We can drive animals away and men away, we can banish trees and plants, by denying them the proper recognition and tribute and by violating the conditions necessary for their existence. May we not also banish other things from our neighborhood; may not the presence of a horde of drinking, swearing, unbelieving, rough and inconsiderate human beings scare away beings and presences who could not exist in such an atmosphere?

As to Pan, he was degraded before he was banished; for this symbol, like most of the ancient ones, was originally much loftier and purer than in later and corrupter times. Just as Dionysus and Bacchus, the Greek and Roman God of divine inspiration, patron of the highest dramatic and choric art, degenerated into the god of wine, so Pan, the great God of Nature, worshiped with sacred ceremonies, degenerated into a god of license and was worshiped with licentious rites.

Nature as a Teacher to Those Willing to Learn

JESUS said to his disciples, "Consider the lilies, how they grow," and in so saying he turned their attention to Nature as teacher and implied that the law of growth by which an outwardly unattractive bulb unfolds into a dream of beauty and fragrance was the same law as that by which the soul of man transcends its casements and unfolds into

PAN—FORTUNATE

by THEODOSIA GARRISON

MOST good it is that Pan is dead.
We be a sad and sullen folk,
Who bend beneath a strange god's yoke,
And grind our hearts for daily bread.

To him what sadness has been spared,
Who died before the world was old
Nor saw his forests bought and sold,
His sky, fleet wood mates slain and scared;

Who died, remembering the dim,
Cool twilights when his clear pipes drew
The sweetest songster of the crew
To shrill an answer back to him;

Who dead, remembers only this—
The darkling rivers moonlit space
Wherefrom the white limbed naiad's face
Lifted its wet red lips to his.

What man would wish him life, to see
His happy river made a slave,
His sleek, wild creatures, fierce and brave,
Heart broken in captivity;

To know his nymphs and satyrs fled,
To see a stern god's altar made
Where once the crew of Bacchus played;
To know his forest mate with dread?

Oh, well that Pan is dead—that he
Hath missed all knowledge of the gray
Shadow of this bleak after day
And little mirth of gods that be!

—Selected

SCENE ON THE RIVER RHINE NEAR ARNHEM, HOLLAND

it is said, with the red grouse the honor of being the only British birds that are confined to the limits of the country. Since this announcement every bird has led a persecuted life, eggs and skins being eagerly sought by the would-be ornithologist and the trader, to the possible extinction of the birds before the bill is passed into law. Such a law would merely add the name of this bird to the list of prohibited birds and should by this time be in active force.

Is it to be supposed that we shall ever be permitted to approach more closely the hidden mysteries of nature and science, if this is the spirit manifested by our stage of progress? To think that Government measures should be necessary is a national shame, alleviated only by their existence and the broad humanity of their authors.

beauty and light. As the magician in the lily, the synthesis of all its little lives, works such a glorious transformation from the germ and food-stuffs stored in the bulb, so should man transform the lower nature into the higher and make every part of his being subservient to the highest.

When we consider how the lily grows, we find that it does so by a conscious power working within; that it receives help from without and gives help in return; that the law of brotherhood, of mutual helpfulness, of self-sacrifice for the general good, is a basic principle throughout all its growth, as it is in all Nature.

In the increase of cells by which growth is carried on, the parent cell yields its life to its progeny, and the plant as a whole blends its energies in the production of seed for future plants and in making provision for them till they are able to care for themselves, thus exhibiting a parental love which Mother Nature has implanted in all her children. If we but lived close to her great heart, we should feel the unity in all things and our kinship with all, and Nature would reveal to us her mysteries and teach us helpful lessons. B.

To Protect the Birds on Midway Island

A MESSAGE from Midway Island, the landing point of the Pacific Cable, states that the employes of the Cable Company have threatened to leave the island by the next steamer if the Navy Department order is enforced, which prohibits them from carrying fire-arms and shooting the beautiful birds of the island. The department has replied to the officer commanding the marines in the island, that the order must be rigidly enforced, as the Government is determined to stop the slaughter of these birds of plumage.

By the latest news from England it appears that a bill is before Parliament for the amendment of the Wild Bird Protection Act in one particular. In the original act the lonely little island of St. Kilda was omitted from the protection given the birds, as the inhabitants depend a great deal on the birds and their eggs. Recently, however, some scientist discovered that the little wren of the island is a rarity, sharing,

Universal Brotherhood Organization

Central Office Point Loma California

ISIS Theatre was well filled Sunday evening at the regular meeting of The Universal Brotherhood and Theosophical Society, despite the most unusual heat and sultriness, and those who turned out were not only well repaid by the splendid musical program and the interesting and instructive addresses, but also enjoyed an hour's forgetfulness of the weather, so admirably contrived is the Isis Theatre ventilation. Too much could scarcely be said in praise of the excellent musical numbers by the Isis Conservatory students, who seemed to have chosen even a more excellent program than usual.

In the course of her address on "The Home Life," Mrs. Isabel H. Butler said:

"In these days the great ideals which were brought to the Western World by H. P. Blavatsky nearly thirty years ago, and which today are being demonstrated by her successor, Katherine Tingley, find their way into even the uttermost places of the earth. Many a wife and mother, feeling the magic power of a broader view of life, longs with all her heart to be of service, to do something—something—to bring these ideals into actual realization. And many a home-maker, too, feels helpless and discouraged when she views her own life and sees herself like poor Susannah Wesley, surrounded by pots and pans, or perchance in a hopeless maze of servants and calls, swept around in a perfect maelstrom of dinners, dresses, and—despairs. Yet in this very environment, which seems filled with a thousand obstacles, lies her greatest opportunity. No one has greater opportunity than the home-maker to give the world just a splendid big lift. She stands at the very center of things—whether she knows it or not. Before her lie the greatest of opportunities, the opportunity to re-form the home and re-fashion the home life on a better basis and a nobler plan.

"How shall she do it? By filling her heart with the love that lights all dark places; with the compassion that makes all burdens light; with the heroism that makes women and warriors forever choose the difficult; and in patience does her simple duties. She need not wait for special teachers from the north pole or for messages even from the moon. She knows the first step, which is the doing of the simple duty wisely and without losing her patience, and the next step will be revealed when the first is taken. That is enough. To lay down set rules is impossible. Cooking receipts are made in that way, but a true home life cannot be. Within her own heart she will find real wisdom springing up, as it were, spontaneously, if she does not become discouraged, if she seizes the opportunities that lie before her, if she does her duty by her children. And this does not consist in slavery to the household stomach, nor in submission to the fads and fancies of nervous or selfish or badly trained children. Many a woman steps into darkness just at this point through failure to discriminate between what is her duty and what is not. Raja Yoga contains the key to the solution, and the heart will bring the home-maker something of its message if she will listen.

"What is Raja Yoga and what has it to do with the home? It has everything to do with it. Raja Yoga, which is 'the balance of all the faculties, spiritual, intellectual and physical'—character building—where can it be better demonstrated than in the home itself? The tourists who visit Lomaland and witness the ideally perfect life of the children on the Hill, often contrast it with the best that the world affords, and always to the advantage of Raja Yoga. Yet the marvelous system is not alone the reason. As a seed cannot grow without the proper soil, so this Science of Sane and Joyful Living, which is Raja Yoga, could not express itself if the basis of the whole system were not the home life."

Mr. J. Ross White, in the title of his address, declared that "Without the Larger Life Humanity Must Retrograde." "Everywhere," said he, "we see at work the forces which tend to produce, on the one hand, a closely-knit tyranny of wealth and brains and bigotry, and on the other hand a large and irresponsible mass of underlings; conditions which would ripen into a reactionary and despotic form of society, if not checked by the growth of an uplifting and expanding spirit.

"And what is the new basis upon which civilization must be grounded, in order to render it stable in its present conditions? What is the larger life which is large enough to comprehend and harmonize so many conflicting interests and motives?

"It lies in a broader conception of the meaning of human life in general, and of the relation of the individual to the whole. Just as invention has knit together our material relations, so some new link must bind together our hearts; and it is the urgent need of this latter that the world is feeling, for its growing powers and responsibilities harass it like a new patch on an old garment.

"The conception of man as a separate soul is not large enough to be a basis for

LOMALAND STUDENTS AT ISIS THEATRE

"Without the Larger Life Humanity Must Retrograde," and "Home Life"—Other Addresses—Music

Reprinted from the San Diego News

modern life; the personal career and destiny of an individual is too narrow a horizon to comprehend the vast prospects which modern knowledge and modern enthusiasms open up. It is true that we recognize that man has a collective life as well as an individual life, but we recognize it only as concerns his material needs. We have no philosophical

or religious conception to correspond with it. We know nothing about human nature itself, except the few details which science can give us as to our bodies and the vague speculations or dogmatic assertions of modern thought and religion.

"We have had social philosophies based on human nature conceived on a very low scale, in which man was regarded as a selfish animal and civilization was looked upon as an attempted adjustment of conflicting selfishness. We have discovered that selfishness is not the law of life and cannot be made the basis of a social philosophy. Experience has taught us that Brotherhood is an essential and indispensable condition, yet we have no fact in human nature on which to ground it.

"Yet Brotherhood is founded on a fact, and it is this fact that Theosophy is trying to get people to recognize. Human nature is something far vaster and greater than we have imagined. Not one of us has realized more than a minute fraction of his possibilities, or formed any notion of what his life might be. We are all shut in and weighed down by our limitations, our prejudices, our fixed ideas.

"How few of us ever stop to consider that we are immortal souls; and that, as such, we must necessarily be endowed with vast powers and privileges which we might call forth if we chose! We often feel the beating of a heart within our breast and get a glimpse of our possibilities; but conventionalism in thought and conventionalism in habit soon pull us back again into the commonplace. Under the divine impulse of Brotherhood we found commonwealths and communities, but the food and money question reduce these enterprises to the level of monotonous repetitions of ancient failures. There has been no ideal to inspire them, beyond the narrow ideal of material cooperation and a sharing of physical needs and pleasures."

Mr. R. W. Macell's address was entitled "The Growth of Art at Point Loma." Among many good things, he said:

"Art seems to me to be a bridge between the unseen and inner world and the mind of man, which usually only sees the appearances of things as they present themselves to his mind.

"Art is a means of awakening the perception of beauty and harmony in those whose minds have become more or less dead to all but the most ordinary and material aspect of the world in which they live.

"Art does not take that which is commonplace, and adorn it with some higher qualities that do not belong to it, but it lifts the veil of the commonplace and reveals some part of the beauty and harmony, which is the real inner nature of all that surrounds us in our daily life.

"Have you ever thought when reading some great poem, that the poet was perhaps endeavoring to tell what he has seen or felt in the most direct and literal manner? Have you not rather thought that it was all a pretty fiction such as the lesser and, I might say, false poets produce for the amusement of idle minds? Now it is certain that the art world does produce a vast amount of this fictitious art, so much indeed that the public may well ask 'What is art?'

"People have got so far away from the Truth that they now generally believe that the commonplace view of things is the most true and that sorrow, discord and unhappiness are the realities of life, and all that is beautiful and joyful is but a fiction. This kind of pessimism is so general that people hardly think of questioning it, they just accept and act upon it as one of the undisputed facts of man's life.

"This is one of the great enemies of Human Progress that Theosophy has to fight, this unconscious pessimism in which the world lives and dies. Two of the most important of Katherine Tingley's teachings are that *Man is Divine* and that *Life is Joy*.

"The fact that it is necessary to teach people these simple facts is itself the proof of the prevalence of the opposite views of the nature of Man and of Life. Now teaching does not consist of mere preaching or telling people things, however true and beautiful they may be, but it means bringing these truths right home to them so that they actually realize the truth for themselves and live as if they realized it. This is what is going on all the time at Point Loma; the life there is so arranged as to constantly give each one the opportunity to learn these truths and live by their light. This is the awakening of the Soul. This is the work of Raja Yoga. This is Theosophy and leads to Universal Brotherhood. And this is the mission of Art as I understand it."

William Quan Judge

And I sought for a man among them that should make up the hedge and stand in the gap before me for the land that I should not destroy it.—*Ezekiel 22:30*

LOOKING at history in a large way one cannot fail to see a certain ebb and flow, particularly in the larger sweep of events. Great periods of advance have alternated with corresponding periods of decline and decay, and there have been times in the past, some of which are known to history, and many of which we have at present no extant historical records—yet all of which have been marked by storm and stress, by great extremes of wealth and poverty, of virtue and vice, of the grossest sensuality and the purest aspiration at times of great political ambition, when there was much search and inquiry along lines of religion, when there was much current speculation as to immortality, destiny and the soul. Such were conditions when Socrates loafed on the street corners, plying his mystic questions; when Plato walked with philosophers and talked with the youth of Athens; such were conditions when H. P. Blavatsky came with her message of truth and of defiance; such were they still when W. Q. Judge took up his life work as her Comrade and Helper.

William Q. Judge was a great historical character, beginning his work as pupil and helper of H. P. Blavatsky at one of the most critical times known to history, a time when humanity's heart-cry for help had aroused into determined and active resistance all the fiendish, disintegrating forces known to modern life. He need not have battled, as he did, alone and single-handed, persecuted by his enemies, the leader, as it were, of an almost untrustworthy garrison, alone and misunderstood. He might have had ease, honors, competence and wealth, for he was a man of culture, a lawyer, and a man who would have made his mark in any intellectual pursuit. His heart went out in compassion to those in the shadows, in prisons, in the bondage of their lower natures, and he lay down his life, verily, to bring to humanity glimpses of God's sunshine, to teach men that they were Divine, actually Divine! to teach them that the perfectibility of man was not a chimera, but a fact; that Divine Justice was not a myth, but a reality. And those whom he called about him as students, what were not his sacrifices that he might fill their hearts, too, with love and with compassion, that he might lead them still nearer to that eternal spiritual sun, whose light burneth all souls pure.

W. Q. Judge was a teacher of what the world, at the time when H. P. Blavatsky came, most conspicuously lacked: a true philosophy of life. But his teachings did not originate with him, this he himself declared. These marvelous teachings of Reincarnation, Karma, of the divine in all things, did not originate with H. P. Blavatsky, nor with Katherine Tingley. (And, by the way, what a stupendous compliment has always been paid to the leaders of the Theosophical movement by enemies who declare that it did!) Only in the lives of those who stand as great teachers of humanity can we find a parallel to the courage shown by William Q. Judge. Think of him, alone, almost absolutely friendless, only a few about him whom he could trust, the many traitors, the many ambitious and selfish; this one determined to exploit phenomena, that one determined to run the Theosophical society on dogmatic lines; a third seeking place and power, and so on.

Many have heard of the time when he inaugurated the public meetings of the Aryan Theosophical Society in New York city at the beginning of his work, when, night after night he held meetings with not a single auditor in the chairs. Many of you are familiar, doubtless, with the reply he made to the friend who said: "What is the use, Mr. Judge? No one attends your meetings. You have given a magnificent address this evening and I was the only listener. What do you expect to accomplish, speaking to no one at all?" And Mr. Judge responded, "I am speaking to the whole of humanity."

Yet contrast present day conditions to the conditions of that time. See today how many lives are influenced by these teachings; from how many pulpits, from how many newspapers, by how many lecturers all over this land is Theosophy taught and preached—but often, alas, not practised! Then reflect that this could not have been if William Q. Judge had lacked courage superhuman, if he had lacked a devotion beyond anything the ordinary mind can conceive. And yet this instance was but one of many incidents in his life. Oh, if we could see the hidden, inner forces;

if we could perceive the spiritual mainspring of his life, so to speak, that made these things possible. No longer would it be a mystery, the presence on Loma Hill of a body of students vowed to humanity's service—the most compassionate body of men and women that exists in the world today.

"My one friend—the only one whom I can trust." These were the words of H. P. Blavatsky, and she spoke them of this student-helper by her side, William Q. Judge, who, while she held Europe and the Orient, worked and fought and "stood in the hedge for the saving of the land" in that lonely outpost in America.

When H. P. Blavatsky died, not only did she bequeath William Q. Judge her position as Leader of the Theosophical Society and of The Universal Brotherhood Organization, but her martyrdom as well.

It was in the midst of such experiences, and the midst of strenuous work, when the knowledge that humanity needed him, was ever urging him on, that help came to Mr. Judge, through his meeting with our present Leader, Katherine Tingley. It was in the slums of New York that he met her working. She, too, had passed through the fire. She, too, had known the crucifixions that none who work unselfishly for the world's forsaken ones ever escape. She, too, had given the best of her life out of sheer compassion, to the unfortunate, the wronged, the sick and the despairing of that great city. "But your work," he said to her, "this is Theosophy." She replied, "I have never used the word itself—'Theosophy,' I only know that humanity needs broader views of life," and from that hour Katherine Tingley and Wm. Q. Judge were co-workers for the betterment of the world's life. It would have been strange indeed, later, when he died, worn out with work and persecution, had he not left to her his work and his position and, as you well know, his mantle of persecution, at that time grown very broad. And Wm. Q. Judge made no mistake.

Do we honor William Q. Judge? We do. We honor him as one of humanity's great helpers, as one among the world's great teachers, as one among life's chivalrous warriors.

The Japanese, who have kept to a degree the Heart Doctrine, and whose religion is so nearly destitute of dogmas, have many customs which we might study with profit and incidentally find therein some reasons for their success. One custom is their abstinence from animal food, and another is what historians have termed, somewhat erroneously, "ancestor-worship." The Japanese do honor their ancestors, and they prove the tribute paid them to be honest and real by taking as examples much that is good in the lives of the warrior souls of the past. It is this that has caused to spring up in the hearts of the Japanese a patriotism so pure and so high that the defense of their country today is lifted far above ordinary lines and is actually a spiritual defense, and being unhindered by the dogma of eternal punishment, they have no fear of death.

Did William Q. Judge believe in God? Yes. Did he believe in Jesus? Yes, as one of humanity's great teachers. Did he believe in the doctrines taught by Jesus? He did. The Sermon on the Mount is pure Theosophy. Did Mr. Judge believe in the divinity of man? He did—yes, in spite of all that he suffered; in spite of the nameless shocks that he received from those who sought to impede his work; in spite of the ingratitude, the ambition, the baseness and the imbecility that he met with in some of those about him, who sought his place and power; in spite of all this, he believed man to be divine, a soul, as Christ himself taught, a son of God. Did William Q. Judge believe in marriage? He did. Mr. Judge's ideal of the marriage relationship has been expressed in Katherine Tingley's own words: "Those whom the higher Law hath joined together no man can put asunder." They both recognize the common law to be necessary to confirm and protect. Did William Q. Judge love little children? Yes. If he had not, there would be no Raja Yoga School in existence today. He could not build one himself, but he could lay the foundation, and this he did. Did he love humanity? He did love humanity; more than that, he served humanity, he lived for humanity and he died for it.

THERE are inscriptions on our hearts which, like that of Dighton Rock, are never to be seen except in dead-low tide.—O. W. Holmes

East Indian Pictures

HERE is a typical picture of an East Indian proprietor on his own land living, as we of Trinidad would say, "in the brush," that is, apart from, but near to, civilization. He may build his house as large as he pleases and provide accommodation for his cows, fowls, and perhaps donkey or mule, and cultivate as much land as he chooses, either to grow vegetables for his own use or sugar-cane to sell to the neighboring factories.

In the photograph we see the working of a primitive but ingenious sugar-mill: the old stump has a hole, in which a smaller stump, acting as a lever, presses out the luscious juice, which, running down the spout formed of an old piece of galvanized iron, flows into the calabash, which is the dried and cleaned fruit of a tree.

Living in a hot climate, needing few clothes, and where the soil will produce nearly everything they need in the way of food, these people are happy, contented and independent, know comparative ease, and are able to save most of the money which they earn by working on the estates. This money they either turn into silver jewelry or deposit in the Government savings bank.

In the picture we see that the woman holding the calabash has silver bracelets on her arms and a heavy anklet round her ankle. She is fully dressed as East Indian women always are, whilst the men are sensibly and modestly clothed. So impersonal and dignified is their carriage always, that even new European arrivals never experience any embarrassment when first seeing them more or less undressed, whilst the dear little children, often fully dressed in a piece of string with some buttons on it, are perfect pictures and form the most beautiful and fascinating studies in brown. These people love flowers, particularly red ones. On one occasion some English sailors came to spend the day with us. As the train stopped the first scene was as pretty and touching as it was unpremeditated. As the first tar alighted a little brown child, about three years old, went up to him and presented a big red flower. "One touch of nature makes the whole world kin."

B. G.

HALF the time we are bragging of our wonderful powers, and the other half we spend in complaining of being over-taxed.—Anonymous

"Guilty, but Innocently"

THE following newspaper clipping looks as if it ought to go into our column of humorous brevities; but a joke is often only a very pointed way of bringing out some point of practical wisdom or some important truth. And this one suggests thoughts about judicial systems and justice:

In the Supreme Court recently, a case in which more or less interest was manifested was the case of State vs. Isaac Matthews, for trespass. A rather unusual verdict was rendered by the jury when they first entered to give their verdict, which was "Guilty, but innocently." His honor recharged the jury and sent them back with instructions to render a verdict of "Guilty" or "Not guilty." The final verdict was "Guilty."

The ideal form of administering justice would of course be to have wise, incorruptible and trusted judges to decide each case in accordance with their own opinion as to its merits and requirements. But we have not such judges, or not enough of them; although undoubtedly this primitive method is largely practised in private and is responsible for keeping many cases out of the public courts.

In the absence of absolutely reliable judges and of people ready to trust them and abide by their decisions, it becomes necessary to codify law; and, however voluminous and elaborate this codification may be, it must necessarily fail to fit all possible cases. General principles bear hard on particular cases.

It is evident here that the jury wanted to say that the defendant was guilty in fact but innocent in intention, and that they could not find an authorized form of verdict to fit their opinion.

The Doenvig Life-Saving Globe

CAPTAIN DOENVIG'S life-saving globe, invented more than a year ago, is now a demonstrated success. It is a sphere of thin sheet-iron, about eight feet in diameter, and entered through water-tight trapdoors. Within is a low sitting-bench running all around, and beneath this a considerable supply of food and water is stored. From the chamber a breathing funnel can be pushed up into the air, and this serves as a mast for small sails. A keel and rudder can be unfolded by mechanism from within. There is also an anchor, a set of oars and a cork belt running round the globe as a sort of external equator. On this, men can stand and row. The cost is small, and the weight no more than that of a life-boat. It can, of course, live in any sea, and when the ship to which it belongs sinks, it simply floats off. Each will hold from sixteen to twenty people, and in case of a shipwreck at sea, they would certainly be far better off than in the ordinary open boats. Hundreds of lives saved annually will presently stand to the Norwegian captain's credit.

As Old as the Hills

LOMALAND occupies a unique geologic position in its immediate vicinity, not only because it is one of the most venerable pieces of land above the surface of the sea, but because its strata, where clearly exposed along the ocean cliffs, show it to have been undisturbed for ages. The superimposed horizontal layers, like leaves of a great book, speak of repose and a sphynx-like calm, contrasting strangely with the ceaseless worrying waves at its feet.

The data on the accompanying map are taken from one of the reports of the California State Mineralogist, and show in a graphic manner the fact that Lomaland is a cretaceous island, not improbably the highest summit of a great area now extending beneath the ocean. At a vastly later date the Tertiary formations added areas to the northern end of Lomaland and also advanced the mainland to the westward, leaving only a two-mile strip of water back of the island. San Diego river flowed into this strait and brought great deposits of Quarternary alluvium; building bars and delta till it connected the island with the mainland. It was then forced to flow either into False Bay or into Port Orient, and after the manner of rivers so situated, it alternated from one to the other, changing its outlet whenever its deposits became too high on that side.

1873, and a dyke was constructed across the alluvium flat as a protection.

In 1542 the harbor was called El Puerto de San Miguel, but when it was surveyed in 1602 it was rechristened Puerto Bueno de San Diego. When in 1835 the mission lands became the Pueblo or City of San Diego the harbor became known as San Diego Bay. Perhaps the changes of the river have forecasted that the government may finally adopt for the harbor the much better name—Port Orient.

The Trend of Twentieth Century Science

"To Be or Not To Be"?—Further Research on the N-Ray

A VERY remarkable situation has developed in connection with the N-Ray discoveries of M. Blondlot and his French colleagues.

This gentleman, whose scientific reputation is beyond question, was led to the discovery of a group of emanations from the Crookes' vacuum tube, which he named with the initial letter of the scientifically famous French town of Nancy. Further research defined the peculiarities of the rays, that they can be reflected, refracted, concentrated, diffused and polarized. His colleagues took up the matter and went further, finding many other sources for the rays than a vacuum tube; and one of them, M. Charpentier, found that all active parts of the human body were among these sources.

All was clear and above board. The methods of the experiments were fully described, together with the properties of the rays to which they pointed. No one casts the least shadow of doubt on the *bona fides* of any of the French gentlemen concerned.

But the curious part of the affair is this: Scotch, German and Italian scientists have repeated the experiments and get no results! On the one hand there are well-established N-rays with a clearly defined set of properties; on the other there are no such emanations! What is the outcome to think?

This, we imagine: That, as the rays are of the nature of light, and have been studied by means of the increased luminosity they confer on a phosphorescent screen, to assume that the French experimenters have a refinement of observation of delicate changes which the others lack. The characteristic vivacity of French perceptions may obtain as well among their scientists as their laity. It is, however, to be noted that among American scientists, Professor Elmer Gates has, we believe, also worked with the N-rays and reached one or two very remarkable results with them, recorded recently on this page. STUDENT

The Secret of Longevity—Peaceful and Temperate Habits

A WOMAN has just died in Meadville, Pennsylvania, at the age of 134, and there is the expected chorus of surprise at her extraordinary longevity. We do not know to what she ascribed her health. The views of exceptionally old people on this matter are not usually of great moment. Their minds have mostly come to dwell on some fad, or quite unimportant detail of habit, as the cause of their sustained power.

But they have ordinarily been country-dwellers, of simple and regular habits and of peaceful temperament. Enquiry would probably emphasize the facts that they bore no animosities, could not be quarreled with, had some form of religion that gave them *trust*, were of actively kindly disposition, and were fond of earth, sunlight and air. We cannot promise an age of 134 to every one who will faithfully live according to this program. But there is no question that it is the path for those who desire days long in the land. Nor need the later years be a mere vegetating.

A Comet in a Test-tube—Striking Laboratory Experiment

A STRIKING imitation of a comet's tail has just been experimentally made in a laboratory by Professors Hull and Nichols. They produced a very fine powder from ground emery and lycopodium and enclosed it in an hour-glass shaped container. This was made as nearly perfect a vacuum as possible. The powder was then made to fall from one end of the glass vessel to the other, and as it fell, the rays from an arc lamp were concentrated upon it. Rays of light, as is now known, produce a pressure upon objects they fall on. And in the experiment, this was sufficient to repel the lightest particles of the powder. Whether the bulk of it were falling towards or from the end turned to the lamp, a fine cloud in the first case followed, and in the second case preceded it.

This appears to be the same phenomenon as is exhibited by a comet's tail. If the comet is approaching the sun, the tail is behind; if moving away, the tail (which in this case used to be called beard) is in front of it: that is, in either case farthest from the sun. The repulsion or pressure of the sunlight frays out the lighter parts of the cometary mass and

pushes them away from the sun. It may be a long time yet before we fully understand comets; but this is certainly a little step. STUDENT

Color Blending by the Eye—Uniforms to Be Changed

HAS the reign of Khaki-color come to an end for military use? It seems likely, for it has just been recognized by some of the War Departments that the juxtaposition of strips of the bright primary colors produces a tone which blends much more perfectly with the landscape than Khaki, and is, in fact, absolutely indistinguishable at a little distance. So we shall probably again see the bright uniforms of old times and the wisdom of our ancestors will once more have to be acknowledged. It is strange that this power of the human eye of blending colors was not recognized by the authorities before, for there are many illustrations in nature and art.

Any artist could have told that it is a common trick to lay bright colors beside each other in spots or lines to obtain delicate atmospheric greys; and some of the new color-printing processes have utilized this principle with great success. The Highland plaid is a case in point also. Woven of lines and bars of strong colors, reds, blacks, greens, etc., it amalgamates perfectly with the broken hillsides of Scotland. Turning to the animal kingdom, everyone knows what concealment is afforded by the stripes and spots of the zebra, the giraffe and the tiger. While in South America Darwin observed a lizard which was absolutely invisible till it moved, and its colors were bright red, black, blue, etc., in streaks. STUDENT

Are the Moon's Craters the Work of Coral Insects?

ALTHOUGH the moon is but a quarter of a million miles from us, a mere trifle when compared with the distances of the fixed stars, the planets, or even the sun—with our greatest telescopes we can see masses of debris no larger than a medium-sized house—yet controversy still wages, and seems likely to wage, upon the nature and origin of the strange markings upon its surface.

The curious smooth plains, the mountain ranges and isolated peaks, the long brilliant lines radiating from some of the ring-shaped mountains (the so-called craters), the craters themselves, and even the actual shape of the moon, are subjects still of mutually destructive theories. We had supposed it definitely proved that the prime cause of these scorings and contours was fervent heat, but just as we were feeling comfortably that the question was finally settled, we were roughly challenged by being told on excellent authority that many of the chief features were due to the action and presence of snow and ice! Now comes another professor, Dr. Voigt from Germany, who advances, in *Sirius*, the German astronomical organ, the startling idea that the brilliantly white ring-mountains are the work of coral insects in long-vanished lunar oceans! He declares that if the water disappeared from the earth the tropical portion of the ocean beds would be startlingly like the familiar lunar scenery! If this unheard-of idea could be proved, it would explain a portion of the mystery of the moon, and would give us a new base to work upon. R.

Blue Light Being Used in Surgery and Dentistry

BLUE light has at last found its beneficent way into operative surgery, and especially dentistry. A despatch to the *Press* from Geneva says that Professors Redard and Emery have been using it for extractions. The patient is put into a dark room, and looks at a sixteen-candle-power blue lamp for about three minutes. The sense of pain then departs—the report does not say whether from the whole body or from the head only—and the extraction is then painlessly performed.

We want more details. It may be that there is an element of moral suggestion here. But the experiment is so simple and so entirely harmless that we hope it may be repeated in the fullest manner. A general anesthetic which does not affect consciousness as chloroform does, and is not open to the dangers attendant upon the introduction of cocaine into the spinal cord, would be the greatest blessing to surgery that the century can offer. A newspaper report credits Dr. Leduc of Paris with the successful use of electricity to produce anæsthesia. SURGEON

✻ ✻ The Stealing of Pryderi ✻ ✻

IT was when a baby prince was born; and it was the duty of the highest ladies in the land to watch with the child each night. Two nights there were faithful watchers; but the third night some of them were secretly haters of the queen. It was their right and their privilege under the law to watch that night; and when Rhianon warned Pwyll, he answered that he knew no reason why they should not have their right; and it was not well, he said, for a king to break the law without a good reason. And she would give him no reason—how could she, when he was not trusting her perfectly? But sad her heart was for him, knowing that he would bring a sorrow on himself and on his land.

Well, there the ladies were in the room, and the child Pryderi in his golden cradle beside them. And one of them was an enchantress, Lloyd's wife, who had taken the guise of a Princess of Dyfed. And by the power of her wiles and crafts and illusions of magic, she had put a sleep on all of them before the midnight hour; and it was a crime for those appointed to watch with a baby prince to sleep in those days. And before the morning a black, huge, flaming-eyed raven had flown to the window, and that was Lloyd ab Cilcoed, and the enchantress gave him the child through the window and the raven was gone.

Before dawn the ladies awakened, and the first to awake were the worst of them, and that, too, was the work of Lloyd's wife. And they saw the empty cradle, and were in great fear because of the punishment that would be for them, if it was known that they had slept. And the thought came to them that it would be well if they told some lie to hide their fault. And the lie was, that Rhianon had come to the room in the night and put an enchantment on them so that they could not stir, and that she went to the cradle and stood over it with her two arms in the air, and a mist came around her, and when the mist was gone there was no one there and the cradle was empty.

That was what they told the faithful ladies, and though they did not believe it, they could not prove that it was untrue, because they knew they had been sleeping. When the queen herself came to them, she saw what had happened. And she bade them tell the truth and fear nothing, for she knew they had fallen under spells and magic, and would not allow any punishment to come to them.

"Spells and magic, indeed, lady, but it is not we that will need protection!"

"What mean you?"

"You know well what we mean—you that have sent the king's son back by enchantments to your soulless kin folk in the wilds."

"Indeed, foolish and wicked you would be to bring this lie against me. As I am queen, I will protect you if you tell the truth."

"Sorrow on the land, if such as you are to be queen here longer!"

With that they went about and spread their lie over the palace. And there was no one to contradict them, for the faithful ladies could only say that they had slept and knew nothing.

And so the sorrow came, and the mischief was done. As for Pwyll, it seemed as if a mist had fallen on his mind so that he could not tell what to do, but sorrow and sorrow. And because of this, and because half the country would have risen against him otherwise, he did allow them to try the great immortal queen before judges who were, compared to her, like sheep elected out of the flock to sit in judgment on their shepherd. Half of them would have driven her forth from Dyfed, but half were warriors that knew her, and would not have it so. For herself, she had no defense to make, and would not stoop to argue with her accusers.

And those two sides came near to making war on each other; but Rhianon saw that the evil side would have conquered if they had at that time. So she put it into the mind of Pendaran Dyfed, her best champion, that she would do some penance until her son Pryderi returned. And the penance was that she was to sit at the gate of the palace in Arberth every day between sunrise and sunset, and whoever came there she was to tell him that she was there in punishment for killing her son.

And Arawn, the great king of the wide Underworld, heard of Pwyll's weakness, and called him to his own realm, and decreed for him such a fate as would make him as compassionate as Rhianon, and so strong and noble that he would not lack faith in her again while the sea rolled or the mountains were standing. And he sent him forth to wander through the Three Islands and through Ireland; bereft of crown and throne and retinue and sovereignty, to do service where he might until Pryderi should have reestablished his mother's rule in Dyfed. And he made him a poor man, a common soldier, without even a name to him, for did not he know that Pwyll would win a new and nobler name ere long, and at last return and destroy the last taint of dark magic in the land?

And in Arberth, Pendaran Dyfed was set to rule in Pwyll's place. And a good ruler he was, too; keeping the bad ones in check, and holding the land in trust for Rhianon and for Pwyll and for Pryderi when he should

return. And his best helpers were the rest of the warriors that had been with Pwyll in Rhianon's country. And they banded themselves together to protect the queen from any wrong or insult further than the penance they were bound to allow her to do.

And that penance she did daily, though there was never a man or woman in Dyfed that would dream of letting her carry them so much as one step. But the children came running to her whenever they passed that way, and many of them she carried, and indeed a joy it was to her to do it. And so the days and months passed.

Fragment from

SPENCER'S FAIRY QUEEN

THOUGH virtue then were held in highest price,

In those old times of which I do entreat,

Yet then likewise the wicked seed of vice,

Began to spring: which shortly grew still great,

And with their boughs the gentle plants did beat:

But evermore some of the virtuous race

Rose up, inspired with heroic heat,

That cropped the branches of the sient base,

And with strong hand their fruitful rankness did deface.

Such first was Bacchus, that with furious might

All th' east before untamed did overrun,

And wrong repressed and establish'd right,

Which lawless men had formerly fordone:

There Justice first her princely rule begun.

Next Hercules his like ensample show'd

Who all the west with equal conquest won,

And monstrous tyrants with his club subdued:

The club of Justice dread with kingly pow'r endued.

It often falls in course of common life,

That right long time is over borne of wrong

Through avarice, or pow'r, or guile, or strife,

That weakens her, and makes her partly strong:

But justice, though her doom she do prolong,

Yet at the last she will her own cause right:

As by sad Belge seems: whose wrongs though long

She suffer'd, yet at length she did requite,

And sent redress thereof by this brave Briton knight.

THE CHILDREN'S HOUR

The Raja Yoga Question Box

A NEW continent, a new nation! Men and women of deep insight, steadfast, stood ready to serve and help humanity.

1 Who was George Washington?

ANSWER—George Washington was the first President of the United States. They called him the "Father of His Country." When we needed a leader he was ready. He was a brave General and led us through the bitter struggle for Independence. Paine, Hamilton, Lafayette, Adams, Franklin and others were his comrades. They helped him to free America and lay the foundation of a superb national life.

2 Who was Mercy Warren?

ANSWER—Mercy Warren was a New England woman. She was born in Massachusetts in 1728. During the Revolutionary War she wrote patriotic dramas and poems. She also wrote a history of the war.

3 Who was John Adams?

ANSWER—John Adams was a distinguished lawyer, born in Massachusetts in 1735. He was a true patriot. His words won many friends for the Declaration of Independence when it was laid before Congress. He became the second President of the United States.

A Breath from the Seashore

A GREETING to you, Buds and Blossoms, from this shore of the broad Pacific, where we Raja Yoga boys of Lomaland spend so many delightful hours. Here we come to bathe in the ocean,

and if you have ever tried to wade out into the foaming surf you know what fun we have. Most of us can swim, and enjoy being lifted high by the waves, or letting them wash over us completely. The fresh, cool touch of the briny water gives us added strength, and the air is just full of life-giving ozone set free by the kelp which grows a little further out where the sea is shallow.

The surf is always sweeping in over this sandy shore, but so

Looking westward over the Pacific from one of the Cliff-caverns on Point Loma

clean and pure is the sand that the water remains just as clear as crystal, and we can see the tiniest objects lying on the bottom. The sea here is just full of beautiful things, and their colors glow like rich jewels through the glittering water. Stones and plants, fishes and shells are all colored in many different hues, mostly, however, in brown, green and purple, although some of the fishes are of the brightest golden red with spots of cobalt blue.

If you ever come out this way to pay us a visit we will promise you a hearty welcome and a good ducking! Hurrah!

A RAJA YOGA BOY

The Warrior and the Tiny Lives

"YES," said Meg, "people are becoming more intelligent and by and by they will allow themselves to be guided, and then they will know more about their nature and their bodies."

"A great deal has been found out, but there is still a whole lot more to know before people can keep 'health and happiness.' And what we eat has something to do with it. You know very clever people have discovered that our bodies are made up of tiny, tiny lives, and from what we eat they take nourishment and that gives the body strength; but being that kind of strength that does not last long we require to eat several times a day to keep from getting faint."

"But there is another kind of strength. All the little warriors whose hearts are filled with a noble purpose, have the power within themselves to help nourish the tiny lives—if the tiny lives are not being overfed by food."

"And sometimes," said Meg solemnly, "before the warriors can give their bodies this strength from themselves, there is a fight, a real fight."

"You see, as a rule, the tiny lives are being overfed, and they have become greedy, and when the warriors begin to give them just as much to eat as is good for them they rebel; and then comes the opportunity for the warriors to decide what is wisest and best; because of course they

are too heroic to be conquered by greedy tiny lives. So they think the matter over.

"They know quite well that the body dies even if it be fed six times a day on the very richest foods; and they also know that a great purpose never dies and that strength from that which never dies is more lasting than that which comes from food. So, as they know there is lots of work to be done in the world, they decide it would be very good for the tiny lives to depend a little on the strength that lasts longest, and they gradually train the tiny lives to know this by giving them just enough to eat and no more."

"And when the tiny lives are feeling upset, thinking they are too faint to do anything, the warriors show them their foolishness by making them do their will—and they do it."

"And then, they find out that this strength of will gives them more lasting energy than the food they wanted; you see, by not being overfed they were able to take it."

"But every one won't allow the warrior to take command, and then the tiny lives go on getting greedier, and greedy tiny lives make people too dull and stupid to think of a noble purpose, so they are quite cut off from knowing the greater and grander energy."

"So, by and by," continued Meg, "when more people are guided by intelligence, nobody will be offended when his friends say, 'No, thank you,' to whole lots of food they would be better without; for, being true

Raja Yoga Boys on the seashore at Lomaland

friends, they will want them to live as long as possible and know grand things. Indeed, they would be very much distressed to see a friend wanting to eat too much of what was offered. They would at once begin to think very seriously about being their brother's keeper."

ANNIE P. DICK

I HAVE a pet lizard named Peter, and he loves to sit around on my tent walls or chairs and tables and make sudden rushes for flies. But he is very dainty and independent and does not trouble to catch every fly he sees; he takes his choice. And the occupation never loses excitement, for it is always an open question whether he will catch the fly. He probably reduces the number of that insect about one ten billionth per cent. He was so winsome, with his wise little eye and his head cocked on one side, that one day I tried to catch him. But he gave a sudden wiggle and I had in my hand a warm scaly tail all wriggling and twitching, and Peter had disappeared. He preferred liberty without a tail to possible imprisonment or death with. They say he will soon grow a new tail, as useful and as ornamental as the old, and may he keep it! E.

AT SUNRISE

ALLAH supreme, beneficent,
Who fashioned suns and worlds beyond,
Allah of grace munificent---
Behold the wronged.

At dawn of day I lift mine eyes,
Where, in the blushing of the east,
I gather hope of Paradise---
Low at thy feet.

Stars fade before thy glories rare,
In purple hues the clouds adorn,
From darkness mounts the sun in air,
And breaks the morn.

Lo, Allah, on my fainting heart,
Let full thy beams of courage shine,
Of heavenly joy grant me a part,
Allah, Allah, divine.—*Selected*

Obedience to Principle

It is painful to behold a man using his talents to corrupt himself.— Thomas Paine

IN this quotation Paine states a truth not generally recognized. The law of nature is "Work with me and great shall be your reward; work against me and that which you have shall be taken from you." Use your talents in obedience to principle and they shall increase; use them against principle and you corrupt yourself. Nature cannot be trifled with. She rewards for unselfish service rendered for her, and sends punishment and loss for all action against her.

Brotherhood, and the virtues we are all familiar with, are not alone mere mental creations found necessary to well-ordered society, but are directly related to the great basic principles of life, therefore of vital importance. To make these principles the foundation of action is to steadily establish character, and through character the soul acts. Obedience to principle is the right royal road—the only road to enlightenment. The road of indifference to the common good, of self-seeking, the path of blind belief, is the path of misery and ignorance, and results in loss of character and in spiritual death. No true teacher ever taught the path of ease and selfishness as the way to the truth. "The kingdom of heaven suffereth violence and the violent take it by force," is a Biblical truth too often shelved and misunderstood. "The kingdom of heaven is within you," said Christ, and is to be taken by him who is devoted to principle. "Behold I (the soul) stand at the door and knock," and through the voice of conscience proclaim and make clear the path of duty—"To make Brotherhood a living power in our lives." And the kingdom of heaven is attained when the soul, the universal savior, is resurrected and floods with its wisdom and joy the mind of man and gives that "peace that passes all understanding."

Love thy brethren of all nations as thyself, is the great ideal requiring the devotion of our hearts. Let us not imagine that we understand all that Brotherhood, in its real sense means, or the best way to work for it. We have to get rid of much that is vague and sentimental in our character. Brotherhood is spiritual unity, is the greatest of all things to be conscious of, because it includes all there is to be known. Yet there is a royal road—the only road—and it leads to the heart of the universe, it is the road of self-purification. Every removal of an error from our own mind and heart, every effort at self-control, and every victory helps the human race, and as our vision under this wise and safe treatment gets clearer, we see wider and better avenues of helpfulness.

There is a great need for clear judgment, we are under a psychological influence of false values; loss to us means too often loss of material possessions alone, and to him who suffers such loss we have nothing but pity, but for him who acts against good principle and thus suffers a loss

of character, what words can describe his loss? And in the eyes of truth who has suffered the greater loss? To condemn a wrong act is right, but to condemn the actor is quite another matter. Our condemnation unconsciously to us discloses our character, and proclaims to our fellow men that upon which we place the greater value, and consequently the probable course we would take if circumstances offered a similar choice. All this arises out of a false worship of the body and all that adds to its comfort, the soul not being understood and placed in the background, to be thought of once a week perchance as something to be saved, and not thought of and realized as the vital active source of all that is good and worth having in human life and man's real self.

To be obedient to principle consists then in opposing with the divine power of the soul the failings and selfishness of our baser self to the permanent benefit of all that lives; become, in the words of Shakespeare:

Brave conquerors, for such you are,
That war against your own affections,
And the high army of the world's desires.

E. J. W.

Self-Reliance in the Light of Raja Yoga

SELF-RELIANCE is reliance on the Self, and in the light of Raja Yoga, it is reliance on the Higher Self, the Self of all beings. One who has true self-reliance will rely on this higher and universal self, not only in himself but in all. In the Raja Yoga training of children this is done. They are taught not only to rely on this self in themselves, but to help others to do the same, recognizing the true self in all. They are also taught to control and use the lower self in service of the higher, for only so is it to be relied upon. One would not trust a wild and untrained horse to take him safely to a desired destination, but with the animal in control and the reins in hand it may be safely relied on. So it is with our lower self, it may be relied on only as the higher controls and guides it.

If we always relied upon the true Self while doing our best, however inadequate it might seem, how much worry, unhappiness and wrong expenditure of energy we should be spared. True self-reliance saves one from worry with its waste of energy, and puts the joy of life in all, while better enabling the Self to work through us with its wisdom, power and love.

To appeal to the Higher Self in others and rely upon it, helps them to realize it in themselves and rely upon it also. It is said of Lucretia Mott that after she had delivered an antislavery lecture in Boston, she found upon leaving the lecture-room a mob awaiting her in the street and she was advised not to attempt to go through it; but she said she was not afraid and that this friend would see that no harm came to her, saying which she took the arm of one of the mob and he saw her safely through the crowd. She relied on the Higher Self in the man and not in vain. Many similar instances might be given showing how the better self in man steps forth when a trusting appeal is made to it.

The more nearly we approach the kingly union of the purified lower self with the higher, the greater will be our self-reliance, and the better service shall we be able to do in the world. BANDUSIA WAKEFIELD

We have never attained or even understood the extent of the powers of the human heart.—H. P. Blavatsky

Silence as an Imperial Function

THERE is something sublime in the reported custom which formerly required the Mikado of Japan, during the reign of the Shoguns, to spend a certain number of hours each day seated in motionless silence upon his divine throne, "in order that the nation might have peace." He was to them an actual deity, the embodiment of the national consciousness and they believed, with good reason, that if the national spirit could be quietly calm for a while every day, there would be little danger of civil war or other internal trouble. Very likely we should find similar results in our personal affairs if we indulged in a few minutes of silence each day. Such a time, if observed daily, soon becomes the vitalizing, sustaining center of the day.

It is a bath in Eternity, cleansing from the worries, hopes, tempers, fears and sorrows of Life, and renewing strength for the everlasting battle. To be silent that we may have peace; by giving the tense brain or over-vitalized muscles an opportunity to relax and begin again. It is a simple thing to do and easily within the reach of every one, and well worth trying, for it does bring rest and peace. S. E.

"THE WHEEL OF LIFE"

by LONGFELLOW

NOTHING that is shall perish utterly.
But perish only to revive again
In other forms, as clouds restore in rain
The exhalations of the land and sea.
Men build their houses from the masonry
Of ruined tombs; the passion and the pain
Of hearts, that long have ceased to beat, remain
To throb in hearts that are, or are to be.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question

Define Mind, Soul and Spirit.

Answer

These words are used so vaguely and variously that they cannot be said to have any fixed meaning in our language today. But we must try to give some definite notion of what a Theosophist would mean by them.

The ordinary idea in the world today would probably be that the mind is the conscious or thinking part of man, as distinguished from his visible body. The words Soul and Spirit would be used indiscriminately to denote the immortal and divinely-illuminated part of man. Religion, in the theological sense of the word, is not philosophical, and does not distinguish between these two words.

The chief error in this, from the Theosophical point of view, is in making too sharp a distinction between mind and soul, and in regarding the soul as something altogether disconnected from this life, and belonging to heaven. This removal of the soul from actual life and making it a mere abstraction belonging to a vague future life, is the false notion introduced by dogmatic theology. To a Theosophist the Soul is the real man, and is trying to manifest itself here and now in this life.

A Theosophist would define man as a Soul inspired by the Divine Spirit, and using a bodily tenement or instrument as a means of operating on earth.

The word Mind refers to the conscious intelligence of man—the field of thought. The mind hovers between the divine and the animal, being inspired, now by selfish thoughts, now by noble impulses.

Thus we have the Soul as the real man, the true self, illumined by the divine spirit. But this real self is obscured by the false self which takes form in the *mind* owing to the mind's connection with the lower nature.

The destiny and duty of man is to blend his mind with his Soul, so that the mind may be redeemed from the delusions and bondage of the lower nature, and the whole man become a conscious power for good.

The vital point is this: Let us remember that we *are* Souls, pure and strong, illumined by divine knowledge, filled with divine compassion. It is our untamed passions, and our ignorance of the workings of our own faculties, that fill our mind with delusions and prevent its union with the Soul. But we can choose, and we can aspire, and then the Soul will be able to overcome and dispel those delusions. Then, when the Soul guides, when there is perfect balance of all the faculties, physical, mental and moral, the Mind, Soul and Spirit will work together in perfect harmony and in accord with the Higher Law of our being. STUDENT

Question

Do you endorse the new theories about eternal life in the body being possible or desirable? If death is the law, what age should be the full allowance for man?

Answer

The full allowance of life possible to the human body must vary widely according to racial peculiarities, racial age, climate, and other factors. But it is certain that in no historic times have these limits been reached. Assuredly they will not be reached by ourselves for a long time to come, even if we revolutionized our habits and adopted wisdom as our guide. The number of sins and mistakes made by us all, tending to shorten physical life, is almost beyond enumeration. We are in every way out of tune with natural law.

Suppose it all corrected; suppose that from birth we had never eaten too much, nor the wrong things; never breathed impure air, been dirty, nor worn the wrong kind of clothing; never committed any act, nor thought any thought called immoral; had never sulked, lost temper or quarrelled; had lived in the sunlight and fresh air instead of crowded

cities; never poisoned ourselves with stimulants and narcotics; had kept our hearts full of love, charity and compassion; had trusted the divine law, and never worried; had never feared death nor anything else; had habitually walked with our souls and in the light of immortality; suppose that we had been perfect in all these things—there would remain the fact that two parents, and four grandparents, and eight great-grandparents had not lived such perfect lives, to put it mildly; and that the influence of that "not" cannot be wiped out in one generation.

From these considerations, carried out as far as they will go, we can get some dim idea of the figure by which to multiply the Psalmist's poor little seventy years in order to get a right idea of the length of days possible to man when he shall have learned wisdom.

At this point another vista opens. Theosophy does not teach the possibility of eternal life in the body. But it does teach that at some other epoch than this sin-laden one of ours, man may have learned to replace the wear and tear of his body *as it occurs*, and much more perfectly than now. To some small extent we do it; but does it not seem possible that, far hence, when we have attained to right living, there may come such an understanding of the body that its decay is corrected cell by cell and moment by moment? We do not mean the kind of understanding that science gives us; that is only an outside understanding. But the same kind of real understanding as we have of the way to move an arm or a leg, and which is altogether beyond the possible teaching of any book or person. We only experience death because we cannot fully replace what is worn out; at last the deficiency is so marked that some important organ cannot go on with its work.

More than this can hardly be said. It seems probable that notwithstanding all possible purity of life, and the application of all possible wisdom in dealing with the body, its life centre would *at last* need rest and recuperation. No wisdom can transcend the eternal law of oscillation and rhythm. But death under such circumstances would be nothing like the process we now know by that name; so unlike as to make all speculation of ours absurd. It seems only safe to say that any idea of it we can now form must of necessity be wrong from its great imperfection. In the meantime there is plenty of work immediately at hand. H. C.

Question

What evidence has Theosophy to offer that we lived in the past and will live in the future, outside of mere surmise and conjecture? Don't you have to call in the old article named faith, which the priests require now as well as in all past ages to bolster up their claims? Please explain and advance reasons, other than the silly and usual childish ones, for instance, that many persons can remember their past life on the earth, and that a past life on the earth can only account for the work of men of genius. Why not tell us how and in what way Theosophy knows these claimed facts?

Answer

The attention of this questioner is invited to the great amount of literature on Reincarnation, published in many languages, throughout the last thirty years.

But we may now briefly say that we accept the theory of Reincarnation because no other explains the difference of human character; no other indicates how man can discharge his great duties, namely: the understanding of human life, the worthy living of our present human life, and the compassionate helping of his fellows. We do not see how any of these duties can be carried on elsewhere; nor do we see how it is consonant with justice that by the mere fact of death man should be allowed to leave so many of his accounts on earth permanently unpaid, so many inharmonies between himself and his fellows permanently unharmonized. The place of debt must be that of payment; the place of quarrel, that of reconciliation; the place to help, that where help is needed. C.

THE true spiritual and primitive Christian religion is, as much as the other great and still older philosophies that preceded it, the light of Truth—"the life and the light of men."—H. P. Blavatsky

WHEN Life shall become to us a continuous and uninterrupted hymn of praise to the Great Eternal Spirit; when our hearts shall beat in tune to the exultant pæan of thanksgiving voiced by all Nature; when our lives shall so swing in unison with all that lives, that our being becomes like one grand sweet song—then, indeed, shall human strife and human misery flee away, and the Universal Brotherhood of Humanity shall be established over all the earth, and shall be recognized as an integral part of the Universal Fitness of Things. "Phacops Nau-
tafabulosus"

DEAR —: I enclose something for you to study!
— has full details; but I would like your opinion
on it. It was caught (!) off coast of South America. Notice dorsal
and caudal fins, and also HEAD, shoulders, arms and CLAWS!!! Is
it fish, flesh or fowl? ??? Or none of these?!!

Yours,

P.

PHACOPS NAUTAFABULOSUS

DEAR —:

I showed it to M— and M— he
Said such a thing could not possibly be.

I showed it to W— and W— insisted
That such an enormity never existed.

We wakened up E— as he solemnly dozed
Whose sarcastic opinion is duly enclosed.

Then J. the Uproarious pranced into camp
And he said the thing was a damnable vamp.

R— suggested that third race man
Was constructed on this thing's general plan.

But C— said nothing, for safety lies
In saying of nothing but looking wise.

Abomination of
Desolation

DEAR —: I think the cut which you send is the
"Abomination of Desolation," spoken of by Jeremiah;
for that, as you know, had "dorsal and caudal fins and halibut, psal-
tery and all kinds of music." If it is not this, it is perhaps the "as-
trally-precipitated" picture of one of Mr. M—'s fish stories. There
is a look in the thing's eyes as if it wanted to be true and couldn't.

I believe I could write an article all around it.

H. T. E.

"Keep
Still"

Keep still. When trouble is brewing keep still. When slan-
der is getting on his legs, keep still. When your feelings are
hurt, keep still, till you recover from your excitement at any rate.
Things look different through an unagitated eye. In a commotion
once I wrote a letter and sent it and wished I had not. In my later
years I had another commotion and wrote a long letter, but life rubbed
a little sense into me and I kept that letter in my pocket against the
day when I could look it over without agitation and without fears. I
was glad I did. Less and less it seemed necessary to send it. I was
not sure it would do any hurt, but in my doubtfulness I leaned to ret-
icence and eventually it was destroyed. Time works wonders. Wait
till you speak calmly and then you will not need to speak may be.
Silence is the most massive thing conceivable, sometimes. It is
strength in very grandeur.—Selected

Bagpipe
of Scotland

VERNON BLACKBURN, a musical writer of some consid-
erable note, says the bagpipe finds its most appropriate
expression in death music, in the dirges of Scotland. He says:

The musical wail of the Gaelic Muse is among the ineffable realizations of tragedy
in the world. She touches the depth and height of sorrow; and fit companion
in that expressed grief is her national instrument. . . . As you wait by the
coffin of the dead you hear the dim sound of the coronach as it grows keener to
your hearing. The pedal note is a long monotone of grief, an enduring moan
for the thing that has been. The melancholy and windlike harmonies that are
blown above that note hither and thither fall to the varying mood of the
mourner, who finds, it may be for the first time, with wonder and dismay, that
to the human heart even the sense of loss must, in its acutest knowledge of the
present, take a relief and a change which seems almost a treachery. Such music
as this, thus played, and on this instrument, once more, in its gloomy and mag-
nificent completion, shows that in the mourning over the dead, Scotland triumphed
unto the attainment of the culmination of her musical art.

THE simplest truths are mightiest in their force.

LET right deeds be thy motive, not the fruit which comes from them.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

■ American Indian and the Filipinos

THE World's Fair has been the direct means of bringing to light something which otherwise might not have been known for years—possibly never, in view of the disappearing races of the North American aborigines. Its bearing on the ethnology of the races of this continent is apparent by the subjoined newspaper clipping:

"Naket cheochefkte?" said a stylishly attired American woman to an Igorrote Indian in the Philippine village at the World's Fair this morning.

These words, spoken in the language of the Creek Indian, mean "What is your name?"

The Igorrote was sitting lazily smoking in front of his hut. When he heard the words he sprang to his feet and answered in his native tongue, "Are you a Filipino?" The question was asked in a surprisingly eager manner.

Mrs. Edward C. Merrick, who had addressed the Igorrote, is one-sixteenth Creek Indian. She was for several years the official interpreter for the Dawes Commission.

She talked to the Igorrote about an hour. He could not understand a word of English, but could carry on a conversation in Creek readily enough.

The Igorrote was surprised when she told him that it was the language of the Creek Indians. This discovery seems to indicate that the East Indians and the North American Indians must have been of common blood.

The Vanished Pacific Continent

The supposition that there formerly existed an enormous continent where now the Pacific rolls its waters, is today practically a scientific and established fact. As a spur of this prehistoric Pacific continent, now given the name of Lemuria, ran around to the south of the present Africa, then up north past the British Isles towards Greenland and Norway, which later formed part of the succeeding continent of Atlantis, the portions of earth above the surface of the waters of the then oceans were sufficiently contiguous to allow of inter-communication and transmigration, as well of human and animal as of plant life. With this connecting land in view, prior to America, which, however, rose in portions before the final and complete submersion of Lemuria, the racial affinities between the head-hunting Igorrote and scalp-hunting redskin, are less surprising. Add to this the Atlantic continent succeeding Lemuria as a habitat of life in all its forms, and the chain of evolutionary progress may be followed with scarcely a break. Now that it is known that the "Turanian" or "Scythian" tribes of Eastern Europe and Central Asia had many and very remarkable habits resembling those of the American nomad and sedentary tribes of red men; that their

■ Turanian & American Languages

languages and dialects, both Turanian and American, had identical words for the same thing, and similar terms of phrasing to express the same ideas; that several of the peoples living in Asia Minor and Western Asia wore the typical American scalp-lock—the questions therein involved seek a more definite answer than is given usually by our text-books. Tzetzes says that the Solymi of Asia Minor were "*trochokourades*"—"shaven all round the head;" and Herodotus (iii: 8) mentions that the Arabs had anciently the same custom. Indeed, Jeremiah (ix: 26) says the same of the Edomites, the Moabites and the Ammonites, who were *Semitic* peoples.

A recent writer, furthermore, brings forward startling proof to show that many of the nomad Scythian tribes practiced the habit of shearing off the scalp-lock, or tuft, of their fallen enemies, thus proving that scalping was not purely a redskin custom.

It is interesting to recall here that the astronomical notions of these peoples, both in Asia and in America, had identical and similar names for the same objects: as, for instance, the naming of the constellation of the "Big Dipper" by the term of the "Bear," used by the tribes of "High Asia, the Phœnicians, Arabs and Greeks, and by the Iroquois" (Camille Flammarion, *The Heavens*).

The riddle of peoples separated by thousands of miles of ocean using commonly, identical words, ideas, and abstract terms to express the same objects, becomes understandable and intelligible once the existence of the two great prehistoric continents of Lemuria and Atlantis is granted.

G. DE P.

Philæ Inundated --- Frontispiece

THE cover-page of the NEW CENTURY PATH this week shows a very characteristic view of the inundation of the island of Philæ. The rising of the great stream, due to the discharge into it of its great affluents, has reached its height. Many of the constructions at Philæ are under water, wholly or in part. The periodic rise and fall of the Nile is like the flow of some great natural artery, and seems like the consequence of a diastole and systole of some great natural heart of life, whose pulsations are not in seconds but in seasons and years.

Sacred Philæ was one of the mystery places of the ancient Egyptians. Today there remain on the island, which is itself not more than 400 yards long, some of the finest and best preserved remains extant. Four large and imposing temples, a long colonnade, and a number of obelisks, with a Roman triumphal arch and other antiquities make a whole of remarkable interest and exceeding beauty.

Philæ is only 6 miles from Aswan, the ancient Syene, s. s. w. of the latter place. It is close to the Nubian frontier. The famous island of

Elephantine, which the Arabs call "Jezeeret-el-Shaf" (islet of flowers) on account of its great fertility, which is just opposite to Aswan, is said to have been connected by wire with Philæ in days of old. Such is the tradition. Both at Philæ and at Elephantine are famous Nilometers, though the one at the latter place was the renowned Nilometer mentioned by so many ancient travelers.

Beautiful, mystic, sacred Philæ! Built on the bed-rock of an islet in mid-stream. Surrounded by the yellow life-giving waters of the Father of Egypt, it is yet to this day covered with remains which in some instances are nearly perfect. Who has not seen a picture of the "Kiosk," or "Pharaoh's Bed"? But the temple of the Lady of Philæ is older, far older, as the Kiosk is of the time of the Lagidæ.

The temple pylons of our Lady of Philæ rise upward, covered with the cunning craft of the stone-cutter, and raising one's mind by their silent massive strength. Peace and happiness are like the keynotes of this strange old place.

The turquoise sky overhead, the yellow-gold sands on all sides, the green-yellow water slipping silently and swiftly by, and the faint hum of the cataract's swirl reaching the ear—the whole remains with one forever.

STUDENT

Public Moral Health

"EVERYBODY," says New York city's attorney, Mr. William T. Jerome, "who has studied public life, has been appalled by its corruption."

No one speaks with more authority, with more intimate knowledge of his facts, than he; and few have waged war against the conditions he exposes, with more courage and persistence.

Naturally he asks, "why should public life be so debauched?"

His answer is as startling as his own question: "I have come to the conclusion that it is only a reflection of private life; there is 'grafting' (bribery, speculation, etc.) everywhere; this sort of thing runs through everything, high and low."

"A reflection of private life"—a charge against a whole people! Not of course against each and every individual person; but a charge against a very large sprinkling amid the nation; and a charge (tacitly made) against the great mass of the rest that they do not hold their ideal of public life high enough to make corruption impossible. And this again because they do not hold their ideal of *private* conduct high enough.

In the ancient republics, at the height of their power and splendor, every individual felt himself a part of the community, and so acted; holding his private interests second.

That principle would make a very fair working basis of morality, even apart from anything else. But today our very morality is selfish and individualistic. Each aims at being moral to himself (when he does even so much). He does not steal (when he does not) in order that *he* may not be a man who steals, not that there may not be *other* men defrauded by him. He is thinking of himself, is selfish in his very virtue.

Civic life is stained with the same. The leading citizens will work for a city park, not so much with the city in view as that *their* business or pleasures will be furthered by a beautiful city. Of how few is it the aim to realize the ideal of a beautiful city utterly apart from any selfishness! So far is it gone that we think it natural and inevitable that the "city fathers," in consulting together for the good of their common home, should each, at the back of his mind, have more or less completely *his own* interests at view. We are accustomed to find selfishness everywhere; we expect it, are unshocked by it.

So we say that apart from any religious or other basis of private virtue which each citizen may have, there must be another. And that other is a love of the welfare of the community in which he lives and of which he is a part; a love so real that *when he is upon the business of the community*, in the council chamber, at the voting station, or wherever, *it shall be as a member of the community he is acting* and not as a private person, not as a possessor of private interests, thinking of the whole, self dropped from thought.

Gradually his ideal will rise; gradually it will spread; gradually in the smaller towns and communities a spirit will arise like that of the ancient republics, and will spread to the larger; gradually an atmosphere of public life will be created in which "grafting" and speculation are impossible. A power will have been evoked whose action will make dishonesty show its

own hand, and at last fear to be. The word "politician" will lose its scandalous significance, and as a designation be a certificate of respect. And the general public betterment will react upon private life and sweeten the whole of the intercourse of men.

STUDENT

"Haunted Machines"

THE word *machine* does not usually evoke ideas of spontaneity, or individuality of character. And although more than one romance writer has made an ensouled machine the hero or villain of his story, it is only as such and for that time, that we accept the idea.

Every inventor, however, whose experience is large, knows that from time to time he constructs a machine which will not do what is expected of it, or does what is not expected; yet is in exact structural similarity with others whose behavior is normal. And in many of these cases he never reaches an explanation. Watches are common instances of this. A writer in a current railway journal gives a number of cases in point. Here is one by way of example:

Another and even more curious instance of the unexpected was that of a well-known electrician who built and tested for three years a certain piece of apparatus. As it worked perfectly, a large amount of capital was put into buildings and plant for the production of these pieces of apparatus for the market, and many were built; but the manufacturers were totally unable to reproduce the original either in effect or durability.

In another case, two similar boilers were connected by necks at top and bottom, and a fire built under each of them, the boilers being about half full. The water, without apparent cause, behaved very strangely, all going into one boiler and then into the other.

Possibly the Psychical Research Society would like to take up such cases as examples of haunted machines.

STUDENT

A Suggestive Libel

HOW little do people *interpret* the signs of the times, as well as *read* them! There is a war in the East: what forces are contending? Japan and Russia, of course! And behind that? How many see what is bound up in the vast issue of the struggle?

A story is *said* to have appeared in a pamphlet prepared by the Cuban Commissioners to the St. Louis Exposition, to the effect that America was *bought* into her undertaking for Cuba's freedom. It is *alleged* that when the Cuban Government saw this statement they ordered the suppression of the pamphlet.

No one seems to be able to run to earth the author of this story. What is its object? Not especially to insult America, but to represent Cuba as insulting America.

Imagine the statement widely believed here that official persons in Cuba were saying that we were *bought* into our aid of that country. Much ill feeling would be roused, and more or less estrangement effected. It is not the first attempt at such estrangement, nor will it be the last.

If they are successful, the result will be that Cuba *again lies unprotected* save by her own courage. Should it turn out, an almost absurd supposition, that there *was* an immediately suppressed pamphlet containing the statement—the statement that Señor Palma distributed bonds before the war, in America, among influential persons to buy their aid—then one wants to know a good deal about the persons who wrote it, their religious and political connections, and the underground wires linking them to what organization.

Señor Palma utterly repudiates the statement. "Not a single bond," he says in his dispatch, "was given by me to any person whatever in the United States, except for value received, and none were given to any one connected with the American Government. Any such insinuation is an insult, not only to the United States, but to the cause of liberty and humanity which did so much for Cuba, and also to me personally."

OBSERVER

The "Searchlight" Now Ready

THE THEOSOPHICAL SEARCHLIGHT, issued August 15th, is for members of the Universal Brotherhood only. It contains general information of the work of the Theosophical Movement throughout the World, and also important instructions necessary for the advancement of The Universal Brotherhood and Theosophical Society, in all departments. The first number of this series is now selling at 15 cents a copy. Mail your address and 15 cents to Clark Thurston, Esq., Manager, New Century Corporation, Point Loma, California.

Some Views on XXth Century Problems

The Red Indian in Canada

AN expert inspector of the Canadian government, a man who has for years traveled among the Indians of that country, altogether denies that they have any special susceptibility to disease. He admits that great numbers have been wiped out by smallpox, consumption and measles, even in some cases whole bands. But he points out that this occurred before the Department of the Interior, whose treatment of the Canadian Indian has always been eminently humane and creditable, had had time to organize medical services for the prairies. The other cause of the mortality was also casual, not essential. Of old, the Indian kept his wigwam and its environment hygienically clean by the simple process of moving away from it into another district. But now he cannot be a nomad; he must stay on his reservation. Or he does not roam because he knows that game is not now to be had by that process. So the still uncleaned wigwam and environment *now* begin to give trouble and breed disease.

This theory occurs in the course of the official report from the Ministry of the Interior. The Minister points out that there are Indians in every stage between barbarism and high civilization. Dr. Oronyatekha is head of the World's Order of Foresters and was educated at Oxford at the personal charges of King Edward, then Prince of Wales. There are Indians in the professions, in commerce, in the civil services, and in factories and mechanical trades. The great bulk of those who were once in half starvation, as hunters on the plains, are now, thanks to the government, well supplied with cattle and rapidly learning the arts of agriculture. In regard to the question of the education of the Indian, we note that Minister Sifton rather favors a very moderate education of a large number than a full education of a few. However educated, he thinks the average Indian cannot compete with the white man as yet; he had better go back with a measure of education to his own people. There, his contact with white men, and the awakening of his faculties, will tell favorably upon the rest. Whilst any Indian with any special aptitude or genius will make that felt and will be enabled to pass forward to a higher education useless as yet to the bulk of them.

Altogether the report is full, careful and sympathetic and reflects much credit on the Department and on the Canadian government. H. C.

The Long March of Civilization

A WRITER in a California contemporary derives much Californian comfort from a consideration of the westering tendencies of empire. The Caucasian races arose in Central Asia. Then came the great civilizations of Babylon, Assyria and Phœnicia. Then Northern Africa, Greece and Rome. Then Spain, and then England. Then the flame leaped the Atlantic and sojourned—burning at its brightest—in East America. Now, he thinks, it is crossing, or has crossed our continent, and on the Pacific coast will glow with an intensity beside which all its former efforts will pale. One can only ask—What hinders it, since it has leaped one ocean in a century and a half, from leaping another? There is an older light than the Caucasian in Asia, one of whose beginnings history knows nothing—the Chinese; and another yet older than that. What if the three should elect to blend on *that* side of the Pacific, and give to us Californians but the honor of its first reflection? Yet there are civilizations spiritual and civilizations material, and they may not have the same headquarters; nor may the former trace the same path of circumambulation as the latter. The essential meaning of the word civilization is *the power of living together*, and all material advances are but the secondary effect of that. We use the word as if it required no definition or qualifying adjective. Our whole attitude towards the past, our quiet ascription to it of a barbarism that was complete in proportion to its remoteness from now, is false and stupid because of our confusion of civilization with complexity of material life. It sometimes occurs to us that there were very high civilizations in the remote past which would have left *no* traces had not some of their wise, foreseeing the future, left such traces as Stonehenge and Carnac; structures whose proper interpretation waits yet. The Bacon-Shakespeare Controversy

MR. CHURTON COLLINS has been making some strong remarks about the people who maintain that Bacon wrote the plays of Shakespeare. He says: What . . . the Baconians ask us to credit . . . is that a man, whose conceptions of love, of beauty and of friendship found . . . exact expression in his essays on those subjects, . . . was the author of "Venus and Adonis," of the Sonnets, of "Romeo and Juliet," and was the delineator of "Viola," of "Portia," of "Rosalind," of "Hermione," of "Imogene;" that a man without a spark of genial humor was the creator of the "Merry Wives," of "Falstaff," of "Mercutio," of "Touchstone," and of "Dogberry;" that a writer in whose works there is no trace of any dramatic imagination, of any light play of wit and fancy, of any profound passion, of any esthetic enthusiasm, transformed himself into the poet of the marvelous dramas in which all these qualities are essential and predominating characteristics; that the master of a style, the notes of which—in color, in tone, in rhythm—are unmistakable, became at will the master of a style in which not one of these notes is, even in the faintest degree, discernible. . . .

And so on. Mr. Collins' point seems to us to be well taken. But they raise a much wider issue. We think that there is an unconscious but quite real instinct actuating the Bacon-Shakespeare people, inspiring them—not to add glory to Bacon, but to take it from Shakespeare. *It is a subtle and refined form of the persecution instinct*; it arises, according to the law of induction or reaction, against any one who emerges from the deeper life with a message for this one. It animated, for example, the persecution of Bruno, of Joan of Arc, and in our own time of H. P. Blavatsky. Men go a certain way with a message-bearer, and then under the impulse of a force they do not understand, swing back into a reaction. And this takes every form from the grossest to the subtlest. Shakespeare was an educator; exactly how much he did to broaden the consciousness of his own time we, who have come into his work as our ingrained heritage, may not now fully appreciate. But it must have been a very great deal, amply enough to arouse the opposing force. May it not be this whose now harmless and belated and absurd ripples, are subtly inspiring the people who fling their little pebble against a great figure? STUDENT

A Somewhat Belated Theory

A PROFESSOR of an eastern University has published a book—*Adam and Eve*—whose main contention is so nearly obsolete that its advancement almost brings it to us as a novelty. His theory is that the Adam and Eve story in Genesis is not myth but history, exact, cold-drawn history of the origin of the human race. First comes something with which we cordially agree:

. . . The evolutionary hypothesis that the human race began in a savage state and slowly worked up to its present condition . . . is, in the presence of established facts, an assumption as groundless as anything one can imagine. On the other hand, a sudden emergence from the savage state to one represented by the ancient civilizations of Assyria, Babylon, Egypt, and that of many other countries, is not an emergence of which history shows any evidence. Hence, the theory that the human family began high up in civilized and social life, but afterward suffered a decadence, has probabilities in its favor that amount well-nigh to an absolute certainty.

Quite so; but it does not therefore follow that the human family began with two people, one made out of the other, and that they fell from their primeval perfection through indulgence in an apple. It may be, as the Professor states, that,

All discoveries in the last twenty-five years or more, are in harmony with the Bible record, that the first beings on earth that wore the human form had a body just as perfect, and a brain or an intellect just as capable of working, and a language just as complete in expressing thought as those of any man now living.

But this is so small an element in the Bible story as to make it almost irrelevant among the points of a brief for that. The Professor wants the literal six days and all the rest of it. We agree with him that the story is truth, and even in a sense historical truth. But to the symbolism that it contains, and to the explanation of its history, we maintain that Theosophy alone can give the key. STUDENT

Art Music Literature and the Drama

THE CORONATION AT EDFU

Temple at Edfu—Egyptian Architecture

IT is on the walls of the Temple at Edfu that we read the inscription by which Thoth commanded that over every doorway be graven the emblem of the winged globe. The solar disk, light, life, growth—the royal asp, guardian of treasure spiritual—on either side the outstretched wings of the "Great Bird." The temple still stands, one of the best preserved in all Egypt, its giant pylons typical of Egyptian architectural forms, its incised mural carvings, typical of that decorative treatment of the human form whose secret Egypt has yet to teach us—what wonder that the sunshine, pouring into the apertures

of its courts, should give an effect of mystery and of magic? Nowhere have we better examples of the peculiarly decorative use of the human figure than in the temples of old Egypt. Here the lowest of bas-reliefs, there the simplest of incised outlines; again, the slightest intaglio.

The Egyptians understood better than we understand today how to combine the symbolic with the æsthetic. The figures upon the walls of Edfu, as shown in the illustration, are of the most refined type. What wonder that the Egyptians held to their belief that portraiture had an unseen, though very real, influence on the destiny of the soul?

When one recalls the marvelous Parthenon frieze, where figures of men and gods and animals are so handled as to secure an unparalleled decorative effect, one involuntarily recalls the carvings of Edfu, and upon other of the temples of old Egypt. What wonder that Solon, when on a visit to Egyptian priests, heard from their lips these words, "You Greeks, you are but children—children!" STUDENT

THE palette of the old Egyptian artist, so archaeologists have discovered, contained seven depressions, each formed like the royal cartouche, each containing one of the seven colors used. These were, so far as we know, white, yellow, green, red, blue, black and a dark brown.

Of the yellow there was a bright tone and a dull; of the blue, three kinds were chiefly used, the azure, a greenish-blue, and a dark color approaching indigo. The reds were dark and somewhat orange in hue, all the colors being, in fact, characteristically Oriental.

The knowledge of color values possessed by the old Egyptians, particularly of the handling of colors in juxtaposition, prove them to have possessed a knowledge of color and harmony yet to be rediscovered by ourselves. Thirty, forty, perchance even sixty, centuries have passed since some of their brilliant decorations were completed, yet the colors remain the same, here brilliant, there severe and dun, very few faded, apparently, and always supremely decorative. Their flat, severely outlined masses of color give us, though modern art would not have admitted this fact fifty years ago, the secret of successful mural decoration.

The temples of Philæ, mainly in the capitals of their columns, give many exquisite developments of the lotus theme, that *motif* of nearly all Egyptian decorative forms.

FINE voices, it is said, are not frequently met with in those countries where meat diet prevails. The sweetest voices are found in Irish women of the country and not of the towns. Norway, a country of flesh-eating people, is not a nation of singers; but Sweden, where the peasantry and the middle classes live chiefly upon fruit and grain, has produced some wonderful voices. We have only to look at nature and observe. Carnivorous birds croak; it is the grain-eating birds who sing.

Philæ—Once the Home of Humanity's Helpers

A TINY island just beyond the limits of Egypt proper, rising suddenly, as the sun might rise in a dream, in the midst of the turbid waters and red granite rocks of old Nile. A few date palms, ruins, a waste, the Temple of Isis, a smaller temple and—what is there to inspire and hold one captive? Scarcely a quarter of a mile long, perhaps five hundred feet in width, the whole tiny isle could be traversed in an hour's time; yet time and space are lost sight of by one who goes to Philæ with anything like the heart's own fire burning within him. Haunted by more than memory, verily, one reads on every side the truth that Philæ was and is a sacred place, *once the templed home of those who lived to help humanity, but were driven away by man's ingratitude.* Now waste and desecrate, yet is it not desolate, for locked within the silences it still holds safe all the fragrance of that rare flower that bloomed within its temples in the past. Philæ, even today, is one's ideal of a sacred place. To see it in the sunlight, to see it at night, to see it—rarest chance of all—during the inundation of the Nile, is to come close indeed to the secret of things. There is a serene, colossal ease in Egyptian architecture, and this one feels when looking at these water-girt temples. The glory and the wisdom of past civilizations, one of the centers of which—a very light upon the pathway of the world's life—was Philæ, has not passed, save as ships might pass in the night, *but to return.* STUDENT

HYMN TO THE NILE

From the works of Enna, a poet of the Nineteenth Dynasty, who lived about the time of Rameses II

HAIL to thee O Nile!
Thou showest thyself in this land
Coming in peace, giving life to Egypt—
Giving life to all animals,
Watering the land without ceasing.
The way of heaven descending.
Lover of food, bestower of corn.
Giving light to every home.
He produceth grass for the oxen.
He careth for the state of the poor.
The inundation comes; then cometh rejoicing.
Doth not its outburst water the fields.
Overcoming mortals with joy?
What was not, his moisture bringeth to life.
Men are clothed to fill his gardens.
Shine forth, shine forth O Nile, shine forth.
Shine forth in glory, O Nile!

The Effect of Music on the Emotions

WE little realize the extent to which music is an indicator of the emotional forces prevailing in our social and national life. The home of all true music is the human heart, from which, great centre of life, radiate the countless streams of feeling which ensoul and inspire our national songs.

We cannot separate true life and true music. Yet what is the effect of popular music, remembering that it plays directly upon the feelings, the emotions, these being by it intensified or strengthened. For we cannot divorce popular music from the feelings, of which it is the expression and of which it may be-

come the cause. A body of people, swept upon the same wave of musical feeling and giving expression to this in song or chorus, literally, in the deeper sense, become one in heart and mind. For the time being the discordant elements that

lead to separateness between man and man are either obliterated or transmuted. That is why it becomes a serious matter to indulge either in performing or in listening to the baser forms of popular music in use today. The effect of such music is distinctly demoralizing, and the modern comic song is perhaps the lowest point to which the mind has descended in all our musical history. Its effect upon both soul and mind is degrading.

Good music is steadily increasing in popularity, notwithstanding, for musical societies are springing up in all directions, and not in centuries has there been so marked and popular and general an effort to awaken a love of music in the masses as is the case today. STUDENT

PHILÆ DURING INUNDATION

THINK OF THE SOUL:
I SWEAR TO YOU THAT BODY OF YOURS GIVES PROPORTIONS TO YOUR
SOUL SOMEHOW TO LIVE IN OTHER SPHERES:
I DO NOT KNOW HOW, BUT KNOW IT IS SO.

—Walt Whitman

ONE of our contemporary writers is now advising women, "when they have nothing in particular to do," to cultivate a hobby; and she quotes the case of a man who fought disease for years with a strawberry patch, and of a woman who fought loneliness and despair by keeping humming-birds.

It is almost difficult to imagine a woman now-a-days who honestly has "nothing in particular to do." Never before was there such a need of readjustment in the world's affairs, never before was there so much work to be done, so many loose ends to be picked up, so many tangles to be straightened out. The Dark Ages saw more, perhaps, of misery and sorrow and hunger and absolute privation. But Heaven knows there is enough in the world now to keep busy an army of ten thousand unselfish workers.

Whittier has said somewhere that if he were a young man and had his life to live over again, he would seek out some persecuted and unpopular cause and ally himself with it, heart and soul. He gave us the secret of conquering disease, of mastering discouragement, and overcoming despair. One might, to save argument, call such a cause as this a "hobby." Whatever the name, it would lead one to forget self in working for others, and that is enough to frighten away almost any disease. That is nearly all that one needs to make the wheels of life fly merrily on, frictionless. There is absolutely nothing which so destroys as the ceaseless turning inward upon self, self, self. It is a disease that is peculiar to a certain type of women because, as a class, women are not pushed out into active positive work by the circumstances of their environment. They have a greater margin of time in which to cultivate their little personal peculiarities, their whims, their crotchets, their grievances. Some women spend that margin in just that occupation—others do not. The first find life the reverse of a constant joy; the second find it a daily privilege and opportunity. The first need advice, plenty of it, about cultivating a hobby. The second need no advice of that kind, for their hands and hearts are full of unselfish work. The first type are the prey, the easy victims, of the destroying agencies in human life; the second are coworkers with the forces that build.

We have been told, again and again, that at no time in the history of many thousands of years have the forces of good and of evil in human life been in such deadly conflict. Every act is vested with a thousand-

Woman and Hobbies

fold significance, either for good or for evil. We little realize what the simplest turn, here or there on the long pathway, may disclose. We must be eternally vigilant, or we will stumble. There is absolutely no avoiding it and a false step when one is on the mountain's height and at the precipice edge—one well knows what must be the result.

It has been frequently said that women are more personal than men. It is true. They have, as a class, a fearful heredity to overcome. For ages they have been shut within their homes, shut away from all knowledge of larger affairs, kept close to the spinning-wheel, the grinding bowl and the loom. The result has been that they have grown, in one sense, small, even though, in another sense, deep and true. Today, in this time of sifting and of readjustment, women have a chance to overcome that hereditary tendency and step out of the old personal ruts into the broad new shining path of service. But few, comparatively, will have the courage to do this, for it means the resolute surrender of the personality.

Of many women the personality is all that is apparent. It seems to be the largest part of themselves. Yet, if cultivated, it will, in the end, destroy them. It will blight their hopes, destroy their lives, take away their every chance of serving and sharing. It may lead to nothing more than a pettiness, an unworthiness, a smallness of life. It may lead straight to insanity.

The advice given that women should cultivate a hobby is good advice, if that will be the means of taking their attention away from themselves. But it is doubtful if any work taken up for purely selfish reasons—merely that one's mind may be at ease—will have the right result. It is more than likely that the mind will turn inward still and that little real benefit will be gained. But if the sympathies be awakened, if the woman be stirred with a feeling of genuine compassion, so that she *forgets* about herself, really *loses* herself in the work or service that claims her attention, then she has taken a tremendous step. It matters little whether it be caring for little children or the collecting of postage stamps, for, as far as the effect on the woman is concerned, her own mental attitude is what decides for or against her.

As the world goes, very few women step into this larger life of their own volition. A selfishness which takes some form or other nearly always holds them back. They have to be forced into it by sorrow. When

sorrow comes, when disappointments gather, when some cruel blow takes away all that is personally cared for, then it is that the woman faces the real situation. She has her choice, then, of falling backward, weary at the prospect of utter loneliness, or she may find her soul at last and step into her soul's kingdom. If her choice is the latter, be sure the world has then another warrior who will help and toil and serve.

But why need women wait until sorrow tears them to pieces? Why not choose the selfless way, why not make, of one's own accord, the little daily conquests over self? Be sure, if this be not done, when comes the great time of choice, all, all may be lost. Then of what avail is sorrow, save to destroy? Raja Yoga? Never has the world so needed anything as this philosophy. It is the philosophy of the sane and selfless life.

Indignant Magistrates

WE thoroughly approve all honest efforts to remedy the depraved moral conditions of our large cities, and appreciate the difficulties to be met with in overcoming them, but there is certainly much to condemn in the methods that are being used by the detectives or "plain clothes men," as they are termed in New York, who are nightly arresting innocent women and dragging them up before police courts. We doubt whether the moral effect of arresting the guilty woman has any worth, but when innocent women are humiliated and disgraced it certainly is time to cry "halt."

In one day, in New York City, recently, several innocent women were unlawfully arrested, as was proved by the testimony later. We quote one of the most pathetic:

"Then the case of Mrs. Mary Provederra was called. She is a frail Cuban woman who lives with her husband and child at 135 East Thirteenth street. Gilmartin handed up an affidavit in which he charged her with soliciting. The woman could not speak English and sat in the pen with the rest of the women prisoners, without understanding what it was all about. Her husband sat among the spectators with the child on his knees. All he knew about the case was that his wife had not been home all night, and when he made inquiries at the station yesterday morning to learn if she had met with an accident in the street, he was informed that she was under arrest and was then at court. He went there with the baby, and Agent Kelly of the Children's Society took him into an ante-room and questioned him.

"He said that he was employed in the Hotel America at Fifteenth Street and Irving Place, and that his wife came from Havana a month ago, when he got money enough to start housekeeping here. She went to see him at the hotel Thursday evening, and she started for home at 8 o'clock. The bright lights and the many stores excited her curiosity, as she had seen nothing like that in Cuba, and she gazed about her. She became confused on Third Avenue, and asked a passer-by in Spanish to direct her to her home. The passer-by could not understand what she said and went his way. Then the policeman arrested her."

One magistrate, at the hearing of the cases brought before him, was so filled with indignation that he had to get up and walk about his chair to recover his good temper again.

Another magistrate, who had several cases of the same kind, reprimanded the policeman who had made the arrests severely, and said, "It is better that fifty women walk the streets and speak to men, than that one innocent girl should be arrested."

Be not haughty because of thy knowledge: converse thou with the ignorant as with the scholar, for the barriers of art are never closed, no artist ever possessing that perfection to which he should aspire.—*From the Book of Ptah-Hotep, among the old writings contained in the Parris Papyrus*

DON'T you know how hard it is for some people to get out of a room after their visit is really over? They want to be off, and you want to have them off, but they don't know how to manage it.—*O. W. Holmes*

Costume of Japanese Women

IN this day of dress reform, we most sincerely hope that the Japanese women will not become so imbued with modern ideas that they will exchange the graceful, healthy and becoming style of the Japanese gown, for the European and American fashionable garments that are so trying to even the handsomest of women. And they are most incongruous on the dainty forms of the Japanese women.

That the Japanese gown is most suitable for athletics also, is vouched for by the following report, (quoted in an exchange) from an American woman who played tennis in Japan with native women:

"It is wonderful how agile they are," she said, "and it certainly is a most extraordinary sight to see them playing in the regular Japanese dress, the pretty soft silk robe so associated with reclining ease, and the thick soled sandals.

"You can imagine the effect of the sunlight on the sheen and gorgeous hues of the silken dress. Of course, the serve and return of the balls sends the gayly costumed little ladies into the prettiest of posturing. They look like flowers lightly blowing about the court.

"The thick soled sandals are not hard to run in. Indeed, I was assured they were most comfortable for the sport."

A Woman Miller

WE see in Miss Anna Webb, of Summitville, Indiana, one of the few women millers of the country, another surprising case where necessity has produced the requisite ability. When her father, the town miller, died, some years ago, all he left to his family was the mill. A brother-in-law undertook to carry on the business for them, but met with failure owing to lack of knowledge in this line of work. Then it was that the daughter

of the late miller rose to the emergency, and being familiar with the work, took sole management of the mill. Success attended her efforts.

She has paid off all the mortgages and equipped the mill with the newest and most modern machinery. Her ability has been recognized far and near, and recently she was made an honorary member of the Indiana Grain Dealers' Association. She is as modest as she is clever, and desires to avoid all publicity in her life-work.

Humanity's One Mystery

PRESENTIMENTS are strange things; and so are sympathies; and so are signs; and the three combined make one mystery to which humanity has not yet found a key. I never laughed at presentiments in my life, because I have had strange ones of my own. Sympathies, I believe, exist (for instance, between far-distant, long-absent, wholly estranged relatives), whose workings baffle mortal comprehension. And signs, for aught we know, may be but the sympathies of Nature with man.—*Charlotte Bronte*

WHAT would result were our soul suddenly to take visible shape, and be compelled to advance into the midst of her assembled sisters, stripped of all her veils, but laden with her most secret thoughts and dragging behind her the most mysterious, inexplicable acts of her life? Of what would she be ashamed? Which are the things she would fain hide? Would she, like a bashful maiden, cloak beneath her long hair numberless sins of the flesh? She knows not of them, and those sins have never come near her. They were committed a thousand miles from her throne; and the soul even of the prostitute would pass unsuspectingly through the crowd, with the transparent smile of the child in her eyes. She has not interfered; she was living her life where the light fell on her, and it is this life only that she can recall.—*Maurice Maeterlinck*

I AM accustomed to judge my own faults severely, yet always to extenuate those of others with "If" and "But."—*Johanna Ambrosius*

The Curious Nature and Usages of an American "Copper"

THERE are now in existence a few Indian "coppers" in British Columbia and in Alaska. These curious marks of dignity are usually of immense value, which increases with time and change of possession. Perhaps two feet in height, and more or less oblong, sheets of copper are beaten into the semblance of a human face in the upper half, and a cross-shaped ridge divides the whole into four portions. This shield is then covered with pine gum, which is burnt into a dull black surface. Only a chief may possess a copper, which usually has an individual name known from Oregon to Alaska. In the old days of frequent fighting, these shields probably had a real value, as being made from virgin copper found in Alaska and often acquired by conquest. At the present date their value rests on the enormous accumulating price paid for them by a tribe as an evidence of wealth, and perhaps contempt.

At the appointed feast time the rival tribes will meet, and the copper may be produced—possibly it will be "The one who brings ruin to a tribe," boastfully so named from its great value.

It may be that last time it changed hands the copper demanded 5000 blankets. This time a chief and tribe who have acquired sufficient dignity to buy it will, in rivalry, heap up thousands of blankets amid all sorts of ceremonies and boastful oratory. Maybe the ceremony will last for days, counting the blankets and demanding more, which are boastfully produced until an enormous sum, represented by the blankets, is paid for the copper. Some may be worth thousands of dollars. This idea of showing superiority over a rival by "destroying property," is very complicated and works by rules almost incomprehensible, although several have claimed to be able to explain it fully.

Should a serious quarrel arise, a piece of the copper may be broken off and given to the one challenged. He must, in his turn, produce a similar token of value destroyed in order to return the broken piece, which is then riveted to its original copper. The pieces are broken off in regular order, commencing at the bottom. Within the last fifty years such a transaction might well mean war, so seriously was it regarded.

But occasionally, instead of giving the copper back with its accumulated value, the feeling would be so intense that the insulted chief would throw the copper into the sea as a supreme mark of his utter disregard of wealth compared with his contempt for his rival. This was a crowning shame to the tribe to whom it belonged, because they could not then repurchase it to show their superior wealth.

STUDENT

Atlantis Beginning to Figure in Modern Science

THE much discussed subject of Atlantis comes up again in the current number of *Revue Scientifique*. The writer reasserts, against the objectors, the former existence of a great continent connecting Europe and America. In view of the now swiftly extending work of the archeologists, the article is most timely. With every year's research the horizon of civilization recedes. The nearer we approach the "beginnings" of civilization, the less do they appear as beginnings. In every direction we are finding that when the curtain rises, civilization is already in full swing.

The explanation is afforded by that sunken continent whose highest mountain peaks survive as the Bermudas, the Azores and Madeira, and whose mainland is 3000 fathoms below the ocean surface. Here, according to Theosophy, civilization (*in any sense understood by us*, for there was a *yet earlier epoch*) began. And as the vast continent sank, and only great islands remained, to disappear in their turn, various causes combined to make this Atlantean civilization almost disappear. The remains of the peoples degenerated, wandered in various directions, and became at last the rude cliff-dwellers, cave-dwellers and mound-builders, whose traces we find everywhere. But before that, and while the original civilization was already at its height, seeds from its bloom were sown and quickly flourished in America, Egypt, China, and elsewhere. And from some of these, taking root in Central Asia, came our own Aryan stock. Many of the traditions and myths of the older nations relate to

the actual history of Atlantis; many of their gods and heroes were actual Atlanteans.

STUDENT

Remarkable Simplicity of the Chinook Language

ALONG the Pacific Coast from Oregon to Alaska, and some distance inland along the rivers a babel of tongues holds sway among the Indian tribes, although many of them are by this time extinct, or nearly so. Many of the sounds are almost unpronounceable to foreigners, and the consequent difficulties of the traders gave rise to a Lingua Franca known as Chinook, because of the basis of the Chinook dialect upon which it was founded. In a few years this artificial language spread over an immense territory, although possibly it was only a graft on an old stock which the tribes may have had among themselves. It is a fact that Chinook or the "trader's jargon" as it has been called, is not by any means among the least utilitarian of languages, even in this day of dying and merging Indian races.

Although a few hours only should suffice to gain a good acquaintance with Chinook, its power of expression is remarkable; indeed, a knowledge of it would be of no little aid in learning any language, since its chief characteristic is the reduction of all communication to a perfect simplicity. Many a time a learner of any language has racked his brains for a translation which, paraphrased by a teacher into the language sought, appears so amazingly easy, that the difficulty seemed only to lie in its unexpected simplicity. This simplicity is soon acquired by the Indian trader, eking out his speech with signs, words, intonations, and every possible means of conveying thought.

For instance, a prison is merely "skookum house," "the strong house;" God is "hyas tyee sagahie," "big chief up above;" America is "Boston illahie," (Boston country); England is "King George illahie." Tree is "stick," so a totem pole becomes "Tyee stick," (chief's pole). Some names of birds and animals are onomatopoeic.

Many of the words are pure French from the old *coureurs de bois* and Hudson's Bay Company French Canadian guides. One or two expressions have a decidedly amusing origin, such as the daily greeting "How do you do?" "Klahowya!" It is said that a popular trader named Clark lived among them, and every white man who passed always shook hands and remarked effusively, "Clark, how are you?" Hence, "Klahowya!" So legend tells.

The genius of the language appears to lie, not in grammar, but in conveyance of ideas by the fewest possible number of words and signs, somewhat after the Chinese "business" or "pidgin" English. Similarly to the Chinese also, the Indian of the Northwest has a great difficulty in pronouncing his "r's." "Len" is at first difficult to recognize as "rain."

Such a language created in the last century or so, to meet a demand for its use, is decidedly a matter of interest to philologists and may even throw some light on the evolution of more scientific tongues.

The Lingua Franca of the Levant and the Swahili as used in East Africa have similar traits as intertribal languages.

TENAS TYEE

Prehistoric Cave-Dwellings Found in Africa

MOUNT ELGON, on the coast of Lake Victoria Nyanza, in Central Africa, is beginning to yield traces of a prehistoric occupation. Its sides are covered with immense caves, hollowed out of the volcanic agglomerate of which the mountain is composed. The floor of most of them is occupied by reed huts, inhabited now by some few hundreds of savages who have not even a tradition relating to the authors of these stupendous examples of cave-cutting. The explorer, Major Powell-Cotton, thinks that a full examination of a number of the caves would throw an interesting light upon their prehistoric inhabitants. His suggestion is that they were mines. It is possible, but why, in that case, their enormous size? As Northwestern Africa was part of Atlantis, and as the line of Mid-African lakes was possibly the east shore of that continent, we should suggest that these caves may have been dwelling places of Atlantean survivors.

M.

The Ancient View of Mother Nature

THERE is a great trinity which lies at the root of all creation. It is the trinity of God, nature and man. This is found symbolized in all religions and cosmogonies, and it is a necessary postulate in every cosmic philosophy or science; for, though the ideas may be disguised under strange names, they are the same. In ancient Egypt, Osiris was God, Isis Mother Nature, and Horus their offspring man. We still have a trinity in our religion, but it is a theological one, and has lost its meaning. We speak of the Fatherhood of God, and the more enlightened religious thinkers are getting back to the old truth which Christ taught that all men are the sons of God in a very real sense, being temples of the divine spirit. But we forget our mother, Nature.

Man was created by influx of the divine breath into the earth; so that while his parentage is divine on the one side, it is natural on the other. And, as man is one with God, through the divine spark in his heart, so he is one with nature, inasmuch as from her mighty soul he derived his faculties and organism. The word nature may have acquired a degraded significance through our paltry conceptions of the natural world, and through the use of the word in modern science to denote forces blind and ruthless; hence to speak of nature as man's eternal mother might seem to suggest heathenism and a lapse into savagery or into what is understood by "nature-worship" or "naturalism." But, if we had time, we might, under the guidance of the great teacher, H. P. Blavatsky, lead our readers into the treasure-house of ancient mythology, and show how the ancients recognized nature for a goddess and venerated her as the source and bestower of all bounty. But such true worship and reverence is not consistent with the abuse of nature by devastation, the shunning of her by fleeing to cities, nor the dissection of her by the scientist's scalpel.

But how man's heart goes out towards his mother, in spite of all the fear that prescribed religion and prescribed scientific belief can inspire. Ever and anon he lets go of his conventional ideas and indulges in a panegyric on the bounty and magnificence of that parent whose heart he feels pulsating with his own. Man feels his oneness with nature and with God, in spite of all the artificial beliefs that have stunted his intuition and all the idols that have divided his adoration. Everywhere we find such utterances.

