THE MYSTERIES OF THE HEART DOCTRINE

Prepared by
KATHERINE TINGLEY
AND HER PUPILS

The Theosophical book of the Twentieth century

Tells the story and the history of the Theosophical Movement Throughout the World; tells what it is and why it is —reveals the mystery of the Doctrine of the Heart.

The prices are \$2 in cloth and \$1.50 in paper, which barely cover the cost, for it is printed and bound, not gaudily, but with such carefulness and thoroughness of art and craft as to make it unique among modern edition books.

Order now from

The Cultured & the Rich in Need of Help

AMONG a multiplicity of schemes for the conversion, for the education, and for the upliftment of the masses, how is it we so seldom hear of any plan for improving the condition of the cultured and the rich? Who can question that we have here a field of labor ready for the plow-point, a field which might produce a more bountiful harvest than we should perhaps suppose?

In estimating the fundamental evil of the day we have exaggerated the value of economics and underestimated the importance of morality. We have, moreover, forgotten, or we have never yet learned, that every social malady is a disease of the whole community and not of one part of it alone. The slum is as much a part of the social system as is the palace

of luxury, and the blood-poisoning of the body politic shows itself as the slum upon one hand and as wealthy selfishness upon the other. Nor need we even ask which is the greater evil, seeing that they are both symptoms of the same ailment of selfishness. If the reform movements of the day were to devote themselves to causes instead of only to results, we should have less occasion to lament their inefficacy, and the sum total, and the average, of human happiness would increase.

It is fortunate for the race that there is today a very widespread desire to help, and a very genuine intention to dissipate some of the shadows which now lie darkling upon the waters of life. Wherever there is a hearty good-will, wisdom will surely follow in its train, and we have therefore every certainty that those who seem to have been favored by fate and fortune will presently recognize that it is largely within their power to lay their hands upon many of the mainsprings of sorrow rather than upon their results, and to permanently purify the river of life at its source.

Surely, the very beginning of such wisdom is the recognition of our own faults. Very few of us realize that he who has removed a weakness from his own nature has thereby sent a forceful thrill throughout the whole community, and that by purifying our own hearts we render the best of all services to humanity. Purification of the heart does not necessarily mean only the eradication of the grosser forms of impurity. There are very many who are comparatively free from such stains as these and who yet add to the collective calamities of the day by a systematic and contagious error of thought, by a persistent obliquity of mental sight. There are those who, to their honor, have never remained insensitive to the cry of human pain and who yet perpetuate such pain

Blood of the Nations Is Poisoned

by their caste distinctions and by their support of religious and social insincerities. There are those who are prominent in charity and in good deeds who yet educate their children along those very lines of selfishness which make that charity necessary. There are those who give of their substance readily and cheerfully to the poor, and who yet allow their children to inherit the belief that labor is ignoble, and that money carries with it only rights and no responsibilities nor obligations. These are the sources from which poison enters into the blood of the nation, and they are sources which are to be found within ourselves. However vivid may be our consciousness of the poisonous growths of civilization, let us see to it that we do not sustain and nourish them by our mental habits and by the thoughts which have perhaps become automatic. It may be that as we look more and more steadily and more and more regretfully and more and more intelligently upon the evils around us, so will come gradually and painfully the recognition that we ourselves have fed these evils, that we are still creating the calamities which we would destroy.

STUDENT

Mourning for the Dead

A DIGNITARY of the Episcopal church finds occasion for lament in the shortening of the period during which mourning is now worn for the death of relatives.

We should have thought that there were other things more worthy of lament than this. That mourning should be tolerated at all by the representatives of a religion which speaks of the "sure and certain hope of a glorious resurrection," is sufficiently remarkable, but that it should be recommended and insisted upon is one of those perplexing inconsistencies which tend to discredit the reality of the "sure and certain hope." The wearing of mourning is either a denial of religion or it is a frank confession of selfishness, and that the habit is now being curtailed or abandoned is satisfactory evidence that death is being robbed of the terrors which have never been anything else than the creation of a self-interested superstition.

The ordinary changes by which nature renews her glorious life, among which death is preeminently to be numbered, are never fit subjects for mourning, at least by those who have any true religious conceptions. Our tears may indeed be shed for the living, but never for the dead.

Capetown, South Africa—Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week gives an excellent bird's-eye view of Capetown, South Africa.

The Making of Laws

OF the making of laws, like the making of books, there is no end. Our legislatures have now become so prolific that their activity would be ludicrous if we only knew what to laugh at and what to weep at. During the last session of the United States Congress, which practically ended on April 23d, nearly 16,000 bills were under consideration, while the Senate contributed its little quota of over 15,000 bills. This is, of course, Federal business alone and exclusive of the State legislatures, which were equally active in telling us what we must do and what we must not do.

We may safely assume that a very large amount of this legislation is benevolently intended to make us better people. That is to say, it is promoted by those whose one idea of reform is to forbid other persons to do things which those persons wish to do, but for which the promoters themselves do not happen to have any inclination. We can only say that this reformatory legislation seems to be as ineffective as the anathemas which were launched against the Jackdaw of Rheims. The world goes on upon its selfish and painful way, undeterred by legislation and unaffrighted by Congress.

All the laws that we have ever passed, or are ever likely to pass, will not take the place of, nor can they judicially enforce, that ancient ordinance, "Thou shalt love thy neighbor as thyself." Civilization has learned with an extraordinary thoroughness how *not* to do things. Let us imagine what would happen if one-thousandth part of the energy now expended in making laws to which no one pays any attention, or is expected to pay any attention, were diverted to teaching unselfishness, not as a mere moral axiom, but as a part of the law of life. Let us imagine how immediately penal machinery would drop to pieces, stained and corroded as it is with injustice and with cruelty. Let us imagine how our legal codes would be swept away into museums before that other simple law of fraternity written upon hearts instead of parchments.

Is this so very impracticable? Would that it were possible to persuade those who sit in high places to try the effect of setting a key-note of altruism for the ear and for the heart of a nation! Men are willing to be led and are waiting to be led. At the bidding of a ruler, of a legislature, whole peoples will go to war for a cause in which very few of them can have any real interest whatever. How much the more willingly would they respond to a call which would be an echo of the voice of God?

The intense desire for place and power would today lose something of its force did we but know the dread and inexorable responsibility which goes hand in hand with them. From those to whom much has been given, much shall surely be required, and it will not be well for those who have mishandled the opportunities for which they have clamored.

Duty Day by Day

WE are too much in the habit of looking upon duty as a force which intrudes itself only upon occasion, only when some great choice must be made. It would be better for us if we so cultivated the sense of duty that it never for a moment left us alone, intruding ceaselessly upon the small things of life as well as upon the great. It is after all in the small things of life that character becomes the most legible, because it is these that show the bent and the inclination of the mind, the shape that the mind naturally assumes when left to itself.

The call of duty is incessant and not spasmodic. No thought, no action, can be so small that it is neither an ally nor an enemy of the soul; every deed must range itself either upon the right hand or upon the left hand. Duty is the sign post which is always to be read and the pure character never looks away from it.

An overwhelming amount is today being written and said about self-culture and self-development. It usually takes the form of recommending certain specific exercises which are to be done at certain specific times with a view to straining and twisting the mental muscles into some desired shape. The desired shape usually proves to be a deformity, as must inevitably be the case where ignorance is the physician. How much better would it be to cultivate a sense of duty, for which no engagement need be postponed and which does not wait upon the clock nor the almanac.

The greatest things are always the nearest to us, and the angel forms for which we seek to pierce the highest clouds are grouped around us all the time. The marvels of architecture were not built by a spasm, but stone by stone. Every structure whether of character or whatever else

it may be, is made up of an infinite number of infinitely small objects, but each one is placed with care where it ought to be and not anywhere else. The small acts of daily life are the stones of the building of which duty is the architect's plan. Every stone, however small, will remain where it has been placed, either a part of the plan or as a deformity. What should we say of the builder who followed the architect's plan only during certain specified hours or at certain points which appeared to be crucial? Duty is a good master to work for and quick to reward. By consistent and unquestioned obedience we throw open all doors of knowledge, we become charged with the most gracious of all wisdom. This is the true solvent of all perplexity, a solvent which fails us at great moments only because we have neglected it at other times. This was perhaps partly the meaning of Christ when he said, "Whatsoever thy hand findeth to do, do it with thy might."

STUDENT

Herbert Spencer and His Opinions

HERBERT SPENCER'S autobiography is likely to attract a good deal of attention if we may judge of its substance by the brief extracts which have been communicated in advance to the press.

We have already commented upon his estimate of Carlyle, and his opinion of Ruskin is no less condemnatory and for very much the same reasons. Spencer does not seem to have clearly understood the motives which animated other men, or that the work of a heart hot with the desire to help is no less effective because its words are not tricked out in the garb of a precise logic. Ruskin exercised a profound and wholesome influence upon the thought of the day, but that influence would have been neither so profound nor so wholesome had he forced his writings through the mould of the precisian. He spoke to men as they are and in the language which they best understood and the number of those who are the better for his work must be very great. That is the success which he wanted.

Spencer's comments upon classical studies are no less illustrative of what we may call his benevolent mental intolerance. He finds it hard to understand why so much importance should still be placed upon the languages of two extinct peoples and upon familiarity "with their legends, battles and superstitions, as well as the achievements . . . of their men and the crimes of their gods."

Our methods of classical study are certainly open to criticism, but not upon this ground. We should, for instance, like to see our students learn Greek in order that they may study Homer, instead of studying Homer in order that they may learn Greek, but so far as a knowledge of Homer is the ultimate result, very much has indeed been gained. Spencer finds it hard to understand why the study of the classics maintains its hold. Is it not because the classics convey a subtle message of the divine truths which underlie their seeming frivolities and their ferocities, is it not because they call forth a response from some not understood part of our nature, some welcoming assent from a part of ourselves which is above and beyond the intellect? The wanderings of Ulysses, the story of Troy and of Argive Helen seem to the mind but little more than a poetic foolishness, and yet they stir within us something of a fugitive and a phantom approval, something of tender, regretful reminiscence, and something too of prediction. We have lost our hold of the living drama of the soul which underlies them. The curtain has fallen upon the inner stage and the lights are flickering almost to extinction. We have gone out into the glaring unrealities of the world but old memories haunt us still, refusing to be banished and laying upon us a spell by which we know that some day we must return, even as Ulysses returned, and that all darknesses and all dangers, all follies and betrayals, all perils by sea and by land will be the laurels of wisdom and the crown of victory.

STUDENT

A Warning!

TO the young woman promised employment at good wages in St. Louis during the fair: Don't go. Procurers are plying their nefarious calling throughout Iowa and adjoining States, and are selling their victims into the worst form of slavery. The allurements of good positions and high wages is the bait offered by those who claim to represent respectable employment agencies, but are, in fact, emissaries of the Devil. No girl should go to St. Louis unless accompanied by a friend or met by friends on her arrival there. Otherwise the gates of hell yawn for her.—*Keokuk Gate City*

Some Views on XXth Century Problems

Vivisection & Cruelty Not Science

THE New York *Journal*, to its credit, prints a forcible and pathetic protest against the vivisection of dogs. It very truly says that the spectacle of a great University, "purchasing and stealing dogs for such purposes is revolting to every man who loves the animal most closely associated with the human race."

Protests such as these are not ineffective. Cruelty detests publicity, and there is no evil in the world which can resist an aroused moral sentiment. With the inner motives of vivisection we have nothing to do. We can well believe that there are some few operators whose perverted interests supply them with some kind of self-justification. Knowing what we do of the human heart, or rather the want of heart, we can also believe that there are very many others who are animated only by a cruel sensationalism, a morbid delight in the infliction of agony, and we are compelled to this belief by their own words.

There are eminent authorities who maintain that no benefit to humanity has ever accrued from vivisection. That, however, is not the question. The end does *not* justify the means, when the means imply the disregard of an elementary and basic moral law. If such a pernicious axiom is truly to be the basis of our social life, where is the end? If vivisection of animals is of benefit to medicine, why not also, and to a much greater extent, the vivisection of men? The children of darkness are wiser than the children of light, or at least more logical, and already we have an increasing demand for the vivisection of criminals. But if of criminals, why not also of others? Why not vivisection children whom no one wants? A depraved science could easily excuse and defend it. Why not vivisection the poor and dwellers in slums? They are far more plentiful than dogs and of no value except to God. All these things can be defended with the same hypocritical favor of humanitarianism to which we are so nauseatingly accustomed. The fact of the matter, of course, is that human beings, poor human beings, are already vivisected, and the operators hardly condescend to conceal their crimes. This is due to the impunity which we have accorded to them in the matter of animals. Vivisectioners are nearly always materialists and they know of no dividing line between men and animals. The man who would vivisection a dog would probably vivisection a child under the undiscoverable pretense of medical or surgical treatment. It would therefore become us, and especially the poor among us, to be increasingly careful as to the hands and as to the hearts of the men to whom we entrust our lives. The medical profession is perhaps the noblest of all others. Let us discourage whatever may debase it.

STUDENT

Capital Punishment No Remedy

A CONTEMPORARY comments upon the recent execution of the three young Chicago bandits. This execution should, we are told, have a deterrent effect on this class of desperado. We are also informed that the more frequent are these instances of exemplary punishment the fewer will be the outrages in question.

We would suggest to the writer of this complacent paragraph that he make himself familiar with the history of penology, a point of education which, in his case, has evidently been neglected. The almost unanimous testimony of civilization is to the effect that the death penalty does not decrease crime, and very many countries have abandoned capital punishment, not alone on the ground of humanity, but because it is inefficacious. It is, of course, based upon the principle of revenge, which is very similar to the crimes which it professes to punish. The community which hangs a murderer has itself committed the crime of murder, and it has committed that crime deliberately, and through that section of itself which is the most highly educated and which ought therefore to be the most incapable of its commission. So far from capital punishment being based upon the principle of self-preservation, it is opposed to that principle, inasmuch as it sets to the whole community an example of bloodthirsty violence which the morally irresponsible are quick to admire and to imitate. Of all our institutions, that of capital punishment is perhaps the most stupid.

STUDENT

Queer Medical Science Practised

HAD we either the time or the inclination to think, we should stand aghast at the spectacle of medical science doing its utmost to preserve the life of a would-be suicide in Chicago, in order that the law might in a few hours' time ceremoniously take that same life for the crime of murder. We are quite aware of all the logical nonsense which is said in excuse, and we are also quite aware that the medical authorities of the prison are the only ones concerned who can afford to remember the whole sickening story without shame. Their duty was to save life under all circumstances, a duty dictated by more merciful laws than those of men, and they did their duty.

We should have thought that this abominable piece of social history would have produced a spasm of wholesome reflection throughout the community. It may have done so, but it has not yet become articulate. The account of the crimes of these wretched boys, and of their judicial murder, with all its revolting concomitants of suicide, "repentance" and bravado, has been received either with the silence of apathy or with pharasaical purrings of satisfaction that the "law has been vindicated." We have yet to learn that the Law, the Law of Mercy, and Justice and Compassion, has been vindicated, but it surely will be—to our abiding cost.

STUDENT

Children the Victims of Ignorance

THE following letter appears in a contemporary, and we give to it all the further publicity in our power:

I read in your issue of today the account of the inquest on a child fifteen months old, whose death was caused by improper feeding, the foolish and ignorant mother having given it meat, cheese, bread and tea, but no milk. I am sorry to tell your readers this kind of thing is going on all over the country, and yet nothing is being done that I can hear of to put a stop to this cruel slaughter. I am constantly traveling, and am always amongst the working classes, and in every home I visit I see children being poisoned and ruined by improper food, tea drinking, etc., etc. It is high time that the government insisted on lessons on the laws of health, the chemistry of food, pure and natural diet, and frugal vegetarian cookery, etc., being given in every school.

To many of our readers the opportunity must often present itself to tactfully instruct some mother or father in the right way to feed a baby. Health lectures in schools would no doubt be very valuable, but the individual feeling of helpfulness toward those directly within our sight would be more valuable still and not only to those who are helped but also to those who help.

STUDENT

Labor Has No Degrading Effect

A HIGH educational authority has just advocated an increase in the number of our manual training schools. He says that by these means we shall counteract some prevailing notions about the *degrading effect of labor*.

Are there such notions in America, except among those whose inanity disqualifies them from consideration? If this is really so we would suggest to those who hold such opinions that whoever by his labor does not add to the wealth of the community is living at the expense of that community and is therefore a pauper and a parasite. He who does not labor, morally, mentally or manually, and so give something in return for the food which he eats, the clothing which he wears and the house which covers him, is stealing all these things from those who do labor, and is therefore a criminal. There is no man of understanding or of intelligence who will dispute the judgment of Ruskin when he said that "life without industry is guilt."

STUDENT

The Evils of the Modern Daily Paper

THE Episcopal Bishop Coadjutor of New York is keenly alive to the evils of some aspects of modern day journalism. He recently said:

It preaches every day, and many times a day. It is the only church that some people know. Does it do good? Does it make for righteousness? On the contrary, we find the most successful to be low, vicious, scurrilous, scandalous, or personal and frivolous, with flashing headline type, catering to indecency, audacity, and hunting vice, bringing it before the people morning, noon and night, with extra meals between times. Why is all this? To make the paper sell.

Art Music Literature and the Drama

The Music of the Kaffirs

THERE is a general impression that the Kaffir has no music of his own, and it is certainly true that European civilization, in teaching him the vices rather than the virtues, is having a somewhat destructive effect upon the musical life of the native African. His own unique musical instruments are already disappearing from view before the invasion of the modern jew's-harp and concertina. It is unfortunate that, instead of displacing the harmless music of the Kaffirs, we do not discover in it a foundation upon which to build.

The Kaffir sings almost constantly while at work, a curious intonation or chant, which he sometimes keeps up for hours. His instruments are primitive, one being a sort of elaborate jew's-harp, another a quaint instrument with strings. A third, the *vali*, is a stringed instrument, in which the strings are actually made out of the fiber of the instrument itself. If a fiber breaks all the player has to do is to make a couple of incisions in the body of the instrument and pry up a fresh string. The *kinanda-kinubi* resembles in form the ancient Greek lyre. Then too, there are reed and percussion instruments, a horn and the *malooch*, or double flute. Of drums there are varieties without end, of course. It is a practically unexplored field, and one wonders why missionaries have been so oblivious of its possibilities.

STUDENT

PHILIP GILBERT HAMERTON, the art critic, used to say, "The English have invented the house, but the French have invented the street." He was right. We have few American cities whose inhabitants might not study with profit the marvelous plans which converted Paris from an unwholesome, narrow-streeted, unpleasant city, with a death rate four or five times as great as that of which it boasts today, into what is undoubtedly the most beautiful city in the world. The work of reconstruction in Paris was inaugurated by Napoleon, following very quick upon the overwhelming changes wrought by the French Revolution. To quote Frederic Harrison:

This transformation, the most astounding that Europe can show, fills us ever anew with a profound sense of the power which for a century has animated the municipal government of Paris; of the energy, wealth, industrial skill, artistic imagination and scientific accomplishments that have gone to the making of it. To plow miles and miles of new boulevards through the most crowded lines of an ancient, populous and busy city; to transform a network of Ghettoes into a splendid series of avenues, squares and gardens; to eviscerate the heart of a great capital and to create symmetry, sunniness and convenience, gayety and variety out of inveterate confusion, gloom, discomfort and squalor—this impresses the mind with the visible signs of imperial might in the ruler and of inexhaustible versatility and adaptability in the governed.

MENDELSSOHN once wrote in a letter to his father, "I have lately expressed myself roundly in a little company to one of the musicians here. He wanted to pass judgment upon Mozart; and, because Bunsen and his sister loved *Palestrina*, he tried to ingratiate himself in their favor by asking me what I thought of the good Mozart and his sins. I replied, 'I would gladly exchange my virtues for Mozart's sins.' How shocking that people have no respect for a great name!"

A Glimpse of an Artist's Life

WILLIAM M. HUNT, the great American artist who was for some years a pupil of the painter of *The Angelus*, gives the following interesting account of Millet's methods: "You ask if he painted much out of doors. He used to take walks, and look at things, and study them in that way. We would start out together, and perhaps come to a cart by the roadside. We would sit down, and he would make me notice how it sagged, and how the light fell on the wheels, and all sorts of things about it, anything was interesting to him. We would be out all the afternoon, and perhaps walk no more than half a dozen rods.

"Sometimes we would go up to Paris to the Louvre, and he would lead me up to a Mantegna or an Albert Dürer, and show me what were the great things. After Mantegna he would say, 'Now, where is your Titian?' He always said he did not care to go to Rome. He could see great pictures enough in the Louvre.

"The country people about him did not understand him very well, and he was high and dignified with them. One day we hurried up to the railroad station at Fontainebleau, after a long walk, in blouses and sabots, like workmen; for he was a workman, and I was proud to call myself one. We were hungry, and the train was going off in fifteen minutes. I gave an order to the waiter, who was uncivil and laughed at us. Millet looked up, saying deliberately and paternally, 'Mon garçon, vous êtes d'une gaieté extraordinaire!' The waiter was entirely subdued and served us as well as he could.

"Millet would say that any artist could go to the East and paint a palm-tree, but very few could paint an apple-tree."

WOLFGANG AMADEUS MOZART

SAY on, sayers! sing on singers!
Delve! mold! pile the words of the earth!
Work on, age after age, nothing is to be lost,
It may have to wait long, but it will certainly come
in use,
When the materials are all prepared and ready, the
architects shall appear.—Walt Whitman

are the prose poems. While some of these have been published, it is probable that between three and four hundred legends still remain untranslated. Of the bardic poetry of Ireland—the poetry of the hereditary bards who were attached to the houses of kings and chieftains in the old days—next to nothing has yet been published. The future holds for us many surprises.

STUDENT

ACCORDING to a recent circular sent out by the Minister of Public Education, France, singing is henceforth to be a compulsory accomplishment among French school boys. The new order is to make its start with a composition by Saint-Saens.

IF YOU look around in modern music you will find that we have a terrible deal of mind and astonishingly few ideas.—Ambros

RICHARD STRAUSS said recently: "I believe in the old masters; for Mozart especially I have a great love."

WOMAN'S WORK

WHAT the poem is to those whose hearts go out to the sorrows of the world and

who long to give voice to their compassion, what the temple is to the builder, what the song is to the singer, all this is the Indian basket to some of the women of our little Indian villages. And yet, just as temples may be builded for money on one hand, and for humanity's sake on the other, just as songs may be sung for love or for gold, so it is with the marvelous basketry of our Indian tribes. In the collections of our *connoisseurs* may be found here and there baskets never meant nor woven for the market, but much of the basketry that is found in our stores speaks of sordidness rather than of the loving artist touch.

Indian basketry, the one link that is being kept unbroken, and which today serves to bind the higher industries of a prehistoric past with those of that greater future when much that is now dying shall be revived, is almost entirely the work of Indian women. To be the best weaver in the village means to the Indian girl to have plenty of suitors and this has been one factor in preserving the simplicity and the exquisite beauty of some of the weaves, although many of the most beautiful are now obsolete. Not only are the baskets an absolute necessity in every Indian household (they are often used for carrying and storing water, and some of the Pacific Coast Indians even boil their food in baskets by means of hot stones) but they play a unique part in all of the religious ceremonies. The finest basket weavers in the world are the women of the Aleutian Islands. There, during the short summer, the workers gather and dry the grass which grows luxuriantly, and carefully gather and store away the roots of spruce; and in the winter, which is long and damp and dreary, they weave their marvelous baskets, a single one sometimes requiring months of work. The finest are of circular shape and are very flexible. In some the weave is so fine as to resemble *grograin* silk. Bits of silk, soft tiny feathers from ducks' heads or from the woodpecker are interwoven, and occasionally they weave in, pendant, beads or polished bits of shell. It is small wonder that some of the Aleutian baskets possess a kind of fascination and seem to carry a message and a meaning of their own.

When one considers the shut-in, dreary lives of those who make them, women who have the same sorrows, the same despairs and the same aspirations, perchance, that belong to women the world over, what wonder that occasional Indian baskets are verily woven poems, freighted with meaning and with almost spiritual beauty?

A book might be written on the simple materials used, by some tribes stems of willow, ozier, vine-maple, the swamp-ash and even the fiber of yucca which is used before it is hardened, while it is still green with the sap. Even the roots of young spruce and cedar are pressed into service, corn husks, hazel and wild hemp. The very simplicity of the material appeals to the *connoisseur*.

But from the birch bark and quill-sewed baskets of the Lake Superior

The Weaving of Indian Women

Indians to Hopi baskets of Yucca and fine grass; from the willow-woven articles of the Havasupais,

from those of tule root and squawweed made by the Southern California Indians, to the finest and most delicate baskets made by the Aleuts themselves, all possess unique and, so to speak, sympathetic beauty.

A lady missionary to the Indians was once asked if she encouraged her "converts" in the art of basket weaving.

"By no means," she replied, "I do not believe in encouraging any but the Christian arts!"

But how many of the Christian arts, that is, in textile work, are fashioned by those who have the same perception of textile beauty and of the pure and simple in design as have the women of our Indian tribes?

Basket weaving is an art, not a craft merely. And the Indian woman declares her fellowship in an artist-guild when she strives for beauty of form and symmetry of outline, when, in the ornamentation, she uses the pure beauty-forms of the old Greeks.

The very perfectness of the stitch, the delicacy of the fiber often used, the gentle sense of fitness with which the Indian woman assigns, by her very attitude of mind, to its own caste and rank and its own sphere of usefulness, the basket she is weaving, all these reveal a certain moral quality, a certain sensitiveness to pure beauty, which humanity can ill afford to lose. There have been Indian baskets which are better than philosophy, for they enable one to know philosophy.

STUDENT

BASKET WEAVERS OF THE ALEUTIAN ISLANDS

A CERTAIN Miss Craige has returned to her home in New York after having spent some eight years among the Indians of Canada. As a child she was much interested by the Hiawatha legend and became impressed with the idea that the whole story had not been told. Believing that the entire legend was known to certain tribes of red men and that the knowledge of it contained a key to the origin of the Indian race, she first went among the Micmacs in Canada, then to the Montagnais tribe in Quebec—but without success. Then she went among the Hurons and later entered the camp of the Ojibways. Here she found the old, old, story that survives in traditions of all peoples and all tribes, the story of the Great Teacher who came to men from the "Land of Light."

The Ojibways sent her on a five-hundred-mile trip to the land of Tamagami, north of the Great Lakes, where they told her had once dwelt *Mitchiewauben*, their God, the great Light of the World. They also told her of their origin, their belief that the world was once all good and that it fell into wickedness through the folly of men, and that *Mitchiewauben* came to teach men *what they had forgotten*. It was he who taught them the legend of the "light of the world."

It is the same old story, and known to all people, savage or civilized; the faults of man, the darkness, the despair and the sin, and the coming of the Great Teacher, with his message of light and of peace. E.

Recrudescence of Red-Indian Art

MISS McDOUGAL (in *The House Beautiful*) calls attention to the more and more marked tendency of certain American arts—basket work, pottery and metal work—to hark back to aboriginal (red Indian) models.

She suggests various reasons, each possessing doubtless some force. One is the tendency of each individual, group, or nation, to recapitulate briefly, in the earlier stages of its development, stages formerly traversed by humanity at immensely low rates. Thus these American arts above named are to be supposed to be now recapitulating the primitive stages of the red man.

Another reason is that they require less "plant," fewer tools, small money outlay. But perhaps a more weighty reason is *infection from the past*. That may sound very mystical and yet be valid. Our ancestors far, far back (perchance ourselves?) may have dwelt on this land before history knows. And so we, returning, take up the race memory.

There was once a connection, as Katherine Tingley has asserted and as is becoming slowly obvious, between the civilizations of old Egypt and old America. Speaking of the basket work, Miss Mc-

Dougall says: "These simple shapes, with their black, brown, red or orange patterns, *that suggest Egyptian hieroglyphics*, and symbolic ornaments of zigzags, bars, lozenges, etc. . . ."

They do indeed suggest that, some of them. Indeed we have seen markings and patterns on genuine Indian basket work that might have bordered the sarcophagus of an Egyptian mummy. K.

A Woman Astronomer

CLOSELY linked with the name of her husband, Sir William Huggins, President of the Royal Astronomical Society of England, is the name of his wife. As a young woman she had considerable knowledge and skill along astronomical lines, and since her marriage she has worked shoulder to shoulder with her husband, and has been sharer with him in his most important discoveries. Sir William Huggins himself is best known as the founder of the science of "Astro-physics." It is the custom of husband and wife to make observations every night in a private observatory next to their home.

"To be frank, I scarcely feel that there is a career for women in astronomy in England," said Lady Huggins recently. "There are few observatories, for one thing, and that means limited opportunities. Greenwich, the only observatory that did employ women, no longer does so. Then, too, the English climate is most unfavorable. Between the northern and northeastern winds, which bring fog and general cloudiness, observers have a difficult time. Indeed, it seems to me the first requisite for an astronomer in this country is a broken heart."

For many years Lady Huggins has been joint author with her husband of all his contributions to learned societies, as well as of a large atlas. "It seems to me," she has said, "more difficult to be a thoroughly good assistant than to work alone, because an assistant who is determined to be all that a good helper should be not only has to do his own duty, but try to lead the other to do his best." During the last year Sir William and Lady Huggins have been engaged on experiments with radium, and they have succeeded in bringing another of its mysteries to light, viz: that radium, at quite ordinary temperatures, is capable of making nitrogen give a bright line spectrum.

STUDENT

Indian Basketry

OTIS T. MASON, of the Smithsonian Institution, says: "There are no savages on earth so rude that they have no form of basketry. The birds and beasts are basket-makers, and some fishes construct for themselves little retreats where they may hide. Long before the fire-maker, the potter, or even the cook, came the mothers of the fates, spinning threads, drawing them out and cutting them off. Coarse basketry or matting is found charred in very ancient sepulchers. With few exceptions women, the wide world over, are the basket-makers, netters and weavers."

Also he says: "A careful study of the homely occupations of savage women is the best guide to their share in creating the esthetic arts. Whether in the two Americas, or in the heart of Africa, or among the peoples of Oceanica, the perpetual astonishment is not the lack of art, but the superabundance of it.

"Call to mind the exquisite sewing of the Eskimo woman with sinew thread and needle of bone, or the wonderful basketry of all the American tribes, the bark-work of Polynesia, the loom-work of Africa, the pottery of the pueblos of Central America and Peru. Compare these with the artistic productions of our present generation of girls

THE WORK OF INDIAN WOMEN

and women at their homes. I assure you the comparison is not in favor of the laborer's daughters, but of the daughters and wives of the degraded savage. In painting, dyeing, moulding, modeling, weaving and embroidery, in the origination first of geometric patterns and then of free-hand drawing, savage women, primitive women, have won their title to our highest admiration."

MAC MURRAY relates the following as having been told him by one of the Yakima chiefs—a tribal legend: "The world was all water and Saghalee Tyee was above it. He threw up out of the water into shallow places large quantities of mud, and that made the land. He made trees to grow and he made a man out of a ball of mud and instructed him in what he should do. When the man grew lonesome he made a woman as his companion and taught her to dress skins and to gather berries and to make baskets of the bark of roots, which he taught her how to find. She was asleep and dreaming of her ignorance of how to please man, and she prayed to Saghalee Tyee to help her. He breathed on her and gave her something that she could not see or hear or smell or touch, and it was preserved in a little basket, and by it all the arts of design and skilled handiwork were imparted to her descendants."

THERE is an ancient Indian legend about the coming of Montezuma, the Indian Christ. At one time when the Indians were about to perish from a drought—for they lived in a rainless land, where the water of three great springs supplied their needs—they prayed for rain. Two of the springs had become exhausted and the third was failing, and yet no rain had ever been known to fall. In that time of extremity one of their maidens went out and, tradition says, turned her face toward the east and plead with the Great Spirit that the Deliverer might come, the rain. While she waited, expectant and tense, a cloud appeared upon the horizon, ascended the zenith, and drops began to fall. It was this maiden who became the mystic mother of Montezuma; such is the Indian legend.

ONE of the students at the University of California is Miss Laura M. Cornelius, an Oneida Indian. It is her intention to devote her life to preserving the language and literature of her people.

THE International Brotherhood League's humanitarian work has accentuated most forcefully some of its principal objects in Cuba. Following the great work done at Montauk, in hospital service to the hundreds of soldiers, of the Hispano-American war, began the work in Cuba for the benefit of the suffering people there. In the great palace of the Plaza Dolores thousands of suffering people—the homeless, and the hungry, and the sick—flocked to receive help from the kindly hearts working there.

Encouraged by President McKinley in this work, and with the generous assistance of the United States Government, this League, as the records show, lavished care and food and encouragement on thousands of these poor hearts. Later, began the educational work, under the auspices of this League. In the year of 1902, the first Raja Yoga free school was established in Santiago for boys and girls. Preceding this effort, a very large number of Cuban children had been placed by the League for a free home and education at the Raja Yoga School, Point Loma, California, the World's great International Center of Theosophic life. Many of these children were orphans, their fathers having died in the service for Cuba, their mothers of sickness and starvation. Some were half-orphans, the fathers having died in the war, or the mothers being unable to care for them and give them the proper education. A very small number were sent by the League whose parents contributed in part to their support and education.

Today, the League's work has grown in Santiago alone to two large schools—one, the free day school, the other, the Raja Yoga Academy. This is, to a degree, the second edition of the Point Loma Raja Yoga School. The children live at the Academy. Most of these children are placed there by parents who are able to pay for their full tuition, but a number are admitted for free support and education under the heads of "Orphans" or "Half-Orphans." In September another school will be opened at Las Cuabas, Cuba. This will be similar in character to the Raja Yoga Academy in Santiago.

The influence of the work of the International Brotherhood League, in Cuba, is already incalculable. It has moved into the home life, imparting that quality of help that the suffering Cubans need, sympathy and encouragement, and knowledge of Raja Yoga that binds in closer harmony child to parent, and parent to child.

The work of Walter T. Hanson, acting President in Cuba, for this League, his wife Estelle Hanson; Mr. Turner; Miss Bolting; Miss Lester; Dr. Gertrude Van Pelt; Miss Ethel Wood; Mr. Frank Knoche; Miss Nan Herbert; Miss Pidge; Mrs. Anderson; Mr. Reinemann; Mr. and Mrs. Sederholm; Mr. C. Woodhead; Sta. Antonia Fabra and the little crusaders of the Raja Yoga School at Point Loma—these workers stand out as having accomplished noble things for the good of Cuba and its people, in this educational work for the real life that serves for the making of men and nations. The public entertainment of the Cuban Raja Yoga children, in the great theatre at Santiago on May 12th, and the grand reception of the Raja Yoga children at their Academy, have struck a new note for Cuba; a convincing one, to many, who have heretofore been influenced by a certain class of unchristian-like workers in Santiago, who profess not only to be followers of Christ the Just, but to be workers in his Cause. It might be well to mention that it was in Cuba that the enemies of the Theosophical Movement from America first focused their hidden

DOMESTIC ECONOMY CLASS, RAJA YOGA ACADEMY

the Work and the Achievements of the Free

at SANTIAGO DE CUBA

efforts, to destroy its beneficent work. Some day, a very interesting book will be published, which will introduce some of the prime features of this unrelenting persecution. Sr. Emilio Bacardi, Mayor of Santiago, one of Cuba's oldest patriots, has always stood boldly in defence of the International Brotherhood League's Humanitarian work. His love for Cuba and for its permanent liberty, ever has held him in right reason and right action. The newspapers, *El Cubano Libre* and *La Independencia*, have also most courageously helped in this great and good work. Katherine Tingley's pioneer work in Cuba was most nobly sustained there by Mrs. Richmond Green, Dr. Herbert Coryn, F. M. Pierce, Ralph Leslie, K. M. Lundberg, Miss Isabelle C. Morris. These Brotherhood workers, from all parts of the world, helped to impress the International spirit of this new nation. Sta. Antonia Fabra of Santiago de Cuba, has been a most helpful factor in advancing the interests of her country in connection with the League. In the year 1899, as a Cuban Representative of the International Brotherhood League, she accompanied Katherine Tingley to Europe, and was introduced by Mrs. Tingley to Oscar, King of Sweden.

The perfect knowledge that King Oscar had of the Spanish language, enabled Sta. Antonia Fabra to bring to His Majesty's attention the real condition of Cuba, and the hopes of its people for a glorious future. Sta. Fabra is now a student at Point Loma, California.

OBSERVER

THE artistic entertainment announced to take place last evening, given by the children of the Raja Yoga Academy on the occasion of the termination of the scholastic year, lasted from 8 to 11 P. M., and was simply beautiful from beginning to end.

Without exception, every one of the pupils of the Academy, children for the most part, extorted thunders of applause and involuntary expressions of admiration from the audience present, who sensed a real soul-touch in the magnificent *salon* of the Heredia-street building. This latter was decorated with such simplicity and refinement that it seemed worthy of being compared with the best taste of old Hellas—an almost unknown quality to certain vulgar minds.

The fifteen numbers on the program were executed without exception, and the children therein gave startling proof of their great progress in calisthenics, English, song, and Spanish readings, etc. The different living pictures appeared like actual pages torn from one of Perrault's tales.

Sr. Emilio Bacardi, Mayor of Santiago, in the telling but brief address he gave the pupils of the Academy at their own request, pointed out with emphasis that such attractive and wise ways of instructing youth enabled these latter to far more easily grasp the meaning and benefit of true education. He ended his address with his hands full of flowers, a tribute from the pupils.

Most cordial congratulations are due both the professors and pupils of the Academy; and especially so to Miss Bolting, Mr. Turner and K. E. Reinemann.

The cause of true education and culture, and of true humanitarian feeling, will always command our heart, our pen, and whatever else we possess of value to it. —From *El Cubano Libre* of May 13, 1904, Santiago de Cuba

Universal Brotherhood Organization

Central Office Point Loma California

THE meeting of The Universal Brotherhood Organization at Isis Theatre on Sunday night

was well attended, and the program was unusually full. The music provided by the Point Loma students was of the customary excellence, and the large audience appreciated it thoroughly. The first address was by Mr. Robert Crosbie on "Theosophy Is Unsectarian and Universal." It drew attention to the identity between Theosophy and Christianity, when the artificial and man-made creeds which surround the latter have been cleared away. "Theosophy," the speaker said, "knows no higher mission than to destroy the sectarian spirit by insisting upon the pure and simple teachings of Christ. Are the sects in disagreement as to the meaning of 'Thou shalt love thy neighbor as thyself'? Is there any difference of opinion between the sects as to His meaning when He said, 'The pure in heart shall see God,' or 'Blessed are the peacemakers'? Do any knotty theological problems center around such words as these? These are the words of Christ and they embody Christianity."

Mr. Crosbie's valuable paper was followed by a quartette of boys from the Raja Yoga School, whose appearance and whose performance were loudly applauded.

Miss Bergmann's paper on "Theosophy in Sweden" was peculiarly interesting, as affording a glimpse of Mrs. Katherine Tingley's activities in the other countries of the world, which appear to be as energetic and, relatively speaking, as successful as they are here. Miss Bergmann is celebrated as a professor of singing, and she has been a prominent supporter of Theosophy since she first met H. P. Blavatsky in London many years ago, being now the Point Loma Representative of the Stockholm Lodge of the Universal Brotherhood and Theosophical Society, traveling back and forth on her mission. Referring specially to her intercourse with Mrs. Tingley, Miss Bergmann said:

"In 1896 some of our Swedish delegates met our present Leader, Katherine Tingley, while she was in Europe on her first crusade around the world, first in Dublin and then in Berlin. This meeting was a profitable one for our future Theosophic work. They returned to our country, filled with reverent love for her and fired with a devotion to help her carry out her work for humanity. In 1899 she came to Sweden and there lighted spiritual fires which can never be extinguished. Many people not before interested in Theosophy were attracted to it then. It was at this time that Katherine Tingley met King Oscar of Sweden, re-

'Our Dead Heroes,' By a Raja Yoga Lad---'Theosophy in Sweden'---A Delightful Program

Reprinted from the San Diego News

ceiving from him the most courteous consideration. His great efforts as a Master Mason have marked his life for good."

Miss Bergmann's address was followed by a few words on "Our Dead Heroes," by a little Raja Yoga boy, Iverson Harris, who was thus appropriately chosen to touch upon the forthcoming assembly of

the G. A. R. in the Isis Theatre. His concluding words were as follows:

"They, our heroes, speak to us today a new speech; they shall, in the memory of their noble deeds, challenge us to GREATER ONES. They call upon us to *arise* to our *Nation's need*, and give unto it that part of ourselves which shall work FOR SWEET LIBERTY ALL OVER THE WORLD; they plead for justice and mercy and tolerance and love. They say, if justice were in the hearts of all men, liberty would rule the nations; they say, if mercy guided the doings of the Nations, light would come to make clear the path; if tolerance held sway, all differences would disappear; if love ruled, hate would die, and the Angel of Peace would become the guiding star to all Humanity.

"In the upper air can be heard the song of Peace—Peace—Peace. Let us chant it again and again, until it resounds throughout the world.

"WE SALUTE OUR HEROES IN LOVING TRIBUTE."

We understand that Mrs. Tingley has found a special pleasure in arranging that the stage decorations which attracted so much attention on Sunday, shall remain in position for the G. A. R. Assembly. Certainly no more beautiful tribute could be devised.

The next item on the program was by a little Cuban boy who made a very pathetic appeal for aid in enlarging the Cuban Raja Yoga Free Schools. Describing the immense work which Mrs. Tingley has already accomplished in the Island, he said:

"The Cubans are very grateful for all this. But they need more buildings; more books; more food and clothing for some of the little ones, and much money must be used to take the teachers from America there.

"I am a Cuban. I love my country. I want education in Cuba to make people better and happier. I mean to help them when I grow older and to take back to them something of what I have learned in America."

The concluding item on the program was a short address on "What Theosophy Is Not," a subject which is becoming increasingly unnecessary, at least in San Diego.

Raja Yoga in Cuba

From *La Independencia*, May 13, 1904
Santiago de Cuba

THE entertainment organized by the Raja Yoga Academy, of this city, was given last evening, as had been announced, and proved to be both full of charm and animation. The program, as varied as it was interesting, was faithfully interpreted by the following, who received hearty and merited applause for their efforts: Emilia de Moya, Juan del Valle, Josefina Ros, Luisa Escanaverino and Lucia Bacardi. The entertainment consisted of exercises, marches and living pictures of charming diversity. Lucia Bacardi, daughter of our respected Mayor, gave an interesting talk on "What Is Raja Yoga," while Sr. Emilio Bacardi, on the request of those present, delivered an address which evoked vigorous applause.

Rarely has a more agreeable evening been spent than that celebrated yesterday by the children of the Raja Yoga Academy, with their festival.

The large audience present applauded with real enthusiasm, every one of the numbers on the program.

The professors and pupils of the Raja Yoga Academy deserve the sincerest congratulation for their exquisite entertainment.

AMBITION is but avarice on stilts and masked. God sometimes sends a famine, sometimes a pestilence, and sometimes a hero, for the chastisement of mankind; none of them surely for our admiration.—*Walter Savage Landor*

SENIOR PIANO CLASS IN FREE RAJA YOGA SCHOOL, CUBA

Brotherhood the Law

Read at a Lodge meeting of The Universal Brotherhood

BROTHERHOOD means to me that the whole of humanity is a unity, and is subject to the same law of growth. I believe that the unity of mankind will one day be accomplished. Since this is our great aim, is it not our duty to aid it by all means in our power? When each of us, loving all men as brothers, shall act to each other like brothers; when each of us, seeking our own well-being in the well-being of all, shall identify our life with the life of all, and our interest with the interest of all; when each shall be ever ready to sacrifice himself for all the members of

the common family, who are equally ready to sacrifice themselves for us—most of the evils which now weigh upon the human race will disappear, as the gathering mists of the horizon flee at sunrise, and the will of God will be fulfilled.

"Neither shall any say, Lo here! or, Lo there! for behold the kingdom or brotherhood of God will be within ourselves." F. F.

SHOULD we be less merciful to our fellow-creatures than to our domestic animals? Before we deliver them to be killed, we weigh their services against their inconveniences. On the foundation of policy, when we have no better, let us erect the trophies of humanity.—*Walter Savage Landor*

TO CONDEMN is to glorify oneself over the man one condemns.

A TRUE Theosophist must be a cosmopolitan in his heart.

✿ The Trend of Twentieth Century Science ✿

New Light on Cancer—Caused by Misuse of the Body

THE investigations made possible by the English *Cancer Research Fund* are beginning to yield good fruit. We know now that cancer is not a germ disease, and is not infectious nor contagious. It is not confined to man, though man alone has succeeded in making a most menacing specialty of it. Besides having some small prevalence among a good many of the vertebrates, an equivalent of it has even been found in certain plants.

Its nature is a local rebellion, whether of the surface (epithelial) or the deeper cells of the body. These rebelling cells cease to belong to the organism or submit to any rules, cease to live with and as part of it, or to work for themselves through work done for it. They make a separate community, living a parasite life on the organism and contributing nothing. They multiply very rapidly without regard to the general convenience, and in their mode of reproducing themselves by cell division present a peculiarity otherwise found only in the reproductive cell proper, connected with the number of pieces into which the nucleus divides.

Having lost their reason, they go on multiplying themselves beyond the point at which the available blood supply can feed them. And, moreover, they multiply so rapidly at the edge that their dense crowds obliterate the blood vessels that would otherwise reach their center. The center consequently keeps dying whilst the edge keeps extending. At last, by pain and loss, the patient dies, and with him the parasites.

These investigations are, of course, very valuable as far as they go. But two important points remain. What causes lead to this anarchy? and how are we going to treat it? In the way of treatment a line seems to have opened with the discovery of the powers of X-rays and ultra-violet light, both of which act as caustics and depend for their success on the fact that cancer cells are much more easily killed than healthy ones.

The cause is obviously misuse of the body. If man did not misuse his body, no part of it would become unruly. The nervous system cannot control and rule the whole of its territory. One cannot help seeing an analogy in the sphere of mind. Part of it is out of control and is the seat of anarchic desires which tend to destroy the whole. Certain sensual desires become arrogantly parasitic, just as in the case of lunatics certain ideas become overgrown and unregulated, finally wrecking the intellect.

STUDENT

The Artificial Preservation of Food Has Its Advantages

TWO analytical chemists write to the *London Lancet* to protest against the idea that salicylic acid, as used in food as a preservative, is injurious; and they challenge anyone to produce evidence in proof of injury. They maintain that the use of this antiseptic enables manufacturers to place on the market, and within the reach of slender purses, many wholesome, pleasant and inexpensive articles of food otherwise difficult to procure; and to produce beverages that may take the place of alcoholic drinks.

We think there is a good deal to be said for this. Salicylic acid is perhaps the least injurious of all the chemical antiseptics used in food, and it may be true, as these gentlemen assert, that there is so far no evidence that in such quantities it is injurious at all. It is probably less objectionable in the preservation of fruit and fruit-juices than the large quantities of sugar otherwise used.

In the matter of tinned (canned) goods, the objections to this acid, of course, become considerable; but no more so than in the case of any other. The acids of fruits that are canned instead of dried or bottled must always dissolve more or less of the metal. And inasmuch as meats are acid in reaction, the same objection applies to their preservation in cans. At any rate, and awaiting the results of experiments on the matter which are now in progress, criticisms would come better from persons whose blood is not poisoned with alcohol two or three times a day, with carbonic acid for eight hours every night, with a daily consumption of cigarettes running far into two figures, or with the products of three daily concessions to the spirit of gluttony.

M. D.

The Wheel of Life—Transmutation of Metals Not So Absurd

ONE of H. P. Blavatsky's teachings which provoked a frown from the orthodox scientists of her day, was that all nature lived in a ceaseless process "ever-becoming," of evolution in cycles, of alternations of growth, maturity and decay or repose. With a masterly touch she traced the process in everything from mineral to man, from the simplest form of matter to the highest consciousness of spirit. She never claimed the discovery of the law of cycles, but she restated in clearer form its working. The law was known to most of the great thinkers of antiquity, and its grand sweep has been widely recognized in long past ages.

Today, as an evidence of the rapid march of new thought—which is the Old—we find Sir Oliver Lodge declaring in his latest utterances about radio-activity that the medieval alchemists were not so crazy after all, for the transmutation of metals "is not an absurd dream," and he even says that the latest views of matter "when brought into line with the theory of evolution," are in perfect harmony with those of Heraclitus, who taught that the universe is not a "being," but an "ever-becoming." Heraclitus and Spencer, the ancients and the latest evolutionists taught that after breaking down came a building up—in endless series. Professor Lodge answered in the affirmative his question, "Shall we build up radium out of simpler things, and so produce the opposite process to that we see in it at present?"

That great Teacher, H. P. Blavatsky, who founded The Theosophical Society, in some of her priceless essays upon science and philosophy, takes great pains to demonstrate that present day thinkers, such as Spencer, are merely restating the ancient thoughts, though in modern form and with more materialistic bias. She gave the world the fundamental tones in philosophy, which will harmonize the uncertain notes of our thinkers. She brought in the soul as the evolving entity, and showed that the eternal cyclic progress of things is made comprehensible and rational when we realize that through all the ups and downs of existence there is something which is gaining experience all the time and is rising to higher states of more intense activity. Endless, boundless fields of service are before the soul, ever-increasing power of serving bringing ever-increasing joy.

In geometry we find a perfect correspondence with the idea of the eternal progress of the universe towards Perfection—God; this is the "asymptote" to a curve, a straight line which is continually approaching the curve formed by a conic section, but which, however far extended, never meets it.

R.

Audible Light—We May Hear the Music of the Spheres

THOUGH we have at present only newspaper reports to guide us, it does seem that a New York electrical engineer has succeeded in making the light of individual planets and stars audible. It was, of course, a problem "on the books" for solution in any case during the next few years. The invention claims to rest on the fact that a beam of light, falling upon a polished metal surface, excites a vibration which can be made audible. The report speaks of success having been obtained with a star as remote as Arcturus. When the invention is established and perfected, a most important addition to spectroscopy (our present sole means of ascertaining from their light the constitution of stars) will have been made. The analysis of light by the ear may give fuller and subtler results than by the eye. New groups of qualities may be discovered. Modern science has gone back to the past along so many lines that it is not surprising to find her vindicating Pythagoras as having dealt in fact as well as in poetry when he spoke of the music of the spheres.

The Transformation of Japan---Glimpses of the

Special Correspondent NEW CENTURY PATH

TOKYO, JAPAN, April 6th, 1904

TOKYO, the Imperial capital of New Japan, is, in this 36th year of Enlightened Peace, or of Meiji, as the Japanese present year-period is called, fast growing to be a distinctly modern city, in our European sense. Its wide streets, most spotlessly clean; its handsome, big brick buildings, its fine railway stations, its electric street railways, its libraries, museums and Chamber of Commerce, give to it a stamp of Japanese progressiveness not to be found elsewhere. But the little, low-roofed dwellings of wood and paper, so characteristic of Japanese life, which seem so very diminutive and doll-like, have by no means disappeared, and probably will not do so for a long time yet, if they ever do so in entirety. The Jap, in spite of his progressive nature, is a most conservative fellow in many ways; having made himself daintily comfortable for so many scores of decades in the past at a nominal cost, comparatively speaking, it is scarcely likely that he will abandon what has proved itself sufficient unto him, for something in architecture which is expensive, in constant need of repair, and against the spirit of the nation's genius.

The jinrickisha is even there, holding its own against the electric tram-car, and anyone who has once enjoyed a ride in a really good 'rickshaw will quite appreciate the desire of the late Sir Edwin Arnold to see it adapted to European city use. Sir Edwin, however, quite failed to specify who were to be the 'rickshaw men; whether they were to be imported from China or Japan, or whether, perhaps, the very poor of our great cities might be induced into trotting around the town, with a 200-pound man in the vehicle behind, at ten cents per hour! Seriously, though, the idea does not seem to some minds to be so very impracticable, as might at first sight appear. This Oriental "pull-man-car," as some resident foreigner has wittily termed the 'rickshaw, it is said, would be of solid and real use to numberless thousands in our cities, who rightly detest the odors and crush of the street car, and to whom cab fare is no light item of expense. Should this ever occur, however, it would indeed be the most noticeable step towards the progressive "Japanization" of the Occident, to which so many Japanese newspaper writers aspire, and of which they so quaintly talk.

The railway trip from Yokohama to Tokyo, which, by the way, was the first railway laid in Japan, gives one many a glimpse into the agricultural methods and village life of the people. The rice-fields, the thatched houses peeping out of surrounding green, and the laborer at work in his patch of ground, flit swiftly by, and all is quite Japanese, and as it should be, until the fair landscape is broken and spoiled by those abominable inventions of the European advertising demon, which announce that "Blank's whisky is the best," or that "no whisky is equal to Clank's." Just off Shinagawa, a suburb station of Tokyo, may be seen from the car window a line of forts built at the time of the coming of Perry's four ships, in anticipation that they would have to serve to repel the impudent and unholy "barbarian" from the domains of the Son of Heaven, the Mikado. Ye gods! what changes have come since that date. And what changes and *bouleversements* even more momentous still must take place before the destinies of this newest of the World-Powers have slipped with the sands of Time, into the past Eternity.

This is a country blessed with three capitals, to wit: Tokyo, the capital of the east; Kyoto, the ancient court city, now often called Saikyo, or the capital of the west; and thirdly, Osaka. But the capital city for all practical intents and purposes is Tokyo, the Mistress of the East, the city of 1,500,000 souls. This is where the administrative buildings are, and where the functions of government are carried on, and where the Emperor usually resides. The Imperial palace at Tokyo, with its spacious grounds, is curiously unlike what one's ideas are of what it might be; that is, what one can see of it, for it, or they (for I believe the palace consists of a number of buildings), are out of sight on the other side of a moat, on a hill walled up like a gigantic fortress. Bridges cross this moat in different parts, and the visiting foreigner gazes over the intervening space at the white and yellow buildings there, constructed *à la japon-*

aise, with uptilted corners and turreted angles, and wonders at the possibilities that closer vision might reveal.

The respect carried in the heart of the Japanese, both high and low, learned and illiterate, for their Emperor, is demonstrative of how truly conservative and yet how protean the character of the Japanese is. To him, the Mikado, even as it was centuries ago, is the Son of Heaven, and a ruler by divine right. While the representative nature of most European governments is duly admired (and criticized), and while their own is constitutional, and in a degree representative, yet the Emperor is secretly regarded as the fountainhead of all power and wisdom, infallible, absolute.

As illustrative of the profound devotion borne to the Emperor by the people of the Empire, considered as a unit, and to show that it always has been so, the following excerpts, taken from the better works on Japanese history, are very interesting. It will be remembered that, anciently, the Mikado was the direct ruler of his people, and that all power issued from his person. Later, he became gradually but the spiritual head of the State, the real power of government passing into the hands of the Shoguns, or Tycoons, as Europeans have called them, who swayed the scepter of power temporal. Yet they received their commission, so to say, from the Imperial court. Under this system sprang up the later feudal character of the government, the feudal lords, or daimyos, holding power under the Shogun and indirectly from the Mikado. By the Imperial decree of August 7, 1869, abolishing the daimiates, and restoring the revenues of these latter to the Imperial treasury, the whole institution of feudalism which had flourished since the day of Yoritomo was swept away in an hour. Now this social revolution, this tremendous upsetting of old and established custom, was accomplished upon the action and desire of the daimyos themselves! It began with a memorial presented to the Mikado, and which appeared in the official gazette of March 5, 1869, signed by the most powerful and greatest of the daimyos of the Empire. The following passage bears upon my subject:

The place where we live is the Emperor's land, and the food which we eat is grown by the Emperor's men. How can we make it our own? We now reverently offer up the lists of our possessions and men, with the prayer that the Emperor will take good measures for rewarding those to whom reward is due and taking from those to whom punishment is due. Let the Imperial orders be issued for altering and remodeling the territories of the various classes. . . . This is now the most urgent duty of the Emperor, as it is that of his servants and children.

Two hundred and forty-one of the remaining noblemen hereupon followed the lead set by the above, and but a few remained who did not join in the movement. The following memorial of Prince Azuki is likewise to the point:

1. Let them (the daimyos) restore the territories which they have received from the Emperor and return to a constitutional and undivided country. 2. Let them abandon their titles and under the name of *kwazoku* (persons of honor) receive such properties as may serve for their wants. 3. Let the officers of the clans abandoning that title call themselves officers of the Emperor, receiving property equal to that which they have hitherto held.

Of course, the surrender by the daimyos of their feudal rights was a natural outcome of the resumption by the Emperor of the executive power formerly held by his ancestors and following upon the opening of the country, but it was not the less remarkable for that reason. Indeed, in this intense reverence for the throne is to be seen the balance to what has so often and so foolishly been called by critics of the country a lack of stability in the Japanese character. The devotion to the throne, and to its Imperial occupant, insures continuity, and promises well for the future of the land so beloved by its sons.

Although it is now late, indeed, to mention events which happened at the very beginning of the present war, and while desiring to avoid that subject, the appended Proclamation of War, issued by the Emperor on February 10th last, may probably interest many who have not seen a translation of that document. It is the official translation of the same:

DECLARATION OF WAR

by HIS MAJESTY THE EMPEROR

We, by the Grace of Heaven, Emperor of Japan, seated on the Throne, occupied by the same Dynasty from time immemorial, do hereby make Proclamation to all our loyal and brave subjects as follows:

Island Empire That May Rule Eastern World

We hereby declare war against Russia and We command Our Army and Navy to carry on hostilities against that Empire with all their strength, and We also command all Our competent authorities to make every effort, in pursuance of their duties, and in accordance with their powers, to attain the national aim with all the means within the limits of the law of nations.

We have always deemed it essential to international relations and made it Our constant aim to promote the pacific progress of Our Empire in civilization, to strengthen our friendly ties with other States, and to establish a state of things which would maintain enduring peace in the Extreme East and assure the future security of Our Dominion without injury to the rights and interests of other Powers. Our Competent Authorities have also performed their duties in Obedience to Our will, so that Our relations with the Powers have been steadily growing in cordiality. It was thus entirely against Our expectation that We have unhappily come to open hostilities against Russia.

The integrity of Korea is a matter of constant concern to this Empire, not only because of Our traditional relations with that country, but because the separate existence of Korea is essential to the safety of Our Realm. Nevertheless Russia, in disregard of her solemn treaty pledges to China and her repeated assurances to other Powers, is still in occupation of Manchuria and has consolidated and strengthened her hold upon these provinces and is bent upon their final annexation. And since the absorption of Manchuria by Russia would render it impossible to maintain the integrity of Korea and would in addition compel the abandonment of all hope for peace in the Extreme East, We determined in those circumstances to settle the question by negotiation and to secure thereby permanent peace. With that object in view, Our Competent Authorities, by Our order, made proposal to Russia, and frequent conferences were held during the course of six months. Russia, however, never met such proposals in a spirit of conciliation, but by her wanton delays put off the settlement of the question, and by ostensibly advocating peace on the one hand while she was on the other extending her naval and military preparations, sought to accomplish her own selfish designs.

We cannot in the least admit that Russia had from the first any serious or genuine desire for peace. She has rejected the proposals of Our Government; the safety of Korea is in danger; the vital interests of Our Empire are menaced. The guarantees for the future which We have failed to secure by peaceful negotiations, We can now only seek by an appeal to arms.

It is Our earnest wish that by the loyalty and valor of our faithful subjects, peace may soon be permanently restored and the glory of Our Empire preserved.

It is a curious, but not an anomalous fact, that a very large part of the Christian sectarian newspaper world is not averse to supporting Japanese action in this war, as against that of a Christian power. Japan is a "Pagan" Power, yet she has the sympathy of Christian newspapers!!! Any one cognizant of the desire of the Christian denominations to "missionize" Japan, will see the matter as truth would compel it to appear, were it laid bare. The missions in the land of the Mikado are distinctly stationary, not by any means what they were in the days of St. Francis Xavier, when converts were baptized by the thousands. Might not to-day an unsympathetic and chilly government prove the bane of what now is of missionary work in the country? Add to this, the fact that the better classes in Japan are almost universally "freethinking," and bear little love to a Church which has so lamentably failed to Christianize the Occident, as a Japanese gentleman bitterly told me, that Occidental international methods, and domestic laws and customs need most sweeping rectification and a change for the better; in view of this, I say, he who does not stand by Japan now, even against his brother in the faith, may expect little help and sympathy later from her.

Ah! this "Pagan" Power! Why should the word "pagan" excite such vindictiveness in the churchman's heart? Its etymology means a "countryman," one living not at Rome, but a provincial. What is there about Buddhistic or Shinto Japan which is in such sad need of evangelization? Is not Buddhistic religious teaching so nearly akin to that of Jesus the Christ, that many critics have sought, and yet seek, and not unsuccessfully, for a common origin? Is not the moral code of the religion of Gautama Buddha, and the ethics of Confucius, are they not practically identical in spirit with those of the Christian Church? Indeed, as regards the former, Buddhism, its list of Commandments is in several instances word for word the same as those of the Jewish Law-giver. While believing that both Buddhism and Christianity have a common spiritual origin, the writer, as a sincere Theosophist, has no desire to endorse the modern and outward form of either. Gautama, the

Buddha, was born [presumably] 2600 years ago; Jesus the Christ [presumably] 1904 years ago. Truth is one and indivisible; and those who hesitate not to rack and quarter her fair body, are guilty of the most heinous of spiritual crimes. If a tree is known by its fruits, then how account for the fact that during the march of the foreign forces to the rescue of the legations at Peking, that body of military which showed the best discipline, the most endurance, the most mobility, and above all, the most kindness and forbearance, as well as respect to non-combatants, were the troops of this "Pagan" Power, Japan? The history of Japan from the time of the introduction of Buddhism into the country up to the present, how does it compare with the history of Europe from the fall of Rome, to the present time? One thing, Buddhism never had a Holy Inquisition, with all its attendant and diabolical horrors; while the massacre of the Christians at Nagasaki, following upon Ieyasu's edict prohibiting Christianity in 1614, was positively and absolutely less hellish than St. Bartholomew's day in Paris, or the hunting of the Protestants elsewhere.

The following is the substance of the "Charter Oath," taken by the Emperor on April 17th, 1869, before his court and an assembly of the daimyos. I quote here from *Japan*, by David Murray, Ph. D., LL.D. It is an excellent demonstration of the moral principles this "Pagan" Power has laid down for its government:

1. A deliberative assembly shall be formed, and all measures decided by public opinion.
2. The principles of social and political economics should be diligently studied by both the superior and inferior classes of our people.
3. Everyone in the community shall be assisted to persevere in carrying out his will for all good purposes.
4. All the absurd usages of former times should be disregarded, and the impartiality and justice displayed in the workings of nature be adopted as the basis of action.
5. Wisdom and ability should be sought after in all quarters of the world for the purpose of firmly establishing the foundations of the empire.

The above is an inspiration. It is a document, which in its way is worthy of taking rank side by side with the American Declaration of Independence, for both were framed and mothered at times of national stress and difficulty, when the hearts of men were rendered transparent to their spiritual natures. The two last clauses especially, are vocal with the spirit of a true and real Universal Brotherhood of Humanity, without distinction of race, caste or color, and predicate a moral advancement which many white men admit but ungraciously. And Japan has lived up to this, as her history shows on its face.

As a last comment on this "Pagan" people, St. Francis Xavier has recorded his sympathy with them by saying that "in virtue and probity they surpassed all the nations he had ever seen." Such a tribute extorted from this great apostle of the Church of Rome is most worthy of remembrance.

Well, 'tis a fair country, and its people show that in them lie the seeds for a national greatness outside present conceptions of the future. So be it; let it come. As a Japanese would say, let Kwannon, the Goddess of Mercy, she of the thousand eyes and of the hundred arms, keep this people under her protection and care, and lead them through the devious ways of destiny to a stable and true national peace. We salute thee, Land of the Rising Sun!

G. DE PURUCKER

Reciprocity With Cuba

THREE months of trade reciprocity with Cuba have had a most stimulating effect upon the commerce of the Republic. During these three months her exports to America have increased over 94 per cent, while her imports from America have gone up over 24 per cent. The reciprocity has therefore been markedly to the advantage of both countries. The nature of Cuban imports shows conclusively that the process of reconstruction is going on apace. Machinery of all kinds figures largely in the list, as well as furniture, foodstuffs and dress material. We believe that the general statistics of Cuba are equally satisfactory, and that the Republic is becoming a valuable partner in the world's production and exchange.

STUDENT

The Story of Tiernyon & the Son of Pwyll---

I THE MARE AND THE FOAL OF TEIRNYON TWRF FLIANT*

IN the old time there was a King in the land of Gwent of the Woodlands, and he reigned in his chief city—of Cærleon on the Usk—which was afterwards the capital of the whole Island. His name was Teirnyon Twrf Fliant, and he was the best King that lived, in those days. He was just and brave and wise and gentle, and it is not known whether it was the birds and the beasts, or whether it was the human folk that loved him most. Teirnyon had no son of his own, but he was such a man that it was an honor and a privilege for the Kings of Britain to send their sons to Cærleon to be his foster-sons, and to learn from him all the great nobility and dignity he could teach them.

Now, this King Twrf Fliant had a most precious and peerless thing, and that was a mare; the most beautiful mare in the vast world. She was so swift that the winds of heaven could not catch her if she had a mind to leave them behind. She was so strong that there were not ten men that could hold her back, if she desired to be going forward. And so gentle was she that never in her life had her lord needed to speak to her, for she obeyed the thought in his heart always before he could put a word to it with his lips.

They called her Melyngan, Golden Song; and if her master was the best of Kings, so was she the best of horses.

And whenever the Eve of May came round, the fairy night of all the nights in the year, she had a foal as beautiful as herself. The bards sang that if any foal of hers were kept in the land till it was a full-grown horse, some great good would come to the whole Island, and the Prince that rode it would ride to the ending of sorrows. Besides, there was not a King in all these lands that would not have given half his kingdom for a foal of the mare Melyngan. But the worst of it was, that when the morning of May-day came there had never been a foal to be found in the stable.

For two years the foal had been missing, and the stable-folk not knowing what had become of it; and the third year Teirnyon set a guard in the stable to watch till morning. The next day the warriors knew nothing of it, and the foal was gone. The fourth year a strong guard of warriors was set within the stable, and a strong guard without, and not one of them but could easily go nine nights and nine days without sleeping, and be none the worse for it; but every one of them fell asleep that night, and there was no foal there at dawn. The fifth year it was the same, and it seemed to those that watched that an enchantment fell upon them and a wandering music they could not withstand; and the foal was gone before they awoke in the morning. As to the sixth year, Twrf Fliant set the best friends he had, and the noblest warriors in Gwent, to watch in the stable. The music came to them, and a half of them slept, and a half would not sleep for the music. Then came a host of the most glamorous and beautiful beings in the world, who offered the least of them empires glowing like rubies and opals between the earth and the sky and enchanted marvelous islands in the west if they would leave the mare and the foal and come. And those that went with the Children of Beauty awoke in the morning, dew-wet, on a lonely mountain. And then came what seemed to be the sound of a great army, and the rest of the watchers hurried out to seek fighting. And they followed the battle sounds awhile, but found nothing. But as for the peerless foal that had been with them before they went out, there was not trace nor sign nor sound of it when they came back, and how it had gone, or who took it, none could say.

When the seventh year came King Teirnyon was thinking to himself, and said he, "Evil fall on the beard of me, if any but I shall watch with Melyngan this May-eve."

"Lord," said his men, "let us watch in the stable; it is not right that a sovereign Prince should undertake such work as this."

And others said, "Let us come, too, King; it would be unsafe for any one man to go against an enchantment."

But they said nothing that could move him; and he would go alone, and without so much as one man near enough to hear a call.

There he was on May-eve in the stable, and the mare looked at him as he came in, and she laughed in her heart, and "there'll be an end of the enchantment now," thought she. As for the foal, it was perfectly formed, most beautiful, and white all over, without one hair that was black or grey or brown or ruddy, or less white than the mountain snow, or the foam on the wave, or the swan's wing, or the whitest cloud of heaven.

The night wore on and Teirnyon watched and talked to the mare, and she answered him with the deep thoughts of her heart. And soon the music came, and it seemed as if the dreaming moon and the stars had forgotten their thrones in the sky, and were leaning down over Gwentland, and stroking from their silver harps slow, low melodious notes of indolent sweet song that fell over the woods and pal-

aces as softly as snowflakes fall when no wind may be blowing. And presently singing could be heard, and it seemed to the King that this was the song:

Rest, King of Gwentland, rest
Under the lovely moon.
Deeds are a wandering tune,
Dreams are the best.

Dream, King of Gwentland, dream!
What are men's ways and wars,
Horses, and battle-cars?
Foam on a noisy stream---
Let them alone, and dream
Under the stars.

And it seemed to the King that the place was full of a million fairy and invisible spiders for weaving around him delicate silvery webs of sleep. But his eyes did not close:

Ah, let your strivings cease!
Beauty alone hath blooms
Here in our moon-white peace,
Where are no deaths nor dooms,
Nor any warfare looms,
But only peace.
For Beauty hath her blooms,
Her white mysterious blooms
In our white peace.

And as the music rose and waved and swooned in the air, strange flowers did indeed bloom out about him, great white wax-like flowers that sent out such deep honey breathing that the whole place became so slumber-laden that a warlike army at the moment of victory would have been lulled and lured away into dreams and silence. But not the King Twrf Fliant:

Dream, King of Gwentland, dream!
Dream while dream hours flow.
Kings and their deeds and all,
They are but leaves that fall
And wither, and whither they go
Who but the four winds know?
You, King of Gwentland, dream
While the dream hours flow.

And Melyngan looked into Teirnyon's eyes, and he into hers, and there never was a man that seemed less for sleep and dreaming than he did. And "yes, indeed," thought she, "here will be the end of this enchantment."

And the stable grew fuller and heavier with blooms and scent and music, and the blooms began to wave and glimmer and move to the music, and they began to grow and change as they moved, and they were beings that seemed to be fairies, the most beautiful in the world. And now the air above Teirnyon's head was growing marvelous with hosts of these jewel-luminous fairies, waving in their slow and slumber-weaving dance, drawing always downward and nearer, and with their magic setting as it were mountains of heaviness on the two eyelids of the King. And he stood beside the foal and waited. And they came nearer and nearer till he could feel the breath of them on his face, and they sung as they came. And he threw out his hand suddenly and caught the prince of them by the arm and dragged him to the ground. And with that there was a sigh passed through all the clouds of them, and they were gone, and the air was cool and clear once more.

"Now," said Teirnyon, "I will be having the life of you."

And the fairy begged him to spare his life, and he would do whatever the King willed, he and his people.

"Can you sing other songs beside that one?" said Teirnyon.

"We can sing no songs but the one we are willed to sing," said the fairy.

"Who willed you to come here and sing that one?"

"Your enemy and the mare's King," said the other.

"And now be singing the song I will you to sing."

And the fairy began to sing, and there was wakefulness in every note he sang. He sang of hope, and of power and of brotherhood; he sang a song against hatred; a great immortal song against sloth and slumberous heartedness, and a song burning and gleaming with the promises for the four quarters of the world. And those songs were born in the heart of Teirnyon Twrf Fliant himself.

"Now by the Wood, the Field and the Mountain, and by my Will, go forth and sing songs like that forever wherever there is sadness in the world!" said the King.

And the fate was laid on that fairy host so that they could never break it. And the King heard their glorious choruses as they flew away, and he himself was stronger and more full of joy than ever he had been in his life. And as to the foal, it was quite safe.

The song died away in the distance, and there was silence, silence, silence. And

*Pronounced Tîr-nîon Tworf Vlee-ant.

a Tale of Enchantment in the Olden Times

you would hardly have heard the silence stealing into tiny sounds, but presently there were strange whisperings without, and starts and hushes, and creepings and stealthy creakings, and it seemed in a little time as if there were infinite quiet armies gathering from everywhere.

And then oh how suddenly all the roar and clamor and tumult of wild battle, the clanging of steel, the rolling of chariot wheels, thunder of hoofs, sharp cries and battle-shouts, spears flying, groans and shrieks, and the sky blazing as if the world were on fire.

The stable walls were gone and the king and the foal and the mare seemed to be standing in the midst of a wide plain, and the mad battle roaring around them like a great wind in the forest branches, like a storm on the waves of the raging sea. And as he looked he saw that one of the two hosts was in the guise of the men of Ireland and the King of Ireland leading them; and the other seemed to be his own men led by Gwron Gwent his champion. And the one would be crying out:

"Where is the King Twrf Fliant? Is he afraid of the men of Ireland on the field of conflict?"

And then the others:

"Teirnyon! Where is the King, Twrf Fliant? Why will he not come against the breakers of his land?"

And long swords swept through the air and spears whizzed close by their heads, and scythed chariots rolled by. And the mare looked at Teirnyon and saw that he was moved and troubled by all that great battle-breaking as much as if it had been a fly buzzing in the stable rafters or a wisp of hay falling from the stall. And "indeed and indeed now sorrow upon me," thought she, "if here is not coming at last the end of this weary old enchantment."

The battle raged and the clamor grew, and presently it seemed that the men of Gwent were overborne by the multitude against them. Then with a shout were the others upon him and their leader ordering him to yield.

"Oh! no," said Teirnyon, "I yield to no vain enchantment."

"Then fight for your life!" said the other.

And the sword of him was ready to strike, and Teirnyon's own sword was sheathed and sleeping at his side. And yet you would have known that it was no other than the King Twrf Fliant who was the conqueror there, so majestic he was.

"Nor that either," he said. "*I will for Peace.*"

And a sigh passed through those hosts and they fell away like the ninth wave after its breaking. And the sword fell with a clang on the stone floor of the stable. And the mare and the foal and the King were in their old place by the stall. And there were the two who had the forms of Gwron Gwent and the King of Ireland, swordless, bound-in-chains and fallen.

"Now," said Teirnyon, "it's you two that will be in chains like that, forever, in chains and in peace."

"We are the fairies of war," said they, "and we should all fade and die unless we had war and strife and violence. But where and how we fight, and against what, it is not we that can choose."

"Who sent you here?"

"Your enemy and the mare's. And it was he that gave us these forms."

"The guise you have is good enough," said Teirnyon, "and you shall keep it, if you will do my will instead of his."

"What we are willed strongly to do, do we must," said they.

"Then by the Wood, the Field and the Mountain, and by my will, go forth now and make war upon every evil thing in the world. And be at peace with the light and at war with the darkness forever."

And they went as he bade them, they and their hosts in quiet ranks, and turned their power and strength and anger and valor against evil in all the four quarters of the world.

And so there was peace again in the stable, and by that time it was nearly midnight. And at the moment of midnight the mare whinnied, and there was a crash at the window above the stall, and what should it be but a talon, the least of whose claws was as long as the body of a man.

The King leaped upon the stall and was at the talon before it could clutch the foal; and in the fighting he saw that it dropped something into the stall. And the King made whoever owned that talon draw it back through the window, and then the enchantment was over and the foal safe.

But what should he find in the stall but a baby boy. He was dressed in fine white silk, and his hair was flaming and golden, and his eyes as blue as the blue sky. No one would not have known him for a king's son, and as soon as Teirnyon saw him he loved him.

He took the child to the Queen, and said, "Let us have him for our own son."

"Yes," said she, "and it can be seen that he will bring us no sorrow."

And as to naming him, until he should gain his own name the Queen gave him the name of Gwri Gwallt Eurnyn,† Gwri with the Golden Hair. And he had for a naming-gift from Teirnyon the foal that was born the night he was found, because the bards said that whoever rode it would ride to some great thing.

II

THE COMING OF PRYDERI

Gwri grew up, and at thirteen he was equal to a youth of twenty, and when he was fifteen the full rank of a warrior was given him. He was the best with sword or bow or song or story of the foster-sons of Teirnyon; and the King and Queen loved him as if he had really been their own son, and every one else loved him, too, and another that loved him was his horse, the foal of Melyngan's that had been saved from the claw and the enchantment. If that horse were within an hour's gallop of Gwri, nothing could prevent his coming at Gwri's call.

One day he was out on the forest's edge shooting at a target, and the last of his arrows turned in its course and flew over the target and away into the wood. And running forward he saw it fall at the foot of a great oak-tree, a good way off. And he ran on and picked the arrow up. And then it came into his mind that he would shoot the arrow back at the target. And he did so, and again the arrow turned in his course and flew on and away. He went on and picked it up, and found himself in a part of the wood that was strange to him.

"Well," said he to the arrow, "it is you that have led me here, and it is you that must lead me back, or take me on to where you will be going."

And with that he shot once, and he shot twice, and he shot thirteen times; and in whatever direction he shot, the arrow chose its own course and went its own way. And he came to a wide field full of king-cups and cuckoo-flowers and rushes, and all kinds of wild and beautiful flowers for the bees, and in the field was a stream, and the fair and purple hills were around on either side. And the arrow brought him to a spring by the streamside, a deep pool in which you could see where the cold, clear water set the sand and pebbles a-dance, as it came up out of the earth at the bottom. And he shot the arrow again, and it fell in the spring at his feet. And at that he thought that small waste would it be of his time to lie down and listen awhile to the music of the waters.

And he quenched his thirst at the spring and waited. And the stream sung to him till he went to sleep, and the stream sung to him till he awoke again. And when he awoke his eyes fell on an apple-tree near by in which there was a strange glow and a glamour of song. The light he saw came from a bird in the tree that had wings of rainbow color and sparkling and burning like living jewels. And with this bird was another, that had the aspect of a prince or chief bard among the blackbird races; and they were talking to each other, those two, in their song. And whether it was the water he had drunk from the well had a magic in it, or some bright enchantment laid by wise ones on the place; or, indeed, whether he had learnt it as we might learn Spanish or English in school, I can't say; but the fact was that Gwri Gwallt Eurnyn could clearly understand what those two birds were saying.

And this is the translation of the blackbird's song:

Bright bird fairy, on what quest
Have you flown now from the west
To these waters, and my nest?

And this of the rainbow-winged one's answer:

I come, oh Forest Chief of Song,
To find the ending of a wrong
That is most deep and dark and long.
These fifteen years in Dyfed green
The long grey wings of grief have been;
And unearned sorrow for my queen.
For, day by mournful day must wait
In Arberth by the palace gate
Rhianon the Compassionate.
About her, sorrowful, come and go
We three bird fairies to and fro;
For on her is the wide world's woe.
Far away her lord has gone,
And none can save her, save her son,
Nor none else win what shall be won.
She that came to bring men peace,
Men have made her bright gifts cease
And slain her peace, and their own peace.

"Bright Bird of Rhianon!" cried Gwri, leaping to his feet, and never in his heart such thoughts had stirred as were with him then, "let me go with you to your queen! Indeed, I am a warrior, and until her son comes it will be well for her to have one at her hand that will protect her as well as he can."

"Call your horse then, and come with me," sung the bird.

Gwri did so, and in a little time the horse had broken from his stable and was

† Pronounced Goory Gwallt Ireen.

at his lord's side. He mounted and rode on after the bird, and left the east wind behind him. And so they started, and Gwri rode on and on through the forest, and the bird flew ever overhead and sang to him of the Queen Rhianon and of the evil chieftains who had enthralled and accused her in the palace of Annwn, her absent lord. And from the song of the bird, Gwri knew that he indeed was no other than Pryderi, the son of the Queen of Gwent and of Annwn, and that only by his might could the evil chieftains be overthrown and their power removed forever.

And so Gwri, led by the bird, came at last unto the palace, and he entered into the hall and saw Queen Rhianon the Compassionate, and the evil chieftains who were her accusers, and the Queen looked upon him and rejoiced because she knew him for her son. And Gwri looked upon the Queen, his Mother, and stood forth that he might succor her against the evil that was plotted.

Then the chief of the evil chieftains spoke:

"The Princess is under punishment for her crime, and the law allows her no place in this hall. We demand that the law shall be kept."

"Pryderi, my son, shall answer you," said she.

Then there was confusion on them all, and some saw that it was Pryderi, and could be no other than Pwyll Pen, Annwn's son, and some would have mocked but for a fear that came on them, and one or two of the worst of them did, indeed, burst out laughing, and cried out:

"Where is he? Are you Pryderi ab Pwyll?"

"I am Pryderi, and my answer is: leave my palace now and my land tomorrow, you that have persecuted the Queen."

"The King is here," cried one of the loyal ones. "The blind would know him for Pwyll's son. Obey him and leave the hall."

"It is time we had a King," said the chief of the evil ones, "to protect us from these plots. To your arms, you that will have me for King, and we will make this upstart grieve that he came here!"

And then there was a rushing to the walls where the swords and the shields were hanging. And the loyal warriors ranged themselves by Pryderi, and the others stood against the wall opposite.

And Rhianon stood aside, and waited without fear. And the selfish and ambitious ones rushed against Pryderi. And he and his men raised the warcries of Dyfed and of the Island of the Mighty, and drew swords and went forward.

And though he was the youngest in the hall that night, no one there fought as he did. Swords could not injure nor shields withstand him. And many of the enemy were destroyed, and in a little time the hall was cleared of them. And afterwards he freed Dyfed of them entirely, and was crowned King in Arberth. And, of course, the chief guests at that crowning were Teirnyon Twrf Fliant and the Queen of Gwent.

KENNETH MORRIS

✻ Here and There Throughout the World ✻

English Minister on The Voice of God SOME very good stories are being told of the Rev. Dr. Clifford, whose magnificent fight against clericalism in the English schools has attracted the attention of the world. Upon one occasion his deacon was sure that he would not accept a call to another church *because* it would mean a large increase in his salary. Dr. Clifford's views upon such questions are sufficiently shown by the following quotation from his sermon on "How to Be Sure of the Voice of God": "Of two voices, one summoning to a private personal advantage, and ending therein, and the other inviting to a larger and more far-reaching good for men, it is easy to be sure that the latter is the sign of His chastening nearness and His redeeming leadership."

Idiotic & Epileptic Children in Paris DR. BOURNEVILLE of the Bicetre Hospital in Paris has made some extensive inquiries as to the causes of congenital idiocy. He finds that out of 2,987 idiotic or epileptic children no less than 1,069 had drunken fathers and 91 had drunken mothers. A large number of other maladies were also traceable to the same cause. Idiocy, inebriety and disease are of course links in a very long chain, perhaps much longer than we suppose. If inebriety produces idiocy, what produces inebriety? And so we are being forced back and back to first causes, and the sooner we get there the better it will be for humanity.

Australian Natives Practically Extinct THE aborigines of Australia are now practically extinct, and the story of their disappearance is one of the blackest ever registered against civilization. These people have been literally butchered out of existence. Mr. Finch Hatton, a former member of Parliament and a man well conversant with the facts, says in a recent letter:

I merely wish to deal with facts, and I unhesitatingly declare that the blacks of Queensland have been almost entirely exterminated by a system carefully planned and deliberately carried out by the Government of the country.

A New Journal for Parisian Laborers A NEW journal is about to be started in Paris which will have for its object the welfare of the working classes and the maintenance of good-will. The chief promoters intend to hold a conference in Paris at an early date, and also to arrange for a series of demonstrations in the great provincial centers. One of the leaders of the movement has declared that it is time for the great European public to awake, which is certainly a salutary sentiment. If this consummation can be attained through the agency of France, it will be well in accord with her history and traditions.

Literary Matter on the Dreyfus Affair A PARISIAN collector has brought together a mass of literary matter upon the Dreyfus affair which is so complete as to amount to a practical history of the case. This collection comprises not only newspapers, but a marvelous assortment of books, cards, drawings, posters and endless unconsidered trifles which will one day be invaluable to the historian. This collection shows very clearly that the friends of Dreyfus were far more numerous than is usually supposed and also that the whole case possessed a significance which is even yet far from being appreciated.

Bilse's Book to Be Printed in English AN English translation of Lieutenant Bilse's book on *Life in a Garrison Town* is about to appear, and thanks to the persecution of the author, it will certainly have an immense sale. Lieutenant Bilse was sentenced to six months imprisonment by the German authorities for writing this book. Had it not been for this the book would never have been heard of outside of a very small circle. It has been read by the whole German speaking world, and it will now be read by the whole English speaking world. Such are the uses of stupidity.

Indian Ideals to Govern India LORD CURZON is deserving well of the people of India. He now announces that there will be no more competitive examinations for the public service. Hereafter officials are to be appointed for obvious fitness and not merely because their memories have proved retentive enough to absorb a sufficient number of unimportant facts. The governor-general has determined that India shall be governed according to Indian ideals and that the experiment of forcing old wine into new bottles has been so far a failure as to justify its discontinuance.

Maitre Labori, Defender of Dreyfus MAITRE LABORI, the heroic defender of Dreyfus, is just forty-four years of age and is thus unusually young for the forensic heights to which he has attained. His journalistic success is nearly as great as his legal. He is the founder of the *Revue du Palais* and also of *La Grande Revue* and is also the editor of an encyclopedia of law in twelve volumes.

Good-will King Edward Hopes For THE King of England has expressed the hope that the press of all countries should unite at the present time in promoting good-will among the nations. There are evidently various newspapers which have either not yet received this expression of hope or who else regretfully feel themselves unable to comply with it.

THE CHILDREN'S HOUR

A Letter from Japan

TOKYO, JAPAN, April 6th, 1904

MY DEAR YOUNG READERS: Today I took a long ride in a 'rickshaw through the streets of this Japanese city, which is the Imperial capital of Japan. I saw many things to interest me, such as only can be found here; but the children, and there are many of them, look just as happy and sweet as did the children in Yokohama, whom I told you about in my last letter. Do you know, it is said that the children of Japan make it a real paradise, by the examples they give to the older people. You see these young brotherhood workers, tiny as they are, have taken "Time by the forelock," as our grandfathers used to say. They are, indeed, beginning early to sow in the garden of the human family seeds of Sweet Will. They love to be polite; and this means so much to a Japanese. These children have heart-politeness, and I think it is this heart-light that gives such beautiful color and brightness to their smallest acts. Possibly this, too, makes their lives so glad, and their dimpled smiles so tender and loving.

All the Japanese children I have seen, and they have been many, have a charming dignity of manner; really it would put to shame some of our European and American grown-ups. It is easy to see that this childish dignity comes from the continuous practice of gentleness and obedience; from the ever-doing of unselfish acts for others.

They do not have, as the Yankees say, "Go-to-Meeting" dress and manners. For every day they are dressed in a most dainty and simple way, so neat and clean. As they wear their dresses, so they do their manners. If you will think a moment, these Japanese boys and girls are beginning very early to make true the motto we love so well: "Helping and Sharing is What Brotherhood Means." We can be sure that if they keep this motto in their hearts, and try day by day to really be what it means, they will, when they grow up, understand how to do the right thing at the right time, and in the right place. Is it not lovely to think of the sweet spirit of harmony growing in the hearts of the children, while the older folk are doing the best they can to bring about peace in their war with Russia?

Now these Japanese Lotus Buds and Blossoms are very jolly, and they love fun too; as all happy children should. As I saw them playing about they seemed very merry indeed. One of the happiest days of the year for them is their great Festival Day, which comes on the 3rd of March. Big girls and little girls turn out on that day in beautiful attire, in their bright and pretty dresses. In Tokyo, Yokohama, and in all the cities and villages of Japan, the toy-shops, and indeed many others, have their windows and shelves filled with little models of dolls and pretty playthings. This holiday is for the girls; the boys have their jolly time on May the 5th. On this day, all the cities and villages are decorated with cotton carp, tied to poles; these float in the air like flags. The boys say, that just as the carp fish "swims up the river against the current, so will a strong, clean-minded boy overcome all evil in his life, and in that way become great and good."

Truly these young Jap boys are trying to show the way to live rightly, even in their holiday fun, just as the Jap girls on their holiday, bring out their dollies and playthings to show what good mothers they will make some day, as well as good little housekeepers. We must never forget this: that the beginning of a true and beautiful life begins in the home. Dear children, from the Land of the Cherry Blossoms and the Wisteria, I send you my loving thoughts.

LOTUS

TWO CHILDREN OF JAPAN

THE earth, which feels the flowering of a thorn,
Was glad, O, little child, when you were born;
The earth, which thrills when skylarks scale the blue,
Soared up itself to God's own heaven in you;
And heaven, which loves to lean down and to glass
Its beauty in each dewdrop on the grass---
Heaven laughed to find your face so pure and fair,
And left, O, little child, its reflex there.—*Selected*

The Story of the Silkworm

DEAR BUDS AND BLOSSOMS: How many of you know that silk is the work of the most patient little creature in the world? If you could see how the silkworm grows and works you would find it more fascinating than any fairy tale. He lives first in a wee speck of an egg—smaller than a pin-head—and when he first comes forth into this big world he is a tiny worm, so small that you can hardly see him. He is dark at first, but soon turns light gray, and such a queer thing happens to him! Four times during his worm life he goes to sleep for a day or two and looks as though he were dead. When he awakens he creeps out of his old skin, and is all dressed in the freshest and cleanest of new ones.

Little Mr. Silkworm appears to have a large head with two bright black eyes, which look very saucy, but these are simply markings and his head is really just where you would expect to find his nose.

He keeps on eating and growing quietly upon his leafy bed, until he finishes that part of his work, when he becomes restless, and crawls about in search of a safe corner. Then the wonderful fairy story begins. Mr. Silkworm weaves a delicate filmy veil out of the finest strands, making a little hammock, which he hangs up with the finest silken ropes.

Soon he is all wrapped about with his gauzy covering, to which he adds continually, until it is no longer transparent but opaque, and the busy little inmate has made himself a prisoner.

All that you can see now is a delicately tinted cocoon, which you would never believe was made of silken threads if you had not seen it woven, and the greatest mystery of all is going on inside, in silence; for the little worm has no intention of spending his lifetime in this prison.

After a certain number of days he commences to be active again, and with a sort of acid which he secretes he moistens with his mouth one end of his prison wall, and begins to move and struggle. There is soon

made a little opening and something begins to work its way out, very slowly and with great difficulty.

Soon a little head appears, twisting and turning to free itself from the network of threads. Then you see a little leg, and then another reaching out for something to catch hold of. If you give him your finger he will cling to it, and help himself out the sooner. In this struggle he gains strength.

If you cut open the cocoon and free him without this labor he will be very weak. It is nature's way, and it makes of Mr. Silkworm quite a warrior, too.

At last he is free, and you know his secret. Behold! he is no longer a worm. In the silence of his prison he was growing a pair of soft velvety wings, and now he is a creature of the air.

Do you not think he teaches us a lesson of silence, of patience, of industry and of loving giving of self? For he leaves his beautiful woven home for us to use, and it is of that that silk is made.

As you must know, one of the most interesting places in Lomaland is the building devoted to the Silk Industries. Near the Bungalows the mulberry orchard is now blossoming out all new, and where we saw bare twigs several months ago, we now see dense green that at a little distance makes you believe you are looking upon a real forest like those in fairy tales, you know. Your devoted friend,

E. W.

GENIUS

by FLORENCE WILKINSON

WHAT seest thou on yonder desert plain,
 Large, vague, and void?
 I see a city full of flickering streets;
 I hear the hum of myriad engine beats.
 What seest thou?
 I see a desert plain,
 Large, vague, and void.

What seest thou in yonder human face,
 Pale, frail, and small?
 I see a soul by tragedy worn thin;
 I read a page of poetry and sin.
 What seest thou?
 I see a human face,
 Pale, frail, and small.

What seest thou at yonder dim cross-roads
 Beside that shuttered inn?
 Untraveled Possibility,
 The Inn of splendid Mystery.
 What seest thou?
 I see the dim cross-roads
 Beside a shuttered inn.

Prof. Loeb and the Life Problem

THE following, with treatise attached, appears in the morning papers of May 27:

BERKELEY, May 26 — Prof. Jacques Loeb, the world's greatest biologist, has just completed in his physiological laboratories at Berkeley, a series in that cycle of experiments from which he is endeavoring to discover the origin of life.

Experiments just finished have given a final solution to the problem so much studied of the growth in the lower animals of fresh organs from points of the body that may be cut. His conclusions on this important subject, which has a direct bearing on the solution of the life problem, are embodied in a bulletin entitled "Dynamic Conditions Which Contribute toward the Determination of the Morphological Polarity of Organisms," issued at the university today.

The new phase of the subject, which Prof. Loeb advances, lies in the phenomenon "heteromorphosis" (Prof. Loeb's new term) which in brief is defined as morphological polarity of the organism, and is "opposed to the idea that such polarity is dependent upon the morphological polarity of the individual cells."

The treatise is interesting in that it emphasizes once more the absolute futility of depending upon scientific experimentation, along material lines, for a solution as to life source and the selective action of cells.

Prof. Loeb exhibits phenomena heretofore unnoted; but *why morpho-*

logical polarity of the organism should preclude that of the individual cell and its inherent selective and active energy he does not make clear. The fact that he has been able, by ligatures, to divert the special cell currents does not, it would seem, subtract from the fact that the brand and character of the tissue former lies within the nucleolus of the individual cell, whether or not it be the motive energy of the "morphological polarity of the organism" that carries the cell to the point of regeneration.

Not to minify Prof. Loeb's contributions to the fund of scientific knowledge, it strikes one that the term "final solution" illy fits conclusions from such a source, no matter what qualifications are made.

The physiologic action of cells in dissolving and building up organic bodies, under lesion or normal growth, must ever remain the great mystery until the facts of the relation of spirit to matter are known and taken into account.

A. C. MCALPIN,
 Fellow Universal Brotherhood

A Marriage

ON May 6th, Grace G. Bohn and J. Frank Knoche were united in marriage in the Aryan Memorial Temple in the presence of Lomaland comrades. The ceremony, in its simplicity, became a binding of new hopes with ancient ideals, a linking together of all that is best in the heart-life, with all that is purest in that vision which we call the Future.

The Mendelssohn wedding march was impressively played by one of the student orchestras. Beside Mrs. Bohn and Mr. Knoche stood Mr. and Mrs. Walter Taylor Hanson, whose guest Mrs. Bohn was before she became a part of the regular student life at Point Loma.

From the Aryan Temple they were conducted to the home of Katherine Tingley, where she received them in simple recognition of the tender relationship that exists between herself and her students. At Mrs. Tingley's home, the children of the Raja Yoga School greeted Mr. and Mrs. Knoche with songs. The following day a reception was given in their honor by the children of the Raja Yoga School in Point Loma, in the Central Group Home.

Mr. and Mrs. Knoche are old students of Theosophy, and on this account their marriage must become an added power for service on right lines. Those who know both comrades feel that this new step is the open doorway to the joy and true comradeship which the law bestows upon those who work unselfishly and live purely.

Mr. and Mrs. Knoche are located at present in their new and beautiful home, "Hasu," just west of the Point Loma Homestead. As students throughout the world know, a true home-life is one of Katherine Tingley's highest ideals, an ideal which, at last, in Lomaland is being transmuted into a practical realization.

Mr. Knoche gave up a brilliant business career, and is connected with one of the oldest and wealthiest families in Kansas City. He came here for the sake of the greater opportunities and the larger life afforded by the student life at Point Loma and the work in connection with the Universal Brotherhood.

The Raja Yoga Edition

THE Special Raja Yoga Edition of **THE NEW CENTURY** contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to **THE NEW CENTURY CORPORATION**, Point Loma, Cal., the papers will be mailed for you without extra charge.

True Liberty Rests on Discipline

WE have a wondrous facility for the perversion of great ideals, and for sustaining our enthusiasm even when its original object has been set entirely upside down. Nowhere is this more noticeable than in the confusion which prevails on the subject of discipline, which we are gradually learning to believe is something opposed to the principles of freedom upon which our systems were originally based. This is peculiarly noticeable among the children of the nation who do not recognize, nor, unfortunately, are they taught, that wherever there has been a combination of men in defense of liberty that combination has only been rendered possible by discipline, and at the cost of those personal and selfish elements of human nature for which we are now

beginning to demand the fullest license. Collective liberty is entirely impossible without personal discipline. There can be no unity, that is to say, no freedom, amongst men except upon the common platform of their higher natures, and by the discipline and subjection of the personal desires whose supreme function it is to make union impossible. The ideals upon which the nation was founded were ideals of discipline, of the subjection of all personal desires for the common good, and because of that a measure of freedom was obtained which is now becoming en-

The Regula- tion of Our Natures

dangered by their unsuspected and stealthy perversion. Discipline is, after all, nothing more than the due and proper regulation of our own natures, and it is therefore inevitable at some time or another. All nature bends her energies to the attainment of order, that is to say, of discipline. All evolution is the putting of things into their proper places so that the higher shall not be retarded by the lower, so that the lower shall not fail of a model and a guide and an inspiration. In the physical nature absolute health is the synonym of freedom, and we know that this freedom depends entirely on the service of one organ to another, on the rightful discipline of every organ, and its subjection to the central authority of consciousness. We know, too, that if any part of the body should claim for itself that same false liberty of which we now hear so much, immediate and possibly fatal calamity would be the result.

If discipline is then the law of nature, it is evident that we must either discipline ourselves or be disciplined by some external force. There is a mysterious and tremendous connection between our inner selves and the powers which we call fate and fortune. It may be that many a yoke which is placed by fate upon our necks is but the determination of na-

In Discipline the Greatest Strength

ture to do for us what we have failed to do for ourselves. All fates are governed by him who rules himself, all external environment becomes pleasant and orderly when there is order within. The external turbulences against which we fight, the petty tyrannies of which we complain, are usually but the reflection of the turbulences and the tyrannies within. The insurrections within ourselves invite and make common cause with the hostility of events, so true it is that a man has no enemies like those of his own household.

Whatever may be our policies toward ourselves, let us at least see to it that by the loving discipline of our children, by doing for them what they are not yet strong enough to do for themselves, we place the means of freedom within their hands, so that they may go forth with an internal orderliness and with the power to stamp that orderliness upon the chaos of events.

Let us show them that there is no other freedom and no other strength than that which comes from obedience to legitimate law, and that resistance to law is the very fountain of weakness and of servility.

Glorious and great and free is he who can rule over himself, who has stretched the scepter of his own royal obedience over all nature and over all fates.

STUDENT

English Education Act

EVEN its own promoters now recognize that the English Education Act is a failure. Anglicans who desire schools where their own form of creed is inculcated must themselves finance them, and no longer levy a tax on the adherents of all other and less fashionable creeds. Doubtless it seems hard to be denied the right to take money from another man to have your child taught something that he disapproves of, but the world does move. Even *The Church Times*, one of the leading Anglican organs, says:

The act is a failure. It is best to be candid. . . . If a law produce an effect exactly reversing the intention of the legislature, no quibble of speech can make it anything else but a failure.

The "passive resisters" to an unjust tax, who consented to lose their goods rather than pay it voluntarily, have won the day. The law has ruined large numbers of the very schools it was designed to support. It stirred the sense of justice even of the people in whose interests it was passed. And its only permanent effect is the broadening conviction that the religious teaching of children is a parental and not a national responsibility.

STUDENT

What Is Patience?

PATIENCE is a homely virtue, often preached but never preached too much. It is one of those cardinal qualities of the Truth that we need to keep externally before our eyes, for we cannot dispense with it for a single instant. We cannot take up any book of great thoughts without finding a discourse on patience; yet it will be easy to find new points of view and new lights on the subject if we speak from the standpoint of a student of Theosophy in Lomaland. For here our understanding is made fuller by the fact that our philosophy and our daily life go hand in hand, and are not kept entirely separate as often happens in the world at large.

It may be that patience, in company with other virtues, has suffered disparagement from association with the dreaminess of the strait-laced canting spirit in religion. Perhaps it has for many people something essentially unpleasant if not unnatural and abnormal. Parents may have invoked the name of patience when they wanted us to do something that went against the grain of youthful impulsiveness. And something in the way the lesson was instilled into us, perhaps a want of tact, perhaps a lack of the quality itself on the part of the preacher, has caused it to figure in our mind as rather an unmanly and unromantic virtue, proper to goody-goody children and to grown people, but not to be expected of reasonable boys and girls.

However, Theosophy has a way of taking the homely virtues, rescuing them from their chill atmosphere of sectarianism, and rehabilitating them as essential parts of the true manly and womanly character. Thus any associations of gloom, austerity or priggishness, which the idea of patience may have derived from sermons and cant, will drop off when we consider it from the Theosophical point of view, and will be replaced by ideas of light, life and joy.

Impatience is an element of weakness, and weakness is unmanly, painful and, in short, altogether impossible for one who means to *live*. Impatience is *cowardice*—word of reproach with which to conjure back a man's self-respect. Impatience is shallowness, want of depth and dignity, insignificance of character, pettiness of spirit.

Patience is strength and courage and largeness, a quality that laughs at obstacles and despises all littlenesses and meannesses. Nobody can be great or noble or successful in any way without patience.

The desire to get immediate results is characteristic of the impatient person, and it shows a sad want of balance, a lamentable preponderance of desire over will. This form of impatience is characteristic of our present civilization, and shows itself in the universal hurry and love of petty enjoyments; the universal necessity for quick returns and for distractions. It is commonly thought all the rush and bustle of our life is evidence of great energy of character; but there is much to be said for the view that it indicates a *lack* of power—of controlling, centralized power. In a fever, though the animal heat is greater and the pulse quicker than usual, we know that in reality there is a loss of vitality. Vitality and strength manifest themselves by steadiness and balance quite as much as by activity. The rush and bustle of business life, and the restlessness and fever of what we call pleasure, are due to the want of a deep, underlying fountain of still life. We have not the power to be still and wait; we are eager to escape from ourselves.

Viewed in this connection patience appears to consist in the possession of a fund of reserve power, sufficient for all emergencies. The consciousness of this possession gives confidence and serenity; we are in no need to hurry, we can afford to wait. Thus patience is not a negative quality—a holding back or contracting influence—but a positive something whose possession makes life fuller and stronger.

Our impatience is never more markedly shown than when we are looking for immediate results. As students we are prone to skip the necessary preliminary instructions and to try to get at once to the practical results; which, of course, means superficial and untrustworthy knowledge, and much waste of time in going back to study what we left out. As reformers of our own character we are impatient with ourselves and discouraged because we cannot undo in a day the effects of years.

We are intolerant of Time and make of him an enemy. But Time is on the side of the wise man, and the patient man is one who has made Time a weapon in the armory of his Spirit, and who uses it as his most powerful agency. As surely as it takes time to do a thing, so surely will time ultimately achieve it.

One often hears the impatient remark, "I do not see of what practical use this is going to be to me." This impatient haste to see an immediate end implies that that end is not a very great one; for great results are only reached after long and patient working at introductory stages, the purpose of which is not revealed until afterwards. Instead of setting before ourselves some single and restricted object, to be attained quickly, we should rather try to make all our lives of effort converge towards a vaster and remoter purpose, only to be achieved by time and endurance. This would involve that *rounding-out* of the character which is so strongly urged upon us.

We might sum up these remarks by describing patience as a well of silent power that must be sought in the depths of our nature, and that will be revealed and made available to us in proportion as we quit our superficial ways of living and realize our deeper possibilities.

H. T. EDGE

Revised Version—of Bible and Mind

MOST people know that the "Revised Version" of the Bible still leaves a good deal to be desired in the way of accuracy. They would, for instance, be glad if the various Hebrew words—some of them plural—translated "God," "Lord God," and the "Lord," were so rendered as to indicate the particular appellation in the original. But they also know that it is a great improvement on the version of King James, a version often distinctly misleading. For example, the passage in John's Gospel, 5:39, originally rendered as a command, "Search the Scriptures," and thus made meaningless, is in the Revised Version rendered properly, "Ye search the Scriptures" It is now full of meaning as part of an argument. Only in such places does the later version differ from the earlier. Except in the cases where the archaic beauty of the earlier is obscure or actually erroneous, it is left untouched. Not a single tender or poetic word or phrase is unnecessarily changed. For page after page one familiar with the earlier might hear the later read, and remain unsuspecting that it was not his accustomed volume.

But for the Episcopal diocesan convention of Missouri, three centuries of study of the Hebrew and Greek go for nothing. After two days' discussion, this body decided by a large majority in favor of the use of the old version. The argument of one reverend gentleman, which did much to secure the majority, merits special notice and preservation as a curiosity. He asserted that the Bible was a poetic book, not a book of scientific accuracy. It is therefore only fitting, one must suppose he meant, that it should be inaccurately translated. He added that the Greek language was fitted to convey the original text of the New Testament, and that the English spoken in King James' time was likewise the choice vehicle for the inspired expressions. Does he think that the Revised Version is in some new kind of Greek; or why that reference? And do errors of translators become accurate by the simple process of casting them in the English of King James' time instead of the English of today? But perhaps, notwithstanding the reverend gentleman's reference to the Greek, he thinks the *original* was in English; for he capped his argument by the remark that he should consider it an insult for anyone to offer him an altered text of Shakespeare! One is reminded of the Sunday-school teacher who, being asked whether she preferred the old or new version, said she didn't want any version at all but just the plain Bible.

