nest with two eggs in it. In a few days there were five. I was told to lock the door and leave it in peace. "But I have forgotten to tell you the way the robin had access to the room. It came through a leaden window which had some of the small squares of glass out. In about a month, when I looked again, I was surprised to see the old bird feeding four young robins."

If it were not for birds man could not live upon the earth.—Geo. T. Angell, Ed. *Our Dumb Animals*

Students'

Path

FROM THE WELSH OF TALIESIN

NOT of father and mother,
 When I was made
 My creator created me;
 But of nine-formed faculties,
 Of the fruit of fruits,
 Of the fruit of Primordial God,
 Of primroses and hill blooms,
 Of the flowers of trees and shrubs,
 Of earth, of an earthly course,
 Of the foam of the ninth wave,
 Of the blossoms of nettles.
 When I was made.
 I was enchanted by the Master of Illusion,
 Before I became immortal
 I was enchanted by the Master of Initiation,
 The purifier of Brython,
 Of Eurwys, of Euron,
 Of Euron, of Modcon,
 Of five battalions of white magicians,
 High Teachers, the children of Maya.
 I am old, I am young, I am Guron,
 I am universal.—*International Theosophist*

The Real Mysticism

WE read a romance of the "short story" order, the other day, whose hero was of an increasingly common type. He was no hero of deeds, not indeed a hero at all; and his favorite occupation, as he "labored deathwards," in the unutterable depths of introspection, was not only that of "watching himself feel, but watching himself watching himself feel." He wore a slouched hat, lived among flowers in the country, had no recorded mode of livelihood, and was incapable of any decision upon anything.

An increasingly common type of hero, we said. It arises out of a study of "the new mysticism," whose prophet, perhaps, is Maeterlinck. We are bound to call it decadent, because it leads away from, instead of towards, deeds. And action is one of the two great antiseptics of life. The other is aspiration, meditation, prayer—the intent fixing of the imagination upon an ideal higher than one's present self, and the holding it there *with strain against resistance from below*.

By these two—action and meditation—efforts onward and upward—the light is reached and life understood. But not in any case by morbid dissection of sensation, emotion and feeling, a dissection which is also a fermentation. And because the exhalations of such a fermentation are mental or emotional instead of physically gaseous, they are welcomed, dwelt on, described, and regarded as marks of genius.

The real mystic is the man who acts, does things against resistance. He is not an actor (or doer) from ambition, to get on, to achieve wealth or fame. He is a heroic lover of life. He feels the pressure of expanding life in his heart; and in another part of his nature, from below, a resistance. So he gets his joy in hurling himself, or his force, against that, against inertia, against his greed, his ambition, laziness, selfishness, and compelling a series of daily actions in direct defiance of all those chains. He feels freedom coming upon him, a new joy, strength, triumph, insight, health. He is constantly conqueror, breaking in each hour the particular claim of that hour. He is man, not dreamer. The years bring more and more light; and they bring at last—or even from the first—an awareness of inner help. Something immortal within watches him and helps, something from an infinite past, of infinite future. And its light floods his consciousness more and more till he is a real initiate in the real mysticism. He has come to his manhood, gained the perfect freedom, scattered the clouds.

The path is easy; each hour has its step; let the next hour look after

itself. There is no failure possible against steady effort. All weaknesses fall away not so much by direct conflict with them as by positively doing those things which affront and confound them. A.

International Peace Movements

THE Twentieth Century Club has listened to a very remarkable address by Mr. Edwin T. Mead on International Peace Movements.

Mr. Mead has lately returned from a foreign tour and has apparently used his powers of observation to some good purpose. He says that the Hague Court is rapidly growing in influence and that it has in fact come to stay:

We of English blood wish to take to heart the fact that our record in the past few years has not been a good one. The resources of the people are being misapplied. The time has come when these millions and billions of dollars which are being spent for destruction must be spent for constructive purposes. The economic aspect is the one upon which we must lay emphasis.

True it is that the resources of the people are being misapplied but the misapplication is by the people themselves. It is time to cease speaking of self-governing communities as though they were the victims of some tyranny other than their own and were thus irresponsible for the acts done in their name. Instead of saying that the resources of the people are being misapplied it would be more direct and more correct to say that the people are misapplying their resources and that nothing is needed but an act of national volition. We do not usually attribute our virtues to the government. Why should we make of the government a scape-goat for our vices?

Mr. Mead's references to France were especially noteworthy. He says:

France and not England or America, is the leader, I do not hesitate to say, in international sentiment. I was deeply interested at the largeness of the schemes of Frenchmen to restore France to the primacy of Europe. They would develop her along economic lines. They long to make Paris a seaport. It has dawned upon them that if they would meet their economic aspirations they must save the tremendous expense incurred by the maintenance of the war system.

Comparisons are always odorous and we can duly estimate the position of France without their aid. It needs no profound study of history to call forth an ungrudging admiration for the long struggle for freedom which her people have waged and how magnificently that struggle has been crowned. No higher tribute can be paid to her present attitude toward the peace movement than to say that it is in tune with her traditions and a worthy continuation of her record. STUDENT

Right or Wrong

A CONTEMPORARY raises the somewhat time-worn question as to whether a soldier ought to enjoy war or to detest it. These ethical puzzles are the inevitable result of human codes of law which induce the fallacy that it is possible to draw a boundary line between right and wrong. No such line can be drawn except by and for the individual. Two men may commit an identical act which is for one a fault and for the other a virtue. To the savage, the highest virtue may be to refrain from robbing the members of his own tribe. The civilized man concedes that it is wrong to rob anyone, or he may one day concede it. If to become a soldier is consistent with a sense of duty then the ordinary obligations of a soldier also become duties and to be carried out as such with energy and with that enjoyment which always attends the performance of a duty. The word enjoyment is of course vague and misleading. A surgeon may perform an operation with intense enjoyment. He will probably be a poor surgeon if he does not feel such enjoyment in the exercise of curative skill. At the same time he may feel genuine regret at the attendant pain and even at many distasteful details.

Such questions would be entirely impossible if we were to recognize the existence of the soul as a living, speaking and guiding reality, and if we were content to individually obey its dictates, leaving other men to do the same according to their light and their evolution. Instead of doing this we usually devote our energies to forcing others to conform to our intellectually raised standards and so cut off the light of the soul both in them and in ourselves. Let us, first of all, place ourselves under the guidance of the soul, and then whatsoever our hands find to do, we will do it with our might. STUDENT

WON THE CROWN

by WILLIAM GASKELL

CALMLY, calmly, lay him down,
He hath fought the noble fight;
He hath battled for the right;
He hath won the unfading crown.

Memories, all too bright for tears,
Crowd around us from the past.
Faithful toiled he to the last,
Faithful through unflagging years.

All that makes for human good,
Freedom, righteousness, and truth,
Objects of aspiring youth,
Firm to age he still pursued.

Kind and gentle was his soul,
Yet it glowed with glorious might;
Filling clouded minds with light,
Making wounded spirits whole.

Dying, he can never die!
To the dust his dust we give;
In our hearts his heart shall live,
Moving, guiding, working aye.

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question In the last issue you drew a distinction between personality and individuality. Please explain more fully what meaning is attached to these words in Theosophy.

Answer Attention has been called repeatedly in the Student's Column to the dual nature of man as one of the most important teachings of Theosophy. There is in him that which undergoes change from birth to death and from life to life, but he has also a permanent divine nature which does not change but which reveals itself more and more in his life, using the impermanent lower nature as a means for its manifestation and thus being in part the cause of the growth and change in the lower.

These two natures are the personal—the evanescent—and the individual, the indivisible, the permanent. The personal nature is as it were a distinctive garment with which the soul clothes itself, and as a garment it wears out and must be constantly renewed. It is in the personal nature that arises the sense of separateness, from which springs the false notion that *my* interests are different from *yours*, hence giving rise to ambition, jealousy and so to competition and war. But the individual nature, being indivisible, links all humanity together. It is from it that springs that highest expression of man's divinity—compassion, that awakes in him the sense of Brotherhood and fellow feeling, that prompts him to deeds of service for others.

The individuality is the spiritual divine nature—the higher self; the imperishable Ego that passes over from life to life, that culls from all the experiences of life whatever may be akin to its own nature, *i. e.*, whatever may be true and lasting. The personality is the material nature with the transient, changeable desires, the changing thoughts that are concerned only with the externals of life or that are not directly in harmony with the higher nature.

A very beautiful simile has been given again and again to show the relation of the individuality to the personality. It is that of a golden thread on which beads are strung. The thread is the ever continuing line of life of the individuality; the beads are the successive personal existences, the many personalities in which the divine soul, the individuality, seeks to mirror itself more and more.

H. P. Blavatsky speaks of the *Sutratma*, which means literally the Thread Soul. It is a synonym of the reincarnating Ego which absorbs the [purer] recollections of all our preceding lives. It is so called, because, like the pearls on a thread, so is the long series of human lives strung together on that one thread.

She says further:

I have given you once already a familiar illustration by comparing the *Ego*, or the individuality, to an actor, and its numerous and various incarnations to the parts it plays. Will you call these parts or their costumes the individuality of the actor

himself? Like that actor, the Ego is forced to play during the cycle of necessity . . . many parts such as may be unpleasant to it. But as the bee collects its honey from every flower, leaving the rest as food for the earthly worms, so does our spiritual individuality, whether we call it *Sutratma* or *Ego*. Collecting from every terrestrial personality, into which Karma forces it to incarnate, the nectar alone of the spiritual qualities and self-consciousness, it unites all these into one whole and emerges from its chrysalis as the glorified [perfected soul].

Indian Women Have Short Teeth

TO the white men it seems a strange thing that the teeth of Indian women are soon worn off short, and it is foolishly said that it is because of eating dirty food. This is not true, for if it was true the back teeth would be worn more, but they are not. Also the teeth of the men would be in the same way, but they are not. So now listen to the truth and know that it is the tanning of leather and making moccasins, which wears their teeth short. The hide they fold double and chew where it is folded to make soft, then fold in another place and chew again until all is done. In this way they do with much hide to make the finest leather. Also when they are at making moccasins they with their teeth the edges to be sewed do press together, so that in many years their teeth are shortened.

When they are working over the house fire in the center of the wigwam, their faces are much in the smoke, so that the skin becomes very dark and wrinkled much, also their eyes become red and the eye-covers are loosened and made to hang down. The carrying of many loads, boats and other things bends their backs and makes them to walk stooped over. It is for these reasons that Indian women quickly seem to be old and ugly.

The white men do not like these things and say that it is not right that women should so work, but they do not know because they never lived as we did.

But now we use much cloth and the game is gone, so there is not so much hide to be tanned and the women's teeth are not worn off.

HYAS ZELOÓ EÉNA

Treatment of the Insane

A PARTICULARLY ugly story comes from one of our insane asylums. An inquest has been held upon the body of a patient who appears to have died as the result of extreme violence, the medical evidence showing that six ribs were crushed and that nearly every internal organ was injured. The incident derives its peculiar gravity from a statement made by one of the guards, to the effect that the unfortunate man having become violent he was choked into submission with a pillow case, and that *this was the usual method employed in asylums to control an unruly patient*. If this is indeed the "usual method," the sooner it becomes unusual the better, and we hope that such a statement will be followed by authoritative disclaimers. Any one capable of adopting such a method as this is obviously unfit to have the care of the insane. If this is indeed a part of the recognized treatment of those who are so peculiarly helpless and defenseless, we do not seem to have advanced at all since asylum abuses were first brought to public attention. The insane have practically no remedy against cruelty, inasmuch as their own evidence and complaint is invalidated by their condition, and very special care ought therefore to be exercised in the choice of their attendants. A combination of authority and humanity is, of course, notoriously hard to find, in asylums and elsewhere, but as little as we can do is to exercise a supervision that will at least make cruelty in its cruder forms an impossibility.

STUDENT

The Life of Gladstone

IN perhaps the most interesting chapter of the first volume, entitled "Characteristics," Mr. Morley, before setting out to record Gladstone's exploits as a Minister, discusses the man. "He was never very ready to talk about himself," Mr. Morley writes of his subject, "but when asked what he regarded as his master secret, he always said 'Concentration.' Slackness of mind, vacuity of mind, the wheels of the mind revolving without biting the rails of the subject, were insupportable. Such habits were of the family of faintheartedness, which he abhorred. Steady practice of instant, fixed, effective attention, was the key alike to his rapidity of apprehension and to his powerful memory."

Some stanzas from Mrs. Brownings "The Cry of the Children"

DO ye hear the children weeping, O my brothers,
Ere the sorrow comes with years?
They are leaning their young heads against their mothers,
And that cannot stop their tears.
The young lambs are bleating in the meadows,
The young birds are chirping in the nest,
The young fawns are playing with the shadows,
The young flowers are blowing toward the west:
But the young, young children, O my brothers,
They are weeping bitterly!
They are weeping in the play-time of the others,
In the country of the free.

"For oh," say the children, "we are weary,
And we cannot run or leap:
If we cared for any meadows, it were merely
To drop down in them and sleep.
Our knees tremble sorely in the stooping,
We fall upon our faces, trying to go;
And, underneath our heavy eyelids drooping,
The reddest flower would look as pale as snow.
For all day we drag our burden tiring
Through the coal dark, underground,
Or, all day, we drive the wheels of iron
In the factories, round and round."

For all day, the wheels are droning, turning;
Their wind comes in our faces,
Till our hearts turn, our heads with pulses burning,
And the walls turn in their places:
Turns the sky in the high window blank and
reeling,
Turns the long light that drops adown the wall,
Turn the black flies that crawl along the ceiling,
All are turning, all the day, and we with all.
And all day, the iron wheels are droning,
And sometimes we could pray,
"O ye wheels," (breaking out in a mad moaning)
"Stop! be silent for today!"

Now tell the poor young children, O my brothers,
To look up to him and pray;
So the blessed one who blesses all the others,
Will bless them another day.
They answer, "Who is God that He should hear us,
While the rushing of the iron wheels is stirred?
When we sob aloud, the human creatures near us
Pass by, hearing not, or answer not a word.
And we hear not (for the wheels in their
resounding)
Strangers speaking at the door:
Is it likely God, with angels singing round Him,
Hears our weeping any more?"

And well may the children weep before you!
They are weary ere they run;
They have never seen the sunshine, nor the glory
Which is brighter than the sun.
They know the grief of man, without its wisdom;
They sink in man's despair, without its calm;
Are slaves, without the liberty in Christdom,
Are martyrs, by the pang without the palm:
Are worn as if with age, yet unretiringly
The harvest of its memories cannot reap—
Are orphans of the earthly love and heavenly.
Let them weep! let them weep!

They look up with their pale and sunken faces,
And their look is dread to see,
For they mind you of their angels in high places,
With eyes turned on Deity.
"How long," they say, "how long, O cruel
nation,
Will you stand, to move the world, on a child's
heart—
Stifle down with a mailed heel its palpitation,
And tread onward to your thrones amid the mart?
Our blood splashes upward, O gold heaper,
And your purple shows your path!
But the child's sob in the silence curses deeper
Than the strong man in his wrath."

School Education and Greatness Seldom Related

THAT a youthful love of school is not necessarily a prelude to coming greatness, is illustrated by a story which is told of M. Loubet, the President of the French Republic. It seems that as a boy he had a strong objection to education, and when his father decided that he should go to college, the youthful Emile, then nine years old, made up his mind that nothing but force should accomplish that end. He therefore hid himself in a neighboring wood, and even when discovered he refused to surrender. His resistance was so strenuous that nothing else could be done than to tie him hand and foot and thus ignominiously carry him to the carriage which was to convey him to his educational destination. The unwilling scholar became, as we know, one of the world's

great men simply through the force and integrity of his own character.

It is, after all, character which tells all along the line; not intellectual knowledge. At present a rather stupid world supposes that the latter acquisition alone will give speed to the feet of the runner, although the whole history of civilization is a proof that the laurel wreaths of fame and success are invariably laid at the feet of character and not of scholastic attainments. The child in whom character is developed will add all other good things unto it, but the child without character will be a nonentity and a failure. If parents would seek for their children only those schools which develop character, we should soon have a different order of men and women in the world. At present all that we ask of the school is that it shall turn out an intellectual sausage. STUDENT

The Raja Yoga Edition

THE Special Raja Yoga Edition of **THE NEW CENTURY** contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to **THE NEW CENTURY CORPORATION**, Point Loma, Cal., the papers will be mailed for you without extra charge.

A Remarkable Aqueduct

For many years the great gold fields of the famous Coolgardie Mining District of Western Australia have been suffering seriously from the lack of adequate water supply. It was by no means an uncommon occurrence to pay as much as seventy-five cents for a gallon of drinking water. Hotel keepers in many towns and villages were wont to guard more jealously the manner in which the customer helped himself to the water than to the whiskey bottle. Even the richest mine owners in Coolgardie were not able to take a bath. In July, 1889, a report was presented to Parliament, with a bill, authorizing the raising of a loan of \$16,500,000 for a plan of supplying Coolgardie with water.

According to the report accepted and the work carried out, a pipe line had to be constructed over a total length of no less than 328 miles. The pipes are of steel and have a diameter of thirty inches. The velocity of the water is 2124 feet per second, while the weight of water to be raised per day is 25,000 tons. The horse power of the engines to carry out this work is 6187, and the quantity of water to be pumped per day of twenty-four hours has been fixed at 5,600,000 gallons. One of the reservoirs—the Helena reservoir—cost in the neighborhood of \$2,700,000. The cost of the pipes alone was nearly \$11,200,000.

The whole undertaking is now nearing completion, and it is hoped that within a month or so the Coolgardie gold fields will be provided with an abundant supply of water, which in all probability will give a new impetus to the important mining industry in that section of Australia.—*Philadelphia Record*

Unvoiced Yearning for Good

WE should be unfaithful to our belief in the divinity of man if we did not pin our faith to the existence of a great unvoiced yearning for good, which is perhaps the most strong where its evidences are the most unseen and unsuspected. The soul does not weary in its world-old struggle, and its opportunities are sometimes so disguised that we do not hesitate to label them as calamities. The discordant waves of human life break so tumultuously upon a rock-bound coast, and so many battered wrecks lie hideously within our sight, that we forget the great silent and sunlit ocean that lies beyond, hiding within its depths the

pearls of great price. And so we know that no man who loves humanity stands actually alone, however dense may be the darkness into which he looks, however vibrant with human hate that darkness may seem to be. Somewhere there is a vast army of comrades, unknown it may be to one another, yet linked together by their very willingness to stand alone. Others there are who by their timidity shut themselves off from that companionship of strength. Would that it were possible to sound a bugle-call into the ears of all men of good-will everywhere that they might recognize the essentials of service and so put away from themselves all lesser energies, all smaller pursuits, all discouragements which

The Power to Stand Alone

weaken both hand and heart! Those essentials are few in number, and all too often we despise them for their lowly dress, but the power to stand alone is perhaps the greatest of them all. It is when we seem to be most alone, to be most isolated, that the powers of nature are drawing closest to us. When that place becomes a home to us where we are as nothing in the eyes of men, then it is that we are girdled with redeeming powers, then it is that our thoughts become protective angels. God speaks only to the isolated and the lonely, and the still, small voice will not compete with human applause. It is from the silences that we draw power and not from the acclamations of men. No human combination can prevent us from being worthy of power, and none can withhold from us the power of which we are worthy. The Soul does not judge by human standards, nor surrender to majorities, and there are no competitive examinations for the prizes of service. To every man comes death, and then perforce the silence, and no other possible approval than that of the unveiled Soul. And the second requisite is devotion, which is indeed the very food of the Soul and its invocation. He who has devotion has the master key to the portals of wisdom, and all other things can be added to him. If we only knew how

The Soul Life That Is to Be

great is the service which we render to humanity by devotion and a willingness to serve, how much greater are these things than intellect or eloquence or the faculties which so often are merely external and to which we pay an undeserved reverence! Lightly the Soul esteems these things, for in one breathing space it can give them all, and in addition, that greater wisdom for which no basis of scholarship is needed. Devotion is cumulative like the waters behind a river dam, which in no way betray their presence until they suddenly carry away all obstructions and fill the thirsty channel. No man knows how near he or another is to the light and power, nor how many dark veils must yet fall before the certain heritage be won. It was said that these things should be in an hour when we know not, but that time comes only by invitation and by expectation, and never by the false diffidence which is a denial of the inner lord of life. This at least we can do; we can so order our days that they shall be a living prophecy in the sight of all men of the spiritual life that is to be, and thus our thought shall take wings bearing messages of peace and hope to all men of good-will whose hearts have been opened by devotion.

Statesmanship and Red Tape

SIR THOMAS BARCLAY pays a warm tribute to the sagacity of American statesmen. It will be remembered that Sir Thomas Barclay was a member of the Commission which drew up the treaty between England and France, and he hopes to see a similar agreement between England and America. He says:

If there is at this minute a real international law, it is due to the intelligence and perseverance of United States statesmen. They approach the question without being fettered by any stock notions of diplomacy. The European statesman is generally raised in a school. He is never face to face with the treaties of international diplomacy. He sees them as they are through a camera. We have no one in our country who can compare with Kent, Wheaton and Woolsey of Yale in international law.

In other words, there is less red tape, less circumlocution, in America than elsewhere; and red tape and circumlocution are responsible for more international difficulties than are jealousy and greed. There are many questions which are allowed to drift within measurable distance of war which in private life would be settled in half an hour. Common sense is one of the finest forms of wisdom, and, if we may be pardoned a paradox, one of the most uncommon.

Columbus

OUR knowledge of Columbus is materially increased by the researches of Mr. Thatcher, who has just published the second volume of his monumental work. Perhaps no more painstaking and careful labor has ever been given to the world, and the author is to be congratulated upon the wealth of detail which gives so great a vitality to his picture. The volume now published opens with the promulgation of the discovery of a new world, and with the facsimile letter which the great navigator sent to his friend in Spain, Luis de Sant' Angel. The little *Nina* was nearly lost at the Azores, and Columbus was filled with dread lest his secret must perish, even at the eleventh hour. He therefore wrote "as much as he could" upon parchment, and enclosed it in a cask, which he threw overboard. The cask has never been found, but the fuller account, which he wrote as soon as the storm moderated, was sent with all speed to the Spanish Court. The picture of the writing of that first letter in the tiny storm-swept boat and its consignment to the sea, is one of the most pathetic in history, a peculiarly tense incident in a dramatic life. The subsequent letter to Sant' Angel is as follows:

Señor (runs the folio letter to Sant' Angel), as I know that you will take pleasure in the great victory which our Lord hath given me in my voyage, I write you this, by which you shall know that in twenty days I passed over to the Indies with the fleet which the most illustrious King and Queen, our lords, gave me; where I found very many islands peopled with inhabitants beyond number; and of all of them I have taken possession for their Highnesses, with proclamation, and the Royal Standard displayed, and I was not contradicted.

This second volume deals with the four voyages which Columbus made, and shows how he eventually returned to Castile, old, weary and broken, with no other reward than the consciousness of his success, and having drunk to the dregs the cup of human ingratitude, which is always refilled to the brim for those who do the real and unselfish work of the world. Perhaps the supreme merit of this volume lies in the attempt, which the writer makes, to show that at the end of the last voyage Columbus himself was well aware of the true nature of his discovery, and that another great ocean separated him from India. STUDENT

What Is Called Education

THE unintelligent nature of much that passes for education is well exemplified by a correspondent of *T. P.'s Weekly*, who writes:

As to Gray's "Elegy," I am sure you are right. I remember how I used to grind through it without one word of explanation, when I was a little fellow of ten years of age [observe, *ten!*]: each line went by itself, and one consequence was that the thing in the piece that impressed me most was the reference to

The dark unfathomed caves of ocean bear.

I had had my neck nearly wrung off in those days, for once saying that a noun "governed" something, and I was not the boy to risk a further twisting by asking if it was the Polar Bear that was meant; but there was a magnificent remoteness in the dwelling of this creature that always pleased me, and it was not till later that I discovered what the verse really meant.

This is, of course, several years ago, but the reform is by no means so radical as can be wished. A good memory, and a willingness to use it, still pass for scholarship, and the mind of the child is too often regarded as an empty ship, which must be loaded with cargo as rapidly as possible. The fetish of the competitive examination takes no heed of the *love of knowledge* which the wise teacher may have imparted. It cares only for the facts which have been acquired, and it nearly always lays its wreath upon the wrong head. The great men of the world are always the men of character, and very rarely indeed do we find a great man with a brilliant school record. STUDENT

Historic Edinburgh Castle

THE illustration on the cover page of the NEW CENTURY PATH this week represents Edinburgh Castle, situated on the great cliff which first attracted attention in consequence of the ease with which it could be defended. Indeed the city itself owes its origin to the castle which, during the reign of Malcolm, was a royal palace. Here died in 1093, Queen Margaret, wife of Malcolm, and niece of Edward the Confessor, and the palace was frequently used as a residence by the Celtic and the Stuart monarchs. Until comparatively recent times Edinburgh was regarded as a frontier town, and the fortifications of the castle were therefore considered to be of supreme importance.

The Act of God

THE theatre calamity at Chicago has revived an odious ecclesiastical habit of referring to such events as a punishment deliberately inflicted by a personal God for some imagined wrong doing. It is to be observed that when those who use these pious brutalities are themselves overtaken by catastrophe they attribute it to the chastening love of God. Only when their neighbors are involved does calamity become divine retribution. Taking circumstances into consideration we are not aware that churches are in any way exempt from the dangers of fire, but these are not considered to be divine punishment—except sometimes by hostile sects. We should have supposed that those who have been thus plunged into bereavement and sorrow might have been spared the infliction of this additional pain and that even the narrowest ecclesiastical mind would have shrunk from such cruel blasphemies. Those who were present at the Iroquois theatre were not necessarily offending against divine law. They were as much entitled to visit the theatre as the church, and public sentiment ought to make itself felt against those who thus intensify the misery which has been caused. It is time that we ceased to attribute to the Deity the characteristics which we usually associate with the lowest types of humanity, and how seldom do we find even among the "heathen" the hideous cruelty of inflicting death by burning for any offence whatever? Those who profess to believe that Deity can commit such hideous crime are themselves capable of its commission. Indeed, they represent the very people who have reddened the pages of history with ecclesiastical outrage and persecution. We have had enough of this sanctimonious ferocity. We are very tired of it. X.

Only a Dog

THE opinion of Robert Browning on vivisection was often expressed, but nowhere more forcibly than in the following verses. The dog in question had saved a beggar child from drowning and had then plunged again into the water in order to rescue her doll:

And so, amid the laughter gay,
Trotted my hero off—old Tray,
Till somebody, prerogatively
With reason, reasoned: "Why he dived,
His brain would show us, I should say.

"John, go and catch—or, if needs be,
Purchase—that animal for me!
By vivisection, at expense
Of half-an-hour and eighteenpence,
How brain secretes dog's soul, we'll see!"

Vivisection in America

A REPORT from Claremont notifies us that the vivisection season has begun and that a large number of live cats are about to be dissected for the benefit of the junior class in biology. We are told that this process, which is an annual function, is looked forward to with great interest, and the laboratory was crowded with members of the class and visitors during the opening ceremony. The newspapers have of course no space to record the sermons of protest which must have been preached by the ministers of the neighborhood at these disgusting proceedings. STUDENT

The Health of Cuba

IT is not perhaps too late to notice a letter which appears in the *Scientific American* from Weston P. Chamberlain, Captain and Assistant Surgeon of the United States Army, dated from Havana, Cuba. The letter is self-explanatory, and we reproduce it in full:

In the *Scientific American* for October 31st or November 7, 1903, under "Notes," I noticed a statement that by good sanitation, etc., Cuba was *gradually* reducing the number of cases of yellow fever within its borders. This is a misstatement that is absurd to those who have read the medical literature of the last few years, and is unfair to Cuba and to the United States Army medical officers who helped free Cuba from yellow fever.

Not a case of yellow fever has originated in Cuba since three years ago last September. Occasionally a case is brought here from Mexico, but the patient is at once isolated, and in no case for over three years has the disease spread to others. So Cuba can be said to be entirely freed from yellow fever.

Some Views on XXth Century Problems

The Qualifications for Preaching

THE Rev. John Watson, better known as Ian Mac-laren, has put forward certain suggestions for the greater efficiency of the churches. His main criticism is directed against the methods in use for the choice of ministers, and while he handles his subject in an admirable manner, it is to be regretted that he does not see his way to declare against the payment of salaries as being the root of nearly all the mischief.

Dr. Watson sketches the course of the candidate for ministerial position from his first arrival at the university. He shows us how he passes through his curriculum in secular and theologic knowledge and the various examinations which are supposed to test his fitness for the ministry. But as to his real fitness there is absolutely no test whatever. So long as he has rendered some kind of general obedience to the ten commandments, or seems to have done so, the most appalling unfitnesses would pass through the sieve absolutely without detection. He may be inflated with self-conceit and with ambition, and he very often is. He may be entirely greedy for the fat things of his profession, he may be entirely lacking in human sympathy, and spiritually may be nothing more than a name, and not even a pretence. We do not say that all these things exist save in exceptional cases, but we do say that what are called the tests for fitness are entirely outside the field which they profess to cover. They are tests of intellectual knowledge only. And now comes the final test of all. The fully fledged minister must preach his trial sermon as a candidate for the vacant charge. Dr. Watson's comments upon this procedure are so forceful as to justify some extracts. He says that now the success of the candidate

depends very largely upon his fluency, together with, if he be unscrupulous, a certain tone which seems to give a pledge of piety and a certain adroitness in choosing subjects likely to be acceptable to the congregation. Can there be anything more unbecoming in our office than preaching the Evangel of CHRIST in a competition against five other selected candidates, or anything more likely to hinder a man of self-respect from entering the ministry? Can there be anything worse for the spiritual temper of a congregation than to sit as judges on the declaration of divine truth, or is there any function which in practice rouses worse passions in church life than a disputed election?

Tainted by the Money Question

The congregation which thus sits in judgment upon the capabilities of a would-be preacher and teacher,

can be captured any day by a windbag with two sermons full of apochryphal religious anecdotes and conventional phraseology. Here again we feel that there is something wrong, and that the best is not being done, either for the candidates or for the church.

All this is very sad and very true, and we are sorry that Dr. Watson does not drive home the nail which he has so accurately placed in position. Instead of this he recommends that the candidate be examined by a kind of committee which is to consist of "half a dozen well educated and spiritually minded men," who are presumably to be selected by the congregation. The whole scheme is of course hopelessly wrong, but we cannot refrain from asking if women are to be excluded from this committee, and if so, why?

There is no congregation upon earth which contains the necessary half dozen men or women who are competent to judge the fitness of another man for the ministry so long as the ministerial career is corrupted by the money taint. There is no other way to assure a comparative purity of motive than by removing those motives which are impure and mercenary. Purity of motive, freedom from pecuniary aims are surely the essentials of the ministry, and mere intellectual attainments and acquaintance with dogmas are as nothing compared with these. There are no boards of examiners, nor committees of six, nor entire congregations which can judge of motives so long as the glitter of gold is in sight, but remove the gold and the gold motive must also disappear. How many theological students would there be, how many trial sermons would be preached, if the candidate had first to realize that his material reliance must be placed upon the power that feeds the sparrows and not upon pew rents nor en-

dowments? Here indeed would be a creed worth having, that he who would teach of the Law must stand by the Law.

It is indeed strange that the churches are so blind to the obvious. How many sermons have not been preached upon the charge which Jesus gave to his disciples to go out into all the world and preach the gospel? He did not stipulate that the world would produce the necessary stipends, nor did he create a financial board for the due arrangement of the pecuniary prizes. On the contrary, He expressly forbade all such considerations, knowing well that reliance upon the spiritual law would render them unnecessary, and that without such reliance there could be no fitness for the work. It is the existence of this Law that the churches must preach, and it is reliance upon that Law that they must practice. When they have cleared the money-changers out of their Temples then Christ will return and with Him will come the multitudes of people eager to be fed with bread instead of the stones which have been given to them.

STUDENT

Evils of the Convict Camp

IT would seem impossible to say anything in favor of the convict camp system which still prevails in some States. Under this system convicts are leased to contractors for the performance of public works, and unless we are to regard the criminal as a mere convenient source of revenue it is impossible to defend a practice which not only confirms the wrong-doer in his misdeeds but must certainly have a deteriorating and brutalizing effect elsewhere. A prominent minister, whose opportunities of investigation have been somewhat extended, writes of these convicts' camps with the strength which comes from conviction. He says:

Criminals are generally scattered in branch prisons—quartered in rude stockades, without proper sanitation, food, or clothing. The average life of these convicts is less than ten years. Old and young are promiscuously chained and bonded together. Even men and women are, in some camps, not separated. Hardened criminals and the boy convicted of his first crime; the comparatively good and the most depraved, vile and abandoned, are chained together. One warden of a state penitentiary protests in his report that "under the present law and custom the penitentiary is the school of crime instead of being a reformatory institution. Of fifty boys under eighteen, nine-tenths of them leave prison much worse than when they came in."

If we have any duty whatever to the criminal—and surely we have not yet reached the point of denying this—that duty is in the direction of reform, and surely no reform is in any way possible except by a uniform treatment administered by those who are intellectually and morally fitted to do so. The states which still tolerate this relic of barbarism will certainly find that it is a bad policy, that they are manufacturing criminals and inducing a general deterioration of moral tone which is the most fruitful of all soils for criminal growth.

Serious Immigration Problem

IMMIGRATION statistics are fast assuming dimensions of very serious magnitude. During 1903 over one million newcomers were added to the population, and this is a very substantial increase upon previous years. The character of the immigration is, however, more serious than its size. Dividing the arrivals into their respective countries of origin, we find that Italy heads the list. Austria-Hungary occupies the second position, and is followed by Russia. Then come Sweden, Germany, Ireland, Norway and England, while Asiatic countries contribute nearly fourteen thousand. America has surely done enough for hospitality and should look somewhat more closely to her own interests, which are not served by the admission of vast numbers of people who have been ruined as citizens by the systems under which they have lived, and who have no other idea than to create miniatures of those systems and sometimes of their worst features. There is, for instance, a small district in New York mainly inhabited by Russian immigrants. From the surface of the streets in this district no less than eighteen tons of garbage are daily removed, the whole of this filth having been thrown from the house windows, as was the custom of these people in Russia.

Art Music Literature and the Drama

Lorado Taft upon American Sculpture

IT is almost difficult to realize that there are living today men who saw the very beginnings of American sculpture, yet such is the case. In his recent work, the *History of American Sculpture*, Lorado Taft has placed those who desire to enter this hitherto practically unexplored field under distinct obligations. To deal critically with the work of artists still living is a difficult task enough. That Mr. Taft has accomplished this more than satisfactorily may astonish those who have not known him personally, but is merely the expected to those who have. United with an innately intuitive temperament—as all who have ever studied with him can testify—there is sound philosophy, practical common sense and the confidence of one who “knows his ground.” There is probably no one in America today who unites on such generous terms the qualities needed for the successful handling of so difficult a subject. There are plenty of art critics, plenty of sculptors, plenty of facile writers, but Mr. Taft is the only one of whom I know today who unites the three gifts without egotism or break.

To hear Mr. Taft lecture was one of the delights of the old days when we worried him with our wrestlings with the clay—and not a few of that little group of students have become famous, too, thanks to his marvelous and genuinely inspirational teaching—Bessie Potter Vonnob, Carrie Brooks O’Neil, Enid Yandell, Ellen Rankin Copp, and others.

Mr. Taft is living proof of the fact that no one can be truly an artist unless he is very much more. His handling of a delicate subject—his plunges, so to speak, into the jealousies that, somehow, do exist, even yet, in the artist world—and his perfectly charming habit of coming up after every plunge without a particle of mud upon his vesture and with his hands grasping pearls—it takes diplomacy as well as courage, you will admit. You see, American sculpture, up to within ten or fifteen years, has been, with rare exceptions, undeniably mediocre. Yet does Mr. Taft place his head serenely under the guillotine by getting ill-humored and bluntly saying blunt things about his compeers? By no means. Yet he tells the truth none the less, and the following is one illustration of his method. Speaking of the earliest sculptors, he says:

The wonder, then, is not that they did so poorly, but that they accomplished so much and kept so well up to the general average of the times. America owes a perpetual tribute of gratitude to these men for opening the way, for preparing the soil. Art does not flourish without such preparation; great art comes only after a weedlike crop of mediocre artists. Powers and Greenough and Crawford, like Rush and Frazee, were indispensable in the sequence which leads to the masters of the present hour, and to the yet greater men of the generations to come.

One of the seriously *gauche* productions that graces the Capitol at Washington, he handles admirably. He says:

It illustrates well the audacity of youth in an untried field. Probably no American sculptor of the time could have done it better, for the fundamental requirements of such a decoration were universally unknown; our designers in the gropings of their inexperience could not possibly have guessed them. . . . Moreover, the other essentials of great decorative art were to Crawford a sealed book. How could

he know that even in treating the “Past and Present of America” there should be an interdependence of parts leading the eye inevitably but agreeably to a worthy culmination, and that such visible arrangement presupposes a dramatic climax in the thought? His poetic nature seems never to have suggested the possibilities of rhythm, the march of a great poem in stone with its successive strophes like the waves of the sea, interrupted but mounting higher and higher in an irresistible crescendo. Of the just measure of elaboration of these individual masses, each complete within itself, varied in detail when viewed near at hand and effective in broad lights and shadows, as well as in the leading lines when seen from afar; of the cumulative beauty of parts closely united in the grasp of a mighty whole—in short, of the lesson of the Parthenon, Crawford seems to have been blithely unconscious. He must have known the Elgin marbles; he evidently did not grasp their significance. For him and for his colleagues the greater achievements of the past did not exist.

Mr. Taft’s work ranks today with that of our best sculptors, belonging as he does to that younger group of men who, though some of them are French and some American, still hold to the same ideals and have, almost as a unit, taken a magnificent step forward. His criticism, owing to that fact, is the more valuable, as it is the more intimate and just.

FROM DRAWINGS BY RAFFAEL
(Academy of Fine Arts, Venice)

I HAVE not chanted verse like Homer, no—
Nor swept string like Terpander, no—nor carved
And painted men like Phidias and his friend:
I am not great as they are, point by point.
But I have entered into sympathy
With these four, running these into one soul,
Who, separate, ignored each others’ arts.
Say, is it nothing that I know them all?

— Browning

delay he saved the situation by seizing flutes, music and music-stands and throwing them, with Quantz himself, into a closet. In 1728 he wrote to his sister, Wilhelmine:

I am the unhappiest creature in the world; from morning till night I am surrounded by observers and music is not allowed.

In later days, however, in the great castle of Potsdam, Frederick the Great often gathered together the greatest musicians of his time and held musical evenings, which royalty felt honored to receive an invitation to attend. At these concerts the King himself often played the flute, accompanied by Emanuel Bach, son of the great composer, at the piano.

STUDENT

Frederick the Great and His Flute

IF there be a divinity which doth hedge a king, there is no gainsaying the fact that many a king’s childhood is hedged and hampered by things less bearable than divinity. There are cases in which—as one glances backward over history and sidewise over the world—there would be less real deprivation had children of the blood royal been born in wholesome and peaceable obscurity. There is a hunger of the heart which is almost more pathetic than the hunger of the body.

When the French poet said, “If I had but two *sous* in the world, with one I would buy bread, and with the other hyacinths, for hyacinths would feed my soul,” he told the whole story.

Frederick the Great of Prussia, as a child, loved military affairs less than his father desired him to do, and music very much more. Some of the saddest episodes of his strangely unhappy boyhood were due to his passion for music, and his inclination to gratify it regardless of his father’s arbitrary and unreasonable rules.

At one time, when taking a flute lesson from his beloved friend Quantz, at that time a great virtuoso, Frederick heard his father coming. Without a moment’s

KATHERINE TINGLEY * THE WOMEN STUDENTS OF LOMA-LAND *

has said, "The world is waiting for a nobler type of woman, a higher womanhood." Such a type is developing in Loma-land, and well it may for the great work that must be done for humanity during the next few years is destined to be done largely by women.

We, students of Katherine Tingley in Loma-land, are daily being prepared to do a work more important than we dream. It is we who must be the pioneers along all the new lines of the new reforms that Katherine Tingley will yet bring about. Valuable instruments will we be if we allow ourselves to be tuned by the great musician-hand which is guiding this movement. Useless, fit only to be cast out, will we be if we think to travel our own ways, regardless of the good of the general work. We may step downward into discord or upward into harmony. The choice lies with each one of us. As Katherine Tingley has so often said, "Every member is the key to his own success, absolutely the fashioner of his own destiny, his own victim or creator."

The women students of Loma-land have come from all over the world. Of widely differing types, coming from different environments, each with differing characteristics, together we form a large and unique group. Some have lived quietly in their homes before coming here, others in the rush and turmoil of life, still others in the sorrow and the shadows. Some have thought deeply and aspired truly. Some have thought little and were guided to this place by the heart's own light. All have in common one characteristic—unwillingness to live the conventional and selfish life; a willingness, nay, an eager desire, to do something to bring help and hope to humanity. It is difficult, if not impossible, to live up to such ideals in the world. Here it is easy and simple, so easy that, in fact, it would be difficult to do anything else.

Most women, as the world go, have grown up under a psychological force which springs from the selfishness of the age. It holds in bondage the whole world, a bondage which is, however, destined to become a release, under the strong influence of the Theosophical movement. Our training has been narrow and wrong; and the pathway that we followed in search of this divine philosophy was a devious one. We found it.

Then the light came. We saw then how ignorance had laid the shadows upon our life. We saw the sorrows of others in a truer relation to our own. We saw the Path, and we resolved to walk in it, be the cost what it would. And, at last, we found our way to Loma-land.

Life in Loma-land is not what we expected to find it, for the Soul has many surprises, and the life here is the soul's life. But we pass on, learning, hoping, trusting, feeling in each event a great lesson, in each circumstance a teacher, in each faithfully performed duty, the greatest possible instruction. Gradually are loosened the fetters which the personality, waxing strong through ages of petting and indulgence, has placed upon the soul. Little by little we come to look at things from the standpoint of the soul. Little by little we stand more clearly in the soul's full light. Little by little the personal desires give way before the advance of an impersonal desire to serve. Intuition grows, the brain mind steps into its proper place, the soul sheds its own pure light over what before was noisiness and night.

Women have in all ages been more or less intuitive. In all ages have they been the bearers of more or less of the heart-force. We have, however, through centuries of lost opportunities, wandered away from the truer ideals that the heart has ever christened its own, and have become lost in the labyrinth of material worries and personal affairs.

The danger now is that women may go to the other extreme, intoxicated by their new-found freedom. Thousands out in the world are doing just this. In Loma-land, the effort is made to keep on middle lines, to be clear-sighted, strong, intent upon the doing of the duty, leaving the results of all things to the Law. Here we have in our own power the causes of things, and the knowledge that this is so would bring to any woman certain soul-dignity and a positive and serene spirit.

The cruelties that women—and men—inflict upon each other in the world, because conscience is easy and vanity strong, are unknown to the social life of Loma-land. Here we do not drift, but are anchored, centered. It is less easy to be vain than impersonal, less easy to be cruel than to be kind. Katherine Tingley has given us the key-note of the Life that is Joy; it is for us to sound it unto the world. STUDENT

LET the maiden with erect soul walk serenely on her way, accept the hint of each new experience, search in turn all the objects that solicit her eye, that she may learn the power and the charm of her new-born being, which is the kindling of a new dawn in the recesses of space. The fair girl who repels interference by a decided and proud choice of influences, so careless of pleasing, so wilful and lofty, inspires every beholder with somewhat of her own nobleness. The silent heart encourages her. O friend, never strike sail to a fear! Come into port, greatly or sail with God the seas. Not in vain you live, for every passing eye is cheered and refined by the vision.—Emerson

The Sunrise "Mysteries" of Loma-Land.

MANY a laugh has been enjoyed by the students on "the Hill" over the tales that have gone abroad about the mysterious "ceremonies" that take place at sunrise. One would think from these tales that all the fantastic beings that could have been gathered from the degenerate "occult" orders of the ages had gravitated to "the Hill" here to live out their absurdities and give their personalities food to grow on. It is to enlighten our readers as to the "mysteries" that are unfolded at these ceremonies that we feel it our duty to refer to these queer tales. Fortunately, the decision of the jury in the recent libel suit has laid these to rest, but the subject of them, the "morning exercises," still exist.

Nothing in all the student life of Loma-land is more enjoyable and more universally agreed to than the practice of getting up at sunrise or, strictly speaking, a little before. By the time the sun has appeared over the crests of the mountains beyond San Diego, the women students not otherwise occupied have already assembled in the amphitheatre for their daily morning class in calisthenics. At the same hour may be seen the children of the Raja Yoga School following the maneuvers of their own drill, on the broad playground just south of their Group Homes.