Speaking of Hedvig and Augustin, a writer says:

They studied together the life and changes of the vegetable and insect kingdom; and every plant, every flower, every little winged or creeping creature around them must reveal to them its name, its life and the history of its development. To see the great in the small became to them a daily delight. The remarkable analogies which they discovered between the life of nature and human life, the little and the great, led them to a still deeper understanding of connection between the two, and to anticipations of the great harmonies of life—those which are and those which shall be when discords cease.

Another writer (W. J. Gallagher in *Great Thoughts*) says, speaking of sunset scenes:

Is not this realm, where tone and tint and shade and depth of grass and darkness of pillar and crag intertwine and mingle, and make as it were a melody of light and song, still a fairyland, still a possible happiness, to a large extent, where a man may lose his cares in a grander study, and where one may find that inner refreshment which goes deep—so deep that no one can understand its full solace, save those who have lain lovingly on Nature's bosom, and who have drunk patiently of her inexhaustible fountains?

A PRAYER

by A. LANFMAN

OH, earth, oh dewy mother, breathe on us,
Something of all thy beauty and thy might,
Us that are part of day, but most of night,
Not strong like thee, but ever burdened thus
With glooms and cares, things pale and dolorous
Whose gladdest moments are not wholly bright:
Something of all thy freshness and thy light,
Oh earth, oh mighty mother, breathe on us.

Oh mother, who wast long before our day,
And after us full many an age shalt be,
Careworn and blind, we wander from thy way:
Born of thy strength, yet weak and halt are we.
Grant us, O mother, therefore, us who pray,
Some little of thy light and majesty.

Why Not Use the Insects?

AS a rule, man has very little use for insects. Truly we have the honey-bee, the cochineal-insect and a few others, which we have learned to use; but most people, if they had their way, would rashly do away with the greater part of the insect world, and vote them outside the general order of things. Of course they would soon find out what an egregious mistake they had made, and quickly reinstate them, if possible, as all sorts of now unknown calamities would inevitably ensue. Nature's balance, as we know, cannot be lightly disturbed, even in small affairs, much less in any wholesale manner. No doubt, as time goes on, we shall find out more about the use of insects, and shall be able to turn them to account for creative and productive purposes.

There are two instances in which this has already been accomplished on a commercial scale in California.

One of these is the successful introduction by fig growers of the *blastophaga*, or fig wasp, an insect imported from the fig orchards of Asiatic Turkey. For a long time it was a mystery why the Smyrna fig could not be grown successfully in California. At last someone endowed with an unusual genius for observation discovered that the fig wasp, common in Asiatic orchards, played an important part in the fertilization of the flowers of the fig trees. It is attracted by the particular shade of the color of the flower of the Smyrna fig, but there was at that time no insect in California which seemed to care about that color, and hence the flowers remained unfertilized. After many disappointments, the fig wasp was at last introduced into California; and lo! the Smyrna fig can now be grown here as successfully as anywhere.

Again, only three short years ago one of the worst enemies of fruit growers in California was the black-scale, a sort of little black shell, like a miniature limpet, which is very destructive to fruit trees, sucking away their sap and destroying their life. Suddenly it is announced that from Africa has been imported a fly called the *Scutellista*, which when introduced into an orchard suffering from black-scale, will clear out the whole pest in a few weeks. All that you have to do is to send for three or four little flies, which come in a bottle through the post. You turn them loose in your orchard and they begin at once to attack the black-scale. They multiply with such marvelous rapidity that in a short time not a trace of the scale is to be seen.
E. V.

Nature, Ever Beautiful, Ever True

ONE of the most wonderful things in nature is the exquisite beauty and perfection of many of the minutest organisms which the microscope alone reveals. Emerson tells the Rhodora to say:

If eyes were made for seeing,
Then beauty is its own excuse for being.

This seems to be true, even when eyes (so far as we know), are not made for seeing. But we look at everything from the human standpoint, and our vision is limited, perhaps not yet fully developed. We know not what vision other beings may have. Longfellow says:

In the elder days of Art,
Builders wrought with greatest care
Each minute and unseen part,
For the Gods see everywhere.

Nature's builders also construct with utmost care the minutest and most hidden parts regardless of human eyes. If we all thought more about the perfection and simple truth of our work, and less about how it should appear to others, our work would be better.
STUDENT

Universal Brotherhood Organization

Central Office Point Loma California

TWO characteristically excellent addresses were given at the meeting of The Universal

Brotherhood and Theosophical Society in Isis Theatre last Sunday evening—one by Mrs. Grace Knoche, containing a glowing prophecy for San Diego, and the other by the Rev. S. J. Neill, declaring that man is his brother's keeper. The

orchestral numbers by students of the Isis Conservatory were exceptionally delightful. A piano solo was contributed by Miss Julia Hecht.

Mrs. Knoche's paper was entitled, "A Hundred Years from Now." In glowing terms she pictured a sunrise as seen from the mountain top, and declared it to be the emblem of the better day that is dawning. "Only those who are still in the valleys declare the day cometh not, it is yet night," she said.

"Compared to that which is to come, the world today is indeed like a city in a valley's depth, shadowed by unbrotherliness as by the wings of some brooding evil. The spectacle is not a reassuring one. There is some brotherliness, some kindness, here and there, a little sunlight, but as a whole the world's life presents a picture of chaos. Go into any great city, and in spite of its art, its education and its philanthropies, what will be forced upon your attention? First of all, child labor, the various forms of immorality, vice, crime and cruelty, slaughter-houses, divorce courts, penitentiaries and asylums; reformatories that do not reform and educational institutions that do not educate. Yet there is a promise of better things, and those who are willing to look outward and upward, may get a prevision of the dawn and a vision of the sun-kissed day.

"What is the picture of a hundred years from now? We see a land fair and smiling, dotted with little homes, set like the nests of birds close among the trees, or here and there upon the slopes; a land yielding fruits in abundance, all that mankind needs, and to spare. We see animals, wild and tame, living out their own lives, as now they are not allowed to do, some actively helping man in his daily work, as at present, others helping in other ways, but all, man and animals, together, living in tacit, though not unrealized comradeship. O, the need of it! Would there were lifted today some hand strong enough to turn our slaughter-houses into shelters for the tens of thousands of domestic animals, which starve and freeze, unhoused through the winter, year after year upon our western prairie-farms—and why? Because men must have gold. And, looking ahead a hundred years (a sort of bird's-eye view), we look in vain for any great, seething, unhealthy centers of life such as we have today, whirling, congested, turbulent and foul. We call them today the "slums of our great cities," and sometimes the city itself might be so described. Instead of these we see in the Twenty-first century thousands of small communities scattered here and there, each a ganglionic center as it were, of the world's common and quiescent nervous life; and coming close to this world of the Twenty-first century, the air itself is different. It is more rarified. The earth moves more swiftly; the clouds and winds are kinder; tornadoes and cataclysms are well-nigh unknown; the great wastes and deserts of all lands have been turned into gardens; and men themselves live a simpler life, the Higher Law recognized and followed by the majority. Not by all, for where there is sunlight there is bound to be some shadow, but by nearly all. The world will not be perfect in the Twenty-first century, but it will be a Paradise, as H. P. Blavatsky has said, compared with what it is today.

"And the majesty of the law in those days! How well we know today that the law of our statute-books needs a new interpretation; that while we need new laws we need still more a higher interpretation of those we already have. We need a higher justice to plead humanity's common cause, and in that day our prayer for these things shall be answered. The Courts of Justice shall be still so named, perhaps, but they will have become great assembly places where men shall gather to make clear all things for righteousness; halls for the translation of the Higher Law into the language of those laws made by man; halls for friendly conclave, not bitter and personal battles; halls before which only the ignorant will stand in terror, only the weak will stand in fear. To the Courts of Justice in the Twenty-first century parents will bring their little children as they brought them in Egypt and old Greece—but as they do not bring them today. Today the very thought of a child in a court-room makes one shudder.

"More than that, from out the higher interpretation given the old laws, new laws shall spring, and what a change will then take place; for in the Twenty-first century the laws will be enforced; public officers will be unsalaried and men will serve their fellows for love, not for gold."

The Rev. Mr. Neill's address was under the title "Am I My Brother's Keep-

LOMALAND STUDENTS AT ISIS THEATRE

Mrs. Knoche's Address, "One Hundred Years from Now"—Rev. Mr. Neill, "Am I My Brother's Keeper"

Reprinted from the San Diego News

er?" "In the story of Cain," said he "the writer introduces the element of what we call 'poetic justice.' Cain has slain his brother, and the ground which received the blood of Abel is at enmity with the murderer: 'when thou tillest the ground it shall not henceforth yield unto thee her strength; a fugitive and a wanderer shalt thou be in the

earth.' What is the thought which is contained in this? It is the fact that life is one, that the universe is one, and that there is harmony or correspondence between one plane of the universe and other planes; between man's body and his mind, or between the moral and the physical planes of the universe. The moral and spiritual atmosphere, if they are bad, impure, will they not affect the physical conditions in which we dwell? Just as in man, body and mind interact, so do the different planes of the universe interact upon each other. It may be a long time before the working of causes in the spiritual is made manifest in the physical, but sooner or later that result is sure to come.

"Cain put himself out of harmony with nature by violating the great law of Brotherhood, and nature was no longer friendly—the world was no longer a home, he was a fugitive, a wanderer. The story of *The Wandering Jew* contains the same idea. Doré, in his picture of *The Dream of Eugene Aram* vividly depicts the horror of the murderer when he finds that neither the water nor the earth will conceal the body of his victim. All this is the expression, in different ways of the great law that nature, in all her parts, is most closely related; and, as the occultists have always taught, man is the little image of what nature is in her entirety. The writer of the story of Cain, therefore, shows a true philosophy of nature.

"We are our brother's keeper. If nature, in all her domains is so closely related, how much closer must all men be related to each other! We are taught by St. Paul that we are members one of another, and that if one member suffer the other members suffer too, and if one member rejoice the others also rejoice. In the healthy body all the different members work silently together for the common good. If society were in a state of social health the same condition of things would prevail which we see existing in a healthy body. We should be living in accordance with the language of the Scripture where it says 'being of one accord, of one mind; doing nothing through faction or through vain glory, but in lowliness of mind each counting other better than himself; not looking each of you to his own things, but each of you also to the things of others.' As things now are men generally do look on the things of others, but it is with the selfish desire of making them their own.

"It is not always very easy to take care of ourselves, but I think it is even harder to wisely care for our brother. It is not always the wisest way of taking care of our brother to scold him, or hit him on the head, if he is doing wrong, or if we think he is. There is something in human nature that causes us to hit back, and to repay anger with anger, and sharp words with words equally bitter. Yet it cannot be kind to let our brother walk into the fire or over a precipice, or go to a place infested with the plague. Kindly, but earnestly, and strongly, we should try to prevent him from going into danger. There is one safe and sure way in which we can act as our brother's keeper, and that is by being right ourselves, and thereby bringing to bear on our brother the powerful force of a good example. If we point our brother in one way, while we ourselves take the opposite way, we may be acting the part of Cain. And many have been slain through the force of evil example.

"I have often found that parents were led to live a good life by the thought that they were moulding the lives of the children after their own example. 'Oh, I don't care so much for myself, but I wouldn't like to lead the little ones astray.' That is often heard, and often acted upon, though never spoken. I am also aware that many, alas! are not as careful as they should be in this respect, and the result is that both the children and the parents suffer.

"Now if a similar feeling could animate us in regard to our brother which moves a good parent to set a noble example before his child, then I think we should be our brother's keeper in a very important sense.

"It is truly said that 'devotion to the interests of another' is one of the first steps in true discipleship. There can be no rest, no peace, no lasting safety for the world while it lives according to the selfish spirit which prevails so widely. The world must always be in a state of unstable equilibrium, and in a state of war, until each man feels he is his brother's keeper—until we look every man not to his own things only, but also to the things of others. Do we wish to be magicians? We can, if we will exercise a Divine Power. We can 'overcome evil with good,' and thus be 'fellow-workers with God.'

"There is no power in the universe equal to that of overcoming evil with good."

Opportunities at Point Loma for Studying Human Nature

ONE might fancy that the opportunities for this study would be equally good wherever men congregate. Human nature, it is often said, is the same the world over. Material is not lacking—the book lies open, and it might seem as if one had but to turn his eyes upon the pages to read and learn. But there is this difference. There are few places, if any, where the pages are wiped so free from dust, where there are so few blurs upon the characters. There is a certain kind of breeze at the Point, which tends to blow away the clouds and illusions which mask the real outlines, and these stand out with relative clearness. Whether they be good or bad, false or true, they can be more easily discovered by the earnest student here than elsewhere. And furthermore, what is of greater help still, there is a force and training at the Point, which clears and strengthens the inner eye which is to read these pages.

People have come here from the four quarters of the globe, with the avowed purpose of studying themselves and others, in order that they may better serve the race. There is, so to speak, an atmosphere for this study created, just as distinct as a musical, an art, a commercial atmosphere in certain centers. This must in time develop within itself a special atmosphere for all that is beautiful and noble and worth learning, but it must be the greater, the all-inclusive atmosphere, for the center at Point Loma is for excellence, a center for character-building. Whatever else is built must be built upon that.

The world at large has been handicapped in this study, because it has lost the knowledge of the true philosophy of life and of the laws which govern the universe. Of what use would it be for one, for instance, to examine a huge machine, operating at full speed, with no knowledge of mechanics, with no instructor to explain? Only a master mechanic would stand any chance of understanding the working of that machine. But *the other* would stand helplessly by and wonder, or in case he was so ignorant as to be egotistical, he would make false guesses and state them to others, equally ignorant, as facts. So in like manner, what chance has one to make an intelligent study of human nature, who does not know the elements of which it is made up, of the law which governs it; of the subtle forces which play upon it? Theosophy teaches these things. Simply an understanding of the duality of human nature clears the vision marvelously, and liberates the mind. It is perhaps due to this knowledge that we have had so much success in our efforts to help children.

Some of the Cubans have said that they began to respect their teachers, when they discovered they could not fool them. This is one of the secrets of bringing out the good, never to allow the evil to come to the front and cover it and declare itself to be good. This is the game which is played over and over again—an exercise which is practised in a majority of human natures until they have become proficient in it. Children are, fortunately in most instances, a little clumsy at it. But in many adult natures, it actually seems as if the whole education and training had consisted in simply this: in learning, not how to reveal and strengthen and bring to the front the pure and real nature, but how to conceal it and place in the foreground the selfish nature and make it appear as the other. And the effort to deceive has been so persistent that they have arrived at the point of deceiving themselves. The selfish nature may take the pose of a saint, a wise man, even a selfless man, working for the benefit of the race, and yet one motive behind another may be uncovered, until finally we arrive at the most powerful one, that which underlies and keeps all the others moving, and it may be as black as night. All these things become perfectly true philosophy. The children at Point Loma do not get a chance thus to bury themselves. Whatever of good is in them must step out to the front and assert itself. Every time the selfish nature asks a favor, giving as a reason for its request some unselfish motive, the mirror is quickly held up to the moral gaze, and the request is not granted. The real nature has a chance, and is not beaten at every turn. Children started on this plan will not have the terrible, pitiful, stupendous undoing that come to so many adults in this age.

What is being done for the children, the adults are with greater difficulty trying to do for themselves. Each in studying himself grows to understand those about him, whom he recognizes thereby to be a very

part of himself. With them as with the children, things are intensified. The very fact that unselfish service is demanded calls out everything that is selfish. The battle is engaged in, and that which is stronger in each must win. All come to realize how essential this training is—how useless it would be to try to help humanity without understanding it, without feeling to an extent at least, its past, its present conditions and future possibilities! Lacking this, all efforts must be in the dark. But with this, and a pure strong purpose, what cannot be done! Such a body of people can grow great and powerful enough to clear the earth. And they will do it!

STUDENT

The Raja Yoga Academy, Point Loma Opens Thursday, October 6th, 1904

THE opening of the Raja Yoga Academy at Point Loma, Cal., accentuates the phenomenal success of the Raja Yoga system, as introduced by Katherine Tingley four years ago.

This system of special training of the young has astonished, by its results, many of the best minds of the present day, who have given it their careful study.

Early in 1900, this system, unknown in its application to the young mind, was first applied to a group of five children, under a teacher specially trained by Katherine Tingley. The result of that simple effort is already manifest in the extension of the Raja Yoga School system. Hundreds are already in the first school at Point Loma; two large schools have been opened in Santiago de Cuba; there is also one in San Diego, California; and in San Francisco and Roseville, California, and in London, England.

The new Academy is the outcome of this successful effort for the education of the young; and it meets the many demands of parents from all parts of the world, whose children have been awaiting admittance. It is designed to fill the gap between the ordinary curriculum of the University and that of the primary schools. This new Academy is preliminary to the Raja Yoga University.

The Raja Yoga system prepares the child to adapt itself to the different conditions of human life; thus, the comprehensive and broad method of this system brings out the latent ability and energy in children, often undreamed of by parents and educators.

The course of study comprises the general course in English, adapted to the ages of the children, in which are included choral training and domestic economy.

Special studies are Music, Art, Literature, the Languages, elementary Law and elementary Science.

FINE ARTS—Painting (oil and water coloring) Modeling in clay, Wood-carving, Drawing, Architecture.

INDUSTRIAL ARTS—Practical Agriculture, Practical Horticulture.

MUSIC (a Department of the Isis Conservatory of Music)—Theory, Harmony. All modern instruments. Vocal Music.

GENERAL LITERATURE

LANGUAGES—French, German, Spanish, Italian and the two classics: Latin and Greek.

ORATORY

SCIENCE—Elementary Civil Engineering, elementary Mechanical Engineering, elementary Mining Engineering, elementary Chemistry, elementary Astronomy, elementary Physics (including electricity), elementary Physiology and human anatomy, elementary Biology, elementary Geology, elementary Botany.

COMMERCIAL SCHOOL—Complete Business Course. Stenography a specialty.

WE have not long to wait, and many of us will witness the Dawn of the new Cycle at the end of which not a few accounts will be settled and squared between the races. This new cycle begins in the next century, and when the end of it is reached much that is now unknown will have been revealed; the earth itself will give up the secrets of the past, in ignorance of which our day has laughed at the ancients; the Fraternity will have caused "accidental discoveries" of manuscripts and objects, the finding of which will make many a theologian quake and bring to the barbarian followers of the ancients great joy that they did not bow down and worship the Golden Calf of today.—*Written during the last years of the Nineteenth Century by H. P. Blavatsky*

IN Southern California, fifty miles east of San Luis Obispo, are the Carrisso Plains, a nearly level desert, bounded by high chaparral-covered mountains; a hot, dry, thirsty Sahara of fertile soil, which needs only an abundance of water to make it a land of prosperous homes. Doubtless it was once an inland sea, for at the lowest part of its concavity the dazzlingly white bed of its last salty lake is clearly defined, and the scorching heat-rays now torment the traveler with mirage-like visions of dancing water-waves on its surface. Near the southern edge of this desert is a large U-shaped rock, with the opening facing the north, and on its inner

facings are curious symbols and colored pictures of unknown antiquity. The dry lake-bed brought visions of clear, cold-running streams, so the absolute stillness of this enclosure brought its opposite. The current of the thoughts ran swiftly and suggested other currents. The word "current" seemed to have a range of application to all the realms of Nature; not alone to water, but to air, fire, sound, electricity, light; to the trend of events and opinions, and to the migrations of men and animals. It implies a more or less orderly progression of things towards a destination which is always discovered to be only temporary, for motion is cyclic, and its laws, though appearing complicated, may be found to be quite simple.

The same current is both a destroyer and a builder. If we follow a stream of water from its sources in the numerous springs or swamps of

the mountains forming rivulets, which combine to make creeks, and these to form great rivers, we find that on the elevated areas where the currents run swiftly and noisily, that they cut or erode the land surface,

while the great deep river, moving slowly and quietly, is the builder of the wide and fertile valleys suited for the homes of men. The current is, therefore, a great leveler—forever tearing down hills and filling hollows; tending towards a smoothing of the topography which other agents of Nature are forever disturbing. Water has its enemy, or its opposite, in fire, and from time to time great areas of the earth's surface are raised by volcanic or seismic processes, and it therefore follows that the topography as it exists today is a real equilibrium, when all the agencies are considered.

But this is not all. The river enters the ocean and, merging with it, loses its identity as a river, but it does not, nor will it ever cease to exist. The evaporation from the water surface is condensed into clouds which, carried by air currents, eventually strike against the fire currents—the mountains—and from the resulting rains the streams are again fed. No one would argue that any particular atom of water circulated over the same cycle, but we know that in time each atom returns again and again on its appointed mission. Although the flow of streams is ever variable, and evaporation is subject to many fluctuations, still we may positively state, for the entire surface of the earth, that evaporation and precipitation are not only closely related, but are equal.

It is a fact that animals and plants breathe, and that, with a few unimportant exceptions, the animals use oxygen and the plants carbon. Who shall say that there is not a world-wide equilibrium between them which man has from time to time disturbed? Who shall

Painted Rock and Its Prophecy

disprove the statement that any destruction of the flora of the earth must be followed by war, pestilence or famine? Perhaps it is not provable by any statistics, nor by any process of figures, but can anything else be true?

A step farther into this subject and we return to the painted rock—and to ourselves. Ethnologists have ever sought to delineate the currents of race-migration, working backwards, as they must, joining the many widely separated streams of tribes, nations and race types. Charnay, Winchell and others have traced out many principal lines of these currents, and they and their followers have conceded an Atlantis and a Lemuria. If science

has suggested that the lemming of the Scandinavian peninsula still continue their remarkable migrations because land existed ages ago towards Iceland, why should it not be admitted that the inspiration of Columbus was a desire to go "home?" If other peoples knew for ages that the earth was a spheroid, there might be at least one man possessing the intuition of a Norway lemming. If the wild geese of the Arctic fly northward, may it not be that the unrest of the seekers for the north pole is a legitimate desire to return to a home which was theirs ages ago, when the areas now at the pole were in a semi-tropic zone, as geology insists?

We scientists do not like the word "reincarnation," and when we do discover it, will probably give it another name rather than make a concession. But we are open to flattery, and as soon as we recognize that the ancients excelled us in many ways, and that some of them were really creditable people, we may be willing to have some honors thrust upon us, which will be received with becoming modesty. We will be proud to claim that we built the pyramids of Egypt and Yucatan;

that we planned the irrigation systems of Babylon and Arizona; that we built the cities of Nippur and Pajarita Park; that we mixed the paints of the Mayas and of the American desert; that we made the glass of Pompeii and hardened the copper at Lake Superior; that we calculated eclipses in Assyria and used the calculus in India; that we used incubators in Egypt and China, and were adepts in embalming; that we wrote the laws of the Medes and Persians, and have been changing them ever since; that we made India ink and papyrus, and furnished a literature that has never been approached either for philosophy or diction. But greater things than all these we will do, for that is the Law. Greater things than have been discovered we shall find if we work in a knowledge of the Law, and with the currents.

In the arid areas of the Southwestern United States the winds are the principal agents of destruction and construction. Little by little the mountains are worn off, and the detritus forms great tracts of drifting sand which we call deserts. Whatever ruins of any old civilization might have existed on the higher elevations, they must in time be eroded and destroyed. Whatever ruins existed in the valleys are now covered by the desert sands, and are thus preserved for future exploration. Whatever traces of ancient or comparatively modern peoples might be exposed at this time to view would be found at the edge of the desert—at that "critical point" where destruction and construction are balanced.

These rock paintings do not seem to claim any profound antiquity, but they suggest possibilities of no small moment. STUDENT

✻ The Trend of Twentieth Century Science ✻

The Latest Conceptions of Science

SCIENCE is advancing into its new fields of discovery and hypothesis with extraordinarily definite steps. If we get these new concepts clear, we can see at what point a new factor, of which science has so far taken no account, must be allowed for.

If we imagine a drop of water to be magnified to the size of the earth, the molecules of which it consists would be somewhere in size between shot and cricket balls.

Each molecule is still *water*. By breaking up that molecule, we find according to science, three atoms within it, two of Hydrogen and one of Oxygen.

But the atom is in its turn composed of still minuter particles, called electrons. If an atom be magnified to the size of a cathedral, then the electrons will be like full-stops, flying about within it. The atom of Hydrogen contains 800 of these; that of Oxygen, 12,800; that of Radium, 180,000. All electrons are alike; it is the number of them contained in an atom that marks the difference between one element and another.

But further: neither atom nor molecule nor electron are "matter" as we have been accustomed to think of it; there is no such thing. The electron is a flying point of negative electricity; the atom is a sphere of positive electricity within which the electrons fly about. They cannot leave it because it attracts them. They cannot coalesce with each other because, being alike negative, they repel each other.

The sphere of the atom is not an empty space; it contains ether, like all else of space. When two electrons, in their flying journeys, come too near each other, they are mutually repelled and fly apart. The concussion, so to speak, causes an agitation in the ether which if it were in air would be a sound; in this case it is a flash of light—of course, too minute to see. So *all matter* is constantly emitting pulses of (to us) invisible light. This constitutes one of the sets of "rays" just discovered. Radium atoms have so many electrons that this phenomenon becomes quite noticeable. Another set of "rays" is made up of electrons *individually* escaping from the atom-sphere for various reasons. These are the "cathode rays." And yet another set is made up of *groups* of electrons escaping and constituting another element. If—purely by way of example—800 of the 180,000 in the atom of Radium were to escape as a group, an atom of Hydrogen would have been formed.

In one way and another, then, all atoms are breaking down into simpler ones, and also losing their energy in the form of light.

In other words, chemistry is about where bacteriology is. We know a great deal about purification and fermentation, which are the *breaking down*—under the influence of bacteria—of organic molecules and cells. Of the other bacteria, which *build*, we know almost nothing. Perhaps they are nearly all too small or for another reason invisible.

And chemistry now knows about the breaking down of atoms, almost nothing about their building, almost nothing of the nature of that magnet which draws together the free electrons of space into the unity and systematization of atomic life. May such a "magnet" not be a *center of consciousness*, fashioning thus its own body? May not the essentially *living* thing in a cell be such a magnet, attracting molecules, generating in each a secondary center so that they attract atoms; and generating still more subsidiary centers of itself which, attracting electrons from space, fashion atoms? May not, in fact, the mysterious entity known as *positive* electricity, be consciousness? This would be the "presiding elemental" of the medieval alchemists.

One's speculation is tempted to move outward and, considering the solar system as an atom, and the planets as electrons, busy itself about the magnet-centre of consciousness that drew *that* together. But the field is too large to do more than glance at now. There is an infinity in both directions, towards the great and the small. And the more we come to know, the more clearly does it appear that the laws that govern at one end, rule also at the other. The solar system is an atom, and the atom a solar system.

STUDENT

Is There Organic Life on the Moon?

THIS question, one of the most interesting of all the problems of astronomy, and one of the most puzzling, is again brought prominently before us by some recent observations of Prof. W. F. Pickering of Harvard University. He has been making a close study of our companion, in the clear air of Mount Lowe, California, and has confirmed and extended his previous observations in Peru, etc., respecting the suspected changes of color upon the moon's surface. He is absolutely convinced that a rapid darkening, beginning shortly after sunrise (on the moon) followed by an equally rapid fading towards sunset, takes place at certain spots.

As these spots are blackest at full moon, it is clear they are not shadows, for shadows are invisible at that period. There must be some actual change of color, and we can imagine nothing but some form of vegetable life which could produce such effects.

Professor Pickering also announces changes upon the floor of the great ring-plain Plato, a new small crater having rapidly enlarged, and some other very minute craters having been seen for the first time.

If these observations are confirmed, the orthodox theory of the condition of the moon will have to go the way of many other theories to doubt which was, at one time, rank blasphemy. For if there is vegetation, and, as Prof. Pickering insists and insists with strong reasons, hoar-frost, there must be an atmosphere and probably rivers.

We must remember that H. P. Blavatsky teaches that the moon is not completely dead, so there is clearly room to expect to find low forms of life upon its surface as it slowly disintegrates. H. P. Blavatsky says, "For she is a *dead*, yet a *living body*. The particles of her decaying corpse are full of active and destructive life, although the body which they had formed is soulless and lifeless."

How the Sun Governs the Earth's Magnetism

IT is well known that the axis of the sun, the imaginary line from pole to pole, upon which that vast globe turns, is not square to the orbit of the earth; in fact, the sun's axis is inclined to the ecliptic an angle of 82 degrees. As we travel round our great life giver, twice a year we find that one or the other of his poles is inclined towards us, in March and September, and twice a year, in June and December, the axis is in a neutral position.

It is interesting to note that some well-known British astronomers have demonstrated lately that at the former period, *i. e.*, when the sun's north or south pole is pointed towards us, the greatest activity and disturbance of the electric and magnetic conditions of the earth takes place.

Theosophy has always taught that the influence of the sun over the earth and ourselves was far greater than scientists were prepared to admit, and it is satisfactory to find, at last, this is being established, and to see day by day new demonstrations of our relation to the heart of our solar system.

A Belgian astronomer also suggests that the earth's electric currents are derived from the solar magnetism. The earth is an armature revolving in the sun's magnetic field, as in a dynamo. By this rotation (from west to east) an atmospheric current is generated in the opposite direction. This, by induction, excites another in the earth's crust, from west to east. Thus is surmounted the difficulty presented by a current moving in the same direction as the rotation.

STUDENT

Kerosene Fires—Milk a Good Extinguisher

IT has lately been said that the proper application to burning kerosene or gasoline, from the explosion of lamps and stoves, is milk, not water. The burning fluids float on the water, and thus spread further. But with milk an emulsion or mixture is formed, and a small quantity suffices to extinguish the flames.

This is worth an experimental trial by every householder, but we imagine that for such an emulsion to occur, the milk and kerosene would have to be strongly shaken together—a maneuver hardly possible when it was most needed!

STUDENT

A Story

"THE soul's armor is never well set to the heart unless a woman's hand has braced it, and it is only when she braces it loosely that the armor of manhood fails!"—*Ruskin*

A large passenger steamer ploughed her way tirelessly through the ocean dividing England from South Africa. Her wide decks were deserted, for it was the dinner hour, and below in the spacious saloon men and women were dining with that luxury and superabundance, which modern civilization seems to think necessary for its comfort and well-being. Amid the glare of the electric lights, the glitter of silver and crystal, the plate-laden waiters rushed to and fro, while a continuous wave of conversation rose and fell to the accompaniment of the ship's band playing overhead in the music saloon. At a side table sat twelve men and women whose faces denoted characters more or less interesting, while at one end presided one of the ship's officers. Tall, fair and blue-eyed, his face expressing manliness and courage, he was one of those sons of whom Old England may justly feel proud. Not entering into the general conversation, he nevertheless responded pleasantly when addressed.

Undoubtedly the most attractive figure in the group was that of a girl about twenty-five years of age, whose simple dress of white muslin, exquisitely delicate, served but to enhance the beauty of her delicate complexion, big brown eyes, and waving hair, which curled naturally round her forehead. Above and beyond all, however, was an arresting expression, "the soul of a High Intent," which would have glorified a less perfect face.

Presently out of the general din arose a man's voice: "For pity's sake don't let us talk religion!"

The protest seemed but to fan the flame, and another voice exclaimed: "Are you not interested in some kind of religion, Miss Manwairing; I see you reading a paper I have never seen before?"

Dorothy Manwairing smiled. "You mean the NEW CENTURY PATH," she said. "It is the organ of the Universal Brotherhood and Theosophical Society, but Theosophy could hardly be called new; in fact, it is as old as the world!"

"What is Theosophy, anyhow?" asked a woman at the other side of the table.

"Well," said Dorothy, "Theosophy literally means the 'Wisdom Religion,' 'Divine Wisdom.' But in simple language just this: 'To do what you have to do to the best of your ability, and to think of others more than of yourself.'"

"Oh!" said the woman in a rather disappointed voice. Evidently here was nothing to offer a new sensation or help to pass the tedious hours more pleasantly. "Are you a Theosophist?" demanded the first speaker.

Dorothy hesitated. Then, with slightly flushed cheeks, she said sweetly: "I think I may say, in the words of a noble woman, 'I am trying to be.'"

The silent officer at the end of the table flashed her a brief smile—and, "how beautiful she is," he thought. An hour later, as Dorothy stood alone on deck, leaning over the rail, gazing into the star-lit sky, she strove to bring her mind into tune with the Infinite, and "her face wore the utter peace of one whose life is hid in God's own hands." Quietly to her side came the young officer. "You cannot guess," he said, "what your words at dinner tonight have been to me; for I, like you, am trying to be a Theosophist. Have you heard much about Point Loma?"

"Why," she said, "I have been there!"

"Oh, lucky; thrice lucky, you!" he exclaimed. "Could you, would

you tell me something about it, and the life at Point Loma?" he asked.

"Gladly," said Dorothy; "but where shall I begin, when all is so beautiful and wonderful? I arrived in the evening; such a one as this, with only the light of the stars to reveal the white buildings and palms, while against the pale, grey sky the lights in the domes of Temple, Homestead, and Homes stood out steadfastly. A concert in the rotunda was just ending, and I have no words to express the different feelings that followed each other through my mind. Perhaps you will smile when I tell you that what impressed me most the next day was the khaki-clad men. You know so many people think of Theosophy as a profound philosophy, which, of course, it is; but it is a real joy to realize how absolutely practical in every way is the life at Point Loma. Briefly, we may say that every man and woman there, and the children, too (oh, those happy children), are hard at work, not only realizing their ideal, but idealizing their real."

"Did you meet the Leader?" he eagerly asked.

"Yes," she replied, "I saw her many times; spoke with her once or twice, and during all my visit felt her kindly solicitude around me."

"Tell me of her, please," he urged.

"Do you know these lines of Lowell's?" she said. "I think they describe her much better than I can:

Yet holds she not her soul so steadily
Above that she forgets her ties to earth,
But her whole thought would seem to be
How to make glad one lonely human hearth:—
For with a gentle courage she doth strive
In thought and word and feeling so to live
As to make earth next heaven!

"My word! What a privilege has been yours!" said he. "What would I not give to be able to go there!"

"Some day, no doubt, you will," Dorothy replied. "All things come round to him who well can wait."

It was the last night of the long voyage, and the two stood again side by side looking over the unfathomable sea. "Well," said he, "tomorrow we part, and then will end for me a time that has made a great difference in my life; you know it is none too easy here on board; there are none in sympathy with me, and some are antagonistic; but by silently doing my duty as best I can, I mean to pull through. And you?"

"As you are already aware," she replied, "I am going to keep house for my brothers in Johannesburg. And as yet it is all strange and unknown to me; but one could not be even a visitor at Point Loma and not absorb some of that spirit of unquestioning trust in the Divine Law which enables us to ac-

complish anything if we only will to do so; and I am not afraid."

The silence that followed was more eloquent than words, for soul spoke to soul the imperial speech of souls. Bending slightly towards his companion, and with a look of admiration clearly defined upon his manly face, it was evident that the silence would soon be broken.

"I wonder shall we ever meet again," at length he said.

"Perhaps we may," said Dorothy.

"Do you hope that we may?" he insisted gently.

Softly, but unhesitatingly she answered, "Yes."

"Then some day I shall come," he said.

"When you come I shall be ready," she replied.

Silently his hand closed over hers as it lay on the rail, and the light that had never before shown on land or sea for those two surrounded and enfolded them. Then the night was filled with music, and—

Love took up the harp of life
And smote on all the chords with might,

Smote the chord of self that, trembling,
Pass'd in music out of sight.

LIFE'S TREASURE

by ADELAIDE PROCTOR

I WONDER did you ever count
The value of one human fate,
Or seen the infinite amount
Of one heart's treasure, and the weight
Of Life's one venture, and the whole concentrate
purpose of a Soul?

And if you ever paused to think
That all this in your hands is laid
Without a fear:—did you not shrink
From such a burden? half afraid,
Half wishing that you could divide the risks, or
cast them all aside?

You well might fear!—if Love's sole claim
Were to be happy: but true Love
Takes joy as solace, and looks above:
And sometimes through the bitterest strife, first
learns to live her highest life.

If then your future life should need
A strength my Love can only gain
Through suffering—or my heart be freed
Only sorrow from some stain,
Then you shall give, and I will take, this crown of
fire for Love's dear sake.

THE CHILDREN'S HOUR

The Raja Yoga Question Box

THE great souls of the past and of the present teach us how noble and beautiful life may become when Heart-light shines through all acts.

1 Who was Margaret of Scandinavia?

ANSWER — Margaret of Scandinavia was a great historical character. For many years, in her son's name, she ruled both Denmark and Norway wisely and well. The Swedish nobles, seeing this, asked her, in 1389, to become the ruler of Sweden also, and to this she consented. She worked for a union of all the Scandinavian countries. She was powerful, but gentle and good.

2 Who was Gustavus Adolphus?

ANSWER — Gustavus Adolphus was the greatest, noblest, and bravest of Swed-

ish kings. He introduced true discipline into the army. He was loved and trusted by the people, and almost worshiped by his soldiers. Industry, commerce, and education progressed under his wise rule. Through his bravery many of the enemies of Sweden were subdued. He fell in the battle of Lützen, 1632.

3 Who is Oscar II?

ANSWER — King Oscar II is Sweden's present ruler, a good, true, and wise man. He is beloved by his subjects and through his wisdom Sweden has become a harmonizing power among nations. King Oscar is devoted to the sciences and arts, to education, and to all things that help make brotherhood a living power in the lives of men.

Brotherhood Rules

DEAR CHILDREN: The following rules have been written out by some of the good people of a little town in northern Italy, and the children in the schools are learning these rules by heart. This is what a friend who is now traveling in Italy writes:

Love thy schoolmates, for they will be thy co-workers for life.

Love knowledge, the bread of intellect. Cherish the same gratitude toward thy teachers as toward thy father and mother.

Make every day thou livest the occasion for some good and beneficial deed; always sow the seeds of kindness.

Honor good men and true women, esteem all men as equals, bend thy knee to no one.

Do not bear hatred to anybody; don't insult people. The word revenge shall not be in thy vocabulary, but stand up for thy rights and resist oppression.

Don't be a coward; stand by the weak and respect and love justice.

Remember that all goods of this world are the products of labor. Whoever takes the good things of this world without giving their equivalent in labor robs the diligent of their just dues.

Exercise thy mind; observe and think and try to ascertain the truth of all things.

Do not assume that to be patriotic one must hate other nations or glory in war. War is a relic of barbarism.

Let it be thy purpose in life to hasten the day when all men, as free citizens of a free state, shall live in peace and happiness, in true brotherhood.

DEAR CHILDREN: There is a lady here who has been raising and caring for canary birds for many years. A confirmed invalid, the greater portion of her time has been devoted to the care of her little songsters and the cultivation of flowers.

The two little pets that deserve special mention are of the Hartz Mountain species, and are beautiful singers. They are named "Sanky" and "Charlie," the former twelve years old, the latter two.

During the moulting season, some ten years ago, "Sanky" became very sick, and seemed likely to die. Previous to this time he had been anything but a docile bird, and his mistress was not over fond of him, but when the little fellow became ill, her great heart went out to him in his suffering and helplessness. He came to his good mistress like a sick child, and she would hold him in her hand for hours, keeping him warmly wrapped, talking to him all the while just as though he were a little babe.

She would say, "Baby is sick; just the sweetest little birdie that ever lived!" So, at all hours of the day, more particularly at twilight, she talked to the bird; the sickness passed and he became again the sprightly little songster. Sitting alone in her room one day, with the canary perched on the back of her chair, she was startled at hearing a piping little voice say, "Baby is sick!" She instinctively knew that the bird had talked. From time to time he learned other words, and now his vocabulary consists of thirty-seven words.

"Charlie," the younger bird, pronounces twenty-four words. They both sing or pronounce very plainly, "He is so, so beautiful, just as pretty as he can be and live, live, live!" The lady has another bird, whom "Sanky" never appeared to like, and in a short time he was singing in a most decided tone, "I dislike her; I dislike her." The lady holds many conversations with her pets, as for instance: Mrs. C. — "Who are you?"

The birds — "Mother's beauty." Mrs. C. — "What are you?"

The birds — "Just as pretty as can be and live."

"Sanky" was very fond of the lady's husband, and at noontime he would perch in the window and watch for him to come up the street, for he always brought him something nice to eat.

There came a day when his kind-hearted master did not appear. "Sanky" was perplexed. He watched several days, then he knew something was wrong, and the little bird moaned as though his heart were broken.

Meanwhile his master had died. Who shall tell to us what was in the heart of that innocent little bird? Give to birds, and to all creatures the best there is in your hearts. They reason far deeper than we can know.

Do you ne'er think what wondrous beings these?

Do you ne'er think who made them, and who taught The dialect they speak, whose melodies

Alone are the interpreters of thought?

Whose household words are songs in many keys,

Sweeter than instrument of man e'er caught!

Whose habitations in the tree-tops even

Are half-way houses on the road to Heaven!

A. I. M.

Dramatic representation by Raja Yoga Children in their International Play given at Isis Theatre, San Diego and in the Greek Theatre, Lomaland

A Patriarch Tree

DEAR CHILDREN: One of the professors of the great Leland Stanford Junior University, California, has made an interesting report about a big tree of California, a *sequoia gigantea*. This tree, when cut down in 1900, revealed its age to be 2,171 years, and it was therefore 271 years old when the Christian era began. Now this tree grew on without any-

thing happening to it for something over five hundred years—at least that is the story told by its uninjured rings—when it received a wound.

What a world of knowledge this tree might reveal if it could only speak! When we think how much happens in just a week or just a year, can you imagine what it must be to stand and stand and stand for more than two thousand years and see people and generations and families and communities and whole nations rise and fall, and come and pass away again? Yet so it stood, with the same sunshine to warm it, and rain to feed it, the same soil to nourish it that feed and warm and nourish the trees of today. Something to think about there, isn't there? UNCLE FRED

Students'

Path

GOD'S DREAM

GOD wept!
O'er earth's vast loneliness, there fell like rain,
Compassion's tears!

God smiled!
The sun shone out on high, and pierced again
The mists of years!

God slept!
While angel voices stirred in sweet refrain
The midnight hour!

God dreamed!
And in that dream, the sunshine and the rain
Blended as one! And when He woke again,
Behold! a flower!

Practical Theosophy

I

KATHERINE TINGLEY has lifted the Theosophical Society out of the purely theoretical, into which it was fast drifting, to an eminently practical position. The time for mere preaching is past, now is the time for doing. Now is the time for living our ideals, for putting into practice that which we have learned. It is no longer enough to go out in the world and tell a patient audience that "Brotherhood is a fact in nature;" we must show them that it has become a fact in our own lives, and that we ourselves are the first to be ready to do the many seemingly difficult things we have asked others to do. We must show it in the many little things we meet with in our everyday life, for we are judged according to the way in which we deal with them, and with us the whole work is judged, for we are recognized as an indissoluble part of it.

This inside reform must precede the outer, but now the outer work is being done in many different ways under Katherine Tingley's direction. It embraces all the different objects of the International Brotherhood League, and is of the most far-reaching importance. To do it well we must enter into it with love and compassion, for only with these in our hearts can we overcome the many disappointments which are sure to meet us. If we look only at the surface we may be discouraged, but if we remember that these souls around us are hungry as we are for something higher, are anxious to live a nobler life and are groping around in the darkness for a ray of light, then we shall feel our hearts go out to them and whatever we do to help them, will be Theosophy of the truest and most practical kind.

E. T. S.

II

Said his mother to a crab, "Why do you walk so crooked, child? Walk straight."

"Show me the way and I will try to walk as you do."

But since the old crab could not walk straight her son laughed at her advice.

The world has had advice enough, it has had precepts enough. Every race has its bible and its golden rule, but in spite of them humanity has gone so far astray that to the vast majority their application now seems not only impractical but impossible. To them life with brotherly love as its basic principle is quite inconceivable. History shows no record of it. To be sure we have legends of a Golden Age, but they are only legends.

When we used to try to teach brotherhood by talking and lecturing we were told, "That is not new, Christ taught that." Which was most true, but his message has lost its meaning because it has not been practiced. We felt sure that the new message was practical, but we did not know how practical, for we had not put it to the test.

Katherine Tingley knowing that the world could not be reformed by

a disembodied, verbal philosophy, however excellent, called her students together to teach them practical Theosophy and to give humanity a living example to show them the way. For men have lost faith and do not believe that a way exists.

If we do not practice Theosophy, how can we expect others to? Doing one's work cheerfully and well is practicing Theosophy. We have found that Theosophy applies to every department of life, religious, social and industrial, as well as to character building. It is not enough to know how to do a thing; we must do it, and do it well. Knowledge is valuable, but performance is of greater value. The motive must be pure, but a pure motive can accomplish nothing. It must be combined with achievement. Practical Theosophy will accept no passive devotees. "Show me the way, and I will try to do as you do." The responsibility is great.

G. Y.

ONLY he deserves freedom who has day by day to fight for it.—*Goethe*

RELIGION is a fire which example keeps alive, and which goes out if not communicated.—*Joubert*

The Necessity for Right Action

THERE is very good news in the air! Though many have spent, and many are yet spending their time in dreaming, speculating and discussing on the problems of life, some clinging to and fighting for decayed institutions, and others making vain attempts to manage the world from their own point of view; yet, there always have been those who knew the great plans for true success and progress, and the vital necessity for action on those plans to bring about a realization of their glorious possibilities.

These great helpers of the race, and their many associates and fellow comrades have worked with all their power for the establishment of the rule of righteousness, of justice, honesty, sincerity and compassion in human affairs; and they have already surmounted the chief difficulties in the way, have gained the summit of the enemies' stronghold, and have dictated their conditions of peace.

So that very soon the human family will feel the touch of the Master hand, of the higher law at the helm of the world's affairs; a divine hand that does not overlook even the humblest worker in the great cause of human progress; and will deal beneficent justice and compassion to all; each in their turn, as indicated by nature's perfect laws.

Never was there a time of greater necessity for the steady, unfaltering pursuit of *right action* to hasten on the realization of this great good. By right action at such a time we can help many out of untold lives of misery. *United work on brotherly lines* is really the key to the new order of the ages. Not to dream, not to argue, not to muse and think alone, but to do.

In trying to get a clear conception of an idea, it is a very wise method to go to a good dictionary and read there the correct definition, and then act upon it. Unless we check our thought by the standard meaning and by right action, it becomes soiled by desire, which discolors the meaning of ideas, making confusion. So to start away in thought and action, with a confused idea, can only lead us into a muddle, and right into the very difficulties we thought we were going to escape from; so we require to "study and work, work and study," as Katherine Tingley says, to be really successful and to learn to be a helper and not a hinderer in the world's progress. This applies just as truly to educated as well as uneducated people, for their education has not been on these lines of the limitations and modifications of human thought.

The great dictionary and encyclopedia on the problems of life is the standard one, Theosophy. That true Theosophy that has come to us from the pure lives and work of the three great teachers, H. P. Blavatsky, William Q. Judge and Katherine Tingley; the very mention of whose names has an inspiring influence and a clarifying action on our thought and lives, so noble has been their devotion to humanity.

So we repeat again and again, and honor and ever call to mind those names of good influence, the names of our teachers who have given their rare abilities and pure lives to the service of humanity, and the result of whose joint work is now permanently established at Point Loma. From this center, the good, pure and inspiring influence of their names and work is spreading, yearly, monthly, daily and moment by moment in ever increasing volume for the benefit of all that lives, transforming our modern life and making possible a heaven on earth.

STORM THOUGHTS

I

INNOCENCE AND GUILT

ONE saw in the lightning's vivid track
The path the storm king trod,
And one in the searching flame of heaven
The cimeter of God.

II

INVOCATION

Be still, my soul, and know thou govern'st me,
Let not the fever of this mind
Tempt thee, my guide, to halt behind—
Stretch out thy hand for eye in mastery.
Teach me, 'tis thine, but thine, to read the clouds,
To ope the way when duty calls,
To raise up when the sense life falls,
And in its darkness thy white light enshrouds.
Await the taking when I bend the knee,
Shorn of the woe that conflict brings,
Stript of the world's vain murmurings,
Subservient at last, alone, to thee.—*Selected*

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question

Will you please define, to the benefit of non-Theosophists, wherein lies the beauty, and also the sublime harmony of the teachings of Theosophy?

Answer

The beauty and harmony of Nature that surrounds us on every hand is felt by all whose sensibilities have been awakened. We feel that Nature is a harmonious expression of some great spirit, and it is a common experience that the contemplation of great mountains, vast deeps—any of the grander manifestations of the natural world—are connected with the feeling of the sublime in man; in fact, call this forth in him. People have reached out towards God through his works.

Think, then, of a system, a scheme of Nature greater than any proposed by philosophy except the Theosophical, in which the human being finds his place and expresses himself with such beauty and force, correspondingly, as do trees and mountains, the valleys and rivers. Think of man in a universe of this kind, the natural environment of humanity once it has crossed the waters of unwisdom and stepped into the knowledge of *His* divine nature. Think of what the harmonized human nature might reveal in the way of noble qualities and heroic capacity to do and help.

There is open to the human being a destiny that Nature, our joy and solace, is debarred from; for, whereas Nature is in unconscious harmony with the law and unconsciously follows and mirrors its workings, in man all the fires of life and mind and soul may be awakened, and it is for man to consciously attune his being and effort with the hidden music, that lies at the root of all life, waiting for the divine call that will sound when the supremacy of man's higher nature is secured to the race, waiting to unfold such beautiful and harmonious life-forms as we as yet dream not of.

Think of the emotions of the human being uplifted, purified—not killed out, leaving heartless corpses, but strengthened in the purifying process. Think of the human relations not reduced to a cold abstraction of unnatural asceticism, but warmed and made electric and heart-satisfying by being freed from selfish desire and inspired by the conscious power to execute noble purposes in united work with others.

Think of an awakened human being in a world that expresses his heart harmonies in the midst of Nature, through him free to bloom into a diviner beauty of environment than we yet know.

Think of a universe that reveals the law to man's opened eyes, where man has found his true place, and all the other kingdoms of Nature work joyously at his bidding to fulfill the purposes of life.

The beauty and harmony and sublimity of the Theosophical teaching lies in this revelation of the perfect work-shop and the perfected workers—a revelation of a universe where all that is unity and diversity expresses its being in harmony, the key to it all being the courageous and faithful moral life, the unselfish endeavor, the choosing the better rather than the dearer, that is man's part.

The widening and deepening of unselfish love for humanity in the heart of man, that is the chief corner-stone of Theosophical teaching, is what will put *man* "in his heaven and all right with the world."

STUDENT

Question

What interpretation do you give to the following:
"Beloved, think it not strange concerning the fiery trial which is to try you, as though some strange thing happened unto you:

"But rejoice, inasmuch as ye are partakers of Christ's sufferings; that, when His glory shall be revealed, ye may be glad also with exceeding joy.—*1 Peter iv: 12, 13.*"

Answer

There was a date, whether before or after this was written we do not know, when the Christian teachings, originally broad and universal, became narrowed down into the formal creed of a sect. Or perhaps, rather, this change took place gradually through the centuries that have elapsed since Jesus the Christ walked on earth. But let us now interpret the passage according to the original meaning of the words used, as explained by Jesus himself in his recorded sayings.

Jesus taught that "the Christ" was the divine self of every man. Man was created by influx of God's breath into an earthly mold; this divine spark can grow to full self-consciousness in the man who reverences it and makes his life pure, and the man is then a Christ and has attained salvation. But Jesus himself stood out above the rest of humanity as one of the world's great Messengers of Truth; he was a special manifestation of the divine spirit, as are all the great teachers; and though all men are potential Christs, this one was able by his power to be a leader and teacher to humanity.

In the text we are told to remember that when we begin to aspire towards the awakening of the Christ in us, we thereby issue a challenge to all the forces in our earthly nature that tend to drag us down into sensual and selfish life. And we also issue a challenge to the world, which is not prepared as a whole to entertain the same aspirations, and which will, therefore, often be at variance with us in our new standard of life. But these tribulations we accept cheerfully, because we have confronted them purposely as one who willingly undergoes arduous training to prepare himself for some desired attainment. Believing fully that a greater happiness, a greater blessedness, a larger field for the exercise of our divine compassion awaits us if we can transfer our life from the selfish center to the true center, we are ready to undergo purification in the *fire* which shines from the Spirit and burns up the dross of passion and vanity in our hearts.

The important point to remember is that this purification, this resurrection of the Christ in us from the grave to glory, is not a thing that can happen only after death in some vague spiritual state; it is a process that can take place in us now in this life. This world may be wicked, but it is we who have to regenerate it. To give up the task in despair and console ourselves with the hope of a future heaven, is to shirk our sacred mission as bearers of the divine light.

H. T. E.

Question

What is man? Is he a unity; is he a duality, or is he a trinity, as viewed by Theosophists?

Answer

Anyone looking into himself will surely find at least a trinity. He will be conscious of the war between higher and lower impulses. He will be conscious of doing unworthy things against the protests of his better self; and of doing fine and unselfish things against the drag of his lower nature. And he knows that between the two he, himself, has the power of choice all along the line. Sometimes his choice is so entirely with one that he forgets the very existence of the other. He may be so strongly moved by the need or peril of others that he altogether forgets his own interests, as we phrase it. Or he may let in sensual or selfish desire in so overwhelming a flood as to temporarily blot out the traces of his better self.

A trinity is, therefore, clearly perceivable by us all. Some of the mediæval Theosophists very vividly called these three the Demon, the Man, and the Angel. In less forcible terms we can say the Animal, the Man, and his Soul.

This may have been the trinity in the mind of Paul when he spoke of body, soul, and spirit. What we called animal, he called body; what he called soul, we have called the man; what he called spirit, we have called the soul.

Maeterlinck and the Stage MAURICE MAETERLINCK's views of the modern stage are not optimistic, nor are they untrue. The educational value of the stage has been forgotten by us of the present day; the grand ideals of the ancients have fallen to what we now understand by the stage; and the result is that more harm is done to morals than good, by the suggestion of virtue ultimately triumphing and vice dethroned. The stage today touches the lesser emotions rather than man's highest intellection: hence its present-day moral level. Maeterlinck says:

"I go to the theatre in the hope of hearing something which will bring to my mind the true phase of human life, to see before me the beauty, the grandeur, and the gravity of man's every-day existence. Instead of that I see and listen to some childish tale based on lives of exceptional people who give utterance to exalted and extravagant sentiments. I wish to see a man and I am shown a hero. We have made no progress in the dramatic art, and are even now behind the ancients.

"A time has come for the complete regeneration of the stage, and it is not far distant when the very soul of mankind will make itself and its sentiments manifest without the aid of the senses."

Where White Ants Are Food A RECENT book on the *Congo Free State* gives this picture of the fondness of the natives for white ants: "In the white ant month the natives have a very busy time. The river is deserted and men and women, boys and girls, go out to gather the white ant for food. I cannot say I admire their taste, but the white ant is not bad as food—merely very rich. In this month he is about an inch long; the natives gather him in hundreds, pull off the wings and roast him. The native boys have a shorter way with him. Sometimes at mess white ants flopped on to the table, attracted by the light.

The boys, who were waiting, pounced on them and without further ceremony popped them into their mouths."

A Millionaire on Money ANDREW CARNEGIE, in a recent letter on the use of riches, says: "In the final aristocracy the question will be, what has the rich man done for his fellows? It will not be asked under what form he worshiped God, but how he served man."

Franklin's Hints for Health HERE are, somewhat abridged, the dietary rules laid down by Benjamin Franklin in *Poor Richard's Almanac* for 1742:

Eat and drink such an exact quantity as the constitution of the body allows of, in reference to the service of the mind. The exact quantity being found out, is to be kept to constantly. The difficulty lies in finding out an exact measure, but eat for necessity, not pleasure, for lust knows not where necessity ends.

If thou art dull and heavy after meat, it's a sign that thou hast exceeded the due measure, for meat and drink ought to refresh the body, and make it cheerful, not dull and oppress it.

If thou findest these ill symptoms, consider whether too much meat or too much drink occasion it, or both, and abate by little and little until thou findest the inconvenience removed.

If a man casually exceeds, let him fast the next meal, and all may be well again, provided it be not too often done.

Use a little exercise a quarter of an hour before meals, as to swing a weight or swing your arms with a small weight in each hand; to leap or the like, for that stirs the muscles of the breast. A temperate diet arms the body against all external accidents.

A sober diet maintains the senses in vigor, it mitigates the violence of the passions and affections, preserves the memory and helps the understanding.

Three good meals a day is bad living.

Where one dies of hunger a thousand die of eating.

To lengthen thy life, lessen thy meals.

A full belly is the mother of all evil.

He that never eats too much will never be lazy.

Eat to live, and not live to eat.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

■ ■ A Mean View of the Christ ■ ■ ■

THERE is a picture now on exhibition at the London Royal Academy, by Sigismund Goetze, entitled "Despised and Rejected of Men." It is creating a great sensation, is mostly welcomed with much unction in religious quarters, and is declared to be "a powerful and terribly realistic presentment of Christ." Since engravings of it are getting about over here, and since it is being received with the same chorus of pious approval—though many healthier and therefore dissenting notes are to be heard intermixed—the picture may already be intelligibly criticized.

In the center of the canvas, Christ is represented nearly naked, bound to a pedestal, with his hands behind him, crowned with thorns, with dejected head, and contorted with pain. Around, passing by, is a throng of

disregarding figures of modern life, a priest in full robes, a fine lady of the world, a scientist examining a test-tube, a newsboy howling details of a divorce case, a fashionable roué, a Calvinist preacher (judging by appearance), a yokel from the country, and so on. All are represented as utterly careless, in their several preoccupations, of the tortured figure tethered to the pedestal above their heads. And this is considered to convey a profound religious lesson! Is it not because of this abject

No Strength, Courage, or Compassion

presentation of Christ that Christianity is where and what it is? The conception is utterly nauseating. The central Figure has no manliness, no strength, no suggestion of profound wisdom or comprehension, hardly any even of compassion and pity. At best it is a Figure appealing for pity; in no wise is it one extending pity to others because in its wisdom it sees their dire need of help. It is an appeal belonging to the same order as Dickens' description of the death of little Paul Dombey. If it has anything at all to do with religion, it is religion upside down; religion rooted in sentimentality, the religion of the school girl. In the name of Christ himself, there should be protest on every hand; it is the very bedrivelment of his work and purpose.

The incarnation of Christ was to help. When he came to an understanding of himself there descended upon him a full comprehension of the needs of all humanity, a wisdom looking before and after, of which few of us can form any conception. In a full consciousness of *strength* he must have faced—as he must now be facing—the problem he had willed to solve. Yet the pictures show us a consciousness of *helpless inadequacy*, of dejection, some even of self-pity! Yet he had *willed*—not

Jesus Came to Help, Not to Lament

merely hoped or craved—to save, to teach, to guide, to illuminate. And that great act (or word) of will thrills space yet, and will do so till the hour of its perfect accomplishment. He brought a sword, was a *fighter*—against evil. And behold, the forces of evil against which he fought and fights, taking their very subtlest form, are precisely those which have succeeded in getting him represented as a meek lamb, led *complainingly* to the slaughter, as one who wept powerlessly instead of acted. If he had been that, why should he or his followers have been persecuted? Why should the Titan of Evil have cared a snap *what* he said or did? His force must have at least equalled that of the Titan, or he would not have roused it to rage furiously.

He was a warrior, with the sternness and the strength of one, if also with the compassion of one. He flung a sword, not a tear, into the old world. And if we seek the compassionate side of his consciousness, it must be with the motive that after we have touched it and been filled by it, we, too, may stand up and fight. There comes a time in our development as true men and women, when it is shameful to seek help, to crave the balm of another's compassion; when the only help we will

An Inspiring View of Christianity

accept is that which comes to all who use in good fight all the strength they already have. To them the reservoirs are open without their asking. The only compassion we get from the heights should be in measure of that we bestow on the depths. Let us defeat the enemy by making a new and true conception of Christ. Then the standard of a vital and redeeming and inspiring Christianity can be raised to same purpose. And this new conception will of its mere self be a notable defeat of the enemy.

H. C.

City of Geneva—Frontispiece

THIS week's cover-page of the NEW CENTURY PATH shows a view of the city of Geneva, Switzerland. This view is considered one of the most interesting that can be taken of Geneva on account of the number of historic points included. The bridge is one of the largest, there being several, as Geneva is built on both sides of the lower end of Lake Lemman, or Lake Geneva. The snow-covered mountains are Mount Blanc and its chain, Mount Blanc itself being the highest peak in the view, to the right. To the extreme right of the picture is seen the tip of Rousseau's Isle, where the famous philosopher, Genevise by birth, used to pass many an hour. The Rhône here re-emerges from Lake Lemman.

The origin of Geneva is unknown, though it is mentioned in *Cæsar's Commentaries* on the war in Gaul, as a town of the Allobroges. It is very ancient. The celebrity which it has acquired under Calvin and his

associates, as well as for its watches and jewelry, is a matter of history and common knowledge.

STUDENT

The White Race of China

THAT there exists a white-skinned race in China is the belief of more than one man of science. They are supposed to have been formerly quite numerous, and to have been driven into the mountains of northern China by the invading Mongols.

It is a curious thing that next to nothing is known of these white-skinned folk, except the bare fact of their existence. Their present dwelling places seem to be in the mountains around the desert of Gobi or Shamo, thus extending from the Altyn-Tag range up to the mountainous barrier separating the Chinese empire from Siberia—practically an unexplored region.

While so little is known about this strange race, it is premature to hazard any definite hypothesis as to the special branch of mankind to which they belong: but nevertheless it is interesting to recall the fact that the cradle of our present so-called Aryan peoples was in upper Asia, according to scientific knowledge. For all we know, this white race may be a branch sprung from the same general ethnic trunk; or, indeed, it may be of another race altogether. The mere fact of their being called white-skinned is in itself a sufficiently vague and unsatisfactory statement, for what may appear to the Chinese to be "white," might well appear cream or "moon-colored" to our own eyes. Certain it is, that very ancient records of several different Oriental peoples speak of a moon-colored race having once held sway over a part of what is at present Asia, and their descendants, if this be true, may still survive as the representatives of a forgotten people.

In any case, the existence of this mysterious race is sufficiently proved to induce one of the faculty of the university of an eastern city, head of the department of Anthropology there, to leave his duties for, possibly, a life-long stay in the Flowery Kingdom. This gentleman, according to report, will devote his time to finding and studying the mysterious race. He says:

The white race of China, which I intend to investigate, is almost unknown to science. They were formerly much more numerous than now, but were gradually driven to the mountains by the Mongolians. They will furnish a much more interesting study than even the hairy Ainu, and they will be of more value to science. I cannot describe them or their life to you, as nothing is known of them, except that they exist.

Quite outside of this white-skinned people, it is interesting to notice what this same gentleman says in regard to China and its future possibilities as a nation. He is quoted as saying that one of the reasons why he should regard his life-long stay among the Chinese as not useless, is because he is convinced that within three years China will occupy the center of the world's stage in commerce.

The thought is a sanguine one; China holding the center of the world's stage of commerce within a lustrum, would indeed be a startling proof of the belief that this is a time when events are moving swiftly; and would be a curiously rapid corroboration of a statement of a recent great writer and thinker—H. P. Blavatsky—that the Twentieth century would see not a few accounts squared between the races.

P.

The Gold-fields of Japan

FOLLOWING closely upon a report of the crisis in Russian financial affairs, brought about by the war with Japan, comes the news that a large and very rich gold-field has been discovered in the province of Iwate, Japan. While banks are failing, and others are trembling on the verge of failure in the Russian empire, the credit of Japan is as good if not even better than before the commencement of the war; and the discovery of these gold-fields will have the inevitable effect of raising Japanese credit even higher than it now is.

The Japanese government itself will develop these auriferous deposits. Subsequent to an inspection by the government engineers, it has been decided to rush work there, and a proclamation has been issued to that effect.

The minimum estimate of the possible yield of these fields is \$500,000,000; while the annual yield, with the force and machinery to be employed, is estimated at \$15,000,000.

As is usual now-a-days in things Japanese, no European will have a hand in this. It is to be Japanese entirely. Nippon has cast off its

swaddling clothes and has sprung with a single bound into full maturity, but it seems to be, from all appearances, a maturity which admits of indefinite growth and expansion. There are no signs whatever of senility or decadence; but there are signs of marvelous vital power and of a great future national destiny.

G.

Ireland's Past and Future

MR. GEORGE MOORE, the novelist, sees "no future for the Irish race. It has fulfilled its destiny. Every race fulfills its destiny. It grows to a certain height, like a flower, and fades. That is so with Ireland."

The flower symbol, as expressing the whole history of a race, is a bad one. If we are building arguments on symbols, let us try a *tree*. Will you—because your tree has been deprived of water and sunlight, and sapped by parasites—say that its flowerless poverty is because it has fulfilled its destiny?

This symbol appears to us to be pretty close to the actual. Only of late years did Ireland see hope for *political* justice; and in that hope, with its partial fulfillment, she has already begun to put forth bloom.

But she has to win another and profounder freedom—mental, spiritual. Not till then will the perfect flower once more appear. For we believe that Ireland's future will be the reappearance of a long-forgotten past; forgotten, yet remembered as legend in which she herself has forgotten to believe.

STUDENT

Cliff-Dwellers' Ruins as a National Park

THERE is a project on foot to purchase a section of the Mesa Verde country, Colorado, from the Southern Ute Indians for the purpose of converting it into a National Park. But the negotiations have come to a standstill for the following reason:

At the request of the Secretary of the Interior, Senator T. M. Patterson went to the South Ute Reservation to interview the tribe on the subject. It appears from the Senator's report that, so far from entering into negotiations with the United States Government, the Indians absolutely refuse to treat at all, on account, as they say, of the failure of the government to carry out the terms of a former treaty in 1896, in which the latter agreed to bring water to the reservation for the sale of certain lands by the Indians. The Utes say that the government has failed to do this.

Senator Patterson reports that the Indians say they will act as soon as the government carries out the terms of the treaty of 1896.

Wherever the fault may lie, as regards the hitch in the negotiations, the project itself, of converting these lands into a National Park, is a most highly commendable one. The section under consideration contains extensive remains of the Cliff-Dwellers.

The archeological value of these ancient remains has but lately begun to enter the minds of the majority of us. Prehistoric America is too little known. It is to be devoutly hoped that this new step of the government will be followed by even more generous appropriations towards obtaining a better knowledge of prehistoric America.

H.

A Russian's Reason for the War

IT appears that Russia's entry into Manchuria, and refusal to quit, was based on profoundly religious reasons. Sapozhnikov, writing in the *Strannik*, says:

The opposition to the retention of Manchuria proceeds from a misunderstanding of the mission which God ordained for Russia. Our country is providentially called to extend and maintain the orthodox faith in the whole world. Did not the Lord Jesus Christ utter the memorable words, that all peoples must come to him in order to avail themselves of the fruits of the redemption? Left to themselves, the Chinese would not experience the need of receiving Christianity, and they would remain forever in the darkness of idolatry. Hence the divine law forbids Russia to return Manchuria to the Chinese.

One can only wonder why Russia, charged with so sacred a mission, ever promised, and promised many times, to get out of Manchuria.

It is clear that "the Lord Jesus Christ," in urging people to come to him, really meant that they should come to Russia. And if they will *not* come? Then it is Russia's duty to come to *them*, and, incidentally, annex them. Other Russian papers declare that Japan is anti-Christ; that the war is a "holy war"; and that to Russia belongs the duty of establishing God's kingdom on earth.

OBSERVER

Some Views on XXth Century Problems

Moderate Drinking & Abstinence

IS the strictly moderate drinking of alcohol injurious? This is an old question, and now in a fair way to be solved. The British Institution of Actuaries recently caused an investigation of 125,000 lives, covering a period of sixty-one years. It need hardly be said that the Institution was purely moved by zeal for statistical facts, and had no concern with social or religious considerations.

Briefly, the report is this: That throughout the whole of the working years, the abstainer's life is the better.

In the ten years from forty to fifty years of age, the prime of life, there are 6,246 deaths among the abstainers, and 10,861 among the moderate drinkers, an excess of 74 per cent in that decade. The excess in death rate from twenty to thirty years of age is 11 per cent, from thirty to forty is 68 per cent, from fifty to sixty is 42 per cent, and from sixty to seventy is 19 per cent.

If figures are ever conclusive on any point, these settle the question. And they are in accord with more fragmentary data collected and published at various times during the last twenty years.

They are in accord also with what one would expect from the classic experiments of Parkes, Ridge and others. The first named surgeon put three soldiers to do various kinds of work, including marching—giving them coffee, meat extract and alcohol. He kept up the experiments three days, so that each soldier tried the work on each of the three fluids. In each case, the man who received alcohol collapsed first.

It is doubtless the word *stimulant* which does so much to keep up the use of alcohol. We do not draw the distinction between things which stimulate—like food and sunlight—by *adding* something; and those which merely *call out reserves*, or which redistribute.

And stimulants of the latter class may create a very marked sensation of added vitality, and yet have done grave harm. Further research is greatly needed, statistical and other.

STUDENT

Moral Insanity & Its Various Whims

ABOUT two years ago we referred to the case of a nurse who, upon trial, was found guilty of the murder of thirty-one persons, her patients. The crimes had extended over a period of twenty years, but it was only the last which aroused the suspicion that finally unveiled all the others. Her manner was kindly and confidence-inspiring, and she always gained the respect and liking of her patients. The murders would have been many more, were it not that after proceeding to a certain point in her poisoning, the whim frequently took her to save the patient's life after all. Then she would stop the doses, administer the right antidote treatment, and land her victim in safety. But the motive of this reversal was neither pity, fear nor remorse: merely a variant of the same curiosity that led in other cases to murder. If she was incapable of love, so was she of enmity. Nor was there a charge or suspicion of sexual immorality against any part of her career.

The verdict at her trial was "moral insanity." The words mean that whilst there was no trace of intellectual delusions or weakness, whilst her *mind* was clear, active and sane, her *moral* nature was perverted.

But of late, in prison, symptoms of *mental* insanity are setting in. That is, she imagines that all the food brought her is poisoned, refuses to eat, and risks death from starvation. Her habitual cheerfulness is consequently gone, but there are no other alterations. She speaks freely of her crimes, but still with no trace of regret, only with a sort of scientific and impersonal interest. As to her poisoning delusion, the explanation is obvious. It is only a translation to her own case of what she habitually did to others. Her mind is full of it, and she can conceive of no reason why it should not be done to her as she did it to others. Finally, she is sure it *is* being done to her.

Now, it is obvious that the words "moral insanity" tell very little. But they *do*, nevertheless express or imply the most obvious fact in human nature—its duality, its mental and moral poles, and the fact that these may vary in almost perfect indifference to each other. In this case, despite her crimes, there was *no marked accentuation of evil*, merely

An Absolute Absence of Good

an absolute absence of good. She had the same quiet interest in the phenomena of life and death as the rest of us. But there was nothing whatever to check it. She experimented and noted as bloodlessly as a botanist or a chemist. There was no rage, no passion, no more than there was sensuality; merely curiosity. And as she had the same liking as the rest of us for being liked and respected, she did her duties well and neatly and (outwardly) kindly. Nor was there any reason why she should not be cheerful; so she accordingly was.

She was in fact an evolution of absolute selfishness, not in the sense of grasping things, but in that of perfect indifference to any other pleasure than her own. She was not a glutton, a drunkard or a sensualist. There are plenty of similar people whose self-control lies in the reason that it is not comfortable to let loose the lower instincts. They had rather have clear minds and feelings.

In other words, the woman appears to be one of those whose selfishness, entire and perfect for many lives, has at last divorced the soul. She has now no tendril clinging to the divine world. She has stepped altogether and apparently finally from her place in the universe of living human creatures. The future can offer her no home among mankind. She has retreated to another order, that of those who have dehumanized themselves.

How many more of these creatures are in the making? Let us remember that our link to humanity is *love*, expressed in deeds; and it is real so long as we love even one other with a love that "seeketh not itself." It is real even so long as there is a *proportion* of that true love mixed with what is ordinarily called love. Real love asks nothing; it gives *only*. And while any of it remains it may grow. It is the one bond between life eternal and life temporary.

STUDENT

Women as Butchers & Brutalizing

SOME months ago, in the East, a small boy was tried for, and convicted of, a number of purposeless murders. Not even he himself had any particular reason to give for them.

At the trial it came out that for months before his birth, his mother had been assisting his father in the work of slaughtering animals; for he was a butcher.

No one seems to have observed a connection between this fact, and the murderous tendencies of the boy. Yet one would have thought it obvious enough even to the very sheep that the woman killed.

The case rises to one's mind in connection with a movement for excluding women from working in the packing-houses—a movement that may be selfish enough, but is none the less admirable. A Kansas City butcher declares that he has seen women "standing in a pool of blood, with arms bared to the elbows, cutting open hogs' heads while the flesh was still quivering." The President of the butcher workmen calls such work "brutalizing" and "unwomanly."

About two thousand women are (or were) employed in the Chicago stock-yards, and the number was increasing. Most of these are or will be mothers, and some work up to within a short period of their motherhood. No one whose attention is called to it (except a scientist) but will know the likelihood of the after-coming children's minds being stained with blood in which their mothers worked. The scientist we need not count; he has denied too many things that time proved.

C.

Diet Does Not Change the Stature

AN interesting experiment in diet was recently tried by the Mikado of Japan. Anxious to create a taller race of men for military service, he fed on a largely fleshy diet a number of small boys in government schools. The diet was in fact an average European program. The doctors charged with the experiment sent in their report last year. They had not found any change at all. It would seem, then, that diet and stature are not so closely related.

C.

Art Music Literature and the Drama

The Tendency Towards Mysticism in Russian Literature

Look for the flower to bloom in the silence that follows the storm: not till then.

GREAT convulsions of national life are often followed by an out-reaching in the hearts of the people toward mysticism. This comes after periods of storm and stress, when the heart is listened to, at least by the few and for a space.

Not without significance are the twin facts that out of Russia came H. P. Blavatsky, Mystic and Teacher, with her message of brotherhood and peace, and that out of Russia came also the suggestion for the disarmament of nations. Two peace notes were sounded and from Russia.

From the "Song of the Tribe of Igor" to the poems of Pushkin and the romances of Turgenieff, Gogol and Tolstoi may seem a far reach, and yet between the lines of their works one glimpses the mysticism that sleeps in the heart of the Russian people as a whole. Darkened and disturbed now is the whole national life by the storm cloud of war; later, when peace shall come, it were against the law that there should not be a great uplift. Whether this comes by victory or by defeat is not the question. The real issue is whether or not the people shall, awakening, find their feet planted upon the pathway of purification.

The Russian language is as intricate and beautiful, as full of color also, as the language of ancient Greece. In its literature a high note is sounded, the undertones of which strike deep in the roots of life, its overtones declaring the Soul, outward-reaching and upward-searching.

Russian literature is unique, as national literatures go, in that while springing almost wholly from the nobility, it is marked by a marvelous sympathy for peasantry and peasant life, even though in some of our best-known Russian novels this sympathy slips easily into sentimentality and idealism.

In no other land are there to be found such extremes as in Russia, crass materialism at one pole and the purest mysticism at the other; virtue balancing vice; wealth, the deepest poverty; culture foiled by the most pitiful ignorance. What wonder that that crusade of 1873 is inexplicable on any sociological theory, that Exodus, so to speak, when thousands of wealthy and highly educated men and women left their cultured life, their homes—for what? For their ideal, their dream, which they called "the people." It was but another version of the old, old search for the Soul. The future holds for all the world vast surprises, and mighty opportunities are sometimes closest to those who are in the depths and whose horizon is shadowed by clouds.

THAT Women's Clubs have brought about many changes in the work and opportunities, as well as in the education of women, individually and collectively, no one denies. In many cases their work broadens into a wide sphere of influence for good. It speaks nothing but praise for these organizations, that the statement should be made, that were it not for the Women's Musical Clubs of the United States, many of the musical virtuosi would remain unheard by the people in small towns and cities throughout the country. These clubs guarantee to the great artists as much as they can afford, and give their townspeople the opportunity of hearing good music. It is said that many of the great pianists, violinists and singers would never visit the smaller cities of the United States were it not for the encouragement and help given by the Women's Musical Clubs. This state of things has given rise to a new profession for women. They become impresarios, making arrangements for the artists in the cities in their vicinity. E. W.

The Artist and Mural Decoration

"HE has too much genius to receive the medal of honor," said Boutet de Monvel of Henri Martin, when another artist, with less genius but more regard for academic rule, carried off the coveted medal at the Salon of the Champs Elysees last year.

Puvis de Chavannes one day met André Michel, and taking him by the arm, said, "Come, I want to show you the painting of a new man who will accomplish much in the future. You must not lose sight of him." It was thus one of the greatest students of mural decoration who practically discovered young Martin, and his ability to recognize genius is yet overshadowed by the brotherliness of his spirit, for a selfish man would have looked upon Martin as a rival.

It was full twenty-five years before Chavannes himself was appreciated in France, such is the power of tradition. But he persevered and won a place, applying laws, not new save to this generation, but old laws whose translation we may still read upon the temple walls of old Egypt, even upon the simplest *Kakemonos* of modern Japan.

Said young Martin recently, according to one of our exchanges:

I have tried to make my mountains quite flat. Mural painting cannot be treated as easel pictures—perspective cuts holes in the wall which you wish to appear flat. While your subjects are taken from life they must be treated conventionally, not that your work need be any the less true. I lived for months in this country which I have tried to represent, spending every day in the fields in order to study the peasants as they worked. It was impossible to pose a model cutting hay. I should have lost all feeling of motion and my picture would have been stiff and unnatural. I therefore followed the peasants as they mowed the grass, making hundreds of quick sketches of them as they moved from place to place. In the same way I studied the children and sketched them at their play. I lived with these people, shared their thoughts and emotions before I began to paint my frescoes. It is only what one accomplishes in his work that really counts—the rewards one receives are of little consequence.

And governments are learning! In the simple incident referred to by the artist we see a step towards that unity without which real art must fail of its full expression.

I was indeed most fortunate to receive from the Government this order to decorate an entire hall in the capital at Toulouse. It is seldom that we poor artists are accorded so much liberty. Usually I am asked to paint one fresco—X paints another in an entirely different style, Y still another—thus all harmony is destroyed. No matter how good the individual work, each spoils the effect of the other.

And much may be expected of one who says:

You Americans are fortunate; you have no traditions of bad art to unlearn. In Europe we are bound down by tradition and it is hard to break away. . . . Yes, I love to work. I am never so happy as when painting. STUDENT

SAID Adelina Patti, recently: It is pleasant now to think of those living singers who, in their regard of others, perpetuate the fine traditions. No one then who had attained to fame would find a word to say that was not kind and often more than generous. Among them all, one of the loveliest natures was that of Jenny Lind. Her whole life through, she was the same sweet, enthusiastic soul.

DVORAK, when asked, "Who was your teacher?" replied: "I studied with God, with the birds and the trees and rivers, and myself." Easily may one believe him, composer of the beautiful "New World Symphony," and the "Slavic Dances."

LET us work ceaselessly, patiently, indifferent to results, only caring that our motive be pure, attuning our every thought to the currents of Divine Life that make for the uplifting of humanity. Let us not look for results and wonder and wait, but do, DO, DO.

THE GRAFTER
FROM THE PAINTING BY JEAN FRANCOIS MILLET

FRAGMENT

by ELIZABETH BARRETT BROWNING

WHAT form is best for poems? Let me think
Of forms less, and the external. Trust the spirit,
As sovereign nature does, to make the form;
For otherwise we but imprison spirit
And not embody. Inward evermore
To outward—so in life, and so in art,
Which still is life. . . .
What matter for the number of the leaves,
Supposing the tree lives and grows? Exact
The literal naivities of time and place,
When 'tis the essence of passion to ignore
Both time and place? Absurd. Keep up the fire,
And leave the generous flames to shape themselves.

STUDENT

"I COUNT LIFE JUST A STUFF
TO TRY THE SOUL'S STRENGTH ON, EDUCE THE MAN."

OUR scientists have long been exercised over the facts disclosed by insanity statistics.

Little by little the public is awakening to the fact that not only is insanity increasing among women with an alarming rapidity year after year, but it has become less curable than formerly.

There is another side to the insanity question, however, which is rarely spoken of. Where one person goes insane ten stop just short. We never hear of them. They drag out a miserable existence, making life a burden to their families or cared for in some sanitarium, where they are treated for "melancholia" or "hysteria." Recently one of the largest sanitariums in Europe, which was founded expressly for the treatment of nervous diseases of women, has published data which are most interesting.

According to these data, "melancholia" and "hysteria" more often afflict women than men, and unmarried women are more frequently the victims than those who have the care of families. The type of woman most subject is the introspective, sensitive and pessimistic, in other words, the selfish. The physicians of this sanitarium meet with success just in the proportion that they are able to induce the patient to forget about herself and think about others. Medicines and nourishing food are needed, of course, but some remarkable cures have occurred which prove that selfishness is really at the root of the difficulty.

For instance: one patient who declared that she could not walk at all, and who obstinately refused to try, climbed a flight of stairs one day in a very great hurry, to rescue a bird which was in danger of being killed by the family, or rather, the sanitarium, cat. Another patient whose case was treated in her own home, refused to leave her bed, although in the opinion of both physician and nurse she was perfectly able to do so, and would have been a well woman if she could have forgotten her ailments in some absorbing work. One day she happened to be left entirely alone for about an hour, when she suddenly heard a piercing scream from the next room. It came from her sister's baby. For the first time in something like five years she actually forgot herself. To save this child from threatened danger she got out of bed, rescued the

Selfishness & Insanity

baby (which had merely poured a cup of cold water upon itself), took care of it until her sister arrived and

hour later, changed its little dress, went to the pantry and found a cake for it—and then, having come to her senses, recovered!

One's sympathy goes out not half so much to these women as to the families they afflict, and to the communities which are forced to endure the burden of their care and get on without the help which these women might give. It is interesting to note that the majority of such cases

occurs among unmarried women, those whose hands are comparatively free. Think of the work that might be done for humanity by such women as these, for in the majority of cases they do not belong to the class which has to struggle for daily bread, but are able to command a certain amount of money and practically all of their time.

There is no denying the fact that sensitive and high-strung women feel, beyond others, the shattering pressure and nervous strain of modern life. There is no denying the fact that the very diseases which take one so near the border-land of insanity, are often cured by just quiet, rest and nourishing food; in a word, the securing of better physical balance. But there

is also no denying the fact that selfishness, and a deadset determination to be the focus of attention, lies at the root of a vast proportion of such cases. We rarely find hysteria and melancholia in the ranks of our truly selfless philanthropists, among those who are busy housewives and the mothers of families, nor, with rare exceptions, among working women.

Is it not time that we, as women, preached the "Gospel of Unselfishness?" Is it not time that something be done to thin out the ranks of those whose complaints make life a nightmare, and who wouldn't take health if it were offered them, if that meant the giving up of their caprices and whims. Isn't it time that some absorbing occupation be found for that goodly company of the unoccupied, the selfish and the morbidly vain?

It is easy to forget about the disease by just beginning again on "woman's rights and man's wrongs," but what we really need is a cure. S.

SEPTEMBER

by HELEN HUNT JACKSON

O golden month! How high thy gold is heaped!
The yellow birch leaves shiae like bright coins strung
On wands; the chestnuts yellow pennons tongue
To every wind its harvest challenge. Steeped
In yellow, still lie fields where wheat was reaped;
And yellow still the corn sheaves, stacked among
The yellow gourds, which from the earth have wrung.
Her utmost gold. To highest boughs have leaped
The purple grape—last thing to ripen late
By very reason of its purple cost.
O Heart, remember, vintages are lost
If grapes do not for freezing night-dew wait.
Think, while thou sunnest thyself in Joy's estate
Mayhap thou canst not ripen without frost!

Mr. Sargent's Just Action

IN response to an inquiry just received from one of our European members, we are glad to state that Commissioner-General Sargent of the Bureau of Immigration, Washington, D. C., declared himself unequivocally with regard to Mrs. Maybrick's return to this country. He said recently, "When I learned that Mrs. Maybrick intended to return to America, orders were sent to the officials of New York to admit her without question. After all that has been done, not only through private effort but through the state department, to obtain Mrs. Maybrick's release, it is not difficult to imagine what the sentiment of this nation should be if we should hold her up at Ellis Island. Mrs. Maybrick left this country an American citizen and she will be allowed to return as one."

It was Mr. Sargent who released the famous "Eleven Cuban Children," after an imprisonment of some six weeks at Ellis Island, said detention being due to the Gerry Society whose methods have been seriously disapproved by thousands who have studied the persecution of Katherine Tingley. Mr. Sargent took this stand, after a personal and most thorough investigation of the Point Loma Institution, including the Raja Yoga School.

His stand with regard to Mrs. Maybrick, after opinions have been flying about in certain quarters that this unfortunate woman was no longer entitled to citizenship in this, the land of her birth, is characteristic of Mr. Sargent. Would that every nation could boast that all officials were as honorable, just, and unprejudiced as he is.

The *New York Sun* of August 16, 1904, contained the interesting statement that Assistant Commissioner of Immigration, Joseph Murray, who is in charge of the port of New York during the temporary absence of Commissioner Williams, declared that unless otherwise instructed *he would not give Mrs. Maybrick permission to land here.*

It was Commissioner Williams who supported Mr. Gerry in detaining the Cuban children. This might have led to international complications of the gravest sort except for Mr. Sargent's just and wise action.

Has not Mrs. Maybrick been persecuted enough? Was it possible that Mr. Murray was acting under instructions from his superior officer, Commissioner Williams, in declaring his intention to detain this wronged woman at Ellis Island? Strange, is it not, the record that character writes, and blessed among nations is that one which can count among its officials even a few whose heart and mind work together, whose professions play not at cross-purposes with their lives.

STUDENT

AT the Woman's Congress, recently held in Berlin, University Study for Women was discussed by representatives from Germany, Great Britain, France, Denmark and the United States. Miss Thomas, president of Bryn Mawr College, defended university work for women and fortified her assertions by recorded facts. She particularly assailed the time-worn suggestion that university work overtakes the physical strength of women and renders them unfit for matrimony. According to the facts which she presented, more men break down from overwork in American universities than women. She also declared that, not only did university women not lose the inclination to marry, but almost without exception they became mothers and showed not only wisdom, but rare unselfishness and tact in solving the difficult problems of homemaking, of wifehood and motherhood. Her address was received with great applause. And this in Germany.

E.

A Hall of Fame for Women

MOST of us recall the balloting, in 1900, for names to adorn the "Hall of Fame" in New York, and at which no woman received a sufficient number of ballots to give her a place. When we consider how many women there are of whom America may be proud—Mary Lyon, Emma Willard, among educators; Dorothea Dix and Lucretia Mott, among philanthropists; Charlotte Cushman and many others, among actresses; Maria Mitchell, among scientists; Louisa Alcott, Alice and Phoebe Cary, Helen Hunt Jackson and others, among our writers; Abigail Adams, Mercy Warren, beautiful and brave Dolly Madison, Sarah Bache, Betsy Ross, Mary the mother of Washington—the list is certainly long. When one considers these, the omission must be due to ignorance rather than design. Now funds have been given for the erection of a Hall of Fame for Women on the beautiful new site of the University of New York, adjoining and connected with the present

Hall of Fame for Men. In it there will ultimately be tablets commemorating fifty American women of note, and ten not of American birth, but who were conspicuous in our national history.

STUDENT

M. BAUTAIN, formerly Vicar-General and Professor at the Sorbonne (Paris) and himself a great orator, recently expressed himself as follows with regard to women as lawyers:

Women naturally speak better than men. They express themselves more easily, more vividly, because they feel more rapidly and more delicately. There are so many women who write in an admirable and remarkable manner, although they have studied neither rhetoric nor logic, and have not even a perfect

knowledge of grammar. They write as they speak, and their language has the same charm. Add to this the sweetness and flexibility of their voice, the variety of their intonations, according to the feeling which animates them, the mobility of their physiognomy, which greatly increases the effect of words, the picturesqueness of their gestures, and, in short, the gracefulness of their whole exterior, and it will be seen that, although not destined for orators by their sex or social position, they have all the power of the orator, and all his success, in their sphere and in the circle of their activity. For none better know how to touch, persuade and influence, which, I think, is the end and perfection of eloquence.

A LIBRARY of 1700 volumes on the matrimonial institution has been recently donated to the University of Chicago. It is said to be the largest in the world treating exclusively on the subject of the family life, marriage and divorce. If words were sufficient there would be today no child labor, no insane asylums, no penitentiaries, no unhappy families, no divorce courts. Something more is needed; that is all too evident.

Does it seem that the contamination of women and of the home can further go when we read in a daily paper of a woman appearing in court with a babe in her arms, to answer to the charge of running a woman's pool-room? Racing sheets and cards were found by the woman detective in the refrigerator, along with the ice and tomatoes. And yet there are those who fail to see that some women would better serve their race by not becoming mothers!

A NEW pianist, only seventeen years of age, whose mastery of technic is said to be extraordinary, has been brought to public notice at the St. Louis Exposition. She is Señorita Laura Rayneri, daughter of a professor of architecture at the University of Havana, Cuba, and she recently graduated from the National Conservatory of that city.

GLENA COTTAGE, KILLARNEY, IRELAND

GLENA COTTAGE, built by Lord Kenmare, overlooks Glenna Bay, one of the many beauties of the Lower Lake. "The Glenna Mountain (1,820 feet) casts deep shadows over a quiet and lovely nook called Glenna Bay, the clear waters of which reflect the green forests densely covering the face of the hill."

Brief Glimpses of the Prehistoric World

Archeology
Paleontology
Ethnology

Whence Came the Americans?

ACCORDING to the declared principles of modern scientific research, the function of a theory is merely to serve as a provisional explanation of facts until such time as other facts are discovered, when the theory is enlarged or changed. Thus the scientific mind must be perfectly open and free from bias, and no theory must be allowed to become set into a dogma. If this latter were to happen, there would be a tendency to dispute facts or to distort them in the effort to make them conform with a pet theory.

Thus, with regard to the ethnology of America, our preconceived notions as to the evolution of man from barbaric or semi-animal ancestors might lead us to try and trace back the history of the present red man to that rudimentary stage. But, if skeletons were to be discovered in association with the relics of extinct animals, and human productions found in very ancient sedimentary deposits, we should have to widen our theory. We might have it then that these remains are those of the original barbarians, and that the red men are the descendants of more civilized races that migrated hither at a later period.

But then somebody might discover ancient temples, with hieroglyphics, which, being interpreted, would prove that the ancient race was not barbaric, but more civilized than the later. And so again our theory would need enlargement.

Altogether, it is about time we gave up trying to make the narrow evolution theories explain facts in ethnology; the facts are getting too numerous and exacting.

On the contrary, however, when we take the key offered by H. P. Blavatsky, and enlarge our conceptions of time, and of destiny, and of human nature, in accordance with that stupendous knowledge to whose threshold she leads us—all becomes clear, and every new fact merely confirms and illustrates our theories instead of upsetting them.

The method of scientific induction is, of course, infallible—provided always that we have *all* the facts, and that they *are* facts, and that we have a perfectly unprejudiced and logical mind to reason from them. These conditions may possibly be attainable in that remote future when the human race has become ultimately perfected; but meanwhile there is a shorter and surer method of learning. This method is to take the hints that have been so generously given us from the storehouse of ancient wisdom, and test them by seeing whether they explain things. Theosophy *does* explain things; it gives keys which can be applied to every department of research, with the same illuminating effect in each. But to try to disentangle the skein of so vast and intricate a fabric as the origin and development of human races, by beginning at the ends, is an enterprise quite hopeless in its difficulty.

The miscellaneous facts discovered about the ancient Americans lead to various theories, according to which particular facts, and how many facts, we take as the basis for our reasoning. The discoveries of human remains in circumstances pointing to great antiquity, have been too frequent and various to be always accidental. Human skeletons and bones in a fossilized state, or associated with bones of extinct mammals, have been found at Guadaloupe, Natchez, New Orleans, in Florida, Charleston, Missouri, and in California, etc. Those in the coral reef at Florida are estimated to be 10,000 years old, and the skeleton found under four buried forests in the delta near New Orleans is put at 50,000 years. Articles made by man, such as pottery, occur in very old deposits.

Similarities between customs suggest that the Americans came from Borneo, from Australia, from Africa, West Europe, East Asia and Polynesia.

But wherever they came from, or however they came, the monuments and other traces they have left show them to have belonged to a very advanced, as well as very ancient, civilization. The tumuli of the Mississippi valley, resembling the remains of Assyrian palaces; the stone buildings in Yucatan; the ruins of Copan and Palenque, and all the varied information about the Aztecs and Toltecs, and Incas, that has been collected, show that the past history of humanity on this continent

is a subject too vast and intricate to be successfully unraveled piecemeal; and it requires the illumination of a much loftier conception of the human race to arrange all these facts in their proper order. Although the early Spaniards systematically destroyed ancient monuments and works of art, we have still the ruins with their hieroglyphics; which latter, being interpreted in the light shed by ample collateral knowledge of the symbols and teachings of the ancient universal Wisdom-Religion, will show how very large the Americans figured on the past pages of history.

H. T. E.

A Passing Oriental Civilization

A WRITER in a recent publication gives a description of life in Siam, which shows how the ancient Oriental civilization of these people is vanishing before Western influences. There is a special privileged caste of pure-blooded natives, called "saked" men, who are those in the service of the king or attached to the person of a noble or a tribal head. They are marked on the side or arm with the insignia of the person whom they serve pricked into the skin and dyed. As this caste is confined to natives, it seems likely that soon the only pure Siamese will be those of the royal family, and the very poorest; for the mixed races of traders are crowding the natives into the lowest positions.

Great Britain controls the export trade of Siam, and the Chinese are its industrial backbone. The Siamese women prefer Chinese husbands as being better husbands, and the resulting hybrids are more Chinese than Siamese in their characteristics.

The native Siamese is being crowded into the lowest walks of life. Even in Bangkok, the capital, where reside the king and all government officials, he finds it difficult to retain prestige, while the place itself is taking on the motley appearance of an Oriental city turned topsy-turvy by electric lights and trolley cars penetrating quarters of such squalor one marvels that life can exist there at all.

The city is overrun by pariah dogs and crows, which cannot be killed owing to the Buddhistic faith, and which are, indeed, very necessary as scavengers. At every turning are evidences of the decay of native art, and in their stead the hideously commonplace things "made in Germany." The Siamese were at one time marvelous artisans in silk weaving, ceramics, ivory-carving and silversmithing; and the museum contains specimens of an ancient artistic prowess which cannot be matched.

Bangkok is a kind of Venice, intersected by canals, which are the chief means of transit, and largely flooded during part of the year. A large part of the population lives in floating houses, and another part in houses built on stilts along the canals. Among these dwellings flows an endless succession of boats and water-craft of all sorts; and all of these are built on the most graceful lines, which marks a survival of one ancient art at least.

Speaking of the character of the people, the writer says:

My travels around the world have never brought me among a people seemingly more contented, more happy, than these Siamese. Their wants are few and easily supplied; a single piece of stuff completes the scanty, inexpensive costume; rice and fruit, and fish, to be had for almost nothing, constitute the food; betelnuts, which high and low chew, may be gathered. Life moves very easily for them, and they go to their death with unbounded faith that Buddha will care for the next world, wherever it may be. Really, these followers of Buddha have life's true philosophy. Living, they hold to their simple faith as conscientiously as the Mohammedans, which is tantamount to saying more conscientiously than the so-called Christian sects. Dying, they pass with confidence into the unknown, and their bodies are burned and scattered to the four winds. The friends that are left behind act with as much philosophy and quietude of spirit as the deceased himself. For those who cannot afford a private funeral pyre, there are public ghats, where the bodies are burned and the ashes of the bones are scattered.

To those weary of the monotonous rhythm and blatancy of Western music, Siamese music comes as a welcome relief. It is in a different mode, free from mathematical cadence, and quiet. A series of gongs, peculiarly modeled and varying in size from a large cup to a punch bowl, supplies a scale of soft mellifluous notes; and to these are added varieties of the xylophone and a reed instrument of surprising depth and breadth of tone.

H. T. E.

A Floral Index of Human Progress

NOW that the search after facts is beginning to give way to the search for the causes of facts, it may be in order to point out some curious coincidences in the development of the human and vegetable kingdoms, or planes of life.

There are at present existing two essentially different types of plant structure, *viz.*, the aggregate, such as the palm; and the individualistic, such as the oak or pine. The distinctive feature of the aggregate type is that every leaf or branch, as of a palm or cactus, is a more or less separate plant, which is, however, unable to fully live alone, but is joined, more or less closely, with others to make up the perfect plant. This type includes a great system of plants, all marked, in greater or less degree, by this aggregate formation. Beginning with the palms, we find an unbroken line of closely related forms extending through the dracenas, yuccas, aloes, agaves, cacti, sea-kelp, lichens, ferns, to palms again. There is another great sweep of life represented by the pine or oak, in which type each plant is a single and entire individual; for an oak-branch has no separate life whatever, any more than a man's arm has a separate life.

Now, it is found that the aggregate type seems to have very largely predominated in the earlier periods of the world, at a time when human beings were the most closely bound together into races and nations; when there was, in short, the most aggregation and least individualism. But as personal distinction of unit from unit progressed, the aggregate forms of plant life were replaced by those of the individualistic type, which now so largely predominates. But it is worthy of notice that even now the palms in the tropics, and the sea-kelps and lichens in the arctic and sub-arctic regions, are of the greatest relative importance where the tribal unity is closest; while in the north temperate zone, where the great development of human individualism exists, the individualistic type of plant life so completely predominates that we regard lichens rather as curiosities, and ferns as, at best, ornamental. It is also worthy of notice that the grasses, which are in many ways a connecting link between the two structural types, are the most widely diffused, and the most indispensable, form of plant life now existing. A more extensive and exact botanical knowledge will doubtless be able to trace some very interesting and important details in these relationships.