When will these conventions, synods, and councils wake up into the Twentieth century with all its terrible needs and troubles? A new version not only of the Bible but of the human mind has been published, and they are rejecting the one as well as the other. And that newly awakened, all questioning, all searching mind, proposing to re-ally itself with the mind of Christ, intends also to utterly sunder relationship with every church-born dogma of the dark ages, with every man-made creed which intensify sorrow and pain, because they block the path which leads to the spiritual liberation which follows an awakening knowledge of divine things.

Muckross Abbey—Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week shows a view of Muckross Abbey, one of the most charming spots in picturesque Ireland. The Abbey is situated between the lower lakes and the middle of Torc lake, and was built by the Franciscans about the year 1440.

Some Views on XXth Century Problems

Tyranny In-compatible With Liberty

THE art of governing men and of ruling over them is of all arts the most mysterious and the least understood. It is none the less likely to assume some prominence as we recognize that the tyranny of a system is quite as incompatible with human liberty as is the tyranny of an individual, and that however much we may pride ourselves upon what it pleases us to call our representative principle of government, it is but a milestone and not a goal. The best is always to come, and it will come the more quickly as we detach ourselves from any idea of finality and from the fallacy of supposing that human wisdom has found its ultimate expression in a political watchword.

Representative government is one of these very watchwords that are so pleasant to hear that we forget to ask if they are realities or pretences. It is the result of the reaction from those times when the world was avowedly governed, and badly governed, by selfish individuals. It expresses the flattering idea that we are no longer governed by others, but by ourselves, whereas a moment's reflection would show us how very few are the individuals who can govern themselves, and that the power of national self-government cannot be based upon anything else than the same power in the individual. Representative government, self-government, is still a long way off, and we are indeed much

Deceitful Disguise in Governing

nearer to autocratic government than we should at all like to believe. It would truly seem that the vast masses of humanity like to be governed so long as it is done in such a manner as not to offend the political principles which they suppose themselves to have adopted. The vast masses in the nations have no interest whatever in the majority of questions decided for them by their governments; and even where they have an interest, as in matters of peace and war, they allow themselves to be helplessly controlled in the direction of certain calamity by their "representative governments," by newspapers and by orators. One-man government is today as powerful as ever it was and more mischievous than ever because of its deceitful disguise. It is a law of nature that wherever two or three are gathered together one among them will rule in spite of all parchments and agreements to the contrary. The rulers of men cannot be dethroned, nor can their power be taken away from them in any other way than by a change of mental basis on the part of those they govern. Nature arranges the whole of humanity in her own order of precedence, of governors and the governed, and the only way we can change that order is by changing ourselves. We may decorate and title and crown and elect whom we please. The true order of precedence remains the same, and we are ruled by the man who has a stronger character than our own, and by no other.

Virtue the Strength of Governing

This being so, it will be recognized as a truth by the new spiritual consciousness which is coming into the world, and which must inevitably detect all insincerities and incapacities. Then we shall see a new order of precedence, and the strong man who now rules because he is strong will be able to do so no longer unless his strength be that of virtue.

The moral force awakening in the nations will no longer tolerate any act of their government which would be considered disgraceful in the individual, nor will they believe that the moral code is reversed for the benefit of governments. The fittest among us will be called upon to visibly rule, and our social machinery will be so adapted as to discover the fittest among us, the one whom nature has appointed.

The idea of the Lord's Anointed has deservedly become a superstition because those whom men so designated were often and obviously anointed from a quite opposite source. Those divinely anointed ones have not, however, failed from out of the world at any time, and they have ruled so far as we would allow them, although we have usually elected and crowned their enemies. When we have learned to follow the indications of the God within us, then truly we shall have, representative government.

STUDENT

Solving Difficult Problems Singly

IT is said of a well-known humorist that on being asked to contribute to the cost of converting the heathen he replied that he had no money but that if they would send him a heathen he would do his best to convert him. Mr. Jacob A. Riis seems to belong to the same school of philosophy, the school of individual effort. Being asked for his opinion upon the distressing social problem of juvenile criminality, he replies that the problem must be solved by individual effort, "one tough at a time."

We have a large way of doing things in America, but sometimes that way shows itself by the construction of a large organization to do our individual duties for us. The way is, of course, for a large number of people to do their own duties for themselves and nowhere is this duty more practical nor more pressing than in the matter of juvenile criminality. Mr. Riis' maxim of "one tough at a time," opens out the way and brings it within the reach of a great many who have had no other conception of philanthropy than a money subscription at most, and the expression of an opinion at least. The juvenile criminal is usually far more human than we suppose him to be and extraordinarily sensitive to kindness. There is no human being who is brought into contact with this class who cannot exert some individual influence, some little power of kindness or of persuasion which, in a great many instances, is the one thing needed. This is not an intellectual problem half so much as it is a heart problem, and if we would apply to it a little less brain and a little more sympathy it would solve itself. The trouble is that we have so little confidence in the wisdom of the heart and so much misplaced reliance upon the redemptive power of the mind. The only way to effectively attack the problem of the juvenile criminal is to acquire the wisdom which comes from a whole-hearted effort to influence one such actual or potential criminal. If a sufficiently large number of persons were to seek for wisdom through the door of a practical and active sympathy we should be saved many dreary dissertations and the work would be done.

STUDENT

Education Awakens the Genius

MR. G. F. WATTS is not satisfied with the present condition of education, and he expresses his discontent in the pages of the *Pall Mall Magazine*. He writes:

The whole object of education is to quicken and develop the powers of observation, to awaken genius and to intensify natural gifts. All that does not stimulate and develop the natural faculties is no education at all. What does our present system do? What is it? It is a great soulless mould into which the minds of children are poured, that they may all come out of a like pattern; and they call this progress! The condemnation of our system is its effect upon the mind of children. Directly they pass from the kindergarten stage they get to hate and detest education—the thing that they should love more than their toys and their games! Is this natural—is it right? No, no; the whole system is wrong, root and branch. We are not rearing intelligent citizens, clever craftsmen, devoted scholars, and earnest and enthusiastic work-people. We are rearing Civil Service clerks, competitors for a pension!

The cream of Mr. Watts' argument is in his admirable statement that children should love education more than their toys and their games. That they do not so love it is evident, and an awakened intelligence in ourselves will lay the blame upon the education instead of absurdly imputing the fault upon original sin in the children.

Education does not consist in giving to the child something which it has not, but rather in facilitating the growth of something which it already has.

The growth and evolution of the mind are as natural to the child as the growth and evolution of the body and ought not to be more distasteful.

What the gardener does for the flower the teacher ought to do for the child, and we have yet to hear of the flower which is unwilling to receive the rain and the sunshine, or which protests against the removal of weeds and stones which hinder its growth.

STUDENT

Art Music Literature and the Drama

CHILDREN OF THE RAJA YOGA SCHOOL OF POINT LOMA IN GREEK SYMPOSIUM, "THE LITTLE PHILOSOPHERS"

THE great truths of life and death, of the soul's message, of destiny and fulfilment, have never been

utterly lost to humanity. They have merely been inaccessible; they have merely failed of realization. And it has been that the many might find that revealing which otherwise would be unto only the few that Great Souls have come to Humanity, age after age, with the Warrior-message and the Warrior-call. And their lives have written themselves upon the tablets of humanity's heart, like great pure dramas, with that sincerity which renders the simplest act inspiring; for the lives of the Teachers of Men have been sincere. It is because their lives were true that they were dramatic in their intensity, and it is partly because the picture of these lives is essentially dramatic that it has persisted through the ages.

It is significant, in this connection, that one factor in holding men and nations in the old days close to the ideals of the Great Teachers has always been the drama; not the drama that we know today, dealing as it does with the insignificant and passing phases of life, but the Higher Drama by which the personality becomes the actual interpreter of the soul. It was by means of parable and symbol—and what are these but drama in its simplest interpretation—that the Teachers of Life have brought the Wisdom of the Soul back to the hearts of men. And the Drama of the old days was truly an educational factor, because it held up to men the mirror of all that was best and all that was intensest in their hearts, of all that was purest in the soul's ideals; and it mirrored the sky and the mountain heights as well, all gold and purple with the sunlight's very life.

In the palmy days the people responded. It is said that in Athens, when the powers felt the people to be growing chill, careless of their city's honor, forgetful of the purity of their civic life, they arranged for the production of one of the great dramas of Æschylus. And it is said that the Athenians went from the presentation of these mighty dramas to the Temples and thronged the doorways, and that they wept, saying, "Athens, Athens, is it, then, true that we have forgotten thee? Athens, Athens!" What ruler in those days would have dared trifle with the rights and the honors of Hellas? But those days passed, and seeking for reasons, may it not be because the children were forgotten that the light failed? The ancients spake unto the adult. The real Teacher speaks to the youth and the little child. The stone which the builders rejected

The Drama That Is to Be

has become today the head of the corner. When Katherine Tingley, with her Students, opened a new era, as it were, and made another new departure by the presentation of Greek Symposiums, first in Point Loma and then in the many Lodges throughout the world, we found that a new step had been taken, a step inconceivable in its real significance. *Hypatia*, the *Conquest of Death*—these seemed to bring us ages nearer the time when "the Good, the Beautiful and the True" should be not an ideal merely, but a living realization—unto the moderns even as unto the old philosophers who walked in the groves of Academus. And within the year, another and higher step has been taken by means of the Raja Yoga Symposium, *The Little Philosophers*, presented by children in nearly every nation on the face of the globe. To describe the effect of it were impossible, as impossible as to explain in terms of musical theory the song of a forest bird. When *The Little Philosophers* was given by Raja Yoga children, first in the Aryan Temple at Lomaland, later at Isis Theatre, we knew that something had happened, that something new had come to be. And the impulse of that hour flowed outward and outward, making possible a yet greater step in the presentation of this Symposium by the children in the Lotus Groups of the Lodges all over the world. And these presentations, given simultaneously, were not mere sequences, not simple events merely added to the sum of other events; but the synthesis of all that had preceded. It is the children who shall bring back to the hearts of men the ancient truths that have been for ages forgotten. It is the children, "the Torch bearers, the Light bringers," who shall bring again to Humanity that greatest boon, which is just the chance that we call "the Path." Katherine Tingley has placed in our midst the child, declaring that the children are destined to be the real teachers of Humanity, and her word today is proven, for lo! the children have become so. Their very sincerity will bring into the higher drama an element which is all but lacking in the ordinary dramatic presentations that we see today. Destined, indeed, are they to lead all Humanity through the portals of the Life Beautiful, beyond which lies the True. The drama of the future, fashioned as it will be largely by the lives and ideals and the dramatic work of little children, will be not an invitation to the passions, nor a mere source of passing pleasure for the sensation-loving, but an uplift and an inspiration, a summons, truly, unto the Soul.

STUDENT

WOMAN'S WORK

THERE IS NO MOVEMENT MORE SERIOUSLY INTERESTING TO EVERY HEALTHFUL AND THOUGHTFUL MIND THAN THAT TO BENEFIT THE POSITION OF WOMAN

—Emerson

SHALL we not rather say the "returning woman," for great, strong, pure and helpful as

we may picture in our highest moods the "coming woman," as she is generally termed, we can really bring forward no ideal of all that is best in womanhood which has not already taken form at different epochs in the past.

History shows this to be true and the myths of all countries reveal it as a fact. Looking into the mythology of the Greeks alone, we find that all types of the "eternal feminine" were there represented most exquisitely and perfectly. By the Nine Muses who presided over science, music and poetry, and who, although dwelling upon earth, yet were supposed to live most of the time in heaven, regaling the gods with their music and inspiring favored mortals who invoked their aid, they symbolized the artistic inspirational qualities in man and woman.

Athena—the perfect type of womanhood—possessed such prudence, power and wisdom that she was supposed to have emanated from the brain of the King of the Gods, "great Zeus himself." Athena was especially interested in the practical things of life, such as agriculture and domestic science. She invented many kinds of work for women which she taught them, and was skilled herself in the arts and crafts.

The brave warrior type developed when the Amazons held sway—and the tender, sympathetic woman was pictured in Iris, who was supposed to be the personification of the rainbow. One of her offices was to sever the last remaining filament or thread which held to the physical form the souls of dying women.

So in the above types only we have nearly all that pertains to the good, the true, and the beautiful in womanhood.

Passing along to the domestic realm which even the gods and mortals did not overlook, we find the goddess Hestia, the giver of domestic happiness, who dwelt in the inner part of every house and kept the sacred fires burning on the domestic altar. Could anything more completely symbolize woman's sphere in the home life? With a

shrug one might say, "all that is too far off, too idealistic to ever be realized in the every day woman we see about us." True, it does appear to be so, yet is there not every evidence that the woman of today, if she so wills, has in her all these potentialities for good and can raise herself to the level of the goddess-like creature she once was.

That such myths did exist, are not peculiar to Greek mythology alone, but to all, and are yet believed in, strongly evidences the fact that such types of women, more or less perfectly realized, have been developed at different eras of human evolution.

That woman has, in ages past, been possessed of such rare virtues that she has been not only the brilliant harmonious center of her own home, the wise maternal protector, the comrade, the inspirer, and—pardon the statement if it suits not—the leader of man in the right sense, as the

The Coming Woman

mother leads the son. One of the most important branches of Katherine Tingley's educational work is the Isis

League of Music and Drama, which was organized by her in New York several years ago. The objects of this Society are "to emphasize the importance of music and drama as *true educational factors*; to educate the people to a knowledge of the true philosophy of life by means of dramatic presentations of a high standard, and the influence of the grander harmonies of music."

There is perhaps no more practical way of educating the masses than by music and the drama. The upbuilding force of music restores the moral tone and equilibrium of the whole nature; while color and form, as represented in the drama with speech, can make clear vital truths which otherwise would remain obscured.

The Isis League of Music and Drama has, among other successful productions, given the *Eumenides* of Æschylus, which has been said by the best critics to have been the truest interpretation ever given in modern times. The ancients possessed a wonderful knowledge of the real nature of man. What today is classed as "unknownable" was to them the known.

Where are these ideals more unselfishly striven for than among the women students of Lomaland? Look at the great educational work of Katherine Tingley, which has become a living fire, lighting up the dark places in all parts of the world—transmuting the sorrows of women into joy, and ignorance into knowledge.

Loyal to the purest standards of the higher womanhood, Katherine Tingley is daring to step in advance of other women, breaking through the clouds by which they are encompassed, the light of her wisdom and her courage inspiring all women to follow. In Katherine Tingley's system of education every detail of woman's work finds its true place, and virtues which in the world would lie dormant, are in Lomaland awakened, brought out and developed.

And so the true woman will embody all that is highest and best in the heart of the race. She *must*, for she is the mother

of men. We firmly believe that after all these years of suffering, discord and pain woman is reaching upward. She has touched the abyss, is turning again toward the heights, nobler and grander for having passed through the fires.

Woman is today at last coming into her own. "The Coming Woman" is she who, purified by experience and grief, has gained the power to unite in realization the truths of ancient ideals with all that is highest in humanity's heart-life today.

E. C. S.

LET us have plenty of music at Christmas time; bright, joyous music for hearts that are full of happiness, but also some tender, comforting, deeply sympathetic strains for the brave souls who even on this glad day are battling with sorrow.—Mrs. H. H. A. Beach

A CUBAN STUDENT OF ISIS CONSERVATORY OF MUSIC

The Roses of Lomaland

IT is a bit difficult, in a land which is one of Nature's garden spots, in which flowers from absolutely every climate blossom in a very extravagance of beauty, in a land where the pine and the southern jasmine clasp hands in the breezes, and where the lotus blooms within a dozen yards of the hardy northern violet—in such a land it must seem difficult indeed to select any one flower as being more glorious than its fellows; but in Lomaland the rose is the flower of flowers. Never were there such roses as those of Lomaland, and never were roses anywhere tended with a care more loving and more full of appreciation for their own rare beauty. Walking through the garden at Lomaland, particularly at the end of the week when the flowers are being cut for the Sunday services, one thinks back involuntarily to the old days when Greece was a land of flowers, too, and when the roses of ancient Greece were famed throughout the world. Nowhere today, except in Lomaland, does the rose hold the unique position that it held in ancient days. The love of the Athenians for the rose was almost akin to worship. The old island of Chlos was a veritable rose garden from shore to shore, and it is said that at times, to those who approached it from the sea, it presented the appearance of a gigantic bouquet of pink and white and sunset tinted blossoms, with the shining pillars of temples and temple-homes gleaming above the glory of the flowers. During the flower season shiploads of roses were shipped every day from this island, the blossoms being used as emblems of joy and of sorrow, of triumph and of death. Many a returning hero has trodden upon a veritable carpet of roses through the streets of his native city. Why this flower has sprung into such unbounded luxuriance in Lomaland and indeed all Southern California, it is difficult to say, for to the most careful observer it is evident that even unusual care, of itself, could not bring such exquisite and rare perfection. STUDENT

Pioneer Woman Violinist

THE old, old heresy that no woman can play the violin like a master, a score of women violinists today are refuting on their own terms. The successes of the younger violinists lead one to recall those who might be called the pioneers. Lady Hallé, better known to the musical public as Wilhelmina Neruda, is nearing the close of a musical life which has been remarkable in many respects other than musical. As a solo violinist she was in her day pronounced the greatest of her time. Her style was and is singularly convincing, her bowing remarkable in its simplicity and strength, her tone noble and her technique thorough and painstaking. There are certain pieces in her repertoire, Spohr's *Ninth Concerto*, for example, which simply could not be better played.

Goethe has said, "If we developed proportionately when grown up as we develop in childhood, we must all be geniuses." Lady Hallé is no exception to the general rule that musicians are exceedingly precocious as children. She made her debut when she was barely seven years of age. For several years she was principal violin teacher in the Royal Musical Academy in Stockholm, for some time head of a string quartette in London, where she has very recently appeared on the concert stage.

It is interesting to know that her violin is one which connoisseurs consider one of the four greatest "Stradivari" in existence. It is the one used formerly by Ernst. Lady Hallé, quite outside of the musical value of her work, deserves to be remembered, as one of those who, by their efforts, made it possible for the many to achieve. JULIA HECHT

The Mother's Work

THE world hates the word discipline. It has an irksome sound and awakens a sense of dread in young and old. It is so much more easy and pleasant to drift with the tide, and leave things as they are until—but there is always a halt. Nature with her changeless laws is sure to bring a harvest time, and suffering is the fruitage of indulgence or neglect.

The mother smiles at the signs of temper in her wee first born and when he cries for things she gives them to him just to keep him still, and when the little seeds of selfishness begin to grow within his heart, she scarce observes their first young shoots, or fails to check their growth, because she dreads the friction, or patiently trusts that when he is older he will know better. So, while she is off her guard the weeds take firmer root and crowd the soil, and when she awakes at last and looks for the blossoms which should adorn a noble life, she does not find them. Their place is occupied with noxious growth of selfishness and self-indulgence,

which react upon her life and perhaps break her heart. This is one of the little dramas of life enacted, in part at least, before almost every hearthstone.

The future of humanity rests with the mothers. When will they awaken to the awful sacredness of the privilege and the responsibility? Never until they learn the sacred truths of life; until they study the working of the Law and realize that every moment of laxity and indifference, every opportunity lost, casts into the soil of the future a seed which will surely blossom after its own kind.

To be in ignorance of the Law, to know the Law and fail through lack of will to follow its divine behests, brings lesson after lesson of sorrow and despair, until the sense of duty is aroused. To know the Law and let it guide her in her loving task will make the mother's work a joy, and the fruitage of it a blessing to the world.

YOUNG STUDENT

Christianity as a Faith

MRS. HUMPHREY WARD, as all who once read and wept over *Robert Elsmere* must be aware, is in religious matters a bit iconoclastic. She recently wrote:

In the breakdown of miracle and revelation the moral experience of man has become at once infinitely more important, more mysterious, more awful.

It cannot be too plainly emphasized that what we are now witnessing in the religious life around us is the emergence of a fresh religious conception, exercising the same thrilling and vivifying power as the older beliefs in Incarnation and Sacrament. For large numbers of religious minds, as has already been said, conscience has become, has taken the place of, revelation. Its witness is not to any external "scheme" or isolated history, but simply to its own laws and their implications, looked at in the light of experience and history. This witness may be far yet from being intellectually complete; but now it is not merely a theory, merely a psychology; it is a *faith*—that is the important point. Christianity was a faith long before it was dogma or philosophy. And in this new awe which says "Reverence Thyself," as all the sages have said it, but adds "For thyself alone is the message of God," there is a power of infinite development. . . . It is as though the human mind, freed from a number of dead conceptions, were drawing nearer than ever before to things primal and ineffable; and, in a wholly new sense, what was ethic is seen to be religion—religion, moreover, that no longer feels itself in danger, as all liberal varieties of dogmatic Christianity must and do perpetually feel themselves in danger, from science, history and criticism. Rather, it knows in science and criticism its best friends; and the tone of exultation that is beginning to ring through it is the tone of those who already foresee an approaching unification of experience and faith, no less far-reaching and commanding than the great unification elaborated by medieval thought, whereof the ruins lie around us.

PHILHELLENE

by ERNEST MYERS

GRANT me all the store of knowledge, grant me all the wealth that is,
Swiftly, surely, I would answer, Give me rather, give me this:

Bear me back across the ages to the years that are no more,
Give me one sweet month of spring-time on the old Saronic shore;

Not as one who marvels mournful, seeing with a sad desire
Shattered temples, crumbling columns, ashes of a holy fire;

But a man with men Hellenic doing that which there was done,
There among the sons of Athens, not a stranger but a son.

There the blue sea gave them greeting when their triremes' conquering files
Swam superb with rhythmic oarage through the multitude of isles.

There they met the Mede and brake him, beat him to his slavish East;
Who was he, a guest unwished-for bursting on their freeman's feast?

There the ancient celebration to the maiden queen of fight
Led the long august procession upward to the pillared height.

Man with man they met together in a kindly life and free,
And their gods were near about them in the sunlight or the sea.

There the light of hidden Wisdom sprang to their compelling quest;
Ray by ray the dawn from Hellas rose upon the wakening West.

Every thought of all their thinking awayed the world for good or ill,
Every pulse of all their life-blood beats across the ages still.

International Co-operation in Archeological Researches in Greece

IN matters of archeology we seem to have reached a point of international amity that might be advantageously aimed at elsewhere. There are in Greece no less than five schools of research, each laboring within its own appointed sphere and thus adding substantially to the common knowledge of the world. Mr. Heermance is in charge of the American excavations and he is about to continue his interrupted work at Corinth where he hopes to identify some of the sanctuaries mentioned by Pausanias. The British excavations are to be found at Palæocastro where an immense number of Mycenaean vases have already been found. Further search is now to be made at Laconia and efforts will be made to disclose the Temple of Arternis.

The French scientists are no less energetic. Their field of operations is at Delos where much success has already been attained. The Temple of Apollo will be further excavated, a work which was begun last year. The Germans are equally busy at Levkas, identified by some as the Ithaca of Homer. The Greek Archeological Society is directing its attention to the ruins of the Temple of Hera in Samos and is also doing good work in the vicinity of the Theseum at Athens. It has also undertaken the restoration of the Temple of Apollo Phigaleia and of the Lion of Chæroneia.

STUDENT

A STRIKINGLY valuable use of the phonograph was recently made by Mr. Charles F. Lummis, a use for which posterity will have reason to thank him. He caused young Indians of twelve tribes to record on this instrument a number of their own folk-songs in their own languages. The Indian dialects are rapidly becoming extinct, and with them go forever their songs and the legends they embody. It is not yet too late for students of language and myth to render science the same service as Mr. Lummis. Progress in the making of these machines has been very rapid of late. It is not easy to foresee the future of the invention, but there is no reason for doubting that it constitutes as great an event as that of printing.

STUDENT

THEY (people) just live and forget that beneath them lie their father's bones. They forget that in some days—perhaps more, perhaps less—other unknown creatures will be standing above *their* forgotten bones, as blind, as self-seeking, as puffed up with the pride of the brief moment, and filled with the despair of their failure, the glory of their success, as they are tonight.—*Rider Haggard (Stella Fregelius)*

Recent Excavations Show a Greater Antiquity for Rome

THE later results of prolonged research among the remains beneath the Roman Forum might, one would think, by this time, be suggesting to archeologists that it were well to modify their conceptions of the age of Rome, assigning to the city's origins a far remoter date than any yet mentioned, except by H. P. Blavatsky.

According to that teacher, both Italy and Greece were colonized from sinking Atlantis, as also the west coast of Europe as far north as Ireland.

That part of the Forum known as the Comitium, the space in front of the Senate House, has now been excavated down to the untouched soil far below the pavement. No less than *twenty-three* strata of remains have thus been unearthed, each stratum with its distinct characteristics. How long were these in being superimposed one upon another?

The old Roman antiquaries of the Augustan age spoke of a certain "Black Stone," which, they said, covered the grave of Romulus. Our antiquaries, of course, know more than they of their city, and have decided that Romulus never existed. But five years ago, when the Comitium was first cleared, a space covered with black marble was revealed, protected all around by a low parapet. Below this was a mass of débris, consisting of votive objects, fragments of bronze, and some early pottery, mainly Greek. And below this again was a tomb or shrine. How far back this dates we do not know. There is reason for thinking it much older than the Black Stone. For the tomb, and some structures on the same level connected with it, are orientated in accordance with the points of the compass, after the rules immemorably set by the augurs for the construction of temples. But the Black Stone is merely orientated in accordance with local architectural convenience, to harmonize with other buildings. One of the structures belonging to the tomb group is a pillar on which is an inscription. The language is archaic Latin in a Greek alphabet. The lines run continuously, that is, from right to left, then turning back to the right. But owing to the defacement of the pillar by violence, this inscription cannot be read. Only the ends of the lines remain. They appear to be making some reference to the early priest-kings.

In another part of the Forum, a prehistoric cemetery came to light. Various modes of burial are to be found here, and it is interesting to note that the oldest of these modes is that to which civilization is now returning, namely, the burial of ashes after cremation of the body. Much later, direct inhumation was practiced, still an improvement on our method of preserving the body from earth contact by means of wooden and metallic encasements.

There is an immense amount of work of this kind yet to do in Rome. That which has been done needed in many cases the preliminary complete removal of large buildings, and even in one place a church, before the first spadeful of earth or the first fragment of pavement could be touched. Doubtless the whole city rests on the richest archeological treasures, most of them therefore inaccessible, but there is still much that is open to investigation. And when it shall all have been done there will remain other cities of Italy with as great and far-stretching a past as Rome, for example Florence.

ARCHEOLOGIST

The Excavation of Herculaneum About to Be Commenced

A SCHEME is on foot for the proper excavation of Herculaneum, a site which has hitherto been neglected in favor of Pompeii, which is more accessible. The town of Resina now stands above the lava-covered ruins of Herculaneum, and there are also very great natural difficulties. The work is, however, to be now attempted, and it is proposed to invite the assistance of all other civilized countries in cooperation with the Government of Italy. The work ought certainly to be done. The results obtained from Pompeii are of surpassing interest, disclosing as they do an ancient city complete in every detail except life, exactly as it stood when the lava flood stilled its activities for ever. Herculaneum is of even greater importance, and the want of money at least ought not to stand in the way of an enterprise important to the whole world.

A BIT OF THE CLIFF LINED SHORE AT HIGH TIDE ON THE WEST SIDE OF POINT LOMA

Our Manner of "Having Dominion" Over the Earth

THE ever present mania for inflicting death, which seems to be so characteristic of the Anglo-Saxon race is fully exemplified in the fate of a certain species of bird which lives in the swamps of Florida. When first discovered, only three specimens were known, all of which were promptly killed by the person, a minister, by the way, who found them. That was fifty years ago, and the specie was then lost sight of and believed by some to be extinct. Recently, however, a few were so unfortunate as to be observed and were sent to museums for mounting. Men have spent months together in the pestilential swamps where these birds live in the efforts to exterminate them "for scientific purposes;" because they are so unlucky as to be rare they are to be made extinct. These birds called the "Swainson's warblers" are said to sing very sweetly in a strain similar to the thrushes, and we presume that the scientific gentlemen who are so carefully exterminating them will have the songs preserved in alcohol and placed beside the stuffed skin of the singer in the museums. Since we choose to live in wildernesses of brick and pavements we find it fatiguing to "go to Nature," wherefore Nature must, perforce, come to us, even though somewhat depreciated by the transit. One cannot, however, avoid the thought that a camera and a phonograph would probably accomplish the result as well, or better, with less injury to the subject.

Y.

A Unique Century Plant a Native of Point Loma

NEAR the southern end of the school grounds, in plain sight from the Homestead, is a space covered with century-plants, or "agaves," of a species said to be found at only one other locality in the world. This species, the agave, is distinguished by its very short leaves and very dark green color.

The plant stands upright to a height of about three feet, then tips over and grows along the ground, sending out hundreds of roots all along its length. When it has become fifteen or twenty feet long, being then about fifty or seventy-five years old, it turns upward again and sends up a flower-stalk three or four inches in diameter, to a height of about ten feet. Its branching arms are shaped like a great candelabra, and bear many clusters of yellowish flowers, somewhat like very short-leaved cannalilies. When it has completed its three-months task of blooming, the plant dies, but its alkaline juice and stringy fiber resist decay so that the bare and spectral flowerstem may stand for several years like its tombstone.

All the agaves have the habit of sending out underground sprouts, which intelligently turn upward into the air, form roots, become perfect plants and gradually sever their connection with their parent. But the *Agave Shawii* has improved on that arrangement; its underground buds form roots and separate themselves from the parent stem long before they have ever seen daylight at all, and rely on themselves from the first.

Universal Brotherhood Organization

Central Office Point Loma California

LAST Sunday evening was delightfully spent by the large audience at the Isis Theatre.

Little Margaret Hanson read a paper entitled "My New Little Woman." It occupied only a minute or two, but her auditors were alike fascinated by the musical poetry of the words and the dainty beauty of the little speaker. Albert Spalding read a paper on "Education for the Nations," which was well received and applauded. Both these Raja Yoga children are well known at Isis Theatre and the warmest kind of welcome always awaits them.

The third address was by Dr. Herbert Coryn on "Theosophy, Pantheism and Fatalism." It was cogent, forcible and timely. We do not reproduce it on this occasion as it is intended to publish it in pamphlet form, and the same plan will be followed with the address entitled "What Theosophy Is Not," which was delivered on the previous Sunday evening.

We wish that it were possible to present our readers with an adequate view of the Sunday evening meetings in Isis Theatre of which we reproduce the report which appears regularly in the *San Diego News*. They would certainly find in such a view an inspiration to their own work and a prophecy of what that work shall one day be in every city of civilization.

If the typical Sunday evening meeting had occurred upon one occasion only it would be sufficiently remarkable. If by some special effort a theatre so large had been filled with intelligent men and women, the most earnest men and women in the city and the best educated, we should say that it was the evidence of a very marked and a very wonderful success. But what then shall we say when this record is not a matter of some unique occasion, when it is repeated week after week and month after month, when it is due in no way whatever to curiosity, and when the same people may be seen in almost the same seats with an unbroken regularity? What, indeed, can we say, except that Theosophy, when rightly presented, when presented as a living aid to daily life, will be recognized as such, and welcomed as such by the humanity which needs it? The people who come to Isis Theatre are representative people, representative of civilization in most of its branches, and they come because Theosophy also is representative, not of some particular and narrow school of thought, not of some special dogmaticism, but of humanity's needs, the needs which well-nigh all men recognize and would like to grapple with.

It must not, however, be supposed that these results are obtained without care and effort, but it is the care and effort which consist in doing little things well, which consist in making every act square with an ideal. Katherine Tingley has given her students the philosopher's stone which turns to the gold of success everything which it touches. It is simply the habit of glorifying every detail by making it worthy of its purpose, that is to say by *intending* every detail, by mentally set-

LOMA-LAND STUDENTS AT ISIS THEATRE

A Delightful Program as Usual (Some Reflections on the Success of the Isis Theatre Meetings)

ting it exactly where it belongs in the finished work. Thus the decorations, the musicians, the readers of addresses, the helpers of every kind do not perform their respective work in watertight compartments. Certainly, each one rigidly minds his own business, but if it were possible to glimpse the unseen planes of the ideal it would be

seen that they were all united in the common intention that the work *as a whole* shall be successful. Unity of intention produces unity of result, harmony in result and, of course, success in result. The Isis work is a diamond with many facets, and each facet is satisfied with its own beauty, its own perfectness, its own position. None tries to outshine another. The ideal of each facet is the splendor of the whole. We might express all this in much simpler words by saying that there is harmony because there is no personality.

And so week by week the immense crowds assemble at the Theatre to hear a program which is always varied and always useful. The decorations alone are worth the visit, but it would be a revelation to many to know with how little labor these simple decorations are carried out. Nature, left alone, produces decorative material with amazing prodigality. It needs only arrangement and the artistic taste which also is a part of the religion of unselfishness.

The music is always good and conveys its lessons in language as unmistakable as the words of the speakers, and the music is all the more eloquent because the players are unseen. The performers, in other words, charm and educate with their *music* and not merely by their dexterity. Here too the personality gives place to the ideal and the result is a force and a harmony. The speakers are few in number, and an address rarely extends beyond ten minutes. It is always effective and for the same reason. The speaker remembers that he is a human and divine soul, speaking to other souls and not merely to intellects. He wishes to say what it will be useful to others to hear, and he says it from that common ground of human need which all men alike share, irrespective of all these factors which are usually supposed to be important. There is no ambition towards mental pyrotechnics and there is a recognition that the only eloquence worth possession is that unstudied eloquence which springs from the heart. Sometimes the children come and reproduce some of their school exercises upon the stage. They do it so supremely well, because they are so supremely unconscious that they are doing anything more than the duty of that particular moment. For them all life is duty and they have not yet learned, nor are they likely to learn, the pernicious heresy of "small duties" and "big duties." A duty for them does not become more of a duty, because it is prominent.

May our comrades throughout the world believe that they also are present by their devotion and helping by their loyalty, at these weekly meetings of the Universal Brotherhood organization at Isis Theatre.

Some Notes by "Observer" on the Point Loma Bungalow and Tent Village

ALITTLE less than an hour's ride from San Diego brings us to Tent Village, from which we see the Homestead, white and shining, against the sky, with the Temple and Yerba Santa upon one side, and upon the other the long line of the Raja Yoga School buildings, and the white camp far beyond. We see, too, the residential bungalows upon the left, each one nestling in its bower of green foliage and flowers, and we see the great stretch of Homestead land made beautiful by crops, and with its splendid burden of fruit-trees now hastening to keep pace with the season. To the right stretches the noble canyon which leads us to Ocean Beach, with its thunderous waves and its white sands, and its rugged, frowning rocks for the adventurous. Continuing the circle, the waters of San Diego Bay spring to our vision, a marvelous, magic contrast to canyon and hill. The Bay is almost at our very feet—it is, indeed, less than a mile away—and today, under the hot, clear sun, its waters are as motionless as the mighty Mexican mountains beyond. Mountains and Bay seem to be waiting breathlessly, and it would indeed be a pity if any unconcerted motion of air, or land or sea should disturb the very witchery of color which now binds all nature into a unit of beauty.

Turning to the Tent Village we see, first of all, and within a few yards, a beautiful wooden building, tastefully designed and substantially constructed, evidently intended for mental pursuits, for music and for pleasure. Immediately beyond, and forming an arc of a great circle, are many tents, the spaces between them laid out with flowers and shrubs, while well-kept paths intersect this village in many directions. Still further away is a group of small buildings, very similar in appearance

to Swiss chalets. These are the kitchens and dining-rooms which we will visit in due course.

Mr. Alpheus Smith, proprietor and director of Tent Village, conducts us, first of all, to the Assembly Rooms, and we need no invitation to admire the lofty hall, with its glass roof, the spacious and unobstructed floor, the appointments perfect in every detail, and the unusually wide piazza, which runs all round the outside of the building immediately under the dome. These are things which strike the eye without indication, but there are other things: the bath rooms, the dressing rooms, the offices of every kind. Everything is perfect, the best that can be bought, and we concede at once that Mr. Smith has not lived in Chicago for nothing—nor with his eyes closed. A hundred conveniences are explained to us, and we should like to enumerate them all, but it is the tents themselves which attract us most strongly, for, after all, this is Tent Village.

Now, a well-made tent does not differ in point of comfort from a most comfortable house, and who can question that it is far more healthy? Those whose ideas of tents are somewhat prehistoric, or who suppose that a tent is merely the flapping and uncomfortable nuisance which it was a few years ago, must modernize their ideas. The walls and roofs of these tents, for example, are nearly as rigid as if made of wood. Most of the tents measure 14 feet by 16 feet. They are rectangular in shape, and the canvas is stretched over a substantial wooden framework and kept tight, not by the unsightly wooden pins and ropes which we usually associate with tents, but by metal pins fastened to the frame of the tent itself. The effect

is neat and trim and compact to the last degree. Every tent has two roofs, separated by a few inches of air space, thus insuring coolness and protection from possible sun glare. The interior arrangement of these tents is a marvel of good taste and ingenuity. The furnishings are artistic and unique, having been expressly made for this purpose. Some of these tents are specially fitted up as bath rooms, while the water hydrants are within a few yards of every door.

It would be superfluous to say anything here as to the charms of tent life, because they must be experienced to be appreciated, but we wonder how many cases of weak health would remain uncured under such treatment as this? A tent has all the advantages of the complete open air with none of the disadvantages, and here in Tent Village the open air means the competing breezes from the ocean upon one side and from the Bay upon the other.

At Point Loma the air is said to be the purest in the world. There is a blend from the mountain and sea. It is the life-giving atmosphere which has made Point Loma so famous for its health.

The refectories and kitchens are complete, and especially interesting are the contrivances for insuring the purity of the water, and not only of the drinking water, but also of the cooking supply. The breath of slander has never yet been raised against Point Loma water, but the precautions at Tent Village show the same vigilance as is found at the Loma Homestead.

Tent Village opens in June, and those who are successful in securing accommodation will certainly be fortunate.

OBSERVER

Church of the Future

THE church of the future continues to be a fruitful source of discussion, and it is a wholesome sign that it should be so. It proves that a divine dissatisfaction is creeping into our minds, that ideals are beginning to assert themselves, and that we are making valuable comparisons between what we have and what we might have. Opinions are, of course, as wide apart as the poles, but that does not matter so long as they have for their background a determination that the present state of things must cease at all costs. This, at any rate, has been weighed in the balance and found wanting. Never yet has the "Mene, Mene" stood out more startlingly before the eyes of thoughtful men.

Among the many changes which are demanded we have one to the effect that the minister of the future must be the best educated man of the community. Now, the value of this suggestion depends entirely on what we mean by education. There is an education of the heart as well as of the head, and we know many men who have the most profound erudition and who are yet as unsuited to the pulpit as it is possible to imagine. We know also many men who have no great intellectual attainments and who yet have that rare education of sympathy with its attendant wisdom which ought to be indispensable to the ministry. The main duty of a preacher is not to solve the intellectual difficulties of a number of precocious young people who already have the usual omniscience of extreme youth, but rather to bring the help of sympathy to those who need that help, to bring to the discouraged the hope which springs from knowledge and not from theory, and to show the existence of Law to those who would otherwise be lost upon the apparent whirlpools of fate. Intellectual knowledge has its position, a beautiful and a magnificent position, but it must acknowledge the master in the heart like all other human forces.

Among other opinions upon the church that is to be, we find a gratifying consensus of opinion that it will concern itself more with the present than with the future, that it will talk very little, or not at all, about rewards and punishments, that it will be built upon courage and not upon fear, that it will give to men the ineffable tranquillity which can only come from the assurance of Law. The belief in human depravity will be sent back into the ghost-infested darknesses from which it came, and in its place will be set up the eternal brilliance of human divinity.

How great, indeed, will be the gain if we can transfer our mental center of gravity from the future to the present, if we can recognize that the nobility of the present moment is the only nobility possible to us, if we can perceive that the character of today and not the belief of today is the only worthy preparation for all future life!

We may well ask in our perplexity, when shall these things be? Where are the churches and where are the preachers who can touch the wounds of human life with the hand of compassion? Some there have been and some there are now, but the harvest is ready and the laborers are so few. Thousands of pulpits are today vacant of spiritual life and there are thousands of congregations outside the church doors.

STUDENT

I LONGED FOR LOVE

by FLORENCE EARLE COATES

I LONGED for love, and, eager to discover
Its hiding-place, wandered far and wide;
And as forlorn, I sought the lone world over,
Unrecognized, love journeyed at my side.

I craved for peace, and priceless years expended
In unwarded search from shore to shore;
But, home returned, the weary seeking ended,
Peace welcomed me where dwelt my peace of yore!

Religious Congresses

THE proceedings at some of the sectarian religious congresses would be very amusing if it were not for the element of tragedy which pervades them. Surely, we can use no other term when we consider the present misery-sodden condition of the world and then turn to some of these assemblies with their almost limitless possibilities of good and observe the almost inconceivable trivialities with which they occupy their time. What, after all, have we learned since the convocations and synods of three hundred years ago devoted their energies to a discussion of such profound questions as the number of angels that could sit upon a church-spire? It would seem, very little.

The Presbyterians, it appears, have been much exercised as to a revision of their book of common worship. A very prominent divine has made a speech to the assembly in which he addressed himself to the world-shaking question as to whether or not they could rightly adopt the Episcopal Confession of Sin. There were difficulties in the way. The Episcopal document was not sufficiently explicit in its confession of a sinful nature and this was a point which must not be slighted. Therefore, the Episcopal confession would not do. But the Presbyterians were in no wise daunted. Not finding what they wanted ready-made, they have made a new one in which there shall be no doubt whatever as to the sinful nature of man. As the newspaper report says, "We wanted a confession with a clear acknowledgment of a sinful nature, and we have prepared one." We may remark, parenthetically, that the acknowledgment of a foolish nature is still more clear.

These worthy men are very anxious that there shall be no ambiguity about the sinful nature of man, but we do not observe any corresponding enthusiasm upon the subject of man's divine nature. We should have supposed that a little more attention to this would have solved many perplexing problems and simplified the proceedings of many future assemblies. We commend it to their consideration.

STUDENT

What Is a Homestead?

OUR word Homestead comes to us from old Anglo-Saxon, through it and through cognate languages, from that branch of the archaic Aryan tongues called usually Indo-Germanic. With it has always been associated a sense of the protecting influence of the household *daimona* or "gods." This feeling is, according to archeology, as old as is man himself, and outside of its universality as a belief, likewise goes to show the existence in ages past, of a universal natural religion. The ancestor and nature "worship" of hoary old China is another child of this ancient heritage.

However, the cult of the Home of the Hamestede, of the *loca sacra*, was better understood of old than it is now; for it contains in itself more than a grain of truth. It is interesting to recall here, that the word for Homestead in ancient Welsh and Cornish is "Tre," "Tref," or "Terp." These three vocables at once proclaim their affinity to the old Egyptian "Rep," or "Erp," a word for "Temple," the home of a religion. How this thought carries us back in spirit to that old time when every household carried his personal "gods" with him, wherever he went; to that patriarchal period when the family center became the holy spot from which cities, aye, nations, sprang!

It would be interesting, very, to know just what influence archaic Egypt exercised upon the mind of the barbarians of the British Isles; and also how much of the old Wisdom-Religion of the Ages those Egyptian Temple Initiates found among these tribes, to whom they carried back what was once a common possession of mankind.

G. DE P.

THEOSOPHY views the Universe as an intelligent whole.—W. Q. Judge

The True Interests of a Country

THE world has been asking what these are for thousands of years, and that no nation has ever yet given a true and practical answer is proved by the national wrecks which lie half hidden in the sands of time, or so entirely buried that all trace and memory of them is lost. When that question is worthily answered, and that answer is worthily lived, nationally lived, we shall see the beginning and the continuance of a human power which will draw perpetual vitality from the freedom which it confers, instead of meriting its own destruction by the slavery and the misery which it has provoked. Nature does not destroy the Beautiful and the Good, nor are nations swept away until they are so saturated with the disease of self that no health whatever is left to them. Ten righteous men would have saved the Cities of the Plain.

Never before have men so occupied themselves with the art of government as they are doing now. Never before has that art been so misunderstood. We say this with the full recognition that the cruder forms of oppression have disappeared or are fast disappearing. The oppressive misgovernment of Cuba is perhaps the last illustration within the area of civilization. May her people be the first to defy the psychology of usage and custom, and to enter into the untrodden path of the highest interests of their country.

At the present day the world is filled with the clamor of those who believe themselves to possess panaceas for the evils which they see. Already the statute books of the nations are encumbered with the measures which have been adopted for the supposed purpose of increasing human happiness. Every year sees the increase of those measures, the increase of suggestions, the increase of endeavor, and we must perforce confess that every year sees also the increase of human suffering, and an added strain to the labor of living. Must we not then conclude that we are upon the wrong path, that we are confusing symptoms with disease, and that we can cure no social evil whatever by a legislative rearrangement of human atoms, or by penalizing the phenomena which are merely the evidences of the malady?

An eminent statesman once said that there is no force in nature which can long withhold from a nation the liberty WHICH IT DESERVES. He apparently meant that the external conditions of a country must presently adapt themselves to, and correspond with, the collective thought and aspirations of that people. It would seem to follow from such a dictum, of which we can hardly doubt the truth, that the ideal government is only possible to the ideal people, and that the machinery of a nation must ever be defective so long as the invisible force behind that machinery is deficient in strength, in determination and in purity. An external justice, a collective justice, cannot exist so long as injustice dominates the heart of the individual, and cruelty will be the keynote of the nation so long as cruelty lurks in the mind of the citizen.

The true interests of a nation must then lie in the culture of the individual and not in the theoretic perfection of its laws. Laws at their

very best can do little more than force wrong doing out of one channel into another, usually out of a visible channel into an invisible one, which is generally worse. We can penalize the grosser forms of cruelty, but we cannot reach the more subtle shapes. No human device can forcibly prevent the cruel man from acting cruelly, nor the unjust man from acting unjustly. The wrong doing which is out of sight of law, produces infinitely more misery than that which the law can recognize, and as the true interests of a country must produce happiness, while making our laws as perfect as possible, we must regard them as merely auxiliary to a deeper and a wider effort in which the duty of the individual is not confined to his vote at the ballot-box, nor to the expression of his political opinions, however loud that expression may be.

The nation which is willing to begin at the beginning in the search for its best interests, will the first of all devote itself to its children. It will recognize that true education cannot be left to those whose own self-interest is their only claim to educational ability and wisdom. It will perceive that the teacher is both the law-giver and the philosopher to the future, and it will require more stringent credentials from the schoolmaster than from the physician. Nor will certificates of intellectual knowledge be at all sufficient. The teacher must be not only able to communicate facts, but to call forth from the child the *love of knowledge*, and to establish that love of knowledge upon a basis, not of self-interest, not of the power to amass wealth, but upon the basis of public good, and of its own desirable beauty. Our confident expectations for the future of Cuba are founded not alone upon the demonstrated force of her people, but upon their appreciation of true education, and upon their perception that wisdom is easily developed in the child before the psychology of custom and prejudice can assert its paralysis.

We should not be altogether unjustified in assuming that the best interests of a nation, from their social side, are entirely secured by the care of children. It is not the quality of mercy alone, which blesses him who gives and him who takes. To educate children is to educate oneself, in all the beautiful things of life; the lessons which are learned in the commonwealth of the school impart wisdom to the teacher as well as to the taught, and the nation whose best thoughts are for its young, is acquiring a wisdom of life which, like a well ground tool, can be used for a multitude of purposes.

Such a people will see to it that the contagion of vice, the contagion of injustice and superstition and cruelty stand far off from the national nursery, and that the evil things of life shall not flourish near the growing wheat.

Such a nation, having its children ever within its sight, will know how to take them by the hand as they enter through the door of manhood and womanhood, and so lead them into those outer and open places where their good deeds will be a benediction upon the world and their voices will be loud and clear in the service of men. STUDENT

Ireland Has a Splendid Future

IRELAND has contributed 50,000 of her best population annually for the last fifty years to this country. The results of this steady drainage are marked and numerous. The marriage and birth rates of Ireland are the lowest of any civilized country; the lunacy rate is among the highest; and in every industry the scarcity of labor is very severe. There is even some danger of the extinction of the nation. Foreigners are beginning to enter the country to take the place of those who have left. During ten years the foreign-born population has increased by 10,000. In consequence of these facts an anti-emigration society has been at work for some time, and the fruits are beginning to manifest. During the first quarter of last year 2,161 emigrants reached New York. The corresponding period of this year shows only 1,667, a decrease of nearly 25 per cent. Ireland has a great future as she has had a great past. The peculiar genius of her people is as fresh as ever. In art, literature and music she can give the world something it cannot get from elsewhere. Her people are natural mystics, and it will need but a touch for them to develop again a beautiful prehistoric civilization whose evidences we are only just beginning to understand. Those who love Ireland will best show their love by helping her people in staying rather than going.

Philosophy and Cruelty to Animals

THE world's philosophers have certainly done something to discourage the cruelty towards animals, which is so dark a stain upon our civilization. Locke, in his *Thoughts on Education*, lays it down as an axiom that there can be no morality without humaneness and that cruelty should be regarded as the most detestable of all vices in a child. He says:

This tendency to cruelty should be watched in them, and, if they incline to any such cruelty, they should be taught the contrary usage. For the custom of tormenting and killing of beasts will, by degrees, harden their hearts even towards men. And they who delight in the suffering and destruction of inferior creatures, will not be apt to be very compassionate or benign to those of their own kind. Children should from the beginning be brought up in abhorrence of killing or tormenting any living creature. (Ch. on Cruelty, pp. 96-7.)

Schopenhauer speaks just as emphatically. He writes in his *Foundations of Morality*:

Between pity towards beasts and goodness of soul there is a very close connection. One might say without hesitation, where an individual is wicked in regard to them, that he cannot be a good man. One might also demonstrate that this pity and the Social Virtues (purity in food and habits) have the same source.

The Trend of Twentieth Century Science

South Polar Expedition—Evidences of Milder Climate

NEW ZEALAND papers just to hand contain some interesting accounts of the arrival at Christchurch of the relief ships *Terra Nova* and *Morning* in company with the *Discovery*, which latter ship they were so fortunate as to find and extricate from her long residence in the ice. The story which all three ships have to tell is an exciting one, the now familiar story of adventure, of narrow escape and of determined fortitude. This must, however, wait until a more favorable occasion, but in the meantime we reproduce a sketch map showing the measure of success which was attained by these bold explorers in their search southwards.

The scientific results have, of course, not yet been made known in detail, and they may prove to be somewhat meager, not in any way through want of energy, but owing to the extraordinary barrenness of the regions visited. No flowering plants whatever were found, and there are therefore practically no insects, with the exception of a ten-legged spider, of which several specimens were secured. Among birds the skuas and the penguins were attentively observed, but no new species were found.

So far as at present known, the one sensational discovery which has been made is due to Mr. Ferrar, the geologist of the expedition. This gentleman accompanied Captain Scott to the top of the Victoria Land Glacier, and at a height above the sea of nearly 9,000 feet he was so fortunate as to find the fossil remains of plant leaves imbedded in sandstone.

The ex-President of the Australasian Association speaks of this discovery with very great enthusiasm. He says that one of these fossils, described as being something like veronica, is clear evidence of a very much milder climate having once prevailed in these frozen regions. These plant remains were found imbedded in sandstone which contained rounded quartz pebbles. These pebbles must have come from a granite district, and as they were found at a much higher level than any granite now existing there, they were probably the remains of mountains which have since disappeared. The discovery will in any case add materially to our knowledge of climatology.

We shall, of course, have to wait awhile for further details of the scientific work achieved. However slight this may be, it will not detract from public appreciation of the fortitude and courage which have been displayed, and which have served to bring these ships back again to civilization with a casualty list so remarkably small.

STUDENT

PROFESSOR MARCHAND, of the University of Marburg has during the last seven years weighed 1234 brains. It appears that in the case of man between fifteen and fifty years of age the average weight of the brain is 1400 grammes, or 50 ounces; in the case of woman 1300 grammes, or 46 3-7 ounces. This difference is not due to bodily size, for men and women of the same size and weight showed the same average difference.

The lay reader of such investigations usually forgets that we have two nervous systems, the "cerebro-spinal" and the "sympathetic." The brain of course belongs to the former. The latter we have no means of estimating by weight. If we had we might find the above facts reversed.

Medicine—Its Use and Abuse—Causes and Effects

NO one can chance to see the annual list of graduates from the medical and pharmaceutical colleges of this or any other country without wondering whether, after all, medicine is not a greater evil than blessing. We may finally decide that it does more good than harm. Then we inquire whether the one could not be wholly abolished; and this opens up the broad question of the relation of medicine to human life and evolution.

The most usual use of drugs is to get rid of the effects of conscious physiological misdeeds, from gluttony upwards. The other use of them is to get rid of maladies which are not, to our knowledge, related to any conscious misdeeds.

Obviously the latter is legitimate and valuable. No one knows why he has cancer or epilepsy; few know why they have catarrh or a bad cold. They do not see the links of the chain of cause and effects. The maladies morally valuable to have are such as obviously follow upon misdeeds; broadly speaking, the use of medicine to cure these would appear to be an evil; its use to cure the others, a good.

There is, of course, a set of lessons which a man learns from pains and maladies that he does not recognize himself to have earned. He will get these anyhow, under the Law, in the ways of life. Let medicine do its compassionate best to help him.

But what of those whose causes he knows, which he can directly trace back to misdeeds? Is he making use of medicine that he may the more quickly get ready to repeat the sin? It may in most cases be the physician's duty to help in the highest spirit whenever his skill is asked for. It may be wise on the patient's part to seek aid whenever his self-induced malady tends to threaten life,

to cripple seriously, or to become permanent. But when such is not the case, when he distinctly intends to continue the offence, or has not as yet will enough to cut loose from it, would he not be infinitely wiser to take the consequences as they come and let them burn themselves in upon his mind? That is the way to lengthen life; not the use of drugs which enable the repetition of the sin tomorrow or next week. It is thus that modern medicine, whilst doing much in spite of its darker aspects, in spite of its many questionable methods, to lengthen the sum of life, also does much to shorten it.

It permits of the swift repetition of offences against the body, which are nearly all offences against the moral law and therefore affronts to the divine Spirit of Evolution.

The men who will stand up to the penalties of their conscious sins, see them through, reflect on them, and gain strength from them against future temptation, are men indeed, helps to all about them and to the world, and on the path of life.

We do not appeal to physicians. It may be in most cases their duty, whilst warning, to do their best to cure. But we do appeal to all those who suffer daily from the comparatively slight and transient results of physiological sins which they perfectly recognize, to take such results standing, to cure them by abstinence, to let them exhaust and cure themselves, and not to cringe under them or fly to medicines. Such a mental attitude and resolution will do more for those who try it, physically, mentally and morally, than they can conceive.

ROUTE OF THE DISCOVERY TOWARD THE SOUTH POLE

An Incident from Life in Southern Italy

It could have happened only in Mediterranean Europe—perhaps only in Italy, certainly only in a land where cruelty is foiled by compassion, where love jostles hatred, where the innocent elbow the guilty. It happened that some ten years ago there dropped into the mesh of one of those “civilized” centers, which spring up in the wake of new railroad projects, a little, old, bent man, a man who had lived his life—or so it seemed—years before. Earth could scarcely have afforded an outlook more desolate than his—high walls on either side, above a tiny strip of sky, beneath his feet the stone pavement, with its network of iron rails; at the north, a gloomy tunnel entrance, and at the south another wall which shut off the switch yards. That was all his world, and his home, located close to the tracks—fairly upon them—was nothing more than a box, set on end, hot in summer, cold in winter, but clean as the winter sun. The man lived with a big, good-natured animal, which could not have been designated other than mongrel, even out of courtesy. Yet, between dog and master, the little box home became a very dwelling place of faithfulness and duty. The loneliness of his life could scarcely be imagined. Not an hour passed without the racking reverberations of the trains—not two hours together served to excuse him from his post—lantern or flag in hand. A slave he certainly was, from the viewpoint of those to whom the world is a hall of enjoyment, and its comings and goings but the passing of a pleasure train. Through rain and shine, ill health, discomfort, often hunger, there he was always at his post. Was he man or machine? How could a human being endure such a life? How could a machine fulfill such duties?

The man limped a little, and yet beneath the ravages wrought by exposure and cold, there was a soldierly air. His old clothes told the story—that he had left the military years before. But the bright brown eyes, the weather-beaten face, which they said was never seen to smile, the hands that still had some ease in their carriage, told the story of an honorable record and an honorable discharge. There was something in his eyes that convinced one of an undercurrent of strength and a certain consciousness of power. But why did he drop into such a life?

One morning the man was wakened by a wailing sound just outside the little box home. His toilet was but a matter of two seconds at any time, and he was soon outside the door where he found a forlorn child, whom he recognized as the one who had passed through the village the day before with a company of strolling players.

The eyes of the man—I never learned his name—were moist as he stooped to pick up the baby—scarcely three years old. But a piercing scream rang out, the child fell again a-sobbing, one arm clasp the man's rough homespun sleeve, the other dangling limp and out-turned at the side. The man realized the situation at once. He had not lived in Southern Italy a lifetime to wonder where the child came from or what he should do with it. It was plain enough, the baby's arm had been dislocated, probably by a savage wrench from the man who had been leading him the day before through the little town. Continual crying became annoying. What more natural than that the child, having become a nuisance, should be promptly discarded? It was an hour and a half before the next train was due. The man gently grasped the hand which rested on his arm, led the child to his cabin, took a bit of black bread from the shelf and gave it to the dog. Why should the dog go hungry? He offered some to the child but was answered only with sobs. Then he left. It was but a few squares to the nearest surgeon.

“It is a bad case,” said the surgeon—“two days’ neglect makes a matter of this kind serious, but with care—now that I have reduced the dislocation—there will be no difficulty.” The child suffered while the little arm was being set, but the man passed through agonies a hundredfold greater. Yet he forgot it at the blessed reward that followed—the sight of that baby face resting upon his shoulder, the little brown curls actually touching his sleeve—that sleeve which had not brushed against a human thing willingly in many years—the long lashes sweeping the cheeks, which were tear-stained to be sure, but beautiful. The child was sleeping the sleep of utter exhaustion, and the man was too wise to awaken it. Once in the little box home, he looked about dubiously.

“The bed is hardly soft enough,” he said, looking at the child. He took down his only other coat from the wall, laid it above the coarse mat upon which he slept

and placed the child upon it. He himself, not from hunger nor fatigue, but from the unwonted emotion, had become overstrained. For a brief half minute his face dropped into his hands, and there were traces of tears upon it when he lifted it upon hearing the whistle of a distant train. With a silent motion he warned the dog to be on guard, and went out to the switch.

The child slept nearly all that day, and at night, just as the sun was going down behind the great walls which shut in all his world, he wakened with the word “hungry.” The man was seized with a sudden alarm as he realized that black bread and garlic were not quite the food for a child; and then there came to him something like illumination—partly from compassion, but mostly from a fear that this which had come into his life so strangely—as a star falls in the night—might be lost out again—he had lost so much. The next day a goat was added to the household *menage*, not the kind which lives with the family, but one which “boarded out” and called only at sunrise and sunset, to leave the generous cup of warm milk. Very jealous was the man of that milk, every drop of which was as a pearl buying health for the baby. And so they lived, happy, and the child grew well and strong. It was a strange life, and strangely unclouded; for the man had no kindergarten theories to make him worry about the future and distrust his own love, and in all Italy there was, thank Heaven, no society for the prevention of such cruelty as he was daily inflicting.

A full year passed. The child grew sunshiny and handsome, pouring his whole nature out in love to the poor little bent man, who was the sun, truly, in his sky. The man had changed, too, though he did not know it. The duty that used to be irksome, had become, since the child came into his life, a privilege.

One day—it was shortly after sunrise, and No. 27 was just due—the man, as usual, stepped out of the little box home at the first whistle, flag in hand, and went to the lever. He could hear the train and knew that it was still within the tunnel. Suddenly it came into view. There were still fifty yards between himself and the switch and he hastened his step. Almost at the same instant he saw the child running, his arms filled with bits of wood, straight to the track. On it he stopped, and between the rails laid down the precious blocks. The train whistled again. The engineer, too, had seen the child, but the man—to save the child and then reach the lever in time to save the train was an impossibility. For a bare instant he hesitated. It would have been so easy to have snatched the child out of harm's way, and the train—suppose it *did* crash into the wall—suppose there should be a wreck—suppose the hundreds of people—he could go away and hide—they would excuse him—they would understand—they might even forget—they would perhaps call him a hero. But something deeper in his nature beat and beat upon the door of his heart—so long, so long, had he done his duty. Was he forced, or did he force himself? The man never knew. He only knew that he went to his post at the lever, and the child played on.

The engineer whistled again, and the man noticed that the train had perceptibly slackened its speed. O the agony of that moment! Why lengthen out the horror when it must be—*it must be*? He turned to the switch—a dark cloud seemed to gather about him; his head was swimming, confused; he heard the roaring of something which must have been the train—he saw nothing but tongues of flame which seemed to be within and about his head, leaping up and up. He saw nothing of what had happened—of how the engineer had leaped from the abruptly slackened train, had swiftly run ahead, grasped the child out of harm's way, and with one quick lift, fairly hurled it into the engine cab.

All the man was conscious of was the cruelty of the train crawling by at a snail's pace; even the train, passing so near that it almost touched his sleeve, did not arouse him, and he understood nothing until there was flung almost into his arms a bundle of—something. It was the child. The confusion passed away. In an instant he knew.

The engineer was looking back, and for one brief instant the eyes of the two men met; one, the hero who had risked a life he did not value, to save a child he knew and loved—the other, one who had given up that which was a thousand times more to him than life ever could have been—which was all in the world that he loved—for the sake of a group of careless pleasure-seekers whom he despised.

STUDENT

ONCE to every man and
nation comes the moment
to decide.

In the strife of Truth with
Falsehood, for the good or
evil side:

Some great cause, God's new
Messiah, offering each the
bloom or blight,

Parts the goats upon the left hand,
and the sheep upon the right,
And the choice goes by forever
'twixt that darkness and that
light.

THE CHILDREN'S HOUR

The House That Jack Built

"TANTE," called Jack from the nursery, "the Sandman says it's time."

"All right, Jack," said his aunt, "I'm coming."

"O Tante, please tell me something *new* to think about tonight, not Christmas, nor vacation time, nor heroes, nor animals, nor boys and girls, something *truly* new." ¶ "Why, Jack, don't you know there is nothing new under the sun?"

"Yes, there is," said Jack, "tomorrow's new."

"But tomorrow never gets here," said his aunt; "now I've got ahead of you, Jack."

"Well, anyway, this *minute* is new; now I'm even with you, Tante."

"But this moment is newer, Jack."

"No," exclaimed Jack, sitting up in bed with excitement, "this *instant* is the newest."

"And you, Jack, are the newest of all," said his aunt, "for each instant you are a new Jack."

"Oh my!" exclaimed Jack, "tell me about it, Tante."

"Why, you know all about it, Jack," said his aunt; "this very instant. What made your arm move about?" ¶ "The thing inside, of course," said Jack.

"Well, I declare, Jack," said his aunt, "if Mother Goose were here, I do believe she would write a new story about the 'House that Jack Built,' for unless I am very much mistaken, you are the very Jack who has built a house, and now you are busy every minute of the day building it over into a finer, newer house. Oh! the finest house it will be, yes, the newest and best that has ever been seen, by the time you get through, Jack."

"Yes?" said Jack, "go on, Tante, please," as his aunt paused for breath.

"Well, Jack, you are not only busy all day, but every minute all night long, that is, 'the thing inside' is busy telling the little workmen to move your arms and legs about, and to give you dreams, and to make you talk and walk. If these little workmen were not busily moving and keeping up a constant action, your house would never be built. But I tell you, Jack, I've made a discovery about building houses. You know how the workmen sometimes go on a 'strike' when one of them gets a wrong notion and upsets all the others, or sometimes when the one who directs them is unjust; and you have heard how bad people will set a place on fire, or will steal in at night and do mischief, so that somebody is needed to set a good example and keep things straight, and somebody else is needed to be on guard to protect the house. And I've discovered, Jack, that you are that very somebody who knows how to always do the right thing, and when things don't go right,

you may be sure 'the something inside' that wants to govern you has been giving wrong directions to the workmen, and not following the true plan. It says, 'I am Jack, I am Jack,' in such a very loud voice that it drags you right into its ways, and things seem to be going very fine indeed, until all of a sudden there is a grand mix up, and then everything is going wrong.

"I tell you, Jack, the newest thing I know of for you to think about tonight when you are going to sleep, is to be on guard to protect your house, so that the naughty thing cannot get in and do mischief and spoil the perfect plan the architect has made for Jack's house, and then tomorrow night when you go to bed you can tell me what the little workmen have been doing to help make over new and beautiful the 'House that Jack Built.'"

"Good-night, Jack, on guard!"

"On guard, Tante, good-night."

TANTE

THE PLAY HOUR—TINY LOTUS BUDS OF THE RAJA YOGA SCHOOL

NOBILITY

by ALICE CARY

TRUE worth is in being, not seeming—
In doing each day that goes by
Some little good—not in the dreaming
Of great things to do by and by.
For whatever men say in blindness,
And spite of the fancies of youth,
There's nothing so kingly as kindness,
And nothing so royal as truth.

We get back our mete as our measure—
We cannot do wrong and feel right,
Nor can we give pain and gain pleasure,
For justice avenges each slight.
The air for the wing of the sparrow,
The bush for the robin and wren,
But always the path that is narrow
And straight, for the children of men.

'Tis not in the pages of story
The heart of its ills to beguile,
Though he who makes courtship to glory
Gives all that he hath for her smile.
For when from her heights he has won her,
Alas! it is only to prove
That nothing's so sacred as honor
And nothing so loyal as love.

We can not make bargains for blisses,
Nor catch them like fishes in nets;
And sometimes the thing our life misses
Helps more than the thing which it gets,
For good lieth not in pursuing
Nor gaining of great nor of small,
But just in the doing, and doing
As we would be done by, is all.

Through envy, through malice, through hating
Against the world, early and late,
No jot of our courage abating—
Our part is to work and to wait.
And slight is the sting of his trouble
Whose winnings are less than his worth!
For he who is honest is noble,
Whatever his fortunes or birth.

A Letter from Baloo

DEAR CHILDREN: You probably enjoyed Lucifer's letter in the NEW CENTURY, but scarcely so much as I did, for I know Lucifer, while you don't, and I love him truly. Lucifer

has really been my foster-mother. When I was very little he was the best friend I had and really brought me up, for my mother (I regret to say it) was much occupied with other matters and really neglected me a great deal.

Lucifer used to play with me. He never hurt me and he never scolded me, even when I would pull his tail to wake him up from a nap. Sometimes he would lie on his side in the sun and softly wave the end of his tail in the air to tempt me, and when I would make a spring for it, then he would jump up quickly and catch me in his arms and give me a good shaking before I could get away. It was great fun. The other cats sometimes frightened me and Lucifer knew this; so he used to stand guard while I ate my dinner, nearly every time. Of course I am big and strong now and don't need so much care, and I sometimes think that if Lucifer had been a little less kind to me it would have been better for me, but, after all, he made my kitten days very happy and I have written this to you because I know about gratitude. It was Lucifer taught me about it. Good-by. Do you believe in the Brotherhood? I do. BALOO.

SURELY the Lotus Buds and Blossoms all over the world must find real joy and inspiration in the picture (which appears on another page) of the Raja Yoga children in a Greek Symposium. *The Little Philosophers*, not only in Point Loma but in nearly every country of the whole world, have won their way into the hearts of many thousands of people who never really knew much about brotherhood before.

Path

YUSSOUF

by JAMES RUSSELL LOWELL

A STRANGER came one night to Yussouf's tent,
Saying, "Behold one outcast and in dread,
Against whose life the bow of power is bent,
Who flies, and hath not where to lay his head;
I come to thee for shelter and for food,
To Yussouf, called through all our tribes 'The Good.'"

"This tent is mine," said Yussouf, "but no more
Than it is God's; come in, and be at peace;
Freely shalt thou partake of all my store
As I of His who buildeth over these
Our tents His glorious roof of night and day,
And at whose door none ever yet heard Nay."

So Yussouf entertained his guest that night,
And, waking him ere day, said, "Here is gold,
My swiftest horse is saddled for thy flight,
Depart before the prying day grow bold."
As one lamp lights another, nor grows less,
So nobleness enkindleth nobleness.

That inward light the stranger's face made grand,
Which shines from all self-conquest; kneeling low,
He bowed his forehead upon Yussouf's hand,
Sobbing, "O Sheik, I cannot leave thee so;
I will repay thee; all this thou hast done
Unto that Ibrahim who slew thy son!"

"Take thrice the gold," said Yussouf, "for with thee
Into the desert, never to return,
My one black thought shall ride away from me;
First-born, for whom by day and night I yearn.
Balanced and just are all of God's decrees;
Thou art avenged, my first-born, sleep in peace!"

Our Mental Strength

NO man knows the strength of his own mind, nor can he ascertain this without a trial. Half our mental incapacities are self-imposed, half our inabilities are self-suggested. The mind is not a machine which bears upon it the stamp of its unchangeable capacity. It is rather in the nature of a medium which needs only to be made transparent to give passage to the light of the whole universe, and by our sustained efforts and our thoughts we either add to its opacity or to its transparency.

Of the science of the mind we know very little, but with an increase of knowledge will come the recognition that a very small amount of thought-force, rightly directed, will give to the mind a resulting strength which may be denied to the highest university training. Between the human mind and the mind of the world, which gives genius akin to omniscience, there is a line of least resistance as well as a line of greatest resistance, and because we usually choose the latter we ascribe to ourselves limitations which are indeed created by the very act.

The thought-force which will dissolve the barriers between ourselves and the wisdom which we seek, may indeed be small in quantity, but it must be continuous. The power of continuity can be acquired by every one, irrespective of education and of the memory which so often passes for knowledge. The ancient alchemists, concealing perhaps a profound philosophy beneath their scientific jargon, recommended a gentle and steady heat as alone being efficacious. It is a gentle and a steady heat, which alone can melt the piled up debris of the mind, and hence arises the unpopularity of true spiritual training among those who suppose that some violent mental gymnastic can take the place of an entire change of mental base.

For it is an entire change of mental base that we need. We have to

alter our habitual standpoint instead of making an occasional spasmodic effort and then tranquilly sinking back to the exact point which we previously occupied. The latter method may have its own results. No effort, of course, can be entirely wasted, but this is along the line of greatest resistance and the results must be very small. Of what avail is it to meditate for an hour upon fraternity if we immediately resume our unfraternal life, if we allow the unfraternal habit of mind to reassert itself? It is not a mental excursion that we need so much as a change of residence.

There are truly very few who recognize the hostility which exists between the spiritual philosophy which they suppose themselves to have adopted and the mental life in which they persevere. It is to the life of the hour and of the minute that the gentle and steady heat must be applied, to the hour of relaxation as much as to the hour of study, to our contact with nature as well as to our contact with men. How many are there who can say that the casual thoughts of the day, the casual contact with men and things are consistent with the philosophy which they avow? And herein there may be no question whatever of wrong-doing, but only of the perpetuation of a habit of thought which is not in accord with a philosophic theory. We have been gentle and considerate with all men, but have we acted toward them precisely as we should have done had our philosophy been truly a living power in our lives? Should we have looked even upon sea and sky, upon tree and animal, exactly as we did had we realized the universal life and a consciousness of which these, and we ourselves, are but expressions? We have perhaps done no moral wrong in word or thought, but have we perpetuated a false mental shape, a shape which makes the mind opaque to the light, or which at least does not lessen the existing opacity?

If we would charm from nature her secrets we must be sympathetic towards her, we must look upon her as she is and not as ages of habit have falsely persuaded us that she is. Nature places her gifts within the minds which are permanently shaped to retain them, and not into minds which are momentarily and painfully twisted into some form which we ignorantly suppose to be the right one, and which will immediately become as they were before—as soon as the violence is removed. It is the gentle and steady pressure which is needed, the gentle and steady heat, in order that the old automatism may be removed. X.

Limits of Human Life

HAVE the limits of human life ever yet in recorded times allowed of the full ripening of a genius? One thinks of Keats, dying at twenty-four; of Shelley, at thirty-four; of Byron, at thirty-six; and of many another; and wonders what heights these men might not have reached if they had had even but a few years more of ripening. By the age of thirty-four Wagner had only written *Rienzi* and *Tannhauser*; if he had died two years before that we should have had but the first of those works. Should we from either of them have had the slightest idea of the riches lying hidden in the man, of the *Ring*, of *Parsifal*? He opened in his later period a vein never before touched by human genius; a new man was born in him. And when he died, he was interrupted in the contemplation of a work which he thought would stand to *Parsifal* as that to the others. Was another new man beginning to wake in him?

We have good authority for regarding seventy as the present normal limit of human life. But we cannot agree. We see men's lives wasted in passion, ambition, in all the failings of flesh. We see every rule of health and balanced life habitually disregarded. And we know that all this has been going on for countless generations and its effects multiplied and fixed by heredity. Are we going too far in supposing that if lives were rightly lived, children rightly brought up, and the laws of being rightly obeyed, the average of days would in two or three generations be at least double that assigned to them by David?

What then of genius? Not only would it come earlier to its first bloom, but bloom would follow bloom; the "new man" would be born, not once but many times; where the path for each has hitherto ended in death, a new one would open leading to heights that we cannot conceive of. The Wagners would be able to speak condescendingly of their own *Parsifals*, the Shakespeares of their *Hamlets*, as but creditable efforts of their immaturity; and the world would move spiritually at ten times its present pace.

STUDENT

MY TASK

by MAUDE LOUISE RAY

TO love some one more dearly every day,
To help a wandering child to find his way,
To ponder o'er a noble thought and pray,
And smile when evening falls.

To follow truth as blind men long for light,
To do my best from dawn of day till night,
To keep my heart fit for His holy sight,
And answer when He calls.

THE SPOKEN WORD

by VIRGINIA B. HARRISON

I HEEDLESSLY opened the cage
And suffered my bird to go free;
And though I besought it with tears to return,
It never came back to me.
It nests in the wildwood, and heeds not my call,
Oh! the bird once at liberty, who can catchall?

I hastily opened my lips, and uttered a word of disdain
That wounded a friend, and forever estranged
A heart I would die to regain.
But the bird once at liberty, who can catchall?
And the word that's once spoken, O who can recall?

Question Have services a money value?

Answer (1) It seems almost absurd to attempt to answer a question in a few words which it would take a book to answer, provided one were able to cope with it at all. The most that any one could expect to do, would be to raise a few sign-posts indicating in what directions it might be worth while to let one's thoughts wander.

It goes without saying that under the present social system there must be a return in the circulating medium for services rendered, for people must live, and this is the method at present by which that is possible. But I fancy this question is asked from the standpoint of the idealist. Is this particular kind of "give" and "take" inherent in the nature of things? Is there a natural relationship between money and labor?

The answer, it would seem, must hinge upon what money can be made to stand for. It represents, I believe, according to most political economists, labor. This may have been the intention, it may have been true in earlier and simpler times, but I think any one is excused now in trying to think out or feel out the ideal relationship between money and labor, because this basis of the political economist seems more like a theory than a fact.

Every one can see that many who labor faithfully and well have very little money, and that many who do not labor at all in any way have enough and to spare. Some useful services are poorly paid, and many others, injurious to the community at large, bring enormous returns. Half the world is starving and the other half rolling in wealth. Indeed, so independently do these two factors—money and labor—seem to run their way, that an ordinary common observer would be obliged to read a learned treatise on the subject, to know that the one represents the other. To the public mind, money has come to possess an intrinsic value. It is considered as representing all good things, but not labor at all, and it must be obtained, generally, at all hazards. It has been made such a fetish that labor has become its humble slave. It would not be too much to say that a very large majority work, not because the work needs to be done, not because they love it, not because others are benefited by it, but simply because they hope to obtain through it this much coveted treasure—money. Money, then, stands for man's greed and selfishness in reality, whatever it may do in theory.

Every science, profession, art, even religion, has been desecrated by this spirit. The external form, at least, of every kind of labor has been laid at the feet of this monster.

So, however equitable the money system may have been intended to be, it is not so practically. It is, on the contrary, a system under which

greed and selfishness can run rampant. Whether this is all the fault of the system or of man's heart is another question, or how it all can ever be righted. But *our* question, as to whether services have a money value, we cannot answer in the affirmative, unless we degrade service or imagine a new kind of coin which is not current today.

Service is a holy thing. If it is real and true, it springs from the heart. It is something which is naturally and cheerfully and joyfully drawn out by the needs of others. It is born of love. It is love's inevitable expression, a something beyond all price. In a natural harmonious state of society, one can imagine it would be interchanged almost unconsciously. It would be as simple as breathing.

Glancing at the ideal helps us to estimate the real. To look upon the former as unattainable is to give up all hope of humanity, therefore we must constantly hold it before our soul's eye, that our feet may walk toward it.

It may need one sent from heaven to revise our social system, but if we are content to rest in the mire, such an one would be sent in vain.

G. V. P.

(2) One needs to ponder well what the meaning of service is before he can place any value on it. If we are serving our own selfish ends, working as man against man, striving for power and supremacy, bending all our energies towards the accumulation of wealth, fitting ourselves to occupy places of responsibility and trust where our services will be sought after as valuable to those who are working for the same purpose, then surely our services are entitled to large remuneration in dollars and cents. From this standpoint, just so far as we can compete with and excel some one else in "valuable" service, just so much more money can we demand for our services, and this is considered just and right from a worldly and business standpoint.

But if, on the other hand, we fully understand the meaning of the word service—to help or benefit others, to render assistance or kindness—then surely our service has no monetary value.

I believe this meaning of service should attach itself to all departments of labor and, all working with the earnest purpose of helping humanity, our every-day duties would become a labor of love and kindness. Thus, with the fervent desire in our hearts of making the whole world better and happier, would be hastened the time "when our political and social institutions will attain an approximately perfect form, when there will be bread enough for all to eat, and the best science of the schools will be a common possession—a time when the last vestige of war and private competition disappear. Then there will be but one payment for every service: Gratitude."

We, as students of Theosophy, know that a sense of gratitude is one of the highest and noblest emotions that one can have, and thus in our gratitude toward the Helpers of Humanity we "seek to render noble service to all that lives."

A. E. W.

Occult Nonsense

A NEW "prophet" has arisen! So declares a paragraph in a Chicago paper. This newest of the propounders of the "occult" (sic!) is authority for the statement, so it seems, that "a person's astral body can be sent all over the world." This new "cult" is based upon the idea that there is good in every religion upon the face of the earth. This is good; but it is not so tremendously new. It is also stated that with proficiency in the exercise of the "astral" power, a man will be able to transport (sic) his astral body from one point to another, and that his corporeal or magnetic body (!) will follow. Whatever may be the antics played by one's astral body, the vision of one's corporeal one flying through space in the twinkling of an eye, is edifying. It sounds like the old *Mother Goose* rhyme, which recites the story of a certain hero, "who follows his nose wherever he goes." In this article, long about one "stick," say four inches, there also appears the remarkable statement that this gentleman is an authority on Theosophy and the Occult.

An authority on these great subjects is a huge proposition. As the essence of Theosophic practise is the bringing into exercise of that most uncommon quality of judgment called common-sense, followers of it need only to bring that into play to discern at a glance, fact from error and sense from nonsense.

G. DE P.

THANKS

by JOHN VANCE CHENEY, in *Atlantic Monthly*

THANKS to you, sun and moon and star,
And you, blue level with no cloud---
Thanks to you, splendors from afar,
For a high heart, a neck unbowed.

Thanks to you, wind, sent to and fro,
To you, light, pouring from the dawn;
Thanks for the breath and glory-flow
The steadfast soul can feed upon.

Thanks to you, pain and want and care,
And you, joys, cunning to deceive,
And you, balked phantoms of despair;
I battle on, and I believe.

Thanks to you ministers benign,
In whatsoever guise you come;
Under this fig tree and this vine,
Here I am master, and at home.

Martyr's Field

TWENTY-EIGHT miles from London is the village of Amersham and close to the village of Amersham is a plot of ground upon a hillside which is known as the Martyr's Field. It is a small piece of ground, not apparently different from the land which surrounds it and of which it is a part. But go there when all the countryside is glorious with cultivation and ask of any resident the meaning of the barren patches upon the Martyr's Field, the patches upon which no healthy crop is seen but only blotches of heavy, sickly and loathsome weeds. He will tell you that long ago men and women were burned alive for their religion upon this very field, that they were shut up in barrels studded with long nails and rolled from top to bottom of this hill, and that upon the exact spots where these horrors were committed no crop has ever yet been known to grow.

Superstition? It may be so; who knows? But there can at any rate be no superstition about facts whatever there may be about their explanation, and the facts are that men and women were indeed martyred upon this spot and that here no crop has ever yet been known to grow. Let us couple these facts in any way we please, but facts they will certainly remain, to be verified by any who have the leisure and curiosity. Year by year this ground has been ploughed and sown, presumably because it is less trouble to include it than to exclude it. Year by year, these terrible

patches have told their disgraceful story and have refused to wipe out the stain which has been placed upon them.

To believe that we see here a cause and an effect is not perhaps a superstition. It is perhaps something that will grow more credible as we understand the sympathy between the consciousness of man and that of external nature, as we recognize that man can indeed stamp his pain and his cruelty upon the face of nature, bringing a frown where there should be a smile. The world is after all the physical expression of the consciousness which belongs to it and of which the human consciousness is a part. If man by his passions can distort his own body, if by his misdirected mind he can wreck the machine in which it works, why should he not also play havoc with that greater body which he calls the world, why should not his evil thought sterilize the land as it shatters and ruins his own body? Truly, the subject will bear much reflection, and by it we shall perhaps throw some light on natural processes which now seem perplexing, lawless and cruel.

STUDENT

Missionaries in Japan

IT is not very often that missionary authorities confess to a failure of their propaganda, and such a confession is therefore all the more noteworthy. At a recent Presbyterian Assembly a missionary from Japan announced to the surprise of his audience that "the Japanese are not becoming Christians in proportion to their population and to the evangelistic work done for them, as fast as have other countries." The candid speaker was further of opinion that Japan would inculcate the countries over which she might have an influence with the great ethical religious spirits of Confucianism and Buddhism. The speaker then went on to deal with the difficulties against which the missionary organizations were compelled to fight. It seems that the chief difficulty is the Japanese belief in the innate perfection of human character. It is evident that the Japanese religions contain something akin to the teaching of Jesus—"Be ye perfect, even as your Father in Heaven is perfect." It is indeed astounding and disheartening to find American missionaries who profess to be representative of American religion and who go away to other countries in order that they may avowedly fight against a sublime belief, and a belief which was the very corner-stone of the religion of Jesus. If human character does not contain the innate power of perfection for what purpose are we alive and what is the goal of effort and of progress? Under such circumstances as these and with systems of creed which are an insult to human intelligence, we do not wonder that the missionaries fail in Japan. They fail everywhere.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

The Neo-Theology of Christianity

Somewhat differently from many other thinkers upon this subject, Sir Oliver takes a bright and progressive view of the future of Christian religious thought; and it is not the less refreshing in that it comes from so high a source. He says:

Now that religion is becoming so much more real, is being born again in the spirit of modern criticism and scientific knowledge, may it not be well to ask whether the formal statement of some of the doctrines which we have inherited

from medieval and still earlier times cannot be wisely and inoffensively modified? There is usually some sort of forced sense in which almost any statement can be judged to have in it an element of truth, especially a statement which embodies the beliefs of many generations. But when the element of truth is quite other than had been supposed, and when the original statement has to be tortured in order to display it, it may be time to consider whether without harm its mode of expression can be reconsidered and redrafted—to the ultimate benefit indeed of that religion of truth and clearness which we all seek to attain.

Vicarious Atonement Shattered

I would not be in the least dogmatic in such a matter, but surely it is generally recognized that, although the sufferings and violent death of Christ were natural consequences of His birth so far in advance of His age, and although the pity and horror of such a ghastly tragedy has a purifying and sacramental influence, yet we are now unable to detect in it anything of the nature of punishment, nor do we imagine for a moment that an angry God was appeased by it, and is consequently disposed to treat more lightly the sins of men here and now, or any otherwise than as they have always been treated by a constant, steadfast, persevering Universe.

E pur si muove!

As to the Doctrine of the Immaculate Conception, our writer practically refuses to accept it. He speaks of the "underlying realities" of religion, and classifies them under three heads:

- I. Incarnation with Pre-Existence.
- II. Revelation or Discovery.
- III. Continuity and Persistent Influence.

How truly are the following sentences filled with the very life of Theosophic thought:

Not Governed by an Outside God

The utterance of science on these heads is not loud and is not positive, but I claim that at least it is not negative. No science asserts that our personality will cease a quarter of a century hence, nor does any science assert that it began half a century ago. Spiritual existence "before all worlds" is a legitimate creed.

No science maintains that the whole of our personality is incarnate here and now; it is, in fact, beginning to surmise the contrary, and to suspect the existence of a larger transcendental individuality, with which men of genius are in touch more than ordinary men. We may be all incarnations of a larger self. Incarnation of a portion of a divine spirit therefore involves no scientific dislocation or contradiction, nor need it involve any material mechanism other than that to which we are accustomed.

We are no aliens in a stranger universe governed by an outside God; we are parts of a developing whole, all enfolded in an embracing and interpenetrating love, of which we, too, each to other, sometimes experience the joy too deep for words. And this strengthening vision, this sense of union with Divinity—this, and not anything artificial or legal or commercial, is what science will some day tell us is the inner meaning of the Redemption of Man.

The spirituality of the evolutionary scheme outlined by the writer in the above excerpt, for it amounts to such, is a remarkable proof of the power the Theosophic doctrine has had, and is having, on the world in general in this century; and attests the degree to which it is imbibed (shall we say unconsciously?) by many of the most brilliant and representative minds of the age.

Change in religious thought is rarely deep-rooted, when it is based on mere intellectual scrutiny. It must come from inner conviction to be permanent.

Such writings as the above are, today, scarcely remarkable for their rarity; three decades ago they would have attracted widespread and antagonistic comment; three centuries ago, doctrines and beliefs similar in character would have brought their enunciator under the ban ecclesiastic.

For what have we here? First, the rejection of the old idea of vicarious salvation by means of divine atonement: that by self-sacrifice of deity (sic!) Humanity may obtain absolution from the consequences of its sins and sufferings merely through the belief and faith in such deific action. Instead, this thinker clearly acknowledges the universal law of Justice, absolute and infallible per se, which he speaks of as a "constant, steadfast, persevering Universe." Second, the lecturer refuses, as opposed to truth, that other bulwark of orthodoxy, called the Immaculate Conception of Jesus the Christ. As to the mystic meaning of this grand

Underlying Realities of Religion

old philosophic tenet, it would be out of place to enter into that here.

What remains of the theologic structure raised so laboriously, and at such cost of blood and tears to Humanity, during two hundred decades past? There remains the Wisdom-Religion of Jesus the Christ, of which he spoke to his disciples in parable, and which has been the same for all peoples in all times, as the "underlying realities" of religion: the fundamental, basic truths of Nature, and of man's divine parentage.

Reduced to these primal principles, not a single one of the different great human families is there, which does not acknowledge the same; and what a grand possibility seems to dawn on us when we realize the trend of modern religious thought, all over the world—the possibility, in truth the probability, of a universal Religion of Humanity, the same for all peoples in its principles (which, indeed, it already is!), and those principles the same as the great truths lying at the heart of the ancient Wisdom-Religion of the Ages!

In the recent Crusade around the world, special study was made of the religions of the countries visited, and of the distinct sects born therefrom. Everywhere were startling evidences of the continuity of these universal

A Universal Religion of Humanity

primal religious ideas, and everywhere were startling evidences of the tenacious hold they have on the human mind. The gigantic monumental testimony, raised the world over, as Houses of the Eternal Spirit, separate from their outward form, are very similar to

each other in general design; so much so, that a fixed impression is born in the mind, that once upon a time, in the far-distant past, there existed a common universal religious architecture; even as there was a common universal religion.

Our Christian nations, one "pagan" one as well, are leading the van of this civilization; and the modern conception of Christianity is showing on every side proof of an evolution of itself. Will a new day not break, before so very long, lightening the hosts of men as they march forward upon a common path of destiny, clinging to the same common belief, the universal brotherhood of humanity?

Therefore, to what an extent does the sentiment of the writer cited above foreshadow the future evolution of the Christian faith? To what spiritual heights will it not attain along the lines of thought he has felt compelled to choose? Verily, may we say, to the Wisdom-Religion of the great Founder of the Christian Church, that Wisdom-Doctrine of all past time.

CRUSADER

The Mean Things of Life

LET us not surrender to the mean things of life which so ceaselessly war upon us, striving to detach our hold upon our ideals and upon the eternities. We cannot separate ourselves from these mean-nesses, because they are a part of the world in which we live, and it is through them that we advance. But let us handle them as though we momentarily stooped to them and not as though we lived upon our hands and knees. Let us dwell with our heads among the stars, and although we must bend to touch the petty things of life, let us do it with the dignity which belongs rightfully to us and not as though we willingly found a congenial home amongst them. Let us enter amongst them as visitors and not as residents.

Our mental home is, after all, the place in which our highest inclinations lie. It may perhaps be our lot to be in almost continuous contact with the trivial things of life, but so long as we remember our true and lofty station, we are preserving the elasticity which will draw us directly back to it whenever an accomplished duty will permit. The mind, like the body, can stand erect or it can stoop, but only by standing erect can it grow, only by the constant tension upwards, which in no way prevents us from stooping when it is necessary, and which insures our instant recovery when the necessity has passed.

How many are there whose aspirations and ideals were once living truths, but are so no longer, although their wordy semblances remain? Such as these have stooped, as all must stoop, to the pettinesses of life, but they have lost their elasticity, they have willingly remained upon their knees amongst the dirt, they have made their home amongst the unworthy, they have forgotten their own country amongst the stars.

STUDENT

Immortality

FORTUNATELY for mankind, there is implanted deep in the human heart a conviction of its own immortality, which is strong enough to overcome the doubtings and questionings of the puzzled brain, and keep alive hope, faith and charity. It is this conviction that keeps people from despairing and prompts them constantly to do things that are unselfish and faithful and that do not square with the belief that death ends all. People who do not think deeply at all have this inner conviction of immortality, and so are not troubled by doubt and despair. They work for their posterity, toil to gain fame after death, give up their lives for loved ones or cherished causes, and act in many other ways as if they were immortal and knew it. Even professed sceptics, who think they believe that death ends all, show by their behavior that they know and feel it to be otherwise.

But when we come to reason on the question of immortality and try to convince our intellect of it by arguments, we find ourselves confused by the false notions we hold about man's nature, about the purpose of human life, and many other problems.

To begin with, we do not sufficiently realize that, however deeply we examine into our own minds, there must always be something deeper yet which we cannot analyze. The fact that we are able to analyze ourselves in this way proves that, behind all the changing scenes of our mind and heart, there stands a central soul that plays the part of spectator. This soul is entirely independent of all the faculties and functions, and is supreme over them. From this central soul all the faculties spring, and it will continue to exist after their passing away. It is the soul which makes man a self-conscious, self-analyzing being; and we may in fact even say that, unless man had an immortal soul, he would not entertain the question of immortality at all.

Current religious ideas do not give us a satisfactory intellectual conviction of immortality. They make the soul so vague and so remote from our ordinary life, that it seems not to belong to us at all; hence, when we are told that this soul is immortal, it does not seem as if it meant that we are immortal.

Again, religious teaching does not discriminate between the higher and lower nature of man, except in a vague theological way. It takes away immortality, together with the essential divinity, from man himself, and transfers them to the theological "soul" in a theological after-life. Thus the real divine and immortal nature of man is denied, and a vague conception substituted in its place.

Theosophy, on the other hand, maintains that the best part of our make-up, as we find it now and on earth, is immortal, and that the soul is not something that will only appear after death, but is the real man as he lives on earth.

To understand immortality, we have to distinguish clearly between what is material, external, temporal, and what is spiritual and eternal. The notions of time and space, as found in the outer world, do not apply to the spiritual part of our nature; and the ideas of beginning and end, change and decay, belong to the outer world, but do not concern the soul, which lives in an "eternal present," as we may try to express it.

Thus, a restoration of the belief in immortality means a restoration of the recognition of our divine nature, a renewed faith in the freedom and all-powerfulness of the soul or real self. It means that we realize once more that there is that in us which cannot perish, which never was born and never shall die.

So-called beliefs that death ends all, amount to nothing more than logical confusion and need trouble no one. It is doubtful whether the question of futurity ought to occupy our attention at all, seeing that it distracts us from the performance of present duty and the enjoyment of present life, and turns our attention to the region of unpractical speculation. Immortality should be sought for in the here and the now, not in the dim "future," which, so far as our speculations are concerned, exists only in our imagination.

Some Views on XXth Century Problems

Contract Labor Should Be Checked

THE law against the importation of contract labor seems to be more honored in the breach than in the observance. This must inevitably be the case where laws are passed without any effective means of enforcing them. The highly skilled workman whose knowledge would be a gain to the whole country is excluded because he is too conscientious to deny that he is under contract, but the unskilled and densely ignorant laborers from the east of Europe are admitted by hundreds of thousands, and that they are practically under contract is shown by the fact that they know exactly where to go upon landing and are at once received and set to work.

Last year 451,000 Croats, Slavs, Poles, Lithuanians, Bohemians, Italians and Hebrews arrived in this country. Out of this enormous total 150,000 were utterly without education, and the bulk of the remainder were barely able to read or write. Nearly 80,000 Scandinavians arrived during the same period, but out of these only 264 were illiterate, and the average of education was high.

If there was any general idea of the character of this immigration from eastern and southern Europe, it would be stopped at once. National hospitality is a virtue, but national suicide is a crime, and it is hard to give any other name to a policy which placidly admits so vast an army of dangerous and brutalized and misgoverned people. They cannot be merged in the national life and they have no intention whatever of trying. They are marching through our eastern gates like a victorious and unwashed army in order to possess the country. X.

Gravity of Juvenile Criminality

JUDGE LINDSAY, of Denver, seems to hold some strong opinions on the subject of juvenile criminality, and to be one of the few public men who are really impressed by the gravity of the situation. He summarizes the problem with a conciseness which in no way detracts from its tragedy, and we wish that his words could be carried into every household in America. He says:

At least one-half of the murderers have come from the boys of the country. Over one-half of the inmates of your jails are boys. At least one out of every five of the mothers' sons come to jail between the ages of 10 and 20—a majority of these between 10 and 17. There are from two to five times as many boys arrested annually as all other classes combined. Nine-tenths of these boys are American boys, American born, and not of foreign birth, as is generally supposed. They are increasing in numbers constantly. Every penitentiary in the country is full of young men who were boys only a few years ago. The jails are full of boys of today.

Could there be a more unanswerable indictment of our civilization, and what must be the judgment of posterity upon a social system which not only creates such a state of affairs, but which views it with a placid equanimity untinged with self-reproach? What will be the end of it, because an end there must be, and speedily, unless the lawless forces of the community are to dominate avowedly as well as actually?

Judge Lindsay, however, is fortunately not one of those who diagnose the malady and then, like the Pharisee, pass by on the other side of the road; nor does he raise the usual ignorant and pernicious cry for an increase of severity toward the criminal. His remarks are, indeed, permeated with that sound and refreshing intelligence which for some mysterious reason we call common-sense. He says plainly that the parents are responsible, and that they ought to be compelled to face their responsibility. If the sins of the fathers are to be visited upon the children, then also the sins of the children ought to be visited upon the fathers—and the mothers. "Send them to jail," says the Judge, "if they neglect the education of their children, if they encourage them to steal or to lie, if they surround them with vicious influences."

We have, of course, no profound faith in jails as moral or reformatory agencies, but so long as jails are a part of our enlightened and Christian civilization, let us at least fill them with the right people.

But Judge Lindsay has a word to say about iniquities and incompetencies other than those of the parents:

The souls of little children in this country are being offered up every day as a

sacrifice on the altar of politics. Impurity and vice are allowed to come into their lives by the criminal state which does not protect them.

We can, perhaps, do something with criminal parents, but what can we do with a criminal state? The problem steadily enlarges itself as we look at it. We cannot put the criminal state into jail, and so our favorite panacea fails us at the last. Moreover, the Judge tells us that the jail makes its inmates worse than they were before.

Judge Lindsay tells us that for years he has made it a practise to trust in the honor of the boy criminal and that he has never yet found that trust misplaced. When he commits a boy to the reformatory he gives him his papers and lets him go alone. He says his plan is to "love him back to righteousness." It seems that the boy criminal has a sense of honor greater than is possessed by very many who are neither boys nor criminals.

STUDENT

Music to Be Delivered By Wire

A COMPANY is now in process of formation whose object is the delivery of music by wire to private houses, public halls, and wherever else it is wanted. So far, we understand that its operations will be restricted to Boston. It will make use of an instrument capable of recording and repeating all the range and qualities of sound within the perception of the ear. A device is attached which makes the tones audible over a large hall, or reduces them to the amount that is agreeable in a sitting room. Any kind of music can be supplied, vocal, uni-instrumental or orchestral, and of any composer. This is one of the dreams of Edward Bellamy, dreamed many years ago and then thought absurd. ¶ When the invention is in general use the piano industry will certainly suffer somewhat severely. This one can hardly regret. Nine persons out of ten who laboriously learn that instrument have almost nothing to show for their time and are wholly unfitted for rendering any kind of music. But they are not unfitted for enjoying it, being softened, educated and elevated by it. And the man who places music cheaply and accessibly at the constant service of the public in their own homes may claim to rank as a benefactor alongside of the inventor of printing.

STUDENT

Movements to Check Child-Labor

THE movement against the excessive employment of children shows some gratifying vitality in spite of a most discreditable public apathy. An exhibit in preparation for the St. Louis Exposition and explanatory leaflets will be given away in great numbers. Child-labor bills are now before the legislatures of four States, and there is good reason to hope that they will pass. New Jersey, however, has decided not to prohibit the night-work of children in the glass-works unless they are under fourteen years of age, while Iowa has refused to pass any bill whatever upon the subject. All progress, however slight, is, of course, to be noted with satisfaction, but we wish that the patriotism of which we hear so much and see so little would but materialize into the form of adequate protection to the children who, in a few years' time, will constitute a large part of the American nation.

STUDENT

Effect of the Prison Life Upon Boys

THREE boys, of whom the eldest is only fifteen years of age, are in custody for attempting to wreck a train. The minimum sentence for this offense is ten years in the penitentiary, and we presume that this punishment will be inflicted. Upon his release the eldest of these boys will be twenty-five years of age, and the gift of prophecy is not needed to forecast the kind of man then to be let loose upon the community, which will thus receive its own products with compound interest. Would that it were possible to form some exact estimate of the effect of the penitentiary upon a boy criminal, or that we could follow up the life history of some of the boys who have been subjected to this treatment! The result would not be complimentary either to our moral sense or to the commercial interests upon which we pride ourselves.

Art Music Literature and the Drama

Wood-carving—Some Fundamental Principles

ACTION is followed by reaction, and it is well. The old day of elaborate upholstery gave place in time to a period when wicker-work and plain wood dictated their own terms. From the elaborate, over-carved and over-ornamented furniture of a decade or two ago the pendulum has swung to the other extreme. Today we demand the simple, the massive, the plain.

The reaction has come not so much against carving, in itself, as because of the kind of carving that has been inflicted upon us in our furniture. The mass of it has been lifeless and worthless, generally because the one fundamental rule of art has been violated in its production, the rule by which the craftsman and the designer should not be, must not be, separated. The simplest leaf form may be so carved as to express something finer and greater than itself—the real thing—the soul, if you like. The purest design may become in the translating, and how much of our modern work is, lifeless and void. The simple truth is, the one who is incapable of making a design is incapable of rightly carving one made by another. The ancients knew this, and the crafts, one by one, have decayed as this ancient ideal has been lost.

It was a fundamental principle in the old days that both design and execution should be the work of one and the same person. This must come again to be the universal rule if any real progress is to be made in the art of wood-carving or any other art, for the matter of that. The commercial tendency of the times has had much to do with keeping our arts and crafts upon that level where sordidness and a willingness to imitate have been their curse, and one proof of this is the separation of the design from the craftsmanship itself.

That is why we tire of so much work that on the surface seems, and is even, well-executed, well-designed.

We never tire of a true and perfect Indian basket, a rare old bit of Italian carving or one of those marvelous missals or manuscript tracteries that have come down to us from the old days. The secret is very simple. They have something to say to us, something to reveal. Through them the soul itself has poured something of its life. It has been left to us moderns to change all that and we have changed with a vengeance. A design that is worthy of the name is something living, vital. Let it be "transferred" to wood by some one who is ignorant of the principles of design or who is incapable of producing a design equally excellent, and that which was alive becometh dead forthwith. Our artists know this principle. Is it not time that our craftsmen should learn it too? Let a song by Schumann be sung by the cracked voice of a Bowery *impresario*, with an accompaniment played on a piano that is hopelessly out of tune, and what have you? The cases are parallel. Then, considering that a large proportion of our carved furniture has been cursed with bad design to start with, and unfeeling, mechanical workmanship to conclude with, need we wonder that the reaction has come and left us praying for plain

wooden benches and the simplest possible lines in our tables and chairs?

When Katherine Tingley founded the Woman's Exchange and Mart one of her objects was to bring about a revival of the ancient arts, crafts, and industries. She has done so, but not as many others have attempted to do it, by slavishly copying the ancient models. Rather has she built an atmosphere in which the *ancient principles, not merely the old forms, can live*. She is fostering a genuine art feeling which makes it possible for the spirit and the letter to go together, impossible for design and execution to be separated, and easy for the soul to express through craftsmanship its very message.

GIVE me the pay I have served for.
Give me to sing the songs of the great Idea, take all the
—Walt Whitman

A GLIMPSE WITHIN STUDENTS' HOME No. 1, LOMALAND
Carvings by R. Machell

In this revival there is no room for slavish copying, which is at best but a shell, a ghost of something that once was. Nor have we at Lomaland any patience with the impractical and the unexpressed, the purely theoretical. A true revival of all that is best in the arts and crafts of the ancients will only come when there is a genuine and perfect union of thought and expression, of theory and practice, of craftsmanship and design.

STUDENT

The Beauty of the Ideograph

WHY are the streets of the merest Japanese village picturesque and beautiful, while our own business streets are ugly and commonplace and hard? Seeking for reasons, the traveler is likely to conclude that it is partly due to the picturesqueness of the signs. It is impossible to imagine anything beautiful in a painted legend reading "second-hand clothing," or in a sign reading "boots and shoes;" and the close proximity of the modern sign is usually sufficient to spoil the inspiration of the most beautiful building in the world. But translate these various signs into their exquisite Japanese or Chinese equivalents, decorate the store fronts with ideographs instead of common-place English letters, and behold! something has happened.

The beauty of the ideograph is by no means a thing of pure imagin-

ing. Its every line is a single unfettered sweep, and we feel that generations have loved and limned these expressive forms until they have evolved not into greater complexity, but into simplicity, primitive beauty. They may be untranslatable, as mere words, to the tourist, but he, nevertheless, feels their beauty and the purity of their witness to that inner grace and inner symmetry which is the secret of The Real. Is it strange that the Japanese love the legend which tells how certain ideographs, once written by Holy Men, became through the magic of that grace and power which lay in their sweeping lines, actually incarnate, and descended from their tablets to hold converse with mankind?

STUDENT

THE gulf which exists between Ireland's past and the future that awaits her people has been well-nigh bridged by the love of music that has refused to die out of the hearts of the Irish people, and the symbol which they keep in their flag of the harp itself. Today all signs point to a not far distant time when all that was best in ancient Irish music shall become once more a factor in the heart-life of the people.

WHAT ARE THE IRON CHAINS THAT HANDS HAVE WROUGHT?
THE HARDEST CHAIN TO BREAK IS MADE OF THOUGHT.