The "ceremonies" consist in nothing more nor less than physical exercises, which, save in a few details, differ not from those used in classes of calisthenics the land over. There are the "setting-up exercises," which relax muscles of back, arms and head; bending exercises, which strengthen the muscles of the back; the foot and limb exercises, which give the body grace and teach it poise. Two simple exercises, which give the body more flexibility and ease, are worthy of detailed description.

Take the correct standing position, heels together, extending the arms until the hands are on a level with the shoulders, palms upward. Keep the arms directly opposite each other and on a straight line with the shoulders. Swing arms and shoulders in unison, first in one direction then in the opposite, until the arm line at the extreme tension of the swing is as nearly as possible at right angles with the first position. Swing in this way about twenty movements to the minute, until the muscles of back and shoulders are slightly fatigued. Over-fatigue does more harm than good. This exercise gives great flexibility to the upper region of the spine. The hips should be kept stationary.

It is often advantageous to follow this, after a brief interval of rest, by exercises calculated to strengthen the muscles of "the small of the back." Lift the hands well above the head, slowly bending forward at the waist, carrying the finger-tips downwards until, if it can be accomplished, they touch the floor. Then gradually raise the arms back to the first position above the head. The exercise should be taken slowly at first, then more rapidly as facility is acquired. The knees should not be flexed.

Perhaps the most interesting part of the "ceremony" is the drill, which consists of marching according to regular military form, running,

and the usual maneuvers which are so intricate and interesting.

This is the "ceremony." These are the sunrise "mysteries." But they open the day well, giving tone to the whole body, elasticity to the step, and exerting a marvelously clarifying influence upon the brain.

A Woman in Thibet

PERHAPS the most interesting move of all in the great game of destiny, which is now being so adroitly played in the Eastern Hemisphere, is the invasion of the British army into Thibet. This weird country has been for centuries as a closed book to every one outside of its own people; unapproachable, inaccessible always through the successful methods adopted to preserve its seclusion, that it should now be invaded by the greatest colonizing people of the age portends that numerous as well as momentous changes are about to occur in the Orient.

The many explorers and travelers that have in the past, urged on by various reasons, undauntedly tried to enter Thibet and to reach its capital Lhasa, have, with a few exceptions, failed to achieve any success whatever.

Suffering untold difficulties and hardships some have reached almost to the capital when obliged to abandon the enterprise.

Among these was a Miss Annie Taylor, an English lady, who after succeeding in getting quite close to Lhasa, some years ago, had to turn back. She, with her native servant, Pontso, experienced the greatest dangers and encountered most peculiar obstacles.

Among other hardships Miss Taylor had to float across icy torrents on rafts

of sticks and inflated skins, or to pass over mounted on a swimming horse, up to the waist in the stream, and with no chance of drying her clothes.

The whole country she found infested by brigands, who were armed with old-fashioned firelocks, and would take a quarter of an hour to get their tinder lighted before beginning to shoot. The largest tribe of brigands was under a woman queen.

They plundered every caravan that came near, and were the wealthiest people in Thibet.

Women's College in Japan

THE first college for women ever opened in Japan began its career two years ago, and today it contains over eight hundred pupils. Some are young students, others are older, many of them having been teachers. The college is undenominational. Among its forty-one lecturers are one German lady, one American and two English. There is, in addition to the regular scholastic department, a department of Domestic Economy, in which all housewifely arts are taught. Music is an important feature of the curriculum.

THE only woman, according to report, who has ever been admitted to the Master Carpenters' Association is Miss Louise C. Hinck of Montclair, N. J. Miss Hinck graduated some years ago from Vassar and later from the University Law School, but her profession is that of building houses. Her work is remarkable for its excellence.

SOME OF THE LADY STUDENTS OF LOMA-LAND IN THE HOMESTEAD GARDENS

AND her voice, it murmurs lowly
As a silver stream may run.
Which yet feels, you feel, the sun.

And her smile, it seems half holy.
As if drawn from thoughts more fair
Than our common jestings are.

Crete and Its People—Evidences of National Degeneracy

DOCTOR EVANS, the Cretan excavator is to be congratulated not only upon the material success of his work, but also on the rapidity with which he has arranged his discoveries and produced in them some sort of order and sequence. This has been admirably shown by some lectures which he has recently delivered and in which he presented the fragments of what must presently develop into a history of the Knossian civilization. In these lectures he dealt more especially with the pottery and the inscriptions. In the manufacture of pottery he finds evidences of a successive evolution. His earlier discoveries pointed indubitably to a connection between the Minoan people and the Eighteenth Egyptian Dynasty. Then came evidences of a point of contact with the Twelfth Dynasty and finally his excavations have carried him back to the Fourth Dynasty. Dr. Evans considers that the destruction of the Cretan civilization occurred about 1000 B. C., when the Palace was destroyed by semi or wholly barbarous invaders.

The period immediately preceding the downfall seems to have been marked by a degenerated life, as shown by inferior pottery and careless workmanship. About 2000 B. C., however, we find exquisite naturalistic designs and previous to this comes the egg-shell pottery, beautifully worked in colored patterns. Last of all, we have artistic imitations of the stone vases belonging to the Fourth and still earlier Egyptian Dynasties, probably dating about 6000 years B. C. That the degeneracy of these people which immediately preceded their downfall should be so clearly indicated by their pottery is a strange illustration of the Theosophic teaching that every race perishes from interior and not exterior causes. National supineness invites the invader and we may perhaps one day recognize that the same cause has an unsuspected relation to natural catastrophes.

In the domain of inscriptions Dr. Evans is no less lucid. The earliest writing is of the pictographic order and the presence of Egyptian signs sufficiently shows the connection of this period with the earliest Egyptian historical dynasties. This pictographic writing is found to develop into a linear script which, at about the time of the Twelfth Egyptian Dynasty changes for another and somewhat improved script. The pictographic writing was never entirely abandoned, although it became less conventional and more artistic. The difficulties of translation are of course very great and might almost seem insuperable. None the less, Dr. Evans is steadily increasing his alphabet of identified signs which now includes many more words such as *vase, man, woman, slave*, etc.

Congratulations are certainly due to a very energetic explorer and to a very competent scholar for an archeologic achievement of the highest importance.

STUDENT

RECENT discoveries, and especially in Pennsylvania, have induced some speculation as to the way in which the stone ax-heads were fastened to the haft. Cords made of dried sinews were undoubtedly often employed, but there seems to have been a yet better way but one which would certainly tax the patience of a modern craftsman. A suitable hickory tree would be selected and the grooved ax-head would be forced firmly into a split made for the purpose. Returning after a few years, the owner would find that the tree had grown around the ax-head, holding it in a grasp from which nothing could dislodge it. It would then only remain to cut down the tree and suitably trim it.

Music of Antiquity—Interesting American Relics

A RECENT issue of the *Washington Times* contains an interesting account of the prehistoric musical instruments now on view in the Smithsonian Institution. These instruments originated in Mexico and in Central and South America, and they are mainly of the wind variety.

One of the most interesting implements in the collection is an Aztec flageolet from Mexico, bearing religious symbols which suggest its former use for religious purposes. Here too, are other instruments which whistle when water is poured into them and a flageolet made from the wing bone of a bird. From British Guiana comes a trumpet made of pottery which is supposed to be a miniature botuto such as are now used of an enormous size upon the Orinoco. Carl Engel describes the botuto in the following terms:

The botuto which Gumilla saw used by some tribes near the Orinoco was evidently an ancient Indian contrivance, but appears to have fallen almost into oblivion during the last two centuries. It was made of baked clay, and was commonly from three to four feet long; but some trumpets of this kind were of enormous size. The botuto with two bellies was usually made thicker than that with three bellies, and emitted a deeper sound, which is described as having been really terrific. These trumpets were used on occasions of mourning and funeral dances. Alexander von Humboldt saw the botuto among some Indian tribes near the Orinoco.

Other curious exhibits are two panpipes, fashioned of hollow reeds and almost precisely the same as those seen in the classical Greek and Roman pictures. These were taken from ancient tombs near Arica, Peru.

STUDENT

To Protect Its Treasures—Italy's Restrictions

THE *Times* reproduces a letter from its Italian correspondent containing a resume of the new law for the better protection of archeological and art treasures. The law is now uniform over the whole of Italy. The export tax is fixed at 5 per cent

ad valorem for objects valued at less than 5000 lire, and increases by 2 per cent for each additional 5000 lire, until the maximum of 20 per cent is reached. Objects belonging to ecclesiastical and public collections are declared inalienable. A catalogue of all objects in public or private collections is to be made, and those objects which are considered of extreme importance will be declared inalienable. When any object is offered for sale, the Government has the right of preemption on equal conditions with any would-be purchaser. The value of an object for export is estimated by the owner, checked by a Government agent, and in case of dispute, determined by arbitrators. The Government is given the right to sell or exchange duplicates. Foreign institutions or citizens may now obtain permission to excavate, subject to rules similar to those in force in other countries.

How long will it be before the American Government displays the same solicitude for American archeological treasures, which are more ancient and more valuable?

STUDENT

THAT the site of the city of Paris was once the bed of the ocean has been abundantly proved by the excavations which have recently been made for the new metropolitan railway. In one place the tooth of a large dogfish was found and also the tusk of a sea-lion. In other places the remains of whales and sharks were found in considerable numbers. From the profundities of an ocean with its mysterious life to the confused artificiality of a great city is a far call.

Studies

Evidences of Consciousness in Plant Life

WHSOEVER is in any doubt about the consciousness of plants should study such a climber as the vetch. In these plants the tip of the stalk bearing the pairs of oval leaflets is run on into whip-like thread, showing from the first a marked tendency to curl like a corkscrew. And the highest pair of leaflets on each stalk are modified into similar threads, no longer serving the function of leaves.

The aim of the vetch is to get to the light by climbing on the shoulders of some other plant. It is therefore content for a time to grow *away* from the light and *into* the thickest part of the bush, up whose stem it proposes to advance. It is content to put aside the immediate luxury of basking in the sun, for the sake of gaining a freer view of the sky later. Some of us might take a lesson from this little plant in the matter of self-control. We humans usually eat our cake at once, and complain later that we have none.

In time it gets its reward. It has now mounted above all the leafage of the plant by which it ascended, and can break into bloom in the unobstructed sunlight.

Now the climbing tendrils are—for a plant—exquisitely sensitive. Let one of them touch anything whatever, and in half an hour you will notice that it has begun to curl toward the side touched. As it grows, it is obviously seeking to touch things. The tendril is constantly rotating corkscrew-wise. The whole leaf is executing slow movements, and the leaf-stalk is also rotating on its own account. As soon as, in these slow and complicated pawings of the air, the tendrils touch a twig, they curl round it, firmly grasp it, thicken and set; and then the plant is ready for a new step.

If all this is unconscious, then so is the infant when it turns its head and eyes to follow a light; so is the man who shifts his chair into the warm sunshine from the shade. Of course, the consciousness of a plant moves slowly. That of men varies very much. In watching a company of recruits being drilled, you will see one man respond almost instantly to the word of command; another will take a second; a third two or three seconds. And there is as much variation in "placing" sensations even when they are perceived.

We may assume that as we go down lower and lower in the scale, through the animal, through the plant, into the mineral, consciousness becomes slower and slower in its changes, but not extinct. And there are changes in the life even of the stone. It is subject to magnetic and electric changes, and to changes of temperature and pressure. It feels the passage of the sun-spot. It grows, wakes. Of late we have learned that metals feel fatigue, and recover by rest; that they can even be poisoned and narcotized.

And beneath all these surface changes is the profounder life of the cell itself, of the molecule, even of the atom. Surface events stir but the surface of this deep life, which exists throughout our own bodies, unknown to us. We only know of the surface event we call a sensation. One day man may learn how to open and enter the ten thousand doors to the deeper fields of life in his own body, and then he will understand the cell and molecule from a side that science does not approach. J.

DAY DREAM

'WAY up yonder in the hills
Echoes caught the wild birds' trills;
Every night the wind sang low
That strange song we used to know,
When we loitered by the way,
Where the butterflies, so gay,
Held their revels by the stream,
Like mad fairies in a dream.
It's the song we used to hear
When the tiny brook, so clear,
Laughed and leaped beside the road,
Where so carelessly we strode.

Clang of bell and whistle's note,
Railway train and ferry-boat,
Bid us rouse ourselves anew,
For the world has work to do.

Wonder if the butterflies
Still delight some loiterer's eyes?
Wonder if the song yet thrills
'Way up yonder in the hills?

WOLF, A FAVORITE POINT-LOMA DOG

mined by endless experimentation only. Is it not to be hoped that as the laws governing the complex human organism are found to be simple and not many, we may find a wider therapeutic application for certain simpler forms of organized plant life, thereby reducing the necessity for so deeply drugging humanity as now.

A. C. McA.

The Flight of Carrier-Pigeons—Their Endurance Limited

THE powers of the carrier-pigeon are very great, but not quite so great as we usually suppose. None the less, he is one of the most powerful flyers in existence, being nearly equal to the wild duck and distinctly inferior only to the martin.

M. Dusolier, in the *Revue Scientifique*, sums up the pigeon's capabilities in a very careful manner, and after examining the statistics and discriminating between fact and fiction, he tells us that the greatest distances authentically accomplished have been from 700 to 1000 miles in Europe and about 1300 miles in America. Nevertheless, those long flights have not been successful, the birds being usually delayed and many of them lost. Beyond 620 miles the results have been precarious, and after a reasonable distance the birds get discouraged and have great difficulty in getting their bearings.

STUDENT

Therapeutic Properties of the Yerba Santa

ALONG with the advent of the new year come the calling voices of the newly budding flower life. Yielding to the caress of the fresh winds from the sea the acacia, a sun-burst of vibrant fluff, gracefully makes obeisance to the fluttering fronds of the palm, the militant poinsettia, rich-capped with crimson, stands guard over the lily, while the fragrance of the heliotrope and such of lesser stature, but none the less in evidence, fill the air with an ecstasy of perfume riches. The earth, as if to prove again the miracle of birth, gives from her dull brown bosom the choicest life and bids the world be glad.

One who walks the hills in these days of rapid change is attracted toward a low-growing shrub, which bears small pinnate, serrate leaves heavy ribbed and gray green with a soft woolly coat on the upper surface, that are gathered around the woody branches and send out an odor mild and pleasant in dilute form, but which cloy in excess. The ends of the branches are superimposed by small clusters of non-fragrant purple buds and blossoms that peculiarly attract lovers of the beautiful. The flower has a tubular fluted corolla with petaled, slightly converging border. The deeper purple tint at the margin seems to produce a haze of the same within, as one peers down its mazy throat, and there is seen at apparent distance in mystic blend pollen, stamen, style and ovary—truly the workshop of the infinite.

The *Yerba Santa*, for this it is, has virtues not yet wholly recognized. Its beauty and fragrance are grateful, but to these are to be added medical properties which are numerous and, although it is now used largely merely as an excipient to disguise the bitterness of quinine, other qualities are known. Its name, the sacred herb, is no doubt the outcome of some known merits which may be more fully apprehended later on.

Modern medicine is overladen with myriad compounds whose therapeutic action is deter-

Universal Brotherhood Organization

Central Office Point Loma California

THE Universal Brotherhood Organization again drew a large audience to the Isis

Theatre last Sunday night, to hear a fine musical program by students of the Isis Conservatory, and two admirable addresses one by Mrs. Hanson on "Principle or Expediency," and the other by Dr. Herbert Coryn on "Imagination." Mrs.

Hanson's paper was so interesting and practical and of such special value to parents that we reproduce some of its more salient features:

"If you have reason to think that a boy or girl in your neighborhood is not a suitable companion for your children, have you the courage to absolutely forbid all intercourse and if need be, give up your social duties and devise some other means of entertainment that will keep your children away from undesirable companions? Not in many cases; none of the other mothers make a fuss and you don't like to hurt their feelings, etc. If the child had smallpox there would be no such delicacy of feeling. Which is worse, physical smallpox, or moral degradation? Or it may be your child is very easily influenced, and consequently hasn't the strength to resist the influence of one stronger in will than he. Don't let self-satisfaction blind you and allow you to take the position that so many take from pride, saying 'None of my family or my husband's family ever did anything disgraceful, and of course my boy never will,' and use that to excuse yourself from throwing safeguards around your boy to prevent him from forming habits that will cost you both tears of blood, that will, perhaps, wreck his life entirely. Fathers, which is more important from the standpoint of your boy's life, to build up a business—making everything else subservient to that—or to take time to find out whether he is growing up with noble aspirations and high purposes, or with bad habits and low ideals? In a recent murder case in Chicago, the murderer was eighteen or twenty years old, it is stated, and his mother had for years been prominent in clubs formed for the purpose of helping young boys, and especially to keep them from reading objectionable books. She said, 'I never dreamed that my boy wasn't all right.' Poor woman. Now he wasn't all right, and couldn't have been a wilful murderer in a minute. Where were her eyes and ears for nearly twenty years that she never suspected he needed some of the care she was bestowing upon other boys?

"Children ought to be born pure and healthy in mind and body, but they are not. We can see failings in other children, but deliberately shut our eyes to the shortcomings of our own. Half the time you begin it when company is around. You may have spent half an hour telling them how delicate Willie is, how he has a weak throat, and you have to be so careful and guard against every draught and change his clothes every time the weather changes and not allow him to play games where he will be overheated. But do you expend one-half that time on John, who comes in then perhaps, rude, rough and overbearing, to ask for something you know he ought not to have? You are so afraid your friends will see him in his true character, you begin to make excuses for his manner to you, his mother! and grant the request, knowing he has taken advantage of the situation, because he knows you will not correct him then. You don't mind their knowing of Willie's physical weakness, but you wouldn't have them know of John's moral weakness for the world—so you make an exhibition of your own weakness in-

stead. How much you would gain if you would be firm, letting him see he cannot force you by his own bad behavior to allow him to do something you do not approve of! It is an awful thing to deceive a child, but it is just as bad to allow one to deceive you. In the first case, they lose faith in your integrity, and in the latter, lose faith in your intelligence.

Cultivate your children, be comrades with them. Let the forming of their characters be your life-work. What right have we, as mothers, to wear ourselves out over frills and ruffles and fancy cooking, when plain living would give us time to spend with our children, to say nothing of the dyspepsia and vanity we would spare them? Katherine Tingley has said that if mothers would spend just half the time now spent in petting and admiring and indulging children, in trying to draw out their moral natures and trying to find their souls, the Kingdom of Heaven would come almost in the twinkling of an eye. And what do social pleasures stand for if they are a barrier between your children and the light? What is business success if it shuts you away from your children? Considering the one item of expense alone, which is wiser, to give your child meat and sweets three times a day and pay a doctor's bill every few months, or to use the balance you may have left, after providing plain and nourishing food, in books, games, or perhaps a trip that will bring him into some touch with humanity? What we mothers and fathers need is not less love, but more wisdom. Let us not sacrifice ourselves less, but let us sacrifice ourselves more wisely. Let us consider when we are yielding some vital principle just because our child will make himself disagreeable if we do not, or just because we fear the criticism or the comparisons of our neighbors—let us consider what kind of seed we are planting and what the harvest will be. Is it not often true that to do something, or let the child do something merely because it is pleasant now, may be to plant the seeds of an evil tendency that ten or twenty years from now will be his undoing?

"How many mothers or fathers can see in the child's little impulses the future good or bad habits grown to maturity? And yet this is just the knowledge that we need, *that we must have*, if we are going to be strong enough to do the wise thing. Otherwise we shall begin by strengthening the child's weakness and end by losing his respect. Many a father and mother has wondered why the son or daughter will not take their advice. Would you take the advice of some one whom you could threaten or coax into acquiescence whenever you wanted something that wasn't good for you? Would you respect a person who chose the convenient thing rather than the right thing? Would you have respect for a person whom you could systematically hoodwink and deceive? There is your answer.

"The real failures were made when that child was in the nursery, in the cradle, yes, even before it was born. We simply don't see these failures for what they are at that time, and years later, when we do have to face facts, we are unprepared to meet them. Let us stop thinking of ourselves as so many blank sheets of paper upon which the relatives or neighbors are to write their opinion. Let us stop thinking of our children as little reflectors, mirrors of other children. Let us think of ourselves as the immortal souls that we are. Then we will have the courage to find out what is best and do it."

Lotus Group at Vestermalm Kungsholmen, Stockholm, Sweden

In October last we moved into our new rooms and invited all the good people who lived with us in our former apartments to come with us, and they did. There was "Faithfulness," who took care of the pictures, and "Gratitude," who carried the money-bags. "Fortuna" had the Swedish flag, "Watchfulness" the dear Lotus Group flag, and our two tiniest Lotus Buds who are called "Lotus" and "Comfort" carried the Golden Cord. At the head went the "Fairy of Love" with the burning torch and her companion the "Fairy of Joy" with flowers and our music books; and so it was that when we moved into the new apartments all these friends were there to receive us. "Watchfulness" standing outside the door and the fairies inside. They had the torches burning and said to each one, "Heart-life gives sunlight." As each comrade entered a flower was received with the words "Life is Joy." With songs and music the meeting was closed.

Every child now has one of the Lotus Song books, translated into Swedish. The children enjoy them very much, particularly the action-songs. We continue our work as before, with stories and recitations, and at every meeting one of the children speaks upon a given subject. It may be interesting to know that the children's favorite song is the "Sun Temple."

ALMA NORSELL, Secretary

Work of Girl's Club of I. B. L., Stockholm, Sweden

A club was started more than four years ago, shortly after the Leader's visit to Stockholm in 1889. During the whole time weekly meetings have been held and the youngest members take an active and positive interest in the work. The offices of secretary, treasurer and librarian have been filled by the young girls themselves.

In addition to our own entertainments the young members of the Girl's Club have assisted in the monthly public meetings given by the Universal Brotherhood Lodge in Stockholm.

This time we have taken up a new study in the club which the girls find intensely interesting. At the close of every meeting we have an hour's lesson in English, and the progress made by some of the girls is surprising. At every other meeting one of the subjects under discussion is taken from the objects of the I. B. L. We are just now very busy preparing the Christmas festival for poor children.

ANNA SONESSON

Lotus Group at Sodermalm Stockholm, Sweden

We have just finished the first series of Lotus Leaflets and New Year will find us beginning the second series. The children begin to understand what it means.

to make Theosophy a living power in their lives. They realize that nothing but heart-life can ever change the world and make it a better place.

We have had new members lately and the club is growing greatly. We are now teaching the children new songs.

AGNES EKHOLM

General Report, Stockholm, Sweden

The teachers of all the Lotus Groups in Stockholm have finished translating the Raja Yoga Symposium and have found the work a real inspiration. They have already begun to teach it and the children enter into it with unusual enthusiasm. The very small children become more than ever our co-workers and helpers, and are not only a comfort and joy in the preparation of these Symposiums but a positive help, both to the teachers and to the older children. We are now giving the children lessons in English twice a week.

ANNA SONESSON, *Superintendent*

Delayed Report of Lotus Group at Ostermalm, Majorsgatan, Stockholm, Sweden

Lotus Group work is progressing more than satisfactorily. The children are much interested about the life in Loma-land, and we feel that every week brings them nearer to the center. They are also much interested in all reports of the work done in Cuba. The attendance is increasing. We have the best of music, besides the Lotus songs, having selections from Beethoven, Wagner, Schumann and others.

ANNA SONESSON, *Secretary*

Youngstown, Ohio, Lotus Group No. 1

After our summer vacation we began our meetings in the new headquarters. The first meeting was opened with the singing of the "Sun Temple." The superintendent expressed her pleasure at the good attendance, and in the course of the

meeting we found that all had been trying their utmost to put into practice during vacation the teachings of brotherhood and helpfulness that they had received.

We received at this meeting the Raja Yoga Symposium entitled "The Little Philosophers," and all agreed that it must be sympathetically and carefully prepared. Our aim is to lift the children into some realization of its inner meaning so that the presentation would have a real heart touch. After some reorganization of classes, the meeting closed with song. During subsequent meetings we have given part of the time to a study of the Raja Yoga Symposium. The work is growing and we feel not only a new inspiration but a greater hope.

FLORENCE C. REED, *Secretary*
M. C. HINEY, *Superintendent*

Report of the San Francisco Lotus Group

OUR Lotus Group has a splendid attendance. The "setting-up" exercises, marching and drill, interest the children to a marked degree. I see developing among them a greater unity of action and a well defined poise and steadiness, due largely, I think, to the exercises. Before they were introduced by Mrs. Tingley the discipline was markedly less satisfactory than is now the case. Last month was devoted to our forthcoming symposium, *The Little Philosophers*. There is spirit and enthusiasm in all the rehearsals and very much determination among the children to remove the "stumbling-blocks" everywhere. We have had many evidences that the Lotus Group training is, in its effects, reaching both home and school through the children. It is apparent that the teaching is changing for the better not only the children's own lives but the lives of their associates. I often think if one hour a week of Katherine Tingley's Raja Yoga training produces such results, what must be the result when the whole education of the child is guided by her methods!

HARRIET H. SOMERS, *Superintendent*

The Common People at Church

THE Rev. Dr. Loomis of Boston, writing in a Congregational magazine, appears to be not unwilling to face courageously the main problems which confront the churches of today. We wish that his words might effectively reach those who seem to have no higher idea of their mission than to wrangle ceaselessly about creeds and emoluments or to lie spellbound under the fallacy that they still possess the power which has passed away from them. Dr. Loomis says:

The pure, high faith of our fathers, in accordance with whose principles our institutions were founded, and by loyalty to which they must stand or fall, the Protestant faith has almost no following among the working people of our towns and cities. They who comprise two-thirds and more of the population scarcely supply one-tenth of its congregation to the average Protestant church. It is a situation full of peril. With the great masses of the common people alienated, the folks for whom the Lord of Glory died and to whom his gospel was primarily given—the folks who have the children and they who hold the future in their hardened, toilstained hands—it is small wonder that churches grow but slowly or stand stock-still, their pews half empty and forlorn, and their Sunday-schools shrinking.

It ought not to be displeasing to a commercial people to be reminded that there is a law of supply and demand in the church world as well as in the market place. The churches were made for the people and not the people for the churches. If the "great masses of the common people" no longer come to church it is because they do not find there the sympathy which they need. It was Abraham Lincoln who said that God must certainly think a lot of the common people or he would not have made so many of them, but the money element now enters so largely into church life that we cannot be surprised if those who have no money feel somewhat out of place and believe that the church welcome is not for them.

If those who so loudly deplore the abstention of the masses would but use their imagination a little more they would be puzzled a little less. Let them ask themselves how many of the practical needs of daily life are supplied by the average sermon. What has the preacher to say to the injustices of our social system, except that they are the will of God which both he and his hearers know very well to be untrue? What has he to say about the actual and practical problems of the day which will commend itself to the intelligence of his congregation? With rare exceptions he has absolutely nothing to say.

COUNTRY LIFE IN IRELAND—A WHEELLESS TURF CART

Can he give to the people anything which they can take home with them to the tenement house, anything which can drive away the spectres of fear and of desperation with which their hearts are filled?

Can he make them understand that nothing happens anywhere, at any time, except in obedience to eternal law, that divine caprice is *not* one of the mysteries of life, that there is no human ill which cannot be removed by human will and that the voices of money and of majorities are not the voices of God.

These are the things which "the man in the street" needs to be told and retold until he shall have learned it well.

He needs a message of his own divinity, of his own godlike and creative power, of the force which he can wield by imagination and by fraternity. A dead theology has thrown him to his knees. Now let a live theology raise him to his feet and show him that he suffers from himself and by no other will than his own. Then the churches will once more find their place in a world of men.

STUDENT

JUDGE NOT

Verses by the New Zealand poet, Mr. THOMAS BRACKER, in
T. P.'s Weekly

NOT understood. We move along asunder.
Our paths grow wider as the seasons creep
Along the years; we marvel and we wonder
Why life is life? And then we fall asleep—
Not understood.

Not understood. We gather false impressions.
And hug them closer as the years go by.
Till virtues often seem to us transgressions;
And thus men rise and fall and live and die—
Not understood.

Not understood. Poor souls with stunted vision
Oft measure giants by their narrow gauge;
The poisoned shafts of falsehood and derision
Are oft impelled 'gainst those who mould the age—
Not understood.

Not understood. The secret springs of action,
Which lie beneath the surface and the show.
Are disregarded; with self-satisfaction
We judge our neighbors, and they often go—
Not understood.

Not understood. How trifles often change us!
The thoughtless sentence or the fancied slight
Destroy long years of friendship and estrange us.
And on our souls there falls a freezing blight—
Not understood.

Not understood. How many breasts are aching
For lack of sympathy! Ah! day by day.
How many cheerless lowly hearts are breaking!
How many noble spirits pass away—
Not understood.

O God! that men would see a little clearer,
Or judge less harshly where they cannot see;
O God! that men would draw a little nearer
To one another, they'd be nearer Thee—
And understood.

The Laying of the Ghost

LIVE WINFORD'S eyes were blinded by tears as she stumbled unseeing along the pretty bush track that led to her home from a visit to the little country post-office. So lately filled with joyous anticipation, crushed now and withered were all her hopes, as the dead leaves that nestled beneath her feet, her cup of happiness dashed from her lips by blackest treachery. The two people she had most trusted in the world had deceived her, and in place of the letter she had expected to receive from her lover was a short note stating that he had married her dearest friend, and that they were on the eve of going to Europe. Not only was the blow severe in itself, but the prospect of all the careless curiosity, the half-pitying sympathy, and the endless gossip about "Olive Winford's unhappy affair" that would supply an interesting topic for all the afternoon tea-tables of the district, flooded into the girl's unhappy mind.

"I cannot bear it!" she sobbed. "It is too cruelly unjust. If I could only hate them, it would be a relief, but I can't even do that; it is just all pain, pain, darkness and misery. Oh, Horace! Minnie! how could you, when I trusted you so!"

She opened the garden-gate and her little dog rushed up to her with the wildest demonstrations of affection. "Good little doggie," she said, patting his head; then the sense of her loss overpowering her, she turned aside to the pine grove, and, throwing herself at the feet of one of the trees, sobbed unrestrainedly. Tiny was in great distress and vainly tried to attract her attention by little whines and kicks, then finally lifted up his voice and howled. "Oh, Tiny," gasped his mistress, roused at last, "this will never do," and the little creature, relieved, scrambled into her lap. "There, your mistress has had her cry now, and neither you, nor the world, will hear anything more about it—but, oh, dear! I feel a hundred. Life is a sore puzzle! I'm thankful grandmother will not be home for a day or two."

The time that followed was weary enough, for the old-time interests and gayeties had lost their zest for Olive, fraught as they were with memories. Then suddenly her grandmother died, and the girl found herself without ties and in possession of a comfortable income.

"I will travel," she said. "There is nothing to keep me here longer. I will go and visit my father's people in the old country."

So joining a party of friends who were going for a pleasure trip, Olive found

herself in Egypt. What an attraction the Pyramids in the desert had for her, and the Sphinx! It seemed to open a new world. Coming from a country untrammelled by tradition, unweighted by a past, as she used to think, the sense of that ancient civilization pressed in upon her consciousness and left its ineffaceable mark; and later, when she reached England to find herself again among the rush and hurry of modern life, albeit a different phase to what she had experienced before, the moments she most valued were the quiet times of night, when she stood at her ivy-encircled window and, gazing at the shining stars, pictured them sparkling above the solemn Sphinx in the silent desert, who seemed to whisper, "Solve me, solve me," and to Olive she represented life.

Walking one day through one of the London Parks, Olive noticed a lady in front of her drop a book, and in picking it up some papers fell from it; in replacing them her eyes fell upon this fragment, "Out of the furnace of man's life and its black smoke winged flames arise, flames purified that soaring onward weave in the end the three vestures of the path." She hurried after the lady, who was delighted to get her book, which she had just missed, and thanked her warmly. Olive, taken with the look in her clear kind eyes, and feeling she should tell her, said in reply, flushing as she spoke, "I read one of your extracts before I quite understood what I was doing, and I do so feel that I would like to ask you what it meant, it seemed to strike some chord of memory and yet I am sure I have never heard it before."

The lady looking at the earnest winsome face before her, impulsively laid her hand on the girl's arm. "Will you come to a children's entertainment with me, I am going there now."

Olive agreed and together they walked on.

"You seemed to me like an old friend from the first moment I saw you," the girl said eagerly, a month later, and though it is but a few weeks since we met, I know you better than people and even relations I have known all my life."

"All your *present* life," replied Miss Thornton, "for may be we were friends in other lives, how else indeed explain our friendship now, there must be some cause, and the feeling you speak of is mutual?"

"And the children," continued Olive, "have the opportunity of learning from the very beginning that they have the power to dominate their lower natures, and indeed that it is their business to; it is wonderful and beautiful! How comforting to know one has lived on earth before, and will again! that was what the Sphinx seemed to tell me in Egypt and if she could not speak, still the knowledge reached my heart; and Dorothy, dear, to think I am going to be one of yourselves! How hard I must work to fit myself to teach the little ones! And how grand to know how we can transmute ancient evil into good by love! how little we realize what Jesus meant by 'hatred ceaseth not by hatred but through love'—we could not very well until we knew of eternal life. The teachings make a past situation in my life so clear to me. Two people greatly injured me, and I almost felt as if I should have hated them for it, but fortunately for me I couldn't, and now I can see I must have deserved it, because of past action; it seemed horribly unjust in those old days, but I really feel I love them now, for see the great good that has come to me out of the old time pain! the chance to learn the truth about life and become of some practical use in the world! Dorothy, dear old friend of now and long ago, I have treated you to a long talk about myself, let me rather show my joyful satisfaction in action. Will you let me, and will you help me, give your poor dear little city Lotus Buds and Blossoms a real day in the country to celebrate the laying of one old ghost from out the past, the burial of a past enmity? Hurrah for Universal Brotherhood and its practical realization, say I.

ETHNE

Wolseley's Description of Lee

FIELD-MARSHAL LORD WOLSELEY, late Commander-in-Chief of the British Army, gives an interesting picture of General Lee, whom, with Stonewall Jackson, he visited at the headquarters of the Confederate Army.

"He (Lee) was the ablest General, and to me seemed the greatest man I have ever conversed with; and yet I have had the privilege of meeting with Von Moltke and Bismarck. . . . General Lee was one of the few men who ever seriously impressed me with their natural, their inherent greatness. Forty years have come and gone since our meeting, yet the majesty of his manly bearing, the genial winning grace, the sweetness of his smile, and the impressive dignity of his old-fashioned style of address, come back to me amongst the most cherished of my recollections. His greatness made one humble. . . ."

BETWEEN the origin of the primitive races of Southwestern Asia and the appearing of the people of Israel upon the stage of life had rolled unnumbered millenniums; hence there is no reason for serious discussion over historical traditions said to be possessed by Israel regarding those primitive times.—*Gunkel*

HE WHO holds dead land a possession and living souls none of his, needs wake no curse; for he is in the very pit of creation, a live outrage on the human bounty.—*George Macdonald*

MILLIONS of men have good ideas—and carry them into the grave with them. It is good to think brotherhood, but the only benefactor is he who acts.

✻ The Trend of Twentieth Century Science ✻

What Is Life?—Science and Imagination

SIR OLIVER LODGE is one of those scientists who are not afraid to supplement intellectual knowledge by heterodox speculation and imagination. With speedy feet imagination runs ever in advance of true science and fortunate is he who recognizes that its light is not alluring nor deceptive but rather the pillar of fire by night which leads away from ignorance.

Sir Oliver Lodge asks himself what is the essential reality of life and he admits that we do not know. We are, however, certain that it is a process of change. In the "organic" world that process manifests itself as growth, culmination and decay. Constant change he tells us is the concomitant of every form of life, and now we are forced to concede that this same condition of change is found to exist through the whole material universe. Well may the learned Professor ask himself what this means and having thereby reached the shore he seems to have no hesitation in plunging into the ocean. There are, he says, "those who have surmised that matter is after all only the weapon and vehicle of mind." He points out that every thought changes the motion and configuration of the brain molecules and "it will be, at any rate, a suggestive analogy if a material process of essentially similar sort is found to be occurring throughout what we know as the inorganic world—the world of dead matter; and we shall begin to ask, does all this motion correspond to some universal thought or mental activity likewise?"

It is indeed a very suggestive analogy and it is suprising that science for so long hesitates to grasp a solution so entire and so illuminating. If thought changes the molecules of the brain who can question that it changes the molecules of the whole body, and if change in the human body is the necessary concomitant of thought why must we suppose some other cause to account for the changes throughout nature both organic and inorganic? Why not indeed recognize the existence of an universal mind which operates throughout the whole of nature as the human mind operates throughout the human body? Why not admit that the phenomena of nature are the indices to the point of evolution which has been reached by the underlying mind? If the shape and configuration of a human brain indicated, for example, a low order of intelligence, why should not the condition of a flint indicate also a corresponding point in consciousness, why should not the whole of nature, organic and inorganic alike, be recognized as the vesture of a consciousness which is struggling to express itself whether its present expression be the mind of the philosopher or the spark from the flint?

To this point science must ultimately come whether it recognize or not that the new order of thought is Theosophy. Sir Oliver Lodge seems so near to that point that we are encouraged to believe that his speculations are a presage of an approaching and speedy advance along the whole line.

STUDENT

Cheaper Radium May Be Obtained from Petroleum

THAT Radium should remain for long at its present prohibitive price is clearly improbable and there are already evidences that nature is willing to open a little wider the door of her treasure house. Professor Himstedt of Freiburg in Germany believes that all products of water and petroleum yield a gas which is very similar to the emanation of radium and he believes that a large number of bodies possess the quality of giving off a kind of Becquerel ray. In this respect radium would differ from the other bodies only as the magnetism of steel differs from that of iron, that is to say only in degree.

NEARLY every day brings news of some fresh scientific activity on the part of the University of California. It is now reported that some new and very valuable astronomical instruments have been added to the observatory and have been fully installed. Among them are some very fine photographic appliances and a new engine for use therewith which is now on its way from Germany. The astronomical work immediately in view is to ascertain the position of the Watson asteroids of which the perturbations are being very carefully calculated.

The Nature of Comets and the Manifestations of Radium

A REMARKABLE similarity between the nature of comets and the phenomena of radium, the newly discovered element, has just been noticed by Prof. Vernon Boys, the eminent British mathematician, who says:

It does not seem possible now to contemplate the phenomena of the comet—of the divided tails, of their tenuity and transparency, of the pale luminosity, partly reflected solar light, partly light as from a glowing gas; of the gradual wearing out and disappearance of those comets which constantly pay visits to solar regions—with all the mysteries of radium now so much in evidence, without tracing the features in which they resemble one another. By radium, of course, I mean any material with the remarkable radio-active properties that radium exhibits with such pre-eminent splendor, whether known in the laboratory or not.

Comets have exercised a weird fascination from the earliest days of human history and the mystery in which they are still shrouded is penetrated very little more than in the days when the fate of rulers and nations was universally believed to be connected with their appearance and movements.

To the student of Theosophy the new fields of speculation into which scientific men have been launched, by the discovery of the radio-active substances such as radium, promise great hope for future research, because every moment science approaches nearer to the truths which H. P. Blavatsky gave her life to disseminate as she built her strong foundation for the great work of uniting the human race in the bonds of brotherhood. In direct connection with the subject of Professor Boys' words and in anticipation of the whole trend of modern research, H. P. Blavatsky said:

The essence of cometary matter is totally different from any of the chemical or physical characteristics with which modern science is acquainted. [Written in 1888] It is homogeneous in its primitive form beyond the solar systems, and differentiates entirely once it crosses the boundaries of our earth's region, vitiated by the atmospheres of the planets and the already compound matter of the interplanetary stuff, heterogeneous only in our manifested world. . . . Every atom contains in itself creative energy of the Divine breath.

When this was first published no substance with the "chemical or physical characteristics" of radium was known to science. M.

The Cause of Appendicitis Said to Be Meat Eating

APPENDICITIS is not an inviting subject although it is one which is forcing itself more and more upon public attention. Perhaps Dr. Chauvel, medical inspector to the French army, knows more about this strange disease than any other living authority, having for many years made it the subject of his special study. He finds that among the troops in Algeria and Tunisia it is the European soldiers who suffer from appendicitis and that among them it is ten times more common than among the native troops and that it is more common among the latter than among the native civil population where it is practically unknown. Dr. Chauvel draws from these facts the inference that the disease is induced by meat eating and that its appearance among the native soldiers is due to their partial adoption of a meat diet. The native population is of course entirely vegetarian and it would seem that appendicitis attacks the native soldiers only when they imitate the dietetic habits of their European comrades. A medical specialist writing to the *Matin* confirms these conclusions by pointing out that the malady is rarely found among the vegetarian peoples of the Orient, and that it is much more common among the meat eaters of big cities than among the more abstemious peasantry. Dr. Chauvel's investigations should be made widely known especially in countries where appendicitis seems to be so substantially upon the increase.

STUDENT

ONCE in my hearing a friend who had not seen him for years congratulated Herbert Spencer on his good health, as evidenced by his rosy cheeks. "Do not," said the latter, "confuse complete with incomplete relation. Because some healthy people are ruddy, all ruddy people are considered healthy; whereas a ruddy complexion may denote a flabby vascular system."—*George Hles in Outlook*

Here and There Throughout the World

INDIAN VILLAGE AT ALERT BAY, BRITISH COLUMBIA

The totems denote crest and quarterings of the chief in whose honor they are erected, precisely as in European heraldry. The Thunderbird on the right was until lately firmly believed to be the maker of the thunder, and is a prominent crest among the Nimpkish tribe.

Proposed Alliance of the Mongolians It appears from an apparently well-informed correspondent of the *Spectator* that as long ago as 1895 there was an attempt on the part of Japan to form a sort of league of the Mongolian races. This was the *Eastern Asia One Script Society*. Presumably this would mean Japan, China, Korea, Burma and Siam. We are not told what was (or is) its purpose, but the writer speaks with considerable indignation. As if these peoples had not precisely the same right to make alliances as we! Indeed, no surer way could be found of driving them to it than this very attitude. The contact of the Mongol with Western civilization may be making him feel that he would rather not have any, or that he will at any rate make his own selection. Let any one read the history of the contact of China with Western Powers during the last sixty years up to today, and then imagine the feelings with which she must regard them.

The United States & Hague Tribunal THE following quotation from Baron d'Estournelles de Constant will be read with interest. He says:

The United States helped the cause of peace by submitting the first case to the Hague tribunal, and I believe American statesmen would do well to come into closer contact with Europe. On this ground I have been invited to visit America next year. I shall go to the St. Louis Fair and deliver a series of lectures on the subject. My main object will be to obtain the formation in America of a group of Congressmen favorable to arbitration, who will afterward visit France and help the great movement for the world-wide adoption of arbitration between nations.

America will remember her traditions and will give to the enlightened Frenchman the encouragement and the aid for which he asks.

German Military Service Unpopular THE German authorities are divided between the desire to deny and to explain the growing unpopularity of military service. And yet recent events should simplify the problem. For example, two officers at Magdeburg have been punished for torturing privates, kicking them, and scrubbing their naked bodies with nail brushes. Ten gunners at Cologne have been tried for a similar offence. An officer at Rensburg has been arrested upon 1,500 cruelty charges, and these are some illustrations out of many. When private soldiers show a lack of enthusiasm in revenging misused missionaries, it is not surprising that they should go further still and object to have their naked bodies scrubbed with nail brushes.

A Brussels Doctor on Tuberculosis DR. NEUSHOLME, speaking in Brussels at the conference on hygiene, is responsible for the statement "that poverty and tuberculosis are close companions, poverty not only furnishing the appropriate soil, but also increasing the closeness of contact and the frequency of opportunities of infection." It would seem from this that the effects of poverty cannot be confined to slums and tenements, however much we may try. It matters not how consistently we refuse to share the burdens of misery or to remove them, or with what regularity we deny the claims of brotherhood, Nature has a silent and an insistent way with her, and she proves that we are indeed our brothers' keepers by infecting us with their poverty-born tuberculosis.

Kindness of the Natives of Thibet HENRY SAVAGE LANDOR is responsible for a very general idea that the Thibetans are cruel savages, and that white men falling into their hands are liable to be tortured. However unpleasant his own experiences may have been their cause will be readily understood by those who have read his book. Other travelers unite in ascribing great good humor and kindness to the people of Thibet. Sven Hedin says:

A few years ago an uncritical young man astonished us with tales of his having been tortured in Thibet; but I was in no degree deterred by his sensational stories—for the simple reason that I did not believe them. The fiendish cruelty of Thibet belongs to the realm of bugaboo.