At present there is a perceptible increase in the popularity of plants, fruits and flowers of the aggregate type where there is the strongest tendency toward fraternity, cooperation and human unity in general. May we hope to see the earth once more covered with palms, ferns and Human Brotherhood!

It is said in the herds that walking does not quench thirst, but it bringeth one to the drinking place.—*From the Precepts of Chiron the Centaur*

THE LIFE NATURAL

by JESSIE STORRS FERRIS

"I will lift up mine eyes unto the hills."

THE gods are not all dead; here 'mong the hills
Is air ambrosial, and the tangy sweet
Of strawberries is nectar all enough.
We hunt the furtive game, and on the banks
Of mountain torrents cast our baited line.
Then lay us down beneath the quiet stars
To sleep unbroken and to innocent dreams.
The keen, bright air and utter stillness bind
Undreamed-of-peace about our tired brows;
And that fierce life that moves in all of us
Springs up anew, a ringing sword, unsheathed
From the strait scabbard of our fevered life.
The Youth we thought had withered, scorched Faith
Too delicate for the hot breath of the world,
And prismic Hope, that lodgment never finds
But in pure hearts of simple trustfulness,
And Reverence, that long had buried been,
And Love we thought had taken winged flight,
Leaving a train of evil birds behind,—
All, all come back, here in the changeless hills.
We breathe, we move as beings born again,
And that elusive thing named Happiness.
That we had hunted up and down the world,
Flees from us not again, but sweetly stays,
And makes our lives a poem of Rest and Use.

BIRTH OF A CUBAN RIVER

to make a flower and already has plants with branches, leaves and buds, but transforms what might become an ordinary branch into a blossom.

A Plant That Goes to Sleep When Lightly Touched

ATROPICAL mimosa, which grows among the grass, inconspicuously trailing along the ground, is so sensitive that it earned from the Spaniards the name of *Adormidera*, or Sleepy Plant. It is fascinating to watch its motions as the children strike it with a twig and command it to "Go to sleep." The feathery fronds, like little acacia leaves, slowly and gracefully fold themselves as flowers do on the approach of night, until in a few seconds all of the leaves which have felt the influence of the blow are "asleep." A quarter of an hour later they have discovered that there is nothing to fear, and again cautiously open their palms to the light, like little hands trying to catch the sunbeams and the rain-drops. There is something of a plant intelligence shown by this pretending to be dead when danger threatens, if that is the meaning of it, an intelligence beyond mere extinct.

A Freak on a Lomaland Climbing Rose

OCCASIONALLY nature furnishes us with something called a "freak," but which may reveal to us some of her hidden mysteries. Such a one was recently found on a branch of a climbing rose at Point Loma. It illustrated plainly the fact that a flower is a branch of leaves transformed for a special purpose. This specimen was in the midst of the transition stage from branch to flower. It plainly showed that it was a branch, as some of the petals were an inch higher up on the stem than others, and after the first circle of petals, which showed the flower most plainly, the other petals were scattered spirally up the stem, each succeeding one a little higher up, and some of these had pointed green tips like a common foliage rose leaf.

There were also just inside the lower row of petals some narrow leaf formations which seemed to be on the road to stamens. Around the stem, below the lower row of petals, were sepals quite perfectly formed and green. The road was not so long from a foliage leaf to a sepal as to petals and stamens, so this stage was already reached. Another peculiarity about this branch was that it

seemed bent on making flowers all along up the stem, for the foliage leaves, instead of being arranged one in a place at regular intervals, were in groups of several near together, the groups being separated by the usual spaces between leaves. This arrangement continued to the end of the branch, which extended a foot beyond the center of the flower.

Though this may be a case of retrogression, it still shows the path of evolution of a rose blossom, for in going back the same road would have to be traveled, though in the opposite direction. Nature is economical and conserves her forces. She does not start anew at the beginning of things when she wants

Universal Brotherhood Organization

Central Office Point Loma California

THE large audience in Isis Theatre, Sunday evening, at the regular meeting of the Universal Brotherhood and Theosophical Society was unstinted in its applause of the splendid Wagnerian musical program rendered by the students of the Isis Conservatory of Music, and the deepest interest was also manifested in the two scholarly addresses of the evening. The first of these was by the well-known Californian painter of flowers, Miss Edith White. Her subject was "California." In part she said:

"At the termination of the Mexican war, when California with other lands was ceded to the United States, many Americans viewed with disparagement the 'worthless acquisition.' Daniel Webster pronounced it a desert, with no possibilities whatever.

"In spite of the pessimistic views of leading minds of that time, California today may well be proud of a romantic history, a steady and rapid growth and a brilliant future.

"In 1849 the attention of all the eastern states was turned toward the discovery of gold in this state, and men of courage and adventurous spirit braved hardships and dangers in quest of fortune.

"My mind goes back to a little band of people, men, women and little children, who, with emigrant wagons drawn by oxen, started out one bright spring morning to cross the great American desert. Their hearts were full of hope, for they had heard the tales of marvelous wealth. Bravely they faced the hardships of this perilous journey. The path was all untrodden. Streams unbridged and swift and deep lay before them, and on the dusty plains their cattle often perished from drinking alkaline waters. Indians haunted their way, and brave were the hearts who kept the watch at night over tired women and children. Then picture the way-worn travelers, after four long months, arriving in some western mining camp. Picture the greetings, the generous help, given by those who had, a little earlier, trodden the same hard way.

"These pioneers of California lived a free and generous life, rough though it was. Men were freed from all conventionalities, and the impulses of the heart were the mainsprings of action. If some poor fellow lost his life in a mine accident, his family's purse was quickly filled; and if some villain did a wrong, punishment was no less speedy.

"Churches were unknown—their absence slightly felt—and schools were very primitive. The school-house was often enough a cabin 'neath the pines, and the master some youth who had found mining less to his taste than books.

"Upon this stock of sturdy, free-thinking men, has been engrafted the culture of the east. As years passed by, California grew into a prosperous and progressive state. Railroads spanned the continent and flashing engines passed, in days, the weary wastes o'er which those emigrants had toiled for months.

"Far down her coast, where mild winds temper the rays of southern suns, a city has been started; a city which has been called the 'key to the Orient,' and the 'Athens of America.' Nature has so favored this fair spot that men have nothing more to ask of her. What more fitting place than this for the beginning of new ideals in living? Where can there be greater inspiration for the production of a grander art or diviner music? Where a more perfect environment in which to nurture a new and higher race of men, who will become the teachers of the world?

"Here Katherine Tingley is creating a wonderful University—schools under the Raja Yoga system. It is the great educational system of the age. To this school are coming students from all countries, and to all countries teachers are going out from this school. This is the centre, from which is radiating a new light, which is dispelling the gloom of ignorance and its great trail of suffering.

"Here new ideals of national and international life are being taught, and the students of this school are making possible to the world the conditions which men long for but do not know how to create. California is the Land of Promise, not only as a state of intense commercial life, but a state already grounded, as one of the great educational factors of the world's work."

Mr. S. G. Bonn's address on "Death" was followed with the keenest interest. It was entitled, "Death—One of the Crowning Victories of Human Life."

"The Theosophical view of death has often been presented by students who have learned something of it from the three successive teachers of the Theosophical movement," said he. "And it will have to be presented many times yet before the black cloud that clings about the very word 'death' has been dissipated forever.

"The death of real Theosophists will also—when it is a more frequent phenomenon—do a great deal to dissipate this cloud. For they will be careful to die

Miss White on "California," & Mr. Bonn on "Death—One of the Crowning Victories of Human Life"

Reprinted from the San Diego News

in such a way as to help the bystanders to understand and appreciate the beauty and mercy of death.

There is a short period when the soul is neither this nor that side of the gate, but in the gateway. It can look back into this world—the darker one—which it is about to leave for awhile, and forward into the other, the world of free-

dom. And as it goes on into that other, it can hand back a final message for the comfort of those it leaves. It is a great fact, to which, so far as I know, there is no recorded exception, that no soul which has ever reached the gateway with its dying body still in some measure responsive to its touch, but has spoken, in the final moment, of freedom, or of light, or of peace, or of joy. And if those who stand by would remember that they, too, are souls; that their hour of freedom, too, will come; if they would stand as souls, holding back their personal grief, then they would strike a bond of union with the other, which, because it was from soul to soul, would be eternal.

"Freedom is the word we should associate with death. Bodily life is in part a bondage for the soul. The soul is in the body as a man in the roar of a great city. Every cell, every fiber of muscle and nerve, every organ, is in continuous touch with the soul, which is in amongst them, or with that part of it which is in amongst them. It must lend its attention to the busy hum, even though, when all is going well, we notice nothing. So closely are we in touch with the body that if but a few of the cells are out of gear, and a little pain or neuralgia is going on, we cannot without a great effort of will attend to anything else at all.

"Hints of death come to us on all hands. By night we are nearer to death than by day. The bodily pulse is slower and feebler; the currents of life slacken. But who does not know that if by night we are awake, if we are in the fresh, open air, and not poisoned by lamps and walls, and carpets, thoughts come in, realizations of truth, perceptions of beauty, which never visit us by day when the currents of life have the sunlight in them? We are nearer to death; all the vital doings are at their quietest; yet our minds and perceptions are deepest and fullest, and freest. As the outer life has waned, the inner has waxed. How would it be with death, when the outer life had become nothing? It is because we do not perceive an outer and an inner life that we fear death, which touches but the outer. Music stills the outer life; and color, and beautiful scenery; all of these are best at night, because it aids their stilling. Then the soul begins to come by its freedom, comes into its proper nature. And when the music has ceased, or we close our eyes upon the scenery, the state remains awhile, the soul remains with itself, in its own atmosphere. Can we not imagine the perfection of that in death? Of course words have very little to do with such a state; they cannot at all express it. No one can describe how he feels in looking at perfect scenery by moonlight, or in listening to music. And still less can any description be made of the very ultimate of this beauty of freedom that comes in death. The soul, so to speak, *wonders*, at first; and when its wondering is gone, it cannot usually convey anything through the lips; it has freed itself too entirely from the body. And if it had not, it could but say: Light, light. Some here, perhaps, have been privileged to stand at death-beds where, perhaps, after a long illness, the body had, so to speak, *thinned away* before the soul rather than *died*; where, it may have been for hours, the soul passed back and forth, using to the last the weakening energies of tongue and voice, getting half visions and half telling them, visions mixed, it may be, with earth memories and imaginings, colored with previous belief, and then conveyed but dimly with the common words that remained in the dying brain; and yet saying enough to show that gate after gate of light was opening, fuller freedom coming upon it moment after moment. And at last it can say no more. Yet its touch remains upon the hearts of those it loved. That will never fail. That is the real communion which we on earth have with those we call dead. It is not a communion of words; has not to do with hearing or seeing; it is not even of thought, as we consider thought. It belongs to the heart life, and this life death cannot touch. With the heart we know our friends who are here; by the same we know them after, and *know them to be*. There is the proof of immortality to those who can find it. Life touches life through all the universe.

"Death is the kindly giver of all that men ask. Theosophy teaches that if men die full of love of all physical life, with no conception of any deeper life, it is to physical life that they are soon returned. If they die worn out with pain and toil, and longing for rest, it is rest that comes upon them and stays with them till they are restored, and till the love of physical life comes back. If they die full of love for humanity and desirous to work for all good things, death opens—not closes—the ways to such work."

Homer

THERE is a hopeless uncertainty among scholars regarding the facts of the life of Homer, the sublimest writer that ever put emotion, thought, and nature into language. This god of language did his work with so much genius that he created emotion, thought, and nature itself that he might have worthy tenants for the palace homes he had builded; and he likewise created groups of words, words which were never piled before or since into such perfect language structures—that he might thereby offer fitting habitations to the princely spirits he evoked from the infinite realms of imagination.

Homer was endowed with a consummate knowledge of life; his lines burn at times with the splendor of a meridian sun; again they are as exquisite as a perfect summer dawn, and anon they flush with all the gorgeous coloring of tropic sunset.

Homer's great works have been called his daughters: Antiphilus personified them and invoked them to "Go join the Muse's choir in heaven."

The estimate in which they are held is indicated by epigrams from the Greek anthology. Leonidas of Tarentum wrote:

The fiery sun, when wheeling up heaven's height,
Obscures the stars and the moon's holy light;
So Homer, seen 'mid the poetic Throng,
Dims by his splendor all the orbs of Song.

Another epigram declares:

Homer so sang of Troy destroyed by fire,
That envy seized the towns that stood entire.

Modern scholars have thrown much doubt on Homer's identity and on the authorship of the two great master works, ascribed, in universal popular estimate, to the Prince of Poets. Among the ancients there was no evidence that Homer's actual existence was disputed, nor do the records which have been preserved to us indicate that any one, during the time of classic Greece, denied that Homer was the author of the *Iliad* and the *Odyssey*. Yet, from the time that his name appears in the classic authors till the present, the questions are still unsolved: Where did he live? Where did he die? When did he die?

The uncertainty as to his birthplace is shown by the following lines:

Seven rival towns contend for Homer dead
Through which the living Homer begged his bread.

This has been pronounced a libel on the several towns in question, and on the Greeks in general; still the verse is extant. An equal uncertainty of the age in which he wrote, and the place of his burial, has prevailed from the earliest period.

That the Prince of Poets was called in his youth Melesigenes, from the fact of being born on the banks of the River Meles; that he traveled through the known world during the prime of his years; that he became blind during that period, and that he sung his immortal epics, as a sacred bard, from city to city, from country to country, during his declining years, are facts which are derived chiefly from a history of his life which was published a short while after the age of Herodotus, about 450 B. C., and which is supposed to have been written by that fascinating and illustrious historian.

A passage in the *Odyssey*—the words being of the blind harper, Demodocus, at the court of King Alcinous—is thought by some scholars to have referred to Homer himself. The passage reads:

Whom the Muse loved, and gave him good and ill—
Ill that of light she did his eyes deprive;
Good, that sweet minstrelsies divine at will
She lent him, and a voice men's ears to thrill.

The Greek for Homer is *Omeros*, and it is said that the equivalent of this word in the Cumæan dialect was *Tuphlos*, which latter word means *One with a Guide*. Critical scholars know that a blind man is often led by a guide, and hence they have decided that Homer got his name *Tuphlos* because he was blind; they seem to have overlooked the real meaning of the word *Tuphlos* as applied to the immortal poet: *One with a Guide*; that is, one who has received illumination, one who has divine guidance, one who could enter the domicile of the Muse; as he himself declares, "Sweet minstrelsies divine at will she lent him, and a voice men's ears to thrill."

Omeros, in the Bæotian dialect, means a union; so there seems no possible connection between the two words, *Omeros* and *Tuphlos*, the one meaning *union*, and the other meaning *blind*; but if we apply the idea of illumination, as interpreted above, we readily see that the two

different Greek words, which were used to designate the Poet, can be used, and naturally would be used, the one in Bæotia and the other in Cumæ, in consequence of a racial difference in forms of expression; while at the same time both divisional races of the Hellenic people intended to convey an identical idea. The one with the divine guide is as one is in a real spiritual unity, in a state where the personal, intellectual, mortal consciousness is identified, or united with; that is, *united* to the universal, the immortal, the spiritual guide, or *SELF*.

For at least twenty-seven centuries Homer has been the fountain from which warriors, statesmen, orators, dramatists, romancers, priests and artists have drawn divine conceptions. So long as readers approach his verses in the true attitude they will be suffused with the afflatus which illuminates every page of his volumes.

IVERSON L. HARRIS

A GLIMPSE OF THE LOMALAND CLIFFS

FRIENDS IN COUNSEL

ALL nature is smiling today at Lomaland, and, to add to the joy of it, there is a calmness in the broad, blue Pacific ocean which breathes peace to all human kind. As far as the eye can reach, it is all ocean and sky. The stillness of it, only broken by the sound of the waves as they roll in upon the high cliffs of Lomaland, calms the mind and brings one to the thought of how sweet it is to be in the quiet for awhile.

What a contrast is this peaceful and restful nature picture to one that marks the struggles of two nations, just over the sea, westward—Japan and Russia, who are battling, in their efforts for supremacy, brother against brother, sorrow and death following.

I love to look forward to a few years hence, when there must be a change in the affairs of men for the betterment of all. These horrors of war haunt me night and day; and I question my soul; I call out in my tears for an answer to come to me that shall tell me that my prayers are not in vain.

Yes, a turn in the affairs of men—a great surging tide of universal love, to breathe into human hearts an inspiration of divine meaning. Yes! A turn in the affairs of men which shall compel right action; which shall place men unafraid of suffering and persecution, to make royal laws; beneficent laws which will force a higher arbitration among the nations, and condemn war as barbarous and savage.

A nation may gain its victory, and it may prosper as the world goes; but there must be an undoing—a balancing of all injustices which have come about through warfare. Pages of pathetic history must be written as the results of all this, before the final accounting is cast by the law.

In the silence I recall my prayer to the divine law, as well as my pity for those who cry out in the wilderness of human despair for light. And lo! a vision is mine. I see! There is time in the near future, when man's ingratitude to the higher law shall have lessened; and some of the peace I feel in the silence today shall have clothed the nations in its garments. Then shall have come the beginning of a new life for all.

Grateful am I for this quiet time; it has given me new strength and a larger hope for the fulfillment of the law which shall ultimately give unto each man peace.

LOTUS

AN expedition to Greenland, in quest of sagas and ethnologic information, started from Denmark nearly two years ago. The story of this expedition, as told in the words of Knud Rasmussen, is now to hand. Many interesting sketches have been made and a large number of songs and sagas collected, but the particulars given deal with the life and customs of the Greenlanders, and with the weird phenomena of year-long day and night.

The expedition reached Cape York and started north in search of men. They found some Polar Eskimos, who received them hospitably, and set to their task of sketching and collecting information. It was a time of snowstorms, and they hardly knew the difference between night and day; for they had acquired the Eskimo habit of sleeping through unpleasant weather, and often slept twenty-four hours at a stretch, afterwards working for another twenty-four hours. The coming of the "Great Darkness" is thus described (we quote from the *Boston Evening Transcript*):

On my return home that evening I met an old Eskimo woman, Arnaluti. She stopped me and, pointing out over the sea toward the west, she asked: "Do you see that out there?" "See what?" I asked. "Out there over the sea! The darkness, which is coming, the great darkness," she answered. The sea was smooth as a mirror, and the mountains reflected themselves in the heavens. It was already growing dark, but one could yet see a long distance ahead. A black cloud-wall rose against the whole western horizon. It was the polar night which was approaching.

A period of terrific rains and storms then set in, during which the whole community, its houses destroyed, had to take refuge in a cave and face scant provisions and darkness. Afterwards, when the winter had set in and expeditions could be made on the ice, they visited a cave, which is described as follows:

With its high overarching vault, and its two deep side aisles, which were divided by a sharp stone partition, it appeared like an ancient sepulchre. The aisles, with their large protruding stones, suggested an unfinished work of man. The background was covered with ice, and in the dim light of our torch it looked like a Greek altar of marble. Crystals of ice hung down in fringes, and hoar-frost flowers sparkled like diamonds. The floor consisted of large unhewn stones, which had been thrown in by the strong southwestern waves. By the flickering light of the torch, in our hairy bearskin trousers, we ourselves must have appeared like two satyrs balancing themselves between the stones.

The sun had gone down towards the end of October, and towards the end of February it would return:

A Glimpse of the Native Silversmith

THE profession of silversmith in Trinidad is a very lucrative one, and the craftsman is kept busily employed turning money (silver and gold) into various articles of jewelry. Judging others by themselves, those who bring their hardly earned money to the smith, sit down and watch, whilst the coins are being melted, so that he may not remove some and substitute alloy—if time admits, they will remain and watch the whole process, and an extremely interesting one it is.

As will be seen in the picture, a little round furnace of clay is made in which it is burned, the coins are put in a small metal bowl, live coals placed on the top, and then put into the fire which the smith blows rapidly with his bellows all the time. When the coins are melted he pours the liquid metal into a small narrow trough; it at once solidifies and he drops it into the basin of water standing in front of him. He then hammers the bar out flat and proceeds to cut it up into pieces or pull it out into wires as the design may require. Some hammers, pincers and nails are practically all his stock in trade, and very

Among the Polar Eskimos

The Great Night

One walks around as if blindfolded. It feels as though one could hardly open the eyes. Everything is blurred. The world shrinks together, and it is even difficult to breathe. It is as if a leaden weight hung over body and soul! There is a feeling of infinite hopelessness in going to bed in the evening, knowing that when one awakes in the morning it will still be dark. It kills ambition, and produces a state of overwhelming mental dullness. Everything disappears in the darkness—the days, the nights, the thoughts; and one knows that one cannot wake up before the light returns. Oh, let there be light! Let there be light!

The description of life among the Eskimos is interesting:

The family which we had chosen consists of a husband and his wife, a girl and a boy. We have now been made members of the family for an indefinite period. All our possessions are reduced to a knife and a cup of metal. Everything that we eat—and our appetite exceeds that of the Eskimos themselves—we are unable to pay for. They know it, but yet they are just as happy, these kind, honest souls. They are satisfied to keep us as two queer house pets, who give them a great deal of amusement. And we also make the house interesting to others. Everybody who comes here must at once come in to get a good look at us.

Our existence is truly elysian. We are feasted and fattened and spoiled in this little Eskimo hut, which is as hot as an oven. The temperature is generally 88°, and the perspiration rolls off of us, despite the fact that we are entirely naked. We must, of course, follow the customs of the house.

Our food is very varied, compared to what it was in the cavern, where we often had to eat half spoiled walrus three times a day, and be happy if we got that. Our landlady has a well-supplied pantry to choose from; frozen narwhal meat, different kinds of seal, narwhal hide, frozen walrus liver—an excellent dessert—dried narwhal meat and walrus. We eat these things to our heart's content, and enjoy them as delicacies, as indeed they are. Most of the food we eat

raw; for it is not every day that we get anything cooked, and whether the meat is fresh or spoiled, it goes down just the same. The climate here requires rich food and plenty of it.

Outside it is dark, although it is daytime, and bitterly cold. Inside two small blubber lamps are burning. We have just consumed a solid breakfast of raw frozen meat, and are now lying down and vegetating on the shelf-bed. Beside me lies my friend comfortably stretching himself out; the perspiration trickles down in muddy streamlets on his not altogether clean body. He has just been lying there philosophizing; now he ruminates. He gave a little finely composed lecture on the pleasures of life, and insisted that the less we possess the better off we are. He illustrated this point by our blissful existence here among the Eskimos. Yes, it is idyllic! On the shelf-bed next to us the two ladies of the house are sitting down sewing. Their toilettes do not inconvenience them.

of Trinidad, West Indies, at His Forge

beautiful work he turns out, although somewhat rough and unfinished.

The woman and little girl are his wife and daughter. The wife has on her very best veil which is of silk, probably four or five yards in length, edged all round with silver bells which jingle sweetly as she walks; round her neck are two or three heavy solid necklets and above a row of hollow golden beads. Through her nose is a narrow golden ring from which hangs a smaller ring to which is attached a flat pendant; the serdhandai on the little girl's head probably belongs to her mother the better to display it for the photograph; it denotes marriage, and when not worn a red line down the centre of the head

takes its place. The population of Trinidad presents a curious mixture of East and West, of Asia, Africa, and Europe. About two-thirds are natives, of African race. There are sixty or seventy thousand coolies from India. It was a Spanish possession till 1797, and of this there are many traces. In 1802 it became the property of Great Britain. Lastly, a good number of years ago, many French settlers arrived and blended in. B. G.

The Trend of Twentieth Century Science

Can We Know Anything of the Inner Truth?

THE English Premier's address to the British Association, of which he is president, must have been a little confusing to that august body of scientists. For, whilst on the one hand, he paid a number of graceful compliments to science in her recent advances into the hidden depths of matter, on the other, he assured his hearers that their conclusions could have very little to do with the truth.

His argument was somewhat as follows:

The process of evolution has provided us with our faculties. But not that we might use them to produce fine theories about electricity and matter, not that we might know the inner truth about anything. No; only that we might get food, bring up children and outwit and fight rivals and enemies. The faculties were evolved through animal and savage ages by straining at those occupations, and therefore to those occupations only, are they fitted. Mind was evolved in the same way and for the same purposes.

In using mind and faculties for the purposes of science, minute observations, elaborate reasonings and calculations, we are putting them to a work for which they are quite unfitted. And the results therefore *must* be wrong and contradictory. For example: these senses tell us certain things about matter. But when, with the mind, they are used scientifically, they tell us, this last year or two, that there is no such thing as matter, as we see it with the common eye; it really consists of points of *immaterial* electricity. They may contradict that again, during the next few years; and so on. What shall we do?

But Mr. Balfour himself supplied something of an answer. "Sometimes," he said, "the plain teachings of experience were contradicted by an imperative instinct or sentiment, which treated experience as counsel treated a hostile witness, till it was compelled to confess its secret. Men of science had always been restive under the multiplication of the entities.

They had sought eagerly for signs that the world is a modification of a single medium, rather than a composite structure built up out of sixty or seventy elementary substances."

That intuition turns out, under experience, to be correct—unless this experience too, is presently found to have another explanation. In the same way "action at a distance" seemed a plain fact of experience, but it was to Faraday's obstinate disbelief in it that we owe some of the most crucial electrical discoveries.

These intuitions—not founded on experience, at first seeming to contradict experience, yet subsequently found true, that is, in accord with, and explanatory of, further experience—had not had, thought Mr. Balfour, enough attention.

They come, according to Theosophy, from a higher region of consciousness than mind, one that understands the universe because the universe is a radiation of its own essence, and is therefore conscious.

But science may be a long way from that conclusion. In the meantime its work is the reduction of real things to pictures which the mind can understand, and by whose aid it can do things which are useful to us.

Experiments Being Made in Silk Staining

TWO French experimenters have been working in order to discover the cause of the natural coloration of silks. Why do some silk-worms produce white silk, others yellow, others green? It appears that this coloring matter is derived from the leaves, originating in their chlorophyl; and that by administering certain coloring matters to the worms with their food, the silk can be dyed at its formation. So far, the experiments are in a very early stage, and the chief success was attained with red.

Leaves stained with methylene blue produced a blue silk, but the color was very faint and the worms did not seem favorably impressed with the flavor of the stained leaves. Dyeing is however, made so easy that this process does not seem of very great importance.

DYER

Three-color Progress in Printing

A RECENT invention has placed the three-color commercial process in a still more highly advanced position than heretofore. Hitherto it has usually been necessary to print the three impressions at intervals of hours, yellow first, because of its opacity, afterwards the red and the blue; but by the new printing machine all three colors are superposed at one operation, the paper taking the three impressions consecutively without loss of time in drying. One material note of progress is the production of perfectly transparent inks which enable the yellow to be printed last of the three, thereby giving it the advantage it needs in drying, this color remaining moist longer than the others.

The leaps and bounds taken by this process of reproducing by photographic means colored pictures, landscapes, and even portraits, are quickly bringing about a revolution in our literature. Almost weekly some worker seems to add a new touch, until even the cheapest of our magazines now find it possible to present colored work which would have been prohibitively expensive and even impossible a few years ago. Thus we find very few colored magazine covers and illustrations of the present day produced by the older processes. Although direct color photography may yet be in the far distance, indirect methods such as these are already making our magazines a veritable education in art for the multitudes who read them. We may be sure that, perfect as the results now seem to be, the field is yet but lightly touched. From the successful and universal production of colored illustrations by mechanical means a growing demand for more perfect work of this kind has arisen, and even now it is an axiom that advertisers must avail themselves of color-work to be in the first rank.

With this increasing demand we shall doubtless find increasing production and improved methods until, trying door after door in their urgency, the pioneers will at last find the one hiding the secret they need.

Friendly Bacteria—Interesting Experiments in Paris

IT appears probable that there are bacteria standing as necessary intermediaries between us and our food, in the same way as there are bacteria between the root (covering it as a cap) and the soil, in the case of plants, serving to make the matters in the soil assimilable by plant life. Dr. Charrin, of Paris, sterilized some suitable food and fed with it two sets of rabbits. But in the case of one set, after the sterilization, he reimpregnated the food with bacteria. The other set died; enteric catarrh and other troubles set in, apparently due to non-assimilation of food. In fact they were starved—not in the midst of plenty but with plenty in the midst. The first set flourished.

The next point is to find out *which* bacteria are the valuable ones and which the poisonous. Perhaps it would be correct to say that the problem is to separate the bacteria which are *builders*, which take the food up a step towards the state needed to form part of the living body, from those which are *destroyers*, which take the food *back*, possibly generate ptomaines from themselves or in it, or at best leave it as it was. We must cease thinking of bacterial life as wholly inimical to us, for there is little doubt that the results reached by Dr. Charrin in the case of rabbits apply also to us.

STUDENT

Saturn's Ninth Moon May Have Been A Comet

PROFESSOR PICKERING has now placed the existence of "Phœbe," Saturn's ninth moon, beyond doubt. But she is so far away from him—8,000,000 miles—that it is a question whether he did not steal her as she wandered heedlessly by as a comet or asteroid. The same unpleasant suggestion is made with respect to the moons of Mars and one of those of Jupiter. Small people must be careful in wandering about space till the point is settled.

Saturn's moons are scattered over a very wide area. One of them is only 117,000 miles from him—half of our moon's distance from us; the farthest, after Phœbe, is 2,225,000 miles. Phœbe requires a year and a half to traverse her orbit, but Saturn's nearest achieves his little path in less than a day.

✻ A Story That Has Never Been Told ✻

JEANETTE sat on the hill-top picking sage. Below her lay the great blue ocean; above her head stretched the blue dome of the sky. She was thinking, "What a glorious land this is! Truly, it is God's land. It is the home of the soul. How I wish all the people in the world could know it! But they don't, poor things; and oh, how I wish I might get so strong that I could go out and tell them about it, and bring them all here."

Jeanette had been an invalid all her life, and now in Southern California she was finding herself, and in the knowledge gained health was being secured.

The brilliant sunshine, the sweet, pure air, and the song of birds were Jeanette's companions on the hill-top. It was Sunday, and the people in the world to whom her heart went out, brought a vivid picture to her mind of what she would be doing were she in her city home in the East.

"There is three hours difference in the time," she was thinking, "and probably the family are on their way to church at this moment. Oh, how glad I am to be in this delightful land!"

Then Jeanette gave a little gasp of horror at herself. "What rank heresy that sounds like," she thought. "Well, it is true, anyway, and I am getting courage out here in this clear, pure atmosphere, to be honest with myself. In the name of all that is rational, why should I apologize to Public Opinion for preferring to sit on this beneficent warm earth, centered in the very heart of the universe, with the great sea and the free, open sky making an unbroken circuit around me, with space to breathe and move, and feel my divinity; and this in preference to four close walls of a big city church, crowded with people whose minds are absorbed with their good clothes, an appetizing Sunday dinner, and the effort to do their Christian duty according to the conventional method, just as I used to be doing, and as church members are doing in all the world today.

"And now," said Jeanette to herself, "tell me how humanity is ever going to recognize its own divinity in such conditions? And yet, did not Christ come to teach man's divinity? Every man's divinity?"

"But then," reflected Jeanette, "Christ did not have a church; he used Nature, the great sea, the blue sky and the hill-side." And the flash of a picture came to her of the Lake of Galilee, lying at the foot of the hills down which ran the beautiful river; with great forests all about, and on the green grass the assembled multitude to whom Jesus spoke: "As a man sows so shall he reap." "No man can serve two masters." "With what measure ye mete, it shall be measured to you again." "Blessed are the merciful, for they shall obtain mercy; blessed are the pure in heart, for they shall see God."

"Ah!" thought Jeanette, "was not that the mission of Jesus—to preserve for humanity a pure heart?"

Then to Jeanette's mind came the picture of the civilization of Europe at the time of Jesus. Like a great picture, in black and white, the world's history seemed. The terrible struggle of the soul with human

nature in the drama of evolution! Out of the blackness loomed the eternal conflict of man with man, and nation with nation, since the beginning of time. Shining out of the darkness, like beacon lights, was the periodical coming every two thousand years of great teachers and saviours, as the personified Christ principle, appearing with each new era to revivify the light and keep the link unbroken.

"And the coming of Jesus," thought Jeanette, "was it not the forging of a link between the most ancient civilization and the modern, to pass on the light of high ideals that must always have existed in the world?"

"I wonder why it is," Jeanette said to herself, "that women are so little mentioned in history. What we read about is a horrible riot of selfish greed, a strife with personal power and personal ambition, in which the cruelty of man to man stands at the front. Where, then, is woman's true power and place in history? Why should she be relegated in the background, and all the cruelty and wickedness in the world brought to the front?"

"Ah, me!" she added, with a sigh. "That is a story that has never been told."

Then came the memory of words she had recently seen in the *NEW CENTURY PATH*, written by Katherine Tingley.

"Would that you, as women, realized how mighty you are as souls. Mightier than mind can comprehend. Look into the past; yourselves the comrades and teachers of the great ones of the race. And deep within your hearts today lies infinite power if you would but stand erect, stand as souls, find the light and walk in it. Are ye not the mothers of the race? The key of all the future lies in your hands. For your own sakes, for the sake of all humanity, I plead with you to turn away from the psychological mists that shadow the mind and destroy the will, and find once again, within your own hearts, the Eternal Sunrise. Find the resourceful part of your natures and dwell therein. Find your own divinity."

The urge of inspiration brought Jeanette to her feet. The sky above and the blue water below seemed like a vast mirror reflecting her own form, as a woman, in the history of nations.

"Oh," she exclaimed, "it is a wonderful drama, in which women are to claim their true power and place. They will write their own history. It will be a new story, and will not be embellished with the harrowing tales of cruelty, selfishness, avarice and man's inhumanity to man, but it will be a story in which the divinity of man shall stand at the front, and the simple teachings of Jesus, that all races of men are children of God's family, and each man is his brother's keeper, will once again lighten the world. And it shall be the work of women."

"Surely, I am beginning to really understand," she added, as with a buoyant step she turned her face homeward. "The race is myself; nothing is separate; all are like one great family. And the women of history— Ah! they are the guides for the race, the guardians of the spiritual light. I, myself, am a woman of history, and tonight I shall begin to do my part in writing a chapter of this 'Story That Has Never Been Told.'"

W. L. C.

Fragment from

SPENCER'S FAIRY QUEEN

WHERE is the antique glory now become?

That whylome wont in women to appear?

Where be the brave achievements done by some?

Where be the battles, where the shield and spear,

And all the conquests which then high did rear,

That matter made for famous poets' verse,

And boastful men so oft abash'd to hear?

Been they all dead and laid in doleful hearse?

Or do they sleep and shall again reverse?

But by record of antique times I find

That women wont in wars to bear most sway,

And to all great exploits themselves inclined

Of which they still the garland bore away:

Till envious men, fearing their rules decay,

Gan coin strait laws to curb their liberty:

Yet, sith they warlike arms have laid away,

They have excelled in arts and policy.

That now we foolish men that praise gin eke t' envy.

And as ye soft and tender are by kind

Adorn'd with goodly gifts of beauty's grace,

So be ye soft and tender eke in mind;

But cruelty and hardness from you chase,

That all your other praises will deface,

And from you turn the love of men to hate

Ensample take of Mirabella's case,

Who from the high degree of happy state

Fell into wretched woes, which she repented late.

THE CHILDREN'S HOUR

The Raja Yoga Question Box

THE brave speak and fight for the liberty of their country. Gentle hands must heal the wounded and suffering. Great statesmen must keep for the nation the freedom won in battle.

1 Who was Patrick Henry?

ANSWER — Patrick Henry was a statesman and a great orator. He was the first governor of Virginia. He spoke and wrote against the right of Great Britain to tax the colonies. His words inspired many to fight for the freedom of their country.

2 Who was Sarah Bache?

ANSWER — Sarah Bache was the daughter of Benjamin Franklin. During the war

of Independence she led 3,000 women to collect money and medicine and make clothing to send to the soldiers. Mrs. Bache also served as a nurse to the soldiers.

3 Who was Alexander Hamilton?

ANSWER — Alexander Hamilton was a great historical character. He was an orator and a writer before he was 18 years old. He became Washington's secretary and trusted friend and helped Washington plan his battles. He was very learned in law and helped to form the Constitution of the United States. He was born in the West Indies, near Cuba. His parents were gifted and noble-hearted.

The Story of Bran

ONCE upon a time, long, long ago, there lived a great Scottish chieftain whose name was Fingal, and anyone visiting the islands of Tona and Staffa, near the coast of Scotland, will be shown Fingal's caves on Staffa. Now Fingal had a great big dog called Bran. He was so big that when Fingal came across to Dunolly Castle to visit his friends, Bran, who came with him, was fastened to a big stone 30 feet in circumference, and his chain cut deep lines all round the stone. I have seen the stone and the lines and also the ruins of Dunolly Castle. The guide book, in telling about it, says, "certainly no ordinary stone, but then Bran was no ordinary dog."

My story, however, is about another dog called Bran, big but not as big as Fingal's dog. He was a mixture of Cuban bloodhound and guarahund, pronounced *warahund*, being the native dog of the Indians who live in Venezuela. He was of a mixed brown and yellow color like the ground, but had long dark ears, big brown eyes and the deep voice of the bloodhound. To his friends he was the gentlest, kindest, most devoted friend, but was very fierce to strangers, especially if he thought they might harm his mistress or her children, to whom he was so devoted that he always accompanied them, but could never be induced to go out with his master, if his mistress and the children were at home.

Accustomed to sleep out of doors at night, he invariably went up to the nursery as soon as the doors were opened in the morning, and wakened the children by licking their hands and faces through the mosquito curtains; but if his master happened to be away from home, nothing could induce him to leave the house. He then slept in his mistress' room, and always got up to look at her several times during the night. This is said to be an inherited instinct of Cuban bloodhounds, to protect the women and children when the men are absent on hunting or battle expeditions.

Although very big and strong, he was as gentle as it was possible to be, and never once hurt the children although he played with them from their babyhood. One of his favorite games was to run from one end of the nursery to the other, taking big jumps over the children as they sat on the floor; another, to sit down on the floor with his front paws stretched out, the children would then get on his back, and he would roll gently over till one saw nothing but a confused mass from which came delighted laughter.

Once he was lying fast asleep on the floor, when one of the children, just able to walk, tripped over him; he gave an ugly growl and his widely opened mouth took in nearly the whole of the tiny arm, but the mouth never closed, and his dropping head and sorrowful eyes fully attested to the shame he felt.

During the long illness of his mistress he remained most faithfully beside her bed, only leaving to get his food when called, and these words of Mrs. Browning's are perfectly true of him:

But of thee it shall be said
This dog watched beside a bed
Day and night unwearied,

Watched within a curtained room
Where no sunshine broke the gloom
Round the sick and dreary.

Roses gathered for a vase
In that chamber died apace
Beam and breeze resigning.
This dog only waited on
Knowing that when light is gone
Love remains for shining.

And this dog was satisfied
If a pale thin hand would glide
Down his dewlaps sloping —
Which he pushed his nose within,
After — platforming his chin
On the palm left open.

His death was very pathetic, he caught a severe cold swimming in the sea; and although everything possible was done for him, it was soon seen that it was useless. Faithful to the last, one evening he followed his mistress to the little jetty and watched her leave in the boat. When she returned, a few hours later, he was still there and unable to move. He was carried gently into the house and laid on a comfortable bed of straw which he never left again. When no longer able to wag his tail he would open his eyes and look long at his mistress, and he died with his dear head resting on her hand, beloved, unforgetten and never to be replaced in her affections. **COUSIN BEATRICE**

POMONA

A Letter from Pomona

DEAR CHILDREN: A little Spanish dog sends you her picture and a letter. Many of you know Spanish, of course, and can read it without difficulty, but for those who cannot Pomona asks me to write out the English translation. Pomona believes in Brotherhood and Raja Yoga, as you see:

Muy SENORITOS MIOS:

Aquí está mi retrato. Soy Pomona. Tengo mas de once años. Aunque soy una viejecita he aprendido comprender el Castellano. "Mas vale tarde que nunca."

El ama mia me quiere mucho á mi. Muchas veces ella me ha dicho que nunca he hecho yo ni una mala cosa. No sé — estoy contenta todos los días.

Hay un gatito en la casa que tiene miedo de mi. ¿No es extraño? Yo no lastimo á los gatos. Mis amos hablan mucho de la hermandad. Tal vez el gato no ha oido decir de esa buena palabra, HERMANDAD. ¡Pobre gatito! Yo probaré enseñarsela.

Adiós, mis amigos, S., S. Q. B. S. M.

POMONA

DEAR YOUNG FOLKS:

Here is my photograph. I am Pomona. I am more than eleven years old. Although I am old, I have learned to understand Spanish. "Better late than never."

My mistress loves me very much. Many times she has told me that I have never done even one naughty thing. I don't know — I am happy all the time.

There is a kitten in our house that is afraid of me. Isn't that strange? I don't hurt cats. My people speak often of Brotherhood. Perhaps the kitten has never heard of this good word, BROTHERHOOD. Poor kitten! I shall try to teach her about it.

Good-bye, friends. Affectionately,

POMONA

DEAR CHILDREN: The Governor of North Borneo, quite across the great world from Point Loma, has many curious pets about his home, so a friend writes me. But the most curious of all is a baby rhinoceros. He is greatly devoted to the Governor's wife and follows her about much as an affectionate dog might do.

When he was captured he was at first inconsolable. However, his kind-hearted mistress gave him plenty of milk and the best of care, meaning to keep him a few days to show to some friends. But when she decided to return him to the jungle Master Rhinoceros refused to go! What will she do with him when he grows up? **UNCLE FRED**

COLUMBUS

From SCHILLER

STILL steer on, brave heart! though wiflings laugh at thy emprise.
 And though the helmsmen drop, weary and nerveless, their hands.
 Westward and westward still! there land must emerge from the ocean;
 There it lies in its light, clear to the eye of thy mind.
 Trust in the Power that guides; press on o'er the convex of ocean:
 What thou seek'st, were it not, yet it should rise from the waves.
 Nature and Genius hold a pact that is fixt and eternal---
 All which is promised by this, that never fails to perform.

How to Study Theosophy

IF this query were made by some one really desirous of investigating the hidden and sacred truths of Theosophy, it is the most sensible thing he could do. There are so many fads which have dressed themselves in the mantle of Theosophy, and the word has become so misused, that almost any crazy idea might claim it as parent. The outside student, or would-be student rather, usually imagines that the approach to the study of it is something that can be taken up as a fad, to be put aside when curiosity is satisfied.

Now, while the principles of Theosophy are so simple and direct that a child may grasp them, there is a side to it which would require a lifetime to understand; aye, more than one life, for Theosophy is the Science of Life itself, and the Science of Right Living. As an example of its principles, we may take the teaching of Reincarnation: that man is reborn on earth, after death has severed him from a former worn-out vehicle; and that other teaching of the law that what a man sows, that shall he reap; that if he sow tares, he shall not reap wheat, but that the harvest will be according to the sowing. Then, further, we may instance the law of human evolutionary progress, which teaches that man was originally a spiritual being; that he fell into matter, and is now on the backward road to his high spiritual estate, but that he shall rise much higher than the point from whence he fell. All these are simple in their principles, and may be taught lucidly to the least intellectual mind.

Now, what is Theosophy as a whole? It has been called by different names and explained in varying ways: some say it means "The Wisdom of the gods;" others say that it means "Divine Wisdom;" others, again, teach that the word signifies the Divine Law of Truth, and that a fragment of it is found in every religious and philosophic system, worthy of the name, the world has ever known.

Therefore, as a science, it has to deal with the whole of man's complex nature. To attempt to understand it merely with the brain-mind is utterly useless; it is not possible to do so, for the very nature of the subject requires a more universal treatment. It must be studied with the heart as well; indeed, more so than with the mind; and further, it must be made a living power in everyday life.

As Theosophy is the Science of Life and of Right Living, every part of man's being falls under its scope. As man and Nature may be roughly classed as triune, Spirit, Soul or Mind, and Body, just so must Theosophy be studied in its relation to each part of this trinity of life, and its study will be only really satisfactory and lastingly beneficial when man studies it with heart and brain, jointly and together.

And absolutely essential to its quick understanding is the necessity of approaching the study of it with a mind free from prejudice and misconception of whatever character. This is just one of the most difficult things in the world to do; for our brains have been rendered so extremely irresponsible to anything recognized as *unusual*, through early mis-education in childhood, that it immediately, on the slightest excuse, marshals its prejudices and its set ideas about this, that and the other, like so many fighting demons; and the result is lamentable confusion. It is precisely for this reason that the mind of a little child may so much

more easily grasp the teachings of Theosophy in its principles than a man, for the child's mind is more plastic, less set in its way, and therefore more intuitive.

Now the great Foundress of the Theosophical Society in the last century, Madame Helena Petrovna Blavatsky, wrote a remarkable work, in which the broad and general principles of Theosophy were carefully outlined. This monumental work of learning traces in brief the entire course of man's evolution, and that of Nature with him; and it foretells the destiny of man to come. This work is also called the "Synthesis of Science, Religion and Philosophy," in that it demonstrates that every system known to man, the world over, has come from a common fountainhead of Wisdom and Knowledge.

But to place such a work in the hands of the enquirer, would be as foolish as to require one who has never learned the first principles of arithmetic, to solve a complicated algebraical problem. Those who are really earnest in their desire to become students of Theosophy will begin at the beginning, exactly as they would begin with any other science; only as Theosophy comprehends the whole Nature of man, it takes the whole nature of man to understand it; and this applies to the principles of it, as well as to more advanced study.

For this reason it is sheer futility to cram one's head full of ideas about "auras," "astral bodies," psychism, hypnotism, etc. What right has the *beginner* in the Science of Right Living to know the real secret teaching about these things, until he has proved indisputably his fitness, his moral and spiritual fitness? Such ideas he may easily get from books, written by others, very probably not a whit more fit than the beginner, only that they have *read* more than he. How can he know that the things he reads about all these ARE TRUTH?

The method endorsed by the Universal Brotherhood is higher and more comprehensive than the ordinary method of study, and its aims are farther reaching. Therefore, to study Theosophy, we must use every part of our nature; we must use the divine faculty of common sense, with which every intelligent man is endowed. Whatever we may read or hear, let us test it by the Heart power as well as the Brain power, and we cannot go far astray. And we must ever bear in mind what Katherine Tingley says: "Theosophy applies to every department of life."
 J. F. K.

Reincarnation

THE doctrine of reincarnation means that man as a thinker, composed of soul, mind and spirit, occupies body after body in life after life on the earth, which is the scene of his evolution, and where he must, under the very laws of his being, complete that evolution, once it has been begun.

This doctrine is the very base of Theosophy, for it explains life and Nature. It is one aspect of evolution, for as it is re-embodiment in meaning, and as evolution could not go on without re-embodiment, it is evolution itself, as applied to the human soul. . . . It vindicates Nature and God, and removes from religion the blot thrown by men who have postulated creeds which paint the Creator as a demon. Each man's life and character are the outcome of his previous lives and thoughts. Each is his own judge, his own executioner, for it is his own hand that forges the weapon which works for his punishment, and each by his own life reaches reward, rises to heights of knowledge and power for the good of all who may be left behind him. Nothing is left to chance, favor, or partiality, but all is under the governance of law. Man is a thinker, and by his thoughts he makes the causes for woe or bliss; for his thoughts produce his acts. He is the center for any disturbance of the universal harmony, and to him as the center the disturbance must return so as to bring about equilibrium, for Nature always works toward harmony. . . . He is thus responsible for all his thoughts and acts, and in that his complete responsibility is established; his own spirit is the essence of this law, and provides forever compensation for every disturbance and adjustment for all effects. This is the law of Karma or justice, sometimes called the ethical law of causation. It is not foreign to the Christian Scriptures, for both Jesus and St. Paul clearly enunciated it. Jesus said we should be judged as we gave judgment, and should receive the measure meted to others. St. Paul said: "Brethren, be not deceived; God is not mocked, for whatsoever a man soweth that also shall he reap." And that sowing and reaping can only be possible under the doctrines of Karma and Reincarnation.

No new ethics are represented by Theosophy, as it is held that right ethics are forever the same. But in the doctrines of Theosophy are to be found the philosophical and reasonable basis for ethics and the natural enforcement of them in practise. *Universal Brotherhood is that which will result in doing unto others as you would have them do unto you, and in your loving your neighbor as yourself—declared as right by all teachers in the great religions of the world.*
 (The italics are mine—Ed.) WILLIAM Q. JUDGE

BE OF GOOD CHEER

EMERSON

BE of good cheer, brave spirit; steadfastly
 Serve that low whisper thou hast served; for know,
 God hath a select family of sons
 Now scattered wide through earth, and each alone,
 Who are thy spiritual kindred, and each one
 By constant service to that inward law,
 Is weaving the sublime proportions
 Of a true monarch's soul. Beauty and strength,
 The riches of a spotless memory,
 The eloquence of truth, the wisdom got
 By searching of a clear and loving eye
 That seeth as God seeth. These are their gifts,
 And Time, who keeps God's word, brings on the day
 To seal the marriage of these minds with thine,
 Thine everlasting lovers. Ye shall be
 The salt of all the elements, world of the world.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question What is the difference between the Theosophical doctrine of Karma and that of a Pitiless Fate?

Answer I The doctrine of a "pitiless fate" can only mean that events happen to us without rhyme or reason, and that we have bad luck and good luck regardless of our deserts. Such a doctrine is impious and irrational; it means that the world is a chaos without system and order. We know perfectly well that Nature is not a disorderly chaos, but is arranged and worked on a most beautiful and orderly system. And it is not possible to think that human life alone would be left to chance and hap-hazard. The religious idea is that God watches over each one of us and cares for each event of all our lives. If God is able to do this, then it is clear that He is not a Person in the ordinary sense, or in any way that we can conceive. A mind so vast and all-embracing, and a care and attention so universal, must belong to a God far greater than religious people usually conceive; to a God who pervades all the universe and is present everywhere, in every tiniest atom, as in every boldest human breast.

The Theosophical doctrine of Karma is an attempt to give a comprehensible form to this idea of the omnipresent, all-just, and all-loving God. Try to look upon it with all reverence, for it is with the deepest reverence that it is spoken of. Simple uninquiring natures can find perfect consolation in the thought that God or Jesus watches over them; but there are people who think deeply and have minds that aspire to a larger knowledge of God and his Laws. To such it is no profanation that they should present the old familiar idea in a broader and more intellectual way, and endeavor to show how divine justice and love pervades and directs everything that happens in the universe.

In observing Nature we find that the Creator does not make special arrangements for individual cases, but that He has ordained His laws once for all, and these Laws protect those who obey them and punish those who strive against them. It is so in human life: God seldom, if ever, interferes specially; but he has ordained certain moral laws for the Soul's life, and certain vital laws for the body's health, and these laws regulate our fortunes.

It is generally admitted that diseases come, not as a special visitation from God, but as a consequence of some violation of the laws of health; and Theosophy extends this idea to our moral life, and declares that our bad luck is the result of some violation of God's moral law. This view is at once scientific and reverent.

It must, however, be borne in mind that, in considering the laws of eternal justice, we are dealing with the life of the immortal Soul—a life that neither begins nor ends with the life of the body; so that, if we are to comprehend God's eternal justice, we shall have to view human life on a far larger scale than we have been accustomed to do. We cannot expect to make God's vast and eternal plans fit exactly with our own narrow and limited ideas as to what is man and what is his destiny. Therefore the study of Karma should go hand in hand with a study of Theosophy generally; and it will be found, as our acquaintance with that most sacred and luminous science grows, that the justice and mercy of

God become ever more and more apparent the more we study his wondrous works and ways.

The erring and puzzled mind of man is not his real Self. The Soul is the real man, and it is for the Soul's experience that life is lived. All the while we are complaining and vexing our brains with doubtings and questionings, the Soul sees and knows and is adding to itself wisdom from experience. Moreover the Soul is trying to teach the mind and to make us see how things really are. Some day we shall have so grown in wisdom that even our minds will understand how and why we suffer and enjoy. Then we shall cease to grumble at God's Laws because they do not happen to agree with the imaginings of our ignorant minds. We shall take every event, whether pleasant or painful, as a lesson from which wisdom may be gleaned. Meanwhile we must trust in divine goodness and strive to broaden our ideas so that we can comprehend it.

H. T. E.

Answer II It is the *resemblance* that is difficult to find, not the difference.

According to the doctrine of Fatalism, your future is fixed *for you* by some power or person other than yourself, and it cannot be altered.

According to the doctrine of Karma, you fix the future *for yourself*, and it not only can be, but is, altered by each movement of your will.

Fatalism implies that causes can act without having any effects, which is the same as to say that a man can become a father without having any children. For if the will exists at all, it is the cause of effects.

Fatalism escapes this difficulty by denying will to us. But fatalism is about half of the truth, and for that reason, when stated as the *whole* of the truth, it is falser than if it were wholly false.

Every desire, yielded to, becomes the cause of its own reappearance in a stronger form. Resisted, its reappearance is weaker. We therefore create tomorrow by yesterday *and today*. Fatalism forgets the *today* part of that proposition; and since yesterday is beyond recall, asserts that tomorrow is now fixed beyond alteration. But today we are absolutely free. It is true that a mass of desires generated yesterday will rush in upon us; but we can resist them, and by our resistance gain more and more strength until we can finally conquer them and they return no more.

Fatalism is therefore the doctrine that the past makes the present and the future; Karma, the doctrine that the past makes the present and the future only so far as the present permits. Fatalism is true for those who do not use the will; it is not true for those who do.

As to external conditions, Theosophy teaches that these answer to the needs of our character. And as we made and make the character, we made and make the conditions. But we are not as yet wise enough to see what external conditions will come to us in answer to the need. Fatalism teaches that they come without regard to need, which is again a denial of the relation of cause and effect.

STUDENT

Question Why do you go to the ancients for your teachings of Theosophy? Is it not a fact that the past century has witnessed a greater advance than any previous century in historic times?

Answer I Yes; a greater advance in science, in luxury, in trade combinations; but hardly in spiritual wisdom. Because the ancients, or some of them, lived less in externals, and desires for externals, than we, they lived nearer to wisdom and were able to translate wisdom and the law into terms of human thought. It is for that thought, which our day lacks, that we have gone back to them. C.

Answer II The past century has also witnessed, especially during the last twenty-five years, an uncovering of a little of the marvelous achievements of the ancients, in architecture, construction, scientific knowledge, literature and even political and social science. From all this we are beginning to learn that the ancients in many directions knew more than we, and if that be so, it is but wisdom on our part to go to them to learn their wisdom. But it should not be forgotten that in so doing we are but recovering our own lost knowledge, for we were those ancients and hence therefore there lies before us an advance to an even greater height than they attained in the far past.

THERE WAS never any more inception than there is now; nor any more youth or age than there is now; and will never be any more perfections than there are now; nor any more heaven and hell than there is now.—Walt Whitman

Ireland and the Church of Rome ON the following newspaper advices from Rome comment is superfluous. The paragraphs tell their own tale:

"Cardinal Vincenzo Vannutelli has returned here from his visit to Ireland, where he represented the Pope at the reopening of Armagh Cathedral, July 24th. He was received in audience by the Pope today and made his report. He says he was accorded an enthusiastic reception, and that many honors were paid him. For the first time since the fall of the temporal power of the Popes the Papal flag, hoisted on the steamer carrying the Cardinal, was saluted by British war ships, while Lord Dudley, the Lord Lieutenant of Ireland, treated him as a prince of the blood.

"The Cardinal also said that the faith in Ireland does not affect the people of Ireland alone, but extends beyond the seas into various countries, especially to America and Australia, to which the Irish have been forced to emigrate. Thus they are centers for the propagation of the faith wherever they are transplanted.

"The Pope was most pleased with the Cardinal's report, and expressed his intention of soon issuing a document in which he will express his feelings toward Ireland."

The Origin of "Windfall" THE origin of the expression "windfall," which is used when one wishes to refer to a streak of good luck, dates back to the time of William the Conqueror. At that time it was a criminal offense to cut timber in the British forests without royal consent. All that could be gathered for fuel or other purposes was such limbs as the wind should happen to break and cast to the ground. On this account the peasant hailed a great windstorm as a blessing, because it was apt to cast enough of "windfalls" for winter firewood. From this old-time forestry custom comes the modern application of the expression. At one time it was decreed that only such limbs and whole trees as should fall during the three summer months could be used as firewood, but

the unjustness of the act was so plainly apparent that no attempt was ever made to enforce it.

Libel & Slander Defined ALL publications in writing or in print imputing to another disgraceful, fraudulent or dishonest conduct, or which are injurious to the private character or credit of another, or tend to render a man ridiculous or contemptible in the relations of private life, are libelous.—*Addison on Torts*, §1089

Abuse by word of mouth is not slander unless special damages can be shown, unless

- (1) It is spoken of a professional or business man in the conduct of his profession or business; or
- (2) It imputes an indictable offense involving moral turpitude; or
- (3) Unless it imputes an infectious disease; or
- (4) Unless it imputes want of chastity to a woman.

If special damage can be shown, other words which are vituperative, but which are not within the foregoing class, may become slanderous.

(The foregoing is not a quotation from, but is the substance of, *Addison on Torts*, §§1116 to 1124)

Loma-Land THOSE who live in Lomaland love to look eastward; beyond the bay and beyond the city and beyond the foot-hills, even to the mountains in the purple distance. And the city is the most marvelous part of the picture; at sunset all fire and gold, a miracle of mosaic; at dawn a city of enchanted palaces. One might easily believe it to have been dropped down from fairy-land, all purple and gold and pink.

But at night the color and the gleam have disappeared. All is darkness. One would not know that the city lay there were it not for the lights which hang—a thousand beacons—in the darkness, but not of it. The picture is an inspiring one, symbolic, a picture story of the world's life wrapped, as it has been for ages, in spiritual darkness of its own making. Yet above the darkness, here and there, lights gleam. They are those who, in all ages, have stood for truth, those who have been Defenders of Principle.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

A Recent Visit to Lhasa

LOOKING over some notes made some months back we have come across the following, which confirms the few meagre details, which so far are all that we have from the British expedition. The notes refer to a visit by M. Zybikoff, a Russian explorer, who had had a prize conferred on him by the St. Petersburg Geographical Society as the first Russian explorer of Thibet.

M. Zybikoff is both Buddhist and Mongolian, being a Buriat of Baikals; and this enabled him to pass as a lama and to reach Lhasa, where he resided twelve months.

Zybikoff entered the country in 1890 by way of the Boumza Mountain, where Prjevalsky was turned back. Following are some particulars of Lhasa given by him:

It has a picturesque location on the southern slope of a mountain, with luxurious gardens on the west and south. The Uitchu River passes to the south of the city, through which dykes and canals have been constructed as a protection against overflows. Surrounding the city is a fine, broad street, which serves for religious processions and penitential exercises. Penitents go the length of this street falling to the ground every five or six feet, so that in a day they prostrate themselves about 3000 times. The city, though small, having at most only 10,000 regular inhabitants,

Important Commercial Center

is an important commercial center, the native traders being all women. In the center of the city is the Temple of Buddha. It is about 140 feet square and is three stories high, with three gilded Chinese roofs. It contains the gigantic bronze statue of Buddha, which has a hammered gold jeweled headdress, in front of which burns a sacrificial fire fed with melted butter. . . . The sacred edifice also contains rooms for the Dalai Lama and his Council.

The residence of the Dalai Lama ("Tale" in Huc's French transliteration), built in the Seventh century, is a mile out on Mt. Buddha La; it is 1400 feet long and nine stories high, and contains also the treasury, the mint, the schools of theology and medicine, and quarters for 1200 officials and 500 monks.

Other monasteries near Lhasa contain innumerable monks of all ages.

Since the fifteenth century all power, civil and spiritual, has been nominally in the hands of the Dalai Lama, but China maintains a Manchu resident and an army. In order to avoid strife in selecting a Dalai Lama, the electoral council places three strips of paper with the names of three boys in an urn, and the Manchu resident removes one with a small staff. The boy indicated on this piece of paper becomes the new Dalai Lama. His education is then entrusted to a college

How the Da- lai Lama Is Chosen

of learned men, and, until his twenty-second year, the Government is in the hands of a regent appointed by the Emperor of China. The present Dalai Lama is twenty-seven years old. He is the fifth since 1806, one of the regents having disposed of three while children.

The Dalai Lama rules through a council of four "Galons," appointed by the Emperor of China, and the administration is in the hands of a closed aristocracy, in which corruption is almost universal.

The population is estimated at probably not more than one-tenth of the 33,000,000 which has been conjectured. Besides Thibetans and Chinese, there are Cashmerians, Mongolians and Thibetans from Nepal.

The houses are of brick and stone, and dried dung is burned, as described by Huc. The chief articles of diet are barley meal, raw yak and sheep flesh, butter, sour milk and vegetables. There is, of course, universal devotion to formal religion and faith in the efficacy of prayers and charms.

M. Zybikoff is writing a book, illustrated with numerous photographs and drawings. Of course particulars like these will be taken, wherever they refer to religious beliefs and practices, with that grain of salt with which a Theosophist always seasons the reports of the prejudiced traveler.

The Religion No Doubt Degenerated

No doubt the religion of Thibet has degenerated, as religion has elsewhere in these Dark Ages. But we have always regarded degraded forms as positive evidence of the existence of their undegraded prototypes; and H. P. Blavatsky assures us that these latter still exist in Thibet. The unsympathetic traveler would not see anything except what he was intended to see, and would be apt to find what he was looking for, as people generally do who seek amid a multitude of miscellaneous facts for such as will confirm their theory. Profane travelers see the smoke, but there must be a fire somewhere. Huc and Gabet, being much more sympathetic, intelligent, and broad-minded than most explorers, and having ideas above mere geographical discovery, territorial aggrandizement, or mercantile enterprise, learned much more about the beliefs and practices of these people. They met and conversed with persons of great culture and ability, and it is quite evident that their religious bigotry was the only bar to their admission to a still fuller knowledge of the country and its people and customs.

The first European to visit Thibet, says a newspaper report:

Was Odorico di Pordenone, a monk who was there early in the Fourteenth century. The next was the Jesuit Antonio d'Andrada in 1624. Since the expulsion of the small settlement of Capuchin Monks in 1760, only three Europeans have succeeded in reaching the city, viz., Manning, the Cambridge mathematician and friend of Lamb (1811), and the French missionaries, Huc and Gabet, in 1846. Among recent explorers who have made attempts to penetrate to the capital may be mentioned Dr. Sven Hedin and the Russian, Prjevalsky. E.

The Future of South America

WHAT is known to deeper students of human history as the "Black Age"—a period comprising about all that ordinary history covers—has been characterized by the dominance of races excelling in material force and ability, such as the Romans and the Anglo-Saxons. For in such an age might is right, and material, martial and commercial prowess are the keys to domination. Under the long prevalence of such a condition we have grown accustomed to classify and appraise races according to their capacity in these respects. The other qualities, however excellent they may be, do not, in this age, give power to form strong material civilizations; and they are therefore depreciated and not counted as assets in our valuation of races.

Thus, a recent writer on South America, speaks of that continent as being "virtually left to those Iberian conquerors whose blood has been largely crossed with Indian;" and says that "Europe cannot afford to abandon the great domain of South America to the creole and native races." But will the rougher, harder characteristics of the lighter races always be title to supremacy? May not an order of society come about wherein shall be needed those softer, mellow and more romantic and imaginative qualities characteristic of darker races?

We believe that such a change will be part of the general change that is coming over humanity, and that the spirit of Brotherhood and the many enlarged and enlightened ideals it draws in its train, will supersede the age of material progress. Then the warmer and more flexible qualities will be called for, and these darker races may claim and achieve a title to excellence by virtue of the very qualities for which they are now depreciated. South America may have a grand future before it as a sister continent, wherein may bloom flowers that do not favor our harsher clime.

Our authority is eloquent over the climatic graces of South America as compared with Africa, the "Dark Continent:"

In South America we have a yet darker continent. Its configuration has been fairly determined, but there are whole tracts about which little is reported, and that little upon the testimony of the Indians. Its vast resources have yet to be explored. Its political and social conditions are provisional in character. Unlike the opposed continent of Africa, it is not scarred by burning deserts. The heat of its tropics is moderated by two oceans, so that its tropical area can receive the colonization of Southern Europe. It is well watered by great rivers, and its temperate regions and mountain ranges afford hospitality to any race of the world.

There is, however, a lonely hinterland—an untamed wilderness which riots in strange forms of vegetable life and stranger creatures. In the south it was recently reported that fresh remains of the giant sloth had been discovered, and an expedition is seriously proposed to search for that primeval monster. Rumors of prodigious forms, reptile or bird, haunt the loftier valleys of the Andes.

As to South America's wonderful past, he says:

In the forest recesses of the mainland the traveler stumbles upon buried cities; grey temples and sculptured palaces choked under a winding sheet of green foliage. The Toltec civilization of Mexico, the Inca government of Peru, went down into the mire of Spain, like the too roughly handled butterfly and orchid of the primeval forest. The archæologist stands dumb before hieroglyphics to which the key, once recovered, has been lost. The empire of Montezuma in its final catastrophe dragged into darkness much science and quaint art, like the treasured ingots which the Aztecs defied the Spaniards to recover.

The remainder of the article is devoted to showing that the political life of the continent is in a state of flux and preparation; and that it behooves the United States and Britain to unite in protecting it from injurious aggression and invasion for so long as it requires such nurture. "It is clear," opines this writer, "that the practical protectorate assumed by the United States, implies a corresponding responsibility for the foreign policy of the South American republics."

STUDENT

Chinese in South Africa

IT appears that of the Chinese coolies who have lately been brought into the Transvaal in pursuance of the Government's new labor policy, a great number have been employed in Manchuria as laborers on the railways. There they have, to some extent at least, mastered the Russian language, and as a matter of course a good many Russian words will undoubtedly find a foothold in the English spoken in South Africa, just as that language already contains quite an admixture of words of both Boer and Kaffir origin. That the Russian will not be of the purest goes without saying, and this present incident is of interest in showing an additional cause of corruption of language and transformation of words when transplanted into another soil.

STUDENT

Is Tobacco-Smoking a Degraded Rite?

ALTHOUGH it was the ancient Americans who gave to Europe the knowledge of smoking, it was the ignorant and self-indulgent Europeans who turned the custom into a habit and fastened it as such upon all nations, including the Red Men themselves.

If there is one formula more frequently mentioned by travelers than another as an indispensable preliminary to all serious business (says Brinton), it is that of smoking, and the prescribed and traditional rule was that the first puff should be to the sky, and then one to each of the corners of the earth, or the cardinal points.

Tobacco is only one of several plants ceremonially used, and the original herb is probably now unknown. The purpose of smoking this sacred herb was doubtless to assist in inducing a state of bodily and mental tranquillity, in which the higher faculties of the soul could be used and necessary insight and knowledge thus gained. Other peoples have used similar and various means to the same end; the Pythian tripod with its fumes, and the gestures and attitudes adopted by the priests of certain sects, may be taken as instance.

Of course, this self-fumigation was only a means subordinate to other means of primary importance known to the practisers; a fact which will serve to distinguish it from mere intoxication or drugging. In the latter case, the body is made sensitive, but the indulger, having no trained will and no special end in view, loses control and becomes intoxicated.

So smoking probably was originally part of a sacred ceremony, having for its object the attainment of clear vision for special purposes; but the English turned it into an indulgence.

STUDENT

Precipitation of Rain

SOME years ago, while traveling through central South Africa, in the "Karoo" desert, the writer saw a most curious and interesting cloud formation. Some distance to the east were two long banks of clouds, one above the other, and stretching for miles along the railway. The lower bank was heavily laden with moisture, and the two clouds were both charged with electricity, the upper one positive, the lower one negative. Suddenly a lightning flash darted from one end of the upper cloud to the cloud below. This was soon followed by another a little further along, and so flash followed flash, the point of discharge always advancing along the cloud bank, and wherever the discharge took place, there it was instantaneously followed by a shower of rain from the cloud below. We have all noted how, during a thunder storm, an extra vivid flash is often followed by a heavy down-pour, but it is not so easy to follow the *modus operandi* while in the midst of it all. Here was an opportunity to see the whole performance from the outside, and it was too evident to leave even the slightest room for doubt. It was the electric discharge which caused the down-pour. Here is a chance for some would-be rain-producer, but first he must produce the electricity. T.

Commissioner Sargent's Visit to California

COMMISSIONER OF IMMIGRATION SARGENT is now en route from Washington to the Pacific Coast. It appears that Mr. Sargent's special mission is with regard to certain immigration matters concerning the Chinese. Commissioner Sargent's numerous friends in California are looking forward to his arrival with unusual interest, particularly the children of the Raja Yoga Schools at Lomaland.

STUDENT

Entrance to Raja Yoga Academy---Frontispiece

THE NEW CENTURY PATH's cover-page this week shows the eastern entrance of the new Raja Yoga Academy, at Point Loma. This side of the building commands a magnificent view over the City and Bay of San Diego, and with the blue and purple tinted mountain range beyond, the effect is simply entrancing.

There are three other large and handsome entrances to the Academy, facing the different quarters, and it is no whit an exaggeration to say that from every one views of great beauty fall under the eye.

The coloring, and the play of color, which have made Californian scenery famous, are seen at their best in the pellucid air of our Southland.

It will not be long before the Academy will be filled with young students, who will perforce imbibe health and develop character under the Raja Yoga training, as they will imbibe the knowledge fitting them to go forth as good citizens, strong men and high-minded women. STUDENT

✻ Some Views on XXth Century Problems ✻

Respect Due to the Three Selves

THERE will be a good deal of pedestal-crumbling when people come to readjust and redistribute the rays of their respect and reverence. Indeed the change is already going on. Respect will no longer be paid to mere largeness of faculty, whatever its power or degree; but to the use that is made of it. At present, faculty itself is respected and sometimes revered. Legal genius, musical genius, all sorts of intellectual and manipulative abilities, are accorded not only the respect due to them as instruments; but the respect is extended more or less consciously to the man who possesses them, independently of his use of them. These instruments, thus improperly respected, become therefore objects of ambition, and their acquirement the sole aim of many.

The new rule will be to count that man great who uses what he has, greatly; and conversely. We shall recognize an ability, as we recognize a man's length of arm. But to the man himself we shall pay no other respect than his use of this ability warrants. There is in every man a gross self, a fine self, and a universally-thinking self. If to the fine self he sacrifices the gross, and thus liberates his finer energies—that is respectable. If he makes his fine self work—not for itself, not for incense to its genius, but for a larger welfare—that is more respectable. He has taken the view of an impartial on-looking Presence, who would naturally consider the largest issues. Taking that position, he has seemed to himself but one of many, worked not for one but for many, sacrificed the fine self to the universal. There are men and women who even hold back their genius, leave it uncultivated, because a more universal work than the use of that, happens to be at hand. That situation is not uncommon, just now, with everything in confusion; though it will not be permanent. But now, it occasionally happens that a poet will serve more universally by setting type than by writing poetry. And here, a genuine and almost terrible sacrifice (temporary though may be for a whole lifetime) of the fine self to the universal, is wanted—and occasionally given. Unhappy sometime will be the man who sacrifices upside down—the universal to the fine; or both to the gross! STUDENT

A God Who Is Sadly Misunderstood

A COPY of a curious little sheet, issued monthly, has drifted into our hands, "devoted to teaching the discovery that God is a myth like Santa Claus." The evidence for the non-existence of God is quite simple and satisfactory. God has been supposed to be a God of mercy. Unmerciful things happen, such as earthquakes, volcano-eruptions, and man-made calamities by land and water. All of these a mercy-loving God would have prevented. Since he did not, he cannot exist.

"God" is here tried by the yard-stick with which we try each other. That which is painful is confused with that which is evil.

"But innocent people suffer and even die?" Well; is it to be a law of the universe that "innocent" people should never taste suffering or death? The keynote of the argument begins to clear up, and thus reveals itself: the only really good things are a healthy body and freedom from any pain. If a god presumes to deprive you of these, if he presumes to think you can still be alive and even better off after your body is dead, if he should decide that a few years of suffering or starvation in the midst of eternity may strengthen your moral feebleness or give you a little will, endurance and energy—then he is obviously non-existent. That is the naked argument of these strange people.

If men would study the events of the moments, and days and years, they would find them to be the response to their characters, their minds, their strength and their weakness, a response that never falters or intermits. The events and their duties are opportunity, and as the wheel turns, day by day confronting us with new things, we can find that they correspond with our real needs and serve our real growth. And in the heart is the urge to seize and use their lesson. For the Supreme Spirit is there, and it is also that which turns the wheel, making use of the deeds of one man to be events for another. STUDENT

Parallels In Scriptural Doctrines

IN the little volume containing the two sets of "Sayings" of Jesus, and the "Fragment of a Lost Gospel," Drs. Hunt and Grenfell have been at much pains to present parallel passages from the canonical Gospels and elsewhere. If it had been within their scheme they might have obtained parallels equally close from the sacred writings of other peoples. A few come at once to one's mind.

Jesus promises a reward to anyone who shall listen to his words: "Every one that hearkens to these words shall never taste of death." In the last chapter of the *Bhagavad Gita*, we find Krishna similarly saying: "And even the man who shall listen to (this my doctrine) with faith and not reviling, shall, being freed from evil, attain to the place of those whose deeds are righteous."

Jesus said: "Raise the stone, and there thou shalt find me; cleave the wood, and there am I." One of the parallels in the *Gita* is: "I am the taste in water, the light in the sun and moon, . . . the sweet smell in the earth . . ." etc.

Like the celebrated Delphic oracle, Jesus incites his believers to self-knowledge: " . . . the Kingdom of Heaven is within you; and whoever shall know himself shall find it. (Strive, therefore) to know yourselves, and ye shall be aware that ye are sons of the (almighty) Father." The injunction to find the Self, coupled with the doctrine that the human real Self, when found, is a direct ray of the Supreme Self, and ultimately that Self itself, fills the pages of the *Gita*. And the whole of the Upanishads might almost be said to be an expansion of the doctrine: "The Kingdom of Heaven (or of God) is within you." "The body is the City, and its heart the Palace, and the Royal Presence there a hid, invisible, close, subtle thing, . . . the Spirit." That is the Chandogya Upanishad. In the *Gita*: "There dwelleth in the heart of every creature the Master, who by his power causeth the cycles of all things and creatures."

The more we study the Scriptures of all peoples, the more do we see that no time or people has been without its message, and that the substantial of the message are everywhere the same. STUDENT

Ireland Restoring Gaelic Language

WHETHER the Gaelic language will be ultimately fully restored to national use in Ireland, may be open to question. But the indications certainly point in that direction. Today 3000 of the national schools are teaching it to 95,000 pupils. In other schools and colleges at least as many are learning it. The territory once occupied by the Celtic race was evidently very large. The present limits of the language are only those of Brittany, Cornwall (but here practically extinct for a century), Wales, Isle of Man, the Scottish Highlands and Western Ireland; but all along Southern and Western Europe are traces of the language, and the name Gallia, or Gaul, for France, is significant of a chapter of lost history. If we could get more Gaelic mythology, and understand it, we might open a whole volume of curious history. Here and there it touches the mythology of the Northmen, of Asia, and of Greece. Indeed, the Greek stories of Achilles, and the Garden of the Hesperides, reappear as those of Diarmid and the boar, and Fraoch and the beast.

The same force that is effecting this revival, the same stir of the sleeping national spirit, may presently check the deadly current of Irish emigration. In 1841 Ireland had a population of 8,200,000. By 1891 it had fallen to 4,460,000. C.

A WEALTHY farmer in Baden, Germany, has recently inaugurated a new system of education and he is trying it on a number of orphans he has taken from different asylums. The children are being allowed to live a free, untrammelled life in the open air. They are allowed eight hours' sleep, and the first thing after rising is a plunge in the swimming tank situated near the house. Their diet consists almost wholly of cereals, fruits, olive oil and milk, and no meat. They study about three hours daily—out of doors. The neighbors, call this man something of a lunatic, albeit harmless; but surely he is "walking in the right direction."

Art Music Literature and the Drama

The Life Itself as a Commentary upon the Art

THE great commentary, and sometimes the only one of value, upon the works of our great musical composers, is the life itself. We shall gain still more intimate glimpses of those causes which lie beneath the surface of things when we know something of the lives of the composer's parents. Beethoven, genius, misanthrope, marvel that he was, both in strength and in weakness—how much is revealed to us by some knowledge of the characteristics of his parents. History tells us that his father was passing inexorable, and unrelenting to the point of stubbornness—a man who went to bitter extremes in his determination to make a great musician of his son. He thought himself honest, according to his own ideals,—so many do, alas! But Beethoven's childhood was embittered, and the marks left upon his soul by those early injustices were never erased.

His mother was sweet, lovely, womanly, and her tender care was almost the only sunshine in his boyish life.

Is it difficult to draw conclusions? It is easy to see how Paganini, about whom we know so little, was fairly coerced into the extremes that marked his genius-life by heredity and the influences thrown about him by his parents. His father, ambitious for his son, compelled him to practice often until the lad would fall from exhaustion, a severity which his mother was powerless to wholly prevent, though his biographer assures us that had it not been for her care and her efforts, he would doubtless have succumbed in his boyhood. History tells us that his mother, shortly before his birth, had a vision in which it was prophesied to her that the child to be born should be a son and a great musician. Unwisely she told the father, and when he perceived the first signs of musical talent in the child he began a regime of the utmost harshness and severity for the purpose of exploiting the child musically. The result was that he wrecked the child's constitution and put his nervous system into a condition of permanent irritability and unbalance. Von Weber's boyhood was ruined and his constitution all but wrecked by the same ambitious severity on the part of his father.

It takes so little—so little—to impress and change, to dwarf or to develop, a soul during those early years when all growing things are plastic, fresh from the hand of God. What physician cannot diagnose more correctly when he knows the causes of this or that disease? What medical student would be trusted by his professor to reduce a dislocation if he did not know anatomy thoroughly; if he were not able, after seeing only the surface, to picture in his mind's eye the exact form and location of each muscle bone or tendon that lies beneath? Do we demand as much of our biographers—this capacity to look beneath the surface of things—or do we not? The day is coming, perchance, when we will be no longer willing to read the dictum of this or that critic, biographer or lecturer—particularly will we be unwilling to force this upon our children—until we are assured either that the biographer himself is able to discern beneath the surface of effects the vast undercurrent of causes, or until we have that knowledge within ourselves by which we are able to sift and weigh, and estimate at their true value, the opinions of those who have not and that day, perhaps, is near at hand.

STUDENT

The Value of French Art to English Students

IT has been for a long time a standing reproach to the British art authorities that none of the public collections have contained any of the works of the great French school of the Nineteenth century. We are glad to see this has been remedied at last though by a bequest. A very valuable collection of fine pictures, engravings and etchings has just been thrown open to the public in the South Kensington Museum. The collection contains Italian and English works of high quality, but the portion which will be prized the most by the art student is the French section, which includes paintings by Millet, Rousseau, Corot, Degas, Diaz and others of the Barbizon school.

These men were giants in the power of expressing the beauty of nature, yet the English art student who could not afford a visit to the Continent has had to do without the opportunity of learning much, for none of their pictures were to be found in the National gallery or the minor galleries of Great Britain!

This time seems particularly fitting for the display of these master-works, for England and France are beginning to understand each other in a new manner, and every opportunity of seeing each other's life more closely and better realizing each other's interest, acts as a binding force, and leads to "the Brotherhood of Man, the Federation of the World."

IDRONE

ONE of Watts' dreams was the revival of chryselephantine sculpture, and not long before his death he began its realization in his colossal statue of "The Dawn." "If I can afford it," he said recently,

I want the whole figure ultimately to be of ivory, and the cloak shall be of bronze, and perhaps one might have a touch of gold about the hair.

"You have no commission for this?"

No, I am just working it to please myself. The idea was first suggested to me, I think, by the rise of dawn over a great expanse of sea. I want to give a sense of majesty, of the breadth and hopefulness of early morning. You see, the eyes will be half closed, she is near to waking.

"The figure is neither male nor female?"

No. I try to give the broad outlines of the human form, suggesting a more embracing idea of humanity, a humanity feeling the first faint stirrings of daybreak after a long night of ignorance and sorrow.

A CURIOUS anecdote in the processes of Japanese art is recounted in the Chinese book, *Rin-Yen*:

It is that Su-Nogh drew in one of his pictures a bull which quitted the canvas in the morning to go to pasture and returned at night. This picture came into the possession of the Emperor Tai-Tsung, 967-998, A. D., who asked in vain of his courtiers an explanation of the miracle.

A priest revealed at last that the Japanese found a mother-of-pearl substance in the flesh of a certain oyster, and that they made of it colors which, visible at night, were invisible in the daytime. The secret of the color prints does not seem to be less fabulous than that. There are figures, landscapes, pictures of manners, expressions of solemnity, details of dress and ceremonies. In one of the pictures the dark tone that white fronts of houses at a river bank in the rain accentuate has the value of a Nocturne by Whistler.

And one of our art critics has recently naively remarked with regard to some of the paintings of modern Japan:

What would not some of our artists give to know how to make black patches in their pictures fall in the proper places as they usually do in Japanese color prints. E.

LOOK not thou down but up!
Thou, heaven's consummate cup, what need'st thou
with earth's wheel?—*Browning*

CARL MARIA VON WEBER

THE TEST

[Musa loquitur]

I HUNG my verses in the wind,
Time and tide their faults may find.
All were winnowed through and through,
Five lines lasted sound and true;
Five were smelted in a pot
Than the South more fierce and hot;
These the sieve could not melt,
Fire their fiercer flaming felt,
And the meaning was more white
Than July's meridian light
Sunshine cannot bleach the snow,
Nor time unmake what poets know.
Have you eyes to find the five
Which five hundred did survive?—*Emerson*

WITHIN the last ten years, since the teachings of the wisdom religion have begun

to permeate the world's thought, we have heard of a new race, a race of godlike men and women, better, nobler, more perfect physically and in every way, than ourselves. It has even been intimated that such a race is in process of formation, here in America. This idea has been found interesting. Philosophies have once again presented man's life and development as a race unity, have shown how the progress of the individual and that of the race are inseparable. Systems of ethics have been formulated that include man's duty to the race. Slowly the world is coming to believe that no man lives or dies unto himself alone, but that his life is part of the great whole.

The belief in the possibility of a new race has brought a feeling of delight to many, who have felt glad that life and growth on earth will go on gloriously after they have ceased to live. They have indulged in speculation about the coming race, but though they are human beings, and *might be creators*, they have *done nothing* to help make ready for the new life.

But the Theosophist knows that there is work to be done, here and by us. He knows that a new and more perfect race will not be born on earth till man takes up his responsibilities consciously, and produces conditions in which higher beings can live and function. The Theosophist knows that there is an onward stream of human development, that at this time of the world there is to come into the stream an infusion of some of the more godlike powers and qualities of the soul, and he knows that the vehicles must be prepared to receive it.

We have only to look at ourselves and our own lives, to see how comparatively little of this great soul impulse can find free expression in us. We have set ourselves in worlds of thought and action, away from which it is difficult to break. We know well that it is to the young we must look, to the children. They are the hope of the world.

To prepare them for the great destiny that may be theirs, and ours also, in another earth life, we need a new, broad, pure, daring and loving understanding of childhood, which will bring a breeze of liberation to conditions that now hamper the child nature, and which will open the way for the soul to act freely on every child.

Our Debt to Childhood

Surely it is a matter of vital interest to women, who throughout ages have borne the bodies of the race, that these

bodies be proper physical vehicles that can respond to the purposes of the soul in man's evolution. Surely women have the right to demand, and to command, that the bodies they bear be pure and strong enough to continue the life of the race, and to receive the modification that will enable them to enter the onward stream of human life, and not perish by the wayside. Let women begin to think, and discover *why* the human race is *not* more perfect today, why so many children die in infancy, why there are so many feeble, sickly little ones, why our newspapers contain so many columns of advice as to how to care for nervous, abnormal children, why there are so many special schools for children of retarded growth and development. Can it be that these indications have become such familiar horrors, that we will forever accept them without protest or effort to eliminate the cause of their being?

FROM WALT WHITMAN'S

SONG OF MYSELF

THIS day before dawn I ascended a hill and look'd at the crowded heaven. And I said to my spirit, When we become the enfolders of those orbs, and the pleasure and knowledge of everything in them, shall we be filled and satisfied then?

And my spirit said No, we but level that lift to pass and continue beyond.

grandeur of our duty to the race. We must love its progress and see in the child the promise of all that is to be.

It has been thought by many that they have done their duty to humanity when they have brought into the world a large family of children, no matter how the latter might grow up. In time to come, those who are feeble mentally, morally or physically will learn that it is part of their duty to the race *not* to bear children.

Katherine Tingley asks how we can look for any real strength, or for any strong basis in a home atmosphere teeming with disharmony and worldliness. We must emancipate children from such conditions. Let us condemn no child to a narrow personal byway of life, but trust the law and the soul and believe in a great sweet sound strong future for the children. And then let us act as if we believed in it.

STUDENT

An Unrecorded Service

LAST month the remains of Talihina, the beautiful Indian girl who was the wife of General Sam Houston, were removed to the National Cemetery at Fort Gibson, where they were received with ceremonies befitting the wife of a distinguished soldier. The Cherokees on that occasion paid fitting tribute to her memory.

Few lives read so like a romance as that of General Sam Houston. Governor of Tennessee, a man happily married apparently, wealthy, honored, eager to serve his fellows, and with the door of service open before him; yet one day he left everything and deliberately took up his residence with a tribe of Cherokees. He made no explanation. The cause of the separation arranged between his wife and himself is to this day an unsolved mystery.

It was during his life with the Cherokees that he met and loved the beautiful Talihina, and she became his wife according to tribal laws. He invariably participated in the councils of the Cherokees, at which councils he always appeared in the full dress of an Indian brave—leggings, moccasins, a big blanket and a long head-dress of feathers upon his head.

The story of his life was for years somewhat pathetic. At one time he went with a band of Indians to Washington to protest against the swindling to which they had been subjected by agents, and to his protest was due the removal of five of the offenders. But when he made a bid to supply the Indians with rations, Houston had occasion to feel the bitter enmity which he had aroused in certain officials who belonged to the Indian Bureau. He was maliciously charged by them with being at the head of a conspiracy to defraud the government, and his bid was rejected. After this he became discouraged; and the next romantic incident was the preferment of charges against him in Congress for assault and battery. He was tried and fined—for it was a fact that he had horsewhipped one of his traducers, a Congressman—but the President promptly remitted the fine, remarking that "He wished Houston would whip a few more of the rascals he had in Congress!"

When Houston returned to his Indian home such a greeting was accorded to him by Talihina, that the incident is still talked of in the households of the Cherokees. She rode out many miles to meet him, and her affectionate words were a marked departure from the usual stolid greeting of the Indian woman.

Later Houston again went back to civilization, and the things he helped to accomplish during the next thirty years of his life are matters of history. Talihina waited for him year after year, and up to the very hour of her death still had a lingering hope that he would return. Such lives read strange. Yet are they things inexplicable? Does not reincarnation give one the key? And may not Talihina, herself half white, have rendered two races service, standing as she did a living link, between the old and the new.

STUDENT

TODAY'S paper gives an account of the rescue of a drowning swimmer by his sister. The two were in a heavy surf when the young man was seized with cramps. Placing one arm about her brother, the young girl slowly swam shoreward and although she was well-nigh exhausted when she reached the shore, a life was saved. The regime of hysteria seems to be passing away. What a calamity!

It is stated that an American woman is at present on her way to China to act as governess to the future Emperor, at present little more than a baby; and this at the request of the Dowager Empress.

Woman's Physical Degeneracy

THE newspapers furnish occasional reports that are disheartening to those who love to harp on the physical degeneracy of the modern woman. Recently one young woman climbed Mt. Hood in record time with only a cheese sandwich for a ration. She started on a sudden impulse, without making adequate preparation, yet was not more than ordinarily fatigued when she reached the summit. On the opposite page of the same newspaper is an account of two young girls who entered a race in which the other contestants, thirty-two in number, were all members of the United States Volunteer Life Saving Corps. It was an endurance swim, extending from the bridge on the Brooklyn side to the foot of West Twenty-fifth street, Coney Island. The men, all of whom were experts, tried to persuade the two girls to forego the attempt, believing that they would become quickly fatigued and thus interfere

with the other swimmers. When the West Shore, Governor's Island, was reached, half the men begged to be taken into boats. At Norton's Point only five swimmers remained, and leading them were the two girls. A little later two others were hauled into boats, and this left only three in the race, the two young girls and one member of the Life Saving Corps. One of the girls became exhausted just before the finish, and the other, in her solicitude for her companion, dropped behind. Except for that, she would have undoubtedly won the race. It is worthy of note that these girls were not professionals. The trial lasted between five and six hours.

STUDENT

IF the International Council and Congress held in Berlin last June, writes a member now in Paris, did nothing else it demonstrated the wonderful organizing ability of German women. The German *hausfrau* is famed the world over as an organizer in her peculiar

field, the home, but the arrangements made for this meeting were a test such as few organizations of women could have met so satisfactorily. The Philharmonie, where the meetings were held, is an enormous hall and was turned over to the Berlin committee of eleven women only three days before the Congress was opened. You would not believe that the changes could be

made so quickly. Corridors were transformed into art-galleries, rest rooms, cafés, writing rooms, telegraph rooms and rooms for reporters, with tables, desks, screens, and even pictures.

The official recognition that the women received is also significant. They were welcomed by Burgermeister Kirschner of Berlin, an official of high rank, who said in the course of an extended speech: "Who can fail to recognize the fact that the woman's movement of today, pressing forward with the might of an elementary force, rests upon a sound and valuable foundation, that it ushers in a significant and promising epoch in the development of the human race? That this fact is recognized—willingly and joyfully recognized—among the men of this city, let the festivities this evening bear witness to the women. And so, in behalf of the municipal authorities of Berlin, I welcome the members of the International Woman's Congress with all my heart as coworkers for the welfare of humanity in the sphere of public life. May all the hopes that the women themselves attach to this movement be completely realized, and may their coöperation bear rich and abundant fruit."

WOMEN are coming to the front as art critics. A niece of Christina Rossetti, Madame Rossetti-Agresti, who is said to bear a striking resemblance to the great poetess, has written a brilliant study of the late Italian artist, Giovanni Costa. She is now writing a life of this famous painter.

ABIDE in the simple and noble regions of thy life, obey thy heart and thou shalt reproduce the Foreworld again.—Emerson

A GLIMPSE OF LOMALAND

SO, take and use Thy work:
Amend what flaws may lurk.
What strain o' the stuff, what warpings past the aim!
My times be in Thy hand!
Perfect the cup as planned!
Let age approve of youth, and death complete the same!

Cave of the Giants—A Californian Wonder

THE possibilities that are still unrevealed in California, in the way of archeological and geological wonders, are foreshadowed by the recent discovery of the Cave of the Giants. It exists in the heart of Providence mountains, in the southeastern part of the state and in its extent and magnificence rivals even the most famous caves of the world.

It was discovered by Mr. Berg of Seattle who, looking across Fo Shea pass every night from his camp, became intensely interested in the outlined forms of the immense limestone cliffs. These, forming the northern wall of the pass, picture two great giant heads, and it was in searching beneath these that Mr. Berg found the cave entrance.

In speaking of his exploration, Mr. Berg said:

We found the cave as "Indian Joe" had described it. Great spire-like peaks stand above the entrance, casting long dark shadows down the precipitous sides of the cañons. It was a long, hard climb to the large balcony at the entrance to the cave, which overhangs a deep cañon.

Our first trip was stopped by declivities we dared not attempt to descend without ropes and grappling hooks, but we saw enough to prompt a second expedition.

The Sunday following our first visit Staubin and I, accompanied by my wife, who is an expert mountain climber, returned to the cave, prepared to see more of it. This time we were equipped with hooks and ropes and an abundance of candles and a flash light camera.

We wound our way through one of the several corridors, a distance of hundreds of feet, coming on a main hall or grotto that leads due south. The last rays of daylight were soon left behind, and with miners' candles in our hands we went down a gradual slope. The floor was rough and sharp edged crystals of lime ground beneath our feet and cut our shoes. The roof soon disappeared from view and the walls, too, but they reappeared again further down to the width and height of an ordinary door, bringing us out on what appeared to be a small balcony. Our dim lights seemed like a mockery in the gloom that hung about us like a pall.

But we were not the only living things. Attracted by our lights, shadowy forms circled around our heads. We felt the flap of their wings before we discerned the dim outlines of the bats. These were the "evil spirits" that had scared "Indian Joe" and drove him from the cave. The squeals of the startled creatures reverberated through the grotto. The echo of our own voices sounded like the clang of broken bells and gave us more of a start than the screams of the bats.

We took soundings of the place by dropping pebbles to see how far we would fall if we should step into the dark depths below. We ascertained by this method that the next floor was nearly one hundred feet below us. We then threw stones in every direction, and came to the conclusion that the cavern had the proportions of a vast cathedral.

We retraced our steps and found a winding stairway that took us down to the floor of the great grotto which we had just left. No cathedral ever had richer carvings or more beautifully tinted walls than this dark cave. Strange serpentine forms of petrified snakes and lizards of divers kinds were encrusted in the walls of what resembled beds of delicately tinted moss.

Rich mosaics, of design and pattern as regular as if fashioned by man after some geometrical plan, covered walls and pillars. Above us hung great stalactites of snowy whiteness, resembling huge icicles.

We next passed into a statuary hall. We thought of the museum of the ruler of Siam. The statues take many and grotesque forms. We found many strange shapes, carved, as it were, by the hand of nature out of translucent stone. A candle thrust into a small chamber of the vast grotto revealed a frost-like tracery of crystals on the walls so delicate that it crumbles at the touch of the fingers. At the narrow entrance to the south grotto is a huge human face outlined on the wall.

I threw a rope up a steep declivity and it was caught on a short, stout post, set on the edge of a terrace. At the top of this terrace is another marvel of nature's handiwork. Before us stretched a gallery with an exquisitely delicate pattern of lime crystals that sparkled in the light of the candles like frost in the sunlight. The floor was as smooth as a billiard table. From the roof hung stalactites, some long, some short, others flat, and still others as thin as a shingle.

Still we passed on from alcove to chamber, noting traces of a mysterious beauty now done in brackets and again in scroll work.

The last object to arouse our curiosity was a giant toadstool, like a huge umbrella, large enough to shelter a dozen people under it. After passing the toadstool the nature of the cavern changes. There is a rapid descent toward the bowels of the earth. The white limestone gives way to blackened walls and the passage has the appearance of having been used as the flue of a great furnace. Masses of rock of

different kinds appear fused as by heat. A faint smell of sulphur is noticeable.

We reached the edge of a deep pit and lowered lighted candles attached to one end of three hundred feet of rope in an effort to find the bottom. It took us several hours to retrace our way from the caverns.

Modern Musical Instruments Known of Old

THOUGH we may not agree that "all is vanity," we are compelled to admit that "there is nothing new under the sun," an admission we are not sorry to make, for it fully supports the teachings of Theosophy concerning the return of events in great cyclic periods, as mankind advances in spiral progress. Ancient Etruria, a large portion of Italy lying north of Rome, was a highly developed State a thousand years before Christ, and but for the martial preeminence of its powerful neighbor would have made a deeper mark in the pages of history. The character of the people has been considered to resemble that of the English of today in many respects, but we require a much more complete knowledge of their language to be able to judge with certainty.

The remains that are frequently unearthed prove that the Etruscans had reached a wonderfully high state of civilization. In the Florence Museum there is a fine collection of objects, from large chariots to minutely chased gold ornaments requiring a good magnifying glass to appreciate their finish. There are even gold cases for artificial teeth such as modern dentists make. The latest discovery at Tarquinii, the modern Corneto, has included many helmets, vases, a gold breastplate and, stranger than all, a beautifully made cornet, of the most modern pattern.

The "merest schoolboy" will remember how in *Horatius* Macaulay refers to the innumerable trumpets of the enemy, and now it is actually possible for us to handle and admire one of the veritable instruments of three thousand years ago.

LARS

The Karle Cave-Temples Near Poona, Bombay

QUITE as interesting, though not so well known as the celebrated caves of Elephanta, are the Karle Caves, near Poona, Bombay.

These are Buddhist temples of wonderful size and elaboration, carved out of the solid rock in the Western Ghats, a range of cliff-mountains that forms the sea-wall of the Bombay Presidency. These mountains present many abrupt precipices and headlands, and in places rise direct from the shore to a height of three or four thousand feet; further inland occur peaks seven or eight thousand feet high. These mighty upheavals of the earth's crust enclose plateaus and vast natural amphitheatres, in which are strewn titanic blocks of stone that constitute hills in themselves.

In this region, in a rock four hundred feet high, are found the Karle Temples, said to date from one or two centuries B. C. The principal temple is a cave a hundred and twenty-six feet long, forty-five feet wide and forty feet high. It is worthy of note, from a symbolical point of view, that it contains a nave and two aisles (in which respect the Christian churches resemble it); also that there is a grand central dome with a high seat for the priest.

The architecture is remarkable, both for imposing size and for the number and elaboration of the carvings on its massive columns and vaulted roofs. Other caves, probably the residences of the sacred office, surround it.