—Thomas Paine

Thomas Paine on Justice to Women

THOUGH not generally known, it is nevertheless a fact that Thomas Paine was the first man in America to plead for justice to women. In 1775, he wrote, in the *Pennsylvania Magazine*, of which he was at that time the editor, the following:

"Affronted in one country by polygamy, which gives them their rivals for inseparable companions; enslaved in another by indissoluble ties, which often join the gentle to the rude, and sensibility to brutality! Even in countries where they may be esteemed most happy, constrained in their desires in the disposal of their goods, robbed of freedom of will by the laws, the slaves of opinion, which rules them with absolute sway, and construes the slightest appearances into guilt, surrounded on all sides by judges who are at once their tyrants and seducers, and who, after having prepared their faults, punish every lapse with dishonor—nay, usurp the right of degrading them on suspicion!—who does not feel for the tender sex? Yet such, I am sorry to say, is the lot of woman over the whole earth. Man with regard to them, in all climates and in all ages, has been either an insensible husband or an oppressor; but they have sometimes experienced the cold and deliberate oppression of pride, and sometimes the violent and terrible tyranny of jealousy. When they are not beloved, they are nothing; and when they are, they are tormented. They have almost equal cause to be afraid of indifference and love. Over three-quarters of the globe Nature has placed them between contempt and misery.

"Even among people where beauty receives the highest homage, we find men who would deprive the sex of every kind of reputation. 'The most virtuous woman,' says a celebrated Greek, 'is she who is least talked of.' That morose man, while he imposes duties on women, would deprive them of the sweets of public esteem, and in exacting virtues from them would make it a crime to aspire to honor. If a woman were to defend the cause of her sex she might address him in the following manner:

"'How great is your injustice! If we have an equal right with you to virtue, why should we not have an equal right to praise? The public esteem ought to wait upon merit. Our duties are different from yours, but they are not less difficult to fulfill, or of less consequence to society. They are the foundation of your felicity, and the sweetness of life. We are wives and mothers. 'Tis we who form the union and the cordiality of families; 'tis we who soften that savage rudeness which considers everything as due to force, and which would involve man with man in eternal war. We cultivate in you that humanity which makes you feel for the misfortunes of others, and our tears forewarn you of your own danger. Nay, you cannot be ignorant that we have need of courage not less than you. More feeble in ourselves, we have perhaps more trials to encounter. Nature assails us with sorrow, law and custom press us with constraint, and sensibility and virtue alarm us by their continual conflict. Sometimes also the name of citizen demands from us the tribute of fortitude. When you offer your blood to the State think that it is ours. In giving it our sons and our husbands, we give it more than ourselves. You can only die on the field of battle, but we have the misfortune to survive those whom we love the most. Alas! while your ambitious vanity is unceasingly laboring to cover the earth with statues, with monuments, and with inscriptions to eternize, if possible, your names, and give yourselves an existence when this body is no more, why must we be compelled to live and die unknown? Would that the grave and eternal forgetfulness should be our lot! Be not our tyrants in all! Permit our names to be sometimes pronounced beyond the narrow circle in which we live! Permit friendship, or at least love, to inscribe its emblems on the tomb where our ashes repose; and deny us not the public esteem which, after the esteem of one's self, is the sweetest reward of well-doing!'"

Woman at the Exposition

WOMAN is to play an important and unique role at the Louisiana Purchase Exposition, but it will not be spectacular, and much of it will be enacted behind the scenes. It was the desire of the Board of Lady Managers that there should be no Woman's Building, and that the products of woman's work should not be labeled and set apart. It was their wish that woman's handiwork should be entered with that of men under the usual exposition standards, which are both impartial and severe. The women entertain, however, in their own quarters, to which the general public will obtain admission only by card.

Miss Egan, the Secretary of the Board, said recently: "We did not want the women's work tagged and put into a variety of sideshow. Woman has gone beyond that point in industry and in every other field she has entered. At this exposition she is placing her work alongside that of men, asking no favors and expecting only justice.

"In the domains she has entered—and they will be found to include everything in the arts, crafts and sciences, and nearly everything in manufactures—she will be found worthy. This exposition will educate the world on the scope of woman's work as nothing else ever has done or could do. When the Woman's Board was given the right to nominate women for members of juries for judging where women's work and men's work were in rivalry, more was done for women than could have been done by erecting a costly building and using it to fasten tighter the band of sex distinction upon women workers."

The Wife of Lafayette

WE revere Lafayette but we, as Americans, know too little of the noble woman who became his wife. "La femme Lafayette," as she began her every petition to the government, became the wife of Lafayette before she was fifteen, the husband himself being but sixteen years of age. The marriage was one of the most ideal known to history and when the "inspired boy" ran away from France in disguise and crossed the ocean to aid us in our struggle for freedom, the girl wife, soon to become a mother, smiled through her tears, saying, "Go, you are right, I wish it." The letters that passed between Lafayette and his wife are marvelous in their beauty and utter confidence.

Later, when Lafayette was banished to a foreign country, Madame Lafayette, unlike the wives of many of the exiled aristocrats, not only refused to be divorced from her husband, but petitioned the government to be allowed to share his imprisonment. In care of General Washington, she sent her bright son of fourteen to America and then joined her husband in a loathsome prison. Though her health was shattered by the confinement her heroism was not in vain.

Shortly after her death her husband wrote of her in a letter to a friend, "Indulgent as she was with respect to calumny and petty hatred, never did she allow, even at the foot of the scaffold, a reflection upon me to pass without protesting against it."

STUDENT

THE ex-Empress Eugenie, who is today seventy-eight, reigned as the consort of Napoleon III. from 1853 till 1870, setting, thanks to her beauty and extravagance, a fashion in dress for which Parisian dressmakers ought to be grateful to this day. Her wardrobe is said to have cost £200,000 a year and her household expenses £2000 a day. When the crash came the Emperor and Empress settled down at Camden House, Chislehurst, in quiet English style. At Farnborough she is chiefly known as an assiduous visitor of the poor. In a mausoleum at Farnborough Hill rest the remains of the Emperor and of their son, the Prince Imperial, who was killed in the Zulu war. The ex-Empress has been to Zululand to visit the place where her son died.—*London Daily News*

The New Woman in China

PRINCE PU LUN, whose liberal views are said to have enraged the redoubtable Dowager Empress during the Boxer troubles, is honorary commissioner for China for the Louisiana Purchase Exposition, and Mr. Wong is vice-commissioner-general. When the latter took up his residence in St. Louis some months ago Mr. Wong placed his daughters in the Girls' Classical School of Indianapolis.

When Prince Pu Lun arrived to attend the opening of the exposition he signified his desire to see something of the education of American women. Mr. Wong suggested that he visit the school in which his daughters are pupils, and the Prince thereupon, with a suite of five dignified mandarins and forty servants, went to Indianapolis and took up his residence at the principal hotel. He awarded the diplomas to the young woman graduates of the school at the commencement exercises, made them a speech and expressed his sense of their courtesy when the girls elected his only daughter, born since he left China, an honorary member of the school. Then he accepted a reception tendered him by the woman's council of the city.

This council contains 8,000 women, and more than 5,000 of them were present at the reception.

"He said that he was more interested in the higher education of women than in any other one question of the day. He declared that he was convinced that if China was ever to come forward and assume the place among the modern civilizations that she held among the ancient ones, her women must be thoroughly educated and emancipated."

In accordance with this idea, he secured a letter from the Chinese Minister at Washington to the Chinese Minister to Germany asking that some woman connected with the Chinese Legation at Berlin be appointed to represent the women of China at the coming meeting of the International Council. This meeting of the International Council of Women at Berlin promises to be one of the most remarkable in the history of the woman movement. The act of the German government in offering the use of the Reichstag for this meeting is without precedence. STUDENT

The Divorce Evil

THE divorce evil, the discussion of which has occupied the Presbyterian General Assembly at Buffalo for two days recently and which has been for some time claiming considerable attention from both press and pulpit, is now being discussed by prominent Club women. Mrs. Lucinda B. Chandler, honorary vice-president of the Illinois Women's Press Association, is reported to have recently said, "I have no doubt that the Presbyterian Ministers are acting conscientiously in their decision and expressing themselves honestly in their views. They are mistaken however in their contention that the marriage ceremony of itself is a sacred institution.

"No mere ceremony can sanctify that relationship which we call marriage; only great and pure love can do that. There is much to be taught in regard to marriage and it is not strange that ignorant and unwise marriages occasionally end in divorce. Some of them ought to.

"The wedding ceremony in itself is a mere form and is sacred only when the relations of the contracting parties are based on justice and purity." This, it must be confessed, is not always the case.

Are Women Responsible?

A RECENT New York paper, in a gently trenchant editorial, lays the blame for the mutilation of horses by docking upon women.

"Let ladies say that they will not ride behind a docked horse and in a short time no such horses will be seen." The editor also kindly attributes the high checking which is so painful to horses, "to the vanity of women," and probably thousands agree with his statement, that if women would refuse to wear dead birds upon their bonnets, the terrible slaughter of our songsters would cease in the twinkling of an eye. This is not pleasant, however, to those of us who are women, particularly to those of us who would not check a horse painfully high, nor mutilate one for vanity's sake, nor wear dead birds on our bonnets. Yet we cannot be honest and say that the criticism has no foundation. The difficulty is not that women have not high ideals, but that they have not that unity which is the only basis upon which ideals can ever be built into realization. A million men together could not put down the simplest insurrection if each one charged upon the enemy on his own account, without any thought of Leader or comrades. When women learn the lesson, that, it must be confessed, men have learned to a certain extent already, the lesson of unity of effort, some headway will be made against the evils of the world, and not until then. STUDENT

The daughter of my people is become cruel.

—Lam. 4: 3

Caught 'mid some mother-work,
Torn by a hunter Turk,
Just for your hat!
Plenty of mother-heart yet in the world:
All the more wings to tear, carefully twirled,
Women want that?

Oh, but the shame of it,
Oh, but the blame of it,
Price of a hat!
Just for a jauntiness brightening the street
This is your halo, O faces so sweet,
Death: and for that! —Wm. C. Gannet

"IT IS FINISHED"—JOAN OF ARC'S DEATH

PEOPLE that are centuries behind the march of civilization may be possessed of primitive customs, but they often possess primitive virtues which the civilized man might do well to emulate. Mary E. Durham, an English woman, has recently penetrated into the most unknown and barbarous regions of Servia and Montenegro, without any escort but a native guide and with no protection other than her courage, her own womanliness and an English passport. Miss Durham, so great was her trust in the people of the Balkans, traveled over the most lonely tracts of the country, lodging in hovels and mingling freely with people of a land which is one of the wildest corners of Europe.

MEMBERS of one of the Chicago woman's clubs have incorporated a Federal Health Bureau. Its purpose is to do something about "educated parentage," and its members advocate that no marriage licenses should be issued without a physician's certificate of health. They have determined to ask federal legislation that will prevent marriages among those who cannot show a clean bill of health or who cannot prove to the marriage license clerk that they have never been guilty of a crime. This is certainly a step in advance and other steps will follow, for the end is not yet.

JUVENILE marriages in India have recently been somewhat discouraged by the announcement made by the Central Hindoo College, Benares, to the effect that all married boys in the higher classes will be charged double admission fee and double tuition fees; and in the lower classes married boys will not be admitted.

Brief Glimpses of the Prehistoric World

Archeology
Paleontology
Ethnology

An Indian Arrowhead Found at Point Loma Homestead

AN inch of white flint—found a few yards in front of the Homestead office entrance. Simple and unobtrusive here lay an Indian arrowhead; a “sermon in stone” among stones which have many messages to tell humanity. On Point Loma are stones carrying down through the ages a record longer than any even in this ancient land of America—stones which could tell of the rise and fall of continents and grand civilizations which human memory has long forgotten.

Among such venerable stones as these is found this little witness to a remarkable phase of retrograde civilization whose meaning is even yet misunderstood by the race which has supplanted it in all but a few neglected and dying communities of Indian life. The arrowhead seemed to be characteristic of the glorious civilization of this ancient continent degenerated into warring tribes, typical of the disintegration of a great national force.

The north land to the south is sown with flint beautifully fashioned by craftsmen whose fingers have not entirely forgotten the skill bequeathed to them by their ancestors. Possibly there is no symbol more universal, no relic more lasting, than these little arrowheads.

The riddle yet remains to be read. Possibly this little white stone had its duty to do in defense of Point Loma against hostile forces. Possibly it came from a foe-man's hand and remains to tell of an enemy defeated.

Perhaps its message is of the sacred mysteries inaugurated, before metals were used, by the candidates for greater knowledge—ancient mysteries whose degraded echoes we still can hear, and hearing, not understand.

Our masonry of today will, it is to be hoped, be forgotten before the years have unrolled much more of their record.

The real national monuments of America—monuments far more ancient than the eagerly sought antiquities of Europe we are allowing our vandalism and commercialism to destroy day by day, and what have we to put in their place? Shall we not eagerly look forward—shall we not bring about an era of national masonry such as old Egypt learnt from those who dwelt in America before us—really national and not individual, reflecting our position among the nations, our responsibilities, our hopes, our aspirations; that it may not be said by those who come after “This was built by such a one,” but “This is a monument to a nation of wonderful masons?”

Then shall they remember our America by the emblems of peace and not of war; as a pillar in the temple of the universe, and not as a stone rejected of the ages. Shall we leave nothing of more lasting import than a few arrowheads?

FOLLOWING upon the example of the Italian government the Norwegian Odelstring has passed a bill forbidding the sale or export of any national objects of archeological interest such as Norse coins, weapons, remains of Viking ships, etc. America will soon be remarkable not only for its archeological wealth but also for indifference to that wealth. Something, it is true, has been done, but much more remains to be done if the traces of prehistoric American civilization are to be saved from the curio hunter. The National Government should spare neither time nor money to preserve everything of a prehistoric character from the devastating hands of ignorant and wanton vandalism.

The Wise and Enlightened Laws of Ancient Babylon

THE profound significance of the legal code of Hammurabi, the Babylonian King, is becoming more and more appreciated as its enactments are better understood. A few years ago we did not know that such a man had ever existed. We now know not only of his existence, but that he ruled over a mighty and a free people, and that the laws which he made were not only merciful and just, but profound in their comprehension of human needs. Hammurabi was certainly justified in saying of himself, “I was a master who was unto my people as the father who had begotten them.”

That legal procedure in Babylon had been carried to a very high point is shown by its absolute insistence upon written evidence. All judgments must be sealed, receipts must be given for all goods and money entrusted to another, and a deposit note must be furnished for goods in bond.

In many respects the Code of Hammurabi shows an enlightened wisdom in excess of any laws which have been operative since his day.

Penalties were incurred if lands were allowed to lie uncultivated, and payment of interest upon loans was excused if it could be shown that crops had been damaged by storms.

Comparisons between the laws of Hammurabi and those of Moses are necessarily drawn, accustomed as we are to the assurances that the latter are the wisest ever known. Such comparisons are strongly to the advantage of the Babylonian system. In its criminal clauses the Babylonian law was more just, more merciful, and placed a higher value upon the sanctity of human life. STUDENT

A Man of the Bronze Age

AN interesting discovery has been made on the top of Brandon Hill, in the County of Durham, England. Some workmen engaged in quar-

rying found a stone receptacle containing human remains which, from the position of the bones and from other indications, evidently belonged to the Bronze Age. The sides of the receptacle were formed of four large stones lying nearly due east and west, with the head to the east. The remains are those of a man of large size, about sixty years of age. Close to the skull was an unusually fine clay urn, eight and one-half inches high, tastefully decorated with three bands of herring-bone ornament, each band surrounded by punctured lines.

The skill with which many of these urns are made and ornamented would seem to point to a higher degree of knowledge than we usually associate with this division of primitive humanity. STUDENT

WE have usually believed that wire rope is peculiarly an invention of modern times. Recent excavations at Pompeii have, however, produced a piece of rope made from bronze wire. It is about fifteen feet in length and one inch around. It is made of three strands, each strand consisting of fifteen wires twisted together. Pompeii was destroyed over eighteen hundred years ago, but the excellence with which this particular piece of rope was constructed is evidence that it was even then by no means a new invention. The Assyrians are known to have used wire, but there is no proof that they ever twisted it into rope. STUDENT

A TYPE OF THE AFRICAN MATABELE

IT is a remarkable fact that the sportsman who comes from the jungle, where he has encountered without a tremor the deadliest animal foes, has been known, upon his return home with the trophies of his prowess, not infrequently to show himself a man who does not dare to oppose the wrong fad of the hour, or a popular political belief. England, the nation of sportsmen, gave a strange exhibition of this trait of humanity during the Boer war. But a very few men, at the head of whom stood the prophet, W. T. Stead, dared to antagonize the jingo cries. After mobs had smashed the windows in the houses of a few of the most outspoken, there was immediately noticeable throughout England an absence of men who cared to encounter the opprobrium of advocating unpopular justice, and the condemnation of their enthusiastically warlike neighbors—who were quite willing to go in large crowds and make demonstrations against single individuals.

In France during the Revolution, we had another curious phase of courage. There were men, and many of them, who did not dare to set themselves in opposition to the dictates of their class, though they might have saved France by a timely exhibition of their beliefs, who later on marched from the prison to the guillotine with a light-heartedness and *insouciance* that showed physical courage of the highest type. So confusing are these contradictions, that we come almost to wonder what the word courage really means.

Perhaps its vagaries are best exhibited in that cartoon of *Life*, which shows a lion-tamer, who has returned at a late hour and fears to encounter his spouse, going into the cage of the lion for his night's rest, and being discovered presently, the woman looking through the bars and exclaiming, "Oh! you coward!" And this cartoon is founded upon not rare idiosyncrasies of courage.

We then reach the point where we ask ourselves:

Am I a brave man, or am I a coward?

If brave, to what extent, in what direction?

For instance, does my courage extend to the point of telling the truth when I lose advantage by such a course; or do I prove myself a liar through cowardice?

If I see a fellow-man drowning, am I sufficiently brave to risk my own life in his rescue?

If I am in a society where an opinion that I hold to be based on truth is vigorously denounced, have I the courage to defend it?

Or do I slink? Slink is a good word, though not a very nice one. It is not pleasant to imagine oneself as a slinker.

And if a fire were occurring in the adjoining house, would I be willing to incur the risks of suffocation in order to rescue a woman who might otherwise perish?—and if I did this, would I on the next day give a smiling assent to the suggestion of my employer that I should vote a ticket which I believed to be not for the best interests of the community?

If I have a long-founded belief, which has been disturbed by argument, am I of that mental caliber which bravely goes to meet a demolition of my views, preferring to encounter a shock to these conceptions? Or do I mentally slink and carefully run away from disturbing thought?

In other words, am I a coward?

True courage is a component part of so many things that it is worth our while to examine.

For instance, no man can be truly a gentleman if a coward. He may have the exterior marks of a gentleman—the veneering—but at heart he lacks, if he lacks courage.

There can be no such thing as true manliness, or true womanliness, if there is a lack of courage.

Courage is the first component of character.

Courage is an essential of successful business life.

Courage is an essential in the administration of a household—the government of the servants. If a mistress is cowardly, her servants quickly discover her weakness and trample upon it.

Courage makes the difference between the clergymen, noble, devoted and useful, and the mere time-server—that most pitiful of professional men, who draws a salary for rendering services to his fellow-men and slinks through life avoiding his responsibilities.

Courage not only marks the great editor of a great newspaper, but its

Courage

by JOHN BRIDEN WALKER in *The Cosmopolitan*

absence kills the investment of the stockholders in that newspaper, so subtle is the public mind with reference to the characteristic of courage, and so instantly does it discover whether a man set over a great journal to guard the public interest has

the courage necessary, or whether he is slinking along trying to avoid every important issue.

Courage equally distinguishes the man in public life and makes of him the personage; or, in its absence, allows him to dwindle into an unrespected obscurity.

Courage in a wife rouses her to meet the greatest emergencies of life. She becomes a heroine in the face of unexpected calamity, before the loss of fortune. It puts her upon a pedestal above the ills and losses of life, where her husband and children may worship; or, for the lack of it, allows her to dwindle into the slattern.

Courage distinguishes the young boy just entering upon his career and marks him out for promotion. He has the courage to stay by duty until performed, to speak the truth, to sacrifice pleasure to his mental and business development.

Courage enables a man in any one of the great stresses which come in life to every human being, to put aside temptation.

It is courage that prompts a man to seek the welfare of his fellow-men rather than his own.

Courage—nerve, some young men call it! But that is a less discriminating word.

Yet I do not know of any course on courage that is given in the public schools. I do not know of any text-book on courage. I do not know of any book that has gathered together the great examples of moral courage which have been given to the world by its heroes.

Physical courage we lay stress upon.

Physical courage is told of in books.

But physical courage is so common in form as to be almost unworthy of notice. In some it is a form of hysteria. In a thousand instances it has been known to be a lack of moral courage. The man touching elbows and going unflinchingly into battle, we speak of as exhibiting courage. Yet it may be merely that he fears to incur the criticism of his companions.

From the *Iliad* down, we have had much talk of this kind of courage. It is trifling. It is unimportant. It means very little. But moral courage—why have we no books which explain to the young the thousand ways in which moral courage may be cultivated, and how much it means in each man's or woman's success?

One additional thought in this connection.

Courage gives the man or woman power to consider facts upon their merits. It is the coward who, in the face of a fact, is side-tracked because the popular, known feeling has been in a certain direction. The man of courage will consider a fact upon its merits. He will investigate. He will analyze and so obtain the truth. And this power of obtaining the truth—truth obtained through a courageous mind—is most valuable in every pursuit of life.

The cowardly mind, standing before opinions heretofore in vogue, is frightened at any temerity of thought, is deterred from investigating; and going into the slough of the commonplace, loses the opportunity for that advance which in modern life means success.

It is not clearly understood how valuable is the adjunct of courage in the man or the woman, nor that, if accompanied by good judgment, it is the most valuable of business assets.

FATHER TAYLOR, when remonstrated with for maintaining his friendship with a Unitarian, on the ground that he must go to a place not mentioned in good society, replied: "It does look so, but I am sure of one thing—if Emerson does go to that place he will change the climate there, and emigration will set that way."

THE great man is he who hath nothing to fear and nothing to hope from another. It is he who, while he demonstrates the iniquity of the laws, and is able to correct them, obeys them peaceably. It is he who looks on the ambitious both as weak and fraudulent.—*Walter Savage Landor*

IT fares with us in human life, as in a routed army; one stumbles first, and then another falls upon him, and so they follow, one upon another, till the whole field comes to be one heap of miscarriages.—*Seneca*

PANORAMIC VIEW OF ELEUSIS, SHOWING, IN THE FOREGROUND, THE RUINS OF THE ANCIENT CITY IN WHICH THE

IN view of the establishment of the School of Antiquity at Point Loma, California, by Katherine Tingley, its Foundress, the subject of the Mysteries of olden time becomes interesting from a new standpoint.

What were these Mysteries, about which so much has been said? A picture is here presented of these traduced ceremonies and celebrations.

The Mystera of the ancients are a sore point of contention among our savants. While the majority admit that they were in all probability sacred festivals, for the most part celebrated at regular recurring periods, not one dare say that he knows either their real meaning, or even the nature of the ceremonies followed. He dare not, simply because he knows it not! That these Mysteries date from untold aeons of years in the dark, unknown past, is granted grudgingly, that they had an aim and purpose beyond that of duping the polloi and hoodwinking the profane, is supported by as few as the ten fingers of the hands; that they professed, and once were, the opening of the spiritual nature of the neophyte by strange and holy ways, is denied outright! Yet great is Truth, and it will prevail.

Let us reason together. That human nature, in essentials, be different today from what it was tens of millenniums ago, is improbable; as long as man has possessed the intricate and composite whole he now directs, his human characteristics must have been what they are now; and this will lead us right back into prehistory, into pregeological times. The first settlers on the banks of Sihor, Egypt's flooded stream; the ante-Dravidian occupants of the Peninsula of Hindustan; the forgotten peoples covering Central Asia with flourishing cities; and those ancient and unknown Americans who preceded the Toltec and Maya builders, aye, even to those races whose portraits we have on Easter Island, graven on enduring stone; where do we find evidence, historic, geologic, ethnologic or other, that man was not far back in prehistoric night just what he is today, in all that makes man a man? So it must be, that from and before the memory of man, from the time when he, like Enoch, walked with the gods, that he has been a seeker after Truth, and that his spiritual nature has forced a demand for recognition upon him, at times imperatively, so that the essence of Being was sought out as the *summum bonum* of life. It was once upon a time known, by intimate personal intercourse, that man is as much a part of Being, Universal Being, of the absolute vibrant life-energy of the Universe, as that he is finite in his lower nature. And in the adyta of the sacred fanes of hoary Antiquity the rites were established, after his Fall from his pristine high spiritual estate, and the teachings and powers resurrected, which would confer upon man his forgotten heritage. There were enacted those mystical ceremonies, and imparted those doctrines, making of him not slave, but Master of Life, not blind creatures of sense and passion, but Initiate in the Wisdom of Isis, which

The Mysteries

the goddess so carefully veiled with her mantle from the too-presuming gaze of her passion-laden sons.

Hence the veneration in which these Mysteries were held. Hence the reason why these things were so carefully guarded from intrusion, that war and desolation were accounted as incomparably of less moment, not to be compared, with the preservation of the holy flame: that flame burning not only upon the altar of the Temple, but likewise in the heart of the Resurrected.

In these initiations there were stages of progress for the seeker. To *know*, to *will*, to *dare* and to be *silent*, were the pass-words demanding peremptorily for admittance into the Brotherhood of Humanity's Saviors; and they were never refused, for he who came carrying their burden in his heart, and manifest in his life, came by divine right, and was already in spirit a member in secret. Veil upon veil was lifted to him; there remained veil upon veil behind. Also there were the Arcana of which I speak, and the outer Halls of Knowledge. Woe betide him who had not passed beyond the veil separating the two! Not yet is he an Initiate, but a probationer; not yet a master but a disciple, pledged to the Cause of Humanity's aid. Dark demons of doubt still held their sway over his soul; still was he subject to his self. If it so happened that his daring carried him beyond his strength to fulfill, so that he failed those above him in the Cause, then his doom came upon him swiftly, not by order, but by the Law under whose dominion he had so placed his life. What life more significant in this connection, than that of Julian, called the Apostate? Called Apostate because he left the shell and form of exoteric Christianity, to seek the Light which lighteth every man that cometh into the world. The Law fostered him and carried him along in its own working; perhaps a sadder cry was never heard than his: gathering his blood in his hand, from the wound in his body, he launched it upwards with the cry, so it is said, "Galilean, thou hast conquered!" The church today takes it one way; those who know, say that it was the voice of human despair, acknowledging not the starry Christos, but the iron hand that was to fall so heavily on man's heart.

With him died the Mysteries, I mean their formal recognition by men. But there is hope. There is Atonement, and it is known among hierophants of the old-world Wisdom, as the BAPTISM OF BLOOD. Humanity has been passing through it, and the day has come now, in cyclic time, when Wisdom shall again reclaim her children, the widow weeping for her sons.

MYSTERIES WERE ENACTED, AND IN THE BACKGROUND THE MODERN GREEK CITY, FROM A RECENT PHOTOGRAPH

of Antiquity

The religions of earth are the children of the sacred Mysteries of Antiquity. Profound study of the facts shows us clearly that at certain periods in history, at times of great dearth and stress, at times when the flow of spiritual life is at its ebb, there appear Messengers among men, whose mission it is to preach a "new" gospel to the people. They come like shooting stars into our midst, and when they vanish a new religion has been founded; a new philosophic cult has been instituted; a new code of morals has been given. Those who are entitled to speak with authority, say that these Messengers from the gods appear at cyclic periods, and that their advent is known, and their coming heralded, by signs and wonders. It is, nevertheless, all done in so natural a way, that not having the key, historians record the fact and pass on.

These religions, these philosophies, these moral codes were born in and of the sacred Mysteries. Time, in its mysterious working, marks off the epochs; the Mysteries are profaned by the spirit and turmoil of the outer world and are withdrawn from sight; the temples become the dens of priestcraft and human terrors. And so it continues, until the cyclic course of Destiny brings forth the Deliverer, the Regenerator. He outlines his doctrine publicly; he gives the key thereto to those he has tried and proven faithful beyond doubt. The Mysteries are *reborn*, to last for a time, for times, and half a time.

Who today can read the full meaning of the old Mystery language of the old initiates? What Egyptologist has understood the *recondite* meaning of the Temple writings of Egypt? What student of their sense, in this our day, may lay claim to have unraveled the skein of their abstruse significance? None! They are scarcely to blame, for who of them is to know that these picture writings must be read not merely in signs, but also in color; in juxtaposition to each other; and by certain formerly well understood rules regulating their interpretation, whether in a religious, a civic, a mystic or an historical sense?

In those old days, part of the knowledge imparted to the neophyte in the Mysteries, is much that is today common in every school in the land. Such were Geography; Astronomy; the Science of Numbers, and Mathematics in general; Chemistry; Alchemy; Divine Astrology; and, above all, History. But they went farther than is done today. The secret bearing of these sciences on man's destiny was explained and demonstrated, while the future of races to come was proven by these very branches of human knowledge. They went farther; that is, the gifts to man

in ages far gone, conferred by great souls who came to this state of life for that purpose, were then given with a key, now forgotten, but which was then verily a reality. It is easy to hear the thinkers of our day scoffing and deriding the idea, but, after all, what proof have they to offer that it was *not* so? Is man the *only* being in this Universe endowed with will-power and intelligence? If he is, how comes he by such divine powers? If he be not, where are they who are sharers with him therein? They must be above and below him; and our answer is there.

Now what knowledge have we today, that is not derived from what our forefathers had? Our systems of weights and measures; our jurisprudence; our codes of ethics; our forms of government; the very languages we speak, are all derived from antiquity; and the ancients were our precursors in all that we may now lay claim to. Music, numbers, art, architecture, government, law-making, industries—in short, everything we know, was known and practised before ourselves. On the old monuments, and in the signs of Egypt, may be seen the shoemaker drawing his twine; the jeweler at his task; the glass maker blowing his glass, just as we may see it today.

Why should the conceited phantasy of the age fancy that our knowledge is self-created, and that it symbolizes the being of such a civilization, that the records of past time have no parallel to it?

Among these Mysteries of Antiquity, none perhaps are so well known to us, through the voice of rumor handed down, as those of Eleusis. Of prehistoric beginning, the Eleusinia took place at the time of the harvesting of grapes each year, in the month of September, called the month of Boëdromion, and lasted for a period of seven days. The Eucharistia was one of the oldest rites of the old time. Ceres signified *bread*, and Bacchus *wine*, the former exemplifying life regenerated from the seed; and the wine, or grape, was emblematic of Wisdom. Jesus the Christ said: "I am the Vine, and my father is the husbandman," referring here to the secret and mystic knowledge of things that he could impart. This again shows the standing of Jesus the Christ, spiritually; for the pledged disciple might receive, but was not empowered, and *could not*, impart, or initiate.

So much for what were termed the Eleusinia "the greater." These were celebrated between harvest and the seed-time. Then there were the Eleusinia "the lesser," which were held ceremonially in the early spring time.

Here, at Eleusis, in Pelasgic times, whatever may be said to the contrary, were enacted the wondrous Mysteries, the "Things Veiled" from the eyes of men, in and during which the inner eye of the prepared neophyte recovered its power, and the Fields Elysian were opened to his searching gaze. He saw life as it is; he saw BEING, uncovered from its enshrouding veil of matter; (*Continued on page 18*)

Universal Brotherhood Organization

Central Office Point Loma California

SUNDAY night's program at Isis Theatre comprised an address by Dr. Van Pelt, Superintendent of the Raja Yoga School at Point Loma, on "Women's Clubs," and one by the Rev. S. J. Neill on "Australasia." Two of the Raja Yoga children also read short papers, the first by a little Swedish girl on "My Country, Sweden," and the second on "Cuba," by one of the Cuban children. Dr. Van Pelt's paper was a thoughtful enquiry into the object and scope of women's clubs.

"Those who are not directly connected with these clubs, or through some experience have not had their attention especially attracted to them, perhaps scarcely realize what an important feature they are of our modern American life. They are to be found everywhere. Quite likely every little town in every little and big State is honored with its women's club. Sometimes they are simply literary clubs. Sometimes they are quite complex, having many departments, including a literary, educational, philanthropic, an art, musical, domestic art department and so on. Now, if properly used, they ought to be a means of broadening the home life; of enabling a woman to fill her position better. If they do not do that for any woman, they are, of course, worse than useless to her. For what we all need to learn to do is not to ignore the place to which nature has appointed us, but how to fill it better and better; how to beautify and purify it and make of it all that is possible.

"The clubs are such an enormous organization, from the point of view of numbers, that one wonders why they are not even a greater power; and they have accomplished so much, one wonders why they have not done yet more. What is it that holds them back from a greater success? Some failure, of course, to understand nature's purposes, and work with her. It can only be that which holds any of us back. Nature has a plan, or that which is behind nature has. There must be a definite line of evolution, and any who work with these divine forces, are irresistible. Suppose that instead of working for a little culture here, a little knowledge there, the correcting of little evils on one side, or the starting of new reforms in another; suppose that instead of trying to patch up the social fabric as it is, there were, working through these clubs, a mighty force, which could grasp the trend of human affairs as they are, and which would like magic throw all human energy into line, and start it flowing in its natural channels!"

The Rev. Mr. Neill's address on Australasia contained many points of very great interest. He touched briefly upon the very interesting geology of the country, comparing the conclusions of scientists with the teachings of H. P. Blavatsky with which they are rapidly coming into agreement.

LOMA-LAND STUDENTS AT ISIS THEATRE

Address by Dr. Van Pelt on "Women's Clubs" and by Rev. Mr. Neill on "Australasia" --- Good Music

Reprinted from the San Diego News

Very important were Mr. Neill's remarks on the aborigines, or Maoris.

These people, it seems, elect their own members of Parliament, and some of their chiefs are in the Legislative Council or Senate of New Zealand. In most countries the aborigines vanish before the advancing white settler, but the Maori is holding his own and shows a slight increase.

There had been wars between the Maoris and whites many years ago, but the Maori King, Mahutu, is now a member of the government. The Maoris had, and perhaps have still, a form of religion of their own, which is said to be a remnant of the Ancient Wisdom Religion. The little Swedish girl who read a paper on "My Country Sweden," is certainly a good patriot. After recounting some of the advantages which she had gained at the Raja Yoga School, she said:

"At the Raja Yoga School we are most carefully taught to study the history of all nations, we are obliged to know all about the writers and the historians of these countries; what their religion, their patriotism, their nationality; and we have to know if they are what we call prejudiced. That is a big word; it has played a cruel part in the history of nations. Through history I have learned much about my country Sweden. I have learned to love it. I love my ancestors. They must have been a great people to have done so much for liberty. You remember it was Gustavus Adolphus, the Lion of the North, who went to Germany, being sorry for the suffering of the German people, and fought to protect it in the Thirty Years War. Once the Swedish people get Raja Yoga, they will make Sweden a greater country than it is now; and if they do this, with love in their hearts for other countries, all countries will be blessed."

The little Cuban boy was no less patriotic. He said:

"I am not old enough to know all that I would like to know about my country, but I feel it has begun a new life. I believe, too, that, year by year, America will help it. I believe that some day Cuba will help America. Columbus said of the Cubans that 'they were the goodliest people in the world,' gentle and forbearing, and honorable. Then they had no guns; no forts; no soldiers in arms; and they had no fear.

"Cuba has entered upon a new life, through the work of our Raja Yoga system. Schools are to be started in different parts in order to further this work of helping little children."

Dr. Van Pelt's valuable and suggestive address on "Women's Clubs" but a brief extract from which is quoted above, will be reprinted in full on the Woman's pages in the next issue of the "New Century Path."

The First Annual Exhibition of the Raja Yoga Academy at Santiago de Cuba

SANTIAGO DE CUBA, HEREDIA 3, May 12th, 1904

ALTHOUGH the Raja Yoga Academy was opened not more than six months ago, great plans were laid and executed for an exhibition at the closing of the summer term. The program was varied and represented the principal characteristics of the individual pupils, as well as affording an exhibition of the various parts of the school curriculum.

The beautiful spacious salon of the Academy was converted into a play-house for the occasion. A stage was built, all necessary scenery added and an artistically decorated drop curtain made by Mr. Machell, the famous artist of Point Loma, completed the settings.

The exercises opened with a grand march, and before going further it should be mentioned that great credit is due Miss Amy C. Lester, principal of the Raja Yoga Academy, not alone for the well-arranged program, but for the ease, confidence and independence with which the children carried off their parts individually and collectively. A march by the school, intricate in its design, was executed without an order, thus showing the unifying influence of the Raja Yoga system and the developing self-mastery of each and all of the children.

Another interesting feature of the program was a Greek dance, given by a number of the girls. Attired in simple Greek gowns, wreathed and garlanded, they glided over the marble floors, gracefully swinging pretty colored silk scarfs. So chaste and pure, without a sound, their graceful figures formed the most effective pictures of art and grace.

Exercises with dumb bells, conducted by Mr. Reinemann, were also an important part of the program. These, the audience not only cheered but they applauded with no small amount of enthusiasm the splendid vigor of the drill.

The fact that physical training plays an important part and is absolutely indispensable to a healthy mind, was demonstrated beyond a doubt to the parents and friends of these children who at the beginning of the term could take little or no exercise at all.

A class of "little tots," directed by one but a few years their senior, marched, sang and gave an exhibition of their daily physical exercises, all to music. They were prettily dressed in the colors of the rainbow, simple and classic, and wore sandals.

Many remarks of appreciation of the beautiful and classic tone of the performance were overheard and the audience was already at a high point of enthusiasm when the second part of the program opened. Little had they anticipated what was coming, for tableaux were an entirely new feature of entertainment for them. In these tableaux the children displayed unusual ease and grace, for they are well defined types of the Latin race and of a poetical temperament.

The forepart of the stage was banked with flowers and shrubs among which sat the chorus of children who sang in very good English the songs accompanying the tableaux.

Original addresses by some of the pupils interspersed the program, which was brought to a close with a presentation of flowers to Mayor Bacardi by little four-year-old Marie de Moyer, the youngest pupil in the Academy.

There was a very distinguished audience. Among those present were the Mayor, Sr. Emelio Bacardi, and Sra. Bacardi, Provincial Superintendent of Schools, Sr. Navarette, and Sra. Navarette, Sr. Desiderio Fijardo and Sr. Daniel Fajardo Ortiz of the *Cubano Libre*, Dr. and Mrs. Mayner, Sr. de Moyer, Sr. and Sra. Berengner and many others.

Scientific Confusion of Simple Problems—Multiple Personality

THE public should not allow its thinking on psychological matters to be done for it by the medical profession. Some of the problems now being so learnedly and unintelligibly discussed, and at whose discussion the public listens so humbly, are not nearly as complex as they seem. And the mystery is often not in that region of the problem dwelt on by the learned.

The former President of the Royal Medical Society of Edinburgh has just aroused a good deal of discussion by a lecture on "Multiple Personality." His example was a child aged about twelve, who became the victim of influenza and meningitis. She was previously well-behaved and intelligent, but after her recovery lost what knowledge she had had, returned to an almost infantile condition, and had to be re-educated. So far there is nothing very mysterious. The nerve-cells which had been developed in the child's brain through the years of education had been poisoned to death by the products of fever and inflammation. In all such cases, as in intoxication, it is the latest-formed cells, the most complexly furnished, that go first, just as in a high wind it is the top story of a house that is blown off.

From this point occurred a number of developments and variations. The child became deaf and dumb, recovered and learned French, forgot it, became blind and imbecile, and recovered again. From time to time she could draw beautifully, whereas normally she could not draw at all.

Here there are two elements: the appearance of a new faculty, that of drawing; and the temporary poisoning of nerve-cells shown in the deafness, muteness and blindness—and the imbecility. Poisonous products were evidently being formed in some yet smouldering centers of disease and poured into the blood.

It is quite common for victims of "multiple personality" to display, in one of their personalities, powers and faculties (as well as likings and tastes) which in another they have not. Dr. Wilson's explanation of the above case, as well as others, was "that the mind or character, the 'ego' which is the sum total of our personality and individuality, is composed of several minor 'egos,'" and he pointed out that "the instability of the normal 'ego' may destroy the original and true personality."

Every form of disease is the accentuation of something that goes on normally. Every form of insanity is the accentuation of some mental process normal in us all. There is no wholly new thing in any mental or bodily malady. That is why it is so hard to draw a line between health and disease, between sanity and insanity. The Mr. Hyde of Stevenson's *Jekyll and Hyde* was only the accentuation and concentration of those moments of evil thoughts and passing flashes of evil wish and intention that are unfortunately—though in their slighter forms—normal in all of us.

And so with other kinds of multiple personality. We all have moods, "crazes," weeks of intense interest in some pursuit, study or amusement. They pass, often suddenly. We remember that we were interested in that pursuit, and had that mood. But this memory may become very dim with years; and the memory of what we acquired while a "craze" lasted, a language or a science, may in a few years totally vanish. One form of multiple personality is an extreme degree of the "hobby" phenomenon. The man is absorbed in some pursuit, subordinates everything to it. The phase passes, usually returning periodically. And the passing shows the essential peculiarity of all sorts of "multiple personality;" namely, that that forgetfulness of the pursuit or mood, which in some degree slowly comes upon us all, here comes completely and suddenly.

STUDENT

The open air treatment of consumption has received an interesting testimonial in some experiments on birds conducted by the Liverpool Medical Officer of Health. It was found that many of the birds in the Park aviaries were suffering from tuberculosis. They were given that sort of sheltered indoor treatment which used to be (and even is now) thought so necessary for human consumption. The result was the death of a large percentage of them. So last winter all of these invalids—even those hailing from tropical climes—were given the "open air treatment." At once the death rate was halved.

The Mosquito, Malaria and the Yellow Fever

THE great success which has attended the fight against malaria and yellow fever by the indirect means of a fight against the mosquito, has naturally drawn a good deal of attention to that remarkable and intelligent little pest. No one will question the intelligence who has watched one of them carefully passing up the flaps of a gauze curtain, to see whether there may not be a gap somewhere by which she may enter. We say *she*, because it is the female who does the puncturing that excites so much unfavorable comment. It is also she who does the singing, for it is a veritable song. There is a vibrating tongue in the large tracheæ, comparable to our vocal chords, and by this she makes music. If a tuning fork or electric lamp, yielding exactly that note, be sounded in a room with open window, a screen in front of it will be found covered with mosquitoes.

This insect, no more than the flea, is necessarily a blood-sucker. Both can and do live on fruits, alive and decaying, taking blood when they can get it. If they *only* took blood they would excite much less criticism. But two of the many species do much more. The little instrument of puncture in these cases is a double tube, one within the other. Down one they inject poison; up the other they draw the blood. And the two species respectively carry malaria and yellow fever. They draw blood from persons having those maladies, and then become "hosts" of the poison. What happens to this poison is not exactly known. It is not for twelve days (in the case of yellow fever) and seven (in that of malaria) that the bite of the insect becomes infectious. And it would appear that no other species than these two, even attacking people ill of yellow fever and malaria, carry the infection.

It is not known why they inject poison, why they are not content to steal blood. One theory is that the poison, exciting a local irritation and determination of blood, renders the theft easier. The other is that the maneuver is like the sting of a bee—only done when the insect is irritated at being disturbed.

But let us hope that the mosquito may soon become a museum curiosity, or only exist in cages in zoological gardens.

STUDENT

Some Reflections on the Question of Left-Handedness

THE subject of left and right-handedness continues to receive a good deal of attention. Why mankind as a whole is right-handed no one knows. The nerve-fibers cross in the brain and spinal cord, and our right-handedness is really due to our left-brainedness. But that fact only throws the query back a stage, and we are perfectly ignorant why the active half of the brain is the left. It weighs a trifle (an eighth of an ounce) more than the right, and its arteries supply it with a trifle more blood. But these are effects of its majority of activity, not causes. The nerve-center in the brain which coordinates and makes intelligible to the mind what the eye sees, is on the left, and so are the centers for speaking and writing, and for hearing. It would probably be truer to say that though these centers exist on both sides, it is the left only that we use.

All these facts are reversed in the case of left-handed people. There is a curious relation between left-handedness and crime. Of normally moral persons, about 6 per cent are left-handed. Of criminals about 18 per cent—says Dr. Austin Flint—are left-handed. The kind of criminal also affects the figures. Among incendiaries, no less than 28 per cent are left-handed. Among highwaymen only 6 per cent, the same as among normal people! This profession would appear to be the least criminal form of crime, and incendiarism the most criminal. There is often a touch of chivalry about even the modern Robin Hood, but assuredly none in the man who will fire a building in utter carelessness of the fate of the occupants.

It seems possible that a whole set of new faculties lie asleep in the right half of our brains, not mere duplicates of those we have. But they will certainly not develop while vitality is wasted as it is in modern life, while at every turn we break the rules of bodily, mental, and spiritual health.

STUDENT

THE last group of visitors had passed through the prison and were going up the

flight of stone steps from which they were to look down upon the prisoners at their evening meal. It was an unusual privilege, granted because of Mrs. West's presence in the party.

As I glanced at the faces of the prisoners, sitting in dogged silence at their evening meal, and then at the faces of the little group of visitors, I wondered where one might place the dividing line—looking at life from the standpoint of the real.

The most talkative of all the group was Edith Hallan, sentimental, full of a maudlin and expressionless pity—the pity that shirks justice and loses all sight of the fact in the featured semblance of it. There was Mrs. Bent, that well-meaning type which we meet at the village funeral and the church sewing society, the woman who is incapable of real sympathy—not because there are no depths in her nature, but because they have never been stirred. Then there was the Rev. Ephraim William Young, written all over whose face was the label of a character that is neither hard nor soft; neither false nor genuine; neither cold nor hot. He might have been a scion of the school of Shammai, had he possessed a little more of the inflexibility that we associate with justice. Miss Weatherly, spinster, peered here and there, examining the prisoners very much as she would have examined the trimming for a new hat. Mr. Porter, the well-fed, well-to-do family lawyer, added his unctuous mite to the party. His face, in its every line—the slight puffiness beneath the eyes, the coarsened lips, the sharpness of the nose—told the story of appetites well but discreetly indulged. The party was completed by Mrs. West herself—sweet, stately and impersonal—as impossible to describe as the perfume of a lily or the color of an opening rose. One was conscious mainly of a deep compassion, not because of what she did, or did not do, but of what she was.

At a signal, the iron-gated cells opened simultaneously and the prisoners stepped out, immediately forming a column single file. At one end of the room were two men, each of whom held a platter piled high with sliced bread. At the table on the other side were bowls of soup. The men marched by, each helping himself, and then the column filed back. When the last had taken his place, food in hands, before his cell, there was another signal. The gates again opened, the men stepped inside and the cells were locked for the night. Doggedness, indifference, ferocity, were written on most of the faces; on a few there was a touch of even idiocy. Where was their inspiration? What was their future? Mrs. West's eyes filled with tears. "Who is that—the man farthest from the end?" she said to the guard as the men passed.

"That," he said, "is No. 90."

"I would like to speak to him." Ordinarily the request would have been refused without much ceremony, but Mrs. West was known and beloved in that prison by the keepers and men alike.

"Well, Mrs. West, the fact is, he is not safe."

"Why not?" was her question.

"He has not been here long, has just been transferred from San Quentin. He is desperate, the most dangerous man they had—was in a dynamite plot last year—killed two keepers—he is a 'lifer' now, of course—came from a good family, too, I believe."

"I would like to speak to him, nevertheless," said Mrs. West quietly.

The man had glanced at her as he passed, and from his eye there had flashed hatred and defiance. He was an ugly piece of humanity—one eye gone—one shoulder wrenched away—for some reason badly lamed; yet there was a certain something that was splendid in the set of his shoulders and the carriage of his hands.

"Mrs. West," said the guard, "I regret that I cannot permit you to speak to him entirely alone. You may, however, enter the cell, and the guard will remain at the door; but you are taking a risk, in any case."

"Will you excuse me?" and leaving the party, Mrs. West turned down the stone corridor with the guard. Cell No. 90 was reached and without ceremony the door was unlocked. "May I come in? That is, if you don't mind?" "No. 90" was sitting with his back to the door, looking dejectedly upon the floor. He rose, then without speaking, continued standing, uneasily watching Mrs. West, his every movement guarded and suspicious. "May I come in?" she continued. "Bill," she said. He

The Transformation of Bill

started. Where had she learned his name? And her voice—it was certainly the sweetest voice that

poor fellow had ever heard—"just right for the reading of a psalm," he thought, contemptuously, and the frown upon his face grew darker. He had been prayed with and sung over many times.

That, however, was not Mrs. West's method. "Bill," she said again, and under the tenderness of her voice, something in that man's nature began to soften. "They told me you were very dangerous; but I caught your eye as you passed me in the line, and"—the man started and looked at her, a bit unsteadily. The ugly frown was gone. "I wish to help you, and I can."

"H'm"—the man shrank into himself again. "Be no finish for me."

"For life, Bill? Well, this is not so bad when you think how many poor fellows here in this prison need you."

"Need me? Need me?"

He looked up. Something was happening to Bill.

"Yes, you; you, Bill." Mrs. West's manner changed.

"Listen, Bill." She spoke quietly, but with a singular and persistent intensity. It was like the quick steady play of a life rope over a boat's edge. "I know you better than you know yourself. When they told me that you were dangerous, I was sure that there was some mistake somewhere. When I looked into your eye, Bill, I saw that you had a heart—some men haven't, you know—and I knew that deep in your heart there was something that yearned for the right. And when you looked at me, Bill, as you passed, it seemed to me that I saw you as a little baby in your mother's arms; as a little boy at her skirts, and I knew, Bill—something in my heart spoke to me—that if your mother were here"—Mrs. West's voice trembled—"Bill, it is for your mother that I came in today, *not for you*"

The ugly head sank lower, until the face was hidden in the battered, coarsened hands, the hands, if you please, of a murderer. Bill was sobbing. The party had gone on. The corridor was deserted and the guard had stepped out of sight.

Two years passed by and one day Mrs. West received a letter from an inmate of the prison. The man was dying, or so he wrote, and it seemed to her as she read the letter, that it was the effort of some poor soul to express the gratitude that he felt before it was too late. It was Bill who had nursed him through the long illness and doubtless it was Bill who had spoken of Mrs. West. So it came about that the man wrote her. He told her of the wonderful change that had come over Bill, Bill, who was once so ugly and so hardened, and he told her how often Bill had spoken of her to him. The letter was written by a man ignorant enough of grammar and regardless of little, indeed, save the deep feeling that lay beneath his words.

Mrs. West looked out of the east window and grew very quiet as the letter fell unheeded to the floor. Within the week she made another visit to the prison and there she found Bill, neat, smooth-shaven, almost upright in his walk, and, as the dying man had written her, employed in the hospital, "a trusty."

As Bill was called to see her the tears came into his eyes, but he proudly refused to let them fall and merely asked in an off-hand way if she wouldn't like to have him show her about the ward.

An hour later, when Bill was off duty they had a long, long talk, and at the close of her inquiries Mrs. West said:

"I saw the Governor, yesterday, Bill, on business connected with the new prison bill, and when I told him about you, he said he believed he could get you a pardon. Isn't that magnificent?"

Bill looked up. He hesitated. "Mrs. West," he said, "I'll be thankin' you and I'll be thankin' the Governor—you'll tell him for me—but I couldn't think of it, even as a favor to you. The fact is, the fellers here, some of them, *need me* just now and—and—I guess you understand, Mrs. West."

"Yes, Bill," she said, and she smiled, "I do."

"I can't go yet. They need me, these poor fellers."

A group of visitors was passing through the ward, the "Men's Emergency." Bill looked over at them and his face darkened. Mrs. West understood the look and knew the reason.

"They don't understand, Bill," she said quietly.

"No, Mrs. West," was the reply, "*they don't understand.*" E. M.

THE CHILDREN'S HOUR

The Spring Song

IT was spring-time, and Jean was walking along the country road. But her bright eyes, usually so brimful of fun and mischief, were wistful and a little sad, and she quite forgot to find out how much the green leaves had grown since yesterday—but she noticed them, for once she said to herself:

"They are just like a new little baby's fingers, all wrinkles! But I don't think the earth is a very nice place to bring babies to. People are so sure about what they imagine being true, when most of the time it isn't, and it is cruel, cruel, to think and say things that ar'n't true. I don't believe that girls who like to talk about other girls and tell things, ever see the truth about anything or anybody—I believe I shall gather some daisies, I can get through here;" and she struggled through a small opening in the hedge.

"Oh, you dear little buds!" she exclaimed, as she dropped on the grass and bent over the tiny clusters of pink-tinted petals nearly ready to let the daisies look at the sun through their hearts. How the birds sang—and suddenly, with a wondering smile, Jean raised her head and looked about her, then sat very still. A strange, sweet melody was chiming everywhere!

"That is the Spring Song calling to the seeds and trees," she whispered. "It is calling to my heart, too!"

And she saw a sea of light, so clear, that it seemed crystal, and over it she floated, taking from her heart seeds of the Lotus Blossom. Whatever she thought, she did, so she dropped the seeds into the hearts of those whose love of beauty made them try to be more noble and true; and she encircled each seed in love, for love, the Song told her, was the right soil to plant the Lotus in.

Then the melody changed. Now it was a chant of clear, far-reaching tones—fewer and fewer tones, mounting higher and higher, until it reached one high silvery note—Jean started.

"Fido!" she exclaimed, as her eyes fell on a small terrier that stood wagging his tail, expectantly waiting for a reply to his invitation for a romp. But Jean was thoughtful.

"I am quite sure," she murmured, "that the Spring Song is chiming all the time, somewhere. Yet how can it? Spring comes only once a year. But things can always be different to what they seem. People think the sunrise lasts only a little while, and it is really always sunrise. The sun is always rising, somewhere, so it is dawn on the earth somewhere every moment in the day. The sun fairies must think us rather stupid. I expect it all depends on where we really are! Yes, Fido, I am coming. Let's run a race!"

My New Little Woman

Read by one of the little girls of the Raja Yoga School, at Isis Theatre, San Diego, June 6th

MY new little woman is a darling bit of Humanity; sweetly pretty; so dainty and gentle in thought and action, and so jolly and happy!

All day long she lives in the sunshine, in the sunshine of the Heart; she is a part of it. She is the happiest when she can make sunshine for others.

Merry as the birds, she is joyous all day long, the delight of all that lives.

My new little woman is a real, real fairy, who is waiting close at the Heart Gates of all the little girls in the world; waiting to enter the Hearts of each, and to be to each a sweet, fragrant Lotus Blossom.

She knows that there are millions of little ones who cry and fret and suffer; and that they need her presence to make their lives sweet and joyful.

Wise beyond her years is my dainty, winsome fairy! *Wisdom*, the great Heart Fairy, has taught her many lessons of loving service; has shown her how much the world needs Heart Goodness to make strong human life. Now, good friends, don't you like my

new little woman, and don't you think that if she grows as the flowers grow, and if she gives her help to all the children of the world, that we shall have many new little women becoming new great women? Children, open the gates of your Hearts to my fairy friend, *Wisdom*, and let her love show you the way to be the merriest and the best children in the world.

A Raja Yoga Songster

ONE bright, sunny morning in Lomaland when the grass plot in front of the music Temple was fresh and green and the new rose trees near by were still covered with dew, the Raja Yoga children came to practice their new marching song. Presently along came a fat little yellow-breasted

meadow lark, hopping through the short green grass all by himself. I think he was hunting for breakfast, but when he heard the children singing he forgot all about that, I am sure, for he stopped to listen.

"Well," he said to himself (that is, I have no doubt he did) "I never heard children sing like this before. How happy it makes me! I am going to join in the chorus," and with that he threw up his little head, swelled out his little yellow throat and sang with all his might.

The children heard him, or at least several of them did, and looked from the window to see who the new singer could be. How they smiled when they saw the brave, happy little yellow bird! He came regularly for several mornings, always singing so gaily and so triumphantly with the children, and they came to consider him a "really truly" member of the Raja Yoga Chorus.

FLOWER GIRLS

by LUCY LARCOM

OH, my little seaside girl,
What is in your garden growing?
"Rock-weeds and tangle grass,
With the slow tide coming, going."

Oh, my little prairie girl,
What's in bloom among your grasses?
"Spring beauties, painted cups,
Flushing when the south wind passes."

Oh, my little mountain girl,
Have you anything to gather?
"White---everlasting bloom,
Not afraid of wind or weather."

MEN WANTED

by O. W. HOLMES

GOD give us men. A time like this demands
Clear minds, pure hearts, true faith, and ready hands;
Men who possess opinions and a will,
Men whom desire for office does not kill,
Men whom the spoils of office cannot buy,
Men who have honor, men who will not lie,
Tall men, sun-crowned men, who live above the fog
In public duty and in private thinking.

Canon Henson and the Masses

CANON HENSON, of Westminster Abbey, is one of those ecclesiastics, all too few in number, who are able to look away from the petty and trivial interests of creeds and organizations, away and beyond to the spiritual condition of the human masses of civilization. It may be that into his mind has come the recollection of the manner in which Christ taught in public, of the multitudes who heard him gladly, and of his tender recognition of the needs of our human nature. If such be the case, the contrast between the then and the now must indeed be painful and we can hardly wonder that his stern condemnation has spread dismay almost to the confines of the Christian world.

What then is the phenomenon which has arrested Canon Henson's attention at this period of missionary activity, of revision of creeds, and feverish attempts to polish and lubricate the worthless machinery of our religious life? It is nothing more nor less than the disappearance of the religious bases of morality, not in certain directions only but over large areas of civilized life. We have heard many a sermon on the parable of the tares and the wheat, but the text of Canon Henson's sermon is the entire disappearance of the wheat. It is no longer a question of the sowing of tares but rather whether it would not be well to sow a little wheat among the tares.

No wonder that a frantic orthodoxy is demanding of the Archbishop that Canon Henson be suppressed and silenced at all costs. We do not believe that Canon Henson can be silenced, and we are perfectly sure that the truth cannot be.

This bold churchman seems to suppose that there is some bond of responsibility between the religious organizations and the masses, and that the "non moral multitudes" would not be in their present condition had those who claim to be the representatives of Christ but obeyed his injunction to "feed my sheep." The food demanded is not that of incredible creeds, but the food of sympathy, of justice, of the willingness to speak for those who cannot speak for themselves, the food, in short, of human brotherhood. And because the people have been veritably starved Canon Henson finds some excuse for their relapse into other methods, for the contempt which they pour upon a religion which has never yet been taught to them, for their determination to take by violence a Kingdom of Heaven of which no man has ever spoken to them. He speaks of the millions of men who "from the cradle to the grave have faced the severe pressure of competition, the squalor of poverty and the miserable exigencies of unmerited want," and who "inevitably compare their condition with the ostentation of unearned wealth, the profusion of unchecked luxury, and the insolence of unchastened power."

It is by such men as these that civilization is mainly composed. These are the true representatives of present humanity, these are the people in whom Christ would be interested. These are the weary and the heavy laden to whom his special and peculiar invitation was given, that they should come unto him to receive, not revised creeds but rest, not dogmas but justice, not the promise of a far away and misty heaven but an earth transfigured into paradise.

Canon Henson has of course but said what has been said many times

before, but it may be that such a voice from within the church will stir some fast dying embers into a flame.

STUDENT

The Religion of Justice, Goodness and Conscience

MR. MAURICE MAETERLINCK seems to have fallen into a confusion of terms, if not of ideas. He contributes an article to a current review, in which he deals with the present religious aspect of the world. He tells us that we are emerging from a great religious period, that we are growing daily less and less religious. Repressing for the moment the feeling of regret with which we naturally receive an opinion so pessimistic, we read on in the hope that Mr. Maeterlinck will have something less discouraging to communicate, nor indeed is our hope disappointed. In spite of this loss of "religion," he asks us,

Is it not surprising that the sum of justice and goodness and the quality of the general conscience, far from diminishing, have incontestably increased?

We must confess to a little bewilderment, unless we are to assume that the so-called religion of which Mr. Maeterlinck speaks is something which the world is very much better without. Religion, we are told, is *decreasing*, but justice, goodness and the power of conscience are *increasing*. We would fain ask, what is this religion, which thus seems entirely independent of, if not inimical to, justice, goodness and conscience? This is, of course, the crux of the whole matter, and we will very readily, and even thankfully, admit that the only religion which is disappearing is the aggregate of creeds which unlawfully bear that name and which have no relation whatever to conduct nor any purifying influence whatever upon character. If this is the religion to which Mr. Maeterlinck refers, and it very evidently is so, we are profoundly satisfied to know that it is disappearing, as we profoundly regret that it ever appeared.

That there should throughout Christendom be any general uncertainty or error as to the meaning of true religion is somewhat inexplicable, but it would not be easy to find any better justification for the presence of Theosophy and for its strenuous advocacy of an undefiled faith. Theosophy seeks to show that Christianity consists of these very things, justice, goodness and conscience which, thanks to Theosophy and its world-wide influence, are now waxing in power, while "religion" is waning. Had the teachings of Christ been preached in all their exquisite simplicity, there would now be no need for any further Theosophy as such, because Christ's teachings are Theosophy. St. John, who speaks with some admitted weight on the subject of Christianity, tell us that,

He that loveth his brother abideth in the light and there is none occasion of stumbling in him.

Christ himself recommends us to love one another, and we rightly infer that this fraternal love constitutes the whole of the system which he came to teach. The "justice, goodness and conscience" of Mr. Maeterlinck are surely synonymous with the love which was the whole teaching of Christ, and this it is which is appearing while "religion" disappears. If our contention be correct, and it would seem to be invincible, we can only express the hope that it will stand not upon the manner of its going, but go.

STUDENT

Brotherhood among So-called Savages

ACCORDING to R. H. Dana, Jr., the conduct of the Sandwich Islanders or Kanakas puts to shame the habits of the civilized man. Their customs show a simple, primitive generosity, which is truly delightful; and which is often a reproach to our own people. Whatever one has, they all have. Money, food, clothes, they share with one another, even to the last piece of tobacco to put in their pipes. To an American trader who was trying to persuade one of these "savages" to keep his money to himself the answer was made:

"No! we no all 'e same a' you. Suppose one got money, all got money. You; suppose one got money, lock him up in chest! No good. Kanaka, all 'e same a' one."

Another Kanaka was seen to break a biscuit which had been given him into five parts for distribution, although he was hungry and food was scarce.

PROPHETIC SIGNS

by EMERSON

DELICATE omens traced in air
 To the lone bard true witness bare.
 Birds with auguries on their wings
 Chanted undecieving things
 Him to beckon, him to warn;
 Well might then the poet scorn
 To learn of scribe or courier
 Hints writ in vaster character;
 And on his mind, at dawn of day,
 Soft shadows of the evening lay.
 For the prevision is allied
 Unto the thing so signified;
 Or say, the foresight that awaits
 Is the same Genius that creates.

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question How are man's life and evolution governed by cycles. (*Continued from last issue.*)

Answer On this subject William Q. Judge further says as follows:

Is there such a thing as a cycle which affects human destiny?

Coming closer to our own personal life, we can see that cycles do and must prevail, for the sun rises in the morning and goes to the center of the sky, then descends in the West; the next day he does the same thing, and following him, you rise, you come to the highest point of your activity, and you go to sleep. So day follows night and night follows day. Those are cycles, small cycles, but they go to make the greater ones. You were born; at about seven years of age you began to get discretion to some extent; a little longer and you reach manhood; then you begin to fall, and at last you finish the great day of your life when the body dies.

In looking at nature we also find that there are summer and winter, spring and autumn. These are cycles, and every one of them affects the earth, with the human beings upon it.

The inner doctrine of the old Theosophists and the present-day Theosophists, to be found in every old literature and religious book, is that cyclic law is the supreme law governing our evolution; that Reincarnation, which we talk so much about, is cyclic law in operation and is supreme. For what is Reincarnation but a coming back again to life, just what the ancient Egyptians taught and which we are finding out to be probably true, for in no other way than by this cyclic law of Reincarnation can we account for the problems of life that beset us; with this we account for our own character, each one different from the other, and with a force peculiar to each person.

This being the supreme law, we have to consider another one, which is related to it and contained in the title I have adopted. That is the law of the return of impressions. What do we mean by that? I mean, those acts and thoughts performed by a nation—not speaking about the things that affect nature, although it is governed by the same law—constitute an impression. That is to say, your coming to this convention creates in your nature an impression. Your going into the street and seeing a street brawl creates an impression. Your having a quarrel last week and denouncing a man, or with a woman and getting very angry, creates an impression in you, and that impression is as much subject to cyclic law as the moon, and the stars, and the world, and is far more important in respect to your development—your personal development or evolution—than all these other great things, for they affect you in the mass, whereas these little ones affect you in detail.

This Theosophical doctrine in respect to cycles, and the evolution of the human race, I think is known to you all, for I am assuming that you are all Theosophists.

It is to be described somewhat in this way: Imagine that before the earth came out of the gaseous condition there existed an earth somewhere in space, let us call it the moon, for that is the exact theory. The moon was once a large and vital body full of beings. It lived its life, went through its cycles, and at last having lived its life, after vast ages had passed away, came to the moment when it had to die; that is, the moment came when the beings on that earth had to leave it, because its period had elapsed, and then began from that earth the exodus. You can imagine it as a flight of birds migrating. Did you ever see birds migrate? I have seen them migrate in a manner that perhaps not many of you have. In Ireland, and perhaps in England, the swallows migrate in a manner very peculiar. When I was a boy, I used to go to my uncle's place where there was an old mass of stone ruins at the end of the garden, and by some peculiar combination of circumstances the swallows of the whole neighboring counties collected there. The way they gathered there was this: When the period arrived, you could see them coming

in all parts of the sky, and they would settle down and twitter on this pile of stone all day, and fly about. When the evening came—twilight—they raised in a body and formed an enormous circle. It must have been over forty feet in diameter, and that circle of swallows flew around in the sky, around this tower, around and around for an hour or two, making a loud twittering noise, and that attracted from other places swallows who had probably forgotten the occasion. They kept that up for several days, until one day the period arrived when they must go, and they went away—some were left behind, some came a little early, and some came too late. Other birds migrate in other ways.

And so these human birds migrated from the moon to this spot where the earth began (I don't know where it is—a spot in space—and settled down as living beings, entities, not with bodies, but beings, in that mass of matter, at that point in space, informed it with life, and at last caused this earth to become a ball with beings upon it. And then cycles began to prevail, for the impressions made upon these fathers when they lived in the ancient—mind fails to think how ancient—civilization of the moon, came back again when they got to this earth, and so we find the races of the earth rising up and falling, rising again and falling, and at last coming to what they are now, which is nothing to what they will be, for they go ever higher and higher. That is the theory, broadly, and in that is included the theory of the races, the great seven races who inhabited the earth successively, the great seven Adams who peopled the earth; and at last when this earth shall come to its time of life, its period, all the beings on it will fly away from it to some other spot in space to evolve new worlds as elder brothers who have done the same thing before in other spaces in nature. We are not doing this blindly. It has been done before by others—no one knows when it began. It had nothing in the way of a beginning, it will have no end, but there are always elder brothers of the race, who live on.

Gospel of St. John

IF modern theology were but to reconstitute itself upon the writings of St. John, the work of Theosophy in the world would already be well upon its road to completion. But we have approached that compendium of wisdom which we call the New Testament not as those who are in darkness and who wish for light, but rather as those whose beliefs are already formulated upon personal bias and who would seek for them such grains of support as the Scriptures are able to afford. We have in fact measured the Bible by the gauge of our own predilections, and the number of those predilections is the number of our creeds.

St. John is essentially undogmatic, as must be every writer upon things divine who is qualified by interior development to approach his subject. He touches upon dogma only to glorify it by a spiritual interpretation; he recognizes the chains only to destroy them. God is light and God is love, he tells us, and no man has seen God except through the interior Christ, the human soul, which is the intermediary between the personal consciousness and the ineffable light beyond. Of the nature of that light and of its radiations into the mind St. John leaves us in no doubt whatever. "He that loveth his brother abideth in the light, and there is none occasion of stumbling in him." This is the essence of Theosophy which has never been absent from the world. Indeed St. John tells us that it is "an old commandment which ye had from the beginning." How increasingly strange it is that of all the creeds of Christendom there is hardly one which is not a contradiction of this exquisitely simple statement that "he that loveth his brother abideth in the light." There is no other essential than this, and yet this is the one eternal truth which we have excluded from our theologies, hiding and stifling it beneath puerilities and superstitions. "If a man say, I love God, and yet hateth his brother, he is a liar," says the disciple who was not inaptly called the Son of Thunder. Is this the living message which St. John has for the dogmatists of today who will show us all ways to swing back the gates of gold except the true way? Again he says, "if our heart condemn us not, then have we confidence toward God." But it is this judgment of the heart or of the conscience which we have made of no account, which we have dethroned for the judgments of fallible and of superstitious men who think that their conclaves and their congresses are modern Sinais and that the word of God becomes incarnate in their nominees.

The Gospel of St. John is included in the canon of Scripture, but it finds yet no general acceptance at the hands of theology. With Theosophy it will stand or fall because they are identical, and we think that we can sufficiently read aright the signs of the times to believe that the stone which the builders rejected will be the corner-stone of the new Temple of Humanity in which there will be no place for the money changers.

STUDENT

THE SPIRIT OF LIFE

by SHELLEY

THROUGHOUT these infinite orbs of mingling light,
Of which yon earth is one, is wide diffused
A spirit of activity and life.
That knows no term, cessation, or decay;
That fades not when the lamp of life,
Extinguished in the dampness of the grave,
Awhile there slumbers, more than when the babe
In the dim newness of its being feels
The impulses of sublimity things,
And all is wonder to unpractised sense;
But, active, steadfast, and eternal, still
Guides the fierce whirlwind, in the tempest roars,
Cheers in the day, breathes in the balmy groves,
Strengthens in health, and poisons in disease.

The Mysteries of Antiquity

Continued from page 11

his soul bathed in the radiant light of pure Truth; he was reborn, for he had received the baptism, and then had undergone the rite of the "laying on of hands"; he was confirmed in the life spiritual. Christos was henceforth his name, for he was one of the anointed; the mantle of the Chrestos, the servant, the disciple, was laid aside.

Here he received the sacred teachings, the doctrine, to preserve which from the knowledge of the people, he promised on his life, and to serve it faithfully for the saving and healing of the people. Hence was he addressed as Kurios, Lord; and as Soter, Savior.

The institutions of all past time were based upon what filtered out through many channels from the veiled Mysteries; little was understood, for may it be said that the people of any day are born spiritual metaphysicians? So what was before their eyes was misunderstood; divisions arose among men as to the meaning of this Logos, or doctrine (please mark); division, or sectarianism grew apace among those into whom the good seed fell; and the result came to be division in all branches of life and thought; for one understood a thing so; and another so; and still another so. The teeth of the Dragon of Wisdom had been treacherously sown here and there, and, to follow the legend, the teeth produced other dragons who turned upon each other, and rent and tore.

What may be gathered up from the remnants of these teachings, which it was Fate's dire decree should be so misused?

What remains of it has been surveyed by the historian in its corruptions among

barbarous nations, or during the decline and fall of Greece and Rome. It may be said, briefly, that the ensemble of these doctrines was no less scientific than sublime. Firstly, this Theologia, this divine Theology of the Mysteries, celebrates the immense principle of natural things, as even superior to being; as being exempt from all, though nevertheless the source of all. From this unnameable source proceeded a progression of beings, growing, by their nature, more and more material as they neared man; that the course of growth was circular, or rather spiral, in character, and that man might mount to whence he had come, and higher still, by the use and development of the spirit within him; and as he mounted back, that all Nature was carried along with him; so that the ultimate of all creation was a sublime reentering into Divinity.

It would be absurd to dogmatize on this being the case during what we may call the archaic period of known history, for it was not so. The Mysteries had already felt the impelling force of Destiny; men had drunk out of the iron cup of Karma, or Nemesis. Pythagoras, Plato and others—even he who drank the deadly hemlock draught, Socrates (though not initiate he)—were a proof that the Mysteries had been withdrawn, by the very nature of their teachings, as we know them; for while conveying truth, they taught publicly, and established their schools and coquetted (may their shades pardon me!) with the State. They came, as said before, as the Messengers to help the people; but they came almost alone, and reft of the mighty power protective of the Mysteries.

From Eleusis sprang the hidden life which made Greece, and adjoining folk, great; great in all that our higher sense holds dear. To Eleusis went they who sought the Light, and who were called to go; they returned as Leaders of men.

From the downfall of the Mysteries, and from the stock of these latter, sprang into life two vigorous shoots: exoteric Christianity, and the body now called Freemasonry. On the face of each is found the imprint of its origin.

Nor should it be forgotten, and it should be emphasized here, that woman held a place in the Mysteries of olden time; and that her status in the sight of men felt the shock of the loss of the Mysteries, possibly more than any other aspect of Society.

Sans the spiritual central life; sans the fountainhead of true Wisdom; sans the knowledge of the secrets of life and of man's complex nature, which the Hierophants of ancient days represented, religion became in our Occident what we have it today, and what it has been; warring, antagonistic, sectarian. No more is it a beacon light guiding the steps of the children of man upon the Path, but a will-o'-the-wisp, leading his wearied feet hither and thither; possessing just enough of the old fire and flame to seduce his intelligence and to blind his eyes to the eternal spiritual Sun of Truth and Righteousness, which cometh with healing in its wings.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Ecclesiasti- cism and Theology

A RECENT address to the Union Theological Seminary of New York dealt with the subject of ecclesiastical domination. We are told that this is the greatest foe of theology, which we can very readily believe, but we are further told that ecclesiastical domination is "not dangerous in this country to any extent except through the organized ministers and theological schools."

Now this seems to be a very large exception indeed. Ecclesiasticism is principally composed of "organized ministers and theological schools," and it is precisely here that we should look for the domination which has never yet failed to destroy any country where it has existed. The particular school of ecclesiasticism makes very little difference indeed. All

such schools are fundamentally incapable of understanding or advocating religious liberty, and they are so essentially selfish that they will allow no human interest to stand in their way. This is sufficiently proved by the whole history of humanity. It is being proved today within our sight in spite of the many enlightened ministers who detest ecclesiastical domination with a fervor which is as truly patriotic as it is truly religious. It is proved by the torrent of obloquy which has been poured upon Theosophy and we are content, in a manner, that it should be so. Truly, the

Intrudes on the Home & the School

children of darkness are wiser than the children of light, and the enemies of Theosophy have sometimes a clearer understanding of its tremendous import than have some of its friends. What after all is ecclesiastical domination? Perhaps we fail to recognize it because it is no longer dressed in the semi-legal costume which history has made notorious and hateful. Ecclesiasticism may be dominant while it claims no legal establishment. It is dominant when it is wound around the lives of a people, when it intrudes upon their homes and upon their schools, and when it exercises the power of social penalties and ostracism. It is dominant when it has the power to inflict any pain whatsoever as a punishment for a religious opinion. It is dominant so long as it is able to deceive public belief and to wield the flail of public censure. It is dominant so long as it can trade upon human superstition, so long as it is able to successfully invoke the terrors of an ignorant supernaturalism.

This being so, who amongst us can say that we are free from ecclesiastical domination simply upon the strength of certain constitutional provisos which become entirely worthless the moment they are no longer sustained and rejuvenated by a public determination to be religiously free in fact as well as in name? If there is such a determination it will be well with us. There was once such a determination in the spring time of our national life and it was then as a rock of salvation. It would perhaps be well to make sure, by self-examination, whether that rock stands now as it did of old, or whether it has been worn away into powder by the subtle and undying efforts of many years. X.

The Church of the First Century

IN Lecky's *History of Rationalism in Europe*, are to be found many pregnant passages which admirably epitomize the process by which the force of Christian fraternity has waned with the increase of dogmas and the multiplication of creeds. He says in one place:

It is in itself evident, and it is abundantly proved by history, that the virulence theologians will display towards those who differ from them will depend chiefly on the degree to which the dogmatic side of their system is developed. "See how these Christians love one another," was the just and striking declaration of the heathen in the First century. "There are no wild beasts as ferocious as Christians who differ concerning their faith," was the equally striking and probably equally just exclamation of the heathen of the Fourth century. And the reason of this difference is manifest. In the First century there was, properly speaking, scarcely any theology, no system of elaborate dogmas, authoritatively imposed upon the conscience. Neither the character of the union of the two natures in Christ, nor the doctrine of the atonement, nor the extent of the authority of the church, had been determined with precision, and the whole stress of religious sentiment was directed towards the worship of a moral ideal and the cultivation of moral qualities. But in the Fourth century men were mainly occupied with innumerable subtle and minute questions of theology, to which they attributed a transcendent importance and which in a great measure diverted their minds from moral considerations.

The distinctions between primitive and later Christianity are here very admirably shown. The distinctions indeed are so marked and obtrusive that they have no room for any resemblance whatever. There is indeed the same difference between them as between love and hate, of which they are typical. It is a truth worthy of much attention and reflection, that the broad, undogmatic and spiritual movement in which some churches, to their honor, are leading the way, and for which they are so bitterly attacked by the blind and the ignorant, is in no sense a new departure, but is rather a cyclic return to the primitive purity of the first century.

Wada Temple, Kobe, Japan—Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH presents a view of the approaches to the famous Wada Temple at Kobe, Japan; also a partial glimpse of some of the buildings. On the bridge is a native party of men and women in the Japanese dress.

The Bible Interpreted by Conscience

AN Episcopal Bishop of much learning and prominence, has committed himself to a statement which he will not find it easy to justify or sustain. The utterance in question formed part of a sermon on the Bible and consists of the following words:

Not the mere letter of the Bible, but the true sense of the Bible *as interpreted by the church*, is the Bible.

We should like to ask some questions. We should first like to know *which church* has been appointed custodian of the true interpretation of the Bible? There are several hundred churches, they all have their own conflicting interpretations, and they all believe that the true interpretation rests with themselves alone.

That point having been settled, we should like to know at what period of church history we are to search for the true interpretation of the Bible. Are we to look for it in the church of the First century, or shall we be referred to the Fourth century when primitive theology had been entirely swept away by political time-servers who, all divine assurances notwithstanding, believed that they could indeed serve both God and mammon? Or shall we be referred to the Middle Ages, or to the Reformation, to unrevised creeds or to the revised, to the beliefs of yesterday or those of today, to the Athanasian creed or to the Apostles' creed? We confess to a very great perplexity in our efforts to find an orthodox interpretation of the Scriptures which will meet with any general approval.

But the bishop condescends further. He advances evidence, or what it pleases him to call by that name, that the interpretation of "the church" is essential to a wise understanding of the Bible. He assures us that had it not been for "the church" and her explanations, we should still be carrying out the Biblical injunction, "thou shalt not suffer a witch to live." Our perplexity is now turned into consternation. Do we really understand the bishop to infer that it was *the church* which stopped the persecution of witches? In the night of our ignorance, an ignorance which we share with all the historians and recorders, we had supposed that it was "the church" which had carried out this, and many another wicked persecution, that it was "the church" which hounded on the secular authorities to their shameful deeds. It was the dawning humanity of the world and not the church which saved the witches, and which scourged the theologians from the tortured bodies of their victims. The growing humanity of the world has, of course, always had its noble representatives in the churches, as it has today, but these magnificent men had first of all to struggle against their own religious communities, as they have today, and they found in them their most unrelenting enemies. To claim for "the church" the credit of destroying a horror which was created by itself, perpetrated by itself, and defended and advocated by itself, certainly does not give us that confidence in ecclesiastical interpretations of the Bible which the learned bishop would evidently like to instil. We always wish to be of service whenever possible, and we therefore suggest to the bishop that he amend his dictum as follows:

Not the mere letter of the Bible, but the true sense of the Bible, *as interpreted by the individual conscience*, is the Bible.

STUDENT

The Man with a Grievance

EVERY one knows the illusion which surrounds the man with a grievance. His face is an indication of the fixed attention which he pays to the fictitious prison into which he has entered of his own accord. In ninety-nine cases out of a hundred, those to whom he relates his sorrows can plainly see who is the fashioner of them. But his friends cannot point out the truth, because they know that their remarks would be received with incredulity or passion. The grievance is a disease, and the patient must find it out and cure it for himself. And so the sufferer nurses his trouble, and airs it to a polite but unbelieving crowd until he suddenly awakens to the fact that he is himself to blame.

When a man is constitutionally built after this fashion, his stock of grievances sometimes gets low, and then he finds relief in adopting the grievances of other people. Of course this is bad for the others as well as himself. Or, to vary the monotony, he will discover defects of character or action in others, and point them out in an effort to entertain or amuse his friends who, if they lend ear, become participants in an unhappy alliance. It is amazing to see how deeply a man may be moved

by the mistakes of another whilst oblivious to his own, forgetting entirely how many, and more fruitful fields of contemplation are to be found in this beautiful world.

But grievances are not always against others. We may have them against ourselves. The daily routine of duty which every man seeks to follow, is either pursued with the joyful consciousness of right action and is pleasing because we like it, or it may be tedious because we would prefer to do something else. In the latter case we may look upon our task as a grievance, imposed upon us by some mysterious necessity, the full import of which we fail to grasp; or we may recognize the cause of the necessity and find difficulty in making it a "living power in our lives." We may waste our time and force in futile regrets. We may construct imaginary difficulties for "tomorrow." Here again we are up against grievances, and again they are obviously of our own making.

Every one with a grievance either against himself or any one else, would do well to study the action of the good law which makes for righteousness. If we can, even for a short time, set on one side the "broodings and willings" of our selfish personality, we shall not fail to see that "all things work together for good." If we will make a strenuous effort in the inner silence of our hearts, to tear aside the veil which the personal trouble has cast over us, we shall see that obedience to the law and an acknowledgment of its unfailing justice and mercy will bring peace and relief from all our troubles.

Life is uncertain. In a week any one of us may have passed on to wider fields of action. Look at this attentively and squarely for five minutes and consider how many of our grievances would be left, if the great release came to us. Why not then so act as if we expected it, and do as St. Paul did, "die daily?"

The Origin of Jewelry

WHENCE the origin of the habit of wearing jewelry? It is almost universal among savage and civilized races. A recent paper by Dr. Ridgeway, read before the English Anthropological Institute, attempts to answer this question. Jewelry, to the savage, means many more things than to us. It includes certain shells, coral, amber, the teeth and claws of beasts, rock crystal, and various kinds of beads. Dr. Ridgeway traced the use of jewels in this wide sense to magic and medicine. The objects thus employed were regarded as having the power to ward off evil influences and cure disease. Gradually the wearing of jewelry became restricted to metals and minerals, and finally to such as were rare and therefore costly. Gold was always held in high honor, being regarded as the perfect metal. Finally all thought of the curative influence of jewels died out, and they came to be worn for their beauty only.

Remembering the radiations now known to be emitted by all objects, animate and inanimate; the effects obtained in homeopathic medicine from the administration of infinitesimal doses of metals; the results of experiments made a few years ago in France on "metallo-therapy," and those by Reichenbach on the effects of the emanations of various metals and crystals on his sensitives, one will be chary of ascribing to pure superstition the primitive and widespread belief in the value of the wearing of jewelry for preventive and curative purposes.

Now-a-days we cannot judge of this point. Most of us wear some sort of jewel of the mineral order; and we all go about loaded with many metals, money, watch-chains, keys, buttons, buckles, spectacles, and what not. It is as if one should take daily eight or ten kinds of medicine, and then found a disbelief in their action on the ground that he got no effect from any one when taken additionally as an experiment. Moreover, we commit so many and complex sins against our bodies that it is a wonder that any medicine still preserves for us the slightest curative value; and certainly no wonder that the fine "M," "N," or other alphabetic radiations of objects, should fail to affect us. X.

An Indian Peacemaker

TYEE DICK, a celebrated Indian of the Puyallup tribe, is dead at the age of 85 years. This old warrior took part in the Council with Governor Isaac Stevens in 1854, and it was through his eloquence that a treaty was signed putting an end to a long series of battles between the whites and the Indians in Washington and Oregon. No doubt the benediction upon peacemakers applies even to Indians. X.

Some Views on XXth Century Problems

Suicide of Children on Increase

THE problem of child suicide is one of a greater magnitude than we usually suppose and certainly one so appalling that it ought to summon our most earnest efforts for its solution. Durand-Fardel found that out of a total of 25,000 suicides, there was one of a child of 5, two of 9, two of 10, six of 12, seven of 13 and two of 14 years. Brierre de Boismont states that out of 4600 Parisian suicides, during ten years, seventy-seven were committed by children 14 years of age. The situation in another European capital is worse, no less than 6 per cent of the total number of suicides being under 15 years of age. That neurotic children are born of neurotic parents we can well understand, but this explanation is not sufficient. We shall have to go deeper than this, into our whole system of education, and, what is of still greater importance, into the lamentable lack of understanding of the mysteries of child nature which is manifested by so many parents.

STUDENT

Vicious Fic- tion a Cause of Crime

THE charge of inciting to crime is not one which can be brought against juvenile fiction alone. Adult literature is also saturated with the same spirit as is evidenced by the steady stream of what are called detective stories, in which the sympathies of the reader are perplexed between the criminal and his pursuer. These stories are, perhaps, not so entirely pernicious as are those glorifications of crime which are intended chiefly for the young, inasmuch as those who read them are not as sensitive to suggestions, or else recognize that their interests do not lie in that direction. That they should be read at all is, however, an indication of our tolerance for crime and especially of the crime of which the narration is amusing.

It is indeed a question how far our attitude toward crime is one simply of self-defense, and how far any moral question whatever enters into it. We have very little conception of crime except as it exists in the criminal code, and most people would deny its existence outside of that code.

Parents and Guardians to Answer

THE State of Colorado is the only State in the Union which holds parents and guardians legally responsible for the misdeeds of the children, who are supposed to be under their care. The terms of the law under which this has been done are worthy of recollection and of imitation by less enlightened States. The juvenile law reads in part as follows:

The words "delinquent child," shall include any child sixteen years of age or under such age, who violates any law of this State, or any city or village ordinance; or who is incorrigible; or who knowingly associates with thieves, vicious or immoral persons; or who is growing up in idleness or crime; or who knowingly visits or enters a house of ill-repute; or who knowingly patronizes or visits any policy shop or place where any gaming device is, or shall be, operated; or who patronizes or visits any saloon or dramshop where intoxicating liquors are sold; or who patronizes or visits any public pool-room or bucket-shop; or who wanders about the streets in the night-time without being on any lawful business or occupation; or who habitually wanders about any railroad yards or tracks, or jumps or hooks on to any moving train; or who habitually uses vile, obscene, vulgar, profane or indecent language, or is guilty of immoral conduct in any public place or about any schoolhouse.

A special and supplementary act provides that,

In all cases where any child shall be a delinquent child, or a juvenile delinquent person, as defined by the statute of this State, the parent or parents, legal guardian, or person having the custody of such child, or any other person responsible for, or by any act encouraging, causing or contributing to the delinquency of such child, shall be guilty of a misdemeanor, and upon trial and conviction thereof, shall be fined in a sum not to exceed one thousand dollars (\$1000), or imprisonment in the county jail for a period not exceeding one (1) year, or by both such fine and imprisonment. The court may impose conditions upon any person found guilty under this act, and so long as such person shall comply therewith to the satisfaction of the court the sentence imposed may be suspended.

By such laws as these Colorado proves the intelligence and humanity of her legislators.

STUDENT

Creedal Or- ganization Had Its Day

THE Rev. T. T. Munger is well-known for the breadth of his theologic views and for the spirit of harmony which he tries to diffuse. He has recently contributed an article to *The Atlantic* in which he expresses the belief that Christendom will see no more new denominations of any importance and that creedal organization has had its day. We sincerely hope that this is true and that Dr. Munger has justification for the hope that is in him.

There is today a certain attitude of self-congratulation among those who have screwed their courage to the sticking point and who have at last determined to discard or modify their creeds. We are so often invited to admire the progressive ecclesiastical spirit of the period that we are tempted to look upon it rather more closely than we might otherwise do. We at once see the necessity of discrimination between those who are moving of their own volition and those whose advance is due to certain propulsive efforts from the rear. There is, after all, a very great difference between the sinner who repents and sins no more, and the sinner who refrains from sinning only because the hand of the law is upon him and we do not look with favor upon any claims which the latter may make upon our sympathy and admiration.

A good many of the creed revisionists and the creed abolitionists belong to the latter category. The force of public opinion is too strong for them, the bayonet of public censure is too sharp. They move because they cannot stand still, and while we are gratified to observe the motion we cannot join in the cries of self-laudation by which they herald their unwilling progress. At any rate a decent interval should elapse between conversion and self-righteousness.

We must remember that the creeds which are now being so grudgingly surrendered have not merely been harmless fallacies upon which we can afford to look with some indulgence. They have been very instruments of torture, scourges which are black and stiffened with the heart blood of humanity. They have produced centuries of benighted misery, they have terrorized generation after generation. Creed and persecution have invariably gone hand in hand, and if the implements of torture are now being wrung from reluctant hands we are certainly unwilling to fall down and adore the mercy and the liberality of those who no longer use those implements because they no longer have the power. Penitence is usually marked by restitution. If the creeds are really dead, and not merely hustled out of sight, we should like to see their places permanently occupied by positive declarations of human brotherhood as the only thing worth preaching and worth practicing. If the erstwhile dogmatists have really and definitely crossed the river, will they not burn their boats?

STUDENT

Man Is Not Naturally a Sinner

A CALIFORNIA clergyman has been asked the somewhat threadbare question, "Why do not men go to church?" and he replies that "man is naturally sinful and does not want to be anything else." We fear that the reverend gentleman has spoken in haste. There is an acerbity about this reply which speaks eloquently of empty pews and a failing exchequer. May we suggest that human sinfulness is the very thing which the churches are supposed to combat, and that if there were no diseases there would certainly be no physicians? What should we say of the doctor who ascribed his failure to the prevalence of illness? But this is precisely equivalent to the attitude of the Oakland clergyman.

But he says that man "does not want to be anything else." This, however, is but a symptom of the general malady for the cure of which the churches are assumed to exist. This particular minister evidently wants a congregation of "just men made perfect," but we would remind him that the Founder of Christianity said that he came to call, *not the righteous, but sinners to repentance*. But then the Founder of Christianity did not ask the sinners to pay him a salary, and that, of course, makes a difference. Under the circumstances we do not see that we can help in the matter, anxious as we are to do so.

Art Music Literature and the Drama

The Trilogy of Æschylus, at Stratford-on-Avon

THE presentation at Stratford-on-Avon of the *Oresteian Trilogy* of Æschylus is but another evidence that the spirit of the old Greek days has never wholly died away, and that the fires kindled by the old dramatists await only the altar and the modern opportunity to leap into a new and purer flame. A tacit forcing of comparison is this between Shakespeare himself and Æschylus, and those of us who have watched the preparation for the *Trilogy* go back in thought involuntarily to the marvelous presentation of *Eumenides*, given some years ago by the students of the Isis League of Music and Drama, under the direction of Katherine Tingley. But it was long before this that Katherine Tingley pointed out the marked analogy that existed between the life work of Shakespeare and that of Æschylus. The dramas of both are pure mystery-plays, picturing as they do the very inner, inner of the mysteries, the struggles of the soul itself as it journeys along that pathway called the heart-life. The dramas of Shakespeare, no less than of Æschylus, portray not the passing and merely emotional phases of human life, they deal not with the morbid nor is their fragrance that of the sewer. They teach in symbolic form the great truths of the human soul, of life and death and destiny, of joy and of fulfilment. In them we see the reflection of the sun itself. Has Æschylus ever been truly interpreted by us moderns? And who among the commentators has given us a conception of the real truths of which the Shakespearean drama itself conveys the message? Magnificent as have been the presentations already made, they yet but skirt the borders of that land wherein dwelleth the true. Nor can they be interpreted save by students who hold the key, who are able, because they live the heart-life, to translate unto the many the message that Æschylus and Shakespeare spoke—alas! but unto the few.

What Mr. Benson has said of the *Trilogy* may equally be said of the *Tempest*, *Hamlet*, *King Lear* and *Macbeth*: "The *Trilogy*, to my mind, has dramatic moments unsurpassed for grandeur and intensity by any scenes in the whole range of dramatic literature. In simplicity, directness and beauty it is to the drama what the Venus of Milo is to sculpture." Picture the *Trilogy* as it might be presented, as the *Eumenides* already has been presented, in the marvelous Greek Theatre in Lomaland—the first purely Greek Theatre erected in modern times—in the open air, with the sky above for proscenium arch, with the great Pacific beyond the cañoned hills as a background. Something surely would come to be under these conditions that were impossible upon the boards of a modern theatre, however perfect. Is it to use merely a figure of speech to declare, as thousands of tourists have already done, that San Diego is destined to be a second Athens, that Point Loma is even now "The Greater Acropolis?" X.

THERE is an old legend to the effect that a full thousand years before Christ, with the sons of Miletus, king of Spain, there came to Ireland a poet "who was a player upon the harp." The Harpers of Ireland were once the boast of that now saddened island, and the study of the harp was then the work of a lifetime. In 1079 the Irish bards were to be found teaching the harp to the people of Wales. In 1300 A. D. the harp was introduced into Italy from Ireland and there was a time in Ireland when every soldier considered his "cruit" or small portable harp part of his regular equipment in warfare.

THE aim of all arts is the same, though every one of them arrives at its own end by different roads.—Ritter

The Modern Art of Scene Painting

ALL divisions of the fine arts in general point to great antiquity, and can boast of an origin that extends far beyond the beginnings of written history into the legendary past. Scene-painting, which was one time not considered a division of the fine arts, but which has in these latter days won its place among them, is comparatively modern.

It is impossible not to believe that in those ancient days, of which history is silent and only tradition speaks, the drama, like the other arts, was greater and more magnificent than it is today. Records do not say, as no records exist, that such was the case, but tradition points to a Golden Age of Drama none the less. Then came the decline, and finally came the day, as well, when our forefathers were contented to have scenes in the dramas which they witnessed indicated by a little sign which read "this is a sea" or "this is a lake." But a mere mental explanation of the statement "this is a street in Venice" or "this is a forest in Spain" was not enough to invoke the living spirit, and the art of scene-painting arose. Scene painters once were regarded as hack-draughtsmen and journeyman painters generally. Today our finest artists not only do not consider it beneath their dignity but are proud to paint the scenes of some great drama. Among them may be mentioned Sir Edward Burne-Jones, whose scenic work for Tennyson's drama of *King Arthur* gave one a glimpse of that color-harmony that rarely, these days, becomes tangible.

As the art of scene-painting has risen in dignity and serenity, a great step has been made toward that unity of all the arts, music, color, architecture, that must be our final goal and our ideal.

WHAT gave Mendelssohn so great a compass to his musical activities was the union, in the highest perfection, of three gifts which are usually granted only singly to men in the measure in which he commanded them. He was as great a conductor as he was a virtuoso and composer. When once his fine, firm hand grasped the baton, the electric fire of his soul seemed to stream out through it, and

was felt at once by singers, orchestra and audience. We often thought that the flames which streamed from the heads of Castor and Pollux must play round his forehead, and break from the conductor's staff which he held, to account for the wonderful manner with which he dissipated the slightest trace of phlegm in the singers or players under his direction. Mendelssohn conducted not only with his baton, but with his whole body. At the outset, when he took his place by the music stand, his countenance was wrapped in deep and almost solemn earnestness. You could see at a glance that the temple of music was a holy place to him.—Lampadius

IT is a well known fact that there is scarcely a millionaire's home in the United States which does not possess from one to three "old masters." It is also a fact that when a genuine masterpiece is offered for sale abroad it is almost invariably purchased by the state. It is a fact, too, that something like a score (according to the estimate of one art connoisseur) of copies of old masters are "turned out" in Paris every day and sent to London and New York dealers. The inference here is very plain. The manufacture and sale of "genuine old masters" is said to be one of the most profitable of industries; and the work is carried on so cleverly that it is often difficult to tell the real from the imitation, either in the case of the pictures themselves or the owners who, under pressure, sometimes "consent" to part with them. H.

"THE ONE THING IN THE WORLD, OF VALUE, IS THE ACTIVE SOUL"

THOSE who are not directly connected with these clubs, or through some experience have not had their attention especially attracted to them, perhaps scarcely realize what an important feature they are of our modern American life. They are to be found everywhere. Quite likely every little town, in every little and big State, is honored with its "Woman's Club." Sometimes they are simple literary clubs. Sometimes they are quite complex, having many departments, including a literary, educational, philosophic, an art, musical, domestic art department, and so on. They are a sign of the times. They were no doubt born out of the inward urge on the part of women for a broader life. They are the expression of an undefined feeling after something which was not present in the life of women thirty or forty years ago. Small in the beginning, they have evolved in size and character, until now they have assumed immense proportions, and exert in all quarters a positive influence. In the cases of certain clubs, it is worth while to inquire what their purpose is; whether their influence is good; whether the need for them is real or fancied. They have had ardent friends and, on the other hand, excited much unfavorable criticism. Has this been justified? In short, what is the object of these clubs?

In the beginning, the real, often unannounced, purpose of the members was to gain self-improvement. This is not a high motive for any undertaking. It goes without saying that we want all the selves improved, but it is one of the paradoxes of nature that this never comes at the bidding. A superficial finish or polish may be acquired, but real improvement or development comes to those who are working for some good object outside themselves.

To the extent that this purpose has dominated certain members of women's clubs, they must, of course, have proved failures, and formed a reasonable basis for all the criticism that they have ever called forth. A wrong ideal always throws the nature out of balance, and causes the one holding it to do eccentric, peculiar, unnatural things, such as neglecting home duties. Any right-minded person would criticize a woman who retired to study Greek art, while her own children were dirty and uncouth; or who went out to give lectures in cooking, while her own family were suffering from poorly prepared meals. Also, some have gone into the clubs, no doubt, out of a craving for excitement, or the desire to be prominent, or one of the many forms of ambition. Those who have been interested in these clubs have even stated to outsiders that political jealousies and conflicts have occasionally given evidence that some women have entered the clubs from no higher motives than ambition. And, of course, to the extent that these have held sway, we could expect nothing but failure.

Human nature is complex. No doubt such motives have ruled a few and been felt to a greater or less extent by others. But fortunately there have been others. This has been clearly shown by the numerous channels into which the energy of the women's clubs has flowed, and the character of the work they have done. Little by little the philanthropic departments, as they have come into being, have taken the front rank and accomplished an enormous amount of good. Legislators and members of city councils have come in many places to have a wholesome respect for them. The laws which regulate child labor in certain States are the outcome of the work done in these departments. It is due to their influence that we have in several of our cities women matrons in police stations. They have secured the appointment of women tenement inspectors, sanitary inspectors; of women doctors in insane asylums. They have stood for cleanness in official positions, have fought

Women's Clubs

SCIENCE has no sex; the mere knowing and reasoning faculties, if they act correctly, must go through the same process, and arrive at the same result. But in art and literature, which imply the action of the entire being, in which every fiber of the nature is engaged, in which every peculiar modification of the individual makes itself felt, woman has something specific to contribute.

—George Eliot

many social evils and accomplished an enormous quantity of good. They have used their influence against yellow journalism, and have very

generally closed their doors to women who indulge in it. They have also stood for physical as well as mental cleanness. I know of an instance in which a highly educated club woman ran for the position of garbage collector, because the streets in her locality were a disgrace, and those who had previously had the honor of the office held they could not be kept clean with the money appropriated. She was elected, kept the office for one term to prove to all that this could be easily accomplished, and then resigned. I am told there has never since been any difficulty in that quarter.

Mentally, the clubs have no doubt been a great stimulus to women throughout the land. The art clubs have helped to increase an art atmosphere, by holding art exhibitions and in other ways exciting public interest. And the same can be said of the musical departments.

Of late years the clubs have greatly increased their influence by realizing the need of more unity. The *General Federation of Woman's Clubs*, holding biannual meetings, to which all Women's Clubs send delegates, is a power. And as extremes are avoided, it is certainly a power for good. Sometimes, certainly, one sees extremes in individual clubs.

When a woman is found spending all her thought, time and energy on club life, one is tempted to query whether she is not losing a little her sense of proportion. And when a woman having a home-life, for which she is responsible, steps out of it and neglects it, she is a failure, as Katherine Tingley has so often said.

The nation is made up of homes. They are the very kernel of our national life. Upon their purity, sweetness, their harmony and perfection everything else depends. They are the nurseries for our future legislators, our future guardians of the nations, and over them women have by the laws of

nature been placed. No position could be greater, more responsible, if properly understood. And to neglect it for the purpose of running out to build clubs or anything else, is criminal. The better club women would be the first to condemn such an extreme, and it would hardly be fair to blame the clubs for their abuse by some. If properly used, they ought to be a means of broadening the home life; of enabling a woman to fill her position better. If they do not do that for any woman, they are, of course, worse than useless to her. For what we all need to learn to do, is not how to ignore the place to which nature has appointed us, but how to fill it better and better; how to beautify and purify it and make of it all that is possible.

The clubs are such an enormous organization, from the point of view of numbers, that one wonders why they are not even a greater power; and they have accomplished so much, one wonders why they have not done yet more. What is it that holds them back from a greater success? Some failure, of course, to understand nature's purposes, and work with her. It can only be that which holds any of us back. Nature has a plan, or that which is behind nature has. There must be a definite line of evolution, and any who work with these divine forces, are irresistible.

Suppose that instead of working for a little culture here, a little knowledge there; the correcting of little evils on one side, or the starting of new reforms in another; suppose that instead of trying to patch up the social fabric as it is, there were, working through these clubs, a mighty force, which could grasp the trend of human affairs as they are, and as they should be, and which, like a very Titan in its strength, would scorn to do less than go to the very root of human difficulties, and from there

sweep out over the earth with such force as to make of itself a gigantic spiritual magnet, which would, like magic, throw all human energy into line, and start it flowing in its natural channels!

Suppose they were working for Brotherhood! And intelligently!

But if they are not doing this absolutely and in the fullest sense, let us thank them for what they have done. They have helped to open out a broader life for woman, for which Katherine Tingley has worked and suffered so much. They have opened more than one door, which we hope will never close again. G. V. P.

The Himalayan Mother's Lullaby

IT is said that in certain parts of the Himalaya Mountains the native women have a singular way of putting their children to sleep in the middle of the day. The child is put near a stream of water, and by means of a palm leaf or a tin scoop the water is deflected so as to run over the back of the child's head. The water pouring on the child's head apparently sends it to sleep and keeps it so, while the mother proceeds with her work in the fields. No one seems ever to fear that baby may be drowned.—*Selected*

WOMEN'S work in France becomes more important as the days pass. Only one evidence of this is the publication, *La Femme Contemporaine*, a magazine which is devoted to women's interests, and which is, to quote its sub-title, "a synthesis of work, ideas and artistic achievement, which in the intellectual, moral or religious order can serve for the practical evolution of the women of today, from the individual, family and social standpoint."

ELIZA R. SCIDMORE, special correspondent of one of our metropolitan dailies, writes from Canton, China:

In the line of unskilled labor, the women of Fatshan and country parts compete with men, and hundreds of women are employed by the American railway builders on construction work, at less even than the forty silver cents a day paid to the knights of labor. A funny lot these navvy women are, with bracelets and earrings of green and white glass, and mushroom hats flounced around with black calico, for the complexion's sake. They carry shallow baskets of dirt, sand and broken stone back and forth, and while they seem to be only playing at work with this shoulder pole and pair of little baskets, the embankments all along the railway line are substantial monuments of women's work. Often the female construction gangs work each one with her own lord and master, and it is significantly said that one man and his wife will do more work than four coolies.

THE women of Patras and Oezion, in Greece, are endeavoring to revive the ancient silk industry of that land, which in olden times was noted for its production of fine silks. Committees of ladies have been formed for the purpose of planting mulberry trees and of starting the industry on a practical basis. The Agricultural Society, of which the King of Greece is President, has promised his support, and all things point to an enthusiastic revival of the industry which in the past rendered Greece so famous. The women of Modern Greece can render invaluable assistance towards bringing back its ancient glories by such means.

Mental Dissipation

THE great trouble with us, as women, is that we were not rightly trained in childhood. After spending half a lifetime vibrating between misery and pleasure, we suddenly wake up to a high ideal, and begin to strive to reach it. No wonder it is up hill work. Our faculties are not trained. We have had no one to teach us the value of better mental habits. If we want to realize the condition of our minds let us try to think for two consecutive minutes upon any given subject. The difficulty is appalling. Our thoughts trip as lightly and aimlessly from one subject to another as the butterfly flits from flower to flower.

Women may lead respectable and blameless lives, as the world estimates, and yet have mental habits which are so lax as to amount to dissipation. The time spent by many in idle dreaming is not only wasted, but creates a force which destroys the memory, clouds the keenness of observation and absolutely precludes the possibility of concentration.

How many go to the theatre to enjoy the sensation of having their emotions swayed, from tears to laughter by turns? All the passions of human nature surge through their minds while they listen and gaze, and

THE CELEBRATED PORTICO OF THE CARYATIDES OR MAIDENS OF THE ERECHTHEON ON THE ACROPOLIS, ATHENS

this they consider recreation, and even a means of culture.