Big Army Estimates in Europe & Asia THE expenditure for armaments in this year of our Lord is almost of an inconceivable magnitude. The current estimates for the armies of England, Germany, France, Italy, Japan, Russia and Spain amount to the stupendous total of nearly \$900,000,000, and so far from diminishing the cost is in nearly every instance increased. Truly it is a grim satire alike upon religion and upon civilization. The ancient cant about securing peace by being prepared for war, is nearly threadbare. These vast and murderous machines create their own demand and their very existence implies their use.

The Kishineff Massacres Avenged THE Russian Government has very largely proved its good faith in the matter of the Kishineff massacres by the sentences which have been passed upon some of the chief offenders. Two of the accused have been sentenced to seven and five years' penal servitude, respectively, and twenty-two others will go to prison for one or two years. The sentences are not, of course, of great severity, nor can we doubt that a large number of guilty persons have been allowed to go free, but then Russia has by no means a monopoly of peculiarities in criminal procedure.

Mexican Villagers Must Paint Quick THE Mayor of a Mexican town, which is described as being just across the boundary line, has lately issued an order that every house is to be painted, and that the work is to be finished within one month. A tradition exists that there are other towns upon *this* side of the boundary line which a little paint would almost transfigure, but had the enterprising Mexican Mayor nothing to say about untidy back-yards? Perhaps there were none in that favored locality, and resemblances must of course end somewhere.

The Rapid Russification of Poland THE Russification of Poland proceeds so rapidly that it seems that the very processes of nature must bear the Imperial seal. A certain kind of rye-seed introduced by the Government into the Polish provinces was found to be a failure. One of the agricultural papers having called attention to this, was reminded by the censor "that Russian seed had for all future time been introduced into the western provinces, and would not be allowed to fail."

THE CHILDREN'S HOUR

The Story of a Rain-drop

DEAR CHILDREN: I once knew a sweet lady who lived near the great Atlantic Ocean. She loved little children even better than she loved birds and flowers, which was saying a great deal, and at one time, as it chanced, there came into her life a sad little motherless boy. He was only five years old, and she often used to tell him stories. One of them, although he is a grown man, he remembers to this day. She called it "The Story the Rain-drop Told Me," and this is it:

Once upon a time I lived with hundreds and hundreds of brothers and sisters in the great ocean. There we all took hold of hands and played with each other; and the winds played with us and took us up on their backs, making us into little waves and great waves. And sometimes, when the winds were not there, we would spread ourselves out smooth like a looking-glass, and look up into the sky; and the moon and the stars would look down upon us.

We wanted to go up into the sky; and so, when the sun sent down his sunbeams, and the stars sent down their starbeams, and the moon sent down her moonbeams, some of us would jump up on their backs and ride into the sky.

But soon they would be tired of us, and shake us off; and down we would fall. Then we would catch hold of hands and make ourselves into clouds; and when the clouds got to be so heavy that the air could not hold them up, we would let go of hands and fall down in drops of rain. But sometimes the clouds would stay up and sail around; and one day the cloud that I was in bumped up against a mountain, and we all fell out, down into the little holes of the mountain, and soon I was all alone in the dark. But I saw a light a little way off, and so I ran along and came to the light which was outside the mountain. And as I stood there I saw a great many of my brothers and sisters standing at just such holes as the one I was looking out of; and when we saw each other, we burst out laughing and ran to each other, and took hold of hands. And all together we made a little brook that ran down the sides of the mountain into a meadow full of beautiful flowers; and so we ran all about the meadow, watering the roots of all the flowers we could reach to make them grow, for we wanted to do as much good as we could. And then we thought we would run on, and see if we could find our old home in the ocean, where we left hundreds of brothers and sisters. But as I got rather tired, I decided to stop and rest awhile on this leaf. But now I am rested, so I will jump off and run to my home in the ocean as fast as I can. A LOTUS GROUP TEACHER

NO friend is more faithful and more necessary to the Eskimo than his dog. It is the dog that draws the laden sledge from place to place, living on the plainest food, sleeping in the snow. He drags home the trophies after a walrus or seal hunt—for the Eskimo lives in a land where grain cannot be raised, and he depends upon the hunt for his living. It is his dog that serves him by day and guards him at night. Strong, capable of great endurance, faithful, kind and intelligent—what would the Eskimo do without him?

The Story of Gellert

DEAR CHILDREN: Last summer I was in Wales and, among other places, I visited Snowdon. There my friends pointed out to me the grave of the noble Gellert. "And who was Gellert?" I asked, supposing it to be the name of some great lawgiver or warrior.

"Gellert," they said, "was a dog, a magnificent deerhound. He lived many, many years ago, and he belonged to the Prince Llewellyn, who often left his baby boy in charge of the great faithful creature.

"One day Llewellyn returned home to find the baby's cradle upset and empty and the dog standing beside it, his mouth dripping with blood. 'Can it be,' said the Prince, almost maddened by the thought, 'can it be that Gellert has killed my son?' and, scarcely knowing what he did, he ran his sword through the dog's body. As Gellert lay dying Llewellyn heard the baby's voice. There, behind the overturned cradle and nearly covered with blankets, was his little son, unharmed. Nearby was the lifeless body of a great wolf which the faithful Gellert had slain.

"The Prince was overcome with grief, and they say that to his dying day he could not speak of Gellert without tears. That all men might know of his gratitude, he buried the dog with honor and erected a beautiful monument over his grave. The spot is known as Beth-Gellert to this day." Affectionately,
AUNT EDYTHE

ONE OF OUR LOMA-LAND FRIENDS

DEAR CHILDREN: Not long ago, near Placerville, California, two miners fell into an old mine shaft that had been abandoned. After a time, to their great surprise, a searching party came to their rescue, for no one ever went down into the mine, and the two men had no means of letting any one know of their distress. The rescuers said that they were directed to the shaft by seeing the little dog that belonged to one of the men watching beside it. The faithful animal would not leave until his master had been taken out, although he had been without food or water for several days.

E. W.

THE BROOKLET

From the French of Victor Hugo, translated by a Raja Yoga student

A BROOKLET fell from a rock
Into the surging sea,
And the Sea said, "Why, little stream,
What are you asking of me?"

"I am so stormy and big,
I reach away out to the sky.
Of a poor little helper like you
Not the least need have I."

But the Brooklet said to the sea,
"Dear Ocean, pause—and think—
That which you lack, I give,—
Sweet, pure water to drink!"

My New Year

Extract from an essay written by a Raja Yoga girl

EVERY new year should be the beginning of something newer and better. See how many people do the same things year in and year out, not striving in the least to progress. Naturally, to these people life seems dull and monotonous. Some people think that New Year's is merely the beginning of a period of twelve months, but it has a deeper meaning. It should be a time

when we put in practice all our best resolutions.

A great many people make good resolutions, but they fail to practice them, for that takes perseverance and unselfishness.

Every new year should be a seed-time for planting good resolutions. But we should not only plant; we should cultivate so that at the end of the year we will have accomplished something or, in other words, we shall have a rich harvest.

Students'

Path

THE COMING TIME

by WILLIAM MORRIS

THEN a man shall work and bethink him, and rejoice in the deeds of his hand,
 Nor yet come home in the even too faint and weary to stand.
 Men in that time a-coming shall work, and have no fear
 For tomorrow's lack of earning and the hunger-wolf a-cour.
 O strange, new, wonderful justice! But for whom shall we gather the gain?
 For ourselves and for each of our fellows, and no hand shall labor in vain.
 Then all mine and all thine shall be ours, and no more shall any man crave
 For riches that serve for nothing but to fetter a friend for a slave.
 And what wealth there shall be left us when none shall gather gold,
 To buy his friend in the market and pinch and dwarf the sold?
 Nay, what save the lovely city, and the little house on the hill,
 And the wastes and the woodland beauty, and the happy fields we till.
 And the homes of ancient stories, the tombs of the mighty dead;
 And the wise men seeking out marvels and the poet's teeming head,
 And the painter's hand of wonder, and the marvelous fiddle-bow,
 And the banded choirs of music, all of those that do not know.
 For all these shall be ours and all men's, nor shall any lack a share
 Of the toil and the gain of living in the days when the world grows fair.

Out of the French

Some extracts from the writings of LAMENNAIS, specially translated from the French for the
 NEW CENTURY PATH by a Student

YE are all sons of one father, and by one mother have ye been nourished; why then love ye not one another as brethren, and why look ye one upon another as enemies?

He who bears not love towards his brother is seven times accursed, and he who looketh upon his brother as upon an enemy is accursed seventy times seven.

Render love one toward another and ye shall fear neither the great, nor princes, nor kings.

Say not, behold I am of one people and thou art of another, for all peoples have had one earthly father, who is Adam, and one father in heaven, who is God.

If a limb be wounded the whole body must suffer. Ye are all of the self-same body, and if there be one among you who is oppressed, then are ye all oppressed.

When ye shall see one who is led forth to prison or to punishment, hasten not to say here is an evil man who has committed a crime against his race. For peradventure he has good will towards men, and suffers now by the will of those who would oppress their kind.

When ye shall see a people bound with chains, and delivered over to the executioner, hasten not to say here is a violent people by whom the peace of the world is disturbed. For peradventure this is a martyred people who give up their lives for the love of men.

Eighteen hundred years ago in a city of the East the priests and the kings nailed upon a cross, after having beaten him with sticks, one whom they called seditious and a blasphemer. And upon that day of death there was a great terror in hell and in heaven there was great joy. By the blood of the just was the whole world saved.

Justice is life and charity is life, most sweet and most abundant.

The law of God is a law of love and love rises not itself above others but sacrifices itself for the sake of others.

He who says in his heart I am not like unto other men who have been given unto me that I may command them, and do with them according to my desire, such an one is the son of Satan.

A certain man journeyed amongst the mountains, and he came unto a place where a great rock, having fallen upon the road, entirely closed it

and there was no passage either to the right or to the left. Seeing then that he could no more continue his journey because of the rock, he tried to move it and so to make for himself a path, but although he toiled and became weary, his efforts were in vain. Being then full of sadness he seated himself and said, "What shall I do when night falls upon me in this solitude, without food, nor shelter, nor any defense against the savage beasts who search their prey?" And while he thus reflected another traveler arrived who, having in his turn sought fruitlessly to move the rock, sat himself down in silence with bent head. And there came many others, and not one of them could move the rock, and their fear was great. Then one of them said to the others: "My brothers, let us pray unto our Father in Heaven, and peradventure He will have pity upon us in our distress." And they heard his words, and from their hearts they prayed unto their Father in Heaven.

And when they had prayed, he who had first spoken, said: "My brothers, what no one of us is able to do alone, it may be that we can accomplish in unison." And they raised themselves, and unitedly they pushed upon the rock and moved it from their path, and pursued their journey in peace.

The traveler is man, and life is the journey and the rock is the sorrow, which he must meet at every step. No man alone can move that rock, but its weight has been so adjusted by God that it can never hinder those who travel in unison.

How Indians Catch Fish in Winter

WHEN on the rivers comes the ice in the winter there are many places where for a long way it is quiet, still water, which freezes quickly, and at the end is a riffle where the dashing of the water among the stones does not let it freeze. Now in the quiet water are many fishes, but the ice is thick above them so that it is not easy to catch them. Then the women make ready where the water is shallow and open among the stones. Everybody in the village comes to help in the fishing. Some stay at the open water where the fish will come. All the others go to the other end of the ice and makes much noise. They are in a line across and every one make noise. The men roll large stones before them, or beat with great sticks upon the ice; the boys have such things also, and the women. The dogs run and bark, and there is much noise as they all in a line go to the open water at the riffle. There the fishes come because they are frightened by so much noise, and because the water is shallow and full of stones; they cannot swim so fast, and are caught and thrown out on the banks or back upon the ice. There is much noise, and if there are many fish everybody is glad and there is feasting in the village. But only one time in one year can this be done, because all the fishes are caught at once, and it is not good to drive all the pools in one winter lest there be no fishes next year, and it is foolish to eat little fishes, because if they are left they will grow bigger.

HYAS LELÓO EÉNA

The Prayer of Zoroaster, 6000 B. C.

"I REPENT of all sins, all wicked thoughts, words and works, which I have meditated in the world. O, Lord, pardon.

"I repent of the sins which can lay hold of the character of man, or which have laid hold of my character, small or great, which are committed among men, the meanest sins which I have committed for the sake of others, or others for my sake, or if the hard sin has seized the character of an evil-doer on my account, such sins, thoughts, words, or works I repent of with the three words, pardon, O, Lord!

"The sins against father, mother, sister, brother, wife, child, against those living with me, against the neighbors, against servants, every unrighteousness through which I have been among sinners, of these sins repent I, pardon, O, Lord!

"Of pride, haughtiness, covetousness, slandering the dead, anger, envy, the evil eye, shamelessness, looking at with evil conscience, stiff-neckedness, self-willedness, sloth, despising others, false witness and judgment, theft, robbery, whoredom, unchastity, as well as all other kinds of sin, of these repent I, with thoughts, words and works. O, Lord, pardon, I repent."

WE reduce life to the pettiness of our daily living; we should exalt our living to the grandeur of life. —Phillips Brooks

A PARABLE

by N. H. WILLIS, in *Lucifer*, 1890

AN aged saint once fasted long
In penitence and prayer—
"Save me from Hell!" he cried, "and grant
That Heaven may end my care!"

"Oh, quench me not in wrath, dear Lord;
Oh, save my soul at last!"
And lo! an angel's fluttering wings
Approach him on the blast.

In one hand was a golden cup
Brimming with water bright.
The other held a ball of fire
Shimmering with holy light.

"Say what thy mission. Glorious One!"
"Quick to thy bended knee,
'Tis thus the message of thy God
Must be received by thee!"

"Know! Heaven and Hell do sore impede
The teaching of the Cross.
God wills men love him for Himself,
And not for gain or loss.

"This water shall Hell's flames put out,
This fire shall burn up Heaven!
My mission dread that unto me
By God Himself was given!"

The vision faded—but the saint
Had learned the lesson well;
"The Love of God," he cried, "is Heaven!
To want that Love is Hell."

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question What is the effect of nature on human life?

Answer (1) Without nature we should not even exist.

What we call nature is a form or expression of the One Life which is in us and in all things. Nature outside ourselves must affect our lives because of its oneness with Nature in ourselves. If we live true and pure lives close to the heart of being, we shall feel the kinship and friendship of Nature. The artificial, insincere and impure life is out of harmony with nature and does not respond to its healing and helpful influence until some trying experience causes a change, and nature brings this about.

We are ourselves the harp of seven strings, and if we keep in tune these strings will vibrate in joyful harmony to Nature's touch. Sky and sea and flowing streams, mountains and valleys, the broad expanse of prairies, the silence, music and majesty of forests, the songs of birds and the beauty of flowers, speak to us of the Universal Soul and awaken within us the deeper harmonies of life and a sense of the nearness of God. Nature, our great and tender mother, the bountiful giver, helps us in all things if we but live close to her heart. She lays a healing hand upon our wounds, softens our sorrows, makes brighter our joys, and renews our strength for greater endeavor.

Nature has her sterner aspects, for she is justice as well as love, and metes out that which is the due of every one, of nations and of races, visits upon them the destructive force of their own evil and makes clear the way for something better to follow. As a thunder-storm clears the atmosphere of impurities, so do all the terrible visitations of nature clear away accumulations that block the onward progress of the race, and those who suffer most from such destructive work are those who need it most.

"Help Nature and work on with her and Nature will regard thee as as one of her creators and make obeisance." B. W.

(2) Some men of modern science, notably, Buckle in his *History of Civilization*, attribute the character of the people, their social and political condition, and all material progress, as well as the manifesta-

tions of human thought in literature, art and religion, to the environment in which a nation or family is placed; and allow four factors, namely, climate, soil, food and the general aspect of nature as determining factors as to what their outcome will be. While the arguments are strong, and good as far as they go, yet it makes man a creature of circumstances, and leaves him out of consideration as a controlling agent in the affairs of the earth.

To a superficial observer it may appear that environment explains the growth of a nation, the development of character, the disposition and mental faculties of man, and that man's progress depends upon external circumstances, but a deeper study reveals the fact that to search for all the causes of the many phases of life, and even of the existence and activity of mental faculties such as the imagination, is a denial of the truth, which is, that all real growth is from within. Although environment has its effect, yet man can overcome its limitations by the power of his own knowledge and determination and aspiration. Such an explanation of life as dependent upon external Nature is far from satisfying to the student of Theosophy who looks upon Nature from another standpoint and to whom Nature, or Isis, is the preceptress, the teacher, who ever says to humanity, in the school of earth life, "Watch me and behold the marvels which I bring about," and ever shifting the scenes, presents throughout the ages, panorama after panorama, in endless procession before the gaze of man, and all for his benefit. Nature never seeks to intimidate man, however gigantic or even sometimes destructive her operations may be, but ever beckons him on, nurses him and ever strives to lift him higher both by the grandeur and magnitude of her physical changes and the delicacy and beauty of structure in things minute she ever excites the imagination, stimulates the mind to seek a broader, deeper understanding of the meaning of life and calls forth the heartiest admiration for the wonders she brings about for man's instruction.

Too often, man is so engrossed with the petty cares and anxieties of his life that he has no time, or thinks he has not, to lift his eyes from his occupation and look about, but remains rooted to a narrow daily routine, actually wasting time and substance, instead of profiting by the great opportunities so lavishly offered by Nature.

Through centuries of error in belief and act, men have come to look upon Nature as something apart from themselves, something in which they have no share; and from that comes an indifference and lack of interest in that as well as the affairs of life—a shirking of responsibility as it were—far better would it be, to realize, when viewing the scenes before us that we were a part of Nature and by our lives helped to build up or tear down her work, that, in other words, we were co-workers with her.

What is needed is the realization of the oneness of all things, of man with Nature, and with his fellow man, and of his power collectively to change the earth's surface, alter its conditions, banish selfishness and work with all the forces of Nature for the benefit of all. H. P. P.

The Diet of Children

EXTRACT from a Seventeenth century treatise on the care of children: "The Morning is generally designed for Study, to which a full stomach is but an ill Preparation. . . . I should think that a good piece of well-made and well-baked brown Bread, sometimes with and sometimes without Butter or Cheese, would be often the best Breakfast for my young Master. . . . If he at any Time calls for Victuals between Meals, use him to nothing but dry Bread. If he be hungry more than wanton, Bread alone will down; and if he be not hungry it is not fit he should eat."

Plain food, "without any Sauce but Hunger," is recommended throughout, and this "very sparingly seasoned with Sugar, and without much Mixture." Fruit "makes one of the most difficult chapters in the Government of Health. Our first Parents ventured Paradise for it; and it is no Wonder our Children cannot stand the Temptation. . . . I should not be altogether so strict in this Point, as some Parents are to their children, who, whenever they can get loose, eat to a Surfeit." Quaintest of all, however, is the following cutting remark: "Sweetmeats of all kinds are to be avoided; which, whether they do more Harm to the Maker or Eater, is not easy to tell. This, I am sure, is one of the most inconvenient Ways of Expense that Vanity hath yet found out; and so I leave them to the Ladies."

Savages at School

WE need to newly define what we mean by an University. In olden times the university was a center of culture in which a moral and intellectual light was kept burning. It appears now to be degenerating into a school for the cultivation of primal ferocities and of the bad manners which are peculiarly the creation of the present age. Thus an eastern newspaper relates how a party of students from one of the largest American Universities sought relaxation by cutting the trolley wires and so causing vexation and delay to thousands of people returning from their daily work. An educational newspaper in another part of the country quotes the remark of a business man which was casually overheard at a football game:

It used to be said that the college student when he wanted to be funny imitated the saloon rowdy; but now the rowdy needs only to imitate the college student to be at his worst.

Similar stories come from Boston. Professor Shaler, the world-known geologist and the Dean of the Harvard Scientific School, threatens to resign because, as he says, "Harvard men act like loafers." One of Professor Shaler's assistants was forced to discontinue a lecture on Geology because of the shower of missiles, including eggs, which were thrown at him, and it will be remembered that a college student recently lost his life while undergoing some brutal and idiotic initiation ceremony. The *Boston Post* says:

It seems that strenuous life is increasing so largely in some of our colleges that the time is likely to come before long when a gentleman offered his choice of a professorship in college or to be superintendent of a state prison would have no hesitation in deciding which to accept.

There are, of course, very many university students in whom the instinct of good behavior cannot be extinguished even by the "higher education." None the less, the men who are responsible for this tide of vulgar misconduct will one day tacitly claim some kind of precedence in the world on the ground of their education. Is it not time that our universities cease to provide models of ruffianism for the successful imitation of young boys?

STUDENT

Two things thou must bear in thy mind—one that all things from eternity are of a like form, and come round in a circle, and that it makes no difference whether a man shall see the same things during a hundred years, or two hundred, or an infinite time; and the second that the longest liver and he who will die soonest lose just the same.—*Marcus Aurelius*.

Huxley on Vivisection

WE are sometimes told that the opposition to vivisection proceeds only from weak-minded and sentimental people who are incapable of understanding the accruing benefits. It is therefore well sometimes to refresh our memories, and to recall the opinions of those against whom the accusation of sentimentalism cannot well be brought and whose authority has not been questioned. Huxley was a member of the commission on vivisection of 1875. Writing to Darwin at the time he said:

On Thursday, when I was absent at the Council of the Royal Society . . . was examined, and, if what I hear is a correct account of the evidence he (the name is not given) gave, I may as well throw up my brief. I am told that he openly professed the most entire indifference to animal suffering, and said he only gave anesthetics to keep animals quiet! I declare to you I did not believe the man lived who was such an unmitigated, cynical brute as to profess, and act upon, such principles; and I would willingly agree to any law which would send him to the treadmill. The impression his evidence made on Cardwell and Forster is profound, and I am powerless (even if I had the desire, which I have not) to combat it. He has done more mischief than all the fanatics put together. I am utterly disgusted with the whole business.

Curative Enthusiasms

IT is related that when Benvenuto Cellini was about to cast his statue of Perseus he was suddenly seized with a fever. As he lay very ill in bed a workman entered his room with the announcement that the work had been spoiled in the furnace and could not be saved. With a cry of consternation the sick man sprang from his bed and rushed into the workyard where with frantic efforts he succeeded in saving his statue. He then ate a hearty meal with his men, returned to bed and fell asleep to awake in the morning refreshed and entirely cured. A narrative such as this deserves more reflection than it ordinarily receives. We are still a long way from learning the extent to which the mind can encourage an illness or discourage it, the extent to which the body is a reflection of the virtues and the follies of the mind. A high enthusiasm has more preventive and curative potencies than a whole college of physicians, as we can very quickly prove for ourselves. Very few maladies can remain proof against a warm interest in the well-being of others and to adopt a worthy enthusiasm—and such are usually unpopular—is to create within ourselves an atmosphere which is as fatal to disease germs as a hot sun at noon day. Try it.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Observations taken at 8 a. m. Pacific Time

PRESIDENT HARNER of the University of Chicago had occasion to deliver an address at a public school. His subject was patriotism, and he began to speak in striking and dramatic way.

"Boys," he said, pointing to the wall on his right, "why does the American flag hang there?"

"To hide a spot of dirt," a little fellow piped.—*Philadelphia Bulletin*

THE child is so often right. It has not the miscellaneous knowledge of the grown-up person who reads newspaper and keeps a tame Encyclopædia Britannica in a carefully devised cage. But the childish mind has an unerring logical faculty not in any way confused by superiority of information.—*Academy*

War and Peace Hang in Balance

THE Angel and the Demon still whisper alternately into the ears of the nations, peace and war tremble in the balances, and the doors of the Temple of Janus swing uncertainly to and fro upon their hinges. The Chancelleries of Europe and of Asia guard well their secrets. We can hear the iron dice as they fall upon the table of fate, and it is left to the money markets of the world to coin into gold the agonies of a hemisphere. Only the hardest optimism can survive so volcanic an outlook, an optimism which is not merely a sentiment, but which is founded upon the philosophy of law. We have that optimism,

because we know that the dawn is as much in the order of nature as the darkest hour of the night which precedes it, and because the power which shall make all things new can destroy and build again, rearranging the stones of sin and shame into divine form and order.

Whatever may be the immediate outcome of the present vortices of human hate, that outcome must indicate the end of a system and the beginning of a new. For us, no calamity however widespread, however prolonged, can be anything more than a step onward. Neither time nor progress ever turn backward. However tremendous are the darknesses into which we descend, those darknesses lie between us and the mountain

Twenty Million of Armed Men

heights, and the sunlight is the nearer, although the more invisible. Humanity learns unwillingly, like individuals, but it does learn, and it must learn. Nature does not weary in well-doing, and with an infinite and a divine patience she materializes our follies, and speaks to us in the terrible language which we best understand. For these many years we have done all that within us lies to live without ideals and without virtues, and the presence of twenty millions of armed men is the proof of our failure. Whether our vicious mental systems are to be broken up by war or in some other way, broken they must surely be. Nature has mercifully decreed that human suffering shall not pass a certain point, and if her remedies are heroic, they are certainly effective. If our vision were more keen, we should see not only the threatened wreck, but also the assured reconstruction, and behind the storm we should hear the creative heart of God. It is well with the world, eternally well, but the still small voice was not heard until the end. Only the Magi knew that in a little child was the hope of a humanity which seemed to be hopeless, and from the fallen splendor of Egypt uprose a new star in the night of men's despair.

In the light of all past history we shall do well to be tranquil and to be apprehensive of nothing except that we may fail to do our whole duty as each day shall show it unto us. If the world must pass through the valley of the shadow of war, then that is as the Law wills it, and it is provided for by the Law. And if it is to be peace, then is that too provided for, but however veiled may be the future, the clear bright light of individual duty is never at any time hidden nor obscured. Tranquillity is not a negative but a positive virtue, because only into the tranquil mind comes the specialized message of the Law, and by tranquillity we prove our confidence and our devotion, our readiness to serve. By the performance of duty we harmonize ourselves with the inevitable, we become comrades with destiny, and the legions of nature are about us to protect us. Unto the Divinity of the Great Law which works in ways mysterious we raise a temple and a shrine.

STUDENT

On Horton Heights

THE illustration on the cover page of the NEW CENTURY PATH this week shows one of the broad verandas that surround the home of Mr. and Mrs. A. E. Horton, on Horton Heights, San Diego, Cal., from which is obtained a sweeping view of ocean, mountain and bay, Point Loma, Coronado, and the larger part of the city. The view shown in the photograph is toward the northwest, taking in the entire stretch of the peninsula of Point Loma and North Island. There are many beautiful and costly residences in San Diego, but from none of them is the view more expansive.

"Father" Horton, as he is familiarly called in the city of his planning, was the pioneer who first saw the feasibility of establishing a great city on the present site of San Diego.

X.

Sweden's King

WE join our congratulations to those of the Swedish nation upon the seventy-fifth anniversary of King Oscar's birthday, which was celebrated on January 21st. Stockholm was decorated and illuminated, and the principal authorities worthily commemorated the occasion by presenting the sum of \$40,000 to the King's Jubilee Fund for the indigent consumptives of the capital. Sweden has been fortunate in her ruler, to whom the whole world wishes happiness and continued health and success.

STUDENT

Missionary Obstacles

THE annual conference of the foreign mission boards of the United States and Canada has been held at New York and it seems that some of the missionaries are greatly incensed at the behavior of European and American residents in Asia. Many of these people, the missionaries say, lead lives of immorality and are thus the occasion of scandal to the natives.

They leave an ineffaceable mark upon Asiatic society. They are not sparing in their censure of the missionary and declare that the uprisings of a few years ago were due to the machinations of the Christian workers. This I declare to be pure calumny. The impurity and intemperance of men who, in the sight of Asiatics, are just as much Christians as are the missionaries, seem to give the lie to all the missionary has to say.

There is doubtless very much truth in these strictures and we can readily believe that very many Europeans and Americans disgrace their own civilization in the eyes of the more ancient civilizations amongst which they live. Nevertheless the accusation of the missionaries has two edges and it cuts in two directions. The Asiatic is metaphysical and logical. He knows that these people come from the same countries from which the missionaries come, that they are of the same race, the same color, the same education and that from their infancy they have presumably been saturated with the same theology which the missionaries are now offering. They naturally ask if these are the results of that theology or at least if the religion of the missionary is not able to change the behavior of those who are most familiar with it. Such questions are not only inevitable but they are justifiable, and so long as some missionaries have no other religion than that of creed we do not see how these questions can be answered. They imply what is an unquestionable fact that the creeds which the missionaries are promulgating are perfectly powerless against the flood of evil under which every modern civilization is nearly submerged and the still more disturbing fact that the religions of creed are able to flourish exceedingly in a soil so saturated with wrong living and without exercising the least influence upon that soil. Truth is sometimes a very hard task master, but those who are willing to receive it never go unrewarded. To look at ourselves through Asiatic eyes would be a liberal education to very many of us. If we could do this for a moment we should understand how impossible it is to persuade the Asiatic that the religion of the missionary is not in sympathy with the misdeeds of the civilization from which it comes. He sees that the religion and the misdeeds exist side by side and he argues, not unfairly, that if there were any real antagonism between them one or the other must cease to exist. Instead of antagonism he sees what is suspiciously like a mutual understanding and he draws his own conclusions.

We are of course well aware that the average missionary detests drunkenness and vice just as heartily as does the average Asiatic. He might none the less ask himself how far a religion of dogma is responsible for the evils at home and whether the Asiatic is not justified in fearing that similar causes will continue to produce similar results. X.

The New Panama Route

THE following table of comparative distances, via Cape Horn, the Suez Canal and the Panama Canal, will be read with interest by those concerned in trans-oceanic commerce. It is taken from the German *Grenzboten*, which is no doubt unfavorable to the new route:

From	To	By way of Cape Horn	By the Suez Canal	By the Panama Canal	Advantage In favor of Panama
Hamburg	San Francisco	15,140	. . .	8,488	6,652
Hamburg	Hongkong	18,480	10,542	14,933	. . .
Hamburg	Melbourne	13,802	12,367	13,198	. . .
Hamburg	Yokohama	17,979	12,531	13,024	. . .
New York	San Francisco	14,840	. . .	5,299	9,541
New York	Hongkong	18,180	11,655	9,835	1,820
New York	Melbourne	13,502	. . .	10,427	2,863
New York	Yokohama	17,679	13,464	9,835	3,729

The *Grenzboten* very justly remarks that "New York will gain immensely from the Panama Canal in the matter of commerce with the eastern coast of Asia, because it will be brought nearer to Yokohama or Hongkong than either London or Hamburg is now."

Athanasian Creed

THE Dean of Westminster has delivered a series of lectures upon the Athanasian creed which he regards as somewhat of a burden upon the consciences of law-abiding persons. It will be remembered that the Athanasian creed dictates to the humanity of all future ages what it shall and what it shall not believe, and then assures us of the eternal damnation of all those who do not adhere. The Dean of Westminster is of course a liberal-minded man and a humane man, but he evidences some little ecclesiastical prejudice in supposing that humanity is in any way interested in the damnatory clauses of the Athanasian creed, or that the average intelligent man is conscious of the burden which it imposes. The learned Dean, like most people, lives in the center of a small circle and supposes that circle to fairly represent humanity. These circles represent only themselves, and to this is due most of our puerilities. The world has heard the Athanasian creed for many centuries and it has discovered, like those who heard the curse against the Jackdaw of Rheims, that "nobody seemed a penny the worse."

The Dean of Westminster objects to the Athanasian creed, to his credit be it said, but he does not wish to belittle its meaning. He says that its damnatory clauses are not simply a solemn reminder, but were meant to be absolutely uncompromising and to carry the meaning that the disbeliever would be strangely endowed with immortality in order that he might suffer everlasting pains. Such is the meaning of the creed and such is the theology which is preached from the thousands of churches using this creed, and which now make noisy complaints that the people are too apathetic to come and hear it. Perhaps the people are too humane to come and hear it, too Christian. Punishment by torture has been abolished from our human codes, or we like to think it has, but when we object to its inclusion in the divine code we are accused of being indifferent to religion. The Dean tells us, however, that good churchmen no longer wish to reaffirm the certain damnation of those who reject the Athanasian creed, so the world may once more breathe.

It is all very strange, this solemn and well-meaning renunciation of medieval horrors and phantoms, but the world has passed its interested point. It is evolving a religion of its own in which there is no creed. It is learning that "all the law and the prophets" are included in the precept and practice of human fraternity.

Immortality in Books

THE passion for evanescent literature which has nothing whatever to recommend it except its modernity leaves but little leisure in life for the reading which is educative. We have almost unlimited time for the short story, which is usually the worthless story, and all too often the vicious story, but we have no time whatever to make ourselves acquainted with the authors who will lead us a little upward instead of encouraging us to walk persistently downward.

Who, for instance, has ever read Emerson or Carlyle or Ruskin without some inner consciousness of unfolding doors and of an inner light which shows all facts of life in a new perspective. The charm of a great writer is not that he argues us into beliefs which we did not hold before, not that he besieges the unwilling fortress of our mind until it at last capitulates, but rather that he tells us things which we have seemed always to know, that he calls forth our instant acquiescence in what is at once obvious.

The true literary teacher does not dispute with us. He leads us to the landscape and his most profound message is as it were, a wave of the hand, an invitation to go into the land and possess it. For this reason the writings of the Greek philosophers are as fresh today as they were two thousand years ago, and they will remain young and they will remain valuable as long as there are any minds which have not yet learned to think, so long as there are any mental doors which remain unopened. Plato gives to us no new ideas in his broader writings. He merely makes an aperture through which our own ideas may issue, and for the same reason the teachings of Emerson can never become stale, because they deal, not with events, but with laws and principles. We do not go to the classics to learn but to be shown that we can learn. They put the end of the thread into our hands. They show us the mountain of attainment, and the narrow path which leads "up-hill all the way."

Some Views on XXth Century Problems

Influence of Religion in Daily Life

A CHICAGO minister asks a question which ought to be asked and answered, not only in Chicago, but elsewhere. "Recent events," he says, "in the two largest cities in our country, compel us to face the question, from a sober point of view, whether in a large population religion . . . has much influence in practical affairs." By religion we suppose that the churches are here meant, and the teachings of the churches, which of course vary very greatly according to the perception and the sympathy of the minister. The best way in which we can form a judgment upon such a question as this is simply to enter one of our churches, leaving all preconceptions outside, and having heard a service and a sermon, to ask ourselves as common-sense individuals whether what we shall have just heard is likely to produce a change of conduct in any human being. The verdict will of course somewhat vary with every church thus visited. Some there will be where the services are conducted with an obvious simplicity and sincerity and where the sermons are instinct with sympathy and devotion. But in how many instances should we not hear sermons which consist entirely of almost meaningless phrases, mere hackneyed repetitions of creeds which the preacher himself does not believe, which the congregation does not believe, and where there is not even a real pretence of belief upon either side. Nothing which is worth doing has ever yet been done by shams and the idea that the heart can be touched and conduct influenced by such proceedings is too ludicrous to be entertained.

There was once a young minister who, while ascending the pulpit steps to preach to a large congregation, was suddenly arrested by an overwhelming realization that he was about to speak to human souls and that *he had nothing to say to them*. There was no sermon that morning in the church, but the illumination of his mission which came to him from that moment of consternation into which his own soul had plunged him never again left him. He never again lacked a message which was worthy for a soul to give and to receive. Surely five minutes of such meditation before preaching would be worth more than much erudition; five minutes' meditation upon the needs of the people, the needs which are all the more pressing because they do not know of them. But that meditation must be honest, and the power of the human mind to deceive itself even as to its own honesty is well nigh limitless. It must be the meditation which recognizes facts and not merely theologic theories. Then will come a sermon which will indeed influence conduct and which will put something into human life not without its effect upon the corporate life of the community and nation.

Indians May Get Some Justice

IS it possible that the Red Indian is about to receive a measure of justice from the hands of civilization? It would almost seem so from the interest which Boston is showing in the lectures by Mr. G. W. James. Mr. James believes that a study of Indian basket work is most likely to be fruitful in a comprehension of the Indian character, on the theory that a man's work represents the best of which he is capable. Referring incidentally to the customary crime of civilization in stealing the Indian's character, Mr. James said:

We have lied to the Indian and stolen from him long enough. We are a big enough people now to do him justice. We have studied in our histories of the treachery and treason of the Indians of the days of our forefathers. We have learned how they combated the efforts of our ancestors to settle here, but we forget that in doing this they were only acting as patriots and defending their homes just as you of Boston would defend yours against any present day interlopers.

These are strong and good words and we hope they will produce fruits meet for repentance. It is all very well to admire the Indian's baskets but unless our admiration is accompanied by deeds of justice what shall it profit him? Mr. James explained that the Indian has poetry, sentiment, religion and imagination, and that all these characteristics are revealed by his baskets. Every separate design is the expression of a personal thought, but he has failed to find very many illustrations of an universal symbol.

Alcoholism Not the Real Disease

THE growth of public knowledge on the effects of alcohol is certainly remarkable, nearly as remarkable as the small effect which such knowledge has produced. One of the earliest experimental efforts along practical lines was made in 1840 by one Robert Warner, a Quaker who applied to a large company for life insurance. He was notified that an additional premium would be required from him as a total abstainer from alcohol, such abstinence being supposed to have a prejudicial effect upon longevity. Dissatisfied with this he resolved to start an insurance company of his own. He divided his risks into two classes, one class being reserved for total abstainers and the other for moderate drinkers. During the course of thirty-three years he found that the deaths among the moderate drinkers were 97 per cent of the expectations, while among the total abstainers the deaths were only 70 per cent of the expectations. The real effect of alcohol is now so well understood that even among the most ignorant classes it would not be easy to find an intelligent defense of its use upon health grounds.

None the less, alcohol is still used in ever increasing quantities, and from this we may draw a not unneeded lesson of the futility of all reform efforts which appeal only to the intellect and not to the moral nature. To a very great extent this error is being repeated in the peace movements of today. So long as the lower or passionate nature is dominant, so long will it submerge the intelligence, so long will it insist upon its gratification, whether that gratification take the form of war or of alcohol. We may prove *ad nauseam* that war and alcohol are followed by a hideous procession of evils, and that they go hand in hand with famine and pestilence and misery. Broadly speaking, that has very little to do with the main question. The love of war, and of every other form of self-indulgence, originates with the lower animal nature, which does not reflect nor reason. Those who descend to that level leave intelligence behind them or carry it with them and bind it into slavery to the demon.

A Higher Court Than Intellect

Men fight because they love fighting, and they drink or narcotize themselves with drugs because their lower natures love these things, and their lower natures are dominant, at any rate in these respects. The intellectual reform propaganda of today have unanswerably shown them the price which they must pay, and they are willing to pay it. To what other conclusion can we come when we are confronted by the fact that within the last thirty years, in Europe alone, *seven and a half millions of people died from alcoholism*, a heavier casualty list than could be supplied by *all the wars of the Nineteenth century*. If this fact alone is not sufficient, if we wish for statistics up to date, we may examine the current financial returns of expenditure as issued by the governments of the world.

The reform movements of the present day have fallen under the evil spell of the spirit of the times. They have appealed unto intellect, they have unanswerably argued their case, only to find that in this Court intellect has no jurisdiction, and that its injunctions are invalid and of no account. Reform must appeal to the higher court of ethics, and it must plead that these grosser forms of self-indulgence are wrong, because they are unfraternal and not because they destroy material treasure, nor vitiate the blood, nor increase taxation. Material nature will teach her own material lessons more convincingly than we can teach them by our logic. Let her teach them in her own way, the way of material pain. Let us rise above that; let us preach a gospel of self-sacrifice which is indifferent to material loss or material gain, and which indicates the right action of self-restraint, not because it will "pay," but for its own beauty. The victims of self-indulgence are very tired of the gospel of self-interest, more so than we realize. The tables of actuaries and the calculations of statisticians are poor substitutes for the law of life. We know them all by heart and they do not move us. We do but pause for a moment to admit their accuracy and then set our faces once more resolutely toward the darkness. Let us now lift our reform efforts out of their sphere; let us make the supreme appeal to the Higher Nature, which is perhaps unexpectedly near to the surface even in the drunkard and the man of violence.

Art Music Literature and the Drama

Shall Humanity Clasp Hands with Art?

PAINT common subjects and show your high art. I never go in for classic or religious pictures which make people admire them not for the art but for the subject itself. There might be wicked people in London but we artists don't paint the hearts. If we have artistic eyes ourselves everything looks artistic. To me all the people on the streets are just the same as birds or flowers. I am unconscious when I am on the street and several times I have knocked my head against the lamp-post. Once I ran with omnibus horses in order to study the movement of their feet and knocked down a baby and had great trouble with the mother.

These are the words of a Japanese artist who is at present writing for some of our western papers. The vein of selfishness that runs through them shows us a certain curious mental type by no means confined to Japan. One wonders how the unethical and the unbrotherly can presume, by any stretch of the imagination, to clasp hands with art. Looking back through the history of Japan—and it must not be forgotten that the Japanese are not only among the most innately artistic among all the modern nations, but go beyond all others in their intense and simple love of the beautiful—one questions if the writer of these lines is a fair sample of the artists of Japan. If an artist has no concern for the heart life of the people what excuse does he have for trying to express himself at all? And what are artistic eyes? And what a chilliness do we feel in any one who declares in one breath that people are just the same to him as birds or flowers and in another nonchalantly relates how he knocked down a baby in pursuit of art!

It is one thing to look upon our fellow-beings dispassionately, as the true artist always does; it is quite another to view them as so much grist for our particular mill. One turns from the picture of arrant selfishness and consummate egotism that this artist brings before us with something like relief to one of the beautiful color prints of Hokusai; they tell us so much of the man himself. They contain something besides lines and bits of pigment and his own words give us a clue to what that something is. Hokusai has been called a sort of artistic Paganini; for roundabout an exquisite conscientiousness there was a certain love of the spectacular and there were times when he actually frolicked, good-humoredly using his art merely to astonish. For instance: he once drew a horse as large as an elephant, immediately following it with a microscopic drawing of swallows in flight on a grain of rice. But that was in one of his play-times. In his character there was a beautiful humility and a real love for humanity. These are his words:

From my sixth year I had a perfect mania for drawing everything I saw. When I reached my fiftieth year I had published a vast quantity of drawings, but I was dissatisfied. At seventy-three I had some understanding of nature and of life. At eighty I shall hope to have made real progress and at ninety it may be that I shall have discovered the secret of things. In my one-hundredth year it is my dream that everything that comes from my hand will be alive. Written at the age of seventy-five by me, Hokusai, the old man who loves art.

Hokusai died in his ninetieth year, and his last words were a prayer that heaven would grant him another life in which to become truly an artist. Those who love the people of that land which has resisted so naively the encroachment of the morally cumbersome in our western life, would fain think of Hokusai as typical among Japanese artists, rather than those who are today caught in the tide of commercialism and of self.

Saint Saens on the Ancient Lyre

M. SAINT SAENS, to whom we owe some of our rarest and most exquisite themes, recently wrote, in a series of researches on ancient music, which were communicated by him to the Académie des Beaux Arts, Paris:

What part did the left hand play in lyres constructed on the plan of the zither? Paintings show us the plectrum striking the strings at the base of the instrument, the left hand placed behind the strings, the fingers spread out fan-wise. This arrangement has been explained by stating that the right hand, by means of the plectrum, performed the principal melody and the left hand executed a counter melody.

This hypothesis would be acceptable were it not that its evident modernity is entirely against it. During my last sojourn in Egypt a fortunate accident put me in the way of another explanation entirely different. In roaming about the Arab quarter of Ismailia, I was attracted by incongruous musical sounds. I entered and found some strange and incomprehensible rites in progress. There I saw a musician holding an enormous lyre, in the posture and manner so frequently reproduced in ancient drawings, that is, with the right hand holding the plectrum with which he struck the strings at their base, while the left hand was held about the middle of the instrument, the fingers spread like the sticks of an open fan. I could not at first understand how the performer was able to execute a design of several notes, indefinitely repeated. I approached more closely and noticed what it was impossible to have foreseen.

With the fingers of the left hand the player cleverly touched lightly those strings which were wanted to be silent, while the others, being left free, vibrated, although all were struck by the plectrum. It is not unreasonable to suppose that the ancient Greeks knew and practiced this mode of execution.

POPE PIUS X has recently laid down certain rules to be followed in the production and composition of all Catholic Church music. Some eight years ago, as Cardinal Santo, "he began his efforts to efface from the churches under his jurisdiction every form of music not strictly religious, . . . and some of the specific abuses to which he particularly objected were the use of instruments unsuited to the sacredness of a church, such as trombones and the piano, and the presence of women in the choir."

IN THE Hawaiian Islands an orchestra has recently been organized in which the best of the ancient native musical instruments will be used in connection with those of today. It was organized for the purpose of playing national Hawaiian music. Among the curious instruments thus rescued from the chance of being lost, are the *obu*, or nose flute, the compass of which is less than an octave; the *ukeke*, formed by a bow stretched with horse hair, and the *kilu*, fashioned of a cocoanut shell.