H. P. Blavatsky speaks most feelingly of the cave-temples of India as proofs of the greatness of that past which has been supposed to have been barbaric. They are very numerous, and a large number have been explored. They yield evidences of the great skill and patience exercised on them by their devout architects, many of the walls being frescoed as well as carved. She says that the Jains claim the ownership of the oldest cave-temples, and are in all probability the descendants of the primitive owners of old India, dispossessed by those conquering and mysterious hordes of white-skinned Brahmins whom, in the twilight of history, we see as wanderers in the Jumna and Ganges valleys, but their records have to be preserved from the destructive hands of the missionary. A Bit of Nature's Tapestry in a Wild Flower

PROBABLY there is no other wild flower in the same regions which gives the admiring beholder such an impression of luxurious richness and dainty grace subtly mingled as does the Mariposa Tulip, some variety of which grows along nearly the whole length of the Pacific Coast of North America, and South America also, we have been told. Poised airily upon its slender stem, its shape is somewhat suggestive of its name, Mariposa, which means butterfly. But when one looks inside the full reason for the name becomes apparent, for scarcely any butterfly's wing has richer and more gorgeously varied combinations of colors than the downy petals of these flowers. From the darkest purple to delicate blues, with occasional dots of vivid red, and blendings of yellow, extends the range of delicately shaded colors; the arrangement often suggests beautiful patterns in a queer, vague way, as though the blossom had presented a cross-section of a geometrical design, while the downy surface upon which they appear gives the colors the richly delicate effect of a butterfly's wing. Toward the center of the cup the hairs are quite long, and sometimes the design upon them is different in form and color, from that on the surface beneath, thus giving exquisite superimposing effects. One curious characteristic of the family is the little cuplike depression in each petal, near its base, which is usually the focus of the color-pattern, though we do not know what purpose it serves.

These plants have very hardy perennial bulbs, which can live on very little water, but prefer a reasonable amount. In some varieties this bulb consists of a flat disk with a cane above, slenderly connected to it, somewhat like a cup and saucer. We are surprised that this family is not more extensively cultivated, especially in the more or less arid regions where it is native. It would seem as though scarcely anything could produce more beauty for the same labor, especially if it is mingled with a few specimens of its natural associates, the wild hyacinth and fringed gillias.

Marvelous Little Rock-Builders

THE illustration shows a microscopic view of some Foraminifera as dredged from the mud of ocean-bottom. These lowly organisms, which can be found living in the seas at the present day, are almost the very simplest type of animal life yet found, consisting of an apparently homogeneous semi-fluid substance ("sarcode") which projects itself through the apertures of the shell into long filaments; these filaments can be withdrawn again into the mass, or they may be woven into a network outside the shell.

Yet these animals are the greatest architects on the face of the globe, for their chalky shells have accumulated on the ocean floor into masses a hundred feet thick, which have afterwards been elevated by upheavals of the earth's crust so as to form the chalk rocks of the Cretaceous System. As it takes a thousand years for a foot of this chalk to be formed, this one stratum of the earth's crust represents a period of 100,000 years. The minute creatures feed on the microscopic vegetation in the sea and so preserve the balance of that form of life, and they extract lime from the water to build their beautiful homes. The specimens illustrated are *Globigerina*, with its irregular agglomeration of rounded chambers; *Cristellaria*, spiral-chambered like a Nautilus; *Lagena*, flask-shaped; and *Textularia*, a pear-shaped group of chambers.

A BIT OF NATURE'S TAPESTRY

Is Nature Wasteful? Look Beneath the Surface

MAY it not be an insufficient knowledge of her ways that makes us accuse Nature of waste and prodigality of life?

On the surface it does seem as if she wasted her creatures; but let us look a little deeper.

The countless myriads of bumblebees live merrily all the pleasant summer, and when winter comes "die to a man." But when summer comes again, with it comes a new race of bees to replace the old.

How, if it is the *same bees again* as last year, the *same* little active minds reborn in their own eggs? Many animals and insects hibernate through the winter. May it not be that these bees hibernate in their own eggs? It would do just as well as the other method.

There are many phenomena that suggest this explanation, an explanation that frees Nature from the obnoxious charge of evolving a vivid little mind like that of the bee, and then throwing it away forever. Says Mr. Herbert Maxwell:

It is many years since I first noticed that the blossoms of the blue sage, in my garden in Scotland, had all been bitten across the throat, just above the stiff calyx. Upon examining flowers of the same species in a Berkshire garden, I found they were intact, and so were those in a Scottish garden not twenty miles from my own. . . . The honey glands of the sage are very productive, but the tube of the flower is narrow and difficult, prohibiting the passage of our substantial bumblebees.

In due time he detected one of these bees in the act of making this incision. After awhile he found that their method had improved, and the new method persisted through the subsequent years:

For several years the incision was made at the front of the throat of the flower, where the diameter of the tube is greatest. It seems to have dawned upon the bees that the shortest way is the best, because now they invariably bite through the side of the tube, where the diameter is smallest.

Let it be remembered that it is only in this particular neighborhood that these bees have learned this trick. Now since "no bumblebee survives the winter," how is it that the trick, in its improved form even, is handed on from year to year?

Does it not seem likely that the bees of that locality hibernate in, and are reborn from, their own eggs;

and that as soon as they come to maturity they resume a practice that is in their memory and experience?

With the aid of the same idea we can understand how quickly—often immediately—the young of countless species of insects and animals take up their complicated life work; for example, the web-spinning of spiders.

It might be asked what purpose lies behind it all; why for ages, year after year, does, for example, a bee oscillate between his summers of bee-hood and his winters of egg-hood? What, if the hypothesis is true, does he get out of it? Probably the answer is that his mind is slowly, slowly growing. Many insects—like the bee we have cited—show evidence of reasoning power, doubtless got through the slow ages.

Neither matter nor force, says science, is destructible. It is only form that is destroyed. Whilst adding *consciousness* to that pair, we would also deny that even *form* is destroyed. Form persists, but it becomes alternately visible and invisible to us. Why should the bee and the ice-crystal on the pane this year exactly duplicate the bee and crystal of last year, if the invisible form has not persisted across the gap? C.

MARVELOUS LITTLE ROCK BUILDERS

Universal Brotherhood Organization

Central Office Point Loma California

THE large audience that attended the regular meeting of The Universal Brotherhood and Theosophical Society in Isis Theatre last Sunday evening, evidenced their appreciation of the two excellent addresses by the heartiest applause. The first of these was by Mrs. M. M. Tyberg, entitled "Live and Let Live." It

LOMALAND STUDENTS AT ISIS THEATRE

"Live & Let Live" by Mrs. Tyberg.
& "The Man Born Blind" by Mr. White. Were Interesting Subjects

Reprinted from the San Diego News

was a strong plea for unity and practical brotherhood. The speaker said, in part:

"So inseparably connected with all else that lives, is every member of humanity, that it is almost a truism to state, that if a human being were wholly and harmoniously alive, in every faculty and power of his nature, he would not only not be a hindrance in the path of any other being, but his life would so blend with the universal harmony that every other life would be fuller and richer because of his.

"What is Life? Are we really alive? Life is said to be the continuous adjustment of the inner to the outer. Can you think what it *might* be, if man's innermost heart, if his *soul* could speak in his deeds, if his external life mirrored the life of the soul!

"We know that for a hundred ages a curious middle world fashioned chiefly by the brain-minds of men, has been for the great majority the plane of impulse underlying human life. Not one of us may say that the life *we* know is a harmonious and conscious expression of a great Law, or of the primal truths of being. This curious middle-world is, indeed, *all* that most of us know. It has been created for us by busy minds, that have effectually closed out the beam of the soul-knowledge.

"We do not often realize how completely we are befogged by these imperfect conceptions of life. We do not realize that life, as ordinarily lived is, compared to what the earth-life of a human being *might* be, like breathing with one lung or part of a lung.

"We must begin to look deeper, to trust the heart and soul, to believe in a grander humanity. This will help us to clear the mists and the mental rubbish, and to cease using our imaginative power to create more stumbling blocks for ourselves and others.

"At present, the most strenuous efforts are often directed to realize in action, what some other mind, perhaps through the medium of an established convention, is demanding of us. Think what might happen if every one you know, suddenly felt no longer the necessity of maintaining the favorite role imposed on *him* by *himself* or another. It takes time and money and energy to sustain these parts. These would be left free to be used for other purposes, perhaps nobler ones.

"Think of the *rest* it would be if *you* no longer felt the necessity of posing as anything or anybody in particular, but simply did the duty nearest you cheerfully, and felt contented to fill the place assigned to you by the Great Law. Great strength would be yours for helpful work!

"Think moreover, what a respite it would be if suddenly you dropped the mental conceptions you have built up about what your friends are, what they ought to be and do, and what they think about what you do; if you ceased demanding that they be anything that emanates merely from your brain-mind. Could this be done human relations would be lifted to the plane of the heart, and people would begin to wonder at the improvement in their fellows.

"Sometimes in the presence of one who truly loves us, one to whom we have no fear to reveal ourselves as we are, without any deception, we have a moment when we feel an exquisite balance of life's forces, when we feel gladness and power to work with the Law. This is what daily life should hold for us.

"At this time of the world *every* effort made to help the revelation of the true inner self of mankind will bear fruit an hundred fold. For close to us, waiting but our trust in ourselves, our united effort to uplift humanity, lies this knowledge of the laws of man's inner being that shall, in the years to come, be the guide of his actions and lead him to manifest a nobler life on earth.

"We have but to battle with the dragons of selfishness and vice; and with the falsity of human conceptions, before the light can shine forth. There is a magic in looking evils in the face. They quail and shrink and disappear beneath the steady but firm glance of eyes that see, also with trust, the light on the heights beyond them."

Mr. W. Ross White's address, "The Man Born Blind," was founded on the question put to Jesus by his disciples, "Master, who did this sin, this man or his parents, that he was born blind?" In the course of his remarks he said:

"As everything must be the result of some cause, therefore the cause must precede the effect whatever it may be. Here was a case of blindness; the man had

not become blind, he had been *born* blind. Therefore the cause of his blindness must have been something preceding his birth. What was the cause which made him to be born blind?

"The common way of accounting for the peculiar conditions of each life is by ascribing to parental influence all the peculiar qualities of the offspring. Among the

lower animals this rule is often acted upon—improve the parents and you get improved offspring. It is not to be wondered at that the Jews, like any other observant people, were cognisant of this natural law. We know they were well acquainted with it, even in some of its special or peculiar aspects, as the case of Jacob taking artificial means to produce a certain kind of cattle, proves. We also know that this subject of heredity had been prominently placed before the Jewish people by the teaching of the second commandment, which speaks very plainly of 'visiting the iniquity of the fathers upon the children,' even to the third and fourth generation.

"As a natural consequence of this teaching, the Jews came to regard all infirmities as the punishment of sin. Hence we see from Ezekiel 18: 2, that it had then become a proverb, 'The fathers have eaten sour grapes, and the children's teeth are set on edge.' But it is noteworthy that Ezekiel voices another and higher law. 'As I live, saith the Lord, ye shall not have occasion any more to use this proverb in Israel. Behold all souls are mine: as the soul of the father so also the soul of the son is mine: the soul that sinneth it shall die.' And the prophet proceeds to unfold this teaching, saying, that if a parent who is upright and just, has a son who is a robber, then the son alone shall be held guilty. And, further, if this robber have a son who turns from the evil of his father and walks in the right way, then he shall be esteemed a just and upright man.

"In this we see the natural progressive movement of the human mind towards justice. For, while the law of heredity is seen to hold good generally, it does not hold good always; it does not explain all cases. And, further, an awakened sense of justice; a finer and fuller sense of rightness could not rest satisfied that the basis of the universe was a just basis if we reaped pain and suffering simply because of the sins of others. It was felt that the inequalities, and the miseries of life could not be adequately explained by the principle of heredity alone. There must be something else, something deeper, of which this heredity was merely the fitting channel of its manifestation. In other words, man must live through many lives, and the result, or karma of his past, as a rule, finds fitting scope for its manifestation in hereditary conditions.

"If all souls were freshly created before birth, there would be no justice, but a boundless injustice in the case of so many who are born into conditions of misery and wretchedness. If all were alike, equally pure and good before coming into this life, what infinite injustice it must be to so many that they are born in sin, and squalor, and vice, and wretchedness, while others, no better than they, are born in conditions of luxury!

"Thus the natural reasoning of the human mind brought it to see the truth of preëxistence, the fact of rebirth; a fact which the great teachers of the world had declared from age to age—those mighty elder brothers who have stood by the cradle and the grave of empires and races, and have watched the great stream of humanity going and returning again and again.

"In the Jewish mind, at the time of Christ, this idea of Reincarnation was a familiar idea. This we learn from various sources, one of which is this story of the man born blind, concerning whom the disciples asked the question, 'Who did sin, this man or his parents that he has been born blind?' If they did not believe that the man preëxisted there could have been no meaning in the words, *this man*; did this man sin before his birth? Evidently the common belief was, that while heredity was the cause of many things, there were other things which could not be explained except by the karma of the person's former life or lives.

"In the previous chapter Jesus declares to the Jews that 'Abraham rejoiced to see my day, and he saw it and was glad.' These words if fairly and plainly interpreted must mean that Jesus had lived at the time of Abraham, and had met him—probably in the person of Melchisedec, to whom Abraham gave homage. Indeed, Jesus distinctly says, 'Before Abraham was I am'; words which plainly state his preëxistence.

"And, in the light of this we should, no doubt, understand the writer of the epistle to the Hebrews, where he speaks of Jesus being 'a priest forever after the order of Melchisedec,' who was 'king of righteousness and king of peace, without father and without mother, without descent, having neither beginning of days nor end of life.'"

RAJA YOGA ACADEMY, CUABITAS, SANTIAGO DE CUBA
Seen from the hills to the west. El Caney is a little to the left, and San Juan Hill just to the right, over the hills, in this view.

The Raja Yoga Academy in Santiago de Cuba.

Different Views of the Academy and Grounds

THE Raja Yoga work at Santiago is no longer an experiment. Its rapid and solid growth shows that its value as a factor in the moral, intellectual and physical development of the island is appreciated. Cuban parents like the Raja Yoga system, and the Cuban children like it, too. This is wonderful when one remembers some current reports of conventional teachers that Cuban children will not submit to discipline—and Raja Yoga establishes at the beginning a high order of discipline. The results which have even already been attained by the use of only some of what may be called the preliminary principles of Raja Yoga, have been so satisfactory, and of such manifest advantage to the children, that an effort is now being made towards a fuller introduction of the system. For this, new surroundings, suitable quarters, were required, such as are not attainable in the noise and confusion and confinement of a place in the city. And although the Raja Yoga Academy was, during its first year, located in one of the very largest and best houses in Santiago, a building constructed on palatial lines, it would not serve to meet the enlargement of our Raja Yoga schools.

The Raja Yoga Academy is established now at Cuabitas, a beautiful suburb of Santiago. The climate is as different from that of the city proper as if it were in another country. This difference in so short a distance is caused by the altitude. Even in the heat of the summer the atmosphere is fresh with the breezes of the ocean. The nights are always delightful. The location of itself will be a life-giving boon to children who have been existing in the hot and crowded city. The teachers in the Raja Yoga free school in Santiago have the great advantage of their home-life at Cuabitas out of school hours. The drive is short, the road magnificent—one of the splendid constructions of General Wood when he was Military Governor of Santiago. It passes the extensive estate of General Wood's former headquarters, now in possession of Katherine Tingley.

In addition to being near points of historical interest—monuments of heroism and effort—there is also the influence of the new quarters being the home of Emilio Bacardi, the present Mayor of Santiago—a patriot in the deep sense of the term—a man who lives in the hearts of his people through self-forgetting service, rendered faithfully through the years of a long life. A man who had the foresight to at once recognize in Mrs. Tingley, when she first went to Santiago with help for the suffering, immediately after the war, a great friend who had much to offer that Cuba needed, and which he now sees is of a nature that cannot be obtained from any other source. Mayor Bacardi's children are pupils of the Raja Yoga Academy.

FROM THE GARDENS IN FRONT

RAJA YOGA ACADEMY, CUABITAS, SANTIAGO

One day the air is warm, and another a cold wind blows. A strong will goes on through joy and pain, building a character, laying up a treasure that shall endure. Are you growing daily in the power of such a will?

The Point Loma Barometer Tides

ABOVE is an exact reproduction of the weekly chart of the Barograph in the Point Loma Weather Observatory for the week ending August 21, 1904. Some little arrows have been added to show the tides in the Barometric pressure.

Every Monday a blank chart is placed on the drum of the Barograph—the clockwork is wound up, and the instrument is started for its seven days' run. A very delicate Aneroid Barometer is so arranged that the long finger indicator connected with it, makes a mark upon the chart continuously. So at the end of the week we have a complete record of the reading of the Barometer for every moment of the seven days. The chart is a weekly picture of the condition of the Barometer in Time and Space. Space is represented by the figures on the left, corresponding to the inches of the Standard Mercurial Barometer. Time is shown by the days and hours marked along the top of the sheet.

By means of these continuous charts some curious facts have been brought to light. One of them is the daily tide in the atmospheric pressure. This occurs at nearly the same hour every day, and is of course independent of the average daily pressure. By looking at the little arrows which mark the tides it will be seen that the high tide occurs from 8 to 10 o'clock A. M., and the low tide is from 2 to 4 P. M. There are also indications of a slight rise in pressure about midnight.

Attempts have been made by scientists to explain these tides, but we believe that nothing very satisfactory has, so far, come to light. **STUDENT**

"Success" and a Raja Yoga Ideal

EACH age has its own ideals. The ideal worshipped today is success. Of course, success has in all times been sought, for it is a necessity; but today success, and success of a selfish kind, is made the end. Our young are taught to first and last strive to be successful, and our whole education largely aims at so shaping the young mind that it will not only be able to battle against obstacles and difficulties in general, but especially against rivals and competitors. The children are taught that they must *excel*, not for the sake of the race or the arts, or for science, but so as to come out on top. The "survival of the fittest" is the leading idea, and men, quite naturally under the circumstances, desire to be the ones to survive.

Half-truths are always dangerous, but there have been few such which in so short a space of time have wrought so much evil as just this theory of the survival of the fittest. Its tendency has been to harden the human heart, to steel it against sympathy for others, against all the feelings of compassion which are constantly forcing themselves upon all but the very worst. But a constant, determined resistance against such latter impulses will at last shut them out completely.

Of course the fittest will be the foremost, for the universe is ruled by justice; but who are the fittest and what is the front rank? As to surviving, we need not trouble about that, for all survive, and that which we call death is only a temporary absence for a while, followed by a new life in a new body.

We can gain whatever we strive for. If we wish the success desired by most men, that of satisfying our own ambitions and desires, we can have it by determined effort, and have it in full measure. Many do so succeed, many of whom we say that they are not worthy of it. But they are; they are worthy of *just what they obtain*. But while it is all that they expected, all that they desired, yet it never satisfied them when attained, and is in reality quite worthless.

There is another kind of success—the success of becoming useful as a helper in the world, as a co-worker with Nature. This also requires hard, patient work; but first of all, a warm heart, for it is from the heart that the impulse must come to strive for this kind of success. But hard as the work may seem at times, it continually brings with it its own reward, and gives the worker a constant happiness, such as nothing else in the world will, or can.

This working for the sake of others is one of the ideals held up before the children in the Raja Yoga School on the Hill, and the spirit of helpfulness has become a living power in their lives. That is the kind of success they are striving for, and they are even now meeting with it, for they are constantly useful to each other, and their helpfulness is an inspiration to all who come in contact with them. They realize that it is necessary to be successful, and they have resolved to be successful; but the success they wish for is that which will make the burdens easier for others, and will permanently advance the whole human race. **STUDENT**

The Value of a Sunny Soul

THE world is too full of sadness and sorrow, misery and sickness; it needs more sunshine; it needs cheerful lives which radiate gladness; it needs encouragers who will lift and not bear down, who will encourage, not discourage.

Who can estimate the value of a sunny soul who scatters gladness and good cheer wherever he goes, instead of gloom and sadness? Everybody is attracted to these cheerful faces and sunny lives, and repelled by the gloomy, the morose, and the sad. We envy people who radiate cheer wherever they go and fling out gladness from every pore. Money, houses and lands look contemptible beside such a disposition. The ability to radiate sunshine is a greater power than beauty, or than mere mental accomplishments.—*Selected*

FRIENDS IN COUNSEL

DEAR COMRADES: Mr. Judge used to say "our best friend was he who pushed us back upon ourselves." True indeed are those words, for the usual tendency is to lean upon others if we can possibly find others willing to be leaned upon, to depend upon props and crutches and not to stand in our own strength unless absolutely compelled to do so or die. The harsh word—the word that seems harsh to us because it puts the surgeon's knife into some particular mental or moral ulcer that we have allowed to grow—may become the saving power in our lives if we do not refuse its benediction, for it pushes us back upon ourselves. Of course we may refuse. It lies always in our power to refuse to take medicine, just because it has an unpleasant taste. Those who are unwise enough do so, and aid their disease in its growth until it becomes so deeply rooted that the ever weakening system has no longer the power to throw it off. What is true of the physical is equally true of the constitution mental or spiritual.

Let us then be grateful for every lesson, even though unpleasant. Let us be grateful for just the chance to be, as we think, misunderstood. Let us be grateful for the opportunity that occasionally comes, to bare these little moral and mental ulcers of ours to the surgeon's knife. For in Lomaland circumstance is as wise as it is severe. It is the true surgeon, and little by little will cut out our idiosyncracies, replacing diseased tissue with that which carries the glow of health. Every event is appropriate and just to the soul. Are we, then, souls? If so, let us look at life from the soul's point of view. That is, I believe absolutely, comrades, to be our only salvation.

A BROTHER IN ARMS

The Trend of Twentieth Century Science

Eating and Living—Some Important Things Forgotten

AMID the rage for predigested foods, digestive tonics, malts, peppins, and the like, two or three important things are forgotten.

First: That the most important part of digestion is not done in the digestive canal, but in the individual cell, which the food ultimately reaches.

Secondly: That however much food we succeed in inducing the stomach to pass into the blood, the active bodily cells will not accept and use more of it than they need. *They* are wiser than *we*. If they are not in good health, they do their digesting ill, and build, from the food supplied to them, inferior tissue.

A specialist on diet, Dr. Rabagliati, has just published a book, in which he argues that nearly all the diseases of mankind are due to over-feeding. His line of argument is, that if excessive food is taken into the stomach, it is either ill-digested, and poison-products of fermentation are poured into the blood, or, if well digested, the excess lodges among the tissues, fermenting *there*—though in a different way—and equally poisoning and interfering with the health and activity of the cells. Various of these kinds of fermentation we call by various names—scarlet fever, pneumonia, and the like. Further, these accumulations may irritate the cells into morbid activity, resulting in cancer and other growths; or the cells may be so enfeebled and poisoned that they produce base and inactive tissues, to whose symptoms we give another set of names on the already extended list.

This view may be extreme. There are *other* causes of disease besides gluttony, other ways in which the cells are depleted of vitality than by poisoning and by the excessive demands of a compulsorily overactive stomach, other ways in which the stomach is thrown out of order than by putting too much into it. There are mental states—for example, anger—which waste vitality. And there are other factors which waste, as distinct from *using*, it. As to mental states, a few weeks ago we called attention to some X-ray (not vivisection) experiments on a cat, in which it was shown that her digestion of a meal was at once stopped by annoying her, and was most rapid when she was pleased and caressed. Do we consider the effect of *state of mind* upon digestion while and after we eat?

As to quantity, the views of Dr. Rabagliati may seem extreme. Perhaps they may seem less so when we consider the rations upon which the Japanese army is campaigning, the regimen of the Bedouin, of the Indian runner, the Mexican courier, the Italian laborer, or the giant porter of Constantinople. We eat too much and too often. STUDENT

Fluorescent Eyes That Translate Light Downward

DR. AUSTIN FLINT suggests that the eyes of animals, such as those of the cat tribe, which sometimes seem actually to blaze in the darkness of night, are really fluorescent. Fluorescent bodies are those which make invisible light visible, such as the screens of various chemical substances used to make X-rays and radium emanations perceptible to our eyes. In fact they translate light downward; light which is beyond the violet of the spectrum, somewhere in the upper dark (to us) octaves, they lower in pitch till it is within the single octave of our vision.

The suggestion of Dr. Flint is that eyes such as those of the cat tribe contain something in their fluids which does this. Probably it was no part of nature's scheme to make these eyes visible. That was incidental. The real purpose was to make visible to the cat objects which it would not otherwise have seen. For, as now known, all objects give off various kinds of high light, so high as not to affect the retina of man and perhaps not of cats. So the only way in which that animal could see, in its nefarious night-prowlings, was to fill its eyes with something that would lower the high lights. The suggestion is interesting and probably true.

One naturally speculates whether in certain states of disease, and otherwise, the human eye may not acquire the same property as that of animals and thus bring into view fine shades of light, and color emanations not visible in ordinary circumstances. STUDENT

The Evolution of Organs—Some Important Observations

SOME light upon the origin of the organs of animals has emerged from the catacombs of Paris. Two or three years ago somebody discovered a half rotten wooden door under a pile of rubbish in the Jardin des Plantes. It was a forgotten trap-door, leading by a shaft to the ancient extensive quarries of the Gallo-Roman Lutetia. From these marble quarries, fifteen hundred years ago, ancient Paris had built her temples and palaces.

Professor Vere saw his opportunity, and has made a marine laboratory here, forty feet below the daylight, stocking it with aquaria of all kinds and sizes. To these he has transferred large numbers of fishes and crustacea which had been accustomed to sunlight and were fully provided with eyes. Soon the eyes atrophy and are scaled over with firm shell; while, on the other hand, the organs of touch and smell undergo an extraordinary perfecting process.

But previously cavern-dwelling animals, bleached and with no eyes, on being brought to the surface and kept in the sunlight, in no long time acquired both surface color and eyes.

These observations have an important moral. This is that natural selection here had no place. The blind animals brought into sunlight did not forthwith begin a long series of casual variations in all directions, of which a few were vaguely towards eyes; of fighting with each other and getting starved to death, those surviving whose moves eye-ward were most pronounced, until at last eyes came to be. All the animals moved, not vaguely and in all directions, but promptly and specifically toward the possession of eyes; and presently possessed them. And similarly with the sense of touch made so acute in the case of animals that were taken out of the light into the dark.

It is true that the first group already had eyes latent, and so there was not so much work for them to do as if that had not been the case. The point is that the variations were not at random round the circle, but specifically in the necessary line. The creature's body reacted to its needs. According to the current statement of the doctrine of evolution, nature exhibits no such intelligence as this. She makes her creatures vary at random, and selects the right variations out of the whole lot by killing the rest. The whole process is depicted as a mechanism of the crudest kind.

The text books have yet to begin teaching that variations, whether it be those of an insect self-protectively mimicking the twig on which it rests, or those of any animal enlarging or perfecting an organ, tend, *as if* intelligently guided, toward the point to be reached; and that the easiest way of accounting for it all is to assume that conscious intelligence is there at work. STUDENT

Curious Snake Stones Better Than Scientific Medicine

THE persistence of belief in snake stones in this boasting practical age is a matter of constant wonder to thinking scientists. Time and again they have been "proved" to be without virtue, and times without number are they known to succeed even in cases where European medical science confesses itself helpless. It is customary among white people to deride their powers and perhaps for this reason they are so little advertised or even spoken of by the races who make use of them, as in India and Central America.

They appear to be made of calcined bone, porous like a light burnt clay, as though formed of a dried paste of this substance. Many a bitten native trusts to the snake stone rather than to other medical aid.

The "stone" is placed on the wound, to which it appears to adhere firmly by its attraction for the poisonous fluid. The wound is said to be clean when so much has been absorbed that the "stone" drops off saturated, its power of adhesion lost. It is said that when used in time in this way it seldom fails to effect a cure. A simple re-burning fits it again for use, removing every trace of septic risk. STUDENT

MANY have fallen by the edge of the sword, but not so many as have fallen by the malicious wielding of the tongue.

Tragedy or Comedy---A Sketch from Life

UNDER the branches of a wide-spreading tree there stood a strangely assorted group, one a woman, apparently the decadent remnant of high eastern civilization, face to face with her modern western sister. Two women, one fair, blue-eyed, with the bearing of the Anglo-Saxon, secure in the unassailable position of a loved and trusted wife; the other dark-skinned, black-haired, with lowered eyelids, whose whole attitude denoted reluctant and grudging submission to something outside herself, which she did not love and toward which she felt no obligation.

Near them stood the two husbands, master and man. A short time before, the dark-skinned man had come in tears to the wife of his master and in broken English had begged her help:

"Mem-Siheb, my wife, go leave me. She say she go away. Please, you talk to her. Perhaps she go stay."

"But what can I say to her, Ragout? I cannot speak your language and she will not listen to me."

"Ah, Mem-Siheb," and the man touched the foot of his mistress with his clasped hands, "I beg you, I beg you."

"Very well, go bring her," and he went away and brought his wife. Then followed a brief colloquy, translated by the Anglo-Saxon to his wife. It read something like this:

"Lutchminia, does Ragout beat you?" A shake of the head.

"Does he make you work too hard?" A shake of the head.

"Does he give you enough food?" A nod.

"Has he taken away your bracelets?" A nod.

"Why do you want to leave him?" Silence.

"Don't you like him?" Silence.

"Wait, Mem-Siheb," and, so saying, the husband Ragout, ran off.

Presently returning, he laid upon the ground a handkerchief full of silver jewelry. Lifting the gew-gaws one by one, he detailed to his wife their value, to the amount of some fifty dollars. Could they not persuade her to stay? O, Comedy! the jewels had been taken by Ragout from his rebellious eastern wife and had been hidden in the carriage of his master, unknown to any save himself. Such is the unconscious irony of life.

The western woman laid her hand upon the arm of her eastern sister. "Lutchminia, you say that Ragout is good and kind to you. Won't you stay with him and try to be good, too?" Silence.

Then spoke the western husband: "See, Lutchminia, I no give my wife bangles and she no want to leave me." With an impetuous gesture the bowed head is raised and the two women are at last face to face, the black eyes looking defiance into the blue.

Baffled, bewildered, and with an aching heart, the English woman turned to her husband. He laughed, for long years of experience with those whose lives are lived in an absolute spiritual darkness had made this an old story to him. He had known from the beginning what the falling lids concealed.

Sadly the blue-eyed woman turned away. "I can do no more, Ragout."

Ragout, with that spirit of resignation which almost all Orientals show, accepted almost cheerfully the inevitable. With "Salaam, madam, salaam," the group separated.

The next day Ragout came again, bitterly bewailing the loss of wife and jewels. Lutchminia had stolen them and gone.

The Anglo-Saxon husband and wife walked away, he dismissing easily from his mind what had been for years an almost every day occurrence. But not so with the wife, for there arose in her heart a resolve, a determination to understand some of life's difficult situations; and although then no light shone upon her path to point the way, she knew that she would find the way, some time, to help such as walk in darkness. B. G.

Sowing a Seed---A Life Sketch

Behold! a sower went forth to sow

SUNDAY, and high noon in a tropical land! How describe the blaze of sunlight, the wealth of color, and shimmering heat-laden air which induced an almost irresistible languor? Two people were chatting together on a veranda, facing a scene of satisfying beauty. A noble pasture, shaded by tall palms, wide-spreading trees, and dotted with peaceful cattle, stretched in front of botanical gardens filled with plants from many climes, while in the distance were a range of hills, verdure-clad from foot to summit, upon which the light and shade changed continually. On a near by table lay several copies of the NEW CENTURY PATH and Stead's little *Books for the Bairns*. Said the woman, "Do you know these dear little books?"

"No," was the reply. "What are they?"

She handed him one of them, *The Knights of the Round Table*. "This, to my mind, is the gem of the collection."

"Indeed," said the man, and then taking up one of the periodicals, he said, "But what paper is this? Something new, surely?"

"Yes," replied the woman, "it is the NEW CENTURY PATH, new, yet old. But let me warn you before you begin to read, because once known, you will never want to be without it." Silence reigned. The woman watched the failing light upon the hills with a full heart, while her friend attentively scanned the pages of the paper. At length he said: "This is quite new to me, but how full of good thoughts! How beautiful and interesting the illustrations!" and just then the notes of an organ floated out to them upon the breeze. "Do you have good music in your church?" she asked.

"Sometimes good and sometimes it is indifferent," the man replied. "I attend regularly, however, not that I think much of churches or pay much attention to the sermons, but it is the best that I can do. If I don't go my clerks would remain away. I used not to go, but when I discovered that my young clerks were spending their Sunday evenings playing cards, drinking and preparing trouble generally for themselves, I decided that if I could keep them from doing those things I would do so, and I found that by going myself to church I set an example which they were quick to follow."

"What a pity that churches do not give young men something better and higher," was the reply, "something that really meets their needs. I, too, find most sermons disappointing. Many are either so theological that one doesn't care to follow them, or so emotional as to be al-

most repulsive to those not in sympathy with the particular doctrines of the church, and all the time hungry hearts are yearning, yearning--"

"I must tell you of a recent incident that so impressed me I shall never forget it. Crossing in the *Mail*, we happened to be two Sundays at sea and among the passengers were two bishops. The first Sunday one preached an abstruse, theological sermon which half the audience could not understand and which the other half, who might have understood it, did not wish to be bothered listening to. The following Sunday the other bishop officiated, and in opening his sermon, he said, 'When I was asked to preach to you today I was reluctant to do so, but when it was suggested that I speak in behalf of the Widows' and Orphans' Fund, this text came into my mind: "True religion is this, to visit the widow and the fatherless in their affliction and keep yourselves unspotted from the world." My friends, *that is the whole of religion*. There are hundreds of creeds in the world today, but should they all be wiped out and only those words remain, they would be sufficient."

"Why," exclaimed the woman, "that is Theosophy and Universal Brotherhood." Thus was a seed sown, or perhaps nourishment given to a seed already germinating, and which shall blossom and bear fruit. B. G.

SOWING A SEED

THERE is no unbelief!

Whoever plants a seed beneath the sod
And waits to see it push away the clod---
He trusts in God.

Whoever says when clouds are in the sky---
"Be patient, heart: light breaketh by and by,"
Trusts the Most High.

Whoever sees 'neath winter's field of snow,
The silent harvest of the future grow,
God's power must know.

Whoever lies down on his couch to sleep,
Content to lock each sense in slumber deep,
Knows God will keep.

There is no unbelief!
And day by day and night unconsciously,
The heart lives by that faith the lips deny---
God knoweth why.

THE CHILDREN'S HOUR

The Raja Yoga Question Box

IN ancient days, in Greece and other lands, the spirit of truth and beauty shone forth in the lives of men. There were men of wisdom to help and heal the people.

1 Who was Hippocrates?

ANSWER — Hippocrates was the greatest physician of ancient Greece. He saved the people of Athens from dying of plague. He was beloved and honored. For 2000 years his writings have been a help to students. Hippocrates lived to be 100 years old.

2 Who was Phidias?

ANSWER — Phidias was an architect, a painter and a sculptor. He lived in Greece in the days of Pericles. His work was the glory of the temples and public buildings of that time. His statue of Zeus was one of the seven wonders of the world. He was the sculptor-builder of the Parthenon.

3 Who was Pythagoras?

ANSWER — Pythagoras was a great scholar and Teacher. He formed the word "philosopher" from two words meaning "love" and "wisdom." He traveled the world over. In Egypt he learned numbers, geometry, astronomy, and music. His college in Greece was a center of light. He taught his pupils how to be silent.

RAJA YOGA BOYS ON THE SEASHORE AT LOMALAND

An Hour on the Seashore

BOYS, did you ever go down to the seashore to hunt for shells and stones, crabs and plants, and the many curious things the tide brings in? That is what we so often do, and a merry time we have, after we have had our usual swim. Best is it when the tide is out, and the shallow water allows us to wade far out, for many of the prettiest shells are found only where the bottom is never dry.

There it is that you find the abalones, and they like to hide on the under side of overhanging stones. But we know where to look for them and how to dislodge them with a quick, sharp jerk when they least expect it. You have seen their beautiful shells, I suppose, but you may, perhaps, not know that, unlike clams and oysters, they each have only a half-shell, and cling with the open side to a rock or to whatever object presents itself. They hold on by suction, and with such strength that it is next to impossible to get one off without breaking the shell, unless it is taken by surprise or you have a special instrument!

The shell is most beautifully colored on the inside, but in the natural state the outside is rough and its iridescent colors, so much admired, come out only by polishing. Some of them are almost covered by small abalones hanging on the outside, and seem ever so much more interesting to us just the way we find them. We find here many things other than abalones, and perhaps I or one of the other boys will tell you about them another time. Yours for Brotherhood, A RAJA YOGA BOY

SONG OF AN OLD PINE TREE

TO A LITTLE CHILD

Translated from the Swedish of Z. Topelius by one of the Professors of the Raja Yoga Academy

HEAR our words
Far in the north,
Far back in time and deep in the ground,
Reaches our root
Stretches our foot.
Wherefore we stand strong 'gainst the storm
In winter's snow
In summer's rain.
Shadows of centuries pass o'er our eyes,
O'er us the clouds float.
All things are born, all pass away,
Still we remain.

Thou child of man
Fleeting and pure,
Grow thou as we grow, valiant and strong.
Reach out thy roots
Through rocks and land,
Grow in sweet Nature-song
High to the clouds.
Grow thou in light,
Grow in God's loving heart.
Grow till thy brow
Like our own leafy green,
Reaches aloft
Even to the heavens.

The Olden Days In Greece

IN olden days in Greece there was a fairy charm in the very air and sunshine. And the Greeks loved the open air. Their theatres were built on the hillside, open to the light. If you look on the map, you will see that no place in Greece is very far from the sea. The sea creeps in here, there, and everywhere. So that nearly all the children in Greece could look out over the blue water every day.

The hills in Greece were crowned with beautiful temples. In the temples, and in the hillside theatres, the people learned to be wise and happy. There was the sound of many voices singing in the groves along the way.

The people loved flowers. Their hearts told them that flowers help us to be joyous and pure. Ah! how sad that today the temples of Greece are in ruins. The voice of the wise is silent, and there is no song in the groves. Many people in Greece today think only of getting money.

But far from Greece in a new land, many children are living, happy and strong and beautiful, as the Greek children were so long ago. Here, too, there is a fairy charm in the air and sunshine. Here, too, the children look out over the blue sea every day. These children know the secrets the flowers whisper. And in this place, Lomaland, the people are seen going to the Temple and to the hillside Theatre,

to learn to be wise and happy. The light is creeping into people's hearts again. Perhaps the children of Lomaland will teach the children of Greece to live again the life of joy, and all of its accompanying beauties will follow.

SISTER MARJORIE

Modern Greek Peasant Family. Home Near a Mountain Spring

DEAR CHILDREN: Not long ago I heard a story about a cat which shows how much sweet mother-love there is even in the hearts of little animals. She had four little kittens and, as her mistress had a number of pets, she agreed to give them to a man who lived near by. So one day he came to see them. The mother-cat must have heard them talking about taking her little kittens away, for the next day she and the kittens had disappeared. It was cold and rainy and the family could not imagine where she had gone.

At last they found her, in a rabbit-hole out in the yard! It wasn't a pleasant home for her, you may be sure. Her mistress brought her in with her four babies, and placed her back again in her comfortable basket near the stove. She did not take any of the kittens away. She felt that the brave little mother-cat deserved to keep them. UNCLE FRED

IF I BUT KNEW

IF I but knew that somehow, somewhere, I
 Had dried a tear or lessened sorrow's sigh,—
 Had slaked the thirst of parching fever's lips,—
 Or led some soul through trial's dark eclipse,
 Then I should feel life's mission had been true,—
 If I but knew!

If I but knew some heart this side the tomb
 Had by mine act been rescued from the gloom;
 Or that one life had grown in noble deeds
 Because somewhere I'd sown some worthy seeds,
 The thought would drive dark clouds from out life's view,—
 If I but knew! —Selected

The Beauty of Law

PEOPLE are suffering a great deal more than they need, and there is a simple way to escape from it. The difficulty is not in the way, or finding out what to do, but in giving up the wrong ideas that have formed themselves into habits of thought and feeling, creative of wrong results. From these wrong ideas, held by so many, are born the criminality, insanity and misery in which we live, and for which we are partly responsible. There is so much wrong, so much misery in every shape and form in life as it now is, that it is found hard to live honestly, and very hard to live happily; and no one can do so who is dragging out an existence in the usual way. We all know well enough, at heart, that a complete change is necessary; and many know that this change is now taking place. This being so, the question is how can we best get into line with the new conditions, and so help to bring about and hasten the coming of a brighter, better and happier life.

I think very few thoughtful, kind-hearted people believe now that it is possible to gain true happiness and enjoyment in working for themselves, and following the gratification of their personal desires; and most of us are well aware that our troubles have been caused by this very pursuit and gratification. So some have found, and many are finding, that true happiness and true joy cannot be really had from *external* things, but is an *internal* condition of the heart and mind, that should be always with us helping us to see the bright side of things, even on a wet day!

Some few can extract the kernel of the nut, no matter how hard the shell may be; but though some few are wise enough and strong enough to be able to do this, there are many who require a fine day or softer fruits to enable them to thoroughly enjoy life; and both external and internal conditions have to be in harmony before true happiness for all can be found. Now the best of all conditions for us to be in is so to feel and see the wrong in the world that we would do anything to help to make it better. So the first step to get in line with the change that is going on is to be thoroughly dissatisfied with life as it is; and most of us, I think, are in that condition, so that the world is ready for a change.

The next step is to find out what this change is to be, and who is to be changed, and is there a purpose and a definite plan, and how can we learn to take an active, intelligent part in it? There is undoubtedly a great plan, and true knowledge of how human life should be lived to make it perfect, individually and socially; and this great plan is now in operation, and it is upon *this* plan that the change is being molded, and on which the future individual and social life will be permanently established.

We are, most of us, aware that there are great laws in Nature, and that we are quite helpless when in opposition to them. Whether we fume or fret, or use all our force to stop it, the rain rains, and the sun will shine, whether we like it or not; and not always to suit our convenience. The same laws govern our mental and moral life, with the same irresistible power, and all opposition to them, or bodies governed

harmoniously by them, is utterly useless, and must in the end, if continued, finally destroy itself when it has expended its pent-up energy. It is not Nature that is to blame; for all her laws and operations are divine, ceaselessly working for the intelligent progression, happiness and enjoyment of not only human life, but for all creatures. It is the individuals themselves that are at fault, who are going the wrong way. And it is we who have to change first, and not Nature, before things go well with us. The beauty of the law is that we can absolutely depend upon it, for it is eternally fixed for the perfection of the earth and all her inhabitants, her children, from the greatest to the least.

Civilizations rise and fall, thousands of years and ages go by, yet the law remains the same, and to gain enlightenment we have to follow exactly the same rules and precepts, based on those laws—expressions of the One Law—that were taught to those willing to learn the truth thousands upon thousands of years ago!

We have to come back to earth again and again until we learn these rules and make them a living power in our lives. It takes a long time to teach some of us by experience that absolute trust in these laws is the best protection and the truest aid we can possibly have. T. W. W.

Light and Darkness

LIGHT and darkness coming within our range of perception every day and every night, we scarcely take notice of the significance of their recurrence, or realize its importance and meaning. One of the old Scriptures of the world says, "Light and darkness are the world's Eternal Ways"—it is one or the other always. And when night comes on and we light our lamps that we may see our way about, we are doing on the outer plane what we should do on the inner every night and every morning and all the time, and that is, keep alight the fire in the heart and call upon the real and true Light within to burn clearly and guide us through the day and be to us a guard throughout the night, "that from darkness we may go forth in light."

Every one is either assisting the light to shine in the hearts of men or is helping the powers of darkness. Everything good, true and ennobling, belongs to the light, while the very word darkness conjures up in the mind, evil, meanness, ignorance, hatred, anger, lust, all ranged on the side of darkness. When contemplating the battle that must be fought and is being fought in the world, when we see how men wilfully choose to stand in the darkness and how in this darkness the powers of evil work for their enslavement and destruction, we might almost be tempted to give up hope did we not know that humanity has its great helpers. And we have the assurance of our teacher, Katherine Tingley, "that the light itself has never faded and never will." How the scene changes at the thought of this, and we can, as it were, see dark, ugly forms cringing and creeping away overpowered by the light—light that reaches back farther than eye can reach, and so bright that no eye can look upon it. What a picture, could we but keep it ever before us!

It is not possible for the darkness to live with the light; when the light enters the darkness must go. But it is possible for man to shut out the light by choosing to live in darkness. And humanity has for so long chosen the darkness, that it has almost forgotten the light; but once more is it shining in our midst, once more is the true pathway of life being shown to us and once more has hope dawned in the world.

A new beacon light has been lighted in the world by our three great helpers, the old fires of devotion have been relighted in our hearts, and light and joy are being carried to all lands. Truly indeed are all evil things revealing themselves in their true natures, for the light is shining upon them that men may no more be deceived thereby. E. H.

The Time to Speak

A time to keep silent and a time to speak—Solomon

THIS is one of the most difficult injunctions to obey. Sometimes we speak, impelled by a sense of duty, and on account of the unpleasant results that sometimes follow the speaking, we wish we had kept silence. Sometimes we keep silent from a sense of prudence, and the results that follow from that silence when the speaking of the truth might have saved the truth, cause us to regret that we had not spoken. From our experience we have arrived at the conclusion that the only time to keep silent is when there is no truth to enunciate, and the true time to speak is when truth is in danger. . . . —Orphans' Friend

RESURGEMUS

[Among other emblems of immortality, the Egyptians fashioned the *crux ansata*, a small cross and ring. The ring signifies endless existence; but the meaning to them of the cross is unknown.]

AGES past, *crux ansata*, even then,
Love of life, and love of love lived with men.
Hearts were gay, wine flowing, lyres rung.
When the Pyramids were building,
When the Pyramids were young.

Even then, emblem immortal, then as now,
Fear of death and fear of fate dimmed the brow;
Lips grew pale, ceased the music, hushed the mirth,
Where the lotos kissed the Nile god,
Where the Nile god wooed the earth.

Faith triumphant, cross and ring, fashioned thee—
Death for time, but life for all eternity.
So they wait, silent, patient, still they lie
In the rocky tombs of Egypt,
'Neath the starred Egyptian sky.—*Selected*

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question In the Light of Reincarnation what explanation can Theosophy give for children dying in infancy. If life is for the soul's experience what value can there be to the soul in the event of infants death?

Answer In the case of very young infants it can hardly be said that there is an incarnation at all. There is only the *germ* of that which will ultimately become human mind and feeling. Up to a certain period the human infant may be likened unto the young of an animal, and practically all that it does is also done by the young of an animal. It does not from the very first clearly show something that the animal can never show. Not until that something begins to appear can we think of the soul as having begun to incarnate. The soul, though at hand, though overshadowing with open wings, has to wait upon the laws of physical nature. And if those laws deny its vehicle, it waits—either passing back for a little to its own realm, or moving to a new incarnation. But even from this delay, one may think it learns something. But the main lesson would seem to be to the parents; for there never comes upon any of us a pain from which we do not gain something of strength, some deepening of character.

But where life has lasted long enough for the soul to have really begun to take possession, then a very rich experience may be gained in a very short time. We look upon the sorrows and joys of childhood as nothings, as trifles almost amusing in their unimportance. But they are just as real as our own. Indeed, what are we ourselves but children of not so very much larger growth? What is the difference between the child who cries for a doll, the boy who cries for a toy steam-engine, and the man who cries to be president of a railroad or mayor of a town? Between the child who obeys the wish of its mother when she is not looking, and the man who resists in secret his "larger" temptation? Between the child who gives away a doll to another who has none, and the man who gives his cheque?

So all the elements of a whole rich human life, its tragedy, its joy, its meanness, its splendor of heroism and unselfishness, can be lived out in a very brief spell of childhood.

H. C.

Answer II. Earth-life is but one phase of life, and the soul's experiences are not bounded by its life here. We know very well that some of the greatest lessons come to us through the withholding by the higher law of that which we most long for. We are thrown back, as it were, upon ourselves, it calls out the inner strength of our natures, and tests our self-reliance. It is as it were, the hand of the sculptor chiseling deep into the marble, but bringing forth forms of beauty and strength.

May it not be that this is what takes place in regard to a soul seeking rebirth into this life and on the very threshold being denied entrance? It must be under the action of the law and we cannot doubt that the soul does reap experience, and may be the very experience that it most needs.

Yet these things should not be and would not be if we had in the past and now lived wisely and well. The causes, the past, must be worked out, but we can build for the future in such a way that the souls of the

unborn shall be won back to earth into homes of light and joy, and not into conditions at the brink of which the soul must stand shuddering at the life that it foresees awaits it, but which we can begin to change if we will.

STUDENT

Question Does Theosophy teach the doctrine of free-will?

Answer I. It is generally unsafe to state that Theosophy teaches any doctrine, for that immediately relates it in the mind to some other teaching on the same subject, which may or may not be the same. But the philosophy taught at present under the name of Theosophy, certainly has for one of its corner-stones the free-will of man. It is odd that any one ever should have doubted this, for every one knows it who has not with difficulty reasoned himself out of his knowledge. The effort of some kind that every one makes is a tacit expression of it.

It must be an inattention to or ignorance of the law of cause and effect that has made it possible for so much confusion to exist on this subject. People start a train of effects, and when they meet them later on, as they inevitably must, they call it fate and declare they are not free, because caught in a web of their own making. But two things are forgotten, first, that they were free to initiate the causes which have brought about the present circumstances, and, second, that they are free to deal with these circumstances in various ways.

The first is untraceable in most cases. The train of events between cause and effect has not been followed, could not have been followed generally, and so has to be taken on faith, or because philosophically life seems impossible otherwise. But by carefully studying the present in a wholesome frame of mind, one arrives at knowledge in regard to the past.

A man finds himself in a certain environment, not agreeable, perhaps, and would like to change it. Not being able to, he confuses free-will with the power to control outside circumstances, whereas these are two different things. The will is perfectly free to act in one of many directions, and the man is free to take a hostile or friendly attitude toward his environment. This does not refer to like or dislike, but means that he is free to use these circumstances to help or hinder his own real development. Those who have reached the point of honestly seeking this, do not complain of their environment or wonder whether they have free-will. It is those who are seeking to grasp for themselves certain coveted endowments, either material possessions, or mental or spiritual powers, who complain they have no chance. Those who are seeking to become, to *be* these things rather than to *have* them, often see in their obstacles, and their hindrances, their greatest opportunities. And seeing these, they use them, and so gradually disentangle themselves from the web they had woven about them.

Or rather it seems as if the web were dissolved by some process of spiritual alchemy without effort directed toward it. By freely willing to *become*, something is generated, and lo! he who has done it, suddenly finds himself unbound, with all space open to him.

G. W. V. P.

Answer II. Theosophy teaches that man is a free agent, free in the only true sense that there is freedom, that is *freedom under law*. The awakened human being knows himself as he really is, knows the laws of his being and can live in conscious accordance with that law. But for many ages humanity has forgotten this heritage of godlike wisdom and power and has permitted the lower, denser aspects of life to obscure the inner vision of the law which once belonged to the race and will again be its liberator.

If the life of man and the universe proceed according to a harmonious progression and development that abides and persists, however unperceived or disregarded by man, all those who move not with this beautiful necessity do but whirl in eddies for years, for lives, only to be driven by force and suffering to the point where man faces his supreme opportunity, to cease by his own will the futile whirl and find the law and live in it.

Those still in this vortex of selfish ignorance are the *slaves*. Theosophy would teach to these the truer conception of life, the nobility of human life and arouse to free united action those who are now stupefied by the hideous whirl in which the lower mind—unilluminated by soul wisdom—has so long kept them.

Paris in the XVIIIth Century ON the appointment of the Jesuit Father Lepelletier as confessor to Louis XIV of France, he requested of the lieutenant of police, D'Argenson, also a member of the Jesuit Order, a confidential report on the moral condition of Paris and its chief personages.

This report was so black and implicated so many highly-placed people, that a part of it was subsequently abstracted and has never been found. A good deal of it, however, still exists, and the picture is certainly very terrible.

"In regard to the clergy generally in France," says D'Argenson, "it is with regret that I have to report to your reverence in the language I must employ. While there are some virtuous prelates, curés, grand vicars and priests worthy of the esteem and affection of honest men, I must acknowledge that a large majority regards ecclesiastical rule and discipline with contempt. They give themselves up to culpable amusements, seek ignoble society, and associate with disreputable people, men and women. Almost all are Simonists. They accept money to enable them to purchase preferments, or to satisfy their cravings for disorderly pleasures, or to lend their ministry to the performance of acts contrary to the canons of the Church. I say it with trembling, but many of these ecclesiastics belong to your order (the Jesuits).

"It is rare that a day passes that I do not receive a warrant for the arrest of some monk or secular priest. The conduct of the regular clergy exceeds all bounds."

Education in Japan In Japan any group of five households having no school in the neighborhood may demand a school with two teachers. The organizing of National education was among the first things put in hand when the era of reform opened, and Westerners may well envy the rapidity and success with which reforms can be organized in a country not shackled by ecclesiasticism and other forms of rooted prejudice and vested interest. It gives us some notion of how we ought to progress, and of how much our prejudices are responsible for.

A Record of Faithful Service MRS. NANCY ROSE, who lately died in the United States at the age of eighty, has fulfilled for forty-eight years the duties of light-house keeper in the Stony Point Light-house, diligently keeping the lamps trimmed and burning, and ringing the bells at intervals, in her lone watch-tower to within a very short time of her death.

Linguistic Reciprocity RECIPROCITY seems to be the order of the day, in language as well as in commerce. For years there has been an incursion, or adoption, of French words and phrases into English speech. Now there is a similar incorporation of English expressions into the current speech and literature of France. While we speak of "the *beau monde*," Parisians speak of "le high life;" as often as we mention a "soirée" or "matinée," they tell us of "une five o'clock tea;" and when we pronounce a thing "very chic," they respond that it is indeed "très smart." Is this an indication that the universal language of the future is to be polyglot?

How the Phonograph was Born Edison is said to have invented the phonograph owing to the accident of a cut finger. He was singing into the telephone, when a fine steel point, which he had placed for safety, cut his finger; it had been jumping about owing to the vibrations of the diaphragm. At once he got the idea he had been in search of. He held a piece of paper against the needle, shouted the letters of the alphabet into the mouthpiece, and obtained scratchings on the paper. Then, passing the paper across the needle point, he got from the diaphragm a faint reproduction of the sounds he had spoken to it. H.

The Rubaiyat of Omar Khayyam FIVE years ago Colonel John Hay told the Omar Khayyam Club of London that America equalled England in her devotion to Fitzgerald's *Rubaiyat*. He averred that this book was among those most read in every library club.

Since then the poem's popularity has greatly increased in both countries. There is even a new verb *to Khayyam*, meaning to write verses with that form and savor. The whole philosophy and practical moral of the poem are:

Drink! for you know not whence you came, nor why;
Drink! for you know not why you go, nor where.

A philosophy and an application alike false and disgraceful. But many clubs and universities are raising steady crops of cultured weaklings, moral and intellectual, on this pabulum. Surely, Persian culture of a thousand years ago might furnish us something better than this.

Changing Views of Science

THE British Association met at Cambridge, England, in August, and many of the addresses mark notable changes and widenings of view. In the main the tendency is away from the old formalism, exactness and abstractness; and towards the recognition of intelligence and conscious life as the active agents in nature and as the producers of infinite variation. Prof. Horace Lamb (Mathematics) is reported as having said:

Mathematical and physical science has become markedly introspective. The investigators of the classical school, as it may perhaps be styled, were animated by a simple and vigorous faith; they sought, as a matter of course, for a mechanical explanation of phenomena, and had no misgivings as to the trustiness of the analytical weapons which they wielded. But now the physicist and the mathemati-

cian alike are in trouble about their souls. We have discussions on the principles of mechanics, on the foundations of geometry, on the logic of the most rudimentary arithmetical processes, as well as of the more artificial operations of the Calculus.

The physicist, he continued, does not deal with the actual phenomena of Nature, in his mathematical calculations, but with symbols or ideal representations. Those who actually undertake physical measurements find that, the more refined the means employed, the more vague and elusive does the supposed magnitude become; the judgment wavers, and at last, in despair, some result is put down, not in the belief that it is exact, but with the feeling that it is the best we can make of the matter. . . . Most of us have been forced to acquiesce in the view that geometry, like mechanics, is an applied science; that it gives us merely a convenient and ingenious symbolic representation of the relations of actual bodies.

Equally significant is the Professor's remark that we have given up the notion of causation, except as a convenient phrase; what were once called Laws of Nature are now simply rules by which we can tell more or less accurately what will be the consequences of a given state of things.

A newspaper report reflects the state of modern scientific thought by remarking:

Poor old Science is getting buffets on many hands, and while Mr. Balfour gently derided all the science of the past as turning out a "world of illusions," and Professor Lamb denounced the validity of mathematics even in those realms of thought where it has hitherto reigned supreme, Mr. Bateson, President of the Zoological Section, attacked the proud dogma of Natural Selection, not as Darwin taught it—one moulding force in the building up of species—but in its claim to pontifical supremacy as urged by the ultra-Darwinians of today.

Evolution a "Prodigious Confusion"

Professor Bateson showed that, while the early evolutionists made an intelligent study of species and the manner in which they beget variations in their form, the later ones have thrown the whole subject into prodigious confusion by attempting to gather under various hasty generalizations a whole mass of facts and data which are not related to each other.

Mr. Aubrey Strahan, Geological President, spoke of past cataclysms as evidenced in the tremendous foldings of rock-strata which we observe; and argued that, as such occurrences had indisputably taken place at intervals in the past, there was no possible escape from the conclusion that they would do so again. This, of course, agrees with the Theosophical teaching that the history of the great races of humanity is punctuated by changes in the land and water configuration of the earth's surface. Slow movements of upheaval and depression are of course always taking place, as observation within recent times shows; but this does not contradict the view that sudden changes also take place; indeed it rather supports it. In the words of our lecturer:

We have found evidence, in the majority of cases, that the disturbances were but renewals of movement along lines of weakness long before established. With such a history before us, and with the knowledge that mountain-ranges have been built in other parts of the world by the upheaval of strata of almost recent date, we have more cause to wonder that the internal forces

have left this quarter of the globe alone for so long, than reason to believe that they have ceased to exist. Changes of level, however, have taken place in comparatively recent times, and are now in progress. Though almost imperceptibly slow, they serve to remind us that a giant lies sleeping under our feet who has stretched his limbs in the past, and will stretch them again in the future. STUDENT

Emigration From Ireland---Startling Figures

STATISTICS tell us that since 1851 the population of Ireland, through emigration, has been lessened 3,961,011.

In a little over half a century nearly four millions of Irish people, mostly in their youth and early manhood . . . have left their native soil.

Perhaps the fact helps to explain why the Irish are so great a power abroad, and why Ireland suffers so much from losing so great a proportion of the flower of its youth.

These figures do not take into account the vast numbers that have been leaving the country since the year 1698, when for a considerable period about 12,000 are said to have emigrated yearly from Ulster alone.

Viewing this great stream of life from the more subtle standpoint of thought and emotion, what tides of feeling are constantly being

directed toward that small green isle; for Irish hearts remain true to their country. Land and sea may separate them, but all fate-imposed barriers but serve as magnets to intensify the love for their native soil.

Tenderly are the green vales and wooded hills remembered. The little white cabin remains dearer than would be a palace in a foreign land.

Generation after generation may pass, but the love of the old home is the truest and most deeply cherished heirloom.

Who knows the meaning of this great inner tide of thought as compared with that other great tide of emigration?

If love, love that has passed through the purifying flame of anguish and despair, becomes a creative power, what may not spring from Ireland! For surely the most tested and loyal love that ever quickened in the human breast hovers over every blade of grass that grows on Erin's soil.

STUDENT

The Indian Institution of Caste

THE Indian institution of caste is peculiar to the country, in that it is universal and well recognized. We have caste in America, too, but it goes by another name and has its distinctions founded on money. With the Hindoo, money has nothing to do with it. The rich official may be a low-caste man, while his poor neighbor is a Brahmin whose caste distinction is his constant envy. The vice-president of the town of Admi is a low-caste man who has acquired riches, but the poor deputy postmaster is a high-caste Brahmin into whose house the former cannot go, and with whom he cannot eat.

There are but four castes. All the others, so-called, are only subdivisions among the great four. These are: Brahmin, or priests and advisors; Kshatryas, the warriors; Vaisyas, merchants; and Sudras, servants. All the subdivisions are among the two lower ones. Anciently, caste was plastic. Then, a low-caste man who had actually changed himself in every respect, mentally and morally, so that he was essentially the same as the higher caste, was permitted to enter that one; so that a Sudra might then become a Brahmin, and a Brahmin a Sudra. There are many instances of this in their ancient history. Krishna was of the shepherd class, and one of the great Rishees was a Sudra. But now it has all become hereditary and the divisions are innumerable.

The Brahmin household has its cooking done by Brahmin servants—people who are poor and willing to serve; but you never find a Brahmin doing other menial work in the house.

The application of these rules is made more to the taking of food and water than in any other way, and in the touching of vessels. If I am a Brahmin and you, a Sudra, handle my water vessel, the vessel if made of clay must be broken up; but if of brass, it may be cleaned. This is because they think the influence given out by the hand is absorbed by the clay; while the brass may be cleaned of it by scouring.

In the railways these rules are temporarily abandoned by tacit consent, and you can on every train see Sudras, Kshatryas and Brahmins all huddled together in the same carriage.

With some exceptions, the crossing of the Great Sea destroys forever the Brahmin's caste. In Bengal, however, they are relaxing the rule, so many having gone to England to travel or study. Upon returning from the voyage a certain penance and purification is enjoined, and the culprit then has full caste communion. But I know of many who were unable to get back, because in their part of the country the rule was strictly adhered to. One of those is S. ——— Swami, of the highest caste, now attorney general for the Nizam. He went to England, and has never since been recognized; so that today he is really an outcast. But he is a very fine gentleman. (From an unpublished manuscript.)

WILLIAM Q. JUDGE

International Olympic Games

WHILST the third Olympiad was being inaugurated at St. Louis, the International Olympic Committee, sitting in London under the patronage of King Edward, was fixing the place of the fourth. Rome was finally selected, and the King of Italy has already signified his approval and support. Before the date of its celebration—1908—a preliminary congress to settle details will be held in Belgium under the presidency of King Leopold.

The affair has, therefore, a truly international character, and must do more than any peace or science congress to break down racial antipathies.

The Greeks made athletics a branch of art, and a pursuit of the whole

of life. Cultured athletic perceptions, cultured intellect, cultured body, were with them three equally important aspects of one thing—*culture*. We have separated the three, and consequently developed three species of monstrosity. In the associations brought about by these Olympiads, there is a real hope of getting back to that Greek ideal, which included at once perfection and balance. It is by forgetting the latter that we have allowed athletics to become brutalized.

STUDENT

The Spectre of Over Population

A LEADING newspaper, reviewing a recently published statistical *Atlas of the World*, and noting the enormous unpopulated and half-populated areas of the world surface, remarks:

The astonishing thing is that the world should still be so thinly peopled after all these scores of thousands of years that have passed since man's first appearance. Cities and particular countries are well stocked, but the continents have still room enough for the growth of a future inconceivably remote. The most thickly peopled country, Belgium, has 588 persons to the square mile, Japan has 288, Austria-Hungary 188, the German Empire 57, the Russian Empire 15, but Siberia, which is, naturally, the richest part of the Russian Empire, has less than one person to the square mile. Brazil has only four and a half, the Argentine Republic a little over seven, Bolivia a little over two, Paraguay four. South America alone has room for hundreds of millions in addition to her present population.

"Scores of thousands of years" is much understating it, but let it go at that. Let us consider *five* "scores of thousands," that is, 100,000 years; or a *thousand* periods each of 100 years.

Now during *one* period of 100 years the population of the United States (from 1800 to 1900) advanced from *five* millions to *eighty* millions. It is true she was largely fed from other countries. But those others (with a small exception) *also grew!*

And the United States (and the countries from whom came her immigrant population) had the usual share of wars. Yet they all multiplied, the United States multiplying itself by sixteen.

Bearing this in mind, and not straining the matter anywhere, let us ask ourselves how it happens that after, say, 100,000 years, or 10,000 years, of human habitation, wars, and so forth, included, there remains on the dwellable parts of the earth a single square foot of ground on which a man is not standing?

One would think that the idea of Reincarnation must have long ago occurred to thinkers. That is, that the sum of human life on earth does *not* increase, but that the same people keep returning, a veritable stage-army.

Yet not quite a stage-army, for they are accumulating unto themselves measureless experiences.

STUDENT

A View of Nuremberg---Frontispiece

THIS week's cover-page of the NEW CENTURY PATH shows one of the characteristic views of the old German town of Nuremberg, or Nürnberg.

Ninety-five miles north of the capital city of the kingdom of Bavaria, Nürnberg was once the greatest and most wealthy of all the free imperial cities of Germany. It is invested with an air of venerable, other-time things; and being still partially surrounded with walls and battlements, its appearance is very striking.

The illustration shows a part of the Kaiserburg, the old imperial castle, often occupied by the German emperors during the Middle Ages.

Here the first paper-mill in Germany was opened in 1390; here also were the first gun-carriages made; and from here to Fürth, in 1836, the first railway in Germany was laid. Nürnberg toys and clocks are exported to all parts of the world, while its manufactures comprise a score of other well-known articles. As the birthplace of Albert Dürer and of Hans Sachs, Nürnberg has other claims to our interest and sympathy. The foundations of the city go back to 905, if not earlier. In 938 it was the seat of the first German Diet. In 1532 the treaty of toleration was signed there, its inhabitants having early embraced the doctrines of the Reformation.

Some Views on XXth Century Problems

The Works of Universal Telepathy

THE late Frank Stockton was a man of much modesty, as well as of much trust in the outcome of human life. He was cut off just before the execution of his best work, but if he had foreseen this, it would have troubled him very little. A friend once pointed out to him how often it happened that men died just as they were approaching their greatest effort. "What does it matter," he said, "after all? If you or I have a thought likely to be valuable to the world, and are forbidden by death or other adverse circumstances to set it forth, there is sure to be some other fellow who will think the thought and express it."

The case of Darwin and Wallace, and their theory of natural selection, along with many other cases, come at once to one's mind; but a little instance occurred in the case of Stockton and this very friend.

"I remember," says the latter, "that while I was in my bath one Thursday morning, a thought occurred to me which suggested a Stocktonesque story. On the evening of that day I sat with Stockton and Alexander Black at the Author's Club, and told Stockton of the idea which it seemed to me he might work, as I could not, into an effective story. When I had completely expounded my thought Mr. Stockton turned to me and said:

"I'm glad you like that idea, because I have just used it in a story, the first installment of which will appear in this week's *Illustrated American*."

Mark Twain, in his humorous way, once gave another case or two. It is usual to call them telepathy, but we must remember that the marked phenomenon occurring between two people to which we give that name also occurs in a vaguer way all over the field of human consciousness.

STUDENT

Hypnotized Lives Order of the Day

HYPNOTIC phrases are the order of the day. We have recently met with a booklet belonging to the school which calls itself "New Thought," in which the key phrase was: "All is well." Whatever happens, keep saying that, till it is burned in upon your mind. Then you go about in a sweetly seraphic condition which no misfortunes can disturb. Very good; but the chances are a hundred to one that you also go about in a hypnotic trance. And if so, you are in a condition of absolute soul stagnation. That is the harm of these books which teach phrases as solutions of life. The victim of one of these phrases, till he shakes himself free, or till the Law sends on him so terrible a blast of calamity as to shake him free, might as well be dead. "All is well"—therefore, you need do nothing for your neighbors and humanity, with whom most emphatically all is *not* well; you need make no efforts to bring your heart into correspondence with the vast chord of human suffering; you need not examine yourself to see whether your mind is not permeated through and through to rottenness with the maggots of vanity, egotism, selfishness, and sensuality. No, *all is well*, for did not "all" come from God? So be it; *this* "god," whose conception of "wellness" answers to the present condition of human life, is fellow to that other created by Calvin, who proposes to damn the majority of mankind. And they will soon be exhibited together as examples of human creative activity gone mad.

STUDENT

Compared to the "Bridge of Sighs"

A NEW YORK paper, speaking of the new Rockefeller Institute for Medical Research, remarks that "the main purpose of the institution will be to experiment on animals," and then proceeds to describe the projected animal house, that is, vivisection house, remarking with extraordinary unconsciousness of the aptness of its comparison:

This building will adjoin the main laboratory, with which it will be connected by a fire-proof corridor resembling in general appearance and construction the "Bridge of Sighs" which joins the "Tombs" and the "Criminal Courts" Building.

One would say that the resemblance was quite fitting. And it would be still more so if the residence of the experimenters should turn out to resemble the last.

STUDENT

Thoughts on the Future of Verse

MR. FREDERICK MYERS thinks that there is no future for English verse; "blank verse is worked out, and the rhymes have all been used up." It may be that the strictly measured blank verse with its ten syllables, and the strictly concordant rhymes, are just beginning to become obsolete; just as one might say that the strict music of a hundred years ago, of Corelli and such schools, is not now precisely in tune with our modern consciousness. Old rules are wearing out; we are gaining and requiring a new freedom; a new sense of melody in words is developing; and a new verse, new rhythms, new uses of vowels and consonants and phrases, are coming into being. John Stuart Mill lamented of music what Mr. Myers laments of verse. The scale, he said, has but seven notes. The combinations of these are limited, and so music must sometime come down to mere repetition of the past. Since his day we have had Wagner. Is not that an answer? We cannot as yet reply so triumphantly in the matter of verse. But Whitman certainly points towards the direction from which a reply will come. Our sense of verbal melody, and our poets' power to make it, are growing swiftly. A critic of Mr. Myers quotes the beautiful line (descriptive of snow):

Stealthily and perpetually settling and loosely lying.

It will not scan; nor will Shakespeare's

And multitudinous seas incarnadine,

but both perfectly satisfy our sense of verbal melody. The pessimist is always wrong.

STUDENT

Horrors in the Congo

IS it not time that the civilized world began to make a move in the matter of the Congo "Free" State? One would have thought that long ago King Leopold of Belgium—in whose hands is the rubber monopoly constituting the one industry of the state—would have been moved, for the protection of his own good name, to institute *satisfactory* enquiry into the truth of the steadily amassing evidence of crimes committed under his protectorate.

The now broadly based charges are that the 20,000,000 natives of the state have been reduced to practical slavery; that they are expected, whatever the possibilities, to turn in a fixed amount of rubber to the agents of the monopoly, who are soldiers; that at the slightest failure to achieve what is often impossible they are either butchered or horribly maimed, men, women, and children; and that this practice has now become habitual and wanton, and is increasing.

The reply of the Congo "Government" is that the outrages are *not* habitual, but only "exceptional happenings."

All the evidence, accumulating for years, is on the other side. The Government's investigation of the charges against itself will not do. If King Leopold and his agents are really anxious to clear themselves, let them call an impartial and international committee of investigation.

The Song of Life Is Not Undesirable

TOLSTOY has changed his opinion about song. The St. Petersburg *Novosti* publishes a conversation between him and a peasant poet, in which he says:

Song is a trivial and undesirable thing. Why should good and thoughtful men sing? In my country old men like to talk about worthy subjects, about faith, God's will and life, and like to read good books.

Very good; but suppose "God's life" happens to find one expression in music? Suppose we presently find that a song is going on in the growing tree, a faint, sweet, slow song in the blossoming flower, in the cells of the heart of a child, and even in those of Count Tolstoy's own heart? And suppose it be "God's will" that we should help his work by singing also?

"People," says the Count, "acquire the habit of singing, but an exercise of the will can rid us of it." It is false; what they acquire is the habit of *not* singing, and they "acquire" it—that is, they become dead to music and the life of God—by letting their instinctive song-consciousness be overlaid by sensuality and greed. The Count is in danger of dehumanizing himself, and that means getting away from "God's will and life."

Art Music Literature and the Drama

Indian Basketry—An Art Already Passing Away

THESE is something pathetic in the way in which the art of basket-weaving among the Indians of our great Southwest has been overlooked and neglected; most of which, however, is due to the dishonesty of those who buy directly from the Indians. Small encouragement, indeed, is offered for better work. The poor squaw may work from six months to a year upon a single basket. What can she do, when the buyer offers her ten or fifteen dollars, what but sell it, to gain even a few necessities for her ill-clad children? But what can one say of the buyer who will later dispose of the same basket to some connoisseur for one or two hundred dollars?

From among our tribes the really fine specimens of basketry are already well-nigh picked up by the curio dealers, and, unless something is done to preserve the art, it is certain to pass away. The Indians love their work, and have a feeling for the art itself that almost amounts to reverence. Years after a basket has passed out of the hands of an Indian woman she will, if she sees it again, recognize it, and has been known to embrace it with tears. In the making, it became as much a part of her life as one of her own children. Her art has never been, can never be, counterfeited. Her baskets can never be imitated. The expert never makes two baskets exactly alike. In shape, possibly in design, certain differences creep in, because the basket so faithfully reflects the heart-life, even the mood, of its maker. Nor are the lines, crosses or curious designs upon it, merely accidental. One basket tells the story of unfulfilled aspirations; another, of conquest in war; another, the tale of some tribal peace-bond, or feud; still another wears the symbols of some religious ceremony. Even the wild fern stems, the feathers, the bits of polished shell, the wampum that are sometimes used, have their own significance. And the color! What so beautiful as the color of a really fine Indian basket, where the dyes have been obtained from the juices of plants and by burying in colored earth the materials themselves? "Civilization" has spoiled many a fine basket with its aniline dyes.

Yet, if left to the Indians themselves, this art will pass. They are poor, ignorant, and have been outrageously imposed upon by their white neighbors. Most of their supplies they must either beg or steal. What can be the result in time? There are, however, those at present interested who are aiming to establish schools for the maintenance of this industry, schools in which children may be taught the art, and agencies which serve as a base of supplies for the adult workers. With this should go some protection from the rapacity of the buyers. The market for such work is ready and growing, for the wealthy, not alone in America, but also in Europe, are at last awakening to its value and real beauty.

Among the Pimas black and white are the usual colors chosen, being united with the natural shades of the grasses. Those of the Apaches are similar, though finer. Brilliant in the extreme are those of the Moquis, while the Californian baskets of the Pomo and Tulare tribes are perhaps the most exquisite in their fineness and rare design of any that fall into the collector's hands. It was Josepha, an aged Pomo squaw, who made what is probably the smallest perfect basket in the world, a dainty woven scrap less than a quarter of an inch in diameter.

As an art, basket-weaving has descended, with all its traditions, from days that are now prehistoric. But recently an enormous collection of baskets has been taken by archeologists from the caves of southeastern Utah. How many thousands of years ago they were made we have no means of knowing. But there they were found, scattered among the utensils and the debris of the old cave dwellings, many of them still almost perfect in form, even brilliant in coloring; and some the very prototypes in shape and weave of the baskets made today by the Apaches, the Pimas, and the tribes of Southern California. This fact alone, that the art has persisted during so many centuries, gives it a significance that is far more than trivial.

The Sand Paintings of the Navajo Indians

THE Navajo Indians, in making picture-records of their religious ceremonies, use a peculiar process known as "dry-painting." The pictures are made by sprinkling sand of different colors upon the ground or other flat surface. As described by one observer:

All the designs are made with the utmost care and precision, drawn according to an exact system save in minor points, where the artist is left to his imagination. So far as known, the system is not recorded in any way, but depends entirely upon the memory of those in charge. Changes must therefore occur in the course of time. The sand is trailed out of the hand, between the thumb and forefinger, and when a mistake is made, it is corrected by renewing, at that point, the surface of the sand which forms the general ground for the work. No less than seventeen ceremonies are illustrated in drawings of this kind.

LET us listen intently at every opportunity to good music and then allow to flow outward into act and deed the inspiration that it gives.

When we more truly obey the high command, "Man, know thyself," we shall have a better appreciation of music as the interpreter of the heart-force, and not until then. When men preach less and practise more, then shall they know pure music to be what it is, the revealer of the innermost secrets of nature and human life.

Music gives rise to feelings above those which can be reasoned upon or translated into words and it may transport us, if we will, to the scenes of that Life-

Drama in which self-consciousness and unbrotherliness have absolutely no part to play. It is the life's great miracle-worker.

No city, no town, and no village, or country community should be without its musical society. The old-fashioned singing-school has filled a place, and that nobly, considering all conditions; but the time has come for societies founded by those who know that music is dual, as are all things, and who can discriminate between that music which degrades and that music which elevates and purifies the whole life.

ANCIENT ALEUTIAN BASKET
Found in a deserted spot in the Aleutian Islands upon a chieftain's grave

I HAVE known the oratorio of "The Messiah" to draw the lowest dregs of Whitechapel into a church to hear it, and during the performance sobs have broken forth from the silent and attentive throng. Will any one say that for any of these people to have their feelings for once put through such a noble and long sustained exercise as that could be otherwise than beneficial? If such performances of both sacred and secular music were more frequent, we should have less drunkenness, less wife-beating, less spending of summer gains, less winter pauperism. People get drunk because they have nothing else to do; they beat their wives because their minds are narrow, their tastes brutal, their emotions ill regulated.—Hawis

FEW realize the wealth of Irish literature, considering it from the beginnings of Irish history; but by that is not meant that period of Ireland's life story which comes regularly within the domain of what we call authenticated historical narrative. Legend and tradition, the poem and the bardic ode, these are the heart and spiritual body, as it were, of Irish literature. Scholars now recognize this fact, and it is well, for the ancient Irish writings deserves the attention for which they have waited so long and which the Twentieth century will give them. M. H.

Lift up thy brow and with a great heart heave away this Storm.—*Shakespeare*

WHEN we, as women, consider how much of our time and energy is expended in observing, comparing and judging, we do well to question ourselves as to our motive in passing judgment. Criticism is part of the divine faculty of discrimination. Are we keeping it pure and unsullied, the soul's interpreter and ally, its force playing uncolored by personality upon the events of life, or are we allowing it to degenerate into mere fault-finding and wilful unbrotherliness?

It is impossible for the true Theosophist to judge another by a hard and fast standard, for the student too well realizes the fact that no one is stationary, but is ever growing, ever becoming. More than that, the woman who examines her own heart as honestly as she does wisely and carefully, knows that within it lie the germs of all that is evil as well as all that is good. By sad experience she will sometime learn that to harshly judge another transfers to the unjust condemner the very life energy of the vices condemned. It feeds and vivifies the germs of the same vices within one's own soul, can sing them to blossom into the very despised faults so harshly criticised. That is an unfailing law. Those who early learn its ways do well.

Tomorrow the horizon of life is, or should be, far wider than it is today. It is only reasonable, then, to postulate that what seems wrong today may not seem so tomorrow, that what seems right today may tomorrow reveal itself to us as but the decaying vesture of some limited view.

It behooves us, therefore, to be careful how we criticize or condemn on the instant. Tomorrow will bring more light, in a week's time the problem may have given birth to its own solution. Why not wait till tomorrow, or better still, wait a week before uttering harsh judgment, even in thought? Vastly quicker are we apt to be in noting discrepancies in the life of another than we are in noting those within the boundaries of our own hearts. It is an old, old habit, brought down to the present from a past, a long, long past, that was made frightful by the sins of unbrotherliness. Why not be honest with ourselves, and, as women, take a new step, form a higher resolve? The difficulty is that we have allowed ourselves to fall into a rut and the little demons that we call "habit" do not like to get out. But shall we be governed by these things? Are we not souls? What, then, is the logic, where, then, is the necessity of our longer

Judge Not

LIFE'S JUSTICE

WHEN I consider Life and its few years—
A wisp of fog betwixt us and the sun;
A call to battle and the battle done
Ere the last echo dies within our ears;
A rose choked in the grass; an hour of fears;
The gusts that past a darkening shore do beat;
The burst of music down an unlistening street—
I wonder at the idleness of tears.
Ye old, old dead, and ye of yesternight,
Chieftains, and bards, and keepers of the sheep!
By every cup of sorrow that you had,
Loose me from tears, and make me see aright
How each hath back what once he stayed to weep;
Homer his sight, David his little lad!—*Selected*

continuing in bondage to a habit of mind of which we must, if we are honest, confess that we are ashamed? And the habit of holding ourselves

up as the self-appointed judges of others whose natures we cannot know and whose acts we cannot therefore rightly interpret, is certainly not one of which we may be proud.

If there is a cardinal sin it certainly is this one. It is less commonly balanced by the opposite virtue than one might wish. It drowns the soul's voice, it kills the will, it shuts away from our minds all that the intuition longs to teach—it brings death, not life. Ere we know it, the doorway of our life's great opportunity swings shut and out into the darkness we go, an unconscious traitor to all that is best in our own natures.

Women need to be more positive. That does not mean that they should adopt a masculine habit of mind, nor a masculine outward manner. They must be more vigilant, but that does not mean that they should become jealous and suspicious. They should not be content to dwell in the dark valleys of life, for their rightful place is on the heights and in the sunlight, and by changing their attitude of mind they may stand there.

There is but one kind of judgment that is safe if we would not feel the scourge of the law, and that is the kind that will help to keep a comrade upon the path. The head and heart must act together, work together, guide the life together, for the heart is ever true, compassionate, just.

Let us be quick to discern within ourselves the first tiny germ of self-righteousness, and then be equally quick to kill it out. Let us follow the heart. Then will our every limitation, our every weakness, become a stepping-stone, not a stumbling-block, upon the path. Then we will stand as helpers beside our sister women, not as their, albeit unconscious, persecutors. Then, and not until then, we may hope to be builders of the new race.

STUDENT

THE spirit animating the Japanese troops in battle is shown by a letter recently found on the body of a slain warrior. It was from his mother, exhorting him to fight nobly for the Mikado and his fatherland, telling him that if he died on the battle-field it would be only an honor. So much is revealed in this simple letter! It is no wonder that Japan has, from the first, gained victory after victory against tremendous odds. M.

Hercules and Omphale

THE old, old legends appeal to those who read them in many ways. To one they may stand as mere fairy tales, to another, blurred and dog-eared, or perhaps embellished, records of facts, certain and mystical truths. The mere fact that these legends have survived and persisted through the ages prove that they are things living, not dead. The heart of each contains some fundamental principle, hidden or revealed by the outer form, according to the eyes which look upon it. All of the Hercules legends stand for something greater than themselves. One which is among the least known is the legend of Hercules and Omphale, and it runneth something like this: After the accomplishment of his twelve labors Hercules was unfortunate enough to slay his friend, Iphitus. Although purified from the stain of the crime by Deiphobus, yet, on consulting the oracle of Apollo at Delphi, Hercules was refused an answer. From the priests he learned that the gods would not be propitiated until he had made expiation by three years of service in slavery.

Hercules accordingly sold himself for three years to Omphale, the widowed queen of Lydia, and became, while in her service, deeply attached to her, and in divers ways softened and purified.

The artist in exquisite symbolism has given us a hint of the alchemy by which Hercules was transformed and transmuted.

His own nobility brought him the great opportunity. His sense of justice led him to wish to expiate the crime, and that brought him within range of the influence that purifies and uplifts only those whose motives are pure, the Woman-Heart.

As long as life persists as life and human nature endures as human nature, we cannot afford to lose sight of the old Greek legends, for they give unto those who are pure in heart, the power to pierce the veil and look within the very portals of the mysteries. E.

SOCIETY women, it is said, are in some of our cities taking up bee-keeping, not a trivial occupation, nor one devoid of material for deep study, as Maeterlinck has shown us. And where other than in a bee-hive can one find abler exponents of woman's rights? Witness the gentle serenity with which the queen rules the whole community; witness the quiet way in which the virgin workers dispose of the drones, the remarkable economy and even genius that is shown in their housekeeping; then, too, the formation and departure of the swarm, which Maeterlinck declares is a voluntary sacrifice of the present in favor of the coming generation; the foundation of a new city, the birth, combat and marriage flight of the young queen. Truly if the occupation is entered into with anything like insight, the average woman must feel as if she were threading her way through a labyrinth of mysteries.

It has often been remarked that the bee-keeper comes to love his bees and to look upon them as little people, as Virgil did. Why? The ancients knew, doubtless. Was not the bee sacred to Hathor? STUDENT

IT appears that there has been an exposure made recently in Germany of a dealer in "orders and titles." He is said to conduct his trade in a business-like manner and to have a regular price-list, a baronetcy, for instance, being worth \$50,000, Spanish titles from \$4,000 on down, Turkish from \$2,000 on to lesser figures, and Persian titles at almost anything. The surprising part is that any one should be surprised. The number of American women—and presumably women of other countries as well—whose lives have been wrecked by bogus counts and dukes and lords, is not insignificant; and the most casual observer might have expected the existence of some such traffic many years ago. H. W.

The Mother of Alfred the Great

GREAT men's mothers! How often do we find it recorded of a great man that he owed most of his greatness to the loving attention of a wise mother. Heredity and prenatal influence count for little in comparison with the influences brought to bear in infancy and early childhood. The experiences of the Raja Yoga School in Lomaland are demonstrating the truth of this in a surprising manner, as regards both moral nature and physique.

Alfred the Great, one of the most truly great kings that ever reigned, is recorded as an instance of the benefits of a wise mother. This man is mentioned as the first monarch who is known to have ruled solely in the interests of his people, without a selfish thought. With such motives it is not surprising that his reign turned barbarism and confusion into culture and order, and initiated an era of progress the memory of which has remained fresh down to the millennial anniversary of Alfred's death, celebrated in England a year or two ago.

Alfred is distinguished as one of the world's Helpers, not only by his qualities of heart, but by his universal genius and tireless energy. He forsakes his beloved studies to take the sword and sweep his country's foes into the sea or tame them into obedience.

No mere director, safe behind the scenes, he rushes personally into the fight, cheerfully encountering dreary hardships and romantic perils. England's scholar-king ventures all alone, disguised as a minstrel, into the Danish camp, and learns the enemy's plans.

He whiles away the forced leisure of the camp with his pen, and translates with his own hand all the Latin books he can lay hands on into English for his people to read. Having won peace and created such an order that valuables could be hung up in the streets and no one dare touch them, and having given his people a literature, he turns his attention to the invention of his candle-clocks and to building ships. Such are a few of the deeds of this man of might.

Of his mother, or rather his stepmother, we read that she strove to awaken in her children a love for books, and offered a volume of English poems to the one who should first learn read to them, and that Alfred won the prize. H. T. E.

FROM Wales comes an account of a little girl of sixteen living in an isolated mountain home who has an unusual knowledge of law. She was recently sent from her native valley to attend court as a witness, and there displayed such knowledge as to astonish the judge.

The result of that occurrence was that a number of people found their way to the cottage in the Swansea valley where she lives and there discovered her studying old law reports and books on law in the intervals between her family duties. Her father is a collier, and at the time she came across her first law book she was the family housekeeper, her father, mother and brothers working together day after day with many others in the coal-pits.

She read and read, and as her father's prospects improved he very generously added to her little library until now she owns something like a thousand volumes. It is said that for miles around peasants come to her to get the solution of the problems, sometimes quite intricate, that come into their own lives. What but Reincarnation can explain a case of this kind? What but Karma has discovered her, at last? STUDENT

Christian Religious Symbols in Ancient Crete

THE discoveries in the palace of Minos, in Crete, throw light on many interesting questions, among which are the use of animals as sacred symbols, and the derivation of Christian symbolism from ancient "pagan" sources. The use of animals as sacred symbols, not being at all fully understood by modern wisdom, has been made the subject of much ribaldry and much solemn twaddle. The childish conjectures which have been made as to the meaning of animal worship, have been supported to some extent by the existence of degraded forms of worship, for the discovery of which modern research has a fine nose. We need more of the faculty that will enable us to detect the original undegraded beliefs and practices.

Animals were used as the *symbols* of various powers of the soul. If a geometrical diagram, or a gem, or a plant can be a symbol, how much more perfect would an animal, as belonging to a higher kingdom, be. But they were more than mere symbols; for all these objects and creatures contain and enshrine the natural potencies of which they are the symbols, and act as centers and diffusers of the particular influences respectively belonging to them.

The Christians have annexed a curious assortment and blend of animal-symbols. The dove and serpent are two of these. The dove is the symbol of the Holy Ghost. It has been used in place of the human face in the sacred four of the man, bull, eagle and lion; and so symbolizes the intelligent or divine-human element in man. The serpent is a very complex symbol for all those powers of the soul and of nature which man by wisdom and gentleness has to tame.

In the palace of Minos were unearthed two stone vases of sacred implements. There was a marble *cross* in the "orthodox Greek" style. But the most striking object was a statuette of a goddess entwined with serpents. It is a foot high, has a purple tiara with a white border, black and very striking eyes, enormous ears, flowing hair. She is attired in a tight corsage, with an apron of oval form, and a skirt reaching to the ground. Around her are wreathed three spotted, green serpents. In her right hand she holds the head of one, and in her left the tail. The two others are wound around her hips—one passing over her apron, then ascending to her neck and coiling around her right ear, while the other passes over her left ear and folds itself around the tiara until its head surmounts it.

The statues were made before 1500 B. C., and the material, "*faience*" or porcelain, must also be of that date.

In the legends and religion of Crete both serpents and doves played a notable part in old times. Indeed, a noted archeologist maintains that "the dove of the Christians descends in a straight line from the dove of Cnossus in Crete," and as a proof of the truth of his statement he points out that the inhabitants of that city founded Gaza, in Palestine, about 1500 B. C., and introduced there the religious ceremonies which were then in vogue throughout Crete.

STUDENT

The Rose as An Ancient Symbol

THE rose has always been the favorite flower of humanity; and the records, both of its cultivation as a flower and of its employment as a symbol, go back to the remotest accessible times. It is mentioned in the earliest coptic manuscript, and in Indian traditions; we know that ancient Egypt had it, although it does not occur in Egyptian sculptures and paintings. Perhaps its connection with the warmer and more romantic side of human nature may have precluded it from the symbolism of that somewhat austere race. For the rose was sacred to Venus.

The Jews, on their liberation from Babylon, bore with them roses; Semiramis is related to have rejoiced in a bower of them; and Mohammed found Damascus encircled with rose-gardens. It is from this city that our name "damask rose" comes, that variety having been imported at some epoch during the crusades.

The rose was a symbol of immortality and also of secrecy. It was sculptured on the ceilings of banquet halls to remind guests that what was said *sub vino* (or *sub rosa*) was not to be said *sub divo*.

Fire-Walking in Japan

IN a recent publication is a description of an eye-witness' account of the ceremony of Fire-Walking, or Hi-Wattarai, in Japan; and many will doubtless recollect descriptions of the same rite as performed by other peoples.

It is necessary, it is said, for the priests who undertake the ordeal to prepare themselves for days beforehand by meditation and fasting, especially during the three hours immediately preceding it.

At five o'clock in the afternoon the priests filed from before the altar into some interior apartments of the temple, to change their robes for a coarser dress. The fire was a great bed of ignited charcoal about twelve feet by four, and one foot deep. At a signal from the head-priest the ascetics gathered at one end of the glowing furnace. The one about to perform the ceremony raises his hands and prostrates himself two or three times; then he stands on a wet matting, wipes his feet lightly in some white mixture, and, while the spectators hold their breath in awe and astonishment, walks unconcernedly over the fiery coals. His feet come into contact with them at every step, nor does he hurry or take long steps; when he reaches the end he turns back and crosses the fire again. Not even a smell of burning reaches the nostrils of the spectators. As to the preparation with which the feet are rubbed, even though this might protect the feet, it seems impossible that it could protect the rest of the body and the flowing robes.

E.

Ancient City Under Washington

ARCHEOLOGISTS are forced to the conclusion that America was inhabited by a highly advanced race *before* the arrival of those migratory tribes whose descendants are the present red men; for remains are discovered of works which the red man is not given to. Witness, for instance, the barrows and tumuli of the Ohio and Mississippi valleys, and the ruins of Uxmal and Palenque.

Now we hear of similar discoveries at the national capital. Stone city foundations have been unearthed at a low level beneath Washington. It is by no means without precedent that we moderns should have been found to have unconsciously located one of our cities right on the very site of an ancient city; and there is much evidence to show that man goes on piling his cities on the top of one another, guided, no doubt, in his selection of a site by an unerring instinct which shows him just where the magnetic lines of earth-life converge, or whatever may be the conditions suitable for locating a city.

It was in digging the foundations of the new building for the House of Representatives that stone remains of what appear to be city foundations were come upon. Nothing was seen of these before in the early days of Washington, nor can any record of them, or of any one who can have founded them, be traced. The North American Indians have not been city builders, nor have they ever dug into the soil to make foundations.

E.

An Ancient Babylonian Firm

THE University of Pennsylvania continues to publish volumes giving facsimiles and translations of the Babylonian tablets discovered at Nippur, and there is enough material yet to last for a generation or two at the present rate. The latest volume includes documents belonging to what is known as the Murashû series. This series is a set of tablets discovered in 1893, 730 in number and made of a peculiar clay, which dried hard without being baked. It contains the business documents of a family of merchants of three generations in the reigns of Artaxerxes I, Darius II, and Artaxerxes II, of Persia.

These tablets introduce us into the daily life and petty concerns of these ancient people, and also reveal an extraordinary mixture of races and nations. The names of persons recorded are in many languages. There were settlements of Ammonites, Hittites, Jews, Edomites, men of Hamath, Gaza, Ashkelon and Heshbon; and the influence of West-Semitic or Canaanitic tribes on the commercial life at this time is markedly shown.

Every Plant a Brotherhood Worker

EVERY plant is a brotherhood of cells working together to accomplish the end of the plant's existence, and each cell is itself a brotherhood of molecules and each molecule a brotherhood of atoms. Thus we have brotherhoods within brotherhoods, an underlying principle of unity pervading all.

In addition to this inner structural brotherhood, there is a brotherhood of the differentiated organs of the plant, all working together for a common end—provision for future generations. Of course the plant itself must flourish to accomplish this; but its own growth does not seem to be the ultimate object of its existence. In fact, many plants sacrifice their lives entirely in providing for their offspring, and all make sacrifices to this end. Co-operation is perfectly carried on among the various organs of the plant. The roots absorb from the soil water, holding in solution various ingredients that the plant needs, and this is carried up through the young cells to the leaves, where a great transformation takes place with the help of the sunlight.

Linked to the soil and water below and the sunlight and air above—the four elements—as well as to the other kingdoms of nature, the plant, a brotherhood in itself, is also a part of a much greater brotherhood. The earth on which it grows is a part of the solar system, which is a unit in a still greater brotherhood of like systems; and so on to infinity.

The leaves of the plant are the chemists that work up the raw material which the root has furnished through the sap, which then flows back through all the plant, each part taking what it needs. The leaf is a highly differentiated organ capable of great transformation. It becomes a supporting tendril, a defensive thorn, a protecting bract or sepal, an attractive petal or an all-important stamen or pistil, to suit the needs and purposes of the plant. It sacrifices its individual character, as foliage, to the common good, just as the root remains buried out of sight in the ground for the same end. Nature is our teacher. STUDENT

The Soul of Plants

AN intimate study of the structure and functions of plants cannot fail to impress the student with the conviction that this structure and these functions are all planned and directed by an intelligence of a high order. Even such a study as an ordinary botanist or biologist might bring to bear is sufficient to instil this conviction. Much more so, then, when the study is pursued under the light of the Theosophist's enlarged and exalted view of nature. Then we recognize, not only the functions which minister to nutrition, self-preservation, and other of the more instinctual and selfish propensities; but also those which operate under the higher law of brotherhood.

And, as we study and admire the functions and structures, there gradually grows up in our mind an image of the being itself whose functions and structures these are. We see the plant take earth and water from below and fire and air from above, and combine them into its own form. What is the being which does all this?

In our own body the functions and structures are only the visual aspect of our being, and we are conscious of the existence of this being in other ways than through the eyes. We are this being; it is our animate soul. Is the plant also a soul?

Each plant is the expression and the storehouse of some quality or en-

JAPANESE HILL SCENE—AN ANCIENT PINE

ergy, and will impart this to anyone who uses the plant as a food or drug. The plant soul influences our own, and we take color from it. Chemists may give us a chemical or physiological explanation of the action of herbs and drugs, but that is only a particular way of looking at things. Their explanation is concurrent with the other explanation, not contradictory to it. The shape, color and scent of plants corresponds to their quality; a fact which the old herbalists knew, and expressed in the word "signature," which means the mark by which a plant's quality may be known. E.

Bees and Fruit

A WRITER in *Country Life in America* relates that the bee-keepers of a certain district of California were drawn into a dispute as to pasturage for their bees—a curious question of trespass which has often been mooted. The result of this difference in the case in point was that bee-keeping was abolished in that part of the State.

The balance of nature appears to have been so upset that the fruit crops are stated to have fallen off by more than 50 per cent, and the fruit-growers became alarmed. Investigation revealed the fact that the decrease was coincident with the departure of the bees, and it became apparent that their work of carrying the pollen from flower to flower was responsible to a large extent for the success of the fruit crop.

The little workers were quickly reinstated, and soon succeeded in bringing the production of the orchards back to the normal output. After so convincing a proof of their value, it is to be expected that bee-culture will become more popular than ever in California. B. B.

THE CHILD IN THE GARDEN

by HENRY VAN DYKE

WHEN to the garden of untroubled thought
I came of late, and saw the open door,
And wished again to enter, and explore
The sweet, wild ways with stainless bloom inwrought,
And bowers of innocence with beauty fraught,
It seemed some purer voice must speak before
I dared to tread the garden, loved of yore,
That Eden lost unknown, and found unsought.