It is these false ideals that become our greatest foes, shutting out from our minds the sacred powers that rightly belong to us. But we cannot regain our lost inheritance until we have the *will to renounce absolutely* our long-cherished mental dissipations. The task is a difficult one, but not hopeless. We must have the conviction that its accomplishment is possible and then must we set to work, not day by day but moment by moment, to watch the details, the treacherous little mental slips which later betray us into great failures.

Nothing can bring us victory but a powerful and continuous effort of the will. Then will we be able to act as souls, then only can we be relied upon to come forth at the right moment and do the right thing; then are we no longer dead weights upon the wheels of progress which are today beginning to fly at a tremendous speed. Then we shall become true helpers in the world instead of, what some women certainly are, it must be confessed, mere hindrances.

Egyptian Race Continuous for Thousands of Years

THE amazing libel upon the ancient Egyptians, that they were cannibals, has at last been definitely disproved. The evidence on which it rested was that in opening many of the tombs it was noticed that the bones of the contained skeletons presented obvious indications of having been gnawed; and, furthermore, that parts of the neck were frequently missing. It has now been shown that the latter phenomenon is due to the depredations of grave-robbers, who, in despoiling the dead occupant of the necklace with which he or she was buried, removed with it a part or the whole of the neck. And the marks of gnawing are now known to be due to an insect.

At a place called Naga ad-Der, near the town of Girga, thousands of tombs have been opened, belonging to every period. Every part of the body has been found and closely studied. One of the investigators, eminently competent to express an opinion, Dr. Elliott Smith, has accordingly been able to reach the conclusion that the Egyptian race, as represented at Naga ad-Der, was one single continuous race from the earliest prehistoric times to the Twelfth Dynasty. And from other evidence, including the investigation of skeletons of Copts of today, Dr. Smith reaches the further conclusion that the continuity of race in Egypt exists to the present time.

Professor Petrie is still at work and has made a remarkable discovery in connection with the Temple of Rameses the Second. Beneath the foundations of this temple are, one below another, the foundations of four others. How far back the earliest of these five successive structures may date is unknown, probably an enormous period.

Another investigator is still engaged, after two years, in excavating the tomb of the great Queen Hatshepsu. It has already been cleared to a depth of *eight hundred feet*, and the end is not yet reached.

From the data almost daily supplied by the ever progressing investigations, one may safely say that any history of Egypt becomes as rapidly superannuated as a text-book of chemistry.

ARCHEOLOGIST

Excavations at Delos Disclose Marble and Granite Houses

THE excavations in the Island of Delos are assuming an archeologic importance equal to that of Pompeii. The city of Delos is peculiarly favorable to work of this kind, it being the only ancient Greek city which is almost uninjured. It is true that the upper stories of the houses have fallen in, but in almost every case the walls still stand to a height of some yards, and their architecture and the general arrangement of the city can therefore be studied with great ease.

The situations of over one hundred houses have already been traced, and in some cases the buildings have been entirely laid bare. These houses are of all kinds, from those of the wealthy to the huts of workmen.

Delos is the mythical birthplace of Apollo and Diana, and was therefore held in high esteem. Many temples and shrines were built there, and these have been brought to light, together with hundreds of votive offerings and inscriptions recording the transactions of the priests and the lists of offerings brought by devotees.

A well has recently been found into which had been thrown a large number of bronze and marble inscribed tablets. The translations have not as yet been made available, but they are said to be of very great importance.

The houses of Delos were worthy of a sacred city, being built throughout of granite and marble. The streets and sewers are distinctly traceable, the latter being very perfect and complete and worthy of a modern city.

The credit for this important and successful work is mainly due to Mr. Homolle, the Director of the French School of Athens, who has devoted very many years to research of this description. In recognition of his immense services to archeology Mr. Homolle has been appointed Director to the Louvre Museum in Paris.

The Cliff Dwellings—A Conventional View of Their Origin

THE Vice Regent of the Colorado Cliff Dwellers' Association has recently read a paper on the "Cliff Dwellers of the Southwest." The paper was interesting, although it seems to have contained nothing very new. The speaker said:

The origin of the cliff dwellers is all speculation, whether from the Romans, Peruvians, Africans, East Indians or whom. It is in the hot, arid lands of Colorado, Utah, New Mexico and Arizona that we find the thickly scattered footprints of a vanished race of many millions that have long since passed away, leaving behind them human remains, ruined homes and rock writings as the only legacy of a lost people. The preservation of their handiwork, field products and the mummified human remains and ruined homes has exceeded that of any other extinct race in the world.

Look-out towers testify to the terror in which these people lived and, like the dwellings, faced east. They probably were sun-worshippers, the country being so dry their whole religion was a prayer for rain. The manufacture of pottery, especially water jugs, was one of their chief industries, and the Indian invariably worked a story into every article which he fashioned. The homes of these Pueblo Indians were scattered over the country 6,000 miles square, varying in size from a single room to a large building of several stories, which must have contained over 100 persons. It is probable that their priests or religious advisers were old men.

The origin of the cliff dwellers is perhaps not so entirely speculative as the speaker infers. We do not believe that human history, however remote, can ever be entirely lost, although for a time it may go out of sight. If archeology will join hands with geology, many revelations would be made, including that of the submerged continent of Atlantis, with its human fringes in America and Europe. Then it would be no longer a matter for speculation whether the prehistoric cliff dwellers of Colorado had a Roman origin!

The Ancient Knowledge of Chemistry Was Secret

THE Berlin correspondent of the *Christian World* reports a very interesting lecture by Professor Pinner on the "Chemistry of the Bible," and of antiquity generally. He admits that the sacred writers give very few clues from which we can gain any knowledge of the chemical skill in possession of their contemporaries, but the few clues that exist are interesting. The Egyptian priests were chemists of no mean order, but their learning was their secret, and the Jews never seem to have got hold of it. The Jews, besides, were small farmers, and this is, perhaps, the one avocation in which even a slight chemical knowledge is unnecessary. They never extended their possessions to the sea, and were satisfied with what the Phœnicians could supply them. Their produce was all unmanufactured goods in which chemical knowledge could not be utilized. The six metals known to the Jews—gold, silver, copper, iron, lead, tin—were all imported from Phœnicia. Smelting and purifying were known to them, especially the purification of gold and silver, but they did not understand those operations in metallurgy in which chemical processes were indispensable. The metal work for the Temple, for example, was drawn from Phœnicia. They could make bricks, but only by primitive methods, and it is quite evident they preferred red clay to white, on account of its superior toughness. White clay is more porous, and the Israelites knew no process of glazing this valuable white clay. They could bake clay, but they could not burn it so as to get a vitreous glaze.

Dr. Pinner comes to the conclusion that although a large number of chemically-produced articles were in use among the Israelites, they imported these articles and did not manufacture them themselves. X.

EXCAVATIONS are still being carried on at Pompeii and not without results. Some workmen have just discovered there a very beautiful piece of marble statuary. It is forty-seven centimetres in height and represents a devout worshiper offering a sacrifice to Aphrodite. The figures are absolutely perfect, and the whole composition is as fresh and significant as on the day when it left the hands of the artist.

A Page of Change of Life in Shells

HERE is a picture of a story in shells which very forcibly impresses one with the swiftness of the succession of life in the sea, and the economy of space in arranging living forms. The large abalone shell is covered on the back with barnacles and weeds which probably grew there during the owner's life, for they are often found on living specimens. When the abalone died it was quickly devoured by crabs and fishes, and in the empty shell came a family of young rock-oysters which used the old univalve shell for one side of their own bivalvular house.

Later came another colony which preferred to disregard the plan of the first and instead to build all of their own houses as usual. These in their turn died, by accident apparently, and an army of tiny shell-building worms took possession, dotting the whole surface with curious little irregular spirals of lime. Meanwhile, the borers have been busily at work in the substance of the large shell until it is honeycombed through and through. Had it been left in the sea it would soon have been disintegrated and the materials used in new structures to shelter other lives.

It would be interesting to know how long the whole cycle takes to complete, and how many times it has occurred, and will occur. Such processes are certainly more rapid in water than on land, except, perhaps, in tropical swamps, and those which endure a long time—such as the whale, which lives about as long as a man—must see a bewildering succession of transmutations. Indeed, the only permanent thing or condition is change, and the attempt at permanence, whether it is the lime gathered into a shell, a bone or a tooth, the filmy, water-woven structure of a jelly-fish, or the very rocks themselves, can only separate and distinguish a bit of matter for a little while; it all merges together again at last.

Natural Orientation of Trees

WE are in receipt of a letter from an Australian reader of the NEW CENTURY PATH who refers to an article which appeared on the Nature page, some time ago, concerning the habit of gum-tree (eucalyptus) twigs of pointing to the west after they die. Both from personal observation and by inquiry our antipodean reader confirms the fact.

Meanwhile, a correspondent from the State of Washington assures us that the hemlocks always point eastward after death. Are we to find an entirely new line of investigation opening before us? It certainly would be worth while to ascertain the reasons for these actions and for the difference in action. Does any reader know of eucalyptus and hemlocks growing in the same locality under similar conditions? If so, do they act as above described, or do both point the same way, and which way? Are there other trees which point in some particular direction, and if so, in what direction?

Possibly there may be some inner connection between this behavior of trees and the well-known habit of some savage tribes of burying their dead with the head in a certain direction.

THE INDIGO BIRD

by ETHELWYN WETHERALD, from *Tangled in Stars*

WHEN I see,
High on the tip-top twig of a tree,
Something blue by the breezes stirred,
But so far up that the blue is blurred,
So far up no green leaf flies
'Twixt its blue and the blue of the skies,
Then I know, ere a note be heard,
That is naught but the Indigo bird.

Blue on the branch and blue in the sky,
And naught between but the breezes high,
And naught so blue by the breezes stirred
As the deep, deep blue of the Indigo birds.

When I hear

A song like a bird laugh, blithe and clear
As though of some airy jest he had heard
The last and the most delightful word,
A laugh as fresh in the August haze
As it was in the full-voiced April days,
Then I know that my heart is stirred
By the laugh-like song of the Indigo bird.

Joy in the branch and joy in the sky,
And naught between but the breezes high;
And naught so glad on the breezes heard
As the gay, gay note of the Indigo bird.

A STORY IN SHELLS

Heredity in the Animal Kingdom

THE old doctrine of heredity has been receiving a good many little nibbles of late years, and a good many more are doubtless in store for it. We have been having some warnings recently on this point from Professor Symes Thompson. He has shown that a good many of the early performances of young animals which have been hitherto taken for inherited instinct—blind machinery, in fact—are really due to careful tuition on the part of their elders. It has, for example, always been believed that flocks of birds, in migrating, are led by the young of the party, finding their way by inherited instinctive memory of the direction to take. Recent observations show that whilst the young do fly in front of their elders, a few of the latter are always in front to show the way. The young are probably placed in front in order that they may set a speed suitable to their immature powers.

The young of many swimming animals do not begin to swim till their parents teach them, nor the young of birds to fly without the same stimulus. The apparatus is there, but the task of the parent is to awake the mind of its young to the impulse to use it. And in this task the parent often shows much ingenuity and originality.

The role of mind, as a factor in evolution, will have to be taken far more generally into account, if many perplexing biological problems are to find a solution. We have elsewhere suggested that variations leading to a protective mimicry may have a mental cause. That is to say, that insects habitually dwelling in certain foliages or surroundings may get a mental impression of them strong enough to affect their offspring into a very advantageous resemblance. This impression might be very dim, hardly comparable to any act of our consciousness, and yet real and effective. And the same idea might be added to the Lamarck theory. According to this, to use a very rough example, the giraffe acquired a long neck by straining at high foliage; and his offspring, inheriting the result of the parental labor, added his own efforts in the same direction. It would not seem unreasonable to suggest that the habitual contemplation by an animal, of food-foliage above his reach, might induce a very dim mental conception corresponding to his needs,

not of course comparable to a reasoned idea of ours, but yet slowly effective in molding the form of his offspring. Then natural selection and heredity would come in and do their part.

STUDENT

WE have more than once called attention to the extraordinary work of Mr. Luther Burbank in the creation of new types of fruits and flowers. He has entered upon a field of experiment which would appear to be without limit, experiment which will in a few years fill our orchards and gardens with forms of flower and fruit life we can now hardly conceive. Among many other evolutions he has now plums and prunes without stones, white blackberries, daisies four inches in diameter, great roses of many new forms and colors, a ten-inch amaryllis, a spurless columbine, dahlias with a new sweet perfume.

Universal Brotherhood Organization

Central Office Point Loma California

A VERY large audience assembled at Isis Theatre on Sunday night, the announced program being particularly inviting. The addresses were by Mr. and Mrs. Knoche and Mr. E. August Neresheimer, well known as the Chairman of the Universal Brotherhood Cabinet. However popular these speakers may be, and undoubtedly are, they will certainly not be jealous of the reception given to the two tiny Raja Yoga children, Frances Hanson and Geoffrey Barborka, whose piano and violin duets are already well known in San Diego, and much further afield. We need only say that these children were as fascinating as ever, and Isis audiences will know how much that means.

Mrs. Knoche's address was on "Trust in the Divine," as exemplified by the helpers of humanity who have come into the world from age to age in obedience to the cyclic law. Mrs. Knoche spoke with special reference to the Theosophical Leaders, of H. P. Blavatsky and the splendid war which she waged in her life-long isolation; of W. Q. Judge, who began the magnificent work which he established throughout the world by speaking to rows of empty chairs in New York, and by Katherine Tingley, whose watchword that "Life is Joy" has been indelibly stamped upon her work. Mrs. Knoche concluded a very impressive address with a question peculiarly memorable at this epoch: "Is it not time that, as a people, as individuals, is it not time that you and I turned away from the shadows to find within our own hearts, once again, the Eternal Sunrise?"

Mr. Knoche's address we can do little more than mention. It was upon "Middle Lines in Human Progress," and was a strong and common sense appeal for a gospel of balance, of harmony, of proportion and of symmetry. The balance is, of course, to be found within ourselves, and must be applied to the chaos of the world and to the reform movements, of which so many are spasmodic and unbalanced.

Mr. Neresheimer's address was heard with peculiar interest, not only on account of its manner, but because its weighty importance appealed to a Californian audience. It was entitled "The Material and Spiritual Possibilities of California." Mr. Neresheimer's opinions were based broadly upon his knowledge of the world

Able Addresses and Little Frances
Hanson and Geoffrey Barborka

Reprinted from the San Diego News

and of the Orient. He rapidly sketched the great commercial and other movements of the Orient, and showed how isolation of interests has now become impossible for any part of the civilized world, and peculiarly for California, whose foot was so firmly placed upon the international highway of commerce and also of learning. Mr. Neresheimer's optimism was based upon intelligence and not upon mere sentiment. He recognized the dangers, but was certain that they would be avoided. He said:

"Do we Californians realize to the full the situation we have before us? That on us would fall the heaviest blows of a racial war of any kind whatsoever; and that it would be our interests which would most suffer, were so dire a calamity come to pass? May the great Law prevent such an occurrence, for we would have to face some two-thirds of the population of the globe; and if they become what Japan has become, and it is not impossible, then what have we to look forward to? Not death; not extermination; not a remorseless and bloodthirsty foe, but in all probability an enemy like Japan is proving herself to be to Russia."

But Mr. Neresheimer believed that such things would be avoided. California would make herself commercially indispensable to the world, and, indeed, was already doing so. San Diego was practically the epitome of California as being the nearest port to the center of the coming national life of the Oriental peoples. "The day is coming, and it is coming quickly, when the center of our national gravity will be shifted from the Atlantic to the Pacific, when the heart-life of this mighty Republic will beat on these very shores of California."

Mr. Neresheimer's concluding words ought to be remembered by all who have at heart the well-being of San Diego and of California. He said:

"No other people in the history of the world has had such onerous, weighty and sublime problems to solve, as face us now. Backed by the grand power of our sister States of the Union, we shall be able to do more towards the establishment of a true and real Universal Brotherhood of Humanity than was ever before granted to any people known. Australia, New Zealand, the islands of the Pacific, China that is to come, the Peninsula of Hindustan, and Japan, are slowly turning their eyes our way for supplies, and it may be for help. Shall we fail? Never!"

IN the *Key to Theosophy* H. P. Blavatsky says: "During the last quarter of every hundred years an attempt is made by those Teachers of whom I have spoken to help the spiritual progress of mankind in a marked and definite way. . . . If you care to do so, you can trace these movements back, century by century, as far as our detailed historical records extend." I have often wished that H. P. Blavatsky had traced for us, however briefly, the work of the Helpers at the close of each century, for it would assuredly be of the highest educational value to understand the forces at work in society. She has not done so, and we are left to do it for ourselves as best we can. This is no easy matter, for though we have historical records, in many cases they rather perplex than help. If any one takes up an outline of the history of the last nineteen centuries, he will find a series of events put down in such a way that important matters are generally obscured. The unimportant is made prominent, and the real living powers, that make for human evolution, are often very slightly touched upon, or hidden from sight altogether. For example, take the case of Jesus Christ. It is well known that, with the exception of one or two doubtful passages, the historians of that time do not mention him at all. Were it not for his followers, we might never have known of the existence of Jesus. We must be prepared, therefore, to resurrect the facts of history, which are really of vital importance, from the heaps of rubbish that undiscerning historians have cast upon them. The historian who will arise and do this, who will put things in their true proportion and relationship, and give us a clue to what it all means, he will deserve well of the race.

One or two preliminary observations may be made. As a wise general prepares his weapons before they are needed, so history shows us that the means conducive to progress are furnished before the time arrives demanding their use. The fall of Constantinople takes place sometime before Greek learning begins to be revived in Europe. The invention of printing, the discovery of America; and in later times, the steam engine and the electric telegraph—these and many other things are prepared beforehand for the uses which the evolution of the race may demand. The tools for the work done during the last quarter of the century are prepared before-

The Last Quarter of Each Century

hand. In this connection we should remember the occult law, that power, or knowledge, when liberated, may be used selfishly, as well as for man's advancement. Therefore, to keep back a knowledge of forces that might be used destructively, is quite as much the care of the Helpers of humanity as it is to unfold knowledge which, used wisely, will be conducive to progress. Gunpowder, dynamite, and many other things, are examples of natural forces which may be turned to a bad purpose. Knowledge itself may be employed to make the evil man an adept in evil.

The power which strong minds can exercise over other minds may be used wisely, but it can be turned to evil, when any man, or body of men, employs it for selfish purposes. The *Idola*, of which Lord Bacon wrote so wisely, are but another name for the dominating or hypnotic influence which is exercised by authority, fashion, custom and the like. Closely related to the above is the fact that when the Powers working to help man give out fresh light, or lay down a line of action, the evil powers cunningly adopt this for the furtherance of their selfish purposes. Schools of learning are good, but we know that a body of people working on selfish lines has used this as a means for its own selfish aggrandizement. Just as the "Sacred Mysteries" were, long ago, defiled, in like manner was the teaching of Jesus, in the early days of Christianity, deflected and changed from its original purpose and purity, and made the instrument of selfishness—all the more dangerous because of the likeness which it bore to the Master and his teaching. And the same thing still obtains, for do we not find that the name "Theosophist" has been assumed by some people for selfish ends, and that such people have been very quick to adopt into their own system certain things brought forward by the Leader of the Universal Brotherhood?

These are but a few of the clues which we should possess in order to read history correctly. Again and again it must be the task of the true historian to "put down the mighty from their seats and exalt those of low degree."

History is an organic whole, as much as a man's life is; and no part can be severed from the rest and treated separately. The pattern will be destroyed if we cut it into sections and pull out the threads. As it is said that the best way to re-

call one's past is to begin from the present and go backward step by step, so, perhaps, the wise historian of the future will trace the stream of history backwards, and thus indicate the causes that have produced certain things or conditions of life.

If we look backward from the last quarter of the Nineteenth century, which is marked by the advent of modern Theosophy, we find a great many things which have been preparing the way for it. The movement was started in America in 1875; but had not Columbus discovered America in the last quarter of the Fifteenth century, there would have been no physical conditions prepared for the Theosophical Society and Universal Brotherhood. The place was being prepared four centuries in advance. Certain conditions were also necessary. Had America been like Russia or Austria, the Theosophical Society would not have been possible. Political liberty was necessary, and mental freedom was also necessary, not in America only, but in other countries as well, if the Universal Brotherhood was to encircle the world. The movement towards "man's liberation," during the last quarter of the Eighteenth century, not only made the American Colonies united and free, but also, to some extent, freed Europe from effete monarchical bonds. Politically, at least, the influence of American freedom reacted on nearly all parts of the world, especially on the English-speaking portions of it, and to that extent made the way for Universal Brotherhood less difficult. Mental and spiritual freedom are our heritage from the martyrs of many lands and ages. Had America been Spanish, and under the rule of the Inquisition, the Universal Brotherhood would have been impossible. Had the Reformation not taken place, mental and spiritual freedom would have been impossible. And had not there been the diffusion of Greek learning, making the Renaissance possible, there could not have been the Reformation.

The teaching of Jesus, which was meant to produce freedom on all planes, had become so perverted in the hands of the foes of liberty, that efforts had to be started along several lines in order to liberate mankind from the bondage which had been brought about by the perversion of those very teachings which should have made men free.

STUDENT

Second Object of the International Brotherhood League

Read at public meeting of Universal Brotherhood Lodge, No. 1, Australia

OBJECT 2. To educate children of all nations on the broadest lines of Universal Brotherhood, and to prepare destitute and homeless children to become workers for humanity.

IS there not here a glorious solution to one of the most pressing problems of the day—one of the most distressing problems? Is it not an act of practical Universal Brotherhood, and does it not bear the promise of a glorious hope for the future of humanity? The world at large will soon now begin to see what all those who are in touch with its teaching already know—that Theosophy is the most practical spiritual system of philosophy on earth, touching with its healing fingers all the plague spots of so-called civilization.

Picture to yourselves an Ideal so lofty and pure, that, like an angel, arises with healing in its wings, breathing in softest tones to the Souls of men the eternal Truth, so beautifully expressed in the words of the great Teacher, Katherine Tingley, "Oh, ye men and women, sons of the same universal mother as ourselves; ye who were born as we were born, who must die as we must die, and whose Souls, like ours, belong to the Eternal, I call upon you to arise from your dreamy state and to see within yourselves that a new and brighter day has dawned for the human race."

The old, old teachings about nature and man are openly taught again in our midst, truths as old as the Souls of men. And the stone that the builders rejected is again in place, the sure foundation of the Temple of the Living God—collective humanity, and the link which binds us all together, and to the Divinity within our own hearts—the foundation of stone, the everlasting rock of Universal Brotherhood.

No system of philosophy can stand but upon that sure foundation, because it alone embraces all God's creatures without exception, and a work to be lasting must be for the good of all, irrespective of creed, caste or color. And so we find one of the signs of the new order of ages is the foundation of a nucleus of Universal Brotherhood among the people of all nations, with a great International Center—a Universal Home, and a Universal Leader, who governs and leads alike in justice and love, at the International Center, and at the National Centers in the various nations where Branches of the Universal Brotherhood are established.

One practical outcome of the establishment of this body of people, united in object and aim (the Truth, Light and Liberation of Humanity), is the establishment of preparatory schools throughout countries where the League is established, called "Lotus Groups," where children are taught on the "broadest lines of Universal Brotherhood;" and encouraged to mould their lives in accordance with these teachings, they are clearly shown the dual nature of man, taught that they are Souls here on earth for the purpose of mastering their lower natures, and with the power to achieve the victory. And these teachings are imparted by a method which tends to make the Soul the active factor in their little lives; by music of a high standard; by symbology; and by dramatic presentations embodying ennobling ideas, in which the children themselves are the actors. In this way old barriers of national separation and distrust will be broken down among the rising generations of the various nations, for they will have been taught of the Unity of Humanity and prepared for a higher patriotism, in which, through striving to prepare themselves to be noble citizens of their own special countries, will allow them also to consider the welfare of the whole world and recognize themselves and others alike, as parts of a great family, each with a special part to play for the common weal.

At Point Loma, the International Center I before spoke of, is established an "International Lotus Home," where are gathered together many of the little waifs and strays, the unfortunate, uncared-for children of our large cities, who are being trained "to become workers for humanity" under the matchless Raja Yoga system inaugurated by Katherine Tingley, the teachers of which have been trained under her direct supervision.

The Raja Yoga School treats of the physical, mental, moral and spiritual welfare of the children, the term implying a science which includes all four. The results are such as astonish all intelligent beholders and touch all good hearts.

It makes one think of the truth of the old biblical saying as they hear on all sides enthusiastic tributes as to the worth and value of practical or applied Theosophy, "Seek ye first the kingdom of heaven, and all these things will be added unto you," for it is through the recognition that man is a Soul, and the practical application of it, that this great work has been started and shows such marvelous results. What may we not expect in the future as these children grow up, and go out as Teachers among the people to the various countries from which they came, while an ever increasing stream will take their place? We have left the darkness of past ages behind us at last, and stand facing the dawn of a new day, when human hearts will be warmed and permeated by the life-giving rays of the Rising Sun of Brotherly Love, the promise of an "International Humanity of Perfection."

EMILY I. WILLANS

IT is always a pleasure to read the Rev. Minot J. Savage, voicing

as he does the thoughts of the most enlightened theological thinkers of the day. Especially valuable and especially trenchant is his defense of freedom of thought and freedom of research against those who feel themselves peculiarly called upon to resist the onward and progressive spirit of the age.

It seems that a league has been formed for the purpose of destroying the Higher Criticism and of coming to the defense of the Bible and divine revelation. To a certain order of mind there is of course a peculiar charm in officiously associating itself with the sublime and of arrogating to itself the position of the spokesman of God. We can but express a very sincere hope that divine truth in no way depends for its existence upon the efforts of its self-constituted and unauthorized representatives. In such a case its position would indeed be perilous.

Dr. Savage addresses himself to this point in a manner which we think is likely to be remembered. Referring to the so-called attacks of the Higher Criticism, he says:

The men who are making this assault on the Bible are representative scholars of the world, scientific thinkers, leaders, teachers, who have given us a new universe,

Rev. Minot J. Savage on the Higher Criticism

a new conception of God, a new idea concerning the origin and nature of man.

They have uncovered ancient civilization and have told us what were the first ideas that men held concerning religion, God, man and destiny. They have studied all the scriptures of the world, compared the religions and the development of religions, thought and life of the world. They have created nothing less than a science of religions. They are not seeking to support or to undermine anything. They are seeking for the truth as the only sacred thing on earth.

It would perhaps be too much to expect a change of heart on the part of those who suppose that all search for knowledge is necessarily opposed to the divine will. We would, however, suggest to these gentlemen that they ask themselves in all sincerity whether it is the word of God or their own opinions which they are so anxious to defend and whether they are fully persuaded that it is not they themselves who are assaulting divine revelation which did not disappear from out of the world two thousand years ago, but has been constantly vouchsafed to every heart which has reverently sought for the wisdom of God, for the Theosophia. X.

SELF-REVERENCE, self-knowledge, self-control, these three alone lead life to sovereign power.—Tennyson

"YOU CANNOT KILL THE GODS"

From *The National Review*

STILL, even in the noontide glare,
The Gods, recumbent, take their ease;
Look rightly, you will find them there,
Slumbering behind some fallen frieze.

What though their Temples strew the ground,
And to the ruin owls repair?
Their home, their haunt, is all around;
They drive the cloud, they ride the air.

Build as man may, Time gnaws and peers
Through marble fissures, granite rents;
Only imagination rears
Imperishable monuments.

Let Gaul and Goth pollute the shrine,
Level the altar, fire the fane;
There is no razing the Divine;
The Gods return, the Gods remain.

Upward and Onward

IN these words we have expressed the line of true progress—aspiration upward towards a divine ideal and a constant effort onward to its realization, that is to say, to *being* it as nearly as possible. Theosophy proclaims the Christ-self within as the divine human ideal to which all true evolution tends, and that its realization is to be aspired to, fought for, each one for himself, in his or her own heart, by the elimination of faults and failings. When we first feel the truth of this statement, we become painfully aware of many defects and shortcomings in the life, work and character of our brother—our neighbor, and we itch to set them right by hinting, and innuendo, if not by downright interference. But that herculean task, if it were possible, is nowhere recommended in the teachings of Theosophy; but it enjoins us as strongly as possible to take the beam out of one's own eye before attempting to take the mote out of our neighbor's.

Underlying this injunction which the wise one's have left us is a hint of the true method of progress. It is to purify our own lives from selfishness, criticism, pride and unbrotherliness as to *be* a truly noble, strong and compassionate example to others as well as a strength and encouragement to all. A man is to be a genuine man, a woman a true woman, a master a just master, a servant an honest servant, one and all unselfish, and in their position and degree as nearly perfect as they each can be. We are not enjoined to talk and find fault, but to be our true selves. Here our brain-mind enters an objection, "Oh but we cannot be all that." No, but we can make a start. A beginning has to be made sometime, and after the first step, the others show themselves. It has been wisely said that "one bad habit conquered in the life of a single individual is worth more to humanity than all the machines he could invent in a lifetime."

What is progress? Is it not a greater and greater freedom and power to live and work at our best? and to get more true joy out of our living and being and doing? Are we so self-righteous, so egotistical and vain as to think we are living and working at our best? Not one of us who is honest and intelligent would say "yes." Suppose now we ask ourselves why we cannot and do not live and do things at our best—for each of us knows in our inner heart that when we impartially view one of our acts, the thought strikes us, that we haven't done it as well as we feel we could and would like to do. What is our answer? Spontaneously it is, "Well, I couldn't do it better at that moment." Here is the confession of our weakness. But it is not *the* answer to the question. The answer more nearly and more truly is that we were not inclined to do better at the moment—our heart was not bent on doing well, but rather on getting done and over—a characteristic of the age.

Let us grapple a little closer with the question. Is it not a fact that our heart-light is faint because our personal habits are too strong and too many? I believe we will see it in that light soon, and then we will make efforts to get over our mental inertia and blind indifference to the world and joy of living and working at our best. Besides, the being able to work at our best will be partly fulfilling the law of Brotherhood, in that we are making it easier and better for all others to work at their best—a thing no one thought of announcing in modern philosophies or religions till that great world Teacher, H. P. Blavatsky, once more made known to the world at large the teachings of the Wisdom religion. How wonderful it seems to the seeker of truth! The universe is one, as the word implies. The divine power of the universe is the unity of the whole, the divine unseen essence, the Soul whose great gifts are beauty and joy. We each are unit souls, integral parts of that unity; and what good one does the whole feels and is enriched thereby, just as selfishness is a dragon and a danger to all.

That is what Theosophy declares we are. You and I and all of us are souls, immortal parts of that divine, creative power which ensouls the universe. If we regard ourselves as anything less than the Soul, we must regard ourselves as the animal body we inhabit, and we live only a personal life for an animal body and as

an animal body. This is purely a selfish life, a living for self, and our mind becomes warped and twisted and bent on narrow, prejudiced and selfish ends. It thus becomes narrow, prejudiced, indiscriminating through fears, jealousies, conceits and superstitions. Unconsciously the mind is restricted, dull, inert, and when put on the stretch, or hearing anything of the truth, it is paralyzed with fear, or complains of strong things being said; and we do not and cannot under such bound conditions live or work at our best.

On the other hand, if we regard ourselves as immortal, divine souls, we see at once the possibility of living the universal life—a life at once broad, beautiful and joyous, health-giving in the best sense, ennobling and freedom-giving. We see the possibility of that perfection which Christ enjoined in his injunction, "Be ye perfect."

Why do we not live such lives of effort? Is it that we still think we are miserable sinners and born in sin, as we have had it drummed into our ears from the cradle up? Let us throw it off and embrace the grand truth as Theosophy declares it. That we *are* immortal, divine souls! Not that we *have* such, but that we *ARE* such, and let us ponder the words well. Let us no longer believe that immortal means beginning at our bodily birth. If immortal means anything, it means we existed *before* that body's birth just as we, Souls, will live on after that body's death. To understand the word immortal will help us to realize the truth of Reincarnation and the law of cause and effect, as well as help to rid us of many of the fears by which we are psychologized at the present day. A. A. S.

Serving God or Mammon

TO tell the truth, what is *called* serving God has been made out to be such a solemn, cold-hearted farce, that nine-tenths of the people never think of it, unless shocked by the death of some one near to them, or on their own approach to what is said to be their end. As a matter of fact, business, the cricket-field, the race-course, the theatre, the sunshine and the bush have a much greater power of attraction for the ordinary man. Why is this so? Is it because the people have been so long taught that they are sinners, in a sepulchral voice, that the fear of God, with folded hands and upturned eyes, or forced on to their knees under the threats of God's wrath and the punishment of hell-fire, that all hope has been given up of being good, and accepting this teaching that they are sinners, there is a determination to see it through and just please themselves?

It looks like it! And certainly vice has grown to enormous proportions on the heels of this teaching. Is it not the truth, also, that human nature has rebelled against the creeds that teach this, and with common consent has given up the very mention of them in ordinary society? In some instances this is out of an innate respect for true religion; but with the many it is like a breaking loose from the control of the jailer, a feverish unrest and love of excitement, in the pursuit of personal desire. Has it made them happy or cheerful? It is just the reverse. Everywhere we see miserable and wretched people. We see it behind the paint on their faces, the outside bravado, and the heartless laugh, and nowhere more than amongst those who have money and are *called* well off. Look at the unkindness, quarreling and cruelty we see in the homes, workshops and offices; at social gatherings and in public duties. We have been born into and put up so long with this state of affairs, thinking it a necessity, that about the only opposition the majority have made to it has been by losing their temper, or meekly giving way, out of desire or fear to avoid a worse disturbance.

Into this hopelessness and misery comes the light of Theosophy, the old, old, because ever living truth that never changes or passes away, for it is divine and immortal. It is held safely by those who love and serve their fellow men, and who gladly give it, again and again, whenever men and women are in hopeless difficulty from having followed the wrong path, deceived by foolish and heartless guides, and led on by the false light of personal desire.

Now what is serving Mammon? It is surely not enjoying the beauties of nature and using her bountiful gifts, being happy, cheerful and generous! No, all these things are a part of God's service, when we love them truly for themselves, and so love to share them with others. The service of Mammon is the touch of defilement that turns all beautiful and good things into poison, the selfish taking, keeping and using them, for ourselves, for our personal gratification alone. This is the "poison in the cup," the breaking of the supreme law of nature.

"Thou shalt not steal!" Rebellion to this command is a source and service of all misery and crime, the herald of disease, decay and dissolution—the mark of Cain. To only believe all this is no use to you! You might almost as well go on believing in original sin. It is the being, the doing of it, that lifts the misery and the wretchedness from your own and others lives. Will you go straight home and be a brother for the rest of your life, always to give, and never to steal? That is the question to which all else is trivial. This is all that God and nature—the truth—asks of us. Not to see that others do it, but to do it yourself, persist in doing it, until you do it purely, that is continuously and strongly, in the face of all opposition, without any reward in kind, and from the very first the holy presence of truth and love will be near you, though even if unknown and unfelt by you. You will have its help, and as quickly as you clear the way, by your noble deeds, will heaven and earth shower their blessings upon you. T. W. WILLANS

The Trend of Twentieth Century Science

Strange Substitute for the Modern Fiction of "Brain-Fag"

DR. GEORGE GOULD contributes to a contemporary an interesting, but we cannot think very convincing, article on "Brain-Fag." This malady, he says, is "a silly myth."

The brain does not tire; intellectual work does not hurt under normal conditions. It is eye-strain that causes all the brain-fag, which the newspapers have been exploiting of late.

To eye-strain he attributes even the vagaries and vices of great writers—the opium-eating of DeQuincy, the irritability of Carlyle, Wagner's gloom and tendency to suicide, Nietzsche's insanity.

If you glance through the biographies of any twenty-five great literary workers, you will find a strange and striking difference between the personal lives of perhaps half of the number, and of the others: twelve or fifteen will be found to be comparatively healthy, while the others are constantly afflicted, and endure lives of intense suffering. Of this class are George Eliot, Huxley, De Quincey, the Carlyles, Parkman, Browning, Wagner, Spencer, Whittier, Margaret Fuller, Lewes, Darwin and Nietzsche.

All of these had

Headache, sick-headache, dyspepsia, nervousness, indescribable misery, irritability, insomnia, and dejection. Moreover, all of them learned every day that the use of their eyes in their occupations caused these symptoms.

In Dr. Gould's view, eye-strain told backward into the brain, and produced the list of symptoms, peculiarities, whims and vices. Eye-strain is, of course, everywhere on the increase, and it does cause an extraordinarily long list of apparently disconnected symptoms which used to be treated as self-standing maladies. But why the eye-strain? Why the astigmatism, the myopia, the ocular inequality?

One cause is quite obvious—we read too much. The eye is affected as would be the ear, if we spent the whole day listening to minute sounds. And the dwellers in cities, mostly shut out from nature's pictures of sward and flower and foliage, of rock and sea, can give their eyes only the negative rest of sleep, not the positive rest of broad sweeps of color and tint. This is for the eyes what it would be for the ears, never to hear any sounds save a faint squeak from a phonograph, and to have to listen to that all day long. This has been going on for several generations, and is now multiplied by heredity. And the evil begins in early youth, almost infancy.

But besides the fact dwelt on by Dr. Gould that eye-strain, traveling along the optic nerves to the visual center, and spreading from there, produces brain-strain, the existence of the opposite process can hardly be doubted. Brain-strain must tell outwards, and in its ripples affect the sense that is closest to our lives, namely vision. And thus a vicious action and reaction is established.

We live one-sided lives, or rather lives one-cornered that should be threefold, physical, mental and spiritual. For perfect health, physical work involving every muscle, in contact with nature, should be done daily. We should make every fiber our own and our home. The body should be allowed the feeling that comes from contact with earth and flowers and trees. Our minds should be steadily encouraged to drink in the beauty of nature, all her sounds and sense and colors. If we did this we should not feel the necessity of so much reading. We should not crave the abnormal stimulant to feeling that is afforded by the bulk of modern novels and short stories.

Music and art should enter much more largely into our lives and days. And lastly, the purely spiritual nature should be fed by daily contact with the Divine. True silence and meditation draw down upon the mind a spiritual rain, which is to its soil as other rain to dusty earth.

If children were thus trained and full natural life made possible for them, there would be no more Nietzsches evolving grotesque phantoms and calling it philosophy, genius would no more be hampered by its physical vehicle; there would be no more brain-fag or eye-strain; and the world's output of inspired thought would be tenfold greater in one generation.

The Psychology of Color—Experiments in Chicago

A PROFESSOR in Chicago University has propounded the view that red is an immoral color. He even ascribes the characteristics of certain urban districts to the prevalence of this color in the lighting of the streets. "Change the illumination in these districts," he says, "and doubtless there would be a change in the morals of the community." He instances the case of a French factory lit by red light, whose employes became so unruly that the color was changed. Then order reigned again. His argument is also supported by one or two other telling examples. It also finds confirmation in some experiments in schools, which have lately come under our notice, and to a few of which we have called attention in these columns.

Far too little attention has been given to the influence of color upon consciousness. Every one has some general idea of the effect of surroundings upon him, and furnishing, in the hands of Morris and others, became one of the fine arts. But the scientific principles underlying have been but little worked out. Why does fashion in colors run now to red, now to yellow, now to the high blues and violets?

Red is a color which seems in all ages to have been connected with energy. Hence it was ascribed to Mars and especially used in war. It is an excitant, and its evil reputation referred to by Dr. Scott must be merely due to the fact that in the present complexion of human consciousness, the evil energies are much more readily stirred up than the others. But under other conditions the influence of red might make entirely for good.

There is a considerable field of work here for experimental psychophysiology. The benefits of it would tell especially upon our schools. A strong man can dominate his surroundings, but not so children. "Bright colors should be about the walls" is a common detail of advice for the furnishing of schoolrooms. But that is begging our question. What bright colors? From such experimentation as has been done, and the recorded experience of teachers, it would seem that the violets, purples and yellows are the best colors, yellow considerably predominating.

STUDENT

"The Blues"—Formerly Known as "The Spleen"

THE malady now known as "The Blues," but a hundred years ago as "The Spleen," has not, so far as we know, hitherto been examined from its anatomical standpoint. But in a recent medical book this has been done, and *Splanchnic Neurasthenia* is the impressive name conferred upon this once fashionable trouble.

The root of the evil, it seems, is laxity of the abdominal muscles, leading to congestion of the thus unsupported abdominal veins. And the consequences of this again is the mental state curiously associated by its name with the color blue. But may not the mental state antedate, instead of follow upon, the physical condition; and then be maintained and made worse by the evil muscular laxity which it caused? We certainly think that to be the case, and appeal for confirmation of our view to the results of treatment.

For medicines notoriously do nothing to cure, except when the patient sees his doctor every day and so gets a daily dose of encouragement. And something more, for there is no doctor but will say that such patients cost his vitality more than ten with other maladies.

He carries them to health. Foreign travel or any kind of healthy interest in life, also cures. In other words, it is a new mental vitality, whether stolen (from the doctor) or acquired, which cures.

Muscular gymnastics, etc., also cure, because to do them the mind has to rise to a beneficial effort of a positive will.

In other words, "The Blues" is a malady that no one need have, nor should tolerate. It is an affront to the divine in us, a severance of the mind from that center of energy, peace and joy. It is the first stage of death of the mind, and its older name, "the vapor," indicates what is going on. "Stand up to yourself, and don't have it" is the essence of all the medical advice.

✧ A Problem and an Answer ✧

GERTRUDE HOWARD sat rocking her little son to sleep, crooning softly the while. What a tender, delicate little life it was, how great her responsibility! But her love and happiness were tempered with a fear, "Am I worthy of so great a joy, am I strong enough to do my duty?" The mother love was strong and deep, but the brain mind doubted.

"I *know* so little," she half moaned, "God help me to do the right."

Daily baby thrived and grew, a happy, healthy little mortal with decided opinions of his own and a genius for exploration.

Gertrude was well-to-do, but her conception of a mother's duty forbade her handing on all her privileges to hired help and so she herself superintended the training of her little son, looking upon it as a labor of love. But how she felt her limitations, faced with the persistence of youthful desire, and the restless energy of "a healthy little atom of continual motion," as his father called him.

"You have the patience of Job with the youngster," he had said, "but there is not enough wholesome discipline."

Gertrude sighed. Then an "little sister" came, and great was Norman's interest.

"Isn't she tiny? Norman's not a baby now," he proudly told his aunts who came to greet the new comer.

"Children are not what they used to be, they think from their very cradles now-a-days," Gertrude remarked, stroking the tiny head.

"Indeed they do," laughed one of her visitors, "what do you think my Molly said? Effie gave her some chocolates the other day, but added as an after thought, 'Will your mother mind your eating them?' 'Oh!' said Miss Molly, 'Mother doesn't mind me eating them when *she* doesn't see me,' and she carefully wiped every trace of them from her face."

Gertrude's answering smile was very faint. Molly was but a trifle older than her own little boy, and *her mother found such things amusing!*

"Still worrying over the children, wifey?" said her husband affectionately, that evening, catching sight of his wife's wistful face as nurse carried their little son unwillingly to bed. "He has got a bit out of hand, but he is a manly little chap and things will right themselves when you get about again."

"I *wish* I knew of some real good plan to work on," replied Gertrude, "one feels so much in the dark, he is a strong character and oh so willful! he just wears me out when he wants his own way." "He knows he'll get round you if he only keeps on long enough," returned Mr. Howard with an easy laugh; but his wife winced at the truth of the criticism.

"It is delightful to think of seeing Violet again! I remember her as the sweetest little girl, indeed, she was always my favorite cousin, and to think we shall be in the country during her stay! It all fits in so beautifully, for she is such a nature lover! I feel quite a girl again at the prospect."

"I too am delighted that you will have such a congenial companion while I am obliged to be so much away," returned her husband.

"You love children, don't you Vi?"

"I do; no, Norman, not just now. Auntie will tell you a lovely story after lunch, as she promised."

"I want it now," he demanded, and seeing no signs of relenting in his aunt's face, he continued, "I *will* have it!" then his lip dropped and a burst of angry tears followed.

Violet bent down, smoothed back his curls and kissed the flushed forehead. "No, dearie, not now," she said firmly, "when Auntie says 'no,' she means it. Listen to little sister calling you to go for a walk, from her go-cart, and nurse waiting, and I can hear the little birdies in the trees telling you how lovely it is out in the sunshine. Run quick, and see if I can catch you before you get there!"

Norman looked at her as she rose. He had found out already that the tactics he used with his mother were of no avail. And then, strange to say, Auntie didn't seem to mind hearing him cry, and she knew some lovely games; so he summed up his chances for a story as *nil*, decided to take the race, and went off with nurse and baby, a smiling little boy.

When Violet returned, Gertrude sat silent awhile.

"Vi," she said at last, "where did you learn to manage children? I have had such trouble with Norman, he is so self-willed, and yet he seems to quite like doing what you tell him. You don't know how I long to give my children the best, and yet I feel such a failure, and you seem to have some secret I cannot fathom. Will you tell it to me?"

"I try to work upon the Raja Yoga method," replied Violet quietly, "and that means to get into sympathy with the *souls* of children, not treating them as if they were irrational little animals, but helping them to act as if they were souls. It means ruling by law and love, not by caprice or according to the mood of the hour"—

"Then there is a *system*," broke in Mrs. Howard eagerly, "a system by which children may be taught to be obedient, and yet retain their affection for their mothers and teachers?"

Violet laughed. "There is a lovely system," she replied, "a natural one. Have you never heard of Point Loma and the Raja Yoga School there?"

"No."

"Nor of the Universal Brotherhood organization and Theosophy?"

"I have heard of Theosophy," said Gertrude, "but I did not know it was anything *practical*."

"It is the most practical system in the world," Violet returned emphatically, "for it goes straight to the root of things. The Raja Yoga training is practical Theosophy as opposed to theoretical, and are not the results just splendid at

Point Loma? If you could only see the sweet, self-reliant, happy little children there, how you would rejoice! I have not had time to tell you yet of my wonderful visit to Lomaland in California. Mother and I have been members of the Universal Brotherhood for a good many years, and mother is most interested in the Raja Yoga School held in Madame Blavatsky's old home in London, and she always makes some warm things for the poor little tots from the slums who go there. You have plenty to learn, my precious cousin," she finished with a hug. "I can see the loveliest chats ahead of us and feel how happy you will be when you know the good that can come to your darlings, and all the other little children who will come under the beneficent teaching and training of Raja Yoga—the science of the soul."

EMILY I. WILLANS

WHAT a soul drinks in with its mother's milk will not leave it in a day. From our earliest hour we have been taught that the thought of the heart, the shaping of the rain-cloud, the amount of wool that grows on the sheep's back, the length of a drought, and the growing of the corn, depend on nothing that moves immutable, at the heart of all things: but on the changeable will of a changeable being, whom our prayers can alter. To us, from the beginning, Nature has been but a poor plastic thing, to be toyed with this way or that, as man happens to please his deity or not; to go to church or not; to travel on a Sunday or not. Was it possible for us in an instant to see Nature as she is—the flowing vestment of an unchanging reality? When the soul breaks free from the arms of a superstition, bits of claws and talons break themselves off in him. It is not the work of a day to squeeze them out.

—Olive Schreiner

THE CHILDREN'S HOUR

The Water-Sprite and the Lotus

"HOW do you do today, my Lotus?" said a water-sprite, as he sailed down through the dark waves close to a root that lay half concealed in the mud in the bottom of the lake, and stood a-tiptoe a minute on the edge of his clam-shell boat. Now, as it happened, this day had been particularly full of vexations and troubles, at least so thought the little life-germ in the lotus root. For one thing, no end of strange creatures had been swimming and staring about, and then a rock had fallen from somewhere—out of the sky, perhaps—and the shock and jar had been dreadfully distressing; so, to tell the truth, the little lotus plant just creeping upward out of its seed-cradle, was not in a very gracious mood. "How can any one be well and happy down here," it whined. "It is cold and dark, and there are horrid creatures about. *You* can sail where you please, but *I* just have to stay here. I am so lonely I just can't do anything but—but —"

"But grow—can you?" and the water sprite laughed at the funny, cross little plant. "Now what do you know that is nicer than just growing? It is like sailing somewhere on a clam-shell, I fancy, and if you keep on and on, some day you'll find the sun."

"The sun! What's that?"

"Well," said the little water-sprite, and he jumped over to the other edge of his clam-shell boat and stood there a while, "the sun—the sun—it is light and warm and happy and —"

"But *what* is the sun?" said the little lotus plant, beginning to become interested.

"Why—the sun," and the water-sprite looked very thoughtful for a moment, "the sun is just the greatest thing in the world. No, it is above the world. The sun is—well—it is just the sun. If you keep on growing you will find it."

"But how am I to see the sun with all this water and mud and these queer fishes and things?"

"Just keep growing—don't worry—*keep growing*, and you will find it. You can almost see the light now," and then the water-sprite sailed away. "Good-bye, Lotus, when you get up into the sunlight I am going to make you a call," and then, do you know, there came right into the heart of the little Lotus a throb of sweet love that seemed like the memory of a beautiful time long past, when it had lived in God's beautiful world, and where there was sunlight all about and something big and shining and glorious overhead. "It must have been ever so long ago," thought the little plant, and again into its tiny heart shone the bright beautiful picture. For a moment the waters all about seemed silent; even the fishes stopped staring, and little Lotus felt a strange new happiness. Suddenly down through the waters flashed a ray of light. "I wonder if *that* could be the sun," said Lotus. "I must hurry and grow," and something in its heart gave a great big push and the little bud shot up away above the mire, and by and by it saw something again like a gleam of light, and—it was not many days—a pure white Lotus blossom lay in the sunlight upon the waters of the lake. And the sun was overhead.

What a Girl Can Do For Her City

Essay by a young member of the San Diego Lotus Group

WE should not say, "When I am grown up I will help the city," because we can help our city right away, and the sooner we begin the better. Many girls do not know how to help each other, and that is the reason why they feel they cannot begin to help humanity until they are grown; but that is a false idea. If we are true and pure and kind ourselves, we can help others by our influence even if we should be sick or in prison. If our influence is good and pure we can turn those who are on the wrong path into the grand and beautiful road to perfection. If we could only see the wonderful results of helping each

other and the joy that comes from it, we would not wish to wait until we are grown to help our city. At school we may be happy and kind and pleasant to those who are not so fortunate as we are, for a happy girl makes those who are around her happy, and happy people can not be wicked. And what a beautiful home life such a happy girl could make, and after a while, if all the homes were made happy by all the girls who wanted to help the city, think what a beautiful life the whole city would have!

But, first of all, we must find our own faults and the way to overcome them. The mistake comes from waiting until we are grown. Why not begin now? We cannot do much, of course, but each one of us can help make the home life happy and can help keep the yard clean and beautiful, and can hold high ideals. We must remember that Rome was not built in one day. The secret lies in the little word, "Now." Raja Yoga teaches us to be

practical, and we know that we could make our city like a heaven on earth if we would all live the Raja Yoga life now.

Japanese Children

DEAR CHILDREN: Have you ever noticed that after every holiday little lost children are always picked up in the parks and on the streets of our great cities? I fancy that could not happen very often in Japan, for there the mothers always fasten to the babies' clothing a little metal ticket on which is the parents' name and address. Japanese babies are fortunate in that respect,

but they do not know the luxury of go-carts, as our babies do, for they are always carried, tied up in a curious little sling on the back of the mother, and even very little babies learn to cling to their mothers like kittens would do. They do not rock Japanese babies to sleep. That is one Raja Yoga custom, truly; and then, too, the Japanese baby never wears the long, tight garments that so many French and German babies do. From the first the Japanese babies' garments are cut exactly like the *kimonos* of his elders. He wears three or four of them, and he puts them on in the most curious and comfortable fashion in the world. The little garments are laid upon the floor, one over the other, and the baby is literally put into them. Then they are tied by a soft belt around the baby's waist.

CHILDREN OF CUBA—A corner of the class room in one of the Raja Yoga Schools established by Katherine Tingley in Santiago de Cuba

AIM HIGH

by LOWELL

LIFE is a leaf of paper white
Whereon each one of us may write
His word or two, and then comes night.

"Lo! time and space enough," we cry,
"To write an epic!" so we try
Our nibs upon the edge, and die.

Greatly begin! though thou have time
But for a line, be that sublime—
Not failure, but low aim, is crime.

Students'

Path

TO OUR POETS

by ALLAN JUNIOR

O H ye who have from God the gift of song.
See that your speech be pure and sweet, yet strong.
And helpful to your kind.

All see the sorrow and all feel the pain;
Ah, poets, show us but for once again.
The joy there is in life.

We see it in the beauty of the earth.
We see it in the splendor of the sky.
We see it in the kindness of the heart.
We see it in the brightness of the eye.

Then sing to us, ye singers of today,
Of meadows daisy-clad and wet with dew.
Of mountain, lake and river, sea and sky,
And clouds with beams of sunlight streaming through.

And sing to us of kindly hearts and hands,
Of little children laughing at their play.
Of all the simple joys of human life,
Of loving deeds that cheer us on our way.

We need your songs, ye singers, not your tears---
Our hearts are filled with sorrows of our own;
So speak to us as often as you may,
But let your speech be silence, if not song.

Moments of Inspiration

HAPPY is he to whom come moments of inspiration, and happier still is he who has made them a part of his science of life, who knows their source and how they may be used. Perhaps it is not yet in our power to summon them entirely at our will, or even to discern the periodic law which governs their shining visits. Such a law there must be, nevertheless, and for this effect also there must be a cause.

Divine nature has, of course, no favorites among men, and these moments of inspiration are the common heritage of all who will receive them. Although we may not know the law by which they come, we do at any rate know that we have a certain power to increase their frequency, and to add to their force; we know that there are certain mental conditions which seem to invoke them, as there are certain other conditions which make their visits an impossibility. We know, too, that as we become more and more receptive, more and more reverential, the periods between their arrival are lessened in duration.

Probably every earnest student of spiritual things has his own method of invoking these moments of inspiration, his own particular line of least resistance. This method may be by an assault upon some favorite weakness, it may be by the imposition of an inner silence, it may be by meditation upon the divinity which upholds and regulates the universe. The result does not follow immediately upon the effort, nor perhaps can we discover any regularity in the intervening periods. But the result comes unfailingly, it may be after a few hours or it may be after days. We are suddenly aware of a light from within the darkness, and its rays are thoughts and ideas which follow each other so quickly that we seem unable to seize upon them or retain them. Or it may be that the problem which once seemed so insoluble suddenly melts into the obvious; or it may be that we look out into the world with a sudden glow of understanding and see the shuttles of force and of intention flashing to and fro through the web of matter. The inspiration may be of a thousand different kinds with a thousand different persons, according to the varying lines of least resistance, but it will always be an answer to a prayer, it will always pass through the best-worn channels of the mind, it will assume the shape which we have prepared for it. To the artist it will

be form or color, to the writer it will be golden thoughts, to the reformer it will be a plan of redemption, to the musician it will be a harmony, and it will be given in such measure that it seems to be the very fountain of God.

Why should we not be practical in these matters? Why should we not formulate our demands upon divinity with the same confidence as upon one another and with the same expectation of a reply? Why should we not set forth our empty vessels, consciously and deliberately, with the certainty that they will be filled? There are those among us who know no other ambition than to give, and why should not such as these demand the power which their service needs, forming their demand within the mind and then sending it forth into the great dark space behind the mind where the light dwells and the silence? Surely, if we leave it there awhile without the disturbance of our doubting, wondering thoughts, it will return to us full-freighted in a moment of inspiration.

Sometimes we think of how much we might do, could we but prolong the moments of inspiration. Perhaps they come upon us at times when we cannot record them, and it is almost with a pain that we see the radiance fade away like the afterglow of a meteor in the night. Let us then will with all our power to absorb what is the very substance of knowledge, to store it against our need. So far as we have a practical faith will this and all effort be efficacious.

STUDENT

O MAN, forgive thy mortal foe,
Nor ever strike him blow for blow;
For all the souls on earth that live
To be forgiven must forgive.
Forgive him seventy times and seven;
For all the blessed souls in heaven
Are both forgivers and forgiven.

—Tennyson

Bible League and Higher Criticism

IS there no theological champion who will arise and defend the Bible from its friends? We are not among those who believe that divine truth is ordinarily in need of human protection but it may be that there are many sincere, if ignorant, people who are entitled to some defense against the misrepresentations of such organizations as the American Bible League. This League now proposes to enter into relations with Sunday-schools all over the country and to furnish an enormous supply of Biblical literature of all kinds from which every trace of modern research shall be excluded. This is of course a compliment to the Higher Criticism, but how about these people who are deluded into the belief that such efforts as this constitute a defense of divine truth, or a defense of anything else except the self-conceit of their organizers? There are many people who have no time to investigate or to think, and who are ready to take every religious apologist at his own valuation.

The Higher Criticism is perhaps an unfortunate term suggesting an antagonism which in no way exists. We would like to ask those who are afraid of the Higher Criticism to ascertain exactly what it is, and so to recognize it as the most potent influence for Biblical support which exists. We presume that every Christian throughout the country, except of course the officials of the American Bible League, desires to know, for example, what Christ did actually say while he was upon earth, and not merely what some one else believed him to have said. This is precisely the information which the Higher Criticism tends to supply.

We may take another illustration. There are a very large number of ancient manuscripts from which the translators of the New Testament had to select when preparing the English versions which we use. Inasmuch as these manuscripts are different one from another we should suppose it to be a matter of common Christian desire to determine which of these manuscripts is the most ancient, the most authentic and the most correct.

That is precisely the work which the Higher Criticism is striving to do and for which it is denounced as impious. The scholars who are engaged upon this beautiful and sacred work are probably largely unaware of the sensation which they are producing among the little people who audaciously claim to be indispensable allies of the Word of God. Otherwise they might reply that it would be difficult to imagine anything more impious than the efforts of those who are trying to preserve error and to destroy truth, and that it is they themselves who are the true followers of Christ and of the God to whom falsehood is an affront. X.

THE LIFE TO BE

by WHITTIER

THE tissues of the Life to be
We weave with colors all our own,
And in the field of Destiny
We reap as we have sown.

Still shall the soul around it call
The shadows which it gathered here,
And, painted on the eternal wall,
The Past shall re-appear.

Think ye the notes of holy song
On Milton's tuneful ear have died?
Think ye that Raphael's angel throng
Has vanished from his side?

Oh no! We live our life again;
Or warmly touched, or coldly dim,
The pictures of the past remain;
Man's works shall follow him!

STUDENTS' COLUMN

Conducted by J. H. Fussell

Question

How are man's life and evolution governed by cycles. How can there be progress if we continually come back to the same point? (Continued from the issue of June 19, 1904)

Answer

In the previous consideration of this question, we have quoted extensively from the writings of William Q. Judge, and as probably the great majority of our readers have not seen the article in question, we give further extracts here. This article, or rather address, was given at one of the Theosophical Congresses, and is of such value that we feel that all students will welcome its reproduction in part here. Continuing, Mr. Judge says:

As some have written, we cannot turn back the cycles in their course. The fire of patriotism cannot prevail against the higher destiny which will plunge a nation into darkness. All we can do is to change it here and there a little. The Helpers of Humanity are subject to law, but they have confidence and hope, because that law merely means that they appear to go down, in order to rise again at a greater height. So that we have come up through the cyclic law from the lowest kingdoms of nature. That is, we are connected in an enormous brotherhood, which includes not only the white people of the earth, and the black people of the earth, and the yellow people, but the animal kingdom, the vegetable kingdom, the mineral kingdom and the unseen elemental kingdom.

You must not be so selfish as to suppose that it includes only men and women. It includes everything, every atom in this solar system. And we come up from lower forms, and are learning how to so mould and fashion, use and abuse, or impress the matter that comes into our charge, into our bodies, our brains and our psychical nature, so that that matter shall be an improvement to be used by the younger brothers who are still below us, perhaps in the stone beneath our feet. I do not mean by that that there is a human being in that stone. I mean that every atom in the stone is not dead matter. There is no dead matter anywhere, but every atom in that stone contains a life, unintelligent, formless, but potential, and at some period in time far beyond our comprehension, all of those atoms in that stone will have been released. The matter itself will have been refined, and at last all in this great cycle of progress will have been brought up the steps of the ladder, in order to let some others lower still in a state we cannot understand come up to them.

That is the real theory. Is that superstition? If you believe the newspapers, that is superstition, for they will twist and turn everything you say. Your enemies will say you said there was a man in that stone, and that you have been a stone. You have not been a stone, but the great monad, the pilgrim who came from other worlds, has been in every stone, has been in every kingdom, and now has reached the state of man, to show whether he is able to continue being a man, or whether he will once more fall back, like the boy at school who will not learn, into the lowest class.

Now, then, this law of impressions I have been talking about can be illustrated in this way: If you look at one of these electric lights—take away all the rest, leaving one only, so as to have a better impression—you will find the light makes an image on the retina, and when you shut your eye, this bright filament of light made by a carbon in an incandescent lamp will be seen by you in your eye. You can try it, and see for yourselves. If you keep your eye closed and watch intently, you will see the image come back a certain number of counts, it will stay a certain

number of counts, it will go away in the same length of time and come back again, always changing in some respect, but always the image of the filament, until at last the time comes when it disappears apparently because other impressions have rubbed it out or covered it over.

That means that there is a return even in the retina of the impression of this filament. After the first time, the color changes each time, and so it keeps coming back at regular intervals, showing that there is a cyclic return of impression in the retina, and if that applies in one place, it applies in every place. And when we look into our moral character we find the same thing, for as we have the tides in the ocean, explained, as they say, by the moon—which, in my opinion, does not explain it, but, of course, being no scientist, my view is not worth much—so in man we have tides, which are called return of these impressions; that is to say, you do a thing once, there will be a tendency to repeat itself; you do it twice and it doubles its influence, a greater tendency to do that same thing again. And so on all through, our character shows this constant return of cyclic impression. We have these impressions from every point in space, every experience we have been through, everything that we can possibly go through at any time, even those things which our forefathers went through. And that is not unjust for this reason, that our forefathers furnished the line of bodily encasement, and we cannot enter that line of bodily encasement unless we are like unto it, and for that reason we must have been at some point in that cycle in that same line or family in the past, so that I must have had a hand in the past in constructing the particular family line in which I now exist, and am myself once more taking up the cyclic impression returning upon me.

What a new meaning is given to the biblical statement that "the sins of the fathers shall be visited upon the children"! In the light of the above, this is seen to be not unjust, but in accord with perfect justice. We come back to reap the harvest we ourselves have sown; at the turn of the cycle we return to the same family line with which we were connected incarnations ago and whose family characteristics we ourselves have helped to fashion.

(To be continued)

Personal Appearance of Columbus

THE personal appearance of Christopher Columbus seems to be very much open to question. There are no less than eighty early portraits of the discoverer, but none of them are authoritative, inasmuch as none of them were painted during his life. The most authentic is that known as the Jovian portrait, because it was executed for Paulus Jovius' *Elogia Virorum Bellica Virtute Illustrum*, published in Basel in 1575. Jovius was twenty-six years of age when Columbus died and it is therefore possible that he had seen him or was able to decide as to the merits of the picture. It is at any rate certain that he had a picture which he believed to be that of Columbus. A large number of other portraits bear no resemblance whatever to it and these we may place upon one side. Additional value is given to the Jovian picture from the fact that it agrees with the description given of his father by Ferdinand Columbus, who says:

The Admiral was a man of good form, of more than medium stature, with a long visage, the cheekbones a little high, inclining neither to stoutness nor thinness; his nose was aquiline and his eyes light; he was a blond inclining to high coloring; in his youth his hair was fair, but when he was thirty it had all turned white.

STUDENT

Mr. Gladstone and the Episcopal Church

A DAILY contemporary having been called on by a correspondent to justify its statement that the late W. E. Gladstone had said that the Episcopal Church of England would rather lose her faith than her gold, draws attention to Mr. Morley's life of that statesman. It seems that this opinion was expressed by Mr. Gladstone on two occasions in letters to his son. These are the words:

Now we have lived into a time when the great danger of the church is the sale of her faith for gold.

The second reference is as follows:

As to the disruption, that is the old cry, by means of which at all times the temporal interests of the English Church have been upheld in preference to the spiritual. The Church of England is much more likely of the two to part with her faith than with her funds.

These remarks become especially significant when we remember Mr. Gladstone's warm devotion to the Episcopal Church, a devotion of all other kinds the most rare, inasmuch as it prompted him to speak truths as salutary as they were painful.

STUDENT

A Definition of Sin

A SINGULARLY luminous definition of "sin" was recently given by the English scientist, Sir Oliver Lodge—"reversion to a lower type after perception of a higher." Precisely the same definition serves for "disease," if only we read *attainment* instead of *perception*. If, for example, the human liver reverts to the methods pursued by the livers of birds and snakes, gout results.

We might learn charity of judgment from Sir Oliver Lodge's definition. How often do we know, when judging a man's conduct, whether a higher line than that which he is pursuing has ever entered his range of perception? No one should, however, learn charity towards his own acts from the definition. For the very fact that he feels his conduct doubtful, or questionable, or needing self-excuse, suggests at once that in the secret place of his heart he has perceived a possible higher. He can reason away the perception; he can whitewash his exterior consciousness for his own inspection; but the divine Law disregards the whitewash and judges according to the apparently obliterated perception. Some men spend their lives in trying to rock these perceptions to sleep. But the hour comes when they all awake together.

When men perceive in another a higher line of conduct than they themselves intend to follow, they are very likely to hate him. And still more when his words awake the perceptions they have lulled to sleep. The old rule was to stone or burn him. For these methods slander is the modern equivalent. H. P. Blavatsky and William Q. Judge are excellent examples of modern method; Bruno and Joan of Arc of the older.

Some men perceive a higher line of conduct than their own, but are too weak to follow it at once. If they do not do any self-excusing or self-justifying, and keep their eyes upon the ideal, they are approaching it and will attain it. But the self-excusing takes a number of very subtle forms. To his own soul a man must excuse nothing; he must let in its light upon his hidden places of motive and intention; to it—it is himself in the ideal, that part of himself which dwells in the world where ideals are living consciousnesses—he must "confess," and its "pardon" will consist in added light and strength. To look at a fault and its roots carefully and honestly is the beginning of the process of burning it up. Faults of character become very embarrassed when brought out from their hidings, paraded before the mental eye, and made to face their opposites. Indeed, it is death to them.

But this robust and healthy process, the true and sanitary *repentance*,

is not to be confounded with a morbid search in the vaults of memory after forgotten sins in order to agonize over them. That is *remorse*, a paralyzing of the soul's power. Past acts only concern us so far as the tendency to do them again still exists. Memory, in this connection, should only be used as a sort of guide to possible present tendency. Except as it bears on future conduct it is irrelevant, and the spectres that haunt its fields should not be allowed to wave their dismal mantles in our faces. They have no place between us and the rising sun of a newly-born life. We solve the past by rightly solving the present. The light lies all along the path *in front*.

Actual faulty deeds, sins, are therefore to be regarded merely as buoys marking the location of hidden tendencies. And as we can only review tendencies by standing apart from them, we are then standing as souls. To the extent that we do this does our power become unconquerable.

"Man's only way to win his great hope and to know the truth is to seize hold on himself, assert and realize his potentially all-dominating SOUL-existence. Making his mind and memory register beyond all future cavil or doubt what he then knows to be true, holding himself at his true dignity, guiding into right conduct all the elements of his nature, his body, mind and emotions, he will maintain from that moment strength and joy in life. That once done, could he but stand in that attitude for a few weeks or months, he would have made of his mind a willing instrument of service, harnessed it to the chariot of the soul and dissolved away its limitations"—and sins.

STUDENT

Ambidexterity

IT seems that there is an Ambidextral Culture Society of which the object is to cultivate the use of the left hand. Dr. James Shaw has just read a paper to the Society recommending this accomplishment, and pointing out how useful it may be in many surgical operations such as bandaging. The left hand is quite easily trained, and the advantages are numerous, especially in case the right hand is disabled. Dr. Shaw says that right-handedness and left-handedness are simply fashions which have been allowed to become permanent and that they have no physiological reason. However this may be, there seems to be no adequate cause why we should subordinate the left hand any more than the left eye or the left ear. Why not make the utmost possible use of the body and of its every part, and train the left hand to be not only an ally to, but a substitute for, the right hand.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Higher Criticism Defends Bible

THE Rev. Dr. Guinness Rogers has tried to say some reassuring words to those who are troubled in mind because of the so-called attacks upon the Bible which have issued from the Higher Critics. These attacks are, of course, actually defenses of the Bible against ignorance and arrogance, but it may yet be some little time before this truth is recognized.

Dr. Rogers believes that the real question we have to face is "whether or not the holy men of old spoke as they were moved by the Holy Ghost. If they did, then the authority of the Bible remains."

There would seem to be very little difficulty about such a question as this. We do not doubt at all that the holy men of old spoke as they

were moved by the Holy Ghost, that is to say by divinity. Nor is there any question that the holy men of today speak under that same influence. All holy men, whenever and wherever they may be found have spoken, and still speak under that divine inspiration. The word holy can surely have no other meaning than a union with the inner God, and the possibilities of such union have not been confined to one time nor place.

A little thought will show us the preposterous nature of the contentions put forward by some sections of orthodoxy as to the meaning of inspiration.

The Vast Antiquity of Humanity

We are asked to believe that God has limited his direct communication with the world to one brief period of history and to one unimportant and nomad race. Let us for a moment realize the vast antiquity of humanity, an antiquity which defies even imagination. Let us picture the civilizations which have succeeded one another like waves upon the shore, the countless myriads of men who, like ourselves, have hoped and suffered and who have reached out in aspiration towards things divine. Let us, in other words, realize the immensity of existence even as shown by our world alone. Then let us ask ourselves if we are able to believe that the God of all humanity allowed these unnumbered æons to pass by without declaring Himself to men, without inspiring their hearts and hands; that He then determined to reveal Himself for the first time to the race and that for such a purpose He selected a wandering tribe but little removed from barbarism and far inferior in intelligence and in morals to many of the peoples who surrounded them.

We say with every assurance that such a belief is unthinkable, incredible and an insult to human intelligence which is about to recognize that divine inspiration has never been absent from humanity and is the gift

God's Messages Are Not Limited

now, as it has ever been the gift, of those who are strong enough to claim it. It is indeed one of the insoluble problems of psychology that an educated civilization should have acquiesced in the dogma that the sum total or even the essence of God's message to humanity was communicated within some limited number of years and was confined to some few dozen men. That such a dogma should be still believed is evidence that superstition and ignorance yet hold their accustomed scepter.

Be it far from us to make light of divine inspiration. As Theosophists we know that inspiration comes within the science of the soul which we are so successfully trying to promulgate. And because Theosophy deals so understandingly with inspiration we know that it exists by the might and the power of spiritual law wherever a voice is raised on behalf of the oppressed, wherever a heart beats in sympathy and compassion, wherever a hand is stretched forth in aid and consolation. It is to this divine inspiration, to this fellowship with God, that Theosophy invites all men of good-will, as it has invited them ever since humanity was born.

STUDENT

Emerson and Carlyle

THE new collection of letters from Thomas Carlyle, which has just been published, is of rare interest, as throwing a new light upon a very complex character. The letters are of more importance than the *Journal*, as the latter was usually written when ill-health made other work difficult or impossible, but letter-writing was reserved for "well days."

Carlyle's estimate of Emerson was generous, as, indeed, might have been expected. In 1841 he wrote of him:

My wife has a copy of a little Book which Emerson the American has written. Not for a long time have I read anything with more profit. . . . This man, for the veracity that is in him, seems to me one of a thousand. . . . As the last malodorous flicker of expiring lamps is to the first cold gleam of morning out of Heaven, so is Puseyism, &c., &c., to poor Emersonism, cold tho' it be.

Carlyle's popularity in America once suggested the idea of a lecturing tour, but his estimate of his own powers was, it seems, a moderate one. He writes:

Arthur Buller, returned from America, preaches loudly the necessity of my going to lecture in America; in all towns he hears from the best judges I am "the most popular author they have," "I might make a fortune," &c., &c. To which I reply in banter and laughter. Yet if one could make once for all a couple of

thousand pounds and retire to the back of a stiff-trotting horse, to green fields, free air and one's own reflections, out of this *Maleboga* for ever and a day!"

Ten thousand dollars seems a modest ambition for one of the greatest writers of the age. Many a yellow journalist today earns more than that per annum.

STUDENT

An Embarrassing Question

WE have long held that the opponents of Biblical criticism and those who profess to defend the verbal inspiration of the Scriptures, are animated far more by a determination to uphold their own opinions than by any real desire to defend the Word of God. We do not, of course, suggest any want of sincerity, but we are none the less very fully persuaded that personal bias, especially when it is combined with theological bias, has a peculiarly blinding effect upon judgment which would otherwise be logical and just. We have now a representative question to put to those who are peculiarly prominent in demanding that the letters of the Bible shall be accepted without cavil or examination. We do not, of course, anticipate a reply; still less do we expect the sudden appearance of consistency where it has for so long been conspicuous by its absence. It may, none the less, be advantageous to illuminate the ground upon which these persons really stand in order that we may know whether it be indeed a Scriptural ground, or whether, as we maintain, it is but the ground of their own obstinate and anti-Scriptural dogmatism.

It is always well to begin at the beginning, and so we will ask these self-appointed defenders of the Word of God whether it is, or whether it is not, a fact that in the first verse of the Bible the Hebrew word *Elohim* is translated as "God," whereas it is a plural substantive, its only possible correct rendering being "Gods." Inasmuch as by their own contention the Bible is verbally inspired, we will ask them whether they will henceforth render the first verse in Genesis as it appears in the sacred and inspired Hebrew text, that is to say,

In the beginning Gods created the Heavens and the Earth,

Or whether they will continue to intentionally alter the sacred writings in order to torture them into accord with their man-made dogmas? We will ask them by what authority they have ventured to change the word of God and in what way they can reconcile this deliberate and serious falsification of the sacred text with their present claim to be the defenders of that text? It is indisputable that the Hebrew original and the English version cannot both be inspired since they do not agree with one another. To which does the inspiration belong? If to the Hebrew original, why do these modern Defenders of the Faith treat that inspiration with a deference so scant? They will hardly venture to claim that the English translation made 300 years ago, has some superior inspiration to the original Hebrew, or that the translators received some mandate from God to alter His ancient word. They will, of course, say nothing, because there is nothing to say. They will none the less continue to use a rendering which they well know to be false, and they will also continue to pose as champions of the Word of God, which they habitually corrupt.

It may be said that this particular illustration is unimportant. That is as it may be, but we use it only as an example, and because it is found in the very first verse of the Bible. *Ex uno disce omnes*, and in order that this shady excuse may be ineffective we propose to follow it up at an early date with other illustrations which are not unimportant. In doing this Theosophy will assume its proper position as the defender of all Scriptures against those who thus wrongfully assume that dignity, in order to give a foundation to their own dogmas which otherwise those dogmas would assuredly lack.

STUDENT

The Acropolis at Athens---Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week shows a view of the Athenian Acropolis, founded by the Pelasgians in unknown antiquity. The subject presents more than usual interest to students of archeology and promises, from the work now being done, to throw further light on the ancient history of Greece. Looking back of the Acropolis and to the left, may be seen glimpses of the modern town of Athens. The Greek Government is now making extensive repairs to restore to the Acropolis its aforesaid aspect.

Higher Criticism and Infidelity

THE Rev. Dr. Minot J. Savage, of the New York Church of the Messiah, has been breaking a lance with the American Bible League. This organization exists for the somewhat Partingtonian purpose of stemming the tide of "Higher Criticism." Its members repudiate *in toto* the methods and results of this kind of work, regarding it as making directly for infidelity. In turn, Dr. Savage charges them with being "the real infidels of the world, and it is infidelity which they are creating." He thus sketches their main contention:

God confined his revelations to one family and its descendants until about 2000 years ago. Never a ray of light, never a whisper of guidance to anybody else. Then He or some incomprehensible third party—it is difficult to give any rational utterance to what is not a rational idea—came down to earth, lived a little over thirty years and went back to the throne of the universe. He did this to save men, and He sent forth His spirit to teach and guide men in all truth. And yet not a third of the inhabitants have yet heard of Him, and the great majority of those who have heard don't believe it.

It is hard to believe that in these days such is the view of anybody, but in truth Dr. Savage does not libel the American Bible League. The quotation represents what one may hear from thousands of pulpits, alternating with laments that "our young men" are leaving the fold and with attempts to bring them back by means of magic lanterns, church picnics, and what not.

The Bible, as Dr. Savage points out, is a set of some sixty or more little books ranging over a period of more than a thousand years, almost accidentally and little by little gathered into one collection; books of all kinds, historical, ethical, biographical, poetical, and mystical.

Nobody then is assaulting the Bible, for the simple reason that the Bible as such has never made any claim. The Bible does not claim to be inspired; it does not claim to be infallible. . . . I suppose that God might have given us an infallible book, if He had chosen, and if He had given us such a book He would have made us *sure* that it was infallible.

But the American Bible League proposes to supply the omission. Fortunately there are at this moment more searchers for and finders of the living present Spirit of Christ than ever before. That Spirit is at work in every department of human life, among those who know what is the source of their inspiration and those who do not. The first mark of its touch on the heart of any man is brotherhood, not dogma. And those who watch the new era of brotherhood dawning on the world, and know that *that* was the Kingdom of which Christ spoke and for which he worked, can but look with pity on the still active centers of religious bigotry and dogmatism.

Human Nature in Indians

THERE is a popular delusion, which the press appears to credulously sustain, that Indians and Mongolians never laugh nor cry. In fact one might suppose, from some accounts, that there exists no emotion whatever in them.

It is true that Indians laugh less than whites, and that the men, when on test, can endure great pain very stoically, but, on the whole, in daily life, the Indians (at any rate the western Indians) show their feelings quite as freely as whites do. During much association with several different Indian tribes there was never noticeable any of the story-book apathy or stoicism; indeed, on the contrary, the Indians usually, on proper occasions, were more exuberant than whites would have been. They have less sense of humor, as we understand it, and a much greater sense of reverence, wherefore they laugh less, but eagerness, anger, joy and similar emotions find full vent unless there is some special reason for repression. Even hysterics are sometimes seen among them.

The truth evidently is that the observers who reported the race as being utterly unemotional never saw much of them except when they had their "company manners" on, and were trying to be stoical.

We hope that such foolish tales will at last die out and give place to a general recognition of human brotherhood in all essential particulars of nature and character. We have too long been divided, race from race, and native from native, by magnified and distorted differences, real or imaginary. It is time now to seek for points of resemblance, of kinship, comradeship and fellow feeling.

Some Views on XXth Century Problems

When Done Right Labor Is Sublime

WE speak much of the dignity of labor, but we might use an even loftier term than this, for is not labor sublime, and even divine, if it be done aright? But upon labor there still lies the shadow of an outworn theology, and man works "in the sweat of his brow," creating a curse where there should be nothing but a benediction.

What after all is labor but the passing onward of the divine creative plan which first took shape within the mind of God? Man stands erect that he may receive the creative lightning flash from on high and he bends to earth that he may stamp the sacred ideal upon the soil and upon its products. The emancipation of labor is the emancipation of the divine concept from the dross of our own lower nature so that it may pass through us uncontaminated by greed and so fashion an earthly kingdom like unto the Kingdom of Heaven. Men are God's workers, with faculties to see and to understand the divine architecture, with intellect, and energy and skill to carry it out.

As the workman is, so also is the work; orderly and beautiful and divine, or disorderly and an offense. Diderot said once of a great artist that the degradation of his character had been irresistibly followed by a like degradation of taste and color and design, that he had placed his life upon his canvas and had displayed his vitiated imagination in his colors. Is this not also true of all work, does not all labor result in a picture of ourselves, legible to all who have the spiritual wisdom which gives vision and understanding?

The ideal, whether it be lofty or whether it be lowly is the matrix of all work and it will bear either the stamp of the beautiful and the enduring, or it will be rejected by nature as unbeautiful and worthless. An ideal pervades our natures, as water is pervaded by the color which we put into it. As every separate drop of water becomes vivid with color, so every action carries upon it the stamp of the hidden ideal from which it can in no way be separated. Human nature has no secrets and the darkest recesses of the mind cry aloud their contents. Our ideals rush forth into the light of day that they may stamp their impress upon face and form and speech and upon the work of our hands. We cannot impose silence upon an ideal nor can we disguise it.

The money ideal, the ideal of greed, is, of all ways in which we have degraded the divine creative power, the most pernicious and the most destructive. By it we saturate our work with the very essences of the unlovely and the impermanent. By it we offer to nature something which is worthless, something which can by no means pass her standard, something which she will not accept and for which she will not pay. The labor which is inspired by a high ideal is a draft upon nature for her best gifts inasmuch as she recognizes its creator as the ambassador of God, charged with the execution of divine perfections.

When the divine ideal of human brotherhood finds a habitation amongst men, then indeed we shall see the emancipation of labor, then will labor become free and godlike, as it once was. Then will the imagination spring from its age-long stupor and the flowers which grow in heavenly fields will give a living glory to the world. Then will men work magic with their hands and whatever their hands have touched will become beautiful and eternal. Then the will of God will be done upon earth even as it is done in heaven and nature will enter into her heritage of a divine government of which men have dispossessed her.

In Spite of Cures Drink Bills Grow

IT is a little unfortunate that prominent temperance reformers should give the weight of their recommendation to advertised cures for alcoholism until such cures have been definitely tested. The miseries of alcoholism are sufficiently acute without the added misery of disappointment.

In one instance a well-known and philanthropic lady reformer recommends a certain "cure," fully describing it and furnishing the address of its proprietors. She states that in one instance the recovery was almost complete in ten days. Now, the majority of alcohol victims cure them-

selves at intervals for much longer periods than ten days, alcoholism being an intermittent disease with its recurring periods of freedom and of temptation. It is, therefore, impossible to speak accurately of the result of any remedy after so short a trial.

The efforts of reformers have, of course, done a great deal along the line of prevention and cure, and we should be the last to underestimate their success. We are, none the less, confronted with a steadily increasing drink bill which it would be foolish to ignore. The gospel of expediency has not proved so efficacious as was hoped, and we have yet to realize that self-indulgence is not greatly checked even by the most convincing proof of its material unwisdom. The desires of the lower nature are far stronger than intelligence, unless intelligence be fortified by something higher and still more potent. We may saturate a child with the conviction that self-indulgence is fatal to health and to wealth, we may prove that misery follows in its train. We may force the intellect to unconditionally capitulate to our arguments. None the less, that child will be a victim of self-indulgence, unless we have shown to it the mystery of its own dual nature, unless we have taught it the habit of discrimination, not in one direction only, but in all directions. The child who has been well taught needs no warning against alcoholism nor any other specialized temptations. All promptings, from whatever source, will bear for it their ineffaceable labels.

It is along these lines that real reform must lie if we would save the next generation from alcoholism and from all other evils. X.

Battleships An Expensive Luxury

IN reply to a question in the House of Commons it was recently stated that the average annual cost of maintaining in commission a first-class battleship of say, 13,000 tons, is approximately as follows: Pay, wages, etc., of officers and crew, £40,369; victualing, £14,604; coal, £23,600; stores and repairs, £9,548; naval ordnance stores, £5,500; or, in round figures, a total cost of £94,000. Adding to this total the amount of depreciation, at a low estimate, the whole annual cost of such maintenance in commission will be about half a million.

In a comparative table issued in a Parliamentary paper to date March 31, 1904, the numbers of battleships, first-class, owned by various powers, are given. Great Britain possesses 49; France, 20; Russia, 16; Germany, 14; Italy, 13; United States, 11; Japan, 6; building among the above nations, 56. This is only one type out of some 14 broad types enumerated. Of the number given many must be constantly kept in commission, and even in reserve the cost of maintenance is great.

The demand for larger navies seems to increase, with little hope, under present conditions, of retrenchment. The national financiers stand confronted with an appalling problem, for the strain cannot increase indefinitely without approaching a breaking point. Are none of the world's legislators and rulers wise enough, great enough, sufficiently altruistic, to bring about conditions which shall divert this enormous disintegrating expenditure into channels of constructive benefit for humanity? Is there *no* help? E.

Indecent & Sensational Advertising

ONE of the many evidences of the extent to which we misunderstand the uses of individual freedom, is the license which we accord to street posters and advertisements. Why should we be compelled against our will to be constantly confronted with lurid pictures of sensationalism, crime and indecency, in order that certain persons may enrich themselves? Why should our children be made familiar with some of the worst aspects of modern life displayed upon our walls with revolting fidelity, and made fascinating with barbaric colors? Some of the advertising matter displayed upon the walls of our cities would certainly come under the ban of the postal authorities if it were sent through the mail, and why should we be more tolerant of a much greater evil? The beauty of a city is a financial asset, to put it upon its very lowest grounds. A commercial community ought to recognize this, and look after its walls and its back yards. STUDENT

Art Music Literature and the Drama

The Music of the Hopis—An Art Fast Passing Away

THE following are extracts from an article upon our American Indian music, by Natalie Curtis, in *Harper's Monthly Magazine*.

The writer naively reveals her motive in the following sentence, and the whole article places those who care less for the fashionable than for the true under distinct obligations:

I sought the Indian songs solely that I might reverently record and preserve what I could of an art that is now fast passing away beneath the influence of the Moody and Sankey hymn tunes and patriotic songs taught the Indians in the government schools.

I had heard since I had come West much of these village-dwelling Indians, and I expected to see in them a higher grade of culture than that of the nomad Navajos or the Indians of southern Arizona. But I was not prepared to find a people with such definite art-forms, such elaborate and detailed ceremonies, such crystallized traditions, beliefs and customs.

Their music astounded me. I felt that I had come in search of gold and had found diamonds. The Hopis' every act of life seems to be a ceremonial rite, containing a symbol, a poetic significance known only to those outsiders who have dwelt long in Hopi-land and are deep-versed in Hopi lore. "We have songs for everything," my little Hopi neighbor exclaimed, when I caught her singing as she combed her baby's hair. "We have songs for dancing, songs for planting, songs for grinding the corn, for putting the babies to sleep, even for combing the baby's hair." . . . These songs for different purposes are different in character. They are all definite in form, with forceful, graceful or poetic words. The Katsina dance songs consist of an introduction on vowel syllables, then the song itself, also interspersed with vowel refrains, and lastly a sort of coda, again on vowel syllables.

And the Hopis sing. Their's is no crooning over a camp-fire, no monotonous chanting, no nasal droning. The men have fine, clear voices, and the women sing softly with a "breathy" tone, the quality of which sounds often just a little sharp in pitch. The gentle lullabies, the pretty, graceful basket-songs of the women, and the melodies to which they grind their corn are as different from the rugged, rhythmic Katsina songs as are the cliffs of the mesa from the blossoms in the fields below. . . . Hopi music is decorative rather than expressive. I use the word in the sense in which it is technically applied to drawing. Indeed, in his art generally the Hopi shows this characteristic, that instead of reproducing an object he symbolizes it only.

This is speaking broadly, and my meaning is best illustrated in the form of Hopi art-work most familiar to Americans—pottery and basketry. In the designs on jug and woven plaque there is no attempt to produce an exact image of an object. The Hopis do not make a picture of cloud, water, bird, flower or feather in the way that we would. They make a sign which stands for that thing. For instance, a wavy line, a symbol so common among Indians, is not intended to depict water; it simply means water. If we laugh at this method of delineation, it is because we do not understand it. So, in Hopi poetry, a single word may stand

for an idea that would take a sentence to express fully. . . . Our system of polyphony and harmony, with its instrumentation, its combination of choral and instrumental effects, and its wealth of tone-color, is a world of which the Hopi, who sings *always in unison*, does not dream. He has but one really musical instrument, the flute, and marks the rhythm of his songs with the rattle, the drum, and the crude scraping of wooden sticks. . . .

The rhythmic quality of the Hopi Katsina songs is, in its intensity and variety of syncopation, unlike anything I ever heard. And it must be heard to be realized, for to me the Hopi sense of rhythm seems far to surpass ours. . . .

Not Hopis only, but Indians of many tribes, have but to hear a melody once or twice to know it perfectly. Never have I found such extraordinary musical aptitude. So quickly, indeed, do the Indians absorb our music that I fear the coming generation will never hear the song that drifted down the trail to me at evenfall—the poet will have vanished from the pueblo.

A COZY CORNER IN THE LOMALAND STUDIO OF EDITH WHITE

FRAGMENT

by ELIZABETH BARRETT BROWNING

ART'S a service---mark;

A silver key is given to thy clasp
And thou shalt stand unweary'd, night and day.
And fix it in the hard slow-turning wards,
And open, so, that intermediate door
Betwixt the different planes of sensuous form
And form insensuous, that inferior men
May learn to feel on still through these to those
And bless thy ministration. The world waits
For help. Beloved, let us love so well,
Our work shall still be better for our love,
And still our love be sweeter for our work,
And both commended, for the sake of each
By all true workers.

the simplest title page. Printing need not be a mere servant of the other arts, neglected, undervalued, as it too often is today. It should be their co-worker and compeer.

STUDENT

As THE story goes, Queen Mary at one time, during a hunting trip into the highlands of Perthshire, offered her own harp as a prize in a bardic competition. It was awarded to Miss Beatrice Gurdyn, of Banchory, and later found its place in a family collection of Stuart and Jacobite relics. It closely resembles the famous harp of Brian Boru, and about a hundred years ago, when it was fitted with strings and played upon, it was found to possess a tone of remarkable sweetness.

The Art of Printing

IN the old days printing was an art. Today, in general, it has become merely the servant of the other arts. There are, however, signs that point to a Renaissance, and there are, here and there, printers who are going back to the ideals of the old days when men loved their work as they loved their children. There was no commercialism in those days, for the art of printing evolved naturally from the old missals and manuscripts so lovingly traced by those who knew their value.

The one ambition of the early printers, in common with their comrades and fellow craftsmen, the old illuminators, was to make their work as beautiful as possible; and if they could attract the favorable attention of some rich patron and obtain such support as was accorded to painters, for example, so much the better. But after a while they discovered that profit lay in the multiplication of copies, and then commercialism stepped in.

There is today, not unnaturally, a reaction towards greater simplicity. It is only the tyro who refuses to admit that printing is an art in itself, which has its limitations, to be sure; but the great principles of balance, of proportion, of symmetry and surely of design must be understood by one who aspires to produce truly even

TELL ME WHAT IS SORROW? IT IS A GARDEN BED.
AND WHAT IS JOY? IT IS A LITTLE ROSE, WHICH IN THAT GARDEN GROWS.

— R. H. Stoddard

A Portrait Sketch

FOR knowledge is a steep which few may climb,
While duty is a path which all may tread.
And if the soul of life and thought be this—
How best to speed the mighty scheme, which still
Fares onward day by day—the life of the world,
Which is the sum of petty lives—how then shall each
Of that great multitude of faithful souls,
Who walk as on the heights, fulfil himself,
But by the duteous life which looks not forth
Beyond its narrow sphere, and finds its work,
And works it out? Content, this done, to fall
And perish if Fate will, so the great scheme
Goes forward!

— L. Morris

WE read repeatedly that Christianity and Theosophy are not opposed to each other, but that "any Christianity which is not Theosophic is bogus and that any Theosophy which is not Christian is likewise bogus."

Such a belief is full of comfort and encouragement when one considers the numbers of women who lead beautiful, unselfish and useful lives on the Christian ideal which they know, who would yet be much happier and do better work if they had the knowledge of Theosophy which perhaps they have never heard of and may never know in this life.

Such an one is a friend of mine, an English woman, the wife of a Christian minister, whose parishioners are almost entirely black. Of a strong individuality, intelligent above the average, and having a wide education, with a positive genius for teaching, fitting her to shine in any position, her whole life is unselfishly and consistently devoted to the spiritual, physical and social uplifting of the people amongst whom she lives. Of her it may be said, as of Aurora Leigh:

She never found fault with you, never implied
Your wrong by her right; and yet men at her side
Grew nobler, girls purer.

Are any ill and in need of nourishment? She prepares and carries it with her own hands. Is there a marriage between young and promising members of the church? Their little feast must be held at her house. Is she sought as godparent for a precious baby? Certainly she will be this if the parents will forego carriages and ostentation, and if she may carry the baby walking to the church. There being no place where little meetings may be held, she has no doubt or hesitation about her duty, her house is always available, and whatever the event, if its object be the betterment of her people, it may take place there. And so if one goes there, one may find the room arranged for a class, or for a meeting of the young men's club, where they read the illustrated papers and play games. Here the children gather happily round the Christmas tree, and here the ladies meet to dress the dolls which delight the children's hearts. Here on Sunday afternoons the little ones come to learn some of the beautiful truths of God and listen to His teaching, and there are two children in the Lotus Home at Point Loma today who for several years have gathered beautiful thoughts from her lips.

Day by day, year after year, in spite of much ill health and many discouragements, she goes bravely on, receiving very little help and encountering the pitying smiles of those who like to keep their drawing-rooms as such, and marvel at her way of keeping hers. Some few do help her in the intervals of their own affairs, but of the constant, almost unconscious support, of the cheerful coöperation which exists in Lomaland, she knows nothing.

To the women who live so happily on "the Hill," the work they have to do is all sufficing; their perfect trust in the Law assuring them that they will go out to work in the world when the right time comes. But to those

who come and see, admire and appreciate, and then return to their own places, the eager thought must come, "Oh! that the time may soon come to be when the wonderful work now being done on the Hill will spread like a life-giving stream into the world."

And as we know that a thought, like a pebble thrown into a lake, makes unending circles outwards, so the happy and privileged ones of Lomaland send out constantly loving thoughts of comfort and support to their sisters in many and different climes, who are struggling bravely on, and aiming to realize the ideal of the highest they know.

Such thoughts must have beneficial effect, and will enable the recognition of the workers to be more immediate; and their work more effective when the great day comes for them to go forth into the world.

Sister, we are surely bound
On the same journey—and our eyes alike
Turn up and onward: wherefore now thou risest—
Lean on mine arm, and let us for a space
Pursue the path together! Ah, 'tis much
For this so weary pilgrimage, to meet
A royal face like thine: to touch the hand
Of such a soul-fellow; to feel the want,
The upward crying hunger, the desire,
The common hope and pathos.—*Buchanan*

BEATRICE GRIEG

For Intelligent Motherhood

MR. GEORGE MEREDITH, the English writer, has addressed the following letter to the Dorking Women's Liberal Association:

At this present time women need encouragement to look out upon affairs of national interest, and men should do their part in helping them to state publicly what has long been confined to the domestic circle—consequently a wasted force. That it can be a force men are beginning to feel. That the exercise of it is an education we see already in the enlargement of their view of life and the country's needs. So there is hope that the coming generation will have more intelligent mothers. This holds true whatever side in politics they may take, and it is the main point.

By studying public matters diligently you will soon learn to perceive that there is no natural hostility between the sexes. Their interests are one when they have learnt to step forward together. It is amongst the lessons devolving upon them to teach the male kind who are not yet enough enlightened in that direction.

A Woman Egyptologist

IT is not enough to know truth; one must have some understanding of the human mind, otherwise one cannot impart it. The close connection that anciently existed between Egypt and prehistoric America has not needed the archeological evidence of Yucatan. The explorations in the former land alone, properly interpreted, afford all the evidence that one needs and it has been in the interpretation of the discoveries of Egyptologists and in their adaptation to the general mind that Amelia B. Edwards has been of such extraordinary service. We have no Egyptologists who write so picturesquely, which is not strange, for Miss Edwards, before she began writing on Egypt, had thirty years of literary work in the romantic school. She worked at style as if it were a science and she mastered it, studying it like a poet, calculating even the play of vowel sounds and the music of periods. Such has been neither the privilege nor the vocation of the ordinary Egyptologist. The result has been that Miss Edwards' writings have opened doorways to the many that otherwise would have been opened only to the few. Yet Miss Edwards was more than a writer; she knew Egypt personally and she loved its very air and soil; she was more than a mere photographer of records; she was an interpreter and translator.

STUDENT

Frances Power Cobbe

IT is not strange that the woman's columns of so many papers should contain tributes to the memory of the late Frances Power Cobbe, of England, one whom even her enemies admitted "never wrote a line not in full accordance with her convictions." Miss Cobbe was one of the first among her sex to suggest gardening and floriculture as ideal occupations for women. It is not strange that, having lived an ideal childhood amid the pleasantest of country surroundings and happy relationships, she should have reached an advanced age, strong, sympathetic, original and most compassionate. While still a young woman she broke completely away from her early religious moorings and was banished from her home for doing so. A hint of the frankness that was always so marked a characteristic of her nature we find in the following line from her autobiography: "How pleasant and interesting and not alto-

True Irish Hearts

LET Fate do her worst; there are relics of joy,
Bright dreams of the past, which she cannot destroy;
Which come in the night-time of sorrow and care,
And bring back the features that joy used to wear.
Long, long be my heart with such memories fill'd!
Like the vase, in which roses have once been distill'd—
You may break, you may shatter the vase if you will,
But the scent of the roses will hang round it still.

— Moore

STATISTICS tell us that since 1851 the population of Ireland, through emigration, has been lessened 3,961,011. "In a little over half a century nearly four millions of Irish people, mostly in their youth and early manhood, . . . have left their native land. Perhaps the fact helps to explain why the Irish are so great a power

INTERIOR OF AN IRISH HOME—CONSERVATORY, KILRUDDEY HOUSE

gether useless life has been to me, *although no man has ever desired to share it!*" For many years Miss Cobbe interested herself in the work of rescuing outcast girls, being associated with Mary Carpenter. She was also prominent in connection with the anti-vivisection movement. But women have particular cause for gratitude because of the advanced stand which she took in support of the Matrimonial Causes Act, by which women were enabled to obtain separation from brutal husbands, a great step forward at the time when it was taken in conservative England.

STUDENT

IN the *Commonwealth of England*, Book I, chapter 2, (quoted in *Bingham on Infant and Coverture*, page 184,) Sir Thomas Smith is quoted as follows:

The naturalest and first conjunction of the two toward making a further society of continuance is of the husband and wife, each having care of the family; the man to get, to travel abroad and to defend; the wife to save, to stay at home and to distribute that which is gotten for the nurture of the children and family; which to maintain, God has given the man greater wit, better strength, better courage to compel the woman to obey by reason or force; and to the woman beauty, fair countenance and sweet words, to make the man obey her again for love. Thus each obeyeth and commandeth the other, and they two together rule the house as long as they remain in one.

abroad, and why Ireland suffers so much from losing so great a proportion of the flower of its youth."

These figures do not take into account the vast numbers that have left the country since the year 1698, when, for a considerable period, 12,000 are said to have emigrated every year from Ulster alone.

Viewing this great stream of life from the more subtle standpoint of thought and emotion, what tides of feeling are constantly being directed towards that small green Isle; for Irish hearts remain true to their country. Land and sea may separate them, but all fate-imposed barriers but serve as magnets to intensify the love for their native soil.

Tenderly are the green vales and wooded hills remembered. The little white cabin remains dearer than would be a palace in a foreign land. Generation after generation may pass, but the love of the old home is the truest and most deeply cherished heirloom.

Who knows the meaning of this great inner tide? If love—love that has passed through the purifying flames of anguish and despair—become a creative power, what may not spring from Ireland! For surely, the most tested and most loyal love that ever quickened in the human breast hovers over every blade of grass that grows on Erin's soil. A. P. D.

My only desire is to know the truth, my only fear, to cling to error.

The Aztecs and the Toltecs of Ancient Mexico

THERE are few nations whose legends do not tell of some great warrior, ruler and teacher, who, departing, promises at some time to return. They are pictured as *departing* rather than dying. Even the British Arthur, when the boat takes him over the waters beyond the horizon, wounded unto death, was yet expected to be healed in the city of light so that he should some day return to his people and reestablish his kingdom and the Order of his Knights.

One of the noblest of these figures is that of Quetzalcoatl, the King Arthur of the Aztecs and Toltecs of ancient Mexico. A date can no more be assigned to him than to the British teacher-king. The legends of his coming differ. Some say he came from the direction towards which he departed, "the way of the rising sun."

He was of another race from those whom he ruled, fair-skinned, full-bearded, of great stature, with black hair, and dressed in flowing white robes. But his people, with whom he dwelt twenty years, were small, sun-tanned and beardless.

He came to them very early in their history, for then they knew no arts nor writing. These he taught them, picture-writing, work in silver, gold, lead, tin and copper, painting, carving and architecture. He inspired them to virtue, weaned them from their love of war, stopped the sacrifices of men and animals and substituted offerings of fruit, flowers and perfumes. When blood was to be shed at all, he who sacrificed must draw it from *thorn punctures in his own body*. He taught them astronomy and the calendar, and the science of medicine.

At last he departed, journeying towards the Atlantic coast. But from the coast he sent back word to the lamenting people that some day he would return with others like himself and guide them once more in the ways of growth and peace.

No one knows when this was; obviously very far back. And it is only a sample of which the like could be drawn from the traditions and legends of many a people.

Who were these men? Mostly solar myths and so forth, we are assured by science.

But the essential point of such legends is that the heroes of them are depicted as being morally and intellectually far in advance of the peoples they taught. If they were invented, if they were merely deified savage chieftains, personified planets, and what not, whence the ideal to which they were made to correspond? For they were not only far in advance of their people at the time assigned to them by tradition, but also of the people of the later times in which the myth is regarded as having arisen.

They were made responsible not only for the primary teaching of arts and handicrafts, but for a spiritual teaching so far ahead of later popular practice that the tradition is compelled to admit a moral retrogression since their day. In other words, they are the shining foci about which is the halo of the universally credited "golden age."

We believe that these men, the King Arthurs and Quetzalcoats of many a legend, were real men, *not* magnified—if something distorted—by the lenses of memory and tradition; that every early race has had a spiritual and intellectual keynote sounded for it and in its midst by one or more members of an unbroken line of humanity's teachers, men who have appeared and do yet appear on earth in response to a definite purpose; who withdrew when they had done as much as the limits of their peoples permitted; and who, though reappearing from time to time as a momentary field of work opened, collectively await the hour when humanity as a whole shall have passed a certain point. We think it is now passing that point. The evil currents running for ages have reached their intensest strength. Humanity is more conscious of pain, because more conscious, than ever before; and spiritually at its darkest. But it is also awakening dimly to the medicine of its malady—brotherhood. When it has learned something of the power of that, when into that chord of harmony the fierce discords have begun to resolve, then, we think, will approach an hour for the reappearance of the great teachers and lights of

humanity, the line that stretches back far behind the point at which infant history and tradition open their eyes. And that hour is surely now very near.

The Emigration of the Ancient Celts from Central Asia

THE word "Celt" generally calls up in the popular mind the picture of a small dark-haired, dark-eyed, quick, nervous man—the man, in fact, of the western fringe of the British Isles, and southward. But it should not do so. The Celtic was the second wave of immigrants into Europe from Central Asia, and the characteristics ordinarily ascribed to the Celt are really those of the first wave, the "Euskarians," neolithic men of the Quaternary geologic period. The Celt was a big-boned blond, not distinguishable from the man of the third wave, the Teutonic.

It was the pre-Aryan Euskarian that was the little black man. When the Celtic wave overran Europe and reached Britain, it did not in the latter islands, nor in northwestern France, exterminate the Euskarian. The small people remained, and remain, on the western fringe, parts of Ireland, the Highlands, Lancashire, North Wales and Cornwall. There was some blending with the Celtic conqueror, and the conquered took his language. The same happened in France and Spain, and the Basque speech is probably the only representative of the Euskarian.

The modern Briton is, therefore, very mix-blooded, but in families in any part of the country an almost typical Euskarian child may even now appear; and, as said, that type is still fairly pure in some small western and northern areas.

The Euskarian was, of course, no Aryan, though he, too, came—according to the teaching of H. P. Blavatsky—from Asia. There was nothing Aryan about him. One would be inclined to suggest that he was a Lemurian remain, expelled by the Aryan invader from his Asiatic home and followed up to the western fringe of Europe.

Even he was not the first inhabitant of Britain and Europe. There was a still more ancient "lithic" man, the Palæolithic. Of him, too, we have quite definite remains. But blood is not one of them, for a glacial epoch absolutely froze him out and separated him from his Neolithic successor. In some respects he was a better man than the successor; he was not a cannibal and the other almost certainly was. Moreover, his achievements in art seem to have been very high. "Implements of horn, bone and wood"—says Gould in his *Mythical Monsters*—"were in common use among both races, but those of the older are frequently distinguished by their being sculptured with great ability, or ornamented with life-like engravings of the various animals living at the period; whereas, there seems to have been a marked absence of any similar artistic ability on the part of Neolithic man." In proof of this, Gould reproduces a Palæolithic rock-sketch of a reindeer feeding, which Laing justly says "would do credit to any modern animal painter."