BEETHOVEN at one time composed a simple little *Adagio*, exquisitely beautiful in melody, for a friend. It was never published, but was placed in the lid of a music-box as a gift from this friend to his daughter, a young girl. Hidden away among a lot of rubbish, both music-box and composition were lost for decades. They have at last been unearthed by Dr. Kopfermann in a house belonging to one of the grandchildren of the young woman for whom the *Adagio* was composed.

"Art should seek by the true to illumine the intelligence; by the beautiful to regenerate the life; persuade by the good to perfect the heart."

A MUSICAL INSTRUMENT

by ELIZABETH BARRETT BROWNING

I
WHAT was he doing, the great god Pan,
Down in the reeds by the river?
Spreading ruin and scattering ban,
Splashing and paddling with hoofs of a goat,
And breaking the golden lilies afloat
With the dragon-fly on the river?

II
He tore out a reed, the great god Pan,
From the deep, cool bed of the river,
The limpid water turbidly ran,
And the broken lilies a-dying lay,
And the dragon-fly had fled away,
Ere he brought it out of the river.

III
High on the shore sate the great god Pan,
While turbidly flowed the river,
And hacked and hewed as a great god can
With his hard bleak steel at the patient reed,
Till there was not a sign of a leaf indeed
To prove it fresh from the river.

IV
He cut it short did the great god Pan,
(How tall it stood in the river!)
Then drew the pith like the heart of a man,
Steadily from the outside ring.
Then notched the poor dry empty thing
In holes as he sate by the river.

V
"This is the way," laughed the great god Pan,
(Laughed while he sate by the river!)
"The only way since gods began
To make sweet music, they could succeed;"
Then, dropping his mouth to a hole in the reed,
He blew in power by the river.

VI
Sweet, sweet, sweet, O Pan,
Piercing sweet by the river!
Blinding sweet, O great god Pan!
The sun on the hill forgot to die,
And the lilies revived, and the dragon-fly
Came back to dream on the river.

THEMING with spiritual knowledge, trumpet tongued, the tragedy of *Macbeth* is a manifestation of

spiritual law. The powers and possibilities of the God-man may be used for evil or good. The universe is embodied consciousness; and every atom of it is pulsating with life. The consciousness in man is in *rapport* with the higher or lower potencies, at will. There are three possibilities within the power of man, in relation to these different states of consciousness, as embodied in varying kingdoms. He may go into co-partnership with lower forces, he may command them, or he may be commanded by them.

In her castle of illusion, "Inverness," Lady Macbeth and the great world meet. She stands before us in the blackness of awful power, of cruel beauty of face and form, of intensest will, indomitable courage and a knowledge of the basic laws of human nature. So forceful is her presence, so all-concentrated her powers, as she makes her first entrance in the tragedy, we become conscious that her mental state is a far result of more than suggestions from letters received from her husband; rather do we realize "the soliciting of metaphysical aid," the evoking of the weird sisters by Macbeth, to have been suggested and urged by her, the stronger willed. Well did Macbeth know her ambition, well did he know her worldly pride and hunger for power. A black magician was Macbeth, but not so far depraved, not to so great a degree was he dead to righteousness. He consciously directed his power to the evoking of the weird sisters; he had knowledge of the law and says himself "this supernatural soliciting cannot be ill, cannot be good." His power was a result; and we can reason from effect to cause, and so reasoning we may start from the result of his thought projection, the objectivation of the weird sisters, and tracing backward along the wires of thought, discover the germinating centers to be Lady Macbeth and Inverness.

Ambition was so rooted in the hearts of both husband and wife that its seeds must have been planted in some remote incarnation, far back in the abyss of time.

The seeds of evil are cast in one life, quicken and become rooted in succeeding lives. They do not blossom and bear fruit, perchance, for innumerable existences.

Inverness is the palace of illusions, the fostering centre of black magic, the home of black magicians. The letter received from her husband and given in part by Lady Macbeth on her first entrance, states occurrences and bids her rejoice; but gives her no instruction as to any means or method for this evoking of shades. But Macbeth's knowledge of her nature was complete, and that she would "rejoice" and "lay it to (her)

✱ Lady Macbeth ✱

I

heart," he was sure. She speaks of "metaphysical aid," and on the moment when the news is brought her of the coming of King Duncan to Inverness, she throws herself into another state of consciousness and comes into relation with other spheres, spheres which interpenetrate our own; and then and there surrenders her own divinity and calls upon the worst, most cruel, fiends of the demon sphere "that tend on mortal thoughts to fill her from the crown to the toe top-full of direst cruelty."

Come you spirits,
That tend on mortal thoughts, unsex me here,
And fill me from the crown to the toe top-full
Of direst cruelty! Make thick my blood;
Stop up the access and passage to remorse,
That no compunctious visitings of nature
Shake my fell purpose, nor keep peace between
The effect and it! Come to my woman's breasts
And take my milk for gall,
You murdering ministers,
Wherever, in your sightless substances
You wait on nature's mischief,
Come thick night! and pall thee in the densest smoke of hell,
That my keen knife see not the wound it makes,
Nor heaven peep through the blanket of the dark
To cry Hold—hold!

No weakling is Lady Macbeth, misled and tampering with dangerous knowledge. She has no curiosity; she knows the demon sphere and how to call upon it, and from this moment of demand and surrender she is obsessed by a legion of devils. The human temple, the wondrous structure which has cost nature ages upon ages to perfect, "not made with hands," where the sound of hammer is never heard; whose forces are drawn from the vital currents of the great "antique heart" as they course through the veins of the universe, this marvelous, mysterious human temple was surrendered to the desire for temporal power.

Emerson's expression of the power and glory and beauty of the human (temple of the divine) comes to our consciousness as voicing the *Te Deum laudamus* of all hearts:

The great Pan of old, who was clothed in a leopard skin, to signify the beautiful variety of things, and the firmament his coat of stars, was but the representative of thee, O rich and various man! Thou palace of sight and sound; carrying in thy senses the morning and the night, and the unfathomable galaxy; in thy brain the geometry of the city of God; in thy heart the power of love, and the realms of right and wrong.

Such was the temple offered and surrendered to all the devils in hell for a crown. Food for deepest reflection lies in the consideration of nature's building of the temple.

KATHERINE RICHMOND GREEN

Irish Womanhood

The respect of the Irish for women, and their chivalrous protection of them, are to be seen in all periods of their career.

IN the midst of all the opposing influences which rally with such persistent determination around the women who take a stand for justice, the heart, in sublime defiance, sends its smiling message of hope to humanity; a message so unwavering in its onward tone, that one cannot but pause to wonder where such dauntless assurance to progress has its source.

That the cause of suffering, injustice, and despair, is the effect of a disregard for nature's laws, has been recognized, so perhaps we may base confidence in the thought that the inspiring trust arises from a drawing nearness to a once more harmonious adherence to nature.

To our perceptions, the action of certain laws is always discernible. It is an old-fashioned saying, "Keep a dress for seven years, and it will come in useful." Such consideration for the morrow would be a temptation for the moths to "break through and steal," so the choice rests with the individual; but the idea expresses a truth—the return of a cycle in which Dame Fashion will produce a corresponding similarity of style. In many ways this law may be traced in the daily routine of every day affairs; and if noted, might enrich ordinary duties with a helpful, instructive interest.

There was a time, not so long ago, when women in Ireland held a higher position than they do today; a time when their counsel often guided political issues through critical debates. Marriage meant no negative subservience in the love of another; helpful authority was retained. Into action, was bestowed the intelligence and dignity of womanhood. True merit, true worth, won for her the respect which she received.

And now, far and wide over the earth, heralds have proclaimed the coming of the new dawn—when woman will be all she was, and more.

For, in harmony with nature, wider and more universal will become her sympathy and influence. And from her loyalty to the radiating vision of the heart, and its compassionate interpretation of the self-inflicted sufferings of today, inspiration, trust, and courage will be kindled, to defend and build upon the unifying greatness and grandeur, which the new cycle is calling into activity.

A. P. D.

THERE is a quaint old ruin at Ipswich known as "Freston Tower," and the story goes that it was built as a study for a certain Ellen de Freston. It was erected in the days of Wolsey, who was a friend of Lord de Freston, and it is through him that we learn that the latter was much concerned because of his daughter's studious disposition. He feared that her desire for knowledge might make her less beautiful, and young Latimer, the famous Protestant martyr, suggested to him that a tower should be built containing many rooms, so that the beautiful Ellen could go from one to another and find in that way a certain relaxation she would not otherwise take. This is how, so they tell us, this quaint six-storied tower came to be built. The lowest room was devoted by Ellen de Freston to charity, the second to tapestry and sewing, the third to music, the fourth to painting, the fifth to her literary work, and the room at the top was reserved for the study of astronomy which she carried on in the evening.

Edwin Booth's Love

EXTRACT from letter written by Edwin Booth to Richard Henry Stoddard, in which he refers to his wife, the beautiful Mary Devlin: "Were it in my power to have my Mary back I would not call her. . . . I have reasoned with myself calmly on the subject, and after having sifted all the golden grains out of my nature I see the black, slimy earth and nothing more. I feel the truth of what is often said: a woman cannot raise a man to her level—he will drag her down to his. Mollie's goodness was, while here, thrown away upon me. We were happy, and in that happiness I forgot God and—even her. I thought only of myself—but her goodness was not wasted, for now I

feel it, now it shows as it ever will, my guiding star through life. Why do I grieve for her who is most infinitely blessed? I have dared to ask God why I have been thus tortured, and now I feel a voice which tells me it was to save me—to save her. It also asks me why I never questioned the Almighty when I was what I blindly thought myself, happy; why I never said, 'Why, O God, hast thou showered this unmerited goodness upon me?' I never thanked God for His gift, or rather for what He loaned to me, and why should I ask Him now why He has taken His own again? She belonged to Him, not to me. I thank Him now, I bless Him for the great good He gave me through her, and for the great good He has given her by taking her from me—me who would have destroyed all her joys, all her hopes. I do sincerely believe I should have gone mad had no other influence spared me. . . . Of course, a tear trembles on my eyelid at sight of some of her loved playthings, and my sighs struggle up and find vent when I kiss my baby—but I fight bravely against the monster, melancholy; talk of my dear one as though she were on a visit somewhere, and gratify a longing to rejoin her by getting beyond the stars in my dreams, and in my waking hours, too; then I feel at peace again and return to my baby

AN IRISH COLLEEN

daughter, and fashion out the path for her—the path her mother trod, of goodness, love and gentleness."

Mary Devlin Booth was buried at Auburn, not far from the family lot of Margaret Fuller Ossoli.

HERE'S the world half blind
With intellectual light, half brutalized
With civilization, having caught the plague
In silks from Tarsus, shrieking east and west
Along a thousand railroads, mad with pain
And sin, too. . . . Does one woman of you all
(You who weep easily) grow pale to see
This tiger shake his cage? Does one of you
Stand still from dancing, stop from stringing pearls,
And pine and die because of the great sum
Of universal anguish?
. . . . Women as you are,
Mere women, personal and passionate,
You give us doting mothers, perfect wives,
Sublime Madonnas and enduring saints. . . .
We get no Christ from you!—Elizabeth Barrett Browning

ELEONORA DUSE says: "Grâce à Dieu, I can still love and enjoy a flower growing in the fields. The artist is not destroying the soul of the woman. Can any one believe that an artist is nothing better than an automaton?"

Treasures of the Alexandrian Library

IN reading the story of the destruction of the Alexandrian Library, one's curiosity is considerably aroused by the brief historical statement that a large part of it was dispersed.

The whole history is this: The library was founded by the half brother of Alexander the Great, Ptolemy Soter, three centuries before Christ. Its 700,000 volumes included everything thought valuable in the known literature of its period.

Half a century before Christ, somewhat more than half the collection was burned during Julius Cæsar's siege of Alexandria.

But a strange tradition may be met with in various parts of the East, says H. P. Blavatsky, who traveled there for several years. This tradition relates that at the time of the siege, the library was undergoing repairs, and the most precious of the rolls were stored in the house of one of the librarians, and in those of other scribes and philosophers. A quantity of these ultimately found their way to Tartary, Thibet and India.

Some doubtless got back to the library, which was further replenished by a great mass of volumes which constituted the library of Eumenes, King of Pergamos.

All went well then for four centuries. During that time the library must have accumulated matter for which our historians would give their right hands. The best literature of Rome and Greece must have been there; much of great value from Egypt; writings of hundreds of Alexandrian thinkers, philosophers, mystics; the lost Gnostic works; and materials from which we could see the whole and exact history of Christianity, its early teachers, its immediate predecessors and surroundings, the growth of the Church and the connections of her ritual and doctrine.

It may be imagined that there would have been no few persons wishing to see a good deal of that out of the way.

Accordingly Bishop Theophilus got the permission of the Emperor Theodosius (389 A. D.) to *disperse* it. And he did. He was another such, morally, as his nephew Cyril, who murdered Hypatia; and he is accused by a famous student of that time, Antoninus, with having bribed slaves to steal valuable volumes from the library that he might sell them, during years before the dispersion.

To whom did he sell his thefts; where are they; and where the officially dispersed remainder?

Again, we meet the tradition which asserts that all of these volumes that were of any value were taken care of, are in the right hands, and will, in due course, be forthcoming.

But even then they were not all dispersed. The final scene came three centuries later yet, when the remainders were burned by a lieutenant of Caliph Omar.

In all, a thousand years. Time enough, and opportunity enough, one may suspect, for many thousands of priceless rolls to have found their way into remote places in Syria, Arabia, India, Tartary, Thibet and Mount Athos.

Sixty years ago, Perring the archeologist offered a large sum to an

STONE ARROW POINTS FROM WASHINGTON

THESE arrow-points are types of those found along the Columbia river and its tributaries in the state of Washington. Each form is found in various grades of workmanship and material, and differ widely in size. No. 1 is usually medium size, about an inch long; while No. 2 is seldom more than two inches long. No. 3 is usually large, from two to four inches long, and of inferior material and finish. No. 4 is of about two inches long, of a softish, mottled stone, and No. 5 is usually small. The materials are flint, quartz, granite and volcanic glass, which last is said to exist nowhere nearer than Yellowstone Park, which is several hundred miles away beyond two ranges of mountains. The present Indians claim to have no knowledge of the use of these stone arrows, though the statement is open to doubt. W. E.

PREHISTORIC ARROW-POINTS FROM IRELAND

Arab sheik to discover to him the door into the secret chambers of the North Pyramid of Doshoor. But the sheik refused to "sell the secret of the dead," promising to show it freely *when the time should come*. "Is it then impossible," asks H. P. Blavatsky, "that in some other regions of the earth are guarded the remains of that glorious literature of the past, which was the fruit of its majestic civilization?" And she quotes Max Müller, who wrote even in 1860: "During the last fifty years the authentic documents of the most important religions in the world have been recovered in a most *unexpected and almost miraculous manner*."

May there not be a method in the "unexpectedness," and a timeliness?

STUDENT

Anthropology Exhibit at St. Louis

MR. S. P. VERNER is in charge of a very interesting expedition which has been organized by the Anthropological Section of the

St. Louis Exhibition. The party is now on the way to the Congo and Zambesi valleys, and its object is to collect information and material with regard to the natives of that region who are practically untouched by the advent of white men. Mr. Verner has been interviewed upon the object of his mission and he says:

The fact that the enterprise leads into a country of cannibals and savages, and that the attainment of our object requires diplomacy and tact in dealing with the natives, makes the mission one of difficulty and hazard. The time at its disposal also will make it, if successful, a notable exploit.

Our base of operations will be from the capital of Chief Ndombe, paramount Chieftain of the Lunda tribes, at the head of navigation of the Kasai River, the largest southern tributary of the Congo, from which place an effort will be made to penetrate the interior. Ndombe is one of the most remarkable of living African rulers. He is peculiar for being of a bright copper color, as are his family, although there has been no known white blood in his ancestry. He is also a firm friend of the white man, having signified his assent to white suzerainty over his domain, and having instructed his people to recognize the authority of the foreigners. His general jurisdiction is very extensive, and, including federated and associated tribes, may be said to include several million people, over a territory of several hundred thousand square miles. In his territory are tribes of pygmies, of cannibals, and the last remnant of the once powerful trans-continental slave traders, the Bimbadi.

The scientific interest attaching to this expedition arises from the fact that it has lately become strongly suspected that the most primitive forms of the human race are to be found in remote Africa, the oldest region known where the native life has been longest undisturbed by outside influences. It is desirable to record the conditions now existent there, and to obtain specimens of the arts and products of the people before they have changed their aboriginal ways for the innovations of rapidly-approaching civilization.

Mr. Vernon says truly that diplomacy and tact are essential in dealing with such natives. If these virtues are employed the danger will be reduced to a minimum and firearms will be of very minor importance. The territory in question was traversed through and through by Dr. Livingstone who spent many years among these natives, and who never found it necessary to shed one drop of human blood.

What Constitutes a Genus or a Species

IN an article in a magazine devoted to natural history the writer makes the remark that "the different species (of fly catchers) seem to be brothers and sisters from the same nest differing in size and other ways only as much as brothers and sisters do in other than bird families."

This is an idea which must often occur to the ordinary unscientific observer who notes the contrast between human beings, even of the same family, and then sees upon what trivial and insignificant diversities species are distinguished in the animal world. Surely if the same system were applied to the people of a given district where they were all of the same blood—and there are such districts even in our own emigrant flooded country—there would be a great range of species which when tested would prove to be only personal variations of type.

We know two very significant facts which tend to confirm this opinion. First, the greatest difficulty of bird-fanciers and stock-raisers is to keep the type pure and free from "sports" as the varying specimens are termed. Second, the greatest difficulty of the naturalist is to find definite lines of division between the species and varieties, which do, as Darwin says, "merge into one another by imperceptible variations." May we not, then, reasonably suppose that if we were able to trace wild bird and animal genealogies as we can the human, we would find the same diversities even in members of the same family. Indeed it is positively known that individuals of widely different "species" often are so related and that there is a zone, as it were, of mixtures surrounding the fixed types in the same way that there are zones of mixture wherever two human race types become adjacent.

It is true that the points which the breeder seeks to perpetuate in his birds and animals are more or less artificial and unnatural and therefore have a distinct tendency to revert to a more simple form, yet the fact that there is no rigid line between species so widely different as the poodles, bulldogs and greyhounds; or between the bantams, games and cochins, should open our eyes to the infinite flexibility of manifestation which nature persists in exhibiting, in reckless defiance of the best systems of classification and nomenclature which men have invented. Indeed, it seems almost as though life and variation are identical terms, and one can, without any great flight of fancy believe that the intelligences which guide and direct the development of living forms may perhaps rather seek than shun variation, as though trying to demonstrate the infinite number of ways whereby the conditions and limitations of life can be met and overcome by modifications and correlated variations in the living organism.

As Emerson so keenly shows, there is a central balance about which all variety clusters:

If the head is greatly enlarged the trunk and extremities are cut short, . . . for nature always takes as much as she gives to any creature.

Perhaps we shall sometime cease to "classify" the multicolored bubbles of lines which constantly appear upon the sea of life universal.

FLOWERS

by ALICE JEAN CLEATOR

WE do not need to search for Nature's sermons
In Wisdom's wondrous books,
For we may read them in the dark deep forests,
Or by the running brooks;
Each tiny blossom is a glowing letter
Of Heaven's alphabet;
O'er all the world in dim and silent places
Like jewels they are set;
Their very presence in the hour of anguish
The sorrowing heart can reach,
And oft more sweet to us their tender silence
Than fairest human speech.

Philosophy and the Love of Nature

WHY should it provoke surprise that a great philosopher and a great scientist should be sensitive to the beauties of nature? Should it not rather be a matter for astonishment if the reverse were the case, and if the mind which had explored the secrets of matter were unconscious or unappreciative of the charm of external form and color? Why then should we find such a sentence as this in a newspaper which seems to reflect some of the better thought of the day:

That Herbert Spencer, philosopher and agnostic as he was, was not inaccessible to the emotions of the religion of Nature is felt in his citing the remark of Ruskin that "all other efforts in education are futile till you have taught your people to love fields, birds and flowers."

That agnosticism, which after all, is nothing but the courage to admit ignorance, should be a supposed bar to the "religion of nature" is not remarkable in an age which values cant almost as much as it values money, but that philosophy also should come under the ban is a little distressing. Doubtless, the scribe in question wrote from the end of his pen and with an eye to quantity rather than to quality. Here, for example, is an extract from Mr. Spencer's writings which should place him high among nature-lovers even were it an isolated fragment, which it is not:

Often when among the Scotch mountains I have pleased myself with the thought that their sides can never be brought under the plow; here at least Nature must ever remain unsubdued. Though subordination to human wants is sometimes suggested by the faint tinklings of distant sheep bells, or by some deer on the sky-line, yet these do not deduct from, but rather add to, the poetry of the scene. In such places one may forget for awhile the prosaic aspects of civilization. . . . Under the western end of the South Downs, where I have taken up my abode this season, daily drives show me beauties future generations will not see. The vast hedges overrun with clematis and bryony and wild hop, occupying as they do great breadths and casting wide shadows are not tolerated by the advanced agriculturist. . . . Where the brook crossed the road, a couple of planks and a handrail served to carry over the pedestrians. But now county councils with members severally anxious to gain popularity by proposing something which gives work, will soon replace all these by brick or stone bridges. Only here and there, where a path through the fields is carried over a small stream by a foot bridge, will it still be possible to lean over the handrail and watch the minnows as they slowly come out of their hiding-places, into which your shadow had frightened them.

STUDENT

IF we have not yet arrived at the time for the lion and the lamb to lie down together in peace, we are tending that way when a cat of mature years and a puppy can be on such intimate terms as to associate in the way the picture shows. This black cat has seen many generations of puppies in his household, and he knew the mother, grandmother and great-grandmother of this one, and evidently considers it as worthy of more than passing notice.

Whether Carrier Pigeons Could Cross the Atlantic

CAN carrier pigeons cross the Atlantic? is a question to which M. Dusolier, in the *Revue Scientifique* gives a negative answer. He believes such a feat to be impossible, and he says that any pigeon attempting it would be lost after about sixteen hours' of flight, unless, of course, it should meet a ship whereon it could rest. Captain Reynaud's pigeon, which is said to have accomplished the feat, must have alighted on various ships in order to pass the night.

As to the speed to which these birds attain, M. Dusolier believes that many absurd stories have been told.

STUDENT

Universal Brotherhood Organization

Central Office Point Loma California

ISIS Theatre was again filled with an appreciative audience last Sunday evening at the regular meeting of The Universal Brotherhood and Theosophical Society. There was an especially brilliant musical program by the Isis Conservatory students, and two solos by Mr. E. A. Neresheimer—all of which were thoroughly appreciated.

The two excellent addresses of the evening were by father and son, one being on the subject of "Liberty," by Mr. R. W. Machell, the well known Point Loma artist, whose works are so great a decoration to the Homestead, and the other by Mr. Machell's son, who is one of the young pupils of the Raja Yoga School. Mr. Machell's paper was of considerable length and of marked beauty and ability. We regret that we are only able to reproduce a few lines from its conclusion:

"Liberty or slavery depend upon the people, and people who are willing to lie down contentedly under the tyranny of their own appetites, and who make no effort to master themselves, people who allow themselves to be psychologized into indifference while their liberties are being taken away, cannot long expect to enjoy even the nominal liberty bequeathed to them by the noble pioneers of national independence.

"The nation is composed of men and women, and what the individuals are the State will be; if the individuals are not self-governing how long can the State hope to be free? For either we must govern ourselves or be governed by others, and the only liberty possible to man is the freedom from alien control, and the only chance for that is for him to be master of his own mind and body. If he were not a soul he could not be master of his own nature, but the lives of the great men prove man's possibilities, and our own efforts at self-mastery will prove to us our own possibilities, prove to us that we can be free if we will, that we can be happy if we will, that we can be our own masters and our own redeemers from the slavery of the brute in us, and remember that as is the individual so is the nation. If we love liberty let us make some worthy effort to establish her light in the land, by establishing her light in our own lives; and let us work for the building of the new nations of the world on this true basis, by teaching our children the simple truth that they are souls and that they must be masters over their own natures, teach them self-reliance and self-respect, and they will not be fooled by any false creed into giving up the right to think for themselves, nor will they be tempted by any bribe to sell themselves and betray the sacred cause of liberty, of which each one of us here is a guardian, if we are worthy to be called men and women. Let us see to it that the children are given a chance to know the truth and to get such a mastery of themselves that they will be the incorruptible guardians of the liberty of the races yet unborn. One Teacher there is today in the world who is able to establish such a system of education, and she has proved her power to do this, and her work is here going on amongst you, and you have the power either to help or to hinder it, and so to influence the future of the world. Now is your opportunity to redeem the negligence of the

LOMA-LAND STUDENTS AT ISIS THEATRE

Addresses on "Liberty" by Mr. Machell, the Artist, and "History" by His Son, a Raja Yoga Boy

Reprinted from the San Diego News

past by giving your honest support and protection to the work of Katherine Tingley. Help her now, and from the schools that she is establishing will go forth true Teachers of Liberty and Purity and Health and Happiness, and you who are here now shall see the wonderful harvest that shall come from this seed sowing. Now is your opportunity."

Mr. Machell's son chose the subject of "History from the Standpoint of a Raja Yoga Boy," and said in part as follows:

"The study of history is a valuable factor as a means of broadening the minds of its students. When we read an authentic and well-written history of the nations, and become acquainted with their leaders and great men, we forget our personal dislikes. We find ourselves face to face with this question, 'Is not every one responsible for the history of his country?' Are we not now making the history of our country? History tells us that some of the greatest statesmen and generals have worked their way from humble cottages to the highest ranks of power. Their lives show that they did not despise little beginnings. They achieved their ends, not for themselves but for the benefit of others.

"When they were young they thought to help their parents. As they grew older their thoughts and actions were not always for themselves.

"Abraham Lincoln was such a man. His mind was always engaged in his country's welfare, while he performed his duties of chopping wood or hauling logs. He possessed a great mind, a great soul and a great purpose.

"We do not become great by chance. True nobility is the result of our efforts to be noble and to love justice.

"Joan of Arc was another great soul. Her ideals and aims were so high that the people of the time did not and would not understand her. She was too great for those people who were fighting for their own selfish ends. Her pure and unstained character was liable to check and thwart their fiendish schemes. Nevertheless she turned the tide of affairs in France. She who was blasphemed, whose honor and integrity were questioned, who was even burned at the stake in the name of God, is today believed to be one of the world's greatest heroines.

"If we are able to gather fragments of the history of the home life of the men and women who have been leaders in the world we will always find a loving mother who has protected her children, whose life has been a fitting example to follow. There are other battles fought and other victories won, besides those on the battlefield. A harsh tongue controlled, a hot temper converted, a cruel hand withheld, these are the victories first won in the home.

"If the parents had failed to do their part, a life of usefulness and strength would have been sacrificed, and who knows what important event in history might have been postponed? For the sake of our country and its right to demand our best services we cannot afford to let the apparently small things slip by unnoticed.

"Katherine Tingley has said, 'You can never tell how far an apparently insignificant bit of good work may spread. It is like a stone thrown into the water in the endless succession of ripples.'"

WELL nigh fifty years ago the writer first read "Two Years Before the Mast," and from that time longed to visit San Diego. Multifarious jostlings in life's course have but just awarded that exquisite pleasure. Descriptions, almost "as the sands of the sea for multitude," by the wise and otherwise; some among them produced anent sincere appreciative impulses, beneficent in their import and correspondingly so in result. Some others have been "written up," even by the wise, for pay and otherwise—but no description of this bay and its environment for comprehensive accuracy excels that of the Harvard graduate, sailor before the mast, embodied in that Continental, if not monumental, classic published first in the year 1831.

For explanation of such contrasting excellencies of composition persuasive reasons are not far to seek.

"Debarring all side pretenses" the one masterful reason resides in the notorious fact, that, whilst among such later narrators—dead and living—were and are persons of great abilities, and of some distinction in the domain of literature, it may well be questioned whether any one of them possessed the intellectual aptitude and scholarly acquirements of the then young Richard H. Dana, whose narrative "all

"San Diego as She Is"

Some short extracts from a lengthy article appearing in the *Daily Oregon Statesman*, January 3, 1904

of which he saw and part of which he was" is of the enduring literature of his country. He lived to write an Addendum, after re-visiting the Pacific Slope in 1878. Dying

but a few years ago, he barely missed an even rating, as an all-round lawyer, with Webster, Choate, Sidney Bartlett and "Ben" Butler, with all of whom, at successive periods of life's fitful fever, he was contemporary.

But, returning now from Boston, there exists, despite such an increasingly great mass of description, a vast deal of miserable ignorance and equally unfortunate misconception respecting this county, its resources and people.

For, now nearing a decade and one-half, the reputation of this "City of Bay-n'-Climate" for serene deadness has stood supposedly unimpeachable, even as against the incorrigible Californian exaggerator.

During part—far greater portion—of that time, regretfully be it said, all the world might have stood up and said of the soft impeachment, "'Tis true, 'tis pity; pity 'tis, 'tis true.'"

Now, however, any one who will take the pains—and embracing the pains enjoy the pleasure—to stroll over the residence districts, cannot fail of being struck—perhaps astonished—when brought face to face with the substantial improvements,

as well municipal as private, palpably made within very recent years and now in progress.

In the more central business quarters—all enormously overbuilt in the baneful boom—less of such proof of prosperity naturally appears. Still, in such localities, new structures are being erected and some of the older remodeled.

The acknowledged activity in business sections is in healthy keeping with everything else; conducted like everything else in San Diego—on the quiet.

Constraint comes, however, to add a few sentences regarding the “Point Loma Theosophical Institute,” inaugurated barely three years ago.

One can but marvel at the phenomenal executive ability, the masterful grasp of the more than extraordinary woman founder, brains, genius and master of that institution, Madam Tingley.

Visit that transcendently lovely site. Try, by vain straining of your eyes, to identify the *terra firma* boundaries of the Theosophical holdings, lest your eyes, painted by such ineffective effort, turn them, with increasing interest, as it needs must be, to the thrifty mulberry grove gracing the opposite slope from that upon which the temple stands; walk around the spacious, landscaped, flower-bordered lawn to the industrial display building—elegant in its simplicity and architectural adaptation; and after viewing the needle and bead work marvels there exhibited, see, in a glass case you could easily pick up and walk away with, the incipient silk worm, pursuing nature's infallible gradations to the full matured, bursting cocoon, then pick up a card, not wider, nor so long as an ordinary blotting pad, and starting at the top of one of the parallel columns, see, again, his incipency developing successively to the exhibit next preceding the last; on that card man's concluding contribution to the operation, finished silk—spool-wound.

Then as you pass around the wide table, lying upon which in orderly array, observe publications in book, periodical, tract form; discoursing Theosophy to such as may place the pipe to their lips and open the ventages of the understanding, perchance. Coming thence out and into the inexpressibly balmy air from over the ocean you can all but step off into and then have pointed out to you the individual school and residence structures—possibly enter some of the former and witness the well-nigh marvelous exercises, exhibitions! very like infantile precocity in music and poetry of motion; attentively hear the descriptions imparted of the wonderful and beautiful cañons which lead to the mighty deep; the extemporized, but grandly equipped and embellished amphitheatre, in which, presently, the Greek drama—and that only—is to be presented in all its pristine splendor and significance!

By this time your eyes, becoming the more accustomed to what is to be seen, are the better fitted to comprehend the immensity of the present main edifice: “Temple of Work”—the more stately companion, “Temple of Learning,” is yet to appear, seasonably. Your ears have not yet heard, nor your eyes beheld, so many wonders as to lastly learn without exceeding surprise that all this has been developed upon that theretofore barren site within less than the three and one-half years last past.

The Lotus Work at Groningen, Holland

Last month—September—we opened a class in English with ten girls. More children are following, because they all are very enthusiastic for this work. The very words of Brotherhood English touch their minds with new vibrations. They sing “Happy Little Sunbeams” and “Lullaby.”

The Lotus-helpers are also studying English. They translate for the children stories from the NEW CENTURY PATH.

Our Lotus Circle became temporarily reorganized on behalf of the preparation needed for studying *The Little Philosophers*, which will probably be given on Christmas or New Year.

The key-note of Raja Yoga teaching was struck for our children by a Raja Yoga baby in the NEW CENTURY PATH of September 20th, with the words, “Good morning! I know about Raja Yoga. Do you?”

Lotus Group II, greatly consisting of the youngest children, is now set apart. The members of the other three Groups will be trained for the presentation of *The Little Philosophers*. To broaden their horizon we teach them some things about geography, ethnology, the Elder Brothers and their teachings.

Enclosed we send a portrait of our Girls' Club. Debate on different matters is now introduced. Faithfully yours, W. G. REEDEKER, Superintendent.

Action---the Illuminator

Paper read at New South Wales Lodge of the Universal Brotherhood Organization

THERE is an old saying well known to most of us, “You must do the deed to know the doctrine.” Theory without practise is absolutely useless in regard to an understanding of Theosophy. Our three great Teachers have all taught us that. Madame H. P. Blavatsky and William Q. Judge lived practical Theosophy and therefore what they spoke of carried conviction to the earnest seeker after truth and aided them also to “do the deed,” that they might “know the doctrine.” But in those days much of the work done was a spreading of the great Theosophical teachings intellectually; it was necessary that the intellectual theories then in vogue should receive a check and undoubtedly H. P. Blavatsky's presentation of the ancient truths was a death-blow to materialistic thought, and for many a searcher the fires of hope and courage were relit. Immortality as a certainty dawned upon the horizon of human consciousness. “You are immortal Souls,” ran her message, “arise and claim your heritage, assert your union with Divinity.” “Know ye not, ye are the Temple of the living God.”

William Q. Judge added to our knowledge of what true Brotherhood is by his heroic defense at the cost of his life of those principles his predecessor gave to the world. The Society was then called “The Theosophical Society,” and the subsidiary title was Universal Brotherhood. The main object was always the formation of a nucleus of Universal Brotherhood, and under the guidance of the third

Leader, Katherine Tingley, who took up the work when H. P. Blavatsky and William Q. Judge laid it down, the nucleus was formed, and the title reversed, and it now is The Universal Brotherhood Organization, of which the Theosophical Society is the literary department.

From the formation of Universal Brotherhood, the translation of theoretical Theosophy into practical Theosophy has proceeded apace at the great World-Center of Theosophy at Point Loma, San Diego, California. There Katherine Tingley and many of the older students are gathered together, demonstrating to the world how joyful a thing life can become when lived upon Theosophical lines. Besides the adults, there are many children, for with the introduction of practical Theosophy, as the predominating feature of the organization, many changes of method occurred.

The Raja Yoga School has become a great feature in the work, and the children trained therein, are the wonder of all who see them, not only for the technical and intellectual excellence of their work, but for what is of infinitely more importance to the world, for their nobility of character. You see, it is practical Theosophy they learn under Katherine Tingley; learn to know in their daily lives that they are Immortal; and that one life is but a day in their long career, a happy, or a sad day, as their own acts determine. It is taught and practised in Loma-land that “Helping and Sharing is what Brotherhood means,” and that as universal brotherhood is the law of life, only by doing unto others as you would

wish them do to you, and looking upon all men as pilgrims in the school of experience, brothers upon a common road leading to a common goal—universal perfection—can it be possible to do one's duty, and obtain that happiness which comes through a clear conscience and a persistent effort towards altruism.

That action is the illuminator comes home to our minds, when we see the great work done and knowledge obtained by those who work upon right lines, in harmony with nature, it comes home to our hearts when we try a little practise of it ourselves and feel our insight and capacity improve. You cannot realize you are a Soul unless you live a soul life; that men are brothers, unless you act as one towards them; nor feel love for humanity unless you unselfishly work for its benefit. You cannot enter into the larger joy of Universal life unless you lose hold of your petty personal interests, feeling yourself a part of the great human family irrespective of caste, color, race or creed.

A beginning has been made to demonstrate these truths practically at Point Loma on an extended scale, introducing art, music, the drama, as a part of the daily routine of life—the life beautiful—which is yet to be lived by all mankind, for we stand at the dawn of the age when “Truth, Light and Liberation” are coming to men. “On human shoulders,” says Katherine Tingley, “lies the responsibility of human progress,” and her students, facing that fact, are piercing the darkness of wrong action and wrong ideals, with the practical application of Theosophical principles in Loma-land, that all men may see by example what Theosophy really is through Action the Illuminator, and take part in the great work of redemption that they too “may do the deed,” and so know the doctrine of Eternal Truth.

GIRLS' CLUB, U. B. LODGE, GRONINGEN, HOLLAND

ONCE, many, many years ago,
there was a knight named
Ydghe—Ydghe, the Lone
Knight, as he came to be called.

He lived in those sorrowful days that came to Britain after the great King Arthur had ruled and passed away to Avalon. And so great was Ydghe's mourning for the good that had been, and which now, too, had passed away, that men spoke of him as the Lone Knight.

One day, so the legend runs, as he came riding down from the north past the plains of Camelot—the country made splendid by Arthur and his knights—he pondered again over all that had been; how for twenty years the stainless King had reigned, and through a hundred, hundred battles made the Right victorious, and carried law and order and mercy through the ravaged lands; giving his protection to the weak and his wisdom to all who needed, and bestowing the wonder of his friendship on those that fought with him for the Truth. Ydghe pictured to himself Camelot as it had been:

Built by old kings, age after age, so old,
So strange, so rich and dim, where the roofs
Tottered toward each other in the sky . . .
Where all the sacred mount of Camelot
And all the dim rich city, roof by roof,
Tower after tower, spire beyond spire,
By grove and garden, lawn and rushing brook,
Climbed to the mighty hall that Merlin built.

And then Ydghe marvelled in his mind over the majesty and mystery of the sacred woods, with their wondrous buildings and temples, sacred to the Druids and the Wise Women of Gavan. For to the south of Camelot spread green plains, and beyond green rolling hills, and farther still, between hills and sea, there had lain, when Arthur was King, the sacred wood—so guarded, so sacred, so unknown, that only a few of all the kings and earls and knights who came to Camelot entered there. The King alone, of all those mighty men, passed where it pleased him to go, and he never spoke of what he saw or knew.

But now all the glory of those days had passed. Times of terrible sorrow and pain came on that joyous land. Arthur, betrayed, was gone; his knights slain in the last great battle, the castles of Camelot ruined, the sacred woods bare and desecrated. The old Wise Men of the Temples had died and none were pure enough to take their places; the sacred fires had flickered out, the temples had fallen into ruin.

The Lone Knight, thinking thus, bore down over the hill that lay above Eischalonay of the sacred woods. But when he saw that grim valley, he drew rein and could scarce go further, so bitter was the sorrow that rose in him. For the once sacred groves were left desolate and lifeless, burnt and blackened as by a great fire. No tree or blade of grass grew in the sacred places, although blighted mist-hung woods crept near.

When at length he reached the charred waste that once had been known as the Gathering Green, he drew rein again, and his heart was filled with unshed tears as he gazed on the blackened ruins and the desolation around him. A long time passed by Ydghe in his sadness before he was aroused by a sighing in the air above him, and looking up he beheld a mighty figure wrapped in a gray mantle, bending low, sorrowing over the ruins of Eischalonay. As he looked

The Legend of the Lone Knight

the Lone Knight knew that he stood before one of the gods, and his eyes dropped abashed at the sight of the great sorrow that

clouded the god's face, and lay deep in the misty eyes. Nor did he dare look again, but crept to the ruins like one stabbed through the heart by the shining tears that fell around him. And it came to him to stoop and bathe his hand in a tear that lay at his feet, and as he did so there cut through him the bitterest pain he had ever yet known; but with that pain there came a sudden knowledge of what was needed of him, then, looking above him once more he saw the god had vanished.

He rose, and having found something that might hold water, dipped it into the shining pools that lay before him, carried it away brimming full and watered the parched earth round the ruins, and even in the silent fields. Many times he journeyed till the pools were dry and all the god's tears were sown upon the sacred ground. Then he mounted his horse again and looked gladly about him, for he knew that a flame would spring up wherever the tears had touched the earth, and that trees and green things would grow once more and bring back life and sweetness to the place.

As Ydghe turned his horse and rode away to the West, the blast of a great horn rang sweet and clear from behind him and sped across all the land, so strong and compelling that it seemed to him the very sun must be kept back from his sinking; and turning Ydghe saw the same mighty figure standing beyond the silent fields, towering into the sky.

As the god called on his horn a second time, a flock of birds rose out

of the miser-grown forest and wheeled toward him. Once again he called, and the last had gathered at his feet. Then they rose into the air before him and builded with their bodies a bridge that might bear him away from earth. And the god stepped along the Bridge of Birds till he was lost in the skies.

And that was the last time, so the legend says, that the gods were seen in the sacred woods. N. H.

INDIRECTION

by RICHARD REALP

FAIR are the flowers and the children, but
their subtle suggestion is fairer:

Rare is the rose-burst of dawn, but the secret
that clasps it is rarer:

Sweet the exultance of song, but the strain that
precedes it is sweeter:

And never was poem yet writ, but the meaning
out-mastered the meter.

Back of the canvas that throbs, the painter is
hinted and hidden,

Into the statue that breathes, the soul of the
sculptor is bidden:

Under the joy that is felt, lie the infinite issues
of feeling:

Crowning the glory revealed, is the glory that
crowns the revealing.

Great are the symbols of being, but that which
is symbolized is greater:

Vast the create and beheld, but vaster the inward
creator:

Back of the sound broods the silence, back of
the gift stands the giving:

Back of the hand that receives, thrill the sensitive
nerves of receiving.

Space is as nothing to spirit, the deed is outdone
by the doing:

The heart of the wooer is warm, but warmer the
heart of the wooing:

And up from the pits where these shiver, and up
from the heights where those shine,

Twin voices and shadows swim starward and the
essence of life is divine.

THOUGH the gods have visited the children of men oft, few among the latter ever have visited the gods. But one such once lived, so the Eddas tell us. His name was Gylfe and he was a King, and, as it chanced, a searcher after wisdom. He ruled in Sweden many hundreds of years after the creation of the world and his wisdom, so they say, was only part knowledge. The rest of it was goodness.

Gylfe, seeing about him the wonderful works of the gods, longed for the greater wisdom that only the gods possessed, so sore did he desire to help the world. So one fair day he resolved to journey to Asgard, the home of the gods. As an old man he disguised himself, but to no meaning, for the Gods knew that Gylfe was coming, even before he planted in his own mind this resolve.

And at last, Gylfe reached the great realm of Asgard, the place whither few have journeyed and from whence fewer still have returned. Of all the marvelous sights that Gylfe saw there the Eddas can tell you better than I, for the gods design that only those worthy, through their unselfishness, and valiant through their trust, shall stand before them, for only such as these could carry their message to the world.

And so it chanced that Gylfe went back to earth a Teacher among men and taught them mighty truths, and builded mighty works, which the Wise Ones had taught him. So say the Eddas. H.

✻ The Trend of Twentieth Century Science ✻

Modern Science Grants a New Lease of Life to the Sun!

IN France when a "new fact" is obtained by a litigant the case may be reopened. A similar state of things prevails in the scientific world, provided that the new fact does not shock the conventionalities too much. But occasionally, something startling, like the X-rays or Radium, is discovered which refuses to be muzzled, though it will not harmonize into the theories of the day. Surprising discoveries such as these, should cause those who have been willing to put their faith upon popular materialistic deductions of certain scientists, to reconsider their position, to think for themselves and to study the inner meanings of the ancient philosophies and world religions by the help of the search-light of Theosophy. Many modern theories are being, and many will have to be, abandoned, or profoundly modified. The ground is nearly clear for the reception of truer ideas, and the trend of modern thought is precisely in the direction outlined by H. P. Blavatsky. She said that the demonstration of the permeability of matter would be the next advance. The penetrative powers of the X-rays, etc., have justified her words, and even the accepted theory of the conservation of energy will have to stand on the defensive.

Till now, the theory of Helmholtz, that the sun's heat output is sustained by a contraction of its mass, so that when the shrinkage can go no farther it will quickly get dark and cold, has been widely accepted by astronomers. This does not allow a sufficiently long life for the solar orb to satisfy the geologists and, of course, there are no observations to support it. It is an essentially materialistic view, but Theosophy combats it by stating definitely that there are far deeper causes for the sun's activities, and that it will not go out fortuitously. Through H. P. Blavatsky the world was taught that the sun does not require fuel from the outside, nor is it needful to fall back on the contraction theory. The sun possesses an inherent vitality of his own, which is competent to supply the solar system with light and heat for the vast period necessary for the due working out of evolution to its end.