Then just within the gate I saw a child—
A strange child, yet to my heart most dear—
He held his hands to me, and softly smiled
With eyes that knew no shade of sin or fear;
"Come in," he said, "and play awhile with me;
I am the little child you used to be."—Selected

The Inspiring Chorus of Birds at Lomaland

ON a bright sunny morning at Lomaland the air is vibrant with the songs of birds. Their notes are many and varied, yet all are overflowing with the joy of life and the bright awakening of a new day. To listen to them is to catch their inspiration, and feel the buoyancy of the morning. From the simplest twitter and chirp to the rich flowing strains of the Sicklebill Thrush, all unite in a grand chorus of "Life is Joy."

But the prince of singers among them all is the thrush. He pours forth such a volume of clear, liquid notes, and has so many variations in

his song, that it is hard to catch its semblance and write it in words. Thoreau describes the song of the Wood-thrush as "liquid coolness from the depths of springs."

The song of the sicklebill partakes largely of the same character. This bird aspires to the heights in more ways than one, and sits on the topmost branches of the highest trees while pouring forth his wealth of song. Such freedom and abandon in this flow of music, in which the soul of the bird sings as well as every atom of his body!

And the silent sympathetic listener feels that the bird has expressed for him something in his own soul that longed for expression, but imprisoned by the personality and hedged about with artificial restraints, like a caged wild bird, was unable to sing a glad free song.

The birds must know.
Who wisely sings,
Will sing as they;
The common air has generous wings,
Songs make their way.

U. S. Commissioner General Sargent Entertained at Loma-Land

ON Friday, September 30th, Point Loma students had the pleasure of a visit from Frank P. Sargent, United States Commissioner General of Immigration, who is making a tour of the Pacific coast, in connection with the duties of his office.

It will be remembered that Katherine Tingley appealed to the United States government, two years ago, demanding an official investigation of the Raja Yoga School at Point Loma, of which she is Foundress and Directress. In response to this demand for justice, Commissioner Sargent came to Lomaland; made a thorough investigation, which resulted in a most favorable report to the government, and in the liberation of the eleven Cuban children, who were then detained by the Gerry Society at Ellis Island, N. Y., through misrepresentation of the Raja Yoga School.

In this second visit of Commissioner Sargent to Lomaland, the first to greet him were the eleven Cuban children, with bouquets of flowers and expressions of gratitude and good-will, in their little speeches in English. In this hearty welcome, all the children of the Raja Yoga School, and the students of Lomaland, were represented. In the records of Lomaland history, never was a more royal welcome accorded to a world's worker. Mr. Sargent visited all the departments, from the art gallery to the refectory, and expressed great surprise and pleasure at finding the general activities so much enlarged.

Mr. Sargent's party consisted of Commissioner North, of the Pacific coast, Mrs. North, Mr. Sargent's private secretary, Mr. Donohue, and Mr. Engelcke, local representative of the Immigration Board.

After dinner, the Lomaland orchestra and the Raja Yoga children, held a formal reception in the great rotunda of the Raja Yoga Academy. These were assisted by the Cabinet officers of the Universal Brotherhood and by a number of the ladies and other students.

After the rendering of exquisite music by the orchestra, in which there were a number of the Raja Yoga children, Master Thorley von Holst, the boy orator of the Raja Yoga School, welcomed Mr. Sargent and his party, in a very appropriate speech, in which a most kindly tribute was paid to Mr. Sargent as a man of honor—a just man; as a man who loved his country.

Songs by the children followed; and after that, Mr. Sargent spoke to the children most feelingly and appropriately. The whole tone of his speech was calculated to make the little ones feel that Mr. Sargent was their friend, and that he would ever stand by their school and by its noble work, so long as it held to its present standard.

Later in the evening the members of the Literary Staff, and members of the Senior Boys' Club, entertained Mr. Sargent and party in their camp home, on the grounds of the School of Antiquity.

In response to an address of welcome by Dr. Herbert Coryn, Mr. Sargent said, in part, that he was glad to meet with the good people of Lomaland, and to see on every side proofs of the advancement that the Institution was making for the good of humanity.

He said further: "I feel that what you are doing here God will record in the Great Book as a duty well done. Wherever I go, and however I may be situated, I shall never fail to speak in favor of the Raja Yoga School at Point Loma; and in just admiration of Mrs. Tingley and those who are associated with her in the administration of an institution where boys and girls are growing up into honorable manhood and womanhood, patriotic in our country's advancement, and with an understanding that is bound to make them pure, strong and true."

Mr. Sargent said further: "I came here two years ago as the Representative of the United States Government; and it was an easy task for me to make a favorable report to the Government after the thorough investigation which I made while here. I deserve no credit; I simply did my duty; and my word was accepted without question. I have often wished I could have found words to have made that report stronger. Let

me assure you, good people, if I had, in my investigation, found anything amiss in any of the departments of this institution, I should have as fearlessly made my reports.

"In this investigation referred to, I learned to admire and respect the children of the Raja Yoga School; they have my love, and shall have my remembrance as long as I live.

"My only regret is that I live so far away from Lomaland; if it were not so, I would send my little daughter to live among you, in this beautiful place, so that she might share in the many benefits which abound here."

At 11 o'clock in the evening Mr. Sargent and party returned in their tally-ho to San

Diego. Mr. Sargent and Mr. and Mrs. North left in the morning for San Francisco. It goes without saying that wherever Mr. Sargent may cast his lot, he will ever hold a cherished place in the hearts of the members of the Universal Brotherhood throughout the world, because of his fearless action in defense of justice. And this same good feeling is accorded to Mr. North, also, for the service he had rendered justice in connection with the investigations.

The improvements made at Ellis Island, under the direction of Commissioner Sargent, marks the man as a humanitarian in the very highest sense of the word.

AT HOME IN LOMALAND—FIVE OF THE ELEVEN CUBAN CHILDREN WHO BECAME FAMOUS THROUGH THE PERSECUTION OF KATHERINE TINGLEY BY THE GERRY SOCIETY

An Attempted Attack on Compassion

THE members of the human race have a common life in the soul, which is the eternal divine thread of gold on which are strung our various personalities. When this common life-source is recognized humanity is at peace, works together in harmony, and is wise and happy. When it is neglected and self becomes the chief incentive for each individual, then trouble and social miseries soon set in.

The future evolution of the human race will witness the growth and increase of this knowledge of the soul, the true self of humanity, the heart-link; and thereby humanity will be raised to greater heights than ever before.

In compassion, pity, sympathy, philanthropy, we see the workings of this spirit; struggling often with perverted ideas and personal motives derived from past habit, but still ever growing and intensifying.

The human race feels keenly today the absolute need of this spirit of compassion, and it is our duty to disencumber that spirit from all its associations with want of judgment and interested motives, and to join it to wisdom and discretion.

The want of wisdom, and the impure motives that are mixed up with so much of modern philanthropy, bring a certain amount of discredit and disparagement upon philanthropy. And there is a certain class of reactionary writers who are not slow to avail themselves of this circumstance. Wishing, for purposes of their own, to give utterance to attacks on the spirit of brotherhood, they find in these misguided efforts an argument to bolster up the case they wish to put.

Thus a writer in a French paper writes on "The Peril of Pity." He condemns wholesale the modern manifestations of the spirit of brotherhood and compassion, confusing the true with the false, and the real spirit with its imperfect expression, in a way that would be misleading were it not so exaggerated. It is true that he pretends to distinguish between a true and a false compassion, but he includes so much under the head of false compassion that nothing is left over as true compassion except impractical theories. To quote a few samples:

We witness in our day the degeneration of a sentiment which, excellent in itself, becomes by its abuse a veritable social danger.

Pity was unknown to antiquity.

In former generations pity was kept within reasonable limits, without involving itself in the solution of great human problems with which it has nothing to do.

Today writers assign a social function to it, elevating it to the height of a principle. False gospel of pity.

A defiance of common sense.

May end in plunging the social system into a vortex of revolution.

A morbid state is the only term with which to characterize a misguided sentiment, manifestations of which are innumerable at the present day.

A person who can write like this is one who has lived too much on the soft and easy side of life, and needs a little adversity to correct his impressions. Humanity as a whole does not need more selfishness, more indifference, more cruelty, less sympathy, just now. It realizes by its own bitter experience that hardness and selfishness are the forces which bring misery and ruin; and it calls for more, much more, sympathy and compassion.

A spell of prison (without pity) would shut this scribbler's mouth up on the subject of absurd compassion for prisoners; and we hope and believe that the just law which he challenges will accord him a wholesome corrective.

The gist of the matter is this. Anyone who advocates a return to the harsh, unsympathetic order of past despotisms, should have the courage of his opinions. But if he has made unto himself a secret reservation that he will keep on the easy side, and be one of the tyrants instead of one of the tyrannized over, then he is a charlatan. Medieval barbarism and Asiatic despotism have their uncomfortable side. Indifference to pity is all very well so long as we do not happen to need pity much; but just wait until the turn of fortune's wheel brings our side down into the mud!

Humanity cannot revert to the past. Humanity is growing, progressing; and the past must be built on and added to. If past civilizations have run to ruin, it was because compassion was not yet strong enough to conquer selfishness. And our writer pretends to think that the blame is on the compassion that always appears struggling amid the ruins, as in the French Revolution!

As the latest and most advanced race of humanity, we have to see

that this time the spirit of compassion takes such firm root among us that it cannot fail.

FRIENDS IN COUNSEL

DEAR COMRADES: I was looking at a new book in company with a friend the other day, when the page opened at a remarkable picture of a face. My companion started and said, "What a beautiful and inspiring portrait? I wonder whether it was made from life or whether it is only imaginary." The words set me to thinking. "Only imaginary!"

We live so much wrapped up in visible things that we commonly take little account of anything which cannot be put into a cart and drawn by a horse. Yet let us think for a moment. Before the world came into being it was "only an imagination" in the Divine Mind, and after it has dissolved into thin ether it will still endure as an eternal picture in the memories of the souls who took part in its evolution. Do not our ideals live in the region of our imagination? and every one knows that the ideals we cherish are potent to bless or blast our lives.

Let us beware lest we undervalue the things which exist (as yet) only in the imagination, for as St. Paul has most truly written, "The things which are seen are temporal, but the things which are unseen are eternal."

STUDENT

DEAR COMRADES: What is life? For answer there comes a whole swarm of theories and ideas, but why should a man be bothered with any of them? If we could stop the mind from its imaginings, its forecastings of the future, its reviews of the past, and its absurd deductions from events, we might have a chance of finding out what life is; as it is, each one lives in an artificial world built out of his expectations, the notions he has had instilled into him at various epochs since his infancy, miscellaneous, scientific theories, and so on.

What is my personality? Who am I? Looking within I find for answer nothing better than a group of recollections, opinions, expectations, pet qualities and beliefs, and such like, associated with a name and a place and a family. This is what makes up "Mrs. This" or "Mrs. That." I find myself laboriously engaged in trying to live up (or down) to the ideals of myself created partly by me and partly by others for me. Everything that happens has to fit in somehow with this character in a novel or stage part.

But why try to circumscribe and define our Self and our life at all? Why not take events and forces as they come, and never mind whether or not they are consistent with our pet character or possibilities? Let us try to understand the message of that epoch-making poet, herald of a new race, Whitman, who was the "Container of all."

When a new event or force or call of duty comes to us, let us not try to run it on conventional lines. Nature and time are wombs infinitely capacious and productive; there is plenty of scope for new lines. Let us allow our Souls to live and try to make our minds keep pace with them instead of holding them back.

A New Raja Yoga School in Roseville

THE opening of the new Raja Yoga Day School, in Roseville, Point Loma, was a most interesting affair in many ways, and promises to be a most useful factor to the little town. The school was opened on September 22, under the direction of Miss Ethel Wood, who was the first teacher in the Raja Yoga School at Point Loma Homestead. Some of the older children of this Raja Yoga School were present at the opening ceremony, assisting with recitations and musical numbers. Roseville is one-half mile distant from Point Loma Homestead. On Thursday evening, October 6th, the children of the Raja Yoga School at Lomaland went down to Roseville and gave a free entertainment to the children of the Roseville School and their friends. The program was made up of exquisite music by the Lomaland orchestra, several interesting recitations, and a most instructive and laughable little farce.

The children who gave the entertainment were highly delighted with their efforts, as they considered it one of the best ways to help make others happy. A very great interest has been created among the people of Roseville through this new work for the education of children. It is interesting to note that Miss Ethel Wood, director of the Roseville Raja Yoga School, was one of the first residents at Lomaland. STUDENT

Pre-Egyptian Remains of the Pacific

SITUATED in the South Pacific Ocean, 2000 miles west from the coast of South America, Easter Island is geographically opposite the great pyramid of Egypt, and Mr. Frank H. Norton has pointed out the "strange coincidence" that the native name, which is Te Pito te Henua, means "navel," and that the pyramid of Cheops was known as the "Navel of the Earth." The native name was given by Hotua-Matua, "who came from the East" and divided the country among his six sons. It appears also that the "Mexican, Peruvian and Central American traditions of the flood all have a story of a wonderful man who came from the East, and who taught the inhabitants the arts and how to live!"

The island was seen in 1687 by Davis, the buccaneer, who did not land, and it remained for the Dutch Admiral, Roggeveen, in 1722, to explore, and name it for the season of the year when his visit was made. In 1770 the Spaniards called it San Carlos.

Captain Cook landed in 1774, La Perouse in 1786, and during the last century a number of English and American expeditions have made surveys and examinations of this wonderful bit of land, an unsubmerged tip of the lost continent of Lemuria, and the last scene of a world tragedy.

The present inhabitants, numbering less than 200, are the last remnant of a large recent population which knew nothing whatever of that former race of beings whose remains are found all over the island. In 1864 most of the male inhabitants were impressed by Peruvians, who worked them in their guano deposits. Only two survived to return to their native soil, taking with them germs of smallpox, which almost exterminated the others and turned the island into a graveyard. But this case of depopulation is insignificant when compared to the results of that catastrophe of which the ruins of Easter Island are today a reminder. This older race, which existed very many thousands of years ago, was interrupted in the construction of buildings, the laying of great platforms and pavements, and the sculpturing of enormous busts, by a cataclysm which effected their extinction. Of the 550 busts, cut from volcanic trachyte, some of them 70 feet high and weighing 200 tons, many are unfinished and are still in the quarries. Each bust is a single stone, levelled on the top to receive a cylindrical crown of red tufa, and on the backs of those best preserved are found ideographs of men, birds and fishes, as well as many symbols which have always existed among men. They were mounted upon long platforms, constructed of hewn stones weighing as much as five tons each, and some of the courses were polished and mortised. The largest of the platforms was 540 feet long, eight feet high, nine feet wide, and supported fifteen of the busts. In front of each platform was a large paved area. Many of the cliffs on the island are carved with ideographs which include also the forms of canoes and a puma-like creature with a human face.

H. P. Blavatsky taught that another continent preceded the Atlanteans, and that its area is now almost wholly covered by the Pacific Ocean. Even as Ignatius Donnelly proved to the scientific world, by cumulative evidence, the sunken Atlantis, so some future investigator will collect the facts relating to Lemuria. Doubtless some of the data were lost when holy men were burning libraries or casting tablets into the sea, but Easter Island has escaped destruction by men. It is too large a proposition for them to handle; the ruins are too great; the stone is too hard;

the island is not easily reached; and as the inhabitants have no gold of which they can be robbed, there is "nothing in it." Government publications, magazines and newspapers, are keeping the subject alive, and, thanks to the little red schoolhouse, the people can read. **STUDENT**

Reason vs. Natural Intelligence

A WRITER, who has evidently by some means got a whiff of fresh air through some part of his internal economy, indulges in the pious ejaculation: "If the human race were to become through and through rational for one brief day, what a whisking away upon a wind of ridicule there would be of solemn fakes, frauds and farces, that are now treated with respect, deference, and even awe!" The remark arose out of a consideration as to whether the animals were much worse off for not being able to "reason," and whether men are not more rational and more fully themselves when, for a time, their "reason" is occupied with something else, and they act from natural intelligence. We would not decry reason; but we would say that perhaps man has to give it up and then get it again before he can know what it really is. Much of our so-called reason is merely the fussy interference of a deluded and prejudiced imagination with actions that could be accomplished much better by the simple light of intelligence. How often do we have to discard our ready-made plans, when the occasion arrives, and fall back on the inspiration of the moment? How often do we succeed best when we are taken by surprise or preoccupied?

If we can by degrees purge our imagination of its fixed notions and drive from our breast the fears and desires that color our ideas, we would gain clear insight, and then the reason could resume its proper function—that of reducing abstract truths to a concrete form and turning wisdom into rules of conduct. **STUDENT**

Quotations from *the Boulaq Papyrus*

"GUARD thyself from sinning by words, that they may not wound; the malicious pertness which never ceases in the breast of a man, is a thing to be condemned. Hold thyself separate from a man who has so failed; do not allow him to become thy companion."

THE ancient Egyptians ever kept their simple faith in rebirth, and eternal life beyond the grave. Death was to them the entrance into another birth.

The Trend of Twentieth Century Science

Science and Its Little Round Things

A GOOD many years ago a very curious book was published, advocating a new departure in science. It was vague, confused and very declamatory, and was met with perfect, and not wholly undeserved neglect. Its contention was that feeling, instead of the senses, should be used as an instrument of research. And the leading illustration was somewhat as follows:

A scientist is studying the relation between mother and child, using only the senses. He perceives that they manifest a tendency to be near each other, and by examination and measurement of it, after eliminating all other forces from consideration, he perceives that it is an attractive force varying *directly* as the square of the distance, but tending to die away proportionately to the length of time the two were separated.

This force he calls *love*, and explains that what it is in itself we can never know; we can only perceive it by its effects on bodies.

Other forces are studied in the same way, and their operations measured: such as the attraction between playmates, between fellow-workers in various fields, between married persons; and also the various forms of repulsion, such as that between rivals of various kinds.

Finally the whole is reduced to an objective science of human life, and it is taught in all the colleges. None of the forces, love, fraternity, comradeship, hate, etc., can be known in itself, but only as a mysterious something present in persons, a mere "metaphysical" entity, not to be speculated upon in its essence, only to be dealt with by mathematics. Those who claimed to know these forces in a far more intimate way as feelings, and to be able to understand perfectly the behavior of others by the same token, were classed as dreamers, and dealers in metaphysics.

Are the scientists of matter in the same case as these other scientists of humanity? Are they refusing play to a faculty that would tell them more in a minute about nature than their books in a lifetime?

They are getting into a very curious and interesting position. First we are confidently told that we can never know anything of force in itself; we only know it by its effect on matter. Secondly, we are assured with equal confidence, in other parts of the same treatises, that there is no such thing as matter; there are only centers of force.

So we cannot know the force; and there is no such thing as the matter! What *are* we to do? We can only know the unknowable by its effects on what does not exist!

But however much later science may deny matter, it must have it, as something to hang its force upon—because it will not learn to cognize force in a new way, and conceive it in a new way. In its attempts to get rid of matter, it only makes its *little round things* smaller. Little molecules do not explain phenomena fully, so we get to littler round atoms. Now they prove incompetent, so we get littlest round ions or corpuscles. They too must have their day.

The process will not work. We must begin another kind of cognition, a use of a faculty that can cognize the non-objective, or that which being non-objective to the five senses, we must for the moment call subjective, namely force. And we must build up a mind that stands to those new cognitions, as the ordinary mind stands to sense cognitions, and then blend the two minds as best we can. Our very vitality will gain when we habitually think of the universe in that way instead of as a mass of little round things.

STUDENT

Chemists' Jewelry—Manufacturing Rubies

THE making of artificial (imitation) jewelry will soon be unnecessary. For real jewels are being manufactured by the chemist with greater ease every year. The last to submit to this indignity is the ruby. It is made by melting together clay and oxide of chromium, and is said to be very pure and brilliant, and to possess all the properties of those made in the laboratories of nature. It may, however, *not* possess all those properties. We do not know enough about them. One of the newly-discovered sets of rays or emanations may have been conferred by nature on *her* product which ours will not be found to possess.

MINERALOGIST

Is There a Scale of Scents?

VERY little scientific work has yet been done on the sense of smell. There is probably a scale as definitely marked in scents as in sounds and colors. A stretched string, when struck, yields, in its primary and secondary tones, our musical scale (nearly). A beam of white light, analyzed, yields the seven colors. But as yet we do not know the corresponding scent scale. Every scent given off from flower and fruit seems to be a compound. Chemists and perfumers are moving in opposite directions. The latter are blending; making the already compounded more compound. The former are separating, and their work tends to show that each "simple" scent as we find it in nature, is already a blend of several.

To make the correspondence with color and sound, we possibly need to find some scent which, on analysis, yields seven; and then to find that these seven, in their primaries and in their gradations between, and in the mixtures of various of these, constitute all the scents found in nature. Scents that are unpleasant to us might turn out to be dissonant combinations of the scale; pleasant ones, consonant, and comparable to chords in music.

In respect of scent, science is still in the stage of regarding it as due to molecular particles. That it may be, like light, an etheric phenomenon, is as yet hardly speculated.

STUDENT

Man and His Climate

IT appears that the Sahara desert is rapidly extending its borders. How long it has existed is rather an open question, but judging from its present rate of increase, it may be quite young, as geologists count time. In the days of Rome it was certainly much smaller than now. But then came the Mohammedan conquest, with its hordes of wandering Arabs; and the Tuareg invasion from the East. Both these events meant the wanton destruction of great wooded areas, trees and all kinds of smaller vegetation being burned to the ground. No more rain was retained in the soil; in a little while none was condensed, no new vegetation appeared, and the local streams and pools vanished.

Whether the destruction of forests accounts altogether for the desert is open to question. It probably does not. The destruction is still recent, in part. Colonel Peroz, the explorer, says that in Ifisen, in a corner of a valley, he uncovered the stumps of a forest destroyed by the Tuaregs more than twenty-five years ago. Barth, the German explorer, found water in abundance, fifty years ago, where Colonel Peroz's expedition suffered from thirst. The old men of North Adar showed the Frenchman rivers which in their youth flowed full many months of the year, but are now dry. Lakes yesterday permanent, which Peroz expected to find full, were dry, and did not replenish except during the two months of winter.

To the question whether man makes his own climate, we are certainly able to answer Yes, in no small degree.

STUDENT

The Japanese Surgeon's Work Has Proven Satisfactory

IT would appear that Japanese vitality is very difficult to extinguish. Major Seaman, a specialist in military surgery who has seen much of the Japanese hospitals, says that their surgeons rely much more on first aid given on the field, than do ours. In every case where the condition of the wound in any way permits it, they content themselves with the application of first-aid bandages and antiseptics, and leave any further work to be done at the home hospitals. The result is excellent, most of the men arriving nearly well. Russian wounded left on the field have had similar treatment at the hands of the Japanese surgeons, with nearly as good results.

"In one hospital ship returning to Japan from the front there were 2200 wounded men, and there was not a single death on board during the trip. Three people will cover all the deaths among the wounded who have been returned to Japan after having received first-aid treatment only."

Some of the result is, of course, contributed by the Japanese soldier's simple habits, constant exercise, and plain diet.

SURGEON

❖ ❖ "A Little Child Shall Lead Them" ❖ ❖

"I DECLARE, Herbert, it is simply unendurable," cried Mrs. Percy, with flashing eyes. "You know how perfectly wretched you make me, but you do not care in the least; and I tell you once more, and for the last time, that I will not endure this state of things any longer."

Mrs. Percy turned to leave the room, but her husband placed himself between her and the door; holding out his hand, he said:

"Come, Constance, do not be unreasonable, I have not neglected you, nor shall I ever do so. My love has in no way diminished. There is no reason why we should not live as happily together as we ever did."

"I cannot be happy with a husband who has so many interests I do not choose to share. How can you expect *me* to care about the working among paupers and drunkards, and teaching in those miserable slums? You must give it all up once for all, or you must give me up. And you must decide now."

"You do not mean that, Constance."

"I do mean it, Herbert."

"But don't you see, dear, that I *cannot* give up entirely this work of helping others? I believe in the fact of Universal Brotherhood with my whole heart and soul; and I *must* live up to my convictions. Otherwise, even you would despise me and I should deserve it."

"Very well, then; you have chosen. Henceforth our lives lie apart."

"We cannot separate, Constance, on such grounds; besides, we must consider Rosamond."

"I have considered her and other things as well. I know you are fond of the child if you no longer care for me; therefore we can all remain under the same roof, but each pursue his own course leaving the other free to do the same. I shall expect to see as little of you as possible, and shall avoid your part of the house, leaving you to the work you prize above everything else."

So for three years the husband and wife had lived in the same house as strangers to each other. Herbert Percy had gone bravely on, in the face of persecution and opposition, working to make Brotherhood an acknowledged fact in the life of the world and to relieve the suffering.

Constance had sought happiness, or at least forgetfulness, in the giddy round of fashionable amusements.

Rosamond was now a bright, engaging little girl of eight years. Her life was not so happy as it might otherwise have been. Her sensitive nature was overshadowed and oppressed by the unhappy estrangement between her parents, and, young as she was, she often pondered over it and tried to devise means of bringing it to an end. Her mother kept her with her when she was at home, but her many engagements drew her out almost daily. Then Rosamond's nurse, willing to be rid of the child, allowed her to slip away to her father's study. Here, when Mr. Percy was in, she was sure of a kindly welcome; and even when he was too busy to talk to her, the little girl was perfectly happy if she could only sit still and watch him at work at his writing table. Her father was never annoyed at any of her quaint sayings, though her mother often was. One afternoon one of Mrs. Percy's fashionable friends came in hurriedly to beg Constance to come over and help her entertain some unexpected guests that evening. The weather was cold and threatened to be dark and stormy.

"Never mind," said Mrs. Percy's friend, "pray do not fail me. The distance is so short, and surely Mr. Percy will be glad to come and fetch you home."

"Oh! certainly he will," replied Mrs. Percy with a smile that would have puzzled her visitor, had she had time to think of it. But she hurried away, and Mrs. Percy, turning to go upstairs, met the wide, earnest eyes of Rosamond, who had followed her to the door.

"O mama, will papa go for you tonight?" asked the child.

"You must have heard what I said," replied Mrs. Percy with a sharp little laugh.

"I'll tell him when he comes home that he is to go," said Rosamond quietly.

"O yes, do," cried her mother mockingly; "it will please him greatly, no doubt," and she ran quickly upstairs to prepare for the evening.

Rosamond was sent into the nursery to have her supper and be put to bed. But all the time her mind was full of what she intended to do. Here was such a splendid chance to bring her father and mother together. It would surely be right and both would be pleased; for had not her mother said so? The child had not dreamed of the hidden meaning of her words

and tone. She knew that nurse would never allow her to sit up, so she was undressed and got into her little bed as usual; but she kept wide awake listening for the sound of her father's key in the front door. Nurse had a cold and went to bed herself before nine o'clock, and soon her breathing told Rosamond that she was fast asleep.

Then the child crept out of bed and stole softly out into the hall and down the wide stairs till she reached the last step. Here she sat down, drawing her little night robe closely about her bare feet, to await her father's coming. Surely he would be in soon, she thought. At that hour Mr. Percy was entering a hotel in a distant city, having been called away on important business by a telegram received that morning.

When Mrs. Percy returned, shortly after midnight, she found the child still on the stairs, where she had fallen asleep.

"O Rosamond!" she cried, "how came you here? How cold you are!" and gathering the little form in her arms she hurried into her dressing-room where a fire was burning. But Rosamond only awoke to murmur hoarsely that her throat was sore and she wanted water.

The household was aroused and the doctor summoned; all was of no avail. Diphtheria in the most malignant form had settled upon the child and the three hours' exposure in the cold hall had given the disease too strong a hold for medical skill to be able to control it.

The agonized mother hung over the couch of her suffering child. As soon as the whereabouts of Mr. Percy could be ascertained a telegram was sent to him. He arrived on the evening of the second day to find his only child cold and still.

As he sat that night, bowed down in grief, by the side of the dead child, the door was softly opened and Constance looked in. She took one step toward her husband, but paused with the terrible thought in her heart: "He has robbed me of everything, and now of my child; for it was in waiting for *him* that she came to her death."

Without pausing to consider how unjust was such an accusation, she went out and closed the door again between them.

Days went by in the desolate home, the bereaved parents, still apart, mourning their heavy loss. Mr. Percy went on with his work for the benefit of others; but when he sat in his lonely study no little hand tapped at the door. When he raised his eyes from his work no sweet child face, from across the table, smiled lovingly at him.

Mrs. Percy sat in her darkened room, refusing to see any one. At first she felt nothing but the intolerable agony of giving up her child. Then she began to call to mind all her gentle, winning ways; her patience when her unhappy mother was so often irritable and exacting; her quaint words, so often wise beyond her years; her desire to heal the breach between her parents.

Then remorse began to gnaw at her heart. She had not done well by her child. From that it was but a step to the review of her treatment of her husband. She was forced to admit that she had been an unloving wife and mother, and all because Herbert sympathized with, and endeavored to aid, those who suffered.

"I, too, will try to live for others," she said at last. "I will work with him, if he will only forgive me and permit it. But how can I ask him now? How can I make him understand how sorry and ashamed I am?"

For many long days and sleepless nights Constance pondered over these things; and the teachings she had hated and scoffed at began to have a new, strange meaning. Her little child had not been taught and yet she seemed to comprehend. She remembered how Rosamond had once said to her:

"Mama, I think I was your little girl when we lived here before," and she had turned impatiently away from her.

Again Rosamond had looked up after a long silence, saying:

"Do you think that you and papa were happy when you lived together before this time?"

And she had sharply bidden the child to be quiet and not say such silly things.

It was a month after Rosamond's death when Mr. Percy came home late one night, cold, weary and heavy hearted. Opening his study door he paused, and gazed for a long moment at Constance, who stood waiting for him. The look on her face told him all. As the door closed behind him husband and wife were again united.

The memory of the dead child had done what her living presence could not accomplish. For the Law worketh in strange ways. STUDENT

THE CHILDREN'S HOUR

The Raja Yoga Question Box

TRUTH never dies. For the pure in heart its light shines ever.

1 Who was Bruno?

ANSWER — He was a student of the teachings of Pythagoras. He was persecuted by the Church, was exiled from his country, and finally, after seven years, was burned at the stake for teaching what wise and unselfish people now believe.

2 Who were the Essenes?

ANSWER — The Essenes were a Brotherhood of wise people. It is said that they lived near the Dead Sea for many thousands of years. Their life was pure and lofty. They taught the same truths that Pythagoras taught and that Jesus taught to his disciples. Many students came to their home to learn wisdom.

"THEY are better than all the ballads
That were ever sung or said

THE CHILDREN

For they are living poems
While all the rest are dead."

Helen's Dream

by a Raja Yoga Student

ONCE upon a time there was a little girl who was very fond of play. In fact, she wanted to play all the time, and this troubled her mother very much, for she knew how necessary it was for her little daughter to form good habits while a child. So every day she gave Helen certain duties, and besides this she gave her a small piece of ground. Helen loved her little garden patch, and every morning she would see something new and beautiful in it, a new plant coming up or a bud beginning to open.

Helen had entire care of her little garden, and everyone was glad to give her advice about caring for it, so that after a time she began to learn a great deal about how Mother Nature helps the little plants to grow, and how lovingly everything is taken care of, and how the flowers begin to bloom. But after awhile Helen began to lose interest, and for a whole week forgot to water the garden. You have no idea of the mischief that came about in that week, and finally Helen's mother called her out one day and said: "Helen, look at these weeds. Your flowers are nearly crowded out, and in a little while, if the weeds are not pulled up, you will have no flowers at all. Now see what happens when you neglect your duties."

That afternoon Helen was very serious, and becoming tired of her play, she went into the big library and curled up in the wide window seat. Soon she found herself in a beautiful doll-house, with playthings everywhere, just the lovely things she had always wished for — dolls that would talk, carts that would go, automobiles that just flew around, a little stove and everything to go with it; in fact, a doll-house furnished complete, even to the curtains at the windows. Helen thought she was the most lucky little girl in the world! She forgot all about her duties or her garden, and for days she did nothing but play, and play, and play, and at last she became, oh! so tired of play — and yet there was nothing else to do! There was no garden and there weren't any duties, and at last she began to cry. Oh, how ugly that doll-house looked! How she did hate playthings! In fact, she was beginning to be very unhappy, indeed, when she heard her mother's voice saying, "Helen, Helen, what is it?" And then she started and woke up. She had been asleep, and this was her dream, and I can assure you that she remembered it to good result, for after that — how she loved to do her duties!

CHILDREN OF THE RAJA YOGA SCHOOL, ON THE GOLF LINKS, LOMALAND
Raja Yoga Academy in the distance

LISTEN, listen, listen while I sing---
There's joy, joy in ev'ry thing!
In bubbling of fresh streams,
In flashing sunlight beams;
Joy sparkles thro' my dreams!

Listen, listen, listen while I sing---
There's hope, hope in ev'ry thing!
In gloom and chill and night,
When lost the guiding light,
Hope rises ever bright!

Listen, listen, listen while I sing---
There's love, love in ev'ry thing!
If mirth and hope must die,
Still I can upward fly,
Love lifts me to the sky! — Selected

On the Golf Links

THESE Raja Yoga boys and girls are playing a game on the golf links at Point Loma. High above them rises the dome of the Temple, the home of light and wisdom. It is not amiss that the Temple thus stands aloft, but within sight of the children at play. We begin to know that boys and girls with pure strong bodies that can stand a good stiff game can more easily climb the path that leads to light and wisdom.

So the Raja Yoga children have said, "Our bodies shall belong to us, not we to them, and we will make them pure and strong."

And every morning early, these boys and girls take command of their bodies, and start them right, to live all day a pure sweet life of work and play. It makes a grown-up straighter, to see them drill and exercise. And never have children been so happy in their work. Nowhere else are children so merry at their play. It is because the warrior king is on his throne in every heart, and those tiresome, selfish wants and wishes of the body, have to obey him. E. W.

DEAR CHILDREN: It is well known that sea-gulls never seem to rest; that day after day they will follow a ship,

flying easily and without apparent fatigue. You should see them when one of the big vessels leaves the Golden Gate harbor, San Francisco.

A hundred or more brown bodies, with long sweeping wings, fly off in the wake of the transport. The steward's premises are very soon invaded by passengers gathering up waste bread and food for the birds.

Upon my recent trip one of the gulls dropped fluttering upon the deck, apparently ill. A soldier picked it up, took it to his quarters and fed and cared for it until it became strong again. Then he allowed it to fly away.

But the bird had not forgotten him. Every day it would alight on the deck and wait for this particular man to come and feed it. It followed the boat to Honolulu and finally to Manila, and where it remained during

the two weeks that the transport lay in Manila, I do not know; but when the vessel turned seaward again, bound for Nagasaki, there was the gull resting on the stern, and it remained with the ship until it passed the Farallone Islands.

I have often wondered how men ever come to forget about the sweet and beautiful Comradeship that exists between humans and the birds. Some day I am very sure that we shall remember. COUSIN EDYTHE

Path

SELECTION

HEARTS with the light of love illumined well,
Whether in mosque or synagogue they dwell,
Have their names written in the book of love,
Unvexed by hopes of heaven or fears of hell.

They say, when the last trump shall sound its knell
Our Friend will sternly judge and doom to hell.
Can aught but good from perfect goodness come?
Compose your trembling hearts, 'twill all be well.

Fairy Light and Shining Towers

And greater works than these shall ye do.

AS the sons of Mile landed on the soil of Ireland, the *file* Amairgen chanted a poem in honor of a marvelous science.

This divine science, indeed, penetrating the secrets of Nature, discovering her laws, and mastering her hidden forces, was, according to the tenets of Celtic philosophy, a being identical with these forces themselves, with the visible and the material world; and to possess this science was to possess Nature in her entirety.

In Erin, in olden times, water was a sacred element. It was deified. And today, around the lakes, linger echoes of profound truths—truths, hidden and entangled in misty legends and traditions, interpreted and related as fanciful faery tales to amuse the unbelieving tourist.

But Erin's wisdom is still sacred to those whose ears retain listening reverence for the guidance of spiritual teachers and are willing to follow the inner pathway to knowledge.

The wisdom of the silent Sphinx is still for those who will dare the inward march and face truth in their own nature.

The beauty of the lakes of Killarney is alone equalled in the beauty of their legends; and kinship they might claim with a few of the different ages through which humanity has traveled.

Nennius says that these lakes were encompassed by four circles of mines; the first was of tin, the second of lead, the third of iron, and the fourth of copper. In the several mountains, adjacent to the lakes, are still to be seen the vestiges of the ancient mines of iron, lead and copper, but tin has not as yet been discovered here. Silver and gold are said by the Irish antiquaries to have been found in the early ages.

The legends tell, that in other times, where now are the lakes, were fertile vales, peopled by men and women who lived in stately palaces. But through lack of vigilance to keep the entrance to an enchanted fountain closed, all was covered with water in a single night. But all the people did not die, only those in whom watchfulness had waned, and whose nature could be lulled and entranced by untrue joys, which veil future flowing of tears within fleeting allurements.

Sometimes in Loch Lene, "the Lake of Learning"—the Lower Lake—a wondrous light is seen through its clear depths. Tall, shining towers rise in glowing splendor.

The fisherman strays,
When the clear, cold eve's declining,
He sees the round towers of other days
In the wave beneath him shining.

Another legend tells of one who is supposed to have lived in Ross Castle, on the shores of Loch Lene—the famous O'Donoghue, a man of miraculous powers, of great wisdom, just, and kingly, and of "great humanity." And like the Prophets in the Bible, he had power and control over water. Obedient to his will, it parted; he walked upon its surface. Long life, without the appearance of age, was his heritage.

One day, after saying farewell to his friends, he floated through the air, over the lake, then descended. The waters divided, then closed over him.

In a few years he returned, shining with "the radiance of the sun, making day joyful" to those who saw him. Afterwards he continued to come and go, until it became by tradition a good omen to see him.

His approach is sometimes preceded by music, inconceivably harmonious; sometimes by thunder inexpressibly loud.

It is to the ancient "Wisdom Science" that we must look for light to

transform the legends from hypothetical faery tales to scientific truths by unfolding the miraculous events and enchantments through Nature's laws.

Hoary with age is the philosophy telling humanity of the heaven within, where the light of divinity shines as the sun.

True interpretation of this teaching weighs, not lightly, the warrior courage, the self-control and watchful vigilance, that entrance to divine realms demands.

Clearly it has been voiced that the power of the soul which crowns man king over the elements, is guarded within the magic of self-mastery—that magic which enlightens, and confers freedom from ignorance, the well of human tears.

What fountain could be more enchanted than one in which can be stayed the tearful tides of sorrow and grief!

Could not the faery light and shining towers of other days, seen through clear waters, harmonize with the light of heaven within?—trusted from afar, even through mists in the vale of tears. A. P. D.

To Help Prisoners

To assist those who are or have been in prisons to establish themselves in honorable positions in life.

With other eyes, too, could I now look upon my fellow man with an infinite pity. Poor wandering, wayward man! Art thou not tried and beaten with stripes even as I am? Even, whether thou bear the royal mantle or the beggar's gabardine. Art thou not so weary, so heavy laden?—*Carlyle*

THE spirit of helpfulness, of sympathy, wisely directed is truly of the nature of heaven and is a bestower of happiness, possessing a regenerative power of collective as well as individual value. It is a force unseen, but which can be felt, coming like an angel to hearts that have hitherto been cold, and moving them to become again true human beings. "He who walks a step without sympathy goes to his own funeral dressed in his shroud." Sympathy and true justice are inseparable, and when sympathy is again a living power in the hearts of men, it will be easy to establish once more that justice that has been so long absent from our judgments.

The judgment of a criminal's act alone, without regard to his early environment, the nature of his parents, or the many other causes that help to make criminals, is not the way to judge with equity.

The daily atmosphere of crime and immorality in which so many children in our great cities live on the one hand, and the atmosphere of crime of a more subtle order, which we contact almost everywhere, can produce nothing but crime. The very air we breathe is full of selfishness and the worship of Mammon, and these qualities manifest according to opportunity. And then the punishment of the criminal is not of that nature to work reform, which is avowedly the object of that punishment. The fact that many are being released from prison after serving a long term, have committed crimes of such a nature a day or two after their release, that their further imprisonment for a long term has been deemed necessary, should cause us to think and wonder if our prison system is all that it should be, and convince us that reform is impossible by its means.

Any system of punishment that is not remedial, is a crime against the punished and a disgrace to the punisher, especially when done under the guise of justice and mercy. The reason for this return to crime after a long imprisonment, can be sought for and logically answered in the methods of the prison discipline itself. The clock-like regularity of prison life, under the strict supervision of warders, calling for no exercise of the prisoner's will causes its decay, and then the prisoner on his release is helpless, and falls a victim to the first temptation. The treatment of prisoners, sanctioned by society itself, is no small factor in producing confirmed criminals. The title of jail-bird has sounded too often the death knell of a man's aspirations. When the penalty prescribed by law has been paid, his debt should be considered by society to have ceased, and he is entitled to our help. In the words of Katherine Tingley:

Don't brand a man as a criminal. Teach him that *he is a soul* and give him a chance. Let him feel that some one believes in him, give him the encouragement that perhaps he has missed through all his life, and the lack of which may have helped to make him what he is.

A reformatory is needed in which the finer qualities of human nature should be encouraged and appealed to, by people who are qualified by compassion, sympathy, and knowledge of human nature to understand a patient's difficulties.

E. J. W.

--COUNT TIME BY HEART-THROBS--

BAILEY'S "FESTUS," 1840

WE live in deeds, not years, in thoughts, not breaths,
In feelings, not in figures on a dial;
We should count time by heart-throbs. He most lives,
Who thinks most, feels the noblest, acts the best.

YESTERDAY

by JOEL BENTON

TIME'S messenger, but lately born,
Stood tiptoe on the hills of morn;
His little span was but a day---
And now the elf has slipped away.

His coming lighted up our sphere---
He must have heard the hail and cheer
Of those who sought high hopes to crown
Before his sun went swiftly down.

He came, a siren, whispering joy;
But sorrow followed to annoy.
And with the parting of a breath,
Brought life to some---to others death.

What joyous hopes, what bitter pain,
Danced thick attendance in his train;
Youth came with dreams---the very old
Looked forth as to a story told.

O little pilgrim, purple clad,
Could thy return again be had,
I'd give---if mine---this world away
To bring back one lost yesterday.---Selected

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question

What do you consider the right way to treat insect pests, poisonous snakes and harmful things generally?

Answer

Theosophy holds there are two ways, two paths that in the *Bhagavad Gita* are called the world's eternal ways—light and darkness, sadness and joy, turbulence and peace, selfishness and unselfishness, love and hate, the sweet and the bitter, and so on. Look about you. Have you not seen people who were naturally selfish, who have lived so long in the lower part of their natures that the lower part seemed to be the whole person. Others are unselfish; it is natural for them to be so. Some are thoughtless, others are compassionate. Some carry almost a halo about them, others the very mark of Cain upon their brows. In the plant world some plants are healing and medicinal, some furnish food, others poison. Plainly some belong to the light, others to the shadow; and of those that belong to the shadow there are two classes—some actively destructive, and others which are passively so. And of the latter class are the vampires and parasites. The same thing is found in the world of human beings, and also in the animal world. Compare the gopher-snake and the rattlesnake. Is it our duty to let the rattlesnake bite us or our neighbors, or to protect ourselves against it?

The Theosophist has no patience with the man who passively sits down and lets evil have its way. He may never do these things himself, but if he allows them to be done without protest, the Theosophist considers such a man a decided failure. I may not bite or poison my own child, but what is my duty if I see him in danger of being poisoned by a scorpion or rattlesnake; or if some unknown man should suddenly come in and bite him, would you consider that I was very virtuous if I quietly allowed it to be done, saying it was part of God's plan? On the contrary, would you not think I was a hypocrite if I took any comfort in the thought that I would not do such dreadful things myself? And the vampire must be treated in the same way, whether we find it in the animal world, the human world, or the plant world. These things which live on others and serve no good end themselves, which merely delight in tearing down, hindering and destroying, ought to be dealt with from the standpoint of common sense. If we care anything about the good in life, if we really want to see good, and not evil, triumph, our duty must be plain.

G. K.

Question

To me, Reincarnation has proved to be a great hope, but a friend of mine, who, I thought, would be as much interested

as I, positively shrinks from the idea of it. All she says is: "Why should I wish to live again here? Why should I wish to come back?" How would you answer her? She has had a very sad life, and it seems to me that the teaching of Reincarnation could do so much for her if she could but see its truth.

Answer

If we take life as it has been and is to very many, one long struggle, full of misunderstanding, injustice, heartache, not to mention the still darker side, and if we regard that as the real life, the only life, then indeed we might shrink from coming back. But that is not real life, it is only a distorted shadow. The real life is far different—it is full of joy, power, love, peace; and it is this life that the soul would have us lead, and it will bring us back again and again to earth until we do lead it.

Only through Reincarnation and the action of the divine law can we hope to attain to the true life, and the secret of it is, not to seek so much that our own lives may be free or to attain for ourselves what we so much desire, but to help to bring a little more sunshine and joy into the lives of others. This is the secret of true happiness given to us by all the great teachers of humanity, and if we would but try it, do we not know in our hearts that gradually all our questions would be answered and all the perplexities of life solved? And when this is so, we shall not shrink from coming back; on the contrary, we shall rejoice that this is the soul's destiny, for it means ever a new opportunity for service, through which alone can true progress be made. It means, too, the renewed opportunity of sharing in the world's work and of taking part in the glorious future of humanity, and of helping to bring it about.

STUDENT

Question

What is the intuition? How does it differ from the ordinary apprehension of truth, i. e., through experience or reasoning? In the *Key to Theosophy*, it is said: "Our duty is to keep alive in man his spiritual intuitions." Please explain this.

Answer

Another Teacher has declared that "Unless ye become as little children, ye cannot enter into the kingdom of heaven." And in the *Voice of the Silence, the Book of Golden Precepts*, we read: "The pupil must regain the child-state he has lost." And this perhaps gives us a clue to the understanding of the power of intuition. For intuition means knowing—it is direct and immediate knowledge without the ordinary process of reasoning employed by the mind. And it is in the child that ordinarily we can see it most active. Has it never come to your notice how keen are children as readers of human nature and character, how quick they are to discern the sincerity or otherwise of those with whom they come in contact, and this in spite of outward appearance, in spite of engaging manners and graceful speech, which too often deceive their elders? What experience has the child had to enable it to judge so accurately, when we, with all our experience, are so often at fault?

What is this faculty, the intuition, and why have we not it? Did we have it when we were children? If so, how came it that we lost it? Can we regain it? Yes; we must have had it in some measure when we were young, and we lost it, as nearly all children lose it, by the prevalent false system of education. For, by this system the child is taught that reason alone is to be the guide, that everything must be tested by reason, and that to know anything "because you know it," and in spite of assertions made by others to the contrary, is—well, to use a long word, unphilosophical. And so the fount of pure knowledge is dammed up, and no longer can this stream of soul-wisdom find an outlet or reflect itself as direct knowledge into the brain. We sometimes speak as "knowing in the heart," in contradistinction to knowing by the brain, and it is this knowing in the heart that is close akin to intuition?

Can we regain it? Yes, of a surety; for what once was ours, may be ours again; nay, it is ours now; but it has become latent, covered up, inactive. To make this faculty again operative, we must clear away the obstructions. It is not anything to be acquired, but to be brought again into use, and, as a delicate instrument which has become rusted and clogged from long neglect and misuse, needs cleaning and delicate adjusting, so the obstructions and the clogs must be removed from our lives and our outer natures become adjusted and purified before we can hear again the voice of the intuition.

Shall We Go to the East for Light

DR. R. HEBER NEWTON thinks that Christianity would benefit by incorporating into itself the spirit embodied in the Oriental faiths. Their adherents, he thinks, live in the constant consciousness of the presence of God, that eternal reality which is to most of us an abstraction. The Oriental is spiritual; we are only intellectual. And so our religion is no longer our very life, that to which all else is secondary: but merely the expression of hopes and beliefs which the mind has created to encourage itself, and to which it turns at special moments.

All kinds of thinkers, beside Dr. Newton, are proposing all kinds of remedies. Having made their propositions, they mostly stand back and wait for someone else to act. Why not apply them? Why not conspicuously do or be the thing they urge others to do or be? If a man thinks

the Oriental mind in closer touch with the divine than the Western, let him bring his own mind into that touch. Then his proposition will come with tremendous force. Anyone can do what he will with his mind, and can expound any kind of Christianity, or any mixture of Christianity with other elements.

But no man need go outside Christianity to obtain the "deep inner light of the spirit." Let us reflect on three or four points, and we have

Light That Lighteth all Mankind

all that is necessary to make a start, to go on with certainty, and to reach the final goal. John speaks of "the Light that lighteth every man that cometh into the world." Christ speaks of the Kingdom of Heaven as being *within us*; and in one of the newly discovered "sayings," he charges his hearers to gain self-knowledge at all costs. And finally Paul speaks of man (and also the body of man) as the Temple of the living God. To find one's (true) self, to find the Light, to find the Kingdom of Heaven, to find God—are the same task. To enter on this task is to acquire the very spirituality for which Dr. Newton would have us go to the East. We can develop it from the teaching we have in the West. And if we have not done so, we shall not do it any the more for wandering amid the ruins of systems for which our minds are unfitted. The West has enough to redeem itself within itself, and for that redemption it waits the coming of men and women who have lit the spiritual fire in their hearts by self-study, by meditation, constant aspiration and compassionate feeling and deeds. When in terms of Christianity the path is preached by those who have gone far upon it, the mind of Christ will be in our midst and all will go well.

Views of History—False and True

THE mistake of applying the principles of natural science to the problems of history has often been pointed out. Even when a scientific theory affords a reasonable explanation of facts in natural history, it does not follow that it will apply to human history. Much less will it do so when it does not afford a satisfactory explanation even of facts in natural history.

This is the case with the principle of "evolution" or "development." It has been shown that the theory or theories which may be more or less accurately grouped under these titles, do not explain even the phenomena of natural science, because they regard only the external details of the process of evolution and do not explain the cause or motive power. There is no fault to find with such theories so long as they do not profess to explain causes and underlying principles, but are considered merely as records of phenomena or classifications of effects. But, unfortunately, there are some scientists, as we know, who do not stop here, but regard the process of evolution as in some mysterious way the cause of evolution; thus leading the ignorant to suppose that the universe can be explained without a God. We will not now pause to examine the extraordinary condition of intellect which permits a man to believe that dead matter can evolve conscious mind, and lower things in general produce higher things, without the operation of a pre-existing will and intelligence. It will be enough for present purposes to mention it.

The result of applying such notions to historical and other human questions we see in some of our school-books. Thus, in a chapter on "Development of State," humanity is supposed to gradually "evolve" a system of government by bringing its intelligence to bear on its surrounding conditions. No regard is paid to the circumstance that there are races which go on century after century without progressing at all. Hence we miss the necessary inference that before a race can evolve, it must be endowed with some power comprising aspiration, intelligence and energy; to account for which we need a profound study of the nature and origin of intelligence and the soul.

Other human concerns are supposed to have pushed themselves upward in the same kind of way. Religion, arts and crafts, literature, all grow out of nothing and develop towards a non-existent goal. This is "bringing out the reasoning power of the child," and this is what the unfortunate teacher (who is perhaps trying to bring his own reasoning power in again) is required to explain.

But we are happy to be able to quote an exception to these paltry notions about history.

Prof. G. P. Fisher, of Yale, in his *Ancient History*, says:

History, although it is not an aimless process, is nevertheless not subject to the

forces and laws which govern in the realm of matter. Physical analogies are not a literal image of what takes place in the sphere of intelligence and freedom.

Reforms and revolutions, which alter the direction of the historic stream, emanate from individuals in whose minds they are conceived, and by whose energy they are effected. The force thus exerted by the leaders in history is not accounted for by reference to general laws. Great men are not puppets moved by the spirit of the time.

This is one sign out of many that the era of forces and tendencies and of dead and impersonal things, and abstractions in general, is passing away; and that personality and mind are coming to be recognized as the agents in all phenomena and events.

A Vindication of Kepler

A WRITER in an astronomical journal has been disparaging the memory of the great Kepler by making out that he did not believe in astrology and that he practised astrology for a living. This writer quotes a passage where Kepler ridicules astrological superstition, but does not quote another passage where Kepler declares his intention of preserving the grain of truth in astrology. The effect is to make the great man appear as an impudent charlatan.

Now, even from the life of Kepler as given in current sources, prejudiced though that certainly is from a Theosophical point of view, it is evident that he was essentially a mystic. He was a Pythagorean, studied the relations between number, geometry and the celestial measurements, and was honored by Bruno and others for this. All great discoverers are mystics who make their discoveries by the old, old methods of using the intuition in the study of nature's correspondences. Then come the scientific drudges who systematize the work of the great discoverer while deriding his methods.

Kepler was a man of fine character, colossal industry and courage in face of ill health and religious persecution, and wide intelligence and intuition. He believed in the ancient Pythagorean science of astrology, and rightly derided the popular thirst for horoscopes. He acknowledged his inability to do more for his inquisitive clients than give a general outline of their character and tendencies, and we can scarcely blame him if, in the interests of his invaluable labors in genuine science, he accepted money that was literally forced upon him by these superstitious folk.

STUDENT

Humanity's Languages

IT has been computed that over 5,000 distinct languages are spoken by mankind. But, if we count dialects, the number of varieties becomes enormously multiplied; in this case, as in all cases where we attempt to apply mathematical numbers to facts, enumeration is baffled by the infinite fine shades of variation. Among the native Americans, as there are no nations, but only scattered and wandering tribes, there are hundreds of dialectic gradations. Even in little England, civilized and well-knit though it be, dialects are spoken which, so far as comprehensibility is concerned, might as well be Chinese. There are said to be more than sixty vocabularies in Brazil, and in Mexico the Nahuatl language has been broken up into 700 dialects.

It seems evident that the number of different varieties of any one thing in this world depends altogether on the hair-splitting and microscopic powers of investigators, and doubtless the dialects might be split up into still smaller and more numerous subdivisions, just as the particles which compose the molecule can be themselves split up.

T.

A New Social Classification

M. EDMOND DEMOLINS has invented a new sociological classification of mankind. He divides society first into two great divisions, the communal and the individual. The communal formation is that in which the individual leans on the community rather than on himself; it is found in the East, and explains Oriental immobility. The individual formation is found in the progressive Occident; in it the individual relies on himself, and this explains the progressive character of the West.

This classification is interesting, but not more true or convenient than other classifications; all classifications are good until we try to define their exact limits, and then all alike break down. M. Demolins has, of course, merely traced the great universal duality in one of its manifestations. All growth is involved in the interaction of expansive and restrictive forces; freedom and law coöperate to yield the perfect life. E.

Narrow Prejudices About the Ancients

IN reading about the conjectures made by explorers as to the objects and uses of various ancient remains, such, for instance, as the Mounds, one is struck by the way in which preconceived ideas limit and hamper the mind. It is absurd to try to explain everything in the light of our own little civilization, with its narrow religious notions, its highly specialized and conventional science, and its crude ideas as to human affairs in general. We do not sufficiently realize that the intellectual atmosphere, generated by a small racial subdivision in a few centuries, is quite special and peculiar, and can have but little connection with the ideas of races that existed thousands of years ago.

Our very words *religion and science* limit the mind; they merely indicate our own distinction between certain classes of investigation or knowledge. The ancient races may have known no such distinction. We say that such and such a thing was probably used for "religious purposes;" we might just as well say for scientific purposes. Religion and science are names for the means by which man studies, evokes, and uses the powers of the soul and of Nature. Religion could never have been created, nor could it have maintained its hold, unless it had at some time actually worked. The ancients did not take all that trouble over a mere "superstition." It was a science—a science much more worthy of the name than our mechanical and chemical system—a science of the human soul and of the divine potencies residing therein and in Nature—a science by which these could be evoked as agencies for the welfare of humanity.

Good Work of the Celtic Congress

A REMARKABLE gathering of representatives of the Celtic peoples of Ireland, Wales, the Scottish Highlands, Brittany and Cornwall has just been held amid great enthusiasm, and is another evidence of the wonderful Celtic revival that has been in progress for the last few years. The Celtic people have at last begun to awaken to their unique position and enormous possibilities. In music, poetry and the higher form of patriotism they rank high. In this age of materialism in life it is a great thing to have some idealists left, and amongst the Celtic peoples the far off echo of the statelier past still lingers. They have yet a characteristic music and an imaginative literature of which they are justly proud. The ancient language is being fostered and a greater feeling of unity is growing. A very striking feature of this Congress has been the adoption of the beautiful Welsh anthem, "Land of my Fathers," as the national anthem of all the Celts. Both words and music are noble and elevating.

Restoration of the Stadium at Athens

THE work of restoring the Athenian Stadium, which was begun in 1895 by the Greeks, has proceeded until they have just about completed the fifty-two thousand marble seats of the amphitheatre in creamy-white Pentelican marble. The restoring committee intends building a propylæum or entrance like the ancient one.

The ancient stadium was made in a hollow space, 680 feet by 130, scooped out of the soil on the bank of the Ilissus. Lycurgus leveled this site and laid it out. Herodes Atticus furnished it with tiers of marble seats capable of accommodating at least 40,000 spectators. E.

The Pavilion, Brighton, England—Frontispiece

THIS week's cover-page of the NEW CENTURY PATH shows the entrance to the Pavilion at Brighton, England.

Members of the Universal Brotherhood, and all readers of the NEW CENTURY PATH in sympathy with the objects and work of the Universal Brotherhood, will remember the great Universal Brotherhood Congress held at this Pavilion in 1899, which marked one of the great epochs in the history of the Universal Brotherhood and Theosophical Society.

An article, well worth perusal, will be found on page 10 of this issue of the NEW CENTURY PATH, giving interesting data and facts connected with the Congress of 1899.

To the Members of The Universal Brotherhood Throughout the World: In order to expedite improvements in the different Departments of The Universal Brotherhood Organization, it is necessary that all communications, connected with the work of the Universal Brotherhood, should be directed to Katherine Tingley, Loma Homestead, Point Loma, California.

(Signed)

KATHERINE TINGLEY, Leader and Official Head

Some Views on XXth Century Problems

Hynotized Crime Grow- ing Rapidly

NEW YORK and Chicago are both getting alarmed at the very considerable increase of crime going on in both cities. A Chicago paper has also examined the criminal statistics of Mississippi, and sums up with the remark that life is about half as safe in that State as in Southern Italy.

Various remedies are proposed—more police, swifter punishment, severer punishment, and so on. There is no need to enumerate the suggestions offered for the suppression of crime.

One of the papers, which is most horror-struck at the figures, contained on the same day as that on which its analysis of the figures appeared, full accounts of several murders, one of them carefully illustrated; notices of one or two suicides; and an article on hypnotic suggestion. The paper contained, in fact, an analysis of the problem, an article on the chief cause of the phenomenon, and an example of the cause in action. Each account of a murder is a hypnotic suggestion in proportion to its vividness; and the matter is much worsened by pictures.

The other day a man, who had causelessly murdered his wife and children, explained that many months before he had read of a case of the same crime. Suddenly the idea occurred to him: *Suppose I should do that!* To his horror the idea grew and grew, dominated his imagination more and more, and at last—as he said—compelled its own fulfillment.

Every town, and almost every village of this country, possesses a daily paper; and hardly a number is issued of any one of those papers that does not contain a glowing account of a murder. If the village in question does not provide the material—well, the next one does, or the nearest large town. Rather than have no murder, they will describe one that occurred in a distant State, or even in Europe!

For various reasons weak and eminently impressible minds are increasing in numbers. And a study of crimes will show that a large proportion are the work of persons of this kind, *not* of hardened and determined criminals. More often than not they have an evil bent, not strongly marked, but sufficient to make their minds a fruitful soil for the seeds which every newspaper they ever buy, scatters.

The remedy is in our own hands. We do not permit the publication of the intimate details of divorce cases. Why? Because we recognize that it would “pander to an appetite”—which means that it would create pictures in unhealthy minds. Why do we not perceive and act on the very same truth in the matter of murders?

While we allow the pictures of murdered bodies, of the rooms in which they were found, and of the murderer, with his knife or axe, we are carefully creating the material for tomorrow's issue, and for next week's moralizing and head-shaking over statistics. STUDENT

In Praise of Abstracts in Languages

WHILST for commercial purposes the advocates of various artificial “universal languages” are urging the adoption of their protégé, Latin is quietly taking a new breath and coming to the front as an international *scientific* language. Valuable scientific work is now reported in so many languages that no one can hope to keep abreast. To do so, he would have to know Russian, Japanese, Italian, French, Spanish, German and English, at any rate; and also one at least of the Scandinavian tongues.

Cornell University, in publishing its *Studies from the Department of Neurology*, prefaces each paper with an abstract in Latin. An educated scientist, say in Japan, not knowing English, but knowing Latin, will read the abstract and then be able to decide whether he needs to have the article translated for him.

The precedent is excellent, and additionally so because of the abstract itself, whatever its language. One often wishes that lengthy magazine articles were prefaced with half a page of abstract. How many people wish to read twenty pages of argument that the universe is a blind mechanism? But an article to that effect might open very intelligently, and it might take one ten pages to discover the ultimate conclusion. STUDENT

Indictment of Educational Methods

PROFESSOR WENDELL, of Harvard University, is of opinion that the younger generation of Americans is hardly educated at all. It is the victim of the kindergarten system.

The principle of this system is that you let the child think he is playing when he is really learning. And, as far as possible, this general principle is carried out in later education.

The result is—according to the Professor—that our young men grow up with no power of fixing their attention on anything that does not interest them. Anyone can read a newspaper or a novel (with some skipping). “But the moment anything be long or dull—sermon, poem, or problem, it is all one—only those can keep their wits from wandering who have somehow learned to control them.”

But by the “old” system of education, the classical one, attention had to be fixed on Latin grammars and *Dryasdust's Homeric Notes*. Will was developed to a considerable power of holding the mind.

Professor Wendell's indictment can go much further. The general and accepted training of children in the world is a no-training, is a system of concessions. Their whims are respected, and therefore encouraged; they grow up with a thousand desires; or rather with the *principle of desire* in luxuriant vitality, and the principle of *will* sleeping. It is *that* fact at which the Professor is really aiming. There is no harm in making education as attractive and as easy as is compatible with efficiency. Let us keep the legitimate lures, if whilst doing so, in the conduct of general life we train the child to self-control, teach it that the thing desired is not necessarily desirable, and awaken in its nature an honorable love of holding impulse and appetite in check. We have in fact to teach it its duality, and encourage it to plant itself in the inner and higher, making that the ruler. You may teach Latin with years of *Dryasdust's Delectus* and yet have a sensualist. Or you may teach the alphabet in rhyme, and geometry with colored blocks, and yet turn out a wise and self-controlled citizen and parent. STUDENT

The Senses, Four, Five and Six

PROFESSOR HYSLOP, of Columbia University, is maintaining, in *The International Journal of Ethics*, that the march of evolution as we see it, does not justify the assumption of any intelligent purpose behind the universe.

It depends how you look. If a deaf man goes out into the open air, he may come back and explain to his children that an inspection of nature by means of the *four* senses does not justify the usual assumption that there is any such phenomenon as sound. They tell him that there are *five* senses, and he replies that this is but an assertion, and moreover rather insulting to himself. They suggest that he should try and cultivate this mysterious fifth sense by attempting to place himself in the closest receptive touch with nature.

He may then try it for five minutes, and, hearing nothing, be more confirmed than ever in his view. Or he may refuse even that, on the ground that even if he *did* come to fancy he “heard” something, it would be but an auto-suggestion, an illusion, the result of “expectant attention.”

He might further add that inasmuch as those who claimed to “hear” things out of doors reported *different* things at the same time, and even the same person different things at different times, the “sounds” were an illusion beyond any doubt whatever.

He might go on somewhat thus: “You yourselves admit that the savage's sense of hearing, as you call it, is superior to that of civilized man. Do you not see that it is in the same category as the savage's animism, the savage's ascription of consciousness to storms and dawn and rain, illusions which civilization dissipates?”

The young people would have to leave their elder alone. And in the same way, those upon whose consciousness the purpose of the universe is dawning will best serve the race not by argument, but by developing their own certainty. Every one knows that argument reinforces both contestants. But conviction is infectious. It gets in behind. STUDENT

Art Music Literature and the Drama

Holy Wells—Truth in the Legend Concerning Them

PERHAPS, as our nature asserts its loyalty to the laws of thought and feeling which govern the regal powers of the soul, the words "Holy Wells" may, of themselves, as they fall on the ear, offer suggestions which will serve to dispel our ignorance concerning them. Perhaps, too, in our hearts may arise something akin to admiration for those who have preserved for us forgotten truths.

The time is now past for refusing to admit that the waters of the earth manifest a wide diverging sweep of characteristics. Not to acknowledge it is to publish our pace as being behind the times and, incidentally, to announce our disbelief in the sacred writings of all nations. Faith in the healing properties of certain waters induces the simple hearted to take long pilgrimages; old and young walk weary miles to kneel by the sacred and revered founts.

And what if they do leave behind them tokens of their gratitude!

Amused smiles have often descended from skeptical superiority upon those simple relics. But it is well to remember that the march of the microscope is as slow as the intuition is swift. Science, by a long, laborious route, now proclaims what "ignorant" peasants have been declaring for ages.

Nature's laws are just. Surely joyous realizations await those who have woven into their lives the deeper harmonies of the "wisdom science." It may be that their loyalty to the forgotten knowledge of the soul will strike a light, resounding keynote, inspiring courage, to defy the ridicule, persecution and oppression which seek in all lands to dim the vision of truth.

ANNIE P. DICK

HOW many know that M. Fantin-Latour, recently deceased, was the intimate friend of a group of men even now recorded as *anciens*, Ingres, Delacroix, Millet, Courbet and Corot? He has lived obscurely, working quietly and unostentatiously in his little quarters in the *Rue de l'Ecole des Beaux Arts*, caring nothing for fame or money. His portraits carried his fame to England, his lithographs have made him famous in America; but he attempted something never before undertaken with real seriousness of spirit, and that was the translation of music into the terms of art. Music was the passion of this quiet man. Schumann, Brahms and Wagner were the tone masters who spoke most intimately to his heart, who dominated his moods and to whom he dedicated that which he declared to be the best in his art. It was his custom to wrap his soul in music, as it were, using his pastels to translate the ideas and emotions of that music into color and form. His pictures were by no means and in no sense illustrations. They were translations, a setting over of the ideas expressed by tone into the idiom of color and of form. His work was a departure in many ways from the traditional, for of laws he recognized those whose source was not without but within.

STUDENT

A Version of Cicero's Essay on Old Age

IT does no harm to open the covers of musty volumes once in a while, if only to contact something of that sincerity which characterized, almost without exception, the old writers. Many of their one-time beliefs are now proven facts. The following extract is interesting, not alone because it was the first translation of a classic in the Western World, but also because it was printed in the shop of Benjamin Franklin, who himself wrote the following introduction. The book is a translation of Cicero's celebrated treatise on old age, in which he refers to an ancient medicinal well, the water of which was supposed to be almost magical in its properties:

This Version of Cicero's *Tract de Senectute*, was made Ten Years since, by the Honourable and Learned Mr. Logan, of this City, undertaken partly for his own Amusement (being then in his 60th Year, which is said to be nearly the Age of the Author when he wrote it), but principally for the Entertainment of a Neighbour then in his grand Climacteric; and the Notes were drawn up solely on that Neighbour's Account, who was not so well acquainted as himself with the Roman History and Language. Some other Friends, however (among whom I had the Honour to be ranked), obtained Copies of it in MS. And, as I believed it to be in itself equal at least, if not far preferable to any other Translation of the same Piece extant in our Language, besides the Advantage it has of so many valuable Notes, which at the same time they clear up the Text, are highly instructive and entertaining, I resolved to give it an Impression, being confident that the Publick would not unfavourably receive it.

A certain Freed-man of Cicero's is reported to have said of a medicinal Well, discovered in his Time, wonderful for the Virtue of its Waters in restoring Sight to the Aged, That it was a gift of the bountiful Gods to men, to the end that all might now have the Pleasure of reading his master's Works. As that Well, it still in being, is at too great a Distance for our Use, I have, Gentle Reader, as thou seest, printed this Piece of Cicero's in a large and fair Character, that those who begin to think on the Subject of Old-Age (which seldom happens till their Sight is somewhat impair'd by its Approaches), may not, in Reading, by the Pain small Letters give the Eyes, feel the Pleasure of the Mind in the least allayed.

I shall add to these few Lines my hearty Wish, that this first Translation of a Classic in this Western World may be followed with many others

performed with equal Judgment and Success; and be a happy Omen that Philadelphia shall become the Seat of the American Muses.

HOW much lower can our theatres and the dramatic ideals of some people sink? The latest instance is the engagement at a most fabulous price of a certain woman whose sole qualification is her spectacular experience in Europe, during which she has figured in three elopements and two divorce court sessions—a woman whose conduct can only be explained on the ground of mental aberration. H.W.

A HOLY WELL—INNISFALLEN, IRELAND

TENEBRAE—FRAGMENT

by SWINBURNE

O SPIRIT of man, most holy,
The measure of things and the root,
In our summers and winters a lowly
Seed, patting forth of them slowly
Thy supreme blossom and fruit.
In thy sacred and perfect year,
The souls that were parcel of thee
In the labor and life of us here
Shall be rays of thy sovereign sphere,
Springs of thy motion shall be.
There is the fire that was man,
The light that was love, and the breath
That was hope ere deliverance began,
And the wind that was life for a span,
And the birth of new things, which is death.

Then, whosoever had light,
And, having, for men's sake gave;
All that waned against night;
All that were fount in the fight
Swift to be slain and to save;
Undisbranched of the storms that distroot us,
Of the lures that enchain unenticed;
The names that exalt and transmute us:
The blood-bright splendor of Brutus,
The snow-bright splendor of Christ.
Then all chains are undone;
Day then seems but as night;
Spirit and sense are as one
In the light not of star nor of sun;
Liberty, there is the light.

"Hatred ceaseth not by hatred; hatred ceaseth by love."

"SHE has failed at a critical point. I cannot understand it, for I thought I could trust her judgment anywhere. It is inexplicable." "Well," the friend replied, "I cannot quite agree with you."

"But her character, as you know, is above reproach. She is the reverse of envious, she could not be jealous, she is most industrious, and of selfishness, in the ordinary sense, she has absolutely none. She has been tried on ordinary moral lines and not found wanting. Why do you feel you could not trust her judgment?"

"Let me question *you*," was the reply. "Has this friend of ours compassion? Does she seek to understand the faults of others, or does she merely draw away from them in disgust?"

"No," was the hesitating reply, "she is not compassionate, that I admit."

"Has she judgment, can she discriminate?"

"I thought so, until the last incident, and this, as I say, I cannot understand."

"I understand," said the older woman, "vanity has stepped in. She is not the girl we once knew. Vanity has slided over, like some poison veil, all that was once so pure. She is self-hypnotized with —"

"Self-hypnotized? Impossible——"

"Yes, self-hypnotized,—with the conviction of her own invulnerability."

Never were truer words spoken, and they might well have been spoken to half the race, for never before these days have such words been so needed. Times are not now as they once were, nor are women the same, for, as they have risen to greater heights, so they have faced manifold temptations and do well indeed when they do not fall.

All conditions have changed. When womanhood as a whole felt the great urge, in this last century, one of its expressions—as a suddenly appearing island might be the expression of some mighty subterranean upheaval—was the modern "woman movement." All womanhood has been affected, thousands of women consciously so, and these have stepped into a freer life. But with greater opportunities they have been forced to face greater dangers. That was inevitable and of the Law.

In taking up the battle for other women, the few souls who went out

A Danger Point

upon the skirmish line for humanity's sake have been brought face to face with themselves. They have been forced to do battle with their own natures. Some have not been valiant, it must be confessed. Others have been glorious and true warriors, conquering selfishness, luxurious tendencies, indolence, fear, timidity, ignorance. They have battled their way to that citadel wherein is shrined the soul. They have won a place within that fortress around which storms may beat, but into which they can never penetrate.

But the battle is not over. It is not enough to merely gain the heights. One must be continually on guard to keep the position gained. Lacking a true philosophy of life, lacking that deeper understanding of the soul and the human mind that only compassion gives, it is not strange that at just this point so many strong women step upon the quicksands. There is the old, old story—of the fall that cometh after pride. Unwittingly, unthinkingly, they permit the vanity that clouds judgment and destroys discrimination, to sweep in upon their souls, and then,—

Oh! if women—and men, as well—could only realize the exactness of that simile so often used, by which travelers along the pathway of the higher life are compared to mountain climbers. If they could know that to pass safely the first crevasse does not insure the safe passage of the second nor the third; if they could only know that to look down or backward on the plain is a very different matter from looking down when one stands on the edge of an abyss, how many might be saved. If women could remember that it is the

over-confident climber who stumbles, that ignorance is far less dangerous at critical times than that knowledge which is transformed into something else by vanity, what suffering would be avoided.

But the saddest of all is when one who is wiser sees a sister woman in a false position; sees her all unconscious of her danger. If sorrow has done its work upon your own life, perhaps you dare speak. You may rush forward to save her, but your hand will be thrust back and your heart will be chilled by words that you thought could come only from the bewildered brain of some drowning man.

"You are trying to get the better of me. You are only working some

THE MARSHES OF GLYNN

Fragment

by SIDNEY LANIER

OH, what is abroad in the marsh and the terminal sea?
Somehow my soul seems suddenly free
From the weighing of fate and the sad discussion
of sin.

By the length and the breadth and the sweep of the
marshes of Glynn.

Ye marshes, how candid and simple, and nothing with-
holding and free,

Ye publish yourselves to the sky and offer yourselves
to the sea!

Tolerant plains, that suffer the sea and the rains and
the sun,

Ye spread and span like the catholic man who hath
mightily won.

God out of knowledge and good out of infinite pain,
And sight out of blindness and purity out of stain.

scheme. You are jealous and suspicious. I am in no danger. I can take care of myself."

Perhaps, knowing what the result will be, you insist upon dragging this sister woman away from the precipice's edge, hoping that she will awaken to her peril. You may, perhaps, succeed in saving her at that particular time. There is one chance in ten that you will succeed in awakening her. There are nine chances in ten that you will fail and that the bitterness which is the poison fruit of vanity she will simply taste at a later time.

Why? The reason is very simple and all true philosophies discuss it. It is found in the fact that vanity is a vice, as disintegrating in its effect as any other vice and easily the mother of them all. It may seem strange to us, too, but it is a fact that the line of demarcation between vanity and sensuality is very, very thin. Analyze the features of the woman who prides herself upon being invulnerable. What about the mouth? What of the lines about the eyes? Tell-tale indeed, are the features of the purest face, when to pride is added the chill of un-compassion.

Women of our day, greater opportunities have forced upon you, greater duties, greater responsibilities, mightier obligations to humanity and to each other, than ever before in all time. Watchmen indeed are you "over the house of Israel," faithful only when you are deaf to the vanity that whispers, "I am invulnerable; I am not as other women are." E. W.

The Rights of the Wife

MRS. STANNARD, better known to the reading world as the novelist "John Strange Winter," in a recent letter to the *London Mail* recounted the following incident, of which she was an eye-witness; and this in the Twentieth century!

I had a most curious instance of what seemed to me like apathy during the course of the last month. I went out of my house one afternoon, intending to take an omnibus from the Clarence Hotel for Victoria. As I crossed the road I heard screams, and saw that a knot of people had gathered, quickly recruited after the extraordinary way of a London crowd. I quickened my steps and arrived at the corner in time to see a young woman, apparently not more than two-and-twenty, very small and very comely, gather herself up from the pavement, her mouth streaming with blood, her dress torn open at the neck, and the whole side of her neck frightfully swollen. Above her stood a young man of five or six and twenty. He was of middle height and had evidently struck the blow which had landed her on the pavement.

The bystanders stood around in apathy, and I saw the man preparing to knock the woman down again. Quick as thought I stepped in between them and stretched out my left hand to protect the woman and faced the man. I said: "You only touch her again through me." And I roundly rated him, up hill and down dale, for his brutality and cowardice in striking so small a creature. Somebody in the crowd said: "She's his wife," in a tone which implied that, such being the unfortunate fact, the man was perfectly at liberty to treat her as he would.

I stood between the pair for about ten minutes, trying to control the excitement of the wife, and to sting the husband into something like shame. The crowd rendered no assistance whatever, but remained perfectly silent. Then two policemen came up. I realized the fact with a gasp of relief, having immense faith in the police, especially the police of this district. These were unusually fine specimens of their kind, but I was never so surprised in my life as I was by the coldblooded way in which they reviewed the case. They told the woman she was making too much noise, and mildly recommended the man to go home. The girl, who was extremely neat and clean, as were her children, declared that she went in hourly fear of her life, and that she could not go on living in this state of terror any longer. The police were absolutely expressionless and apathetic, and their attention was turned to bidding the wife behave herself.

I said, "Are you not going to take this man up?"

"No, lady," said one, "there is not sufficient damage."

I said, "The woman is streaming with blood, the side of her neck is swollen and bruised," when one of the policemen delivered himself of this astounding remark, "Well, you see, lady, we can't take up a man for giving his wife a bit of a bat on the face."

Is it a fact that the police cannot take up a man for ill-using his wife unless a

certain amount of damage is done? Who is to determine the amount of damage? Surely the law of this country is for the protection of wives as well as for administering to the comfort of husbands. Must a limb be broken, or must the unfortunate victim be rendered unconscious before the police can exercise their authority?

Now, I do not wish in this letter to seem to be calling down maledictions upon the heads of all policemen, or even of these two. They were not brutal; they were not rough; they were simply apathetic and totally indifferent to the rights of the wife. *If the man had struck me as he struck his wife, they would have taken him into custody immediately.*

Interpretations Under Hypnotism

ACCORDING to one of our exchanges there is now being given in New York city a series of "musical interpretations under hypnotism." The *danseuse* is under the control of her "professor"—a sort of Svengali, apparently—and after being sent into a trance is led to the front of the stage, where she remains standing still until the music is played. To quote from the description given by one of the admirers of this horrible performance, "The hypnotized woman's acting became almost savage in its intensity, expressing fearful violence. Music, half religious, half sentimental brought the entranced performer to alternate paroxysms of despairing humility and fear. At times she cowered imploringly on the floor." The writer closes with the statement, "Her facial expression alone is oftentimes out of tune."

We should think it would be. What can be said of such a performance that is not condemnatory? What of its effect upon an audience? What of the effect of such performances upon the dancer herself, her soul absolutely driven from the helm, her body as much at the mercy of every passing emotion, whether suggested by music or by her "professor," as is the falling leaf at the mercy of the whirlwind? If Theosophy has done no other service, it has declared itself in unmistakable terms against hypnotism. But where is the higher womanhood that does not utter protests against such degrading scenes? ROSE-MORALS

by SIDNEY LANIER

WOULD that my songs might be
What roses make by day and night—
Distillments of my clod of misery
Into delight.

Soul, couldst thou bare thy breast
As yon red rose, and dare the day,
All clean, and large, and calm with velvet rest?
Say yea—say yea!

Ah, dear my Rose, good-bye,
The wind is up; so drift away,
That songs from me as leaves from thee may fly.
I strive, I pray.

A GIRL of twenty, living in Indiana, recently showed great spirit and courage in her own defense. The man whom she was to marry, having listened to a slander concerning her, broke off the engagement. Strong in her innocence, this young girl had her fiancé and the slanderer as well brought before a meeting of the church to which they belonged. There she plead her own cause so ably that, by the unanimous vote of those assembled, the young man was censured for his readiness to believe ill of a pure girl, and the slanderer was obliged to publicly acknowledge her fault.

We congratulate this young girl upon her escape. Had she been married to this man, perhaps the mother of several children before she awakened to his real character, her position would have been a more painful one, even had she had the courage to act. These occurrences are significant in that they are all signs pointing to woman's final emancipation from unwise timidity and false notions of what her position in life really is. Such women should be not the exception but the rule. M. M.

THE condemnation that a certain English writer has been gratuitously offering to American women has sent a ripple into the quiescent waters of ministerial thought. The papers are well-nigh through discussing the matter and the ministers have begun. It is a sign of the times that many are looking at this vexed question of "woman's sphere" with a breadth of view that would have been impossible a generation ago. The Rev. David Beaton of Chicago, says: "The real power of woman lies in her spiritual ideals. If she loses those ideals and becomes selfish, materialistic and frivolous, the very soul of society will perish with her. Woman's function and nature is at heart sacrificial and ennobling, and all her education and opportunities must be given in the service of the heart."

New Theories About Stonehenge

THE date assigned to Stonehenge has undergone many and wide variations. Nennius, writing in the Ninth century, places it at about four centuries before his time. More modern writers, regarding the remains as Druidical, vary the date of construction between 100 years before Christ and 500 years after. Nennius asserted that the stones were placed in memory of some slain British nobles, but Inigo Jones believed them to be a Roman temple.

A thorough official reinvestigation has just been made by a committee, with the assistance of the owner, Sir Edmund Antrobus. This committee also called to its assistance the astronomer, Sir Norman Lockyer, and together they decided that the authors of the structure were probably Neolithic men, and that they did their work about seventeen centuries before Christ. Let us consider the nature of the work.

Stonehenge consists of two circles of stones, one within the other. Within the inner are two ovals, and within the inner oval is an "altar" stone, fifteen feet in length. The outer circle contained thirty upright stones, sixteen feet in height and eighteen in circumference. Mounted on the tops of these, stretching from one to another, were thirty more of equal size. The inner circle contained forty smaller stones, and the inner oval nineteen.

Obviously it would tax modern resources to their limit to erect this structure, especially the outer circle. Who, then, were the Neolithic men, who effected this surprising piece of engineering work? Diminutive savages! Says Grant Allen:

In stature the Neolithic men were short and thick-set, not often exceeding five feet four inches. . . . In general culture they were about at the same level as the more advanced Polynesian tribes when they first came into contact with European civilization.

They knew nothing of metal, and all their implements were stone.

Let us ask a Polynesian tribesman by what method he would propose to erect two stone columns sixteen feet high and eighteen in circumference, and then bridge the tops of them with another the same size!

The Neolithic men arrived in England when as yet there was no channel, when England and the European continent were one; and when Spain and Africa were also one. So it was possible to walk from Egypt to Salisbury Plain, where Stonehenge stands. All along that walk are similar structures; in the Mediterranean basin, in Spain, in Africa and Sardinia, and in France. At Carnac, in Brittany, the stones are eleven thousand in number.

Who took that mighty walk, as well as many others, leaving such extraordinary remains? For we may leave the Neolithic men entirely out of account. And the date selected on astronomical grounds by Sir Norman Lockyer, may just as well be 25,000 odd years—that is, a whole precessional epoch—earlier. And what was the purpose of the structure, its central point, the double oval, and the surrounding double circle, and the vallum and ditch outside them—the seven elements? Possibly the builders intended that future ages should ask the question, and that the answer should only come when the world was ready, in understanding their work, to understand them.

STUDENT

The "Mound" of the Mississippi and Ohio

THOUGH the early colonists of the Mississippi and Ohio valleys did not discover any human traces except those of the Indians, later and more learned explorers found that this area was thickly covered with the relics of an older and more advanced race. The chief of these were mounds of earth, whose great number and peculiar struc-

ture renders them of unique interest, for they differ widely from mere burial mounds such as are found in many parts of the world.

They are found throughout the whole region from the Rocky mountains to the Alleghanies, and from the great lakes to the Gulf. Ohio alone contains 10,000; in Illinois 5,000 are found within a radius of fifty miles. From Florida to Texas they abound and in smaller number are scattered through territories outside these limits.

From the form and structure, which vary greatly, various objects have been assigned to the mounds. They may be classified as defensive works, sacred enclosures, temple mounds, altars, burial mounds, animal mounds, and miscellaneous or unidentified.

The defensive works are found chiefly near the Alleghanies, are always near water courses and are placed on bluffs or other sites suitable for fortification. They were evidently intended not merely for defense, but for permanent garrisoning against the depredations of nomad tribes. They consist of walled enclosures, with trenches, out-works, gateways and other usual accessories of a fortification.

The "sacred" enclosures is a conjectural name given to the walled enclosures found in the low lands, but there is nothing to show

that religion was their purpose. Unlike the forts, they are regular in shape, being circles, squares, polygons, etc.

The "temple mounds" are a series which are supposed to have been sites of temples. They may be but a few feet high and several acres in extent; in some cases much higher and larger. Some are pyramids, round, square or oval, with a level top and sometimes terraced. The one at Cahokia, Ill., is 700 feet by 500 at base and ninety feet high.

The burial mounds are those which contain bones and objects such as are buried with the dead. The animal mounds, occurring chiefly in Wisconsin, are only a few feet high, but some hundreds of feet in linear extension.

They are in the shape of various animals and birds, such as the buffalo, bear, wolf, otter, lizard, eagle. The "snake mound" in Ohio is one of the most celebrated. It winds along the summit of a hill for 700 feet and appears to be swallowing an egg represented by an oval mound 160 feet across.

Hints on Irish Archeology

HISTORY tells us that the houses of the ancient Irish were round, and built of wood. Among the better classes, a residence consisted of a number of these circular structures grouped together. Each member of the family had a separate room, or "house," also the guests. And there was always a special one, occupying the most favored spot, called the "greenan," that is, "a sunny-house," for the private use of the women of the household.

The home-life of the Irish has always been characterized by a gracious warm-hearted hospitality.

It is accepted that the influence of education on childhood expresses itself in the character of manhood and womanhood. So, perhaps, this royal characteristic of the Irish race may be traced to its education in early, or rather ancient time, when the people were instructed by the most learned in the land—the Druid priests and priestesses.

To be a Druid, the course of training was sometimes protracted over twenty years. Officers of State were always chosen from among them. "On all public occasions they held the place of honor near the King."

Education was completely under their control. And may it not be that the harmony, the universal nature-love in their teachings, greet us through the Irish heart!—a heart that has gladdened and inspired many wanderers seeking for truth, their only home.

Nature

Studies

One of Nature's Desserts

WHAT salted peanuts are to the city boy, that the hazelnuts, or wild filberts, are to the country children of the northern middle United States. The gathering of them is in itself a joy, as they ripen, like most nuts, in the autumn, when nature has softened the summer heat and put on her gorgeous dress of flaming reds, yellows and browns. Then some day a merry party of young folk, duly attended by their elders, starts, duly provided with baskets and sacks, and ravages each long familiar hazel copse for its treasures. The squirrels are at the same task, but as they prefer to wait until Jack Frost has turned the nuts out of the burs, their human rivals take advantage of them by gathering them before that occurs and placing them in layers on shed roofs and such places to freeze and dry.

The jolly work of gathering them is soon done, despite side trips to the wild grape vines and the lingering wild plums. Then there is a cool evening ride triumphantly homeward, seated on the well-filled sacks, which the next day are emptied and their contents jealously guarded from enterprising daws and squirrels, until the nuts can be shaken out and put away for use at little gatherings in the long evenings of winter. Though the kernel is seldom larger than a pea it is very sweet, and, taken in connection with roasted apples or some simple cake, is a feast to the simple rural taste, and much healthier than a city "spread."

We hear that enterprising horticulturists are cultivating and "improving" the hazelnut, but we hope we shall never see any of these and thus lose the woodland flavor of our boyish memories. To domesticate them is almost as much a sacrilege as to cage a partridge, or any other sturdy denizen of the forest glades.

HAZELNUT OR WILD FILBERT

"Playing 'Possum"

WHEN an opossum is pursued it takes to the trees, which it can climb at a lively rate; but when it is caught it feigns death, and will bear a good deal of teasing and thumping about without showing signs of life. It is, however, alert and on the watch for an opportunity to escape, which it does not fail to improve when found. This characteristic is so marked that the expression, "Playing 'possum," has come into use for such action.

There are at least two kinds of spiders at Point Loma that play 'possum. One is a good-sized spider, shining black, with the exception of its back, which is a brilliant yellow, dotted with black. Its body is somewhat angular and looks as if it might be encased in a shell. It suspends its web over the center of the deepest part of a cañon from a long thread which it has thrown across from a bush on one side to one on the other. If some pedestrian in the cañon comes in contact with this web and breaks or disturbs it, the spider, which is in the habit of sitting at the center of the web, spins and swings on a silken thread to the ground, where it drops on its back with its legs folded tight over the under side of its body, and there it lies like some inanimate object, looking more like a piece of hard coal than anything else. As long as it is under close scrutiny it shows no signs of life, but let the attention be turned away for a moment, and away goes the spider.

There is quite a small spider, of a dull, brownish color, which, on being touched by a person, immediately folds up its long legs tightly against its body and looks like a little lump of earth, and nothing more. No one would suspect its being a spider, and consequently would not make war upon it as such. What wisdom has this little mite!

Cold Storage in Nature

THE preservation of fruits by subjecting them to a low temperature is an achievement of which civilized man is very proud, yet it is a very old device in the bountiful economy of Nature. The coast of Northern Siberia is mainly composed of marshy flats called tundras, and to these congenial haunts vast flocks of ducks and other aquatic and shore-frequenting birds, which have been driven southwards by the setting in of the Arctic winter, return in springtime. As these birds arrive almost before the snows have melted, or any of the new vegetation has yet begun to grow, hospitable Mother Nature stands confronted with the problem of feeding her innumerable guests.

Like all wise mothers, she has a habit of looking ahead, and has already ample provision in store. The previous autumn, when the bushes were loaded with sweet berries and juicy fruits, a protective cover of snow was softly spread over the whole. Thus an inexhaustible supply of nourishment was put into cold storage to keep until the warmer days melt the snow, unlock the cupboard door, and invite the hungry travelers to their much-needed repast.

The Mystery of the Mist

JANUARY in a tropical land! Glorious, scorching sunlight; blue, cloudless skies; tall, leafless trees, covered with scarlet and white flowers; the air filled with the twittering of the many-hued birds and butterflies; high, rushing, upsetting, nerve-distracting winds—it is day in the dry season.

Exquisite moonlight; the air filled with the voices of the myriad insect world—hundreds of fiery flies, carrying two lights, like lanterns in the sky; the tall trees and palms, sparkling with the heavy dewdrops; and all the distant hills bathed in soft, purple light—it is night.

Soft twittering and gentle breeze, golden light of the rising sun; wide-stretching plains, covered with waving sugar canes; the distant hills no longer there! Filling all their valleys, tenderly nestling in every corner, lies the enfolding cloak of the mysterious mist, and only their tops remain, like little islands rising from the sea.

It is the early morning of the new day. B. G.

When the Queen Whistles

A PARAGRAPH has recently gained circulation to the effect that the drumming on pans and resounding metal trays does not in any way attract the swarming bees, as it is popularly supposed to do. It is stated that the connection between the noise and the settling of the bees is merely imaginary.

The noise, so it is reported, is a relic of an ancient custom by which the owner of the bees informed his neighbors that a swarm was on the wing and that he was hot-foot after them, thus maintaining his claim.

But, unfortunately for the reporter's exuberance, this pretty theory must be relegated to the limbo of fiction. A bee expert gives quite an interesting explanation of this popular idea. The queen, he says, maintains a low but quite audible whistling, which acts as a focal point for the moving swarm. The sound being overcome by the beating of pans, the queen, unable to control her bands of workers by means of sound, settles in a convenient spot until an opportunity again occurs to proceed uninterruptedly. So well known is this fact that a bee keeper will often imitate the whistling at the mouth of a hive, in order to call the bees to their new home.

Universal Brotherhood Organization

Central Office Point Loma California

ON THE SEAWARD SIDE OF POINT LOMA—LOOKING NORTH TOWARD MISSION BAY

The Universal Brotherhood Congress, Brighton, England, 1899

REPORTS of congresses are not ordinarily interesting to those who do not belong to the body in session; frequently not even to those who do.

But the Universal Brotherhood Congress, held in the autumn of 1899 at Brighton, in England, was neither of local nor temporary interest and importance. Within a very few years it will begin to be looked back to, and its records examined, by a wider and wider circle of people. For the germ of a program was there outlined which, in its ultimate and utmost development, will have something to do with every element in human life. It is the program of a movement for the elevation of every department of human activity and thought. When, in the ordinary course of the discoveries of science, someone announces new facts of a startling character, they are met either with simple incredulity and neglect, or with active hostility. Then, for a time, no more is heard of them. But truth presents herself in cycles. When she has sounded a keynote, she does not at once build upon it.

The point in the cycle comes again, and then the silent work of the interval becomes manifest. Men's minds are ready for the new things; other departments of research are now prepared to harmonize with the new facts. They suddenly find their place and become the starting points of new paths. And it is probable that no interim insistence upon them, no propaganda in their favor, could hurry the arrival of that moment.

This law applies to the English Congress of 1899. It was not so much a dwelling upon the past as the outlining of work to be taken up in the near future when its moment arrives.

It is true that even for the seed then sown the ground had had much faithful preparation. The work of H. P. Blavatsky, begun in England twelve years before, had been carried on without intermission. The public had in some degree been made ready for the reception of new (yet also very old) ideas about human life and its vast untouched possibilities. But the main work of that Teacher had been to awaken individuals and prepare them for the great duties that would ultimately devolve upon them. The actual lines of work she left unsketched, bequeathing this task and the future direction of the work to the hands of her successors, William Q. Judge and Katherine Tingley.

By Katherine Tingley the Congress was called together; and whoever hereafter looks back to its work will see to what extent the future activities of the Universal Brotherhood in England were there indicated and exemplified.

It was held in the great Brighton Pavilion on the 6th and 7th of October, and continued for several days more at H. P. Blavatsky's old home, 19 Avenue Road, near Regent's Park, to which the Leader, Katherine Tingley, had betaken herself immediately on her arrival in England on September 30. Representative members of the Organization from all over Europe were present; and with the Leader were some members of her Cabinet in America.

All the departments of work of the Universal Brotherhood were also represented, the International Brotherhood League, the Isis League of Music and Drama, the departments connected with the work for children, for boys and young men, and with the art industries of women; and the School for the Revival of the Lost Mysteries of Antiquity. Each had its part in the Congress.

Music was liberally used throughout. It is held by Katherine Tingley that music has never in our times held the place which belongs to it as one of the refining and elevating influences of life. And it is part of the work of the Isis League to restore it to this position. It is also part of the work of the Isis League to raise the drama to

There Is No RELIGION Higher Than T R U T H

its ancient place as a teacher of the deeper things of life. *The Eumenides* of Æschylus was selected in exemplification of this. But little idea can be derived by the ordinary reader of the deeper meaning which the old Greek dramatist-teachers strove to convey in their plays, a meaning which they largely left to the setting, to the music and to the intelligence or genius of the actors, to convey. In the Brighton rendering of the

Eumenides an attempt was made to reproduce these elements; and the profound impression made upon the audience showed the success of the experiment, repeating that achieved by the several productions of the same drama by the Isis League in New York, and giving infinite promise of possibilities yet unexplored in this direction.

The possibilities of the work for children were shown by the presence and performance of hundreds of children, gathered from all parts of crowded London. They were selected from the various "Lotus Circles" attached to the London Universal Brotherhood Lodges. They had had little but the Sunday afternoon training provided by these centers, and not very much of that. But in their singing, in the grace of their dancing (done in white Grecian flower-garlanded dresses), in the clearness and intelligence of their recitation, and in the manifest joy they took in their work, together with their utter unaffectedness in the presence of so large a company of onlookers, they were an eloquent testimony to the methods for child-training introduced by Katherine Tingley. An extension of these same methods constitutes the Raja Yoga training of Katherine Tingley's schools of that name, of which one was a few days later established at 19 Avenue Road.

One need not despair of London's future nor of England's when one reflects on the great work even now being done for the next generation in the Schools and Lotus Circles. Along with the Avenue Road Raja Yoga School, a Boys' Brotherhood Club was also established at Avenue Road, on the lines of those in America, founded in the Universal Brotherhood Organization.

A remarkable feature of the Congress was a debate between a clergyman of the Church of England and a member of the Universal Brotherhood Organization. This was designed to make clear once and for all the attitude which the Organization has to Christianity. It is held that the full meaning of the work and teachings of Christ has never been appreciated. Dogma and bigotry began at once to overlie and darken the words of that teacher, and centuries of sectarian conflict have almost killed the message they contain. Nevertheless the message is still there; the light is still there; and the Universal Brotherhood proposes to bring both, in a new way, home to the modern consciousness. The full bearings of this work will appear later. The debate was designed to show its general lines.

One of the most important parts of the Congressional activities was a short address by the Leader, in which she emphasized some of the points elaborated in the debate. She said:

"It is a fact that humanity has lost sight of its heritage; that it is asleep—has been hypnotized for ages and ages by the brain-mind conceptions of truth. It has been hypnotized by a foul fear. It has been taught that in its birth and growth it is evil in its nature. It has been forced into the minds of men, and even of little children, that they were born sinners; and that cruel hypnotic influence has been an opposing force in the growth and development of our fellow-creatures. It is that fact that stands as an appalling monster today, holding and fettering humanity. There are organizations—there is one organization that has a mighty sweep of power throughout the world, and uses it in all its most pleasing aspects to feed in a certain degree the imaginations of men. It holds out to the world that only a few are to be saved. It preaches eternal suffering for man, and it is that organiza-

Isis
Theatre
San
Diego
California

LOMALAND STUDENTS AT ISIS THEATRE

ISIS Theatre was well filled last Sunday night, at the usual meeting held under the auspices of the Aryan Theosophical Society of Point Loma. The music was exquisitely rendered by students of the Isis Conservatory of Music, and the two addresses of the evening were listened to with the closest attention.