These men, according to H. P. Blavatsky, were remains of the Atlantean race, the fourth great human period, counting the Lemurian as the third. And she asserts that they were semi-savage contemporaries of a high civilization whose relics are mainly beneath the Atlantic waves. Savagery and civilization existed then, as now, side by side. That we have not yet uncovered the relics of that civilization is partly due to the fact that they are submerged, and partly, as Laing points out, because only a very small portion of the earth's surface has yet been explored.

Recent Strange and Important Archeological Discoveries in Mexico

MANY ancient ruins of Lower Mexico have been explored in years past, but it has been left the well-known American archeologist, Frank C. Pierce, of Dallas, Texas, to discover, after an exhaustive and perilous search, the wonderful ruins of Tepeji Viejo, in the State of Puebla, said to be the castle of Montezuma, whose great treasures are hidden there. The existence of this castle has been unknown to many people living within only a few miles of the place.

The mysteries, history and difficulties experienced in exploring this ruined castle are interestingly narrated by explorer Pierce.

Nature

Studies

A Glimpse of Another Plane of Life

THE beautiful insect shown in the photograph is what is known as the Atlas moth, perhaps because of its size, which is often five or six inches from tip to tip of the wings. Below it is the cocoon, from which it emerged. The cocoon is split open, showing the two wholly distinct casings and the chrysalis itself, with the special forms for the wonderfully developed antennæ. It is these same antennæ which are, if some recent theories be true, the chief distinction of this particular moth.

It is now claimed, by those who think they know, that the antennæ of insects are really auditory organs whereby they *hear* the shapes, density, etc., of objects as we see them. If this is true, then this Atlas moth must have a most extraordinary range of perception, if one can judge from the number and varied lengths of the branches which give his antennæ such a feather-like appearance. If they correspond with similar arrangements in the human eye and ear, he must have a perceptive faculty ranging over several octaves of vibration and be accordingly vastly superior to the ordinary insects with straight antennæ, unless there is a different and perhaps more simple contrivance in their organs. At any rate, these reflections open a very fascinating field of investigation, and one which will, from the factors in the case, necessarily be conducted with uninjured specimens, unfortunately affording no proper opportunity for the vivisection which modern scientists are so ready to practise on victims sufficiently helpless to deprive the operation of any possibility of danger to themselves.

And, viewing this moth from another standpoint, one cannot but be awed by the miracle whereby the fat cylindrical worm constructed from its own body a house formed of two layers of gummed silk, with no attachment between the two, and inside a third case of fine, thin horn most beautifully modeled to his own *future* form, and then so entirely transformed his own substance into a beautiful shape so wholly unlike the former one.

Are we to suppose that he did it by his own intelligent craftsmanship? Or that it just naturally happened by "natural law?" Or that there are nature-spirits who do such work, as a man does farming or building? What a craft that would be, or is, to build with living tissue according to the patterns ordained by other beings of a higher degree of development!

THE *Scientific American* disagrees with the facts about bird migration recently quoted from the *Saturday Evening Post*. The former believes the surface flights in daytime to constitute the migration, while the latter calls such "mere picnic parties of laggard bands." According to the *Scientific American*, migration is entirely a matter of food and temperature, while the *Post* declares such factors to be wholly inadequate to explain migration, which often occurs irrespective of, or even in opposition to them. On the whole, we believe the weight of evidence to be strongly in favor of the radical views expressed in the *Post*, which are quoted at some length in the *NEW CENTURY PATH* for May 8th.

EVENING

by SHELLEY

THE sun is set; the swallows are asleep;
The bats are sitting fast in the grey air;
The slow soft toads out of damp corners creep;
And evening's breath, wandering here and there
Over the quivering surface of the stream,
Wakes not one ripple from its summer dream.

There is no dew on the dry grass tonight,
Nor damp within the shadow of the trees;
The wind is intermitting, dry, and light;
And in the inconstant motion of the breeze
The dust straws are driven up and down,
And whirled about the pavement of the town.

Within the surface of the fleeting river
The wrinkled image of the city lay,
Immovably unquiet, and for ever
It trembles, but it never fades away.
Go to the
You, being changed, will find it then as now.

The chasm in which the sun has sunk is shut
By darkest barriers of cinereous cloud,
Like mountain over mountain huddled, but
Growing and moving upwards in a crowd;
And over it a space of watery blue,
Which the keen evening star is shining through.

THE ATLAS MOTH AND ITS COCOON

The Family at the Main Gate

IF the recent picture of the Main Gateway to the Homestead grounds had been a little wider to the right, it would have shown the pretty little octagon "guard-house" which is the headquarters of the custodian of the gate. It is all overgrown with honeysuckle vines, and in a tangle of stems close up under the eaves a pair of towhees have started housekeeping. The nest is built of grassroots, picked from a recently plowed field, and lined with horse hair. Already it contains five or six pale blue eggs, sparsely speckled with chocolate brown. The little brown mother keeps very steady hours on the nest without any fear of the human beings so very near that they could touch her with an outstretched hand. She knows that they will not harm her and that their presence is a protection from hawks, shrikes, and the great owls which live over in the tall cypress hedge.

The master of the house looks as though he had fallen headforemost into a bottle of crimson ink and brightly stained his brown cap and coat as far as the wings. He is very devoted and regularly brings food to his spouse who is so closely confined at present by domestic duties. Apparently she has developed a vigorous appetite, since she has plenty of time to think about it, for she has a dreadful story of starvation to tell every time he comes. Sometimes she scolds if the morsel is not to her liking and he apologizes or excuses himself as well as possible.

A free lunch system will soon be inaugurated for their benefit and will no doubt be very welcome because bird-food is rather scarce this year, even this early in the season.

There are many nests around the Homestead; in the vine which can be seen in the picture in the May 1st number there must be at least a dozen, of several different sorts, but they are hidden so that we cannot take

quite so direct an interest in their affairs as we do with our musical comrades who almost touch elbows with us in their homes under the guard-house eaves.

NATURE LOVER

Killing Animals for Amusement Should Not Be Encouraged

AT Avalon Bay, Catalina Island, not very far from Point Loma, indeed visible from here, was recently committed a hunting exploit worthy to be called a crime. A sunfish, said to be the largest of its species on record, was captured and killed merely for fun, because it was big. The sunfish is of no use whatever as food or for any other purpose, so that there was no reason at all for killing this creature which weighed about a ton. It was done in mere wantonness without any justification. It is true that his bulk does not logically make his life more valuable or sacred, but it seems a greater sin to kill a large creature uselessly than a small one, possibly because we think that it must have cost Nature more work to produce it; which is not always the case. Anyhow this great fish was caught and killed merely that he might be photographed and boasted about. We yet hope that the long-deferred time will come when the human race will cease to find leisure in ruthless vandalism and death of inoffensive creatures.

N. L.

Universal Brotherhood Organization

Central Office Point Loma California

THE announcement that Katherine Tingley would deliver an address at the regular meeting of the Universal Brotherhood and Theosophical Society in Isis Theatre last Sunday evening served to call out another of those large crowds of enthusiastic and intelligent San Diegans which invariably throng the theatre when there is a chance of hearing or seeing the Leader and Official Head of the Theosophical movement.

She was at her best on this occasion, all signs of the weariness and hardships of her recent long journey around the world having entirely disappeared, and a fund of energy and vigor pouring forth from her that held the utmost attention of her large audience for nearly an hour, during which she was frequently interrupted by spontaneous and prolonged applause. Under the general heading of "Thoughts by the Way," she gave a series of beautiful and vivid word-pictures, which made a deep and lasting impression upon those who were fortunate enough to hear them.

She began her address by disavowing all intention of indulging in either high-flown rhetoric or idle theory—just plain, straightforward common-sense being the greatest need of the hour. Humanity had run wild on theory, she said. There were so many different theories in the world today that they could not all be enumerated in a single evening.

"We have been taught to differ instead of to unite. There are millions of times more books today than there were a hundred years ago, yet the world has not grown one whit better. There are hundreds of isms and religions, yet the world is no better than it was two thousand years ago. Something is radically wrong. Our ecclesiastic friends each hold that they have truth in different aspects, each claiming to have the highest, yet the highest aspect of one does not agree with the highest aspect of the other, rather they contradict; and the inquirer concludes that neither is the truth.

"Theosophy combines the essentials of all religions," said Mrs. Tingley. "Man is divine and the other nature of him is not necessarily an evil nature, but an undeveloped nature. He can only raise as he lifts himself, shaking off the bonds of selfishness and reaching for the higher things."

Mrs. Tingley, when applauded by her audience for some of these sentiments, said she believed that if the great initiate, the Nazarine, were in the audience, he, too, would applaud her utterances, for they were no different, in reality, from those to be found at the base of all great religions and as given to humanity by all true reformers and teachers.

Turning next to the subject of cause and effect, she gave striking and graphic pictures of two of the many instances that have come under her observation of the

KATHERINE TINGLEY AT ISIS THEATRE

Striking & Impressive Address of the Theosophic Leader before a Large and Enthusiastic Audience

Reprinted from the San Diego News

awful effects of hypnotism. She described a visit to Folsom prison.

The warden, at her request, pointed out his worst cases. One of them was a wife-murderer. Mrs. Tingley, after stating that she was not a missionary, but was contemplating an ideal reformatory ("And it will be built," she assured the audience, whereupon there was renewed

applause), induced that official to remove the man's irons and permit her to talk with him alone.

She said she had shed no sentimental tears but, with a smile upon her face, told him that if she had her way he would be permitted to go out into the light and air, that the end he was going to—the gallows—was not the end of consciousness or of life, and that she thought he had already suffered enough for his crime.

In the twenty-minute interview granted by the warden, she secured from the prisoner the story of his crime. He admitted killing his wife, saying she had been perfidious. Mrs. Tingley tried to find excuse for the woman, and learned that she had once been a good wife and mother, but that she had come under the control of a man who had hypnotized her. He had studied with a professional hypnotist, had learned he had power to control others and had applied it in this wrong way. "Hypnotism is the world's great curse," said Mrs. Tingley. She added that the very day she was speaking with the murderer in prison, the cause of the crime was lecturing in New York; then, to the astonishment of her audience Mrs. Tingley said: "He has lectured in this city and has fooled some of you."

Another word-picture was that of a fallen woman in New York, once a helpful charity worker on the East Side of New York, a co-worker, in fact, with Mrs. Tingley in that city. Mrs. Tingley diagnosed this case as the result of hypnotism also, and said that the woman had been restored to her family and friends after a rest in the country.

After a musical number by Students of the Isis Conservatory, Mrs. Tingley returned to the stage and said a few kindly words in closing. She bade her audience not to leave the hall with too gloomy a view of life, but admonished them to remember that man is divine, and to teach it to their children. Parents should study their children, not only lovingly, but hopefully and intelligently. They should be taught the divinity of man and other of the great truths of Theosophy.

There were several splendidly given musical numbers during the evening, and Mrs. Bertha W. Bundsmann, prior to the address of Mrs. Tingley, gave a most effective recitation of the story of Rebekah and Isaac, from Genesis. Mrs. Bundsmann wore the Oriental dress of a woman of the period of which her story had to deal.

The Material and the Spiritual Possibilities of the State of California

An address by E. August Neresheimer at Isis Theatre, Sunday, June 19, 1904

WHAT can be said about the future of this great State that has not already been touched upon, in part at least, by some of our brilliant writers? Its future is the marvel of thinkers, for they realize that its situation geographically, closest in touch with the swarming millions of Asia, as well as its long coast-line and fine harbors, fit it naturally to be the Empire State of the Union, so far as its coming commerce is considered. The piercing of the great Isthmian Canal will mechanically develop latent resources; the mineral wealth of California is yet almost untouched, in comparison with what will be done; while in educational and philanthropic progress, it outstrips any of the other States. Can any University in the country show a spirit so ambitious of true learning, and so generous with its funds, as at least two of the Universities of California? Is not the very name "Californian" symbolic of the spirit of Progress?

Now a word about the countries bordering on the littoral of the Pacific. Take a map, examine the tremendous coast-line washed by the waters of this mightiest of oceans; notice its almost continuous sweep, and marvel at what it implies. Think again of the growing peoples living in the Islands of the Western Sea: Australia, New Zealand and the Philippines. Survey with me the unnumbered swarms of human beings living and working out life's problems in Asia; and pause with me to glance at that mighty little Island Empire, Japan, which is today teaching a lesson of humanity in warfare, and mercy to a foe a thousand times more powerful than itself, apparently. And when you have done this, and are ready to realize what it all means, then cast your eyes on your own, *our own* beloved State, and you may with justice dream of its grandeur to come!

In the mysterious working of the laws which govern the rise and fall of civil-

izations, it has been decreed that the Aryans, call them Caucasians, even, or, better still, white-skinned men—it has been decreed that these white-skinned men shall control and govern the Earth; and that it shall be their destiny to carry the message of fraternal good-will, and the blessings of a just and rational jurisprudence to all others, who may be found needing it. Westward the course of empire takes its way; the flow of the immense evolutionary wave spread along in centuries past, until it broke with a resounding roar on the shores of the Pacific Ocean about the middle of the last century. The White men came to settle on these shores, they grew to be a people, a separate State, and then their eyes began wandering Westward!

From the great Continent of Asia did the first Aryans come, in millenniums past; they made the tour of the globe, carrying all before them; and now behold the white man again, knocking for admittance at the closed and barred doors of the mystic and dreamy Orient.

But there is another side to the picture. The Orient itself is beginning to wake up to the stern necessities of the present day. One of the peoples composing it, Japan, is now ranked as a full-fledged first-class military Power; *more*, Japan is today receiving the respect of the whole civilized world, in view of the humane and kindly manner her war is being carried on. Can our Western nations show a deeper strategy, better soldiers, better discipline among them, more humanity, and more exalted patriotism, than those manifested by the little five-foot men of Nippon?

Then China, what is happening to her? She is creating an army; she is increasing her navy; she is paying Japanese officers to drill her troops, and is em-

playing Japanese instructors to make a school system for her millions of young.

So that when it comes to a question of racial supremacy, we face the fact that we have before us men of another race, of another blood, who are our equals in all that we have taught them; that these men realize pretty well what they are about, and are pretty well determined to get just what they want, for they know how to wait till they are ready, with true Oriental patience!

Do we Californians realize to the full the situation we have before us? That on us would fall the heaviest blows of a racial war of any kind whatsoever; and that it would be our interests which would most suffer, were so dire a calamity come to pass? May the great Law prevent such an occurrence, for we would have to face some two-thirds of the population of the globe; and if they become what Japan has become, and it is not impossible, then what have we to look forward to? Not death, not extermination, not a remorseless and bloodthirsty foe, but in all probability an enemy like Japan is proving herself to be to Russia.

But this, I believe most emphatically, will never come to pass. War is growing more and more a universal public nuisance; the patience of mankind is nearing its end; we are more than beginning to see that the shedding of human blood is useless, when our brains will cut us a way out of a difficulty; so that the future promises us no longer a contest of steel and flame and murder, but a contest of will and intelligence!

Are we of the white race to be beaten at our own game of civilization and progress? Are we to allow these yellow men to outstrip us in the race for commercial supremacy, and in the records of history to come, are they to stand forth as the abolishers of warfare by substituting for it their subtle brain power? Are they to be our material and spiritual teachers? No! a thousand times no; and again NO!

Therefore it behooves us well to be up and stirring. It behooves every true son of California here tonight, and every one of her daughters as well, to recognize that this is no vain and empty thing, but a reality growing up at the threshold of our home. Let the sails of our ships whiten the waters of this vast ocean;

let our wares and our commodities be carried into every hamlet of the Eastern lands, and let them become a necessity to the people there. Let us realize the fact that no other nation on the earth is so favorably situated as we are to control the trade, and, verily, the future policy of these Oriental folk. This our city of San Diego is the nearest port to the center of the coming national life of the yellow races, and this fact is being with every day more keenly realized. From here great steamship lines will run, carrying the goods of the West to the ports of the East. The day is coming, and it is coming swiftly, when the center of our national gravity will be shifted from the Atlantic to the Pacific; when the heart life of this mighty republic will beat on these very shores of California.

Let us receive the sons of Asia into our Californian Universities. Let us educate them; teach them to respect us, and our civilization; and then send them back home with a sense of their indebtedness to us. It is our duty, and we shall have to face it one day or another, very differently from what we think now.

No other people in the history of the world has had such onerous, weighty and sublime problems to solve, as face us now. Backed by the grand power of our sister States of the Union, we shall be able to do more towards the establishment of a true and real Universal Brotherhood of Humanity than was ever before granted to any people known. Australia, New Zealand, the islands of the Pacific, China that is to come, the Peninsula of Hindustan, and Japan, are slowly turning their eyes our way for supplies, and it may be for help. Shall we fail? Never!

It cannot be denied that the trend of civilization is Westward. It is coming fast, not only in material things but also spiritually. California is the center towards which the energies are being directed. One great teacher of humanity has said that the west coast of the United States of America will be the seat of the first prominent development of a new spiritual force in nature.

Events, national and personal, are making steadily for the unfoldment of that one great truth and principle: The unity of all things, "the Universal Brotherhood of mankind."

THREE distinct steps lead to wisdom. These are, a knowledge of

History in the Light of Reincarnation

for the foundations of a new race which will take at least 50,000 years in perfecting.

facts, the knowledge of their relation or meaning, and the putting what we know into practise. History consists of two elements—the faithful record of things and the philosophy of that record. Reincarnation never has been taken into account by historians, and yet nothing has a more direct and important bearing on what we are. History, so-called, is only a disjointed fragment, a few bits out of a wonderful mosaic. At one time it was the custom to give a record of battles, and crimes, and call that history. On the ancient monuments or in the cuneiform inscriptions, we read of kings who waged war and took captives, but hardly ever a word about the varied life of the great mass of the nation and of the world. The perfect history has yet to be written: and only a great adept could write it.

"Science is knowledge systematized," and one reason why a preference is given to the study of physical science, is because of the well-defined field in which that study is carried on. The facts, say in chemistry, are definite, and the laws relating these facts, or explaining them, can be known. But the problem of human life is not so simple. Here, also, it is very important to get at the facts. And, according to Carlyle, the trouble is not so much that many things have not been written, as that they have been *miswritten*. We know how difficult it is in our day to get at the facts. Newspapers are often the mere instruments of political parties, and it would be too much to expect them to state the case of their opponent in the same way that they give their own side of the question. Dr. Johnson said that in reporting the speeches in Parliament he "took care that the Whigs should not have the best of the argument." If it be such a difficult matter to know what is happening in our own time, we can form some estimate of the labor of the historian in trying to find out the facts which happened many centuries ago. But even if this could be done, there would still remain the correct explanation of those facts, or the philosophy of history. "Why did such a man or such a nation act in a certain way?" and "what was the result of such action?"

How can we make any progress in the explanation of events, or in showing the true philosophy of history, if we leave Reincarnation out of account? No doubt, other things, such as fairness, keen penetration, freedom from prejudice and the like, are needful in the historian. Do we not find that those who compile histories of Greece or Rome very often color the life of the past with their own political or religious views? But, while that is so, who can fail to see the vast importance of a knowledge of Reincarnation? If the Romans of the early days of the Empire returned as the Elizabethan English, what a new view it must give us of history. Does "history repeat itself?" If so, it would be an intricate, but most important problem to trace in the present the results of the past. Where should we look for the ancient Egyptians? Under what new names do the old reformers, poets and heroes reappear?

Difficult as these problems are, they are simple in comparison with others. The present is not simply a reproduction of the past. New mixtures of races produce new results, which we see in operation daily. The mingling of various races in America is said to be the care of advanced beings, who are thus preparing the way

The task of the historian and of the wise statesman should be free from all prejudice, and removed above all party lines. In the early days of a country there is much merely local legislation; each section wishing to have more than its share of the public funds. In a more perfect state, the welfare of the whole is paramount. In like manner, as the world advances, universal welfare will be the goal of the true statesman rather than the aggrandizement of any one section of the whole. The dream of the poet, "The individual withers, and the world is more and more," is the soundest philosophy, and will mark the history of humanity as it grows to the measure of the stature of perfect manhood. Yet, each note of that far-off, divine harmony must be developed to individual perfection along its own lines, else there could be no harmony. It is in this way that we must explain many strange problems of history, such as the seclusion, for a time, of a nation or race; and also the strong individualism that youth fosters, whether in nations or in portions of a nation.

It is because of the rebirth of races and nations that "history repeats itself," and that we find the course of time marked off into cycles great and small. H. P. Blavatsky said it was not such a difficult thing to describe the future when you knew the past. But the correct knowledge of the past—"there's the rub!" The astronomer can predict the course of a comet, or the return of an eclipse when certain elements are known. The true prophet is an astronomer on the ethical plane.

We know by experience that we can learn much, if we will, from a knowledge of our own past. Our failures, if wisely used, will serve as finger-posts for the future. This is no new teaching. Longfellow has made us familiar with the thoughts of Saint Augustine—rising on our dead selves we can mount to higher things:

All common things, each day's events,
That with the hour begin and end,
Our pleasures and our discontents,
Are rounds by which we may ascend.

If we can learn so much from the years of one short life, how much more should we learn from the many lives through which we have passed! And, how much vaster, still, should the harvest of wisdom be, which the true history of nations and races furnishes, if read in the light of Reincarnation!

There is one cycle of a hundred years, which, though a small one, is regarded by Theosophists as of great importance. We are taught that the Helpers of humanity, during the last twenty-five years of each century, are able to give fresh light to the world in an especial manner. The year 1875 marks the starting of the Theosophical Society and Universal Brotherhood; and we know that the last twenty-five years of the Nineteenth century are of vast importance to the progress of the world. I propose to look into the past, as far as we know it, and try and trace the work of the Light-bringers at the close of one or more of the past centuries.

S. J. N.

THE SIFTING OF PETER

by LONGFELLOW

IN St. Luke's Gospel we are told
How Peter in the days of old
Was sifted;

And now, though ages intervene,
Sia is the same, while time and scene
Are shifted.

Satan desires us, great and small,
As wheat to sift us, and we all
Are tempted;

Not one, however rich or great,
Is by his station or estate
Exempted.

No house so safely guarded is
But he, by some device of his
Can enter;

No heart hath armor so complete
But he can pierce with arrows fleet
Its centre.

For all at last the cock will crow,
Who hear the warning voice, but go
Unheeding.

Till thrice and more they have denied
The Man of Sorrows, crucified
And bleeding.

One look of that pale suffering face
Will make us feel the deep disgrace
Of weakness;

We shall be sifted till the strength
Of self-conceit be changed at length
To meekness.

Wounds of the soul, though healed, will ache;
The reddening scars remain, and make
Confession;

Lost innocence returns no more;
We are not what we were before
Transgression.

But noble souls, through dust and heat,
Rise from disaster and defeat
The stronger.

And conscious still of the divine
Within them, lie on earth supine
No longer.

The Unity of Religions

WHEN, thirty years ago, H. P. Blavatsky argued that all religions were but the varying dresses of one thing—Religion—she became at once anathema to the orthodox. The idea, not then new, but supported in her writings by illustration and proof as never before, gathered from every time and people, has been gaining ground ever since.

In *The North American Review* for April we have noted with pleasure a strong presentation of the same case from the pen of the Rev. Dr. R. Heber Newton, an article which we should like to see in the hands of every other Reverend in every English-speaking country. Doubtless, coming from within the clerical ranks, and advanced with so much ability, the case will get more consideration at their hands than if it had any other source—especially should that source be Theosophical.

Religion, in Dr. Newton's view, is a growing plant in the heart of humanity; religions, creeds, forms of worship, institutions, are the successive blossoms it periodically produces in successive periods and peoples. "Each," he says, "suberves a use in the evolution of the fruiting religion of humanity; each will find its permanent value preserved and its transient uses discarded in the attained unity of the flowering soul of man."

He points out that the great religions have all in succession evolved the same institutions, used the same symbols of worship, inculcated the same beliefs, and led to the same mode of life. He could have made many more heads of classification, could have expanded indefinitely each of those which he has selected; but doubtless want of space stayed his hand.

As to *institutions*. "The Church (spelled with a capital C) was an institution of Chaldea, India and Egypt millenniums ago, as it is of Italy, England and America, today. A sacred ministry, a class of men set apart for the divine offices of religion, would have been found of old in Babylon and Thebes, as it is found now in Rome and London. The pagan temple was the Christian basilica and cathedral," and like them had its altar on the sacred spot. "Monasticism developed in the East long before it arose in the West. . . . Good Father Huc was utterly astonished to find in the Far East tonsured priests bowing before splendid altars, while acolytes swung the fragrant censers by their side." Everywhere the oneness of Religion generates the same institutions among different religions.

The symbols of worship, too, are everywhere the same. "The circle, the triangle and the trefoil were graven by pagan chisels on the walls of the sacred buildings reared by religions which thought of themselves only as aliens and foes to one another; for the unity of God, signed by the circle and the tri-unity—the oneness in variety—of God, signed by the triangle and trefoil, were truths known to no one religion alone. The cross, which forms the most sacred symbol of our Christian churches—this same cross would have been found in the temples of well-nigh every religion of the past as its most sacred symbol."

As to *beliefs* there is also a profound unity among the creeds. Referring to Dr. Lundy's work, *Monumental Religion*, Dr. Newton says: "In this epoch-marking work, Dr. Lundy, accepting the Apostles' Creed as the norm and type of all creeds, traced, clause by clause, the parallelisms which he had discovered in other religions: showing that every article in the Creed found its counterpart in the various systems of paganism. Dr. Lundy might have meant only to exalt the creed of Christendom; he succeeded in revealing the creed of humanity."

As to the *life* inculcated: "There is no real discord between the ethics of Buddhism and Confucianism and the religions of Greece and Rome, no essential difference between the spirituality of the Hindu and Persian and Egyptian, save as each naturally shows the different coloring of race and environment upon the face of the same soul. The human ideals are one everywhere. Purity and justice and truth and temperance and charity—these need no translation from the speech of the pagan to the tongue of the Christian. The Golden Rule proves the rule of Hindu and Chinaman, as of the Christian. It waited not for Jesus to reveal it. . . . When the soul of man fronts the infinite and eternal Spirit, beneath the bo-tree of India, or amid the rugged fastnesses of Tibet, or in the cloisters of the Christian abbey, it is one and the same God who is seen."

Truly a remarkable presentation of a great idea. As the next few years go by, and more and more correspondences between the religions of the past come to light, this idea will come more and more to the front and at last be unquestioned. Then the wars of creeds will cease, and the exponents of them, recognizing the presence of the unity beneath, will devote themselves to developing that in the service of humanity. In so doing they will gradually lose themselves in their work and in the growing consciousness of the eternal Purpose moving all things onward and upward to the heights of perfect life. And there will be more and more who will, as Dr. Newton phrases it, accept "the law of sacrifice under which the superior souls of earth devote themselves to the saving of their fellows." Yet it will be no sacrifice, for they will have become one with the Force inspiring them.

To Help the Cubans

THE following cable messages with reference to the great Cuban tornado will be read with interest:

Turner, Raja Yoga School, Santiago de Cuba:

I rejoice at your safety. Are any of children's parents suffering from disaster? Are our school interests interfered with?

KATHERINE TINGLEY

Katherine Tingley, Point Loma, Cal.:

Families school children are provided for. Little suffering City, mostly in small towns and country. Could use money to relieve town Cobre, etc. Vegetable seeds useful. Heavy material damage throughout province. Cable communication uncertain.

✧ The Trend of Twentieth Century Science ✧

Three-Color Printing Was Produced in 1730

ONE of the greatest advances made by modern science is the development of the color principles enunciated by Young, Helmholtz and Clerk Maxwell, with their later application in the three-color printing processes. Thus by means of photography excellent reproductions in natural colors from paintings, objects and even landscapes are multiplied daily, culminating in the grand work of the foremost scientists of the day in the United States, Great Britain, France and Germany. In the Charlottenburg Technical School Professor Micthe has even produced fine portraits in natural colors with a total exposure of three or four seconds—perhaps even less by this time. Almost all correct color-work in magazines is produced by this three-color printing method, in which the three primary color sensations are sorted out by selective screens into separate pictures from which etchings are made and prints synthesized with the corresponding inks.

The results of this work are so amazing in their progress that a suspicion arises that, after all, like so many modern inventions, this is but the sign of the awakening of brilliant minds to things known in the remote past—the springing up Minerva-like of all but full grown power. And now the hour-hand of time as to the knowledge of the three-color idea is being pushed back a century. A writer in the present issue of *Camera Craft* now brings to light the fact that three-color prints, apart from photographic processes, were made in London in 1730:

They were printed from steel or copper-mezzotint plates, printed by hand and were very beautiful. And even today to copy one of them the same size would tax any half-tone shop in the country, even though only indifferent results were obtained. The inventor of the original process was T. Ch. Leblond, and he formed his company in London about 1730. He had many troubles, principally financial, and about 1740 moved to France. Here he had many imitators. Some of the colored copperplate prints of that day, which were sold at a few shillings, are now valued at many hundreds of dollars. In 1730 Leblond published a work entitled *Il Colorito; or, the Harmony of Coloring of Painting Reduced to Mechanical Practice under Easy Precepts and Infallible Rules*. Leblond maintained that in painting, all visible subjects can be depicted by the aid of three colors, namely, yellow, red and blue, and expressed himself as follows on the subject: "Various mixtures of the three primary colors produce all conceivable tints, and if they are intermixed black is produced." By Leblond's method a separate plate was used for each color, but as three colors did not give depth enough to the shadows he eventually employed a fourth plate. All of which would seem to indicate that there is little new, after all, under the sun.

As with those other modern triumphs which almost daily we find to be repetitions of Egyptian, Indian, Chinese and other ancient arts and crafts the hand on the dial of time goes back until our primal source of inspiration appears after all to be a fruition of the seed sown by earlier laborers. No sooner has the public mind grown accustomed to regard a great idea as of modern make than a little corner of the veil is lifted and history shows that its past is more ancient than we suspect, until one is gradually led to believe that the ancients possessed the key to all our boasted knowledge. Indeed, H. P. Blavatsky in her writings showed this to be the case and the idea put forth by her that the affairs of the world come round in soaring cycles is become a patent truth. The proverb of Solomon which once everybody quoted and nobody believed, is vindicated daily—there is nothing new under the sun.

P. A. M.

A ROYAL commission was recently appointed in New South Wales to enquire, among other things, into the steady increase in infant mortality. The commission finds a leading cause of this to be the feeding of infants on manufactured foods. It makes a number of suggestions, upon one of which we have already dwelt here, that on registration of the birth of a child the mother should be given a printed slip of elementary instruction on infant feeding, how to sterilize and prepare cow's milk, if necessary, for her child, how to test milk, etc. The ideas of even well-to-do mothers on such matters are often astonishingly crude, and to the majority the fact that infants cannot digest starch, or the amount of cane sugar contained in nearly all brands of condensed milk, is wholly new.

STUDENT

The Red Planet Mars Excites Great Curiosity

OF all our sister planets Mars must always excite the greatest interest and curiosity. It is well placed for observation at frequent intervals so that astronomers have collected an immense amount of information about its markings and changes of aspect as it travels in its long journey round the sun, a journey which takes nearly two of our years to complete. Strange to say, though at times the shadings upon Mars are very easily seen, there is much doubt as to the true interpretation of their meaning. But, anyway, the great resemblance Mars presents to what the earth must look like at the distance of many million miles is striking, though we may not believe that the conditions prevailing there are identical with what exist around us. For instance, though we may be almost certain that the polar ice-caps of the earth are paralleled on Mars, and that the dark shadings on the ruddy planet are strikingly suggestive of oceans, yet there are reasons for still withholding final judgment upon these matters. As an example of the difficulties to be met, the so-called oceans are delicately mottled with fine shadings, which would seem to be inconsistent with their appearance if they are truly large bodies of water. Again, in the late summer these "seas" become lighter in color, thus suggesting the ripening of crops rather than any aqueous cause. Owing to the axis of Mars being tilted at nearly the same angle as our own the Martian seasons resemble ours, though of course they will last longer. Round each polar white cap a dark line is to be seen which increases as spring advances. Most probably this is melting ice or some similar substance, but the mystery of the dark straight lines, the so-called "canals" which intersect the whole surface—even passing over the "seas"—deepens every year. Some skilful observers, using large refracting telescopes profess to be unable to see them at all! Other highly-trained astronomers have mapped them and measured them, and are so firmly convinced of their existence that they have the courage to declare that in some cases they have been seen doubled! They are many hundreds of miles long and fifty or more miles wide. A reasonable explanation has been advanced that they are irrigated and cultivated lands lying on great trade routes between cities, the buff-colored surface between the "canals" being desert.

Whatever may be the cause of these weird markings—and we need a more powerful reflecting telescope than any existing to be certain of their existence—there is no doubt that great solitary clouds are sometimes seen floating in the atmosphere of Mars, clouds of several hundred miles in length, which blur the clear outlines of the "oceans." Not long ago a remarkable one was seen to drift about four hundred miles across the planet in twenty-four hours, and Professor Lowell of the Flagstaff Observatory, Arizona, who watched it carefully, thinks it was not composed of water vapor, but of dust.

RHO

A Curious X-Ray Experiment With a Rat

A CURIOUS echo comes from the laboratory of Professor Elmer Gates, of Chicago. Experimenting with some rays several octaves above the spectrum violet, he found that all substances were transparent to them except the *living* animal body. Holding a living rat between the source of these rays and his screen, the screen exhibited the shadow of the rat. But almost immediately after the rat's death the shadow vanished; the body had become transparent.

But at this moment "a shadow having precisely the same shape as the animal is seen to move upward on the screen. The inference is obvious: in the living body the rays are interrupted by a subtler form of the same shape dwelling within it. At death this form departs, "upward."

"Now if," says Professor Gates in an interview, "in any way this escaping organism could be caught and made to give evidence that it still possessed mind, then we should for the first time have an inductive laboratory proof of the continuity of life after death"—though not, of course, of immortality.

Experiments are in progress to detain this shadow and make it give an account of itself.

Some Confidences and Their Result

"YOU are thoughtful tonight, Mary," said Mr. Edwards to his wife as they finished dinner.

"I was thinking what examples of unselfishness we find sometimes, where we would least expect them," she replied.

"What have you on your mind now?" asked her husband, with a twinkle in his eye.

"I *would* like to talk it over with you, Dick, if you can spare the time," said Mary, with an answering smile, for they were great chums.

"Come into the library," said he, "and I will sit in my armchair and be all attention."

"You may have noticed," his wife commenced, "a little woman I get in to do the washing and scrubbing. Agnes isn't strong enough to manage all the work." He nodded and she went on.

"I often talk to her and she has told me a good deal of her life."

Mr. Edwards smiled broadly; invariably people did tell his wife "their troubles," for they were sure of sympathy and help.

"And such a sad life it is, too, and yet she is always cheerful, only just once or twice I have seen her break down. She makes me feel ashamed to grumble at *anything*—even the everlasting piano next door," she finished with a comical little pucker of her brows.

"I think I have a remedy for that," replied her husband, "but it is a tale that will keep."

She looked an interested inquiry and then returned to her subject.

"She came with her people from Madagascar, where they had been quite well-to-do, until her father and elder brother died suddenly, and then they came over here to some relatives of her mother. And then she married, and her husband died in a few months of consumption, and then his mother, and now there are only she and a married cousin left, and the cousin is as poor as a church-mouse, with half a dozen children, and a husband as often out of work as in. She told me that she took her fortnight's-old baby in her arms and walked from door to door looking for a day's work, till at last some one gave her a day's washing. Oh, Dick, wasn't it awful! And from that time on she has just struggled to keep body and soul together with odd jobs of work. Then about two years ago she married again, and the man couldn't get any work, and told her he would go to another State to find some, and she has never heard from him since, and that's more than a year ago, and now she has two children to keep instead of one. Only the other day she told me they had nothing but water-sago in the house, and her little boy asked her, 'Mammy, haven't we any bread, not *even a dry crust*?' Her cousin is as good to her as she can be. When her last baby came she pawned her only brooch to get a little wood and coal and something to eat. Perhaps you remember me telling you that I went to see the woman and found her sitting by the bed sewing, with a two-days'-old baby lying there! because the landlady had demanded the rent or out she must go!"

Mr. Edwards poked the fire vigorously, and his wife wiped the tears from her eyes. Mary spoke again:

"But the strange thing is, she keeps so cheerful and works so willingly and tries to do things the way *I like* them done and not her own way. She says, 'I like to please ladies and do my work the way *they* want it done.'"

"I wish there were a few more built that way," commented her husband, with the sigh of an employer whose employees were not *quite* ideal and had fairly strong views about their own methods and their excellence.

"Yes," continued Mrs. Edwards, "and whatever I ask her to do, she does with a smile; I have never seen her out of temper. What a difference it makes when people are *cheerful workers*!" "It does," he agreed.

"It makes me think of what that Universal Brotherhood lecturer said,"

she continued, "that we went to hear the other night, that we were all Souls who had gained our experience through countless lives in many different bodies down through the ages, and that our present characters and positions in the social scale were due to that past, and the direct result of our own thoughts and actions, for how else could an unlettered woman with no advantages learn to make the best of things and get the whole happiness possible out of her present unfortunate incarnation?"

"I don't suppose she reasons at all," said Dick.

"She doesn't need to if she *is* a Soul," answered his wife with fine contempt; "she just *feels* she is one, and acts, and that's better; but you cannot do things you haven't learnt; you needn't *talk* about them, but you must have the capacity to do them. I cannot get the idea out of my mind; so many sad things in life would no longer be so sad if it were true, and so many things that puzzle one would be quite clear."

While Mr. Edwards smoked slowly, looking into the fire, he was silent. Presently he turned to his wife and took the pipe from his mouth.

"What does it all mean, little woman?" he asked tenderly.

"It means this, Dick," she answered. "I am no longer satisfied with my old careless, selfish life, just living in the sunlight of your love and sheltered from all trouble, while so many are living such *desperately* hard lives. I want an explanation for it all, and I want to *help*!"

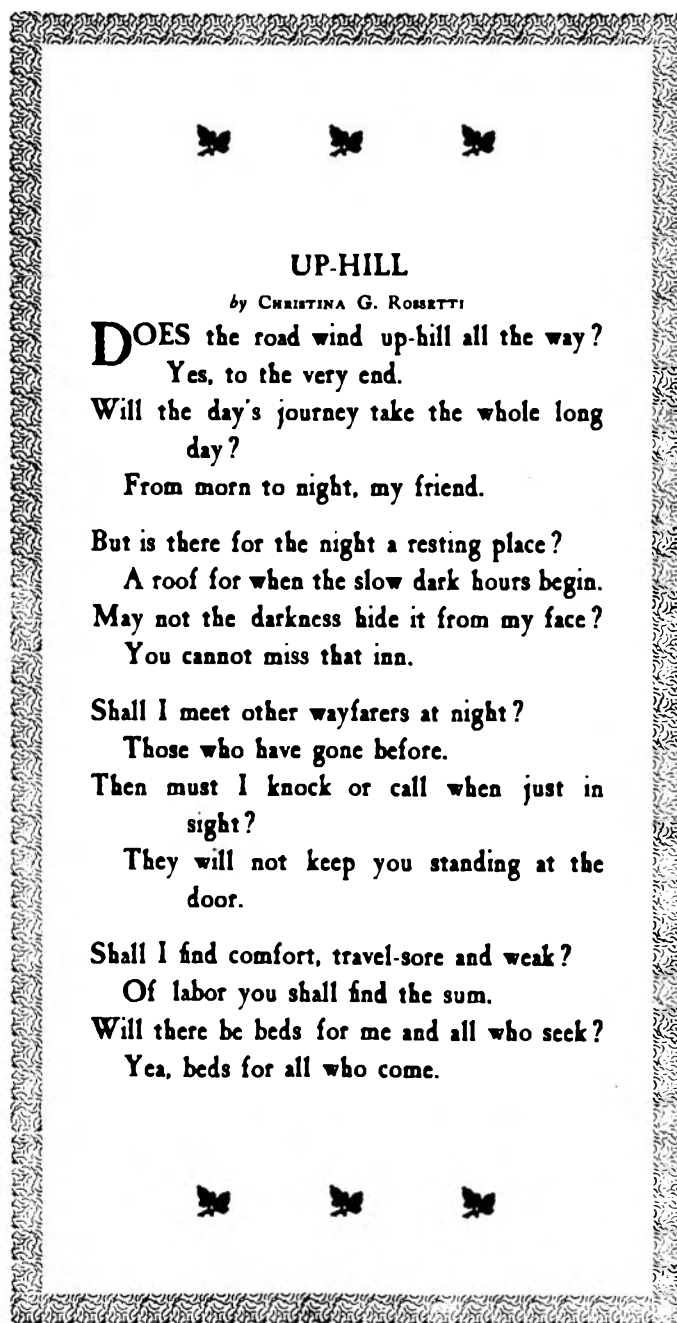

The tears were gone now and a deep earnestness vibrated in her voice. "And to do that wisely, I feel that I want to know more," she added.

"There *is* a destiny that shapes our ends," quoted her husband, turning back to the fire—then to his wife, "Mary, it is very strange, but Ned Carruthers called at my office this morning. It seems he has been a member of the Universal Brotherhood for some time, and seeing us at the lecture the other night, he brought me round a book called *The Mysteries of the Heart Doctrine*, which, I must confess, has impressed me even with the glance I have been able to give it, and inclines me to look into Theosophy. I have never yet found a philosophy of life to suit me;—perhaps"

"Oh, Dick, it cannot be for *nothing*, that we both feel like that," cried his wife.

And the future proved her intuition to be true.

THE CHILDREN'S HOUR

DEAR BOYS AND GIRLS: Isn't it time that we did something?

Year after year, thousands of children, and grown-ups too, celebrate this wonderful day that we call the Fourth of July in very much the same stupid fashion, and, as I said, isn't it time that we reminded them of what the day really means? I know a good many *do* preach silence, but they practise—noise. The Fourth of July, which really stands to us for all that is sacred and all that is truly noble and high, which stands for the higher patriotism itself, has become a day of claptrap and accidents and noise. You know as well as I that people are really tired of it and wish there were a better way to celebrate this day. Perhaps we could help them find the better way if we could remind them of what the day really stands for. You see, there is so much that is wonderful and beautiful in the past, we could easily build all that was best of it into the present and make a picture that would be glorious. It is a shame that with so many, Fourth of July should be a time of just noise and thoughtlessness.

Think what this liberty of ours cost! Think of the Higher Patriotism that fired the hearts of Washington, Franklin, Greene, Jefferson, Adams, Thomas Paine, brave young Lafayette and many others.

Splendid Lafayette came here from France bringing to us the very fire that Joan of Arc lighted in that beautiful land when the light upon her altars had sunk and was almost dying. Lafayette knew about the Higher Patriotism; he loved all mankind, and that is why he stood and shall stand, a living link between his own land and our own.

Franklin was another link. Do you remember his words? "Where liberty is, there is my country;" and the still more inspiring words of his comrade, Thomas Paine, "*Where liberty is not, there is mine.*" Thomas Paine was also a link with France, and isn't it well to remember, when we reflect on the real and beautiful meaning of our Independence Day, that France has an Independence Day, too, in the very same month, July 14th, the day the old Bastille fell? How true were the words of Thomas Paine, "The principles of America opened the Bastille!"

Boys and girls, we are more united with our brothers across the sea than we dream. Some day you will realize it more fully and it is because of this that you have even now a great responsibility in helping people everywhere to find the higher meaning of our Independence Day.

What a picture comes before us of the old days when our hero warriors fought for liberty! "These are the times that try men's souls," said Paine, himself a brave soldier, you remember, marching all day, sharing

Fourth of July

with the soldiers all their hardships, and writing night after night in his little tent those thrilling words which helped to bring us victory. It was Paine who first counseled independence. Why not remember his name on Independence Day? Do you remember what he said? "To yield one right which is inalienable is to betray all other rights, making us slaves and cowards," and when the ministers grew very much frightened at the prospect of having war, even though they knew that it was the only means of gaining true peace, and when they counseled the people to trust in the Lord and wait, Paine again declared, "Throw not the burden of all your hopes upon the Lord, but *show your faith by works.*" He was Washington's comrade for many years. Together they did a work for liberty that neither one could have done

alone. We cannot afford to forget the great names of those who gave up so much for your sake and for mine, and for all who are to come. They stand like great lights along the path.

What is the Higher Patriotism? It is not something new, for they held the same ideal at Thermopylae, Sophocles declared it at Salamis, Joan of Arc at Orleans; and then Lexington! What an inspiration in the very word! Higher Patriotism means the heart life and brotherhood.

It means stepping away from all the thousand ugly passions and selfish thoughts into the beautiful sweet life where everything grows as flowers grow in the sunlight. People are waiting, boys and girls, for you to start this procession, and

you know processions are quite the order of the day on the Fourth of July. Who will be the first to lead off?

Who will step out as Warriors, reaching the hearts of men by music and joy, and love and fearlessness, in a word, by Raja Yoga? Then Fourth of July will reflect the real heart life and the higher peace, the true warrior note will be sounded, and men will come to see that there is a true war as well as a wicked war, and that true peace is worth

having no matter what it costs.

No nation can ever fully understand what true peace is—as distinguished from that false peace which is nothing in the world but slavery—until it declares pure ideals and then lives up to them, until it believes in Brotherhood so utterly, and Liberty and Justice and Purity, that it is willing to fight for these ideals. Then men will know what the Higher Patriotism really means.

Come, boys and girls, let's make Independence Day this year a great crusade, and we'll write on our banner, "Higher Patriotism means Brotherhood."

UNCLE FRED

SIGNING THE DECLARATION OF INDEPENDENCE
Students of the Raja Yoga School of Point Loma in Historical Drama

GRANT that our songs may reach the waiting world,

Grant that our joy may reach the hearts of men,
Grant that our love may teach and purify,
Teaching men silence when they know but noise,
Teaching them love where even hatred rules,
Teaching all men the Higher Patriotism.

Path

IF WE KNEW

From the *Chicago Tribune*

COULD we but draw the curtains
That surround each other's lives,
See the naked heart and spirit,
Know what spar the action gives,
Often we should find it better,
Purer than we judge we should;
We should love each other better
If we only understood.

Could we judge all deeds by motives,
See the good and bad within,
Often we should love the sinner,
All the while we loathe the sin;
Could we know the powers working
To overthrow integrity,
We should judge each other's errors
With more patient charity.

Ah, we judge each other harshly,
Knowing not life's hidden force;
Knowing not the fount of action
Is less turbid at its source,
Seeing not amid the evil
All the golden grains of good—
Oh, we'd love each other better
If we only understood.

God Deliver Us From Our Friends!

IN an old prison, somewhere in Italy, visitors may still read the following, deeply scratched upon the walls of one of the dungeons:

Dai nemici miei mi guarderò io;
Dagl'amici miei mi guardi Iddio!

Anglicè: "From my enemies I can protect myself; but God guard me against my friends!"

The lines are half effaced, but are still plainly legible.

What a moral is conveyed to us in this! And what truth! Those whom we trust, those to whom we confide the secret things of our soul, and those who become a part of our inner life and impulse, who are in that way initiated into the nature of our being, become the custodians of our honor. It is given to them in silent confidence, and more often than not our confidence is betrayed. Betrayed perhaps unconsciously, perhaps consciously; but betrayed we are. How many of us are there, who may not, at one or another time, have had the bitter pain of realizing to the fullest what a friend's betrayal means? Imperial Cæsar was not the only one who has had a right to cry, *Et tu, Brute!*

How many reputations have been blasted irrevocably by careless and unthinking speeches made to too willing ears? How many human hearts have ached sorely through the evil irremediable, done by faults of commission and of omission, on the part of those who had been trusted?

Treason and treachery may work very subtly; and there are no set lines of action for them. But beyond, there are other moral crimes as grave. Suspicion is one of them; for who does not know that few are strong enough in the true heart-life to bear another's inmost thoughts, without becoming immediately a victim to doubt as to the character of the one who confides. How truly it has been said by some one, that the man who confides in anybody else, in matters of weighty import, creates a universe of—two fools! The human mind is the most unreliable of things. It sees forever through the lenses of its own especial creation; and when focused on another's affairs, how sadly are these latter distorted out of all resemblance to their real being.

There is a higher faculty men possess, and it is common to us all, and

it does never distort; nor does it ever betray; it is the Heart Power. Its vision is as limitless as thought; and it is as kindly and as charitable as the law itself, for it is the organ through which the Good Law works out man's destiny. Why is it that man will not become the Heart within him? Why will he not recognize that in so doing his power and influence on those around him is more than trebled? Why will he not KNOW that he who allows the Law to lead him cannot wander from his way; or betray a sacred trust; or become a byword among his fellows?

'Tis this mighty Heart Power which brings us back to life from the bourne beyond the tomb; 'tis the subtle nature of its working which builds and fosters our noblest civilizations; 'tis the Heart Life which makes a man strong, clean and faithful in the whirlwind of life. But the brain? Ah! "There's the rub!" 'Tis the brain that leads us astray when it is weaned from the heart, its source of being; 'tis the brain that we allow so pitifully to mould our characters that we become unstable, shifting in purpose and as variable in our moods as the winds!

We respect the man of dominating brain power; but we respect him in much the same way as we do the wild and uncontrolled elements of Nature; there is something akin to the storm and the forces of destruction in him, which we intuitively feel. Whereas the man, infilled with the spirit of the Heart Power, we not only respect, but love; for he recalls to our mind, as it were, the sleeping and mighty hidden potencies of Nature: that Something which causes the growth of the flower, and the flowing of the stream; the upraising of mountain peaks, and the sweep of verdant valleys. For the Heart Man's thought is inter-atomic: it is secret, and dwells in the fire of life; while that of the Brain Man is reflected, deflected, and (in comparison), superficial. He lives on the outer boundary of things.

It is a truism to say that the perfect man, the ideal human, must be an equilibrium of both Heart and Brain, the former leading the way and the latter directing the course. Man lives within; he looks out upon life's phantasmagorical things in sorrow, and does his part on the stage of life; yet does he live a life apart, and plays upon his body, more or less correctly, as one does upon a musical instrument.

What is the moral of all this? It is to honestly face the uncertainty of our lower nature. Let us bathe ourselves in the blood of our slain faults, like as did Siegfried of old; and rise therefrom invulnerable to things baser than we. Let us learn from the old legend to slay our Hagen, lest he slay us through treachery and wile: for our brains are our enemies, say what we will! How noble a thing is man; and how vile a thing is a man un-manned. Hearts enough are broken already; what need to break more?

G. DE P.

The Science of Silence

MARTIN LUTHER somewhere recommends silence as a cure for ignorance. That silence may conceal ignorance is, of course, obvious, but in what way can it remove it?

There is, nevertheless, a philosophy which underlies this counsel of silence. Speech is the outflow of a mental force which would otherwise increase at compound interest. While there are times for its judicious expenditure, there are also times when it should be hoarded as a miser hoards his gold.

The great men of the world have usually been silent men, but were they great because they were silent, or silent because they were great? It was said of Wallenstein that he lived in an atmosphere of silence, and both the Duke of Marlborough and Count von Moltke were hardly less taciturn. From General Grant comes the aphorism that silence is one of the great arts of conversation, while Charlemagne was of opinion that no man ever betrayed himself by silence.

Silence is certainly a part of the science of the mind and capable of tremendous uses by those who understand it. When we have acquired this most profound of all knowledge, we shall be aware that an idea or a fact may be selected and put away in the dark places of the mind, there to grow as crystals are said to grow, in subterranean secretcies. However crude may be the idea thus selected, it will be treated as the oyster treats the grain of sand which is placed within its shell. The Soul will cover it with a lustrous pearl, and we may claim it again after many days.

DOUBT AND FAITH

DOUBT is the city street where, all day long,
Incessant voices call me to and fro,
Uncertain wheresoever I shall go,
One with a heedless throng.

Faith is a little room alight for me
Where not an echo of the street may come;
And here, with but a sup and just a crumb,
Is heaven for one to be. — *Youth's Companion*

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question Do Theosophists believe in a devil?

Answer In the theological creature of hoofs and horns, no! most emphatically. Nor, indeed, do modern religionists themselves believe it. But as to the existence of vileness and evil in one's own mind, and in the existence of beings who purposively choose evil rather than right, it may be said that Theosophists do believe that. St. Paul speaks in no uncertain terms of these beings, who choose the path of darkness rather than of Light, and his testimony is endorsed by the voice of the ages.

The various conceptions which exist, concerning the devil, or which have existed, to be truthful, are often most ludicrous, and very dissimilar. Bigots of the old time endowed him with hoofs, horns, tail; and in some cases, he was believed to possess a most offensive human smell! He was supposed to lie in wait, and go about like a roaring lion, seeking whom he might devour. The application, in this sense, can easily be made with regard to human passions; and it is undoubtedly in that sense that the phrase above quoted was meant.

While Theosophists, as individuals, have individual conceptions of the meaning of the evil powers in man and Nature, loosely called "devil," it may be said again that as a body they look upon the ordinary conception as most erroneous and abominably misleading. The effect which this figment of the theological imagination has had upon the human mind, since the establishment of the Christian Church, has been unqualifiedly evil itself; and it may be said that the belief in the "devil," rather, almost, than in Jesus the Christos Himself, has been one of the principal bulwarks of its theologic system.

To free the human mind from error; to give it light; to lead men into nobler and truer paths of thinking and towards Comradeship in Life: this is antagonistic to the very conception of a special prince of evil, in whom one *must* believe to be saved. Evil does exist, and undoubtedly evil beings do exist who choose evil consciously rather than good; but this by no means predicates the devil of our forefathers.

Question Why do Theosophists decry Hypnotism?

Answer They decry it for the simple reason that it is almost limitless in its evil tendencies and results.

Question When did Mme. Blavatsky establish The Theosophical Society in America?

Answer In 1875 Mme. Blavatsky established The Theosophical Society in New York City. Since that time the Society has become a large and influential body, merging its objects into the larger life of The Universal Brotherhood. It has centers all over the world, and reaches all classes of people, for the Preamble to its Constitution states that it is "Ordained and established for the benefit of the People of the earth and all creatures."

The principal purpose of the Organization is, to teach Brotherhood; demonstrate the fact that it is a fact in nature, and make it a living power in the life of Humanity.

The teachings of Theosophy afford an unbounded outlook for Humanity; for these teachings are broad and universal in their scope. They

are based upon the fundamental laws of human life, and when rightly applied, they raise man to the heights of sublime conception. They give him the knowledge to render royal service to his fellows; in compassion they speak to the hearts of all men of that peace which passeth all understanding.

Fear has no place in the heart of one who knows his own Divinity: thus speaks Theosophy.

The Kaffir

A RECENT book on the Kaffir (*The Essential Kaffir*, by Dudley Kidd) gives an instructive picture of a dying race. A race in its maturity, or in its adolescence, has mental vitality enough to evolve new conditions and new institutions. And its individuals can absorb and apply knowledge throughout nearly all the years of their life. But in decaying nations, nations in the bodies of whose individuals the pulse of evolution is no longer throbbing, this mental receptiveness, flexibility and creativity, cease earlier and earlier in life. For long periods the *status quo* is maintained; institutions do not change; much thought and philosophizing may be done, but it is on old lines, it is directed to the past; no new thing or thought is evolved, or if there be one it is frowned upon. At this stage, there is not yet any physical or mental decay; the wave, having reached its furthest, halts. This is perhaps the condition of India. Full recovery is possible. The nation can awaken its slumbering vitality and come again into the procession of advancing peoples, may even at last lead them.

It is the state into which most men fall at or before fifty. In full possession of their faculties and powers, they have no longer that margin of power over what is required by their lives which expends itself in development and the origination of new lines of work and thought. They can seize the still present center of energy and enter upon a new period of developing life; but few do so.

In the following stages in the history of nations, there is retrogression. Not even that effort necessary to keep level with the past is made. Earlier and earlier in the lives of the individuals is the power of acquisition of new facts, of creating any new institution, or of adaptation to any new conditions, seen to be no longer in action.

This is the case of the Kaffirs. Of their mental powers Mr. Kidd notes the fact that the children often show much precocity, and absorb knowledge readily. As they grow toward manhood their brains stop growing, they can assimilate nothing more, and they remain in the state of arrested mental development. The little evolutionary force still pulsing in them has no margin after childhood; there is nothing to spare for mind; all is used up in bodily growth. Later, that, too, begins to suffer.

In a still later stage, as with some Australian and Papuan tribes, no phenomena worth calling mental are to be noted at any stage of the individual's life. Not only is there nothing to spare for mental operations, but there is not enough for physical development, and the race is stunted, deformed and diseased.

In retrogressing peoples, one must see that the souls of the individuals touch their human life less and less. The now only animally conscious organism affords the soul no chance of work. It must be as necessary an experience for it to touch and dip into the descending evolutionary wave, into the trough, as into the wave ascending, into the crest.

We do not therefore mean, when a race is becoming extinct, that its individuals are. The principle of individuality is the soul, not the pulse of animal instinct which we share with the animals proper, and which in the Australian bushman is almost the whole of the person. The extinguishing of these races must represent the punishment of the individuals composing them. We can well imagine that having reached the height of some now forgotten civilization ages ago, a civilization of which no trace remains unburied in sand or sea—just as we have reached such a height—and having failed to grasp the really spiritual center of power and move up to a yet loftier level—as we are in danger of failing—the evolutionary wave went past them. And the individuals who thus failed are doomed to stay by their retrogressing physical types.

Thus the history of a race is but a chapter in the history of the souls composing it, often—perhaps usually—a chapter whose last page is sad enough. But there are other chapters, and the soul is eternal. X.

"A fool's mouth is his destruction."

GIVE ME PATIENCE

by BROWNING

"O DREARY life," we cry, "O dreary life!"
 And still the generations of the birds
 Sing through our sighing, and the flocks and
 herds
 Serenely live while we are keeping strife
 With Heaven's true purpose in us, as a knife
 Against which we may struggle!
 O thou God of old,
 Grant me some smaller grace than comes to these!
 But so much patience as a blade of grass
 Grows by, contented through the heat and cold.

Mystery in Religion

WHAT position does mystery rightfully hold in religion? The position which it has unrightfully held is a very extensive one and to it is due a superstition far more tyrannical than the power which has ever been wielded by rulers.

Mystery in its truest sense, and as opposed to superstition, is of course inseparable from religion. We are surrounded by the unknown, and it is only the dense intelligence which can gaze upon any phenomenon of nature without being overwhelmed by the mystery of it all. The universe stretches away from our sight into depths so profound that the pursuit even of the imagination is baffled and defeated. If we descend from the infinitely great to the infinitely little there too we find a like barrier, there too we reach a point beyond which we cannot pass. And everywhere there is unending motion which ignorance believes to be in self-conflict but in which the eye of spiritual genius perceives order, intention, design and purpose. We may lay hold of that design, knowing it to be design by the facts which we have seen and learned. We may raise veil after veil but there will always be other veils beyond.

And this perhaps indicates the difference between mystery and superstition. Mystery is the unknown cause, the unfathomed internal explanation of facts which we know to be facts, while religious superstition invents alike the supposed facts and their explanation. When therefore we are told that mystery is a part of religion, and that it must be approached only in an attitude of faith, let us enquire what are the demonstrated facts upon which that mystery rests and let us reject all mystery which stands upon any other foundation.

To take a definite illustration, let us ask ourselves the causes of light

and heat. Science has removed many veils, it has led us back a long way from effects to causes. None the less we finally reach a point where an effect is obvious but of which effect the cause is not obvious, and we are well aware that even if that cause became obvious it would then be an effect or a result of some other cause. This is the point at which we reach the domain of mystery, but it is true and legitimate mystery, and we have reached it truly and legitimately by following along the rigid line of ascertained fact, or such at any rate has been our honest intention. But compare such a mystery as this with the ordinary religious mystery which we are asked to accept upon faith. In vain we demand any single basic fact, any attempt to argue sincerely from a fact to the cause of that fact, any effort whatever to lawfully reach the domain of the unknown, the point at which mental incapacity drops a veil between an effect and its cause. The usual religious mystery is nearly invariably founded upon a dogma which in its turn is founded upon the sands of human folly. To faulty observation of fact, and to erroneous reasoning, all humanity is liable, but it has been left to spurious religion to impose beliefs upon the minds of men which are absolutely and entirely innocent either of facts or of reason.

The Clergyman and the Skylark

A CLERGYMAN in Nebraska, who was holding Lenten services and baptizing babies, found relaxation from these arduous occupations in shooting and killing twenty-one larks, and was fined \$110. The comment of *The Universal Republic* newspaper is contained in the following verses:

He stole a summer song, dear,
 This godly man of mark,
 He made the spring day silent,
 He killed a meadow lark.

And the children off to school, dear,
 Across the fresh turned sod,
 Will seek in vain the songster
 That kept them close to God.

The plow-man in the morn, dear,
 Will miss the dawn-tipped wings
 That soaring upward taught him
 To think of nobler things.

And all the summer long, dear,
 Each day, when it is done,
 We'll wonder who, tomorrow,
 Will welcome up the sun.

For he is dead and cold, dear,
 Our little meadow lark,
 And he sang a song of love to
 That godly man of mark.

We wonder if the clergyman himself had been baptized. It doesn't seem to have "taken."

The Raja Yoga Edition

THE Special Raja Yoga Edition of **THE NEW CENTURY** contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to **THE NEW CENTURY CORPORATION**, Point Loma, Cal., the papers will be mailed for you without extra charge.

Will Theosophy Save Humanity?

THIS question contains at least two inferences: that Humanity needs saving—from something; and that there is a power on earth which can and will do that saving. First, as to humanity's present condition. It is a patent fact that our civilization has by no means attained that point of perfection which is supposed to constitute the ideal life. It is very far from that point, indeed. Cast a rapid glance over the conditions of our modern life, and on every hand you will find the most startling evidences of social disintegration. Discord, disharmony, unbrotherliness, lack of true charity, are gnawing at the very root of our national, our international, life. In the history of Humanity, in that history which has been written, we shall not find so se-

vere a strain upon all that is best in man, as we find it today amongst ourselves. Everywhere there is unrest; everywhere there is an unconscious revolution going forward, against the chafing and shallow customs of our day. Men are turning to each other, and to everything, seeking, aye, clamoring, for a remedy to heal the illnesses we are so sadly afflicted with.

The greatest, perhaps, of these present human illnesses, is the absolute selfishness of the things for which we fight so strenuously. Our day is a time when the measure of success is the measure of one's worldly possessions; and to possess more than the next man, is considered the holiest teaching to instil into the tender minds of our children. To get, and to hold tightly; and to pass on what one has got to one's heirs, for them to increase, or for them to squander: this is the spiritual nourishment which we, in our dreadful blindness, are assiduously feeding to our young. The result is what we see on every side. Now, it is not wrong to get, nor is it wrong to hold; nor is it wrong to pass on to our heirs what we have got and held. But it is wrong, and short-sighted, to make of that the creed of our life.

Selfishness the Besetting Sin Today

How is it that the incendiary torches of anarchism flare so bravely in the countries of the earth? How is it that statistics of crime and of insanity of our children show so alarming an increase in this last quarter of a century that it has called into being new sciences to deal with the question? Professor Lombroso, the great Italian thinker, is a good example of this school. We have a new word, a word which we should hide as our human shame, but which we flaunt proudly in our magazines and newspapers as one of our scientific achievements! That word is "Degeneracy." We speak of it proudly, and feel insensibly puffed up

Our Responsibility for Degeneracy

with our own greatness; we fail to see that this word, and the thing it represents, sounds like the passing bell of our brightest and holiest hopes. For, what are these "degenerates" of whom so much is heard? They are our children; our brothers; and it is we (shall I say the mighty Regenerates!) who incarcerate them, and judge them, and electrocute them! These creatures spring from our loins, from our own blood and bone; and if the poison is in them, it must also be in us. Humanity, as a body, is itself responsible for these things.

Take any invention of universal application; or, if you like the term better, take any discovery applicable in a general way; what is the first use to which we try to make it subserve? Is it to help the poor, and the weak, and the ill? We know that it is not! We know that the most sellable thing in the world today is that thing which is most destructive in its nature. A new engine of warfare, a quicker and more expeditious way to take human life, something that will the most easily destroy human life and property is the thing that commands the readiest market. It has been said that this is true; but, that were some one to discover something that would cure the diseases of man, that that thing would have as ready a sale. Undoubtedly; but has

Pandering to Forces of Destruction

it been discovered? Why has it not been discovered or invented? The answer is as simple as possible: because the great balance of our energies, and our best intellect, has been thrown into another scale, into another field: that of pandering to the forces of destruction which today are doing their best to wreck human life. For centuries past warfare and international antagonism have been like the key-note of our statecraft; and all that subserved that end was fostered and encouraged. Thus we are now reaping the fruit of it all. Look at the almost numberless millions of dollars annually spent by the nations of the earth to build up fighting machines, to foster the warlike spirit, and to breed up soldiers. Then, look at the way in which these millions might go for the positive helping and betterment of the body social in general. What hospitals could we not build? What sciences might we not forward? What new and startling discoveries might we not make? What numberless thousands might we not aid—those numberless thousands who suffer dumbly yet; who are exposed to all shame, and all misery, and all degradation! What things might we not do towards beautifying and cleansing our great cities from the evils that beset them, if we had but a part of this money set aside to disappear in gunpowder smoke? Now that we have these armies and mighty ships, why do we not use them

They Who Dread the Powers

in some holy cause? The nations of Europe stood quietly by, while thousands upon thousands of Armenian peasants were slain and hunted down like dangerous beasts. It is said that it could not be done, because the Powers could not agree among themselves as to who should be the avenger and the protector of the unprotected. Did these United States of America hesitate to unsheath the sword of Justice for the unhappy and hunted Cubans? Was it not then said, as it always is, that the Powers of Europe would object?

Well, the picture is an edifying one, is it not? It is a picture of which we feel proud, is it not? It shows our great and superb intelligence, does it not? Never will there be shown in history another civilization like unto ours, is it not so?

Never before was there so much talk, and so many weighty and ponderous volumes written, to prove that ours is an age of glorious humanitarianism; and never before was there so little done to help the next man!

Our government is firm, stable, and just in principle; our laws are, in general, humane; we are beginning to understand that if a man works for his nation he helps himself. But why all this unrest; why all this national uneasiness, apparent in every newspaper in the land; why this continual silent struggle for something beyond us, we know not quite yet what it is?

Theosophy the Gospel of Hope

In view of all this, Theosophy can, and will indubitably be, of immense practical value to the race. It explains the secret and reason of man's existence, and demonstrates to him the why and wherefore of his well-being or of his misery. It teaches to him the eternal Gospel of Hope; and teaches him that effort directed away from himself, to help another and others, will rebound back to him carrying success and a blessing in its hands. The philosophy of the Theosophical doctrines tends powerfully to strengthen just those qualities in human nature which build; and to destroy, or rather divert, those which are destructive in tendency. Theosophy unravels the riddle of life, and gives to man such an enormous hope for the future, not only of himself, but also of the race, that every nerve is invigorated. It is a manly teaching, and its tendency is to make men of us.

But it depends wholly upon ourselves whether we will take it. It is of such a nature that it cannot be given to anyone, but must be taken and kneaded into man's acts and into his very life. Can a man make his living by listening to fascinating tales of how such a one built up a fortune? Can a child learn its lessons by hearing another recite?

So that is what Theosophy promises to the people of the earth. Its Constitution recites that it is "established for the benefit of the people of the earth and all creatures." As such it is applicable to everything in life, and to all conditions to which humans are subject. It comes to us as a saving power, and once we take it honestly into ourselves, we shall feel that Theosophy will save Humanity—from Itself. G.D.E.P.

Samuel Smiles

THE death of Samuel Smiles recalls the extraordinary popularity of his book, *Self-Help*. Twenty thousand copies were sold within a year; by this time the sales have mounted to at least five times that number. Moreover, it has been translated into every European language except Turkish. It has even penetrated Asia, for the Japanese have it in their own tongue.

The gospel of the book is simple, almost conveyed by its title, "if at first you don't succeed, try, try again." The goal of your efforts was to be your own success. There is a higher gospel possible, but the second best is certainly here presented in its most stimulating and beneficial form. That it does not square with the facts, Dr. Smiles never appreciated. He went about as it were with a note-book putting down all the cases he met with in which effort was followed by success. Those in which it was not had to be carefully kept out of view of the theory, so as not to hurt its feelings.

But cases in which effort does not bring success, and those in which success comes without corresponding effort, make a large and perplexing group in human life. And they will never square with our sense of justice until we recognize the fact of Reincarnation. Every cause must

have effects, and no effects can occur without cause—or the universe runs on idiotic principles. But the most persistent and honorable efforts may have to wait for their meed of success till the following birth. For a long time it may be delayed by the effects of other causes. And so, when it does come, it may easily look like reward unearned. Moreover, some people find all the reward they wish or think of, in hard work itself. No outer success in any visible form may come at all, merely that growth of character which work thus done brings about. They get their pleasure in a steady stream, and have no clouds of envy, disappointment or longing. This way of work is one of the roots of that wisdom whose final fruit is almost unknown in our time. The other root is brotherhood.

STUDENT

The Secret of Point Loma

TOURIST visitors sometimes ask what is the secret of Point Loma, where is the source of the peace and inspiration which is in the very atmosphere here. The secret need not remain a secret. It would not be a secret at all if humanity lived aright with itself. For the same peace and inspiration would bathe all the earth.

The secret is natural life, and consequently happy life. The day is well filled with changing work. The students are not working for themselves, have the common aim of serving the race and fitting themselves in all ways to go forth on that highest of errands, and constantly refresh their ideals of the possibilities of human life; and are consequently at harmony with each other. They have a common love for and trust in the Leader who has made possible their assembly here, and whose proved wisdom adjusts to each his work and to each needed work its doer.

The life is indeed as nearly the ideal life as our heredity and acquired habits and human selfishness permit, and it constantly approaches nearer to the ideal. It is a life in which every valuable element in the student's nature and mind is encouraged and developed, in which everything useless and unworthy gradually drops out of sight. The students are consequently happy; they find themselves always moving towards a larger freedom, freedom from those strains of unrest and selfishness which elsewhere so profoundly embitter the world's life, and are so fascinating to some.

The life is complete, requiring full activity of mind and body. The soul is constantly and openly recognized as that factor in consciousness which should dominate all others. There is consequently an ever completer health of body and sanity of mind and feeling.

As to the work itself, one can best view it by the symbol of the tree. It consists of many industries, of agriculture, music, the arts, literature, the drama, science. From the one trunk new branches appear from time to time. From them others; all of them rebranching and subdividing out to the smallest twigs, which, to translate the symbol, are the very special sub-departments into which the general work of the main department distributes itself. Thus the way of growth is the strictly natural one. If anyone finds the activities that fall to his share perplexing in their diversity, he merely waits, knowing that in due course the specializing and redistributing force will come his way. The twigs, of course, do not remain twigs. They steadily enlarge, and in their turn break into lesser shoots. And so on continuously, *because the organism is living*. That is the last word of the matter.

In the writer's view, and in that of all the other students here, that ideal of perfect life, of a new golden age, which every human heart nourishes in its hidden and unvoiced deeps, will at Point Loma ultimately find its realization. And this, moving outward into the world, carried out into the world by those students who have prepared themselves as teachers and exponents, will ultimately redeem human life. More than the adult students now at Point Loma, with all their difficulties of habit and heredity, there are the children of the Raja Yoga School in their midst. And what they fail to do, the children can perfect. So we move forward into the future with absolute confidence, doing our utmost to make Theosophy a living power in the life of humanity.

The Canal of Corinth --- Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week gives a view of the famous Canal of Corinth, which unites the Moera with Greece proper, and is in all ways a blessing to maritime interests. A nearly continuous line of vessels may be seen daily traversing its length.

Some Views on XXth Century Problems

Peers to me all chilluns good
Ef they are only understood;
Even the bad ones, seems to me,
Is jest as good as they kin be.

Sympathy for the Boy Criminal

THIS sentiment is quoted with apparent approval by Judge Lindsey, of Colorado, who is well known for his successful treatment of the boy criminal. That this just Judge is successful, we can well understand after perusal of an article which he contributes to the *Denver News*. It is vibrant with sympathy and wisdom, strong in appeal, not against the boy criminal, but for him. This, if we remember right, is the Judge who always sends boys to the reformatory *unaccompanied*. He relies upon their honor and has never yet relied in vain.

Judge Lindsey says that no one can sit in the Juvenile Court for three years and not learn many things about children. We wish this were more true than it is. There are some people who seem never to learn anything anywhere. He says:

Such knowledge brings with it an amazing amount of information about parents. Yet I do not claim to be able to give any advice. I can tell some facts. What they are worth and what they mean, others can judge. Only just so far as people think and care will what you say amount to anything, anyway. Of course, I don't expect everyone to agree with all I say, and it is sometimes hard to speak on such a subject without being misunderstood. Every father and mother ought to know more about their own children than anyone else. Perhaps in most cases they do; yet it is amazing how often they do not. There are too many church fathers (and mothers, too) who clamor for the Bible in the schools, who really haven't it yet in their homes. I once noticed the good book in a certain home. The boy told me it was "the big book that I sit on at the table." Can't the church awaken the conscience of the parent? Does the church know that there are in proportion to people above 20 years and those between 9 and 20 from two to four times as many arrests among children as there are among grown people in the cities? There is an amazing amount of work for the church. It is not so much neglect as not knowing how to go at it. The parent is a good place to begin. The father is too willing to transfer his sacred parental duty to the mother, who often has to call in an outsider.

Boys Who Hate Their Fathers

One of the most striking phenomena to which the Judge refers is the extent to which most of these "bad boys" hate their fathers. They certainly have cause. He says:

I once had some boys from the industrial school at my house and one suddenly turned to me and said: "I tell you, Judge, George's 'old man' was just as bad as mine. He used to get drunk and beat my mother, and let me drink, and send me to the saloon, and I hate him, I do. I hate him, I hate him." "Yes," chimed in the other boy, "you don't hate him any worse than I hate my dad. I don't know where he is; I hope the devil will get him; golly, how he used to beat me up!" Talk about a father's curse, what about the child's? What do such boys think of the fifth commandment? Come to our court records, go to the Humane society and ask E. K. Whitehead and Marcus Haines, assistant district attorney (who by the way, are doing such splendid work to make fathers do their duty), ask these splendid officers how many fathers shirk, how many fathers sneak, then you will begin to wake up to why so many children are quite calloused to the fifth commandment. Disrespect for one does not help along respect for others, or for the law, either. I believe that more time and care are devoted to live stock than to the children of our cities. Yet hath the Master not said of him who would do an injury to one of these little ones, that "it were better that a millstone be hanged about his neck and he be cast into the sea." I recently talked to the most notorious murderer in the St. Louis jails. Like nearly all the other murderers and criminals, from New York to California, he was a youth, just 20 years old. He told me how he hated his father, and then the state. When a boy of 13 he was sent to the reform school. The three recent boy murderers in California and the leader of the young train wreckers in Colorado all had their day at the reform school. That did not mean a failure of that school any more than it did the public schools, which they equally had attended. It means the failure of the home.

The last time President Roosevelt was in Colorado, he spoke along these very lines and the Judge does well to remind us of his words:

Just one word on the future of the country—the country as it will be twenty, thirty or forty years hence. A good deal depends upon how we handle business,

how we do our great industrial work, how we handle the farms and ranches; but what counts most is the kind of men and women that there are at that time in the country. No nation is safe unless in the average family there are healthy and happy children. If these children are not brought up well they are not merely a curse to themselves and their parents, but they mean the ruin of the state in the future. Schools can do much, but if the homes do not do their part, the schools cannot at all make good the deficiency. The father and mother have got to do their full part to make the boys and girls such as will assure good citizenship of the future or they are derelict in all good duties of citizenship. There are a good many contemptible creatures in the world, but, on the whole, the most contemptible creature is the one bent on going through life for the easiest time the world can give. Next to him comes the man or woman who from weakness—for it is nothing else—neglects to make the child able to meet and overcome difficulties, but teaches it to shirk them.

Let us not suppose that the children with whom Judge Lindsey has to deal are necessarily slum children. They are nothing of the sort. They belong to all classes. For very poor parents who neglect their children there may be some excuse. For parents with leisure there is none whatever and we shall do well to remember that the selfishness and the appetites which culminate in crime can be, and are, cultivated in the homes of luxury quite as well as in the streets. STUDENT

The Spirit of XXth Cen- tury Japan

EUROPEANS are generally of the opinion that the Japanese of this Twentieth century are sitting modestly at the feet of western learning. This was true up to a certain period, when the country was building itself up along Europeanized lines; but it is so no longer. During the last decade or so, a decided reactionary spirit set in, and foreigners are beginning to learn that they are at a discount in the land. Some fifteen years ago there was a movement throughout Japan, having for object the Romanization of the literature of the country, and one of its fruits was the coining of currency bearing the specific value in Roman letters. Today the Roman letter is being replaced with ancient Mongolian ideographs.

Some time past a lively discussion took place in the Imperial Diet, over the introduction of the metric system into the country; and it was successfully opposed on the ground that such an innovation from Europe, would be equivalent to casting discredit on the mathematical ability and upon the commercial standards of the people. Now, while this may be true sentimentally, it is to be regretted that the metric system was not adopted, for far from being a purely national standard of measurement of any country whatever, it is the simplest and easiest way of computing. It is a system towards the adoption of which the whole world is tending, and Japan will one day see the necessity of doing likewise. However, the opposition of the Japs to being flooded with un-Japanese things and ideas is shown very clearly by this action.

Billy-cock hats, patent leather shoes, silk hats and European trousers are being more tabooed.

The old national games are being revived, and most significant of all is the fact that the Japanese say openly that while they are grateful to us for what we have given them in science and mechanics, they want nothing whatever to do with the essential nature of our civilization. It is antagonistic to the spirit of the nation's genius, and against the age-old ethic of their moral teaching. STUDENT

THOSE who want to live long might with advantage note the uncommon longevity of members of the Society of Friends. Year by year their mortality tables tell nearly the same story. In 1900, for instance, the Society had 300 deaths in Great Britain, and the average age at dying was 61 and a half years. The average for the public in general for that year was, we believe, about 35. The causes lie of course in the habitual state of mind cultivated by the Quaker, his reliance on the "inner light," which he regards as the manifestation of Christ in him—and his regulated life. There is no need to be a Quaker to achieve the same results by the same means. STUDENT

Art Music Literature and the Drama

Has Music Intrinsic or Absolute Meaning?

MUSIC is a science more exact than most people suppose. You cannot, for instance, say different things with the same tones in music any more than you can say different things with the same words in English or French. "Black" means "black" in English; never under any circumstances can it mean "white." In the same way, in music, a major third expresses an interrogation or an appeal, never anything else, and this appealing quality becomes exceedingly marked in the fourth descending, while the fourth ascending advances from interrogation to affirmation and finally to command. Major and minor fifths travel by regular gradations from prayer to desire, and from desire to menace. Sixths express passion—all love music is written in sixths. To a semitone higher, and this love, this passion, becomes a painful, an ominous, an ill-starred one. Sevenths express grief, tragedy. Perhaps you think I am exaggerating here, but I assure you I am not. What I claim you will find claimed in many treatises on music, and if you will study the works of the composers, you will find that they, too, bear me out.—*Exchange*

The question as to whether or not there is absolute meaning to music, as the writer of the above article contends, is summed up in the universal experience that music suggests more than it actually tells. The effect of the same music is never alike on any two persons, although there are marked correspondences in ideas and sentiments. Music composed to represent the march, the dance, exaltation, hilarity, joy, sorrow, distress, and other sentiments, may be unmistakable in the sentiments intended to be conveyed, but the feeling with which they are received depends upon the capability, the mood, of the listener.

The sincere composer has no uncertainty as to his meaning, but this meaning is never fully expressed on the plane of cold notation. The major part of his ideas must remain musically unexpressed, because they can not be written down on paper. At this point the performer takes up the thread, rehabilitates the ideas of the composer by infusing, so to speak, mental life into the script. Thus it reaches the listener and with him rests the verdict, and the listener himself becomes a creator according to the manner in which he evolves a concept of the ideas, feelings and sentiments of another. To one auditor the music will convey the composer's ideas quite well. To another the whole estimate will be biased by the key-note of the life. To still another the same may be interpreted from the standpoint of frivolity, or what not. Each one receives the music according to the key-note of his own mental and moral life.

It may be true, possibly, that certain musical intervals and progressions have a definite meaning, but the intrinsic meaning of music cannot be determined from its technical form. The subject is elusive. It concerns feeling, not intellect. It is of the soul of things and lies further back than the brain-mind can go. The march is a march always, and yet it blows a breeze of gladness to some and a whirlwind of sadness to others, as it passes.

E. A. NERESHEIMER

Lili Lehmann on Music in the Home

MADAME LEHMANN, according to an exchange, declares that we listen too much and sing too little. We pay enormous sums to bring the greatest singers to our land that we may listen to beautiful singing, but *we do not go home and sing ourselves in our home, or family, life.* She says: "*Mark my words! it is this family singing that makes a great musical nation. Music in the home!*" Referring to France and Germany she says: "Good music is a part of ordinary homespun education, a part of the daily life of the men and women of the family,

who, among themselves, sing all the arias from the operas." What America needs, as Madame Lehmann says, is to imitate those family gatherings abroad, where some member of the household sits down at the piano and all—parents, sisters, brothers and guests—sing together. "They sing as the birds sing, because they love it, and it is their habit. But you Americans! Ambition is so apt to lead astray! If a girl sings—she at once dreams of the stage or the fashionable concert-room. To sing night after night, in the home parlor, or home living-room, just for the sheer love of singing, how she scoffs at the mere suggestion!"

IT was during the year spent at Königsberg, while Richard Wagner was passing through a period of unusual sorrow and stress, that he wrote the *Rule Britannia Overture*. In some mysterious way it was lost and no trace of it was found until recently, when it was discovered among the effects of a musician named Thomas, after his death in a workhouse in North Wales. According to experts, there is no doubt as to the genuineness of the discovery. The overture has parts for the serpent and the ophicleide, and at one place introduces the air of "Rule Britannia" scored for four French horns. It has a finale scored for a full military band in addition to the thirty-one instruments.

THERE is a certain significance today in the researches now being made by folk-lore and musical societies of many names and many descriptions, to gather up the traditional ballads and folk-songs of Ireland. It would seem that this alone would build a bridge that must extend from the past into the future. And yet the link has really never been broken—as a cable which extends across the ocean, from shore to shore, might sink beneath the water and be forgotten, because lost to view for a time. Deep within the Irish nature is an innate love for all that is best in music. It bids fair, at last, to find outlet and expression.

THERE is something sacramental in perfect meter and rhythm. They are outward and visible signs of an inward and spiritual grace, namely, of the self-possessed and victorious temper of one who has so far subdued nature as to be able to hear that universal sphere-music of hers.—*Charles Kingsley*

"A NEW COMMANDMENT I GIVE UNTO YOU, THAT YE LOVE ONE ANOTHER"

Helen Keller

HELEN KELLER, after months of most intense application, broke down completely with nervous prostration, on the eve of her graduation from Radcliffe College. The sympathy of all will be extended to her in this time of suffering.

Mark Twain once said that the two most remarkable characters of the Nineteenth century were Napoleon and Helen Keller. One who looks with sympathetic closeness into the life of either inclines to the belief that the statement is not far from right.

Helen Keller was not two years of age when she became permanently blind and deaf, as the result of a severe illness. When six years old, this forlorn little prisoner, within a world that was as soundless as it was silent, was, to put it plainly, traveling towards melancholia, if not idiocy. In her autobiography, just published, she writes of herself at the age of seven: "Anger and bitterness had preyed on me continually for several weeks. . . . Have you ever been at sea in a dense fog, when it seemed as if a tangible white darkness shut you in, and the great ship, tense and anxious, groped her way toward the shore with plummet and sounding-line, and you waited with beating heart for something to happen? I was like that ship before my education began, only I was without compass and sounding-line, and had no way of knowing how near the harbor was. 'Light! give me light!' was the wordless cry of my soul, and the light of love shone on me in that very hour."

Marvelous indeed must have been the wisdom, as well as the patience, of the teacher, Miss Sullivan, to whom Helen Keller virtually owes all the richness that life holds for her today.

For today finds her a student at one of our leading universities, possessing a good knowledge of the literature of our own and other nations, familiar with several languages and, most remarkable of all, capable of writing a book that leaves nothing to be desired from a literary point of view, and which is a naïve and confiding record of the liberation of a once prisoned soul.

"During the first nineteen months of my life," she writes in her autobiography, "I had caught glimpses of broad green fields and luminous sky, trees and flowers, which the darkness that followed could not wholly blot out."

Music she learned to love, perceiving it by tactile recognition alone, so sensitive did she become to the beating against her of the air waves set in motion by the sound.

From teaching her the names of concrete objects to giving her some comprehension of abstract ideas was a long step, but it was taken.

"Love" was the first to be comprehended, and of this she writes:

"What is love?" I asked.

"She drew me closer to her and said, 'It is here,' pointing to my heart, whose beats I was conscious of for the first time. Her words puzzled me very much because I did not then understand anything unless I touched it.

"I smelt the violets in her hand and asked, half in words, half in signs, a question which meant, 'Is love the sweetness of flowers?'"

"No," said my teacher.

"Again I thought. The warm sun was shining on us.

"Is this not love?" I asked, pointing in the direction from which the heat came, 'Is this not love?'"

Later, on the breaking out of the sun from the clouds:

"Again I asked my teacher, 'Is this not love?'"

"Love is something like the clouds that were in the sky before the sun came out," is the enigmatic reply. At last the beautiful truth burst upon my mind—I felt that *there were invisible lines stretched between my spirit and the spirits of others.*" (Italics mine.—ED.) STUDENT

A Second Helen Keller

THERE is, in the Wisconsin School for the Deaf, a young girl whose remarkable development bids fair to rival that of Helen Keller.

It is Eva Halliday, deaf, dumb and blind, a condition which resulted from catarrhal fever when she was six years of age. Her home was in Wausau, Wis., and, her parents being unable to educate her, she was invited by Superintendent Cary to enter his school.

By a strange chance a Miss Hypatia Boyd had recently entered the school, herself deaf and dumb, for the purpose of learning how to teach those similarly afflicted. The two were thrown together apparently by accident and Miss Boyd was so touched by the settled sadness of Eva's disposition that the superintendent at once consented to her proposal to take Eva as a pupil.

At that time, but little more than a year ago, the young girl knew practically nothing beyond a few signs which expressed the simplest ideas or needs. Miss Boyd began teaching her by placing an object in her slender hands, then placing there the letters spelling its name. The connection was soon made and a new world opened out before the sad-faced girl. Today Eva uses the typewriter easily and correctly, does several kinds of needlework, and has also learned to operate a sewing machine. She reads and writes and the way is at last open to her to receive an education on the highest and most advanced lines.

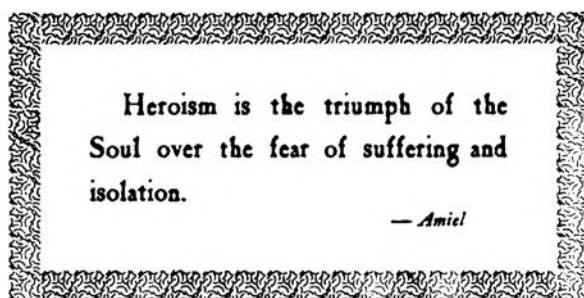

But the greatest change has been the blossoming out in her character of a real joy. It is as if sunshine were at last being let into a beautiful room that had long been kept darkened. Said Miss Boyd recently, in speaking of her pupil, "I can never forget the beautiful change that came to her countenance when she was freed from her prison.

"At first her thoughts, as reflected in her face, were of an indescribably sad and pathetic nature, but from the day that I taught her her first word she began to look out on the world with an affection, an intelligence and even a keen sense of joy that did one's heart good to see. And it is this and other things that convince me that Eva has a mission to fulfil in this world. In a way

that I cannot find words to describe, she awakens all that is sweet and noble in human nature, and gives to those who come in contact with her a strength and courage productive of much good, especially in overcoming obstacles and difficulties. Her happiness never leaves her. *I believe she is the happiest child that I have ever seen.*" (Italics mine.—ED.)

IT is difficult to believe that a sense of color is possessed by the blind, but such has long been proven to be the case. To quote but one instance, that of a Miss Tillman, who makes the most beautiful designs in bead-work, many of them exceedingly complicated, working them out in various colors, which she blends without the least inharmonious. She says she can tell the colors by the "feel." The beads are assorted in boxes of various shapes and sizes, one color in each box, but this is the only help Miss Tillman receives in selecting them. Industrious habits are the rule among the blind; in fact, it is most unusual to meet a blind woman who is not industrious and exceedingly useful in certain ways. Most of them can cook, do many kinds of housework, sew, and even travel without escort.

HELEN KELLER's book, *The Story of My Life*, is being translated into Bohemian. It is to be brought out in an edition cheap enough to be within reach of the poorest Bohemian peasant, the aim of translator and publisher being to interest the poorer classes in the possibilities of education for the blind, deaf and dumb.

Teaching the Blind

A NEW experiment is now being made in Chicago which promises to be successful. Mrs. S. E. Frackleton, so well known as the inventor of the beautiful pottery known as the "Blue and Gray," is teaching the use of the potter's wheel to one of the blind residents of the Industrial Home in that city. This departure is Mrs. Frackleton's own idea. Last year she said: "At a meeting of the Federated Women's Clubs, I was shocked to hear the statement that ninety per cent of deaf mutes are self-supporting, while the blind beggar is always with us, and I asked myself if it can be possible that the loss of any one of the senses should render a person helpless. As it happens, I have a friend who has been blind many years, and no woman is happier or more useful."

"She is at present instructor in a training school for nurses. Her sense of touch is marvelous. Outside of her profession, in which she is markedly excellent, she is a student and a charming woman. Why cannot all blind women be equally happy and equally independent? Surely each has some one talent that might be cultivated. Of course it was then but a step to the thought of my own work, pottery, and it seemed to me that this was a line of work particularly adapted to the blind. This outfit is not expensive, and the product is always in demand, which is not always the case with bead-work, crocheting and knitting, and lace work."

Who shall say that this is not the opening up of a broad, new path?

HELEN KELLER was recently tendered a reception by her old comrades at the Wright Oral School. She was, of course, accompanied by Miss Sullivan, who for sixteen years has been her constant instructor. Most of the time Miss Sullivan interpreted to Miss Keller by the deaf and dumb alphabet, Miss Keller touching her hands. At other times the latter would place her hands on the throat of Miss Sullivan while she repeated to her the greetings and words of her old friends, Miss Keller thus grasping the meaning of all that was said. One of the most remarkable of the Wright School students is Miss Katherine Woodward, who was born deaf and dumb. "I went to see *Midsummer Night's Dream*, the other night," she said. "I had read the play and I understood all that was said. When the actors' faces were toward me I could understand nearly every word, and when I could see their lips only in profile I understood a great deal."

Women and Colleges

IN the year 1836 there were in the United States 120 colleges for young men and not one for young women! Today there are five large women's colleges in the New England and Middle States, while nearly all other colleges and universities are coeducational, opening their class-rooms to women on the same terms as to men. With every year that passes one sees an increasing number of women winning honors and degrees. It was but little more than a hundred years ago that the City Fathers of Northampton voted "not to be at any expense for schooling girls," and one William Woodbridge, a Yale graduate, who in 1780 advocated opening schools for girls, was looked upon as a visionary. He was practical, however, and demonstrated his theories by opening an evening school for girls, the first of the kind in New England.

FEW women of the present day have carried on a work fraught with so much good as Mrs. Hepburn Starey, whose labors among the sightless London poor well entitle her to be called the "mother of the blind." The number of the darkened, poverty-stricken lives that have, thanks to her efforts, received both moral and material amelioration, it would be difficult to reckon. Her genial presence and sympathetic temperament admirably qualify her to be the friend and adviser of a class who, in the "struggle for life" in this great city, are often in danger of being wholly overlooked.—*London News*

Madame Roland's Request

When Madame Roland was on the scaffold she asked for pen and paper to note the peculiar thoughts that hovered about her on the last journey. It is a pity they were refused, for in a tranquil mind thoughts rise up at the close of life hitherto unthinkable, like blessed inward voices alighting in glory on the summits of the past.—*Goethe*

WHAT a contrast is presented to us in the deaths which occurred during the French Revolution of two noted women! One, Madame Roland, the woman of whom Lamartine wrote, "The doors of a prison closed on her, and all the virtues, the faults, the hopes, repentance and heroism of her party seemed to enter the dungeon with her;" the other, Madame du Barry, the courtesan, noted for her great vices as well as beauty.

Of the latter, it is said that when on her way to the execution she displayed the most abject weakness—crying and lamenting, and shrieking to the noisy mob following her cart, "Life! life! life for my repentance! life for all my devotion to the Republic! life for all my riches to the nation!" Without one redeeming virtue apparently—with no guiding purpose to sustain her—she died like a coward.

A contrasting picture of beauty, heroism and lofty purpose was shown in the death of Madame Roland, "the Soul of the Gironde." So imbued was she with her intense patriotism and love for the cause she was sustaining that her captivity seemed to strengthen all the charms and virtues in her character; even more, if possible. On her way to the guillotine, her eyes shone with a deep brilliancy, the color came to her cheeks, and she seemed enveloped in a glorious beauty. Her whole attention was given on that last journey to caring for the comfort of an aged man who was her companion to the guillotine, forgetting her own sorrows. As she stepped lightly up to the scaffold, she bowed before the

Statue of Liberty and exclaimed, "O Liberty! Liberty! how many crimes are committed in thy name!"

Madame Roland was said to have had no religion, as was also said of Thomas Paine; yet the following prayer, which was found among her papers, would evidence that she had a deep knowledge of the inner life:

"Divinity! Supreme Being! Spirit of the Universe! great principle of all that I feel great, or good, or immortal within myself, whose existence I believe in, because I must have emanated from something superior to that by which I am surrounded—I am about to reunite myself to thy essence."

Here we have two extreme types of women, both of them instrumental in causing that Revolution: the French courtesan, whose life of extravagance incensed the starving masses to rebellion, and the higher type of womanhood, brilliant, beautiful and brave, ready to sacrifice her own life for what she considered the good of all. E. C. S.

THE law of compensation has rarely shown itself more strikingly than in the case of Mr. Wolstenholme, a performance of whose compositions took place lately at the Steinway hall in New York. Blind from his birth, he has found in music a realm of gold, where he

Sits i' th' center and enjoys bright day.

In Blackburn, where he was born, and where his father was an architect, no one held quite so warm a place in the public heart as the organist-composer, whose child-like passion for music in any form, from a brass band to a ring of bells, was a subject of unfailing delight. It is an interesting fact in Mr. Wolstenholme's career that when he went up to Oxford to take his Mus. Bac. degree, Edward Elgar, then unknown, journeyed with him and played the rôle of amanuensis to his blind friend in the examination.—*Selected*

MADemoiselle BOUSIGNORIO, a young French woman practising in Paris as an oculist, has been lecturing with great success on blindness, arousing much interest and attention.

Archeology in Music—Practical Applications in Progress

AN interesting application of practical archeology to music, to which we have already referred, is now in full progress. This consists in registering by means of the phonograph the still remaining folk-songs of all the tribes of Indians surviving in the United States.

Though we have heard snatches of Indian music, but little is as yet really known. No serious study of it has been done, and no attempt made to get into touch with the qualities of feeling it represents and reflects. In other words, a whole field of consciousness has remained closed.

In dealing with prehistoric remains, we recently pointed out one never hitherto considered in this light. Educationalists have long noted, without drawing much inference from it, the fact that children from any of the less retrograde classes of American Indian are as susceptible to education, even in its highest forms, as are our own offspring. In other words, the machinery of intellectuality and culture is present, only waiting its call to activity. And we argue that this could not be the case if the tribes had been on the *ascent* from primeval savagery. It could only follow from their being the *remains* of an ancient culture and civilization in which the now silent machinery was in full operation. It belongs to the type of disused organs, and is a true "prehistoric remain."

Why should not the same be true in music? Does it not seem possible or probable that an education in the forms and methods of modern music given to a sufficiently large number of Indian children would unveil in some of them a latent *genius* for music? In such case, the child would be a link between the present and the past. Assimilating whatever the present had to teach, he would add to it from the stores of his race memory, and a wholly new—yet also very ancient—key-note would be sounded in modern music. An old world would have been reborn into the new. A question recently asked by a professor of music would be answered: "What will be the distinctively American characteristics of the future music of America?"

Believing moreover, as we do, in Reincarnation, we believe that among the white races of this continent are reborn many of those who belonged to the civilizations that once flourished here, as well as many who, by their features, show their relationship to one or another tribe of Indians. The folk-songs now being recorded would be their own, would be their link to the past, and will certainly inspire one here and there to the composition of music that to our ears will convey a new and strangely suggestive message.

Visit of Norsemen to America. Nine Hundred Years Ago

THE belief that America was discovered many centuries before Columbus' voyage, by Norsemen who sailed across the northern seas, rests primarily on the stories told in some of the Scandinavian *sagas*. Besides this, archeological remains have been found in the north-east of our continent, which are regarded by some as evidence of occupation by the Norsemen, while others deny this evidence.

Thus the late Professor E. N. Horsford and others found what they regarded as the foundation stones of Norse dwellings, indicating that the Norsemen came to Boston Bay; whilst Professor Fiske was skeptical regarding all these supposed remains.

Dr. Dieserud, of the Library of Congress, reviewed the evidence a year or two ago, in the *Bulletin of the National Geographical Society*. He accepts the theory that the Norsemen came to America about 900 years ago, but rejects all archeological evidence, and relies solely on the *sagas*.

There are two such *sagas*, the *Flatoe-book* and the *Hauks-book*. The first states that Bjarni Herjulfson was the first to discover America, and that it was in 987; and that Leif, son of Red Erik, visited it again fifty years later.

The *Hauks-book* makes Leif the true discoverer, and Bjarni probably only sighted America. Leif is said to have been blown out of his course while returning from Norway to his home in Greenland.

But Thorfin Karlsefni, a later adventurer, set out with the definite purpose of finding Leif's "Wineland," and is said to have taken with him four vessels and 150 men. He remained out several years, lost part of his party, and discovered what he thought to be the original "Wineland," but the identification was not complete.

It is thought Karlsefni struck the coast near Labrador and pushed southwards, down Newfoundland, around Cape Race, and so westward towards Cape Breton, where he wintered in an inlet called Streamfirth.

Later the party started out from Streamfirth to explore further. One of them, Thorhall, went north and was lost. Karlsefni went southwest, and landed in a country he called Hop, finding grapes, grain, animals and fish. Dr. Dieserud thinks this was "Wineland," and locates it on the southern coast of Nova Scotia.

Prehistoric America Had Intercourse With Egypt

IT is astonishing that prehistoric America does not hold the attention of the scientific world more than it does. Geologically, this country is older than Europe, and even Africa; and recent explorations, more especially in the great southwestern states, have brought to light distinct traces of a prehistoric people whose origins are lost in the night of time. All indications go to show that this people was not of what is called the Aztec nations, but was the product of another branch of the human race altogether. And it is not only the southwestern states which still hold evidence of this prehistoric civilization; but traces of it, or of another akin to it, are scattered far and wide from British Columbia down as far south as the straits of Magellan.

Possibly the unknown people who covered Easter Island, for example, with huge and imposing statues, and different remains, were closely allied with the prehistoric Americans proper; and it may even be, and probably is, the fact, that these forgotten ancients of America had intimate intercourse with the Egyptians of untold centuries past. Their architecture was similar; they used the same cement: their pottery was in many ways identical in shape and fabric; while as to the Toltecs and other South and Central Americans, the mode of embalming was the same as that described by Herodotus as used by the Egyptians. It is of the utmost importance to remember that certain peculiar signs, with regard to architecture, temple and domestic, were the same in Egypt as they are now found to be in Central America.

As America is older than Europe and than Africa, why should it be impossible that this continent was formerly covered with flourishing nations from whom spread to the then corners of the earth all that was valuable and useful in civilization?

The Navajo Is a Good Indian—Chief Manuelito

W. N. WALLACE has lived with the Navajo Indians for nearly twenty years, and he says that the Navajo is a good Indian, in spite of the fact that he prefers a beautiful blanket to hideous trousers. There are 20,000 Navajos on the reservation. They are industrious and thrifty, and their circumstances are therefore good. Mr. Wallace is eloquent in praise of his Indian friends. He says he never tires of them. He knows their language and their habits, and they trust him entirely. Of Manuelito, the great chief, who died some years ago, Mr. Wallace says:

He was one of the greatest men I ever met. He was one of the best friends I ever had, and I could never express my gratitude to him fully.

He saved my life once when it looked as though I didn't have a bare chance to live. I got into an altercation with an Indian one day a few years before the chief died, and should have been stabbed to death but for his timely interference. His name in the Indian language was Tah Hahn Ah Badana. Rather high-sounding, isn't it? Well, he deserved to have a good name, as he was the salt of the earth. If he had been a white man, he would have been considered a great orator.

We hope Mr. Wallace will record his experiences in some permanent form. They would certainly be valuable and humanizing.

Can Any of the Lower Animals Count?

MR. ERNESTO MANCINI writes interestingly in the *Revue Scientifique* on "The Arithmetic of Animals," and what is far more to the point, he writes sympathetically. We do not yet fully recognize that sympathy is a means of knowledge sometimes more fruitful than the most analytic intellect which lacks sympathy.

According to a translation made for the *Literary Digest*, Mr. Mancini says: "No matter how slightly developed it may be, and even when it is quite rudimentary, the faculty of enumeration has memory as its principal factor. Now it seems entirely admissible that memory exists even in lower animals, and that it becomes more and more developed as we rise in the scale."

Not knowing exactly what Mr. Mancini means by the "lower animals," it is not easy to comment upon his opinion, except to express the belief that there are very few animals indeed that will not show evidence of memory if properly observed.

The author admits that many animals have a very good idea of concrete numbers, and he cites the case of certain mine horses, who are required to make thirty trips a day, and who return at once to their stable after the last trip, and also of the oxen in the Royal Gardens of Suza, of which Montaigne speaks, who refused to perform more than their daily task of turning the irrigation wheels one hundred times. Mr. Mancini tells us that we must accept those stories with caution, but they do not seem to be more remarkable than other experiences which many animal lovers have encountered.

The power which human beings possess of estimating numbers, is not so great as is usually supposed, and without special training is often very faulty. Mr. Mancini quotes to this effect from Houzeau, who says that if we ask a person to estimate the number of stars visible upon a clear night, we shall probably receive a very exaggerated reply, the actual number thus visible being a little over three thousand. The author sums up:

What is wanting in the animal is general judgment. It lacks the articulate word and, consequently, the explicit exercise of intelligence—in fact, all that contributes to the formation and development of the number concept. On the other hand, it has been sufficiently shown that, up to a certain point, the animal has a notion of number—not of abstract number or of quantity apart from concrete objects, but as a comparison of groups or as simultaneous and consecutive images of things. . . .

THE loquat is one of the fruit trees originally brought from the far East, which were introduced into California by the early missionaries from Spain. It is an evergreen, which blossoms in the autumn and yields its first ripe fruit, in this climate, about the first of April. The fruit is intermediate between the plum and the apple in size, shape and structure as well as in flavor. In hotter climates it is a very fine fruit, but on the cool coast lands the pulp is apt to be thin and stringy, so that the loquat consists principally of the two to four large soft seeds, but it responds well to intelligent care in location and culture. The wood is whitish, soft and very brittle, so that climbing after loquats is likely to result disastrously to both the tree and the climber, for which reason the trees are kept trimmed low. The blossoms, while not very beautiful, have a sweet, rich odor and will keep for a fortnight or more in water. The specimens shown here are from trees on Point Loma. G. W.

THOREAU

by R. A. DOUGLAS-LITHGOW

FAIR Nature loved him, and he worshiped her
With ceaseless homage, in her every mood,
Bearing the impress of her motherhood,
As her own meek devoted minister,
Noting each smile and frown—each pulse's stir—
He sought her wonders as his daily food,
Nor did her beauties e'er his eye elude
E'en in a wild flower, or an insect's whirr!
From aurate morn—from noon to dewy eve
He sought her footprints by each wood and lake—
Followed o'er hill and dale—through grove and brake,
And felt reluctant her fair haunts to leave.
At length, fatigued, he laid him down to rest
And sleepeth still on Nature's loving breast!

THE LOQUAT IN BLOSSOM

Is Form a Sure Sign of Life Rank?