The sun is "glowing," but not "burning," in the strict sense of the word. The discovery of Radium has given us some light upon this profound problem, and the most recent hypotheses of scientists are getting closely in accord with the teachings of Theosophy, unlikely as it seemed five or even two years ago. We know that the element Helium is present in the sun; Helium is derived from the transmutation of Radium. Suppose, which seems exceedingly probable, that there is a considerable proportion of radium in the sun, the energy given off from such an immense mass would be sufficient to allow the sun an enormous antiquity and almost illimitable future of activity, without external aid. To show how careful we must be not to accept the improved hypotheses of modern science indiscriminately, particularly when they clash with the profounder wisdom of the ancients, the following quotation from Professor E. W. Maunder in *Knowledge*, is interesting:

The computations which Lord Kelvin and other leading men of science have made as to the possible length of time in the past, and in the future, during which the sun could maintain its present energy of radiation, are necessarily set aside, for we can no longer assume that the concentration of the sun's substance from infinite distance has been the sole or even the chief source of its energy. It is not only that radium itself may exist in sufficient abundance in the sun to account for its energy, but the same or similar radio-active properties may be possessed by other of its elements or by the sun itself as a whole. Professor G. H. Darwin writes: "Knowing as we now do that an atom of matter is capable of containing an enormous store of energy in itself, I think we have no right to assume that the sun is incapable of liberating atomic energy to a degree at least comparable with that which it would do if made of radium."

But this gives a fatal shock to the glib text-book explanations of the origin of our system from the primeval nebula. The nebular theory will be found to be a far deeper, grander and more complex mystery than we have dared to imagine. And now, perhaps, the haunting specter of the sun's speedy extinction for want of fuel, and his relatively short past life will disappear into the limbo of many mushroom theories. Theosophy declares that the sun will never become extinct until the last ripple of planetary evolution has run its course. There is the great Law "working for righteousness" ceaselessly, and things are not left to blind chance. R.

Luminous Water in Medicine—Superstition Becomes Science

FOR many years—we think even so far back as the days of Paracelsus—various unauthorized persons have claimed that water through which colored light has passed acquired curative medical properties. They had their results to show for their contention. But that mattered not. They were outside the pale of orthodox medicine and science, and the results could not even be considered. Superstition, quackery, or auto-suggestion, were epithets just as good for this line of treatment as for the use of the magnet, mesmerism, or medicines attenuated after the method of Hahnemann.

The situation slowly changes. The superstition of today is the official science of tomorrow. The effects of colored light on the body are now everywhere admitted and used. "Sunlight is a great curative agent," says Dr. William Morton, of the New York Post-Graduate Hospital, "and liquids charged with violet rays have practically the same effect."

It is even possible that the tonic and antimalarial effects of quinine may be partly or wholly due to this very principle. Solutions of it "fluoresce," that is, shine with an opalescent reflection, when light falls upon them. They detain some of it on its way through, and very beautifully radiate it in all directions. Dr. Morton makes use of this property. A patient is given some solution of quinine, "and then when radium is held near the body or the X-ray used"—or, in other experiments, violet light—"the liquid becomes luminous, and sunlight may be said to flood the interior of the body."

The germ-destroying power of sunlight is well known. Its direct effect on germs in the blood is, however, very doubtful. But by the method suggested by Dr. Morton, the blood itself, containing quinine, may be supposed to become charged with light, and fluorescent. There are doubtless transvisible parts of the spectrum to which clothes and flesh are transparent; but the passage of these through the body must be a very different matter to their momentary detention and then reflection throughout it in every direction. "In chronic malaria, cancer of the liver, and many other ailments, this treatment has shown good results."

If humanity would but cease its continuous production of the causes of disease, the whole mass of existing diseases and tendency to them could be quickly overtaken by the growing resources of modern medicine. And the horses and guinea-pigs could be allowed to rest from the production of serums.

M. D.

A New Medical Fad—Cleanliness and Good Health

A PHYSICIAN has attracted some attention to himself of late by maintaining that bathing and skin-washing are not only unnecessary but injurious. As a matter of practice, he already has a considerable portion of the population on his side. But he also wants the rest. Three or four millions of glands open on the surface of the skin. Some of them secrete a lubricating oil, especially for the hair; others excrete perspiration. Both products tend to putrefaction, and both readily dry and harden in and about the open ends of their ducts. The skin is also an absorbing organ, and advantage is taken of this fact in administering certain medicines by applying them as external ointments.

Putting these facts together, it is clear that the non-washer, who from hereditary or acquired instinct, or under the advice of the physician we are quoting, knows no other use for water than to drink it, is covered beneath his clothes with a layer of vapor given off by putrescent secretion and dead skin-scales, and that his skin is inhaling this into the blood. Besides removing this source of poisoning, the use of water all over the skin involves rubbing to dry it again; and this means a most beneficial massage of all the cutaneous venules and lymphatics, whose sluggish contents are thus forced into the general blood-stream.

M. D.

The archeological history of Paris is being gradually unveiled, thanks to the energy of some of its citizens. Mr. Charles Magnew has long suspected that something worth finding lay underneath the Rue Cassine, and his investigations have disclosed the cover of a tomb bearing the figure of a Roman blacksmith. His left hand holds a pair of pincers and forceps, but the right arm is missing.

Here and There Throughout the World

A LONELY TARN IN THE HILLS OF ENGLISH LAKE DISTRICT

A country famous for its beauty and its literary associations. It is visited by great numbers of Americans every year who like to look upon the scenes that inspired the pens of Wordsworth, Southey, and many others.

The Death Traps of Christian Nations A BIG Atlantic liner entering Cherbourg has narrowly escaped destruction from the accidental explosion of three torpedoes at the entrance of the harbor. The *Progressive Thinker* very properly asks:

Why are torpedoes planted at the entrance of harbors? Is it to protect cities against heathen peoples, or savages? Is it to protect against Buddhists or Confucians? O no; it is to guard and defend against attack by other Christian nations.

The possession of torpedoes is almost entirely confined to Christian people who invented them and who use them. It is certainly a grim parody upon our profession, and a parody which will cease as soon as we realize it. Christian civilization lies hypnotized within a vicious ring of habit and custom. Sanity and fraternity are outside of that ring.

M. Curie and the Legion of Honor M. CURIE has attracted some criticism from the French press on account of his refusal to receive the cross of the Legion of Honor, which was offered to him by M. Chaumie, the Minister of Education. In explanation of his refusal, which was taken as a reflection upon those who have thus been decorated, M. Curie has made a communication from which the following is an extract:

I, myself, do not need or care for decorations of any kind. I told Minister Chaumie this, and he understood my position perfectly.

It is true, I admit, that decorations sometimes inspire to certain acts of courage and devotion, but I cannot see why a French citizen should need any decoration to inspire him to patriotic acts, any more than a citizen of the United States, in which country there are no decorations of any kind.

The Penal Code of the Moros WE may learn something of the science of penology even from the Moros. It seems that the penalty for theft, according to their ancient code, is the loss of both hands. They find that the effect of this cruel punishment is to render a conviction almost impossible, and the offender usually escapes any punishment whatever. Those of our own countrymen who so easily rush into print in order to advocate penal ferocity usually forget that juries are likely to have sentiments of humanity greater than their own and will avoid a verdict which carries cruel results. Vindictive punishments invariably foster crime.

Alaskan Natives & Christian Vices GENERAL FUNSTON, writing on the condition of the Alaskan natives, says that they are rapidly dying off from tuberculosis and from the whiskey and bad habits given to them by civilization. It is, of course, an old story, and we have learned to listen to it with placidity. If all the white missionaries in the world were to devote themselves exclusively to undoing the mischief wrought by their compatriots and to preaching a return to a clean life, they would have no leisure for insisting upon their creeds, and there would be no need for their governments to send gunboats to aid in spreading the gospel.

Cathedral of Toledo Going to Ruin THE great Spanish cathedral of Toledo, always so representative of the ecclesiastical life of the country, seems to be in a condition of hopeless ruin. The roof has fallen in and the walls appear likely to follow suit. The building of this magnificent cathedral occupied over two hundred and sixty years, having been finished in 1492. It has been sacked over and over again, the last time being by the French under La Houssaye. The hand of time seems likely to be the strongest of all and from its judgment there will be no appeal.

Titled Scoundrels in French Courts THE exemplary punishment which the French courts have recently meted out to some titled scoundrels who have been guilty of the most flagrant abominations under the guise of mysticism may serve as a warning and a deterrent. The hold of superstition upon the human mind is nearly as strong as ever it was, and under its guidance the boundary line between sanity and criminal insanity becomes very thin and very faint. The devil has a very extensive wardrobe from which to choose a disguise, and it is usually effective—for a time.

Dreyfus to Be Re-instated in Army IT is stated upon what seems to be good authority, that as soon as the innocence of Dreyfus has been declared by the Court of Cassation, he will be reinstated in the army with the rank of Lieutenant-Colonel. His regiment has already been arranged for, certain removals having been made in order to assure a favorable reception. A nomination of Lieutenant-Colonel means a promotion of two grades, and they will be provided for on consecutive days. *Fiat Justitia.*

Good Factory Law in Russia THE legislation of the Russian Government is certainly thorough. The new factory and mine law provides for compulsory compensation in all cases of accidents however caused, and such compensation which takes the form of annuity, is payable not only to widows and legitimate children, but also to illegitimate children and their mothers, and is based upon 260 days wages per annum, although actual working days number only 220.

Portrait of Dante Found at Bologna THE question of the personal appearance of Dante is likely to be solved by a discovery made in the state archives of Bologna. Among these documents Professor Giovanni Livi has found a parchment dated 1323, on which appear two pen sketches representing the crowning of the poet by the city. It is surprising that a treasure such as this should be allowed to lie unnoticed through so many centuries.

The Folly of a New York Preacher THE New York minister who proposes that physicians shall be authorized by law to put to death those who have incurable diseases, is probably inspired by no higher motive than to get himself talked about. Where is the physician who is charlatan enough to say that any disease is incurable except the mental disease of folly? And if folly were made a cause of death, we should obviously hear no more suggestions from the minister in question.

THE CHILDREN'S HOUR

The Real Meaning of Christmas

Written by a twelve-year-old Lotus Group girl of San Francisco

THERE are many people scattered all over this land who do not know anything about Christmas or Santa Claus. These people are called savages by Christians, but still these so-called savages share their food with their neighbors and help their brothers whenever called upon to do so. Some people think they know all about Christmas and Santa Claus, but they do not believe in celebrating at that time because it costs too much or because they are selfish or afraid they will not get more than they give. How unhappy such people must be! And there are many, many such!

Now, I think the story of Christmas and Santa Claus was intended for just such people, to see if they could not be touched and appealed to for the sake of the children. For when a child cannot influence a hard heart there is no hope left.

The Lotus Group teaches that Christmas is the time when the real Christ principle in us ought to show itself more than at other times. We should be glad and joyful for such a glorious reminder of the Christ spirit in all of us, for that is what brotherhood means. Christ was born in an age when everything was dark and gloomy; all hope seemed to have disappeared. But still there were a few who wished and hoped and willed for the dawn of a new and brighter day, and these few made it possible for another teacher to come among us; such was the infant Jesus whom we are taught to love and respect. Another dark age is upon us, and Christ's teachings are now being forgotten.

Katherine Tingley and the children are holding up the bright star of hope to humanity until another great master comes who will teach the very message that Jesus taught.

Until then let us celebrate Christmas and be filled with gratitude and joy. V. A.

Raja Yoga Home Life

DEAR CHILDREN ALL OVER THE WORLD: How would you like to find, as Cinderella did, a dear old fairy godmother, who would place a magical coach-and-four at your disposal, and then if you liked, just whisk you through the air, quick as a wink, to Loma-land? Wouldn't it be splendid? And what would you see? Homes, homes, homes, for, as all Lotus Group children

IN A GROUP HOME OF THE CUBAN BOYS OF RAJA YOGA SCHOOL

know, a true, pure sweet home life is the very foundation of the Raja Yoga system. And the beauty of these homes, their simplicity, their genuine Raja Yoga wholesomeness—no one could have designed them as Mrs. Tingley has done, and no one else could have inspired the children, boys as well as girls, to become such perfect housekeepers.

On Being Stupid

"MEG!" exclaimed Kathleen, "see what a quantity of raspberries we've gathered, our pitchers are full"—

"And we are going to make jam and we will bring a pot for you to taste," added Susie. "And Meg," said Muriel, "we have

IN ONE OF THE GROUP HOMES, RAJA YOGA SCHOOL, POINT LOMA

been wondering what makes people stupid, and one day you said you would tell us something about it."

Meg smiled, and very soon they were grouped around her.

"Well," she began slowly, "one reason is, people don't use all they know, and that leaves the best part of their minds dormant, as though slumbering intelligences were there. Because when we recognize anything as being true and right, we have called forth, we have brought to life, within ourselves, intelligence.

"Some people act and use this; and some people don't. And that is the only difference between great people and some of those who are stupid. Sometimes it is the very presence of these intelligences that causes the feeling of stupidity. Our minds are just as though

they were in twilight, and when we recognize truths, the recognitions themselves are light, and that makes what was only twilight before seem darkness. And if we go on acting from the darkness, refusing to use the new intelligences we have called into life, we grow to feel stupid because of the very presence of the light which lets us know that we might be different.

"So when people feel stupid," said Meg brightly, "they need not always be despondent, because if they couldn't be different they wouldn't know they were stupid! And so of course it can be different if they try."

A Nest in a Signal Lamp

ONE day one of the porters at Brampton Junction on the Newcastle and Carlisle Railway, England, went up to light the signal lamp at the east end of the platform when he found that a pair of common brown or wood owls had chosen the signal post as a nesting place. A box-like receptacle about half-way down furnished a place for the nest, and there they had laid two eggs. Although close to the moving signal board they sat quietly and would probably have reared their brood if some one had not discovered and robbed their nest.

Just so soon and so far as we pour into all our schools the songs, poems and literature of mercy towards these lower creatures, just so soon and so far shall we reach the roots not only of cruelty, but of crime.—George T. Angell, Editor of "Our Dumb Animals."

Students'

Path

THE BUBBLES OF SAKI

by DAVID STARR JORDAN

IN sad sweet cadence Persian Omar sings
The life of man that lasts but for a day;
A phantom caravan that hastes away:
On to the chaos of insensate things.

"The Eternal Saki from that bowl hath poured
Millions of bubbles like us, and shall pour,"
Thy life, or mine, a half unspoken word,
A fleck of foam tossed on an unknown shore.

"When thou and I behind the veil are past,
Oh, but the long, long while the world shall last!
Which of our coming and departure heeds
As the seven seas shall heed a pebble cast."

"Then, my beloved, fill the cup that clears
Today of past regrets and future fears."
This is the only wisdom man can know,
"I come like water, and like wind I go."

But tell me, Omar, hast thou said the whole?
If such the bubbles that fill Saki's bowl,
How great is Saki, whose least whisper calls
Forth from the swirling mists a human soul!

Omar, one word of thine is but a breath,
A single cadence in thy perfect song;
And as its measures softly flow along,
A million cadences pass on to death.

Shall this one word withdraw itself in scorn,
Because 'tis not thy first, nor last, nor all—
Because 'tis not the sole breath thou hast drawn,
Nor yet the sweetest from thy lips let fall?

I do rejoice that when of "thee and me,"
Men talk no longer, yet not less, but more
The Eternal Saki still that bowl shall fill,
And ever stronger, purer bubbles pour.

One little note in the Eternal Song,
The Perfect Singer hath made place for me;
And not one atom in earth's wondrous throng
But shall be needful to Infinity.

The Science of Religion

A MOVEMENT has been started for the establishment of chairs of Christian evidence from the scientific standpoint, at various American colleges and universities. The information to hand is somewhat meagre, and although the scheme seems to be plausible and attractive, it would be interesting to get some further details in order that terms might be a little more definitely defined. What, for example, is the precise meaning which is attached to Christian evidence? Does this mean—as it has so often meant before—that stray fragments of scientific knowledge are to be isolated and twisted to support some particular piece of incredible dogma? We have, for instance, been repeatedly assured that the various flood myths which are found among savage peoples, are a confirmation of the Biblical deluge story in all its details, and this has been called scientific evidence, and we doubt if we have yet heard the last of the efforts to give a scientific name to the fish that swallowed Jonah. If this sort of thing is what is meant in the present instance by scientific evidence of Christianity, we must venture to suggest that it is neither scientific, nor is it evidence, nor is it Christian.

There is, of course, a science of religion, which includes Christianity, and it is to the revival of this science of religion that all Theosophical efforts are directed. Indeed the decay of religion is due to the loss of its science. What is now called religion has not only lost its knowledge,

its gnosis, but it no longer believes in its power to acquire it, nor indeed in its very existence. Only by the practice of Theosophy can this power be regained, because there is no power without knowledge.

Why is it that those who confine their researches to the material world have been allowed to claim a monopoly of science? They have so claimed it and practically without contradiction except from Theosophy. They have asserted that no knowledge whatever is possible, except of material things, that all other beliefs are imaginative and speculative. In these claims the religions of today have acquiesced if not openly, then tacitly, and the judgment of the world has gone by default. It is the mission of Theosophy to put heart into religion by giving science, that is to say knowledge, once more into its hands. Then religion will be able to answer its adversaries of materialism. It will no longer be on the defensive but it will be very much on the aggressive. It will be able to retort that it is not materialism, but religion, which has the monopoly of knowledge, and of science, inasmuch as the latter deals with consciousness, whereas the former can do no more than blindly speculate about those things which influence consciousness, the external world of which we know nothing except its effects upon consciousness. It is religion which deals with realities, while materialism must perforce confine itself to the shadows. We know nothing whatever of the simplest material object and we cannot logically say anything more of it than that our consciousness has undergone certain changes. Consciousness is peculiarly the sphere of religion. Within it lies Deity, life and death and fate, the forces which save and the forces which destroy. All these things we can know, and not merely speculate about, by studying the laws of consciousness, the laws of life, by knowing ourselves. Truly it is a great pursuit, the greatest and the best which any man can undertake. It is the only science worthy of that name. It is the knowledge which kills superstition and fear, which dowers man with the perfect tranquility which must come when supreme Law is discerned. When religion has learned to take what is its right it will no longer go to the material researcher, cap in hand, to beg for the scraps which may serve to buttress its own futilities. Religion will then be the only avenue to knowledge, and this veritable possession of the Soul is the Pearl of Great Price which Theosophy, the Wisdom of the Ages, offers to whomsoever will.

STUDENT

Herbert Spencer and Materialism

THE teachings of Herbert Spencer have been made the excuse for much blatant materialism on the part of those who are never so happy as when parading the thoughts of other men, and who are constitutionally incapable of discriminating between disbelief and a reverent agnosticism. It might be well for such to be reminded of some words written by Mr. Spencer shortly before his death. He says: "For years past, when watching the unfolding buds in the spring, there has arisen the thought, Shall I ever again see the buds unfold? Shall I ever again be awakened at dawn by the song of the thrush? Now that the end is not likely to be long postponed, there results an increasing tendency to meditate upon ultimate questions. But it seems a strange and repugnant conclusion that with the cessation of consciousness at death there ceases to be any knowledge of having existed. With his last breath it becomes to each the same thing as though he had never lived. Of late years the consciousness that without origin or cause infinite space has ever existed and must ever exist, produces in me a feeling from which I shrink."

STUDENT

Helps to High Living

by DAVID STARR JORDAN in the *Call of the Twentieth Century*

- SUN. So live that your afterself—the man you ought to be—may in his time be possible and actual.
- MON. It is impossible to drop into greatness.
- TUES. The only way to learn to do great things is to do small things well, patiently, loyally.
- WED. Those who control the Spiritual thought of the Twentieth century will be religious men.
- THURS. The sinner is the man who cannot say no.
- FRI. Love looks toward the future. Its glory is its altruism.
- SAT. To do strengthens a man for more doing; to love makes room for more loving.

THE humblest occupation has in it materials of discipline for the highest heaven.

A TIMELY WARNING

by LONGFELLOW

BEWARE! The Israelite of old, who tore
The lion in his path—when, poor and blind,
He saw the blessed light of heaven no more,
Shorn of his noble strength, and forced to grind
In prison, and at last led forth to be
A pander to philistine revelry.

Upon the pillars of the temple laid
His desperate hands, and in its overthrow
Destroyed himself and with him those who made
A cruel mockery of his sightless woe;
The poor, blind slave, the scoff and jest of all,
Expired, and thousands perished in the fall.

There is a poor, blind Samson in this land,
Shorn of his strength and bound in bonds of steel,
Who may in some grim revel raise his head
And shake the pillars of this common-weal,
Till the vast temple of our liberties
A shapeless mass of wreck and rubbish lies.

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question How far is man the creature of circumstances?

Answer Just as far as he permits. This does not mean that he can change circumstances, but he can change his attitude towards them so that thereby both their moral effect and value are immediately altered, and instead of being a slave he begins to dominate them and to sow the seed of new circumstances in which he shall be master. It has perplexed many to find how far circumstances rule their lives and make or mar their happiness, and this just because they do not know their own nature and power. They ask, how comes it that they are so bound, why cannot they shake free?

It should be remembered that the conditions of the world into the midst of which we have been born have been of slow growth and the result of the untold acts and thoughts of humanity during thousands of years. All outer conditions are ultimately traceable back to inner causes, and so in like manner, if we desire new outer conditions, it lies with us to set up those causes which shall bring them about. But just so long as we submit to, or accept as inevitable the circumstances of life, we only tighten the chain of circumstances about us. There is a power which every man has, and he who thinks he has it not, may acquire it, of meeting circumstances in such a way as to deprive them of their dominance. Some may think they have not this power, but let them try it; let them follow Mark Tapley's example and say "Jolly" when everything looks black; let them remember that they have had their dark hours before, but that they have pulled through, otherwise they would not be here now; and they will pull through again. To laugh at circumstances takes all the sting out of them. Surely, it is not needful to say that we are to become callous or hard-hearted and to lose all sympathy and fellow-feeling. No; on the contrary, it is by becoming more sympathetic, by increasing our desire to help others, by losing no opportunity of loving service for others, that we become capable to meet circumstances with an unfaltering, a courageous heart. We have wound around ourselves the web of selfishness, strand by strand, until we can scarce move hand or foot, but now the cords have slackened a little and to unwind the web that course alone can avail which is the opposite of that which wound it so tightly—i. e., the only way to freedom is through unselfishness.

Question What part does motive play in determining our actions?

Answer Motive determines the real character of every action. The apparent character and the real character may be very different, in fact, directly opposite. Thus a cloak of seeming good may be worn to cover evil purposes. The outwardly good or unselfish act with the evil or selfish motive at heart, may work temporary outward benefit, while the evil seed at the core grows into a giant long-

lived weed not easily rooted out, the harvest of which the sower will sometime reap in suffering. A good act performed with a pure unselfish motive is a power for good on both outer and inner planes, helping others and helping most the one from whom it emanates. Even a mistaken act of kindness, unwisely done through lack of knowledge, while working some harm is more than counterbalanced by an unselfish motive, a sincere desire to help. Owing to our dual nature, our motives may spring from either of two sources, the lowest selfish desires or the opposite. Desire of some kind is a motive power within us, and to purify and ennoble our desires, enlarging them to take in the welfare of all, is to place our motives on the spiritual plane of compassion where they will be most powerful and most beneficent to all. The highest good cannot otherwise be accomplished either for ourselves or others. So we need to search our hearts for our motives, turn on the search-light of pure compassion and see of what character they are. It is very easy to deceive ourselves into thinking that our motives are unselfish when they are not, but we must not listen to or harbor for a moment the sophisms of our dark companion, who would entangle us and blind us to the light; but placing our trust in our warrior companion, put down the dragon of selfishness and walk over its dead body into the light, liberty and power of an unselfish life. If we keep our motives pure and free from selfishness, we shall gain the clearer vision that will enable us to judge aright and to act wisely. It is always the big shadow of our little self that obscures for us the light.

Krishna says, "As the ignorant perform the duties of life from the hope of reward, so the wise man, from the wish to bring the world to duty and benefit mankind, should perform his actions without motives of interest." B. W.

Work and Play

THERE are several learned theories to explain why the young of man and animals play, and now comes a new one. According to Herbert Spencer, play is a method of letting off surplus energy not required for growth. The ground not covered by this explanation, Groos attempts to cover by the theory that play is a sort of instinctive rehearsal for future life-work.

The last explanation is that play is a reversion to what was work. Thus hunting, fishing, camping out, and so on, which some do as play, had to be done as work for livelihood in other epochs of our race life. The writer, Professor Patrick, particularly deals with football:

In this game more than any other, except those of the Roman amphitheatre and their modern representatives, there is reversion to aboriginal manners, and hence a more complete relapse into latent habits, more perfect rest of the higher brain-centers, more thoroughgoing rest and recreation. The game is more brutal—that is, more primitive—than others. The scene before us is the old familiar scene of ages past. The lively chase for goals, as for cover, the rude physical shock of the heavy opposing teams, and the scrimmage-like, *melee* character of the collisions awaken our deep-seated slumbering instincts, permit us to revel for a time in these long-restricted impulses, relieve completely the strain of the will, and so serve all the conditions of recreation.

The psychology of football and similar sports does not teach that in these games there is a return to savagery. There is a momentary return, in the form of sport, to the serious manners of former days in order that in the serious affairs of today these manners may be the more completely left behind.

This last theory is the only one of the three which also explains the play of adults, for example chess. These plays enable the employ of a kind of skill not useful in ordinary life, yet pressing for use; and they offer as reward the sense of *victory*, not otherwise to be obtained without harming some other person. It is the old joy of battle. X.

THE NUMBER of Japanese books published in 1901 was nearly 19,000 and of these only 35 were translations. During the previous ten years the annual number of publications was over 20,000, but a very large proportion were translations. Japan is evidently producing a great Japanese literature.

TO FRET and fume is undignified, suicidally foolish, and theologically unpardonable. To preserve a proper equanimity is not merely the first part of submission to God, but the chief of possible kindnesses to those about us. To do our best is one part; but to wash our hands smilingly of the consequence is the next part of any sensible virtue, and no one but an atheist has the right to wrangle over anything but his own conscious sins.—Robert Louis Stevenson

IT is at times of crises that masks are torn off and the real character reveals itself in all its beauty or all its hideous deformity. The recent terrible fire in the Iroquois Theatre at Chicago, brought many out in their true guise of selfishness, while those who perhaps before had never done anything that the world might call heroic proved to be braver than some of those who have been decorated for their prowess in battle. In one sense it is not strange that there should be heroism, for the soul is always heroic and true. The unselfish thing is, to the soul, the easy thing, the most natural thing in the world. Storm and flame may hurt, but they cannot prevent the soul from expressing itself, and in the actual balance they have absolutely no weight.

One who looks about over the world's life and sees the misery, the almost universal selfishness, takes new heart at the records of some of the heroic deeds that occurred during this fire. To cite one or two instances: when the first alarm was given a dozen or twenty ushers promptly betook themselves into safety. Only one of all those employed thought of the little children, for it will be remembered that by far the largest part of the audience on that afternoon was composed of children. This usher, "Joe," a lad just out of his teens, forgot all about himself. Seizing two children and carrying two, he made for the exit. Five trips were made in safety as far as the children were concerned, although he was burned and bleeding. On the last trip he stumbled and the mob swept over him—and that was all.

Another hero, as brave as those we read about who stuck to the guns on a sinking battleship, was a young boy who had charge of the stage elevator. Trip after trip was made until every chorus girl was safe, al-

Heroism

though the car during the last two trips was blanketed in smoke, the boy was badly burned and the controller of the elevator was blazing.

One mother died, shielding with her own body her little two-year-old, herself burned beyond all possibility of identification, thrown like a covering around the baby, who was entirely uninjured, the little face unscorched, the little garments unruffled. Another heroine was found among the dancers, a member of that profession which is so often spoken of by the clergy as if it were inevitably the doorway to the broad and easy path. This girl ran to get out of the burning building with a group of others, one of whom wrenched her ankle and fell, helpless. Five gave a glance backward and then hurried on. One only thought of the fainting girl. Grasping her friend around the waist she dragged her down five long flights of stairs, across a stage whose hundreds of pieces of scenery were blazing, and at last, both badly burned, they staggered into the street, the very last to leave the burning building alive.

Another case was that of a governess who was caught in a panic with her two little charges. One she carried and the other one whom she was leading stumbled. "Help me save this child!" she cried out to a man at her right. "Save yourself!" he replied with an oath, and passed on. In some unexplained manner she reached the street, herself badly injured, but the children safe. But what was this man?

It is curious what a picture in miniature every great disaster brings us of humanity's life. It is as if all the world were reduced by some process and its record, its lights and shadows, placed on a sensitive plate. There is a little heroism, of course, there are a few who forget themselves, the soul still speaks—but what about the many? STUDENT

POINTS OF WISDOM

from H. P. Blavatsky

THE Spirit in man—the direct ray of the Universal Spirit—has at last awakened.

The age of crass materialism, of Soul insanity and blindness, is swiftly passing away.

Many are the honest aspiring Souls now raising themselves against the muddy waters of materialism.

The voice of the Great Human Soul proclaims the rise of the human Spirit in the masses.

It is the rich who have first to be regenerated, if we would do good to the poor.

Theosophy alone can gradually create a mankind as harmonious and as simple-souled as Kosmos itself.

To feel Compassion without an adequate practical result is not Altruism.

The Raja Yoga Edition

THE Special Raja Yoga Edition of **THE NEW CENTURY** contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to **THE NEW CENTURY CORPORATION**, Point Loma, Cal., the papers will be mailed for you without extra charge.

■ The World Is Restless and Uneasy

WHO shall doubt that a great reforming force is abroad in the world, subtle and pervasive? It shows itself in many directions—in peace movements, in struggles against corruption, in the world of religion and of science. It invades alike public life and private life, as though the collective consciousness of mankind had suddenly gained a glimpse of an ideal world, and was a little heartsick at the comparisons which force themselves into sight at every turn. Sometimes it is public calamity which shows to us the unwholesomeness of our social life, sometimes it is an outbreak of crime, or a threat of war, and as we

turn to face each new peril the clouds lift just enough to show us the precipices which lie ahead. The world is uneasy, apprehensive; it has forebodings and presentiments.

The fact is that all discord is contrary to the law of nature or the law of God, and is just as menacing to the body politic as are hygienic irregularities to the life of the individual. We may be yet a long way from understanding the unity of humanity, but it is the intention of nature to teach us that lesson and to make us understand it. It is impossible for any part of a community to be happy or healthy, however wealthy or luxurious it may be, so long as slum life exists, so long as the armies of the robbers and the robbed fill the world, so long as some human beings are so poor as to sell themselves, while others are rich enough to buy them. There is no possible isolation against misery, try as we may; nor can we in any way avoid the contagion of despair. If we will not have the brotherhood of joy, then must we have the brotherhood of sorrow. We can none of us go to heaven by ourselves. The very compassion which alone can take us there will also bind us to humanity.

Brotherhood of Sorrow or of Joy

The disorder against which nature is protesting is a mental disorder from which none of us are exempt. The corrupt and the criminal classes are not themselves the disorderly forces, but are rather the indices and the pressure gauges of the disorderly forces in ourselves. We may violently suppress the symptoms, we may drive them inwards and out of sight, but they are fed from the body itself, they are the poisonous growths from a poisoned soil. The trouble is that we have tried to live without love, we have assured ourselves that we are not our brothers' keepers, and we have not understood that fraternity is not merely an ethical sentiment, but a Law which cannot be broken with impunity. Whoever has shut love from his heart has placed a knife in the hands of the assassin, and is himself the cause of greed and public corruption. There is a common reservoir of human ill-will, and the criminal classes are but the channels through which it runs back into the world of action.

We Need a Mental Revolution

We need a mental revolution, and we are likely to have it. It is already presaged by a change in our habits of thought. So far the change is spasmodic and uncertain, but it will become definite, and it will make war upon custom and habit. It will restore to us our lost manhood and womanhood, it will recall honor and dignity and self-respect, it will give humanity a Soul. All revolutions begin with an idea thrown into the mind of the world by the Soul of the world, an idea which does not depend upon intellect nor upon argument, but which is rather a revelation of a divine and simple truth which we seem to have already known long since and for a time to have forgotten. It recalls us to ourselves as from a nightmare. We do not stay to enquire the source of those ideas. Their strength is rending and destructive, and then we see that it is also constructive.

Those divine ideas come like the tide, like the wind upon the corn. The self-interests of the world are always apprehensive of that tide, because it has been seen before at the times when history has been made somewhat rapidly. All sorts of ramparts have been raised against it, the bulwarks of superstition and caste, and prejudice and ignorance. But all these will be like the sand castles which children build upon the shore. They will be swept utterly away, and on the places where they stood will grow up new and beautiful cities, filled with friends.

STUDENT

Education and Manners

THE increasing misbehavior of some college men to which the press is drawing attention has received exemplification by a report of an incident at a well-known Methodist college, which may be the subject of legal enquiry. It is stated that a live rooster decorated with freshman colors was liberated in the chapel during prayers. A free fight seems to have ensued during which the bird was literally torn in pieces, and the Humane Society is about to investigate the affair. We have heard a good deal about the Paganism of the rising generation which is ascribed to the absence of definite religious teaching, but it would be hard to match such a scene as is here described in any Pagan Temple in the world. There is presumably plenty of definite religious teaching in a Methodist college, that is to say plenty of creed. Is this tree also to be judged by its fruits?

STUDENT

The Teaching of Spencer

THE world owes more to Herbert Spencer than it has yet realized. Very much of his best work was done while he was still comparatively young, and the stream of that work has become so incorporated in our national life that to a great extent we have forgotten its source and origin. Herbert Spencer it was who first claimed for girls a real education instead of the destructive folly by which their training was then governed. He it was who first showed that a healthy body was a necessary basis for a healthy mind, and that true development must pass over many parallel lines. He, too, it was who explained that children should be taught how to discover for themselves instead of being fed with facts, and that the love of discovery was in itself the most liberal of educations. These things have to a great extent become axioms, but when they were first enunciated by Mr. Spencer, they acted like explosives in our educational systems.

It was, of course, in a scientific direction that Herbert Spencer's great work was done, and there are, unfortunately, very few investigators who are saturated with the spirit in which he worked. For him science was a high and holy mission, and so pure was his ideal that there can be little hesitation in placing him high among the great religious forces of the age. Science, as he understood it, was the supreme teacher of honor and truth, and of that mental freedom which cuts itself away from error the instant that error is detected. We are still a long way from recognizing that all truth is religious, and that every aspect of truth is an indication of the whole. It is not easy to fully estimate the bearing of material science upon religious concept. Our theories of God are usually based upon our knowledge of the universe within which that God presides. As we extend our knowledge of the universe, so must we also extend our conception of God.

Perhaps no other writer of his age did so much to make men understand the wonders of the universe and of the laws which govern it.

STUDENT

Belief and Action

DISTRICT ATTORNEY JEROME of New York seems to have some wholesome theories as to the necessity for action in combination with precept. Responding to the toast, "The Duty of the Citizen," at a Greek Society dinner, he recently said:

After my fifteen years of public life in this city, it is hard for me to talk about anything but the need of decency in public life; and educated men, you men of the colleges and universities, are under peculiar obligations to furnish that decency. Ethics alone won't do it. Thinking beautiful thoughts and embalming them in quarterly reviews won't do it. How far do you suppose Christianity would have gone if the principles had not been incarnated in one personality, in a Leader? Without that Leadership we should have had merely another school of ethics.

It is not enough to believe in decency. You must get out and fight for it; and if your own sense of honor doesn't force you to do that, nothing will.

It may fairly be questioned if there can be any genuine belief without action. The theory which stimulates the head but not the hands, will never count for very much. It is worth about as much as a bank check without a signature. However beautifully we may design our ships they are useless until they are launched, and it is right action which invokes the divine law. Mr. Jerome's citation of Christianity is a reminder of the words of Christ upon this very point, that not every one who said Lord, Lord, would enter into the Kingdom of Heaven, but "he that heareth my words and doeth them." The world would cheerfully dispense with a very large amount of precept in exchange for a very small amount of practice.

STUDENT

Gladstone and the Church

THE Episcopal church never had a warmer friend than W. E. Gladstone, but his friendship was of that illuminated kind which saw the truth and expressed it boldly. The religious persecution which is now being carried on in England under the guise of educational zeal is causing many references to the great statesman's attitude. Writing once to his son on the subject of church rates, he said: "Now we have lived into a time when the great danger of the church is the sale of her faith for gold." And again, upon another occasion: "The Church of England is much more likely of the two to part with her faith than with her funds." From the lips of a true friend cometh wisdom.

A Real History of Europe

THE state of preparation for war costs nearly as much as war itself. It costs England 50 per cent of her whole budget, France 59 per cent of hers, Italy 64 per cent, Spain 70 per cent, and so on. Moreover, it keeps millions of youths idling in barracks, losing whatever good they may have brought from home, wasting their best years, and acquiring habits of vice and drunkenness.

A Frenchman, Gustave Hervé, has written a school history, designed to bring out this and other dark sides of war instead of the more usual ones. It is an ordinary history of Europe and its countries; but as each war comes up for consideration, no time is spent in dwelling upon the prowess of the generals or the details of battle. Instead, we get a record of the amount of devastation and destitution caused by the wars, the disastrous effect on the peoples, the international hatreds engendered, and the destruction of culture and liberty involved. Wars are ordinarily taught to the schoolboy and schoolgirl as mere facts in history, as causes of geographical and political effects. Here they are shown as points of delay in the evolution of humanity, delay and retrogression. The schoolboy ordinarily finishes his school study of the history of his own country with more or less instinctive hatred of all the nations with whom he has learned his own people to have been at war; with more or less contempt of other peoples; and with no other conception of war than as a glorious affair of valor and banners.

Not so here. He learns of the small share which the peoples have in the determination of the wars in which it is nevertheless *their* blood that is shed. He acquires neither contempt nor hatred of other peoples. And he comes from this history book with a foundation-sense of human brotherhood, and of the real community of interests of all peoples. Were history universally so taught, another generation would see the light of a new era.

STUDENT

Birthday of Paine

THE birthday of Thomas Paine has been worthily celebrated in Los Angeles, and that such a remembrance should be possible is evidence of a forward movement which is continuous and pleasing. The author of the *Rights of Man*, did not live to see those rights established, but by turning ourselves to the recollection of his work, we are all the more conscious of the green and living shoots of which he sowed the seeds and which are now growing so thickly underneath the tangle and the dead wood. Paine will not be forgotten until the world has learned the freedom of thought, a freedom which can in no way be conferred by constitutions nor by laws, but which each individual must valourously find for himself, and which each individual must watch and guard. The enemies of freedom conferred upon Paine the only honor they could give, and which he could take, the honor of martyrdom. They are equally eager to do today what they did then. Paine knew how to rise up and salute martyrdom, because he knew that victory walked within its shadow, as it ever does.

"Certain Wild Animals"

AN extraordinary and terrible passage from the writings of La Bruyère give to us a picture of the condition of the French peasantry before the Revolution. It is indeed difficult to realize either a state so deplorable or the mind which would dictate such a description:

Certain wild animals, male and female, are to be seen in country places, black, sunburned, affixed to the soil, which they dig and turn over with invincible persistence. They have a kind of articulate voice, and when they rise on their feet they show a human face, and, in fact, they are men. They retire at night into dens, where they live on black bread, water and roots; they save other men the trouble of sowing, toiling and reaping, and they do not deserve to lack the bread which they have sown.

The Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week gives a fine view of the famous Monte Cristo in the State of Washington, which is truly representative of the magnificent mountain scenery of the Pacific Coast. The district of Monte Cristo is noted for its copper and silver mines.

Some Views on XXth Century Problems

Man, Deity and the Law at Chicago

A NATIONAL calamity like that which has recently happened at Chicago always produces a discussion as to the action of Deity in abstaining from interference or prevention. We ask ourselves whether catastrophes of this nature can be prevented by the interposition of divine will, and if we answer that question in the affirmative we are of course confronted by the further problem of why such prevention is withheld. The question is by no means so full of difficulty as it appears. Let us first of all remember that there is a perspective in the moral landscape as well as in the physical, and that unless we have the perspective which can only be given by time and distance we are entirely unable to estimate any event at its right value for weal or woe. Some of the greatest benefits which have ever come to the human race have been introduced by apparent calamity and how often have we not given a noisy welcome to those other occurrences which have resulted in catastrophe?

Let us, secondly, ask ourselves to what causes the burning of a building is presumably due. We prejudice no case whatever in saying that nearly all such misfortunes are produced directly or indirectly by preventable causes; that they are due, in other words, to a lack of human oversight, to a lack of human care, or to a lack of human prudence. This is a matter of common knowledge and not to be contradicted. Is it not then apparent that an expectation of divine intervention to ward off the direct results of our own action, or lack of action, would mean the destruction of all human progress, which must necessarily rest upon human experience?

Man Must Learn by Experience

It would mean the destruction of free-will, of the power to discriminate between good and evil, between safety and danger. It would at once reduce humanity to the helplessness and the unintelligence of infancy. Let us take the question a step further. If we may expect divine intervention in the case of such a calamity as that at Chicago, that same intervention would surely be exercised to prevent war which spreads a desolation vastly greater. If, again, such intervention is to be expected in great things, why not also in small things, and which of us shall divide the great from the small? Why shall we not be protected from the trivial accident, from the fall in the street, from the bruises and hurts of daily life, and from illness? Man must either learn by experience or not at all. He must either move or stand still, and motion implies resistance, obstacles, conflict, and with these a strengthened will, a clearer perception, an added wisdom. It may be that the horror at Chicago will cause every theatre in the world to be better safeguarded for the future and the loss of hundreds may mean the salvation of thousands because of the added prudence which must result. It is at any rate certain that a wave of pity and compassion has been called forth which must have inestimable blessings for a world which would forget both pity and compassion but for their invocation by human pain.

STUDENT

The Russian Church and Duelling

THE action of the strong minority of the General Synod of the Protestant State Church of Prussia, in vigorously defending the practice of duelling, has naturally excited considerable attention and disgust. That such usages should find exponents amongst laymen might, perhaps, not be surprising, but that it should be defended by prominent and representative churchmen, needs more explanation than it has yet received. Count Storch was conspicuous for his advocacy of this form of murder. He admitted that it seemed to be in opposition to the Ten Commandments, but he reminded his hearers that the Twenty-first Chapter of *Exodus* was a justification of homicide under many circumstances. It will be remembered that the chapter referred to contains many of the more savage and revolting features of the ancient Hebrew law, and we presume that this shining light among Prussian Protestants would also give his sanction to the texts, which ordain "Eye for eye, tooth for tooth, hand for hand, foot for foot, burning for burning, wound for wound, stripe for stripe." The General Prussian Synod is not to be congratulated.

STUDENT

Overworked & Underfed Women

MR. GEORGE R. SIMS, in the *London Daily Telegraph*, writing on poverty in London, presents a picture of the terrific pace at which physical deterioration has set in and must inevitably continue in the immediate future. Women who have lived in a half-starved and overworked condition most of their lives yet breed large families of children; and the State, aided by a host of philanthropic movements, keeps these weaklings alive, concentrating charity and aid on them rather than the less obviously afflicted poor.

In Bethnal-Green the women do home-work, consisting of cardboard box and toy-making. The conditions under which they do this work are described as "loathsome."

The overworked, underfed mother may be found in home after home, in street after street, of the poverty area. She toils from early morn till late at night to supplement her husband's scanty earnings, and the combined income is scarcely sufficient to keep body and soul together.

One is not surprised to hear, knowing what churches have to offer and how they are allied with wealth and plenty, that,

The soul has suffered seriously if we are to accept the testimony of the clergy, who complain that they cannot reach the people, that almost every effort to get them under any sort of religious influence has failed. As to the body, the end is often the hospital. And yet these women are the mothers of large families. They are bearing year after year an enormous number of children, who are born either physically or mentally unfit for hard work.

Following is a specimen of the kind of statistics collected:

The Army Is Becoming Organized

Physically and mentally a weak woman. A home-worker. Long hours and short food. Family of home-workers in district for two generations. This woman has had ten children. Couldn't remember their names. Nine of the children have died. All were in some way afflicted. The father is weak-minded.

The writer does not wonder these people drink when they can, for it is an escape from their world into another world. And this drinking, too, produces its effects on posterity.

The sanitary measures taken by the State, "excellent as they are in one sense, are in another a check upon Nature's method of dealing with the overcrowding difficulty. Modern humanity strives to preserve the weakling."

The poor man's home is no longer his castle. He can be invaded at any time by half a dozen officials. His children must go to school or he is summoned. His home must be in a sanitary area or he is evicted. His children must keep good company, or he is brought before a magistrate and they are taken from him. If he is out of work and raises money on first-class security he must pay a rate of interest that would in time ruin a Rothschild. When he has no money he must not attract the attention of the public by stating his case and asking for alms—that is an offence against the law; and presently, though the only breadwinners may be his boys and girls, the law is going to step in and prohibit their employment.