"An Evening with William Q. Judge," was the subject of a paper by Mr. W. Ross White. "The name of William Q. Judge," said the speaker, "has become known throughout the world as a man of affairs, who, to render a lasting service to humanity, offered up his name, fortune, energies, and in the end his life, upon the altar of altruistic devotion. Mr. Judge's life and teachings were for the expressed purpose of keeping alive all that was true, not only in the Christian religion, but wherever truth was found."

Prof. W. E. Gates, of Ohio, who is a visitor at Point Loma, read an interesting paper on "The Theosophical Movement and Its Connection With Archeology." Professor Gates declared that only thirty years ago the minds of the western nations were confined in two almost rayless prisons. These, although in fact belonging to one camp, were held to be opposed to each other. They were named "Religion" and "Sci-

ence," and in the sacred name of Authority held the minds of men in rigid bonds of constricted belief concerning man's origin, history and place in the world. Mental conditions have changed. These prisons of the mind have been unlocked. What is more important to the human race than a knowledge of itself, of whence it came, of its powers, of how long it has lived and worked upon this earth?

Into these mental conditions came H. P. Blavatsky in 1875, as she herself stated, with a purpose and a mission. Her mission was "to sow the seed of brotherhood in the soil of mysticism." The work she set out to do has been done. The soul of man is asserting itself. The society which she founded as a nucleus of universal brotherhood to study the laws of life, has begun to live those laws, and dared to become universal brotherhood itself, under the leadership of Katherine Tingley. We see today, as H. P. Blavatsky predicted, the establishment in the West of a great seat of learning, where is taught and explained and demonstrated the great theories of men and nature; where the children of the race, instructed in the science of Raja Yoga and the simple laws of life, shall become passionate lovers of the beautiful—workers and helpers in the service of all that lives. OBSERVER

tion above all organizations in the world that is to be feared. I hope that my utterances here will not be in vain; I hope that England, with all its power and majesty, will stand as a bulwark against the invading power of such a system."

And she compressed her countervailing message—that of the Universal Brotherhood—into a sentence that can read as a prophecy:

"If men could rise to the consciousness of their divine heritage; if they could realize every moment, every hour and every day of their lives that they are souls, facing great responsibilities, do you believe for a moment that we should have the fear round about us, the despair, the pessimism and the awful suffering that exist today?"

The work, in fact, of the Universal Brotherhood is to bring home to men that they are souls, and to teach them to work and to live fully and richly, as souls, and also as brothers, with the common heritage of immortality.

Part of the work of the Congress was a rededication to the Universal Brotherhood of the Home at Avenue Road, in which H. P. Blavatsky had labored so strenuously and in which she died. Many meetings were held there, and a new Lodge formed—"The William Q. Judge International Lodge of Universal

Brotherhood." Since the Congress the work has continued in all branches quietly but firmly. There are times when it is profitable and possible to strike hard, moments in a nation's consciousness when it is ready for a new message: and times when a large expenditure of energy would be relatively wasted. England is in the latter case; she is preoccupied, though beneath the surface she is getting ready for new things and a new future. At present it is a fact that although certain movements inimical to her future freedom and growth are taking the opportunity of her preoccupation to insinuate themselves, it is not yet time to counteract them effectively by a wide propaganda of Theosophy and Universal Brotherhood. Nevertheless the hour is rapidly approaching when this work will be taken up and pushed to a complete triumph.

Meantime the Leader relies on the faithful and steady work of all the English members, knowing that in their endeavors to live the highest life, to study the principles of the philosophy they profess, to embody them in conduct, and in some degree to popularize them, they are preparing the conditions against the moment when it will be possible once more to sound the charge. FRIENDS IN COUNSEL

DEAR COMRADES: Recently a low fence has been erected around the Homestead somewhat similar to the one surrounding the International Lotus Home. To those whose minds have a bent towards symbolism it suggests that, as the new Academy is to be located in the Homestead, we must be more wakeful than ever that outside influences of a harmful nature should be excluded. At this institution it is proposed to train hundreds of youths according to the ancient principles of the Raja Yoga School. All sensitive young things are protected in Nature—the egg by a shell, the seed by a husk; and not only does the covering guard against injury, it protects from prying curiosity the sacred, secret evolution of the germ.

It is noteworthy that the Leader has not given out much about the plans for the Academy. Our hungry minds crave for details on which to fasten and to feed, but we are left for the most part with very little information, and are rather encouraged to exercise our divine power of imagination upon the general plan, and not formulate cut and dried details which might only block the Leader's path. One reason, as I conceive it, why the future is kept so secret, is because if fully revealed it would seem "too good to be true." Our weak imaginations would be staggered at the effort to receive the glorious vision of the coming days.

Think of the advantage, first, of this lovely climate, where for nearly the whole year round a life in the open air is possible. Think, too, of the seclusion of this spot. We are not exposed to the contaminating influences which ever hang like a black pall over every city. No coarse advertisements to corrupt the taste. No jarring note of business competition. Every morning from this bold ridge the sunrise lies before us, every evening the sun goes down in full view. This means much to impressionable young minds.

But more than all, the young students will have the advantage of the supervision of an educator and molder of character whose fame has gone out into all lands. We, who have lived on the hill, have felt in our own lives, and seen in the lives of our comrades, the most remarkable results of the influence of our Teacher. How much greater will be the effect of that influence upon those whose minds are not already set and hardened into the grooves that prevailed in the pessimistic, materialistic surroundings from which we have come.

Let us remember that the Raja Yoga training is no new experiment. Even in the short time during which children have been educated here the most wonderful results have been accomplished. An outsider, who came to visit us, said that it was not simply that our girls and boys were better girls and boys than you can find elsewhere—they *seem like another race altogether*.

Here the real Raja Yoga system will be carried on: that indescribable process by which the soul, the mentality and the physical are welded into one harmonious whole, a fitting temple for the dwelling place of that Divinity which each child is told to look upon as his real self.

I write on the eve of the opening day. What will have happened

here before twenty years have passed? The mind sinks back in wonder at the effort to forecast that future. But the heart burns within us, for it already lives in the golden future and tries to send to our lagging, toiling brains, some faint reflection to cheer us on our way.

To see daily exemplification of Theosophy made a living power in the lives of students at Point Loma is a rare privilege. PERCY LEONARD

Language-Learning

THERE seem to be two ways of learning languages, ways that might very fairly be described as the negative and the positive. Indeed, they apply to all learnings of things.

The negative is the bad method, and it is that ordinarily pursued at schools. To pursue it, the mind is rendered flat, passive, or negative; and the elements of the language are then stamped upon it. Pursued for a sufficient length of time, the language will be acquired, and possibly very thoroughly. But there is little growth of any other mental faculty than that of crude memory.

The positive method is that in which the mind is compelled to be at a continual strain of guesswork. It is asking a thousand questions, and is instantly alert at any moment to the least suspicion of an answer.

Huxley once said that his idea of the best way to learn a language for reading purposes was to take some good general book or story in the desired language and intently read it.

Not a word will be understood. No, that is going too far; each line will have a word or two like enough to words in the reader's language to carry their meaning.

After a page he will note the reappearance of the little words corresponding to "and" and "the," etc. These will fit into place and one by one others will follow.

This method is gaining ground. Nowadays there are little books in most languages so written as to contain a maximum number of words alike in the learner's tongue and that which he learns. This might be called the simplified Huxley method.

But the Huxley method is really incomplete. The mind at last awakes to a keen and intelligent enquiry as to the significance or physiology of the changing forms in which it sees the verbs, the various plurals, formations of adverbs from adjectives, etc., etc. And this enquiry must *now* be satisfied with a grammar—which will *now* prove interesting. Of late years a good number of books have been published that follow these lines. Simple sentences, with their translation, are given; and at the foot of the pages are grammatical notes designed to answer the mind's enquiries about forms.

Of every method there are advocates. Fewer, day by day, fortunately, are the advocates of the old heavy grammar system, the negative method—the system in which, at each step, any practical and interesting work is preceded by masses of explanation.

First give your pupil something; then explain it; fill the gap left after his own mind has done its best. When a language has been learned in *this* way, the mind is a keener instrument for all purposes than ever before. It sharpened with every lesson.

The Trend of Twentieth Century Science

Our Moon and the Walled Plain Plato

THAT the moon is dead or dying, seems to be the general opinion; that it is dying of old age seems to be evidenced by the study of its surface. It would logically follow that it belonged to a former generation of planets, and is therefore older than those of the present generation of worlds.

For centuries astronomers have speculated upon the moon as a habitable planet, or, when the lack of air was proven, upon the possibility of life-forms which might thrive under unearthly conditions. Philosophers have speculated regarding its past and future, and wondered how it might be that if a man is immortal; a planet could really die. Is the human soul higher in the scheme of evolution than that of a world? If it be true that we do not see or recognize the soul of the moon, does not the same truth apply to most men? Whatever evidence exists to prove the souls of men, likewise insists that there be other souls, greater and smaller, related to each other in that Greater Brotherhood of the Cosmos.

There are not a few points of similarity between things selene and mundane, and one of these is volcanic activity.

Recently the interest of astronomers has centered about the great walled plain known as Plato, on account of changes observed on its floor. The illustration shows the location of Plato in relation to a small area of topography near the north-polar region; on the extreme right is Cape Laplace, which is over 10,000 feet elevation above the Sea of Rains; to the left are the Alps, cleft by a straight and narrow valley which is one of the many odd features of the moon's contour.

On lunar maps the south is at the top, and the north is at the bottom; just the reverse of terrestrial maps. The names given by astronomers to the various areas which were formerly covered by water, have an interesting sequence corresponding to eras in the life of an individual. Beginning in the southwest quadrant of the lunar surface, and going towards the north pole, these are: the Seas of Nectar, Fertility, Crisis, Tranquillity, Serenity, the Marsh of Sleep, the Lake of Death, the Sea of Ice. The last named is shown on the left side of the illustration. Thence, after passing through the Valley of the Alps, and entering the Sea of Rains, a pilgrim might turn to the right and round Cape Laplace to the protected Bay of Rainbows, or he might turn to the left and traverse 1,500 miles of the Ocean of Storms; thence across the Dark Sea to a particularly deep and uninviting crater which the maps designate as "Hell." It is a rough and rocky road, and no kind-hearted person would wish that even John Calvin himself be compelled to walk it barefooted. STUDENT

The Last Surgical Triumph

SURGERY may be a substitute for some lost arts of healing, but it is certainly a very efficient one. The last achievement is the splicing of dead nerve cords to living roots. The muscles supplied by a dead nerve are of course paralyzed. In certain of these cases, especially those known as infantile paralysis, it has now been shown possible to sever the dead nerve from its junction with the spinal cord and splice its spinal end to a living and healthy nerve cord. Fibrils from this extend into it, gradually pass down to the muscular endings, and, if the muscles have been kept healthy in the meantime by appropriate measures, reopen the channel of will. SURGEON

Words and Thought

TWO or three journals have revived the old controversy—do we think necessarily in words? In struggling towards an answer, the correspondents forget that their difficulty simply comes from want of definitions. If "thinking" means a process of consciousness involving the use of words, then of course we cannot think without words. But if they will put the question: Are there any processes of consciousness that go on without words?—the question answers itself. In a very short time an infant knows milk from black ink, and of the two will select the first to drink. It *thinks*, in fact; but it knows no words and would make the same selection if its parents and nurse were dumb. Conscience speaks at first without words. It tells us something is wrong to do. But it tells, and we hear, by *feeling*, not words. The whole area of feeling is wordless. It is often a great trouble to translate an intuition into words. A course of conduct is *felt* to be mistaken. We cannot say why. That is an act of thinking without words. The inspiration of the poet is at first wordless. It may take him hours to translate down this *inspired* thinking into words of any kind. But perhaps it is better to keep the word thinking for those processes that *do* go on in words, and use other names for the other processes (both higher and lower than thinking) which do *not* at first. One could perhaps conceive of a whole life, spent by a person deaf and dumb, in which a great part of the conscious activity might go on behind those gestures which to such a person would be words. STUDENT

Fatigue of Metals

IT is curious to read the current scientific literature. On the one hand there is a strenuous denial of the existence of anything but dead matter, and yet on the other, expressions are constantly used which distinctly refer to life and consciousness. One of these expressions, used now quite a long time, is *fatigue* of metals. This term refers, as we know, to the well-recognized fact that even a moderate stress, if repeated often enough, will ultimately cause rupture in a piece of metal or other substance. The experiments of Wöhler and others seemed to indicate that for each such stress and material there was a definite number of such alternations which would produce rupture. The latest researches, however, show that *time* is an important factor in this, and that if sufficient time is permitted to elapse between the individual applications of the stresses, the material tested will withstand a very much greater number of stress alternations. More than that, it has been found that even a serious injury to a metal through too severe a strain will *heal* again if given time. The metal has a chance to *recover* its even strength, nay, become stronger than it was before, as in wire-drawing. Who is it that shows fatigue? Does a dead body do it? Who has the power of healing an injury? Has a dead body that power? Who can recover strength? A dead body? The answers to these questions are obvious. When will the world of science read the handwriting on the wall? T.

FURTHER details on the use of blue light as an anæsthetic are now forthcoming. The Geneva correspondent of a London daily personally called on Dr. Redard, to whom the discovery is due. He speaks of experiencing a penetrating sense of restfulness and muscular repose, but no loss of consciousness. His description suggests that this effect might be utilized as an adjunct to other treatment in the relief of the craving for morphine and the accompanying horrible restlessness. PHYSICIAN

Selfish Invalids

IN a recent lecture by Dr. S. Weir Mitchell, he is quoted as saying:

In all my experience as a physician, I have not seen more than a dozen men or women who have been improved morally by long continued suffering. Acute illness and illness which brings the patient close to death, often has a beneficial effect upon the disposition, but I cannot agree with the assertion which we frequently hear made in the pulpit, that suffering is usually the means of refining. I have seen a few isolated cases in which this was so, but it is not the rule by any means. The chronic invalid is almost invariably selfish and peevish, and it is a hard task to find a nurse who can stand the strain of such a service.

There is a wholesome note of truth in this statement of practical experience. Mere sentiment is apt to confuse the condition of things as they are with things as they should be. Certainly there is much to learn from suffering—both mental and physical. But chronic ailments are too often evidence that the patients are evading their lessons. They fail to recognize wherein their methods of living are out of tune with nature's scheme. When we really master any of life's many problems, the page is usually turned over, and something else is presented for study.

The effect of sudden and severe illness is often an awakening to the nature that needs it. Healthy persons, absorbed in the conventional whirl of society or business, are likely to forget the realities of life. Their consciousness, moored upon a plane where everything is changing and elusive, does not operate upon the plane of higher thought and feeling. When the hand of disease strikes them down with pain and weakness, they feel that everything has been swept out from under their feet. This shock, which shows the instability of old standards, emphasizes the necessity of finding something which is more lasting.

The need of a new standard seems less imperative to the chronic case, as he is still able to partially functionate along the old lines. Most of these patients are anything but examples of the refining influences of long suffering. So long as the invalid is kept chronically conscious of the body, by pain or weakness or irritation, the consciousness is largely held upon the physical plane. A study of the general principles of disease, like any comprehensive view, adds to the mental breadth and clearness; but to be constantly aware of one's own symptoms has a narrow, warping influence upon the nature. A body which is demanding attention for its own abnormal details is not conducive to abstract, impersonal quality of thought or sympathy. Dr. Mitchell's opinion will be indorsed by most physicians: practical experience proves that saints are not produced by long sickness. Too often the unreasonable, selfish and ungrateful demands of the sick one are a severe tax upon the nearest ties of kin and friendship.

There is an analogy which unites pleasure and pain. The individuals who are held to the painful body senses by sickness and those who are bound to the pleasurable sensations by sensuality are alike enslaved. Neither experience is ennobling *per se*, however valuable the lessons may become when understood. The chronic invalid grows inured to confinement and limitation and to endless efforts to adjust conditions more comfortably to the personal position. Unconsciously his efforts frequently end with the idea of making disability endurable. There is far more willingness displayed to try new cures than to attempt physiological living.

Emerson says quite truly that men do not wish to be saved from their vices, but from the effects of their vices.

Proper medication, which is so helpful, would be far more efficacious if patients really desired *to get well* instead of simply wishing *to be cured*. This would not mean an increase in the prevailing nervous tension, but to strengthen and develop the will by continuous effort to become familiar with healthful habits rather than to get used to being sick. To keep the body and mind in a calm, positive, hopeful, hygienic attitude will operate in time to build up a better quality of thought and of flesh.

The bodily tissues are constantly undergoing changes, new cells replacing the old ones which are discarded. Scientists show that will and memory are not confined to the brain, but are inherent throughout the body. The body of consciousness, which determines the arrangement of the physical molecules, is itself subject to change upon the mental plane. This accounts for unexpected recoveries due to joy or hope, or other stimulating emotions. Alterations in this invisible mold of consciousness result, in time, in similar physical modifications. If the invalids would persist in physiological thinking and living, the effects would appear comparatively soon, save in hopelessly damaged tissues. As a matter of fact, the chronic case usually displays the average human nature in seeking to adjust the personality to self-imposed limitations rather than in trying to overcome them. Few patients are willing to sacrifice old ideas and habits in the discipline of right living: but they expect to receive sympathy as martyrs to the disability of wrong living.

The world has suffered too long from blind, narrow faith, both in creeds and in cures. We want less inertia masquerading as resignation, and a more wholesome vital tone in religious sentiment. Working out salvation, physical or otherwise, requires intelligent, earnest effort. The body is a temple for the spirit within: we should aim to make it a worthy dwelling-place. Sickness is something to be ashamed of; it stamps one as a hygienic law-breaker, and here as elsewhere ignorance of the law excuses no one. The invalid's disease and disability are entitled to the best care and sympathy which science and devotion can give, but the most lasting benefit lies in helping him to help himself. It is a waste of will power to cultivate endurance of needless mental or physical restrictions when the same amount of energy, physiologically directed, would work for liberation.

LYDIA ROSS, M. D.

THE history of our sixteen years of life shows that our efforts put forth in every quarter of the globe have modified the thought of the day, and that once more the word "Theosophy," and many of the old ideas that science and agnosticism supposed were buried forever under the great wide dollar of present civilization, have come again to the front. We do not claim to be the sole force that began the uprooting of dogmatism and priestcraft, but only that we have supplied a link, given words, stirred up thoughts the very highest of importance just at a time when the age was swinging back to anything but what the reformers had fought for. The old faiths were crumbling, and no one stood ready to supply that which by joining religion and science together would make the one scientific and the other religious. We have . . . lead the times a step "to the primitive soul-satisfying philosophy of the Aryans."—*William Q. Judge*. From the *Path*, March, 1892

THE CHILDREN'S HOUR

The Raja Yoga Question Box

O GENTLE land of flowers, where the warrior heart is yet so strong, the world welcomes you to closer comradeship!

1 Who is Mutsuhito?

ANSWER — Mutsuhito is the Emperor of Japan. He came to the throne in 1867, when a boy of 15. He was the first emperor for many hundred years to come out before the people and be their actual ruler. During his reign Japan has been opened up to the world. It has become one of the great powers of the earth. Mutsuhito has been the leader of his subjects in their progress.

2 Who is the Empress Haru?

ANSWER — The Empress Haru is the wife of Mutsuhito. She is beloved by the

Japanese. During the war with China the Empress and her ladies did much to help the soldiers. The Empress gave large sums of money to the hospitals. She went herself to carry gifts to the wounded soldiers. The Empress is also interested in the higher education of women.

3 Who are the Samurai?

ANSWER — For untold ages the Samurai have been the ruling class in Japan. They have been great warriors. In time of peace they taught the people. It was the Samurai who roused the spirit of old Japan and restored the Emperor to his place as ruler of the people. From the Samurai are chosen men to fill places of trust in the state. The Samurai were the true chivalry of feudal Japan.

A Japanese Legend

ONCE when the earth was very gay and glad, says a writer in a contemporary paper, a great bamboo reared its graceful head towards the skies, a thing of beauty and a joy forever. And all who passed by stopped to look at it, because it was so tall and proud, and swayed so gracefully to every passing breeze. Close to this fair, strong bamboo dwelt a rough old willow tree, so old and rugged that none ever thought of giving it more than a passing glance, and the bamboo in its pride looked down upon the hoary willow. One morning, when the dew was on the grass, the bamboo and the willow saw a thin, weak little green shoot rising between them, a futile thing that had leaped out of the ground in the night, and the wind blew it hither and thither until it was twisted and tangled, and almost broken, and the bamboo laughed at the weak thing, and told it to crawl along the ground and not try to stand alone. But the willow whispered to the newcomer to be brave and patient, and told it to wait with patience until the warm sun came and gave it strength.

"Let me lean against you and grow strong, I pray," pleaded the weakling to the bamboo, but the proud beauty shook off the clinging tendrils of the helpless one, and would have none of it, and the little stranger, faint and sick at heart, fell on the ground and crawled to the foot of the willow tree to die. But the willow called to it to take heart, saying, "Clasp your tender tendrils in my bark and hold on to me," and the stranger did so.

Day by day it grew in strength and beauty, wrapping its soft green limbs around the old willow. One day a great mass of buds showed themselves amongst this green foliage, and the bamboo sneered, crying, "What are those ugly lumps that are now coming amongst your leaves? Is it a plague that you have brought so near me?" But the next day the sun shone on the buds and they burst open, and the old willow was one great blaze of glory from the ground right up to its topmost height.

That night the man who owned the ground said to his workmen: "Clear a space around the old willow; cut down and burn all that is in the way; for the gods have sent us this lovely thing, and we must protect it." And one of his hired men said, "Shall we spare the bamboo? It is straight, and tall, and strong." "Not so," replied the master, "Japan

is full of bamboos as straight and as tall, but a willow crowned with such beauty as this no man hath seen." And the thing was done, even as the owner had commanded.

Raja Yoga Base Ball

IF base ball is the national game of the United States, surely here in Lomaland it has become the international game, for we boys come from so many nations, and we all think that there is no game like base ball. But if you wish to know who excels in it, then that is more than I can tell you. The Cuban boys and the English have become

every bit as expert at it as we Americans; but, you see, we do not bother much with comparisons, for we play for the fun and for the exercise, and we get lots of both. I am sure we enjoy the game just as much when our side is defeated as when it wins. Both can not win the same game, you know, but both can find real delight in playing it.

Of course, each of us does his very best all the time, and I think in doing that is where a good deal of the fun comes in, for we are constantly improving. One of the things we are learning is how to pitch curved balls. By the way, over there in the background you will see our dear old friend, Mr. Spalding, who was, I believe, the first to ever pitch a curved ball,

and who has helped us so much in mastering this and other difficult points of the game. **PITCHER**

THE RAJA YOGA BOYS AT BASE BALL
"A close decision"

SO WISE!

A FAIRY sat on a rose-leaf edge---
"The children have grown so wise,
One needn't hide in a rose's heart
For fear of questioning eyes
Nor shake the gold-dust out of one's hair,
Lest a sunbeam show it unaware.
One may tilt and sway in the golden grass,
One may wander fairy-free,
For, of course, if the children don't believe,
They will never look to see!"—Selected

frolic, when it saw the mastiff coming. Instead of running away, frightened, it dashed at the big dog, barking furiously. With one snap of the great jaws the poor little puppy gave up his little unselfish life, and the children were saved. But what a sad thing that poor dogs are not better cared for. They are the truest friends, none more so than the mastiff itself, and those who have most knowledge about them say that when dogs become mad it is because of some one's cruelty or neglect. Usually this comes when dogs suffer from great thirst, and there should be drinking-places for them in every street in our cities. **UNCLE FRED**

Students'

Path

TO LIFT OR TO LEAN?

by ELLA WHEELER WILCOX

THERE are two kinds of people on earth today,
 Just two kinds of people, no more, I say.
 Not the saint and the sinner, for 'tis well understood
 The good are half bad, and the bad are half good;
 Not the rich and the poor, for to count a man's wealth
 You must first know the state of his conscience and health;
 Not the humble and proud, for in life's little span
 Who puts on vain airs is not counted a man;
 Not the happy and sad, for the swift-flying years
 Bring each man his laughter, and each man his tears.

No! the two kinds of people on earth I mean
 Are the people who lift and the people who lean.
 Where'er you go you will find the world's masses
 Are always divided in just these two classes;
 And, oddly enough, you find too, I ween,
 There is only one lifter to twenty who lean.
 In what class are you? Are you easing the load
 Of over-taxed lifters who toil down the road?
 Or are you a leaner, who lets others bear,
 Your portion of labor and worry and care?—*Selected*

Have We Lived Before?

IN thinking over this question a number of others present themselves as variants. "Do we have more than one life?" "Are we alive now?" "Do we ever die?" "Shall we live again?" and so on. To each of these questions we can answer, "Yes" and "No," according to what we regard as "We" or "I."

There is a humorous old song, the refrain of which says:

As I walked by myself,
 I talked to myself,
 And myself, same self, said to me, . . .

Many of us have experienced this trick of talking to ourself, and even holding a strong argument, sometimes pretty loudly. If we think a few moments we can see that we are one self who owns another self. These talks in our lonely hours are an unconscious testimony to our dual nature. The "We," the "I," that does the listening, is the self or soul which rarely speaks, as we commonly understand speaking, in those conversations. The other self that we own, and which does the talking and back-answering, and getting into a fume of fears or complaints, is the lower self, but it is this lower self which we too commonly fancy we are.

It is the real, silent self which has lived before—that is to say, has inhabited other bodies. It is the conceited, ever-talking self that we own, that has never lived before. It is wrapped up in the bodily life; interested in the sensational life, wanting this sort of food and that sort of dress, it must go here and it must do that, and all just so! This self is mortal and has but one life, and when the soul's influence finally parts from it, it ceases, it dies. But the real self, the unselfish, patient, gentle, and yet warrior soul we really are, which is associated with this mortal self, also has only one life! Its one life is immortality itself, continuous being, now in a body, now out of a body, learning to master the animal self so as ultimately to have a perfect and willing instrument to live in and work through for the good and benefit of all creatures. Each period we are in a body we ordinarily call a life. It is only the temporary abode of the soul, though it is the life of the personal, mortal self. You and I, as souls, have lived many such lives on this earth, and many a bitter time have we had as the result of seeds sown in prior lives through our self-will and folly and the lack of true humility. Yet the soul we are in really returns again and again in similar bodies to the task of reaping its harvests and garnering experience till one life it flowers as a transcendent genius, and knows itself as part of a whole and universal soul.

Are we, then, truly alive now, or are we only dreaming heavy dreams

of death and calling it life? Do we think of ourselves as merely animal bodies with our personal likes and dislikes? Are our thoughts centered on it and its pampering as the one object of life? Do we think of all our fellow creatures as beings we are separate from and independent of? Do we think we have no responsibility for their progress, and that we are not affected by their happiness or degradation? Then, according to the teachings of Theosophy, we are dreaming heavy dreams of death, and are certainly not yet alive. But on the other hand, do we regard ourselves as immortal, godlike souls dwelling in a body for a term? Do we try to appreciate our great origin from, and within, a divine unity—the universal soul, in whom we live and move and have our being? If so, we are beginning to live, and the more we realize our unity as interdependent souls and strive to live and work as such, the more nearly we approach our universal relationship.

In essence and fact we are brothers, and we have to realize our responsibility as such. Once we realize that, we shall know we never die, though we shall inhabit many more bodies and live many more personal lives for universal ends. Life will then be, as it is to many even now, one grand, long, one great opportunity for service and progress for all that lives. Let us work, then, for a better understanding of, and a more enlightened sympathy with the great truths Theosophy teaches. Also let us live more and more in harmony with our inner self, our divine nature, and then we shall truly live. S. A. A.

Man's Dual Nature

EACH one of us has within himself the proof of man's dual nature; for every one who has not sinned against his higher nature till he no longer hears its voice, or has not conquered his lower nature and made it obedient to the higher, has within himself continual warfare; and the more earnestly he aspires to be wholly at one with his higher nature, the more strongly does the lower assert itself. And he has to put on his whole armor of right thought, right feeling and right action, or he will succumb to the lower self, whose core is personal, selfish desire. Confusion arises between what we ought to do and what we desire, and the battle rages over what seem to be small things, and there is where we are most likely to fall short, and where we need to be most vigilant, for if we yield in the least, the victory is with the lower self and we are as weaklings before it, crucifiers of the Christ within, wronging our whole being, even that lower self to which we cater, and which we should lift into something nobler and better.

Surely the time has come when we should do no half-way work but fight a royal fight. It is time we should make our declaration of independence from the rule of the tyrant that would use all our powers for selfish ends, time to assert and win our freedom, and throw off the load of heavy burdens that selfishness ever piles upon our shoulders. Our warrior companion, the higher nature, the soul, stands ready to help and guide us when we give ourselves completely to this task, making no reservations and leaving no loop-holes open for the entrance of our dark companion, the lower selfish nature, declaring our own freedom, and by so doing, help to win it for the multitude of lives dependent on our will and our action. If we would all do this, and do it at once, it seems to me the light of it would fill the world, and the joy of it would stir all hearts, and the earth would be reborn into freedom and light, and all nature would sing a glad song. BANDUSIA WAKEFIELD

II

"Man" is defined as a "human being," possessing the qualities of nature, but possessing also something which is higher than the human, which is divine, which makes it possible for him to stand aside from what he usually calls himself, and view the actions due to the qualities of nature. We think of man as *one*—as a living soul, we say—but capable of action in two different ways or directions. His action will be humane, which means kindly or becoming to a man, thinking of others and their needs as well as his own needs. Or it will be the opposite, unbecoming to a man, selfish, in the sense of no regard for others, in no recognition of the close relation existing between all men and universal nature. In his own heart no man doubts which of these qualities should have the supremacy. And yet we are so far from a positive knowledge of these simple and self-evident truths that our civilization is built upon a wrong basis, and hence the Saviors and Teachers of the human race have to come again and again to awaken in man a knowledge of himself. H. G. S.

THE SEARCH FOR THE SELF

I WAS ere a name had been named upon earth,—
 Ere one trace yet existed of aught that has birth,—
 When the locks of the Loved One streamed forth for a sign,
 And being was none save the Presence Divine!
 Ere the veil of the flesh for Messiah was wrought
 To the Godhead I bowed in prostration of thought.
 I measured intensely, I pondered with heed
 (But ah! fruitless my labor) the Cross and its creed.
 To the Pagod I rushed, and the Magian's shrine
 But my eye caught no glimpse of a glory divine:
 The reins of research to the Caaba I bent,
 Whither hopefully thronging the old and young went;
 Candasai and Herat searched I wistfully through,
 Nor above nor beneath came the Loved One to view!
 I toiled to the summit, wild, pathless and lone,
 Of the globe-girding Kaf, but the Phoenix had flown.
 The seventh earth I traversed, the seventh heaven explored,
 But in neither discerned I the Court of the Lord.
 I questioned the Pen and the Tablet of Fate,
 But they whispered not where He pavilions His state.
 My vision I strained, but my God-scanning eye
 No trace that to Godhead belongs could descry.
 But when I my glance turned within my own breast,
 Lo! the vainly sought Loved One, the Godhead confessed.
 In the whirl of its transport my spirit was tossed
 Till each atom of separate being I lost:
 And the bright sun of Tannaz a madder than me
 Or a wilder, hath never yet seen, nor shall see.—*Sufi Poem*

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question What is meant by the School of Mysteries?

Answer A Mystery is a thing hidden or veiled, and in that sense all the forces of nature are Mysteries. For though we see their *effects*, *them* we cannot see. A vast force bridges the space between earth and sun. If it failed a moment, the earth would swing off into boundless space. We cannot see it; we can only see its *effect* in holding the earth in her orbit. We see the growth of a flower, but the force of the growth is concealed. So in that sense all nature is a Mystery.

There is another order of Mysteries, those concerned with man himself, and it is to these that the question refers. Man's inner nature is a Mystery to him. He finds himself prompted sometimes to good, sometimes to evil. He does not know *what* does the prompting; he only knows the *effect*, his impulse. He hears of the soul; he does not know what it is. He finds himself thinking; he does not know how he does it. He can move his arms; he does not know how. His body changes; he does not know how. And he does not know how he came to be at all. So we ourselves are Mysteries to ourselves in every way.

Science, using only the five senses, and reasoning on what they tell, is limited to them, and so can only know and measure effects, not the real forces that cause the effects.

Theosophy teaches that another faculty can be awakened in man which will then deal directly with forces themselves, and understand, not effects only, but the forces in connection with the effects. And the ancient "Mysteries"—"lost" because the faculty has been forgotten and left to sleep—were based on the use of this faculty. They are the same "Mysteries" as will be enacted or taught at Point Loma by the *School for the Revival of the Lost Mysteries of Antiquity*. For man still needs teaching about that great part of himself which is unknown to him. What this disused faculty teaches can, in a great measure, be *shown* by certain kinds of play or drama to those in whom the faculty still sleeps. And that will help them to awake it, and help them to live wiser and better and fuller lives, lives of understanding instead of blindness.

So a Mystery, in this sense, is not something artificially and unnecessarily concealed by man; but something which, *by its very nature*, is hidden; and also something which, as soon as we look at it with the right faculty, stands revealed. And the word is then further made to apply to those dramas in which the hidden things were symbolically represented.

Sometimes the old Mysteries took the form of a story told, instead of a play played. There is, for example, a beautiful old Teutonic legend

in which the hero is represented as imprisoned in a cave and compelled to spend all his time forging swords which his great enemy will subsequently use against him. But sometime it occurs to him to hide all the swords he makes by day, and by night weld them together into wings, with which he flies up through the roof of the cave into the free star-lit space above. The swords are, of course, the lower desires, which a man forges by his thought, and which his enemy, death, will sometime use against him and with which it will kill him. But if he will forge them into wings, turn their force into desire for light, then they will carry him upward into freedom.

That of course is a very rough and incomplete example of a Mystery play. But if the many elements in human nature, which we feel and understand so vaguely, are thus thrown out, as it were, on a screen and shown in their separate action; and if the story is devised by one profoundly versed in all the conscious forces that blend and conflict to make our character—it is easy to see that great lessons in philosophy, metaphysics, and morals, can be taught with perfect clearness, and with a vivid beauty utterly impossible to any treatise or written system. Of such were the Mysteries of Antiquity; such they will be at Point Loma under Katherine Tingley. Nay, they are already in progress. H. C.

Question According to Theosophy are the terms Heaven and Hell applied to conditions or places?

Answer The well-known teaching of Jesus that "the Kingdom of Heaven is within you," is also the teaching of Theosophy. And the Heaven or Hell in which we find ourselves at any time are due to our own inner condition primarily, and not to any place in which we may be. This is a matter of common experience. A man may be in the midst of surroundings that are bright and pleasant and such as outwardly should be conducive to the greatest happiness—truly a heaven on earth. But if the heart and mind are not attuned, if there is not an inner peace and content, if the mind is restless, dissatisfied, anxious, grieving, if the lower nature is dominant, such surroundings will not make up for these things, but the state of the mind will distort the vision and becloud even a cloudless sky. Such surroundings, such a place, will no longer be heaven, but may appear as a veritable hell.

But we know that the converse is also true, that in the midst of the darkest surroundings, amid squalor and vice, the heart may be full of light and hope, shining like a star in the midst of the darkness, carrying its own heaven with it wherever it may go.

There is another point, however, to be considered. Every one, no matter what his character may be, tends to create around himself conditions similar to his own interior nature, thus making as it were a place for himself. In whatever place we may be, in degree we make of that place a heaven or a hell. If we work out the purposes of our divine nature, which are the true purposes of life, we not only have heaven within us but create it around us. And this is our destiny, not only as individuals but as the human race. Not to do this, but to permit the opposite conditions of selfishness, self-gratification and self-seeking and all their unholy train which in the aggregate make hell—to permit these conditions to grow in our natures, would be to go contrary to our destiny.

This earth is fair, Nature is beneficent, the only discordant note is due to man. But were he to live out his true nature, this earth would be heaven indeed, and it rests with him to make it heaven. And then heaven, besides being a condition, will be a place also.

As for there being heaven and hell beyond this life, or in the intervals between successive lives on earth, it is clear that as states or conditions these must exist, for man carries his own states, his own character, with him; he cannot change these states unless he changes his character. Are they places, too?

Not in the sense in which we ordinarily conceive of place, for that exists for us only on the physical plane, and when death comes we leave our physical bodies and the physical plane behind.

But then, as now, even if heaven exist as a place, our going there and our being there depends on our having heaven within ourselves. When that is so, then heaven is wherever we are, and we may rest content that in the wise purposes of Nature each one goes to his own place, and whether that place be heaven or hell.

Isolated Thibet and Its Mysteries

THE British mission to Lhasa is one of the most interesting and significant events which have happened since the beginning of the present century. Thibet has always been surrounded with a halo of mystery. Its strange and complicated ecclesiastical and hierarchical system bears, with the sole exception of its two chief Lamas, so close a similitude to that of the Roman Catholic, that Abbé Huc considering this and many other resemblances connected with northern Buddhism, was at a sheer loss to understand and explain the facts.

The Dalai Lama is, as a matter of fact, the spiritual head of the northern church of Buddhism, if the word is admissible. This branch of the great religion of Shakyamuni, called the Mahayana, or Great Vehicle, is doctrinally, but not positively in a fundamental sense, in es-

trangement from southern Buddhism, or the Hinayana system—the Doctrine of the Little Vehicle.

Thibet is the center of Buddhistic doctrine; and there, in his extraordinarily magnificent and interesting retreat lives the "living incarnation of the Buddha," as a Buddhist of the northern school would say of the Dalai Lama. His country has been called the home of superstition, thieves and drabs—a criticism possibly based on hearsay and report, as so many other criticisms are.

Saner Ideas of Life vs. Egotism

One is glad that this strange and hitherto inhospitable land seems on a fair way towards yielding up its territorial and racial egotism to saner ideas of life.

Like Japan was just one-half century ago, Thibet, protected by its nearly unbroken rampart of high mountains on north, east, south and west, has been immersed in a racial stupor—of a kind—for ages. Its frontiers are jealously guarded against foreign intrusion; and while the nominal sovereignty of China is acknowledged, the Chinese themselves confess their political and governmental authority to be a mere idea.

So positive and persistent an isolation is not merely prejudicial, but acutely harmful as well to the Thibetans as a people; while the power directing the isolation is short-sighted and selfish. The very fact that with the exception of occasional fertile oases, the high table-land of Thibet is so arid, rocky and waste that even European science and ingenuity could with difficulty make a productive land of it, argues against it ever seeming fit for occupation and settlement by the white man. Does it contain vast mines of gold and gems and rare metals? Possibly; but no one knows that it does, and its situation in Central Asia, surrounded by

Conditions Unfavorable for Progress

and inhabited by fierce and treacherous tribes, to say nothing of its terrible climate, would deter any but the most intrepid and foolhardy gold-seekers from essaying to force an entrance. In short, it is by natural conditions quite sufficiently protected against foreign settlement. When a trans-Asiatic railway runs from Paris to Peking via the coast line of the Arabian Sea; when the wild tribesmen shall have vanished; when the Thibetan shall have learned to meet the White Man in the way the Japanese has—then may Thibet enter the family of peoples on an equal footing, for it will have the countless millions of Young China at its back.

Yet Thibet holds much of absorbing interest, alike to the historian, philosopher and antiquarian. Of all the Himalayan peoples the Thibetan alone possesses a historical and literary interest to European knowledge. Its temple-literature is even now known to be vast, countless volumes existing on religious, mystical and historical subjects. And what about those marvelous finds of evidences of a prehistoric civilization which, says H. P. Blavatsky, once covered all Central Asia, and built over the eastern and central portions of the high plateau opulent and flourishing cities which could well vie with Babylon! More than one

Ignorance of Subtler Laws of Nature

European traveler has discovered remarkable evidences of this prehistoric civilization. Thibet has its mystics and wonder-workers; so have other lands which know well the white man's tread. And by the white man's very ignorance of the subtler laws of nature, and by his personal sense of infinite superiority over his Oriental brother, are these secrets hidden from him. A diet of flesh and whisky, and a life of uncontrolled desires, are not the "open sesame" to Nature's wondrous secrets.

Yet Thibet must come one day into the comity of the peoples of the earth. Brotherhood and not isolated interests shall and must one day be the law; progress, even through suffering, and not selfish egotism of race or creed—a stagnation of the human soul—shall one day open the wild passes of the Himalayas.

We need not go to the East for Light. The crest of the wave of human knowledge and wisdom is carrying us along; and as William Q. Judge once wrote in substance: We need no missionaries from India or Thibet; it is our duty to send such there. G. DE PURUCKER

The Thibetan Bible

THE Thibetan Bible is a voluminous affair, and an expensive one as well, judging by the following account:

The *Kahgyur*, or Thibetan Bible, consists of 108 volumes of 1,000 pages each, containing 1,083 separate books. Each of the volumes weighs ten pounds

and forms a package twenty-six inches long, eight inches broad and eight inches deep. This Bible requires a dozen yaks for its transport, and the carved wooden blocks from which it is printed need rows of houses, like a city, for their storage. A tribe of Mongols paid 7,000 oxen for a copy of this Bible. In addition to the Bible there are 225 volumes of commentaries, which are necessary for its understanding. There is also a large collection of revelations which supplement the Bible.

From the foregoing it is very evident that a Thibetan family knows its Bible by report and by quotation. Instead of being a household article common in every home, it is a tribal possession and is looked upon as communal property. The spirit of Biblical research is very apparent in view of its 225 volumes of commentaries and its collection of revelations; but the restriction of such research to the initiated monks certainly acts as a vigorous deterrent to protestantism of whatever nature. P.

Lhasa and the Grand Lama's Palace

A PRESS correspondent gives some particulars of Lhasa, lately visited by the British expedition.

The city has no walls, these having been pulled down in 1721 and replaced by a sand embankment to protect against inundation. The road passes Norbuling, the summer palace of the Grand Lama, runs beneath tangled plantations attached to Kundeling monastery, and reaches a height from which Lhasa is viewed.

There is almost nothing missing from this splendid spectacle. Architecture, forest trees, wide spaces, rivers and streams, mountains, everything lies out before one looking down from the height upon Lhasa, immediately at one's feet. Nor is this quite all the charm. There has been nowhere along the journey a hint of what the end was to be. The dark forbidding spurs and ravines of the valley interlocking one behind another promised nothing of this, and the delight of Lhasa's beauty is doubled by its utter unexpectedness.

It is true that we had passed through green fields and marshes cloaked shoulder high with rushes; it is true that here and there a densely matted plantation had moved out to view from behind a projecting spur, or seen afar, had slowly grown in size beside the road as we came along. But there was nothing—less, perhaps, in the maps of Lhasa than anywhere—to promise us in the heart of a city these wild stretches of dense wood, this close-cropped grazing land and this marshy grass, ringed and delimited by high trees, or the lazy streamlets of brown transparent water over which the branches almost meet.

Thus in Lhasa itself there is a mile-wide green belt enclosing the palace and secluding its holy occupant from the town. The town itself is an adobe stretch of narrow streets and flat-topped houses, with here and there a blaze of golden roofs. The Grand Lama's palace "would dominate London."

By European standards it is impossible to judge it. There is little to which comparison can be made. Perhaps, in the austerity of its huge stretches of blank, unveiled, unornamented wall, and in the flat, unabashed slants of its tremendous southeastern face, there is a suggestion of the massive grandeur of Egyptian work, but one only thinks of the likeness to dismiss it again.

The vivid white of the buttressing curtains—each a wilderness of windows and the home of hundreds of the crimson clad dwarfs who stand in the sun at the stair heads, or, pygmy like, man the roof tops—strikes a clear and harmonious note with the sea of green which washes up to their bases. But one is hardly ready for the perfect taste which not only decided for the rich maroon color of the central building resting—three times as large as Stafford house—upon and between its white supporting bulk of masonry, but added, with the sparing hand of the old illuminator, the golden finials which recompose the whole from roof to roadway. It is in such perfect taste that the glistening tops of the Jo-kang, visible enough a mile away across the trees, seem a trifle overdone and even a trifle vulgar in comparison.

The Chinese Queue

SIR CHENTUNG LIANG-CHENG, Chinese Minister at Washington, says that it is a popular delusion to suppose that a Chinaman regards the abandonment of his queue as meaning social ostracism and future perdition. There is no religious significance in the pigtail, merely rooted custom; and it is being abandoned in many countries by Chinese settlers. The Chinese Government has no objection, and takes pride in seeing its people adapt themselves to the customs of other countries.

"For Law and Justice"

An object now frequently seen in Finnish homes is a little savings box bearing the motto "For Law and Justice." The money gathered in these boxes is devoted to helping the agitation for Finland's freedom, and sustaining the arrested and deported.

It is more than possible that as things are now going, the possessor of one of these boxes will *ipso facto* be the first to need its contents.

The Arthurian Nucleus

THE Celtic revival is causing the old Arthurian controversies to assume a new life. At any cost the hero must be rescued from non-existence, and his life disentangled from adventitious elements. These are many. The original Celt-Euskarian nucleus has been surrounded with later romance elements, with elements of Scandinavian and early Christian origin, and with some brought back to Europe by the Crusades.

The theory that there was *no* Arthur is peculiarly characteristic of our day, and is sister to the theories that give us no Homer and a Bacon for Shakespeare.

But it is gradually becoming recognized that there *was* at some period of pre-Celtic history a very great and commanding personality, so great that his people looked up to him as their material and spiritual redeemer, and believed that when he died he rose again, and was waiting somewhere in the world against the hour when he could once more come amongst them. So great indeed was he that when, in the early Christian centuries, his legends began to be collected and viewed as a whole, it seemed for awhile as if King Arthur would become the eponym of humanity, or hold the place of Christ.

We must recollect that the available sources of possible information are as yet but touched. There are thousands of Welsh-Celtic manuscripts so far even unread. STUDENT

The Siberian Transcontinental Railway

WE read much just now about the splendid equipment of the Siberian Railway, an equipment which in some respects surpasses even that of our luxurious trains, which so long have been considered models of perfection. These trains are not only provided with the usual sleeping-cars and dining-cars, with libraries, barber shops and bath rooms, but in addition they are furnished with fine pianos in elegant music rooms. This will certainly very much assist the travelers in making the best of a long and tedious journey, and the enterprise shown is in so far commendable; at the same time one can not help regretting that such a large portion of forethought and care is spent on merely material comforts. Conveniences are pleasant, to be sure; yet carried to extremes they enfeeble a people, which soon finds it impossible to get along without them.

In Russia, however, we can scarcely speak of a *people* being thus corrupted, for the vast majority will not have a chance to even get a glimpse of these luxuries. Nowhere in all the world is the distinction between the rich and the poor so marked as in Russia. Nowhere else is there so much squalor and misery next door to the palaces. Nowhere else is there such contentment amidst the poor surroundings. And nowhere else, perhaps, does there exist the same difference between the conveniences furnished the well-to-do traveler and the peasant who travels on the very same train. STUDENT

Chamonix and Mont Blanc---Frontispiece

THIS week's NEW CENTURY cover-page contains a remarkable view of the valley of Chamonix, and of the famous Mont Blanc.

No other valley, or range of mountains, is so celebrated throughout Europe, as is this part of the Savoy Alps, on account of its picturesqueness and wild grandeur. The glaciers running down into the valley from Mont Blanc, the *Mer de Glace* famous in the number, are the finest in Switzerland.

Chamonix, written of in poem and story, lauded to the skies by enthusiastic tourists and the summer recreation ground of Europe's sight-seers, enjoys a universal fame for beauty, and deservedly too.

The village of Chamonix is 3425 feet above the level of the sea. The winters are usually severe, lasting from October until May; while snow usually covers the ground to a depth of three feet during these months. Yet even in winter, visitors throng to this beautiful Alpine resort, and old and young lose the cares of life in the vivid excitement of Alpine *lugeing*—a form of Alpine tobogganing.

To the Members of The Universal Brotherhood Throughout the World: In order to expedite improvements in the different Departments of The Universal Brotherhood Organization, it is necessary that all communications, connected with the work of the Universal Brotherhood, should be directed to Katherine Tingley, Loma Homestead, Point Loma, California.

Some Views on XXth Century Problems

The Annihilation of Space Imminent

SPACE, mere distance, will soon have to confess its power utterly gone. Wireless telegraphy is rapidly becoming a mere commonplace of daily life. Wireless telephony is close at hand. Now, to complete the matter, comes the transmitted picture of the person talking. He stands before you and speaks. The telegraph transmits not only the letter of your friend, but his handwriting. The details of engravings and sketches of events can now come with the current.

Go forward a few years, and it is obvious that every part of the earth will be in visible and audible touch with every other. The wires, or the paths of electric transmission, are a set of nerves of the organism of humanity. What happens anywhere happens everywhere.

But they would not mean so much if they were not the physical symbols of other paths which are to events in feeling what the electric paths are to events in fact. These will soon be recognized. One would have thought that even now the majority of thinking men would have come to suspect that a bloody war could not be in progress in any part of the earth without the volcano of passions attending it being felt in some degree over all the field of human consciousness.

And so, coming closer and closer together, we live more and more in every hour. Consciousness moves swiftly. Inexplicable moods and impulses, having no obvious outlet in action, no obvious cause in our own lives, succeed each other rapidly. We feel more, think more, and have more pains and joys. But especially pains, for most lives are painful; the interrelation of nations is mostly one of strain due to jealousies and rivalries. And by the annihilation of space we are forced to dip into it all. Yet that very thing is the promise of future harmony, and of a future fulness of life we cannot dream of yet.

STUDENT

Words the Mirror of Mind

IT often strikes one that the historian of morals and manners, the historian of the *consciousness* of a people, would find his clearest index thereto in the history of their words, the words that have slowly changed their meaning for the better or the worse. Witness *pious*, and *piety*, once terms of unmixed praise; now with a flavor of hypocrisy and intellectual weakness. Witness *sanctimony*, and *sanctimonious*, now nearly the same as hypocrisy and hypocritical.

There are also subtler but equally significant changes. *Conscience* once meant *consciousness*; then, that supreme faculty of consciousness assumed by the man who judges himself, that is, judges his thoughts. The man *was identified with the judge*. Then the meaning changed, and the man became *the thing judged*. The point of the change lies in the degradation of the man. The old English word for conscience was "in-wit," in-knowing; it carried the idea not only of gnawing reproof or exhortation to deeds, but of *knowing*. It was the equivalent of *intuition* in its proper sense. But *intuition* does not now mean looking within to that which knows, but a sort of feminine quick guess. *Idea* once meant a divinely conceived foreplan of something that afterwards became sensible to mortal eyes. Now it is a casual opinion. And so on. Are there *any* words that have gone *up*, spiritually or intellectually? But words, like *mén*, have their cycles of light and darkness, and the latter is nearing its end.

STUDENT

The Great Pitfall of Youth

WE have every sympathy with the agitation in favor of the control of cigarette-smoking by the young. But there is something more to be said. When your anæmic, spotty-faced, shambling youth explains that his palpitating heart and all the rest of his symptoms are due to the excessive use of cigarettes, he is *never* telling you the whole of the truth.

And that which he does *not* tell is more profoundly the cause of his condition than that which he advances to your attention. The real cause is one usually discoverable only by its effects. If these were as legible to parents and school-teachers as to the majority of physicians, the next generation might add another ten years to its promised average of individual life, and halve the number of its lunatic asylums.

PHYSICIAN

The New Epicureanism

A PHILOSOPHICALLY-MINDED contemporary notes the rise of what it calls "The New Epicureanism," the doctrine of the duty of happiness. It examines the precepts of various schools of this Epicureanism. Some teach, as a path to happiness, the constant "denial" of the very existence of those ills that make us unhappy. Others teach the "assertion" of their opposing goods. One little book, from the last school, which we recently noted, has as its chief prescription, the constant repetition of the words, "Youth, health, vigor."

All these prescriptions are said to be ways to happiness.

There is only one real and permanent cause of happiness; it is that submergence of the intense sense of selfhood, which occurs when the opposing sense of unity with others rises. It takes the forms of sympathy, love, compassion, brotherhood, kindness; and it manifests in word and deed. It can be cultivated, thought about, trained and "asserted;" and affords the same stimulus to the will as any of the other practises. Its effects are permanent. Moreover, all other persons are compelled to *aid* the man who enters *this* path. He radiates something which evokes from them an answering radiation eminently helpful to both. But the man who mutters "youth, health and vigor"—why should others help *him*? He is in fact walling himself in very closely, and what has he left when his trinity deserts him, as it must?

We repeat the eternal commonplace—permanent happiness, happiness lasting up to and through death, is in ratio to forgetfulness of self in love of others. All other happinesses are unphilosophical, delusive, and have a time limit.

STUDENT

A City's Wards Going Unfed

IN the columns of the *London Times*, the Rev. Dr. Horton calls attention to the 122,000 children going to London schools unfed, and makes a suggestion that is almost indecent. It is nothing less than that the great City Companies should forego their costly banquets and devote the amount to the feeding of the poorest of these children. He seems to be aware that this is going almost beyond reason, and suggests an alternative course—that they should go on with their banquets but subscribe a sum equal to that spent thereon.

We do not know what will come of these impertinences. But they suggest an ideal of city life which may sometime be worked out in detail in our Londons and New Yorks. Why should not the children born in the poorest strata of great cities feel that they are in a real way the care, the wards, of those cities? Why should they not constantly feel the power of the city as a protecting hand about them? At present they hardly know it save as a force compelling them to go to school, and ultimately punishing the worst kinds of outrage. Thousands of them now grow up with the sense of being entirely uncared for, unwanted, alone. The way in which Freemasonry deals with its orphans comes into one's mind.

STUDENT

How to Be Ill

THERE is a view of illness which those who are ill might very usefully adopt. Acute illness, fevers, are in perhaps all cases eliminative storms, fires excited by foreign matter whose tendency is to burn that matter.

That is the view that the patient should take and hold, as far as he can, feeling cheerful and confident that the burning—painful as it is—will leave him the better for the riddance of long accumulated rubbish. This even applies to a common cold. And contrary to most "assertions" of like kind, it is strict truth, the exact fact.

But if, on the contrary, he lets the thought—"I am *ill*"—dominate him, then he is assuredly setting his mind in color with the dark side of the case, depriving himself of a legitimate help, and weakening his forces of recuperation. The natural tendency of illness is to cure itself when its work is done. The patient's business is to live till then. And he will most effectively attend to this business by a cheerful and correctly based attitude of mind.

Art Music Literature and the Drama

The Music of Japan—Many Lessons Still to be Taught

FROM the Paris letter in a recent issue of the *Musical Courier*, we clip the following:

There are a number of conservatories of music in Japan. One I know of in Tokyo and another in Yokohama, a program of a students' concert that took place in the latter having been published in this paper some time ago; it was sent to us from the conservatory, and Beethoven figured in it. Moreover, we must not forget in discussing this interesting "war" feature, that we can be assured beyond any doubt that the military and naval bands of Japan are constituted of Japanese natives. These natives must have studied our music, our musical notation and the technic of our musical band instruments and our band orchestration, and they must comprehend, at least, some divisions of our rhythm to be able to play on these instruments.

Now, then, how did these Japanese learn this music, learn the manipulation of our musical instruments, and—this is more important—how did it come that they substituted, in place of their own original Samurai war songs and war chants, the new music of the West? Let us remember that their own war songs always led to victory, and that they have never, during a dynastic rule of over 2500 years, been defeated.

What does 2500 years of uninterrupted advancement mean? Their very adaptability in assimilating with unheard of rapidity the whole social, ethical, political and scientific machinery of the West illustrates what it means. What happened in these 2500 years? With the exception of Japan, every Asiatic nation has been humiliated by nations of Europe, China being humiliated contemptuously by Japan within a few months—contemptuously, considering the disparity in the size, the number of inhabitants and the resources of the two nations. Until Marathon and Salamis, the Asiatic nations governed the then habitable or inhabited globe, and after these events, some 500 years before Christ, the tide began to turn, until not only the autonomy of government was lost to the Asians, but the greater part of the continent was actually acquired by European nations. It required 2500 years to do this, and we know that during all this nearly incomprehensible period of history, embracing about all we claim thoroughly to know of the human race, this Island Empire of Japan remained unmolested not only in its life but in the uninterrupted continuity of its dynastic succession.

What do we know of the music of the vast part of that period? Nothing. With the usual superb and impudent equanimity of Western civilization, we assume that during this period, a period embracing the pinnacle of artistic achievement, music was a mere complement to the other arts; that the Greeks had a limited number of modes which to our acute sense of cultured hearing would seem cacophonous; that there were some rude attempts at harmony in later Egypt; that the Asiatic did not even know a mode, or a harmony, or a lucid interval. Not knowing anything at all about the music of the greater part of this, the only truly historical period of mankind, there is no utility in discussing it. In the archeological discoveries we find the remains of laws, documents illustrating society, war and its conquests, and the lineages of royalties. We find monuments and inscriptions, but there is no trace of music; *but there must have been music*, or the Japanese could not now be able, after only a few years, to play what we call music. If we deny this, we must admit that, taking into consideration the magnificent genius of her soldiery and her organizers, the Japanese nation must be gifted beyond the ordinary capacity of the other nations of the globe, and that is hardly admissible.

A nation that has been able to sift out and adopt what is best in our Western civilization without being demoralized and ruined by what is worst, certainly is "gifted beyond the capacity of the other nations," and this Japan has been able to do. We agree with the correspondent in that "there must have been music," even though we have not, with all

our burrowing, been yet able to unearth it. Japan has taught the artists of modern Europe and America some of their greatest lessons in art—it is more than likely that she may say her word in music when she is ready.

So spectacular has been almost every phase and every process of our Western growth, it is difficult for us to understand that deeper development, that truer growth, that can never come to be save in the silences. It was no accident that those who have guided the destinies of Japan kept the nation secluded for so many years and forced its growth to be self-contained and silent. To have done otherwise would have been to place this people of possibilities at the mercy of our ravenous Western "civilization" before it had attained its wisdom or had found its strength.

And drama? Is it probable that a nation whose history is one of the most dramatic the world has ever known, and whose heart-life is still honest and sincere, may not yet teach us many lessons in the higher drama? STUDENT

Without poetry our life will appear incomplete.

FROM LANDSCAPE by COROT

LIFE AND SONG

by SIDNEY LANIER

IF life were caught by a clarionet.
And a wild heart throbbing in the reed.
Should thrill its joy and trill its fret
And utter its heart in every deed.

Then would this breathing clarionet
Type what the poet fain would be.
For none o' the singers ever yet
Has wholly lived his minstrelsy.

Or clearly sung his true, true thought
Or utterly bodied forth his life.
Or out of life and song has wrought
The perfect one of man and wife:

Or lived and sung, that Life and Song
Might each express the other's all,
Careless if life or art were long
Since both were one, to stand or fall:

So that the wonder struck the crowd,
Who shouted it about the land:
His song was only living aloud.
His work, a singing with his hand!

Technical Training v.s. the Culture of Heart Life

THERE is already a reaction, not only among the critical section of the public, but among musicians themselves, against so much study of mere technique. Too much time is given to the acquiring of dexterity, too little, far too little, time is given to the general culture which alone can breathe into manual dexterity life and beauty. What is the real instrument which the musician uses? Is it not first the brain, then the hand—always assuming that the musician himself lives, works, labors, as a soul? We think no time wasted by the mechanic who cleans and sharpens his tools before beginning work and who keeps them, even at some expense of time, in good condition. Is it then a waste of time for the musician to keep his brain clear, his body strong and his mind alive by pure living, pure thinking and human interests?

Yet the simile is inadequate, for purity of life does something more to the brain than merely clarify it. It actually brings to light it the fire of the gods. It renders the mind transparent, as it were, so that the soul-light may shine through. Mental culture alone will not do this, divers musicians to the contrary; it is the heart touch that is needed, the heart force and the life compassionate and pure.

There are many technicians, but they no longer satisfy us because, as a people, we hunger for something they have not and so cannot give. The time is coming when those musicians who will not voluntarily bring into their work and lives this broader culture of the heart, will be forced to yield their places, in the great march, to those who do. STUDENT

IT is not strange that so many are paying tribute to the late Lafcadio Hearn, the American author and teacher who died recently in Tokyo, Japan.

In bringing us a bit nearer to the life of the Japanese people he placed his American contemporaries under lasting obligations. If he had one fault it was a certain narrowness of view. Perceiving, with the artist eye, the beauty and the simplicity of Japanese life, he lamented beyond reason the incoming of American methods and American ideals. Japan was to him a land of ideals passing, its beauties doomed to extinction and hopeless materialism. He saw the beauty of Japanese character, but he saw not the spiritual strength that lay beneath—that strength which has placed Japan today in her true position as a Teacher to many nations of many things. Nor will her beauties fade and pass. STUDENT

"Thou shalt make thy house the Temple of a Nation's vows"

DR. ELIZABETH JARRETT, Medical Examiner for the New York Board of

The Breaking of Life's Laws

Education, said recently, speaking of the breaking of life's laws:

"One hundred and fifty of the 600 girls sent to me for physical examination this spring had to be held over for re-examination this fall because they were found to have some form of heart trouble, incipient kidney disease or anaemia. These are not inherited diseases. Many of them, as examinations have proved, have been brought on by the nervous tax of three mental examinations—the state superintendent's, city superintendent's and training school superintendent's—which they must pass in order to obtain a teacher's certificate.

"When I say that 7 per cent of the girls turned out of training schools have become incurably diseased, I speak conservatively. I find well developed cases of Bright's disease, severe heart disease, decided spinal curvature, some tuberculosis, and I came across one case of goitre. Some of these girls come back for several years to be examined over again in the hope of improvement, but usually we find the same thing. It was the school work that sent them on the downward path of disease. They were placed under a pressure of work such as no girl of 18 should undergo, such a strain as comes upon a business man of 40.

"Many of the girls tell me that during the last year of their course they sat up until 12 o'clock every night. No career is worth that, and there is no need for such strain."

No mention is made of diseases peculiar to women, which are not usually considered incurable, but which are exceedingly common, which make life a burden, which sap the vitality and which render those afflicted unfit to have the care of students of any age. Wherein lies the difficulty?

Not entirely in the requirements of the examining boards, in spite of the fact that to meet them demands an outrageous amount of brain work. But to speak of students sitting up until twelve o'clock preparing for examinations is probably understating it.

No one familiar with college life or even high school work but can name a dozen ambitious young women who study until two or three o'clock night after night for weeks at a time, with only the relief of

an occasional feverish nap in the daytime. And the night before examination how many foolish stu-

dents have not sat up practically all night?

Of course such strain as this is beyond the necessity of argument. It is absurd, criminal. But, after all, the real difficulty lies in the total lack of a true philosophy of life on the part of the students themselves. In the first place, the majority has the erroneous idea that the prime requisite is intellectual training; the majority has almost no knowledge of, and but little respect for, the needs of the body.

The average student life is one perpetual oscillation between the extremes of nervous worry over some test or examination, and the unhealthy excitement which so often masquerades as pleasure.

What would not a knowledge of their own sacred threefold constitution do for our college women and our teachers?

For it must be borne in mind that the sum of a soul is not the physical *plus* the mental *plus* the spiritual. It is by no means a sum in addition, but it is each quality reinforced by both others, added to these, each of which is likewise reinforced; and the combining, the union, of these is pure alchemy. This is no argument in favor of illiteracy, however, nor does this contain a hint that school teachers should know less of books than they do. The fact is, that when one's whole nature is placed in something like balance, intellectual training may be acquired with one-tenth the effort and with no strain at all.

This the Raja Yoga system has already demonstrated. It is because the schools, the teachers and the students of the world are ignorant of this fact—so marvelous that it seems almost like magic—that we go on piling up the statistics of "the lame, the halt and the blind," the incurably diseased and the nervously unbalanced. And the list is an exceedingly long one.

STUDENT

MISS MORSE, who has just taken the degree of Doctor of Philosophy at Jena, is the first woman to receive that degree from that University. She is a niece of the inventor of the telegraph.

ENGLAND has at last its first woman preacher, Miss Gertrude von Petzoid, who is now in charge of the Unitarian church in Leicester.

THE MOTHER

WITHIN the dusty car she sat apart,
Wrapping her torn shawl round a little child,
Who looked up in her swarthy face—then smiled,
And dropped his drowsy head above her heart.

I saw the mystery of creation dart
Into her sombre eyes; that look the "Undeified"
Cast on the Babe, whose couch with straw was piled—
Knowing, like her, neglect and hunger's smart.

What worth were creeds, before that woman's face?
Isis—Demeter—Mary—'tis the same!
And ere was writ the history of the race—
(Though some were born to praise—and some to shame)—
Each mother heart was made the resting place
Of that transcendent Love, whence all life came! — *Selected*

The Rearing of the Child

THE last blow has fallen upon us. The child who was awarded the first prize at the Louisiana Purchase Exposition in the test of all nations for the world's finest specimen of babyhood was reared—by a man! Where are we now? And where is woman's sphere? The man in question is one John Krell, an interior decorator. The child is less than three years old and this is the story as the father tells it, and his words are quite worth quoting:

"Shortly after the child's birth the mother became an invalid and the whole care of the child devolved upon me. I decided that, if possible, I would get on without doctors and to that end I have kept him in the open air most of his life. My work has made it possible for me to do this, fortunately. He has been out of doors practically all of the time

excepting when sleeping and he has also gone barefooted most of the time. When he was born he was homely and frail, but now he is so different! I have been careful with his diet and tried to be rational. After he was weaned from the bottle he had cereals, plenty of milk, of course, fruit, cooked vegetables and eggs. He has

ON THE GROUNDS OF THE RAJA YOGA ACADEMY
One of the Lecture Halls in the distance.

never had any kind of meat and I hope he never will have any. Then, too, I have never given him any candy, pastry or sweets."

Now what have we, as women, to say to this? It is only one of the thousand arguments which we may meet on every hand which proves that the mere fact of physical motherhood confers no wisdom of itself. When we think of the mortality of babies among even the middle classes in our cities, the windrows of little graves in every country churchyard, of the thousands of children who grow up weakly, nervous, all out of tune and carrying through life fifty senseless idiosyncracies—and when we recollect that the vast majority of these unfortunates were reared by their mothers, it is easy to see that mothers, as a whole, have yet much enlightenment to gain.

STUDENT

THE following letter was written to one of the Lomaland students by one who recently made this home-spot, Point Loma, a visit—a woman who has seen too much of life's real sorrow not to appreciate its joys, and who today, through sheer sweetness of soul, has stepped beyond the shadows and into the light:

SAN DIEGO, CALIFORNIA, Sept. 26, 1904

DEAR ———: I keep thinking, "Was it a dream?"—my delightful two days in lovely Lomaland. How heavenly it all was! You are so happy and busy, and are making all happy who have the privilege of looking in on your little Paradise. I hope more of those delightful doorways to the perfect life will be opened in every land on earth, though none could have all the natural beauties of Lomaland, with its vast panorama of sea and sky, of mountain and valley. I am so glad I had the pleasure of that visit. I shall always hold it in my memory as the most delightful event of my life.

M. A. P.

A DISPATCH from St. Petersburg to the *London Express* says:

In the Kharkoff, Poltava, and Ekaterinoslav Provinces of Russia, says *The Novoe Vremya*, there is a rapidly growing trade in the sale of wives, frequently at their own desire. The usual cause is the extreme poverty of the husband, who can no longer keep his wife; though it is often because the wife desires to be free from a cruel, drunken partner. The trade has become so common that few markets are held without such transactions, which are considered so binding that no case has been known of a husband demanding his wife back. Their market value varies from £8 to £15. More is never paid. The women are required to be good housewives and fieldworkers.

What will be the comment of the historian of the Twenty-first century? Yet let us not lose sight of the real issue in wild and futile debate anent "woman's rights and man's wrongs." If a husband who is guilty of such an assault upon justice and decency is to be condemned, what about a wife who will submit to such indignity without protest? E. H.

Should Illiteracy Disappear

ACCORDING to the figures furnished by the British Registrar-General, as illiteracy has disappeared divorce has increased, and naturally the bishops are worrying about the time when everyone will be so highly educated that divorces will be considered indispensable. It is curious, indeed, to reflect upon the bequests that illiteracy always leaves behind it when it disappears. One such was the abolition of that little (English) legal enactment by which a man might chastise his wife *cum flagellis et fustibus*; that is, "with whips and cudgels" whenever, in his opinion, her behavior might warrant it. Then there have been others, such as the Married Woman's Act, divers curious legal indications that marriage might not be, after all, a despot and slave arrangement, nor a contract between two people, one of whom was to forever play the role of silent partner.

Then, too, think of the other distressing things that have happened since illiteracy began to disappear! Republics have come into being along with just and remedial laws, greater opportunities for men, for women, for little children, for the poor; greater protection for the infirm, greater help for the mentally and morally sick. It is awful to contemplate—think of it!—whole nations that will never again be visited by famine or by the plague; whole communities that will never again be terrorized by the tax-gatherer or feudal chief; whole families that live in peace and harmony, and threaten to so continue! Plainly, it will never do for illiteracy to disappear. Have we not, as women, a duty in this connection? Shall we not rise and protest?

STUDENT

DR. KIERNAN, a Chicago alienist of reputation, said recently: "Woman has always had hold in the professions since the days when the Irish Monks established what afterwards became the universities of the continent of Europe. Since the Thirteenth century in Italy women have played high scientific parts and made marks in jurisprudence. Since the establishment of the house of Savoy this phase of woman's work in evolution has been in striking evidence. A great deal of scientific work has been done in both Italy and Russia by women, and in much of this so little of sex characteristic has been shown that even the gynephobic press of England has praised their work as being 'peculiarly masculine in character'—a high compliment in the eye of these egotistic male types.

"In the United States, however, the work of woman to a degree has been of an emotional rather than of a scientific type, and like all emotional effort has damaged both the work and the worker."

WOMEN have been permitted to serve on thirty-five of the one hundred and forty-four groups of jurors at the Louisiana Purchase Exposition, says an exchange.

But why "permitted"? Would not "invited" have sounded just as well, less unflattering to both women and men and less untrue in its inference?

SOMETHING like three hundred women are at Port Arthur engaged in hospital work. Recently, when advised to leave, they replied they would rather face the possibility of massacre than desert their posts, and they remained.

FROM the Montana School of Mines at Butte was graduated recently Miss Isabel Little of Baltimore, at that time the only qualified mining engineer of her sex in the world.

BREACH of promises are rare in France, possibly because marriages are so carefully arranged by parents, trustees and lawyers on both sides, and possibly, also, because the law is so favorable to the injured party.

American Indian Engraving

OF the arts in which the Alaskan Indian excels, engraving on metals is not the least, being presumably a branch of their skill in carving conventional figures, such as totems, "coppers," and the paraphernalia of their mystic dances and feasts. The degree of conventionality attained in their representations of natural objects is wonderful.

When it is remembered, as a well-known writer has remarked, that drawing, and especially line work, is but an illusion upon which the beholder builds his conceptions of the ideas expressed, then it will be seen that this conventionality, so strange to us, may represent a high form of art to those for whom it has been evolved. It is possible that this work, as also a large portion of the Egyptian and other ancient conventionalism, conveyed in a simple form, ideas which reconverged in the mind of the spectator into living pictures quite as eloquent as those produced in modern days by the simple line of a Phil May, a Paul Helleu, or a Du Maurier.

The Indian worker, too, is a craftsman from beginning to end. The skill with which a silver dollar is beaten out into a thin, broad bracelet, is in itself a fine art. Even gold twenty-dollar pieces are sometimes used, but the designs are of late years becoming less characteristic and more calculated to catch the tourist's fancy, so that these ornaments made from coins of high value are more liable to be decorated with an American eagle or flag, more or less indifferently wrought as compared to native designs.

The illustration is of a design originally made on a hammered dollar bracelet, representing the "thunder-bird" which figures so largely in the totems and legends of British Columbia. TENASTYEE

THE THUNDER-BIRD

Egyptian Architecture

THE chief characteristic of Egyptian architecture, nowhere better exemplified than in the temples whose ruins have been dug out of the sand, is simplicity and grandeur. In text-books of ancient history one finds the writers struggling between an evident appreciation of the greatness of this architectural spirit, and an imagined necessity of conforming to the fixed idea that the Egyptians were elementary and all succeeding civilizations progressive improvements on them. So the Egyptians are condemned for stiffness, want of ornament, and so on. But we have to take into account the nature of their scenery, with its immense sunlit plains and bold escarpments. By doing this we may realize how their architecture was made to match the general genius of imposing size and grandeur characterizing both land and people. The Greeks have been credited with greater symmetry, but it was symmetry within a smaller compass, so that the eye could take in the whole at short range. But the Egyptian temples were not built for a close view, to crown some hill or citadel, or to grace a public square; and a symmetry of large scale was demanded, not less harmonious, because a close and contracted view cannot take in the proportions of the whole.

Let us refrain from assuming that, because the Egyptians *did not* build like later architects, therefore they *could not*. They had no need to.

In the temple illustrated we cannot without a vivid exercise of the imagination get an idea of the symmetry of the structure, half-buried as it still is. The massive proportions of the superstructure are brought too close. We can understand that a point of view sufficiently remote to give due proportion to the aspect of the top would also render elaborate ornamentation superfluous. Simplicity was needed, and simplicity is secured. We notice the three rows of massive columns forming the

RUINS OF EGYPTIAN TEMPLE

portico of the temple, and some idea is given thereby of the size of the entire structure. The columns have thick cylindrical shafts mounted by capitals of the shape known as cyma, ornamented with flowers, probably palms or lotuses. Above this is the rectangular abacus, supporting

the entablature, which is a simple architrave without frieze, crowned by a heavy cornice. STUDENT

Surgical Skill in Babylon

THE Code of Hammurabi, which has several times been referred to in the NEW CENTURY PATH, contains some interesting regulations for physicians and surgeons. Hammurabi, it will be remembered, was a king of Babylon, identified with the Amraphel mentioned in *Genesis xiv*, whose code was found two years ago on a broken monument in the ruins of Susa. A graduated charge is fixed according to the wealth of the patient. Thus:

If a physician operate on a gentleman for a severe wound, with a lancet, and save the man's life, or if he open an abscess in a gentleman's eye and save the eye, he shall receive ten shekels of silver. If he operate on a freeman he shall receive five shekels. But if it be a man's slave he operate on, the owner of the slave shall give two shekels to the physician.

In one respect the ancient usages were more rigorous than ours, though it is a debatable point whether or not they were better. For we read that:

If a physician operate on a gentleman and cause his death, or destroy his eye, they shall cut off the physician's fingers. If he operate on the slave of a freeman and cause his death, he shall restore a slave of equal value.

The fact that physicians could exist at all under such stringent conditions seems to show that the risk to them was small; that is, that they were exceedingly skillful. A critic of this code makes the remark that "there was no aseptic surgery in those days;" but he does not give his evidence for the assertion. Perhaps Lord Lister is only a reincarnation of some great Babylonian surgeon, and his discovery of antiseptic surgery only a feeble reminiscence. Or perhaps was there not the same need, in Babylonian patients, for antiseptics.

And Among the Cliff-Dwellers

AMONG such a people as the Cliff-Dwellers of New Mexico, too, there has come to hand evidence of a surgical skill far in advance of what we should naturally attribute to that race.

Though not now regarded by scholars as an ancient race, it would scarcely be considered a very advanced one, though the accuracy of the houses it erected in the cliffs shows considerable mechanical skill.

Among the collection of skulls of Cliff-Dwellers, in the possession of Professor Hewitt, principal of the State Normal School of New Mexico, is one which shows evidence of having been most skillfully trephined. The aperture showing the removal of the broken section of skull is slightly larger than a 25-cent piece, and several fractures extend from the orifice $1\frac{1}{2}$ inches in length. The opening was filled with a kind of cement or gum. We are apt to make the unwarrantable assumption that other races must have made their advances in knowledge in the same order of succession as we have made ours, and that if they are behind us in one respect they must needs be so in some other respect. But this does not follow, nor does it follow that surgical skill is in proportion to the number of instruments used. We rely so much upon instruments in nearly all our arts and crafts that we have neglected to develop the natural skill of the most wonderful of all instruments; and a volume could be written about the marvelous things that other races can do with their hands alone or with the simplest implement. Some Point Loma Beauties

THE Sweet Sultans which are shown in the photograph, are a sample of the floral wealth of Lomaland. This variety of the *Centaurea* is especially satisfactory to cultivate on account of the size and beauty of the blossoms, as well as of their number and persistence of bloom; while, as its name suggests, its delightful fragrance is, to many, its chief attraction. In structure it is an interesting transition type between the complete composita, such as daisies, on one side, and the aggregate tansy-type on the other, for while its outer row of florets is much larger than the others, yet these florets have not yet spread out into the single-petal form, nor have the others become atrophied to the flat disk such as forms the center of a sunflower.

A distinction must be drawn between such flowers as here described and the double composita; because in the case of these *centaureas*, *galliardias*, *schissas* and their kin, there has not yet occurred the splitting and flattening of the corolla into a single petal. This splitting occurs in all the perfectly typical composita, such as sunflowers and daisies, no matter how "double" they may be induced to become; while with these others there is no such thing as a "single" or "double" flower, because the florets have not lost their individuality, nor the full perfection of their corollas. G. W.

A Singing Mouse

I HAD long wished to possess a singing mouse, and my strong desire coming to the ears of an obliging collier, he brought me one of these little songsters in fur, which he had caught in the workings of the mine where he was employed. My new friend was a fine young mouse in perfect health and nearly full grown, and during almost the whole of her waking hours she poured forth a slender stream of soft sweet notes which became louder with exertion, but which almost died away when she sat in repose. Her scale of notes was rather limited, perhaps not exceeding three, and yet her song had a distinct resemblance to the song of a bird which you hear outside a closed window. It was not a *squeak*, but had a quality of sweetness and melody about it, and an old collier to whom I lent my pet one day, described her music as "something sublime."

Thus began an acquaintance which soon ripened into intimacy. The melodious little mouse would run all over my arms and shoulders, brushing her slender tail against my cheek, and twittering "the soft little song she knew," into my ear. She would eat her supper of bread crumbs as she sat in the palm of my hand, and afterwards groom her sleek coat with her claws and teeth while she washed her thick fur with her moist pink tongue. I decided that it was not good for a mouse to be alone, and so I procured a quiet and well-behaved husband for her, by the simple process of setting a trap in the pantry.

Early one morning I was greatly diverted to see the affectionate pair giving each other a warm bath with their energetic little tongues, and a very pleasant process it seemed to be judging by the willing way in which each resigned itself to the other's attentions. It was a bit of practical

SWEET SULTANS

brotherhood work which went right to my heart. The singing mouse was very careful not to hurt me with her sharp teeth, indeed I think that during all the years I knew her, she never once bit me. Sometimes when I shut her up between the palms of my hands for a longer time than she thought proper, she would tenderly pinch my skin with her teeth as a gentle hint for her release, a hint to which I always judged it prudent to attend without delay.

After four years of close friendship my mouse began to show the marks of old age. She tottered in her walk, her teeth began to fail, until at last one morning I found her lying still, her head half way out of her little sleeping box, and a crumb between her teeth which would never now be swallowed.

Up to the last, however, she never failed to sing. Her good spirits never flagged. Always cheerful and active she believed with all her heart that life is joy, and helped her human friends to feel it, too.

I missed the cheery little songster and even to this day can never think of her unmoved.

The body we buried, but where is the mouse herself? Something can never become nothing, that every child can see, and so somewhere in the Vast Unknown that tiny spark of life is burning yet. The Universal Mind which notes the fall of a sparrow, does not forget the singing mouse. Both mouse and her master lie in the same firm yet gentle grasp, which holds the distant planets in their courses and shapes each glittering drop of dew. STUDENT

Intelligence and Good Fellowship in Birds

A POINT LOMA student, in the habit of eating his lunch under the open sky, was frequently visited by different birds for crumbs. One day a sickle-billed thrush came and lighted on the ground in front of him. He threw it some crumbs, which it ate. After a little the thrush went away and then returned with some pods containing seeds that he seemed to consider a better kind of food than that the student was eating. He would drop a pod on the ground in front of the student, and pick it up and drop it again, making a sort of call as a hen does to her chickens when she has found a worm or some other choice morsel. The thrush continued his visits and became very friendly.

A similar case is that of a lady who had a pet magpie, which she was accustomed to feed with crumbs from her lips, which she would put to the bill of the bird. To return the compliment, the magpie came to the lady one day with a fine green worm in its bill and placed it to her lips.

These birds showed intelligence and a generous spirit as well, and who knows but they thought the student and lady lacking in intelligence that they did not partake of the feast that was offered them? STUDENT

PICTURE OF SWEDISH RIVER

TRUTH, and goodness, and beauty, are but different faces of the same All. But beauty in nature is not ultimate. It is the herald of inward and eternal beauty, and is not alone a solid and satisfactory good. It must therefore stand as a part and not as yet the last or highest expression of the final cause of Nature.—Ralph Waldo Emerson

ON THE SEAWARD SIDE OF POINT LOMA—LOOKING NORTH TOWARD MISSION BAY

The Dedication of the Raja Yoga Academy at Lomaland

ONE of the great events in the history of the Theosophical work at Point Loma, was the dedication of the new Raja Yoga Academy, for boys and girls, on the evening of October 6th.

For weeks the Students at Lomaland had been looking forward to this time with great enthusiasm. To see the enlargement of the Raja Yoga work, following so swiftly after the initial step of only a few years ago, was a moment of prophetic promise to them.

Many of the helpers in this effort, only a few years ago, lived in different parts of the world, attracted to H. P. Blavatsky's great movement for Humanity's upliftment. Later, they journeyed to this great Theosophical center to serve in the ranks of the World's workers, under the banner and the motto: "There is no Religion Higher than Truth."

At the inception of this truly great effort in 1897, the hills of Lomaland were barren of buildings and of all that marked the presence of man; but on October the 6th, 1904, these hills were lit up with huge bonfires for a distance of over two miles, in honor of the opening of the Academy. The Academy itself was a dream of beauty. Illuminated from base to dome, every window a portal of light, it looked like a mystic palace in the distance, its background the shadows of the eventide.

Floral decorations and the flags of all nations added to the picture a color touch of rarest beauty.

The residents and older Students were the spectators; the Raja Yoga children were masters of the ceremony. At six o'clock, they started in procession from the Raja Yoga School, down the broad walk to the entrance of the Academy, and in silence gathered at the entrance, where stood the Director of the Academy, the Rev. S. J. Neill, and Dr. Gertrude Van Pelt, the Directress, who were presented with floral tributes.

With grave and solemn mien, one of the beautiful little Raja Yoga girls, Miss Margaret Hanson, escorted by a young Cuban, Antonio Castillo, approached the broad entrance of the Academy, bearing a crown of flowers representing the Victory of Knowledge, and a scroll symbolizing Hidden Wisdom. Attaching these beautiful symbols to the door-knob, these two stood in silence, while the children in the procession sang one of their beautiful songs. Then the march was resumed, the children passing slowly through the winding paths of the exquisite grounds, out to the broad way facing the Pacific Ocean, timing their steps to the rhythmic beat of a school chant.

Facing the Aryan Memorial Temple, they formed a semicircle, making a picture of youthful life. While some of the children strewed offerings of flowers on the Temple steps, again was repeated the dedicatory ceremony of attaching to the doors of the Temple the mystic and symbolic scroll and crown.

While the admiring spectators watched this beautiful ceremony of silent offering, the doors of the Temple opened, and a burst of orchestral music, proclaimed in triumphant sound, the victory of this hour: The Dedication of the Raja Yoga Academy, on October the Sixth.

**There Is No
RELIGION
Higher Than
T R U T H**

While this quaint and interesting ceremony was proceeded with, some of the devoted workers were busy at the children's school, preparing a reception for them, on their return to their homes.

From the Temple, the children marched up the broad way fronting their little Bungalows, each of which was illuminated with Japanese lanterns and gay bunting.

Here they disbanded with merry song, and spent the evening as only Raja Yoga children know how to do.

At this same time, the older Students gathered in the great lecture hall for a general assembly, to listen to the addresses of some of the Students and to the reading of the contents of the scrolls which had played so prominent a part in the dedicatory ceremony of the evening.

Perhaps at no one time, in the annals of the history of the Theosophical Movement, was there such a unity of thought and feeling with the members of the Universal Brotherhood and Theosophical Society throughout the World, who had done so nobly on their part in sustaining the great work of H. P. Blavatsky and William Q. Judge, in helping to make possible this most solemn and significant event.

The members living at the "Cliffs," the beautiful International Brotherhood center at a distance of one mile and a quarter from the Homestead, held a festival in honor of the dedication. Flowers, music and addresses by the different workers, in which the children took an active part, added to the completion of the day's work for the advancement of true education for the young.

To this Academy are coming children from all parts of the World, thus emphasizing the fact of the International character of the work at Lomaland.

SPECTATOR

Periodicals of the Universal Brotherhood Organization

AMONG the many Theosophical publications of the Universal Brotherhood and Theosophical Society is the *Universale Bruderschaft*, published at Nürnberg, Germany, monthly, which is a constant source of inspiration to many members of the Universal Brotherhood whose English is insufficient to allow them to profitably read the *NEW CENTURY PATH*. Another excellent monthly is the Dutch magazine, *Lotus-Knoppen*, published monthly at Groningen. The style and general get-up of this periodical are excellent. The Dutch members of the Universal Brotherhood Organization are now engaged in issuing a series of pamphlets on Theosophical subjects, which are supplying the growing demand for all literature published under the auspices of the Universal Brotherhood Organization. The *International Theosophist*, published in Dublin, and the *Theosophical Chronicle*, published in London, at the European Theosophical center of the Universal Brotherhood, at 19 Avenue Road, are both worthy of highly favorable comment, not merely on account of the growing public interest in the work of the Universal Brotherhood they prove, but also on account of the high literary level they have attained.

Special notice should be made of the two Swedish publications, the *Theosophia*, published at Stockholm by Dr. G. Zander, and the *Nya Seklet*, published at Helsingborg by Dr. Erik Bogren. Both of these messengers of "Truth, Light and Liberation" to discouraged humanity, are doing splendid work, and are invariably splendid specimens of the two editors' ability.

Isis
Theatre

LOMALAND STUDENTS AT ISIS THEATRE

THE large audience which assembled at Isis Theatre last Sunday night, expecting to listen to an address by Katherine Tingley, Leader of the Universal Brotherhood and Theosophical Society, were doomed to disappointment, as unexpected but pressing demands upon her time made it impossible for her to be present, though it was announced she would speak at the earliest date possible.

Another announcement, and one of more than ordinary interest, was that in furtherance of her extensive educational work, Mrs. Tingley has under preparation dramatic presentations for the public, which she feels will be gladly welcomed by all who have for long felt the real want of the higher dramatic art. Certain of the Point Loma students are now being trained for this special work.

The keen disappointment felt at Mrs. Tingley's absence, was compensated for in some measure, at least, by a most delightful surprise. San Diego people have from time to time heard of Point Loma orchestral activities, but were certainly not prepared for the exquisite rendering of the musical program by the Point Loma orchestra, or at least a portion of it, for we learn they were not all present. This remarkable development was at once a surprise and a delight, and elicited warm applause. It is hoped they may be frequently heard in the future.

The first speaker, Dr. Gertrude W. Van Pelt, who is a favorite with Isis audiences, read a paper on "The World's Eternal Ways." In part she said:

"All things issue forth from the unmanifested into manifestation, and then in time merge into the unmanifested. These two, light and darkness, are the world's eternal ways. The waves of the ocean express it in ebb and flow of the tides; day comes to the earth and is followed by night; the life forces of plants sink to rest in their season, and burst forth again in the spring. Man's consciousness leaves this earth as it turns from the sun and returns at the dawn of a new day; and when the life forces of the body have been spent, it, too, dissolves, and the soul fashions again its garments ready for use, when the turning of the great wheel brings it from the world of cause to the world of effect. Such, indeed, are the world's eternal ways. There must be, there is, a way of working with the tides of life, of using them and ma-

king them our allies; but instead of studying the fundamental principles of law, it seems to be more common to take human life in its present, twisted, abnormal, diseased condition, and to consider the mental habits of this undeveloped race as expressions of the world's eternal ways. But within each heart burns eternally the torch of truth. 'It lighteth every man who cometh into the world.' We shall find that where there is light there must also be shadow in the world of manifestation; that when there is good there is that undeveloped side which we call evil, which the good must be forever moulding, tempering and refining. And we shall learn that we, being a part of it all, must be a mixture of these two eternal forces, and that it is the world's eternal ways that we should be eternally responsible."

Ruth Westerlund, one of the Raja Yoga girls of Lomaland, by request, gave an exquisite recitation: "Voices at the Throne."

Rev. S. J. Neill read a very practical, helpful paper, entitled: "The Victory of the Divine Man." The speaker pointed out,

As a great law of Nature, that nothing moves on with even flow, but all motion is in ripples or waves. So we find man's life to move. It is divided into more or less well defined cycles. At one time they are happy, hopeful, buoyant; at another time they are miserable and despondent. With an effort of the will, man can rise above these conditions; he can cast off the sullen and morose mood, and make the character firm and strong, calm and hopeful. We can cultivate a good temper and a sunny atmosphere. And the happy feeling thus produced will return and return; it will become cyclic. And finally it will become natural for us to dwell in light and sunshine.

Each step we mount upward over our lower selves gives us a wider horizon, and a heavenlier air to breathe. The foes we slay today we shall never have to fight again. We not only become stronger, but we become much stronger relatively as our foes are weaker and fewer. The more we live with perfect unselfishness, the more we come into the 'path of the just.' But if we do good things even, looking for the reward, we do not take the highest path. Though we dwell in Time, and our lower nature belongs to it, yet in our inmost and only true self we belong, not to Time, but to the Eternal; that is our home and place of peace always. The man who retires often to this fortress—to his Place of Peace—though he may have to pass through much suffering, will be raised above its destroying influence.

OBSERVER

Cuba's Change from Bull-Fighting to Baseball

SOME of the most promising signs of Cuba's progress can be found in the rapidly changing ideas in regard to amusements, that are now taking place in that country.

A few years ago bull-fighting and cock-fighting were two of the most popular forms of amusement. Today neither one nor the other can be found in the island.

The Spanish-Latin mind is one that preeminently demands action—constant and strenuous. In the past, this craving only found its opportunity of satisfying itself in the above mentioned sports; not so much on account of any insatiable love of blood and cruelty on the part of the people, but rather because it satisfied these innate longings for action, which are held by all restless natures. In Cuba this natural love for intense action found its vent in bull-fighting merely because the people had never had anything else which could take its place. They had no inordinate love for the cruelty and gore of the bull-ring; the latter were to them but incidental matters. What they really cared for were the feats of daring and skill which were called into play, and the cool courage and resource developed on the spur of the moment by the intrepid fighters.

They unfortunately had none of the healthful, invigorating, manly sports so well known to the Anglo-Saxon races; in fact, they had scarcely heard of them. So they kept to their bull-ring and felt a pitying contempt for any "foreigner" who saw anything low or cruel about their diversions.

While no defence whatsoever can be made for bull-fighting, yet it is a doubtful matter as to who made the biggest mistake in the judging of these so-called sports. The spectators, as a rule, saw only a contest between wit and skill, as opposed to brute strength, without seeing the cruelty and savagery; while the outsider saw only the latter without the former.

In this case it but needed the example of a few American soldiers, indulging in their healthy, national game of baseball, as a recreation from the tediousness of garrison duty, to show the Cubans that there was a much better way to satisfy their natural love of thrilling contest than that to which they had been accustomed.

It was not very long after the American occupation before baseball clubs began to spring up in nearly all of the cities and towns of the island. The familiar northern sight of street-corner games among the schoolboys began to be common. Cock-fighting was relegated to the rear, bull-fighting was voted uninteresting, and the populace in general, with the versatility of the Latin races, devoted their attention to baseball.

In this simple way, by the mere force of a good example, more has been accomplished in eradicating an evil than could have been done by years of preaching or denunciation.

In Santiago de Cuba the old "Plaza de Toros" (bull-ring) has been torn down, the plot of ground it occupied being converted into a typical

THE FORMER BULL-RING AT SANTIAGO DE CUBA

American baseball field—grand stand, bleachers and all.

On Sundays and holidays in the past, the people used to flock to the bull-fight; they now, however, throng to the baseball game. They go to the same old grounds, with the same old enthusiasm and light-heartedness, but with this difference: in the past their eyes were regaled with the sight of man's fiendish cruelty to animals and their ears with the hoarse shouts of frenzied spectators urging the "matadores" (killers) on to fresh feats of butchery. But now! We find them gazing intently at the well-rolled diamond, instead of a sawdust covered arena, or at a board conspicuously marked "score," which occupies the same space as the former record of the afternoon's orgie in blood.

Their ears are now regaled by the cries of "foul ball," "two strikes," "home run," and all the other well-known terms in the phraseology of the diamond.

Their attention is as equally well held by the well matched teams, battling as fiercely as ever battled man against beast, as it was in the former days. It must be confessed we see at times a momentary reversion to the savage spirit of the past, when suddenly enraged voices are heard crying "Mata el umpire!" (kill the umpire.) They seem to have copied their northern teacher even to this little detail.

One of the most picturesque features of the sport here is this nondescript mixing of the American baseball terms with the native Spanish. It must be heard to be appreciated. Having no words in their own language to correspond, they have adopted the American terms word for word. So, in the center of a daily newspaper, printed entirely in Spanish, can often be found this heading, "Hoy Baseball" (baseball today), or we hear an earnest argument carried on in heated and rapidly-spoken Spanish, accompanied with many gesticulations and which is peppered throughout with such

words as "pitcher," "third base," etc. At times the pronunciation is exceedingly quaint, and only an expert in etymology would be able to solve the question of its origin.

Undoubtedly the Spanish language is soon to be enriched with some new expressions. In fact one of the newspapers has already coined the word "Beisbol."

A good lesson can be learned from this sudden change for the better. To wit: that much of that which is called bad in the world, is nothing more than a normal, healthy feeling led astray by ignorance. And also that a practical object-lesson is the best means of education. H. S. TURNER

Death Blow to Bull-Fighting in Spain

According to a cable from Madrid, dated October 5, the Institute of Social Reforms, after a heated discussion on that day, decided by thirteen votes to eight, to ratify the absolute prohibition of Sunday bull-fights. This is considered to be the death-blow to bull-fighting in Spain.

BASEBALL FIELD WHICH REPLACED THE BULL-RING

✧ The Trend of Twentieth Century Science ✧

The New Bridge in Nature

THE researches of Von Schrön, and di Brazza, starting from two opposite ends, seem to meet in the same conclusion. One showed living matter to be crystalline; and the other, crystalline matter to be living. One showed many of the bacilli to be perfect crystals, but living, each bacillus having its characteristic crystalline shape. The crystal moves, assimilates, and reproduces itself. When what we call the "living," organic matter of the crystal goes, the crystal is dead, and is then an ordinary mineral crystal.

On the other side, di Brazza studied the formation of ordinary crystals, and found them to be alive. They begin by the formation of a cell with a nucleus, a network, and a membranous capsule. This swims about, reproduces itself in various ways, struggles with others, has diseases (already enumerated as fifteen in number) grows, assimilates, and finally becomes a naked-eye crystal.

So where is the line? And one is naturally led on to suppose that even complex cells, say of our bodies, would turn out to be plastic, fluent crystals, if we could once make out that shape from which they are continually departing, to which they are continually returning, yet never actually are.

And further, to speculate upon the probability of a measure of consciousness in all crystals that are in their formative stage. When they are fully formed, they are dead, already disintegrating, though they may take ages to complete the disintegration. Their molecules can never be again quite the same *after* having formed part of a living thing as they were before. Even with them, evolution is going on. STUDENT

The Right of the Child

THE child has a primary right to be well born. Parents who endorse physiological living for their children, can best initiate the treatment through themselves. Unfortunately, it is human nature to keep reformation a generation ahead. The smoker or drinker or debauchee soothes his conscience with the promise that his children shall not do those things which he ought not to have done. But the child's body is a reproduction from that of his parents, and a good constitution cannot be built up from the fag ends of a father's vices. Nature, moreover, does not discriminate between poor, exhausted parental tissue, which is deficient from overwork, or from social dissipation, or excessive mental labor, or dietetic wrongs or unsanitary habitations. Physiological law will accept no excuse. The infantile cells are rarely found *structurally* diseased at birth, but the constitution often has the hereditary stamp of abnormal *tendency*. It is interesting to analyze the defective nutritive and nervous tone which appears in different members of a family, as neuralgia, insanity, tuberculosis or immorality. But the experts in all these lines can unite in presenting physiological living as a common means of prevention, and this summing up of the situation is the point of practical import in scientific treatment. L. R., M. D.

A Non-Expansible Alloy

AN alloy which would be independent of changes of temperature, and keep the same volume under all circumstances, would save a great deal of time and trouble in using instruments for metrical observations. As it is, corrections have to be applied to the calculations in order to allow for the expansion of the metal. The metal scale of a barometer, for instance, varies in length according to the temperature; and, in very accurate reading, this has to be allowed for. In survey instruments, where a slight error in the estimated length of a bar becomes multiplied many times in the course of the calculation, the drawback is more serious; and it is necessary to go to the trouble to carry around ice so that the bar may be kept at zero.

Hence it is welcome news that a German physicist, Dr. Guillaume, has discovered a new alloy which does not expand. It is made of certain proportions of nickel and steel. Such an alloy would be most useful in the numerous cases where expansion interferes with accuracy, as in time-pieces; but it will have to be more invariable in quality and more reliable

than alloys generally are, if it is to replace the ice-bar. A cast metal, especially if it is an alloy, is by no means constant or homogeneous in texture; and we have very incomplete practical knowledge as to how to secure uniformity in this respect. E.