THE now generally recognized fact that each kingdom of visible nature; the mineral, the vegetable, the animal and the human; is each inhabited or pervaded more or less by intelligences and conscious entities of the kingdom next above, will ultimately prove to be a key to some of the most abstruse mysteries of geology, botany, zoology and anthropology. We all know how closely some species of animals approach to human intelligence; some individuals even seeming to have the power of thought; and we know that, almost without exception, those species which have the highest type of intelligent consciousness have also the highest type of physical organization, and those which are deficient in intelligence are physically inferior to related species in physical structure.

We know also that, in spite of apparent exceptions, the truly spiritual man is the physical superior, often very much the superior, of the more animal races.

In view of the above, we venture to predict that these truths will yet be found to be the solution of the problems offered by plant-intelligence, evolution of form, genius, the laws of chemical affinity, degenerate types; and many others of like nature. It may even be discovered that

the mysterious border line between the animal and the vegetable is broader and extends further up the scale of life than is now generally supposed. A finely bred, intelligent horse or dog is easily the superior, to outward appearance, at least, of many tribes of human beings, even to some persons to be found in civilized countries.

May it not be likewise at the other dividing line? An intelligent, active plant like a sensitive plant or an insect catcher, or the acrobatic seeds of some species, certainly seem to be superior to the degenerate medusa and other anomalous forms. May it not be that they really are so? A.R.

Some Reflections on the Life of a Point Loma Crow

WE purposely say *the* crow because there seem to be no companions nor associates for him. Every morning, as soon as it is light he flaps his slow way northward, past the Homestead, often as far as Mission Bay, whence he soon returns laden with provisions for the family at home, southward, toward the lighthouse. His identity is rendered unmistakable by the absence of a feather from the second phalange of his left wing. With the wide soaring buzzards, which visit the Point, he has nothing to do, *his* life does not revolve in their circles.

It is natural to feel a special interest in *the* crow and to suppose that he must have an original and energetic mind. Else why has he separated himself from the numerous company of his kind along the bayshore? A pioneer crow, he has ventured alone into this territory.

We feel a personal companionship with that crow and have occasionally ventured to salute him with his generic password, the historic "C-a-a-w," to which he responds briefly or not at all, as the humor takes him. At other times, however, when matters of more than ordinary import occupy his thoughts, he announces them to us with sonorous regularity of utterance as he passes, totally indifferent to the fact that his verbs and adjectives all sound exactly alike to us, so that to our dull perceptions it seems that he has, like the oracle, only a single answer to all inquiries. Universal Brotherhood Organization

Central Office Point Loma California

ANOTHER large and enthusiastic audience greeted Katherine Tingley, Leader and Official Head of The Universal Brotherhood and Theosophical Society, at Isis Theatre last Sunday evening. The keynote of her inspiring address was the Declaration of Independence. She pleaded for a broader and higher conception of this wonderful document of human rights, and insisted that one of its most important pronouncements was that which divorced church from state. Particularly in this respect, and indeed throughout her entire address, the audience was in hearty accord with every sentiment expressed, and frequently interrupted the speaker by emphasizing its approval with unstinted applause. She boldly charged the union of church and state with many of the evils under which humanity all over the world is groaning today—and the audience applauded its assent.

The theatre was beautifully and appropriately decorated, and there was a splendid musical program by the Raja Yoga children and students of the Isis Conservatory of Music. One of the bright Raja Yoga boy orators presented a brief but striking address on "Independence Day, 1776."

"So far as we have rightly interpreted the message of independence enunciated by our forefathers," said he, "so far have we prospered in those things which make a nation truly great, and in so far as we have misinterpreted the great message, to that extent have we failed."

The patriots of 1776 were men of heart who gave their lives for true freedom, said the Raja Yoga lad, and he thought we could better show our appreciation of their glorious work by putting more heart-force and less gunpowder into our celebration.

Little Frances Hanson and Master Barborka again charmed the audience by their wonderful piano and violin duets.

Mrs. Tingley's appearance was warmly greeted. Although she spoke under the general title of "Thoughts by the Way," her address began and ended with the forceful, earnest plea for a deeper understanding and appreciation of that historic event which would be celebrated on the morrow. Her address might be termed a Fourth of July oration, but of a broader and more profound scope than that embraced on any other platform. If our forefathers of '76 could be with us today, she said, they would agree that the mighty meaning of the Declaration of Independence has not yet been understood. She spoke feelingly of the sufferings of the early patriots, and then came her declaration that wherever church and state are bound together despotism and in the end, death, are the results. (Applause)

She said she did not want to unsettle anybody in their religious beliefs, however, and that if humanity today followed the essential truths found in all great religions, there would be no need for a Declaration of Independence. "Our very lives would tell of our real independence."

"The Declaration of Independence will be passed down to history as Scripture. One of these days it will be read to the children of the earth as such, sanctified by the sufferings of those who have lived and died and fought and suffered to uphold the mighty principles it gave to man." (Applause)

She hoped that every family at the breakfast table on the morning of the Fourth would read the document, at which suggestion there was renewed applause.

Turning then to other countries where she had studied the conditions of the people during her travels, Mrs. Tingley gave briefly a series of telling word-pictures that will live long in the memory of her audience. She had never known what true patriotism was until she witnessed the suffering of people in other lands. Her travels had given her a new urge toward doing her part to interpret our Declaration of Independence in the light of the heart knowledge, she said. Whenever, in foreign lands, she had found the church and the government united, there she found a stultifying power.

In Sweden the people enjoyed great freedom, she found, but it was the heart of the King and not the church which granted their liberties.

In England one almost lost sight of the fact that church and state were united. The measure of freedom was due to the intelligence of the people and the liberal tendencies of the church.

In Austria she was warned not to use the words "soul" and "spirit" in her public address, under pain of arrest. The audience heartily applauded when she said she had disobeyed these orders, and almost converted the official into becoming a member of The Universal Brotherhood. Austria was a country to make one appreciate free America.

In Rome abject poverty and ignorance existed under the shadow of the Vatican,

KATHERINE TINGLEY AT ISIS THEATRE

The Theosophic Leader's Eloquent Appeal for a Broader Conception of the Declaration of Independence

Reprinted from the San Diego News

but there is throughout Italy, she said, an aspiration for the spirit of the teachings of our Declaration of Independence that will yet save the nation. She saw the signs of a coming Declaration of Independence in Italy. She spoke of the work of Tom Paine in France, and of the bond of sympathy that was created between this country and

France in the early days by the higher patriotism of such men as Lafayette and others. "The seed is growing in France," she declared, and there seemed little doubt of the harvest.

In touching Ireland the speaker referred to a recent book written, she said, by a member of that church which has kept the Irish nation in bondage so long. It was a noble book, and she hoped at some future time to quote from it in a public address. Ireland's close connection with America made the influence of the Declaration felt even there—and more and more as the years go on.

In Egypt she was awed into silence by the evidences of antiquity to be found on every hand. Many of the modern Egyptians were very poor, she said, but they communed with nature, looked at the stars unafraid and had no terror of the theological damnation so apparent in some countries.

In India there was great confusion of thought at present, but find a Hindu of the old type and you found a man with no fear in his face and no missionary at his side. (Applause)

In China there was mental food enough to hold one's attention for a life time. But no matter how many gods and idols the natives may have they are in no terror of the orthodox hell. Their philosophy has suffered from misinterpretation, but it contains the truth, and the nation is united.

In glowing terms Mrs. Tingley spoke of the splendid advance made by Japan since first that nation was touched by America. Commodore Perry did not go there with guns in the name of civilization, but in the spirit of Brotherhood, and in that spirit Japan welcomed him and his nation. Today America has no better friend than Japan, said the speaker, and there was great applause again. "The Japanese have a sublime egotism that I admire. It is toned down when you meet them, but you recognize something in them that we often lack. They believe in themselves."

In concluding her eloquent address Mrs. Tingley said she would preach a higher patriotism. She hoped for a new light, a new force, a new love to sweep away all international barriers—to sweep away the selfishness of the age and replace it with Universal Brotherhood. (Applause)

OBSERVER

How Theosophy Can Help the Afflicted

HOW can one best console a person who is in deep pain or affliction? Not a very easy question to answer. So long as the acute suffering lasts, the sufferer is scarcely calm enough to be reasoned with, and so perhaps the best way is to say little and make things as easy as possible for him until the agony is past. Then will come a period of calm in which his mind will be able to view his case more reasonably and to take consolation. We cannot always see the reason for things while we are suffering; but, after it is over, we may, if we are wise, learn to profit by our experience and even be thankful for it.

One of the chief pains in our suffering is the feeling that we are being unjustly persecuted—by God, by fate, or by some harsh, unreasonable power. In our deep distress we may appeal to this power, and perhaps be rebellious and curse it for ever letting us be born to suffer so. People find it very difficult to hold on to their religious faith sometimes, when they suffer they know not why. In fact this is one of the places where man-made religion breaks down and proves its weakness; but sometimes a man may have enough real religion in his heart to help him through.

Now if humanity had not been misled and disheartened for centuries by false religious ideas, but had always had the light of true knowledge, it would not become so discouraged over trouble and would be able to console itself better. We should then be able to understand how it is that we suffer and why, and should not need to be questioning and wondering and cursing our lot. Let us see what false teaching it is that has made us so weak, and what the true teaching is.

The answer is this: We have been taught to distrust our own self and bow down in spirit before a God who is represented as being separate from us and ruling over us from above. It is not blasphemous to say this; the blasphemy is in the ordinary theological teaching, if anywhere; for it is belittling the Deity to think of Him as an arbitrary judge, punishing people without enlightening them.

What then is the real and original religious truth about God, which is to be found in the recorded words of Christ, and which has been so perverted and misrepresented by people who have undertaken to expound his teachings to us? It is that God dwells in every human heart; and that man himself, in his very inmost self is divine. Is this blasphemy—to say that God is everywhere, in all creatures? Surely it is the largest and noblest and most reverent conception of God we can form.

This view makes all the difference in the world when we come to consider pain and its cause and purpose; for it amounts to this—that we suffer by our own will and choice. We deliberately choose a path of experience that will bring us pain, in order that we may learn. The trouble is that, as we are not (in the present stage of human development) fully conscious of our divine will, it appears to us as if the pain were inflicted by some one else. We have two wills: a divine will which orders our life in accordance with wisdom, and a rebellious personal will.

To take an illustration: An athlete will purposely inflict toil and hardship on himself in order to train his powers and gain strength and skill. The higher will overrules the weaker instincts. In the same way that supreme will that stands behind the scenes of our daily life carries out its own purposes in spite of the opposition of our frail body and impatient temper. But it is not somebody else who puts us through the mill; it is our own real self.

'Tis thou, proud heart, 'tis thou hast willed it so! says Faust, when, in the supreme agony of suffering, the light bursts on him. This teaching of "God in the heart" is like the heliocentric system in astronomy—it throws a clear light on every problem, and makes simple and clear what before was complex and puzzling. It restores our self-respect, and teaches us to take a proud bold stand and face our lot with the confidence of a director and supervisor. It reconciles man with his destiny, and does away with the idea of carping at fate or cringing before it. We are the arbiters of our own destiny.

And there is yet another error we make in considering pain: that is, when we think of it by itself as a separate thing. But in reality pain has no existence apart from pleasure; the two are as inseparable as light and darkness or as the two ends of a stick. *Sensation* is the thing, and pain and pleasure are its two poles. It is sensation that we crave; and we get both kinds. It helps us very much in our endeavor to be calm and self-poised, if we accept (even intellectually) the idea that back of the turmoil of sensation and emotion stands our *true self*, calm and self-possessed. This belief will prevent us from entering too deeply into our sorrow, and draining the cup to the dregs. It will steady us in every kind of experience and prevent us from being carried away by violent ups and downs. And gradually, by time and practise, the intellectual belief gains reality; and the true self, thus recognized, is able to manifest himself and become a prominent factor in our life.

From this it will be seen that the effort to run away from pain and seek pleasure, as most people do, is unintelligent and can only entangle us deeper in the meshes of sensation. But by recognizing pain and pleasure as facts, and learning to understand what they are, and in what relation the self stands toward them, we master pain and pleasure, and cease to be troubled by them.

H. T. E.

The Beauty of Law

Read at a public meeting of Universal Brotherhood Lodge, No. 1, Australia

PEOPLE are suffering a great deal more than they need, and there is a simple way to escape from it. The difficulty is not in *the way*, or finding out what to do, but in giving up the wrong ideas that have formed themselves into habits of thought and feeling, creative of wrong results.

From these wrong ideas held by so many are born the criminality, insanity and misery in which we live and for which we are partly responsible. There is so much wrong, so much misery, in every shape and form in life as it now is, that it is found hard to live honestly, and very hard to live happily; and no one can do so who is dragging out an existence in the usual way.

We all know well enough at heart that a complete change is necessary, and many know that this change is now taking place. This being so, the question is, how can we best get into line with the new conditions, and so help to bring about and hasten the coming of a brighter, better and happier life? I think very few thoughtful, kind-hearted people believe now that it is possible to gain true happiness and enjoyment in working for themselves and following the gratification of their personal desires; and most of us are well aware that our troubles have been caused by this very pursuit and gratification. So some have found, and many are finding, that true happiness and true joy cannot be really had from *external* things, but is an internal condition of the heart and mind that should be always with us.

Some few can extract the kernel of the nut, no matter how hard the shell may be; but though some few are wise enough and strong enough to be able to do this, there are many who require a fine day or softer fruits to enable them to thoroughly enjoy life, and both external and internal conditions have to be in harmony before true happiness for all can be found.

Now, is it not a fact that the best of all conditions for us to be in, is so to feel and see the wrong in the world, that we would do anything to help to make it better? If so, then the first step to get in line with the change that is going on would be to become thoroughly dissatisfied with life as it is; and most of us, I think, are in that condition, so that the world is ready for a change. Then the next step would be to find out what this change is to be, and who is to be changed, and whether or no there is a purpose and a definite plan, and how we can learn to take an active, intelligent part in it.

There is undoubtedly a Great Plan and true knowledge of how human life should be lived to make it perfect, individually and socially, and this Great Plan is now in operation; and it is upon this plan that the change is being molded, and on which the future individual and social life will be permanently established.

We are, most of us, aware that there are great Laws in Nature, and that we are quite helpless when in opposition to them. Whether we fume or fret, or use all our force to stop it, the rain rains, and the sun will shine, whether we like it or not—and not always to suit our convenience. The same laws govern our mental and moral life with the same irresistible power, and all opposition to them, or bodies governed harmoniously by them, is utterly useless, and must in the end, if continued, finally destroy itself when it has expended its pent-up energy. It is not Nature that is to blame; for all her Laws and operations are Divine, ceaselessly working for the intelligent progres-

sion, happiness and enjoyment of not only human life, but for all creatures. It is the individuals themselves, who are going the wrong way, that are at fault, and it is we who have to change first and not Nature before things go well with us.

The beauty of the Law is that we can absolutely depend upon it, for it is eternally fixed for the Perfection of the Earth and all her inhabitants, or children, from the greatest to the least. Civilizations rise and fall; thousands of years and ages go by, yet the Law remains the same; and to gain enlightenment we have to follow exactly the same rules and precepts based on those Laws, that were taught to those willing to learn the Truth, thousands upon thousands of years ago!

We have to come back to the surface of the Earth again and again until we learn these rules and make them a living power in our lives. It takes a long time to teach some of us by experience, that absolute trust in these Laws is the best protection and the truest aid we can possibly have. We say laws, and yet there is only *One Law* acting in many different ways, suitable to the degree and condition of life. We say lives, and yet there is only *One Life* showing itself in many different degrees and aspects, and it depends upon our breadth of comprehension, and depth of feeling, how much of that *One Life*, that one great Universal Life, we can throw for the moment on the screen of time.

T. W. WILLIAMS

MORE than three million people have emigrated from Italy during the last ten years, yet the population is gradually increasing.

CUBAN RAJA YOGA CHILDREN AT SANTIAGO DE CUBA

LIVE IN THE SUNSHINE

by MARGARET E. SANGSTER

LIVE in the sunshine, don't live in the gloom;
 Carry some gladness the world to illumine.
 Live in the brightness, and take this to heart—
 The world will be gay if you'll do your part.
 Live on the housetop, not down in the cell;
 Open-air Christians live nobly and well.
 Live where the joys are, and, scorning defeat,
 Have a good morrow for all whom you meet.
 Live as a victor, and triumphing go
 Through this queer world, beating down every foe.
 Live in the sunshine, God meant it for you!
 Live as the robins, and sing the day through.

"Strenuousness"

A WRITER to a newspaper quotes the views of some medical men and others that there is too much "strenuousness" in our times, and that we are living at a too rapid pace. "We have reached a point," he says, "where we must rest a bit in this mad rush for fortune and fame, else we will find ourselves helpless and hopeless breakdowns." A disease, called arterio-sclerosis, is mentioned as a result of this tension.

But what, we may ask, is the usually recognized alternative to this rush? It is "resting" or "going slowly." It seems to amount to this: that the only choice before the typical busy man of modern life is between rushing madly or doing nothing at all, between hurry and indolence, between excitement and exhaustion, feverish energy and lassitude.

One would think that, with so many people, all working themselves at top-speed, much would be accomplished. But is it so?

The real trouble is, not that we work too hard, but that we work in a wrong manner and from a wrong motive, and therefore wastefully and with the maximum amount of friction and inefficiency. All our energy is in our nerve-ends, and it works itself off in these mad rushes. Then, when the inevitable lassitude follows, there is either inertia or else fresh stimulation by quickly-digesting foods or stimulants, until the body breaks down. We all know what it is to "live on one's nerves."

Civilization is living on its nerves. It lacks real energy, such as is deep-seated, calm and continuous. This real energy springs from a deeper fount of vitality and does not produce either the rush of over-excitement or the reaction of depletion; it remains steady and constant. This is the kind of energy that does the real work; the other kind merely achieves superficial and temporary results and wastes itself in the friction of competition.

Hence, it is a mistake to say that we are working too hard, when our very "strenuousness" is but a form of indolence—one pole of that evil something, of which indolence is the other pole. Real energy would hold in check this feverish activity, as the massive momentum of the fly-wheel holds in check the racing wheels.

A good illustration of our condition in this respect would be that of plants watered by surface-sprinkling. Surface-sprinkling will readily produce a crop of rapidly-growing plants with little or no root, that will die directly the sprinkling is discontinued. But a eucalyptus, with its deep tap-root, laughs at changes of season; it taps an invariable source.

So we would not advocate dawdling as a cure for hurry, nor hurry as a cure for dawdling. Both are merely the alternating phases of a moral and physical fever; they indicate weakness and exhaustion, the one as much as the other; and to encourage either extreme is to equally fortify the other. We would urge an endeavor to get rid of the entire disease by stopping to think—pausing amid the rush of life to ask ourselves what is our purpose and what is our destiny and duty as human beings? We must learn to stand firm, rooted deep in the conviction of man's divinity, immortality and mighty destiny, and to resist the pull of the thought-forces that press in from the mad world and seek to suck us into their vortex.

NEXT week's issue of the NEW CENTURY PATH will contain a very interesting description of the experience of the Raja Yoga teachers in Santiago de Cuba and vicinity during the late terrible tornado on the south coast of Cuba, in which they barely escaped death.

A TRUE woman should always endeavor to make her home a sacred shrine.

The Japanese Art of Self-Defense

PERHAPS one of the most wonderful things in matters Japanese, as far as the Japs' purely national characteristics go, is their marvelous art of self-defense. In it is combined humane feeling and perfect self-protection. They call it Ji-jitsu. While the anglo-saxon knocks out teeth and generally mauls his adversary; and while the Gaul delivers horribly crushing and often mortal blows with his feet, the Jap is enabled by his strange science, to almost instantly convince his adversary, if he be a foreigner, that it is useless to fight with him. Schools for the teaching of Ji-jitsu are now established all over the country; while every soldier, sailor and policeman, is obliged to have attained a certain perfection in this system before he will be passed.

It is related that on one occasion, a Japanese policeman, well versed in the art, was known to have reduced to submission four sturdy sailors of some foreign Asiatic squadron, who had been making themselves more than objectionable when on shore leave.

Now, what is this science called Ji-jitsu? They say that it is based on an accurate knowledge of anatomy, and upon the power of self-control. While some claim for it an origin now lost in remote antiquity, others give the following explanation of its birth as a science.

It sprang from the Samurai, the warrior class of old Japan. These Samurai, or knights, as we would call them, belonged to a military order known under that name; and to them was imparted the breeding, the gentle courtesy, and the learning that mark the gentleman in all countries of the world. They only were allowed to bear arms; they were the Emperor's men, and they studied attack, self-defense, and the arts of war, as their sole occupation. As with the knights of Europe in the middle ages, it was considered derogatory to their caste to engage in other pursuits than that of their order; and as they could not be continually fighting amongst themselves, their attention was turned to athletics. It was soon found, that the human body possesses certain sensitive nerves and muscles; and that play upon them, rendered such a one subject to another. Expert pressure applied to this or to that place, or muscle, does not injure the frame, but produces momentary pain and incapacity to fight. So that, provided the Samurai did not lose his self-control, and kept his presence of mind, he was immeasurably the superior of one ignorant of this most interesting of arts.

One more lesson we have to learn; that it is not always brute force which Mother Nature has decreed shall be invulnerable; but that it is the subtle power of mind, applied intelligently to surroundings, which is the stronger. Thus it is, that one little five-foot Japanese policeman could master four sturdy European sailors, and lead them docilely to the police station.

Purchase of Louisiana

FEW people, even in Louisiana itself, know that the purchase of that State from France arose from a suggestion of Tom Paine's. On Christmas day, 1802, Paine wrote this letter to President Jefferson:

Spain has ceded Louisiana to France, and France has excluded Americans from New Orleans and the navigation of the Mississippi. The people of the Western Territory have complained to their government, and the government is in consequence involved and interested in the affair. The question then is, What is the best step to be taken?

The one is to begin by memorial and remonstrance against an infraction of a right. The other is by accommodation—still keeping the right in view, but not making it a groundwork.

Suppose, then, the government begin by making a proposal to France to repurchase the cession made by Spain of Louisiana, provided it be with the consent of the people of Louisiana, or a majority thereof.

By beginning on this ground anything can be said without carrying the appearance of a threat. The growing power of the Western Territory can be stated as a matter of information, and also the impossibility of restraining them from seizing upon New Orleans, and the equal impossibility of France to prevent it.

Suppose the proposal attended to, the sum to be given comes next on the carpet. This, on the part of America, will be estimated between the value of commerce and the quantity of revenue that Louisiana will produce.

The French treasury is not only empty, but the government has consumed by anticipation a great part of the next year's revenue. A monied proposal will, I believe, be attended to; if it should, the claims upon France can be stipulated as part payment, and that sum can be paid here to the claimants.

I congratulate you on the Birthday of the New Sun, now called Christmas Day; and I make you a present of a thought on Louisiana.

✿ The Trend of Twentieth Century Science ✿

Science Now Recognizes All Pervading Life

WHILST the text-books of chemistry still speak of "organic" and "inorganic," and even of "living" and "dead" matter, the distinction has practically vanished. The world has all become living. The last vestige of the line has vanished with the discovery that crystals live, move, struggle, grow and propagate. The facts are fully developed in a recent paper in the *Revue Scientifique*.

If we dissolve in hot water all the salt it will hold, shining crystals appear through the solution as it cools. Finally the whole becomes solid. What force is at work in the liquid, causing these points of crystallization?

Microscopic study of the early little crystals shows them to be alive. They move about and they rotate. They struggle with each other, and the weaker disappears, absorbed by the stronger. They are subject to occasional disease, becoming eaten away at points on their surface. They are sometimes deformed, bifurcated or twisted on their axis. They reproduce themselves in the three ways common to unicellular plant and animal life: that is, they divide into two parts which swim away from each other; they throw off buds which become detached; and sometimes they give birth to a little crystal, which, having become perfectly formed inside the larger one, comes to the surface of the parent, breaks through and swims away.

In the center of each crystal is a cell, quite comparable to the ordinary animal or vegetable cell, and from this the bulk of the crystal grows out. The cell has a nucleus, or more than one, surrounded by a spherical cell-body. A fine network pervades both, and within the nucleus are spots that may be nucleoli. As the crystal is forming, the cell throws out a promontory on two opposite points of its surface, and a line joining these constitutes the axis. When, as in salicylic acid, the crystal is long and needle-like, the appearance of the cells under the microscope, with long delicate prolongations, is suggestive of some of the brain cells of animals.

There is some dispute as to the origin of the cells. One observer regards their appearance as a case of spontaneous generation. Another thinks that every molecule in nature has its own proper generative faculties, which, under proper conditions, it at once begins to use.

A point arrives at which the crystal is fully formed, ceases to grow, and is fossilized. A very slow disintegration probably then sets in, occupying ages, the "putrefaction" of an organism that has run its life cycle and is dead. In the case of radium we can witness this going on at a comparatively rapid rate.

"All minerals," the paper goes on to say, "being of crystalline formation, . . . it results . . . that all minerals are formed of colonies of beings that either are or have been alive. Every individual of this colony behaves in a way to defend the mass."

A question remains for consideration, to which science can as yet hardly give a reply. Do the individual molecules gain anything from their association together as a crystal? It can be asked at any point in the scale of life. Are the molecules that have gone to make up the brain of a man permanently altered, educated, evolved, by that association; are they, after the brain is dissolved, the more ready and fitted to come together again in like grouping? The question seems almost as unnecessary as it would be to ask if a man is altered by association with others into a community, if he is made the readier for future like groupings.

Nature is forever trying to express the higher through the lower, the ideal through its vesture. And she always has a higher ideal ready. No unit, whether molecule or man, can ever be the same again after forming part of a combination that is an organic whole. And so the types of nature, though in the lower kingdoms they may seem to have been unchanged for ages, must be slowly altering, moving upward. In the mineral, moving plantward; in the plant, rising toward the animal; in the animal, manward; in man, —. Each unit, at whatever grade, must by its association with others, add to its individual life something that could only be got by association. Little by little, science becomes the demonstration of poetry, and lends imagination a new and higher vantage-ground from which she may spread her wings.

Graft, Heredity, and Acquired Characteristics

ONE occasionally sees, as a sort of gardeners' freak or feat, a tree bearing more than one kind of fruit or flower. One branch of an orange-tree, for example, will be bearing seedless oranges, the other branches normal ones.

This, of course, is done by grafting. A twig or bud of one plant is inserted beneath the bark of the other and grows there. But it strictly preserves its own characteristics, behaving as a lodger and utilizing the sap of its host merely as nourishment.

Whilst this statement is nearly true, it is probably not exactly so. In some few cases the tenant actually modifies the host a little. In others the host gradually modifies the tenant, and may even ultimately destroy its special characteristics. Indeed, it seems probable that in all cases there is a slight modification of both kinds, and that after a sufficient length of time a new type would be reached consisting of a compromise between the host and the graft. But the change in the host, though real, would be very slight.

The experiment throws some light upon heredity. In a certain sense the graft is an acquired characteristic, and it is now generally agreed that acquired characteristics are not handed on to the offspring. All that is transmitted is perhaps a slight tendency on the part of the offspring to acquire for itself the characters the parent had acquired. Thus an ordinary orange-tree which bore several grafts of the seedless kind might perhaps bring forth on its own branches, after a considerable lapse of time, fruit containing seeds in fewer number or of smaller size. We do not know whether this has yet been noticed.

The possibilities of grafting, applied to fruit-trees, have a very important bearing upon humanity's future food supply. For it enables us to divert all the energy of fruit-trees from the function of reproduction and cause it to expend itself in the size and nutritive ingredients of their fruits; and then to add these characters to hardy nature-growths in entirely other climates and conditions. So far, we are scarcely more than at the beginning of this important line of work.

STUDENT

Human Radiation That Will Show the Condition of Health

SCIENCE is on the eve of formulating a subtler test of health than any heretofore at her disposal, and not only subtler, but far exacter. A method has been invented for measuring the electric energy given off by the body. Nerves, muscles and organs give off electricity in proportion to their activity. Various instruments already exist for measuring muscular power. But that is hardly an index of health. Health is rather indicated by the condition of the muscles when, so to speak, nobody is looking at them; not when they are being called out by will for special exhibition. The perfectly vigorous man, even when doing nothing, has a certain tension or alertness of muscles, due to the steady flow into them of healthy nerve-energy. This is independent of their actual size. It is readiness for normal activity. Muscles may be large, and yet *slack* when not in use. And so of the whole body. No hitherto existing instrument of diagnosis might detect any flaw in the make-up of an immense number of people who, tested for the electricity they were giving off, would show a general slackness or negativity; and therefore an openness to invasion.

To our thinking, the most important immediate result of all this will be the pictorial demonstration of the general health standard of the poorer parts of our great cities. Men will continue to flock to them in every country till they see for themselves, with absolute certainty, that to do so is to lose something of the health that nature alone can give and maintain. It is in cities that the great evils of life develop. One would have thought that by the mere force of analogy men would long ago have surmised that moral disease is as contagious as physical. Perhaps it will not be a great while before they reach the suspicion that these unseen rays, electric and luminous, of which all of us are generating centers, consist of something more and subtler than vibrations in the ether.

✻ Amy Stevens' Stand for Brotherhood ✻

ND Life *might* be so full of joy!" thought Amy Stevens, rather sadly, "if only we were not so selfish. Nature is bountiful, and there is plenty for all, if only there were more willingness to help and share; more brotherly feeling, in fact." So thinking, she walked along unseeing and nearly came into a collision with a figure coming in the opposite direction, through the gathering twilight.

"Am I so insignificant in your sight, Miss Stevens," called a gay voice from the gloom, "that you intend to walk through me, as something absolutely non-existent?"

"I beg your pardon," replied Amy absently, still absorbed in her own thoughts.

Frank Edwards felt rebuffed. He was a smart, up-to-date young man, just fresh from a college career and a European tour, and he was used to having his advances received with great cordiality by the young people of his native city; but Miss Stevens never seemed to be aware of his superior attainments; indeed, had he but known, the school of her life's experience precluded any ideas as to superiority based on class distinction.

It was but lately that she had come to live with her uncle, the leading doctor of a fashionable suburb, but her early life had been such, that, face to face with poverty and sorrow, she had learnt to see that human nature is much the same whether the form be gowned in satin or cotton.

Suddenly she smiled, and when Amy smiled, she was decidedly attractive, being one of those people whose face a smile alters and brightens almost beyond recognition, and who positively warms you with their cheerfulness.

Frank was a little bewitched, as well he might be, at the change, for how could he know that the thought had flashed into her mind that she would at the first opportunity take a dose of her own medicine?

Brightly she chatted, as they walked on together, and when they reached her uncle's gate as the dinner bell rang, she remembered his mother's absence from home, and asked him to dine with them.

Dr. Stevens was a fine type of man, absorbed in his profession, and it was easy to see that his niece had introduced a home-touch into his life that had before been absent, and that she was the delight of his heart.

"I have an hour to spare tonight, Amy, my dear, so come and sing and play to me. Edwards may go and have his cigar in the hall—you'll find some in that box on the mantel-shelf, my boy—and we'll leave the door open so that he may hear."

Amy assented laughingly, and obediently went to the piano. Frank settled himself down in an easy-chair, and the smoke of an excellent cigar soon floated toward the ceiling, while he listened first in lazy contentment to the exquisite strains flowing from the girl's fingers; but his interest grew, for Amy's playing came straight from the heart, and as such, bore a touch of genius in the sympathetic interpretation of the ideals of the great musicians. As for Amy, she played herself back into hope, and faith and trust, into the heart of humanity, and renewed her

resolve to stand for Brotherhood herself, even if others did not quite yet see the way.

There was a sudden telephone call for the doctor. "I am afraid it is all over with Jones," he said, returning to the room. "What will that poor helpless woman do with all those little children," and he hurried into his overcoat.

"Do let me come with you," said Amy eagerly. "I *might* help."

The rain had descended in one of those sudden storms so well known in the antipodes, and the wind howled and shrieked through the trees. Amy, cloaked and hooded, soon reappeared.

"We can drop you at your door as we pass," said the doctor to Frank, "and better luck to your next visit to us."

"What a blessing a motor car is on a night like this," cried Amy; "no patient horses to wait in the wet," as they dashed up the road through the pelting rain.

Frank Edwards shivered as he stood on the doorstep. "She is a brave girl to face all that trouble and on such a night. 'Hang it all!' with a burst of irritation, 'the Jones' are not her friends, and it did not concern her that the man chose to drink himself to death."

But the harmonies he had heard that evening returned to his mind, and Frank had the grace to feel ashamed of himself.

It was a week or two before Amy returned to the Tennis Club, and when she did there were others besides Frank eager to greet her. Pleasantly she expressed her regret that she had not been at home when he called, and they walked to take their places in the game, where serenely and skilfully she played her part, unruffled whether they won or lost.

As he watched, Frank Edwards dimly felt there was some motive power in her life that he had not; others might struggle and maneuver for petty personal triumphs, but never Amy, and she listened or talked to all with the same courteous interest.

"What do you think?" said Molly Davis to a group at the Club some few weeks later. "When old Jones died, the family were left very badly off, and Amy Stevens has actually undertaken to educate the children herself, and goes there every day. I wonder the doctor allows it, but she cannot do anything wrong in his eyes! I asked her how she could do it, and she said 'Life would not be worth living to me if could not help to lift some of the sorrow and pain of the world; and I look upon it as a great opportunity to be able to help all those poor little mites.' But then she was always peculiar," she added lightly.

There was an uncomfortable pause, an unwonted stir of the heart rendered some kind-hearted but selfish ones, uneasy.

Frank Edwards broke the silence: "It is a pity for the world a few more of us are not a little more *peculiar*. I, for one, honor Miss Stevens with all my heart, and I mean to profit by her example," he finished resolutely.

May it not be that in this friendly defense of an act of brotherhood, shone forth a greater promise for Frank Edwards' future, than in all the honors he had won in class and field?

E. I. W.

HAVE faith, O, ye who suffer for the noble cause: apostles of a truth which the world of today comprehends not; warriors in the sacred fight whom it yet stigmatizes with the name of rebels. Tomorrow, perhaps, this world, now incredulous or indifferent, will bow down before you in holy enthusiasm. Tomorrow victory will bless the banner of your crusade. Walk in faith and fear not. That which Christ has done humanity may do. Believe and you will conquer. Believe, and the people at last will follow you. Action is the Word of God; thought alone is but his shadow. They who disjoin thought and action seek to divide Deity and deny the eternal Unity. Cast them forth from your ranks, for they who are not ready to bear witness to their faith with their blood are no true believers. . . . Child of Humanity raise thy brow to the sun of God, and read upon the heavens: It moves. Faith and action! the future is ours.

—Mazzini

THE CHILDREN'S HOUR

The Story of Babette

DEAR CHILDREN: Once I spent a few days at a house where lived a dear little black and white dog called Babette. She seemed to be nothing more than an ordinary little dog, because her master had not talked to her, and although not unkind he was not loving; and you know that love is the only thing that brings out all the good in animals or children.

When we were going for a walk one day, I called Babette to come with us. "Oh," said the master, "she won't come; she never will follow me beyond the gap." But I encouraged and patted her and said, "Come along; Bab's good doggie."

And wasn't he surprised to see her running beside us, gaily and happily wagging her tail and frisking with the other dog, Laddie, who was much older and always followed.

"Oh!" said Babette's master, "I am afraid I have not winning ways." Now, don't you think that was a lesson in Raja Yoga for him?

Well, we stopped at a factory where they made cocoanuts into oil and meal—for all this happened in far-away Trinidad—and after a time went upstairs, and I, being tired, sat down on the top of the steps. Presently I saw Babette running up and down and round and round, looking for us. I called to her, but she could not see where I was and began to whine sadly; presently I saw her run up to Laddie, stay beside him a little while, and then run round and round again. I called once more, and this time Laddie saw me and came running up the steps. When he had reached nearly half way, I said, "Go down, Laddie; go back and fetch Babs."

And down he went and up to Babette and stood close beside her. Now, I did not see them speaking, neither did I hear them, but Laddie came running back with Babs beside him and up the steps with Babs behind him. And what a happy dog she was when she found me at the top!

Babette's master saw it all, and said it was only a coincidence, but we who know animals and love them, know better; for who can limit the power of unselfish love?

He prayeth best who loveth best
All things both great and small,
For the good Lord who loveth us
He made and loveth all.

Some time after, all Babette's puppy babies died, and she was very sad indeed; for there was no outlet for the mother-love which filled her little heart. So what do you think she did? If you tried ever so hard you would never guess! She collected all the boots, shoes and slippers she could find, and put them in a big chair, and would lie nearly all the time beside them, with her head resting on some and her paws round others; and if necessity caused the owner of a pair of boots to take them away, she immediately fetched two others. She did not seem to mind whether they were in pairs or not! Were not they funny kind of puppies for a dog to nurse? And what tender mother-love she had! like heart-light—don't you think so? COUSIN BEATRICE.

Love and the Giant Selfish

"WHAT is love, mother?" said Oscar, flinging himself down upon a flat rock, just beyond reach of the ebbing tide. "Jack's song says it is that which 'makes the world go round!'"

It was a glorious afternoon in June and Stella, who had been reveling in the sweet beauty of sky and sea turned and smiled, thinking what a question from the child, of whom it might with truth be said that, so far, love and life were one. "Well, mother?" said he, lifting his merry eyes to her face.

"You are love, dear heart," said she, "and the sky, and the sea, the birds and the flowers help to express love, too. Love is the happiest thing in the world and all beautiful things are love."

"Oh, mother, please tell me a story; I'm too tired to play."

"Once upon a time there was a great king, who lived in a most beautiful country where every one was happy; but some of the king's subjects had forgotten their home and their king, and were wandering, lost, far away in a strange and desert land. So, the king called to him his favorite messenger, who was clad in shining white and was very beautiful, and whose name was 'Love,' and told him to go into that far-off land, to rescue his people from the terrible enemy who was destroying them, and to bring them home."

"So Love went. And when he arrived he found there this enemy, who was an ugly, cruel fiend, named Giant Selfish."

"And this giant had the power to delude the people; so, in order to entice them near him, he would change his appearance and dress himself up to look like Love the great king's messenger, and would even make people believe that he was Love."

"For in some respects Giant Selfish seemed to be much kinder than Love. He would say pleasant things and make people feel comfortable, but in the end he killed them with his poisonous breath."

"Love, on the other hand, was a warrior, and sometimes he would appear in gleaming armor with a sword in his hand, and people, if they were not true-hearted, were afraid of him. And from his helmet there shone forth a wonderful light, which could light up every corner in their hearts."

"But all the people who were true rejoiced when Love, the warrior, approached, because to the true-hearted he brought a joy that was like a song, and even when the rays from the light in his helmet, consuming all the rubbish and dross in their hearts, scorched them, they said nothing; not even when it hurt quite badly, because of the song. It was such a wonderful song. It was like joy and sweet music and heart-light and beautiful color all blended together and it made them feel like being oh! so compassionate and so true! More than that, it woke up old and sweet memories in their hearts. They remembered their king and the beautiful country they had left, and they begged Love to lead them home. And he did."

"And Giant Selfish, mother?"

"Oh, he was left all alone with just himself for company!" M. V. H.

THE BUSY CHILD

by JOSEPHINE PRESTON PEABODY,
in *Harper's Magazine*

I HAVE so many things to do
I don't know when I shall be through.

Today I had to watch the rain
Come sliding down the window-pane.

And I was humming all the time,
Around my head, a kind of rhyme;

And blowing softly on the glass
To see the dimness come and pass.

I made a picture, with my breath
Rubbed out to show the underneath.

I built a city on the floor:
And then I went and was a War.

And I escaped; from square to square
That's greenest in the carpet there.

Until at last I came to Us---
But it was very dangerous!

Because, if I had stepped outside,
I made believe I should have died!

And now I have the boat to mend,
And all our supper to pretend.

I am so busy, every day,
I haven't any time to play.

Path

THE NOBLE NATURE

IT is not growing like a tree
 In bulk doth make man better be;
 Or standing long an oak, three hundred years,
 To fall a log at last, dry, bald, and sere;
 A lily of a day
 Is fairer far in May.

Although it fall and die that night;
 It was the plant and flower of Light.
 In small proportions we just beauties see;
 And in short measure Life may perfect be.—Selected

Helpers of Humanity

NOT long ago the President of a certain Missionary Board received a letter from a young woman, recently sent as assistant to older workers, who were establishing a mission school in a remote part of India. This young woman had studied at the Institute with which the President was connected, and he looked upon her, because of her devotion and great enthusiasm, as one of his most promising workers. The first letter received from her opened his eyes. He was used to surprises, and his sense of humor often served to tide him over disappointments. "H'm," he remarked dryly, as he handed the letter to his secretary. "Answer this in time for the next boat. Tell her to come home if she wishes," and the secretary (who happened to be his son), remarked:

"Same old story, father. You ought to have had the country fixed up in advance."

The letter in question detailed the "hardships" the young woman had encountered at "her post of duty," chief of which were the facts that she *didn't* like rice and she never *could* eat custard, and at home she was used to a bathroom with running water! "In fact," she wrote, "I seem to have encountered every one of my pet prejudices here, and you have no idea how trying it is—but don't think I am complaining. Of course, I realize the discipline is good for me." Not a word did the letter contain about the sadness and privation that she had been sent to relieve, and all that beautiful enthusiasm about "devoting herself to humanity" and "doing the Lord's work," appeared to have been left behind her in America.

Yes, the same old story! Those who really love humanity—and they are fewer than one would fain believe—hear this same old story again and again. There are so many who would make *any* sacrifice if only humanity might be helped—save the one indispensable sacrifice, which is that they should do part of the helping! There are so many who would *so* like to see the world's life clean and bright and pure; but to go themselves down into the darkness and impurity in order to make it so, Heavens, no! As a woman—member of a dozen literary and musical clubs—once remarked:

How sorry I feel for those poor forsaken people in the tenement districts! How I long to help them, and I could do so much with my leisure and my wealth. But I just never could stand the dirt!

And so it goes. This woman, the brightest ornament of half her clubs, who was invariably chosen delegate to various State conventions, who lectured on "The Social Evil" and "The Problem of Vice in Our Large Cities," and whose pet shibboleth was "the brotherhood of man"—this woman is a fair type of a certain class who pose as philanthropists, and who would do such great wonders for the Lord—if they only could stand the dirt!

Let me paint another picture. Shortly after the Spanish-American war a certain woman—the most persecuted as she is the most beloved wo-

man of the present day—went to Cuba with a little band of helpers. She carried food, clothing, medicines and cheer. Cuba was literally prostrate, her people dying by hundreds of the famine and fever that always follow in the trail of a war. This woman had been reared in luxury, and since her girlhood had always had wealth and servants at her command. But did "pet prejudices" and selfish personal comfort stand in the way of her helping those who were in sore need? Not a moment. And this was the outlook. The best quarters that could be obtained were guiltless of furniture of any kind, and the floors and even the walls were covered with vermin. One bed was finally procured, which she gave away the next day to a poor, old, sick "Cubana," who needed it more, and the entire party slept on the floor—after thorough fumigation and cleaning, it might be added. And the only food attainable at first, corresponded with the surroundings. But, intent only on her self-imposed task, she often forgot food and rest altogether in her anxiety to relieve the thousands of sick and suffering who crowded about the door. And the result of that work has already blossomed into the promise of a higher freedom and a new life for the entire Cuban people.

Suppose, for example, that the work had not been done. Thousands would have gone to their graves uncheered, unhelped. Suppose this woman had insisted on being comfortable and helping humanity at the same time? Suppose, just suppose, she hadn't been able "to stand the dirt!"

Those who *really want* to help humanity are never bothered very much by "pet prejudices."

Those who think they really want to help, might as well learn in the beginning that "pet prejudices" *must be* quietly suffocated and drowned at the start, and that services which are not given freely, *utterly*, and without any reservations whatever, are no services at all.

The time is rapidly coming when those whose primary care is for their own comfort will recognize themselves as utterly out of place in the ranks of an army that is fighting for humanity's freedom. And those who early realize this will handle their "pet prejudices" as they deserve to be handled, instead of allowing themselves to be made unholy spectacles by personal peculiarities. The world is too full already of well-intentioned people, who "can't stand the dirt!" God pity them. Can't stand inconveniences.

STUDENT

The Learning of Foreign Languages

SOME one who was well accustomed to weigh his words once said that he who has learned a new language has gained a new soul.

Without asking for metaphysical definitions we know very well that there is a sound basis of truth in this dictum. A language is the expression, in a very real sense, of the national soul. It is as sensitive to the touch of a people's sentiment as is a musical instrument to the hand of a skilled player. Language is the audible and visible expression of a nation's virtues and a nation's faults, and of every gradation between them. He who has learned a new language has acquired the power of transferring himself to a point where he can view an entirely new facet of the diamond which we call human life. Such an acquisition, if rightly used, becomes therefore an eternal possession, and is thus removed from the realm of temporary expediency.

Edward Fitzgerald, he who gave Omar Khayyam to a momentarily ungrateful world, left the university with but a scanty classical education. In spite of this, he perfected himself in Latin and Greek so far as to make Tacitus, Seneca and Homer integral parts of his being. Later on he learned Spanish, and translated eight plays of Calderon. Still unsatisfied, at the age of forty-four, he learned Persian, and enriched the world with a knowledge of Omar Khayyam. Fitzgerald was surpassing rich in the treasures which he gave away, the only kind of wealth which we permanently retain.

We are sometimes told that translations are so readily obtainable that it is not worth while to learn a language. We might as well be told that photography has made us independent of landscape and sea. To the city prisoner, a photograph is a boon in the same way that the translation of a classic is a boon to those who cannot acquire the original. We are also told that the power of learning languages is a peculiar gift not shared by all. That is true, in a sense. There are some who have not the energy, nor the mental acquisitiveness, nor the mental control, to acquire a new language, nor anything else, but these are the only exceptions. X.

THE HINDU SCEPTIC

I THINK till I weary with thinking.
Said the sad-eyed Hindu king;
And I see nothing but shadows around me,
Illusion in everything.

What knowest thou aught of God?
His favor or his wrath?
Can the little fish tell what the eagle thinks,
Or map out the eagle's path?

Can the finite the Infinite search;
Did the blind discover the stars?
Is the thought that I think a thought,
Or a throb of the brain in its bars?

For aught my eye can discover,
Your God is what you think good---
Yourself flashed back from the glass
When the light pours on it in flood.

You preach to me to be just;
And this is his realm, you say;
And the good are dying of hunger,
And the bad gorge every day.

You say that he loveth mercy;
And the famine is not yet gone;
That he hateth the shedder of blood,
And he slayeth us every one.

You say that my soul shall live,
That the spirit can never die---
If he were content when I was not,
Why not when I have passed by?

You say I must have a meaning---
So must dirt, and its meaning is flowers;
What if our souls are but aureate
For lives that are greater than ours?

When the fish swims out of the water,
When the birds soar out of the blue,
Man's thoughts may transcend man's knowledge,
And your God be no reflex of you.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question

What is the book of the *Secret Doctrine*?

Answer

Madame Helena Petrovna Blavatsky, who wrote the *Secret Doctrine*, called it the "Synthesis of Science, Religion and Philosophy." It was and still remains the strongest refutation of the old idea that there can possibly exist the slightest antagonism between Religion and Science or Philosophy. The Theosophical doctrine does not admit for a moment that there can be anything but the most perfect accord between the essences of these three things, for it says that TRUTH IS ONE, and may not be divided.

Advanced thinkers in all ages have thought that there somewhere existed a system of thought, which if it could be discovered, would give the most rational and sympathetic explanation of the many perplexing problems of life; and that this system of thought would tend to bring men closer together, and weld them into a common unity of purpose. When it is remembered that if TRUTH does exist, it must of necessity be uniform, and that there cannot be two or more truths, then we see at once that such a secret doctrine does indeed exist, for it is the expression of that one TRUTH.

Now the book of the *Secret Doctrine* was given to the world through Madame Blavatsky, a Russian lady of unusual spiritual and mental power who, in her turn, had received the doctrine through and from men wiser than herself. These great souls are the teachers of man in his individual and collective struggle to attain a higher stage of human evolution than he knows now; and these great souls know what man needs, because they themselves have reached the higher knowledge and have done so in other ages by just the same training that man himself is now going through by the laws of life. The existence of these great souls is scarcely questionable; for every religion the world has known, speaks of

them under different names, but all acknowledge them. A Christian might speak of them as Saints, or perfected men; the Hindu and Buddhist would call them Arhats; the Mohammedan would name them Messengers; in the ancient religions of Egypt they would have been called Initiates; the medieval philosophers called them illuminati; they were recognized by the Pythagorean and Platonic systems of philosophy under various names. The list can be indefinitely extended.

These great souls still live and work among men, and have been from immemorial time the custodians of the Secret Doctrine of the Ages; and when there comes upon the world a period of materialism, whenever, in short, man seems to lose his hold on his higher nature, then they give out to the world once again portions of this secret wisdom, so that man may once again recognize his better nature and be governed by it. And this is the Book of the *Secret Doctrine*.
STUDENT

Question

There is a Theosophical Society that does not advance philanthropic work, while your society does. What is the difference between these two societies, as both are called Theosophical societies?

Answer

This question really contains its own answer, for the great difference between The Universal Brotherhood and Theosophical Society, and the society named, is in the fact that The Universal Brotherhood *advances Theosophic work*, while, as the questioner says, *the other society does not*. That society only can justly claim to be called the Theosophical Society which moves on the lines laid down by the Great Founders, through H. P. Blavatsky; and these lines have been made plain from the first. It should not need to be stated, so very obvious is it, that the founders intended the society to be a living, uplifting power in the world. They meant it to be the active embodiment of Brotherhood, and not a mere club for intellectual talk, and the pursuit of the marvelous. While study should not be neglected it should never be forgotten that, in order to know anything thoroughly we must practise it, we must become it. Knowledge which does not result in action is like food not digested, it is not only no good, it is injurious. The Universal Brotherhood grows naturally and spontaneously as the child grows by activity, for exercise is a law of growth.

The following are a few quotations, out of many, which might be given from H. P. Blavatsky to prove that she meant the Theosophical Society to become a very practical power in the world. In the *Key to Theosophy*, she says: "Theosophical ideas of charity mean *personal* exertion for others; *personal* mercy and kindness; *personal* interest in the welfare of those who suffer; *personal* sympathy, forethought and assistance in their troubles and needs." And again she says: "The first of the Theosophical duties is to do one's duty by *all* men, and especially by those to whom one's *specific* responsibilities are due." "Theosophy teaches self-abnegation, but does not teach rash and useless self-sacrifice, nor does it justify fanaticism." It is the duty of the Theosophist to sacrifice his own comfort, and to work for others if they are unable to work for themselves." "Theosophy is the quintessence of duty." And, "Duty is that which is *due* to Humanity, to our fellowmen, neighbors, family, and especially that which we owe to all those poorer and more helpless than we are ourselves." And in the *Voice of the Silence* we have these remarkable words: "Self-knowledge is of loving deeds the child."

From the words of one of those great Helpers of Humanity whom H. P. Blavatsky called the real Founders of the Theosophical Society we learn, that "The chief object of the Theosophical Society is *not so much to gratify individual aspirations as to serve our fellowmen*." And again he says: "Yet, you have ever discussed, but to put down the idea of a Universal Brotherhood, questioned its usefulness, and advised to remodel the Theosophical Society on the principle of a college for special study." H. P. Blavatsky, in the same connection says: "Those Theosophists then, who in the course of time and events would, or have departed from the original aims, and instead of complying with them have suggested new policies of administration from the depths of their inner consciousness, *are not true to their calling as Theosophists!*" S.J.N.

To LIE under the lash of a false accusation, with trust in the Divine Law, holds the soul of the sufferer close to an undreamed-of victory on a higher plane. Better to be accused of all the crimes in the calendar, than to falsely accuse one's brother.

THREE TRIOLETS

by R. A. DOUGLAS-LITHGOW

WHEN sunbeams at play
Gem the breast of the river,
My love, don't delay
When sunbeams at play
Invite us to stray
Where the green alders quiver---
When sunbeams at play
Gem the breast of the river.

Sweet flower, thy perfume wing
To where my love reclineth;
Where birds around her sing.
Sweet flower, thy perfume wing:
Take thou my offering---
For me her fond heart pineth.
Sweet flower, thy perfume wing
To where my love reclineth.

A bird sang to me
When my heart was care-laden;
Perched up in a tree.
A bird sang to me,
And thrilled me with glee
Like a vision of Aidenn.
A bird sang to me
When my heart was care-laden.

The Ideal

LIFT your eyes to the sun, to the stars, to the light in whatever form it shineth, and build a bridge in your fancies to the source of that light. Build it high and ever higher. Step out on it bravely, it is stronger than you may think. Go forward, toward the end of that bridge, for there is your Ideal, beckoning you, yet constantly eluding your grasp, receding as you advance, but growing clearer and brighter all the time.

This ideal is not merely your own creation, it is much more than that. It is verily a part of yourself, the best, the noblest part. It is that which overshadows you, that which inspires you to lofty thoughts, to graceful acts, which bids you see yourself and follow that which is Divine in you. Your Ideal is no fancy, it is the only Real Thing you see, though you do not as yet perceive all that there is to see. What you see now is

only that from which a corner of the veil is lifted, the veil which you yourself have made and must remove. This veil is made of wrongful thoughts and deeds, but fold by fold you can remove it, just as the sculptor cuts away by patient toil the stone in which the Goddess slumbers, awaiting yet his chisel to come forth.

Ideals are no castles in the air, but are our guides and guardians. They shine with a clear light of their own, so clear that we can even see them through the veil and therefore move with greater certitude as we advance along the path. Nothing is finite, nor are our ideals. They are like mountains which we see ahead far in the distance, revealing but the outline of their shape. As we come nearer they take form and show us much we did not see before, but when we reach them they are gone, and from their summit, far ahead, we see another range still grander.

The Ideal is infinity itself in its full greatness; our part thereof is just what merit has in store for us. Our part is like the mountain peak, it grows as we go on, but when we reach it, lo! the Ideal is still far ahead!

E. T. SEDERHOLM

Old Temples in Japan

ELIZA R. SCIDMORE, writing from Uji, Japan, to a Chicago paper, says the temple proper at Uji, the Kondo, contains historical relics of priceless value. Among many others—

A treasure of historic interest to Japanese scholars is the journals of the abbots of the temple for the last 300 years. These precious manuscripts are not opened to the vulgar, but they will show one a book of paintings by Matahei, that first artist of the popular school, who broke from the classic and conventional schools, and painted the life of the common people, city street scenes, country road life, festival crowds, and humble folk at work. Like all his work, these paintings at Daigo are not signed, the fact that has enveloped his personality in so much of mystery, and even made some Oriental art critics declare that Matahei, the individual, never lived—that there never was such a one—an opinion violently combated by certain Boston and New York collectors who have spent their thousands upon paintings that bear such stamp of genius that one cares not to whom they attribute them. Matahei, by any other name, surpassed his contemporaries, and led a movement that resulted in some of the most feeling and appealing works of Japanese art.

Now, nothing makes so much impression on the heart of a man, as the voice of friendship when it is really known to be such; for we are aware that it never speaks to us except for our advantage. We can suppose that a friend is deceived, but not that he wishes to deceive us.

The Raja Yoga Edition

THE Special Raja Yoga Edition of **THE NEW CENTURY** contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to **THE NEW CENTURY CORPORATION**, Point Loma, Cal., the papers will be mailed for you without extra charge.

» A Nation Spiritually Free » » »

THE coming of the Fourth of July naturally sets one a-thinking about the liberty of nations; and from their political liberty one moves upward to the thought of their spiritual liberty. It may well be doubted whether there has ever yet in historic times been a spiritually free nation; nay: whether in the view of Nature, the divine Law, there has ever yet been a nation. Does a "hive of bees" consist of that many bee units chancing to dwell together in that particular enclosure? Does it not rather mean the principle of integration—a spiritual something—showing itself in perfect cooperation?

Applying that idea to humanity, we do not know that as yet there has been a real nation. History does give no record of such.

In all their behavior, the bees show a common consciousness. And, moreover, each worker, and each queen, knows immediately at birth that which it has to begin doing for the whole. Its work is never for itself. It surrenders its individual liberty in return for a far vaster gift.

Here and there in human history, small groups of individuals have consented to forego a little of their individual liberty in consideration of a larger group life. For a little while they profited; for a little while they gained a profounder thought, a clearer outlook on life, a deeper peace. And in that atmosphere of peace, even against the weight and narcotism of creeds and lifeless formulæ and artificial observances, their souls grew. But ambition insinuated itself; small quarrels and jealousies grew to great; and even when such groups lasted, they were groups no more; merely congeries of units tied perhaps by oath, bound by rules that had lost their meaning, or never had any; failures from the divine—Nature's—standpoint, whatever they may have been from man's.

Nevertheless, what they were, if only for a few days, shows the possibilities for humanity when a real nation shall have even begun to exist. The vast light that will come from heaven upon such a people will make it a savior of the whole race. A new destiny will have opened for humanity, a new era that shall almost blot the old out of memory. Nothing good will be lost; no worker or thinker will work or think the less; men's minds will be universally clarified almost to the point of genius. Every form of art will flourish as never before. But the inspiration to work, to think, to produce, will not be to gather a harvest of laudation, but to enrich and raise the whole.

That is Nature's idea or ideal of a nation, and it is easy to see that it has never yet been realized. Civilizations have reached what seem to us great heights, only to vanish. They had not the one eternal link of cohesion among the units that raised so splendid a banner. Some cohesion there was, or there had been no civilization at all. But when the stress of growth and external conflict was over, the bonds dissolved. Civic and political and social ambition became the undisguised stimulus to work; greed, sensuality and selfishness reigned everywhere among the people.

Will that epitomize the history of our new America, or shall we rise to the glorious possibilities of unity? H. CORYN

Mexico and Its President

IT is easier and safer to libel a country than a man. In rare cases a man can be attacked through a libel on his country, and one of these is now in progress. The name of President Diaz is inseparably associated with his country. He rescued Mexico from comparative chaos, weaned the people from what had almost become a habit of revolution, awakened in them a love of peace, and placed them on the path of commercial prosperity.

Since there is no question that the country is at peace with its neighbors, is prospering commercially, and that no revolution is in hand, the only way open to the enemies of the President in their desire to attack him is to say that with his death will come to an immediate end the conditions he has established. They are contingent on the life of their self-sacrificing and patriotic creator.

This course is being pursued. United States Consul-General Hanna finds it necessary to issue an official report of contradiction.

"Having noticed," he says, "articles in many American papers to the effect that 'Mexico is steeped with a revolutionary spirit,' and that 'it only requires the death of the present President to bring about a condition of instability and political contention such as existed many years ago,' and having received many letters from American business men and prospective investors touching upon this subject, I deem it proper to give expression to my opinion."

His opinion is that the statements of "many American papers" are libels.

Of course, he is right, but whence the libels and why? Why should the life-work of this patriot (and Freemason) be represented as so superficial and temporary? What is the voice speaking through the "many American papers"?

Our readers have not studied the signs of the times to much purpose if they do not know. A disturbed and revolutionary Mexico would be

the opportunity of some people. Power now denied to them would be easily gained under worse social and political conditions, and it would be pleasant to point to these as the result of the policy of Diaz. The first step to *bringing them about* is to predict them.

In the meantime the Mexican National Congress has effected an amendment in the constitution extending the term of presidency from four to six years, and thus adding two more years to the occupancy of that post by Diaz.

OBSERVER

The Pessimists Again

THE world has hardly yet begun to realize that during the last few years its potential food supply has been indefinitely increased and will be indefinitely cheapened. The spectre of Malthusianism, (for it was never more than a spectre), the doctrine that population tends continually to outrun its food supply, has been definitely laid. It always assumed more than it proved, and omitted to consider facts fatal to it.

Most people have now heard of the nitrifying bacteria, those little organisms that can assimilate the raw nitrogen of the air and work it up into plant food. The cost of adding these to soil is, or will be, very minute. The cost of production of cereals and other important food annuals may therefore be lessened almost by that of the nitrifying manures and fertilizers which till now have been necessary. The exhaustion of land will be a vastly slower occurrence and will be only in respect of other saline matters than nitrates.

Other extensions and cheapenings of the food supply are rapidly coming about through the extraordinary development of grafting, cross-fertilization, and selection; in fruit, grain, and vegetable culture. The nutritious elements in these foods are being indefinitely increased; seeds eliminated; worthless husks, fibers, and kernels, reduced to a minimum; and plants and trees trained to climates formerly impossible to them. It is estimated, for instance, that the blend of the American orange with the little sour, worthless, but hardy and frost-defying Japanese wild orange, enables at least eight additional States to produce that fruit.

Some people seem to think that Nature has brought man on to this planet only to leave him ultimately in the lurch. Their glances into the future only afford them reason for gloom. Our machinery was to run down for want of coal. Then came natural oil; electricity from natural power-sources; and we are doubtless on the eve of the direct production of electricity from solar heat and light.

Our wood supply was about to give out. And the eucalyptus tree comes forward smilingly.

The sun was becoming extinct! The recently discovered behavior of radium, and new theories of solar life, seem to be laying *this* spectre.

And to the food question we have already referred.

Why should not pessimism give us a rest, take heart of grace, and no longer regard the solar system as either an unconscious mechanism with man as an accidentally conscious incident in its short history, or as wire-pulled by a monster or idiot?

STUDENT

Mental Economy

FEW of us realize how large a part of thinking is mechanical, and capable of being done—under certain circumstances—without conscious effort. Much of our time is taken up by slow and difficult thinking, often yielding wrong or no results, over matters that we have the mental apparatus to solve instantly and accurately. Our thought crawls between its stations, instead of telegraphing itself. There is therefore no time left for walking to places to which there is no telegraph, and to which the road is utterly beautiful.

The arithmetical prodigies show what the mechanical side of the mind can accomplish. Zerah Colburn at the age of eight could instantly answer such questions as: How many seconds are there in 25 years? Within one minute, at the age of twelve, George Bidder, a laborer's son, answered this question: If the pendulum of a clock swings 9 inches and three quarters in a second of time, how many miles, and also how many inches, will it swing in 7 years, 14 days, 2 hours, 1 minute and 56 seconds, counting a year as consisting of 365 days, 5 hours, 48 minutes and 55 seconds? A French committee of scientists investigated the case of one Mangiamiele, a Sicilian boy, and among other questions Arago gave him this one: What is that number whose cube, added to 5 times its square, and to 42 times itself, and the number 40 being subtracted from

the result, gives zero as a result? This question was answered as Arago finished.

Nearly or quite all of these people were considerably below the average level of intelligence, and of no emotional range. Nor did they know how they got their results. It is obviously a mechanical bit of work. Given certain data, certain results must follow; there are no two answers; there is no room for feeling, none for originality. Such minds perceive the whole of the facts of a matter at once, the whole conception. There are so many seconds in a year; their number belongs to the full meaning of the word year. But most of us do not grasp a whole conception at once; we take the one end of it and have to toil wearily to the other.

The reason is, of course, the infinite discursiveness of our minds. In considering anything, they not only make wide sweeps away from the path, sometimes not returning at all; but also an uncounted number of small and unnoticed oscillations which multiply by thousands the time which should be necessary to reach a result. The cause of the oscillations great and small, is of course the myriad magnets of desire. We never cease wanting to interfere with the stream of things, wants great and small, wants that cover years, days, seconds, the whole life. And of the whole number, may be but a few—two or three—ought to exist, perhaps not one.

If one considers the matter, it would seem probable that were it not for unnecessary diversions our minds would understand existing phenomena in great masses, with all their implications, and without effort; just as the boy understood a year as not only so many days, but as so many implicated minutes and seconds. Thus freed, we should have time and power to spare, to understand the universe in its living and conscious activity, and time and power to work therein. The secret is *concentration*; and *trust* in the Law that guides the stream.

STUDENT

Cremation in Germany

THE German clergy appear to have a low opinion of the intelligence of their parishioners. Large numbers of them are opposing the practise of cremation on the ground that if it became general the belief of the working classes in the resurrection of the body would be severely maimed. With the disappearance of this belief would go others, and the hold of Christianity, already weakening, be paralyzed.

If the clergy are teaching the resurrection of the body as an integral part of Christianity, we do not wonder at the spread of unbelief. The German working-man does some thinking, and he is not altogether unacquainted with the facts of chemistry relating to the fate of his body after he has ceased to occupy it. He may also have certain pictures in his mind connected with the results of war, accident, and even cannibalism. It is sad that the presentation of religion—badly enough needed—should include insistence upon dogmas which the first breath of science and sense blows into fragments.

STUDENT

Why Not Reincarnation?

MR. T. P. O'CONNOR, who was well acquainted with the late Henry M. Stanley, has been giving his impressions of that very remarkable man: "Here in the Nineteenth and Twentieth centuries was a man who seemed a survival of the great and spacious days when the world was still young, and when the explorer was at once the discoverer of new continents and oceans and the conqueror of new empires. If Stanley had lived in the days of Elizabeth he would have been on the Spanish Main, and, possibly, would have been the leader of the ships that broke the strength of the Spanish Armada. If he had been a Spaniard of early days he would have had the career of a Pizarro or a Cortes."

We wonder when the idea of Reincarnation will occur to Mr. O'Connor and his like, the idea that H. M. Stanley *did* perhaps live in the days of Elizabeth or *was* perhaps "a Spaniard of early days."

Among Grecian Isles---Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week gives a glimpse of one of the many entrancing views to be caught in threading one's way among the picturesque Isles of Greece. The view is taken from one of the main islands of the Grecian Archipelago.

Some Views on XXth Century Problems

Light too Strong for the Creed

A LITTLE ripple of compunction is stirring in the consciences of some of the English clergy. There are fourteen occasions during the year when, according to the law, they have to read with their congregations the curious document known as the Athanasian Creed. But they do not want to read it *publicly* any more. Their consciences are stirred to that extent; but not to the extent of making them disbelieve and reject this document. On the contrary, in a deputation to the highest Church dignitary, the Archbishop of Canterbury, asking to be relieved from the public reading of the Creed, they took care to affirm their acceptance of it, and the Archbishop also affirmed *his*.

Why do they not wish to read it publicly? Because, they said, the bulk of the public do not understand it. Certain parts of it, known as the "damnatory clauses," offensive to the mind of the natural man, become no longer offensive, but even refreshing, after a course of historical and theological study. As the ordinary hearer has not gone through this, it was better not to read the creed to him. The Archbishop said,

That such persons should be called upon to recite the creed seems to me to be not only unfortunate, but capable of being actively mischievous. It was in response to a feeling, *not of a greater laxity of belief*, but of greater intelligence on the part of the worshiper, that the change they asked for was advocated.

We agree: "actively mischievous;" not only the *recitation* of the creed, but the creed itself, so far as anybody believes it. And these clergy do; they will not own to the least "laxity of belief" on that point.

Damnatory Clauses in Church Faith

What, then, are the terms of these "damnatory clauses" which it is not good for the ordinary person to hear or recite? They consist of warnings *directed to this ordinary person*, that this creed, which is to be kept from him, must be subscribed to by him on pain of damnation! Let us quote a little. The creed opens:

Whosoever will be saved: before all things it is necessary that he hold the Catholic Faith. Which Faith except every one do keep whole and undefiled: *without doubt he shall perish everlastingly*.

The "perishing" is further defined as by "everlasting fire." The "Catholic Faith" is then outlined. It consists of a careful description of the Trinity, and of the being of Christ. The Trinity is accurately defined in twenty-five clauses, although in one of them the description is suspended pending the remark that the whole subject is absolutely incomprehensible:

For there is one Person of the Father; *another* of the Son: and *another* of the Holy Ghost. [Yet] are we forbidden by the Catholic Religion to say, There be three Gods or three Lords. [Again]: The Son is of the Father alone: not made, nor created, but begotten.

The Holy Ghost, on the contrary, is neither "made, nor created, nor begotten, but proceeding." Yet though two of the numbers of this Trinity are respectively "begotten" and "proceeding," "none is before or after another," "the whole three persons are co-eternal together." And so on, through forty or fifty clauses altogether. And then this amazing production ends:

This is the Catholic Faith: which except a man believe faithfully, he cannot be saved.

And this document, self-admittedly incomprehensible in its statements, *must be accepted*, under an awful penalty, by millions of persons from whom the head of the English church proposes to withhold it! He cannot claim that he wishes them to read it in private, because his objections apply exactly as fully to private as to public reading. The church is no longer trying to keep the daylight out of the room; it recognizes that to be now impossible. So it would fain take the room away from the daylight. This, too, is impossible. The spirit of a New Era is upon us, and the old dogmas and formulas must content themselves with a place on the museum shelves.

STUDENT

Harmful and Fraudulent Medicines

THE post-office has decided to debar the use of the mails to persons and firms selling fraudulent patent medicines, and to newspapers advertising the same. The word fraudulent applies to such medicines and nostrums as chemical analysis shows to be incapable of doing what is claimed for them, or are distinctly harmful.

We are in the fullest sympathy with the department's desire to lessen the cataract of advertisements of patent specifics which deluges the country, and the consumption of the same. But the chemical experts of the department are not capable of saying, in most cases, whether an advertised remedy is a fraud or not. For example, few homeopathic medicines would yield any reaction to chemical tests. Are they therefore all frauds? Moreover medical views as to remedies and their relation to disease change rapidly. Anti-diphtheritic serum may be all the vogue today and ascertained to be pernicious superstition tomorrow. Water charged with some quality of light may refuse to be anything but water so far as the test tube and litmus paper or a luckless rat are concerned, and be therefore today a fraud. Tomorrow it may be the elixir of life.

We suggest to the department to make its laudable crusade only against advertisements offensive to decency, those that hint broadly at, or enumerate, objectionable pathological symptoms of disease, and those containing immoral suggestion. Theoretically, such a line of demarcation might seem difficult to draw. In practise there should be little or no difficulty.

Live Sacrificed by Taking Chances

THE Slocum disaster calls attention once again to the appalling carelessness in respect of human life which men display when the acts of carelessness will be separated by a little time from the probable disaster. The fact that their sins of omission will not bear fruit for a few weeks or months, and *may* by chance not bear fruit at all, seems to lift from them any sense of responsibility. It is not lack of imagination, not deficient power to imagine the direful results of their neglect. The disasters flow from the fact that the imaginations of responsible persons are not stimulated by regard and compassion for mankind. So they are willing to take the chances that *this* voyage, *this* descent of a pit, *this* ascent of an elevator, may somehow pull through. The only remedy for such people is to make them understand that any taking of chances (when a disaster reveals the fact that they did so) shall count as premeditated homicide.

STUDENT

The Use of Oil-Fuel on Steamships

The American-Hawaiian steamship *Nebraskan*, has made a successful trip from San Diego to New York, using crude California oil for fuel. She did the voyage of 12,724 knots in ten days less time than the coal-burning *Nevadan* did it in. She was clean and sweet, her furnaces and boilers were in good condition, the fuel cost less and only one-fourth as many men were required in the furnace-rooms. Thus the sentiment in favor of oil-fuel has been strengthened, as far as mercantile vessels are concerned at any rate.

Oil is dearer than coal on account of the expense of transporting it, but in this case it cost less because the Californian oil was on the spot. The same applies to the Gulf of Mexico, on account of the Texan oil-fields, and it is pointed out that other parts could be supplied by tank-vessels. The Naval Bureau of Steam Engineering sent to investigate the results of the *Nebraskan's* trip, to gain data for determining whether to introduce oil-fuel into the navy.

But, though the same advantages are applicable for war-ships as for the mercantile marine, namely convenience in handling, cleanness and thermal efficiency, there are obvious objections, such as the danger of damage to the tanks by hostile shot, and the accumulation of explosive gases which might be fired by a spark. But Rear Admiral George Melville recommends that oil-fuel be tried for torpedo-boats and destroyers.

STUDENT

Art Music Literature and the Drama

Felix Mendelssohn-Bartholdy

There may come a day when the example of Mendelssohn's life, yet more than that of his works, may be invoked in Germany.

TO those in whom genius has asserted itself in spite of great moral infirmities, the average person invariably attaches a certain romantic interest—not because purity of life is valued less but rather, I fancy, because genius is valued more. The masses are hungry for music and color and flashes of anything that may even hint of soul, and much has always been forgiven, when need be, those who are able to touch the heart-life in poetry or in song.

But for Felix Mendelssohn, whose life was one of simple, religious purity, wholly untainted with jealousy or ambition, there need be no apology.

Seldom, indeed, has a temperament so sensitively artistic been so morally poised, and yet, when one considers his heredity, the nobility of his father and the refined purity and simple moral strength of the four women with whose lives his own was so interblended—his mother, his wife and his two sisters, Fanny and Rebecca—one almost wonders how he could have been different after all, or how he could have accomplished very much less. His father's position—secure both because of his rank as a thinker and patriot, and because of his wealth—gave the young Felix many opportunities, and it would have been strange indeed if a rich, full musical life had not found its center in the family mansion in Leipzigstrasse, Berlin, a magnificent place, whose seven acres of garden joined the estate of the king's brother, and in whose court was erected a glass-enclosed musical pavilion capable of holding several hundred people.

Instead of having to fight his way through fire and pain, young Felix found the way paved for him, and his own nature, innately grateful and pure, seized every opportunity and profited by every advantage. Among those who gathered at the famous "Sunday Mornings," given by his sister Fanny and himself, were Weber, Spohr, Henselt, Gounod, Ernst, Liszt, Schumann, Paganini, the artists Ingres and Vernet, the singers Grisi and Schröder-Devrient, the sculptor Thorwaldsen, the poets Heinrich Heine and LaMotte Fouqué, the scientists Humboldt, Hegel, Jacob Grimm and Lepsius.

Like Schumann, when a mere child, Mendelssohn pored, fascinated, over the writings of Jean Paul Richter. Goethe was his hero, and by him little Felix, so marvelous musically, was passionately loved. "Be careful of him," said the poet, "he is a wonder-child." In one of his letters Felix at one time wrote:

Every afternoon Goethe opens the piano, with the words, "I have not heard you today at all. Now make a little noise;" and then he is accustomed to take his place near me, and . . . I generally improvise at the end. Then I ask of him a kiss, or I take one without permission! You have no conception of his goodness and friendliness, and just as little of the wealth which this polar star of poets possesses in minerals, busts, copper-plates, statuettes, great drawings and the like. His figure does not seem to me imposing, he is not much taller than father,

yet his bearing, his speech, his name, they are rarely imposing. His voice has a wonderful ring.

In another letter the boy Felix writes to Fanny of his beloved Goethe, then seventy-three, but apparently not more than fifty-five:

Every morning I receive from the author of *Faust* and of *Werther* a kiss; every afternoon from Goethe as father and friend two kisses. Think of it! This afternoon I played for him more than two hours, partly fugues by Bach and partly from my own improvisations.

Those who know something of the mysterious causes which serve to deflect this way or that the tides that cleanse and fashion the lives of men, know something of what this association must have meant to a budding, gifted life. Compared with facts like these, dates, places and all events which take their rise in the outer life merely, are insignificant. "Send Felix to me often," Goethe wrote to the young boy's mother. "He refreshes me. . . . I am Saul and he is my David."

Felix Mendelssohn owed much, doubtless more than he fully realized, to his sister Fanny. His sister Rebecca was beautiful, brilliant and affectionate; his mother Leah was an almost perfect mother on higher lines; his wife Cecile was gifted, tender and beautiful, and his short married life of ten years was ideal. But between himself and Fanny there was a tie of peculiar tenderness and the letters that passed between them give us glimpses that no biographer, however sympathetic, has ever been able to give. Her sudden death was a shock to him from which he never fully recovered, and he survived her but a short time. From the days when, as children, they played under the trees of their father's garden, to the later days when she was his confidant and adviser, not alone in music but in all the details of his life, their attachment was serene and unbroken. Such comradeships are rare enough, but why? What is the state of humanity—and wherefore—that such should not be the rule rather than the exception? How comes it that genius is seldom so blessed by fate and so favored by heredity?

Mendelssohn's life, as its events go, is almost as well known as his music. There is, however, a subtle undercurrent of causes that has never been recognized even by his ablest biographers, and yet is more worthy than all the rest, of recognition. So subtle is it that it may not be depicted, it may only be suggested, and those alone who have ventured into the recesses of their own hearts can even glimpse the suggestions and know them to be what they are. STUDENT

THE wonderful E minor Symphony was Brahms's last and greatest work for orchestra. In it he surpasses Beethoven, he even surpasses himself. "As an example of thematic music—

music that from a few simple themes is built up architecturally until it attains the grandeur and symmetry of a cathedral—this symphony is perhaps the greatest in all musical literature."

THE laws of morality are also the laws of art.—Schumann

MUSIC is to me so solemn a matter that I do not feel justified in trying to adapt it to any subject that does not touch my heart and soul.—Mendelssohn

FELIX MENDELSSOHN-BARTHOLDY

MUSIC

by JOHN VANCE CHENEY

WHOSO at eventfall has heard
The measures of the vesper bird,
Has felt the spirit, heavy, dull,
Rise to the Dwellings Beautiful.

And though ere long the dark, the star,
Whispered, "The birds all silent are,"
The spirit, dreaming deep and long,
Still drank the sweetness of the song.

For, as it vanished with the light,
It sought the spirit in its flight,
And on was sounding, sweeter now
Than when it trembled from the bough.

Such music's blissful ministry:
Champion of immortality,
Faithful it bides, ay, grows in power,
Beyond the seasons' little hour.

WOMAN'S WORK

WHEN WOMEN ARE HONORED, THE DIVINITIES ARE CONTENT: BUT WHEN THEY ARE NOT HONORED ALL UNDERTAKINGS FAIL.

—Hindu Scriptures

Theosophy in Sweden

THEOSOPHY in Sweden stands a beacon light to that great country, as hope for the permanent helpfulness of its people. The great teachings of Theosophy are disseminated through the great Universal Brotherhood Organization which has its center for Sweden in Stockholm. There faithful hearts work continuously for the uplifting of the people, and in many other cities of Sweden there are like activities. The work among the children is considered almost phenomenal, and the Boys' Clubs are great factors in molding the character of our young folks.

I first became interested in Theosophy in 1886. The principles of Karma and Reincarnation appealed to me and I found I had been for many years working on these lines in my musical efforts. Later, it was my privilege and pleasure to help found a Lodge, a Theosophical Lodge, in Stockholm. A great supporter of this work from its very inception, was the noble Doctor Gustav Zander, who still is President of the Lodge. It was he who founded the *Theosophical Society in Sweden* in 1889. Sweden's response to this new light, was evidence that its people were lovers of liberty; that they had learned to love liberty through suffering. Theosophy satisfied their heart longings, gave answer to their questions as to *whence we came and whither we were going*.

In the summer of 1889, with a comrade-worker in Theosophy, I paid a visit to Madame Blavatsky in London. This was one of the greatest privileges in my life. I met her and found her the greatest personality of the Nineteenth century. My interview with Madame Blavatsky gave added impetus to my efforts and that of my comrades in Sweden.

In the summer of 1890, I again met Madame Blavatsky at the inauguration of the Headquarters at 19 Avenue Road, London, and more than ever was I impressed with the greatness of her life and the glory of her work for Humanity.

In 1896 I met our present Leader, Katherine Tingley, while she was in Europe on her first crusade around the world. Others of our Swedish delegates met her in Dublin and again in Berlin. This meeting was a profitable one for our future Theosophic work. We returned to our country, filled with reverent love for Katherine Tingley and fired with a devotion to help her carry out her work for humanity. In 1897 she came to Sweden and there lighted Spiritual Fires which can never be extinguished. Many people not before interested in Theosophy, were attracted to it then. It was at this time that Katherine Tingley met King Oscar of Sweden, receiving from him the most courteous consideration. While King Oscar stands at the head of the State Church of Sweden, faithful to his duties, he has in no way ever manifested unfriendliness to our Theosophic work. His great efforts as a Master Mason have marked his life for good. . . .

Day by day new branches of Theosophical work are being inaugurated in Sweden by Katherine Tingley, and faithful hearts are there, always ready to respond to the call for service.

America, in many ways, is today doing a noble part for the world's good, but more marked to me than all else is the Theosophic and Broth-

erhood work, which has its International Center at Point Loma, California. The world needs the life that it gives, the hope that is implanted in humanity; these brotherly efforts must touch the hearts of the people and make glad the new day.

ELLEN BERGMAN

A Word About Psychology

IN no department of life is a knowledge of psychology needed so much as in the home. If women had a knowledge of the lower and higher psychological forces, they would establish the home on the right basis. A new world and a new life would open to them. They could and would put themselves in their right places everywhere and would sustain the position taken.

This knowledge enables woman to become aware of her own inherent power for good; she awakens to her soul strength and she knows how to use it. She becomes able to detect evil in its very beginnings (whether in her own nature or the natures of others), therefore she can prevent evil from making inroads in her home. With the ability to protect herself against the lower influences, she also has the power to protect others and to lead others to find their own strength.

Many women, with true and conscientious effort, have tried to establish an ideal home life. Why have they failed? Because they were ignorant. They had not the key to the knowledge of human nature. They were blind to the subtlety of evil. They had not the light of a true philosophy of life.

The knowledge of the higher and lower psychological influences makes woman's trust in the Higher Law so strong that no tidal wave of the lower forces can move her from her high purpose. She cannot be swept into the current of the glamour and spell of the lower.

Let us, as women, look with fearless honesty into our own natures. Let us examine our own minds and hearts. What are our thoughts? What are the motives behind our words and acts? Let us shut out of our hearts all despondency and gloom. Why should we be in the sunlight today and in the shadows tomorrow?

Somewhere something is wrong. It is in ourselves, or in others—or in both ourselves and others. The knowledge of the higher and lower

psychological forces leads us to the source of the difficulty, for with insight into our own natures, we also have insight into the natures of others. It enables us to understand the interplay of good and evil all through the warp and woof of human life; the warfare between the high and low. Woman has it in her power to be not only the builder of ideal home life, but its preserver. She is the guardian of its purity and the protector of all that makes it sacred. The very destiny of nations lies in her hands; for as are the homes of a nation, so is the life of that nation. Katherine Tingley has often said that an ideal home life is the basis of an ideal national life.

When women in the home shall be armed with true knowledge of life, homes will become Temples, places of purity and light. Joy will be the life-spring of action, and upon the nation itself will rest the benediction of peace and prosperity.

STUDENT

MISS ELLEN BERGMAN

Assistant Directress of Isis Conservatory of Music, Point Loma. Formerly Teacher and Gold Medalist of the Royal Academy of Music, Stockholm, Sweden

One of Our Women Composers

THE poet who wrote, "Let me write a nation's cradle songs and I care not who makes its laws," sounded the key-note of a great truth. As the voice is the soul's most perfect and intimate means of expression, so it is the song that, of all musical forms, most appeals to the heart life. There are songs and songs, many of them, thousands of them, travesties on all that is uplifting and not a few of them fairly disgraceful in their stupidity. At one pole we have the street singer and the cheap soubrette, and at the other, Antoinette Sterling and those who, like her, have won and lifted the public heart by their singing of simple songs.

Margaret Ruthven Lang of Boston, although the composer of a number of ambitious works—some of which have been performed by the Boston Symphony Orchestra—is best known for her songs. They are spontaneous, sometimes elaborate, again intensely dramatic as in "Betrayed" and, the greatest of all, her "Lament." Miss Lang has been fortunate, that is scholarly in her selection of poems and she has fitted the musical setting to the sentiment with a rare appreciation of the underlying unity that should be evident in all songs. "Ghosts," "My Lady Jacqueline," "Maiden and Butterfly," "O What Comes Over the Sea," and "The Spinning Song" are among those best known.

A number of her best works, including one or two concert overtures, which have been performed by the Boston Symphony Orchestra, have never been published.

JULIA HECHT

Women as Scientists

MRS. AYRTON, of England, who will be remembered as the original of Mira in George Eliot's *Daniel Deronda*, has attained wide celebrity as an electrician. At Girton, as a girl, she won high honors as a mathematician, but it was at Cambridge that her inventive faculty first showed itself. It was there that she invented and constructed the sphymograph, an instrument for measuring the beats of the pulse. Later she took out a patent for a line divider, a machine for immediately dividing up a line into any given number of equal parts. After her marriage she assisted her husband in a series of experiments on the electric arc, later giving the results of these in a series of articles in the *Electrician*.

"Women are peculiarly fitted to become scientists," said Mrs. Ayrton, recently, "because they possess minute powers of observation. Unfortunately, the need to earn money prevents many from taking science seriously. When entering into competition with men, however, a woman should take time to make herself a little more eligible than they, in order to counterbalance the sex disadvantage. I have every faith in the capacity of women. They are, I consider, more inventive and original than they know, only, unfortunately, they have hitherto wasted their powers on trivialities."

ALL those who favor the idea of gardening as an occupation for women will be interested to hear that the promoters of the St. Louis Exposition have appointed Miss Eda A. Suttermeister as their assistant landscape architect, in which capacity she is responsible for the "Cascade Gardens" that are to form such a notable ornament to the grounds; for these she will select all the plants and flowers, and will have the help of a staff of assistants.—*Selected*

THERE comes a time when the souls of human beings, women, perhaps, more even than men, begin to faint for the atmosphere of the affections they were made to breathe.—*Oliver Wendell Holmes*

The Marriage Status

PROPOS the marriage question, one of our readers, an attorney-at-law, sends us the following with regard to the legal status of the married woman:

If the married woman is to be independent of her husband—exactly as before marriage—in thought, words, acts, property, there would be no such thing as the *marriage status* in law. Under such conditions, while there might be a union, spiritually as well as on other lines, it could not be said to be an expression of, nor to rest upon, the laws of the land.

In such a union the voluntary, individual standards of parties concerned would be the only restraints upon discord and the only assurance of virtuous conduct. Yet who, under present conditions, would advocate this doctrine?

Yet there are but three other methods from which to choose: 1 Give husband full authority; 2 Give wife full authority; 3 Give husband and wife joint authority over persons and property of each other and of offspring.

Women vigorously denounce the first, yet must allow that the second is equally unjust. The third would work beautifully—as long as it worked beautifully, that is, as long as husband, wife and children lived in a state of entire harmony—in short, only in cases of those unions founded on justice, purity, sympathy, unselfishness and mutual respect. But these virtues would bring about the same results under either first or second methods.

In case vice, cruelty and injustice became factors in the domestic life, the system of joint authority would but stimulate the discord, and the matter would have to be left to adjust itself without the aid of law, which would mean anarchy. Or, the law being invoked, it would be forced, in adjusting such cases, to adopt either first or second methods. This places us again at the starting point. What is the true solution? I. H.

HER heart is like an outbound ship
That at its anchor swings;
The murmur of the stranded shell
Is in the song she sings.—*Whitier*

BISHOP LAWRENCE, of Massachusetts, recently said:

The whole realm of theology has until the present generation been interpreted to us by men. Women have worshiped and revealed the graces of the saintly life, but it has not been vouchsafed to women to enter deeply into the study of the Bible or its interpretation. Who knows what a different theology we might have had in the past if women's minds had been at work on the problem? Would Mariolatry have taken the form it did? Would Calvinism have captured the intellect of Protestantism? Would any man have dared to say that hell was paved with the skulls of infants?

A SUPREME love, a motive that gives a sublime rhythm to a woman's life and exalts habit into partnership with the soul's highest needs, is not to be had where and how she wills; to know that high initiation she must often tread where it is hard to tread and feel the chill air and walk through darkness. It is not true that love makes all things easy: it makes us choose what is difficult.—*George Eliot*

MME. SEMBRICH, the most noted light soprano of her time, recently wrote that it was fortunate for her that she was not at the beginning of her career. It takes all her genius now to make *Rosina*, *Violetta*, *Marie* and the rest of the old-fashioned repertoire interesting. The future is for the dramatic soprano. This is only one more proof that music, as well as drama, is in a transition stage.

Paleontology
Ethnology

Legends Claim that Votan Located a Colony in South America.

A NOTE in our last issue discusses the evidence for the discovery or contact of America by Norsemen. It reminds one of a curious mythological connection between South America and Scandinavia. The god or hero, Votan (Wotan, Odin), was common to certain traditions or mythological stories in both countries.

According to the traditions of the Chiapense of Central America, Votan came (like Quetzalcoatl) from eastward (? the then slowly sinking Atlantis), charged with divine instructions to people the country. He brought with him seven families and built a great city, Nachan or Na-Chan, City of the Serpent Family, the family of Chanes or serpents. He claimed that he also visited Spain, northern Africa (perhaps founding Carthage) and Italy. Possibly some of those he brought with him may have been the mysterious Pelasgians or Iapygians connected with the legends from prehistoric Italy.

All the traditional heroes of Central America are represented as coming from the east. And the races looked forward either to the return of these same great figures after their departure whence they came, or to the appearance from the east of new and wise peoples who should give them a new light. From the east came the mysterious Quetzalcoatl and thither he returned. The Nahua followers of the Toltecs in Mexico came from the east. The Yucatan traditions describe that people as coming from the rising sun. Their founder and teacher, Zamna, brought, like Votan and Quetzalcoatl, a colony from the east. From the same quarter came Coxcox to Mexico, and all the Mexican traditions give that origin to the Mexican races. Samé, the hero of Brazilian tradition, another great teacher and founder, came from the east. So strong were these beliefs that the first Spaniards who landed with Cortez were thought to be messengers from Quetzalcoatl, merely because of the direction from whence they came, and were received with great joy. "For a very long time," said Montezuma to Cortez, "has it been handed down that we are not the original possessors of this land, but came hither under the guidance of a ruler who afterwards left us and returned. Inasmuch as you are from that direction, which is toward the rising of the sun, and serve so great a King as you describe, we believe that he is also our natural lord."

The Incas had similar expectations. So, indeed, had the natives of Haiti, and they told Columbus about them. In North America the same expectation was cherished by the Maryland Indians and by the Delawares. There is a Maya chant which, translated by Lizana into Spanish, runs thus in English:

At the close of the thirteenth Age of the world,
The sign of the Lord of the Sky will appear,
The light of the dawn will illumine the land,
And the cross will be seen by the nations.
Father and brother to you will he be, ye natives of Tancah.
Receive ye well the bearded guests who are coming,
Bringing the sign of the Lord from the daybreak,
The strong and merciful Lord of the sky.

We need hardly remind the reader that the cross existed as a symbol among the Mayas ages before our era, and that the complete symbol described in these lines would be the cross in the circle, the circle being "the sign of the Lord of the Sky."

There are other east-coming heroes, teachers, and race-founders in the legends of South America, Sua, Viracocha, and so on. But we have named enough for the point. We can understand it all, the heroes, their powers and knowledge, the reverence they inspired, and the civilization they brought with them, if we accept the teaching of H. P. Blavatsky that America was peopled ages ago by successive outflows from the now vanished continent of Atlantis. Civilization had there reached a great height, vanishing as later ones have vanished. And the outlying traces of its greatness seem to be handed on to us in the traditions of ancient America. When we touch the Indian of North and South America, it is the meeting of Aryan and the far older Atlantean.

And we can also understand that echoes of Atlantis may yet be heard along the west of Europe, and instead of being surprised at the legend of Votan belonging both to Scandinavia and South America, be prepared to find many more such links.

In closing, one may remark the curious recurrence of the number 13 in some of these American legends. There is the Maya chant from which we have quoted, beginning:

At the close of the 13th Age of the world —;

there is the Inca prophecy that in the reign of the 13th Inca, white men would come to them from their father the Sun. The Aztecs had a ceremony on the last night of each cycle of 52 (13x4) years, marking a recurrent point at which they thought the fate of their race hung trembling in the balance. There is a prophecy among the Winnebagoes that their nation shall be annihilated at the close of the 13th generation. STUDENT

Archeological Finds in Crete Are Creating Unusual Interest

WHO and what the Myceneans of Crete were, may be less of a disputed question once that the excavators, now busy in different parts of the island of Crete, have finished their labors. At four separate spots on the island diggings are being rapidly pushed on, and the treasures being daily brought up again to the light of the sun, after reposing in the darkness and oblivion of the bosom of Mother Earth, cannot but be links in the chain of evidence archeology is forging towards proving community of interests and racial affinities between prehistoric peoples now all but forgotten. Italians, English and Americans are the nations represented in this work. Pottery and implements, both of stone and bronze of that far-off time, will yield to us the secret of the ages; and will be strands in the Ariadne's thread to lead us back to the life of our forgotten ancestors. Knossos, Phaistos, Palaikastro and Gournia, on the Gulf of Mirabello, are where this work is being carried on, producing results beyond expectation. At Knossos, a great Mycenaean palace is now cleared, and this place is remarkable for its frescoes, gypsum flooring, drainage system, baths, and for all the signs it gives us of a people loving not merely wealth and ornate architecture, but also one possessed of the spirit of true art. One very interesting thing in the way of finds, is a large rectangular tomb, remarkable because it presents such a striking contrast to the usual bee-hive tombs of Greece proper.

However, as far as the excavations have gone this spring in Crete, it is said that the combined finds from Knossos, Palaikastro and Gournia cannot compare with the archeological value of the sherds of a vase of black steatite, or soapstone, which was uncovered at Agia Triada. This vase, or bowl, became the object of most unusual interest and admiration on the part of archeologists. It shows a new type of the Mycenaean shield, and one of the three figures is so exquisitely carved, that it may truly be looked upon as prophetic of the renaissance of later Greek art, centuries after. On another steatite vase discovered by the same excavator, were figures of unrivaled interest, not only to the archeologists, but to the art student. Three of the zones of ornamentation depict a battle, while the fourth portrays a bull-hunt. The whole subject is treated with a dash, vigor and artistic individuality, which do not suffer by comparison with the best products of artistic skill in our own day. These three evidences of a prehistoric past, just given up to us by the earth, reveal to us a new page in history of the human race. Conservative thinkers say that they date from at least one thousand years before the florid period of the later Greek art; but what is there against the possibility of their coming down to us from a still remoter antiquity? What proof can be brought forward that they do not? In what way would it insult human intelligence if a cipher were added to that period of a thousand years? Were these ancient Myceneans Pelasgic in race, or were they Pelasgic-Hellenic? Sufficient time had elapsed between that unknown period, and the flowery period of Greek art, for the one to fade away into oblivion, nearly; and for the latter to be born, as it were, from the sons of Grecian soil proper. Could this take place in the short space of one thousand years? STUDENT

Ants May Have Emotions Like Humans

INSECTS are not often credited with emotions, but a very little study of their life will readily satisfy any observer that in many respects their feelings are just like our own.

The writer conducted two little experiments with two neighboring nests of ants, which evoked some amusing and very human traits of ant feeling. One of these groups occupied a chamber of their own excavation below the surface of a hard road. Down to it led three or four holes, the openings of little descending passages. A small beetle strolled along, and the writer pushed him into one of these. In a moment he reemerged in the grasp of an ant a quarter his size. The ant was obviously furious. He dragged his captive about an inch, then let him go; stood in front of him a moment, clearly using very violent language; re-seized him and dragged him another inch or two; dropped him again and circled around him, still hurling defiance. Then the beetle recovered from his astonishment and hurriedly departed, followed for some little distance by the wrathful ant. Not till the intruder was several inches away did the ant return to the hole. And on the journey back he met a friend to whom he manifestly related the horrid circumstance.

Another group had just set up house. A minute hole had been made leading to a small chamber. Great numbers of ants were busy coming up from below bringing each his grain of earth, and around the entrance hole was now a little encircling mound of these grains. Taking the opportunity when all happened to be below, the writer carefully swept away the mound. In a moment an ant emerged from the hole bearing his grain. To his amazement there was no mound! Letting his grain fall he rushed wildly down into the depths, and with one's eye to the hole one perceived intense excitement below. No ant appeared for some minutes, but at last one deputy cautiously put up his head and finally ventured to emerge. He surveyed the situation and walked around a good while. At length he went to the hole and communicated his discoveries to the multitude below. He said that with reasonable caution there was no danger, and six or eight came up and were taken around by him. Finally all returned. The writer then scraped up the scattered mound with his little finger and replaced it around the hole. Waving antennæ and a little black head appeared in a moment, and then one or two more. The situation was too much for them; the mound had come back! So they instantly fled into the depths. Now a long time elapsed, but finally one and then another appeared, who reported things below. More consultation followed, and at last a steady upward stream began again, each ant with his grain. But this time, for a reason not clear, they did not deposit the grain *on* the mound, but with some care on the far side of it. Probably that seemed somehow safer.

All this was very amusing, considering the minuteness of the creatures. But if one looks at the affair and the actors through a mental microscope and makes them *men*, we shall find their conduct and obvious emotions just what ours would have been.

OBSERVER

It was a kind-hearted farmer in the Michigan fruit belt who turned the nozzle of the insect spraying hose away from a plum in which a robin with an appealing eye had its nest. The husbandman used the hose on all his other plum trees, but when he came to pick his crop, lo, the robin tree yielded four-fold that of the others.

BACK TO THE WOODLANDS

by S. O. SELMAN

BACK to the woodlands again I must go,
For I hear sweet Spring calling me there.
Back to the trees and the soft grass below
That waves in the soft balmy air.

How can I tarry? How can I stay,
When I hear that voice calling to me?
I must off to the woods where the tiny birds play.
There I'm happy as happy can be.

I sit on the grass in the cool fitting breeze
That blithesomely blows o'er the height;
I follow the paths on along through the trees
Till they lead me far on, out of sight.

O woods, how I love these thy trees and thy brooks
And all the sweet things that I see!
How I'd like to live here in thy cool shady nooks,
Where I'm happy as happy can be!

The birds overhead sing their songs bright and gay,
The stream murmurs on at my feet;
And all of my troubles and cares pass away,
Giving place to thoughts good and sweet.

Oh! cities are beautiful, buildings are grand,
But God's woodlands are greater to me
With their trees and their flowers by summer winds fanned,
Where I'm happy as happy can be! — *Selected*

Sitting by the Sea at Point Loma.

SITTING by the sea and listening to its bombardment of the sullen cliffs, or gazing to the confines of sight where the purple haze of far away mountains blends with a misty sky, or out over the ocean to where the curve of the world interrupts the vision, there come strange mental states as though the flow of gentle waters were smoothing the sands of thought and noiselessly submerging the rocks of perplexities and doubts. How, indeed, can we resist the great consciousness of nature or any more defend the barriers of self-will which we have built between ourselves and the vastnesses around us? If we would escape from the assaults of nature we must turn our backs upon the sea and go back once more to the daily pettinesses in which we have made our home. To stay by the sea is to surrender to the sea.

But we will stay and receive whatever good gifts nature may have for us. Have we not indeed a right to be here as those who are self-exiled and for whom the door stands ever open? As we listen and gaze, the sounds of the sea sink ever lower and lower, becoming parts of ourselves as from ages of familiarity.

There is no longer the bombardment upon the cliffs, nor the wash of the waves upon the stones, but only the eternal ebb and flow of thought and the rhythmic pulsation from the caves of memory. There is no more any sound at all but the sound of the inner silences as the soul of the sea broods with a tremendous peace over its mountains and its deeps. We have transfigured nature into an idea. We have created a new heaven and a new earth.

Nature teaches us nothing until we identify ourselves with her, until we gaze upon her so that the outer vision becomes an inner one, until we listen to her so that the outer sound becomes the inner silence. Then indeed she shows to us ineffable things and whispers words that may not be uttered in the speech of man. Then she makes us know that we were with her when time was not, that when she laid the foundations of the world we too were there. She has carried us onward and upward upon the tides of time, hiding within us the pearls of her surpassing wisdom, nourishing us, even in our estrangement, from the veins of her mighty life. Well was it said that "the mind is eternal, in so far as it conceives things under the form of eternity."

Only the eternal recognizes the eternal, only as we die to the transient can we live in the majestic life which moves the seas upon their way and establishes the mountains upon their foundations. STUDENT

Botanists Say N-Rays Are Emitted from Plants

BOTANISTS have recently been investigating the N-rays, and we are told that they are emitted from plants as well as from nerves and muscles, and that the fluorescent screen will glow when brought near to the plant, especially the leaves and the roots, where the effect is more pronounced than in the case of the flower. N-rays are emitted from such plants as onions and mushrooms, so that they do not seem to depend upon the presence of chlorophyll, or green coloring matter, their intensity being apparently due to the activity and condition of the vegetable protoplasm. This was shown by the fact that the N-rays were produced from germinated seedlings, and not from those which had not germinated, while their emission was stopped entirely on using chloroform to suspend the vital activity of the plant. Universal Brotherhood Organization

Central Office Point Loma California

AN exceptionally large audience filled Isis Theatre last Sunday evening at the regular meeting of The Universal Brotherhood and Theosophical Society, and although illness made it impossible for Katherine Tingley to be present, the Raja Yoga chorus from Lomaland gave several of their best selections, captivating the audience as usual, and there was a highly interesting and instructive address by Dr. Gertrude W. Van Pelt, besides the customary program of instrumental music by the students of Isis Conservatory. Dr. Van Pelt's address was entitled "The Parting of the Ways," and is given entire, as follows:

LOMALAND STUDENTS AT ISIS THEATRE

"The Parting of the Ways," an Interesting Address by Dr. Gertrude Van Pelt---Raja Yoga Children

Reprinted from the San Diego News

"There is an old story of Hercules, that at a certain point in his life he was shown two wonderful roads, which divided and led in quite different directions. One looked comfortable and easy and was full of attractions. The sun was shining along the path, the flowers were everywhere. The sky was blue. There were many shade trees and beguiling resting places. Fruits and foods were freely offered by the hand of nature, and all needs could be supplied without effort. But in the distance it looked dreary and empty and lonely. The other road was full of difficulties and obstructions. It was rugged and rough. There were burdens to be lifted and faces to be brightened. Plainly he who would travel this road would have to clear his path, and the flowers that were to grow here could only spring up *behind* the feet of the one who should tread it. But beyond, in the distance, there was a great light, and it looked warm and friendly and inviting.

"Which will you choose?" said Athena. And he, being Hercules the great, could not hesitate. He had become what he was, able to do, to bear, to overcome because he had accepted the duties and burdens of life as they came. He had evolved himself into a Hercules, a name which has become a synonym for strength. So that when the great parting of the ways came, his choice was already made.

"Such great partings as these are always coming to individuals, to communities, to nations. They may be called judgment days—days on which those concerned settle their own accounts. The decision is not made at the time of the crisis, but little by little in all the preceding days. The action at that time will be almost automatic. It will be inevitable, and the careless or pessimistic will say it was by fate that the balance tipped as it did, without reflecting that every one involved had thrown his weight in the scale. Or they may be called examination days, when in the school of life, each one reveals himself. They are examinations for which no one can cram, and in which, in spite of himself, each one is bound to lay bare his real motives, and show of what metal he is made. In vain he may plan to appear what he is not. When the moment arrives, he will uncover himself, and reveal to himself and the world his weaknesses and his strength. And these revelations will continue to be surprising, shocking, painful, overwhelming, until it is realized that every moment is a moment of choice, that it is eventful, sacred, and that on its use hangs the fate of empires.

"Every moment the patterns of our lives are being woven, every moment our characters are being molded. Every instant we are giving an impulse of some sort to our bodies, our minds, our hearts.

"People so commonly fail to see what are the real issues in every issue. They fail to see that besides the significance which belongs to any act externally, some sort of tendency has been given to the character of the person who did it. For instance, something is met which ought to be attended to. Shall we do it, or let it pass? It seems of little consequence. The disadvantages to others seem so very slight if we neglect it. The trouble seems out of proportion to the results. The need for it will have passed in a few hours, and the world will go on as well without it. This may be. There must be certain consequences belonging to the doing or not doing of that act per se. And they may or may not be easy to face later.

THE sophism which is my ruin, is that of most men who complain that they want strength of mind; when the time has already gone past for making use of it. Virtue only costs us an effort from our own fault; and if we were always willing to use forethought, seldom would we require any exertion to be virtuous. But inclinations at first easily withstood draw us on without resistance; we yield to slight temptations, the dangers of which we are apt to despise. By degrees we fall into perilous situations from which we might easily have saved ourselves, but from which we are now no longer able to withdraw without heroic efforts which frighten us, and we fall at last into the abyss, saying to God, "Why have you made

But there is another consequence, not so trifling, which is apt to be overlooked. A tendency to laziness has been distinctly formed in that character. If all similar situations in one week, one month, one year, are met in the same way, a strong enough bent has been formed to make one look indolently on matters of much greater moment. And

after a time, suddenly a great crisis occurs, one in which a failure to act may affect the happiness of a lifetime. And lo! the moment passes, and he, who had started simply in thinking it too much trouble to give a passing comfort to a neighbor, has wrecked his own life.