And the poorer a man is today the more he pays for the necessities of life, and the less value he gets for his money. He is poisoned on one side and cheated on the other.

In conclusion, the writer says that this great army of the underfed is no longer voiceless, but is getting leadership and organization and reading the papers.

STUDENT

Who Is Responsible for Such?

A BOY of 14 who threatens murder with a pistol would be a remarkable phenomenon if he were in any way exceptional, but as he represents a large class he is specially interesting. His brother testified before the judge that his murderous proclivities were mainly due to bad company and equally bad novels, which is another illustration of the tranquillity with which we allow vicious writers to enrich themselves at our expense, and for their own private emolument, to contaminate young boys. Should this boy one day actually commit a murder, to whom will the real guilt attach?

STUDENT

Art Music Literature and the Drama

The Drama of the Future

SLOWLY and surely, as time moves on, are the basic truths of Theosophy permeating the literature of the western world. The idea of Reincarnation, which was the target for abuse, ridicule and sarcasm when first advanced in the writings of H. P. B., has now become universally known and quite generally accepted. It has offered themes for romances innumerable. But it was left for a clever playwright to make Reincarnation the subject theme for a drama that is beyond question one of the most unique of the present day.

Adolph Wilbrandt, in his admirable play, *The Master of Palmyra*, which drew packed houses when produced in Vienna, has touched upon some vital truths which prove him to be a student of life in the truest sense. The old love-motive between the man and the woman exists throughout the play, but the author invests it with a higher purpose than the average playwright.

The Master of Palmyra, or Apelles, the hero of the drama, represents the noble warrior-soul desirous of perpetual life, that he may experience to the fullest extent all that life offers. This desire is gratified by the Lord of Life. The chief woman of the drama reincarnates in several different personalities during the course of the play.

In each personality she meets Apelles, who continues to live on in the full vigor of life—the two never recognizing each other, but the woman always bringing something nobler and more inspiring into the life of the man.

Evidently the thought of the author is to show, as did Goethe, the woman-soul leading the man upward. At last, after passing through countless trials and vicissitudes, the Master of Palmyra has become so weary of living that he longs for Death as ardently as he had before desired Life. In this condition of mind he meets the woman-soul, now reincarnated as Zenobia. He recognizes her then as the one who has been with him through all the important events of his past life, and gives utterance to his thought in these words:

Yes, at last, I understand, O thou mystery that has so often crossed my path, gentle flame of the multiform life! Now I understand the purpose of the Master—alas, too late!

The Spirit of Life passes from one form to another; the *ego* of man is restricted, only one of a thousand forms can it shape and enfold, only one road. Therefore, aspire not to the infinite sea of Eternity, whose span only God completes!

If it is to endure, it must grow, change, as thou, the narrow *ego* broadening, maturing, refining from form to form, until it is purified in the clear light. So could we, perhaps, gradually grow like unto God.

Zenobia says:

Who thou art, I remember now. My eyes see clearly. On thy brow I see the sign that made thee sleepless,—and a voice speaks, saying: Release to him who, after long struggle, understands at last the riddle of life and the lesson of death!

Apelles then sinks on his knees before Zenobia, and as she lays her cool hand on his brow,

he passes away from life, saying:

Adonis!—Shall I, like Adonis, return to the light?

Zenobia (*as he dies*):

Thou art yet to learn!

The author brings out very clearly and beautifully the distinction between the Spirit of Life and the Ego or Soul in these words when Apelles speaks to his son regarding the life of the world:

Within, a wheel with bright-colored spokes turns round and round. Things change, but they return; and all the souls of men are different colored bits of glass, through which gleams the one spirit of life—call him what you will. He stands invisible, behind each one, his true ego, and lives in us his life.

Could anything expound more clearly the principles of Theosophy than the above? It is encouraging to see authors becoming imbued with these truths, which seem new and yet are so old, old as life itself.

Still more encouraging is it to know that the public mind is ready for these truths. Yes, we believe the *healthy* part of the public mind is so eager for the real higher knowledge that its unseen but felt demand must bring the necessary supply.

We must frankly admit that while *The Master of Palmyra* unfolds valuable truths, yet it leaves the mind at its conclusion unsatisfied; it is incomplete.

The living facts can go forth only from one who is fully competent to give them utterance. Such an one is even now among us as a Teacher, and we believe the true dramas of life for the hungry Souls of the world will at the proper time be produced by her pen, and presented by a trained body of Students under her direction.

E. C. S.

HEAD OF MICHELANGELO'S "DAVID"

ELIZABETH, Queen of Roumania, better known by her pen name, "Carmen Sylva," is a musician of no mean ability. During her girlhood Madame Schumann was one of her teachers, before which, during her stay in St. Petersburg, she had become a pupil of Rubinstein. Of him she later wrote, "Under his hands it was not a piano which I heard. Now it was the music of the spheres, now the gossamer of fairyland. His genius made me forget the miracle of his technique. I stood in wonder as before a great event in nature. Oh, the witchery of his playing! Like the bloom upon the grape, the dewdrop on the flower, it adds to the music a beauty of its own."

FRAGMENT

by ELIZABETH BARRETT BROWNING

WHILE art

Sets action on the top of suffering:

The artist's part is both to be and do,
Transfixing with a special, central power
The flat experience of the common man,
And turning outward, with a sudden wrench,
Half agony, half ecstasy, the thing
He feels the inmost: never felt the less
Because he sings it. Does a torch less burn
For burning next reflectors of blue steel?
The poet should be cooler for his place
'Twixt two incessant fires—his personal life's,
And that intense refraction which burns back
Perpetually against him from the round
Of crystal conscience he was born into,—
If artist-born. O wonderful great gift
Conferred on poets, of a two-fold life,
When one life has been found enough for pain!

THE crying need of the times is the mere opportunity to live simply, that we may discover ourselves.

There is something salutary in dealing with the actually necessary, that pierces the veils of illusion we have woven about ourselves and others, and allows the soul to shine through. To consciously choose, not being driven by want, to realize the simple necessities of daily life, is to begin a thread of consciousness that leads to a point where we, as women, may know and see and be at one with all the life that is synthesized in our wonderful physical organism. In our new school of social economics thinking women will do this, and by carrying their conscious mind from the simplest life that fills all human needs, through to a comprehension of the complex social organism that now exists, they will attain the "enlightened mastership" of wealth and opportunity; and *when unitedly* many such individual threads of consciousness are woven, a cable will be formed that will transmit *higher* human impulses than we have known. Then will the gods speak once more to mankind.

To begin by attention to necessary duties, to open to oneself this wider view, is true Raja Yoga, and truer concentration than any psychic practice. Take the question of the sustenance of the body, a vital question to women, the housekeepers. How many women spend the greater part of their time in buying, preparing or sometimes hardest of all, managing to get some one else to prepare, a great variety of delicacies in the way of food, to tempt the appetite and tickle the palates of the members of their families? Much of this food is not *required* by those who eat it; on the contrary, it often disables them by causing drowsiness and disease. Many devoted women give time and energy to build up insatiable monsters, whose criticism and disdain of a simple diet gradually cuts them off from the real life-giving properties of food.

Think of the abolition of waste, that most far-reaching crime of prodigal humanity, that would ensue, if, instead of what I have described, people were in the habit of taking only the food that was really needed. Think, moreover, of the effect of eating such food "with respect," as the ancient books say, and with the intention of building a body to be a fit vehicle for all noble purposes.

Look next into our homes. Are they not too often merely store-houses?

Woman and the Home

TRUE love is Christ-love: it is that part of woman's nature which lifts it above the ordinary, which fills the soul with compassion, and with a force such as words cannot describe.

KATHERINE TINGLEY

When we enter them we feel the absence of simplicity, we are jarred by the clogging of the necessary adjuncts of

life with objects that often have neither use nor beauty to recommend them, and that bear no relation to the *lives* of the people who put them there. Truly, we are often reminded of Stevenson's saying, "It is not taste that is *plentiful* but *courage* that is *rare*."

What we need is *courage* not to fill our houses with unnecessary things simply because others have them—or because others have them not and cannot get them! When *to do* and *to be* have won back their lost place, beside the dominant *to have* and *to get* of today, our hands will be free to restore lost arts and crafts, and will make of every home a beautiful place. I have read that in ancient times no unheralded visit occurred in homes. This may convey little to those who are in the whirl of social

observances, but this simple statement carries with it a refreshing breath from a time long ago, *when home was a sacred precinct*, whose atmosphere was lovingly and consciously builded, in which, shielded from the untoward, men and women prepared for great work; a place not to be lightly invaded, but to be approached with reverence.

What a saving of energy the restoration of formality founded on wisdom and the laws of human life would accomplish! Do you know anything more exhausting to the nerves than the continual informal visiting that goes on in the world? Is not the habit of "talking things over" carried to a point where clear thought and real growth become an impossibility? Sometimes it almost seems as if the art of human intercourse were destined to become a lost art. To many it already is so.

Working thus together, each from day to day freeing her soul to expression in action—this is the basis for a nobler type of home life than now prevails. It is the dawn of a higher courtesy.

MARJORIE TYBERG

NATURE is in earnest when she makes a woman; and there are women enough lying in the next churchyard with very commonplace blue slate-stones at their head and feet, for whom it was just as true that "all sounds of life assumed one tone of love," as for Letitia Landon, of whom Elizabeth Browning said it; but *she* could give words to her grief, and they could not.—*Oliver Wendell Holmes*

Mrs. Tyberg

ONE of the best known of our eastern members is Mrs. Oluf Tyberg, formerly of Brooklyn, now, with her family, one of the resident students of Point Loma. Mrs. Tyberg was born in Canada where she spent her girlhood, her ancestry being Scotch. She spent much time studying literature and educational methods, although, after her marriage, she of course relinquished her profession of teaching.

Something like twelve years ago she became a member of the Theosophical Society and Universal Brotherhood. Instead of deadening her interest in the studies which had been her delight along educational lines, Theosophy served rather as a spur and she pushed out and tested all lines, having become familiar with practically all the modern methods of education. For some years she was interested in women's clubs and particularly those occupied with the study of child nature, and it was in this way that she became familiar with the Froebelian system of philosophy, which is now demonstrated, to an extent, in the Kindergartens. When Katherine Tingley gave her students—long before the public knew anything about it—some insight into the Raja Yoga system of education, Mrs. Tyberg felt that at last she had found what she had been looking for all her life.

"My ideal," she said recently, "was always an international home life for children and an education that would fit a child for any situation and make him equal to any emergency, and when my own children came I felt that there was at last hope of realizing my eager desire to open to them the whole world. Here in Loma-land I am realizing my life's ideal, and the longing I have had to give my children a purer, simpler and more widely human life is at last answered. The educators of the world—that is many of them—strive to lead children into the simple life but they lack that knowledge of child nature which alone can give them the power to do it. They forget that children are souls first and bodies afterward. The Raja Yoga system to me is the only system of education that meets every need that may arise, that is able to solve every difficult question—and mothers meet so many!—the only system which prevents that lamentable gap between home and school which has been the *bête noir* of educators since time began.

"It is the only system which permits the child and mother to live a natural and ideal home life, for it must not be forgotten that home life in its highest and purest aspect is the foundation-stone of the Raja Yoga system."

PARTICULARS of the wreck of a large steamer on the French coast contain an account of the bravery of a French fisher-girl, whose prompt action resulted in the saving of many lives. The vessel, which was bound for Dunkirk, went on the rocks in a thick fog and shortly afterwards sunk. One boat, full of seamen, narrowly escaped destruction on the treacherous rocks solely because this young girl swam out at the risk of her life and established communication with the shore.

IT was Mrs. Barhydt who established the Baldwin fund for the etching class in the National Academy of Design in New York. The endowment was in memory of her brother who was himself an etcher. Recently she has entrusted the administration of it to Mr. Smillie, teacher of the classes in etching. The fund is a great encouragement to students and in establishing it Mrs. Barhydt has done much to foster art life.

DISPATCHES from Berlin under the date of January 13th state that when the Reichstag reassembles next week a new petition will be presented asking that women be permitted to do business on the German Bourse. Although there is small chance that the petition will have any weight, the presentation of it has special interest at this time when everything seems to be changing, either for better or for worse.

Lady Macbeth

II

THE tragedy of *Macbeth*, studied deeply, these devastated temples of God comprehended, and the relation made manifest of man to the universe, would restore to humanity its lost heritage of spiritual knowledge, and so release him from his bondage of dogma, perversion, prejudice and error. *For its basis is spiritual law.* The ray from the central spiritual sun, the watcher, guardian, pleader, which has overshadowed and illumined the consciousness of Lady Macbeth through the long journey of many lives, is now withdrawn from the temple surrendered to pollution and evil. She is henceforth soulless, as she desired,

That no compunctious visitings of nature
Shake my fell purpose.

It has been suggested by some student that the soul reincarnated and radiated its glorious light yet again in the polluted mansion, as her conscience revealed its trouble and vain remorse, when the day of her little life shadowed to its night, "to be rounded by a sleep." Not so, NO MORE, *the soul light was withdrawn!* But can we not realize that where the transcendent soul has shed itself there must remain the aroma or effects? Even a grain of musk refuses to be obliterated. Welling up through the poisonous exhalations of hell, old memories arose and clothed themselves in radiance, sweetness, purity and peace. For hell exists alone by contrast. And where the soul has lighted the way, its effects are potencies revealing to humanity heaven, or hell. That is the work of the soul in humanity. Sublime in the gathering darkness of death's night stands the majestic ruin. That which lends solemn beauty and glory to mortal shrines and ruined material temples, pyramid or cathedral towers and domes—starlight, moonlight, sunshine or the rush and roar of battling elements, belong to material nature—and we sense the illusionary effects. But *this!* temple of the Holy Ghost—in its desecration—shows but the afterglow of the light once shed therein by the presence of God—"One accent of the Holy Ghost the heedless world has never lost."

This reflex action of the soul that illumines the gloom of the shadow of death that encompasses Lady Macbeth, is the soul's process of separating the wheat from the chaff of garnered years. She has chosen. It is finished.

With Macbeth, who does not surrender his temple, the soul pleads and pleads. How magically upon the shifting screen of his action are cast his mental reflections, that show to us the footsteps of the *same*. These footprints linger long and lovingly around the construction of the builder-man and reveal to us all along the way the stored wonders of his brain and heart. To the last hour, in his final desperation, the soul pleads with him and holds to him through his despair. The gleam of the soul flame glows over him to the last, "when life has lost its meaning."

Out, out, brief candle! Life's but a walking shadow, a poor player,
That struts and frets his hour upon the stage
And then is heard no more. It is a tale
Told by an idiot. Full of sound and meaning,
Signifying nothing.

Slowly man has evolved, gathering to himself the fabric and substance of his dwelling-place. Only after long ages it has rounded out into physical perfection. For æons of time this gathering, smelting, fusing by countless invisible processes, has provided the material for this wondrous dwelling. To what end? That the temple may become the fit dwelling for the most high God. That the Lord of Hosts may incarnate among men, and through the human temple raised to the divine, may sound the law!

Flinders Petrie Tells the British Association of His Work

THE address recently delivered by Professor Flinders Petrie before the British Association is useful as a pregnant epitome of exploration work in Egypt and the historical results which have accrued. He pointed out that until very recently the origin of Egyptian civilization had been unknown. It is still unknown, although the labors of archeology have disclosed many fascinating chapters, far preceding any hitherto known to exist. It is at any rate certain that the dynasties of which Menes was the first King were so far from being the beginning that they were rather the termination of one great civilization and the dawn of another. The art of the dynastic people was entirely different to that of the men who preceded them, as though a new and different genius had been incarnated in Egypt. For the first time we are now able to look clearly at a period of history extending over ten thousand years, and although the dawn may be still far from our sight, we are none the less upon a road of which every step must add materially to our knowledge.

It would be interesting to obtain Professor Petrie's opinion upon some of the discoveries which have recently been made in America, discoveries which certainly carry something more than a suggestion of Egyptian origin.

The field of archeological research is so broad and the laborers are so few that we lack the coordinative and the comparative work which is becoming increasingly necessary. The science of archeology is divided, as it were, into water-tight compartments, and we need a comprehensive survey to determine the way in which those compartments are related one to another. That will, of course, come in due time, and we shall then

find that many of the lines of research which now appear to be parallel are actually converging toward a common source. When this is recognized we shall certainly find that the prehistoric civilizations of America, of the vastness of which we now know so little, bear a very important part in the foundations of Egyptian evolution.

STUDENT

Archeology in Eastern Europe—What of Our Own Treasures?

AN American expedition has just left Boston in order to undertake an archeological exploration among the buried cities of Afghanistan and Southern Russia. This locality has never before been explored and it is believed that valuable discoveries will result.

It is of course gratifying to find American energy directed to such far distant fields. Science is above and beyond all geographical boundaries, but it may not be amiss to point out that even from the purely scientific standpoint America itself offers a better field for archeological research than either Afghanistan or the Crimea. These latter localities are not yet the prey of the devastating tourist and such treasures as they may contain will probably lie secure for many years to come. The case is however different in America. The vast treasures of our ancient history are not matters of speculation but are lying upon the surface and are suffering a yearly diminution in quantity and deterioration in quality. America possesses the scientists who are willing and eager to work. America possesses also the necessary money and it is hard to suppress a feeling of regret when this latter ingredient is employed in directions where the need is not so pressing.

STUDENT

A Great Druid Temple Beneath a Village in Kent, England

IT is not generally known that Stonehenge is not the only collection of Druidic remains in England. Near Chiselhurst, in Kent, is an extraordinary set of subterranean caves and passages, hitherto but little investigated, but now being thoroughly dissected and searched.

A vast Druidic Temple lies beneath the little village. The caves lie between 80 and 130 feet below the surface of the ground, and, with the laboriously excavated passages leading to them, are of immense extent. From the passage leading to the temple proper branch off many other passages, one *seven miles* in length; another five at least, for it has never yet been followed to its termination; others have been blocked by downfall from the roof; and all of them afford entrance to lateral caves. The floor rings hollow, strongly suggesting the existence of another and deeper set to which entrance has not yet been found. The arched walls of the passage are carefully finished, as also are the sides of a deep well in the floor of one of them.

The temple proper is marked by four massive altars, cut from the wall, all facing east, and opening from it is a little chamber to which access is gained by a slit in the wall through which one passes with difficulty.

A proper investigation of this mighty excavation has but begun. All the passages have to be followed to their ends, and the debris cleared away from those that are closed. The way has to be found to the deeper story of passages.

The Druid initiates committed nothing to writing. What we know of their mysteries and teachings comes to us only from tradition. And though of such second-hand information there is a

fair amount, it is strongly colored from the medium through which it comes, mostly Roman. Our real knowledge must come from a study of their remains and from our growing understanding of similar remains in other parts of the world.

Surprising Revelations of Archeologists in Prehistoric Crete

A CERTAIN sequence is usually to be noticed in archeological discovery and this is admirably illustrated by the discoveries in Crete.

The disclosure of an advanced civilization of such enormous antiquity was in itself sufficiently startling. We may also add that it was sufficiently disquieting to those who are always in a hurry to ascribe to myth and empty tradition whatever seems to conflict with preconceived opinions. The preliminary results of Cretan excavations had however hardly been given to the world before the announcement was made of yet another Cretan civilization antedating the Mycean and which may have been almost as much a matter of conjecture to the Mycean people as it is to us. Mr. John L. Myers describes a sanctuary which belonged to those earlier people and which stood upon the summit of a hill. This sanctuary consisted of a massive retaining wall of large blocks enclosing a rectangular space. Terra cottas have been found in very considerable numbers, those of human beings being dressed in a manner very different to the Mycean costumes. The garb of the women was especially novel, including enormous and highly decorated hats, having a remarkable resemblance to some of the modern fashions. Terra cottas of animals were also found in great profusion.

The Trend of Floral Development?

TO the lay mind, which knows nothing of genera and species, there is something very significant in the development of flowers from the simplest to the more complex forms and methods of arrangement. Beginning with those types which have no flowers at all such as the lichens, we find a progressive process of assembling the parts of a flower. First a group of modified parts of the plant; then, a step further, an organized structure, with its beauty of form, color and odor, every detail of which is of some use in the performance of its functions as a flower.

But now opens up a new series of development. From the simple, single *rosaceæ* or *crucifloræ* we advance to ever more and more compact groupings of the flowers themselves. At the beginning isolated flowers such as roses, apple blossoms or carnations, then groups, clusters, racemes, umbels and spikes, and so by infinitesimal steps to *compositæ*, the daisies and sunflowers. Each of these is a little family or town of flowers, perhaps two hundred tiny flowers to make one daisy. Each floweret has many parts, so that our dainty daisy is really a most wonderful little system composed of probably five or ten thousand tiny organs and parts. Then another step occurs and we find that in the calla-lily family we have the flower community all enclosed in one great petal instead of a row of them.

Now this appears to be still somewhat short of the final plan, for the *compositæ* themselves begin to combine. They lay aside their large, showy petals, as in the thistles, becoming very unobtrusive in appearance. Then they begin to combine into larger systems, first by groupings, then by umbels of *compositæ*, such as the yarrow, and so on. The process of assemblage is manifestly yet incomplete; other stages remain to be worked out; but the fascinating problem is how far will it go? Is it a prophecy as well as a record of human progress back to the Golden Age?

First the undivided pre-blossom stage, then individualism, next the family group, clustering into tribes which grew by successive steps of unification into composite nations. Does not this next and, as yet, last step in the plant world truly represent the spirit of unity now working so powerfully among men; the effort of nations to combine in peace?

One naturally wonders where it will end, what sort of flowers will be at last produced, and what sort of a world they will grow in, when they stop struggling, each for itself and combine harmoniously into great unities.

SAN DIEGO has petitioned for a federal forest reservation in the Cuyamaca mountains, which when enforced will insure an abundant water supply.

WILD HONEYCOMB FROM LOMA-LAND

AMONG the clefts in a rocky canyon, near the School of Antiquity grounds, Point Loma, some of the Raja Yoga schoolboys, while taking a walk lately, found a good-tempered swarm of bees snugly tucked in. Our cut shows a very perfect piece of honeycomb which was found close by, hanging to a branch. The bees had deserted it, owing to the increasing coolness of the weather, and had found a warm shelter in the cliff. But the new location was exposed to danger from the rain and to a deadly enemy, the moth, whose caterpillars soon began to ravage the new comb. Help was necessary, and after much labor the bees have been comfortably shifted to a warm, safe hive, and they promise to be the progenitors of many strong colonies.

It is a curious sight to see how active the Loma-land bees are in January, when all is usually quiet in temperate climes. But the warm sunshine and the flowers in the Homestead gardens, keep them working and even raising their young. All day the busy little workers are carrying loads of pollen and honey for their brood. But, like their kind in colder climates, they have driven out the useless drones some months ago.

R.

Our Woodland Housemates

WHILE in camp last summer we were on quite friendly terms with some chipmunks, who resided under our cabin. Although very shy at first, they soon became so tame that they would come and eat what we put out for them, or else stuff it into their cheek pouches and take it away to eat at leisure. If it was in very small pieces they would eat it then and there, and we found it very interesting to watch them. Nuts were their favorite food, and they could smell them at a very surprising distance. After a while they learned to come up in our laps and eat from our hands, or stuff their cheeks with what they could not eat. It was extremely funny to see them take nuts out of their cheeks and repack them more compactly to gain a little extra space.

They sleep most of the winter and therefore do not need to lay up as much food as the squirrels who keep open house nearly all the time. The smallest and tamest one we called Baby. Sometimes he would be having a private picnic with us when he would see the largest one coming, and would squeal and run away. Probably they do not understand Brotherhood, or it may be that Baby was breaking family rules.

Our friend who lived across the road said that he used to make them do tricks before he would feed them, by passing his hand up the tent pole and around the boxes to make them follow.

One of the little ones tried to get away with half a loaf of bread one day, but we stopped him and told him that we intended that for our dinner, so he reluctantly left it.

They were as fond of candy as any child, and fairly reveled in it when we gave it to them. We hope that they will have a nice winter's nap so as to be fresh and happy when we meet them next year. DRYAD

The Durability of Woods

SOME experiments as to the durability of woods have recently come to a conclusion. Stakes two feet long and an inch and a half square were driven into the ground nearly their entire length. At the end of five years oak, elm, ash, fir and soft mahogany were entirely decayed, larch and hard pine were decayed on the outside, cedar of Lebanon and hard mahogany were in fairly good condition, but Virginia cedar was as sound and perfect as at first.

THE greatest carrier-pigeon speed on record was reached by a pigeon belonging to Mr. Gist, which flew from Bayonne to Antwerp, a distance of 617 miles, in 10 hours 39 minutes, or at an average rate of about 85 miles an hour. Over much shorter distances higher speeds have, of course, been reached but in no case exceeding 75 miles an hour.

Universal Brotherhood Organization

Central Office Point Loma California

IN spite of a chilly atmosphere and threatening rain, a good audience assembled at Isis Theatre on Sunday evening to hear the admirable music which is now so customary, and the papers which had been prepared by Mr. W. A. Dunn and his son Hubert, who was one of the early pupils of the Raja Yoga School. Mr. Dunn has two sons in the School, but we understand that he himself has only recently arrived at Point Loma as a valuable reinforcement to the musical talent at the Homestead. Mr. Dunn's paper was on "Music in Life," and we present our readers with a short extract from an able composition:

"All here are familiar with Katherine Tingley's statement that 'Music is not only one of the refinements of life, but life itself.' So much is this the fact that science is now demonstrating that we never contract a group of muscles, or propel a nervous impulse, without generating musical tones throughout the entire body. Scientific instruments are now in use that assist the ear as the microscope assists the eye, and there is no longer any question that these bodies in which we live possess innumerable octaves of musical strings, capable of responding sympathetically, if we would let them, to every conceivable vibration of nature. Just as there are several octaves of notes on a piano, so are there several octaves or degrees of natural sounds in nature and in the body. For instance, the eye that perceives vibrations of light belongs to a much higher octave than the organs of smell. Now, if we carefully observe, within ourselves, how the sensations we receive rise into the mind and become changed into thought and states of feeling, we will notice that a very small proportion indeed are under control. The organs of sight, hearing, feeling, smell and taste receive outward sensations, as it were, in a raw state. These travel to the mind within and receive those commanding touches that make man the creator of his destiny. For instance, if a man has a positive purpose in life—to live up to the highest ideal he can conceive of—all received impressions are worked up into the melodies of thought and harmonies of feeling, that are *in relation* to his attitude and purpose. On the other hand, if a man has no particular purpose in life but is swayed hither and thither by the desire or emotion that happens to be uppermost, these lower forces attract the impressions we receive from life, and mold them into the discordant tones in life. Many writers have likened the human nervous system, with its uncountable silver threads, to a complex musical instrument that gives forth musical harmonies according to the proficiency of the player within. Every day this is being recognized as the literal statement of a scientific truth. It is a singular fact that our bodies, called by St. Paul 'the Temples of God,' have the least value placed upon them as musical instruments, and receive little or no cultivation along the lines of their limitless possibilities.

"In considering the cultivation of musical thought and feeling, it is necessary to remember that its field of operation is over the whole field of life and duty. There is no physical act, no wave of feeling, no thought activity that cannot be used for the purpose we have in hand—that of restoring our minds and bodies to their true place at the head of nature.

"People now-a-days do not err so much in committing wrong as in *omitting* to do the obvious right. They live negative lives, with will-power asleep, and the power of imagination uncultivated. Sense impressions and lower desires being unchecked, have free play over the mind, feed upon its substance and wax strong into the forces of personal habit that obsess and mar our lives.

"Music teaches a great truth—the need of continuous rhythmic effort. The power felt in music is generated by a succession of rhythmic impulses, giving coherence and meaning to a series of notes and chords. Rhythm is not mere accent as is commonly supposed, but successive accents *plus* the force of musical feeling.

"Rhythmic impulse in nature corresponds to effort in human life. Effort to perform right action generates will-force—and more. It acts upon the mind and heart as a new energy, and awakens up our sleeping intuitive knowledge. If effort

Yoga" by His Son, Hubert

Reprinted from the San Diego News

be repeated again and again we feel a natural tendency to perform the act *without* effort. This is the manifestation of the power of rhythm, which we have created through a series of efforts. "The greatest of all human power is the power of initiative. Initiative is the commencing to do the right thing in defiance of lower promptings to remain inactive.

An action performed from a high standpoint above our customary grooves of thought, and for a high purpose, sends a thrill of living music through the whole nature. Its constant repetition not only becomes an embodied force of character, but at the same time paralyzes the energy of lower forces of habit, and finally dissipates them.

"Music has a great truth to teach the world today. As part of life itself, it demonstrates the laws that govern the moving harmonies of nature.

"Musical feeling suffuses the mind with pure electrical energy, and loosens up the lower thought-grooves—making room for the expansion of the heart forces. As an educative force it cannot be estimated. Its real value is in developing and purifying the mental faculties, so that the acquirement of other branches of knowledge becomes easy. Many a dull nature has been awakened to active perception through the love and practise of music. Whole nations have been stirred up in the past to mighty deeds by the force of a great song."

Hubert Dunn's paper was on Raja Yoga, and he said in part as follows:

"Katherine Tingley once told the Raja Yoga children, 'Raja Yoga is the perfect balance of the faculties, physical, mental and spiritual.' Day by day this means more and more to me, as I watch and experience the effects of Raja Yoga on myself and other children. It is a fact that as we try to do right we have more respect for ourselves; and every fault overcome gives us confidence to face all our weaknesses.

"The child who has a Raja Yoga training from the time he first opens his eyes is indeed fortunate. What we learn in early childhood helps to form our future manhood. There are so many little children in the world whose lives seem so destitute of sunshine, hopeless and purposeless.

"Raja Yoga teaches us that each one has a duty to perform, and it is not so much *what* we do as *how* we do it.

"It is much easier to impress a young mind than one which is already filled with wrong thoughts. The young mind is easily affected, and then is the time to plant seeds for the future. The very surroundings make their impressions on the little one. How many mothers, fathers, brothers and sisters guard their speech in the presence of young children? Watch a child and see those wise little eyes noticing and wondering at everything they see. Then when at some opportune time they cry out in defiance, the harm is done and an evil influence has had its effect.

"Physical exercise, fresh air and good wholesome food are necessary for a healthy body. Our body should be alert and active; ready to respond quickly and with ease. How much more joy and pleasure it gives to see a child standing erect, with an open, frank countenance, than one who stands crooked, and with a sly, underhand expression on his face.

"A child's character is seriously undermined by the influence of the playmates. It is not every parent who looks with care, nor is able even to choose the companions for his child.

"Raja Yoga teaches us that book-learning is not the only requirement for a good education. Some people imagine that to go to college and pass the examinations complete a boy's education. Raja Yoga teaches us that our education should be so broad that all through life we are learning new lessons. Some of the wisest heads are unable to puzzle out the problems that young and pure minds regard with clear perceptions.

"We are taught that 'the knowledge that we are divine gives us the power to overcome all obstacles.' The Raja Yoga education is so general that its students are not bound by any hard and fast lines of thinking. We are taught to think for ourselves and stand up for the truth.

✻ ✻ A Greater San Diego Clearly in Sight---the Banquet Given by C. W. French ✻ ✻

Some extracts from the San Diego-Sun, 2 February, 1904

SEATED around tables made as beautiful as taste and money could make them, with delicate china and gleaming silver, with masses of red and white carnations and delicate greenery, 150 of San Diego's most representative men listened at the banquet given at the Hotel Robinson last night by Chas. W. French to words full of promise for the future greatness of San Diego. The occasion was the formal christening of the enterprise to construct the San Diego-Eastern railroad.

Some very significant statements, bearing upon the railroad outlook, were made by speakers during the course of the evening, especially by Messrs. French and Peters.

Most significant was a statement made by Chas. W. French, the railroad man, when he said in relating his vision of San Diego's future greatness: "San Diego, a city of California, was annexed to the Rock Island States of America in 1907."

Just at the close of the dinner, with clanging bell, the first engine of the San Diego-

Eastern road entered the banquet hall, propelled by the young son of Mein Host Robinson. It created a roar of laughter and applause.

"San Diego is destined to attain the full stature and scope for which it is qualified by its location and natural environment. Having waited for the fullness of time its growth cannot be delayed much longer," said Mr. French.

"It will be restricted only to the limits of the world-wide interests in the advancement of which Greater San Diego must play an important, a vital part. One of the three harbors located on the western coast of the United States, San Diego bay affords in anchorage, in climate and location, an advantageous port, perhaps unexcelled by any other harbor.

"The rapid increase in both volume and importance of the world's commerce, the territorial expansion of America, the construction of the Panama canal, the certain opening of the Orient to the trade, the commerce and the culture of the world, all demand the immediate use of this great harbor as a transfer station on the shortest possible route for an American-Asiatic highway of commerce.

"The shores of this bay must speedily become lined with wharves and warehouses. Within ten years we shall see regular steamers entering and leaving San Diego bay carrying at least 40,000 tons. The world harbors of the immediate future must accommodate vessels drawing 40 feet of water.

"Having long hoped for one direct line of railway, San Diego must soon accommodate at least three. Trains carrying 2000 net tons of freight each, forty 50-ton cars will roll in and out of San Diego in an almost unbroken procession.

"It is not only from her commercial advantages, as a transfer station on one of the world's great natural highways, that Greater San Diego will derive her strength, her importance and her glory. Among the great manufacturing centres of the Twentieth century, San Diego must speedily take front rank. It is not yet the full age of steel. That age is but just beginning. The use of steel is destined not only to increase, but to multiply. Steel can be manufactured at and distributed from San Diego cheaper than any other place in the world. With inexhaustible supplies of raw material to draw from, Greater San Diego will be known as one of the large steel producing centres of the world. The product of its mills will enter all lands and all climes.

"Greater San Diego will become distinguished as an educational center. One of the great universities of the world will be founded here.

"Events presage the political consolidation of all English speaking peoples into one nation, under one flag. The capital of that nation will be in America. When the new United States of the world rules the world its commerce and its culture will diverge from America to all peoples in all lands. Then only shall America attain her full stature and assume her destined role in the drama of the world's history. When the sun that now struggles through the vapors of a misty morning shall shine in the splendor of a cloudless day, when the nation that now creeps with the weak insurmountance of a child shall walk with the strong confidence of a man, when the great west, like a Christian Hercules, with bones of iron and steel, nerves of gold and silver, and muscles of bread and meat, shall raise and bear aloft, on the palm of its hand, its aged parent, the east, Greater San Diego will stand like a triumphal gateway through which shall pass the serried trophies of prouder victories and a grander conquest than ever Persian, Greek or Roman won."

President Homer H. Peters, of the Chamber of Commerce, responded to the toast, "The Material Possibilities of San Diego." Among the significant things which he said were the following:

"San Diego is at this moment attracting more attention than at any previous period of its existence, not only because of the new railroad projects and the great steel

MAIN ENTRANCE OF THE RAJA YOGA DAY SCHOOL IN SAN DIEGO
The San Diego branch of the Raja Yoga school, though but a few months old, is already crowded with pupils, the applications keeping well ahead of the rapidly expanding facilities. The illustration shows the Christmas holiday decorations of holly berries, poinsettias and natural greenery

plant to go with it, but because the United States government is recognizing the importance of this city in more ways than one, and in a manner of ultimate great moment to all our people.

"Can you imagine a more attractive, safe proposition than the construction of a first-class inter-urban line, along the Mesa boulevard to El Cajon and through that beautiful and prosperous valley on to Lakeside, a proposition which, if east of the Missouri river, would long since have been a reality and paying liberal profits to its owners? The electrifying of the National City and Otay is of vast moment to this community, for these propositions lend great attraction to the visitors and are a constant source of pleasure and pride to our citizens. 'In union there is strength,' is as applicable to the welfare of San Diego as the welfare of nations. Let us then be up and doing, each individual citizen doing his or her utmost to work out the greatest good to the greatest number."

Among other speakers introduced by Toastmaster Dehnell were George W. Marston, who spoke on "The San Diego-Eastern Railroad"; "ex-Mayor Reed, on "San Diego of the Past"; Victor E. Shaw on "San Diego of the Future"; and James MacMullen on "The Intellectual Possibilities of San Diego." These speeches were all well received,

the humorous points being enjoyed particularly. The birth of another day had taken place before the close of this most successful and pleasant banquet, and it was after one o'clock before the guests had left the Hotel Robinson.

Many were the comments of praise for the elaborate menu served, and the perfect way of serving. It was thought by many to have been the finest menu ever prepared for any banquet at San Diego. The setting was also ideal, as the beautiful dining-room was aglow with countless electric lights, and pillars and walls were wreathed and covered with beautiful greenery. The hotel orchestra simply outdid all its former achievements. Specially prepared numbers were rendered at short intervals throughout the evening, and at the close praise was universal and unstinted.

Much Loyalty and Activity in Sweden

The latest reports from the Lotus Groups of Sweden indicate unprecedented activity. The new Raja Yoga symposium by Katherine Tingley, "*The Little Philosophers*," has been an inspiration. It was translated into the Swedish language without delay and special effort has been made in preparing it to bring into the work the real spirit of Loma-land. Students of Katherine Tingley need no assurance of her love for Sweden and the Swedish people.

It will be remembered that during her Crusade Around the World an enormous impulse was given to work for brotherhood in that country.

It was during her subsequent trip that King Oscar and his suite attended one of her receptions, becoming most favorably impressed with her great work for humanity.

The Theosophical work in Sweden has always been an inspiration to other lodges all over the world. One evidence of their whole-hearted enthusiasm we find in the preparations they made for the study of this symposium. Stereopticon views of Athens and her temple hills were shown to the children at various meetings and a special study was made of Greek history and social customs. Great philosophers were studied, not only their lives but their message of brotherhood, all for the purpose of bringing the children into the true spirit of the symposium.

At the close of the study stereopticon views were shown of Loma-land, where all that was best in old Greek life is being brought back again in the world, added to a something greater and more inspiring which the ancient Greeks themselves did not possess.

ONCE upon a time there was an old woman who lived all alone, down under the hill, by a sharp bend in the road. Her house was little and old and low. She, too, was little and old, and her back was bent, her nose was sharp, and she was poorly clad; more than this, she had a bad temper (so people said) and was ill-disposed towards all human beings. So she lived alone, and seldom indeed did any good thing happen to "Ol' Mis' Polly Larkins."

Polly Larkins' only companions were animals. She had a cow named Crumples, a dog named Patsey, and three cats named Double-paws, Optics and Kinkie. With these she lived alone down under the hill by a sharp bend in the road, where the children passed on their way to school.

Now Polly Larkins dreaded nothing in her lonesome life so much as these school children, and she watched for them morning, noon and night, prepared to endure their pranks, and she met their assaults with all the weapons at her command. Usually she held the fort with a broom, while she urged Patsey to bark. When really frightened, as she had been many a time, she would fly into the house, shut the door and fasten it with chairs, for she had no lock in that little low house down under the hill by a sharp bend in the road.

To the village children "Polly Larkins" was a great source of mystery and wonderment. Tales of how she came to live all by herself in this secluded place, her general dislike for children, her love for nothing on earth but her animals and her rose trees, had been told them at home, time and again, and not a child but had been warned and warned to go straight by and let Polly Larkins alone. But all these tales and warnings but served to fill the older children with eager curiosity and the little ones with awful dread.

Many invasions of this little low house had been planned and attempted, and few indeed were the children in the village who had not known the excitement of sitting under the hedge to wait and watch and see what Polly Larkins would do, when she thought all was safe, the children all gone. Sometimes she would open her door and steal out, perhaps to find that some miscreant had tied the three cats to the clothes-pole, or a piece of brush to Crumples' tail.

Day after day found the children making some distracting attempt to call forth her fury and make her fear and distrust them. Her life was a burden indeed. One day a new child came to the school, and when she heard about the great mystery of poor Polly Larkins she did not join in with them in planning some fresh assault. She became indignant at their tales and she openly took the old woman's part. At last she stood up among them and exclaimed, "How could she love animals and roses and be an old witch? Nonsense!"

"But she is!" contended the children.

"But you shall see that she isn't and I am going to prove it. But I can't do it alone, so who wants to come and help me?"

This new girl was as mysterious as Polly Larkins herself. What could she mean? Well, it was something new, anyway. So the children all shouted, "All right! We'll help! What is it?"

Under the determined leadership of Agnes, their new classmate, all went valiantly to work. "And you mustn't ask questions," said Agnes, "till the work is all done!" And they obeyed her.

Some gathered flowers, a few wrote messages, which the others were not allowed to see. These were tied into the wreath which Agnes had

The Transformation of Polly Larkins

woven with the flowers and that night when Polly Larkins unlatched her door to see if Crumples was safe, she found her cats unharmed and the wreath tied to her latch-string. It was very mysterious! The next night, when she started out to wander

over the hills to find Crumples and bring her home to the milking, there she beheld Crumples nicely tethered at the gate with a bundle of sweet clover near by for her to eat.

Such children! How they did work! Agnes was a born leader, and as they followed her, day by day, little acts of kindness took place. The romping children went by the little low house to school silently, the old rude behavior changed into a kind "Good morning, Mis' Larkins." Quietly they watched for some signs which should tell them that the poor little dame no longer feared lest they should trespass or molest her lonely life.

There were still one or two who were yet incredulous, and could not resist throwing a stone or two out of spite, and they said all the fun they had had was gone, but the majority were ready to help Agnes to her heart's content. So the time went by, until, one morning, the children going down the road, saw Polly Larkins standing at the sharp corner waiting for them, Patsey by her side.

Now this unusual sight threw the incredulous ones into a state of fear, and the mischievous ones were anxious to call out some bad thing, to see what she would do, as had been their wont before the new child came.

A few remained loyal and stood by Agnes and were the first to say "Good morning, Mis' Larkins."

"Good morning, dear," said the little old woman, holding out a big bag of something. "Take this, share it with the other children, and when it is empty bring it back and I will fill it up again for you," and away she flew in a hurry, not waiting long enough to hear the little children's "Thank you."

When they looked in the bag, to their joy and surprise it was full of ginger-cookies. Think of it!

"Now," said Agnes, "now, is she a witch?"

The children were silent, partly because their mouths were filled with cookies and partly because they had nothing to say.

The weeks passed. Day after day the children passed the little old house down by the hill, by a sharp bend in the road, with "Good morning, Mis' Larkins!" and usually with some flowers for the little old lady. And nearly every morning

Polly Larkins met them with a bag of cookies or something else just as good, and a smile. She began to grow younger; her temper seemed to have disappeared entirely. All the hard lines that disappointment had carved upon her poor little face were beginning to disappear.

Then something happened in the homes of these little children, too. The parents stopped telling their weird tales—the children would not listen to them, so what else could they do?—and the children began telling gentle tales, in their turn. They watched Polly Larkins as they would have watched a flower and she grew and grew and grew, younger, sweeter, one might say, even handsomer. As the days passed, something finer and truer than even friendship came to exist between this little old bent woman and these erstwhile abominable children. At last the climax was reached, when one of the children came home one night and announced, "Of course we like Mis' Larkins, she believes in *Brotherhood*!"

"Brotherhood?" said the child's astonished brother.

"Why, yes, that is what did it. Brotherhood did it, you ask Agnes!"

The transformation of Polly Larkins was complete. I. H. B.

THE whole of the story is not written here, but it is suggested. And the attribute of all true art, the highest and the lowest, is this---that it says more than it says, and takes it away from itself. The story is a little door that opens into an infinite hall where you may find what you please. Men, thinking to detract, say: "People read more in this or that work of genius than was ever written in it," not perceiving that they pay the highest compliment. If we pick up the finger and nail of a real man, we can decipher a whole story---could almost reconstruct the creature again, from head to foot. But half the body of a Mumboo-Jumbow idol leaves us utterly in the dark as to what the rest is like. We see what we see, but nothing more. There is nothing so universally intelligible as truth. It has a thousand meanings, and suggests a thousand more. Though a man should carve it into matter with the least possible manipulative skill, it will yet find interpreters. It is the soul that looks out with burning eyes through the most gross fleshly filament. Whosoever should portray truly the life and death of a little flower---its birth, sucking in of nourishment, reproduction of its kind, withering and vanishing---would have shaped a symbol of all existence.

—Olive Schreiner

✻ The Trend of Twentieth Century Science ✻

The Passing of Materialism—Rational Conceptions of Matter

THE old Nineteenth-century illusions with regard to science are passing away; yet still we are continually finding people who claim to be authorities on science overstepping the limits of their sphere, and trying to explain by means of physical science things that, from the very nature of physical science, never can possibly be explained by it. And this in spite of the very obvious and insurmountable dilemmas into which such an attempt must lead them.

For example, there is one such dilemma which, one would think, ought to be enough of itself to settle the question for a logical mind.