Bacteria Mistake Their Vocation

PROFESSOR BODIN, bacteriologist to the University of Rennes, in France, gives us a most attractive theory of the disease-producing bacteria. He thinks that it is no part of their original and proper program to multiply in living tissues. They have become educated to that by finding living tissues so feeble in resistance.

An analogous case is that of the mosquito and the flea. Both these blood-suckers can live on the juices of dead fruit.

We have to imagine, then, that nature designed a set of minute organisms as her instruments for reducing dead matter to simpler and simpler forms—for getting rid of it, in fact. She never intended them to touch *living* tissue.

But they took to poaching on that preserve. They found they could multiply and thrive in it more luxuriously than in their appointed medium. So, while some continued to attend to their proper duty, and now constitute the harmless species, others gradually transformed themselves to suit the conditions of living matter. Continually varying, they became at last the species we know.

That the process is still going on, that new kinds of them are still evolving, anyone may guess who compares a medical text-book of yesterday with one of twenty years ago—still more the medical student who enters practice. He will find types of disease not in his text-books, and intermediates between diseases there classified as absolutely separate; for example, between diphtheria and scarlet fever, and between influenza and typhoid.

If the theory of Professor Bodin is true, and it is not quite new, disease is an accident, because the disease-making habits of the bacteria are an accident. And we may look forward to a time when, humanity having learned to live rightly, the cells of the body reacquire the power to hold their own in every case against these little trespassers. PHYSICIAN

Electricity in Medicine

ELECTRICITY in the practice of medicine has been, on the whole, a disappointment. On its introduction it was thought that it would well-nigh prove the elixir of life. This hope died hard; in fact, it is even now rather asleep than dead. The rôle assigned to electricity is now much more modest, and though we feel that it *must* have a larger usefulness, we do not know how to educe it. Some recent experiments on plants do not seem to help. A constant current of various strengths was passed through moist soil containing germinating seedlings. The effect was very marked. The little roots at once ceased to grow downward and curved their tips towards the direction from which the positive current was coming. Microscopic examination showed that the curve was due to the death of cells on that side and the continued growth of those on the side of the negative pole. This effect was invariable. Whether growth on the negative side was stimulated, or remained merely normal, was doubtful. STUDENT

Our Knowledge of Lunar Geography

THE rapidity and accuracy with which land surveys can be made depends partly upon the accessibility of the country and the unobstructed views which the surveyor obtains by the ascent of high peaks. The greater the expanse of country which may be seen, the better the opportunity for map-making. It is for this reason that for many years we have had better topographic maps of the visible lunar surface than of the habitable portions of our own planet. The astronomer does not have to carry a transit on his shoulder nor direct the movements of perspiring chainmen, but sits on an easy chair at the eye-piece of his telescope and measures with great precision the elevation of peaks, the depths of craters, and the areas of ocean beds.

How to Study Ancient History

IN studying ancient history we must remember that the people who wrote books on history did not have the advantage of the light which Mme. Blavatsky shed on the subject, and therefore many of the views which they take about the ancients will seem to us to be rather paltry and ridiculous. Nevertheless, if we want to study history, we must use the books which we have; and, if we read them with this caution in mind we shall glean much useful knowledge, for the historians have found out much, in spite of their limitations. Besides, if we are to go out and teach people, we must know what they think and get familiar with their ideas. We cannot correct their mistakes unless we know what those mistakes are.

When Mme. Blavatsky came she told us that the modern scholars and historians were greatly mistaken about the ancients. Mankind, she said, is much older than has been supposed, and has risen to a great height of wisdom and power in far past ages. Mankind has had to go through the darkness of ages of ignorance and selfish strife, but that is in order that it may learn the lessons of life; and it will rise again to still greater wisdom and power. Mme. Blavatsky also said that scholars would soon begin to find new proofs of the vast knowledge and prowess of ancient peoples; and her prophecy has already come true in many cases.

You will read in the chapters on Chaldæa, Assyria and Babylonia, that all that now remains of those mighty empires is some sand-hills dotted over the barren plain. Well, an American professor has been exploring those sand-hills and excavating them; and he has discovered the walls of many palaces and temples, and, most wonderful of all, the library of King Asshur-bani-pal, who, as we read, made a collection of all the works on science and mathematics and history, etc., which he could find. This library consists of many thousands of clay and stone tablets with the writing engraved on them in very fine, small characters; and those which have been translated show that these ancient Chaldæans had a vast and comprehensive knowledge which throws our present boasted knowledge into the shade.

And in Egypt and many other parts of the world it is the same; archeologists are every day finding some new proof of the glory of the ancients, as Mme. Blavatsky said they would.

In our own country, America, they have found ruins of massive temples covered all over with sculptures and inscriptions like the monuments of Egypt; and this shows that the ancient Americans were also a mighty and wise race in days gone by. Thus we shall soon see our schol-

ars coming round to the view of Mme. Blavatsky, that we are descended from very wise and great ancestors, and not from savages, as some of the books try to make out.

The last great human race that came to the earth was the Aryan race, and at first it had the light and was wise and brotherly. But, as the dark cycles of time came on, it lost its wisdom and became scattered over the earth into many separate nations, and we are some of its descendants. The Universal Brotherhood will help us to get back again the knowledge we have lost, through the teachings of the School of Antiquity at Point Loma; and, as we know, Brotherhood is the lost key which we have to find again before we can bring once more to light those buried treasures of wisdom.

A RAJA YOGA TEACHER

The Conquest

A WARRIOR was passing through a wilderness; his sword and armor bright, his eye alert, he went on peacefully, almost joyfully, toward the village lights that shone like dim stars through the darkness.

He grew weary; his path seemed to lengthen; by degrees all the joy and peace left him, and suddenly he stood facing a queer, uncouth creature. I know not its shape, but to him it was dreadfully ugly. It seemed to say: "Go back! Go back!" in an agitated manner.

He approached steadily. When he stood over the place where it lay he saw in it a horrible resemblance to himself.

"Who are you?" he cried.

The creature tried to squirm away, but it dared not take its eyes from those of the warrior. He demanded again:

"Who are you? Who are you?" with such persistence and so much courage that it dared not remain silent.

"I—I—thought I was yourself," it said.

The warrior was amazed. He drew his sword to strike, crying:

"Not myself, nor like you shall I ever become."

As he spoke, another, a radiant being, stood with him, from whose eyes shone love and compassion.

"Who are you?" asked the warrior.

"I am your true self, whom, until this moment, you could not see."

Then the warrior passed on, joyfully, toward the village where the morning sun was shining. A new joy had come into his heart. The whole earth smiled and within his heart was love compassionate, like a glorious shining light. W. D.

THE OLD FLAG FOREVER

by FRANK L. STANTON

SHE'S up there—Old Glory—where lightnings are sped—

She dazzles the nations with ripples of red,
And she'll wave for us living, or droop o'er us dead—

The flag of our country forever!

She's up there—Old Glory—how bright the stars stream!

And the stripes like red signals of liberty gleam!
And we dare for her living, or dream the last dream

'Neath the flag of our country forever!

She's up there—Old Glory—no tyrant-dealt scars,

No blur on her brightness, no stain on her stars!
The brave blood of heroes hath crimsoned her bars.

She's the flag of our country forever!

THE CHILDREN'S HOUR

The Raja Yoga Question Box

ORATORS, by a magic of speech and bearing, teach great ideas. Inventors show the workers how the mind can help the hand in labor.

1 Who Was Henry Clay?

ANSWER—Henry Clay was a statesman and one of the greatest of American orators. He was born in Virginia in 1777. He was a true patriot. He wished to abolish slavery. It was Henry Clay who said, "I would rather be *right* than be President."

2 Who was Daniel Webster?

ANSWER—Daniel Webster was a famous orator and debater. He was the ablest defender of the Union. His words, "Liberty and union, now and forever," were a watchword among the people. He was born in New Hampshire in 1782.

3 Who was Eli Whitney?

ANSWER—Eli Whitney was an American inventor. He was born in Massachusetts in 1765. He contrived a machine to separate the cotton wool from the seed. It could do as much work in a day as 1000 people. This was the beginning of the great cotton trade of the United States.

On a Flower Farm

"**W**HATEVER will they do with them all?" asked little Bessie who had come on a visit, as she looked at the great piles of peonies stacked up, for all the world like cord-wood on the earth floor of the cool shipping room in Minnesota.

"Why, sell them, of course. What do you suppose?" said Archie, who was showing her the beautiful buds.

"But who will buy so many," asked Bessie, her eyes full of wonder at such a strange sight.

"Why, the rich people in Chicago told them to send all they could grow. You just ought to go out into the field and see the thousands they are going to pick. Do you know how many they will send today?"

"No. How many?"

"Guess."

"Oh! I can't guess right. But there looks to me to be more than a million."

"I don't believe you are very good at guessing." And Archie looked wise because he knew so much. "I'll tell you. They sent out last night, on the express train, over 29,000, all packed in boxes with a great piece of ice in each box, and the man over there told father this morning that they ought to send twice as many today."

"I would not have thought that there were so many in all the world as this if I had not seen them. But why do they send buds? Why don't they wait until they open?"

"Didn't you know that if they picked them after they were in full bloom that they would be all wilted in a little while?" "Is that why they send only the buds? And do they open out big before they are sold?"

"Why, yes. They don't send them out until they are ready to be of use when they are wanted."

"Oh yes; I see," said Bessie. "It's like the Lotus buds at Point Loma!"

C. S.

DEAR CHILDREN: I heard a charming fairy story the other day and I want to tell it to you.

A water lily, a rose and an edelweiss were on their travels, seeing what they could of the world.

After visiting many places they chanced to meet at a hotel kept, in a ditch, by a dandelion. Much conversation followed and much vanity was displayed, for all vaunted their several beauties. The lily said she was the angel of the waters, the rose, that she was the angel of the earth, and the edelweiss was angel of the snows. And each attributed to herself her own beauties.

Next day they met at breakfast. Each told her dream, and behold, all the dreams were the same. Each had dreamed that she had been in

the highest heaven, up to the throne of God. And each had there seen, worshiping, the fair angels of earth and snow and water. To the three angels God had given command to go down upon earth and scatter there some of his message and reveal a part of the perfect beauty. And so the three flowers were the *abode* of angels of God, and in nowise derived from themselves their own beauty. A LOTUS GROUP TEACHER

The Peasants of Modern Greece

A SIMPLE life, indeed, live the peasants of modern Greece. You can meet them everywhere, sometimes in work-a-day clothes, at other times in gala costume. It is not at all uncommon to meet along the country roads, particularly in isolated districts, an old woman winding wool, as you see in the picture, as she follows her goats or her donkey. The peasants live a quiet life, and one wonders, sometimes, if their thoughts ever dwell upon the glories that once were in their land. The old men and women speak of these glories to their children and there is something in the younger Grecian heart which declares that the greatness of Greece has passed away only for a little time, and that it shall again return. The peasants live, so the tourists tell us, a happy and somewhat care-free life, and to see them one would never dream that they were living within the very shadow of noble ruins and still unforgotten glories.

UNCLE FRED

Mary's Violet

"**N**O, Mary, you cannot have another piece of candy. You have had enough." Mary felt discontented, and as usual, when she did not get what she wanted, her face drew up

into a frown and she walked away in a very sulky manner. As she went along the dusty road to school, with her head hanging down and her feet dragging along, she happened to see a little yellow violet growing all alone by the edge of the path. "I wonder why that flower grows that way. I don't see why it holds its head up so straight. It must see something up in the sky." As she said this, Mary looked up to see what this something might be. She saw nothing but the bright sun and the pretty flowers and the fresh grass. "I guess that's what it is," she said, "and that's what makes the violet so pretty, holding its head up. I wonder if I would be pretty if I held my head like that. Everybody says I look cross."

When Mary got to school she was all smiles, for the sunshine had found its way into her face that was so often spoiled with a frown. Mary said nothing, but deep in her heart she thought, "Now I know that was it, and if it is true about the little violet, it is true about me."

The next morning, before Mary started for school, something unpleasant happened again and the flower look all went away from her face, but as she went down the path there was the little violet still trying to look upward. The frown upon her face went away quick as a wink and the wonted smile and sunshine came again. A RAJA YOGA GIRL

THE SWEET RED ROSE

GOOD-MORROW, little rose-bush,
Now prithee tell me true,
To be as sweet, as a sweet red rose,
What must a body do?

To be as sweet as a sweet, red rose,
A little girl like you
Just grows, and grows, and grows, and grows---
And that's what she must do.—Selected

GREEK PEASANT

GREEK PEASANT

COMPENSATIONS

by HARRIET MAXWELL CONVERSE

MISTAKING life—that Time will dignify—
 We call our sorrows in reviews, through fears
 From Memory's irritating dust of years;
 Resisting not, our woes we glorify;
 Choosing not with grief our lives to beautify.
 We fill the thornless lily with our tears,
 And search for wounds the thorny rose-bloom fears,
 Accepting not one hope to deify!

Triumphal arches rise all o'er the earth,
 Bend obedient, seek the open gate;
 Poor the name that hath no inheritance,
 Though thy worldly one was a crownless birth,
 In everlasting glories for thee wait
 Compensations, in God's holy vigilance.—*Selected*

Toleration

THERE is so much that we do every day which injures ourselves and others that there is no necessity to do: restricted, narrow, untrue ideas about ourselves, which we keep on thinking about, holding to and acting upon; bringing pain, trouble, delay and unhappiness into our lives, which need not be there at all.

Looking at life from the Theosophical standpoint, we can distinguish the difference between the voices from above and below, coming to us ordinarily in thoughts, feelings and impulses—those from above leading us into the Light, on the path of wisdom, health, happiness and prosperity; or the thoughts, feelings and impulses from below, from sources that are degrading, leading us into difficulties, darkness, disease, suffering and premature death. If one were to listen *constantly* to his Higher Nature, he would never be in ignorance, suffering or misery.

If we only would obey our Higher Nature, as a disciplined soldier obeys his commanding officer, our path would always be plain. In time of battle, the commanding officer gives no long explanation to his soldiers of the reasons why he issues certain orders, or why they should work on certain lines, or principles of discipline; yet if these are not promptly obeyed and carried out, disaster is sure to follow. So it is with our Higher Nature; we get these thoughts and feelings, and learn these principles of Divinity, and if we promptly obey them, we avoid destitution and destruction, in its many and various forms, and as we become more and more obedient to that inner voice, it can come by natural law nearer and nearer to us, till at last we become entirely identified with it; for it is our Higher Self, the God within. Then our Soul fully takes possession of our body, or its natural kingdom, and we become a co-worker and co-partner of Great Nature, able to do service *consciously* in the vast work of universal evolution, and earn the great privilege of having constant immortal companionship with the *Great Helpers* of the race.

In this picture of man's glorious heritage and destiny, to become one with the Gods and Deity itself, we may seem to be going a roundabout way to the subject of toleration, but unless we turn our attention to what man is, and ought to realize, the priceless value of toleration from the Theosophical standpoint will be missed, and it might resolve itself into merely a little dissertation on a virtue, that we have all heard preached from our cradle, but which no one ever seems to think of practising in a whole-hearted way.

Most good people will tolerate some things, but the limit of their endurance is reached if they are pushed far enough, and they end in giving a "bit of their mind" always, of course, for the good of others. That is because there is dependence for their peace of mind on outward circumstances. Toleration is a necessity in human life, just because each human unit must learn in his or her own way, and in his or her own *degree*; for the Law of human progress is a Law of evolution, and enlightenment comes from *within* not without. One of the greatest crimes we

can commit is to *force* or *corner* others to think and act as we wish them to do, or as we think right. In this way we work to make slaves, criminals and soulless beings, who are moral and mental cripples, unable to act from their own Higher Nature. If we work with the Higher Law, and have as much faith in another's Higher Nature, as we have in our own, we shall often find those we thought unbearable, or going to perdition, will become in our time of need our truest companions and best of friends. We will learn to be tolerant and not get upset with the little "annoyances" of life, the differences of opinion, or the hundred and one little *seeming* causes of irritation and ill temper, that bring so much misery into our lives and those of others. It is our own intolerance and desire to have others do only that which pleases us, looking *outside* instead of *inside* for our sympathy and happiness, that is the direct cause of so much harm. Let us insist on being charitable to the weaknesses of others, seeking ever to help where we can, and more than three-fourths of the world's ills will disappear into thin air. It is glorious to think and know of the great Immutable Laws of Nature in which we can place our implicit trust, and to which we can implicitly trust others, and that because of our basic unity through all this seeming separation, by doing our own duty we can truly help and serve all.

T. W. W.

Hope

HOPE, the keynote of the new age has sounded; the dawn of a new day is here, proclaiming to the world that "Life is joy." Humanity has been held so long under the tyranny of fear, that Hope comes as a flaming messenger, to melt the chains and liberate the souls of men.

Deep buried in the depths of man's divine nature is the star of hope; ready to shine forth, and light the way in the darkness. Call it forth then, O brothers of the human race, and light the way; that man may overcome the giant octopus fear, that has fastened itself upon the very vitals of the race, with all its destructive potency.

All misery, crime, vice, insanity, is the work of selfishness and fear, which have been fostered in the human mind by false teaching; and have robbed man of his divine heritage.

Let us, then, O my brothers, call into activity this divine power of hope, that we may drive out selfish fear and serve mankind.

Let us consider for a moment these two words hope and fear, in their different aspects.

Fear includes despair, dread, anxiety, doubt, terror, timidity, cowardice. These are opposed to hope which includes buoyancy, faith, expectancy, confidence, trust, daring, courage. Fear is passive and negative, therefore destructive. Hope is active and positive, therefore constructive. Fear is paralyzing, contractive, resulting ultimately in death. Hope is liberating, expansive, life-giving; it is a fire which melts all obstacles.

Two great souls have been sacrificed in order that humanity may overcome the thralldom of fear, which has threatened its destruction. A third great soul, our present Teacher and Leader, has taken up the task, bringing hope and joy and life to the world. To help these noble souls is a great privilege.

E. L. I.

The Need of Raja Yoga in Daily Life

THE routine of daily life brings each of us constantly face to face with the question contained in the declaration attributed to a French poet: "If I had only two sous, with one I would buy bread, and with the other white hyacinths to feed to my soul." But would we do so in such a case? As each moment's choice comes to us, how much of the physical are we willing to sacrifice for the sake of the spiritual?

The physical requires some care, some consideration, but how much? If we give it too much we build up a coarse animal monster which binds our higher natures in loathsome slavery to its appetites and desires. If we give it too little we have a weak, sickly, ineffective instrument with which to do our work.

Daily and hourly we feel the need of Raja Yoga, of balance between all the parts of our nature, which shall enable us to attain the condition so finely described by Plato as "the harmonious agreement between the principles of a man's soul as to which of them shall rule; such harmonious unity constituting temperance, fortitude and justice, freedom from sin, and giving the power to appreciate the beautiful and the true."

As we learn to discount the whining or blustering demands of our pleasure-loving companion, the lower self, at their true value of actual needs, we find him an ever better and better servant, and ourselves capable of a widening comprehension of the mysteries and beauties of real life. And when he finds that he cannot rule us, this companion becomes a docile, happy and very useful servant.

R. W.

SELECTION

MAY I reach
 The purest heaven --- be to other souls
 The cup of strength in some great agony.
 Enkindle generous ardor, feed pure love,
 Beget the smiles that have no cruelty,
 Be the sweet presence of a good diffused,
 And in diffusion ever more intense!
 So shall I join the choir invisible,
 Whose music is the gladness of the world.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question If Theosophy, the Wisdom Religion, is as old as the human race, how comes it that man has forgotten it, so that it is necessary for great Teachers to come again and again to give him the knowledge of it once more.

Answer I think the answer to the question, or at least a suggestion for its solution, is to be found in the experience of every man and woman whenever the lower nature is permitted to rule. Just so long as we permit the lower nature to hold sway, just so long are our higher faculties, the power to know, to see clearly, to act with judgment and discrimination, clouded and, ultimately, if we continue under the dominion of the lower nature, atrophied.

When following the guidance of the higher nature, we have once had a glimpse of true life, and felt its joy, how comes it that we drift back again into the selfish, narrow, struggling world of the lower nature? If we can answer this question, then it will, I think, give a clue to the solution of the other.

There are two forces in Nature, a duality out of which man's dual nature has sprung. "Light and Darkness are the world's eternal ways;" the good and the evil stand ever opposed, fighting one against the other; and man stands between. In the days of infant humanity, the human race had its guides, its teachers, and guardians, who shielded and nurtured and educated it, just as the infant child is shielded and nurtured and cared for. But the time comes, as the child grows, that it must learn to walk alone, to stand alone, to think out for itself the problems of life, though its parents and guardians stand ever by to help it and to point out the way. But more and more it must face for itself the problems of good and evil, and choose for itself the path of light or the path of darkness.

And humanity, like so many of earth's children, forsook the light and followed darkness, and would have perished had not the wise ones, its Teachers and Helpers, come again and again to strike once more the keynote of Truth, to set once more the example of pure living and, as has so often been the case, to give their lives and suffer martyrdom in the fulfilment of their task.

Strength can only be gained in conflict; it is not really strength until it has been tested in the battle of life, and although the great Helpers of the race have not always been openly present among the people, they have never ceased watching and helping just so far as humanity's own efforts towards the light have made it possible for them to render help. Thus in the great conflict between Light and Darkness, which has raged around man and in his own heart, even when at times his defeat has seemed sure, and the triumph of darkness inevitable, one of the great Helpers, as today, has come again to give new light and hope until humanity shall at last rouse itself and greet the dawn of the new day. STUDENT

Question What proof have you of the existence of a golden age in the past, and upon what do you base the statement that there will be one in the future?

Answer First, what are some of the facts of life, so far as regards the past history of mankind? Every year, almost every day, new discoveries are being made of the wonderful knowledge and achievements of the ancients, showing a height of civilization, along many lines, to which we, with all our boasted progress, have never reached. Witness the stupendous architecture and the engineering feats of Egypt, the "lost arts," the literature of India and Babylonia. It is not necessary to enumerate further, as frequent reference is made in this paper to these discoveries, week by week, as they

are published, and attention drawn to the lessons they convey. But what is most pertinent to the present question is the conclusion inevitably forced upon all investigators that these ancient civilizations did not arise out of barbarism, but that they become more glorious, more perfect, the further we go back into the night of time.

In addition to the above, which we may call the material evidence, that the ages long preceding our own were brighter and more glorious than the so called historical ages, we have the further evidence of the recorded statements of the same ancients, and the traditions of peoples all over the earth, that in the far past, in the dawn of their life, there was a golden age, and that this was followed by what in comparison was called the age of silver, then by that of bronze, and finally by the age of iron, in which we now are.

But the greatest evidence exists in the race consciousness, and it is here also that lies the promise of a golden age in the future. If man is divine, which Theosophy asserts, and which each man in his inner consciousness may know for himself if he will, then however deep the valleys into which humanity has wandered, it is man's destiny to rebecome divine, and to so fashion life and civilization that the golden age shall dawn again.

STUDENT

Question There used to be an idea that it was necessary to be eccentric in appearance and unceremonious in behavior, to be a Theosophist in good standing. Is this right?

Answer Within the Theosophical Society, never at any time was such an idea held save by the very few, and I doubt if these could be called members in good standing, for the simple reason that Theosophy is common sense; and to be in good standing, in the true sense of the term, is not simply to have paid one's dues, but to govern one's life as far as possible in accordance with the principles of Theosophy, *i. e.*, first and always, on common-sense lines.

But the very word Brotherhood, which was the aim and object of the Society, attracted to its ranks, in the early days, many who thought that a mere profession was all that was necessary, and that under its cloak they would find an easy means of gulling the public and also the members and so be able to work their selfish schemes and fads with impunity.

In connection with this question, I would suggest reading an article in *The Mysteries of the Heart Doctrine*, entitled "Grotesque Theosophists," from which the following extract is taken:

The grotesque is ever present in human nature so long as it remains unregenerate; and, until man becomes perfected, we shall always find deplorable specimens wherever there are men, no matter how lofty the ideals they profess or to what organization they belong. If all societies were to be judged by the erratics, egotists, faddists, emotionalists, "teachers" and practitioners of mental sensualism—degenerates—contained on their roll, it would be but a lamentable and discouraging prospect for any of them. But although The Universal Brotherhood was at one time afflicted with a few such, yet through its strenuous efforts to spread Brotherhood throughout all the world, it has reached a point of discernment as a body which causes anyone who enters to discover himself by his own acts.

We would respectfully but strongly deprecate the practice of making Theosophy responsible for all the fads and foibles of those who take up its study, or of those who use its name. These fads and foibles were learned in the world, and Theosophy sooner or later eradicates them. We do not denounce a Home for Inebriates as a place where people are incited to intemperance because we find inebriates there, nor are we surprised to find sick people in a hospital. So among the earnest devoted Theosophists there may be found a few who have entered from more or less sincere motives but not availing themselves of the help given to all, having permitted their lower natures to gain the ascendancy and seeking to exploit some idiosyncrasy, they appear as cranks who occasionally bring discredit upon the organization.

But despite these examples of crankism and folly, the wise will discern the genuine life within that has forced them to disclose the evil in their nature.

Without the saving grace of a sense of humor, it is impossible for anyone to preserve a healthy mind in this age of complicated vanities and follies. We can see in the grotesque Theosophists the opportunity for a hearty laugh as well as the profitable study of the weaknesses lying latent in human nature.

As H. P. Blavatsky has said, "Theosophist is, who Theosophy does," and again it may be said—Theosophy is common sense, it is whatever tends in the highest sense to establish Brotherhood, to help men and women, to quote the first object of the International Brotherhood League, "to help men and women to realize the nobility of their calling." Verily, Theosophy teaches that life is noble and must be nobly lived. STUDENT

A "Holy War" Preparing

ACCORDING to reports from Russian sources, chief among which is the *Novoe Vremya*, in a lengthy article by a M. Nossiloff, a holy war is preparing in Central Asia, the magnitude of which, at present, is scarcely measureable. Following the above-named writer, whose article deals extensively with the Mongolian movement, so-called, July of every year sees a huge concourse of Chinese pilgrims and Buddhist clergy at Urga, named "the sacred city of the Mongols," these gatherings often reaching to the very respectable figure of one hundred thousand attendants.

At Urga, the Buddhists of all countries congregate annually for the purposes of "prayer," and also for the purpose of discussing religious matters.

The invasion of Thibet has formed the principal topic of discussion

at this year's convention, last July. According to M. Nossiloff, the Buddhist mind has been under great stress of agitation over this event, and it is said that a caravan of lamas has been sent into different parts of Mongolia on a special mission. The direction taken by the caravan was from Urga, northward, to the skirts of the Russian Altai range.

"The object of the mission is not known," of course, but it is supposed to be for the amassing of resources from the very confines of

To Aid Dalai Lama & Thibetan Capital

Buddhist influence in Asia, to the end that material and practical aid may be given to the Dalai Lama and to the Thibetan capital. Preparations are being made for a holy war, says M. Nossiloff. In this war not only the Russian Buriats and Russian Mongols would take part, but they would combine with the adherents of the spiritual head of the Thibetan church in Thibet, China and India. This dark and threatening cloud is to burst in the month of February next, according to the current saying of the people.

It would be exceedingly difficult to take issue with so (apparently) authoritative and exclusive a source of information as the above-named; and, perchance, the facts are as quoted; or, peradventure, there is more behind the facts than even the Russian Argus sees, and it is to this it is well to call attention.

It is pretty well recognized throughout the Extreme Orient that Russian success in the present titanic struggle would mean a radical shifting of interests and spheres of influence in all Asia. Also that Russia is today engaged as much in a religious war as in one where national policies are at stake. And furthermore, that Russia follows up military success by absorption into herself and for herself, rather than by dominion over the conquered territory simply.

England's Influence in the Orient

Great Britain holds another record politically in the Orient. This Power today governs millions of Buddhists directly; and British influence is predominant over other scores of millions of adherents to the ethical system of Gautama the Buddha. These have learned that their religion is protected against violence by the very laws which ensure peace to other human faiths; and while missionaries, rum and opium have a fair field, these many millions of Buddhists have learned that they, too, have that field, and that they can easily hold their own.

Shakyamuni's followers number today about one-third of the earth's children. They are spread all over Asia and the great Eastland's outskirts. Five hundred million human souls daily acknowledge the Buddha Gautama as their Lord.

Sectarian sympathy is keen, keener and more fundamental even than racial bonds, as history shows on its red pages.

Japan, in spite of its national "ancestor worship" under the name of Shinto, is considered a branch of the Buddhistic body corporate. Japan is an Oriental country; it is looked upon by the most enlightened of the Orientals as the hope of the East, and as an example of what other peoples (China, for instance), may one day grow to be.

Great Britain the Ally of Japan

And Great Britain, the political mistress of millions of Buddhists, and of centuries of millions of Asiatics, is the ally of Japan!

On the other hand, of the two great European Powers in question, one is regarded as representing radical absorption with complete loss of national existence for a foe; the other, conservative dominion primary to equitable government.

Now these things are known in the Far East. The "dreamy" Oriental is the most practical and shrewd of men; his idealism is practical and to the point. No one knowing the Far East well, will undertake to dispute this.

The Dalai Lama, and his Chinese political advisers and overseers at Lhasa, are astute men. They must have realized by this time the trend and march of Fate in this Twentieth century, and the persevering, enterprising character of the White Man. Japan realized this in time to save herself, by opening her gates to him, and by proving herself even more far-sighted than he. China bids fair to be stirring in her heavy national lethargy, prior to rising with her countless millions to do likewise.

Shall Thibet remain on the razor's edge of indecision, to be severed by her own inertia and impotent weight? Or to be crushed between the Northern and the Southern foemen?

The presumption is unreasonable. It is to the point here to note that the

Uprising May Be for Another Cause Thibetan Mission accomplished its end—such as the Fates allowed that end to be. The precedent is established, so far as Thibet's isolation is concerned. Is there further need to draw inferences? Will the shrewd and wily Oriental choose to submit to a fiery

and powerful foreign foe warring under the banner of a militant and arrogant church, rather than to another foreign power in whose train commerce spreads its tents and opens its emporiums to all?

Should this threatened uprising of Buddhists take place next February—a supposition remarkable enough and extraordinary enough in itself—it may be for another cause, and against another power than Japan's ally. Japanese emissaries are today in every part of Asia, and along the whole frontier line of Chinese territory, as well as in the mountain passes and in the towns of the inland. The reappearance of the god Airol, reported extensively some few weeks ago in our papers, who is represented as urging a rising against Russian rule in Manchuria, may have other causes than directly celestial ones—or directly Celestial, if you will. *Dictum sapienti sat est.*

As a great thinker has said: the time has come for not a few accounts to be squared between the races of the earth, and this applies as well to the Far East as to our own Occident.

Let events come as they may; the Gods watch!

G. DE P.

The Secret of Patent Medicine Testimonials

EVERYONE is familiar with the libelous newspaper woodcuts which accompany extravagant testimonials for various patent medicines over the signatures of pretty society women and prominent men. Even non-medical fakirs have been puzzled to know the process by which persons of even ordinary vanity and self-respect could be persuaded to endorse such pictures and to so publicly air their ailments. The wonderful cures described were no more mysterious than the method of securing the testimonials.

Upon the average mind a printed statement, especially if illustrated, has an influence beyond mere words. The types are not expected to lie. The continued repetition of an impression through the eye at last becomes convincing. This hypnotic power of the press is fully utilized by a certain class of patent medicine vendors who regard money spent for expensive advertising space as capital well invested.

The following quotation from an article in the *New York Medical Journal* is interesting. It throws added light upon the prevailing spirit of commercialism which willingly pays any dishonorable price for financial success:

Remarkable testimony has been obtained by the postoffice department as to the ways in which testimonials are obtained by some of the big concerns engaged in this business. One large firm admitted that it had agents out seeking persons who had formerly occupied prominent positions in the community, but had suffered financial reverses and were harassed by debts they were unable to settle. The agents would obtain possession of the unpaid accounts, and would then apply pressure to the unfortunate victims, demanding immediate payment in full. Finally, after long persecution, the desperate victim would be invited or commanded to call at the office of an attorney, where he would be given to understand that if he would sign and swear to a testimonial a receipt in full for the claims against him would be given. This seems incredible, but the facts are now on file in the records of the postoffice.

Evolution is no less commendable in business than elsewhere, but the above methods mark an age that is rather ahead of itself—in spots. The growth of modern commercialism is abnormally out of proportion to the development of ethics. This thumb-screw business in Twentieth century industry belongs to the moral suasion of the middle ages.

LYDIA ROSS, M. D.

[The above article might easily be extended to include the various methods by which questionable enterprises of different kinds, questionable literature, etc., are imposed on the public's gullibility, by means of working on the standing of respectable publications.

While these may owe no debts, nor be subject to legal pressure of any kind, yet threats of adverse criticisms in the columns of contemporary publications if the book or enterprise is not "boomed," and promises of rosy-colored descriptions if such are forced on the public's attention, are only too well known to be denied. This thumbscrew method has, unfortunately, its ramifications everywhere, and many people are often duped.—ED.]

Mount Pelee in Eruption

FROM Martinique comes the news that Mt. Pelée is again in violent eruption, and that the population is getting anxious. And well they may, with their former terrible experience in so fresh remembrance.

We learn by experience, or, as some put it, by bitter experience. In reality it need not be bitter to teach a lesson, but to some even that which is most bitter is forgotten over soon. Too much of anything is apt to dull our sensibility. A miner, through long familiarity with the dangers of dynamite, becomes reckless, until he entirely disregards all ordinary precautions, and an accident occurs.

And so it is with people who have for years, perhaps all their lives, lived under the shadow of the danger of a great natural catastrophe. The flood comes and destroys, the dreaded eruption of the volcano takes place, leaving death in its track, yet the debris of the old are hardly cleared away before man returns to face the same danger anew.

What is this that impels him? Is it only recklessness? Is it courage, ready to brave everything? It would almost seem so at first sight, and yet, if we look deeper we shall probably find that it was fear, and not courage, which prompted the return. Fear, not of the danger just past and which may be repeated, but fear of the unknown. The former danger is familiar to him, and, fear it as he may, he can measure it. Like a gambler, he is willing to take his chances rather than to face that which he does not know. He might move away, but that would involve a sacrifice of material advantages connected with the old home. That thousands have left that home and prospered elsewhere is not sufficient to him. He fears to strike out, and so takes a much greater risk, which makes him appear like a hero, perhaps even to himself. S.

China's Appropriation for the World's Fair

THE special pains that have been taken by the Chinese Imperial Government to give the United States a signal mark of esteem on the occasion of the Louisiana Purchase Exposition, are worthy of note. Prince Pu Lun, as representative of the Throne, himself a scion of the Imperial blood, came to St. Louis last April as the Commissioner-General of the Celestial Empire. It is, indeed, a high compliment, for China did not take official part in the World's Fair of 1893, and the country was represented only by the displays made by a few Canton merchants. For this last Exposition, on the contrary, the Chinese Government made a specific appropriation from the Imperial treasury equivalent to half a million dollars, a distinct departure from the established precedent, and a sign, certainly, of the times. The Government building itself is one of the most exquisite features of the entire grounds, being a reproduction of the home of Prince Pu Lun. The display made of art, science and industries, has never been equalled by China at any previous exposition. E. H.

Japanese Bullets

JAPANESE bullets, says a press correspondent, do less harm to the body than any weapon heretofore used; they are almost harmless. Surgical reports on Russian gunshot wounds show that one of these missiles may actually go through the medulla without causing much trouble. "The men in the hospital have tiny wounds, smaller than a threepenny bit, a mere red stain, nothing more." The velocity is greater and the bullet smaller than ordinary. A missile 2.5 lines (1-5 inch) in diameter, with an initial velocity of 725 meters (2378 feet), has enormous penetrative power and makes a very clean perforation. H.

THIS week's cover-page of the NEW CENTURY PATH shows Port Erin, Isle of Man, in the Irish Sea. Port Erin is often called Port Iron, probably from "Ierne," the ancient original name of Hibernia (Ireland) which lies directly west. In fair weather the Irish hills can be seen.

The sentinel crags of Port Erin have seen strange scenes of storm and battle and shipwreck, during their long watch over the entrance to Port Erin. Oft has the ancient Dane steered his mailed bark, laden with wild Vikings, into this little bay. Spanish Head overfrowned the destruction of a part of the Armada.

To the southwest, around the point of Kione-ny-Gane, is the island of "Calf-of-Man."

Some Views on XXth Century Problems

Obliterating the Slum ■ ■ ■ Mark

DR. ARCHDALL REID, eminently qualified to speak, has been saying some encouraging things about slum life. The older view, which he contests, that of Dr. Cantlie, was that the evils of slum life were cumulatively handed on by heredity. People who moved from the country into the slums of a city went down in health. Their children were born with the degree of poor health reached at the time of their birth by their parents; and in their turn went still further down. Their children still further, and so on to the extinction that awaited the line in three or four generations.

"I believe," says Dr. Reid, "this assumption to be a totally unwarrantable one. It is founded on a confusion between inborn and acquired traits. Of course, the influences which act on a slum-bred child tend to injure him personally." But, he goes on, this parental decline is *not* registered as a prenatal permanency in the constitution of the child. "I believe, in fact, that while a life in the slums deteriorates the individual, it does not affect directly the hereditary tendencies of the race in the least. . . . Slums are not a creation of yesterday. They have existed in many countries from very ancient times."

In a word: Subject the child of the slum-dweller, from birth, to the right influences, give him a healthy up-bringing, and he will be the equal in physique of the child born and reared in the country.

This may be an over-optimistic view; but it is worth working on. We think it needs another touch. Begin that "healthy up-bringing" of the child a few months *before* it is born, and maybe we have the whole secret. Hereditary influences *do* doubtless accumulate from generation to generation, and become relatively permanent. But these are secondary in comparison, we think, with those stamped on the child within a little period on both sides of its birth hour, and may be neglected altogether.

STUDENT

The Rise ■ ■ and Fall of Creeds ■

A PROMINENT divine turns a biological eye upon creeds, and believes that he sees in their prolificness the operation of the same law which in the animal and vegetable worlds produces such countless variations of type. In both cases, he thinks, the complementary law subsequently operates—that of elimination of the worse and survival of the fittest.

We think the analogy correct, but take no comfort from it. "Fittest," in the biological sense, means aptest at getting food, completest in its adaptation to conditions. The food of a creed, its field of growth, is human minds. So a creed is no better than the minds of those who accept it. Why then multiply them? What the race needs is a set of men and women who have got back to universal ideals of life and conduct, and *live them*. The force of example, the light that such lives radiate, will do the rest.

Belief is the product of pre-existent character. Its subsequent reaction on character is very slow. Let the creeds arise and fall as they will; we will appeal to the divine fundamentals of human character. Creeds are mind-made; character has feeling as its basis. Creeds only formulate (and therefore limit) conceptions that arise in feeling. The axioms of today will not be axiomatic tomorrow, for axioms are felt, not thought.

STUDENT

The Migra- tion from ■ ■ ■ Sweden

AMERICANS should be unselfish enough to wish the river of Swedish immigration stopped. His mother country needs the young Swede more than we. Why he should leave her is something of a mystery. He is happy; he is free; and he can easily be prosperous. Moreover, he is justly an ardent patriot, proud of his country's history, and eminently a home lover. Nowhere are the bonds of family life closer or more real than in Sweden. Yet from a population of 5,000,000, nearly 1,000,000 Swedes have come here! Their sterling qualities, energy, honesty, capacity and kindness make us glad to receive them, but why do they come? Is the old Viking instinct

to roam so strong as to take them from one of the most beautiful countries on earth?

For Sweden's sake, we are glad to note that steps are about to be taken at home to ascertain and remove the causes of this steady emigration, for Sweden is a glorious country.

AMERICAN

The "Deep Breathing" Quackery ■

WE wonder how many quacks there are at this moment in America teaching "the art of breathing?" And what proportion they bear to the numbers willing to be "taught"—say at \$2 a lesson? "How to breathe," "How to become beautiful," "How to be powerfully magnetic," are the headings of advertisements usually to be found in the same column, and parting the same kind of persons from their money.

The heart is fortunately out of reach, or we should be informed that that organ also was ignorant of its business and needed to be regulated or enlarged or something. For certain physiological reasons, a little margin of control over respiration is left to the will. We can stop breathing a moment or two in passing through foul gas, and we can alter the rhythm in order to punctuate our spoken sentences. Nature, fortunately for us, does not yet trust us very far. And the wisdom of her caution is obvious. Exactly as far as she does give us her trust, do we abuse it.

The attempt to produce health by deepening the breathing is on all fours with the attempt to put a dog into good humor by wagging his tail for him. That good results sometimes follow is due to the other measures pursued concurrently. Meddling with the breathing machinery simply detracts from them. And it is exactly as injurious to the breathing centers as gluttony is to the digestive centers. Over-breathing is a move in the direction of fever, and results, like over-feeding, in the production of toxins. Let the breathing alone; as good health comes back, so will good breathing capacity correspond. Every direct attempt to meddle with it will certainly be revenged later on.

PHYSICIAN

A Bishop's Apology ■

BISHOP WELLDON, of the Church of England, admits that most sermons are dreadfully dull; but he thinks we do not make allowances enough. The ordinary speaker may use all kinds of illustrations, and may introduce as many jokes as occur to him. And he is frequently rewarded and stimulated with refreshing applause.

But the preacher is limited in his topics and in his illustrations; and he may not joke. Nor does he get any applause. Against these grave disqualifications he can *only* set such qualities as come from careful preparation, elevation of character and spiritual intuition. Only! If a preacher will supply these, he will not lack an audience, nor will his discourse be reckoned dull. He may "limit" his topic as much as he likes, (that is to say, to all the important and all the radical things of life); he need not joke, for what he says will stimulate his hearers' consciousness just as much; and his "spiritual intuition" will tell him far better than applause, the exact effect which he is producing. And the development of this intuition will constitute a "careful preparation" much more effective than the study-consultation of books. *Why* do men go into the ministry, *why* do they presume to teach, without that spiritual intuition which should be the only warrant for, and stimulus to, the attempt? The man who has the real fire *must* let it out, and he will never lack his audience. The world seems to be waiting for a new order of preachers, and a new method of evolving them. The real preacher may be a man of learning, may be a finished critic, even a higher critic; may have all sorts of intellectual possessions. But he is and has much more. There is a fire behind his intellect which fills it with light and throws its pictures as living powers upon the minds of those who hear him.

STUDENT

WITH Reincarnation the doctrine of Karma explains the misery and suffering of the world, and no room is left to accuse Nature of injustice.—*William Quan Judge*

Art Music Literature and the Drama

The Art of Painting in the Middle Ages

I CENNINO, son of Andrea Cenni, born in Colle di Valdelsa, was instructed in this art for twelve years by Agnolo, son of Taddeo of Florence, my master, who learned the art from Taddeo, his father, a god-son of Giotto, whose disciple he had been for twenty-four years."

Thus, the introduction to the quaint *Book of Art*, composed by Cennino da Colle in 1437. What a field of thought is not opened up by this naive little treatise written long before Raphael, Michael Angelo, or any of the masters of the true Renaissance came upon the scene. Honest, loving, destitute of that higher carelessness which seems to have been the discovery of the post-Raphaelites, Cennino gives to his book the charm of utter simplicity. It is dated from one of the Florence prisons, nor is it difficult to picture him sitting there, working away—for he was always poor and frequently in debt—happy, as our own Thoreau was happy, pegging shoes and writing philosophy in the Concord jail.

Cennino begins by saying that one should first learn to draw, and one of his great secrets, to erase charcoal with bread, has not been improved upon to this day. He goes into great detail as to the use of tracing paper, giving receipts for preparing it and instructions, which would best be called "receipts," for using it. He gives a method for making charcoal crayons and sings the song which we are by this time beginning to know is not a wise song, to draw and draw for years before even beginning to use color. The artist of today knows what the Japanese have known for centuries, that to divorce color and form is impossible and that drawing and painting must, in true art teaching, be recognized as together forming a whole, fragments each, when separate.

But Cennino's best advice may well be taken by students of today. He declared that the student who would attain excellence must be regular to the point of asceticism in his living, "eating, at the most, twice a day, using light and good food," and that he "must restrain his hand, preserving it from fatigue such as would be caused by throwing heavy stones or iron bars." Details are also given as to the manufacture of one's own brushes—fancy the labor of the student worker in those days—and from his book, too, one judges that the study of anatomy was then almost unknown. In speaking of the human body Cennino gives the proportions of the body of a man, saying, "I omit those of a woman because there is not one perfectly proportioned!"

Equally naïve are his directions with regard to perspective, the laws of which had not been in his day re-discovered. He says, "Let the cornice which you make at the top of the house incline downwards toward the obscure, (meaning doubtless the vanishing point); and let the middle cornice of the building facing you, be quite even. Let the cornice of the base of the building ascend in a direction quite contrary to that of the cornice at the top of the building." This was Cennino's perspective!

But let us bless him for the torch he held aloft then, let us wish that there were today more artists as loyal to their craft, as honest to their better impulses and as lovingly helpful to their fellow men. Let us be grateful to one who dared, in the very darkness of the Middle Ages, sound this true note—"The student shall give heed that he study from love of the art and true nobleness of mind. Let him adorn himself with this vesture: love, obedience, reverence and trust."

STUDENT

The True Education Must Unfold the Heart-Life

SHORTLY before his death, Watts, "the greatest of the Victorian artists," is reported to have said, in a conversation with one of his friends:

None the less, it is the people eventually, and not the scribes, who have to judge, and they speak with authority. The education of the people—one looks to that as the great hope!

The bulk of the people at present seem to care for nothing but smoking, drinking, and gambling; that's quite true; but then we don't yet in this country understand the meaning of the word education. A real education would modify all that.

Art is the living presentation of Religion.—Wagner

Any true education is surely of its essence religious. It consists in teaching us to differentiate between the beasts and ourselves.

Do you suppose that the addition of a few dogmas of this or that sect, or talking about names and titles of God or of Christ, can transform irreligious into religious teaching? Creeds are, of course, the shell protecting the vital thing; but in insisting too much on creed, the life within may elude us, and leave us an empty husk.

A BOOK recently published in France, purporting to recount divers scandals of the Second Empire, it is really somewhat difficult to appreciate. One wonders at first glance whether it contains truth or fiction, and what could have been the collector's estimate of his readers.

No one but a discharged cook or some spiteful and *bourgeoise* lady's maid would think of retailing such scandals about "the family," and her listeners could only be placed upon the same level with herself. With all the beauty there is in life

and in the heart's best aspirations; with all the real hunger that we find everywhere for something that lifts us above the plane of the humdrum and of slander, the best that one can wish for such a book is that it may sink into the obscurity it deserves.

A DISPATCH from Chicago reports the death of a 'cellist of that city due to constant practice on his instrument. The surgeons amputated the left leg in the hope of curing the disease known as osteosarcoma, which had developed as the result of the daily pressure of the instrument against the limb. The papers are commenting upon this, naturally, but how many ever think of the thousands whose nervous systems are injured by over-practice, and the not insignificant number made nervous wrecks from the same cause?

AND now comes a sceptical foreign writer who delivers himself sarcastically anent "education," which he calls "the American fetish" and the "cure of all ills." In his train follow, of course, a dozen American writers who are protesting. Why should they protest? There are so many notions as to what constitutes a fetish, that that point may be spared the argument; and as to education being the cure for all ills, *right education certainly is*. It is not right education that has populated our sanitariums nor made asylums and prisons present day necessities. The responsibility for these things rests upon divers brain-mind systems *miscalled* "educational." The word itself—from the Latin *educere*—how can it refer to systems whose aim is to cram into, not to evolve or *lead forth*? To "lead forth," from what? Truly, from the soul itself wherein forever abideth that wisdom whose message is the heart-life, that "light which lighteth every man that cometh unto the world." Beauty and the perfectness of joy are its expressions. M.

FRAGMENT

FOR truth only is living,
Truth only is whole,
And the love of his giving
Man's polestar and pole;
Man, pulse of my centre, and fruit of my body,
and seed of my soul.—Swinburne

The Flower of Courtesy

THE flower of courtesy is a badge wrought on the shining armor of the world's heart heroes. Only those who engage in the conflict with the specious armies of selfishness and separateness, and have won victories over themselves, have the heart knowledge that enables them to invest right speech and right action with the positive luminous quality that belongs to the flower of courtesy.

Be it understood that the higher courtesy adorns only those who have won the heart victories. Those who are still lugubrious, those in whom vision is dim, those in whom exists not the inner certainty of the unity of life and the majesty of moving with the Law, those still entangled in the web of self-justification or blinded by the blazoning of their own spiritual attainments—brave warriors though all may be—cannot yield from their heart of hearts, with even their kindest words and most brotherly deeds, the blessing of courtesy that flows so generously from the world's heart chivalry.

The warmth of the higher courtesy cheers, comforts, uplifts, inspires, but its source is the fire in the heart—and the fire burns. It burns through the veneers and masks, the personal appearances that the people in the world have built up. It seeks out the living fire in each. Those who love truth covet the smart of this burning, and by it transmute some of their baser metal into gold. They are purified by the strength of this fire of the higher courtesy, which based upon knowledge of the Law, gives unto each—not what his personality demands—but his due, and thus reveals the seeker unto himself. Picture the daily life graced by the courtesy of the soul. No invasion of the being of another, no defense necessary, no pretensions, no display, no whining, but each in his place, and in harmony with all the others, radiating from his own inner shining the warmth that finds form in beautiful behavior.

About the graceful forms of courtesy and the easy physical poise of the Japanese linger a light and warmth, as if from a time long ago when heart wisdom inspired them. This spirit lives in Japan today; for the flower of courtesy is a flower of the spirit. It fades not with death, but blooms from life to life. Only those who wear it will be of the royal race that is yet to be known upon the earth.

STUDENT

The Burden of the Past

IF there is one thing that, more than all else, keeps women away from their higher possibilities, it is the fact that they are absolutely psychologized by the past. Not only have they the result, the precipitate, so to speak, of all the past within their very souls, but over their minds hangs its memory. The ability to look straight ahead and to let all memory of the past-traveled roads drop off and out of the mind, is one that few women have yet acquired. Men, as a whole, have this ability, or characteristic rather, to a certain extent. Their business training has forced them to acquire it. Their tendency is that of the pioneer, a looking ahead rather than a looking backward. They let the sense of failure more easily slip away, and as a whole—knowing how the will weakens and the courage disappears under the pressure of regret—throw it out of their minds and march ahead. The wrecks that are strewn here and there in the business world are of those, invariably, who sat down to grieve over past misfortunes, while, before their tear-blinded eyes, opportunities unnumbered passed unseen.

There is in the minds of many women a dread, undefined, yet nevertheless existent, of the future. It arises from what might be termed a want of exact honorableness somewhere in their make-up. For ages and ages the women of the world, as a whole, have had slender opportunity to acquire this honesty on the purest terms; or, to be more exact, they were surrounded by every temptation to be a little less than entirely just. The higher justice is what women as a whole must yet acquire.

We must learn to put down the personal wants and look at things and at events, and at each other, impersonally. We must be less emotional and more calm, less eager to force things our way along personal lines, and more eager to work along lines of least resistance, which are *never* personal lines; more willing to stop worrying and concentrate our attention on our duties; more willing to look ahead than backward. If the past could be dropped absolutely out of the mind, women would, with a single effort, stand face to face with their own souls. Then they would *know* their own Divinity instead of merely speculating about it. They would *realize* their Divine Power to transmute life's leaden obstacles into steps for the Soul's Golden Stair, and they would blossom into wise and selfless use of power, as the child-soul blossoms into speech.

"GOOD MORNING"
In the Land of Courtesy—Japan

A Woman Archeologist

MISS HARRIET BOYD, the American archeologist who discovered in Crete a Bronze Age City, indubitably one of those described by Homer in *The Odyssey*, recently returned home from a second trip to the site of her great discovery. She said, in response to inquiry:

"On my last trip, we uncovered a building resembling in many ways the contemporary palaces at Knossos and Phaestos. This time we went deeper into the city and laid bare many parts of the old residential and business sections. The houses are built flush with the road and close together. They are of about equal size, and although small are well built, on the modern plan of cellar, ground floor and upper floor. From what we saw I believe that the city was attacked by an enemy, deserted, and pillaged and burned.

"I have with me several tablets inscribed with prehistoric characters, such as were found on relics of Knossos and Aghia Tridha. The characters are still intelligible and will probably lead to the discovery of the inhabitants and their customs.

"The decorations on some of the relics indicate a high proficiency in art. A stirrup cup is decorated with two sprawling cuttle-fish, and a set of eight drinking horns bear plant and semi-conventional designs. They will take high rank among prehistoric pottery. A law passed in Crete shortly before I left made it possible for me to bring many specimens back, all of which will go to the University of Pennsylvania. Before that whatever was brought from the island had to be smuggled.

"Some of the vases when found were broken into hundreds of pieces. It required a delicate and careful hand to put them together, but I am sure we have passed over nothing of value so far as we have gone."

THE extent to which musical study is taken up in women's clubs is not generally known. One member recently prepared a course of study, extending over seven years, which is being pursued by many clubs throughout the United States.

The plan is a comprehensive one, taking up first a general view of music, musical form, theory, and its history from the earliest time. This is followed by a study of the music of different nations and special study of the works of the great composers.

As a rule, women's clubs are formed of mothers and those who, in all probability, could not attend classes or schools.

It is beyond doubt or cavil that women's clubs occupy a unique place.

THE reverence for women that is a national characteristic of the people of Scandinavia, and the industry and intelligence of the women themselves, have been the means of opening to women in Sweden a wide range of employment. Every Government department has its women employees, who are treated with great consideration. All positions in the business world and all professions, are open to them. Many printing offices employ only women, and the acknowledged leader in the modern idealistic school of literature is a woman, Miss Selma Lagerhof.

By theory and tradition the position of women in Japan is very subordinate; those who have traveled in that island declare that Japanese husbands are tyrants only in theory, unkind husbands being much the exception.

It makes all the difference in the world whether a nation,—or a person,—is fighting for principle or not. Just read history and you will see.

Filipino Women

A FRIEND, now in St. Louis, writes as follows, concerning the handiwork of Filipino women:

"The most interesting spot to me is the Philippine exhibit, and in that the work of the Filipino women opens a new book. The building itself is built after the Spanish fashion, with a great iron frame-work in front of the windows, and a large court. In the windows shells, which keep out the heat of the sun, but let in the light, are used in place of glass. Here is displayed the work of Filipino women in embroidery, weaving, wood-carving and all kinds of sewing. Nothing could be more exquisite than the light, fluffy, woven fabrics, and in artistic finish and thoroughness of detail, the work of these women could not be excelled anywhere. Compared with it, the undertakings of the men, particularly in the line of agriculture, look exceedingly crude.

"When the Louisiana Purchase Exposition was first proposed, clubs of native women were organized for the purpose of making an exhibition of the work of the women of the islands. Such embroideries, such exquisite lace-work, such delicate, woven stuffs I have rarely seen. The carvings are beautiful, and altogether one wonders where these women could have gotten their artistic taste, their genius for thoroughness and refinement in needlework. To see them combing out long strands of pineapple fibre and making the most beautiful cloth in the world on their hand looms, is a real inspiration. And the famous Filipino hats! It takes a woman, working steadily all day, ten days or two weeks to plait one of these hats."

The same might be said of the embroidery and loom work done by the women of all Oriental nations. Cuba is by

no means an exception. During childhood the little "Cubanas" are taught to handle a needle with marvelous skill and highly artistic feeling. The hand-wrought laces of South America are as famous as the almost microscopic drawn-work of the native women of Mexico. Think, too, of the artistic value of the woven handwork—baskets, blankets and rugs—of North American Indian women! From the Persian woman, who sits patiently before her loom day after day; from the little East Indian, lovingly stitching rare color into the patterned tracery of some priceless Cashmere shawl, to the poorest Indian basket or rug-maker on our reservations, all possess a deep love for the beautiful and a genius for the decorative in color and form.

STUDENT

TOURISTS say that in many respects the idea of the inferiority of women is not as marked in Japan

as it is in England or America. Women are considered to be as fit for all manner of work as are men, and their endurance in the matter of physical labor is astonishing. Most of the women of the working classes carry on their work day after day with babies strapped to their backs. A great many of the industries of the country are carried on by women.

It is interesting to know that one of the largest associations for promoting the welfare of the blind in England owes its initiative to a woman, one Elizabeth Gilbert. She herself was stricken when young and out of the depths of her own misfortune formed a plan which today, after fifty years, insures happy and remunerative employment to hundreds of blind men and women.

THE remarkable success of the International Congress of Women, held in Berlin, was due in large measure to the wise and unselfish work of its President, Frau Anna Stritt. One of her co-workers was Mrs. Kazuo Hatoyama of Japan. Another step toward unity and peace! E.

FRAGMENT

A GRACIOUSNESS in giving that doth make
The small'st gift greatest, and a sense most meek
Of worthiness, that doth not fear to take
From others, but which always fears to speak
Its thanks in utterance, for the giver's sake;---
The deep religion of a thankful heart,
Which rests instinctively in Heaven's clear law
With a full peace, that never can depart
From its own steadfastness;---a holy awe
For holy things,---not those which men call holy,
But such as are revealed to the eyes
Of a true woman's soul bent down and lowly
Before the face of daily mysteries;---
A love that blossoms soon, but ripens slowly
To the full goldenness of fruitful prime,
Enduring with a firmness that defies
All shallow tricks of circumstance and time,
By a sure insight knowing where to cling,
And where it clingeth never withering.---Lowell

The Roman Forum

MUCH of the most interesting part of Roman history centers around the Forum and its closely packed throng of magnificent public buildings, monuments and works of art. Laid out in the early days, on land reclaimed from the marshes by the building of the Cloaca Maxima, or "Great Sewer," it served as the meeting-place for all citizens in their capacity as legislators. The Comitium, where the assemblies of the patricians were held, was a large platform at one angle of the Forum (beyond the columns and the arch in the illustration); on it was the rostrum, the scene of so many eloquent orations. The Senate House and the Temple of Vesta were among the most famous buildings on the Forum, while the Capitol looked down from above. Successive generations of potentates enriched this site with the spoils of victory and the monuments of fame; and the greater part of all these have gradually been located by archeologists by their foundations under the soil.

Fine Character of the Zunis—Their Great Antiquity

IN November, 1900, Professor Troyer was invited to Lomaland by Katherine Tingley, and he gave a most interesting talk on Indian Music before some of the students. This man had for the Red Man and his traditions a respect which was as far above the usual view as it was founded on superior information. But though his reverence for the Indians came from his intimate association with them, he would never have won that intimacy had he not in the first place possessed the sympathetic soul and generous intelligence which alone can unlock the portals of guarded knowledge.

Before entering the Indian country he found it would be necessary to learn the sign language, which he did from the Orinocos, and so got to the Incas after several months of difficulty. "They say," said the Professor, "that no white man ever went there and came out alive; but I went there and I came out alive, and when I came out I had 400 songs with me." The Indians hate the white man and with good reason; but the sign language helped him very much and the Indians were friendly and showed him many of their secrets. The Zuñis submitted him to ordeals when he entered their country. They threatened him with death, giving him the choice of fire, strangulation, or being shot with arrows. The fire was kindled, and he did not know but he might be thrown into it. Then he waved his hand and said, "Bury me among your high chiefs!" Then the chief came and cast a spear at his feet, whereupon all gathered around him with presents. He was offered gold but refused it; to have accepted it would have meant instant death.

The Zuñis would look at a man and read him through. If he flinched, he would be stabbed immediately.

The North American Indians were, according to the conclusions derived from all his study and observation, the oldest race on the globe. He said: "I think the Zuñis are the oldest in America and perhaps in the world; they are millions of years back of us, and they have older relics of intellectual life than can be found anywhere else."

The Zuñis have an aristocracy, but it is one of culture, art, history, education. With them all is intense and there is nothing that is not sacred. They live a more true life; coin is not known, as in Eastern countries, and its accompanying contamination of character is likewise absent. Their laws are finer than ours in many respects, especially in regard to friendship and truth. If any one steals from his tribe he dies; and the same fate attends the unfaithful man or woman.

They show powers of endurance of which no man among us is capable. They teach their children to swim by throwing them into the water, and after a gasp or two they will float. Their tenderness, however to those sick or in need is described as something superhuman. They are

true friends, for they love truth and nature, whereas the whites do nothing but for dollars and personal gain.

It is small wonder that people so pure and strong should possess undimmed some of the finer faculties of which their more degenerate brethren have lost the use. They can effect marvelous cures with palm oil; they have the senses of weight, temperature and intuition developed. They will regard you with a piercing look and know instantly whether you are friend or foe.

Cyclopean Masonry in England

AT Grimspound in Dartmoor, Devonshire, England, are the remains of a massive ancient structure, which archeologists call a fortress. It may have been

such; nevertheless we know that ancient races have valued massiveness and size in their structures for other purposes than defense. Dartmoor is a barren rugged tract, which has remained unchanged for centuries, and its population is diminishing. But though unproductive to the tiller and producer, it is a mine of wealth to the archeologist. The fortress at Grimspound belongs to the "Neolithic Age," and was erected by men who had no metal tools but only flints, and who inhabited the land before even the ancient Britons migrated thither. "Narrow-headed, dark and agile folk," the accounts called them; and add, "*with great knowledge of Nature and her laws.*" Well may this conclusion be made concerning men who, without knowledge of metals, set upright enormous blocks and built huge walls of stone.

The fortress lies in a valley, and, viewed from the neighboring Hook-nor Tor (or hill), appears as an area of some four acres, which was surrounded by two walls whose great stones, now overthrown, stand out grey among the heather. Some of the stones are of immense size. One is ten feet by five feet and a foot thick, and weighs three or four tons. As stones of this size were laid in regular courses, an estimate may be formed of the labor (or was it skill?) employed. A writer reckons that a modern contractor with all his appliances, would expend \$17 a yard on such walls, each yard requiring the work of four men for a week. Yet there were here two walls, about five hundred yards in circumference. E.

The Sun Dance

THE Autumnal Equinox has passed and Indians have been celebrating their annual Sun Dance, descriptions of which, with remarks thereon, appear in the papers. People still persist in calling the ceremony "sun-worship," and the celebrants idolaters, and in imagining that the Indians regard the sun as the supreme being. One report, however, admits that "the sun dancers are not absolute idolaters. They do not worship the great orb of the heavens as a supreme being, but as a sort of representative of the Being who is the maker and master of all the universe."

Those who have studied Indian lore have proved conclusively that the sun has always been regarded as quite an inferior deity, and even as a slave bound down to a fixed task and with no liberty. The true God, they knew, must be far superior. The sun was his emblem, performing certain subsidiary functions concerned with physical life.

The Zuñis speak of the "White Sun" as being above the "Golden Sun." The Greeks said that Phœbus was borne around the sky in a golden chariot, but modern astronomers say they cannot see the chariot. Perhaps they do not look hard enough.

Hence it is clear that the sun dance is merely the invocation of one of the cosmic powers, not a worship of the supreme being. We cannot perhaps expect to find the ceremony existing now in its original purity; but, in the face of our own absolute ignorance of that science by which the powers of Nature can be invoked, and by which man can attune himself to them, we cannot afford to ridicule anything.

A Point Loma Sunset

RECENTLY in the NEW CENTURY PATH a number of drawings were given, showing strange phenomena of the setting sun as seen from Point Loma. Here is now shown an actual photograph of a phase of such a sunset. The sun sets very quickly in this latitude, about three minutes being the time it takes for the entire disc to disappear, once it touches the horizon; and, as the horizon is usually clear and free from mist, these few minutes are well spent in an observation of the sun as it moves westward beyond our sight.

Not always does it take on unusual shapes, but usually passes from view with true majestic dignity, leaving a trail of glory which lights and colors the sky with what evening clouds there may be in a beautiful manner. Sometimes, however, the phenomenon spoken of appears and the sun passes through a series of abnormal shapes; the one now given, that of a double dome, being taken about ninety seconds before final disappearance.

The picture was secured with the aid of a supplementary lens on the ordinary lens of the camera, by which a magnification of eight diameters was obtained. A careful examination of the picture shows the sides of the sun terraced like the terraced pyramids of Egypt, and the remarkable illusion of the sun appearing to be in front of the clouds is seen.

The cause of such phenomena is not entirely clear, for conditions seem to be exactly the same when the sun sets normally.

OBSERVER

The Ant-Lion

WHEREVER the soil is at all sandy here, you may find the small conical pits of the ant-lion. He is called the ant-lion because he is an insatiable devourer of ants. He has six feeble legs, a bloated, barrel-shaped body and great formidable jaws.

His method of earning a living is as follows: He lies hidden under the loose sand at the bottom of the pit, and presently an ant, approaching too near the treacherous edge, falls over, and in her efforts to get out dislodges some loose grains which slide to the bottom and give the lion in wait evidence of an intruder. Immediately the ant-lion throws up loose sand, which increases the difficulty of the victim's escape, and she finally tumbles to the apex of the cone, where two powerful jaws emerge and the poor ant disappears under ground. In wet weather, or after heavy dew, the pit does not work so well; the sides are firmer, and an ant has a pretty good chance of climbing out. At such times the lion is said to take deliberate aim and overpower the ant by a stream of well directed sand grains. For two years the ant-lion lives under ground, then he becomes a chrysalis and emerges as a four-winged flying insect.

Two years spent in shoveling dust under ground and then a bright ethereal existence as a gauzy-winged fly in the sunshine! Nature abounds in these strange contrasts. It certainly suggests that man is not forever doomed to live immersed in the life of physical sensations, but may eventually un-

THE TUMULT OF THE TOWN

I HAVE forgot the tumult of the town,
Its pitiless oppression, its sad ills,
Amid the girth of everlasting hills---
Forgot the lure of riches and renown
In emerald meadow cloak and woodland crown;
And in the gossip of the birds and rills
The exultant freedom that my spirit thrills
Quickens the smile and banishes the frown.

Oh, come and share my pathway! Low and sweet
The airs will blow, in most beguiling wise;
Cool aisles will ope to lead the wanderer's feet
Toward heights that step on ferny step arise;
Care---the grim Vandal---vanquished, will retreat,
And life will wear Youth's radiant rainbow guise.

Intelligence in Animals

THERE is in the papers an interesting case of a thought-reading dog, and it is mentioned as surprising that, in addition to the tricks he can do at his master's bidding, he is also able to execute things which are merely thought of. Thus he will bark a given number of times according to a number thought of by a member of the audience. But it seems reasonable to suppose that animals do nearly all their feats by thought-reading, whether words are used or not. It is well known that they obey the tone rather than the words of the speaker. They catch his meaning in various ways, by signs, facial expression, and probably very largely by pure mind-reading.

An animal has no personal ideas and prejudices to crowd his mind, his attention is absolutely concentrated, and his perceptive powers intensely keen.

One professor says that "in the few cases of seeming intelligence the brute does not reason, but is guided by the faculty from which reason sprang." What is this faculty, if not direct perception of the truth, intuition, the power that sees instead of groping?

A trick-horse trainer scoffs at the idea that horses can reason (in our way.) He makes signs with his fingers, feet or head; and the spectators, being absorbed with the animal, do not notice them. One time the investigating committee dismissed the trainer, and the horse would have failed had not the groom, who was lounging near, made the signs.

In an inquiry like this, however, we shall have endless disputes if we try to define the word reason too rigidly and to mark it off from instinct. Every creature, whether he walks on two legs, or four, or six, or whether he has no legs at all, but only perhaps a stalk, has intelligence adequate to his needs. And he may have language too; for any vocal means of conveying ideas is language. A man who is a wonderful imitator of animal cries can even converse with the birds and understand to some extent the meanings of their different notes. The language of an animal may seem invariable and simple only because we have not studied it. If a watchmaker can hear countless different sounds in the tick of a watch, might not similar special training reveal to us undreamt of complexities in nature?

An Ancient Telephone

THE PATH of July, 1894, contains an interesting little article, over the name of William Quan Judge, which is well worth republishing. It is entitled, "An Ancient Telephone," and contains in itself a quotation from the *New York Evening Sun* of May 31, 1904:

It has been the custom of many people to belittle the ancients by assuming that they knew but little of mechanics, certainly not so much as we do. The builders of the pyramids have been described by modern guessers as making their calculations and carrying on the most wonderful engineering operations with the aid of pools of water for obtaining levels and star angles; they could not, it was assumed, have instruments except the most crude. So also the old Chinese were mere rude workmen, although it is well known that they discovered the precession of the equinoxes over 2000 years ago. Of late, evidence has been slowly coming out that tends to show the ancients as perhaps having as much, if not more, than we have. So the following from the *New York Evening Sun*, an influential daily paper, will be of interest. It says, on May 31, 1894:

"An English officer by the name of Harrington has discovered in India a working telephone between two native temples which stand over a mile apart. The testimony of the Hindus, which, it is said, is backed up by documentary proof, shows that the system has been in operation for over 2000 years. Scientists engaged in excavating the ruins of ancient Egyptian temples have repeatedly found unmistakable evidence of wire communication between some of the temples of the earlier Egyptian dynasties."

It will probably be found, in the course of time, that the oft-repeated statements of H. P. Blavatsky that the ancients had all of our arts and mechanical devices, were true. She asserted that they had flying-machines. In Buddhistic books is a story of Buddha which refers to a flying-machine, or mechanical bird, used in a former life of the Lord; and Indian tradition speaks also of air-walking machines. Reading this item in the newspaper reminds me, too, of a conversation I had with H. P. Blavatsky in New York before the phonograph came out, in which she said that some Indian friends of hers had a machine by which they spoke with each other over distances of miles with great ease.

It will be remembered what an astonishing thing the telephone was considered when first brought out into general use among us. Since then the progress of our knowledge in the way of discoveries has advanced in such gigantic strides and in so marvelous a manner, that one's sense of proportion is all out of gear as to the real wonderland our thinkers in this realm are leading us into. We scarcely appreciate the magnitude of the (re) discoveries of late years; or what fairy-land of strange fact they may yet lead us to.

However, the allusion to the use of the telephone in ancient Egypt, in the newspaper clipping above referred to, is the more worthy of remark, in that it calls attention to the fact that it was during the time of the earlier dynasties that the telephone appears to have been in sacerdotal use. It is another corroboration of the well-known saying of Egyptologists, that the farther back one goes in Egypt's history the finer the art is, the more scientific the building as well as the more grand, and the more is the impression forced upon us that ancient Egypt was greater

There Is No RELIGION Higher Than T R U T H

and more imposing than under the later dynasties. The complicated and wonderful system of ideographic writing was at its perfection in the remotest ages of Egypt's history known to us.

Egypt was old and settled in wisdom when the stream of Aryan immigration poured into the plains of Hindustan.

F R I E N D S I N C O U N S E L

DEAR COMRADES: The other evening, just as the sunset tints were fading from the western sky and the first faint stars began to pierce the gathering gloom, our good friend, United States Commissioner of Immigration Sargent, and a party of friends, drove up to the Homestead. Even the welcome of decorations, songs and speeches cannot be adequately described; much less the welcome of grateful remembrance that went out from our hearts to one who, in a dark and critical moment, gave us a powerful weapon of defense in his honest judicial report upon the children two years ago. Standing on a little eminence, one could trace the progress of the visitors as they passed from one department to another, for songs and illuminations sprang up, as it were, wherever they went. One of the young orators of the Lotus Home spoke a few words of welcome, explaining that they did not value Mr. Sargent's services simply because he took their side in a contest, but because he acted on the pure impersonal lines of justice and fair play; and that their gladness at the victory was mainly because it would help to spread the Raja Yoga system of education all over the world, and give to the rising generation everywhere the advantages they enjoyed.

A very interesting procession may now be seen any morning leaving the Homestead grounds. A small party of children, with their teacher, go down to the newly established school at Roseville, and a very interesting little party it is to study. Shakespeare speaks of the schoolboy "with shining morning face, creeping like snail unwillingly to school;" he begins his description well, but the latter half is the very opposite of the deportment shown by our children. Under Katherine Tingley's system there appears to be no compulsion needed; her scholars do not take their education as a dose of medicine, but as a draught of cooling water to one who is athirst. The effect that a few of our Raja Yoga scholars will have as they mix with the children at the new school, can scarcely be more than barely suggested by words. They will influence by their manners, looks and gestures; and the very attitudes they unconsciously assume, will preach brotherhood and living in harmony with the Great Law, far more eloquently than by any spoken word.

But the chief charm about the little company as they leave the gate is that they suggest to the onlooker that they are the first pioneers of a long line of successors who shall leave this hill and go down into the dark valleys of earth's ignorance, until the light they carry shall burn in every human heart. This is a sweet promise.

LOMALAND STUDENTS AT ISIS THEATRE

A LARGE and appreciative audience filled Isis Theatre Sunday night, at the regular meeting of the Universal Brotherhood, held under the auspices of the Aryan Theosophical Society of Point Loma.

The musical program was exquisitely rendered by students of the Point Loma Conservatory of Music.

The first speaker of the evening was Miss Ethel Wood. Her subject was, "Woman's Work and the Danger of Extremes." She said in part: "We have the greatest respect for Puritan simplicity and purity. Such extremes as those of our forefathers were certainly less demoralizing than the effects of the extremes to which the flippant creatures of fashion and society go today. What is the middle line and how may the path that does not lead to danger be found? Plainly, the doctrine of middle lines may otherwise be called the doctrine of the heart life, and the path is the living of that life.

"Never has the world so needed help as it does today, never have women been so near the point of being awakened. We shall live to see women who have found the middle path—nay, we even see such as these today."

Master Thorley Von Holst read a paper on "Boys: Their Possibilities." From it we quote: "Youth is the springtime of life, and while we are boys we are sowing the seeds which will blossom out in manhood. There is nothing courageous or honorable in being passively good. When we are young we must form habits of honesty, purity and kindness, so that when we grow up we will always be able to live up to our highest ideals.

"An industrious, unselfish boyhood leads to a noble and useful manhood that shall be worthy of its great responsibilities.

"We boys of the Raja Yoga School at Point Loma are striving to make practical in our daily lives our highest and best ideals. We realize that some day the greatness of our nation will depend upon the present generation, and we are determined to do our utmost to raise our country to a height hitherto unattained."

The closing paper of the evening was read by Dr. Herbert Coryn, and was entitled, "The Right Man in the Right Place."

After describing the Higher Patriotism, the speaker said:

"Why do we apply a lower standard to national morality and character than we do to individual morality? How many nations are there who look after other interests than their own; who never even wish for the lands of other nations? Historians generally count it as in some way a law of human progress that the life of nations should be limited, that after a greater or less length of time they must necessarily go down and disappear. But is there any necessity about it? May not nations go down because of causes which they could have avoided? Before we admit that it is part of the essential scheme of things that nations should, having had their day, cease to be, let us wait till we have found records of a nation which from first to last lived the life that in individuals we call noble; that stole (we say "annexed") nothing; that helped the weak wherever oppressed; that kept its politics pure; that never became boastful, and that comported itself in all respects like gentlemen. I do not believe that such a nation could be injured by the age-long dash and wear of time, or that where it was necessary for it to fight, it could be ultimately conquered.

"The divine law in the world would delight in sustaining it as an example for younger nations, and a protection for whatever was good in the world.

"In our hearts we are better than we seem, better than we talk or do. We have an ideal of the kind of national life we should like our people to achieve. We, in our better moments, conceive of our nation becoming a light to the world, a help to the weak who need help, an ever active menace to the cruel ambition of brute power, and within our own borders living the highest national life that history records of any people; an individual life that amasses money only that with its aid all that is best of human consciousness and ability may be fostered—art, literature, and every form of true and noble culture and education—and so radiate upon all other nations the light that we have achieved in our own life. In a word, we have the ideal of an international brotherhood as wide as earth; and we have the opened path to work for it with every vote we honestly cast, every public word we honestly say. For the law waits upon us to second every good thing we do or think." OBSERVER

Glimpses of the Island of Trinidad

THE island of Trinidad in the British West Indies has an extremely cosmopolitan population, there being representatives besides the British Isles, of France, Spain, Germany, Italy, Switzerland, Portugal, America, Canada, China, Venezuela and India—the last named country having contributed many thousands during the last fifty years. Every year sailing vessels bring a large number of emigrants under the auspices of the government to work as agricultural laborers on the sugar estates, and they are commonly called “coolies,” which means “laborers.” They are indentured to the different estates for five years, and during that time they are extremely well looked after and provided for under rules laid down by the government. Houses, hospitals with nurse and dispenser attached, which a doctor visits twice a week, and food, are provided during the first year whether they work for its value or not. There are only three places where an indentured emigrant can be—in the fields working, in hospital or in prison for refusing to work, or running away.

On the expiration of the five years they become free, but are required to put in five years of industrial residence in the colony; after that time, they receive either a free passage back to India, or a grant of crown lands.

The two pictures give an idea of their lives when free and living where they please. In the one we see a number of them living together in what might be called a compound and occupied in the duties of daily life. The woman on the right is cleaning the brass vessels out of which all the Indians eat and drink; they are always kept scrupulously clean and bright. The man standing beside her looks as if he were cleaning his teeth. About this they are very particular, cannot be induced to go out to work in the mornings until this is done, using each time a fresh piece of stick which they split and chew to make soft and like a brush.

The next woman has rice spread out on a goatskin and is sifting it through her fingers to allow the wind to blow away the chaff; whilst the one in front of the man who is sitting on a bed called caban is putting rice or corn into a mortar and is going to pound it.

The houses are made by themselves out of interlaced bamboos or dried clay with caxat palm roofs, and are cool and often kept beautifully clean, although some are very dirty.

These East Indians live their own lives, or their own lives as near as possible to the life in India, and only a very few of the younger generation, comparatively speaking, assumed the ways of Europeans. Coming from all over India, when first they arrive they cannot understand each other; but quickly pick up a kind of hindi patois which is common to all. On the whole they are quiet and law-abiding, very fond of their children and animals. Thrifty, they turn the greater part of their savings into jewelry which plays an important part in getting and retaining the affections of a wife; although at the same time a father has to give as large a dowry as his circumstances will admit, in order to marry his daughter.

Girl children, although in reality loved and prized, are ceremonially despised, and if asked how many children he had, a man would reply two or three boys, as the case may be, and not mention the girls, unless specially asked if he had any.

COUNTRY ROAD IN INTERIOR

THE EVERY-DAY LIFE OF THE LANDHOLDER

With large black eyes, very bright as a rule; wavy or curly black hair, dark skins and regular features, the children are exceeding beautiful. Whilst the men are handsome, the women become old and haggard whilst still young.

I cannot make any authoritative statement regarding their religious beliefs. Nominally Hindoos or Mahommedans, I know they have Temples all over the island, in which they gather, and those able to do so will read out of the Koran. On all important occasions, such as marriages, deaths, etc., they make a feast, offer flowers, which they always want to be red, and sing chants. At one time when there was a good deal of sickness amongst the people who lived near here, they one day

gathered together, went to a grassy space, made a raised circle of clay in which they put a bamboo with a bunch of flowers at the top; they then sang and prayed around it and brought fresh flowers every day for several weeks. The sickness passed, and the shrine was neglected, but the bamboo grew and is today a living memento of their faith, and will some day be no doubt a large clump of feathery beauty.

With little respect for their native priests who will do no work, and obtain as much money as they can from them, they still think their services necessary to perform marriages; then the priests can obtain all the rupees they have, for reading from a book which none of them understand, he stops at frequent intervals to demand “more money,” and as they do not know if the important words have yet been said, they produce “more money”—beginning with a five-dollar bill, they go on down until a few cents are at the last reluctantly brought out.

The condition of these people in the West Indian Islands is vastly superior to their condition in India; they are well protected and looked after by a large and capable staff of government officials. There are, of

course, exceptions in this as in every other case, but I can say that I have lived amongst them for thirteen years, and met nothing but smiles and cheery and respectful “Salaam Bebee,” whilst my children could count their little friends by the dozens. I have been made the arbitrator in many domestic quarrels, and entrusted with small fortunes in silver jewelry which the husbands had taken away from disobedient or indifferent wives.

As a people they are extremely fond of horse-racing and cards.

During the two days of the annual races in the capital, the race-course presents a most varied and beautiful appearance, covered with these people dressed in their best, bright-hued, but harmonious native costumes. They come from all over the island and camp out on the savannah, often in the cart in which they have come, with a piece of canvas over it.

The courts are always filled with interested Indian spectators, and they frequently bring fictitious cases before the magistrates, supported by witnesses, with a lawyer on each side, by which they will afterwards decide the real case amongst themselves. A strange people, living a life in which one feels one has only the smallest part and very little knowledge of. Themselves, perhaps, only conscious of more or less painfully earning their daily bread; yet they are adding to the wealth and prosperity of their adopted country, and slowly but surely working out their own salvation, for “The destiny of organized Nature is amelioration, and who can tell its limits?”

THE only way to regenerate the world is to do the duty which lies nearest us, and not to hunt after grand, far-fetched ones for ourselves.—C. Kingsley

The Trend of Twentieth Century Science

Professor de Vries' Back Garden and Its Lessons.

PROFESSOR DE VRIES' name is tolerably familiar in this country, even among the laity, as an "opponent of Darwinism."

This description he disclaims. But there is, notwithstanding, enough truth in it to preserve its life.

The current view of the origin of species teaches that they come about by the accumulation, generation after generation, of slight variations from the characteristics of the parent stock. After a while, in any given locality, the original form has altogether disappeared in favor of the new form or species.

De Vries denies that new species arise in any such way. Slight variations *do* occur, but they are inconstant, and disappear in the progeny of those that show them. Moreover, they are not variations of kind, they present nothing radically new. They are only shades, degrees, of some already existing quality. Consequently they are not capable of accounting for those sharp differences of quality that mark one species from another.

These sharp differences arise, according to de Vries, because they as it were choose to do so. And when they have arisen, they stay. Nor does the original type disappear from that locality. Henceforth both species, the old and the new, live on together. Lastly, the new species are not necessarily better adapted to that environment than the old.

De Vries got a number of his facts from his own garden. He has a plant there—the "Lamarck's Evening Primrose"—

Which has been taken in the very act of producing new forms. I have brought it into my garden, and here, under my very eyes, the production of new species has been going on, rather increasing in rate than diminishing. . . . There is neither a gradual modification nor a common change of all the individuals. On the contrary, the main group remains wholly unaffected by the production of new species.

Whence these new forms, and why? There is no answer. Are they the reappearance of long lost types?

One wonders whether there is a human parallel to this process. Not that we know of. The appearance of genius in a commonplace family does for a moment suggest it; but the species called genius is unfortunately not permanent. Like the Darwinian variations, it lapses in the progeny.

For the moment, the chief interest of the new facts lies in the weakening of the mechanical conception of the origin of species. We were taught that variations occur all round the circle; useful ones remained and perpetuated themselves; the others died. Finally they became so marked as to constitute a new species. By this simple process man gradually arose from the *amœba*.

And man believed it! Some of him, at any rate.

STUDENT

Bees, Barometers and Blowing Wells.

THE mercurial barometer is a familiar instrument for the measurement of atmospheric pressure and for the foretelling of storms, and with its help man is able to do what bees and other animals unquestionably do without instruments—that is, instruments that we have recognized as such. He also probably possesses an organic barometer somewhere in his make-up, but he is not used to noting his obscurer sensations, and cannot read it.

"Blowing wells" are common phenomena in many parts of the world. Some of them have connection with great underground caverns or fissures, and it results that any change in the weight of the atmosphere would be shown by a sucking-in or a blowing-out of air through the constricted opening. Others connect with caves bordering the oceans, and the rising and falling tides produce the same movements of the air column. If a man had one of these in his back yard he would be able to forecast weather or predict tides, and his neighbors would credit him with the intelligence of bees or ants. As a matter of fact, the bee has the best of opportunities, and is not slow to take advantage of them. Every capped cell is an aneroid chamber which shows the pressure of the atmosphere as compared with the air in the cell, and the fluids of every flower, forced by continual root-pressure, flow best during low barometer. The steam which issues from the craters of many sleeping volcanoes appears in greater quantities during low barometer, and the "cloud-cap" which forms around such summits is recognized as a prediction of storms. It all goes to show that "it is easy when you know how." STUDENT

The Lessons of a Well

THE President of the Section of Engineering at the British Association regards the digging of a deep hole as more important than getting to the North or South Pole. Nothing less than twelve miles will content him. This, he thinks, would occupy eighty-five years in digging; its cost would be twenty-five millions of dollars; and the final temperature reached would be 270 F. Mechanical difficulties, such as pressure of air at that depth, and its heat, could, he thinks, be overcome.

And the results? First, a supply of hot air, above the heat of boiling water, continuously delivered to the surface. Secondly, a knowledge of the constitution of the deeper rocks. Thirdly, possible access to rich sources of metals.

Take a book of seven hundred pages and tear off the covers. Then stick a pin into the pile to the depth of *one* page. The pile will represent the diameter of the earth; the pin-prick, the hole of twelve miles depth. Nothing to boast about!

But there might be some curious results. *Would* the temperature be 272 F.? We have before us a list, compiled under the auspices of the Geological Survey of the United States Department of the Interior, of all the wells dug in this country to a greater depth than 300 feet, up to December, 1901, of which the temperature was taken. The average, at 400 feet, is 60 F.; at 1400 feet it is 70 F.; at 2100 feet it is still 70 F.; at 3000 feet it has returned to 60 F. Six wells are not included in estimating this curve. They are of exceptional temperatures, out of relation with the other group, which contains about 200. But the same curve obtains here. The shallowest is 100 feet deep, and its temperature 130 F.; the deepest is 3800 feet, and its temperature 105 F.

This is, however, no argument against the digging of the hole, but in favor of it.

The Essential Stuff

AN eminent toxicologist has been speculating on the amount of "essentially vital matter" which the body contains. A grain of pure hydrocyanic acid will kill; less than that of strychnia; much less of aconitine.

Translating his suggestion out of its technical language, it is this: That of the whole mass of protoplasm of which the active tissues of the body consist, only a minute fraction is primarily and positively "live" stuff, or directly in relation with vital force; all the rest is dependent on that particle—say one ten-millionth of the whole—for its life, is in fact not alive of itself, but only because it surrounds the living nucleus. It is this nucleus which is the self-alive center, and it is this which is killed by such poisons as prussic acid.

The residence of this all-essential stuff is doubtful. It may be the ultimate germ-plasm; some of it may be in the nucleus of every cell; it may be in the medulla, or the floor of the fourth ventricle.

The author further suggests that it may be even semi-gaseous, existing in solution in nuclear protoplasm. We are apt to forget that our bodies can be almost correctly regarded as *liquid*. Protoplasm is really a liquid, held together in the meshes of a network. So far, we are only familiar with structure among the molecules of solids. It may, however, in the body, exist among some of the molecules of liquids, and even of gases. Many of the problems of medicine and physiology will become easier if we may conceive of the essentially living matter of nuclei as gaseous, gases with a structure among the molecules or a proportion of them.

STUDENT

X-Rays and Cancer

A CASE of death from cancer, regarded as due to prolonged exposure to X-rays, is reported from Orange New Jersey. The victim was a worker at the laboratory of a famous electrical experimenter. Physicians will doubtless note, and draw some tentative conclusions respecting the *treatment* of cancer by the same means.

So far as we know, there has been no other published case. But the rays are young, and not at all in general use.

Our Young Folk

A Story of Neglect

IT was at Montauk Point that Katherine Tingley established a great relief work immediately after the Spanish-American war, and it was in this place that she and her helpers gave to thousands food, clothing, medicines and loving care at a time when all these things were sorely needed and when without them many, many lives would have been lost. A friend of boys and girls, who was for a time working in one of the hospitals at Montauk in which the patients were cared for by a few who worked for pay and not for compassion's sake, sends the following true story:

A wise physician was at one time in charge of dozens of sick men in a Cuban hospital, and to the fever patients medicine had to be given every half hour. One day he had to leave to look after other patients elsewhere, and to the nurse in charge he said, "Do not forget this patient in particular. He is very, very ill, yet I feel sure that with proper care he will pull through. But you must mind the medicines and give the dose every half-hour without fail."

This patient was a young man and he was very ill with Cuban fever; but the nurse thought more about his own comfort than about his charge, and he said to himself, "Who will know the difference if I let one half-hour slip? The boy doesn't seem to be any sicker than the rest, and anyway, if he is to live he will get well, of course. I have been here three weeks and I hate the work and I can't bear the food. I think I will take time to hunt up something to eat."

So he went away, and by the time he had come back from his search the half-hour had long passed and his patient was beyond help. In a flash he saw that he had made a fearful mistake. At four o'clock the next morning he telegraphed the physician, "Will Sands is dead. Died at twelve midnight." The return telegram read, "Tell me if you gave him the medicine every half-hour. Great need here. Cannot come for two days." The nurse's heart sank and his head whirled. Where was his comfort? Where could he turn? What could he do but confess the truth, that he had known his duty, but had neglected to do it?

A LOTUS GROUP WORKER

THE wonderful victory of Liao-Yang reminds us that some of the world's greatest victories have been won during the month of September, as, for instance, Sedan, Flodden Field, and Delhi. Lucknow was relieved in September, 1857. It is a fact, too, that nearly every one of the really decisive battles of the world have been won by small armies against armies of much greater size. Victory has often seemed fonder of the small and apparently weak than of the mighty and apparently strong. But then, the minority is more often in the right than the majority, as the world goes, and that is what makes the difference.

Raja Yoga Courtesy

A LITTLE incident which occurred in the Raja Yoga Day School of San Diego, the other day, gives one a glimpse of the high ideas of honor and courtesy held by the Raja Yoga boys. Near the school and adjacent to Unity Hall is one of the playgrounds which, during recreation hours, swarms with happy boys. Recently they have been playing football, but on one day, as it happened, an important meeting of the Order of Foresters was being held in the Hall just at the precious playtime hour.

Now Raja Yoga boys enjoy their games as much as any boys in the world, and of course football isn't ever played exactly in silence. So it was only natural that one of the officers of this Order should ask the boys if they would be willing to forego that day's pleasure, as the game was somewhat disturbing to the meeting. With a prompt,—

"Certainly, sir, with pleasure," the Raja Yogas quietly formed in line and returned to the school.

What was their surprise, the next day, to receive from the members of this Order a resolution of thanks and a present of the finest football the finest boy anywhere could desire.

The Supreme Chief Ranger, Dr. Oronhyatekha, of Toronto, Canada, shortly afterwards visited Lomaland and the Raja Yoga School, doubtless eager to learn something of a system of education which ingrains such high ideals of unselfishness and of true courtesy.

STUDENT

Facts Worth Knowing

THE deepest gold mine in the world is in Australia.

LAST year nearly forty thousand persons visited Shakespeare's birthplace at Stratford on Avon.

IN Dartmoor, England, stands an old oak which was green and flourishing in the days of King John, over eight hundred years ago.

OVER the River Kistna, in India, sweeps the longest single span of telegraph wire in the world. It is over six thousand feet long and is suspended over a deep valley.

LYDDITE, which is merely a form of picric acid, was discovered quite unexpectedly. For more than a century the acid was peaceable and useful as a dye for silk, but when a warehouse, in which it was stored, caught fire, there was a terrible explosion of the picric acid stored there. The result was the discovery of lyddite.

Few countries have so many newspapers, comparatively, as Japan. There are, in that tiny little isle, nearly nine hundred, and scarcely a town is without one. Is there not significance in this fact?

A SONG OF PROPHECY

WRITTEN by A STUDENT

THEY tell us, the Sages,
That here in our Land
An Order of Ages
Shall come and shall stand,
Shall come to each Nation,
Give Freedom to all,
Truth, Light, Liberation
At Brotherhood's call.

CHORUS

Ring out, ye boys and ye girls, now the chorus,
Sing, men and women, our song clear and good.
While flags of our Country, all nations wave o'er us,
Our Lomaland banner proclaims Brotherhood.

Foretold by the Sages,
Behold! Now, The Grail!
New Order of Ages,
We hail Thee! All hail!
Blest age of kind action
Made perfect as art,
Wise age of the children
And childlike in heart.

CHORUS

Age, radiant and Golden,
Enshrined in the heart,
Thy Glory beholden
Shall never depart.
Preserver! Creator!
Destroyer of Self!
Thou World's Liberator!
Humanity's SELF!

CHORUS

THE CHILDREN'S HOUR

The Raja Yoga Question Box

CUBA, the youngest of the nations, was born old in courage and patriotism. A soil is here for the heroes of the future.

1 Who was Cespedes?

ANSWER—Carlos Manuel de Cespedes was a lawyer and a wealthy planter of Bayamo, Cuba. In 1868 he issued a declaration of Cuban independence. With 200 men and few firearms he began the Ten Years War for Cuba's freedom. In a few weeks he had an army of 15,000. In 1869 a Cuban Congress drew up the constitution of a Cuban republic. Cespedes was elected President. Cespedes was shot by Spaniards who were trying to capture him.

2 Who was General Garcia?

ANSWER—Calixto Garcia y Iniguez was born in 1836. Garcia and Cespedes planned the rebellion of 1868. After Gomez retired Garcia was made commander-

in-chief of the Cuban forces. He was twice taken prisoner and sent to Spain. He escaped to New York. He landed in Cuba with a large force. He won several victories over the Spaniards and joined the Americans in the taking of Santiago de Cuba in July 1898. Garcia died in Washington at the end of that year.

3 Who is Emilio Bacardi?

ANSWER—Señor Emilio Bacardi is a distinguished patriot. He has brought many gifts to the service of Cuba. In speech and writing he has taught the Cubans the love of their country and of freedom. He has twice suffered exile and imprisonment at the hands of the Spaniards. He was a determined worker for Cuban liberty. Señor Bacardi has been Mayor of Santiago ever since Cuba gained her freedom. Señor Bacardi had the wisdom to see how Raja Yoga could help his beloved Cuba. He is assisting Katherine Tingley to establish Raja Yoga Schools in Cuba. He is in the highest sense of the word a philanthropist.

La Piedra

PIEDRA basked like a fat animal in the sunlight. At night it lay like a calmly sleeping creature under the moon and stars.

Paquito loved it. He often sat on its warm back, patting and talking to it. In the morning he ran to it saying, "Buenos dias, Piedra mia;" sometimes he left off playing in the *patio* to stand beside it, thoughtful, wondering; at night he could see it from his tiny bed and seldom slept without saying "Buenas noches" to his ancient, silent, patient friend, Piedra. For Piedra, as any little Cubano might have told you, was a stone.

Once, when he seemed to have caught something of the rock's own silence, Paquito stood beside it, patting its rough, sun-heated surface.

"You are older than I, Piedra?"

"By thousands and many thousands of years."

The answer seemed not to have come from the rock but from some deep thought within Paquito himself.

"There have been thousands of boys and girls growing into manhood and womanhood. The mountains have been beneath the seas. The valleys have been mountains. The forests have come and gone and come and gone, while I have waited thus."

Paquito felt very weak and little. Then came the thought of contrast. "I can do much Piedra has not learned. I run and sing and laugh and cry and —"

"When Paquito has learned silence and patience there will be other lessons."

"Patience—I don't know that lesson very well," admitted Paquito. "Silence—well, I'm silent when I sleep. I sleep and wake. Piedra seems only to sleep and sleep."

"Piedra is alive and at work always."

"Alive!" This was too funny. Paquito laughed, but ceased shortly because his attention was fixed by the very strange appearance of the rock. No, Piedra was not an ordinary rock, after all. It was a mass of thousands, millions, of tiny shells and pebbles.

"Shells are the houses of living things," Paquito said, convinced of so much, at least.

He had never seen the ocean. The thought that Piedra must have been, sometime, some-

A CHILD'S THOUGHT OF GOD

by ELIZABETH BARRETT BROWNING

THEY say that God lives very high!
But if you look above the pines
You cannot see our God. And why?

And if you dig down in the mines
You never see him in the gold
Though from him all that's glory shines.

God is so good, he wears a fold
Of heaven and earth across his face—
Like secrets kept, for love, untold.

But still I feel that his embrace
Slides down by thrills through all things made,
Through sight and sound of every place:

As if my tender mother laid
On my shut lids, her kisses' pressure,
Half-waking me at night; and said
"Who kissed you through the dark, dear guesser?"

where, within or near the sea was almost too wonderful. How had it happened? Was the sea once here where stood his old, old home? Had Piedra traveled hither? Had it perhaps once been a soft mass carried by some great force this way, gathering as it came all these little pebbles and pretty shells?

Paquito climbed on La Piedra's back to think out these astonishing questions. His mother called him at last. He was very quiet as he sat on the doorstep with her through the evening hours. When she kissed him good-night, she asked,

"Why so thoughtful, little son?"

"It is Piedra, mother. I never knew it was so old—and *alive*! It is living mother, isn't it?"

"All things live, dear. What did Piedra teach you, today?"

"How to wait," said Paquito shyly, and then he went to bed. W. D.

The Lotus

Essay by a young Lotus Group member

Deep in the earth of the world's desire,
Far from the warmth and the sunlight's power,
Learning its lesson of mud and mire,
Stretches the root of the Lotus flower.

OUR lives are like the lotus. We come up from the mud and the mire, learning the lessons that will help us to blossom into purity. If we try and try again to live the right life, never giving up when temptation comes along, we will grow strong. When we are strong and loving and kind to every thing and every person, we will shine pure like the lotus flower.

The pure and divine could be seen in each and every one of us if we would only wipe off the dust and let it shine out. When we feel disgusted with the selfishness and weakness of our lives, we must make a powerful appeal to the divine within us. It will respond and will shed light on our minds and give courage to our hearts. We must look within for the power to subdue our passions. Self-mastery is the only door to the Kingdom of Heaven or peace.