"Even every crime must some time have had a small beginning. A man kills another under the influence of the passion of jealousy. But there must have been a time, however far back in the history of that life, when there was simply a passing thought, a desire to hold a personal affection he had no right to. And this must have been nursed and nursed until finally it became a ruling passion.

"Think of the habits of body and mind that people allow themselves to form every day. If we could only realize that every set of tendencies which we call a habit that is not laid in accordance with the Law is bound some time to be overcome by it, surely we would consider the work we do each moment. Either we must by suffering and toil and weariness, day by day, undo that which we have so carelessly done, or suddenly in some storm of life we will be roughly torn from our ruts and our moorings and swung into line, all bleeding and sore.

"It is not pleasant to face these matters. Our little faults are so little—vanity, a desire to be considered first, a willingness to be a little false, a lack of courage to defend an unpopular truth, a love of ease, a wish to appear always in the right, and many other things, which most people know so well how to cover up with a host of virtues. These are the things we all meet every moment, and we have the choice of turning into the road which leads into them, and there feeding, nourishing and gently covering them from sight, letting the roots run deeper and further, or turning into the other roads which part from these.

"How the choice is made may seem to each rather unimportant, or at least important only to himself. And yet the sum of all these little choices produced once, for instance, the French Revolution. How little they of those days dreamed what flame their choices would one day fan! The sum of the tendencies created burst forth, and none could handle them, but the choice of each foregoing moment had been absolutely free to each.

"The only safety for the world lies in realizing this, in learning the sacredness and the meaning of the moment, and feeling its responsibility. Eternal vigilance is needed, which is a something so difficult to obtain. For though many can be alert when danger is immediately threatened, but few know that danger is certain if they are not alert, and it is so easy to be lulled into a false security.

"The constant sense of warfare is a result of all the wrong tendencies we have formed and the wrong habits of body and mind that have settled into us and become a very part of us. Were these once overcome, one can imagine a state of poise in which it would not be so difficult to keep one's balance. But even the overcoming has its pleasures. Is there any happiness the earth contains which is equal to that which comes to one who has honestly, faithfully, profoundly and without flinching, performed his duty; who has kept a clean heart in the midst of temptation and allowed no thought of self to intrude and deflect his course so much as a hair's breadth? The rugged path which Hercules chose was the one which held the deeper joy. Every step gained on it brought a fresh glow of life and health and the light and glory in the distance penetrated to every part. And the day came when Hercules, who typifies the hero sleeping in every man—the day came when he was able to loosen the chains of Prometheus, the soul who had come to earth to redeem it."

me so weak?" But in spite of us, He answers through our consciences; "I have made you too weak to get out of the pit, because I made you strong enough not to fall into it.

CURE the drunkard, heal the insane, mollify the homicide, civilize the Pawnee, but what lesson can be devised for the debauchee of sentiment? —Emerson

It is as useless to fight against the interpretations of ignorance as to whip the fog. —George Eliot

To TRY to conceal our own heart is a bad means to read that of others.

Disaster Wrought by Cyclone in Santiago de Cuba

LAS CUABAS, CUBA, June 15th, 1904

THE awful cyclone, which brought death and disaster in its train, has passed.

Santiago de Cuba, and the surrounding provinces, suffered most; and the teachers of the Raja Yoga School, and the children under their care, escaped with their lives. Oh! it was a terrible thing; it swept over the hills and valleys like an unseen monster.

Such floods of rain I never saw! We were at our Raja Yoga School, in Santiago, when the storm first began. Even then, the downpour of rain seemed to be washing out the very earth from under our feet. We were preparing to come out here for the night, to get away from the heat, already quite oppressive in the city.

Our twenty minutes' ride from Santiago to our destination seemed like an eternity to us. We fully expected to be washed down the street into the bay, but we all got safely to our school on the top of the hill. The commanding view we had of the city and bay and surrounding provinces, gave us an opportunity to see the larger picture of the storm and the awfulness of the gloomy scene all about. The tall palm trees on the grounds, some 40 feet high, swayed and bent under the force of the wind and the rain, until they were almost uprooted. Soon our big house was flooded, and we began to pile up cots, and place the children on them, to keep them from harm and exposure. The storm increased, and the water came pouring in. Every moment we expected to find the house and ourselves going down the hill, or the roof of the house blown off. General Wood, when he erected this building for his military headquarters in Cuba, must have anticipated storms and hurricanes; for we were spared the awful death we were menaced with. That night was truly a night of horror. You can imagine the teachers when the storm began, wading in the water in their mackintoshes, across the floors, under umbrellas (!) candles in hand, to look about, and keep the rest of the folks from being frightened to death. Even then the wind would sweep in, and we were often in darkness. When daylight broke over the hills, the storm had abated, but the marks of it were everywhere. Shrubby and plants uprooted, trees thrown down, the fences about our extensive grounds out of place, enormous cuts in the roadways. The families in our outbuildings came out alive; but as much terrified as we were. At the time I am writing we have pulled ourselves together, in thanksgiving to the great Law, for the safety of our building, and, most of all, for the safety of our dear children and teachers. I have just learned that the rain swept in to the first floor of our Raja Yoga School at St. Felix St., Santiago, doing some damage; but our library, pianos and most valuable furniture are safe.

The disaster in Santiago was very serious; many of the parents of our children have suffered very much through loss and exposure, which it will take a long time to remedy. The mining districts of El Cobre suffered especially severely, many houses being blown down, and many deaths. Other provinces, quite near by, had serious losses too.

It does seem as if these Cuban people had already had enough of misfortune. Millions of dollars damage to the roads alone! Chickens are

lost, no eggs, fish, fruit or vegetables in the market (we fortunately had a supply of canned goods on hand.)

The island needed assistance and financial help, but now it seems as if something must be done for their immediate relief, or the people never will survive such continued misfortunes.

What can they do alone? They have no farms, orchards, poultry or cattle. The daily supplies at the market seem far less than is necessary for the consumption of a city of much smaller size.

The only means of reaching the world or Havana by wire was by cabling to Jamaica, from there to the British Bermudas, thence to New York. No mail since last Saturday (this is Friday) except from the wrecked train en route from Havana. I believe a steamer has been dispatched from Havana, so we may soon hear something from other parts of the Island and outside.

Is it not possible for something to be done by the Americans, and members of our Society, to help those families who have lost their homes and everything? If you could see the naked children, running about, without even clothing —!

Well, I must leave the picture, and trust to the good hearts of the people whom you may enlist in the interest of these suffering Cubans. I must have food for some of the families of our school children in Santiago.

ALICE BOLTING

Secretary Raja Yoga Schools in Cuba

The children will be the greatest sufferers, for they not only need food and medicine, but they are also prevented from coming to school, for lack of proper clothing.

All moneys contributed for the aid of these sufferers should be addressed to Madame Olivia Peterson, Treasurer of the Cuban Raja Yoga Fund, Point Loma Homestead, Point Loma, California.

Japanese Subtlety

JAPANESE courtesy is famous; but there are certain peculiar shades of understanding in it, which a Westerner takes some time to fully grasp. Nor does the Jap, at first blush, quite grasp the intricacies of our own rules of social and commercial courtesy. To the point is the following:

A Japanese who had secured a situation on trial with some English house, was requested shortly after his appointment, to write to a customer who had been for some time past in debt to the house, and who seemed lacking in desire to settle. "Write briefly and politely, but let him see clearly that he must pay the money without further delay," said the cashier. Our Jap indited his epistle, and the following day brought a check for the money due. So quick a response, evoked the surprise of the Jap's superior, who asked to see the letter which had brought so speedy a settlement of the difficulty. Here it is:

DEAR SIR: — If you do not send us at once the money you owe us we shall be obliged to take steps which will cause you the utmost astonishment.

Respectfully yours

The combination of Oriental subtlety and Western vigor, proved most effectual!

A CLASS IN THE CUBAN RAJA YOGA SCHOOL AT SANTIAGO

In Touch With Japan ❖ Symbolic Fujiyama ❖

by Katherine
Tingley

Tokyo, April 14th, 1904

IN touch with Japan one cannot help sensing its antiquity, obscured as it is, in the historic sense. It is not difficult to believe that there is still lingering in the life-blood of this Japanese people the golden thread of a mighty past—a glorious civilization—a time when soul-life was the mainspring of all their progress. Who these people really are, and from whence they came, specialists in ethnology have failed to discover. The very mystery of their origin inspires one to dare to work out on lines of deep study the serious history of these interesting peoples. In view of known data, we turn our minds to ancient Japan, to about the Sixth century of our era, from which time, approximately, begins the admitted authentic history of the country. Behind that date a veil of obscurity has closed in the prehistoric records.

But does that mean that they are lost? That some day, under the touch of that Law which is the ever-guiding power in all human progress, they shall not be revealed and the missing links restored? As in the history of Egypt, we know that which seems lost there, if recovered, would reveal sacred records of a character to make all that we have of its antiquity seem but the shadow of the real. So it is with Japan today. Much as we have, to fascinate us and to hold us in admiration, in studying the characteristics of these peoples, we are here facing but the shadow of the real. And yet this shadow is one of great promise. As the atoms have their cyclic life, so do nations, and Japan, even in its warlike attitude, is at a cyclic point of its development, moving outward through struggle and death to a broader field, where it shall find that link which binds it to its ancient life. For in the ancient days, the wisdom of righting wrongs was applied to human life without bloodshed.

This, in the tide of human affairs, will bring forth to the world's recognition statesmanship and valor, so significant in their quality as to point only one way, to one fact: a reawakening of intuition. It is like opening *The Book of the Dead*, and reading from its pages of the wisdom of their great ancestors.

Who is there to prove that the sacred records of the origin and growth of these peoples have not been preserved?

We have but to study them seriously, impartially, to find a quality of devotion leading them which is a part of their very blood. And this marks the now hidden influence of the past. In the highest sense, obscured as is now their spiritual teaching, one cannot dispose of some evidences among them of an interior spiritual life: a soul-impress that urges them to do beyond their knowing. Searching the oldest records of the antiquity of some of the Oriental countries, here and there, is recorded testimony of devotion to sacred mountains. What think you of the revelations that the hidden and most ancient records of the Himalayas might reveal? And even some of the old mountains of old America? Or, of those older than all, now buried out of sight in the depths of the seas?

Atlantis and Lemuria are no longer visible to us; but they did exist, and Japanese people may still hold, in their inner courts, some of the wisdom of old passed on by word of mouth from their venerable ancestors. All along the ages, the seeds of truth are sown in the hearts of men. Some fell by the wayside and some on stony ground; but there is enough of these still left in the Japanese to hold them united in trust, in an unspeakable faith of their own divinity; and in a love of Humanity that surpasses in many ways anything that modern history has written.

There is much to learn from the Japanese, especially in their devotion to high ideals. Imperfect as may be the Shinto religion, and the Buddhistic teachings; imperfect as may be all the forms of worship of the Japanese, they have not lost the Heart Doctrine, which is the basic life of all human progress. Today, there does exist in Japan, deep in the mountain forests, those who have preserved some of the real and inner knowledge that belongs to the Japanese people particularly. As far as the Japanese people have wandered from the Light, through the confu-

sion of conflicting religious teachings, so far have they to retrace their steps back to that state of consciousness that brings man face to face with himself, and the laws governing his being.

It is the urge of the old spiritual life that is teeming in the blood of the Japanese today; and a wave of spiritual devo-

tion overshadows them, in their efforts for the real. They are advancing, moving towards a higher state, to the time when there shall come to them, a blend of the mental and the spiritual life.

China, having preserved, more heroically and definitely, some little of its ancient knowledge, has helped Japan, even in these modern days. Let us look behind appearances, and human errors, and find that which is the redeeming quality in all men, and learn therefrom. Still, with a lingering devotion born of the past, they cling to the old; and imperfectly interpreting its teachings, they push on in devotion.

In retracing their steps back and upward to the ancient Light, theirs is an easy path, in comparison to that which many nations must travel ere they reach the height; for the Japanese people are not weighted down with the useless theological luggage of centuries, and with all the heavy Karma of the mistakes made in the holy name of God.

The history of Fujiyama, the mountain, and all its past associations unrecorded, might give the world a startling story, as strange and wonderful as the stories of Biblical lore.

Let us see what the written history is of this wonderful mountain. We quote from a writer on Japan, a Professor of Japanese and Philology in the Imperial University of Tokyo:

Natives and foreigners, artists and holiday-makers, alike fall down in adoration before the wondrous mountain, which stands utterly alone in its union of grace and majesty. During the Middle Ages, when Fuji's volcanic fires were more active than at present, a commonplace of the poets was to liken the ardor of their love to that which lit up the mountain-top with flame. Another poet, earlier still—he lived before the time of King Alfred—sings as follows:

There on the border, where the land of Kai
Doth touch the frontier of Suruga's land,
A beauteous province stretched on either hand,
See Fusiama rear his head on high!

The clouds of heaven in reverent wonder pause,
Nor may the birds those giddy heights essay
Where melt thy snows amid thy fires away,
Or thy fierce fires lie quenched beneath thy snows.

What name might fitly tell, what accent sing,
Thine awful god-like grandeur? 'Tis thy breast
That holdeth Narasawa's flood at rest,
Thy side whence Fujikawa's waters spring.

Great Fusiama, towering to the sky!
A treasure art thou giv'n to mortal man,
A God Protector watching o'er Japan—
On thee forever let me feast mine eye.

"The surveyors tell us Fuji is 12,365 feet high—an altitude easy to remember, if we take for *memoria technica* the twelve months and the three hundred and sixty-five days of the year. The geologists inform us that Fuji is a young volcano, to which may be ascribed the as yet almost unbroken regularity of its shape. The beginning of degradation is the hump on the south side called Hoei-zan, from the name of the period when it was formed by the most recent eruption of which history tells. This eruption lasted with intervals from the 16th December, 1707, to the 22d January, 1708. The geologists further assure us that Fuji had several predecessors in the same vicinity, Mounts Futago, Koma-ga-take and others in the Hakone district, being volcanoes long since extinct. Futago, indeed, still has a crater which deserves a visit, so perfect is its shape and so thickly carpeted is it with moss and shrubs.

"Philology is the science that can tell us least; for no agreement of opinion has yet been reached as to the origin of the name of *Fuji*—anciently *Fuzi*, or *Fuzhi*. *Fuji-san*, the current popular (Continued on page 18)

The Trend of Twentieth Century Science

The Earth Shows Wonderful Signs of Being a Living World

PLATO never gave us all his reasons for calling the earth a great animal. Perhaps because, since she is continually giving birth to living and conscious creatures, plant and animal, he inferred that she must herself be conscious. Max Nordau, in another way, suggests the same idea:

Nothing proves to us that there is not in nature some vast mind or consciousness, whose extent our circumscribed consciousness is unable to grasp. . . . The same elements that form the body and brain of a human being are also found in enormous quantities outside of the human organism; the forces that produce the vital processes, that is, the chemical and mechanical influences, electricity and other forms of power that are still unknown to us, are also to be seen in operation outside of the human organism. Who then is so bold as to assert that these elements and these forces are unable to produce a consciousness except in the form of a nervous system, except in the form of a human brain? Is it not conceivable and even probable, that the form of the nervous system is something accidental, and that the elements composing it, the forces operating in it, are all that is really essential? and that they can also serve for the foundation of a consciousness when they operate upon each other in a manner entirely different from that which prevails in the organisms accessible to the observation?

In other words, every molecule of this earth may be part of the ganglionic system of a vast earth-consciousness.

Assuredly, the earth does not behave like a dead thing, apart from the fact that she is the constant progenitrix of living creatures. Her surface is never still. The occasional earthquake is but an extreme degree of the ceaseless tremor going on everywhere.

Along with the earthquakes and tremors there are slower movements also always at work. A continent is slowly rising there, another becoming submerged here. And from time to time volcanoes tear their way through the crust.

The poles are in constant motion, apparently in some relation to earthquakes. It has been found that during the last eight years the axis of rotation moves through the earth's mass almost proportionately to the number of earthquakes per year. A man who desired to retain his place on the North Pole would have to do a good deal of walking around in small irregular circles.

And, as everyone knows, the magnetic poles periodically execute wide swerves from side to side. We must give up using the phrase *terra firma*.

So there are plenty of signs of life about the earth, and if our spiritual perceptions were not so dead we might perhaps *know* that she was alive, apart from any scientific considerations whatever. STUDENT

Does the Sun Control and Have Influence on the Weather?

FOR many years it has been the "correct thing" to deride the ancient belief that the heavenly bodies have any influence on the weather, but lately a change has taken place, for the eleven-year period of the sun spots and its probable connection with the weather, has become an important subject of research on the part of the United States Weather Bureau at Washington.

Professor Bigelow says:

We have been studying the problem for more than thirty years, and if we can give a satisfactory answer at the end of thirty more, I shall consider a great discovery has been made.

We are passing through a period of sun-spot maxima, and it is noteworthy that nearly the whole of the United States has been suffering from abnormal weather, too much or too little rain or sunshine according to the local circumstances. Also in England an extraordinary amount of rain has fallen during the past eighteen months, and in Egypt and other countries the crops are delayed.

Professor Bigelow suggests, rightly, that the whole earth should be affected by the solar changes, supposing they do control the weather. But it does not necessarily follow that they should produce rain or low temperatures in every region. The same cause may give rise to very opposite effects. It is quite possible that this dry spring in California may

have its origin in the sun's action, as well as the inclement weather of other parts.

But we know that the outbursts of sun-spots are accompanied by terrestrial auroras and magnetic storms, even to the interference with the telegraph and telephone systems, and as the synchronism of solar magnetic variations with our cold waves, variations of atmospheric pressure, and storm tracks is established, it follows that there must be a close connection between the weather and the sun-spots. Further, if it be true that the eleven-year period of Jupiter's revolution round the sun is the cause of the sun-spots, as is reasonably advanced, we are coming very near the position held by the wise men of old. The law of cycles governs in every department of nature, as we are rapidly rediscovering. The importance of the recognition of this law is immeasurable, for it will help us to anticipate events in our own life-cycle as well as in the wide fields of nature. R.

Consumption Is the Cause of the Largest Number of Deaths

THE Tuberculosis Symposium before the Illinois State Medical Society gave birth to some remarkable statistics illustrating the penalties we pay for town life.

Consumption causes about 12 per cent of the total deaths in that State, and considerably more in some others. The bulk of these deaths occurs in towns and cities. And the consumption death rate is highest in that part of any city which is most crowded. Of all occupations, it is highest among clerks, men who spend a long day in close offices—higher than among the wives of the same men. For the women, on the whole, go out more than their husbands, and the clerk's residence is often in the suburbs.

Throughout the United States, out of 2000 deaths from consumption, 160 will be of whites, 470 of negroes, 490 of Indians, and 640 of Chinese. Excepting in the case of Indians, this would probably represent something like the relative congestions of their residential quarters, though other factors are also concerned. The Japanese rate is hardly higher than the white.

The disease is in fact among chronic maladies that one which takes quickest advantage of depressed vitality; and the most universal cause of depressed vitality, operative in cities continuously and from infancy onward, is vitiated air and excluded sunlight.

It was generally recognized that the open air regime without intermission is the necessity; and that for the victim of consumption, tent life throughout the year, even in Illinois, is his best chance. The next point is diet; the last—if anywhere, medicines. HERBERT CORYN, M.D.

Incubators Are Not Better "Hatchers" Than the Mother-Hen

ASCIENTIST has been making himself merry over the "popular superstition" that a hen, in incubating her eggs, furnishes them with any "mysterious life magnetism." In his view, it is simply the warmth of her body that effects the egg changes. He rests his contention on the fact that eggs submitted to the action of an incubator, and thus mechanically mothered, hatch in as large numbers and as healthily as those under the care of the hen.

If this is true, it is obvious that the hen does furnish nothing but warmth. And it is true as regards the actual numbers and apparent health of the chicken. But beyond that, facts and figures are lacking. We do not know the relative length of life or future health, or egg-laying capacity, of chicks hatched respectively in the natural and artificial manner. And until we have sets of such figures carefully obtained, any assertions are mere dogmatism. The probabilities certainly are—considering what we have lately learned of the invisible emanations of living bodies—that something more than warmth is furnished to her eggs by the hen, and that the lack of this is manifested some way further on in the chicken's life. Science will have to get over its horror at the idea of "mysterious emanations." There is a good deal of unlearning as well as of learning awaiting its students, and the epithet of "charlatan" will have to be reconsidered in more than one case. STUDENT

A Silent Service

"It is such a pleasant house to go to!" said Mrs. Howard to her cousin. "You are so sure of a welcome, and the girls always seem to have something interesting to say or do. Esme is the musician of the family, Gertrude the artist, and Alice an all-round sort of girl. Mrs. Morris is an invalid, so Alice mostly acts as hostess, and though calling usually bores you, Lydia, I think you will enjoy meeting the Morris girls."

A faint gleam of amusement lit up the girl's tired eyes, then, stifling a yawn, she replied, "Don't expect me to be too enthusiastic over your protégées, Lisbeth; I have lost the capacity for any violent interest in people these days."

Lisbeth was used to her cousin's ways, and remained unruffled in the face of the lack of interest in the entertainment provided. So different were the two in character, that their friends used to say their friendship must be the result of "attraction by opposites."

The afternoon saw the energetic little lady and her visitor on their way to visit the Morris family. The relief of dropping into a comfortably-cushioned chair on the cool veranda, after their walk through the sunny streets, was at first sufficient for languid Lydia, and the feeling of relaxation absorbed all her energies. To Gertrude and Esme she was the subject of a good deal of interest, for Mrs. Howard was a great favorite of theirs, and her traveled cousin, on a fleeting visit, might be expected to be a welcome addition to the limited society of the quiet little mountain village.

Lydia's polite aloofness was rather a disappointment, for they were natural, open-hearted, friendly girls; but being in addition unselfish, and more given to making things pleasant for other people than expecting others to do so for them, they quickly fell in with her mood, and turned their attention to Mrs. Howard.

"Did she know their mother was away on a visit to their uncle? She went yesterday. Such dissipation for an old woman!"

"Frank was home for a few weeks, and what fun it was to have a full-fledged M. D. in the house! Alice is quite an adept at bandages already," and so on.

The tea was fragrant and the cakes delicious.

Esme, dropping out of the conversation, sat silhouetted against the open doorway of the semi-darkened room beyond, softly playing on her guitar. Lydia, rested and refreshed, turned observing eyes upon the scene before her.

Quiet Alice was sitting by the tea-tray, her fingers busy with her knitting-needles; Gertrude sat on a low seat at Mrs. Howard's feet, gayly chatting to her. There was a lull in the gay chatter, and suddenly

the player struck a chord; then the voices of the sisters blended in sweetest harmony in one of those beautiful old songs which go straight to the heart.

It was an idyllic scene, the slowly sinking sun throwing long glints of light between the softly rustling leaves of the beautiful camphor laurels, and the sweet insistent perfume of the mignonette and roses, which bordered the veranda, wafted towards them in the wings of a gentle sunset breeze just springing up, a veritable zephyr.

Lydia took in the whole tone of the picture, and felt the witchery of the hour sink into her soul—a peace so different from apathy—a feeling of nearness to something good she had not felt since childhood. Her thoughts passed swiftly over the events of the last few years, years passed in travel and full of enjoyment.

The simple beauty of the scene before her, the pure affection that spoke in the sister's looks and words, caused her own life to stand out in bold contrast, and she thought with a tightening at her heart how her own growing love of luxury and ease had almost persuaded her to cut herself off from the joys of unselfish love and effort. She felt her mood

soften. Unbidden, tears rose to her eyes, she became aware of undefined longings in her heart, she felt that there was in her something better than she showed, better than she lived, a dim vista of possibilities unfulfilled and the vision of their fulfilment.

Mrs. Howard was warm and voluble in her praise and thanks as they rose to go.

Lydia's glance and handshake were eloquent of gratitude to Esme, though her lips were mute, and her smiling graciousness of farewell went far to remove the former impressions of her aloofness from the other sister's mind.

"I shall probably never see your friends again, Lisbeth," said Lydia on the morning of her departure, "but I shall never forget my visit to them."

Then, to her cousin's further surprise, "It has come home to me that life is a far nobler and more responsible thing than I had ever realized before," and stooping to kiss her farewell, she whispered with a happy little laugh, "I shall send you the largest slice of my wedding-cake—and please give them some

—I have decided to marry Jack Evans after all, and take my chance of making a good poor man's wife."

"And that is all she told me," said Lisbeth to her husband as she repeated the news to him, "but then Lydia never *did* explain herself. And she might have married a millionaire—or a title!"

ETHNE

DEEDS

by A. LAMPMAN

'TIS well with words, oh masters, ye have sought
To turn men's yearning to the great and true.
Yet first take heed to what your own hands do:
By deeds, not words, the souls of men are taught:
Good lives alone are fruitful: they are caught
Into the fountain of all life (where through
Men's souls that drink are broken or made new)
Like drops of heavenly elixir fraught
With the clear essence of eternal youth.
Even one little deed of weak untruth
Is like a drop of quenchless venom cast,
A liquid thread, into life's feeding stream,
Woven forever with its crystal gleam.
Bearing the seed of death and woe at last.

SIGHT

by A. LAMPMAN

THE world is bright with beauty and its days
Are filled with music: could we only know
True ends from false, and lofty things from low;
Could we but tear away the walls that graze
Our very elbows in life's frosty ways:
Behold the width beyond us with its flow,
Its knowledge and its murmur and its glow,
Where doubt itself is but a golden haze.

Ah brothers, still upon our pathway lies
The shadow of dim weariness and fear,
Yet if we could but lift our earthward eyes
To see, and open our dull ears to hear,
Then should the wonder of this world draw near
And life's innumerable harmonies.

THE CHILDREN'S HOUR

DEAR BOYS AND GIRLS: A little bird told me that you are all wondering how the Raja

A Raja Yoga Fourth of July

Yogas spend July 4th in Lomaland, and especially how they spent it this year. Well, another little bird has just told me something about it, and I'll pass the song-message on to you. Just before Independence Day Mrs. Tingley received a note from the boys and girls of the Raja Yoga School which read something like this:

DEAR MRS. TINGLEY: We know that you know what is in our hearts but we wish to tell you that Raja Yoga has taught us that firecrackers and a lot of noise are not at all necessary for our Fourth of July celebration. It would make us feel badly to burn up the money that could be made so useful in teaching Raja Yoga to other children. We can spell "picnic" in the air, and a bath in the old Pacific with lunch on the beach would be a fine celebration. With much love,

YOUR RAJA YOGA BOYS AND GIRLS

And that is how it came about that early last Fourth of July morning all the Raja Yogas climbed into the big tally-hos and bundled the tiny tots in with them and went off on a glorious ride to Ocean Beach. Was there ever such a beach anywhere else? No. Were there ever such children as the Raja Yoga children? Could one even imagine a more glorious day? The skies were as blue as California skies always are, with little fleecy clouds here and there, just enough to save the sunshine from being too warm, and a fine breeze came up about nine o'clock, which made the day as beautiful as Point Loma days always are, and that is saying a great deal. The Pacific never looked so beautiful and when it came time for the big ocean bath—and that is such a luxury to Raja Yogas, you know—you would have thought you were looking at a section of fairy-land with dozens of frolicsome brownies scampering about and running in and out of the breakers. And then after that splendid bath—for ocean bathing is one of the delights of the Raja Yoga children and one secret, I dare say, of their remarkable health—then came lunch time and the baskets were opened. There were extra good things in these baskets, as a matter of course, for these are extra good children, and their bodies are extra splendid and extra strong and they carry every day of their life extra responsibilities and, in fact, all felt that Independence Day was the opening of a year of glorious pioneer work. But the little letter tells you the real story. I do not need to dilate on the advantages of Raja Yoga after speaking of that.

The key-note of the whole sweet day was sounded in the speech made at Isis Theatre by one of the Raja Yoga boys, and this is it:

In 1776 this song for liberty-loving people resounded through America, and the people rejoiced. Hearts were made glad then; for in the thought of liberty there were entwined the sweet notes of peace and good will to men. *It was a glorious time.* Since that early day, America, Independent America, has swung itself into line on the onward march of progress with other nations.

As far as this word of Independence, and the spirit that lies back of it, has worked for right action, so far has our beloved America advanced; and no farther. Just as far as the word *liberty* has been misinterpreted and misapplied, so far has America retrograded. While we ever keep in mind all of our glorious achievements, we must not be unmindful of that which is in it, and yet not a part of it, that is, false ideas of liberty. It would be wise, would it not, for us today to get a new grasp of ourselves, so that we can mentally place ourselves where we can look out over

our broad and beautiful land, and discern its possibilities as well as its dangers. If we do this, cannot we make this day for ourselves

the most glorious of all the Fourths of July we have ever known? Behind liberty and independence, the spirit of unity must be the urging power: or else we grow not well to that point of progress which our forefathers prophesied by their noble work.

Look at the chances boys today have to build for the future on a solid foundation of fraternity! How my blood warms in me, when I recall those old heroic days, when a few American patriots became united in a fraternal effort for the benefit of the people! These patriots were men of heart; they loved their fellows, and they bent their energies to this mighty work of true freedom on the Fourth of July which we tomorrow shall celebrate.

Is it not time that we felt the need of making it more in accord with the spirit of the old days? Is there not too much of the gunpowder and firecracker odor about some of our celebrations? Might we not lessen up a bit, in this way, and be just as happy? I think that the Fourth of July should be to every American the beginning of something new in his life, for the betterment of himself and his country.

Let our celebration be one of recognition of the glorious work of our forefathers, this to become a breathing power to push us on to greater things! A hundred years from now we shall better know the meaning of the work of these great men: for knowledge will make the people of America find their way to a broader and more beneficent path of service in the name of liberty.

Peace, peace! Sound it through the land. Call up the people to do homage to the memory of our glorified ancestors! *For by their works even ye shall know them.*

Isn't there inspiration in this and isn't there promise that something better than America has ever yet known shall take its place yet at the center of things and at the helm?

Do you wonder that Raja Yogas are happy and strong and contented, that they go about their duties as joyfully as if they were birds? Do you

wonder that they are working hard and finding every duty and every lesson a joy, and that they are looking forward with absolute inspiration to the time when they shall carry to other children the splendid help and courage and devotion and common sense and heroism that Raja Yoga has brought to them?

UNCLE FRED

A RAJA YOGA PICNIC LUNCH AT LOMALAND

THE RAJA YOGA QUESTION BOX

DEAR BOYS AND GIRLS: What do you say to a Question Box, to be opened once a week during our Children's Hour? Let us hear from you about it. And how's this for a beginning?

1 Who was Josephus?

ANSWER—Josephus was a Jewish historian. He was born 37 A. D. At the age of fourteen he was very learned in law, and astonished the people by his learning. He wrote many books.

2 Who was Herodotus?

ANSWER—Herodotus was a great historian who lived in Greece and Italy 484-424 B. C. He read all the Greek books of his time and traveled in every land about which he wrote. His books give a picture of the life of the Greeks, Persians, Egyptians, and many other nations.

3 Who was Joan of Arc?

ANSWER—Joan of Arc was a poor village girl, born in France, 1412 A. D. Her country had long been oppressed by the English and had lost heart and hope. When a girl of seventeen Joan of Arc roused them to action, and led the French soldiers from victory to victory. She was called the Deliverer of France. But the people were ungrateful and let her fall into the enemy's hands. She was tried and condemned by the church, and was burned at the stake.

Students'

Path

THE WAY TO GOSSIP TOWN

HAVE you ever heard of Gossip Town,
On the shore of Falschood Bay,
Where old Dame Rumor, with rustling gown,
Is going the livelong day?
It isn't far to Gossip Town,
For people who want to go.
The Idleness train will take you down
In just an hour or so.

The Thoughtless Road is a popular route,
And most folks start that way;
But it's steep down grade; if you don't look out,
You'll land in Falschood Bay.
You glide through the valley of Vicious Talk,
And into the tunnel of Hate;
Then, crossing the Add-To Bridge, you walk
Right into the city gate.

The principal street is called They Say,
And I've Heard is the public well,
And the breezes that blow from Falschood Bay
Are laden with Don't You Tell.
In the midst of the town is Telltale Park,
You're never quite safe while there,
For its owner is Madame Suspicious Remark,
Who lives on the street Don't Care.

Just back of the Park is Slanderer's Row;
'Twas there that Good Name died,
Pierced by a shaft from Jealousy's bow,
In the hands of Envious Pride.
From Gossip Town, Peace long since fled,
But Trouble, and Grief, and Woe,
And Sorrow and Care, you'll meet instead,
If ever you chance to go.

Seek the Cause of Evil in Your Own Heart

TO say that perfectly wise and just Law determines everything that happens to us; that a chain of cause and effect connects our fortune with our deserts, though most of its links may be unseen; and that consequently it is impossible for anyone to get more or less than he deserves; to say this is easy. But to so realize its truth as to render it a real consolation and a valued guiding principle in all the affairs of our life is a question of time and labor. Nevertheless this latter can surely be done, and is done with steps that are sure if slow, as we daily advance along our chosen path of realizing Theosophical truths.

It is said in writings on Reincarnation and the law of Karma that many of the things which we undergo are the result of causes set going in *past* lives. But we must bear in mind that the germs or seeds which were sown in those past lives, and which are coming to fruition in the present life, were sown in the soil of our constitution and exist now as definite things in some part of our complex organism. It is perhaps not too much to say that all past tendencies and qualities are stamped into the very substance of our bones. Such a theory, at all events, provides a meaning for all the infinite variety of shapes which our bodies have, which otherwise would be an effect without a cause and a symbol without a significance.

And to accept such a theory merely requires that we should enlarge our present theories. It is easy to see how the Karma of a drunkard is impressed on the enfeebled body which he inherits, so that he enters this world branded with the stigma of his past mistakes. And the same with a person of fortunate heredity; and, in short, one could enumerate many cases in which the self-generated fate of a man is obviously stamped on his physique. Extending the application of this theory, may we not infer that all the various traits of character with which we are endowed

have their counterpart somewhere in our bodily mechanism, and that we all go about carrying, not only the stamp of our past, but the influences which tend to mold our future?

If this be so, we can understand that the things which happen to us in this life may be the natural consequence of our peculiarities of organization.

We do not know, in most cases, what it is that directs the so-called casual or fortuitous actions and events of our life; but there must be some cause for every effect, and to say that a thing happens "by chance," means nothing. Is there not perhaps something in our make-up that impels or attracts us to those places, those circumstances, and those people who will bring about our appointed destiny? If so, then a man who has sown (let us say) the seeds of marital unhappiness, will be drawn by this unseen something in his make-up to the very person best qualified to fulfil his self-made destiny for him. Or a person who has earned for himself the fate of being misled by false friends, will always attract or be attracted to such a circle of acquaintance.

Carried still further, this theory means that, when other people do anything to us, they merely give us what we ought to have—in fact what we ask for, or what some part of our nature is calling out for.

Though this is the extreme case, and is as hard to realize all at once as it is easy to write down, yet if we accept it as a truth we shall immediately begin to proceed along the path of its gradual verification. Starting from the opposite extreme of blaming somebody else for all that happens to us, we may come to see that *some* of our experiences at least are due to faults in ourselves. And practise will enable us, whenever we are ill-used, to more and more readily perceive where the fault in us lies that causes this ill-treatment.

But let us now abandon the wrong old way of regarding misfortune as a *punishment*, an idea fostered by the theological notion of a vengeful Deity. And let us regard affliction as a natural medicine, administered by that beneficent force in nature which heals and adjusts. Then we come to recognize that the treatment we receive from persons and circumstances is absolutely necessary to us, so long as we continue to harbor the germs in our character that cause and merit such treatment. We can acquire in this way a detached, philosophical, impersonal way of contemplating life, that will take the bitterness out of what we call misfortune.

To look at the matter from an opposite point of view, let us consider how we treat others and why. Has not each person we meet got an atmosphere of his own which absolutely compels us to treat him in a certain manner?

The summing up of the whole question is the familiar truth that we can find the key to the whole universe within ourselves; and that, by attending to our own heart and mind we can shape our whole life, modify all outward circumstances, and determine our relations with our neighbors. He who blames another, wrongly affixes the guilt; he should have blamed himself.

H. T. E.

CONSCIENCE is the voice of the Soul, the passions are the voice of the body. Is it astonishing that often these two languages contradict each other, and then, to which must we listen?

Incarnate Messages

THE mere existence of some people constitutes of itself a message of encouragement to those who think themselves too crippled and hampered by the unkindness of nature to fill *any* place in life. Think of Helen Keller, blind and deaf. Apparently almost absolutely cut off from relationship with the world and her kin, apparently doomed to a lifelong silence, to the existence of a vegetable, she learns to speak and write perfect English, becomes a university graduate, swims, rows and bicycles. Her temperament secures her more joy in life than nine out of ten people who are born with every sense and faculty. It would almost seem that her buoyant will and refusal to be conquered have compelled the development in her of subtle senses which do much to take the place of those she lacks.

Think of the negro, Blind Tom the pianist; and of that armless artist who held his brush and palette with his feet.

It would seem as if these souls purposely incarnated, voluntarily assumed their obstacles, in order to teach the rest of us that difficulties are made to be conquered, and that there are no difficulties that cannot be conquered.

STUDENT

LOYALTY

by GRACE H. BOUTELLE

WHAT is true friendship? Hear the answer, then!
 True friendship does not doubt, or fail, or fear;
 It turns to calumny a deafened ear;
 Its strength must needs be as the strength of ten
 Because it is so pure and selfless, free
 From morbid fancies and from vain alarms.
 His honor questioned? Quick! a call to arms
 To fight for him with might of loyalty!
 And when his world seems dark, through grief and care,
 Let friendship spread for him her wide, strong wings
 And bear him up so swift and far and high
 That every breath of clear, life giving air
 Brings rest and courage, hopes of better things,
 A healing calm, a great serenity.—*Selected*

Conducted by J. H. Fussell

Question Of what value is prayer?

Answer First, we must understand what prayer is. Prayer is an appeal which we make to some inner power in ourselves. If the prayer is selfish, then we merely invoke our own selfish will-power; and if the prayer is unselfish, then it is our spiritual nature that we invoke. It is not reasonable to suppose that the supreme God of the universe is a personality who attends to each and every supplication, selfish and silly, or unselfish, that is addressed to him. This notion belongs to the narrow *theological* idea of God, as a person who is subject to caprice and moods. The Theosophical conception of God is far vaster and more reverent; it regards God as the eternal omnipresent Spirit of Life, Light and Wisdom, from whom all creatures have their origin. To address prayers to such a Spirit is ridiculous.

We are all under the rule of infinite wisdom, goodness and power; and to presume to make suggestions or petitions, in accordance with our little notions of what is good for us, is useless and shows lack of trust and faith in the Divine Law, as well as in ourselves.

The facts that warring nations pray against each other, and that individuals pray for themselves regardless of the general good, show that prayer (as ordinarily understood) is a personal matter. Needless to say no such selfish, ignorant prayer can reach any throne of grace. What we do, when we make such a prayer, is merely to strengthen our impatient desires; and the result, if any, is not likely to benefit us.

But now, is there such a thing as real Prayer, and, if so, what is it?

Yes; real Prayer is an earnest aspiration to reach to the Divinity in ourselves, and to discern the working of Divine Law, and to unite our own will with that Divine Will. In real Prayer, we do not desire anything specific, but feel a deep aspiration for the good of all—an acknowledgment of the perfect wisdom and justice of the Law. It is what Christ speaks of as "Praying to thy Father in secret;" and we may remember how he rebuked those who prayed in public.

To sum up, I would say that it is quite useless to pray in the ordinary, ignorant selfish way. True, the prayers of truly religious people may often contain an element of pure devotion mingled with the personal longings and ignorant ideas, and may thus to some extent elevate and purify the nature. But we should try to make our prayers all pure. To do this, *we must pray all the time; pray with our every action*—let each action be a prayer—not to throw oneself into some mental state, but simply to do our duty in the right spirit, and then each action will become Prayer. For, while mind and body are engaged with the right performance of duty, the Soul can instil wisdom and power into them. The best prayer is a constant trust in the Law and charity to all. H.T.E.

Question How can one enter the astral form and become conscious of it?

Answer I don't know, I have enough to do to try to be fully conscious in my physical form and while working on the physical plane. However, there are some self-styled Theosophists who will tell you all about it, with all its colors and tints and changes, but who nevertheless will not be responsible for the ill-health, shattered ner-

vous system, physical or mental break down that may follow your attempt to practically acquire such knowledge which they themselves more often than not merely pretend to. And we do not hear from them very much about the first step or the second, which our teachers have always insisted upon as leading to higher development.

H. P. Blavatsky said, "To live to benefit mankind is the first step; to practise the six glorious virtues is the second," and W. Q. Judge and Katherine Tingley say the same. No doubt, in the ordinary course of evolution we shall some day be fully conscious on all the planes of our being. Indeed, we are at times partly conscious now in the way referred to in the question, *e. g.*, in our dreams, and some of the so-called Theosophists referred to will give you all sorts of rules or practises to follow to attain such consciousness, but believe me, if you wish to retain a sane mind and a healthy body, beware of all such!

And while I still hold to my first answer, "I don't know," I can also say the opposite, I do know, at least so far as the preliminary steps which are the same for all true development, for the answer is given in the words quoted from H. P. Blavatsky. Our teachers have also taught us that it is unwise to push our investigations abnormally into the realms of thought of which we know so little, for we do not know the dangers that are there; and the only armor which is impenetrable in that realm is purity of life, and all absence of self-seeking.

We do not yet know one half of the marvels of the present life with its possibilities and powers and we never shall know them until we have purified our whole nature. So do you not agree with me that it is best to gain a little more experience in this realm before we push on unprepared into dangers we know not of? Have we not yet got a little more to do in this life first? Then it is sometimes well to ask, why do we want to acquire such experience? Are we quite sure it is not mere curiosity, or selfishness, or love of power? I assure you, friends, that when we can use what power we now have *rightly* and for the benefit of others, we shall have all these other powers, so far as they are right and useful, added to us. But have we yet made the armor of our souls impenetrable through purity and unselfishness?

Another answer was given to the question 2000 years ago by the teacher who said, "Seek ye first the kingdom of God and all these things shall be added unto you."

So if you want to know, if you really desire true knowledge, "seek first the kingdom of God." But this must be *first*, not second or third or in any other place.

"Nothing Is Great or Small in the Divine Economy"

PERHAPS the impossibility of mentally grasping a conception of space is never more forcibly impressed upon us than when we try to adjust our ideas of bulk to the microscopic life with which the world teems. We learn with awed astonishment of the number and complexity of the items which aggregate in a human, bovine, or other large animal body, and we unconsciously form an idea that so many organs fill so much physical space. Then we find some tiny parasite upon this large body, and the idea more or less definitely occurs that, because it is smaller, it must be a "simpler" form of life. But the microscope shows its structure to be even more complex than that of its comparatively gigantic host, and that it has organs as delicate in proportion to its size as are those of the greater creature. And then, wonder upon wonder, we find that it also has parasites upon a similar scale of relative size, but not perceptibly simpler. Indeed, we believe that the microscope has never revealed the utmost extreme of minuteness in living form, and no positive assurance can be given that the smallest microbe ever seen does not have its bacteria and germs to guard against.

On the other hand, we find that we ourselves are cells or parasites(?) of a national body with its organic life; and it, in turn, of the race, and so on; worlds combining into systems, and systems into universes, until the mind loses itself in the stupendous query propounded by some modern astronomers, whether the whole visible stellar creation is not a living unit; one among other units, which, in turn— At the other end of the scale we find ourselves trying to understand how molecules and atoms can pass through the veins and arteries of an infusorium.

Nothing remains to us but to recognize our standards of comparison and our limits of perception. Perhaps Space is only an aspect or phase of matter and not an attribute of it. R. W.

A COMMON DESTINY

from HORACE

WHATEVER our rank may be,
 We all partake one common destiny!
 In fair expanse of soil,
 Teeming with rich returns of wine and oil,
 His neighbor one outvies;
 Another claims to rise
 To civic dignities,
 Because of ancestry and noble birth,
 Or fame, or proved pre-eminence of worth,
 Or troops of clients, clamorous in his cause:
 Still Faith doth grimly stand,
 And with impartial hand
 The lots of lofty and of lowly draws
 From that capacious urn
 Whence every name that lives is shaken in its turn.

In Touch With Japan---Symbolic Fujiyama

(CONTINUED FROM PAGE 12)

name, simply means 'Mount Fuji,' *san* being Chinese for 'mountain.' *Fuji-no-yama*, the form preferred in poetry, means 'the mountain of Fuji' in pure Japanese, and the Europeanized form *Fusi-yama* is a corruption of this. But what is the etymology of 'Fuji' itself? The Chinese characters give us no clue. Sometimes the name is written 'not two,' that is, 'unrivaled,' 'peerless'; sometimes 'not dying,' 'deathless'; and with this latter transcription is connected a pretty legend about the elixir of life having been taken to the summit of the mountain in days of yore. Others write it 'rich scholar,' (Students of Theosophy please note) a more prosaic rendering, but no whit more trustworthy. Probably *Fuji* is not Japanese at all. It might be a corruption of *Huchi*, or *Fuchi*, the Aino name of the Goddess of Fire; for down to times almost historical the country round *Fuji* formed part of Aino-land, and all eastern Japan is strewn with names of Aino origin."

We quote again:

The Japanese are fond of saying *Fuji* is inhabited by a lovely goddess named *Kono-hanna-saku-wa-hime*, which, being interpreted, means "the Princess who makes the Blossoms of the Trees to Flower." She is also called *Sengen*, or *Asama*, and numerous shrines are dedicated to her in many provinces. The peasants of the neighboring country-side often speak of *Fuji* simply as *O Yama*, "the Honorable Mountain," or "the Mountain," instead of mentioning its proper name. One of *Hokusai's* best picture-books is his *Fuji Hyakkei*, or "Hundred Views of *Fuji*,"

executed when he had reached the age of seventy-six. In it the grand mountain stands depicted from every point of view and under every possible circumstance and a few impossible ones; for instance, the artist gives us *Fuji* in process of being ascended by a dragon. (Students note). According to a popular superstition, the ashes brought down during the day by the tread of pilgrims' feet reascend spontaneously at night. The mountain is divided into ten stations, and formerly no woman was allowed to climb higher than the eighth. (!)

Is it the spirit of devotion, shown by the Japanese people to this beautiful symbolic mountain, impressed into the very atmosphere of its surroundings, that makes one feel its mystic charm? Or is it that somewhere near or about that mountain, at times, are found teachers sent forth to help the people by lifting the veil, little by little, according to their understanding; lifting the veil that shuts out the light of Japan's ancient glory?

May it not be that this delicate thread of spiritual devotion of the Japanese people, will bring them ere long to another cycle, when shall be revealed through them, truths undefiled? A Master of Wisdom has said it shall be so.

KATHERINE TINGLEY

Human Nature at Religious Congresses

WHAT weird side-lights upon human character are sometimes thrown by the denominational congresses which are now so prominent! At one of these recent congresses the delegates were for a time convulsed by the world-shaking problem of theatres and card playing. One of the speakers is represented as saying, "For thirty-two years I have not gone to dances nor played cards. I have kept up my spirituality by living up to the rules of the church."

There are, no doubt, many ways of doing the same thing, even of keeping up one's spirituality. Christ's way of doing this may be found in the Sermon on the Mount, but those who follow him do not unobtrusively call attention to their own spirituality. In the early days of Christianity there was some kind of prejudice against those who stood at street corners and thanked God that they were not as other men.

Another speaker appealed to the Congress as "a woman and a mother." Another woman had told her that she had a son, 17 years of age, who was waiting for the decision of the Congress before making up his mind whether or not to go to the theatre. Why, there are children in the Raja Yoga School at Point Loma, not yet three years of age, who can discriminate between right and wrong without asking any one. This young man has evidently exchanged his conscience for a Congress and we fear he has made a very bad bargain.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Credit Due for Some Pulpit Remarks

FOR a long time past we have been aware that some of the matter in the NEW CENTURY PATH is being more or less regularly annexed, and uttered from certain pulpits, without acknowledgment. Sometimes the annexed matter is reissued nearly verbatim; sometimes diluted and colored a little.

This may be a compliment, but we are willing to forego it. We have no objection to furnishing the reverend gentlemen concerned with new ideas, nor to their uttering the same from their safe seats of authority, were but the rest of their matter in the like spirit with that which they annex. For the question of conscience in this sort of literary "conveyance" is for themselves to settle. But those who settle it in the con-

venient way we have said happen to be also those to whose annexations we have an objection quite otherwise founded. It is precisely these persons whose other utterances are absolutely out of tune with the matter which they "lift" from our columns.

In certain spheres the NEW CENTURY PATH is the enemy of dogma, the enemy of every attempt to cripple the human mind by forcing it to assent to statements which have no meaning, or whose meaning it cannot understand, or which outrage its sense of justice.

Sermons of Little Benefit if Mixed

And it is with such statements and dogmas that the annexed paragraphs from our columns and columns from our pages are forcibly allied. The mixture is administered as a whole, the poison with that which under these circumstances is not its antidote but its sustainer. We have no remedy. We seek none—save the widening circulation of the NEW CENTURY PATH. For when, in the libraries of every town, this journal is to be found, the most "liberal-conscienced" of this class of reverend will hardly venture to submit as his own that which his hearers will have read elsewhere.

And beside this—already rapidly coming about—the passage of the years and months is providing another remedy. The days of dogma are now few, as few as those of its ally and enemy, materialism. The shadows of medievalism are dissipating. A new consciousness is waking in the human heart to which old formulas and old systems of thought have simply no application. It is to voice this that the NEW CENTURY PATH exists, to render it in terms of thought, to show its cleansing and vivifying power over every worthy department of human activity. We hold that human life is about to be reborn on a new and higher level; that it will presently be apulse with a new joy; that the attempted reign of

Philosophy Very Old & Practical

Brotherhood which dissolved into such awful chaos at the end of the Eighteenth century will now prevail and order all things into a new cosmos. In that belief, and in its spirit, every word of our columns is written. They will keep steadily apace with the new heart-consciousness dawning, translating it into speech intelligible of all. We propound no new philosophy; it is a very old one; and no new religion. We try to express the spirit beneath all religions, that makes them one, and that will presently also shine its quickening rays into all arts, activities and sciences. For its cyclically recurrent period of action has come. All may find it in their hearts, and all lovers of humanity will try to give it expression in thought, feeling and deed. STUDENT

The Coming Metropolis of the Great Southwest

THIS metropolis, so many thinkers say, is to be the city of San Diego, California. And there are reasons innumerable why this should be so. Its even, temperate and exquisite climate; its more than ideal natural surroundings, unsurpassed by the far-famed bay of Naples, or by the historic and romantic isles of Greece; its natural position with respect to the coming nations of the Greater Pacific, and the débouchement thereof into of more than one system of railroads for that very end and for that very reason—these are a few of the causes which will inevitably tend to draw the millions, of people, as well as of money.

On the waters of this beautiful bay will be seen at no very distant period, the shipping of all maritime nations, and the bay offers to such perfect protection from the dangers both of wind and sea.

Today, this city on the bay offers a haven of rest and quiet for the overworked, and for the invalid; and thousands annually come to it for those things. The surrounding country is productive, water is plentiful, and the land is not too expensive, even for the man of little means. Here is where the ideal home-life may be found; for Nature and man have combined to produce results which are now daily paving the way towards a realization of that dream of the average American citizen.

Has it not been said that "Westward the course of Empire takes its way?" And are the signs not already plainly apparent that the wave of Empire has already touched these Californian shores? Bancroft, in a remarkable volume published some two or three years ago, *The New Pacific*, writes most intuitively and most interestingly of what the countries bordering on the greatest of oceans are coming to be, and the chances that lie before them: chances which they simply must take, for it is their manifest destiny to do so.

California was first settled at San Diego, and may we not look forward

to the time when it shall be San Diego also—Port Orient may be its name then—which will lead this great State of ours? Leading it not only in all that tends to the greater destiny of man, but also in all that pertains to man's material existence? The hope does indeed not seem too vain, nor too sanguine, if we may judge by the shadows cast daily before our vision of the things that are to come.

It is today the International Center of one of the most remarkable Organizations which the World has ever seen: The Universal Brotherhood of Humanity; and thousands upon thousands, the World over, daily repeat the name of our beautiful city by the sea, as they link their thought with ours, for the uplifting of the Race.

STUDENT

Mysticism Versus Theology

A WRITER in a religious contemporary detects a steadily mounting current of mysticism in the thought of the day. This he regards as very curious in an age that is otherwise intensely commercial, materialistic and sensual. Mysticism he defines as the immediate communion of the soul with God.

Another religious paper laments the decline of theology, "the grandest of sciences." Accepting the first writer's definition of mysticism and his assertion of the growth of mysticism in our midst, we seem to see the cause of the fact lamented by the second. The soul that is "in communion with God," and in proportion to that communion, is in possession of a wisdom or knowledge with which words have nothing to do. The mind has no business to try to make formulas and definitions in that sphere. The mind's plane of action is quite other and lower. Yet these formulas and definitions of the utterly transcendental constitute the matter of theology. It is only in the *silence* of thought that any communion with the divine is possible; and the fulness of that silence cannot be rendered in any sort of thought that the brain can effect. Where is the world, after centuries of theologizing, and the production of thousands of tons of books about it?

Theology cannot now be revived, nor the current of mysticism stayed. We doubt whether, in another fifty years, there will be any theological colleges. The world will have outgrown them; it will not look to them for its teachers. They will arise in some more natural way, and will not find their teaching warrant in parchment diplomas. The man who has known in its fulness what the silence contains will carry his diploma in his bearing, in his manner of life, in his way of doing his duties, in the quality of that invisible radiation that in all cases constitutes our real and deeper knowledge of each other.

The silence in which the soul touches the divine, gathers strength from it, obtains wisdom and light from it, is like that which follows the ceasing of lofty music or the words of a supreme and inspired orator. The mind has ceased for a moment to obtrude upon our attention, and another consciousness has begun to be born in us. This consciousness is the crown of our humanity. Once struck into being, as on such occasions as we have said, its effect remains for hours. We have been, as it were, in the presence of something greater than the personal self, and the hush of a benediction rests upon thought and speech and act. Sometime, humanity will live entirely in that light, and then its proper life will begin. Those who have touched it often and fully are its real teachers. But they will not teach theology. They may teach art, music, science, history, agriculture. But whatever they teach, they will convey something of the spirit that was born for them in the silence, and they will give to all things a new meaning.

STUDENT

The Sun

THE Sun—the Light—rises in the East! Light is a simply self-involved existence; but though possessing thus in itself universality, it exists at the same time as an individuality in the Sun. Imagination has often pictured to itself the emotions of a blind man suddenly becoming possessed of sight, beholding the bright glimmering of the dawn, the growing Light, and the flaming glory of the ascending Sun. The boundless forgetfulness of his individuality in this pure splendor, is his first feeling—utter astonishment. But when the Sun is risen, this astonishment is diminished; objects around are perceived, and from them the individual proceeds to the contemplation of his own inner being, and thereby the advance is made to the perception of the relation between the two. Then inactive contemplation is quitted for activity;

by the close of day man has erected a building constructed from his own inner Sun; and when in the evening he contemplates this, he esteems it more highly than the original external Sun. For now he stands in a *conscious relation* to his Spirit, and thereby a *free* relation. If we hold this image fast in mind, we shall find it symbolizing the course of history, the great Day's work of Spirit.—*From Hegel's Philosophy of History*

American Bible Society

IT was a part of the advice of Christ to his disciples that they should "Take no thought for the morrow." Their "Heavenly Father" knew their needs and would supply them. This, it would seem, is no longer the case, if we may judge from the financial condition of the American Bible Society. Its assets, it appears, amount to more than two millions of dollars. And yet it reports its financial affairs as at a crisis, saying that unless there are more contributions it must do less work. To this official statement the Rev. Dr. Philip Moxom, a well-known Congregational preacher of Springfield, Mass., opposes the question:

Can it be true that the American Bible Society is needing any increase of its present receipts when, for many years it has not used its income?

The 1903 report shows funds of nearly \$90,000 not used last year, while the 1902 report shows nearly \$150,000 carried over. Dr. Moxom points out one or two other things: The society has three secretaries and a treasurer, each getting a salary of \$5000. "Office expenses" come to \$18,000 more. "Salaries and expenses of field agents" add a further \$16,000, making a total of \$54,000. As it appears from the report of 1903 that the total collections from all the churches of the country amounted to over \$10,000 less than this, a natural inquiry arises as to whether *fewer officials* might not get through the same work?

In Massachusetts, the financial agent employed by the American Bible Society, collected during the past four years from all the churches and individuals in the State \$6327. His salary during this time, without counting his expenses, we find to have been a total of \$7200.

Is Massachusetts satisfied? May not the falling off of the society's funds be due to the fact that intending contributors are taking to studying the report before they contribute? One wonders what would have been Christ's comment if the "seventy" whom he sent out had returned, not "with joy," but plaintively reporting that they had hardly been able to collect the amount of their own salaries? Dr. Moxom quotes from the society's last report this statement:

The society has no established agency in Europe. It, however, makes generous appropriations to many missionary bodies, and to some of the European Bible societies.

But the same report shows that the "generous appropriations" to the "many missionary bodies" throughout 1902 was only \$5642! One wonders how much each of the "many" got. To the Bible societies the value of the donated Bibles was \$4000—altogether less than \$10,000; less, that is to say, than the salary of two of the secretaries.

We would respectfully suggest to the society to go ahead and use up some of its assets, "taking no thought for the morrow;" to live up to its income, and to reduce the salaries, or at any rate the number of those receiving them.

OBSERVER

Release of Mrs. Maybrick

THERE are thousands of people throughout America who will rejoice to hear that Mrs. Maybrick has at last been released from her English prison. Those who have most thoroughly and impartially studied her case are of the same opinion as ourselves: that she was innocent of the crime of which she was accused.

Italian Lake Scene—Frontispiece

THE cover page of the NEW CENTURY PATH this week gives a view of one of the famous Italian lakes. Many a similar nook, unparalleled in beauty, may be found in little known localities, in countries bordering on the Mediterranean.

To the Members of The Universal Brotherhood Throughout the World: In order to expedite improvements in the different Departments of The Universal Brotherhood Organization, it is necessary that all communications, connected with the work of the Universal Brotherhood, should be directed to Katherine Tingley, Loma Homestead, Point Loma, California.

Some Views on XXth Century Problems

Indifference of Powers to Massacres

THERE is now no doubt that the hideous Armenian massacres have begun again. We are getting the usual lists of crimes on a vast scale with which the last twenty years have made us so familiar—villages destroyed; men, women, children and infants, outraged, tortured and killed. The usual amiable remonstrances from the great Powers are being rendered through their ambassadors. But we all know that nothing will be done. The "Concert of Europe" must be maintained. An earnest threat, the movement of a warship, would suffice to make Abdul Hamid utter the single word that would stay the lawless tragedy. But he knows that there will be no such threat; no battleship will move nearer by an inch. He is safe in the middle of the ring of protecting, jealous, "concerting" powers. They know each other.

Some day we shall begin to demand that our collective action, focused in the executive government, shall not fall short in morality and humanity of the standard we set up for our individual conduct. Ten men would not permit a woman to be stabbed to death by a ruffian in their midst, nor, if one of them rushed in to her aid, would the others suppose that his real objective was her watch or her purse. Yet in the case of governments, under corresponding circumstances, the suspicion would be well based. When shall we require that our national executive, in its diplomatic relations with the executive of other powers, shall at least reflect the average moral standard of the people? The question may be asked in every country. And when the peoples say—*Now!* the end of war will be at hand.

STUDENT

Practice of Hypnotism on Children

A DENVER newspaper devotes considerable space to an account of the clairvoyant performances of a boy of 17, son of a physician in South Braintree. The father began to hypnotize this boy at the age of 8! "I found he was a splendid subject for hypnotic work," says the doctor as reported in the newspaper, "and as fast as I learned to do a thing"—the doctor was studying hypnotism—"I put him through the experiment. I finally brought him under such control that a mere word would send him into the hypnotic condition——!"

We were going to say that comment was needless, but we are not so sure. Here is a doctor, presumably a man of some education, and presumably accustomed to do some thinking, who does not see that the repeated hypnotism of a child little more than an infant, carried so far that "a mere word" induces the hypnotic state, is an error so great as to amount to a crime.

From the age of 8 to 17, the years during which the child's own soul should be molding its brain and body for its purposes, the father is instead molding the brain for his purposes!

Does he know the tremendous responsibility he has assumed? Did it never occur to him that one day the boy may come to an appreciation of the mental vivisection practised on him throughout those years? And may then—thank him accordingly?

STUDENT

Humanity's Organism Is Sensitive

ENGLAND is just finding out that war is by no means merely an affair of the countries engaged in it. At the outbreak of the Russo-Japanese war—nay, at the very rumor of the outbreak—the price of all cereals leaped up and has stayed up. So marked was this phenomenon that a Royal Commission to inquire into causes and remedies was appointed, and the formation of vast national granaries urged. The fact is that humanity has now begun to know that it is an organism with an acutely sensitive nervous system which telegraphs everywhere disturbance anywhere.

War is an outbreak of inflammatory neuralgia. And this integration will go on till all nations have become veritably one body with one heart and one mind. Then, and long ere then, war will have become impossible. But the present transition stages are painful, though if we learn from the pain we can hasten the process, and more quickly work for Universal Brotherhood.

STUDENT

Our Costumes Lead Us Astray

CANON WILBERFORCE once asserted that he saw affixed to some stylish hats in the window of a millinery store the legend, "With this style the mouth is worn a little open." He was generally regarded as having delivered himself of a joke. We do not know, but we *do* know that in a Parisian fashion-plate dealing with the latest designs of skirts for this season occurs the sentence, "With this shape of skirt the walk must be carefully studied." Reading further we find that a special gait must actually be devised and practised for this skirt, if the danger of falling down is to be avoided. It is not necessary to reproduce the description of it; and indeed no possible description could do justice to the shapes of hats that are figured as going with that skirt.

Our age seems to be getting further and further away from the old Greek ideals of beauty, in the dress alike of men and women. We think ourselves artistic because we look at pictures. Could the sexes tolerate each other's dress for a moment if we were really so; if a large proportion of us were not at heart, in matters of beauty, flaunting barbarians? In color we are a little nearer the mark than in form; but all classes assuredly need "art missions."

STUDENT

Danger by Proxy Is Fascinating

IN this age we gratify our love of danger and of conflict and bloodshed, by proxy. We love bull-fights, prize-fights, dog-fights and executions. Thus we get the pleasant stimulus to our jaded nerves without any pain or after-effects. The other day, at Limoges, an enormous crowd watched a butcher slaughter a sheep and dress its carcass in the den of an African lion. The lion-tamer's presence gave just that ingredient of chance which makes the spice of these things. Some, however, are not particular about spice; they like the mere shedding of blood as such. To this class belong, for instance, the crowds who make up the long daily procession through the slaughter-houses at Chicago and elsewhere. Even the savage lust for battle is more respect-worthy than this. Truly, do we need reawakening to an almost bygone manhood.

STUDENT

Arbitration Treaties Numerous

THE treaties of arbitration are coming so thickly that nobody notices them. The latest have been effected between Spain and Portugal, and Holland and Denmark. Their terms are very guarded; they may not seem to mean much. But they do; they represent the spirit of the peoples, at last finding expression in international relations. And they indicate a dividing line between the nations that have been touched by the spirit of the new era, and those still under the domination of the old. On one or the other side the nations are taking their stand and writing down their own future on the pages of the book called Destiny. They do the writing; they must abide by the reading. And the time for that is not far away.

STUDENT

Frogs' Legs Becoming a Rare Diet

WE regret to note that frogs' legs are scarce this season, the demand being greater than the supply. Our sympathy goes out to those of limited means who find themselves deprived of such a necessary as this. They can now feel for the patricians of dying Rome when the supply of peacocks' brains ran low in the markets. Live frogs of merely ordinary size are now quoted at nothing less than 25 cents each, and large ones at 50 cents. And even the largest have but four legs! Perhaps those who are starving for lack of bread will now be able to see that even the rich have their sorrows. The only suggestion we can offer to the victims of the scarcity is to try toads.

STUDENT

WE are told that there is to be a "thorough investigation" of the Slocum disaster. Good. And we would suggest that a part of the court's work should be an investigation of the men whose investigations and "inspections" should have made the disaster impossible.

Art Music Literature and the Drama

Music, an Art Long Misunderstood

THE various forms of music are really the truest landmarks that we possess of the real heart-life lived by our forefathers. Music itself has been one of the least understood of all the legacies that have been bequeathed us by the past. It is partly because we have stepped so far outward along the path of the intellect and have so nearly forgotten the inner life and the inner light. Music, the language of human feeling, the expression of the deepest aspirations of the heart, how little do we understand it! How little meaning for us has the simple statement that among the ancient Egyptians the songs in use among the people were sometimes determined upon by decree! How utterly we fail to understand why it was that in ancient India music was restricted to certain forms that were considered magical; why it was recognized and used by those who stood as teachers as a revivifying power in the life of the people. The ancients may not have possessed the complex knowledge of musical theory that we possess today, yet they far more truly understood its deeper meaning and power. The priests of ancient Egypt conducted great singing classes, at the head of each being a singer called "Ata," who taught the people chorus singing. Great attention was paid by the ancients to the cultivation of the voice. In old Greece Galen, the "father of medicine," mentions facts about voice and vocal training that are only just being rediscovered by the leading singing teachers of Europe.

Verily, music is something more than a mere accomplishment. The real mastery is never attained by dextrous use of fingers nor dextrous control of vocal chords, nor does all that goes by the name of music exercise an ennobling and harmonizing influence over the moral nature.

There are two kinds of music, just as there are two kinds of nearly everything in this evolving world—one which speaks to the soul, which feeds the aspirations and warms and nourishes the heart-life; the other, which appeals directly to the passional and sensation-loving side of the nature, which degrades and disintegrates. It is little wonder that, in the separateness and un-fraternity of our life today, music has refused to reveal its deeper meaning. As our ideals are lifted into practical realization, then personal selfish differences between man and man shall disappear and then the music of life will be listened to and understood. Then will we listen to undertones and overtones of surprising beauty that will translate all things into nobility and will be, in their turn, translated by us into living that is pure. Then will we know that life itself is not a cry but a glorious song.

MAN must reap and sow and sing; trade and traffic and sing; love and forgive and sing; rear the young with tenderness and sing; then silently step forward to meet whatever is—and sing.—*Thomas Tapper*

NEITHER are we to value ourselves upon a day or an hour, or any one action, but upon the whole habit of the mind. Some men do one thing bravely, but not another. See that ye be men who are courageous in all things.

The Words of One Artist About Another

EUGENE D'ALBERT, the well-known virtuoso, said recently in an article in the *Neue Rundschau*:

The artist, who formerly lived only for his ideals and held material goods in little esteem, has now reached the conclusion that he shall not be the only one left behind in the general scramble for wealth. Accordingly no means are disdained, neither the most vulgar advertising nor the most absurd craze for dazzling external effects, if they only help to fill the hall or theatre. This is true of reproductive as well as productive art. The piano teacher with us, too, has become only a man of business, like in America or England. His pupils are his stock in trade, and his eye is directed chiefly toward getting good customers.

At the same time no art is more difficult to learn than to play the piano with style. The acquisition of technical facility is an easy matter for anyone who has industry and patience; but the magnetic fluid that establishes the contact between the artist and his public can only proceed from the soul of the born artist and cannot be acquired. The teacher can awaken this divine spark and fan it to brightest flame if he has the fine gift of the born teacher.

Undoubtedly very few possess it, and none in the same measure as Franz Liszt, the great artist of the soul. Therefore both teacher and taught should turn more and more to this mighty teacher as a model—the teacher, by seeking to influence the soul-life of the pupil and guide him into the right paths, not by crushing it with an excess of dry, unnecessary pedagogics that clip the wings of his genius—the pupil, by taking as his model the unselfishness of Liszt's life and his ideal conception of art.

Let him keep himself free from all pettiness, narrowness of mind, and prosaic living. Let him not limit his knowledge to the piano. Let him mature himself, gather experience, take an interest in everything, in the fine arts and in literature.

A well-known piano teacher was asked by the father of a not especially talented pupil what the young man should do to make progress in playing. "Let him diligently read Schopenhauer," was the professor's only answer. Was it irony, or did he mean it literally?

The Japanese Color Print

NOW, as a century ago, the Japanese color print serves its purpose of instructing and amusing the people.

Tourists say that, since the recent war, street crowds stand before the omnipresent and highly colored posters and that, while the decay of a noble art is written on every hand, something that a people can ill afford to miss is, in a certain sense, supplied by these bits of pigment and ink. The genuine color print is nowadays rarely met with in Japan, thanks chiefly to the enterprising French dealer who

introduced it into Europe not many years ago, fairly ransacking Japan and dazzling the art world of Paris by these glimpses of something marvelous and new, the priceless color prints of Outamaru, Kiyonaga, Hokusai and others. The connoisseurs bought up all they could find in their turn, and after that came forgeries bogus prints galore. But one need not become grave over that. It is not likely that a country which is today witnessing a revival on every line shall fail of a revival in art. The Japanese have much to teach us—far more than we in our occidental egotism are willing to admit—on lines of art, and the day is not far distant when we shall realize this more fully. S. M.

I HOLD every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavor themselves by way of amends to be a help and an ornament thereunto.—*Lord Bacon*

FRANZ LISZT

FOR, as it is dislocation and detachment from the life of God that makes things ugly, the poet, who re-attaches things to nature and the Whole—re-attaching even artificial things, and violations of nature, to nature, by a deeper insight—disposes very easily of the most disagreeable facts. Readers of poetry see the factory village and the railway, and fancy that the poetry of the landscape is broken up by these; for these works of art are not yet consecrated in their reading; but the poet sees them fall within the great Order not less than the beehive, or the spider's geometrical web.

—*Emerson*

WOMAN'S WORK

"WHEN THE SILENCE FALLS UPON US, WE CAN HEAR THE VOICES OF THE GODS, POINTING OUT IN THE QUIET LIGHT OF DIVINE LAW THE TRUE PATH FOR US TO FOLLOW."

What Does It Mean?

At this time, when the heart of Humanity is pained with the sorrows of war, confusion of thoughts, and strange unrest, it brings a great hope to one's soul to know that there does exist a peaceful spot like Lomaland.

Peace and good-will to man is written here in the silence of the activities of the Universal Brotherhood.

Peace one finds in companionship with his fellows; differences of mind often play a part in the daily doings, but differences in the Heart Life cannot be found.

No wonder the world stands amazed at the progress of this practical work; and it is not a matter to wonder at, when one realizes that the secret of the advancement of the great institutions here is based on altruistic endeavor.

Sitting at eventide on the slope of the hills close to the great Pacific Ocean, my thoughts go back to the beginning of things, connected with the efforts of William Q. Judge and H. P. Blavatsky. In those days, I lived in the throbbing life of a great city, where one sees in a day the tragedies of a lifetime written on the faces of those who pass. Then I longed for a sign in the world's doing, of a definite something that marked a contrast, and held a promise to the sad hearts of the world.

The promise is here! And one knows, if he be here but a day, and sees only the surface of things, that H. P. Blavatsky and William Q. Judge did not lay their lives down in vain.

Just over the way, in the great garden of the Raja Yoga School, many happy children are at play, drinking in the sweet air from the ocean and mountains, timing their gentle lives to the world's needs, even in childhood. Over a hundred of them, boys and girls, from all parts of the world, here are daily working out life's mystery, surrounded by all that goes to make a beautiful and useful life.

If nothing more than this had been done, I said, it would be enough to satisfy those who have dreamed of these things: of a strong, sweet life in the world's selfishness.

Seven years ago, this great stretch of land, running down to the sea for miles and miles, was covered with brush: sage, manzanita, yerba santa; while under every stone, so it seemed, lay the dreaded "rattler," now gone. High up the cliffs we see the great white buildings of the Homestead, Aryan Temple, Industrial buildings, Raja Yoga Group houses, bungalows, and beautiful private residences, not to speak of house-tents, music halls, and the superb open-air theatre, built on the model of those of ancient Hellas.

Just under the great brown cliffs, where the golf links are, young men and women, students of Lomaland, are making ready for an hour's recreation. Of the world they seem, yet not of the world. Watching their movements, and listening to their merry voices, which reach me here in my solitude, again I say: What a wonderful work is this practical life of Theosophists: they study and work, and work and study; and with it all, they have time to sing and be merry; and time to serve Humanity, too. Some day, can we not believe that all over the land, we may see pictures of joyous life everywhere—with the young folk and the old folk; among the rich and the poor?

Universal Brotherhood is no misnomer; it is not a dream, for before my eyes I see its beginning. In this beginning is the promise of greater and greater things; of real happiness for those who expect and have not yet found; who seek and seek in vain for that comfort which is promised in the Divine Law.

"Greater things than these shall ye do," said Christ. He knew.

POINT LOMA, California, July 13th, 1904

KATHERINE TINGLEY

The "Holy Mother" of Asia

NOW since we would have those who speak of our womanhood remember Our Lady of Sorrows, let us not forget "Compassionate Kwan-Yin." No purer impersonation of mercy is known to poetry, hagiology or mythology, and it comes in the form of a woman to the mystics and thinkers, the poets and dreamers, of Asia.

Kwan-Yin has refused Nirvana that she may remain forever on earth to suffer and struggle with all sentient beings. Like Mary, she, too, has her wayside shrines, where mothers kneel for blessings before a female figure upon a lotus-blossom.

Legends childish, grotesque, mystic, and overrefined, and legends profound, are floating like incense around her. Sometimes Kwan-Yin figures as a mother, but in other conceptions her tenderness has come without such human aid. Sometimes she is crudely represented with many pairs of hands; because she has sacrificed both her hands to save her family, behold her reward! This, of course, is a primitive expression of the power of Deity.

Sometimes she is sitting in state, but she is smiling upon the birds and children that attend her.

Kwan-Yin has visited all the hells, but as she enters flowers spring up around her, sin vanishes and the spot becomes beautiful. She would if she could, reach the lost, but the beautiful intervenes, hell recedes from her and the arch-fiend Yamma forces her from his domain.

Old prayers, like old violins, gather sweetness from every soul that vibrates through them. Oh, if the noble liturgies of Orient and Occident could be guarded from desecrators, as are fine violins! But even a prayer can seldom do its best in this "conditioned being." And yet in the incense bowl the ashes of the incense burned by the thoughtless, the superstitious, by worldlings and other-worldlings, support the fragrant stick which the simple believer reverently lights to Him before whom all men come in prayer.

The interaction of literature and life is common law of the mind. Let us have faith in these incomprehensible women of Asia, whose better self many times magnified is immortal in Kwan-Yin, the sweetest goddess of story.

"All hail, great compassionate Kwan-Yin Budhisattva!"—Minnie D. Kellogg, in the *Book-Lover*

Russian Courtesy

IN their unwritten Russian code the most exacting of all clauses is that pertaining to courtesy. Rob the Russian and he may overlook your crime, but any breach of courtesy he regards as unpardonable. In a St. Petersburg tram-car, when a workingwoman entered, every man in the car arose and proffered his seat. When later another woman of the people boarded the car, the scene was repeated. As you drive through a Russian village or along the highway, every peasant you meet doffs his cap and bends at the waist. "How servile these people are! It's disgusting!" said an American traveler, who never once deigned to acknowledge the salute of the passing peasants. "You were never more mistaken," said his guide. "What you think is servility is common politeness. Those peasants perceive that you are a stranger, and each regards you as his particular guest so long as you are in his country. His bow is his form of welcome."—*The Outlook*

AMONG the papers of Herbert Spencer's father was found this memorandum regarding the son: "One day when a very little child, I noticed as he was sitting quietly by the fireside, a sudden titter. On saying, 'Herbert, what are you laughing at?' he said, 'I was thinking how it would have been if there had been nothing besides myself.'"

WORK AND CONTEMPLATION

by ELIZABETH BARRETT BROWNING

THE woman singeth at her spinning-wheel
 A pleasant chant, ballad or barcarole;
 She thinketh of her song, upon the whole,
 Far more than of the flax; and yet the reel
 Is full, and artfully her fingers feel
 With quick adjustment, provident control,
 The lines, too subtly twisted to unravel,
 Out to a perfect thread. I hence appeal
 To the dear Christian church—that we may do
 Our Father's business in these temples mirk
 Thus swift and steadfast; thus intent and strong,
 While thus, apart from toil, our souls pursue
 Some high, calm, spheric tune, and prove our work
 The better for the sweetness of our song.

Nerves and the Spinning-Wheel

ONE wonders why there is so much poetry woven about the spinning-wheel, and one fancies it must be because the pendulum has swung to the other extreme, and people are trying, through romance, to forget the days when the spinning-wheel stood for nothing but drudgery. At last it seems destined to strike a middle line of usefulness, and, according to report, certain English physicians are advising nervous and hysterical women to learn how to spin. In support of their theories they point to certain cures.

With all due respect to the physicians there is probably no virtue in the spinning-wheel itself. The women are cured because they are interested in something besides their own aches and pains and imaginings; because they acquire a certain degree of concentration—they have to or the thread breaks—and because the novelty holds their attention. Anything else that would have this effect would do equally well. Hysteria results from a lack of nervous control. The spinning-wheel forces a certain amount of self-control, while a mere social call does not, and even a feather-brained person can do something toward sweeping a room without concentrating, providing the work is that which she is accustomed to.

But women will never get over their "nerves" until they develop, of their own free will and plain intention, the very qualities that now the little spinning-wheel is getting the credit for. Suppose each of us were to enter upon each task as if it were something entirely new. Novelty itself has a charm which holds one's attention. Then suppose we should concentrate, that is to say, pay attention to what we are doing while we are doing it. Suppose, in addition, we should exercise continued self-control, forgetting all about our nerves in the meantime. Where is "hysteria" then, and how can our nerves make an exhibition of us under such circumstances?

"Hysteria" and "melancholia" and nervousness generally are the labels that men and women wear which proclaim that they have been somewhere or sometime or everywhere or all the time breakers of some of Nature's laws. The time is coming when many of our nervous diseases will be as much of a reproach to us as the bloated skin is to the drunkard or the swollen eyes and coarsened mouth to the sensualist.

STUDENT

FOR the first time in history a married woman has received the degree of "Doctor of Philosophy" at the Berlin University, Mrs. Helene Hermann. Mrs. Hermann is a daughter of the authoress, Maria Hellmuth, and began her studies in the University, while still a young woman. Dr. Max Hermann was one of her professors. At the close of the first semester the professor and his pupil were married, but the wife continued her studies with the above result. In so conservative a country as Germany this means more than we can easily realize.

STUDENT

Women Sanitary Inspectors

THE experiment of trying women as sanitary inspectors among the very poor of London has met with marked success. The work is somewhat laborious and requires tact and sympathy. The duties can scarcely be laid out in detail—so multitudinous are they. For example, the woman inspector has to visit all houses in which death or disease are registered. There she invariably finds conditions that make it necessary for her to give homely and practical advice. She has to visit houses in which infectious diseases are recorded to exist and to do whatever lies in her power to prevent their spread. Usually the sufferer has to be removed to a hospital. At other times a little good advice along hygienic lines, on cleanliness, ventilation, disinfection, etc., is all that may be needed. All deaths of children under one year of age have to be investigated and also cases in which older children have died of preventable diseases. Factories and all workshops where women are employed have to be visited to see that provisions are made for comfort and for health. Not only does work of this nature require all the tact in the world, but without the sympathetic touch—which certainly the majority of politicians do not possess—such work might almost better be left undone.

Sanitary work was long ago undertaken by the women of England. At a session of the Congress of the Sanitary Institute, Mrs. Escombe spoke on this subject saying, among other things:

"There can be no doubt that sanitary work is woman's work—pre-eminently woman's work—and women have, unconsciously perhaps, always more or less directly acknowledged this.

"First, as housewives, we have watched over and protected the health of our families, of those dwelling under our roofs; by degrees we extended our work to those living around us, to our neighbors, to those with whom we came in contact in our parochial work as district visitors. The knowledge thus acquired of the suffering caused by ignorance and defective sanitation led us further. We endeavored by simple lectures and short, easy leaflets to teach the ignorant, and we came forward to take our share of public work on sanitary bodies.

"Nearly half a century ago, in 1857, a few ladies founded the Ladies' Sanitary Association; they issued leaflets and cards, gave lectures and held cottage meetings. Later, but more than twenty years ago, the National Health Society was established by Dr. Elizabeth Blackwell. The Society also issued leaflets and, furthermore, trained teachers and lecturers.

"By degrees women realized that the office of Guardians of the Poor, with, in rural districts, its allied work on Sanitary and Highway Boards, was open to them. In 1875 a lady allowed herself to be elected Guardian, and others soon followed in her footsteps." M.

GREEK PEASANT

EVEN India has her woman lawyer, one Cornelia Sorabji, a Parsee lady, who at one time studied at Oxford. Her

life work is to defend women, particularly the child-widows of India, who have fallen victims to the rapacity of relatives through their lack of legal knowledge. The average child-widow is so ignorant and helpless as to constantly stand in need of advice, and the women of India live so much in retirement that it is a simple impossibility for them to have men as legal advisers.

Since the French bar has been opened to women there are a number who have taken advantage of the new privilege accorded to them to plead at the Palais de Justice. The pioneer was Mlle. Chauvin. Her debut as *Avocate* in 1889, made quite a sensation at the Palais, but so far no particularly bad results have been brought to public notice, and a very great deal of good has been accomplished.

Said to Be an Senile Race of Ape-like People in New Guinea

VERY extraordinary set of tribes has been discovered in the interior and almost unexplored regions of New Guinea. The report comes from the Rev. Copland King, who has just returned to England, after thirteen years work among the cannibals there. He does not explain how he has managed to get away.

The cannibal population, it appears, is still very large, but the peculiar tribes to which part of his report is devoted, live in the far interior. They are ape-like swamp-dwellers who, owing to the nature of their homes, pass most of their time in canoes. Their arms and chests are powerfully developed, but the legs stunted and almost useless. Other and somewhat similar tribes were seen by Sir Francis Winter and Mr. Monckton, raft-dwellers, also almost without legs and generally dwarfish. The chief of one of these was but four feet in height, with a chest measurement of twenty-six inches. The intelligence of them all was of the lowest and most animal character.

All these are doubtless Lemurian remains, for the western portion of Africa was the east wing of Lemuria, and the chain of great lakes were part of the Lemurian coast. East of these lakes must have been the border of the succeeding great continent, Atlantis. Africa proper has never really received archeological investigation, and it may easily be that there is much hidden in its forests and beneath its sands, which will throw light on vast periods of human history hitherto not even suspected by the self-complacent Twentieth century.

Ancient Syrian Irrigation Described in Consular Report

IT is not often that Consular reports can be admitted to rank as interesting literature. But the account of ancient irrigation systems in Syria, Palestine and Chaldea, given by our Consul at Beirut, must certainly come under that head.

"In these deserts," he says, "one finds ruins of aqueducts led along frightful cliffs where goats can scarcely keep their feet, and carried for miles across ravines and rivers on lofty arches; over there in the wilderness traces of subterranean canals of astounding length and nicety of construction." These canals were fed by means of deep wells. A number were dug in a half circle, and from the fan, so to speak, thus formed, the collected water was either gathered into great artificial lakes or led away below ground to immense distances. Now and then explorers chance to open one of these channels and find water still running. Palmyra was thus watered from the Baalbec springs, 120 miles away. This long canal was covered in nearly all the way, and lined with cut rock. Streams were also led down into the great cities from the artificial lakes.

Most of the ancient orange, olive and fig-growers probably had their own wells, and they got the water up by means of wheels or drums over which ran ropes with buckets. These were turned by horses, mules or oxen. This method is in full use today, and in that land customs do not change. Men do as their fathers did millenniums ago. Along the Orontes the wheels are of enormous size, even 90 feet in diameter, and make most picturesque objects for eye and ear. "These wheels, with their enormous loads, slowly revolve on their groaning axles, and all day and all night each one sings a different tune with every imaginable variation of tone, loud, louder, loudest, down to the bottom of the gamut—a concert wholly unique and half infernal in the night, which, once heard, will never be forgotten."

Modern machinery is to replace all these. American engines are entering in ever greater numbers. A railway, parent of others, will run from Europe to Bagdad. And in time that great district which saw the civilizations of Assyria, Chaldea, Babylon and Phœnicia rise and wax and wane through countless centuries back to the days of the mysterious Accadians, civilizations of a peculiar magnificence unparalleled since, will be rewatered as of old, repopled—but not as of old—and its silence roughly broken by the voice of the Twentieth century. Many a forgotten city may yield up its secrets under the touch of the modern engineer and excavator.

Remarkable Patience and Skill of Ancient Craftsmen

EVERY day fresh evidence is forthcoming of the pre-eminence of ancient races in so many things wherein we have been supposed to excel above all previous times; and the claims of H. P. Blavatsky are vindicated. For did she not passionately urge the title of bygone civilizations to be the possessors of a knowledge and a prowess beside which our vaunted modern enlightenment is but a faint glimmer in the darkness? Since she wrote, much has been learnt by explorations and discoveries, and the world is beginning to realize that the fragmentary records we have of races in their periods of decline do not constitute a history of antiquity, and that modern progress only marks the beginning of an emergence from dark ages and the recovery of a little of the vast sciences that were before.

In years to come we shall obtain further and further vindication of ancient wisdom and glory.

It is no new fact that the ancients were able to accomplish engineering feats which we cannot perform now, and that their craftsmen possessed secrets which have since been lost. The transporting of colossal monoliths from the distant quarries in Egypt, and the unfading colors in ancient Egyptian decoration, are familiar examples. Undoubtedly one of their secrets was patience, the same quality of unhurried greatness of soul which prompted the medieval cathedral builders, or enables a Chinaman to commence sinking a well which will not be completed in his lifetime. This is a quality that we have not at our command in this age of hurry and superficiality, of desire for quick returns, and of scamped workmanship.

In working thus patiently and majestically, these ancient craftsmen walked hand in hand with their great teacher, Nature, whose processes are vast and unhurried. A minute fragment of the characteristic rock of Barbados is seen under the microscope to be composed of exquisite shells, and as this rock is 1100 feet in thickness, the mind fails to form any conception of the period required to deposit it.

Speaking of the ancient craftsmen, at a conversazione of the University of London, Mr. Randolph Berens exhibited a collection of pre-historic Egyptian stone vases, attributed to 6,000 B. C. In looking at these beautiful forms, fashioned out of hard materials, one is divided between admiration of the artistic sense of the workers—equal to the best later and present day examples—and wonder at their command over such intractable materials. We know not what means they had, further than that they polished with dust of precious stones, but they must have had extraordinary patience whatever their methods may have been. In the case was a curious little ivory figure found in an ancient Egyptian tomb. The face is Mongolian. Now, how did the old Egyptians come to know the Mongolian physiognomy?

Restoration of the Famous Nearly Complete Athenian Stadion

IN 1895 a patriotic Greek merchant gave a large sum of money which was to be spent in the restoration of the famous Stadion or Stadium, at Athens. The work was at once begun and is now nearly finished. The last of the 52,000 marble seats of the vast amphitheater are now going in, the white marble coming from the Pentelikon mountain. A marble propylæa or entrance, on the model of the ancient one, will be added. And the opening will be marked by a restoration of the ancient games for which Athens was famous. Four days will be given to the celebrations, and the athletes of all Greece will participate.

The Greek patriot to whom all this is due may have done more than he knows, in thus making a link between his country's past and present.

The Logos Among the Red Indians

THE Klamaths, a Red Indian tribe, of Northern California, believe in a Supreme God, whom they call "The Most Ancient." Being asked by what means the Ancient Father created the world, a Klamath replied: "By thinking and willing." According to Max Müller, we have here the germs of the Greek Logos and of the "Word" of St. John's Gospel.

To Judge by the Blossom—Other Factors to Be Considered

FAMILIAR as we all are with the modern botanical system, based wholly upon the structure of the flower which any plant may chance to bear, and the almost total disregard for other factors of plant structure except as incidental aids to hasty identification, it yet strikes us with a certain sense of absurdity when practically applied.

We are all acquainted with the sunflower and its large bushy habit of growth, but what about sunflowers which grow directly from the crowns of a perennial root? There is such a flower, indistinguishable in appearance from the ordinary sunflower, having leaves which closely resemble those of a sunflower, and yet is of a wholly different family. It is quite possible that microscopic differences might be detected in the blossom which would guide a skilled botanist with a good instrument, but in the lack of a microscope the observer would be obliged to class it as a sunflower.

Or, to take another instance, there are two shrubs with much difference in the leaves, and in the size and manner of growth of the plants, but no difference in the flowers, and we are assured that they are identical and that no botanical distinction can be made. This is an actual fact. There appears to be an utter disregard of the fact that there are other factors of plant structure. It is as though one were to classify a city crowd by its neckties and overlook the rest of the clothes. Taking the *Rosaceæ* family for example, we will find perfectly roseate flowers upon every possible kind of plant, with every other factor different, yet they are "related" by the microscopical analysis of their flowers!

If such must be the case we should be extremely thankful that we have microscopes to classify with or we would not be able to tell which plants are alike and which are different from one another. **STUDENT**

NATURE is the chart of God, mapping out all His attributes; art is the shadow of His wisdom, and copyeth His resources. — *Martin Tupper*

The Meaning of Color in Flowers—Can Earth Be Dead?

WHENCE the peculiar charm of flowers, their power of elevating, purifying and sweetening consciousness? The first appeal they make is to the sense of color. Each flower is a harmony in itself. It has a keynote, but there are infinitely numerous subsidiary tones. The white rose, however white, begins to show the tenderest of rose-blush towards its center. And the more one educates one's sense of color by the study of flowers, the more readily and fully will the eye detect the color-harmonies running up from the obvious keynote. Even the reddest of red petals has its suggestions of orange and yellow, and even—more faintly—of blue and violet.

Then there is the consciousness that it is *living* color, not paint. Not only do we know this as an intellectual fact, but we sense it in some subtle and indescribable way. It awakes our feelings of companionship and also of protectorship.

There is the scent, doubtless also a harmony, as complex as the color. Probably no flower is without scent. We may not detect it as definitely as we do that of the lily or the violet, but it does its work upon us nevertheless, clears the brain and delicately harmonizes feeling.

And there is another radiation to which as yet no name has been given, except "N." We know now that all flowers throw off an invisible emanation which is yet a form of light, and this may also, like the scent and color, be a manifold. There is the form, a geometry at once concealed and revealed; concealed, because softened; irregularized, yet obvious; a set of protecting circles about a center.

And underlying all these is the sense we have that we are looking at living things, quiet, passionless, waiting on air and winds and sun for their gifts, linking sky and earth, children of the living heart of earth held up to the light. Can the earth be "dead" when her whole vast surface is ready to break into bloom at the touch of rain and sun? **S.**

The Chameleon Famous for Its Changes of Colors

THE wonderful changes of color which chameleons are able to display have always made these creatures famous. The way in which it is brought about is interesting. The outer layer of the skin is colorless, but beneath this, at varying distances from the surface, are certain iridescent cells, then some containing drops of oil, others with crystal granules, and still others with brownish and reddish pigment. When the crystal-filled cells are brought near the surface, they refract the light and make the creature very pale—almost white; the oil-drop cells, in turn, cause a yellow color; when all the pigment is forced upward, a dark hue is imparted to the skin, and, when the light is diffracted through the yellow oil and iridescent cells, a green tint results. These pigment cells are under the control of the chameleon and thus he can copy his surroundings so perfectly and immediately that when one portion of his body is in shadow and the other in sunshine he is bicolored.

There are many more strange things about a chameleon, but the tongue and the eye seem beyond belief in a living creature. The former is club-shaped at the tip and covered with a sticky substance. Ordinarily when a chameleon opens its mouth the tongue is not especially conspicuous, but when six or seven inches from a fly this organ will be shot forth so quickly that the eye can scarcely follow it, and yet with unerring aim the tip strikes and snatches the fly down the chameleon's throat. The secret of this little bit of magic is the elastic stem or base of the tongue, which telescopes upon itself when not in use.—*Selected*

San Luis Obispo County's Gigantic Fruits

IN other districts one expects to find the familiar castor-bean upon a shrub perhaps two or three feet high, a garden plant to adorn a corner. But in the favoring air of Southern California it sets new limits to itself and becomes a stately tree fifteen feet, or more, in height, and supporting on its massive trunk a wide-spreading wealth of foliage.

In like manner has the humble "immortelle" exalted itself from the lowly grass-herb of the northern fields, to be an upright shrub six or eight feet high, bearing its white, strong-scented flowers in perennial succession.

Other things have set themselves to the same Brobdingnagian scale of size. We hear reports from San Luis Obispo county, of potatoes weighing ten pounds each, carrots twenty-five, mangel-wurzels one hundred and fifty, and apples three pounds. Geraniums clamber up the poles and entangle themselves among the telephone wires. Mulberries grow as large as a man's whole thumb, and, in fact, everything seems to need only water to attain to sizes undreamt of elsewhere. Not far from the Point is an elderberry bush of which the principal stem is more than a foot in diameter, and the tangled branches form now, in blossoming time, a green-mottled snowbank twenty feet high and forty-five across. One is forced to have a respect for a soil and climate which can produce such things without deterioration in quality. **OBSERVER**

The Menace of the Little Gypsy Moth

BESIDES the war of which every one is talking, Russia has one in hand of an even more serious nature. This is with the gypsy moth, and unless she wins, no conflict in which mere cannon and rifles are the chief destroyers will approach the loss of life that the little moth will inflict. For it is a destroyer of everything that grows green on earth. It lays many hundreds of eggs at a time, and each, becoming a caterpillar, eats—as do all caterpillars—for dear life. In some provinces they have eaten hundreds of square miles, leaving not a leaf or blade. The pest is not many years old in Russia, but it is already a formidable menace, and much money is yearly expended in fighting it.

Unfortunately the United States is in some degree threatened. Some years ago an experimenting naturalist permitted a few to escape from his live collection. The result is that Massachusetts has since had to spend \$100,000 a year in conflict with the progeny of these few. **STUDENT**

REMARKABLE BIRD'S-EYE VIEW OF SYDNEY, NEW SOUTH WALES, AUSTRALIA, TAKEN FOR THE FIRST TIME IN ONE NEGATIVE

THIS photograph was taken from a balloon 600 feet in the air at Crow's Nest in the suburb of North Sydney. The center of the city lies in the middle of the photograph across the water (harbor.) The tower in shadow with the clock face is the general post-office, and the dome-topped building close by on the right looking at the picture is the

The jutting headland on the extreme left in the far distance is North Head at the north side of the entrance to Sydney harbor. The long point at the opposite side of the entrance is South Head and the white building crown-

The Fourth of July at Point Loma

THE Fourth of July was celebrated with all the honors at Point Loma, both by the children of the Raja Yoga School and the elders.

The day before, the children sent a note to Mrs. Tingley, of their own motion and composition. It was to the effect that Raja Yoga had taught them a better way in the celebration of "American Liberty Day" than fire-crackers, and that they did not desire to burn up money which would find a higher and more lasting use in extending the blessings of Raja Yoga to other children. Instead, they suggested a bathing picnic.

The Leader's reply, addressed to the children themselves, expressed her pleasure at their letter, which, she said, breathed a higher spirit of patriotism. She fell in cordially with their suggestion, adding that she would enjoy it with them in memory of her own childhood days.

Next day they all rose early (unnecessarily so, one need hardly say) enthusiastically went through their usual household tidying, and got away in large tallyhoses by 10 o'clock, only the very babies remaining. Lunch was carried with them; Mrs. Pennell, who presides at the refectory, and her staff of helpers, entering into the spirit of the occasion with much energy and correspondingly generous results.

After this meal, taken on the rocks at Ocean Beach, patriotic orations were in order and supplied accordingly. The prevailing opinion indicated therein was that the spirit of the signatories of the Declaration of Independence had come again and was proposing to remain and increase.

Then came the bathing, and as most of the children can swim and the

day was calm, the water looked as if a shoal of hilarious seals was holding a public meeting.

In the evening, the adults—along with the elder boys of the school—held their somewhat graver celebration. At once after dinner, just before evening began to touch the hills, all assembled in the open-air Greek theatre. The long tiers of seats face down the great amphitheatre cañon as it opens toward the sea on the west, and the cool sunset breezes wandered lazily up the hollow and lost themselves in the wide arena. A committee had spent part of the day in making green decorations about the seats, the wings and the central altar; and the effect was very refreshing.

The choir, under Mr. Dunn's direction, opened the proceedings with an old English song, "Hail, smiling morn!" and at intervals gave several other songs, among which was an adaptation of appropriate words to the air of the "March of the Men of Harlech," the whole finishing with the National Anthem, in which the whole audience of course joined.

Short addresses were given by Clark Thurston, Frank M. Pierce, Walter Hanson (all of Katherine Tingley's Cabinet), Dr. H. Coryn, Dr. Wood, Mr. Philip Fabra, Mrs. Stewart (till lately Miss Fabra), and Miss Lester. Miss Lester and Mr. Hanson having lately returned from Cuba, their speeches, like that of Mrs. Stewart, naturally bore reference to that country and her newly achieved national life and independence.

The patriotism of Mrs. Stewart and her brother is very deep and sincere, and this fact, so apparent to all who hear them, lends a real eloquence and even pathos to all that they say of their country.

BALLOON, AT AN ALTITUDE OF SIX HUNDRED FEET, ON EASTER SUNDAY, APRIL THIRD, NINETEEN HUNDRED & FOUR

ing the highest part is the great electric light house which when put up a few years ago was one of the most powerful lights in the world; following the harbor and its several islands to the extreme right of the view is Parramatta river upon which is the great champion rowing course and is really for many miles a continuance of the harbor, like a broad winding

river with almost numberless points and bays. At the head of this inlet is a small fresh water stream where the town of Parramatta is situated. The foreground of the picture is the suburb of North Sydney. In the far distance all along the horizon from Botany Heads to North Head Sydney harbor is the South Pacific Ocean. The view is looking south.

After the speeches were over, just as the sun sank below the horizon of the great ocean lying below our eyes, the assembly left the theatre in procession, the choir leading and singing a beautiful Swedish marching song.

All the residents at Point Loma have learned to look forward to the Fourth of July for more than the ordinary reasons. Their association as representatives of many nations, and their annual interchange of ideas connected with this day, brings about each year a deeper comprehension of real liberty, and of that higher patriotism which loves not its country less, but more, because this love is blended with love of humanity as a whole. It is strong enough to look beyond its national borders and see that in the blending of nations into one vast family lies the hope not only of all, but of each.

Later in the day a message of greetings was received from Brother A. E. Neresheimer, Chairman of the Cabinet, now in Colorado on a short leave of absence.

All the students at Point Loma this day sounded a new note of unity for the world's children.

THE language of courtesy and politeness of Japan is a unifying power, of a most refined character.

THE Japanese have an extensive mythology and folklore.

JAPAN is not a land where one need pray, for 'tis itself divine.—*From Japanese*

Who Shall Unlock the Truth?

MUCH paper is used in the effort to interpret past history; but who unlocks the truth? We, with ideas bound and stained in worldly limitations, propose to make known and explain the life, the ceremonies, the writings, of people whose thoughts and actions were based on a knowledge of nature's universal laws!

One wonders when we shall become great enough to follow the wisdom of the wise, and turn for a space from books, to first seek the key, which will liberate from written records the true and living heart-light that shines within the words. Does the quickening touch of Autumn, the seed-time, a season ever sacred to the wise, not strike a guiding chord in our truant hearts and minds—to nature herself?

Need it remain the privilege of only the few to ponder and reflect on the great, silent, pulsating stream of life, returning to the source which sent it forth? How in the tree, the sparks of life which unfolded the leaves and matured the seeds, restrain and conquer the outbreathing impulse, and blending with the inbreathing stream are united once again with the parent flame! And that which is subservient to change and decay, receiving no renewing force, falls to earth! Would not that law alone present a key? Nature's laws being universal, act in human nature as surely as elsewhere. Man cannot be separated from the universe, from the seasons. Of what use to us is history if we cannot glean from it the knowledge and the power to rise into ever greater and mightier thoughts and deeds?

STUDENT

Universal Brotherhood Organization

Central Office Point Loma California

THE large audience at Isis Theatre last Sunday night showed its appreciation of the wonderfully eloquent and forceful address of Katherine Tingley by the most enthusiastic applause. For nearly an hour the founder and head of the Point Loma Institution and Leader and Official Head of The Theosophical Movement throughout the world, held her audience as if spellbound, the applause frequently being so loud and prolonged as to interrupt the speaker for several seconds. One enthusiastic voice in the gallery, being completely carried away with the glowing word pictures of the orator, could not restrain itself from calling out "Amen!"

Isis Theatre audiences are composed of the thoughtful and intelligent people of San Diego and vicinity, with always a heavy sprinkling of the better class of tourists that come here. Taken as a whole they comprise the culture and refinement and education and wealth and earnestness of this southwestern metropolis. They are tolerably familiar with the eloquence and earnestness of the woman who sometimes comes over from her home on the Hill to talk to them and with them, and they expect much from her. They are never disappointed, save when the press of work becomes too great, or the hand of illness operates as a bar to prevent her from speaking; but on this occasion their best anticipations were more than realized. Katherine Tingley really outdid herself, and before she had been speaking five minutes the audience realized something of what was in store for them, and they listened almost breathlessly to her every word, the intense concentration being broken only by the thunders of applause that seemed to come reluctantly, as though drawn from the audience by sheer force of the speaker's words and sentiments, and in spite of their evident desire not to lose a single word from her forceful and glowing periods. Her clear, resonant voice was never heard to better advantage than on this occasion, and the earnestness and vigor of her manner were no less powerful in their effect upon her hearers than were the lofty and noble thoughts which she expressed.

Under the general head of "Fanaticism" she roundly scored many of the abuses of today, some of which might be characterized by much harsher designations. She was not sparing in her sarcasm, least of all of those "Fanatics of Theosophy who have sacrificed the truth, stultified themselves and put stumbling blocks in the way of humanity by giving vent to their own fanatical interpretations of Theosophy."

Her appearance on the stage was the signal for a warm, friendly greeting. "Theosophy is optimistic in all its teachings," she began, "It has that in it which is hopeful and comforting all through life."

But for all its optimism it did not blind one to the dark spots in civilization—to the fanatics and fanaticism of the age. "Fanaticism is a lack of mental balance," she said. The fanatic was one in whose nature the extremes were uncontrolled and these extremes, running free, sowed disaster on every hand. If we sat quietly and in fear, giving the fanatics free rein, we were ourselves to blame for the evil consequences. Beginning at home, Theosophy itself had been held down by the fanaticism of the age, and by its false and self-constituted teachers.

In denouncing the fanaticism of the church she declared that in the old days when the Romans burned the Christians at the stake it was not only the fanaticism of the Romans, but the fanatics among the Christians themselves that brought disaster to Christianity. She characterized the Christian church, as it exists today, as an excrescence and a violation of the teachings of Christos. Her sentiment, that "Man is divine and in his divinity needs no savior but himself," was applauded to the echo.

Briefly, the orator painted a little picture of the famine in India and the widespread suffering it entailed. Then she told of one who, in the midst of all this suffering, proposed to "burn butter to the gods" as a remedy, one who was not, however, a member of the Universal Brotherhood and Theosophical Society.

In Egypt she had traveled on the Upper Nile with a fanatic—a woman who beat the donkey boy because he asked for more than four cents for leading her donkey eighteen miles, and the native lad bore it meekly because milady was a missionary! (Applause)

She told of a long-haired, greasy-coated fanatic in Theosophy whom, in the early days of her connection with the movement, she had mortally offended by advising him to quit lecturing on Theosophy and go to work. He had never forgiven her. (Applause)

She knew of a woman intensely interested in clubs and in prayer-meetings. This woman lectured on a variety of topics, especially on the "Home," on "Home Life" and "Devotion to Husband." One day the speaker obtained a glimpse of this woman's home—"the poorest apology for a home I have ever seen."

In literature the fanatics were especially rampant, said Mrs. Tingley. She reverted to "Books of the Mysteries" containing an invocation to the ruling deity on one page, and on the next, "Please send \$5 for a full course in hypnotism"

KATHERINE TINGLEY AT ISIS THEATRE

Fanatics and Fanaticism in Theosophy and Christianity Shown in True Colors by Theosophic Leader

Reprinted from the San Diego News

—of books that contained pages of quotations from Christ teachings, and at the bottom of each page "send \$5 to learn how to heal by magnetism." (Applause)

She told of a lecturing fanatic who (for certain considerations) taught his dupes how to develop psychic powers, and who furnished charts of the seven auras, etc.

(Applause) Reverting again to the fanatics of the churches, she said "Christianity is being sold every day for the almighty dollar by people who profess to be teachers of humanity."