This is the principle of "action at a distance." For, on the one hand, modern physics rejects at once the notion that action or force can be transmitted across an absolute vacuum; physics requires for all its explanations a mechanism of some kind, and therefore fills up any inconvenient gaps, between particles or between worlds, with some other substance called æther. But yet, on the other hand, it can be proved scientifically that, not only must action at a distance be possible, but *all* action is action at a distance.

For the only conception which materialistic science can form of the structure of matter is that of a number of particles separated by spaces. (If the particles were in contact, there could be no elasticity or expansibility in the matter.)

The dilemma then is this—that the only possible way in which force can be transmitted (that is, by action at a distance) is impossible. All theories of gravitation, for instance, which may pretend to explain the cause, must be eventually impaled on the horns of this dilemma.

The wise will recognize at the outset that the materialistic formulation of phenomena can never explain the *causes* of things; and, keeping physical science to its proper sphere of invention and manufacture, will seek for causes in the world of mind. The scientific conception of matter and of the universe in general is altogether limited by the conception of *extension in space*, which is produced by the senses of sight and touch, and has no application beyond the limits of those senses. Therefore, if we would know *causes*, we must leave off trying to imagine them as being substances having spatial extension, mass, and so forth.

As H. P. Blavatsky pointed out, the great scientific luminaries have been guiltless of the errors of their followers:

Cuvier warns his readers about the doubtful nature of the so-called Forces, saying that "it is not so sure whether those agents were not *Spiritual Powers* after all." At the outset of his *Principia*, Sir Isaac Newton took the greatest care to impress upon his school that he did not use the word "attraction," with regard to the mutual action of bodies, in a physical sense. To him it was, he said, a purely mathematical conception involving no consideration of real and primary physical causes. . . . He expresses the opinion that "there is some subtle spirit by the force and action of which all movements of matter are determined;" . . . and that "it is inconceivable that inanimate brute matter should, without the mediation of something else which is not material, operate upon and affect other matter, without mutual contact."

In this connection, it is interesting to notice the view taken by Mr. William George Hooper, F. S. S., in a newly-published book, called *Æther and Gravitation*. We can only quote a few sentences:

For all things derive their existence primarily, with all the energies and powers they possess, from God. Look where we will, or at what we will, from the smallest atom or molecule up to the most stupendous world, or myriads of worlds that roll and sparkle in the blue infinity, in each and all we see the indisputable evidence of the existence of a mysterious spirit, or power, that controls and governs them. A spirit or power that we cannot see, but which is so indisputably evidenced that its existence cannot be denied. . . .

Thus, behind and beyond all we see, in every living form, there is the evidence of a hidden spirit, which is the governing and controlling and sustaining power, and without which the organism ceases to be an organism. A spirit which animates the mechanism, and uses its activities and powers as it wills for its own purposes and ends. This spirit or power we call its life, which gives to the form its existence, together with all that it possesses, as its powers, activities, energies and productions, for all are but the effects of the hidden life. If this mysterious something, termed

its life, becomes in any way separated from the mechanism or organism, then as a distinct and separate organism it ceases to be; and though the mechanism may still exist for a time, yet all its powers are gone, while the organism, robbed of its very life, begins slowly to decay. . . .

A spirit which we know is not the mechanism itself, and which by experience and observation we know to be distinct from the organism. . . . Look where we will, from the smallest atom to the great aggregation of atoms, as our earth, or even to the more stupendous orbs of heaven, the working of a secret and mysterious power or spirit meets our gaze. A spirit or power that is not the form or the mechanism, but is separate and distinct from the mechanism, while at the same time it is inseparably connected with each and all.

"Superstitions" of Old Becoming Science of Today

IS it not time that we reviewed our use of the word "superstition"? Little by little, the "superstitions" of a few hundred years ago are passing into science; and science is also verifying the "crude speculations" of a yet more ancient date.

One such speculation was that the universe was made up of one substance, not many: one, variously compounded. This idea lived in Greece, in India, and in Egypt. Now take a sentence from some scientific manual of a quarter century ago:

The ancients, in their ignorance, thought that the universe was essentially of one substance. It is now known, however, that there are at least 70 elements which cannot be changed into one another.

Then came the alchemists, who repeated that speculation about one root substance; and added that because it was a fact, they were sometimes able to change one substance into another. Their methods they professedly kept secret. Whoever is curious about such matters, and knows in what byways of history to wander, will find plenty of creditably attested evidence that some of them did what they said they could do.

Why not grant that some of them may have done it, even if we think it was accidental? A few years ago the answers would have been: (1) Because it would be superstitious; (2) Because there is no root matter; there are only forever-separate elements. Reason number 2 is already out of date. It is now almost known that the elements are evolutions of—and in—one root substance. And the other day, the celebrated chemist, Sir William Ramsay, commenting on the way that radium (an "element") changes into helium (another "element") said:

What is this but an actual case of that transmutation of one element into another in which the ancient alchemists believed when they painfully sought to change lead into gold and incidentally founded the modern science of chemistry?

What now becomes of reason number 1?

The New Gem Kunzite Recently Discovered in Southern California

THE new California gem resulted from a remarkable discovery of lilac-colored *spodumene* recently made at Pala, San Diego County, California. The new gem was named after its discoverer, Dr. George F. Kunz, the well-known mineralogist and gem expert. The crystals are of extraordinary size, transparency and beauty, some weighing 17 troy ounces. The crystals are flat, and the color varies from a very pale tinge to a rich amethystine hue. They have been etched by weathering. They are remarkably free from flaws. The specific gravity of the crystals is 3.183, and the hardness is 7. When cut and mounted parallel to the base the gems are of rare beauty. The new mineral is being analyzed by Dr. Charles Baskerville, University of North Carolina.

By the action of Röntgen rays, Dr. Baskerville excited a crystal of the new mineral sufficiently to make it photograph itself when placed upon a sensitive plate and kept in the dark for ten minutes. In the course of the tests by Dr. Baskerville the Kunzite crystals were subjected to the action of the ultra-violet light, without showing any evidence of fluorescence or phosphorescence, and it was not until it was subjected to the bombardment of X-Rays of very high penetration that it became at all fluorescent. On its removal to a dark chamber, it exhibited a persistent white luminosity never before observed in its class of minerals.

Here and There Throughout the World

SUNSET AT SITKA, ALASKA

The Good Offices of France in Crete THE imbroglio in Macedonia is recalling to very many minds the somewhat similar state of affairs which prevailed in Crete, and the magnificent action of the French Admiral Pottier, who not only himself did a splendid work of pacification, but whose example was so fruitful among the representatives of the other powers. Admiral Pottier sent for the leading spokesmen of both Moslems and Christians, took them into his confidence and persuaded them in turn to speak freely. The various towns of Crete, recognizing his justice, came freely to him soliciting his good offices, and the Austrian, Russian and Italian representatives willingly modelled their own efforts upon his. The pacification of Crete was peculiarly the work of France, and the invocation of similar service to Macedonia would be a service to the human race.

The Great Nile Dam Saved the Country IT is satisfactory to note that the great Nile dam paid for itself the first year after its construction. The year 1902 was one of the three lowest Nile records of recent years, the other two being in 1877 and 1899. The usual wide-spread destitution was completely averted, and the lowering of the gates of the Assiout Barrage turned "what would undoubtedly have been a disastrous year for middle Egypt into one of fair flood." So runs the official report. In lower Egypt also, no loss of crop occurred, and there were no difficulties in the way of water distribution. The prosperity of this ancient country will therefore be henceforth on a firm footing. Who knows what the future may have in store for her?

Treasures of the Japanese Library THE Imperial Library of Japan seems to be worthy of the country. It contains nearly half a million volumes of great diversity of language and interest. The annual report shows that the majority of readers prefer literature and language, history, biography, geography, and travels, while Theology is the least popular subject. There appears to be no fiction in this library except what is contained in the books on history and theology.

Deterioration in the American Army WE regret to see it stated that the American army is not entirely exempt from the physical deterioration which prevails so extensively throughout the European military forces:

In reviewing the work of the United States army in the Department of the Lakes, Major-General John C. Bates says that the character and physical appearance of recruits is not up to the same standard as those of former years.

The Training of Children in Japan AN enterprising scribe has interviewed Baron Hayashi on the subject of the training of Japanese children. Among much that is of interest his excellency remarked:

We have an unwritten system of training children which makes our homes happy. As soon as a child can be reasoned with, he is taught to understand that the love and care his parents give him must be met with love and respect. In fact, the love of grown-ups for children and the respect of children for grown-ups are two ideals of our national life.

We have many fine ideals in America but this is certainly not one of them.

Tortured Animals as a Dainty Food IT is well known that the European production of *pate de foie gras* is attended with circumstances of abominable cruelty in order that the livers of the unhappy geese may be increased by disease to the desired dimensions and consistency. A trade newspaper now announces that these disgusting barbarities are practiced here also in obedience to a fashionable demand. It is not easy to understand why people wish to eat filth of this description, but they should, at any rate, be prevented from feeding their depraved appetites at the expense of so much animal suffering.

New Railway from Santiago to Havana THE railroad which now connects Santiago and Havana, Cuba, was no slight undertaking, but it has now been completed and its advantages are conspicuous. The journey between the two cities can now be made in a few hours, whereas formerly it occupied four or five days. Large tracts of valuable land are now made available for culture, and the natural attractiveness of the island is enormously enhanced. Arrangements are already being made for numerous branch lines and the benefits to the country, commercial and social, are innumerable.

Jains of India Will Wear no Feathers THE Jain community of India have decided to discontinue the use of feathers for headgear, and also of all articles made of tortoise-shell, on account of the cruelty to animals which is involved in these trades. Nominally, the Jains are not Christians. In fact we spend much money in futile effort to persuade them to renounce their own faith. After all, Christianity does not consist of saying "Lord, Lord," however much we may suppose that it does. It consists rather in doing the will of Christ—like the Jains.

To Take the Life of the King of Spain IT would seem that an attempt was recently made against the life of the young King of Spain. The incident has, of course, been hushed up so far as possible, but two of the royal gamekeepers have been arrested and a third gamekeeper has committed suicide. The attempt is said to have been made while the King was hunting, and although the authorities deny all knowledge of the occurrence, its truth is generally believed.

Conspicuous Products of America ONLY one book on geography was used in the Spanish schools at Manila. This was a small volume printed in Barcelona and only two pages are devoted to the United States. This very brief description closes with the assurance that "the most conspicuous products of the United States are millionaires, advertisements and eccentricities."

English Monument to War Horses A MONUMENT has been erected in England to the four hundred thousand horses which died during the South African war. The monument bears the following inscription:

In memory of the mute fidelity of the 400,000 horses killed and wounded at the call of their masters during the South African War, 1899-1902, in a cause of which they knew nothing, this monument is erected.

THE CHILDREN'S HOUR

EVER since his mother could remember Johnnie had been absent-minded. Just how many people had had to suffer through his bad habit no one will ever know. Of course, he was always very sorry after one of these misdeeds, and tried to make up for it in every possible way, but somehow his remorse never seemed to ward off the next mishap. But the worst of all happened one day, when he gave the wrong medicine to his little sick sister, and although it did not result seriously, the sight of his mother's anxious face and the doctor's stern look cut him more deeply than anything had ever done. Poor Johnnie! this time he really suffered, and in despair he ran to the woods and cried long and bitterly.

"O, dear, O, dear!" he sobbed, "what can a boy do to learn to use his eyes and ears and think before he does things?"

"Come with me and I will show you," a little voice answered, and before he knew what was happening he felt himself being drawn up, up, and then he found himself in the strangest place. At first everything was so confused! Johnnie couldn't make out the meaning of anything until the owner of the voice drew him over to a place that seemed a center of activity. "You see," the voice explained, "this is your own little world that you yourself have formed. Each little boy and girl has one. Now you can see the result of all your 'forgettings,' your 'I didn't think' and 'I didn't see.'"

And sure enough there they were, for as his eyes grew more accustomed to his surroundings, he could see more plainly what was happening. He seemed to be in an immense space that was filled with what looked like little worlds of some cloudlike substance. Johnnie looked more closely at the one the voice had said was his, and just then a strange thing was happening. Some silent, busy little creatures who never stopped moving, not even for the smallest part of a second, were building the most beautiful little Temple imaginable. Johnnie didn't know how he could tell it was a Temple, for no one had told him, but the stone it was built of was so white and glistening, he felt sure it must be. Just as he was going to ask permission to enter, one of the pillars suddenly fell, destroying the balcony which it supported. "O, save it, save it!" called out Johnnie, holding out his hands as if to catch it, but of course it was useless. "Why did that happen?" he asked. "It wasn't the fault of those little creatures. They are working in another part."

"Look around again," the voice answered. By this time Johnnie's eyes were accustomed to the cloudlike effect of everything, and he saw other buildings—the loveliest little homes—all at different stages of completion, with flower gardens of every kind around them. "From the moment you were born," the voice went on, "this new little world in space began. All your good resolutions and kind acts have given life to these little creatures, and strength to build, for this is

Johnnie's World

Even when you were a baby your little builders began. First came the flower gardens, and when you grew a little older your greater determination gave them more strength, and they began homes for these little children who are to come; and when you reached the age of seven the Temple began a-building. You can make these little creatures work

the "Land of To Be," and you are building a new and more beautiful world for many future little children.

where you will them to. Sometimes you keep them in the garden for a long time; and then during your better days they can work at the homes.

"But there are so few days when they can build in the Temple! And the worst of all is when you 'forget' or 'don't think,' some of this work becomes undone. See that broken dome? That was almost completed the day you left the gate open and the colt ran away.

"We saw it fall in and then we knew Johnnie had 'forgotten' or 'hadn't thought' again. The blighted rose bush, that spoils the appearance of the garden, happened when you forgot for a week to water your own geraniums. Your little thoughtlessnesses affect only the gardens and buildings, but the larger ones, those that hurt other people very much, affect the Temple. When you

gave that wrong medicine to your sister one of the pillars broke—the one you saw falling. You see there was not enough love in your heart for others or it never would have happened."

Johnnie was very silent and very sad.

"Come," the voice continued, "let us look at other children's worlds." Then they seemed to fly through space, and when they stopped before the next the voice whispered a name in his ear.

"O, yes. I know him," said Johnnie. "He is the kindest and most thoughtful boy in our class. See how many complete buildings and what perfect gardens! He won't keep his children waiting long for a new earth to come to. But look at that broken window, how could that happen in this place?"

"Not the fault of his little builders," the voice answered. "All the little builders of all these worlds belong to a great brotherhood, who have secret ways of communicating, and when those of one world have their work destroyed or undone through a careless and forgetful master, those of another who have a very considerate master, of their own accord take on the extra burden, and so one child's world is set back on account of another and"

Just here Johnnie awakened. The sun was low in the sky and already the woods were growing dark. Johnnie was thoughtful. "Well," he said at last with a new ring in his voice, "if that's only a dream, it's a pretty good one!" And now when he has an unpleasant duty to perform or begins a hard piece of work, he thinks of that broken pillar—and he remembers.

THE LITTLE STREETS

"TOMORROW I'll do it," says Bessie;
"I will by and by," says Dan;
"Not now—pretty soon," says Jennie;
"In a minute," says little Ann.

O, dear little people, remember
That, true as the stars in the sky,
The little streets of Tomorrow,
Pretty Soon, and By and By.

Lead, one and all,
As straight, they say,
As the King's Highway,
To the city of Never and Not at All.—Selected

THE WORLD RUNS ON

by EDMUND VANCE COOKE in *The Independent*

SO many good people find fault with God.
 Tho' admitting He's doing the best He can.
 But still they consider it somewhat odd
 That He doesn't consult them concerning His plan.
 But the sun sinks down, and the sun climbs back,
 And the world runs round and round its track.

Or they say God doesn't precisely steer
 This world in the way they think is best.
 And if He would listen to them He'd veer
 A hair to the son' son'-west by west.
 But the world sails on and it never turns back
 And the mariner makes never a tack.

Or the same folk pray, "O, if Thou please,
 Dear God be a little more circumspect;
 Thou knowest Thy worm who is on his knees
 Would not willingly charge Thee with neglect.
 But oh, if indeed Thou knowest all things,
 Why fittest Thou not Thy worm with wings?"

So many good people, like you and me,
 Are deeply concerned for the sins of others,
 And concede it their duty that God should be
 Apprised of the lack in erring brothers.
 And the myriad sun-stars seed the skies
 And look at us out of their calm, clear eyes.

Meaning of Prayer

AMID very much wearisome and often pernicious controversy on the subject of prayer, we too often overlook the fact that prayer is an essential of human life, and that we can no more avoid praying than we can refrain from breathing. The tendency of all modern thought is to lift religion out of the nebulous and uncertain state into which it has fallen, and to restore it to its place as a science, more positive, more absolute, more precise than any other science which we possess. It will more and more receive the sublime endowment of knowledge, we shall more and more recognize that the passage of the soul, the descent of the Holy Ghost, is not merely a matter for reverential and unspeculative belief, but is subject to the law which governs all divine nature, a law with which we cooperate and thus receive its benediction. At a time when the shortcomings of religious systems are so much in evidence, when we hear so much of the weakening hold which these systems are exercising upon the deeds of men it is indeed strange that so few are able to recognize the central religious need of the day, the need of knowledge instead of speculation, of Law instead of whim and chance. It is an age of intellect, and knowledge is the food of intellect. So far from humanity neglecting religion, humanity is hungering for it, but it must be a religion which is based upon ascertainable law and not upon tradition, not upon the unreal ghosts of the past, nor upon creeds which are nearly always an outrage upon intelligence and sometimes an outrage upon instinctive morality.

And so, if prayer be a part of religion it also must be subject to law. The concepts of the last generation will soon pass away forever. Never again will men pray to a God on the assumption that that God does not already know what is best for the world, or can be diverted from his divine will by human intercession. Never again will men arrogate to themselves the power or the desire to interfere with divinely intelligent government, and never again will the prayer of selfish aggression inspire anything but disgust amongst those whose sentiments possess any value whatever. What then is prayer and how can it be exercised? What is the law of prayer and how can we comply with it?

We detract nothing from the potential sacredness of prayer by saying

that every human wish partakes of the nature of prayer. Every human wish is a draft drawn upon the bank of nature, a draft which will surely be honored if the conditions be complied with, the conditions established not by human law but by the same divine law which regulates the interplay of atoms and the celestial march of universes around a central sun. There is here no uncertainty, no possible doubt as to whether prayer will or will not be "answered." If it comply with law it will be answered, if it does not comply it will not be answered. Why must we draw a boundary line and suppose that upon one side of that line, the side of visible and material nature, a vast and complex system of law holds sway in every part and atom, and that upon the other side of that line, the spiritual and mental side, law gives place to whim and chance? No human undertaking can succeed unless those who engage in it have first mastered the laws which govern it or so much of them as they can. No such undertaking ever fails except from a lack of such knowledge. We know that the whole of the visible universe is so ordered. Why not also the invisible? Why reverse the whole known process of progress? Why substitute doubt and despair for light and certainty? The reason is, of course, obvious and we cannot hide it. The rule of all-embracing law is so evident and alas! so threatening, that we greedily grasp at superstition, which promises escape, which offers to us the prospect of an impunity for wrong doing. Nevertheless there is a magnificent sincerity deep in all hearts, and it is that up-welling sincerity which makes us yearn for justice that the account may be balanced by honest payment and not avoided by spiritual sleight of hand.

To attempt an explanation of the laws which govern prayer would be to undertake a review of human nature and to assume a knowledge which few at present possess. Nevertheless, by observation we may learn much, an observation removed from the sphere of superstition into the light of common-sense. Every human wish is a demand upon the storehouse of nature, and from nature, Divine Nature, we get whatever we ask for. But to ask of nature is not a verbal request. It must be a demand of our whole being, it must be a consistent and an unceasing demand. It must be a demand made by the whole man in his entirety and not by one aspect only, nor upon one occasion only. Saint and sinner alike lead lives of prayer, and both attain their desires according to their intensity, and both alike come under the great law of compensation, of equilibrium. Only he fails who lacks continuity and intensity. Of what avail is it to pray upon Sunday that a clean heart be renewed within us if, upon Monday, our acts constitute another prayer for an unclean heart, a heart soiled by greed and dishonor? Of what avail is it to fill our lives with mutually contradicting prayers, to lead a purposeless life with no one strenuous prayer behind it? The wicked ones pray better than this, for they bend all deeds and thoughts continuously to their evil ends, and they attain to them and to their retribution. Nature never refuses an answer to every prayer which reaches her, and all prayer reaches her which has will and continuity behind it, that is to say, all prayer which is in earnest. It is our infirmity of purpose which recalls prayer before it reaches its destination, and the insincere prayer never even starts.

There is then unquestionably both good prayer and bad prayer. We draw from acquiescent nature either those gifts which feed the higher nature or the lower nature, the soul or the passion. We have free will, we may choose. We may ask for food or we may ask for poison and all these things, being in turn causes, must in turn produce effects. Cause and effect rule supreme, and against them there is no appeal whatever. Nemesis follows upon our heels and we are blessed or cursed by our prayers. Those prayers seize upon every atom of our being, they saturate us with their benedictions or their maledictions. The purpose, the central prayer, of our lives prints itself upon every line of the face, upon gesture and walk, and we proclaim it in the tone of our speech. By it come health and disease, the esteem and the hatred of men, the armies of fate which encompass us with doom and destiny. Our prayers create an atmosphere around us and we see all things through its colors; it makes manifest and it hides.

Milton's Definition of Education

I CALL, therefore, a complete and generous education that which fits a man to perform justly, skilfully and magnanimously, all the offices, both private and public, of peace and war.

THE CLIMB OF LIFE

by EDWIN MARKHAM

THERE'S a feel of all things flowing,
And no power of earth can bind them;
There's a sense of all things growing,
And through all their forms a-glowing
Of the shaping souls behind them.

And the break of beauty heightens
With the swiftening of the motion,
And the soul behind it lightens,
As a gleam of splendor whitens
From a running wave of ocean.

See the still hand of the Shaper,
Moving in the dusk of being:
Buras at first a misty taper,
Like the moon in veil of vapor,
When the rack of night is fleeing.

In the stone a dream is sleeping,
Just a tinge of life, a tremor:
In the tree a soul is creeping---
Last, a rush of angels sweeping
With the skies beyond the dreamer.

So the Lord of Life is flinging
Out a splendor that conceals Him:
And the God is softly singing
And on secret ways is winging
Till the rush of song reveals Him.

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question How can you expect such an all-embracing science and philosophy, as Theosophy is claimed to be, to reach the masses?

Answer (1) For the simple reason that it *is* all-embracing, it is fitted to reach the masses. They are not touched by some little sect, some little half-expression of truth. That which will move them must rest on broad principles, the broader the better, and must deal with life as it is. I suppose no one would claim that nature is narrow, that it is not all-embracing, that it is not scientific or philosophical. And no one would ever fancy that nature does not touch the masses—perhaps even closer than it does the “classes.”

The most profound things are also the simplest. A true philosophy and real science are built up on axioms that any human mind can recognize as true. From this they merge step by step into the most abstruse and complicated problems. But the whole human race have a common ground of understanding in anything that is real and true. They start out together, hand in hand, and those who can, plunge deeper and deeper, according to their evolution. The depth and height to which truth reaches are as unlimited as the breadth—for it fills all space.

The few principles on which Theosophy rests are so natural, that natural people naturally accept them, and the working of them out is nothing more than simple common-sense. One realizes, in trying to live them, how far we have all strayed from a life of Nature; indeed, how artificial and strained human life is today. There is a pretty well-defined and general feeling that this is true; but it is not generally understood that Theosophy opens the door which will make it possible to return to a natural life (*i. e.*, in accordance with man's true nature, which is the Higher nature); that it offers the very thing that so many are now blindly groping after. Misconception born of ignorance, prejudice, and often even of malice, have prevented many from recognizing their own. When once these have been cleared away, it will be unnecessary to explain why Theosophy must reach, not only the masses, but every one. G.V.P.

(2) If Theosophy, as some people not having investigated ignorantly believe, only consisted in metaphysics, mysticism, and that it was also something fantastic and strange—which it is not—this question might well be raised, and be with difficulty answered, for the so-called masses who need guidance and support along practical lines would get no real help from it.

But that part of Theosophy which applies to the daily life of man, is in reality very simple—so simple, indeed, that it may be taught to children. H. P. Blavatsky says: “It does not require metaphysics or education to make a man understand the broad truths of Karma or Reincarnation.”

Let the minds of the younger generation be once instilled with knowledge of the error of the belief that one can escape the consequences of his own acts—that greatest cause of all immorality and crime—teach them the responsibility of the divinity of their own natures, and they will turn from evil as naturally as their fathers imbued with the doctrine of original sin turned towards it.

The masses are crying for help, physical, mental and spiritual; they listen and they read, and thus in these days of widespread information, the difficulty is not so great as might be imagined. The very fact that Theosophy is all-embracing is its strength, and makes for its acceptance, for anything that leaves out any part of nature must fall short of satisfying the soul of man.

Encyclopedia Biblica

THE outcry which has been raised against the new *Encyclopedia Biblica* suggests some curious reflections upon the manner in which the ecclesiastical mind approaches discovery or speculation. That the work in question has raised an outcry of protest must of course be known to every reader of current literature. That a dignitary of the Episcopal church should give his imprimatur to mental and theologic progress was in itself sufficiently serious. That he should do so under the form of an encyclopedia and in so popular a form as to compel attention was an aggravation of his offence and a hardy challenge to reaction. The most notable feature of the protests which have been directed against this erudite and valuable work is the entire absence of any attempt to show that its conclusions are untrue. And yet upon no other ground could a protest be effective. We are told that the publication of such a work, embracing as it does the latest results of the Higher Criticism, is inopportune at a time when religion and disbelief are at death grips. This objection would be very valid if we were but able to descend to the mental position that truth is an enemy of religion and an ally of disbelief, a position which seems to be extensively occupied by ecclesiastical advocates. From yet other quarters we are assured that the *Encyclopedia* is to be severely deprecated because many of its contents have not received the approval of the leaders of religious thought. It seems to occur to very few of those critics that if a work of this kind contains any vulnerable point whatever that vulnerable point must consist in its lack of accuracy, its lack of fidelity and nothing else. That it is inopportune or unauthorized by “authority” can have nothing whatever to do with the question. The intrusion of truth, or of legitimate and argued conjecture is never inopportune, and if reform had to wait for the recognition of authority we should long ago have expunged the word from our dictionaries and the pursuit of progress from our minds. It is a very old story. The writings of Robertson Smith in the *Encyclopedia Britannica* were assailed twenty years ago in precisely the same manner as the *Encyclopedia Biblica* is assailed now. It was “monstrous” to assert, to believe, or to publish anything whatever which militated against the received dogmas of the Free Church of Scotland to which Robertson Smith belonged. The learned writer was therefore expelled from that church by a persecuting majority which ascribed to their own man-made dogmas a divine inspiration which they denied to demonstrated truth. Robertson Smith's heresies have now become the commonplaces of theology in the same way as all religious beliefs mount into public acceptance upon the bodies of the martyred. It is now the turn of the *Encyclopedia Biblica* and of its learned editor who, if he feel any doubt at all upon the righteousness of his position, may take heart of grace by observing the hostility of those who very rightly regard movement of any kind whatever as a menace to their position and to their spiritual pride.

STUDENT

Charles Lamb on Reincarnation

SPEAKING of the terrors he, when a child, endured in the dark, Charles Lamb says: “That the kind of fear here treated of is purely spiritual—that it is strong in proportion as it is objectless upon earth—that it predominates in the period of sinless infancy—are difficulties, the solution of which might afford some probable insight into our antemundane condition and a peep, at least, into the shadowland of preexistence.”

Ruskin Up to Date

RUSKIN was a master of vigorous speech, and it is rare indeed that we fail to find in his writings something peculiarly apposite to the problems of the moment. He speaks of materialistic scientists as "Apostles of the Gospel of Dirt, in perpetual foul dream of what man was, instead of reverence of what he is." Their creed he declares to be: "I believe in Father Muck, the Almighty Plastic, and in Father Dollar, the Almighty Drastic." He says that the foremost exponents of materialism "are of opinion that there is no God: they have never found one in a bottle. And truly if, since we cannot find this King of Kings in the most carefully digested residuum, we are sure that we cannot find Him anywhere."

Ruskin has his reply to those who mourn over the supposed decay of religion. This is due, he says, to "the unfortunate persistence of the clerks in teaching children what they can not understand, and employing young consecrated persons to assert in pulpits what they do not know."

Ruskin himself came very near to being a clergyman. He seems, however, in early life to have associated the claims of religion with cold mutton for the Sunday dinner, and as he much preferred it hot, the current of maternal intention was checked.

Oriental Ideals

OUR knowledge of Oriental, and especially of Persian, life and ideals is increased by the scholarly translation of the *Story of Valeh and Hadijah*, which has just been given to the world by Mirza Mahomed and C. Spring Rice. The story itself is a most beautiful one, with a fine and pure philosophy underlying it. To epitomize would be to spoil, but we cannot refrain from quoting one short paragraph from the pen of Mirza Mahomed, in which he speaks of the nature of true love. He says:

The world is Allah's school, and Allah has many schoolmasters, and the name of one is Love. . . . If you can show me one who loves and continues to love, without hope of reward, or the joy of meeting, one, in fine, who does his work and asks no wages, and learns his lesson and demands no reward, then indeed you have found a true scholar of Love.

Western civilization and culture have not yet evolved a comprehension of love in its finest sense. Even to the best meaning amongst us, it is too often tainted with the commercial idea, the giving of something in order that something may be received, an account in which credit and debit sides must be balanced.

STUDENT

For a Naval Training Station

Extract from the *Los Angeles Examiner*

SAN DIEGO, January 24th

THERE is much enthusiasm here over the reported intention to establish a naval training station at San Diego Harbor, and from assurances which have been received in the past from Secretary Moody and other officials, there is little doubt of the accuracy of the information. The location would be on the government reservation at Point Loma, where the Navy Department has over 400 acres of land with 2800 feet water frontage on the bay.

Secretary H. P. Wood of the Chamber of Commerce says that "While the Chamber has been working for this in a quiet way, it is more directly the recognition by the Navy Department of the advantages here afforded of perfect climatic conditions and a big stretch of water, upon which craft of any size may safely venture any day in the year. It is a benefit to the city particularly, as it accentuates our value in the eyes of the Navy Department. The Chamber will, of course, immediately commence active work to forward the movement, but the merits of the location, I think, are sufficient to win out."

Mayor Frank P. Frary says: "It is a good proposition for the city. It not only means the circulation of considerably more money here, but it keeps San Diego before the public. Government recognition always counts."

President Homer H. Peters, Chamber of Commerce: "Such recognition by the government would alone make the location of the station here a great advantage to the city. Considering the fact that the government is already largely interested here, and a coaling station for the harbor is in line, anything of this kind is certainly an added benefit."

William E. Smythe: "San Diego is probably the most ideal spot for a naval station in the world. It has been the city's ambition to secure such a station, and when a delegation of citizens met Secretary Moody in Los Angeles a year ago it was strongly urged, while he seemed favorably impressed. It will benefit the city in bringing hundreds of desirable people here, but it will be of greater benefit to the nation at large because of its strategic location."

Ex-mayor D. C. Reed: "It is a good thing for the city and certainly a proper thing to be done in view of our strategic position as the nearest port to Panama and to the Orient, while the largest vessels can enter our landlocked harbor at any time. With the completion of a direct Eastern railroad, men can be transported across the continent in twenty-four hours less than by any other route, certainly a great advantage in case of war or other emergency."

PRESIDENT ROOSEVELT deserves the thanks of all states which value their timber when he said that the big tree district of Calaveras is "not only a California, but a national inheritance, and all that can be done by the government to insure its preservation should be done."

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

The Vivisection Reports

It is not generally known in England that the official vivisection reports, which so soothe the public conscience, are drawn up by the vivisectors themselves! The Hon. Stephen Coleridge points out that "under the present law a vivisector may operate on a dog in the privacy of his laboratory without any inspector being present, and that if he makes to the Home Office a report of what he has done, that report is drawn up by himself. The subsequent incorporation of that report in a blue book cannot possibly afford any protection to the dog from the extremest suffering, and perhaps in these circumstances those who own dogs that they are fond of will take the advice of the National Anti-Vivisection Society and not lose them." There is a system of official inspection, but the inspectors and the inspected change rôles and have the same interests! It is a beautiful system and every one is content.

The Greatest of National Heroes

GEORGE WASHINGTON is today the greatest of our national heroes, and is likely to remain so. To him belongs the glory of creating a type of American citizenship, an ideal of public and private virtue which may be momentarily out of sight, but which will again be brought forward as the cycle of necessity becomes more insistent.

We should, perhaps, find it a little difficult to reconcile our admiration for the character of Washington with our departure from the principles of which his life was a recommendation. And yet the inconsistency is not so great as it may seem. Deep within the heart of the nation there is a manifold hope for a better and a purer public life. We feel ourselves overweighted by a malign drift of events and circumstances as though

the powers of evil were too many for us and too strong for anything but acquiescence. We do not believe in our own strength, and we are submissive where we should be defiant.

How wholesome it would be for us if we could but celebrate this anniversary in a new way, no more as an honored routine but with some searching of the national heart. We should then revive the memory of this and of all great men, as now we go away for a change of air. We should restore our standards of national and individual life as we set our watches by the sun. We should return refreshed and invigorated, and for long afterwards there would be in our minds a gauge of duty and of honor intrusively setting itself by the side of daily act and thought and forcing us into a contempt for the sordid

and the base. An autograph letter from Washington of which the existence seems to have been previously unknown, has lately come into the possession of one of our universities. It was written in response to a suggestion that he should again become President of the United States. He was at that time living at Mount Vernon, performing the simple duties of a country gentleman, with the same faultless accuracy and completeness which had made him world-renowned upon a greater field. He replied that it was his chief desire to live and to die in peace and retirement, and that he knew well that accusations of ambition and inconsistency surely lay waiting for their opportunity. He none the less hoped that he would always possess sufficient firmness and virtue to maintain the most enviable of all titles, the reputation of an honest man, and so to pursue whatever line of conduct should seem to be the dictate of duty. These are not now the sentiments which we demand from our public men, however they may sometimes be entertained by them. The character of Washington which forbade him to receive salary or reward for his services, has ceased now to be a national ideal. Today such a character would be an eccentricity, but it was such a character which once wound the mainspring of our national life, and it will go hardly with us if such characters are not again forthcoming when the time is ripe.

The elements which constituted the success of Washington are not obscure nor hard to find. There was here no blaze of intellectual genius, no dropping of a star from the sky. A great American writer has said that it is the supreme duty of a nation to breed great men, and Washington was the child of the nation to which he belonged, and he became the apex of a national pyramid of which the base was loyal labor and fidelity. He did everything well, and the perfection of his work was the same whether that work was great or small. Washington did not spend his whole life in the arena, but his private work was as admirable as his public work, and as thorough. He was the expression of the national virtue, of the national determination, of the national endurance. It was these things that made Washington possible. It was Washington who made the American nation possible. He possessed courage, without exception the rarest of human virtues, and always the expression and the proof of wisdom. We fear what we do not understand, whether it be the strength of a foreign foe or the nature of our associates. Washington understood every problem, great or small, with which he was confronted, and he played all the games with the confident assurance of skill. Franklin says that men are usually dastardly when met by opposition. Here is a man who was not dastardly and who succeeded because he had courage, because his nature had in it none of the corruption which makes us fearful of the result. He asked for no other reward than the performance of his duty. The whole of nature contained no other possible reward for him, nor will it ever offer anything else to any true man. No human combination, no force upon earth could make his duty impossible to him and therefore fear became equally impossible. Nothing that he worthily valued could be taken from him; he could lose nothing worth keeping except by a moral surrender which was unthinkable to him.

Washington Had True Courage

If it be the supreme duty of a nation to breed great men, has the supply of these failed for lack of duty done? Are there more men like this waiting for the bugle note that shall call them to great achievement? It might be well to ask ourselves such questions as these and so give to our celebration a meaning and a determination which it lacks. STUDENT

American Diplomacy

TO America belongs the credit of inaugurating a new order of international diplomacy. In the old order, the variety to which the world has hitherto been accustomed, there is certainly room for improvement. Among the older nations there are, of course, honorable exceptions. It is, however, none the less true that mutual international relations are habitually based upon a code of conduct which would be considered disgraceful in an individual. The protection of what is supposed to be a national interest is sufficient excuse for unblushing falsehood, and for a duplicity which, in its skill, is almost miraculous, and which is now so fully recognized as to defeat its own objects. Diplomacy is, of course, a more pleasant word than chicanery, but the meaning is not dissimilar, and the individual who introduced the methods of international diplomacy into social life would be speedily ostracized.

American diplomats have not been sufficiently long in the school of nations to be contaminated by it, and we hope that the practise of honorable action has become a habit. An ideal Righteousness exalteth a nation, and truth is a safeguard even to material interests. The reputation for direct and truthful and courteous speech is a national asset, and the certainty that pledges will be redeemed and that promises will be kept, comes back to us as wealth. According to D. M. Wilson, the standard of American diplomacy was set by John Adams. He remarks:

Indeed, may it not be said that the Adamses, in the three notable periods in which they so illustriously served the nation at the highest European courts, laid the foundation of what is now recognized in its directness as distinctly American diplomacy? Talleyrand, in his dealings with John Adams, sought to veil his mendacity, after his kind, in diplomatic phrases, insisting "on the form of civility and decorum, from which in their relations with each other governments should never depart." For such form and evasions bluff John Adams had an utter abhorrence, and when he saw in Talleyrand not only falsehood and bribery, but an enemy of the United States, he struck him a blow so direct and vital that he carried the pain of it to his dying day. Bismarck has a name for candor. He could be frank, brutally frank, when it served his turn; but the Adamses were daringly and unswervingly veracious. When they spoke they spoke as honest men, sound to the core. They could be silent, but never sinuous. Their directness was like a law of nature. And this candor of the Puritan, so congruous with the new, simple life of this nation of the common people, has become organic.

At a time like this, when America is raising her voice in the councils of the world, it is to be sincerely hoped and believed that her statesmen will not depart from the habit of manful and honorable speech. X.

Contamination of Literature

IS it the force of "conviction" or the force of sensationalism which has induced a prominent minister at the Chicago Baptist Association to denounce the reading of Homer and Virgil? "All these Pagan classics," he tells us, "notwithstanding their popularity, leave their stain upon the purity of our literature. They should be succeeded in our colleges and schools by the more wholesome and elevating literature of the Bible." It is of course intensely saddening to learn that the immaculate literature of the Twentieth century, with its yellow press, its dime novel and its problem play, is being stained and discolored by Homer and Virgil. But how about the devastating influence of Plato and the incendiary writings of Epictetus and Marcus Aurelius? Shall these escape the censorship of the Baptist Association? The matter is of course too entirely ludicrous to discuss, but we cannot refrain from congratulating the minister in question upon having created a ripple of hilarity in a world which is forgetting the use of wholesome laughter.

STUDENT

Frontispiece---Ross Castle, Ireland

THE illustration on the cover page of the NEW CENTURY PATH this week represents Ross Castle, in the South of Ireland, which was founded by the O'Donoghues in the Fourteenth century, and for long was their stronghold. It consists of a tower surrounded with outworks, with small circular buildings at the corners. In 1652 it was defended by Lord Muskerry against the Commonwealth soldiers under Ludlow, and would probably have made a successful resistance had not the assailants availed themselves of a popular superstition, that the Castle would fall when attacked from the Lake. Ludlow procured a number of boats which he filled with armed men, producing so great a panic among the defenders that they surrendered their post.

Incident of Colombian Warfare

ALTHOUGH the Colombians are extremely brave, their generals care nothing for the lives of their men, says T. S. Alexander in *The World's Work*. At the battle of Palo Negro, when General Uribe Uribe, the Liberal leader, was beaten back in his efforts to reach Bogota, over seven thousand men were left dead upon the field and many terrible atrocities were enacted. One of the worst was related to me by a Government officer, General Trina, after he returned from the fight:

It was a glorious victory and a horrible affair, and we whipped the Liberals properly. But one thing happened which has disgusted me with the whole war. I never want to see any fighting again.

There was a strong force of Liberals ambushed in thick brushwood on the side of a hill. One of our generals was ordered to clear them out, but he could not locate their exact position, and he knew that to advance blindly upon them would mean the loss of a great many of his men.

What do you think he did? Among his troops there were about forty little boys from ten to fourteen years old. He picked them out and told them to march across the exposed ground toward the enemy. They had never faced death before, and were proud to march ahead of the rest. Before they had gone far thousands of riflemen opened fire on them, and every one of the forty was killed. Then, the enemy having unmasked their position, our general easily drove them away. A pit was dug after the battle, and the corpses of the forty boys all thrown into it together.

Parsifal and the Church

WHAT are we to do? May we go to see *Parsifal* or may we not? The rival churchmen have plunged the whole nation into a state of agonizing suspense from which we trust to be extricated by a speedy *modus vivendi*. The Rev. Dr. N. D. Hillis, of Brooklyn, has seen *Parsifal* many times and he says that its light "is a light that streams down out of 'the sky, and the sweetness that it breathes is the sweetness that is distilled out of purity, holiness and immortality.'" He says that *Parsifal* is to redeem, cleanse and save the soul." On the other hand, Dr. Parkhurst has not seen *Parsifal*, but he has read the libretto and he calls it "stupid sacrilege," and "stuff and nonsense." Great as may be our desire to submit ourselves reverently to the ecclesiastical will we must confess to some bewilderment at this unseemly conflict on the part of the authorities. Is *Parsifal* to be blessed or is it to be banned? If the American promoters of *Parsifal* were capable of vindictive feeling, which of course they are not, they could show it in no more effective way than by printing Dr. Parkhurst's condemnation upon every libretto they issue. The public could then form their own opinion of the value of a judgment which described *Parsifal* as "stupid sacrilege" and as "stuff and nonsense."

STUDENT

Doubtful Economy

THE practice of economy, which should be one of the preservative forces of the nation, is too often invoked for purposes of crass reaction. Of this the New York Board of Education furnishes an almost incredible illustration. On the ground of economy it has been decided to reduce the number of evening schools by one-quarter, and to entirely abolish the recreation centres, playgrounds and vacation schools. We have long since learned that there is absolutely no limit to human stupidity; otherwise, the very fatuousness of such a report would be its own disproof. Is there no other way in which money can be saved than at the expense of the children, no other way than by the removal of this one bulwark against disease and crime? Are we to believe that New York is actually in such a poverty-stricken condition that it must retrench in so fatal a way? Surely, the slums of New York are already extensive enough, sickness and crime already abundant enough, without the forced cultivation implied by such "economy" as this. Has New York itself nothing to say in the matter, nothing to say in defence of its sanity, or is the Board of Education really representative of its intelligence?

STUDENT

IT is not generally known that Mr. Combes, the French Premier, is a member of the medical profession. The night-bell may still be seen beside the door of the little house at Pons, where the Premier practiced medicine for many years and where he still spends his holidays. The whole world is a debtor to Mr. Combes, and not France alone. His leadership is cordially recognized everywhere.

Some Views on XXth Century Problems

Revised Charts on the Life Voyage

A RECENT number of *Unity* contains an article entitled, "Ought Ministers to Tell the Whole Truth?" The article itself is an able one, but the title is infelicitous, suggesting, as it does, that the churches have some private hoard of information from which they can give or withhold as it may please them. That is not the case. The added knowledge of Biblical history which is now available was not obtained by the churches, nor is it in their keeping. It was won, of course with some honorable exceptions, against their determined resistance; its promulgation was disputed, and is still disputed, step by step, and its universal diffusion will be unaffected by their attitude. The writer summarizes the position as follows:

Our creeds are just charts of the infinite sea of life over which mankind is voyaging. Like all early charts, made in times of comparative ignorance and unrestrained imagination, the older creeds are full of false soundings and imperfect marking of the channels. The proposal is seriously made, however, to call these early charts final, and to suppress any effort to revise or correct them by utilizing later discoveries. In practical navigation, "the captain who should prefer a chart of Drake or Frobisher to one of the last decade would not be extolled for his caution, but dismissed for his folly." Why not use the latest and most complete charts in religion? Is not the voyage perilous enough at best, with all the helps that we can have? Why deliberately add to the dangers?

That a proposal should be "seriously made . . . to suppress any effort to revise or correct" the present creeds, is only evidence of the fatal power of the human mind to magnify its own importance, and the sight of any organization of men deliberately opposing the spread of discovered and unassailable truth is melancholy and depressing.

A man's bread and butter depends upon his telling something else, and, moreover, the support of his family; or he is not altogether sure he has the truth—the creeds may be right and his private thinking wrong; or it would shake the people's faith to have their chosen leader confess that his own was uncertain, and with shaken faith would follow lax morals and no end of harm; or yet again, to tell the plain truth would be to forfeit one's position of influence, where he is undoubtedly doing good, for an obscure pulpit where his word would reach only a tenth as many now, if it did not drive him outside the church into some secular employment.