The best thing to do to help us live an upright life is to be very careful of our thoughts.

Do you know that one little flower is found growing 17,000 feet above sea-level? It is not a very pretty little plant, but think how brave it must be, growing, as it does, upon the very upper slopes of the Himalayan mountains, near the line of perpetual snow.

The Path of Progress

THE very idea of progression takes us in thought to the picture of an ideal to be achieved. And what an ideal of hope, of peace, and of beauty; does Theosophy hold out to us; what a glorious consummation of all humanity's struggles towards the light, in a practical realization of Universal Brotherhood! Just think of it! A time when people will realize "the oneness of the spirit dwelling in their hearts," and *therefore* will act towards one another in a truly human, brotherly manner. That will indeed be the Golden Age! But the sun must rise before it reaches the zenith, and to sit down waiting for the reign of Brotherhood to begin will not bring it; for as truly said, said by our Teacher, "On *human* shoulders rests the responsibility of human progress."

We find that those who do, and *did*, the best work for humanity in the world always do it through holding firmly to some high ideal and striving towards its attainment. The Theosophical Ideal is Universal Brotherhood, based on the inner unity of soul with soul, and all souls with the Over Soul, a Spiritual Brotherhood with our Higher Natures. And Theosophy teaches it is surely written in the Perfect Plan, the *Perfection of the Human Race*, that that ideal should find expression upon all planes of nature. The prayer taught by a great Teacher and Helper of past ages expresses this truth, "Thy kingdom come on *earth*, as it is in heaven." Where did he place heaven? "The kingdom of heaven is *within* you," he said; and being united by virtue of his all-embracing love for humanity with his Father in Heaven, the Supreme Spirit, he partook consciously of this Inner Unity, and therefore taught *practically* of the Inner Life.

It is the same way with all truly Spiritual Teachers, "By their fruits ye shall know them;" their noble and heroic lives are a living example of what we may all become when we walk the path of progress, the path of brotherly, unselfish love that leads towards Conscious Divinity. One infallible sign is always present, they point men *always* to their own great possibilities. "*Know ye not that ye are the Temples of the Living God,*" said one; and the root of that saying, H. P. Blavatsky has pointed out, is to be found in an Egyptian papyrus, thousands of years old, in a Hymn to Amon-Ra. . . . "Thou producer of beings, we adore the Souls which emanate from thee. Thou begettest us, O thou Unknown, and we greet thee in worshipping each God-Soul which descendeth from thee and liveth in us."

H. P. Blavatsky's successor, William Q. Judge, also insisted upon individual responsibility, and laid down his life in defence of the principle of Brotherhood; in fact, if you study the lives and writings of any of the great ones among earth's children, you will never fail to find the golden thread of Universal Brotherhood, of man's responsibility to man, a prominent feature, most strongly insisted upon.

Would those, think you, who are *wise* in the Mysteries of Life so insist upon teaching by precept and example the necessity of Brotherhood, if it were not the foundation stone of the true structure of a perfect life? And being so, are *we* wise to disregard its practice in every-day life in "humdrum" home life? I think there are few of us who would deny the beauties of brotherhood in *theory*, and many of us who are delighted to see *other* people brotherly, and quick to detect when they are not, forgetful of the beam in our own eye. But after all, the practical road to attainment lies in carrying out to the best of our ability the beautiful ideals of brotherhood we so admire in others in our own lives; it was so the Teachers of men reached their high point of Spiritual Progress.

"The heights by great men reached and kept,
Were not attained by sudden flight,
But they, while their companions slept,
Were toiling upward in the night."

That seems to me the secret—steady, constant effort towards the goal

of Perfectibility, a great faith in our *power* as Souls to live dignified, noble, unselfish lives, and fearless to act as if we were divine.

Do we not know that what we ponder on in secret will one day confront us openly, be it good or evil, because we are weaving it as an ideal, a plan, into our thought-life, and one day it will bear fruit in action. Think, then, high thoughts, ye who would walk in the path of Progress, weld high ideals into the innermost fibre of your thought-life, try to feel in your hearts the Mighty Ocean of Life, the expansive force of Universal Brotherhood that binds you to the whole, helping you to realize the meaning of these memorable words, "He who would keep in the Light must make of duty one of his highest ideals," and "hold in his heart an heroic determination for the continuity of right action"—then, indeed, will our feet be set upon the path of progress, and in the words of a well loved poet:

"Standing on what too long we bore
With shoulders bent and downcast eyes,
We may discern—unseen before
A path to higher destinies."

E. I. W.

Service

SERVICE is an essential element in the world's evolution. Throughout all the kingdoms of nature the law of service is demonstrated.

The grass and the trees, the birds and the flowers, the winds and the rain, are continually doing service, not only to man, but to each other and to the whole existing world.

Man alone deludes himself into believing that service is a thing to be avoided, if possible. He forgets that Brotherhood is a fact in Nature. Find the man who can go through the world without rendering service to his fellow men, and you will find a man whom the world could very well do without.

For whom does the architect build his houses? For whom does the farmer till his fields? For whom does the dressmaker design her gowns? For whom does the man with the shovel clear the snow from off our thoroughfares?

The fact that he must exchange his service for a piece of metal or a bit of paper, stamped with a sign that men consider valuable, and the fact that the product of his labor may be gathered together into one corner of the earth, does not make it less true that some one other than himself has been benefited by the service—that he has performed the service, not for himself, but for others of his kind.

Through ignorance man has come to look upon the compensation as the real substance, sacrificing his birthright for a mess of pottage, and making of the earth a place of misery in his mad chase for a paltry bit of gold. In the darkness of his desire he has "builded his house on the sands." Whatever the motive, however selfish the desire, so long as men dwell together, so long must we render service to our fellows.

So long as we live among men we must serve—willingly or unwillingly—consciously, or unconsciously. Why not recognize the fact? Because the task seems not to be of our choosing, or to our liking, shall we rebel? How much does our rebellion lighten the load of humanity, and how much easier does it make the task which we have in hand? This does not indicate a passive indifference to the false systems set up by the rulers of the earth.

How shall we accept, and with what motive shall we perform the duties which come to us? Before we can help humanity to answer the question we must answer it ourselves. Shall we go on like "dumb driven cattle?" Shall we exchange our service for the compensation that the world has to offer, merely that we may "eat, drink and be merry?"

What then shall be our motive for doing service in the world?—for it is the motive with which the service of the world is rendered that will either lift the race into a new humanity, or darken the way of its progress towards the light.

In the teachings of Theosophy this question is fully answered. If you doubt the truth of the answers you find, try, at least, to demonstrate them. No one need take the teaching blindly—test it, and in your own life discover the truth.

For all who earnestly ask how best to serve humanity there is an answer, and for those who hear the answer and follow it there is a world waiting for such service as they can render.

"To live to benefit mankind is the first step."

M. H. R.

SELECTIONS

WHAT we have we prize not to the worth
 Whiles we enjoy it, but being lack'd and lost.
 Why, then we rack the value, then we find
 The virtue that possession would not show us
 Whiles it was ours.

—Shakespeare

Back of the canvas that throbs, the painter is hinted and hidden;
 Into the statue that breathes, the soul of the sculptor is hidden;
 Under the joy that is felt lie the infinite issues of feeling.
 Crowning the glory revealed is the glory that crowns the revealing.

—Richard Realf

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question What guarantee is there that Theosophy contains the truth more than numerous other beliefs, held by people who are equally certain?

Answer Truth is its own guarantee, and the decision as to what is or what is not truth must be rendered by each one individually before the tribunal of his own conscience. It is something which can never be recognized by the unaided human reason. Only the awakened intuition is capable of a clear vision.

What guarantee could there possibly be given which would satisfy every one in a world made up of people at every different stage of development, and possessing infinitely differing grades of perception? And suppose we should agree to defer to the opinion of those recognized as the best thinkers living, how shall we know that the world's verdict is correct in placing them upon this pedestal? For it is certain these thinkers would not agree. And as there can be no differences about the truth, the fact that such difference existed would show some defect in the eyes of the observers.

None better than Theosophists recognize the fallibility of the human mind, and so, though believing that Theosophy is an expression of truth, they ask no one else to believe it, knowing well that that is a matter for each to decide for himself. The Universal Brotherhood, which is an organization trying to work out and live the truths of Theosophy, has no creeds. One of the articles of its constitution exacts that each shall accord to all others the same liberty of thought and opinion that he asks for himself. For no real Theosophist is stupid enough to say that *he* manifests the truth. He says Theosophy contains it, and he is trying to so live as to find it.

Each one only knows so much of the truth as he *lives*. And when one has discovered a truth in this way and then compares it with the recorded discovery of another who has made it in advance of him, he perceives that no record could be made which would impart it to another; that statements of truth only reveal it to those who are able to know it already. They help to show others how to make the discovery for themselves; and serve as sign-posts for those who come after, showing that the road has been trodden before; but reveal in a real sense, they cannot.

A recognition of this makes one less and less sure that he understands the beginning and end of anything. A sincere Theosophist is not dogmatic. He is more likely to say, "Thus it seems to me today, tomorrow I may see further."

But notwithstanding all this, in another way Theosophists are the most settled and sure people living, and it is probably through an observation of this fact, that some one has been led to put the above question.

What is it they are so sure about? They are unshakeable in their conviction that the Universal Brotherhood Organization is going to be the means of purifying the whole earth; of straightening out and liberating the almost hopelessly tangled thread of destiny; of leading the vast army of the human race forward and upward and of reestablishing on this suffering, restless earth, true peace and harmony.

This is a tremendous claim, and yet a Theosophist is as firmly fixed in this as if his feet were planted upon a rock, as indeed they are. They are planted upon the foundation-stone of existence—the *fact* of Brotherhood. They look upon the world, not theoretically, but practically as an organic whole. They are not fanatics, but ordinary common-sense people—only lifted by an enormous faith in themselves and in their brothers—banded together by a determination to serve the race.

To those who are on the outside for a little while and looking on, this

may sound praiseworthy, but the question will naturally be added—Have they the power to accomplish that which they have willed? How are they better equipped than others who have longed to serve the race?

Here again is something each one must answer for himself. But this can be said—Whatever may be true of faulty individuals, as a body, as an organization, they have undertaken to face themselves and have entered with all seriousness into a holy war against the evil within their own natures. They have studied, more or less, the illuminating philosophy re-given to the world in this century under the name of Theosophy, and have therefore gained a large conception of brotherhood, which has put them upon a track which is, in this age, at least, new. And they are drawn up in battle against every form of evil under a General, who understands the situation, the needs of the hour, and who knows how to lead.

To those who, in this transition time, are confused by the many colored torches which are raised to guide the stumbling wanderers through the maze of ignorance and corruption, it can only be said, "By their fruits ye shall know them."

G. V. P.

Answer 2 To the merely curious questioners or superficial observers there may seem to be no such guarantee. To them Theosophy is one more *ism* added to the list of theories and beliefs which they have never fairly tested.

But to the earnest inquirer who is concerned with the deeper issues of life, and whose mind is hospitable to highest Truth the study of Theosophy soon brings profound conviction that the philosophy which so practically and pertinently relates all the acts and facts of life to great truths and principles that strike deep into the nature and satisfy the heart, must be more a comprehensive statement of truth than any known heretofore.

The test of the Theosophical principles is in the application of them to daily life. All through the ages the wise have said, "Man, know thyself;" and the inquirer who conscientiously endeavors to model his life on the principles of Theosophy finds growing up within him a knowledge of his own nature and of his close relation to all else that lives and a sense of greater responsibility. The basic truth of Brotherhood once grasped, the intuition gradually awakens, and to the one who perseveres thus far comes an assurance and certainty that cannot be shaken. Theosophy has for him stood its test of the touchstone that exists in every nature, will man only look deep enough within. The awakened intuition recognizes in the Theosophical teachings the fountain of wisdom undefiled, from which other philosophies and religions may have drunk in order to live at all.

In addition to this individual test, that proves the metal of Theosophy there exists now in the world an outward and visible proof that Theosophy contains much that has at least been obscured in other religions and beliefs, for its principles have been able to inspire a large number of people to lead a life that is based on the pure principles of Brotherhood.

The Headquarters of the Universal Brotherhood Organization at Point Loma, Cal., is a revelation to the intelligent observer, who, the more thoroughly he investigates the more wonderfully he finds the united life and work of these believers in Theosophy to fulfil ideal conditions and to suggest that here is expressed some greater and deeper knowledge of the possibilities of human life and endeavor than have ever been formulated.

M. M. T.

Theosophy

THEOSOPHY is that ocean of knowledge which spreads from shore to shore of the evolution of sentient beings; unfathomable in its deepest parts, it gives the greatest minds their fullest scope, yet, shallow enough at its shores, it will not overwhelm the understanding of a child.

It is not a belief or dogma formulated or invented by man, but it is a knowledge of the laws which govern the evolution of the physical, moral and intellectual [all the outer and inner] constituents of nature and man. The religion of the day is but a series of dogmas, man-made, and with no scientific foundation for promulgated ethics; while our science as yet ignores the unseen, and failing to admit the existence of a complete set of inner faculties of perception in man, it is cut off from the immense and real field of experience which lies within the visible and tangible worlds. But Theosophy knows that the whole is constituted of the visible and the invisible, and perceiving things and objects to be but transitory, it grasps the facts of nature, both without and within. It is therefore complete in itself and sees no unsolvable mystery anywhere; it throws the word coincidence out of its vocabulary and hails the reign of law in everything and every circumstance.—W. Q. Archeology and the Bible

If it were asked, What is a Theosophist's view of the Bible? the answer would be that, considering the very wide range of Theosophy and the immense field of study open to Theosophists, that view will be much broader than any one of the various narrow opinions currently held about the Bible. Theosophy would not support the old orthodox ideas of verbal inspiration and literal interpretation. Nor would it agree with the equally narrow and equally extreme views of what is known as Higher Criticism. We cannot interpret a great ancient Scripture in the light either of a narrow theology or a scientific fad. It is necessary to go much deeper, to weigh together many more facts, and to throw a variety of different sidelights on the question.

We find Professor Sayce strongly supporting archeological evidence as

against the narrow school of philological faddists who are responsible for the higher criticism extremes. He shows that these critics, not satisfied with illuminating the text of the Bible from a literary and linguistic point of view, have gone too far, overstepped their legitimate bounds, and attempted to interpret *history* by philological principles. The result has been that, instead of clarifying our ideas of the Bible by merely removing old delusions, they have created a new set of delusions. It is true

A Record of Ancient Wisdom-Religion

we can no longer claim for Hebrew Scripture and religious tradition that exclusive and preeminent character which the upholders of sectarian religion would fain claim for it; but there is no reason why we should rush to the opposite extreme and call the Bible a collection of myths and fables. In so far as higher criticism can help in showing the Hebrew Scriptures to be a record of some of the teachings of the ancient Wisdom-Religion, it will have exalted the value of those Scriptures; and broad-minded people will be thankful to have ground for believing that the Truths revealed to one race and time do not contradict those revealed to other races and times, but form one consistent whole. To quote from Professor Sayce (*Monument Facts and Higher Critical Fancies*):

For purposes of history, philology can be only accidentally of service in so far as it throws light on the meaning of a literary record, or assists in the decipherment of an ancient inscription. It is the linguistic sense of the record, and not the history it embodies or the historical facts to be drawn from it, with which alone philology is properly concerned.

The subjective impressions of a modern European in regard to ancient Oriental history are not likely to be of value. It is quite certain that an ancient Oriental author would not have written as we should write, or as we should have expected him to write; and consequently the very fact that an ancient Oriental document does not conform to our modern canons of criticism is an argument in favor of its genuineness.

Archeological Not Philological Evidence

It is the archeological evidence of Egyptology and Assyriology, and not the philological evidence which alone can be applied to the settlement of historical disputes.

He shows that the delusion that there was no written literature before the time of the Hebrew kings, and that consequently the Mosaic record is only a record of traditions and superstitions, is contradicted by archeological discoveries of much older written literature. Moses could have written, and probably did write down, a digest of old-established and fully formulated religious and historical data. The code of Khammurabi and papyri and inscriptions from the Nile and Euphrates support this.

Again, "evolution" misapplied to the study of human mental development, has led to absurd theories. A hard-and-fast system regulating the order of succession in which various ideas are supposed to dawn upon humanity has led critics to alter the dates to suit it. But the ancient Oriental mind did not, necessarily—in fact could not possibly—follow the same laws as the modern Occidental, and we cannot assign the date of a writing by the ideas it contains. The Professor concludes:

The Master-Key to These Problems

We have learned that the Old-Testament Scriptures are as truly a literature as the classical productions of Greece or Rome; that they were written by men, not by machines, and that they reflect the individual qualities of those who wrote them, and the coloring of the various ages at which they were composed. Nevertheless, between the recognition of the human element in the old Testament and the "critical" contention that the Hebrew Scriptures are filled with myths and historical blunders, pious frauds and antedated documents, the distance is great.

And let us conclude with the remark that, while philologists and antiquarians and theologians and scientists are each worrying his own little thread of truth, the writings of H. P. Blavatsky show that she saw the whole fabric and how all these threads were interwoven. The Wisdom-Religion of Theosophy is the Master-Key to all these problems.

H. T. EDGE

Earthquakes at Manila

IN the recently completed census of the Philippine Islands is a well written report on the seismology of the archipelago, and from it may be seen that during the past eighteen years Manila has averaged one earthquake per month. It must not be concluded that this city leads the world in this matter, for there are few mountainous regions that would not show the same or greater average if reliable records were

available. The catalogues of earthquakes are very voluminous publications, and the one published for the Pacific Coast of the United States is quite an imposing book, and yet we are not inclined to believe the coastal region a dangerous place to live. Probably the world does not average more or less of these disturbances than at former times, but we have been paying more attention to the subject: we have finer instruments for recording the shocks, and our architecture is of a kind which invites disaster. The fact is that our earth is in constant motion, and it is not the tottering of old age either, but a simple adjusting of forces which have ever existed.

Missionaries in China

TURNING over an old number of a paper called *The Signs of the Times*, we notice an article on "China, the Missionary Field of the World," and are surprised to find what an intelligent appreciation of facts is combined with what unreasonable inferences therefrom.

China, we are told, is *the* missionary field of the world; (1) because of its teeming millions, (2) because of its people's strength of character and general worth, (3) because of her undeveloped resources. "Their muscular power and endurance of toil and hardship are most remarkable, and they possess almost a stoical indifference to physical suffering. They are bright, skillful and active, and have wonderful mental ability: a nation civilized, though heathen, where scholarship is made the test of political preferment—where the scholar is the aristocrat, although he may not have a 'cash' in his pocket or know where his next dish of rice is to come from; men whose convictions of duty and right are and have been so strong for centuries as to have become almost petrifications; a people whose ability to rule is second only to their love of ordering other people about.

"Their perceptions are rapid; they are quick to learn trades, and can easily become adepts in anything, from the digging in the mud after lotus roots to ably discharging the duties of the chief official position in the Celestial Empire itself.

"China is well supplied with material in the rough, like the immense amount of mineral in her hills—enough coal above, it is said, to supply the world for twenty centuries."

An admirable tribute to the excellent qualities of the people and the resources of the country. But what inference is drawn? The little band of Christian workers "must be backed by thousands of others before its course is eventually turned in the right direction—away from their idols and superstition toward Christ."

In fact the idea is that such a good people could, by adopting an alien religion, become even better. Their own religions, ideals and customs are considered as weighing in the scale against their virtues. But there is at least as much argument in favor of the Chinese sending missionaries to us, and perhaps even more.

A Russian "Beauty Farm"

ACCORDING to an account, a wealthy Russian named Reshetnikoff, runs a "beauty farm," which is an estate on which he has gathered together fine specimens of the human race of both sexes, and mated them, with the object of breeding a superior type of humanity. It is said that since the establishment of the farm forty marriages have taken place under his supervision, and that the children are of superior kind, both mentally and physically.

It is, however, very justly remarked that Mr. Reshetnikoff is doomed to failure on account of his inability to control human inclination and choice in the selection of partners. How will he persuade his young stage-hero to marry the heroine, or prevent the heroine from falling in love with the villain?

To this it might be added that, even if men and women can be so persuaded, there is "Nature" to reckon with. Frederic William of Prussia could not breed an army of giants; sterility, or a reversion of type in the offspring, checkmated him.

The fact simply is that "Nature" or "Providence"—that is, the Intelligences which determine the destinies of the human race—has larger plans than Mr. Reshetnikoff; it may or may not happen to have a use for the type of organism he seeks to develop; but it is more than probable that his ideas of perfection are not those of the Great Architect of the Universe. We recommend Mr. Reshetnikoff to turn his attention to other pursuits. His ideas are excellent but are they commendable? E.

The Holy Synod's Prayer

THE Russian Holy Synod advises that more ardent prayers than ever should be offered up for the victory of "the worshippers of Christ over a cruel enemy full of guile."

Here are a few sentences from the Synod's official prayer. As emanating from the Holy Synod, it could hardly fail, one would have thought, to attract special consideration in the Right Quarter.

" . . . Give the Christ-loving army victory, and enable it to subdue the enemy. . . . O Defender of the Orthodox Faith (it would appear that God is a member of the Greek Church) send down thine arrows and confound the enemy. Strike them as the lightning and deliver them into the hands of thy faithful troops."

The Almighty, with a bow and arrows, helping Kuropatkin with his three hundred guns, makes a remarkable picture. But he is not only requested to "shoot arrows," to "send his lightning," to "send his angel" of victory, and to "make his invisible finger defend his servants," but also to stretch forth his whole hand "and touch the hearts of the enemy (not—this time—to kill them, but) so that they shall make supplication unto thee, the God of Peace," presumably supplication for their own slaughter and defeat. The prayer would have been inartistic and incomplete without that last touch. As it stands, it is flawless. But something has gone wrong somewhere, for since then the field of Mukden has been fought. The arrows, finger, hand, lightning, and Angel, did not appear.

What can be "heathen" Asia's view of Christianity? Is it not time that Christians issued a protest?

STUDENT

Growing of Rice in Trinidad

AT this time of the year in Trinidad all the East Indians who can possibly do so, flock to the rice fields, which are owned by Government or individuals and rented out.

At one part of the island, by going to the top of a hill, one can look down upon an interesting and unique sight.

The lagoons, covering about one hundred acres, surrounded by dense forest, are divided into small, square plots of one-half or one-quarter acre each; these are separated from each other by banks of grass and weeds taken from the plots. The more advanced plots are already a delicate green color, the shoots of the young rice plants appearing above the water; whilst the others are occupied by people knee deep in water setting out the young plants which had been grown in nurseries on higher land elsewhere. In four to five months the crop is reaped and harvested, and a man has sufficient rice to keep himself and his family for the rest of the year; and possibly have some to sell as well.

Getting out the crop now presents a difficult problem. It is usually "headed" to the nearest road, and then slung in bags pannier-wise across the backs of donkeys, or carried in carts to the town.

B. G.

THIS week's cover-page of the NEW CENTURY PATH contains a fine view of the Castle of Rushen, Castletown, Isle of Man.

This massive and venerable pile is associated in the history of the Isle of Man as the stronghold and palace of its kings, the seat of the legislature and the general prison. A former castle stood here in the Tenth century, but a part of the present building probably dates from earlier than 1313.

The castle walls vary in thickness from 7 to 12 feet; the embattled wall is 25 feet high and 9 feet thick. The flagstaff tower is 80 feet high, the others 70 feet. The south tower contains a clock given by Queen Elizabeth in 1597; its bell was presented by James Earl of Derby in 1729. In the chapel is the famous "Wishing Stone," and current local opinion is quite positive that those who stand upon it and wish, will see their desires fulfilled.

The Raja Yoga Messenger

VERY interesting publication, unsectarian, will be issued on Christmas Day, 1904, by some of the children of the Raja Yoga School at Point Loma. This publication is the *Raja Yoga Messenger*, an illustrated monthly for young folk. This effort of the Raja Yoga children at Point Loma promises to be a real benediction to the home and to little folk. The oldest of the editorial staff of the *Raja Yoga Messenger* is only twelve years of age. We wish this new publication a full share of the great success enjoyed by the NEW CENTURY PATH.

Some Views on XXth Century Problems

A Heretic's Book

THE Abbé Loisy's book—which earned him last year the condemnation of the Vatican, has now been translated into English, and those who wish to do so can ascertain for themselves, without sending to Paris, why that condemnation was visited upon the author.

It elaborates two "heretical" conclusions. The first is that the essentials of Christian dogma were imported from Greek "paganism." These essentials are (according to the Abbé) the Trinity and the Incarnation. If Christianity had not imported these tenets from Greek philosophy, it would have remained simply Judaism, the story of a purely Jewish Messiah, and have thus been entirely unacceptable to the western world. So Paul, Origen, the Gnostic and others took it in hand, says the Abbé. They made the Jewish Messiah, a merely racial redeemer, into an incarnation of the Greek Logos or Word, Verbum. This necessitated the ascription to Jesus of the dual nature, the essentially divine, and the assumed or adventitious human.

This again made the pagan Trinity necessary. For there had to be the Father; the emitted Word or Son; and the Holy Ghost, the Power passing between, the link between the two. But this Trinity, which in its pagan form was a mere philosophical triangle, thus became a living religious tenet.

Other of the dogmas of the Church came later yet, according to the Abbé. They are all, evolutions of *germs* contained in the Gospels, evolutions coming about in the course of Church history. "The reality" (he explained to a representative of *Le Temps*) "and the notion of a hierarchy, of infallibility, of dogma itself, and even of the sacraments, are an accretion of the Christian community of which the Gospel gives only the germ. The historian would commit himself to the stupidest of anachronisms were he to discourse of the infallibility of St. Peter, who certainly never had a thought of enunciating any dogma whatever, and who did not regard his ministry as a pontificate superior to that of Caiaphas."

This is the Abbé's final summing up:

The Gospels are less a detailed history than an expression of the Christian conscience in such terms as seemed to the evangelists most clearly in harmony with the facts. They are devotional literature. Their authors were not afraid to treat the material that had come down to them with a freedom that makes all the artifices of a certain sort of interpretation quite futile in their efforts to conceal it. The last of the four even dared to produce a new framework for the Gospel narrative, and a new form for the Gospel. The critical historian, in his interpretation of texts and data, must rely upon the texts themselves, and not upon the Christian dogma which has evolved from them.

Dogmas Necessarily Self-Contradictory

And the other sin of the Abbé's was in asserting that it is of the very essence of dogma to state and maintain at once two opposite and contradictory truths. The Trinity is a unit and a triad. Christ was divine and human; perfect yet temptable; limited and unlimited. Man's salvation is entirely with God, and also entirely with himself; God predestines yet man is free. Man is only responsible to God; yet also to the Church.

And so on. These contradictions the Abbé regards as quite necessary and proper. They have their solution and their reconciliation in the infinity of God. They are as near to truth, when taken in their pairs, as mere mind can get. Heresy only arises when men insist upon one extreme only and forget the other: as when they assert as the *whole* truth either that there are Three Persons or only One.

To the common man it will appear that to state to the mind two contradictory propositions as both true, and to assure it that by its very nature it can never hope to understand them, yet must accept them—is to insult and paralyze it. Is it any wonder that those who refuse the paralysis turn to materialism or—Theosophy? Darkness or Light?

It is interesting to note that other Christian thinkers and students of history are moving towards the position taken up by Abbé Loisy. For example, Professor Mahaffy, Governor of the University of Dublin, in delivering the August convocation sermon to the University of Chicago graduating class, said:

Christianity is not a new thing, but it is the gathering of all the great truths,

and the weaving of them into the glorious texture of Christian faith.

Then, particularizing, he said:

The doctrines of the trinity and the incarnation were imported from primitive peoples. The trinity comes from the documents of the Egyptians and Indians (let us also add from the Chaldeans, Assyrians, and others) "and the incarnation from Buddhism," (and Hindooism, Magism, and elsewhere.) Moses, said the Professor, "used old documents of the Egyptians and Mesopotamians, and did not write from direct observation." STUDENT

Baby Pugilist

OUR leading pugilists will doubtless be flattered to learn that they have their imitators and students even among the infants of our cities. A little Los Angeles boy of eight has just been charged before a coroner with causing the death of another of the same age by a blow over the heart. The little murderer had been much excited by what he had * * * read in the newspapers of the deadly effectiveness of the great "solar-plexus blow." He had carefully acquired it, and used it in boyish fights. The dexterity he thus gained usually made him victor, and on this occasion he employed it to "plant one" over his comrade's heart. (We must apologize if the technique of our description be a little faulty. We own to reading but carelessly the columns of prize-fight descriptions that disgrace the daily papers.)

Somebody was writing recently on the evolution of games, chess, baseball, etc. He regarded the game-playing instinct as an echo of the fighting instinct, the instinct to get victory through the death of an opponent, to chase him, hurl missiles at him, and skilfully elude him. This instinct we now gratify harmlessly by games.

We gratify it in another way, more exciting than games, but even safer—for ourselves. We pay other men to shed real blood for us, while we look on comfortably and do the shouting. And if we cannot do that for respectability's sake, we read all about it, round by round. But we never bargained that our infant children should read all about it, too, and then *practice* the cruel business.

They tried their first bull-fight in Hungary the other day, at Buda Pesth. But the bulls were more civilized than the spectators or our prize-fighters, for they could not be made to engage! OBSERVER

Light from the East

THE editor of the Tokyo *Shimbum*, referring to the wounded Russian sailors now under treatment in the Tokyo hospital, says:

They are true sailors who have done their duty faithfully. Why should we not honor them and treat them kindly? Revenge is a sin. It is barbarous. *We are living under a new law of universal brotherhood.*

And the Tokyo *Journal*, while commending the government for its kindness to the prisoners, adds:

But this rare opportunity of doing good should not be left entirely in the hands of the authorities. It is also our duty to be sympathetic friends of the captives, and make them feel at home in a strange land.

We have ventured to italicize a sentence in the above.

Prison Regime

WE have still a great deal to learn about the treatment of criminals. But all the experiments of many years past tend to show that the degradation of prisoners is a mistake, and so is the arousing of their resentment. In a word, they should *respect* the treatment dealt out to them. The ideal treatment is not yet understood; it requires more wisdom and more humanity than civilization yet possesses. But we can try; and we can remember that in nearly every case, deep in his nature the worst criminal has some sense of what is justly due to him. If we could find and uncover that, we should often realize that to go beyond it, to outrage it, may do only harm.

Mr. Collins, New York State Superintendent of Prisons, some time ago abolished the lock-step and cropped head. The prison stripes on the first-term prisoners were also removed and a dark-grey semi-military suit substituted. Since then punishments for prison offenses have decreased by more than 4 per cent. The Thunder-Bird

THE thunder-bird figures largely in the Indian legends and totems of the Northwest. It is futile to give the Indian name, because the English language has no means of adequately representing many of the Indian "clicks" and sounds with which the dialects are largely interspersed.

The Nimkish legend of the wonderful bird, which even now is believed by some to be the maker of the thunder, is interesting. In a previous issue was given an illustration of the method employed by the Indians in the construction of their dwellings. The thunder-bird is intimately connected with this scheme of architecture, since it made such a framework possible in the beginning. The roof-beam is made of a single giant tree, such as are to be found throughout British Columbia. This enormous spar is hoisted to rest on two uprights without any fastenings, a slight concavity in the ends of the uprights being considered sufficient to hold it in place, owing to its enormous weight.

In the huge wooden house erected upon the solid framework so built are many small dwellings, with a central, common space, used for every kind of purpose. The whole resembles somewhat the 'tween-decks of a huge ship with cabins at each side, furnished with bunks where used as sleeping-rooms.

The story relating to this form of architecture runs that, in the days before the white man came, a brave determined to found a tribe and build a dwelling. He cut down the trees he needed—the finest timber he could find—and that is as far as he went. For when all was ready he realized that he could not alone lift the great roof-beam to its place. And while he was sorrowing the thunder-bird came and spoke to him, afterwards lifting the beam into position. Then, taking the form of a man, the thunder-bird was persuaded to remain in the human state, as a guide and helper of the tribe. Such, roughly, is the story of the thunder-bird and its prominence as a totem. At the present day thunder-birds are scarce for building purposes, and a capstan is used for hoisting the centre-beam into place. This should give sun-mythologists an opportunity to see in the thunder-bird's visit the advent of a ship, with the noise of its guns and the use of the capstan.

TENAS TYEE.

Excavations in Crete

AT the recent meeting of the British Association, Dr. Arthur T. Evans, director of the excavations at Knossos, furnished some details of the results. On a hill a mile north of the palace a cemetery was discovered and 100 tombs were opened. The relics found are of later date than the palace but reveal the same artistic tradition. They include bronze implements and vessels, swords, jewelry and gems, and vases with magnificent decorative designs. Skeletons were found, and some of the skulls sent to England. About two miles further north they discovered a sepulchral monument, most of whose contents had been rifled; but a gold hairpin, parts of two silver vases and a large bronze mirror remained to attest the former wealth of the buried treasures.

Hindu Measures Used by Mound-Builders

IN Lord Avebury's great work on *Prehistoric Times* is the following passage from his account of North American antiquities. Speaking of the mounds, the writer says:

They vary much in size; five or six of them, however, are exact squares, each side measuring one thousand and eighty feet—a coincidence which could not possibly be accidental, and which must possess some significance. The circles, also, in spite of their great size, are so nearly round that the American archeologists consider themselves justified in concluding that the mound-builders must have had some standard of measurement and some means of determining angles.

Now with regard to the 1080 feet: This sum, multiplied by 4 gives 4320. Readers of Theosophical literature will detect still another co-

incidence here, those figures, with additional ciphers, being associated with Manvantaric cycles. But it is agreed that the English foot, as a standard of measurement, is derived from Egypt. Egypt, we have been told by Katherine Tingley, received its civilization from America.

The testimony of those "five or six mounds" links together ancient Egypt, ancient America and ancient India. For the number 4320 with ciphers has hitherto, so far as we know, been associated only with the time computations of the last-named country.

For those who realize how much the knowledge of events, both past and future, depends upon knowledge of cyclic periods, these coincidences will be full of meaning. The ancient Americans kept their records in mounds which have remained to this day as witnesses to the unity of humanity.

W. JAMESON

A Prehistoric Welsh Fortress

THE best preserved ancient stone fortress in Great Britain is probably the one called Tre'r Ceiri, which is situated on one of the peaks of the Carnarvonshire mountains in Wales. It occupies an area of about a fifth of a mile by a hundred yards. In the northeast corner is the cairn, or look-out post, from which the commander could reconnoiter. The wall of the stronghold is of uncemented stone, fifteen or sixteen feet high and in many places of equal thickness. On one side is a *banquette* running along the wall, on which sentries could pace and look over; and in this place there are second and third walls outside, to check onsets. There are three entrances, protected, on scientific principles of fortification, against attack. The ruins of many houses are within, some with walls four feet high still remaining. The antiquity of these ruins goes back to prehistoric time, and nothing has been found which gives a clue to their origin.

The Stone Remains of Buddhism in Ceylon

FEW religious memorials have been built on so stupendous a scale as those of Ceylon, but it is only comparatively recently that the modern world has made acquaintance with them.

Half a century ago, the British government began to unearth the ancient capital of the island, the vast city of Anuradhapura. For nearly a thousand years it had slept buried in the dense jungle. But throughout an equal period it had been the scene of a vivid social and religious life. An archeological commission has now been at work for many years clearing the remains of this ancient city, marking its boundaries, and deciphering the Buddhist inscriptions of the mighty dagobas which the city contains. So immense are some of them that it has been estimated that with the aid of five hundred men, and all modern engineering appliances, the larger of these structures would require at least seven years for its construction. One of them originally stood 400 feet high, and was erected on a platform covering no less than eight acres. This one was completed about twenty centuries ago. Others are from one to two centuries older yet. They are bell-shaped, brick-built, faced with plaster, and surmounted by a pedestal and spire.

Sons of emperors do not usually become missionaries, but one of the sons of the Buddhist Emperor Asoka did so. He went to Ceylon as his field of propaganda, and preached on a hill a few miles from Anuradhapura. His converts made the ascent of that hill as easy as they could. They put 1800 steps of granite, running to the top, and their noble stairway was fifteen feet wide. This, too, has now been brought to view.

Other Buddhist remains are the rock temples. These, as their name implies, are chambers cut out of solid rock, and containing colossal figures of the teacher in whose honor they were constructed. They usually attested their faith by specimens of their architecture made to last almost forever, and whose duplication would often tax modern resources to their utmost limit. How they did it generally remains their own secret. No instance comes to mind in which an inscription records the method by which the titanic structure on which it was cut was effected.

FAMOUS FOX TEMPLE NEAR KYOTO, JAPAN

The Trend of Twentieth Century Science

Ether, Matter, Force—A Scientific Trinity

WE have already referred to the invincible tendency of modern science—and indeed of ancient—to postulate little round bodies as the basis of the universe. The tendency has now invaded the ether; it too is thus constituted. According to the last view, propounded by Dr. Larmor and Professor Reynolds, the ether consists of closely packed atoms, each the *seven hundred thousand millionth* of a wave-length of violet light in diameter. These inconceivable little beings *nearly* touch each other—but not quite. There is a little space between, equal to a *four hundred thousand millionth* of their diameters. That is their position when quiet, as they like to be. But from entirely unknown reasons—shall we suggest the *Verbum* of the Greeks, or the *Sound* of the Hindus?—minute whirlpools or vortices occur through the mass, so that the members of the little groups are strained round to the “right” or “left,” crammed corkscrew-wise. When a number of such points of twisted discomfort occur together, they affect our senses, and we call it *matter*.

When one group suddenly succeeds in springing back to its original state of ease and peace, which it can only do by passing on the strain to the next group, and when the strain is thus handed on swiftly from group to group, like a passing whirlwind—that is a current of electricity or a ray of light. So matter is thus fixed electricity or fixed light.

But if a group whose strain is to the “right” meets one whose strain is to the “left,” they neutralize each others’ strains. Matter, or electricity (as the case may be) *goes out of being*.

Thus science is now facing the possibility that its hitherto axioms of the Conservation of Energy and the Eternity of Matter, *may not be accurate!* Might a Theosophist be permitted to suggest that *will*, cosmic will, may be the cause of the primary strains; and that the will of man, feeble as it is, even now both causes and releases them? STUDENT

The Variations of Glaciers

FOR the past nine years Prof. Harry Fielding Reid has been collecting data relating to the advance or retreat of Alpine glaciers. His last annual report, published by the University of Chicago, states that although nine years is “a time too short for very general results, still we can say that the thirty-five years’ period which Brückner found in the variations of the Alpine glaciers, applies also to glaciers in other parts of the world. It is also probable that there are longer climatic periods than this whose course is very complicated; moreover, the individual character of the variations of special glaciers is, without doubt, dependent upon the topography of their basins. . . . But we can say, in general, that the dominating tendency of glaciers at this time is to retreat.”

The observations of twenty-three glaciers showed that nineteen of them were decreasing in length, and it would seem that this preponderance would be sufficient to establish the general fact, namely, that there is a cycle of climatic changes which is partially recognized from these data. The rapidly accumulating evidence of the existence of cyclic law will soon put the opponents of this truth out of date. F. P.

Variations in Solar Radiation

A CURRENT astronomical journal has an article by Professor Langley, in which he gives good reason for holding that there was a fall in solar radiation at the end of March of last year. A series of observations on this point were made at the Smithsonian Observatory from October, 1902, to March, 1904. After allowing for atmospheric variations, it appeared that solar radiation fell off 10 per cent, beginning late in March, 1903. The most obvious result was a fall of temperature, which, noted at eighty-nine stations in the North Temperate Zone, was on the average two degrees C. But there must have been many other effects which we have not yet begun to suspect.

The radiation is regarded as consisting of negatively charged units, taking forty-six hours to reach the earth. Coming at all times, they come in greatest quantity during the passage of sun spots across the solar meridian; and then cause terrestrial magnetic storms. We are very dependent on the inexplicable moods of his solar majesty. STUDENT

Theory and Fact

A VERY interesting compilation could be made of stories showing how difficult it has ever been for truth to establish itself against human theories. One might cite the firm conviction that a steamer could never cross the ocean because she could not carry enough coal, or that a locomotive could not move because the pressure on the cylinder-head would exactly equal that on the wheels. Not long ago it was decided by an academy of science that a cat cannot turn over in the air and land on its feet, and that a baseball pitcher cannot throw a curve.

But the steamers do cross the ocean; the locomotives do run; the cat does turn over, and the curves continue to worry the batters, and the academies of science are the authorities as to how it happens. Really, the skirmish between theory and fact sometimes becomes ridiculous, as for example the fact that the axis of the earth is not fixed in its position but has a regular cyclic motion. This was denied by astronomers “owing to the difficulty of accounting for it theoretically.” Mr. Chandler, who argued for the positive side of the question, “deliberately put aside all teachings of *theory*” because, as he said, “it seemed high time that the *facts* should be examined by a purely inductive process.” Prof. Newcomb, who had the negative side of the argument, “soon found the defect in the *theory*, and is now as cordially in favor of the *results given by observation* as he was originally against it.” We hope this bleak statement does not do full justice to Prof. Newcomb, whose reputation for honesty is not questioned. For the illustration of the point, the italics are ours, but the quotations are from no less an authority than the Smithsonian Report for 1892, pages 716-17. F. G.

The Wandering Poles

PROFESSOR MILNE some time ago made the suggestion that the constant small changes in the earth’s axis, for which there had hitherto been no explanation, may be due to changes in the earth’s crust. It is probable that great earthquakes and earth-tremors are due to crust movements, continents and ocean-beds sinking and rising. The earth’s mass is thus changing its center of gravity and consequently its axis.

Measurements have since corroborated this theory of the relation between axial changes and earthquakes.

As several ancient legends and traditions assert the rapid submersion of vast portions of the great continents of the past, Lemuria and Atlantis—and also great alterations in the inclinations of the earth’s axis, is it impossible that both assertions may turn out to be true? In the light of recent investigation, does not the *fit* of the two stories suggest the truth of both? STUDENT

Is There An Intra-Mercurial Planet?

ASTRONOMERS hope that next year’s eclipse of the sun will answer a long doubtful question: Is there a planet whose orbit is within that of Mercury? It is Mercury himself who has raised the suspicion. The perihelion of his orbit—that part of it which is nearest to the sun—moves forward forty minutes in a century more than theory requires. Is a planet nearer to the sun than Mercury the cause of this?

The eclipse is booked for August 30th, of next year. The shadow-path begins at sunrise south of Hudson’s Bay, enters the Atlantic, crosses north-eastern Spain and Algiers, North Tunis, Assouan, and ends in Arabia at sunset. The longest duration of it is at Assouan and is then only three and three-fourths minutes. But upon those minutes the camera can confer immortality. STUDENT

Garlic in Tuberculosis

SOME time ago an English physician, Dr. Minchin, called attention to the curative power of garlic in tuberculosis and lupus, asserting his own great success. In the course of a laudatory comment on this simple remedy Dr. Berdoe said:

I look upon it as a perfectly safe treatment and also an efficient one in all cases of incipient pulmonary tuberculosis, in nearly all cases of moderately advanced, and in many very advanced cases. . . . I have had so much success with it that I have come to look upon few cases of consumption as hopeless.

Garlic was a remedy to which the ancients ascribed many virtues. Has its day for general use in medicine come round again? PHYSICIAN

Nature

Studies

Shark's Eggs

THE illustrations, which are from photographs of specimens taken specially for the Nature Notes, represent the case of a shark's egg, and the yolk with young attached. The cases are sufficiently familiar objects on the shores of California. They are about five inches long, horny, semitransparent, and of the color and appearance of dark-brown sea-weed. Spiral ridges run around the outside of the chamber containing the egg. Strangers to this coast are surprised, on cutting open what appears to be a part of a kelp plant, to see the usual contents of an egg run out.

**A Strange Child of the Woods**

THE "Indian moccasin," or "moccasin-flower," is probably better known by hearsay than by sight to the majority, even of those who live in its native region, which is the swamps of the great glacial moraine of Wisconsin and Minnesota; because it is a somewhat rare companion of "jack-in-the-pulpits," ferns, flags, "cattails," and such water-loving folk of the wilderness. It is not a showy flower, its greenish color blending it with the foliage until nearly full grown, when it takes the characteristic bluish-purple, or pink-yellow color. Its huge cavity, sometimes three inches in diameter, is a reception-room for insects, who seem to be fond of it, though to our mind its chief attraction is its novelty. The whole plant is seldom more than three feet high and bears one or two blossoms, which are so eagerly sought for that were it not a bulb-rooted plant it would soon be entirely extinct in the vicinity of towns. The State of Minnesota has taken it as the State floral emblem, though none were found in the gardens of the capital grounds, or in any of the parks. One private residence in the capital city has a fine bed of them, though few who see them know what they are. Probably there is no other flower so closely interwoven with the popular idea of Indian life as this, and for that reason it is a fit emblem of a State where Indians have been so important a part of recent history, and where their blanket-wrapped persons are yet familiar sights even in some of the larger cities.

STUDENT

The Busy Ant

SOUTHERN CALIFORNIA seems to be a paradise for ants. At any rate many species abound here. They are large and small and of medium size, red, black, brown and dust-colored; and are to be found almost anywhere in large colonies, where they seem to be most actively engaged in the manifold duties and labors of ant-life.

Indeed, for these little creatures life appears to be very strenuous, an affair of incessant toil and travel. A student once, during a ramble in the country, came across a large mound of earth thrown up by ants. Underneath were the excavations which furnished homes to the countless myriads of inhabitants. The ground all about was covered with a thick growth of tough, high grass, through which a well-beaten path led away from the mound. This roadway was from one to two inches wide, and as clearly marked as a wagon road through a forest.

Curious to know whither it led, and for what purpose it had been made (for it must have cost an enormous amount of labor), the student followed it several hundred yards and found that it ended in a small field of grain. All along the way the ants were met returning with their heavy load, while others were hurrying from the mound to the field. It was extremely interesting to observe how carefully each party kept to its own side of the road. Of course those who were loaded traveled more

slowly, and thus, each keeping to one side, all crowding and inconvenience was avoided.

Frequently the burden one had assumed would prove beyond his strength. In such cases one or more good brothers always hurried to his assistance. The greatest trouble was at the rather small openings which led under the mound, and which rendered the work of storing the grain a somewhat difficult task. It was curious to notice how very human were the actions of these tiny workers. Several of them would walk around the huge load, apparently consulting and measuring possibilities before going to work in the most orderly and systematic way. At the last they always succeeded, though often only after repeated efforts.

Though ants are so plentiful, they do not often prove very troublesome. A lady once had a rather strange experience. She occupied a wooden house, under one side of which was a colony of small red ants. They had been disturbed and had evidently decided to find a new habitation. For several days she had observed a few ants traversing the wall in her room near and above the bed; but being a fear-

less lover of all nature, she thought little about it. In the night she was awakened by feeling something moving over her face. She arose, and upon lighting a lamp, discovered that the bed, pillows and walls were literally alive with ants. The effect was beautiful as well as strange, for the light shone upon heaps and balls and masses of fluffy, bright red, moving, living creatures.

These were the very tiny red ants. The large red ant is less harmless, and its bite is as much to be dreaded as the sting of a bee. The black ant has a very disagreeable odor.

Like almost every other living creature, the ants are quiet and harmless if let alone; and they are certainly shining examples of industry, perseverance, good temper and harmony.

STUDENT

California Forests to be Preserved

LOVERS of nature and haters of wanton destruction will rejoice to hear that at last the government experts have presented to the head of the Bureau of Forestry in Washington a bill for the California legislature.

This bill guards especially against fires, and the idea is to appoint a state forester with assistants, and also county wardens, whose duty it will be to prevent and fight fires. Heavy penalties will be imposed upon campers and all who can be shown guilty of carelessness, and rewards offered for information against offenders.

The Pomegranate and Its Self-Sacrificing Leaves

THE pomegranate flourishes at Point Loma. It is a very ornamental bush, with its showy, scarlet flowers and bright red fruit, in contrast with its green foliage. There are buds and flowers and fruit in all stages on the bush at the same time, but the branches bearing ripening fruit are destitute of leaves. In this we have an example of one of the many sacrifices that leaves make in their unselfish service towards carrying out the purposes of the plant.

The production of ripened fruit is the crowning work of the plant, and is a very exhausting process, not only using up food already elaborated by the leaves, but often taxing them for the production of more to such an extent that they sacrifice themselves completely to the task, as in the case of the pomegranate.

The leaf in general is a selfless servant and will accommodate itself to whatever uses best serve the plant as a whole and its purposes. STUDENT

WHILE there is inspiration in the thought of the great teachers, the great defenders of principle, there is perhaps greater inspiration in the thought of those who have stood for principle unknown and unnoticed, with no drums beating, no bugles sounding, no urge of tramping feet behind them, no colors flying. Susannah Wesley was one of these, and when one thinks of the nobility of her life and of the lives of many others equally humble, the thought comes like an inspiration, "Why may not I do as much? Why may not I be the same?"

Well, try it. You can be more than you dream. Take a stand, not outwardly, but in your own heart, in defense of principle. You know what principle is, you could not feel the urge if you had not the Warrior-light within your own heart. Perhaps you have seen and felt the emptiness of the world's life. It may be that you are too honest to shirk your plain duty, for when the truth is revealed to one, even in part, it is one's plain duty to defend it.

Every woman has the chance to choose sometime between the light and the darkness, to shut the light out of her life, or to open the heart utterly to what is true, and the moment of that choice is the moment of her first step upon the path. It is needless to ask advice, your own heart will teach you all that you need to know; nor is it necessary that you should see what the end will be. It is not even necessary that you should see the second step. The first is plain, and when you have taken it, still plainer will be the first after that. Nor will you have gone very far before you will begin to understand the lives, and particularly the persecutions of the great Teachers of the world.

If you love the right better than you do the wrong you will soon find that, in allying yourself with all that is best in your nature, you have challenged all that is worst. Every weakness of which you are aware, and several never discovered before, suddenly loom up on the horizon ready for battle; and so the battle begins. It is just this battle that those who are beginners at this task of defending principle talk so much about. Some-

Defenders of Principle

times they overdo the matter just a little, and often they forget the bright side of the picture, so determined are

they to discover and analyze all the darkness on the dark side.

And yet it is a battle, for the selfish part of one's nature is no myth and often it is a monster, but to *only* look at that side is absurd. To ignore the soul is to shut away all light and all help, to crucify the very principles we declare ourselves ready to defend.

Take refuge in the soul, then, for the soul is more than a warrior; it is an alchemist, capable of transmitting every selfish desire into the pure gold of spiritual aspiration—if you will give it a chance. Look at things from the standpoint of the soul and the battle-field will become the crucible.

Then shall we see the glorious side of this picture, and the side which some even among the great defenders of principle have never seen, because they would stay right down on the level of their trials and persecutions.

And what will be the end of it all? The darkness, despair and discouragement that we see all about us and feel at times within our very souls, is but the darkness presaging the dawn of a new day. For the dawn is nearer at hand than we realize and those who keep the light burning in their hearts will find that it will not grow dim and disappear, save to become a part of the Great Light that is to be, the Light that will bring back to

mankind a new Golden Age. Then persecution will be unknown; then will all walk in the sunshine of soul life; then will come to all women the peace that now cometh only unto the few.

STUDENT

ACCORDING to a recent dispatch from Vienna, a beautiful young woman was hanged recently in a Russian fortress. This young girl, with other ladies of the Russian aristocracy, in the Winter Palace and under the direction of the Dowager Czarina, assisted in preparing bandages, etc., for the wounded soldiers. She also assisted in forwarding literature to the far East, and it was charged that she enclosed in one of the packages copies of anti-military pamphlets. As stated, she was hanged and her father, because of her crime, was sent to Siberia.

A GLIMPSE OF LOMALAND—RAJA YOGA ACADEMY IN THE DISTANCE

In a Lomaland Canyon

NO grey cliffs these, rising from a bed of green and crowned with towering trees, but warm gold, brown, and red violet, as if the sunny Californian sky had wooed the earth to show some of her heart's color. A walk over the hills at Point Loma leads through the fragrant brush down into the bed of a canyon, sheltered, warm and still. Along the path we go, around sharp turns and between the towering upright cliffs, standing like rows of golden sentinels, until the canyon opens at last to a broad view of the Pacific ocean. Then what a delight to climb and rest upon the bright-hued cliffs and look out over the peaceful blue.

Far back of us seems the hum of the world's busiest civilization. Before our eyes the glimmering line of kelp in the ocean shines like the promise of a new land, to rise from the deep and bridge the distance to the Orient—the Orient that is awakening to new life. For centuries the waves of the Pacific have murmured to the shores of the East and of the West of a great mystery that lies hidden beneath their crests. Who knows that the call has not been heard and that the mystic knowledge of the peoples sunk beneath the Pacific waves may not have awakened once more in the hearts of men and spurred them on to once more link the East and West in one united effort for humanity's progress.

On Loma hillside, earth, air, sky and sea all speak of fulfilment. In truth, secrets of the joy of life, long hidden, shall here be unfolded. The voices of happy children blend with the murmur of the waves and bring a golden peace to the heart.

STUDENT

IN A LOMALAND CANYON

DAY DREAMS

HIGH on my perch in my rocky seat,
The world and its worries beneath my feet;
Away to the west the ocean lies
Under the arch of the sapphire skies.
Along the coast is a silvery line
Where the foam-tipped billows break and shine.
And a wreath of mist so faint and dim
On the far horizon's distant rim
Marks where the stately vessels ride
Over the world to the other side—
Over the edge of the world and away
Along the track of the golden day.

Adown the canyon the clear stream flows,
Cold and sweet from the mountain snows.
Hastening, hurrying onward to be
Lost and absorbed in the turbulent sea;
Cold and clear and sweet no more
When beaten and tossed on the briar shore.

So oft to my rocky perch I come
Away from the city's bustle and hum,
And sit and dream till the day is past
And darkness broods o'er the landscape vast.
Till the sun goes down in the gorgeous west,
And the moon shines over the mountain's crest,
And a million stars in the sky appear,
And earth recedes and Heaven is near.

—M. A. P. in *The Charlotte Leader*

THE following extracts are taken from a code of morals for the women of Japan, which was published some years ago:

"It is better for women to have a good mind than a beautiful appearance.

"Parents must be on guard lest their daughters see or hear any evil thing.

"A woman must not chatter nor slander any one nor tell a lie. When she hears any slander she must not repeat it, for this causes disputes among families.

"A wife must not waste her money in expensive clothing, but must dress according to her income. Her ornaments and clothing must not be splendid, but neat and clean, so that she will not cause people to remark. She should dress according to her rank.

"Though a woman may have many servants, it is a rule that she should manage the house herself."

MISS ANNIE S. PECK, the American woman who has gained international fame as a mountain climber, has ascended Huascan Mountain, the highest peak in the Andes, to a height of 21,000 feet. She was prevented from reaching the summit because of immense crevasses, but she stopped only a thousand feet from the very top and has beaten the record of Sir Martin Conway by over a hundred feet. Miss Peck, a graduate of the University of Michigan, and for some years a student of archeology in Greece, was the first woman to reach the summit of the dreaded Matterhorn. That was nine years ago. Since then she has climbed Popocatepetl and Orizaba in Mexico, as well as other mountains difficult of ascent.

Miss Peck's experience goes to show what experts have long declared, that mountain climbing accidents are nearly always avoidable and are usually due to carelessness or lack of preparation.

The Let-Go-Duty

HOW easy it seems to let a thing go for a moment under pressure of many things to be done at once! But the let-go-duty is presently joined by another let-go-duty, and before we know it there is again heaped upon us such a pile we hardly know which way to turn or what to do next.

Each duty has its own place in the economy of the universe, but the let-go-duty is a fugitive, a tramp, a renegade, and becomes an enemy of the household. It forms a clique with its companions to create dissensions and discord, making great gaps, which keep one forever trying to fill in and even up to a just balance. Any one who needs experience to prove this has but to attempt the keeping of accounts where a number of people are involved.

The gaps in human life, with their consequent strain on the nerves and their torture of suffering, prove to one that lax methods are an injustice to the soul. For one learns that method is the instrument of the soul. It is the machinery used by the Law to bring harmony into the world of men and women.

Before we recognize that we are souls we think of ourselves as something distinct from all others, with separate aims in life. Each of us pursues his own method to fit the absorbing interest of the moment. As our interests shift with each new fad of the day, we add with each a new method. Our brains become so burdened at last that we lose our way in the labyrinth which our own acts have made. In our perplexity as to which method is best, we lose faith in the Law.

Method without the Law guiding it becomes mechanical and dead; our interest in it cannot be sustained, and the method grows lax.

Once we know ourselves as souls we become united in a common purpose, consciously to work with the law. We thus get a transforming or a self-adjusting method that holds itself within necessary limits, yet gives flexibility of movement that adapts itself to every need. This produces a rhythmic continuity of action that makes for balance between cause and effect, and through this law of harmony we are led to find the ways of the soul.

STUDENT

MRS. FANNIE B. WORKMAN, of Massachusetts, daughter of Ex-Governor Bullock of that State, holds the world's record as a mountain climber. Last year she reached the summit of three mountains in the Himalayas never before explored or named. She ascended to a height of 23,390 feet, a record that it would be impossible to equal in the Andes, for none of the peaks in that range are so high.

The summit of Mt. McKinley in Alaska, the highest peak in North America, still awaits its first human visitor. Several attempts to climb it have been made by scientists, but they have failed on account of perpendicular walls of snow and ice several hundred feet below the summit.

WOMEN in Norway are not behind their Swedish neighbors. Fru Anna Noss states that in 1902, one woman was placed on each of the inspection committees for the public and private asylums throughout the country. In 1903, the municipal council appointed a woman as member of the inspection committee of all municipal hospitals in the city of Christiania. And we read of a lady taking part, as solicitor's proxy, in an examination before a magistrate, who acknowledged that this was a new departure, but that he "knew no reason for preventing it."

Our Young Folk

A LEISURE HOUR IN THE ART STUDIO AT LOMALAND

A New Art Message

Extract from an Essay by a Raja Yoga Youth Who is a Student in the Art Department of the Raja Yoga Academy

WE feel that we are beginning a new Crusade. In our hearts we know that we are going to carry a great art message around the world. Art and music are the real expression of the soul; and the characteristics of all races may be studied through their art and through their music. Where today is it easier to bring back again the true in art than here in Lomaland? Here we are all trying to lead pure lives and teach others; for art, as our Teacher has said, is not merely an accomplishment, but a part of life itself. Our school of art is and must be different from the art schools in the world, where students think so much of becoming famous for their work or getting money for their efforts.

Our motives are very different, for we do not think of money or fame, but of how much good we can do the world. We want to make people love what is higher and more beautiful and we want to show them how beautiful it is to strive after pure and high things. We are studying all branches of art, just as they do in the art schools of the world, but we are studying very much more.

We know that to really understand nations and history we must know something about the art of the world, and so we are studying in this school, of all the different schools of art, from ancient Egypt and Greece, down through all the centuries, to modern France and Japan. We are studying the different schools of architecture, of which there are at present nine, and also that of Point Loma, which represents a new style and is the tenth.

We study all branches, so that we can model and draw and paint intelligently. We know that the world needs a new art spirit and we know also that other children everywhere are looking to us for something that other art schools cannot give. We can give it because we are learning Raja Yoga. That is why we feel a great responsibility. We are deter-

mined to build something better in an art life than has ever been built before, and we can do it if we let our hearts rule. We are determined to do our share to make Point Loma the great art center of the world.

Facts Worth Knowing

HAVE you seen our Raja Yoga Prospectus? You should send for one.

ONE hundred years ago English was spoken by perhaps twenty millions of people throughout the world. Today it is spoken by one hundred and thirty millions.

IF WE study the history of nations, it is easy to see that the greatness of a nation depends more upon the virtue of its people than upon its size, wealth, population or material resources.

ONE of the most effective educational exhibits at the Louisiana Purchase Exposition is the school conducted by Miss Pilar Zamora, a highly educated Filipino woman, in a little bamboo cottage with only the facilities that would be found in a regular Filipino school. She teaches fifty little Filipinos to fashion English letters on blackboards mounted on bamboo poles.

TWO million acres of magnificent redwood forest in California, which have been sold by the government at the average price of two dollars an acre, is now being destroyed. This marvelous forest, beyond comparison with any other of its kind in the world, and which cost Nature thousands of years to build, is being cut down for lumber. Why is it not preserved by us as one of our most precious natural treasures?

THE first people to teach English to the Filipinos were officers and soldiers of the United States troops. As a result of the beginning thus made, more English is spoken today in the Philippine Islands than was the case with Spanish after four hundred years of Spanish rule. The Spaniards did not encourage the natives to learn their language, believing that a common language would make the latter too dangerous, and that a perfect Babel of dialects was better. Were they right?

THE CHILDREN'S HOUR

The Raja Yoga Question Box

EXCEPT for the gentle and unselfish helpers, how much that is beautiful and true might be kept away from us.

1 Who was Fanny Mendelssohn?

ANSWER—Fanny Mendelssohn was the elder sister of the great composer, Felix Mendelssohn. She was his first music-teacher. In later years she composed music and also helped her brother to compose some of his beautiful melodies. She was noble and gifted, caring more for her brother's fame than for her own.

2 Who was Caroline Herschel?

ANSWER—Caroline Herschel was the elder sister of Sir William Herschel, the

great astronomer. She was a fine musician but gave up her music to assist her brother in his work. She then became an astronomer and made important discoveries. She was very unselfish, helping her brother every day as long as he lived.

3 Who was Jenny Lind?

ANSWER—Jenny Lind was Sweden's greatest singer. Many believe that she was in her time the greatest in the world. She had a hard, lonely childhood but sorrows always made her more gentle and kind. Everybody loved her. She gave many fortunes to help the unhappy and the poor. She loved little children.

About Seeds

WHEN we think of seeds we always look into the future and it seems to us very wonderful that all the possibilities of a future beautiful plant or great tree is contained in a little seed. But the past of that seed tells just as wonderful a story as the future does, and we will not go very far in the study of it before we find out that plants really know a great deal about mother-love and mother-care, and heart-light too—much more than some human mothers. If you do not think that plants love their little seed babies, then how do you account for the care they give them? All that is delicious and beautiful in our fruits, as, for example, in the peach, the apple or the fig, is fashioned by the mother plant to show how much it loved the tiny seed within. Now when we think of plants in this way, as having a real intelligence of their own kind, of a real love of their own kind, we come very much nearer the truth; but we find that plant mothers differ from human mothers in one important particular. There aren't any selfish ones. They work not alone for themselves but for the future and for the baby seed, and they work unselfishly. Their first care is to see that the little seed is well nourished, their next to provide it with some sustenance after it leaves its little nest in the heart of the plant, and their last care is to provide it with some means by which it may find the right home in the soil.

The seed exists first as a tiny something called an ovule. But after the ovule has grown into a seed, then the plant knows—at least I am sure that it must know, for how otherwise would it take such pains?—that there is coming a time when the seed must leave its little nest and must live its own life and find its own food. The mother plant knows it cannot do this very well at first, for, like the little baby, it would not be strong enough, so she stores away a supply of food close to the tiny growing embryo, and inside the dry coating of the seed. You see this in corn and beans and many other seeds. The little living germ that grows into the plant is very, very small, and nearly the whole of most seeds is composed simply of food for it to use, although there are some seeds, like those of the sugar maple, which contain almost none; but that we can take up later. How many stop to think of this when they eat delicious fruit?

But that is not all. The mother plant has still another care, which is to see that the little seeds find their way safely to homes of their own in the soil, and so she devises many ways. The maple tree, you know, fashions little wings, and on these the seed flies much further from the

mother tree than it could otherwise. And the dandelion seed has wings of another kind which enable it to fly through the air, and still other seeds are so fashioned that they will cling closely to objects that brush by them, as, for instance, cotton seeds, or the burrs which we get upon our clothes. Still others are given by the mother plant very, very attractive dresses, so that birds and human beings may be tempted to eat them, or rather, the attractive covering they wear, and carry them some distance. In still other plants the little seed vessel bursts suddenly with something almost like an explosion and the seeds are scattered to a great distance, and so on. There are many, many ways, and when we have studied seed life in this way, it isn't hard to believe, is it, that mother plants are not only tender and unselfish and loving, but are wise. AUNT ESTHER

SOME OF THE CHILDREN OF THE RAJA YOGA SCHOOL AT THEIR MORNING CLASS IN CALLISTHENICS

IF any little word of mine
May make a life the brighter,
If any little song of mine
May make a heart the lighter,
I hope I'll speak the little word,
And take my bit of singing,
And drop it in some lonely heart,
To set the echoes ringing.

— Selected

ants, but Hilda was particularly valuable because, when any of her captive relatives got into trouble, she always came forward and made peace and soothed them. You see she could talk to them in their own language, and even the head animal man couldn't do that. He used to declare that Hilda was the most attractive and peaceable creature that ever came into his charge. She was only two years old when she was taken from her forest home, just a little tender creature then, as lions go, and her trainer told me that from the time that she began to mingle with the other lions the influence of her kindly disposition was very marked. Hilda was given the fullest liberty in going and coming in the big exercising room of the winter quarters, and, strangest of all, she enjoyed a real comradeship with all the animals. She would talk with the bears and gossip with the elephants, and say "good morning" to the tigers, and even speak with the leopards sometimes. And when her two little babies came she was the happiest and proudest mother that could be imagined, though the two little furry bundles looked more like kittens than like lions. Hilda was so happy with them. But one day she caught cold and she never recovered. How beautiful and kindly some wild animals prove to be. E. W.

Isis
Theatre
San
Diego
California

LOMALAND STUDENTS AT ISIS THEATRE

HELPFUL addresses, delightful music and a bit of nature in the stage settings combined to give an indescribable charm to the public meeting of The Universal Brotherhood and Theosophical Society at Isis Theatre Sunday evening. The music was an especially pleasing feature. One of the numbers, the "Scherzo," from Schumann's piano quintet in E flat, was its first performance before a San Diego audience, by the students of the Isis Conservatory of Music.

The first paper of the evening, by Mrs. E. T. Bundsmann, was entitled: "The Message of Theosophy." In part the speaker said:

"To the women who are wives Theosophy gives this message: 'Ye are priestesses at the altar of home, and to you is given the safe-guarding of the nations. Their honor, peace and purity are in your keeping. Beware lest you treat it lightly or let corruption enter at the heart.'

"Through your power over life, called into being by unselfishness, you can span the chasm from life to life with the radiant bridge of love. So that, upon it, your loved ones can pass over and beyond, either to the larger, fuller life of awakened consciousness here, or into the life beyond the valley of the shadow, with your love to sustain them at the parting of the ways.

"And because you have loved them with unselfish devotion—because you have called their souls into the field of action, there can be no death.

"Unselfish love is an indissoluble link between soul and soul; Love, and not Death, is victor. And the love which is strong enough to conquer death can call back the departed soul, and it will come again over the shining silver span back to our life and love.

"This hope, this blessing, Theosophy would take into all dark corners of the earth. To homes darkened by poverty, disease and death; to homes shadowed by materialism, scepticism and fear; to homes made unlovely and dreary by creed, dogmatism and cant. This is its hope and its message."

Rev. S. J. Neill read a paper entitled "Education Through Illusion to Truth," pointing out how we progress, step by step, toward truth. He said, in part: "We try illusion after illusion till at last we realize

the truth of the words of a great Teacher, that nothing out of the eternal can help or satisfy the inner nature of man; yet are we being led on and educated continually by illusion, to the end that sooner or later we may reach truth or reality.

"If we can comprehend this idea that we are being led on through one illusion after another, it will place us above and beyond this changeable existence—'the roaring loom of life,' as Goethe calls it, and it will enable us to behold life from the standpoint of the Spirit. It will help us to read the history of nations, and of the world, in a new light. It will enable us to view with a bright vision, and a more comprehensive judgment, the errors, and crimes and follies of mankind.

"Turn where we will, we meet illusion. There is the illusion of the physical existence. So strong and constant is it that many people regard the illusion-body of flesh as the real man, even though they know for certain that it soon perishes and disappears.

"Death, also, is an illusion. The real man dies not. Just as the sun seems to rise and set, so the soul, the spark of the Divine Sun in man, as it puts off or puts on a physical covering, seems to set or rise, to die or be born; but all this is illusion. In the course of time, as we are educated by this setting and rising, we come at last to realize and to fix our soul's gaze upon the only Reality, which is another name for Truth itself. We pass from the temporal, the transient, to the everlasting, the Eternal.

"The Divine Law is ever the same. 'For brass I will bring gold; and for iron, silver.' The shadow vanishes, the illusion passes away, but the Reality, Truth itself, is ours more and more. We strive for some lesser good, and we get an infinitely greater good; for brass we get gold.

"Heir of all the ages; let us see to it that we prove worthy of the heritage, that we are foremost in the files of Time. And as we view the history of the world, or as we contemplate our own individual lives, let this thought, like a bright, heavenly arch, span our years—that we are under the care of Infinite Wisdom and Goodness, which ever gives us greater good for lesser, and makes the illusions of our present existence serve to lead us from a world of Maya to our true home."

Art Music Literature and the Drama

The Harmony of Life Comes from Heart Wisdom Translated into Act and Deed

IT has come at last. The faddist is now waving a tuning-fork, with the advice to mothers to carry one always in their pockets—to assist their children to talk in the proper key, presumably, also, to cry and quarrel at the proper pitch! It would seem that nonsense could no farther go, and yet these things are valuable in indicating to what extremes one may go who has the best of motives, but who has no knowledge of the laws of life or of human nature.

What might be called one of our racial idiosyncracies is our almost universal tendency to run after specifics for this or that. The tuning-fork theory is a case in point. Yet the motive of the one who advanced it was probably unselfish.

It is not an idle dream to picture a world, or a community, or a household, as wrapped in harmony. The ideal of homes or cities in which one might hear musical sounds instead of the opposite, is not Utopian. We might live in such a world and we should be living in one today. That we are not is our own fault. Look at nature. See the harmony of sea and cloud, of landscape and sky, of color and form. Go into the woods; listen to the language of the forest birds, the call of the wood dove, perhaps the lowing of cattle in the far distance, and, beneath our feet, the tiny orchestra of the insect world. Compare this, in its sweet and naïve harmony, to the average human community with its rasping and jarring discords, and then ask yourself, "why these things?"

Yet no tuning-fork nor a million of them, will ever straighten out or alter such conditions. As easily might one cleanse a sewer with perfume and sweet words. Something must be substituted for the discords, the hatreds, the selfishness; something quite opposite, such as love, unselfishness and good-will. The heart feelings, flowing outwards, could not produce discords. There would be melody, there would be harmony, there would be the ideal realized.

In the Life is the key to it all, the Life whose deeds are one flowing sweet expression of the heart's pure song. In such environment would Great Souls plead for incarnation, as certain of harmony and peace as the brown bee is confident that the nectary of sweet pink clover contains no poison drop. Is there not inspiration in this thought? Nor need we be discouraged that with all our effort the harmony still cometh but now and then. Not all can reach Parnassus with a single stride, but all can turn their faces that way.

STUDENT

NOT a few of the best artists—meaning by that those in whom the spirit of true art is really awakened—are now giving their attention to the home. The result is that many of the objects distinctive to home life are becoming not only more beautiful, but more simple in line and more exquisite in color. The care and feeling which was formerly lavished on what were called the fine arts, is now being devoted to the home life. It is one sign that art is not dead, and that there is neither rhyme nor reason in the despairs of those who would not know a Renaissance of true art if they should see one. It is the home environment that makes or mars the budding and beautiful life. The years spent close within the boundaries of the home are invariably the child's earliest years. The soul blossoms free and true under the sunlight of beauty, in the atmosphere of noble music and pure art. Where, then, is art's province if it be not the home? M.

The Inspiration of the Architecture of Point Loma

Extract from an essay by one of the Cuban lads of the Raja Yoga School, who is a student in the Art Department of the Raja Yoga Academy at Point Loma, California.

THE architecture of Point Loma is so beautiful and graceful and free that I would not like to live anywhere else. I imagine that a city many times larger than New York and holding twice as many people as London, if built according to the same style of architecture as we have at Point Loma, would make the most delightful place in the world. It would seem like a garden, where people came as though into Paradise. If the people looked out for their cities and tried to build them

simply and in a beautiful style of architecture, most of the suffering and unrest that we find in our large cities would be unknown and the word "slum" would disappear from the pages of the dictionary. Then a city would be what it truly ought to be, a gathering of the people of the world for the enjoyment of life, living again in one bond of Universal Brotherhood. The people have tasted of the joy of life on this Hill. They have seen the results of this work and will yet see more. The people have already felt a new light burning in their hearts and will feel it more and more as time goes on. Then the prophecies of Madame Blavatsky will be revealed in their full meaning. Then the wise teaching of the ancients shall be better understood. Then men shall know that they are divine and unto them shall be revealed their power. They shall know that they are the temples of the living Christ, the living truth, and they shall walk hand in hand toward the light, and Universal Brotherhood will be a living fact. The nations shall clasp hands and peace shall come.

A SONG OF THE FUTURE

by SIDNEY LANIER

SAIL fast, sail fast,
Ark of my hopes, Ark of my dreams;
Sweep lordly o'er the drowned Past,
Fly glittering through the sun's strange beams;
Sail fast, sail fast.

Breaths of new buds from off some drying lea
With news about the Future scent the sea;
My brain is beating like the heart of Haste;
I'll loose me a bird upon this Present waste;

Go, trembling song,
And stay not long; oh, stay not long:
Thou'rt only a gray and sober dove,
But thine eye is faith and thy wing is love.

Something more was put into these violins than just wood and glue and varnish. George Eliot gives the secret in her lines on Stradivari:

That plain, white-aproned man who stood at work,
Patient and accurate, full four-score years,
Cherished his sight and touch by temperance,
And since keen sense is love of perfectness,
Made perfect violins the needed paths
For inspiration and high mastery.

STUDENT

UNDER the title of the "Théâtre des Inconnus," a playhouse has been founded in Paris, the purpose of which is to afford opportunity for the presentation of the works of unknown dramatists. A new departure.

ACCORDING to *Grove's Dictionary of Music*, the actual cost of an ordinary warehouse violin is as follows:

	s.	n.
Wood for back	0	2
Wood for belly	0	2
Wood for neck	0	1
Workmanship in neck	0	2
Blackened fingerboard	0	2
Workmanship in back and belly	0	3
Cutting out by saw	0	1 1/2
Shaping back and belly by machinery	1	0
Varnish	0	10
Fitting up strings, bridge, and tail-piece	0	9 1/2
Total	3	7

A few years ago \$20,000 was paid by a Berlin banker for a Stradivari violincello, and a really fine specimen from the master's hand is not attainable for less than several thousand times the actual cost of material. Evolution seems to have come to a standstill in violin making, or so it appears.

Though every other instrument in the orchestra has been improved out of recognition, the violin of Stradivari remains not only unimproved, but unapproached.

ON account of the increasing circulation of the *NEW CENTURY PATH*, letters of inquiry from new readers are from time to time received, asking for more information about William Quan Judge.

This has suggested the idea of placing on the cover-page of the next issue of the *NEW CENTURY PATH* an engraving of William Quan Judge, which will remain for a considerable number of issues of this weekly.

This is done, not only as a tribute to one of the World's great workers, but to give to those who are interested in Theosophy an opportunity to study the features of an honest man.

William Quan Judge became acquainted with Helena Petrovna Blavatsky in 1874, in New York City. This was an event which prophesied phenomenal success for the Theosophical Movement in America.

At that time Theosophy was not known to any extent in the Western World. It was William Quan Judge, who alone established a Theosophical Center in New York City. Those who knew him best, and most respected his unselfish labor for humanity, recall with pride those days when he sat alone in a small hall in New York City, holding his regular weekly meeting to empty seats.

Great must have been his insight into the future, and still greater his confidence in the Divine guidance of the Theosophical Movement, for he persevered. He not only built up a great Theosophical Center in New York City, but with the assistance of Madame Blavatsky, established Centers in all parts of the world.

There are many comrades at Point Loma and throughout the world who worked with him in the early days of struggle for the advancement of Theosophy. Today they are privileged to see the phenomenal results which have grown up through the simple trust and devotion of one man.

This heroic soul has made a record in his devotion to humanity, which will ever stand as an example to others.

In order that readers of the *NEW CENTURY PATH* may become better acquainted with the writings of William Q. Judge, these pages will contain from time to time different articles written by him. They are to be republished partly on that account, and also as a just tribute to the efforts of one who laid down his life in unselfish devotion to a cause he rightly felt with all his soul to be a holy one.

Mr. Judge was a very able writer. His practice at the bar, before his identification with Theosophy, gave him a training which was invaluable for the clear and lucid exposition of ideas; besides, he was by nature intuitively fitted to be a teacher. As Editor of the *PATH*, he did a large work in the literary field, and gave hope and help to thousands of people who, otherwise, would have been overlooked.

It was at the Parliament of Religions, at Chicago, that William Q. Judge did enormous work for the Theosophical Movement by his able addresses on Theosophy; thus aiding to bring Theosophy throughout the world to the stage it now, in 1904, occupies in the public mind.

To know the heart of all things was his duty,
All things did sing to him to make him wise.—“ODE,” *Lowell*

There Is No RELIGION Higher Than T R U T H

FRIENDS IN COUNSEL

DEAR COMRADES: As we persevere in the study of self, that difficult but fruitful field of labor, we cannot help being struck by the appalling waste of thought force of which we are guilty every day. As we look at the great needs of human-

ity and realize our responsibilities, we feel that we are in duty bound to devote all our time, thought and work to their relief, but how does the matter stand?

On strict enquiry we find that for a large part of every day our minds are occupied with creating mental pictures of things we should like to eat, clothes we should like to wear, scenes we should like to visit, people we should like to meet. And while the mind is thus luxuriating in its dissipation, the great cause to which we profess to be devoted is deprived of the stream of will and imagination which is the sustaining power which keeps it alive.

We know some little of the Leader's plans and we can help more than we know by letting our imagination dwell upon them and giving them the nourishment of our interest and determined will.

Why not sometimes make a picture of the whole city of Esotero and try to imagine the life of the inhabitants? The little houses nestling against the hillside, shaded by palms and covered by creeping vines. The people, drawn hither from every race and country, yet all harmoniously blending in the common city life. The little group houses of Japanese, Hindoo, Maori and Hebrew children playing in the sunshine, and the never-ending sounds of song and music which envelope the city as an atmosphere. All these are in Katherine Tingley's plan.

We can project our minds into the future when at this great seat of learning on the Hill, there shall be throngs of the youth of all nations, where there are now only a few hundred, passing to and from their classrooms, lecture-halls and groves. Note their free and easy carriage, the product of life under natural conditions; their radiant faces and their graceful forms, like the statues of Greek gods come to life.

This is the right use of the mind. Set it free from the orbit of revolution round our petty personality, and let it range into the future and do true craftsman's work in building the New Order of Ages for the coming generations.

In letting the mind be circumscribed by the personal interests, and perpetually evolving schemes dictated by our likes and dislikes, we are acting like children who build sand castles by the sea. The tide comes in and strews the level beach with their ruins. But when we act together and labor in a vast plan laid down by one who works with knowledge of the law and “the prophetic scheme,” we are building for eternity, and in the work we lose ourselves and gain the freedom of impersonal life.

STUDENT

Most deeply am I convinced that that which makes the difference between one man and another—between the weak and the powerful, great and insignificant—is energy, invincible determination, a purpose once formed, and then death or victory.—*Buxton*

Students'

Path

OUTLOOK

NOT to be conquered by these headlong days,
 But to stand free: to keep the mind at brood
 On life's deep meaning, nature's altitude
 Of loveliness, and time's mysterious ways;
 At every thought and deed to clear the haze
 Out of our eyes, considering only this,
 What man, what life, what love, what beauty is,
 This is to live, and win the final praise.

Though strife, ill fortune and harsh human need
 Beat down the soul, at moments blind and dumb
 With agony; yet, patience---there shall come
 Many great voices from life's outer sea,
 Hours of strange triumph, and, when few men heed,
 Murmurs and glimpses of eternity.—*Selected*

The Sustaining Power of Right Action

ALL who have earnestly endeavored to act aright and have to some extent succeeded, know that there is a sustaining power in right action that gives strength, courage and new life; and they also know there is lack of it in wrong action which brings weakness, inharmoniousness and disease, and this they learn from the experience of failures. But where the motive is pure and unselfish, the sustaining power is present whatever the seeming success of the action; for motive is the principal thing, and this being allied to the Universal Self, draws strength from this great fountain head and has its unfailing support. But that which is anchored in the personal self is like the house built upon the sand; it has no sure foundation.

It is difficult to keep oneself always on the higher levels of motive, thought and action, for the other side of our dual nature ever waits its opportunity to assert itself, and we are prone to swing like the pendulum between the two; yet a knowledge of what is involved in our action will help us in maintaining the right attitude and right performance. I am told that William Q. Judge once said that other souls were depending on us and our right action, and that we could make the upward path an easier one for them to climb; but if we suffered ourselves to fall back, they too would fall, and although we might rise again, they, being weaker, might not be able to do so. Think what a responsibility this places upon us! Could we ever be careless with such a thought in mind? It seems to me that this thought is enough if we carried it always with us to make us ever choose the highest and the best, to sacrifice our personal wants and likings to the better service of all.

No matter how small any act may seem to be, it weighs on one or the other side of the balance; it is a power to uplift or to pull down; and we may make every act a fit offering to the Supreme Spirit by its service to humanity through right motive.

The dividing line between right and wrong action is less than the thread of a spider's web, and that is the reason it is so easy to get on the wrong side and so difficult to keep always on the right side. A matter seems so small in itself, and would be small if no question of *ought* came up, but with that question it becomes great. Yet the thought that it is really of little consequence is there together with the *ought* and the *ought not*, and fitting in with our inclination, often prevails; and when it does we at once feel the lack of that sustaining power which always accompanies right action. Now when a case like this arises, if instead of allowing ourselves to think this matter is of little consequence, we should think, "If I yield to inclination in this seemingly little thing instead of doing what I know to be right, I shall take from others a sustaining power, and some struggling soul who is depending on my action may slip and fall, if I let go my firm hold on the right; while if I set aside desire and follow the right, that soul will feel the uplifting power and be able to resist the greater temptation." So instead of thinking, "This makes little differ-

ence," let us think, "I will do what I know to be right that others may have help to do the same. I will withstand temptation even in this little thing, and so, may be, help another to withstand a greater temptation. I will add so much to the moral force of the world instead of detracting from it." If we do this and act accordingly, we shall at once feel the uplifting force of the Great Sustaining Power to which we have attuned ourselves.

As the ignorant perform the duties of life from the hope of reward, so the wise man, from the wish to bring the world to duty and benefit mankind, should perform his actions without motives of interest.—*Bhagavad Gita* B. W.

Proportions

THE world is built on a geometrical plan, and one of the fundamental laws of geometry is the law of proportions. It teaches us that as it is above, so it is below, and that even the tiniest form is but the counterpart of the universe itself, of Divinity, in fact. We learn to see the Divine in everything, but we also learn to see that nature and men, and ourselves included, are still very far from having attained to Divine perfection. For, while potentially all are alike, yet there are degrees, as we all know, and equality in development exists nowhere in nature.

It is the Divine spark in everyone which recognizes the good in others, and we all know the impression made on us when we find ourselves among congenial, earnest and trusted friends. We become conscious of a superb peace, and all nature seems to have put on holiday vesture. So day after day comes and goes and, if we are honest, the good we see around us causes us to begin to look our own nature in the face more critically than ever before. We begin to see flaws that we never suspected before, flaws that were hidden and had remained unnoticed. Our friends also begin to look different to us from what they did at first. We begin to see that they, too, have their faults, that they are not as perfect as they at first appeared. Their faults may not be serious, but to our vision, strengthened as it has become through this honest introspection, they become magnified and assume very large proportions. We are apt to lose our balance and discrimination, if we do not look out, until the faults appear so great as to entirely overshadow the good. In reality they may do nothing of the kind, but we are losing our sense of proportions. We have, without realizing it, been drifting away from our old standards of measurement and have not yet learned to handle the new.

But let us get away from our friends for awhile, into the great world beyond our peaceful circle. Then we are brought back to our old surroundings, to our old standards, and we find, to our astonishment, that they are not what we used to think they were. Yet they are not changed, only we have become accustomed to other things, and when we now look back to the friends we had criticised we begin to see how comparatively insignificant, after all, their faults were, and we see again more clearly their merits. Our sense of proportions has come back to us. We need the shadows to see all the fine chiselings on the marble, and so it is also only by an occasional ray of the outside light that we get a correct idea of the light and shade in our comrades and friends. To know ourselves is difficult; to see ourselves as others see us—even our near friends—is likewise difficult; and it is often necessary to get an outside point of vantage to see them as they really are, and then we shall wonder to see the radiant beauty of their real nature. STUDENT

ONE of this great Brotherhood has said, all the troubles of the world would disappear in a moment if men would only do one quarter of what they could and what they ought. It is not God who is to damn you to death, to misery. It is yourself. And the Theosophical Society desires above all things, not that you should understand and do strange and wonderful things, but understand the constitution of matter and of life as they are, which we never can understand but by practicing right action.

Live with one another as brothers; for the misery and the trouble of the world are of more importance than all the scientific progress that can be imagined. I conclude by calling upon you by all that humanity holds dear to remember what I say, and whether Christians, Atheists, Jews, Pagans, Heathen, or Theosophists, try to practise Universal Brotherhood, which is the universal duty of all men.—*William Q. Judge at World's Parliament of Religions, Chicago, 1893*

 Written in the heart's deep pages
 Shines today, forever new.—Selected

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question

What do you think of the Millennium spoken of in the prophecies of sacred scriptures?

Answer

The Millennium, or one thousand years of heaven on earth, is based on such passages of Scripture as this: "Blessed and holy is he that hath part in the first resurrection; on such the second death hath no power; but they shall be priests of God and of Christ, and shall reign with Him one thousand years."

The immediate origin of the idea of a Millennium may be traced to the Book of Revelations; to one or two sayings of Christ; and especially to the Apocalyptic literature which appeared between the close of the Old Testament and the time of Christ: such as the Book of Enoch, the Apocalypse of Baruch, Ezra, and others.

During the captivity of the Jewish people the Prophets gave voice to the national hope for deliverance. They pictured a Golden Age coming—a Millennium—during which a great Deliverer should rule, not only Palestine, but the whole world, in peace and righteousness. While in some cases the language of the Prophet is limited by local ideas, at other times it becomes more universal and spiritual, and speaks of an "everlasting kingdom."

But, in Daniel, and in the Apocalyptic literature, the coming one, the Messiah, was generally thought of as reigning for one thousand years, because the Scripture said: "One day with the Lord is as one thousand years;" and the six days of Creation were understood to mean the six thousand years from the time of the Creation, after which would be the seventh day of rest, or Sabbath, also of one thousand years; this would be the Millennium.

In the early Christian Church, and afterwards, the second advent of Christ was supposed to introduce the Millennium, when the power of evil, or Antichrist, would be vanquished, and the reign of righteousness and peace would result.

This idea which the early Christians had was an illusion, but *not a delusion*; it was the shadow of a great truth, and it led them on toward the truth. Jesus taught that the kingdom of heaven was within, and on one occasion said: "There be some standing here who shall not taste of death till they see the kingdom of God." St. Paul, also, speaks of "Christ in you the hope of glory." When we realize the power of the Christ within, and make that the ruling principle of our lives, Christ will, indeed, have a *second advent*, with great power and glory. *We* must help to bring about this Millennium, and we as Theosophists believe it has *really begun now*.

STUDENT

Question

What proof have you of the existence of a Golden Age in the past, and upon what do you base the statement that there will be one in the future? I think Theosophists are too optimistic, and that their optimism is not warranted by facts.

Answer

The first part of the question was answered in the Forum of last issue, but space did not permit of the consideration of the querist's view of Theosophists, that they are "too optimistic." It would be interesting to know the grounds for such a view. Is it because of the statement in regard to a Golden Age in the future? That we discussed in last week's issue, but we may add that if we grant the essential divinity of man to be a fact, we have not only warranty for this statement, but are fully justified in our optimism.

To any one who does not recognize the divine power in man, it might indeed seem that facts do not warrant an attitude of optimism. The misery, wretchedness, crime, the horrors of war, and, what is far worse, the daily sacrifice of children to the demon of greed and selfishness, would, indeed, lacking the faith in man's divine power and destiny, be

enough to make a pessimist of a saint. But Theosophy, the Wisdom Religion, not only gives an explanation for this terrible condition, but shows where lies the remedy, and gives the hope and inspiration which alone can lift the race and restore it to its rightful heritage of joy and happiness.

Further than a general statement, it would be impossible to give proof that the Theosophist's optimism is not only warranted, but absolutely unavoidable. If one really wishes for the proof, and is in earnest about the matter, he can obtain it through experience, and, indeed, in no other way; *i. e.*, he must become a Theosophist himself; and this does not mean the mere acceptance of a set of beliefs; it means "living the life." For Christ's saying is universally true, that whoso doeth the will of the Father shall know of the doctrine. We can get no real proof of the truths of life but by living them, by putting into actual practice our highest ideals. If we have but the courage and the will to do this, the whole aspect of life will change, and instead of standing helpless in presence of the world's needs, we shall find we have the power to help lift a little of the heavy burden.

And what are facts, indeed? Make your own facts, help to change the world and make it brighter, and create thereby a reason for your optimism if you still lack one.

STUDENT

Question

What is the best way to overcome one's faults? Does Theosophy give any help to do this? I have known of people who have fought and fought against their faults, and instead of conquering them, have found them grow worse.

Answer

Does Theosophy help? I know of nothing else that will give such great help as does Theosophy, and, if the help is taken, it gives more; it gives victory. The great difficulty which confronts us when we first begin the task of self-conquest, arises from ignorance of our own nature, but Theosophy removes this ignorance and in place thereof gives knowledge.

First of all, it teaches that man is a divine being in his real nature, and consequently that he has the power to overcome, if he will but rely on the divinity within him and follow its guidance. Coupled with this teaching is that of the duality of man's nature, and the power that man has to link himself either with the higher or the lower. One of the chief reasons why we find it so difficult to conquer and control the lower nature is the lack of confidence in, and reliance on, the Higher Self within—true self-reliance.

Then again, Theosophy in its teachings of Karma and Reincarnation gives help in the knowledge of the certainty that all things are under the guidance of beneficent law, that, as is said in *The Book of Golden Precepts*, "e'en wasted smoke remains not traceless"; that no act, not the smallest, but bears its harvest of results. Thus all our efforts at self-conquest have an added power, which comes from the knowledge of the certainty of their full effects. And with this teaching of the law is that other of Reincarnation, giving the hope and certainty of the opportunity of making for ourselves a new record in the lives to come, and that we can, according to our efforts now, shape the future as we will.

One other teaching, contained also in one of the parables of Christ and throughout nature. This is contained in the well-known statement that two things cannot occupy the same space at the same time, and that nature abhors a vacuum. If we simply aim to get rid of our faults and have that as our main object, we shall never succeed. We must do more, we must have a higher object than that. And in practical application of the teachings referred to above, the surest way to overcome a fault is to cultivate a virtue in its place and so to fill our lives with good that no evil can any more find place.

Finally, to accomplish this requires faith, persistence and courage. When we face our faults, they may for a time appear to grow worse, but let us remember that that is because we are threatening their very existence, and that they are, as it were, fighting for their lives; and it is then that, recognizing them for what they really are, we have the opportunity to overcome them.

In this fight, H. P. Blavatsky has said, "each failure is success and each sincere attempt wins its reward in time" and furthermore, "twenty failures are not irremediable if followed by as many undaunted struggles upward." If you wish to conquer your own faults, then help somebody else and you will find that with each effort for the sake of another, you yourself have gained new strength for the struggle.

STUDENT

Some Coins of Antiquity

THE coins of antiquity, so far as they have been discovered, do not carry us a *very* long way even into historic time, to say nothing of prehistoric. The earliest known coins are Greek, and do not date farther back than the Seventh pre-Christian century.

On the whole it may be said that coins do not teach us any history, though they confirm, and in a small degree correct, what history we know otherwise.

But they tell us other things. They tell us, for one thing, a great deal of mythology. Greek coins, for example, till the death of Alexander, bore *only* mythological (or religious) subjects. No small part of our mythological knowledge is solely derived from this source in the cases of Greece and Rome. Coins also often depict the natural produce of their countries, telling us details of commerce we could not otherwise get. From them also we learn the state of art of the period. In many cases they reproduce in metal the now-lost statuary of contemporary sculptors, besides—especially is this true of the later Greek coinages—being often themselves examples of the very finest art.

But more than all, they give us *portraits* of the rulers under whom they were produced. "There is no more delightful companion," says Mr. Poole, the coin curator of the British Museum, "in historical reading than a cabinet of coins and medals. The strength and energy of Alexander, the ferocity of Mithridates, the philosophic calmness of Antoninus, the obstinate ferocity of Nero, and the brutality of Caracalla, are as plain on the coins as in the pages of history."

For this reason we have selected for reproduction, from a number of ancient coins, those which bear portraits. It may be that in some cases the artist has flattered his subject, but notwithstanding, we can in every case be sure of the type; and the likeness is doubtless generally very close.

I This is an example of the coinage of Cyzicus, a once celebrated town in Asia Minor, the province of Mysia. Its many temples and great public buildings still exhibit their ruins amid the overgrowing foliage of orchards and vineyards. The coin is from the Fourth century and bears the head of some Greek ruler of the period.

II Bears the portrait of Philip of Macedon, father of the great Alexander.

V This is generally regarded on good grounds as the head of Alexander himself. One would like to have a portrait of him further on in his life, although he died at thirty-three. But in the thirteen years of his reign, he certainly succeeded in compressing as much history as would satisfy several ordinary men. Many of his characteristics are ascribed to the influence and heritage of his mother, Olympias, daughter of the Molossian chief Neoptolemus, a woman of savage energy and boundless superstition.

IV Alexander Ægeus, son of the great Alexander. In these three coins we have, therefore, three generations of celebrity.

III Philista, wife of Hiero, King of Syracuse. Syracuse was one of the chief Greek cities of Sicily. The coin is from the Third century, B. C.

VI This bears the head of Arsinoë, daughter of Ptolemy I of Egypt, of the Fourth century.

VII The great Cleopatra.

VIII Antiochus Epiphanes. Several of the Greek kings of Syria bore the name of Antiochus. Epiphanes was the fourth and greatest, B. C. 175.

IX and X are obviously orientals, Arsaces the 13th and 6th of Parthia, the little state which offered the Grecian arms so great a resistance.

XI Menander, a Greek king of Bactria. Bactria and Parthia figure largely in Greek and Persian history. Judging by his face, this was a formidable person.

STUDENT

Alaskan Canoe-Building

ALMOST every boat used by the Indians along the British Columbian and Alaskan coasts is a canoe of the "dugout" type, as far as its construction is concerned. They are, however, entirely unlike the ordinary dugout made by savage tribes in different parts of the world. Such vessels are generally very clumsy affairs, quite unsuitable for any serious navigation.

The Alaskan "canim" is a marvel of workmanship, not only on account of its beautiful shape and finish, but also because the builder has to model the form quite a little different from the final shape he wishes to give the canoe. This is due to a peculiar and ingenious process of expansion, employed to obtain a boat wider than the log from which it is cut. These canoes are often thirty, and even forty feet long, and six feet wide, and they are cut from logs only about four to four and a half feet wide. The Indian craftsman begins by fashioning the outside, after which he hollows out the inside, estimating the thickness to a nicety by simply using his hands as callipers, one on the outside, the other on the inside. The average thickness is about one inch, and long practice enables them to make it surprisingly uniform.

The canoe is then so far ready, but must still be expanded to the desired width, and this is done by filling it with water and then keeping the water boiling, by means of red-hot stones dropped in, until the wood is softened. The thwarts are then inserted and serve to hold out the sides during the drying period, after which the wood maintains its form.

The shape of these canoes reminds one not a little of the old Norse Viking ships, and while these Indian canoes are much smaller, they are remarkably seaworthy and fast for both rowing and sailing. They certainly reflect great credit on their builders and help in their way to bridge the gulf supposed to exist between the Indian and his white brother. STUDENT

Number 13

THOSE who are fond of coincidences, and also those who fear the number 13, might study the following:

On Friday, May 13, on page 13 of the *Baltimore Sun* (it is this paper which tells the story) appeared an advertisement from the Baltimore and Ohio Railroad, notifying the public of

a particular set of trains. A newspaper man noted that there were to be 13 trains daily, on 13 tracks; that "hourly service," and "Camden Station" both had 13 letters, as also "hour on the road." The aforesaid observer immediately telephoned William E. Lowes, the passenger advertising agent of the Baltimore and Ohio, to tell him of the awful fact. After a few minutes figuring Mr. Lowes replied:

Never mind, old boy; you have 13 letters in your name, and I have 13 in mine, and I was born on April 13, on Friday; besides, the president of the railroad is the thirteenth, and his room is No. 13, Camden Station.

Japanese Wisdom

TRULY the West can learn much from the East. The following bit of wisdom, which was uttered by Yone Noguchi, the Japanese poet, in a recent conversation with an American, throws quite a little light upon the working of the Oriental mind:

Foreigners say we are secretive. Perhaps. It is this—nothing so very complex. We have an energy, simply that, and we direct it even at sleep time to where it shall hit.

Because it moves in dark as well as day, it is called—how is that word? Subtle. I do not deny if we are that.

Is there no English or American who is so? I fancy there are some that can move in dark without stumbling. We have not need always of lanterns, that is all. Simply, we are not like fish on the sand.

EVERY being is its own center, around which it moves.