Well may the writer say that this is the sort of sophistry to which men are being driven by the insistence upon the old creeds. Well may he also say that "it is a sort of sacred sleight-of-hand that would be damnable if it were not so pitiable." Sleight-of-hand it certainly is, but we fail to see its "sacred" aspect. How many ministers are there who are so skeptical of their own creed that they allow a bread-and-butter anxiety to outweigh the essential and sacred obligations of their calling? We fear there are some, but we hope they are not numerous. Nor has such apprehension any foundation whatever. In its secret heart the world loves courage and manhood; applauds and rewards it. The vast bulk of the people abstain from church-going because there is so little independent bravery of thought. The religious hope of the future is not with the people who now go to church, but with the people who do not now go; and if these are to be attracted it will be by fearlessness and not by cowardice, by the declaration of truth and not by its suppression.

STUDENT

Cruelty as a Part of All Vivisection

DR. STEPHEN SMITH, M. R. C. S., was one of the speakers at the International Anti-vivisection Congress recently held at Frankfort. He made some strong statements in reference to the oft-repeated claim that vivisectioners are innocent of cruelty:

As you know, the existence of this torture is denied. We are told that vivisectioners are educated men, refined men; that some are married, some are fathers of families, some are good Christians, etc. One English vivisectioner has stated that neither in England nor elsewhere has he ever seen a cruel experiment. My only answer to the windy nonsense that vivisectioners wouldn't be guilty of torture is that I have never been in a laboratory in England, France, Belgium or Germany without seeing torture. *I have seen the struggles and heard the shrieks of the victims.* I assert that denial of cruelty is brazen and contemptible falsehood.

To Teach Citizenship in Schools

THE Central Teachers' Council meeting recently at Chicago has passed a resolution calling for the teaching of civics and the duties of citizenship in all schools. This is of course admirable, and even if there should be a considerable difference of opinion as to what constitutes good citizenship very much would be done if we could but bring home to some minds the fact that citizenship does imply duties and not merely selfish opportunities. The duties of a citizen toward his city are largely overlooked by the average man who has been taught to believe that a social system is merely a convenient machine for self-aggrandizement.

The recent outbreak of crime which Chicago has had so much cause to deplore is a reminder of unfulfilled duties and a proof that man is after all his brother's keeper by divine appointment, however much he may neglect his charge. To allow any member of a community to drift outside the pale of our fraternal responsibility brings sharp penalties in its train and the reform which has any other basis than self-reproach can be neither effective nor permanent.

STUDENT

Slave Children in Christian America

THE Principal of the United States public schools at Ounalaska states that the slavery of children is a common occurrence in Alaska. He enumerates several instances, and he says that these children looked helpless, sad and hungry. We can well believe it. The factory children elsewhere have sometimes very much the same appearance. We do not, however, call them slaves, and the name makes all the difference. If a child is forced by economic conditions into body and soul-destroying labor, we speak of the progressive and competitive system of a free country. We coin its little life into gold and read the Christian burial service over the little murdered body. But when children are avowedly enslaved by material force, it is a different story and our indignation is aroused. When the faces of these "helpless, sad and hungry" children brood like a curse upon our civilization, there will be no opportunity for these subtle and complacent distinctions.

X.

The Increase of Suicide in America

THE Life Underwriters' Association of Chicago has been furnished with statistics which show the phenomenal increase of suicide throughout America during the last ten years. In fifty representative cities it was found that the rate per 100,000 of population has increased from 12 in 1891 to 17 in 1902. St. Louis ranks highest and Chicago comes third on the list. The statistician who prepared these figures argued that life insurance is a direct incentive to suicide, and it is indeed a pitiable fact that very large numbers of persons take their own lives in order that their relatives may benefit by their death.

What might not such self-sacrifice accomplish if it were but rightly directed, if we but knew enough of the laws of life and of death to make such pathetic offences an impossibility!

None the less, it would be well for insurance companies to reflect upon the advisability of thus putting a premium upon suicide.

U.

The Police and School Expenditures

AMERICAN school statistics speak well for the importance which is attached to education in our national life. The annual amount thus expended is about \$227,000,000, as compared with a European expenditure of about \$246,000,000. It must, however, be remembered that the enrollment in European schools is about three times that of the United States, which places the per capita expenditure of the latter country in a very favorable light. It would be interesting to get a complete comparative statement of the amounts expended on education and on police by our great cities. St. Louis, for example, spends more for its police than it does for its education, but this is probably very exceptional and due to special causes.

Art Music Literature and the Drama

Von Vecsey—The "Wonder Child"

ALL Berlin has been bewitched by the playing of little Franz von Vecsey, the young Hungarian violinist. They tell us that he is small of his age—in fact not much bigger than his violin—but that in three years' study he has mastered seventy of the most difficult compositions known to musicians. Joachim, the greatest classical violinist of modern times, was with difficulty induced to hear the boy play. He selected for him one of his own test compositions, expecting naturally that the boy would fail. But the child astonished him. He was not half through when Joachim rushed forward impetuously, seized him in his arms, kissed him and declared that Paganini, having learned new secrets in Heaven, had come back to earth to tell them!

They say that little Franz is just like other boys of his age, with the exception of this wonderful gift, and that there is no sign, so far, that he will meet the fate so glibly prophesied in the case of every "wonder child." One wonders how much basis these prophecies ever had, or why people are so persistent in their belief that the children of genius are forever destined to have unhealthy experiences and short lives.

The evidence is rather the other way, contrary to the tradition that when a child shows genius at a very early age he is not apt to amount to much in maturity. Of course the parents can ruin such a child with unwise management, just as they could ruin a stupid child still more easily, and we know of many cases of children who, in maturity, did not live up to the promise of their childhood.

But if we could look at the poor apology for discipline that has been inflicted upon most of them, and the slender chance they have had for acquiring anything like moral stamina, we would find reason there, rather than in the mere fact that they were precocious as children. Quite outside of music we find "wonder children," none of whom lived stupidly or died young. Among them, John Stuart Mill, Grotius, Melancthon and Torquato Tasso. Bavatier wrote Hebrew when he was eight. And in the musical world look at the record made by our "wonder children": Mozart, Wieniawski, Rubinstein, Liszt, Hoffman, Otto Hegner, Jean Gerardy; and the great Joachim himself, one of the sanest and most balanced men that the world of music has ever known, was a "wonder child."

A delightful story comes to us from Berlin which, if true, shows that little Von Vecsey was fortunate in his selection of parents. He was recently invited to play privately before a banker, who was devoted to music, but was at the time too ill to attend the concert. With the request, which was made to the parents of little Franz, came the offer of an *honorarium* of 2000 marks. The parents replied that it would be a pleasure to themselves as well as to their son to give an hour's happiness to an invalid, and that to accept a fee for this would be out of the question. Little Von Vecsey played, and one wonders how much richer and purer his destiny will be just because, when he stood before this open door, his parents didn't close it again and bar his path-way by the stumbling-block of a sordid ideal.

STUDENT

"The Hour of Despair," by a Point Loma Artist

LET us make the poor hearts of our fellows throughout the world, those in doubt, those in the shadows, those in the darkness of their lower natures, the immured criminals, the human outcasts, feel the great purpose of our lives, our trust in the higher law, our belief in the divinity of man, our knowledge that there are great compassionate souls working to give them in the deeper sense the right hand of fellowship. Can there be a greater joy than that of making all humanity feel the grandeur of that life of which we have glimpses?—KATHERINE TINGLEY

The subject of Machell's painting is the same old problem, the problem of "Hard Times," less terrible and insistent in America than in Europe, yet facing humanity everywhere. It pictures the conditions which make possible, nay, inevitable, the slum environment and the tenement home, sad commentary on an age which boasts of its advancement, which deigns to speak patronizingly of the past and presumes to dictate terms to the future. It is this problem, fashioned for us by the unbrotherliness of the age, that turns many a good man into a skeptic. "Would a just God allow these things?" is the question that wells up from the heart and forces its way to utterance by the many who fail to find an answer in dogmas or in creeds.

Yet to those who have a knowledge of a true philosophy of life, no problem is without its solution, as there is none without its cause. And as the mad selfishness of the age is the cause of bitter heartache among the submerged many as soon as they are "out of work," so there is a possible solution. But it can only come when men are willing to forget their prejudices and find their hearts; it can only come when the majority, not the very, very few, are willing to make brotherhood a living power in their lives.

And there exist those who yearn to lead men into the peace that this solution would bring, great souls who stand in the sunlight and long to help their brothers who dwell in the shadows. We know that such exist, for age after age have they come to humanity as Teachers, Saviors. It is this supreme waiting comradeship that Machell has so exquisitely and mystically suggested in his painting. The carved frame, the angel whose outstretched arms push back the gathering clouds, even the very lines of the composition itself, all point upward to the light which shines overhead and which forbids that our

world-picture, spite of man's selfishness and sin, should be wholly limned in shadow.

SCHUBERT'S SONGS.—Beautiful as are his symphonies, and great as was the treasure he bequeathed to the world in his instrumental works, his most important contribution to music is to be found in his songs, of which he wrote some six hundred.—Fillmore

THE Trilogy of Eschylus (the *Agamemnon*, the *Choephoris* and the *Eumenides*) has been recently presented in Athens, Greece, in the Royal Theatre. The dramas were rendered not in the original of Eschylus, but in modern Greek.

"THE HOUR OF DESPAIR"
by R. W. MACHELL of Point Loma

THE POET

(Les Contemplations)

From the French of Victor Hugo, translated by a Raja Yoga Student

YOU ask, "And whither goest?" I know not,
Yet still go on. If but the path be straight
I cannot walk amiss; before me lies
Twilight and daylight—night behind—and that
Suffices me. I snap my bonds—I see—
And nothing more; believe, yea, nothing less.
My future doth concern me not at all.

WE MUST BUILD UP A ROYAL FELLOWSHIP WITH OUR BROTHERS, AND LIKE JESUS,
RENDER NOBLE SERVICE TO HUMANITY

KATHERINE TINGLEY

THESE are those who, like Shaftesbury of England, cannot sit quiet while half the world is crushed, as if beneath a great wheel; who, like this man ("with all the churches against me," as he once said), cannot die with a clear conscience, leaving wrongs unrighted. Yet, looking out over the world, even the wisest must question, "Where shall I begin?" From the horrors of child-labor the misery of our slums, from the debauchery of our great cities to the suffering of the women who work in factories from one end of the world to the other—look where one will, the picture is a disheartening one. And that which makes it so is the apathy, the selfishness, of those whose own lives are full of ease.

To do the duty that lies nearest at hand, faithfully, patiently, trusting to the Great Law to bring the opportunity for broader work, that is all that any one can do. With the great opportunity, if one's heart is true and one's motive pure, will come the wisdom that shall guide one into its right use.

So little are we conscious of that common sisterhood of which all women are a part, that those who go out in real compassion to the women who suffer are comparatively few. There are thousands of women practically submerged by terrible conditions; yet those who have wealth and home and pure affection in their lives realize it not.

Probably no more pathetic page could be written than one relating to the condition of factory women. From the factories of New England to the cotton mills of the South, hundreds of thousands of women are impressed into the service of what we are pleased to call our industrial "necessities." The meagre pay, so meagre in many instances that none but those who live on the very edge of poverty would think of accepting it; the long hours, unsanitary conditions; the desolation of the life itself; the poorly-kept homes, which are the inevitable corollary to the whole wretched problem—what chance for reform? But where shall one begin?

There is one ideal which every true woman holds somewhere in her heart, even though she may never give it expression, even though she may never fully realize that it is there. It may be a dim memory, it may exist but as a yearning and a prophecy. But *it exists*, and it is this: a picture of conditions that shall make possible sweet, pure, wholesomely unfolding girlhood; strong, self-reliant, devoted wifehood; wise, pure and tender motherhood; and an old age that cherishes no memories save those of devotion to duty and to humanity. Could this be realized in the lives of but a small proportion of women, soon, indeed, would the world's life change. Could it be realized by all, earth would become a Paradise, and Heaven would be here and now.

What are the conditions? On the one hand, we see young women reared to believe that selfish ease and personal advancement are their appropriate ideals; on the other, a mass of women, old and young, whose lives are absolutely crushed by their environment, who have no high ideals, who are constantly tempted to still the hunger of the heart by the dissipations of the body, whose nervous systems are worn out with clatter and toil—and why? Because "business is business" and "trade is trade!"

Books have been written, time and again, about these conditions, and more than one writer has become famous through well-written stories that glimpse the pathos and the struggle of the factory-girl's life. To what avail? The conditions still exist. To better them a new force is needed, a new power, a compassion that expends itself,

The Women of Our Factories

Hath God said so?
But Trade saith No!
And the kilns and the curt-tongued mills say Go,
There's plenty that can if you can't: we know.
Move out, if you think you're underpaid.
The poor are prolific; we're not afraid;
Trade is trade.

and birth-rates and wages and hours, and, to close his argument, laments the increasing sterility among factory women, as if it were the chief calamity of the entire system.

To those who love little children, and to those who love humanity, the sterility of factory women appears to be the opposite of a calamity. Better that children be not born at all than born into the conditions and environment that surround the average factory worker—better for the children, better for the overworked women, better, a thousand times better, for humanity.

No, the one who shall better these conditions and lift from these women's hearts this appalling weight, must reach their lives in a different way. No one can do it who is not truly compassionate. The birth-rate is not half so important as the fact that the churches, which, as one writer states, "play an important part in the social life of the mill-hands, give religious *but not moral* instruction!" with the natural result that these young women have no ideals higher than tawdry ornament and a "good time" with all the logical results.

The death-rate may be important, but the general bad health among the living is infinitely more so, as the root is more important than the branch. What can we hope for women who are flat-chested, stunted, cramped of body and mind, starved of soul, nervously wrecked, many of them, between hard work and tea?

Yet those who have lived among them say that there exists a remarkable sweetness of disposition, sympathy and tenderness, and among many a great longing for some of the things that feed the soul—books, flowers, music, a better home life.

The home life is the most pathetic chapter in all this dismal record. Yet what can one expect? How much heart or strength is left for the home life of a woman who stands before a machine ten or twelve hours a day for six days in every week? And yet those who paint us vivid pictures of the cheerless, desolate, poverty-stricken, at times filthy, home life of the factory workers, groan because factory women have so few children! Where is their logic, where is their compassion?

We need a better race, rather than a more prolific one. We need more of sympathy between those whom fortune favors and those whom it does not; we need to make brotherhood a power in our lives, a power so living, so full of that Divine Urge which the Christs among men know that we cannot rest until these conditions are changed; and they will never be changed by statisticians, nor by those who love money better than they love the human heart.

The toilers and the sore beset must wait for those whose motives are pure, whose lives are selfless, whose hearts yearn to give. Yet they do not wait in vain. Such as these shall come—even now are they going out among the stricken of earth's people, relieving, aiding, cheering, and planting in men's hearts a new ideal. Well do the Students of Katherine Tingley know that, until a few are lifted above earth's levels, until a few—just a few—feel the sorrows of others more than they feel their own—until a few souls rise up in warrior-strength for humanity's sake—the reforms of the world must wait.

STUDENT

Then "Trade is trade," but sings a lie:
'Tis only war grown miserly.
If business is battle, name it so:
War-crimes less will shame it so
And widows less will blame it so.

Is Woman's Education Unnecessarily Expensive?

A RECENT article on the "Expense of Feminine Education," certainly furnishes food for reflection. It seems that this expense is growing, and that Vassar College, which started with \$800,000, has since spent about \$1,000,000 on buildings and grounds, and added \$600,000 to general endowments, and is now trying to raise another million. Of course, what is true of one institution, is, in general true of the other women's colleges, and in a greater degree true of the men's also.

The editorial from which these figures are copied proceeds to show that only a very small part of the income is expended in salaries, but that nearly all the institutions are overloaded with funds for real estate and buildings, while the endowments for working purposes and for meeting running expenses are small.

The editor thinks, if the reverse were true, there would be no reason to complain, as the money comes from voluntary contributions, and as the coming woman must be fitted for wage earning and the larger part she is to play in society.

These statements, as said, furnish food for reflection and suggest a number of questions—*e. g.*: What is Education? What is its real purpose? Is the accomplishment of this purpose necessarily or even desirably such an expensive process? And would a proportionately greater expenditure in salaries, really help the situation at all?

Indisputably, the aim of education should be to fit one to fulfil all the duties of life. It should so bring out the latent possibilities as to make one, not the puppet but the master of his or her environment. Information is not education, and if the power to use it is not developed at the rate with which it is imparted, it is only a clog. No kind of power is possible without training and self-discipline, and that only is desirable which is the result of a right character building.

Do these expensive institutions recognize these facts? If they do, one is forced to admit that there is convincing evidence of it.

The education in colleges, so far as the college is concerned, is only intellectual. The requirements for a student are that she shall pass certain examinations, and not do anything openly, of course, to disgrace the college or herself. Whether she learns self-control, whether she learns that it is nature's law that she shall think of others as of herself, whether she even learns how to do the hundred and one things every woman ought to know how to do, are things which the college considers quite out of its curriculum. She learns a hundred things, which by no possibility will have any relation to her future life, and which therefore are never thought of after the examination is over, and she passes out into the world to get her real education—rather late, alas! which in 99 cases out of 100 has been neglected by her mother, and in 100 cases out of 100 by her Alma Mater.

If, instead of having the machinery so perfectly oiled that information can be poured in faster than it can be digested, each student felt that she had her part to play in making the conditions for her own education, would it not only be less expensive, but more profitable to her? And if some reciprocal process of giving and taking could be thought out, would it not develop a nobler type of womanhood?

If the prime object were to liberate a soul, instead of to feed a brain,

would not an entirely different system gradually supplant the present one?

For if there were nothing to offset this, and if it were continued over many more than four years, one is sometimes tempted to think it would develop a race of intellectual monsters.

The Raja Yoga system of education seems quite new in this age. It is based on the knowledge that every one is a soul, and aims for a well-rounded and balanced development of the whole nature, physical, mental and spiritual. It is very thorough, and it is *not* so very expensive.

G. W. V. P.

The Autumn of Life

Fleeting life is but a fading picture on the scroll of time

WE would be wise! Yet, when wrinkled brows and snowy hair call forth from our hearts a guidance to truth, how completely it is ignored. The supposition that we live only one life on

earth, can be accepted by the intellect alone. The heart refuses to believe that experience and knowledge of the trials and battles of life, will pass forever beyond the reach of earth-bound souls calling for help.

Happily for humanity, nature's laws act independently of man's mistaken theories, and in the "Wisdom Science," we find that age and death are but the laying aside of worn-out garments; that the soul will return to earth and be born in other forms, many times, ever seeking to build from experience gained, until its nature expresses the living presence of the present-day accepted, but imagination-stored, truth—that the body is the temple of the divine on earth.

The light of approaching freedom shines over snowy locks, and sympathy refuses to be bound within the personal interests and woes of a narrow circle.

The motherly heart is closer to nature's heart. With unfaltering love it befriends the erring through the nursery of folly and inexperience, and with something of the great Mother's tenderness and compassion, it would protect and guide all CHILDHOOD, not only the childhood of those near and dear.

The autumn of a life-time awakes the creative power to bless.

Its speech has a silver lining to those in despair. And as there is the autumn of individual life, so is there the autumn in the life of nations.

Many signs are telling that this universal seed-time has come. And from our individual harvests through the ages, we each may bring offerings—our autumn's realizations of life, blend and unite their freedom-crowning light, and arise, new-born, unfolding the wider sympathy, the truer love, the higher nobility, through hearts that pulsate for the welfare of the race.

The Babylonian Code of Hammurabi & the Laws of Moses

THE discovery of the legal code of Hammurabi of Babylon has stimulated Mr. Stanley A. Cook, M. A., to produce a very valuable work which contains not only a useful explanation of this remarkable code, but also a comparison of its law and ethics with those of Moses. Mr. Cook's scholarship eminently fits him for such a task, and his *Laws of Moses and the Code of Hammurabi* will take a prominent position among authoritative treatises.

It will be remembered that the tablet containing the Code of Hammurabi was found in 1901, together with numerous letters, contracts and business documents, which throw a very clear light upon that age and upon its King. Hammurabi probably began his reign about 2285 B. C., that is to say, long before the life of Moses, and there can be little doubt that the code in question was but an epitome of laws which were even then ancient. The King himself seems to have been an enlightened monarch, whether judged by the standard of his own or of any other age.

He was proud to be called the "Shepherd of His People," and for their benefit he erected the great legal stele, "that the oppressed man who has a suit may come before the King of Justice, may read the inscribed and hear the precious words. The stele will make clear unto him his suit, and his heart will rejoice, saying, 'Hammurabi is a lord, who is literally a father to his people.'"

Mr. Cook's comparisons make it very clear to us that there existed in the laws of Babylon a far better conception of human interests and a more evolved sense of justice than is to be found in the Mosaic law. The Code of Hammurabi, which is far older than the earliest Biblical "law of Moses," shows that a higher value was set upon human life, and that the principles of justice were better understood in that hitherto dim and shadowy past than in any historic period since, even down to the boasted ultra civilization of the Twentieth century.

Greek Archeological Researches Encouraged by the Grecians

THE French School of Archeology has been enriched by the sum of \$10,000, which has been presented to it for the purpose of continuing the excavations of the School of Greece. The Greek Minister of Education is himself an archeologist and it will therefore be for him a labor of love to aid the intended explorations at the bottom of the channel near Kythera. It was from this channel that the famous statue variously known as Hermes, Perseus and Paris was recently recovered, and there can be little doubt that other treasures await the activity of the Greeks with whom arrangements for the work are now being made.

THAT the musical instruments of early humanity were intended to last was illustrated at a remarkable open air concert recently given in Copenhagen. One of the selections was performed upon two horns which were made over 3000 years ago. These instruments were in good tune and are said to have an agreeable tone. The Copenhagen Museum of Antiquities possesses twenty-three of these ancient instruments of which nine are in sufficiently good order to be played upon.

Valuable Ancient Manuscripts Found in the Mosque of Damascus

THE present period has been remarkable for the number and importance of ancient manuscripts which have come to light. A considerable proportion of these have been of a religious nature, and from some translated scraps which have been made public we may evidently anticipate a very interesting addition to early Christian literature. Of the full importance of the discoveries which have just been made at the Mosque of Damascus, it is as yet too early to speak with any certainty. The find is none the less remarkable as being an indication of what we may yet expect when all likely and unlikely depositories have been fully ransacked.

This particular discovery was made by Dr. Violet, and consists of a number of literary fragments in Latin and Hebrew. These are found to be marriage contracts, liturgies and Old Testament portions with some scraps of Egyptian origin. How they came to be deposited in the Damascus Mosque remains a mystery, unless it be assumed that they represent booty seized by the Turks upon some warlike expedition.

The most valuable feature of the discovery are the fragments in Palæstinensic Aramaic letters of the Old Testament, as well as portions of the Gospels. The portions of St. Paul's letters, which are included in these manuscripts, are said to be unique, and their translation and comparison is to be awaited with much interest.

STUDENT

THE SIBERIAN MAMMOTH

WE have already commented upon the discovery of a complete mammoth which has been found in Siberia. The accompanying illustration of this remarkable animal is from the pages of the *Scientific American*, and it serves to give an idea of the size and state of preservation of the enormous body. The world is indebted to Dr. Otto Herz for the skill with which the mammoth has been removed and placed on view in the Academy of Sciences at St. Petersburg. The position of the body indicates that the animal injured himself by falling upon a steep slope and was unable to move. The grave being flooded with water, which soon afterwards froze, accounts for the preservation of the flesh, which was so perfect that undigested food was found in the stomach.

Some Irish Burial Mounds

WE have already briefly described the very remarkable sepulchral mounds which exist at New Grange and Dowth, County Meath, Ireland.

We now see that these monuments have been made the subject of a lecture by Mr. George Coffey, who has paid very special attention to their construction and meaning. The mound at New Grange, which

is composed of large stones, covered about an acre of ground, and was over forty feet high at the center. But the most interesting feature is the carving with which the stones are covered. This carving does not seem to be decorative, and Mr. Coffey is therefore of the opinion that it has some special and religious significance.

He compared them to the painted scenes upon the Egyptian tombs, which had reference to the fortunes of the dead and not of the living. The carvings at New Grange differed very widely from those at Dowth.

The former contained splendid examples of spirals, both single and double; and while there were also spirals on the Dowth stones, they were in every case single.

The Dowth stones contain several instances of concentric circles, but none of the lozenge and triangle forms which are found at New Grange. Mr. Coffey believed that both these monuments are of very great antiquity, and are probably the most important of their class to be found in Western Europe.

Students of Theosophy will remember the references which H. P. Blavatsky made to Irish archeology and to the prehistoric civilization of Ireland. Efforts such as those which have been made by Mr. Coffey bring us appreciably nearer to the time when we shall understand more of these people and of their religion.

Expert Grape Culture in America

IF a man is worthy of honor who makes two blades of grass grow in a place where there was formerly but one, so must be the man who doubles the size of a fruit, makes it edible where it formerly was not so, or multiplies the number of species.

All this has been done for the grape by the Hon. T. V. Munson, of Denison, Texas; and his work may well stand alongside of that of our Californian neighbor, Luther Burbank.

The plan was simple, though the working out required much labor, observation and thought. It consisted in finding the best and hardiest native wild grape, and hybridizing it with some fine cultivated variety from elsewhere. The result is, of course, a grape combining the culture of the one and the hardness of the other. Under Mr. Munson's hands a large number of European grapes representing centuries of culture have been made to find a home in this country, and in particular in Texas. In return, with a Colorado grape of great vigor, Mr. Munson rendered a most important service to the French grape industry, at that time in a critical situation. So important, indeed, was this deemed by the French Government that Mr. Munson received a decoration of the Legion of Honor.

As soon as our western mankind begins to think of relying less and less upon flesh for its diet, the problem of feeding it will become simpler. In the new direction it will be met more than half way by the comparatively new school of experimenters in fruit and grain culture.

These products will be infinitely varied, enlarged, enriched in their nutritious elements, deprived of superfluous fiber, stone or shell; and the peculiar results of centuries of culture in one country will, by blending with natives, be rendered available in many others.

Cheaper food will mean some release from the stress of life, and better food a shortened tale of disease. No branch of practical science better deserves honor at our hands than that which attacks and solves the problems connected with food. K.

CALIFORNIA oranges are meeting with appreciation elsewhere than in their own country. Two hundred and fifty cases of the variety known as Washington Navel have arrived at Naples in Italy from Southern California. They have been procured by the Italian government and are to be sent to the agricultural institutes in Sicily and to the Royal Villa at Castelporziano, near Rome, in order that the necessary experiments may be made with a view to their general introduction.

THE MINERAL production of California for the past year shows a substantial gain over the preceding year, the last figures being \$35,069,105, an increase for the year of 713,124. The mineral resources of the state, except gold, have barely been touched thus far, and there is still a great future in gold production.—*Los Angeles Herald*

TO THE DAISY

by WORDSWORTH

BRIGHT flower! whose home is everywhere,
Bold in maternal Nature's care,
And all the long year through the hair
Of joy or sorrow;
Methinks that there abides in thee
Some concord with humanity,
Given to no other flower I see
The forest thorough!

Is it that man is soon depressed?
A thoughtless Thing! who, once unblest,
Does little on his memory rest,
Or on his reason.
And Thou would'st teach him how to find
A shelter under every wind,
A hope for times that are unkind
And every season?

Thou wander'st the wide world about,
Unchecked by pride or scrupulous doubt,
With friends to greet thee, or without,
Yet pleased and willing:
Meek, yielding to the occasion's call,
And all things suffering from all
Thy fraction apostolical.
In peace fulfilling.

AN AVENUE IN JOHANNESBURG, SOUTH AFRICA

The Impossible in Plant Growth

IT was an article of faith with us, until recently, to believe that ferns grew principally in woodland shades and required a plentiful and constant supply of water to make any successful growth. In fact, the text-books upon fern culture warn their readers to never, never let ferns become entirely dry, as it will surely kill them. It seems, however, that Nature omitted to read that paragraph, because here at Loma-land we see it violated constantly.

All over the hillsides, on little points of rock, and on precipitous slopes, are ferns which have not known the touch of water since last winter, and yet they are alive, and when the rains come they will quicken into beauty and unroll their delicate fronds, often a foot or more in height, as easily, so it seems, as though raised in the saturated air of a fernery. There are several different sorts of them, of very widely distinct types. The ordinary woodland fern, with broad, finely subdivided fronds two or three feet long, grows only in shady places. The more common oak-leaf type is more adventurous, but does not care to challenge the sun too boldly. California maidenhair prefers the shadow, it is true, but is not fussy about it, and will grow in broad sun glare on a stone pile if it can find a convenient place to spread its pendent tresses.

There are two or three sorts with triangular, well-divided fronds, borne on smooth, wiry stems, but they are very seldom over six inches high. One of them, the dwarf of the family, seems to really prefer the driest places, and, when the water supply is exhausted curls up in a ball and waits for a revivifying drink. There is also the "coffee-fern," quite different from the others, with its wire-like purple stems and the thick, leathery leaflets, nearly round, each daintily separate on its own footstalk. The fronds are often a foot high, each with the family signature of one three-lobed leaflet at the base.

When the leaflets have dried to old-gold yellow, the purple stems make them very pretty. This sort also prefers a rather dry and sandy soil with plenty of dead leaves in it. We are eagerly expecting the time for the reappearance of these several beautiful plants as soon as the rain-elves give the plant-fairies a stimulant. As these lines are

being printed the clouds are pouring down upon San Diego county a generous rain. Tomorrow, or the next day, the sun will be bright again, and soon Nature will be robed in her new spring garb. L.

ARHODE ISLAND dog was in the habit of frequently jumping over the gate of a common picket fence. One day he appeared with a long bone in his mouth. He made several attempts to leap over the gate but failed every time. He stopped a moment and was evidently debating another plan. He placed the bone beside the gate, jumped easily over it, and then put his paw under the gate and pulled the bone through. He then went off wagging his tail complacently over the result of his experiment.—*Our Dumb Animals*

Universal Brotherhood Organization

Central Office Point Loma California

A GOOD audience as usual assembled at the Isis Theatre on Sunday night to hear Miss Ethel Wood's address on "Making a Choice." Mr. E. A. Neresheimer also read a paper on "Some Practical Suggestions for Daily Life." The music by the students of the Isis Conservatory was as admirable as usual. Miss Wood's address was strong and thoughtful and was received with every appreciation. She said, in part:

"There comes a time in every life when one stands at the parting of the ways, facing two paths, one leading to the heights, and the other into the depths where misery and shame wait to become our comrades.

"As the world goes, the young girl is usually so unwisely brought up that she remains all unconscious of this great soul-power that is hers, the power to choose her own path. Her acts are guided partly by her environment, in which the example of her parents and friends is an important factor, and partly by the tendencies and characteristics of her own nature. Without realizing it she is the absolute victim of all that is coarse and weak in her environment, and she becomes too often an easy prey to her own selfish and negative tendencies.

"This is the picture that we see about us every day, and if we ask why are there so many wrecked lives, we may read in this picture the reason.

"But the time of awakening comes, the time for making a choice. It comes to every woman sooner or later—generally later. If you don't believe this, examine the statistics of our hospitals, of our sanitariums, of our insane asylums and our divorce courts. They are the goal these days of thousands and tens of thousands of women who, when the time came for facing life, when the time came for making a choice, whether they wished to or not, found themselves unequal to the situation, unable to go a step further, simply crushed. And probably not one woman of all these but looks back and says, 'O, if I had only known. If I had only come to understand my own nature when I was a girl. If I had only chosen the right way instead of the pleasant way.'

"Then, there is another class who, when the time comes, have drifted too long, and who openly choose a life of self-indulgence, regardless of the sorrows they bring to others. And then, fortunately, we see that other type of strong sweet souls, who were strong enough and pure enough to make the choice bravely and right. Some of them are our mothers, and all of them we love.

"But must it always be so? Must women grow to thirty, forty, or even fifty years of age before their eyes are open? Must they find their strength failing already by the time they first realize they have it? These things need not be; we know that we are souls, who are determined to bring something of the soul light to humanity; we declare that they *shall not be*. We know that a new era is dawning for women, for by the light that is coming into the world, we know that young wo-

men can now see clearly what their mothers perhaps were unable to see at all. For those who make the choice and who choose right, and the unselfish life, and purity, and principle, and joy, that which to the world is as dawn, to them is as the day.

"Katherine Tingley dreams of a day soon to be, when the Knowledge that belongs

to women need not be gained through suffering and pain and risk.

"She dreams of the day when the child of seven will know that he is a soul and will *live* as if he knew it. She dreams of the day when the young girl will not oscillate perpetually between selfish indulgence and the disappointment that it always brings; the day when the young girl shall think a little less of her own likes and dislikes and a little more of her sister-woman's joys and sorrows; the day when the joy of the soul's life will belong to her, the joy that comes to every one who sees with clear eyes and walks with firm steps. What a picture and what a lesson is such a life as this! What would our divorce courts and the insane asylums do if all young girls had the poise and the honor and the common-sense that a few women of forty and fifty today possess.

"For the choice cannot be made aright save by those who know their own natures, and this knowledge never comes from indulging one's self and never will, this knowledge never comes from mere book-study and never will, for it is the doctrine of the heart-life and only those who live the life may read it.

"What is the choice? It is a time that comes to everybody, sooner or later in their life, when they stand still, as it were, in the midst of the whirl of their thoughtless life, and realize for the first time that they are a Soul. Then they ask themselves who am I? What am I here for? What is my purpose and duty in life? *Then* comes the time of choice. Shall they stifle the thought of responsibility, and try to become indifferent and distract themselves again in the whirl of life? Or shall they bravely face the question and strive nobly to find out what they are living for? We know that some things are real and some things are only sham, but have we in our hearts the ability to discriminate between the real and the sham, and in our souls the courage to choose the real? The choice is the stand we take when the soul first becomes our guide. There women stand, many of them just at the critical time when girlhood and womanhood meet, many of them—you cannot deny it—standing on the brink of a chasm which must be bridged or a life may be wrecked. What will bridge it but soul knowledge, and how many young women possess it? And so there they stand facing the two-fold path; joy on one side, on the other side misery, a life of service, or a life of self-indulgence; mental and moral physical health, or mental, moral and physical disease. There is the opportunity for choice—on the one hand the life that is bounded by intellect, warped and destroyed by the desires, or on the other hand the heart-life, the life of joy, service and fulfillment."

Lotus Group at Malmo, Sweden

Our Christmas festival at the great Hall of the *Arbetsforeningen* was the most successful we have ever held. *The Little Philosophers* held the first and principal place on the program. The scene, depicting a sunrise, formed an appropriate background for the two low Greek tables, decorated with flowers and fruits. The children were dignified and forceful in their bearing, dressed, of course, in white Greek costumes and wearing garlands. After the Symposium, which was splendidly given and well received by the large audience, the children had stereopticon views from the Raja Yoga edition of the NEW CENTURY PATH. Then the little Lotus children came upon the stage with SVEA (symbol of Sweden) in their midst, holding in her hands the national flag, to which the children testified their love by singing our national song, *Our Swedish Flag*. A large Christmas tree delighted the children, among whom we divided oranges, fruits and sweets, besides gifts. The second number on the program consisted of a fairy-play by Topelius. After the children's festival the Lodge members assembled and held a meeting. New Year greetings.

Lotus Groups of Chelsea, England

Reports from the Vernon Place and Chelsea Lotus Groups, England, show great enthusiasm over the Symposium recently given, *The Little Philosophers*. The children have risen, in presenting it, to a new feeling of responsibility and to a greater dignity and, it need not be added, to a better conception of the simple teachings of Brotherhood.

MABEL SWAN, Superintendent Chelsea Lotus Group

The Sydney, Australia, Lodge

Reports have just reached us of a public entertainment given by the Universal Brotherhood Lodge of Sydney, Australia, on December 13th last. Besides vocal and instrumental music, the entertainment consisted of the Greek Symposium, *The Conquest of Death*, given by the adults. This Symposium is already well known to students throughout the world, and those who have witnessed its presentation at the great Amphitheatre at Loma-land can never forget the spiritual uplift that it brought to them.

The Lotus Group of Sydney, Australia

New Year's Day was chosen as the most suitable time to give Katherine Tingley's Symposium, for we realized that it sounded a new key-note, and would, if studied right, bring something more into our work. The children entered into their parts with the heartiest interest, and the harmonious chant at the close, "To help humanity, to make Theosophy a living power in our lives," seemed like a benediction. One among the large audience said to me after the performance, "It was beautiful; now at last I begin to understand your teachings." Said another, "Now I can understand why your members and the parents of your Lotus Group children are so frankly enthusiastic."

The evening's entertainment was opened by Handel's *Largo*, then singing by the children themselves, followed by *The Little Philosophers*, closing with a selection by Beethoven.

Lotus Group of Groningen, Holland

On January 3d the Lotus Group of Gröningen, Holland, gave Katherine Tingley's Symposium of *The Little Philosophers* before an audience of several hundred, in the Hall of the *Harmonie*. The play was greatly appreciated, and the children, we found, had been wonderfully helped in many ways by the effort they had made in preparing their parts, and unconsciously to themselves they have grown into a certain calmness and dignity which will mean a greater strength and far more satisfactory work for the future year. Undreamed of opportunities lie before us in helping the men, women, and particularly the children of our city, and the work of this Symposium has given us just the uplift that we have needed. Our three Lotus Groups have now grown to five, each with its special character, and each, in a sense, with its special work.

The Symposium has sounded a new key-note in this work for the children, and has raised all our Lotus Group activities to a higher level. Truly, the Christmas bells sound with a new tone, and bring to us a new expression of the Christ spirit and of the way in which the little children shall give to the world Christ's teachings. Greetings,

A. GOUD, W. G. REEDEKER

Cardiff, Wales, Lotus Group

On the evening of January 1st, we gave our Leader's Symposium, *The Little Philosophers*. The evening's entertainment opened with music, recitations and songs. The chief feature was the Symposium itself. The rehearsals had been most interesting and promised well, but the public performance was an inspiration. Every one was deeply impressed and the children felt that they were teachers in very truth. After the Symposium we served light refreshments, and then Santa Claus came and gave the children what they had long wanted, each a box of paints and a book. The children, as well as the guests, were reluctant to go when the evening's entertainment was concluded.

JOHN MORGAN, JR., Superintendent

Everton Lotus Group, Liverpool

From the Everton Lotus Group at Everton, Liverpool, England, comes a most enthusiastic account of recent work. During December most of the time was spent preparing for the New Year's entertainment, the chief feature of which was Katherine Tingley's Symposium, *The Little Philosophers*. The children of the Old Swan Lotus group joined with us and the entertainment was a great success. The room was prettily decorated with flowers. In the evening we had a Christmas tree.

H. H. LOWE, Superintendent

A New Disease

IT seems that a new disease has appeared at one of our great universities. Its chief symptom is "mind-wandering," and its unfortunate victims are unable to read for ten minutes and then to describe what they have been reading about. So far it seems that four men and four women have had to discontinue their studies on account of this distressing malady. To the merely lay mind the number would seem to be remarkably small, as the outside world contains a very large number of people who are afflicted with mind-wandering, and who are certainly unable to concentrate their attention for ten minutes, or even ten seconds. Overstudy is suggested as the possible cause.

STUDENT

The Lotus Group at Helsingborg, Sweden

On December 19th the Raja Yoga children of our Lotus Group gave Katherine Tingley's Symposium of *The Little Philosophers*. The room was prettily decorated, the children were dressed in Greek costumes, and the Symposium was given with spirit and enthusiasm. Our rooms were crowded and every one was deeply impressed. On the 2nd of January it was repeated. Our Lodge had its usual Christmas feast for poor men, women and children. It was held in the name of the International Brotherhood League, whose motto is, "Helping and Sharing is What Brotherhood Means." After dinner we had a little talk on Theosophy and Brotherhood. There were, besides instrumental music, songs by the Lotus children, who helped serve the people. Besides the dinner we furnished clothing to a large number of poor children. Greetings for the New Year. ERIC BOGREN

Lotus Group of Lodge 4, England

The children of the Lotus Group of Lodge No. 4, England, gave a delightful New Year's entertainment. The main feature was the Symposium of the *Little Philosophers*. There were also songs and recitations from the NEW CENTURY PATH. The children had been most enthusiastic over the rehearsals, and as a result the Symposium was given in an excellent and harmonious manner. The room was prettily decorated with yellow and white chrysanthemums and quantities of trailing ivy. At the close of the entertainment the Superintendent of the Group made some remarks about the right attitude toward eating; that it was a truly sacred thing to keep the body, which is the temple of the soul, pure and healthy and beautiful by eating at the right time and in the right way, never merely to gratify the palate. After this the children and guests were served with simple refreshments of cake and fruit.

CONSTANCE SAUNDERS, Superintendent

Lotus Group at Gothenberg, Sweden

A Christmas festival was given for the Gothenberg Lotus Group in Sweden which was most delightful. The program consisted of music, both vocal and instrumental, recitations and tableaux. A pretty little Christmas tree lighted the room and gave additional happiness to the children. At the close of the entertainment chocolate was served in an adjoining room. We feel that by means of this festival the children have learned more than ever before of the blessing that lies in unselfish giving and in every effort which we make for the sake of giving joy to others.

The preparations that we have made for the festival have served to unite both comrades and children more closely.

C. KARLSON, Secretary

The New Jerusalem

REV. FRANK GUNSAULUS, the Chicago preacher, who held his services in the Iroquois Theatre, and who lost a nephew in the fire, has just preached a sermon in which he said:

Our pulpits—mine with the rest—have too much to say about the New Jerusalem and not enough concerning the vital needs of Chicago. I have neglected my duty. I have seen abuses—lawlessness, all pervading and unrebuked—negligence, incompetency and carelessness in public life, and have not lifted my voice against them. Hereafter, with God's help, I will do my duty as a citizen.

A SUBSCRIPTION to the NEW CENTURY PATH is an investment that bears interest far beyond the total amount of the principal.

"I'll thank you to mind your own business, Mrs. Murphy," said Mrs. Davis, with a toss of her head. "It's meself that undherstan's me own bisness better than ye could be after telling me," rejoined Mrs. Murphy vigorously; "and it's a disgrace to the street, it is, the way yer childern carry on. It's the schule alone that would be givin' them any chance, I'm thinkin'."

Before Mrs. Davis had a chance of replying, an agonized roar from within caused her hasty disappearance. Mrs. Murphy, still standing at the door, next saw little Susie come out and run crying down the street. Her anger abated in the face of an apparent calamity, as Tommy's screams continued to reach her ear. Mrs. Murphy put down her broom and entered her neighbor's house. There sat Tommy's mother in the kitchen holding the screaming and thoroughly frightened boy on her lap, vainly trying to stanch the flow of blood from a cut finger. Mrs. Murphy threw up her arms.

"The saints help us! he'll blade to deth before the dochter comes;" and she rushed from the room, followed by Tommy's piercing yells.

"You are in a hurry, Mrs. Murphy," said a voice pleasantly.

"Oh, dochter, and is it you? The saints be praised! There's Tommy blad in' to deth inside there!"

The doctor entered the house, and within a very short time a white-faced little boy with a well-bandaged hand was lying quietly on a couch in the corner of the kitchen, a grateful woman standing beside him.

The crowd of sympathetic neighbors had returned to their own homes.

"So he doesn't like school?" the doctor was saying.

"Wouldn't you like to go to a school where they have a big round tent out in the garden all the summer-time and beautiful flowers and plenty of music and singing?"

"I would," said Susie, who was listening, open-mouthed.

"Would you," he said, "and have a little garden all your own?"

"Wif flowers in it?" asked the child — "growing flowers?"

"Yes," he answered.

"Could you grow carrots?" inquired Tommy, with dawning interest.

"Perhaps," replied the doctor; then turning to the mother, "Your neighbor's children (Mrs. Murphy's) have lately begun school. John is a fine little fellow." Mrs. Davis froze instantly. "Thank you kindly, I don't think *my* children will be goin'. I don't hold with new-fangled notions!"

"I won't go to the other old school, so there," and flouncing round, Susie knocked the dipper onto the floor with a loud clatter which brought down the ire of her parent on her head.

Tommy eyed his mother thoughtfully, but was silent. Thirsting for information he called a truce with John, and began to ply him with questions calculated to elicit the desired information.

"An' there's no canes, and they never speak cross-like, and if ye haven't had any breakfast they give yer some, and they drill yer like sold'ers, to make yer stand like er man, and there's no fighting erlowed; me and you'd have to stop pelting stones at each other. Yer can't even put out yer tongue and make faces!"