Fanaticism in the drama, she said, was the fault of the people and not of the stage. There was scarcely a theatrical man in the country who would not "thank God" for some lofty, exalted production that would please the theatre-going public—but the public wanted fanaticism, and worse, and got it. (Applause)

In politics, in the home life, on every hand, look where we might, was to be seen the devastating hand of the fanatic. "I am pleading to you for reformation from this unbalanced fanaticism," she said, "and for a return to that mien of sanity wherein men and women will cleave to the middle lines of common-sense and justice."

Of San Diego and its natural beauty she spoke in the most happy vein, evoking the greatest enthusiasm. Nowhere, in her travels around the world, not even in Italy or in Greece, had she seen "such a blessed land as this." She painted the future of San Diego in glowing colors, predicting the establishment here of a greater Athens. (Great applause)

Mrs. Tingley told how her predecessor, William Q. Judge, had been comforted on his death-bed by a prophecy of the Theosophical institutions at Point Loma, which, said this prophet, should be established before the year 1904.

Referring again to the future, she said that within fifteen years the city of San Diego would be a new city and a veritable Elysium. There would be no need for a Purity League, for vice will have been expunged; there will be no drunkards, for men will care no longer for strong drink; there will be no prison, no reformatory, no defective city charter—universal brotherhood will prevail and institutions of learning, of art, and of music, will absorb the attention of the people.

"We have been working at the wrong end of the line, attacking all these evils of our civilization from the wrong standpoint," she said, "because we don't know how to go at our problems; and how can we learn the right way until we know ourselves—until we know, until we realize, our own divinity. We cannot have a pure city without a pure charter, and we cannot have a pure charter until we have men of blameless lives and motives to draw a pure document for us. The need is for less fanaticism in public and in private life. We need to keep to the middle lines and establish a sane atmosphere in which purity and unselfishness can grow. We cannot get good politics until we have good homes. Good men are the product of good homes, and good homes grow and multiply best in that pure atmosphere which noble women alone can create. (Applause, and a voice from the gallery, "Amen!")

"And the first step," continued the speaker, "is to know yourself. Get down on your knees to yourselves—to the god within each one of you." (Applause)

"Away with the false and the untrue, away with the hypocrisy and the license of the fanatic. Let men look themselves squarely in the face! Kill out the unselfishness, the unbrotherliness, and as a united people, on a simple platform of common sense, let us prepare for the coming of that new and brighter day whose dawn is even now upon us!" (Applause)

"How much time is wasted, alas, in wrong methods; in dwelling on our failures! We must take a deeper and truer view of life and its possibilities. I should like to see Christ and his disciples walking on your streets among you and teaching and practising the simple truths that were witnessed by them in the early days. No need of more churches for this. Christ had no church. If all the churches in the world should disappear, would you know less of the teachings of Christ, of the plain and simple truths of Christianity? (Applause)

"Fear has helped to build the church. A pure but mistaken sense of religion and devotion has played its part in establishing the reign of the churches, no doubt, but thousands upon thousands of dollars have gone into their edifices and their treasures, wrung from the people by the power of fear. Thousands upon thousands have been put into the churches to appease the wrath of God! (Applause) If we could take the money spent in teaching fear and build great educational institutions with it, in which the little children would be taught to walk upright and un-fearing before God and man, in which the children would be taught their own divinity, what a Paradise might we not make of earth! (Applause)

"I appeal to you to evoke the divinity in yourselves, in your homes, in your children, to evoke it in the infant, letting it be enfolded in the arms of our father, the great law, in its own simple, pure divinity." (Applause)

The Trend of Twentieth Century Science

"The Age of Science"—Signs of Bolder and Broader Investigations

PRESIDENT IRA REMSEN of John Hopkins University, who gave a commencement address at the Worcester Polytechnic Institute, is reported as having said that scientific work in its highest form does not pay. It does not appeal to the capitalist, because there are no immediate profits in it; yet our commercial and industrial opulence has sprung from it. The capitalist is interested in science that pays and leads direct to dividends; but pecuniary motives do not inspire discovery, which comes rather from disinterested devotion to knowledge. He hoped that in the future the endowment of research would render discoverers more independent, but feared it would make them less enthusiastic.

Some of the remarks found in a newspaper report of his speech, and in the editorial paraphrase or comment thereon, are as follows:

The speaker's subject was "The Age of Science," meaning the last hundred years and particularly the latter fifty.

Science has hitherto largely run its race and won its triumphs by the impulse that comes from "the joy of work," from that unquenchable thirst for truth that has distinguished its votaries. The thought of reward in the purely material sense probably never inspired a fresh discovery and never will.

May not this age have to surrender its claim to a subsequent one, according to the logic of the present movement? We are as yet hardly more than at the threshold of nature's inexhaustible mysteries, and as the portals open wider and wider even present achievement in another century or two will appear dwarfish.

In these remarks there is clearly outlined the usual gap in thought, the usual absence of the real key to the situation, which one finds in the discussions of people who have not the clue which Theosophy affords to all problems. This gap in thought gives a lack of cohesion in the logic, and unresolved dilemmas. Disinterested love of knowledge is the real inspirer of discovery (we are told), and yet the pursuit of unapplied science will not satisfy a practical age. But the only form of applied science we know is the commercial—that which appeals to the capitalist. So we shall have unpractical enthusiasts discovering things, and greedy capitalists coining the discoveries into money.

But what is the right incentive for discovery, and what is the true application of science? These are the missing links in the problem. For want of these links the chain of human life is separated with two parts which do not pull together. We have unpractical intellectual curiosity on the one hand, and on the other practicality enslaved to money-greed.

Science is properly the eye of wisdom, the beacon light of life; the incentive to its pursuit should be love of the truth; and its aim and outcome should be the ennobling and illuminating of life. Modern science has never risen to that height. Its pioneers may have had more or less genuine desire to promote human welfare; but, even so, their researches have been restricted almost entirely to the material side of nature. Deeper and more important studies have been left to other departments of speculation which, not being scientific, were otherwise.

The higher things which the professor anticipates for the future will, we believe, more truly represent Science in her original and undefiled garb. For the signs of the times show that we are tired of sciences and philosophies and creeds which only amuse the mind and let actual life flounder about in ignorance and helplessness, and that we are thirsting for a science that has a human side, a science that will show us how to live happily together.

STUDENT

BY the analysis of nineteen great magnetic terrestrial storms, Mr. Maunder recently worked out their connection with the transit of sun-spots. He found that such storms begin about twenty-six hours after the transit of a great spot across the sun's central meridian. They reach their maximum in about twenty hours, and die away during the next thirteen. The explanation of the connection now in favor is that the sun-spot is a point of enormously intensified radiation. From it streams of ions or units of electrified matter are driven out and bathe the earth and her atmosphere. "Ion" is a modern chemical term, meaning an ultimate particle of substance, carrying a charge of electricity; or, as others regard it, consisting of that charge.

Cancer Research—Commencing to Look in the Right Direction

THERE is perhaps no disease the cause of which has been more extensively sought in the past decade than that of cancer. The frequent failure to control this class of cases, even by surgical means, makes it an ever-present problem which grows more imperative since it is well proven that cancer is progressively increasing.

In keeping with the materialistic trend of modern science, the exhaustive investigations of cancer pathology have been focused upon the patient's environment, to the neglect of the subtle forces of thought and feeling which react upon the physical body. Care and anxiety have been incidentally mentioned as causative factors; but research has been generally along the lines of diet, hygiene, climate, etc., and especially has it been turned toward bacteriology. That the race at large has developed a nervous system and a mental susceptibility which is more sensitive to surroundings than that of our ancestors, seems to be overlooked in examining hygienic and general conditions which, however faulty, have never been better than under our modern methods.

In view of this popular emphasis on the patient's environment, broadly speaking, there is a significant note of doubt in an editorial of a recent number of a representative medical magazine. The editor speaks of the lamentable failure in cancer research which is everywhere recognized and deplored. He quotes the report of Dr. Herbert Snow, of the London Cancer Hospital, who states that he and his associates have studied the disease as it has probably been studied nowhere else in the world, using every known means at command, yet they have utterly and miserably failed to find the cause. Dr. Snow thought that proper scientific investigation of the action of the "lymph glands on the cancer protoplasm would advance this practical knowledge of cancer and might even lead up eventually to the ideal non-surgical cure."

The above is a hint worth following, for glandular action is controlled by the sympathetic nervous system, which is the organ of involuntary sub-conscious man, dictating tissue changes whether asleep or awake, and working apart from the conscious brain mind. The editorial in question voices the doubt now developing in some medical minds as to the adequacy of the popular materialistic methods which ignore the more subtle and powerful influences that touch the patient through his inner sensibilities. The writer asks:

Is there then something wrong with the methods of research of the pathologists? Has there been too great reliance upon bacteriologic and laboratory ways and too little upon clinical and physiologic observations? It seems as if some obscure country practitioner stands as good a chance to solve the enigma as the most famed and erudite. Perhaps the bacillus is not, after all, the arbiter of health and destiny.

M. D.

The Earth's Age—Calculations Now from Chemical Data

FOR the first time, science is beginning to try to calculate the age of the earth from chemical data. From theological, astronomical and geological data, a large number of estimates have of course already been made, varying from thousands of years to hundreds of millions.

Radium, as usual, prompts the new attempts. Uranium, it is assumed, gradually "decays" down into radium; radium "decays" on further into other things, helium, ions of protyle or what not. From guesses at the rate of decay of radium, which is not known, further guesses are made at the requirements of uranium, and from these two generations of guesses the conclusion is reached that the life of uranium is 10,000,000,000 years long. Another guess is then necessary as to the time required for uranium—as a type of matter in general—to come into existence as such.

Of course it is all wildly hypothetical, but considering that according to Theosophical calculation the earth's age is about 2,000,000,000 years, it is obvious that Theosophy and modern science are not standing quite so far apart as once they did.

If science will now kindly extend her views as to the length of time man has resided on the planet, and extend them very greatly, the approximation will be closer.

STUDENT

❖ ❖ The Sorrow of Dyfed ❖ ❖

ON THE HILL OF GORSEDD ARBERTH

It is a sad story that must be told now, because you might have thought there would have been no sorrow there after Rhianon, the immortal Princess, became the Queen in Dyfed. But there was: a dark thing came into the land; and what it was you shall be hearing.

At first, when Pwyll came back from the country of Hefeydd Hen, everything seemed to be going well. For one thing, the illusion was lifted from Gorsedd Arberth, and whoever wished to take his place there, could do so at certain times. Then those who were wise and noble never came away without seeing something that made them even wiser and nobler than before; and any that were foolish or cowardly, if they went there, could not escape without blows and violence.

And it was always found that strange things happened to those that went on the Gorsedd, the marvelous Gorsedd Arberth, that spot about which no man may disclose the whole truth save unto those who know it already. It was upon Gorsedd Arberth that he who wished might take his place and stand as he chose before his trial. And many among the warriors of the land went there because of the clarion call within their own hearts, nor did they reveal its mystery—the miracle of Gorsedd Arberth—to any save only, as I have said, unto those who knew it already.

And they came back changed, with a new light in their eyes, a new radiance in their faces, a new courage in their hearts. Unto the noble the Hill of Gorsedd Arberth became a holy place, but unto those who loved the darkness better than they loved the light, it chanced quite otherwise. For whatever might before have been hidden in a man's mind, or in his heart, or in his imagination, that thing would surely become revealed, because of the wonder of Gorsedd Arberth.

You know that when Pwyll went there, who was strong and noble, and who had always desired to be a true King to his people, the end of his going was that Rhianon became his wife, and with her help he could have done more good than ever without her; indeed, it seemed to him that he could do then what he could only dream of doing before. And so it was with the princes and lords and with all the men of Dyfed. None were quite the same, after seeing the marvel on Gorsedd Arberth. The things they dreamed before, they accomplished after. There were many among the warriors who had never thought well within themselves; nor did they know why it was that they wished to be noble and to do great deeds in battle. But they could not see the marvel from the top of that hill without all those things becoming clear to them. For to the man that had no wish except to be a stronger helper of the people and a truer servant of his lord, there would appear the vision that would help him to become what he wished to be. But whoever wanted to be noble that people might honor him and count him among the Pillars of the Island of the Mighty, or that he might gain anything for himself,

then the thing that happened to him would be such as to call forth the demon thing that had been sleeping in him, and soon he himself and those around him would see clearly the evil and selfish thing that he really was.

And many of the true in heart took all their being in their hands and fought, and those who did that, found they had gained something on the hill and were the stronger for having been there. But others had no will to fight the darkness in themselves. And so they left the Miracle Hill with all their wickedness revealed and with the sign of their madness and their folly written plain upon the brow. For temptations did then exist,

and those who walked with their eyes upon the ground saw not the stars by night nor the sunlight by day, and they stumbled. There was one rich Lord to whom it seemed as if a serpent came to him as he sat on the throne, and coiled itself around him. And it whispered to him that if he would let it rest its head upon his heart, he should have pleasure and kingship and such wisdom as it had itself, and he should obtain success in all that he sought to do for himself. And although he knew that it was evil, he was not willing to fight against it strongly and in a little while its head was on his heart.

And it gave him such things as it had promised; but his kingship was not in Britain, and he had no place among the golden chained princes with the chosen king in London. And as the time passed there came a pain upon him, and it seemed to him as if the serpent's teeth were in his heart. And at last he lost all he had gained, and only the pain remained to him; and it was owing to this that he died, and no one knew when or where, and no one cared.

And there was another prince that took his seat on Gorsedd Arberth. Pendaran Dyfed was his name, and he was Pwyll's champion. And while he was there a darkness came around him and in a little time he became aware of a lurid and flaming dragon in the air, and this was for destroying him. And it was striking at him with long, blood-red, wounding claws, and biting at him with terrible, venomous teeth. Like the ninth wave of a stormy sea in its falling, was that dragon as it reared over Pendaran. But there was no fear in this man, and it seemed to him that whether he should come away a living man, or be carried away a dead one, he would certainly not

die until he had freed the world from the monster, nor wish for a greater joy than the doing of it. And his sword was for swiftness like the lightning of heaven; and whatever blow of the dragon hit anything else than the earth or the air, fell on the nail-studded leather shield of him; and it could gain no advantage over him. And he went forward and he was as swift as the swiftest and as strong as the strongest. And unwounded he was at the last, and singing for joy that there was one evil the less to oppress the world; one cloud gone from the sky; one sorrow that never again was to come into the heart of any man. For the dragon had died when his sword had wounded it a thousand times. And as for Pendaran Dyfed, there was not one thought for himself in him at all. STUDENT

FRAGMENT

by GEORGE ELIOT

O MAY I join the choir invisible
Of those immortal dead who live again
In minds made better by their presence: live
In pulses stirred to generosity,
In deeds of daring rectitude, in scorn
Of miserable aims that end with self,
In thoughts sublime that pierce the night like stars,
And with their mild persistence urge men's minds
To vaster issues.

So to live is heaven:
To make undying music in the world,
Breathing a beauteous order, that controls
With growing sway the growing life of man,
So we inherit that sweet purity
For which we struggled, failed and agonized
With widening retrospect that bred despair.
And all our rarer, better, truer self,
That sobbed religiously in yearning song,
That watched to ease the burden of the world,
Laboriously tracing what must be,
And what may yet be better—saw within
A worthier image for the sanctuary,
And shaped it forth before the multitude:
That better self shall live till human Time
Shall fold its eyelids, and the human sky
Be gathered like a scroll within the tomb,
Unread forever.

THE CHILDREN'S HOUR

Growing

A CROSS little boy went to bed one night after a long day spent very unhappily. He had been naughty and unkind, and had said shameful things and shaped ugly thoughts; but he was tired and so he went to sleep. In the night he awoke. It was dark, and at first he could hear nothing. He thought of the day he had spoiled, and he was afraid. He called for his mother, but she was sleeping. He became angry, and then he began to cry. Still no one came, and it was very dark.

Suddenly he grew calm. He listened quietly and heard the river flowing, and it seemed to him it was singing as he had never heard it sing by day. The wind was blowing in the trees and it seemed, too, as if they were singing. He listened more and more attentively and all the time he heard other strange, soft sounds, and he began to feel peaceful. He thought he could distinguish the voices of the different growing things. He listened still more closely. Perhaps he fell asleep and dreamed; or perhaps he was very wide-awake; I really don't know. All I know is that all the tiny growing things were piping aloud:

"Growing, g-r-o-w-i-n-g, g-r-o-w-i-n-g!" They were the baby plants and the thin grasses and the wee weeds, the latter noisier than all the rest.

The rose-bushes and the vines and climbing ones seemed to be singing:

"Just a little higher, just a little higher today than yesterday!"

The trees were singing the prettiest song of all. "Peace, peace!"

Then the boy thought of how the tiny seeds in the dark ground grew.

"That's like me," he thought. "I'm all alone in the dark."

"G-r-o-w-i-n-g, g-r-o-w-i-n-g!" cooed the baby shoots.

"Perhaps boys grow most in the quiet; when it's dark, too, seeds do."

"Climbing, climbing, a little higher," sang the rose-bush at his window.

"I could climb, too," thought he.

"Peace, peace," whispered the trees to the morning breezes, and the boy sprang up and hurried out to see the rising sun. There was a new and joyous light on his face. How beautiful was the new day! W.D.

THE little children of the International Brotherhood League Colony, Point Loma, which is an activity of the Universal Brotherhood Organization, spent a joyous Fourth of July. At breakfast-time they had a fine surprise for each of the grown-ups in the shape of a dainty garland with a little brotherhood sentiment attached. One of the children made a speech and the glorious Declaration of Independence was read. There were papers by some of the others, and altogether the day was very beautiful. Some weeks ago one of them conceived a plan for a rose pillow for some one whom they loved best of all, and day after day little hands have been gathering the full-blown roses and carefully saving the rose petals. On Fourth of July day the pillow was complete and made up and sent over to the big International Headquarters at Lomaland to its destination. M.M.

AMERICAN AND CUBAN RAJA YOGA CHILDREN IN THE FLOWER GARDENS OF LOMALAND

A Prisoner

DEAR CHILDREN: Did you ever see one of our beautiful wild birds shut up in a cage, and did you feel sorry for it? Why?

You were sorry because it is so hard to be a prisoner. Whenever I see one I am very, very sad, and I do see prisoners every day. Every time I see a naughty child I see a prisoner, for the naughty part is the jailer that locks up the *real* child and holds him fast so that he

cannot even look out of the windows. The eyes are the windows, you know. Sometimes the jailer is the little selfish boy that wants everything for himself, and so he locks up the little good boy in a cold, cold prison and puts a big stone in front of the door. And the "cry-baby" who feels so sorry for himself and never the least bit sorry for other children, is another jailer, too, and then there is the child who does not always tell just the truth, and the silly child who wants everybody to admire her all the time, and then the naughty child who kicks and scratches, and the boy who doesn't want to mind. All these are jailers, and what a hard time the dear little good boys and good girls have when they are locked up!

When your eyes shine then I know that the good

little boy is out of that prison, looking out of his windows, and then how happy you are, just like a sunbeam; then you are brave, like a knight, and strong. Then you are not a prisoner. But when you are unhappy and cross, then the jailer comes and shuts out all the light and draws down the curtains, and *isn't* it dreadful, and *aren't* you glad when you just walk right out of that prison and smile and let your whole face shine? E. E. O.

THE RAJA YOGA QUESTION BOX

1. Who was Alexander the Great?

ANSWER—Alexander the Great was a famous Greek king. He was bold as a lion, and conquered many countries. He loved knowledge and gathered learned men about him even when on the march. In 332 B. C. he founded the city of Alexandria in Egypt where were many schools and a great museum and library.

2. Who was Hypatia?

ANSWER—Hypatia was the daughter of Cleon, a learned man of Alexandria. She studied with her father and also in Athens. While still a beautiful young woman she became a great and wise teacher, and about 415 B. C. she had many pupils who loved her and followed her teachings. This made Cyril, the archbishop of the church, jealous of Hypatia, and he roused a mob of ignorant people against her. They tore her body to pieces and burned it.

3. Who was Michelangelo?

ANSWER—Michelangelo was a great Italian painter and sculptor, who lived from 1475 to 1564. He was also an architect and a poet. His works are of such grandeur and beauty that all artists since his time owe much to him. He lived simply and purely and worked unselfishly for love of his art and not for money.

THE OPTIMIST

by FRANK WALCOTT HUTT

IT'S well to meet the man of whom they say
He bears good news with him where'er he goes,
Whether it be upon the world's highway,
Or just beside a poor man's garden-close,
It's good, I say, to meet with such a man,
For he can set things right, if any can.

A man of wholesome greetings anywhere
Who brings with him good wishes and good will,
Finds steadfast friends enough—the sort that care
And stand by him through good report and ill.
It's well to meet with such a man—to know
The world is not all bad, come weal or woe.—*Selected*

Day-Dreaming a Dangerous Self-Indulgence

THE habit of day-dreaming or castle-building is an insidious and dangerous form of self-indulgence which is too little considered. If it were more considered, it would probably be found to be the root and cause of many of the more obvious and generally recognized forms of self-indulgence. In many cases, too, these vices are found impossible to overcome, because their subtle cause, day-dreaming, is still persisted in.

To the majority of people day-dreaming is nothing more than a waste of time, occasionally indulged in; and to them our remarks will not apply, and may seem uncalled for. But there is an ever-growing class of persons of a highly developed mental and nervous organization, in whom the practise has grown into a habit of morbid and dangerous dimensions. Of these a few may be recognized by their marked absence of mind and gibberings as they rush blindly along the street; but with the majority the habit is a secret one, and its only outward signs (to the ordinary observer) are abstraction, dullness and awkwardness.

In a bad case of day-dreaming, the patient passes the greater part of his life in an imaginary world of his own, in which he carries on imaginary conversations and passes through imaginary adventures. The habit grows until he is liable at all times to become oblivious of the outer world, and pass into his state of abstraction. The causes of this disease are weakness and self-indulgence. The victim is a person of deficient animal spirits and courage, over-sensitive and shy. These defects prevent him from mingling amicably with his fellows, and from participating successfully in the affairs of outer life. His energies and enthusiasms therefore, find vent in an imaginary world wherein he can, of course, reign supreme and uncontradicted. The pleasure which he derives from this fictitious life causes him to indulge the habit until it acquires the strength of a vice.

The evil effects of this habit, when carried to such an excess, are many, subtle and great. In the first place, there is no greater waster of vitality and energy than this habit, for it dissipates the finest essences of the nervous organization which are the founts of life. It withdraws all this high-grade energy from the body and wastes it in unprofitable excitement. This inevitably leads to debility, and is usually the direct cause of some physical defect or depravity, and of slovenly and weakening habits in general. The victim becomes more nervous and debilitated, more bashful and retiring, more awkward and unsociable than ever.

In the next place the habit induces a complete loss of control over the mind, the emotions, the vital forces and the organism generally. It tends to produce a being unbraced, base and unself-possessed; a being whose nature is so unprotected that it is readily invaded by malefic thought-forces or diseases. Again this habit is too often made the occasion for an indulgence of vanity, egotism and other forms of desire; and the victim thus ruins his character in secret while passing outwardly for quite a

saint. From the causes, characteristics and effects of day-dreaming, it will be seen that it is a vice of precisely the same nature as opium eating and its tribe. That is, it is a means of shirking the social duties of active life and retiring to an utterly selfish world of sensuous illusion; whereby the whole nature is gradually ruined, morally, mentally and physically. And it is the root and cause of many of these more obvious vices, for a vicious habit of mind soon generates a vicious habit of body.

The remedies for such a disease are easily seen. They may be briefly enumerated as follows:

First, a lively conviction that the habit is selfish, vicious and destructive. Next, an intense desire to get rid of it and become a well-balanced member of society. Third, time and patience; for what took years to do cannot be undone in a day. Fourth, an attack on the enemy on all planes at once: on the moral plane, the cultivation of social interests; on the mental plane, constant watchfulness; on the physical plane, a reform of regimen.

In speaking thus strongly on the habit of day-dreaming, we may seem to be making mountains out of mole-hills, and to be unnecessarily severe on a class of amiable and absent-minded philosophers and dreamers. But we believe that the very plausibility and secrecy of the vice constitutes its chief danger. It is one of those things which evade attack and which yet do more mischief than anything else—one of those secret, hypocritical plausible evils that do all the mischief and get none of the blame. And it enables one to be outwardly respectable and inwardly otherwise, thus constituting him a hypocrite though usually a self-deceived one.

We would ask, Should an evil that is known to be most pernicious be spared because it assumes an unostentatious and amiable guise? Should we spare it in ourselves, and would it be kind to indulge it in others? E.

The Dead Past

THE power of remembering past events is one which should be exercised with great discrimination, and a faculty for selection which very few possess. This is, of course, a spiritual memory which consists in the changes wrought in our characters by the experiences through which we have passed, and this is so much a part of ourselves that it can never be relinquished. But to live through past events in memory, to recall the days that are gone with their worn out freight of joys and sorrows, is nearly always harmful. They have done their work, they have delivered up their fragrance and nothing remains for them but unprofitable shadows.

And so if we would enter once more these waste gardens, from which all flowers have been plucked, let us do so only when we are strong and positive in the present and anchored to the future by hope. Otherwise we shall surely fall under the glamour of dead events which were once palpitating with life and wisdom, but which have long ago delivered up whatever of value in the way of experience that they possess. There is neither life nor virtue in them now and their pretended charms are subtle and deceptive. As we look upon them we lend to them our own vitality for which the present and the future so earnestly call. These waters of memory carry us backward into the night and away from the sun. Our lives belong to the present and to the future; let us not bury them in ancient graveyards already haunted by the regrets and the reproaches which need so slight a signal to fasten once again upon us. S.

An Offer to Infidels

THE pastor of a Baptist church in Provo, Utah, has made a public offer to pay infidels one dollar per hour to sit in church and listen to him. There must be no nonsense about their infidelity; applicants must submit to a searching examination. We would suggest that a certificate from a clergyman should be accepted in lieu of the examination. We are not acquainted with the author of this ingenious scheme for calling attention to his church. But though emphatically claiming for ourselves the constant advocacy of true Christianity, we are of opinion that we could pass the examination and honestly claim as many dollars as this gentleman shall hereafter preach hours. We are not, however, proposing to try. We are somehow reminded of the anecdote of the condemned criminal who was offered his choice between death and the reading of —'s *History of England*. He read a page or two and then sadly put the book down and laid his head on the block. S.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question Why are the sins—virtues—diseases, etc., of parents inherited by their children if, as we believe, each child is the molder of his own destiny? How can the child grow and improve when he returns, if he must bear the burden of his parents' faults?

Answer (1) Because they are the child's due, because they are the sins, virtues, diseases, which the child has earned for itself in the past, and it has come into that environment which will provide for it the best conditions for its progress and welfare. Why are these inherited? So that the child, the man or woman may overcome them, in the case of the sins, and may make more beautiful still the virtues.

Why does a child bear the burden of his parents' faults? Partly because of the above, but also because in greater or less degree we all must bear the burden of one another's faults, because humanity is not made up of separate, distinct units, but that these units are all linked together, and the closer the ties, the more do we share in the burdens and joys of others. The links that bind parent and child are not simply of one life, but of many lives and it may be, nay, must be that in the past, the burden was heaped up by each on whom it now presses and must be borne until higher endeavor, purer living, unselfish service shall remove it.

(2) Does it not seem probable that the failings and virtues are only inherited because they are also the property of the child? He would naturally be attracted to parents of somewhat like nature with himself. The same would apply to inherited diseases. The child has also, like the parent, a lesson to learn from them. And if the faults of the parents' are also the child's, one could readily imagine the Law bringing them together precisely to be mirrors to each other, helps to each other, even when years of strife had to wear away before the lesson was learned, charity and forbearance reached, and the plan of the Law realized. H.C.

(3) In studying a large and unfamiliar subject, many questions will arise which cannot be fully answered at once, but which demand further study; and, after the student has mastered the elements of the subject, he will be in a position to answer his own questions.

Generally speaking, then, when we come to a difficulty which obviously depends on our small acquaintance with our subject, we should bide our time until further study clears it up.

The teachings as to Reincarnation show us that the Soul chooses or is assigned a body in accordance with its merits and needs. The defects which we inherit from our parents, therefore, are those defects which we ourselves created in our past lives; and it is because we created them that we were fated to be born in such environments. Thus a man who in his past lives has cultivated habits of self-indulgence, is born of parentage vitiated by that fault. In short, the Soul is to blame for its bad heredity. But we are not bound down by that or any other tendency, because our divine nature gives us a power of resisting tendencies, altering our own character, and sowing better crops for the future.

Let us therefore make the best of what we have, in the assurance that our lot was shaped by perfect justice; let us, instead of deploring that lot, turn it to good account by learning the valuable lessons it can teach; and let us take care, by our behavior now, that we do not earn another such bad heredity in the future. H. T. E.

Question How are man's life and evolution governed by cycles? How can there be progress if we continually come back to the same point? (Continued from the issue of June 26, 1904.)

Answer The following extracts are in continuation of those previously given from an address by William Q. Judge on the subject of "Cyclic Impression and Return and Our Evolution." In the quotations here given, he takes up the subject from a practical, personal standpoint, and gives many hints which, if followed, would do much to make life brighter for those who find it hard to bear up against trouble and depression. He says, speaking of cycles:

Now this has the greatest possible bearing upon our evolution as particular individuals, and that is the only way in which I wish to consider the question of evolution here;

not the broad question of the evolution of the universe, but our own evolution, which means our bodily life, as Madame Blavatsky, repeating the ancients, said to us so often, and as we found said by so many of the same school. An opportunity will arise for you to do something; you do not do it; you may not have it again for one hundred years. It is the return before you of some old thing that was good, if it is a good one, along the line of the cycles. You neglect it, as you may, and the same opportunity will return, mind you, but it may not return for many hundred years. It may not return until another life, but it will return under the same law.

Now take another case. I have a friend who is trying to find out all about Theosophy, and about man's inner nature, but I have discovered that he is not paying the slightest attention to this subject of the inevitable return upon himself of these impressions which he creates. I discovered he had periods of depression (and this will answer for everybody), when he had a despondency that he could not explain. I said to him, you have had the same despondency maybe seven weeks ago, maybe eight weeks ago, maybe five weeks ago. He examined his diary and his recollection, and he found that he had actual recurrence of despondency about the same distance apart. Well, I said, that explains to me how it is coming back. But what am I to do? Do what the old Theosophists taught us; that is, we can only have these good results by producing opposite impressions to bad ones. So, take this occasion of despondency. What he should have done was, that being the return of an old impression, to have compelled himself to feel joyous, even against his will, and if he could not have done that, then to have tried to feel the joy of others. By doing that, he would have implanted in himself another impression, that is of joy, so that when this thing returned once more, instead of being of the same quality and extension, it would have been changed by the impression of joy or elation, and the two things coming together would have counteracted each other, just as two billiard balls coming together tend to counteract each other's movements. This applies to every person who has the blues. This does not apply to me, and I think it must be due to the fact that in some other life I have had the blues. I have other things, but the blues never.

I have friends and acquaintances who have these desponding spells. It is the return of old cyclic impressions, or the cyclic return of impressions. What are you to do? Some people say, I just sit down and let it go; that is to say, you sit there and create it once more. You cannot rub it out if it has been coming, but when it comes start up something else, start up cheerfulness, be good to some one, then try to relieve some other person who is despondent, and you will have started another impression, which will return at the same time. It does not make any difference if you wait a day or two to do this. The next day, or a few days after, will do, for when the old cyclic impression returns, it will have dragged up the new one, because it is related to it by association. This has a bearing also on the question of the civilization in which we are a point ourselves.

TO BE CONTINUED

A National Festival of Education

ON the 19th of June, Paris and the twenty-five thousand communes held high festival, commemorating for the first time the presentation to the Assembly at Versailles, thirty-two years ago, of a monster petition, bearing a million and a half of names, for free, universal and unsectarian education. Tens of thousands of Parisian children took part in the celebration, and the President, with the high officials of State, was also present. The organizing body was the French Educational League, founded in 1866, for conflict with dogmatic and reactionary forces. It has nearly won its battle, and the victory was marked by the vast crowd with repeated cheers for M. Combes.

For the first time the decorations of the Legion of Honor have been awarded to teachers. Fifty of these were bestowed, eight to women, twenty-eight to elementary teachers.

Such an affair would be impossible in any other country but France, that land of living ideals. Could a wild wave of national enthusiasm for education, culminating in a national festival, sweep through this country or through England?

We note that in a recent book by Dr. Emil Reich, the distinguished Hungarian historian, he practically assigns to France the front place in the ranks of civilization. No country, he thinks, has been so thoroughly demedievalized as France.

The barriers of class and caste have there been leveled almost to the earth. . . . Very few men in France find it desirable to conceal their social origin.

The catastrophe of 1870 was a tonic, if a bitter one, an awakener; and since then France has gained a new consciousness. To those who know her otherwise than as a fashionable holiday resort, this is obvious. She is alive to the last cell, and throbs with the spirit of the new era.

STUDENT

The Power of Silence

"WHAT impressed me most," said Smith, "in the address last night, was what the lecturer said of the power of silence. It never struck me before what an awful waste of force goes on in talk. I should think Charlie and I sat up last night for two hours discussing that very thing. I was trying to point out to him, indirectly you know, that *he* talks too much, but I don't believe he caught the idea."

"Isn't he —" began Jones.

"He's a good fellow," went on Smith, "but his brain is a perfect mush of half-boiled talk. Thinks aloud, that's what he does. One of those people who never talk about *things*, but always chatter, chatter, about *people*. I hear he's engaged, or as good as that, to that girl Robinson. Nice girl, but an awful chatterer; don't wonder she and Brown couldn't hit it off. They'd have talked each other to death."

"But —" interposed Jones.

"By Jove though, it was a fine lecture. Last night after I got to bed the thing got bigger and bigger. I could just *feel* what we lose by this incessant talking. I believe I could have made a girls' school see the thing if I'd had them there. The ideas were just ramping. Why look here. Suppose a man's brain just goes on *piling* up force, got out of his soul you know, the dynamic energy of thought—that's not a bad phrase, by the bye—and if he'd only *keep* it, he could think things worth thinking. But if he can't get anyone else to talk to, he'll talk to himself, by Jove. I've watched Charlie's lips moving when he did not know I was looking.

"Now this thing's got to stop. I do it myself to some extent. I went round to see Frank the other night—hadn't much to do and wanted to swap ideas a bit with someone—I don't see why you should smile merely because I mention Frank; he isn't much, but a man can't stop by himself all the time; and he's a nice quiet fellow—and while I was talking to him a great idea struck me. Why shouldn't you and I and Frank and Charlie—that is till Charlie's married, if he ever does marry—room together and take a sort of pledge not to speak anything but necessary things for a month? Pythagoras kept his pupils silent for seven years, and I guess they were just such fellows as you and I. Once a week we'd have an off night and tell all the things we'd been thinking about."

"What did Frank —" said Jones.

"Oh! you know Frank. Didn't *say* much; just sat and smoked—thought it *might* work—laughed a bit to himself and asked what you said. I told him I knew you were all right. Another thing occurred to me, a

great invention, scientific instrument which I would call a tacitometer. Weigh a fellow's head while he sleeps; then when he wakes keep his head in the instrument, and make it keep recording the weight as he goes on thinking. See if he could still his mind so thoroughly—without going to sleep, mind you—as to have his head weigh as little as if he *was* asleep. Queer revelations we should get. The way to do, you know, would be to fix the mind on one thing only and hold it there without a move. I tried the experiment after I left Frank and got it down fine. Never thought a single thing. While I was in that state it seemed to me as if I could see the brains of Charlie and Frank and you and lots of others, all crowded with perfectly nonsensical things, no good to anybody. Of course Charlie was thinking of Miss Robinson, and the whole thing was a perfect whirl. I tell you, Jones, humanity's in a tough situation. A League like I proposed is sadly wanted. I wrote to that lecturer—what's his name?—Gunga-charya, forty pages, and then hadn't said all I wanted. Wonder if he'll answer. Well I must be off; think it over."

"Think over what?" said Jones.

"Oh! everything; the League and the instrument and all the rest; and if any other ideas occur to me I'll let you know."

"Smith," said Jones, "Carlyle wrote forty volumes on the necessity for silence."

"Of course he did, but he couldn't *keep* it. Never was such a failure. But our League—here's Frank; let's talk it all over with him."

STUDENT

HOPE and love and enthusiasm never die. We think in youth that we bury them in the graveyard of our hearts, but the grass never yet grew over them. How then can life be sad, when they walk beside us, always in the growing light, towards the perfect day?

THE only sin which we never forgive in each other is a difference of opinion.

—Emerson

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

We Realize When Truth Convinces

IT is easy to say that Theosophy is the key to the problems of life, or that Brotherhood is the solution of all human difficulties. And we may think we believe it. Nevertheless, however strong may be our intellectual conviction of the truth of a thing, it is always a surprise when we begin to realize its truth. We then see that what we previously imagined to be belief was only opinion, and we say, "It is really true after all!"

Now, if Theosophy and Brotherhood are the key to all human life and to all problems, then they must be able to throw light on every vexed subject: on science for instance, and on music, and on medicine, and so on. And this is what we are beginning to realize in Lomaland—with so much gratified surprise in spite of our supposed previous convictions

to the same effect. We see light being thrown on all questions. It is because we have gotten right back to the very heart and center of things, and can therefore view things from the only true view-point.

If we consider the various systems of thought that are in the world, we shall see that none of them begin at the center of things. Thus physical science takes the precepts of our sense-consciousness as its data, and does not go back of these. Consequently, though admirable as a set of formulæ for solving questions of physical science, it is useless as a philosophy of life. And great thinkers are telling us we must go beyond the field of modern science and study our senses, our emotions, our minds, and so on. If we do this we get a system of metaphysics or a moral philosophy; it takes us back a bit further, but again we find we have not reached the center, and again we must search still deeper.

All current speculation is vitiated by the lack of centralization, just as astronomy was complex and obscure before the heliocentric theory simplified the problem of the planetary motions.

Theosophy applies a heliocentric system to the problems of life generally, and so simplifies them all. It is in its way of regarding the nature of Man that Theosophy strikes the key-note which reveals the harmony throughout. A false view of man's nature is what has been confounding speculation all this time. A true view of Man's nature puts all problems in a new light; and the application of this correction extends downwards to the smallest details, infusing order into everything.

Ordinary speculation is all based, avowedly or tacitly, on the assumption that a man's personal consciousness is the highest he can attain to, and hence self-interest becomes the mainspring. We

Self-Interest the Basis of Sociology

have sociologists arguing that every man will act in his own interests, except in so far as he is constrained by other people acting in their own respective interests. And, finding that a social philosophy based on this works out wrong, other philosophers have tried to substitute a pooling of interests, a compromising of selfish wills, as the basis of sociology. But, though they perceive from patent facts that men do habitually act from other motives than self-interest, there is no science or philosophy of human nature at hand which can tell them *why* people so act.

This is where Theosophy steps in with its declaration, that the personal consciousness is a mere subsidiary function of man's nature; and the real Man, at the present stage of development only very partially revealed, is a Being who does not act selfishly. It is this real Man behind the scenes that prompts those actions which contradict the self-interest theory. If we began by recognizing the unselfish man as the real being, and the personal man as only a subordinate phase, we should never make the mistake of formulating absurd theories which do not fit the facts, and then trying to persuade people to live according to our theories. Once accept the idea that man, as we know him now, is not in possession of his best faculties; add to it the conviction

Theosophy and Brotherhood the Key

that he can acquire the use of these superior faculties; and end by showing that the Theosophical teachings as to Brotherhood and the unity of life are the key to that acquisition:—and what becomes of current speculation, based, as it is, upon an ignoring of these ideas? It will change and the disarranged ideas will fall into line and be seen in their correct relation as we view them from our new vantage ground.

But this truth of the Higher Self must be a reality, an experienced fact, before it can be fully effectual; so long as it remains a mere theory we shall get beautiful words and no more. In Lomaland, however, where the life of one and all is daily based on Theosophy, and every regulation and method down to the smallest detail is founded on Theosophical principles; and where students are required to make their conduct approximate to the best of their ability, to these ideals; the reality of the Higher Self begins to dawn as a fact of experience. The presence of a Soul, common to all and belonging not to any individual but to the community, becomes manifest. And, as people come to realize that there is this larger life with its nobler incentives and deeper joys, their motives change and they do everything from a different inspiration and with a new purpose. These present remarks are intended to be general; but the various pages of the NEW CENTURY PATH are showing how Theosophy throws a new and a powerful light on each special subject as it arises.

Expression of the Uni- versal Soul

Thus, in science, instead of viewing the universe as dead and trying to make a reality out of a mere system of mathematics with equations expressing the relation between unknown factors, such as space and time and motion, we see in everything an expression of the universal Soul. A crystal is no longer an assemblage of inconceivable molecules, arranged according to a purposeless law by a causeless force; but it is a living soul of some kind, and its properties can be understood and explained on this hypothesis. Modern science has so far not contributed to the real interests of man, but has only complicated his external life; and this is because it deals only with the mathematics of Nature, viewing the universe as a mindless mechanism. But, taking conscious and intelligent life as the basis of all creation, we shall find that difficulties and contradictions disappear, and have a science that will be at once beneficial (in the true sense) and consistent.

Or take music. Instead of being a form of sensuous pleasure, or an incentive pursued instinctively in ignorance of the real source and meaning of that incentive, music appears as one of the arts by which the beauties and harmonies of soul-life may be revealed. It thus acquires a purpose and can be cultivated and used intelligently instead of being a chaos as at present.

And so we might go on enumerating the various departments of culture and enterprise and indicating the way in which they are illuminated by being viewed from the Theosophical view-point. All work, in fact, acquires a new meaning when done in the spirit of a craftsman using a divine art of creation, and not for bread or money. H. T. E.

Man the Microcosm*

EVERY man who seeks to obey the golden aphorism, "Know thyself," finds in his own nature reiteration of the world at large; he finds it, both physiologically, in his body, and spiritually, in his soul. Man's body contains the elements of all knowledge. Its chemistry is wonderful, and embraces all chemistry. Its geography is equally so; its seas and rivers are even more wonderful than those of the earth; its temperature contains the whole theory of combustion. All knowledge, all taste, all sense of right and wrong, is comprehended within the sphere of the microcosm, man. He who knows man thoroughly, is both learned and scientific, and what is better than either, he is truly the wise man. In man, all the powers and realities of the universe are concentrated, all developments united, all forms associated. Man is the bearer of all the dignities of nature.

There is in nature no tone to which his being is not the response, no form of which he is not the type. The human organism is the whole Kosmos, with its life infused into the individual. Man's organization embraces all; he is the world's self-surveying eye, the world's self-hearing ear, the world's self-renouncing voice. Hence he is termed by Goethe the plan of creation; by Novalis, the systematic index to nature; by Oken, the complex of all organizations.

Of all subjects open to the human mind, it follows that the unity of man with Nature is the most lofty and instructive. If true that he is one with it, then the study of man must needs be the study of all nature; and conversely, that of nature must be a microscopic view of man, free access to every side and aspect of him. No subject defines so vast a circle. It embraces the whole of metaphysics, and the whole of the philosophy of language, which is equivalent to saying the entire range of the correspondence of things spiritual with things material. It embraces the whole of zoology, of botany, and of the sciences of nature in general, making all things fill with life, and bringing all into an unexhausted fellowship. In every sense of the word, it is self-knowledge.

* *Life, Its Nature*, etc., by Leo H. Grindon, Lecturer on Botany at the Royal School of Medicine, Manchester.

The City of Eternal Spring

Reports from many of our eastern and central cities speak of a wave of prostrating heat passing over certain districts. Californians always feel that they have an unusually good share of Nature's blessings when such reports arrive. A country of perennial spring time has always been the dream of most men, and our southern Californian climate is practically that. The changes in temperature are so small, that a fit name for San Diego might well be the "City of Eternal Spring." STUDENT

A Visitor's View of Point Loma

MR. F. J. DICK, correspondent for several publications in Europe, is now visiting Point Loma. In one of his recent publications, he speaks most enthusiastically of the Point Loma Bungalow and Tent Village. Mr. Dick says:

"The Point Loma Bungalow and Tent Village is beautifully situated on spacious grounds, commanding extensive views of San Diego, the bay, mountains and ocean. Here are large, commodious tents, laid out with ample space between them, and a large Recreation Hall near the entrance, with upper promenades and galleries. It is hardly possible to convey an adequate idea of the beauty of this interesting tent-home and its surroundings. One noticeable feature on the Village Grounds, is the refectory, nestling in a wood of cypress and mulberry trees. On the grounds there are lawn tennis, basket-ball, and croquet courts, and garden seats and swings. The grounds are laid out in such a way as to afford all possible comfort to the people who occupy these pretty little homes. One finds here a refined and ideal home-life awaiting him, with the added charm of the most beautiful situation, the purest air, and the most equable climate obtaining anywhere in the world. The boulevard, running down from the hilltop, leading to San Diego, has been broadened and greatly improved. Mr. A. G. Spalding, who occupies his beautiful home on the Point Loma Homestead grounds, has, at his own expense, for the benefit of Point Loma and San Diego residents, greatly enhanced the beauty and service of this road, by adding to the width of it, to such an extent, that it is now 40 feet wide. The oil-hardening process is being used on this road. The pleasures of driving and cycling will thus be added to the amenities, for this means perfect freedom from dust. Loma Homestead, just across the boulevard, stands out as a most imposing structure. Its background of blue sky and Pacific Ocean, with its beautiful gardens and drives, makes a picture an artist might dream of.

"It is plain that Point Loma and San Diego are united in a common interest. The city of San Diego is undergoing a great change; an increase of population and general commercial activity are advancing by leaps and bounds. There surely is a great future for this part of California."

Kurodani Graveyard, Tokyo, Japan --- Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week shows a view of the Kurodani Graveyard at Tokyo, Japan. In studying Japan, and the customs of the Japanese people, one finds so many interesting points for consideration. The contrast between an European or American graveyard, and one in Japan, is striking. The gruesome and drear picture of mounds, under which lie the bodies of the so-called dead, was always an unwholesome suggestion.

The idea of putting the remains of a beloved one under the ground, and closing it in, never did appeal to man's spiritual hopes. Now, while the Japanese do bury their dead, sometimes, they have a way of suggesting companionship in memory. Close to the suburbs of the cities of this people, on high terraces, out at the foot of their woodland hills, they place their carved tributes in stone, in memory of their so-called dead. There are no suggestions in these Japanese burial places, of the form beneath the ground. There is, even in the cold marble and granite they erect here, more suggestion of the unbroken link with their loved ones.

Just down the hillside is the city of Tokyo, with its simple busy life of sunshine and happiness. Here, at the Kurodani graveyard, the birds sing all day; and there is very little in the whole picture to make one feel the atmosphere of death.

English and American Masons Foregather

THE fittingly cordial relationship between the Masonic Lodges of Great Britain and America will be much strengthened by an official visit that is about to be paid to the Grand Commandery of the United States, at its Triennial Conclave, by some of the highest officers of the Grand Priory of England and Wales. The visitors are also personal representatives of King Edward and the Duke of Connaught. They will be guests of the Grand Commandery of California, and will receive the fine hospitality and courtesy for which that body is famous.

Masonry has a great work awaiting it in the future, as it has a great record from the past. And the closer that Masons everywhere now draw together, the sooner will that work be reached and the more effectively will it be accomplished.

Some Views on XXth Century Problems

The Divinity Student as Journalist

THE President of the Chicago Theological Seminary thinks it would be a good thing if divinity students took a short course as journalist reporters, so as to get a badly-lacking touch of practical human needs. The idea seems good. But would the best of them, the most practical and energetic, consent in due time to leave their vivid journalistic life for the cloistered pulpit atmosphere—which is, nevertheless, exactly where they are needed? If they would, then the pulpits which they subsequently filled would hear sermons very unlike the ordinary, sermons that touched practical life and its needs at every point, and owed not one item of their contents to the nightmare-reveries of Athanasius or Calvin. And we should look for some startling changes in The Creed if these men met as a Synod to revise it.

They would probably spend little time in telling their hearers how they, as individuals, were to be “saved,” but much in telling them *how to save the people outside*. They would teach that the Christian life required seven days in every week to live it properly, and that it required its professors to give time, money and work to the betterment of any and every condition about them that needed bettering, to be a special kind of business man, a special kind of voter and citizen, a special and most remarkable kind of politician. And they would express in strong terms a well-based opinion that no one would ever get “hereafter” any more of Heaven than he had previously made around him, or tried to make around him, *for others*, here. They might even be so inconveniently minded as to require that members of *their* churches should give evidence of filling this bill.

How many of such members there would be is another question. The pulpits must touch the living world of men with its needs and pains, or the world will presently pass them by as a belated institution.

It is *this* world whose needs are so urgent. And whoever will work to relieve them will find a creed growing up in his heart which, because it is beyond all utterance, is forever safe from crystallization into dogma.

C.

The Limitlessness of Modern Credulity

THE English clergyman claiming to be a Reincarnation of Jesus Christ, the Rev. John Smyth-Pigott, is still able to command a fit circle of worshipers. He has just re-emerged upon public attention by holding a séance of the believers, who seem to have gathered from many quarters of the globe.

Is there *no* limit to human credulity? We can understand that as there was already an Elijah and a John the Baptist (indeed, two; one, we noted, subsided into a lunatic asylum about a week ago), it was necessary to “go one better.” But that the man should be *accepted* at this valuation—!

We await the claimant to a still Higher Identity. There was one such, but he died about a quarter of a century ago.

Claimants who have no other claim to greatness than that of their pretensions are posing as reappearances on earth of this or that great personality of the past. We have met many Marys (of Scotland), many Joans of Arc, and two Shelleys. H. P. Blavatsky was not dead a year before an Englishwoman of some notoriety, who calls herself a Theosophist and permits her worshipers to regard her as Hypatia, professed that she knew a youth (in India) in whom that great teacher had incarnated—which, by the way, would seem to the uninitiated to imply two souls in the same body. Since then it has been reported that H. P. Blavatsky has incarnated in three other persons and been born as an infant in at least two places! The admiring world is invited to believe this on the authority of the three persons and the two pairs of proud parents. We doubt not that all of these claimants will in due course have a circle of abject worshipers, abject listeners to rubbish talked in the name of one of the world’s wisest and strongest teachers and reformers, and that they themselves will ultimately find a home in an insane asylum. Every good and great thing has its counterfeits; but is the great thing itself responsible for them?

Higher Criticism and Textual Criticism

IT is no uncommon thing to find these two confounded by those who know better; and the misuse permeates largely our periodicals and newspapers. A liberal attitude toward the criticism of the text is sometimes spoken of as the “higher criticism”; and in like manner a liberal, advanced, unprejudiced treatment of the subject matter goes by the same name. The object of textual criticism is to find out the actual words of the author, by detecting and removing errors in the text. The higher criticism has to do with the subject matter, whether the manner of treating this be ultra-orthodox, or ultra-rationalistic.

In the matter of textual criticism we find a very strange state of things. Those called conservatives are the advocates of modern manuscripts; whereas the advanced or liberal critics are the real conservatives, *i. e.*, they place more value on a few early manuscripts than on a basket full of copies, full of errors in transcription, which show a suspicious agreement with each other, and which belong to the Tenth century, instead of the Fourth or Fifth. If the words of Jesus and of his early followers have any value, one would think that those copies of their sayings which bring us near to the apostolic age should be prized more highly than those made during the Dark Ages. Yet we find, ever since the first printed copy, that the great preponderance of ecclesiastical influence has been in favor of the corrupt manuscripts of recent date, rather than the early manuscripts which must represent approximately the original text.

In regard to the criticism of the subject matter (the higher criticism) we find a similar state of things. The liberal scholar, the advanced critic, who seeks to restore the Christianity of the First century—the teachings of Jesus—is regarded as an innovator by those who call themselves Christian, but who prefer the creeds, the decrees of councils, or bulls of popes, to the words of the great founder of Christianity.

Textual criticism must prepare the way for the higher criticism, that of the subject matter; for we must know what an author says before we can discuss what he means. According to a well-known authority (Westcott and Hort) textual criticism is “always secondary and always negative”; by which it is meant that the work of the critic begins only where different readings are to be found, or where there is some manifest and undoubted mistake, and that the process is to detect and eliminate errors. It has nothing to do with what the author should have said, but only with what he did say, as the best text records it.

The higher criticism, that of the subject matter, should rest on the basis of a pure text to begin with; and from that proceed to discuss the author’s meaning. If the critic is learned, and seeks, without prejudice, to bring all the resources of modern knowledge to bear upon the elucidation of the author in question, he deserves the name of advanced critic. But if he tries to make everything fit into some creed or church teaching, then we say he is an unprogressive or orthodox man.

What Are “the Classics”?

“THE Classical Association” has been formed in England to defend the menaced position of the classics—meaning Greek and Latin—in modern higher education. The classics, said Mr. Mackail, speaking for the Association, appeared before the world “not, as once, candidate and crowned, but in a garb, an attitude of humility, almost of supplication.” This the Association proposes to correct:

The classics included certain specific things which were unique in the world, and without which human culture was, and always must be, incomplete.

To a certain extent we agree, but have two comments to make: First, that the *spirit* of the classics is not got at by, nor taught to, the average student of them. He is usually too absorbed in, and wearied by, the technicalities of the grammar of the languages, to get beyond and live in the consciousness of the writers and people that used them. The barbs are made unnecessarily numerous and repellant in the fences. Indeed the fences seem to be often regarded as the very goal.

And secondly, why should not “the classics” include *Sanskrit*, the elder and more august sister of Greek and Latin, the key to a far vaster and profounder literature?

Art Music Literature and the Drama

The Need of a True Philosophy in the World of Art

IN all days, because artists as a whole have not lived up to their possibilities, the impress which they might leave upon their generation and their time has been forgotten or overlooked. Why? Mainly because there has been such lack of true fraternity among them. There have always been noble souls and many of them, but, it must be confessed, also many, just as is the case in all professions, who have been swayed by ambition, whose motive power has been to gain money, or fame, and who are swept off the right path every day and sometimes every hour, by jealousy. There are few indeed whose motives are really selfless and who live so wholly in the higher phases of their art that the lower has no hold upon them. Looking at these one can readily see why some who have had magnificent command of technique have left so little real impress upon their age.

Hogarth comes before us as one of those who might have done so much more for his fellowmen than he did, had his point of view been something different. He has always seemed to me a sort of artistic Voltaire, a cynic, a man whose hand was stretched out, not in compassion, but to point the finger at his fellowmen as if they were so many targets. He himself preferred to be called author rather than painter, and yet in spite of the deep protest of both his life and his work against the follies of the time, he is remembered not for his compassion but for his cynicism.

Sensitive to beauty, it was Hogarth who wrote a work entitled *The Analysis of Beauty*, and it was he who declared the serpentine line to be the "line of beauty," you remember. Yet he was above all a cynic. His battle with the art brokers and so-called art connoisseurs of the day was a splendid one, but the results were insignificant because of his positive genius for rubbing people the wrong way. He had a great message for humanity, but he knew not how to impart it. Exceedingly shrewd in his estimate of human nature on certain lines, he was exceedingly stupid on others. "The gentle art of making enemies" he learned at an early age, and characteristic was his method both of attack and of defense.

His life, looked at in the light of Theosophy, gives us the key to many a problem, and the answer to the old, old question, "Why do not our artists exercise a greater influence upon all life than is the case?" The world is waiting for the inspiration of a new art spirit. The hearts of men are hungering and thirsting for the Beautiful. Yet, so shut in are we by outworn habits of thought, so veiled are our eyes by misconceptions and by fears, so dulled is our perception to pure beauty, we no longer have the power to discriminate between the true in art and the false. We need not more schools of art, but we do need more souls aflame with a great compassion. We need not more technique, but we do need more fraternity. We need not more splendor, more glamour, but we do need more discrimination, that man may better understand his brother man—that the soul of things may not wait too long for its revealing.

BENEATH these flowers I dream, a silent chord. I cannot wake my own strings to music; but under the hands of those who comprehend me, I become an eloquent friend. Wanderer, ere thou goest, try me. The more trouble thou takest with me, the more lovely will be the tones with which I shall reward thee. — Schumann

The Motives of Millet, Painter of the "Angelus"

WILLIAM M. HUNT, one of our great American artists, has the following to say of Millet, who was at one time his teacher. Comment is needless. The life is the real commentary—the Soul gives forth its own lesson:

Millet's pictures have infinity beyond them. Couture's have a limit. I am grateful to Couture for what he taught me, but it was well that I left him. I took broader ideas of humanity, of the world, of life, when I came to know Millet and his works. His subjects were real people who had work to do. If he painted a haystack, it suggested life, animal as well as vegetable, and the life of man. His fields

were fields in which men and animals worked; where both laid down their lives; where the bones of the animal were ground up to nourish the soil, and the endless turning of the wheel of existence went on.

He was the greatest man in Europe. I give you his poetical side; but he was immense, tremendous—so great that very few could ever get near him. He read only such things as would help him; knew Shakespeare and Homer by heart. He was like Abraham Lincoln in caring for only a few books. He loved *Hamlet*. I've found him laughing over the *Clouds of Aristophanes*. It was splendid to hear him read the Bible: "*Now the famine was great throughout all the land.*" "What a description that is!" he would say. "What breadth there is in it! It could be expressed in no other way." And yet people say that the Bible cannot be translated into French! And to hear him read the Book of Ruth! He saw it all from a painter's standpoint. He is the only man, since the Bible was written, who has expressed things in a biblical way.

When I first saw his pictures in Paris I was walking through the exhibition with one of my friends, and we were delighted with them. No one else cared for them. They were called "*des tristes affaires*." I was in Couture's studio at that time. He cared nothing for them. I went to Barbizon, where Millet lived, staid there for two years, and was with him all the time. I found him working in a cellar, three feet under ground, his pictures mildewing from the dampness. . . . It will give you some idea of the low prices at which his work at that time was sold to know that for "The Sheep-Shearers," the most expensive picture of his that I bought, I gave ninety dollars. . . .

FROM DRAWING BY GUERCINO
Academy of Fine Arts, Venice

FOR, break through Art, and rise to Poetry.
Bring Art to tremble nearer, touch enough
The verge of vastness to inform our soul
What orb makes transit through the dark above,
And there's the triumph!—there the incomplete,
More than completion, matches the immense.—
Then Michelangelo against the world! — Browning

ACCORDING to one of our daily papers, Biondi's plastic group, "Saturnalia," has been rejected by the Metropolitan Museum of Art in New York City, not on the ground that it was not good art, but that it was an offense to public morality. The rejection was based on the opinion of a committee of the National Sculpture Society. It is stated that the group was on exhibition in Paris for some time and was there awarded a prize. There is food for reflection here. Technically, the work of the sculptor—as far as a photograph is able to reveal—leaves little to be desired. Morally, the whole group is very, very far from elevating in its influence. It represents a drunken and bestial crowd of revelers, so bestial that there is not remaining even a vestige of a hint of that inspirational something which wine sometimes, by certain poets, has been supposed to stand for. The figures are fully draped, so that one who criticises could not be accused of prejudice against the nude in art. "Saturnalia" may have been awarded a prize by a jury of technicians, but is there not something more to art than mere technique? Is there not a higher morality for which art should stand, the laws of which no artist should dare to offend? And is it not glorious that the key-note has been sounded at last? The time has come. STUDENT

OUR LIGHT MUST SO SHINE THAT THE EVIL IN LIFE WILL FLEE AWAY. & OUR BROTHERS, WHO WALK IN DARKNESS, WILL SEEK OUR PATH, BECOMING A LIGHT UNTO THEMSELVES & HUMANITY.—*Katherine Tingley*

This Point Loma in California

BUT now farewell. I am going a long way
With these thou seest—if indeed I go—

To the island-valley of Avalon;
Where falls not hail, or rain, or any snow,
Nor ever wind blows loudly.—“The Passing of Arthur,” *Tennyson*

EASIER it is to believe that we are down in the land of the Arabian Nights! This brilliant sky and these snowy walls belong to the land of Pittsburg and Chicago! Why, look at the ground at your feet, and see the Magical Carpet on which you have been brought into this land of wonder and mystery. There you have the true Persian color and design: the deep rich crimson and the soft dust-gray and the pale yellows and greens, close-cut and close-clipt. There is no mistaking that design. And look at those domes of light swelling up into the turquoise sky! If those are not the domes of the Grand Vizier—and yonder Aladdin's lantern—may my eyes never behold them!

It is a land of wonder. The old Indians felt its beauty, and told it to their children when they handed down the legend of the Grand Canyon. Death had taken away his best-beloved, and the old chief mourned and would not be comforted. Finally even the gods had pity for him, and told him if he would never show another the way, they would lead him to the Happy Land where lived his long-departed. So down the canyon they led him, with eyes bound, where no other human foot had ever trod, and at last he was brought in safety to—California.

Not even in these later days has all of poetry vanished from life. Other seekers for the Happy Land have come and have found it at Point Loma. Here are ideal conditions. Earth and sky and sea pour forth their treasures of flowers and fruit and sunshine and wine-rich air. All that the senses need is given in beauty and fragrance. And that other necessity for happy living, a busy life—not strenuous nor overcrowded, but full of healthy human interest, is furnished in the work of the school. For each there is a part and a place. Teacher and pupil alike seem imbued with helpfulness, so that the interest centers in the thing done, and the doer and his manner of doing become subordinate.

Such souls find it easy to express themselves in melody since all is attuned to harmony. Perhaps this is why even the children at Raja Yoga can render with such exquisite taste and melody these songs which seem to come forth as naturally as the birds sing.

One being human, and recently from the outer world, looks for some slip of taste, for some poor workmanship, but it is not in the Temple nor in the Mart. Through it all there has been at work an Artist, and artist-souls have been attracted hither, as like draws unto like.

The early day has a Greek beginning. First comes the culture of the body callisthenics in an amphitheatre so placed in a cleft running down to the sea, one wonders if he has not been translated back to Greece in Homeric days. Then follows the busy day of healthy, wholesome work of hand and brain, work done for the love of doing, and beautiful and perfect because of the pleasure in its doing. At nightfall there is the hour of music, and such music as seems impossible for amateurs—many of these mere children. Delicacy of expression, musical instinct and perfect blending of voices—all this do these little ones exhibit. Then comes the long, restful night, with pure air, brilliant stars and sky, and perfect peace. This is Point Loma. ANNA L. HILLIS

MRS. ANNA L. HILLIS, a gifted woman, wife of the distinguished preacher Dr. Newell Dwight Hillis visited for several days at Lomaland. Mrs. Hillis was so thoroughly in sympathy with the life and work of the students and teachers here that she gave voice to it in above article. Mrs. Hillis won the love of all with whom she came in contact during her brief sojourn, and it is their sincere wish that she may repeat her visit.

Our Experiment

WHILE metaphysicians are wrangling over what mind is and what it is not, some declaring thought to be the result of the vibrations of brain matter and others denying it; while scientists are “measuring” thought-force, brain fatigue or trying to weigh the amount of energy used in thinking, memorizing, etc., while the scientific world, in short, is experimenting with mind and its functions much as a vivisectionist might with the entrails of his victim, an experiment of a very different order is going on in Lomaland, an experiment in which the mind is recognized as the servant, not the master, as most of our scientists now regard it.

Theosophy is a new science, the Science of the Soul. Our experiment, as students, consists in making a constant appeal to the soul, while in life as it is usually lived there is a constant appeal, first of all, to the intellect. The effect is not to decrease the strength of the mind, even though we are not engaged in so many “mental gymnastics,” but to increase its power, to open it to the influence of a new force, to bring it under the sway of the higher nature. As the powers of the soul are infinite, a mind dominated by this new force gradually develops capacities as yet unknown. The Theosophist well knows the occult law that nothing can rise to a higher level save through the assistance of something that is already on that higher level. If the world continues to regard mind as the highest faculty, and its cultivation, separate from the moral and spiritual being, as the most important object in education, it will never reach a higher than a brain-mind level. That is self-evident. The further cultivation of the brain-mind may give us new facts, new comforts, new discoveries, new inventions, new confusions and complexities, but of what avail will they be if we keep on using them for the same selfish purposes as of old, for mere personal indulgence?

The mind is “the slayer of real knowledge,” strange as it may seem, and as we turn the light of self-examination upon it, too often we find it full of the cobwebs of preconceived ideas, woven by the errors and indolence of the past. We find ourselves unable to receive a single new truth or a higher idea without examining it by the light of our old mental notions and previous misinterpreted experiences. Is it any wonder that we are unfit to receive the real truth?

If this could be overcome by the race as a whole, genius would become universal, instead of the exception, for the soul would have a free healthy brain-mind as its instrument. We would not have to blunder and worry our way along the path of knowledge, as we now do, taking years to learn what we might quickly and infallibly know by intuition. We would not have to wait centuries before some genius here and there makes a new discovery or gives us a new music or a better school of art. That is what Raja Yoga training does for the children, but we students may share this if we will take the mental “kingdom of heaven” by violence, stop weaving new mental cobwebs, stop living in old mental pictures, stop listening to the echo of old and erroneous ideas and open the mind to the stream of new ideas constantly endeavoring to flow into it from their source, the soul.

STUDENT

PROFESSOR ASO, Dean of the Japanese Women's University of Tokio, is in America for the purpose of studying the educational methods in use here. The dean is reported to have said: “The Japanese have learned that a weak and sickly woman must be an object of misfortune. It is my purpose to learn the methods employed in America in developing the superb specimens of womanhood for which this country is noted.” The Japanese Women's University was founded in 1901 by President Nruise and Dean Aso. It is under the special patronage of the Empress who donated 2000 yen towards its establishment. This was the first contribution for such an educational work ever made by a Japanese ruler. Some of the Japanese women the Empress sent to this county to be educated, on their return to Japan have proved most efficient teachers.

Dress

IT has been said that woman's dress mirrors the thought of the age. Surely, today, nothing better pictures the world's unrest, its triviality and even sensuality. The tyranny of Fashion is responsible—Fashion and her twin sister, Commercial Interest. And the two are adepts at degrading art, drama, even our social life in most of its phases. Fashion and Art have not always been sworn foes. They were friends and allies in Egypt and in ancient Greece and in ancient America, but that is not the case today, save among occasional primitive peoples whom we are wont to call "savages."

Fashionable dress today concedes nothing to art or to simple beauty, but concedes everything to novelty and display.

As women of Lomaland we are working out in our dress a two-fold ideal, that of the Unity of Soul, and that of its Individuality. The first may be expressed, as it was expressed in Greece and Egypt, by a dress which, foundationally, is uniform. This we have in our "Students'

Corean Women

MANY of the tales which come to us regarding the Corean women are extremely interesting. One of the most attractive is given by Captain Casserly, relating to the military cloak which every Corean woman wears. It is a long green cloak thrown over the head hanging down over the shoulders.

A former King of Corea once gave a banquet in the palace of Seoul to some of the officers of his army. Among them, unknown to the King, were a band of conspirators who aimed to take the life of the King at this banquet, and seize the throne. A number of loyal Corean women, hearing of the plot, went in a body together, gained admittance to the palace, and managed to secure the military cloaks of the officers, which had been left in an antechamber. Wrapping themselves in these cloaks, they stole into the banquet hall unperceived by the officers, and while some of the women threw the cloaks over the heads of the officers and held them securely, the other women seized the King and hurried him

WOMEN STUDENTS, POINT LOMA, CALIFORNIA—EARLY MORNING CALLISTHENICS IN THE AMPHITHEATRE

Dress," our "Students' Hat," our "Drill Costume." The latter ideal each must work out by adapting the simple and uniform dress to herself, making it in some way expressive of her individuality; and also by the designing of other gowns which, though not uniform, still follow the lines that the artist loves and do not betray all that we hope for in the future.

Richard Wagner designed the costumes of the actors in his great dramas down to the minutest details. That is the secret of the unity that he achieved. Lohengrin, Elsa, and the rest, so perfectly adapted to the characters is the dress, that if one thinks of it at all one feels that they could not possibly have been dressed otherwise.

Less of individuality and more of unity was expressed by the pure Greek style, which fails to satisfy us today, because it demands perfect physical health and beauty on the part of those who wear it. Where is this to be found among the womanhood of the world today? Where, save in Lomaland? Here a beginning has been made, based upon a knowledge of the divine laws which govern mental, physical and spiritual growth. It is in Lomaland that the true ideal of dress shall become a living realization. It is out of Lomaland that a higher type of woman, a nobler womanhood, shall go forth into the world to restore Pure Art to the place which Fashion so long ago usurped. STUDENT

THERE are many standards of beauty as the world goes. In New Holland a unique standard exists, out of respect to which the women cut their faces and arms with shells and, keeping the wounds open, thereby assist nature in forming great scars which are considered very ornamental.

to a place of safety. The King out of gratitude to these brave, loyal women, decreed that from henceforth all women should wear the military cloak thrown over the head as a mark of honor. E.

Women Ride Donkeys in Egypt

THE ancient custom of riding on donkeys is still followed by the women of Egypt. While the animals are not large, still they are well trained and manage to carry their riders long distances with considerable speed, and safety. The women especially use the donkeys for all sorts of conveniences. They ride them to market, to do their shopping, and on long journeys.

Especially fine asses command as high prices as good horses, and are used by the wealthiest citizens. Donkeys are able to get about the narrow streets more easily than horses, and on the broad highway can outstrip the carriages. And what is of paramount importance is that no great skill is needed on the part of the rider, as the donkeys are docile, and easily handled. This would peculiarly attract women who are not experienced riders. M.

THE daughter of the Chinese Ambassador is quoted as having said:

In my country all girls of good family spend years studying the classics. There is a text-book called *The Three Hundred Poems*, which every school girl is expected to know by heart. So it will be seen that we devote a great deal of time to literature, and perhaps this tends to give us a taste for letter writing. My greatest pleasure is in writing letters to my friends in China.

The Extinction of the Tonkawa Tribe of Indians

A NEW YORK journal is lamenting the coming extinction of the Tonkawa tribe of Indians. For various reasons, their numbers have now come down to about a thousand. According to their own traditions, the earth was once covered with men of their race. But a great flood came, and so scattered even the remnants that they have never been able to come together again.

When the first European explorers came, it is true that the Tonkawas were the most powerful tribe of Indians in the southwest of the continent, a fact in line with their own legends. And they also appear to have been the most civilized. They were fine weavers, and they kept lengthy and most curious historic records by means of strands of many-colored beads. Of marriage they held the strictest views. Infidelity was punished by loss of the ears; if it occurred again, by cutting off the nose; and for the third offense, death.

Like nearly all peoples, they believed that the earth arose out of water. And as we have seen, they had the other as common legend of a great deluge. Hardly a tribe of Indians is without this latter. Is it a legendary reminiscence of the sinking of Atlantis? According to some of these accounts, nothing living escaped. This was the belief of the Dakotas, the Nicaraguans, and a tribe of Brazilian Indians, as also the Aschochimi of California. In other accounts, more or fewer people succeeded by various means in escaping, so that the human race was continued. Some of these legends have a very curious resemblance to the ark story of Genesis. So, for that matter, have many of the Indian legends of the origination of the earth from water. These and other parallels to both Old and New Testament Christianity greatly horrified the early proselytizing Catholic Fathers, and caused them to accuse the Devil of plagiarizing from Christianity in anticipation! For example: In Genesis we have the Spirit of God moving on the face of the waters. The Hebrew word translated "Spirit" is *Ruach*, literally *wind*. Here is the Quiché account:

This is the first word. (?Logos.) There were neither men nor brutes; neither birds, fish, nor crabs, stick nor stone, valley nor mountain, stubble nor forest; nothing but the sky, nothing but sea and sky. There was nothing joined, nor any sound, nor thing that stirred; only the silent waters, only the quiet ocean, only it in its peace. Nothing was but stillness, and rest, and darkness, and the night, nothing but the Maker and Molder, the Hurler (of the thunderbolt), the Bird-Serpent.

Over this sea came a mighty wind, Hurakan (hence our word *hurricane*), and the earth arose. The Nahuatl of Mexico not only had a deluge, but an ark in which only one man and his wife (Nata and Nena) were saved. Some of these myths are very finely couched, with more than a touch of philosophy. Indeed, Brinton remarks:

Is it that hitherto, in the pride of intellectual culture, we have never done justice to the thinking faculties of those whom we call barbarians? Or shall we accept the alternative, that these are the unappreciated heirlooms bequeathed a rude race by a period of higher civilization, long since extinguished by constant wars and ceaseless fear? Or that they have been passed from hand to hand to America from the famed and ancient centers of civilization in Asia and Egypt?

And he quotes Schoolcraft, who, speaking of American Indians, says:

There is a subtlety in some of their modes of thought and belief on life and the existence of spiritual and creative power which would seem to have been eliminated from some intellectual crucible without the limits of their present sphere.

In other words, they are the remains of forgotten civilizations. And if, in the strife of perhaps centuries of centuries, they have lost the art of writing, their wampum belts, their knotted cords, and their other mnemonic devices have enabled them to hand down from generation to generation no small number of scraps and indices of history dressed as myth or legend, from which we can recover something of their past.

Nor are the races, as a whole, dying out. Tribes like the Tonkawas and others are disappearing, but the latest investigations show that as a whole their numbers are at worst stationary. Some increase, to keep pace with those that are diminishing. As a whole, they do not show this

infallible mark of a worn-out race. In time, some of them may yet lend their special note to the chord of civilization. STUDENT

The Sublime Repose Shown in the Statuary of Egypt

READING in my Ancient History I find the following remarks about the painted scenes on ancient Egyptian sarcophagi and temple walls:

The proportion, form, color and expression of every statue were fixed by laws prescribed by the priests, the effect most sought being that of immovable repose. All Egyptian statues have a stiff, rigid pose.

And in another Ancient History:

A strange immobility, at an early period, attached itself to Egyptian art, due to the influence of religion. The artist, in the portrayal of the figures of the Gods, was not allowed to change a single line in the sacred form. Hence the impossibility of improvement in sacred sculpture. Wilkinson says that Menes would have recognized the statue of Osiris in the Temple of Amasis. Plato complained that the pictures and statues in the temples in his day were no better than those made "ten thousand years" before.

A better appreciation is, however, given of the size of the statues; for instance, of the two colossi of Amunoph III at Thebes, forty-seven feet high, each hewn from a single block of granite, it is said:

The appearance of these gigantic figures, upon the solitary plain is peculiarly impressive. "There they sit together, yet apart, in the midst of the plain, serene and vigilant, still keeping their untired watch over the lapse of ages and the eclipse of Egypt."

It is evident that this fixedness and changelessness was the very genius of the Egyptian art. Can we regard it as a defect? Perhaps, in later degenerate times the sublime virtue of constancy may have dwindled into unintelligent conservatism, and eternal duration into stolid inertia; but repose and eternal vigilance were the original ideals. And even now, when this vast spirit has long vanished from the earth, antiquarian enterprise, conscientious and faithful if unintelligent, preserves the forms in which it was expressed; so that any aspirant possessing a germ of aspiration to those sublime ideals may feel his spirit quickened by contemplating the forms and endeavoring to identify himself in imagination with the feeling of the sculptor.

In museums we have the opportunity, right in the midst of the meanness and din of modern life, to retire and regard those mighty emblems of ancient Egypt, or the Assyrian sphinxes that gaze out sublimely with their great calm eyes; and they speak to us of a life that was deep and steadfast and knew not the restlessness and disease of what we now call life.

It is customary in books on history to regard the Greek art and spirit as an improvement on the Egyptian, and to trace, through Rome up to modern times, a path of progress and enlightenment. But we take, in great measure, an opposite view. Though the destinies of mankind continually advance as the cycles roll, and though races pass through periods of darkness that they may finally emerge into still greater light; yet we can trace the gradual diminution of glory, and the shrinking of ideals, and the loss of knowledge, from the time when this Aryan race first appeared in its God-like glory on the planet, to the nadir of its life-cycle.

Thus the ancient Greeks, though they may have excelled in beauty, in elaboration and in the portrayal of motion, had lost the sublimity and massiveness of the Egyptians.

We are the heirs of all past ages and can regain from each what was best in each. May the relics of ancient Egypt inspire us with a greater patience and steadfastness, and remind us of the profound serenity of the Soul. H. T. E.

UNDER date of June 28th a London correspondent of the St. Louis *Globe-Democrat* writes that excavators in the Egyptian city of Oxyrhynchus "came upon a manuscript which contained some further sayings of Jesus. These, together with a 'fragment of a lost gospel,' they have now given to the world in a popular form abridged from the publication of the texts in the Oxyrhynchus papyri, part 4. The newly discovered manuscript of the sayings of Jesus differs in form from the earlier one. The earlier manuscript consisted of a leaf belonging to a well-written volume. The recent one has a less worthy setting, and the sayings are written on the back."

Nature

Studies

Intelligence Displayed by the Sand-Wasp

AN English writer describes—in *The Pilot*—a little nature-scene which any one who lives within range of a sand-stretch may easily see for himself. It is the conduct of a sand-wasp arranging for the well-being of her egg or eggs. There are several species of these, and each has its own ways of working.

The largest, the *Ammophila* (sand-wasp), excavates a hole in the sand about three inches in depth. It occupies her a good hour, and is hard work. The sand is carried out from the burrow in her mouth, and laid down at either side of the hole—never above, for it would then merely fall in again. The orifice of the little channel is wide, and the path inward steadily narrows. The object of this is presently clear, for when the hole is finished to her satisfaction—for she is very particular about details—she searches about for, and finally discovers, a little flat stone smaller than the opening. Carrying this in, she makes a lid of it, closing the channel about an inch from the mouth.

This inch she fills up with sand-bits; then walks swiftly round and round the hole, scattering the loose sand so as to make it look exactly like the rest of the neighborhood; and finally she cuts little bits of dried grass to lay them about promiscuously, so as still further to complete the deception. She now takes a minute survey of the spot for a radius of about a yard, that there may be no difficulty in finding it again—and departs, it may be for half an hour. When you are beginning to think she has forgotten all about it, she suddenly whirls into view carrying a grub or caterpillar, often much larger than herself. The hole is carefully reopened, the lid removed, the grub crammed to the bottom along with an egg, the lid replaced and all is finished as before. When the egg hatches, the wasp-grub finds a copiously-supplied larder that will last him as long as he needs it.

Two or three of these holes are made, and then the mother, having done her full duty by a posterity she never thinks of again, departs to enjoy life.

Pompilus Viaticus, another and smaller sand-wasp, and not perhaps so handsome as the flashing black and gold *Ammophila*, pursues a set of similar maneuvers. But she shovels the sand out from her hole in a shower behind her, exhibiting however the same incessant energy as her cousin. And in place of a grub she procures a certain spider as food for the product of her egg. She does not usually need to go so far to find it as *Ammophila* her grub, and consequently does not provisionally close up the hole. But she returns every three or four minutes to make sure that it is all right. Moreover, she stops a moment now and then to gossip and play with any other *Pompili* that may be about. This human touch somehow arouses a friendly feeling in us as we watch.

The Oxybelus is much the smallest of the group, and closely resembles a small black fly. This admirably serves her purpose, for it is flies with which she stocks the larder of her future grub. The casual flies sunning themselves on the sand do not notice the enemy at work among them.

Believers in the omnipotence of Natural Selection might do worse than consider the case of these spiders, and especially the first. What possible agency short of intelligence could cause this insect to go through her elaborate set of operations? Natural Selection is of course a factor in evolution; but unless it be supplemented with intelligence as another, evolution must remain an incomprehensible process. We have no right to assume that our own kind of mind and intelligence is the only one that can exist. Insects may have designs and purposes in this life of which we can form no conception, and H. P. Blavatsky indeed states that they have different perceptions of space and time.

ENTOMOLOGIST

ROSETIME

by FRANK W. HUNT

TUNE'S in the world, and now 'tis time
The rosetrees through the porches climb.
The rosetrees that are near as old,
With memories as manifold
As ancient porch and roof-tree where
They breathe again the Junetime air.
White roses and red roses, they
Are comrades gossiping today;
Next to the caves they love and woo,
Ah, nearer than their forebears grew.
All through the year, in sun and rain,
Old thresholds never yet in vain
Await the rosetime, and the rose
The advent of the Junetime knows.

—Selected

Hardiness in Plants—Is It a Soul Quality?

AMONG a thousand seedling pea plants exposed to a frost, it may be that as we look down the blighted rows on the following morning, we discover just one which stands up green and vigorous. If now we take the hardy survivor and examine it with the most powerful microscope, we shall find nothing which distinguishes it from those that have died, neither will a chemical analysis reveal the slightest difference in its composition. All we can say about it is that it has a frost-resisting quality, but as to the nature of this quality nothing is known.

Mr. H. Gilson Gardner in the July *Cosmopolitan*, suggests that we are at liberty to assume that the hardy survivor has "the courageous resistant soul," and that the weaklings that succumbed were

lacking in this. The possession of this robustness is of incalculable value to mankind, for by selecting the seeds from such hardy plants and sowing them again, we may gradually develop a variety of pea that can flourish in regions far more northerly than those which can produce the common pea. In a similar way we can produce a drouth-resisting wheat, and thus bring vast areas of semi-arid land into profitable cultivation, changing deserts into wheat fields, and all because of a peculiar something called hardiness, which eludes all physical tests. Truly there are more things in Heaven and earth than are dreamed of in our materialistic philosophy.

STUDENT

Deforestation Results in Cyclones and Floods

CYCLONES, floods and climatic changes generally are variously regarded as the effect of the inscrutable will of Providence, or as the working of unalterable natural laws. The search into the meaning of statistics, going on so energetically for many years, has at last taught us the lesson of these calamities. They are penalties for our reckless destruction of forests, and for that reason recur with ever increasing frequency in the west and southwest of this country. In Brazil, as a United States Consul points out, this wanton devastation has gone even further and produced almost the ruin of large tracts of country. Famine and depopulation have necessarily followed and relief measures on a large scale have been rendered necessary. The *Brazilian Review* points out that "the drought is almost entirely confined to places where no trees now exist; while in Brejos, where trees still exist, there have been rains almost constantly throughout the year."

A good deal of this destruction of trees is wasteful and unnecessary, due to total disregard of the larger welfare. And the same selfishness stands in the way of the replantation of bared districts. "Why should I plant to benefit people I shall never see?"

AGRICULTURIST

Birds Guided in Their Flight by the Stars

DO you ever venture any conjecture as to how migratory birds manage to keep up their flight in a due north direction after night?

It has been proved that on clear nights they often "wing their northern flight" in the rarified atmosphere at an altitude of from two to three miles above the earth's surface, and in some rare cases of larger birds, at an even greater distance.

This being true, it is then clear that guidance by the topography of the country is out of the question; how, then, are they able to keep their beaks pointing towards the north pole? The scientific ornithologist comes to the rescue with the declaration that they are guided by the stars, and in support of his opinion cites as evidence the fact that when the stars are obscured by clouds the birds become bewildered and seek the ground. But, even so, we have yet to explain how pigeons, dogs, and cats, find their way home across unknown regions.—*St. Louis Republic*

Universal Brotherhood Organization

Central Office Point Loma California

THE large audience that greeted Katherine Tingley, last Sunday evening, at Isis Theatre, showed a keen appreciation of her interesting discourse. She accentuated, in a very strong way, that it was the half views of man's mind that limited his conception of the real issues of life.

Mrs. Tingley referred to how Humanity was living today, in contrast to the way Humanity lived in ancient times. A most vivid and charming picture was made by her of the old Teachers and their disciples, studying in the Temple Groves in Egypt and Athens, showing that these were close students of Nature; that they brought light and inspiration into their studies in this way. The speaker pictured in glowing colors modern Athens, in Southern California, close to the Bay of San Diego. She said that the time was coming when we should see this in full reality; that the climate and surroundings made open-air study-life practicable and attractive. The word pictures of this brilliant speaker are intensely vivid and hold the thought of the listeners spellbound.

Mrs. Tingley, in referring to the innocence of Mrs. Florence Maybrick, who has recently been freed from an English prison, pointed to the half-view side of the common law; its many imperfections; and the outrageous way in which it is sometimes applied to right wrongs. She said that the Divine Law is written in the silences that are all about us; carved in the very air we breathe; that it was in the hearts of men, but that its speech was not yet interpreted; for selfishness, cruelty and ignorance still held sway over the minds of men.

With her being deeply stirred in sympathy for Mrs. Maybrick, she said: "You who love freedom and you who have freedom, picture the suffering of this mother, shut in an English prison for fifteen years, separated from her little children—an innocent woman! Twentieth century suffering; twentieth century justice; and twentieth century religion! Oh! the pathos of it all; the cruelty and injustice of it all! Can we conceive of anything that can efface from this suffering heart the mem-

ory of all she has undergone? We may declare her innocent; we may send our heart's sympathy to her; we may protest and protest against the crime that has been done her—but we cannot free her from the mental bondage of those fifteen years; we cannot undo the evil which has been done her.

"This evil began in gossip and slander; the result of these cruelties today thrills the world with horror."

Mrs. Tingley inferred that such errors would continue, injustices would be repeated, human hearts would be crucified, until Humanity realized the responsibility of life, and its divinity. Theosophy, she said, was the messenger of light and peace which would help to undo these evils, and bring man to a knowledge of his higher self.

The speaker said that Theosophy was interpreting the Higher Law for the benefit of mankind. Most forcibly and clearly, did Mrs. Tingley interpret the same; "Oh God! My God! Thy will, not mine, be done," from a Theosophical standpoint.

Leaving her audience deeply impressed with the earnestness of her life-work, the speaker closed.

One of the pleasing features of the evening was the chorus singing of the Raja Yoga children from Lomaland. Their appearance on the stage at Isis Theatre is always the signal for hearty applause. As living witnesses for the work that is being done at Point Loma by Katherine Tingley and her students of the Universal Brotherhood and Theosophical Society, these children, whether in singing, in instrumental music, or in reading papers and making impromptu addresses, are uniformly successful and pleasing. Last Sunday evening their singing was even more heartily enjoyed than usual, and their part of the program added not a little to the general interest of what proved to be one of the most pleasing meetings of the season.

The instrumental music rendered by the students of Isis Conservatory was appreciated by the large audience, and its numbers warmly applauded.

Australasia

by the Rev. S. J. Neill
of Point Loma.

THE Universal Brotherhood, if true to its name and aims, must be international in its interests. It is concerned with the welfare of all nations and peoples, and not with one or two only. It seeks to make unity a reality in ordinary life, for Life is One. It is opposed to, and it is opposed by all "the forces" that tend to separateness and disintegration. There is nothing more conducive to amity and unity than a correct knowledge of ourselves, and of our brothers all over the world. The age in which we live, in spite of many drawbacks, tends to bring men closer together.

It would seem, from what we know of the past, that the method by which Nature works, in perfecting mankind, is to build up a nation or race; then to send forth colonists; and, finally, to bring them together again in a more highly developed life. The time and distance-annihilating inventions of the last fifty years aid powerfully in bringing men together. They are made to feel a closer community of interests, and to see that what affects one affects all.

From the dawn of history we find that the colonies, sent forth by the motherland to inhabit lands sparsely populated, developed a life of their own. In the course of time changes take place in the customs, laws, and even in the language of the new settlers. It is the family-life on a larger scale: the parents influence the children, and then as the children grow up they exert a modifying influence on the parents. The Greek colonies in Asia and Italy exerted a powerful influence on Greece. And, today, there is no doubt that Canada, America and Australasia are exerting a great influence on the parent stock.

Australasia includes Australia, Tasmania, New Zealand, and many smaller islands in the South Pacific. It is very large; it is far removed from the rest of the world; it is solving the old problems of life under somewhat new conditions; it is a portion of the world compared with which most other parts are geologically new.

Australia, before the making of the Suez Canal, was by far the largest island-

continent in the world. Australasia is nearly as large as Canada or the United States, and almost twice as large as Europe, if we omit Russia. It is the only large portion of the earth wholly in the southern hemisphere. According to the teachings of H. P. Blavatsky, with which science is coming into agreement, there once existed a great Continent in the Pacific and Indian Oceans; part of which stretched from Madagascar to Ceylon, and eastward to Australia and New Zealand.

The old forms of animal and plant life in Australia indicate its great age. An eminent geologist once told me that Australia had been separated from the rest of the world from a remote past. "It sat there in the Pacific, the sea in the heart of it, like a tub half full of water, while New Zealand sank and rose from the ocean at least twelve or thirteen times." Consequently New Zealand has a different fauna and flora from Australia, and is also as free from snakes as if it had been the home of St. Patrick! The aborigines of Australia differ very much from the aborigines of New Zealand. The New Zealand Maori arrived in his present home after many wanderings, and sojourns in island after island of the Pacific. He is supposed to have started originally from India or Egypt, and he differs much from the Australian native. The Maori resembles a fine old Roman of the days of the Republic. The Australian native is said to be a much degenerated remnant of a part of the great Third Race that inhabited Lemuria, when much of the Pacific was dry land. And, though very low in the scale of humanity, he has some psychic powers which ordinary people have not. The native of Australia was not well treated by the whites, and is rapidly becoming extinct; whereas, the native of New Zealand, in many cases, rents his lands to the white man, and lives an easy life, some even keeping a carriage. The Maoris also elect their own members of Parliament, and have some of their chiefs in the Legislative Council, or Senate, or House of Lords of New Zealand. In most countries the aborigines vanish before the advancing white settlers, but the Maori is holding his own, and shows a slight

increase. A few years before I went to New Zealand there had been wars between some tribes of the natives and the white settlers, but the races now live together in peace, and the Maori King, Mahutu, is a member of the Government. The Maori does not take the European religions very seriously. When the Leader and Official Head of The Universal Brotherhood, Katherine Tingley, was in New Zealand in 1897, she had a very important interview in Auckland with the Maori King and some of the heads of the Maori people, from which good results have sprung. The Maoris had, and perhaps have still, a form of religion of their own, which is said to be a remnant of the ancient Wisdom Religion.

It is generally believed that geographical and climatic influences act powerfully on people in every part of the world. If this be so the future of Australia will be different from the future of New Zealand, and the people of Australasia, taken as a whole, will no doubt add something of value to the growth of humanity. Several facts may be mentioned in this connection as full of interest and significance. There is first, the isolated position of Australasia, and the thousands of miles of water separating it from Europe and America. From this it comes about that Australia and New Zealand have a stream of Colonists from the "Old Country," both smaller and less mixed than has ever flowed to any part of the English speaking world. Canada was largely French for a long time, and both it and the United States, owing to their proximity to Europe, absorbed and continue to receive vast numbers from Europe, as well as from Great Britain and Ireland.

In Australasia, and especially in New Zealand, that is not the case. And although Australia is comparatively near to Asia, very few Asiatics are to be found in Australia, except in the northern portions; and still fewer in New Zealand. I know that it has been the fear of some in Australasia that no matter which side gains the victory in the Russo-Japanese war, Australasia would suffer. Asiatics would pour into these colonies. But if it be the design of Nature, as it appears to be, that a people of a special type should spring up in these colonies, we may hope that Nature will find means for carrying out her plan.

The people of Australasia are, perhaps, as truly cosmopolitan as men can be found anywhere; and yet they have a strong leaning to the Mother Country. Their position between Europe and America has made it possible for them to see both the excellencies and the defects of those countries. And while the old influences ecclesiastical and political have been carried with the colonists, or followed them, the inhabitants of "Greater Britain" have, by the mere fact of having journeyed so far, left much of what was effete behind them. Maybe they have left some good things, too, but, on the whole, it has been a gain to start life in a new hemisphere, where even the heavens are different. The struggle with the elements, with difficulties and with new conditions, has always tended to develop mankind. The changing of the wilderness into a fruitful field has always had an enriching influence mentally apart from all outward results. As the lever needs a fulcrum on which to rest, so the human mind has always shown its best development where the environments of life called forth patience, industry and energy, in order to master them. The temperate regions of the earth have always given birth to the dominant races. Thus it has resulted that while the colonists in Australasia had many difficulties to meet, and still have, they started life not handicapped with many things which older nations find it difficult to carry or to lay aside.

In both the political and religious life this new spirit is manifest. While it is true that with the first colonist, or even in advance of him, the inevitable missionary landed, yet the new settlers were agreed that there should be no State religion, and that all the sects should be on an equal footing in the new land. On the whole, this has been adhered to, though the Methodist, Anglican, and I think also the Roman Catholic churches, were clever enough, in the early days, to get large tracts of land from the natives or from the government, which are now of considerable value. And, notwithstanding the fact that there is no State church, and all sects are equal in the eyes of the law, the Anglican and Roman Catholic clergy keep to the old country practise of calling their bishops "My Lord."

I have begun by mentioning that in which the new colonies differ but little from the old country—though the placing of all the churches on the same legal footing is by no means an unimportant matter. In the matter of education the difference is greater, and in political affairs greater still.

Education is unsectarian, free, and obligatory on all. And in the colonies there is growing up a new generation which has been educated under this system; one result of which is that all the combined assaults of the Anglicans, Roman Catholics and Presbyterians to introduce the Bible into the public schools, and gradually make them sectarian, has been set aside by the great mass of the electors. In New Zealand, and I believe in Australia, too, the schools are supported out of the consolidated revenue of the country, and not left to local rates, as in America. But local interest is maintained through the schools being managed by provincial boards and local committees.

It is on the more material lines of political life that the colonies, and especially New Zealand, deserve attention. When the new settlers arrived at their home, like all people in a new country, they had everything to do. Roads, and bridges, and railways, had to be made. Harbors had to be constructed, houses built and the forest cleared. Money had to be borrowed, but all the works done belonged to the whole people. The total debt may seem large, but then the assets are productive works owned by the people, and managed for them by those whom they themselves have chosen. In this way the Australian colonies started life without having so many vested interests to contend with as we find in other countries. Roads, railways, post-office, telegraph and telephone—almost all the great public utilities, except shipping and the coal mines, belong to the whole people. Then the public service is non-political. A high standard of excellence is necessary before any one can enter the civil service, but when admitted it is for life, as long as the person has

good conduct. It matters not to the men in public service what political party may be in power. This tends to national stability, and it tends, in no small degree, to honesty and general excellence. And if the civil servant should fancy he can be uncivil, or negligent, there is a quick appeal in the local member of parliament who can bring the matter "before the government" in a few days or hours.

The "advanced legislation" of New Zealand is watched with much interest by people in the older countries, and by none more so than the American workman. After all, it is the patient, long-suffering "people" which is the chief end of legislation, and not any one group of people, whether rich bankers or trades unionists. There are boards of Conciliation where, without interrupting work, employers and laborers can have their differences settled. It is felt that fair play to both is the best thing for the State. There is not much chance of making a very large fortune, except in mining, nor is there so much danger of losing a fortune. The State is itself, practically, a great bank, giving absolute security to the children who put in their pennies and to the settler who wishes interest on his savings. The farmer, in certain cases, can borrow at a low rate of interest from the State, a thing very displeasing to the banks, who always charged a high rate, and often closed on the mortgage at the most inconvenient time for the farmer. This is one of the most "forward movements" made in New Zealand which is not likely to be spoken well of by some people.

Another forward move in legislation has been the "probation act for first offenses." This has saved many a young, thoughtless boy; and has been followed with keen interest in the older countries.

For sometime New Zealand has had universal suffrage, and it has been found that the women have voted quite as wisely as the men. There is also Government Life Assurance. This is managed at very little cost through the ordinary post-offices, and it gives State security at a very low rate of insurance. All persons of good character, and who have not sufficient means of their own, can have a pension from the State after attaining a certain age. This is looked upon as their right and not a matter of charity. Many cried out against the bill before it became a law, but it has worked well and other nations are likely to follow the good example.

In regard to one matter, the liquor traffic, the colonies have not made much advance, although they have local option; and the people, if they really wished it, could close all the hotels in the country, to the sale of intoxicating drinks. In spite of much talk, the liquor traffic holds on its way—a few houses have been closed, that is all.

A study of colonial legislation is very interesting and instructive, and shows, among other things, that you cannot legislate much ahead of the people—you may, a little, but the best laws cannot avail much if the people are not ready for them. Laws cannot make men honest, but they can hinder stealing—and a "big steal" which sometimes takes place in other countries, is hardly possible in New Zealand.

In my opinion, all new colonies are on the material plane to a large degree. The people have gone to the new land, leaving friends and conveniences behind, in order to "better themselves." Making money, and not soul-development, is the chief end. No doubt the higher parts of man's nature will develop though the bent of the life is to things material, but the process is slow.

A few years ago the various colonies of Australia came together and formed themselves into a united body known as the "Australian Commonwealth." This includes Tasmania, but does not, at present, include New Zealand. Thus the struggle of the American colonists for self-government, one hundred years ago, has given birth, on the other side of the world, to a commonwealth as large in population, and much larger in area, than the original federation of American States. And is it not a hopeful sign—a sign of the new age—that this took place amid the congratulations of the whole world? Surely it marks another forward step towards "the parliament of man, the federation of the world." As we trust in Nature, and have hope for the future, we believe that our brothers in this new land, which is the old, in the far south, will, at no distant date, bring their life-work as a new note into the great harmony; and be able to say, "What we have done, what we have suffered, what we have learnt, we lay gladly on the altar of the world's life for the enrichment of all, and the good of all."

S. J. NEILL

Greetings From E. A. Neresheimer

THE following letter has been received from Brother E. A. Neresheimer, now on a leave of absence concerning his mining business in Colorado. The letter will be of interest to all the members of The Universal Brotherhood Organization:

NEDERLAND, COLORADO, July 21, 1904

Dear Comrades in Lomaland:

It is nearly one month since my departure from Lomaland, and, though my occupation has been eventful and exciting, I have never lost sight for one single day of my tie to the great work of which I am no less a part in spite of the great distance which separates me temporarily from personal contact with my comrades.

One need only to go away for a short space of time to appreciate by comparison the gulf that exists between the world *outside*, which is at best only thinly-covered sham, and the *inside*, at the coming center of the Golden Age, where men are men, and women are women, more nearly as they should be when time shall have ripened a better race. I know now that the regenerative work, at last so grandly begun, was not commenced one moment too soon, for the downward sweep of the *Rajasic* trend, must be stemmed by a powerful center from whence radiates *Satwic* force. I long to be back at Lomaland, the land so full of promise and help, to add my mite of power to the assured vehicle for liberation.

Greeting,

E. A. NERESHEIMER

✧ ✧ Ideals in Northern Legend ✧ ✧

MIGHT not the Gods of Olympus now give place in our schools to the Gods of Asgard, the Homeric legends to the Arthurian and Scandinavian, and the seekers of the Golden Fleece to those of the Holy Grail?

The question is asked by Dr. G. S. Hall in his great work on *The Psychology of Adolescence*. He agrees with everyone else that young people should be encouraged to read great epics; but why, he asks, must we necessarily go to Greece and Rome for them? If the Northern myths and legends have less artistic beauty than the Southern, they have qualities of greater moment which the Southern lack. They teach "the highest reverence for womanhood, piety, valor, loyalty, courtesy, munificence, justice and obedience. The very life-blood of chivalry is heroism. Here we find the origin of most of the modern ideas of a gentleman, who is tender, generous and helpful, as well as brave; the spirit which has given us Bayard and Sidney, as well as the pure, spotless, ideal Knight, Sir Galahad. These stories are not mechanically manufactured, but they grew slowly and naturally in the soul of the race."

Here are two important points. The legends give an ideal of a *gentleman*, and it is an ideal which belongs to the very center of consciousness of the races from which the English-speaking student springs. He will find in the North-Europe legends *his own*—perhaps unconscious or unpictured—ideals of a hero and a gentleman. The characters in these legends are drawn on a great scale, and the touch, even when it is crude, is firm and human. The effect on the mind of reading the Norse stories is that which comes from the contemplation of great spaces and the play of great nature-forces. They appeal to the sense of grandeur as those of Greece do not. Why are the latter "classic," and the former not? Why is it a disgrace to a gentleman to be ignorant of the Muses and Graces, and none to have ever heard of the Norns? Why must you know the wanderings of Ulysses, yet may safely remain in perfect ignorance of the wanderings of Odin through the world? We read Greek mythology and afterwards are interested to find its parallels in the Norse. Why should we not begin with the Norse and get our interest subsequently in finding parallels in the Greek? If anything like the same attention had been concentrated on the former as we have for centuries given to the latter, the whole dim field of Celtic and Teutonic history might be in daylight.

The legends and myths to which Dr. Hall calls our attention are in two groups, the Arthurian and Scandinavian-Teutonic. King Arthur gives us the Celtic ideal of a hero, and he is, in addition, our ideal of a gentleman. The Grail is the Christian form of the object of the mystic quest of his Knights. Behind Arthur stands another King, and another form of the quest. Then it was an elixir that conferred the spiritual vision upon him who found it. The older figure, the magician-King, Lemenitz, stands unplaced in dim pre-Christian time. Of him Arthur was accounted the reappearance. The ancient heroes did not die. Like Arthur and Quetzalcoatl, they departed, or were wrapped in

slumber in the heart of some mountain. And their people always expected their return in an hour of greatest need. Arthur was the returned Lemenitz, and he was fabled to have done what perhaps he attempted and perhaps Lemenitz *did*—established a reign of peace and justice and gathered a circle of Knights vowed to pure and perfect life.

Let us stop there a moment, and consider what manner of people was that which could evolve such an ideal. They were "barbarians," of course; we all know that; for do not the antiquarians say so? But they had an ideal, reflected in their lore, which as a people *we have not*. And they not only looked forward with hope to its realizations—peace, justice, chivalry—but backward with regret to its disappearance. If we could give wireless telegraphy, radium and the typewriter, in exchange for that ideal, we should not do badly.

Siegfried, who may be accounted the Norse hero and ideal, is not so perfect a picture as the Celtic Arthur, cruder, not so much of a gentleman. But he *is* a hero, knows nothing of fear or meanness, and is utterly true to his friends.

This is Dr. Hall's ideal of the modern treatment of these legends for school and other use:

I believe a great duty is laid upon high-school teachers now—namely, that of re-editing this matter into form that shall be no less than canonical for their pupils.

Excrescences must be eliminated, the gold recoined, its culture power brought out, till, if the ideal were fully realized, the teacher would almost become a bard of these heroic tales, with a mind saturated with all available literature, pictures, and even music, bearing on it. Some would measure the progress of culture by the work of reinterpreting on even higher planes the mythic traditions of a race, and how this is done for youth is a good criterion of pedagogic progress.

That the mythic traditions of a race can be "reinterpreted on *even* higher planes," can be interpreted at all as otherwise than solar myths or personifications of the winds and stars, is an idea which, if pressed into practise, will lead into the very consciousness of a past we now think of but as barbarism and infancy.

STUDENT

THE Hindus consider every twelfth year most propitious for the beginning of their religious fairs, or festivals. These gatherings attract the representatives of all sects, from princes down to the last fakir. The twelfth year is called "Kumbha."

The Theosophical Searchlight

ON the 15th of August, there will be issued the first of a series of Bulletins from the Leader's Office, bearing the well-known name of "THE THEOSOPHICAL SEARCHLIGHT," containing general information of the work of the Theosophical Movement throughout the World; and also important instructions necessary for the advancement of the Universal Brotherhood and Theosophical Society, in all Departments. The first number of this series will be sold at 15 cents per copy; succeeding issues of the SEARCHLIGHT, 10 cents per copy. Mail your address and 15 cents, to Clark Thurston, Esq., Manager; NEW CENTURY CORPORATION, Point Loma, California.

The Trend of Twentieth Century Science

Modern Science Is Abstract, Dealing With Points and Dimensions

THE attitude of Theosophy towards modern science is one that needs to be constantly kept before the mind. Theosophy recognizes to the full the value of modern science *within its limits*, and its utter futility outside of those limits. Thus there is ample scope in these pages both for recording the achievements of science when it fulfils its own self-assigned duty, and for calling it down when it attempts to supplant Divine Law. Professor Karl Pearson says—

That all science is description and not explanation, that the mystery of change in the inorganic world is just as great and just as omnipresent as in the organic world, are statements which will appear platitudes to the next generation.

In fact, science is abstract, dealing with points and dimensions and forces and accelerations, a set of formulas for calculating and classifying; whereas, the real world is the world of our experiences, sensational, mental, emotional, etc. It is forces like these that actuate the mechanism of the universe alike, in stone, plant, animal and man.

Take, for illustration, the case of "gravitation." We know *that* a stone rushes to earth, and we know *how* it so rushes; but we do not know *why*. That mystery is a mystery still. The answer is probably that the stone seeks the earth because it *wants* to be near it. Every action must be prompted by a motive. This may sound like insanity, but that is only because it is bluntly put and not couched in a learned jargon. We can understand what a *desire* is, and how it may impel to an action, because we have experience of it in ourselves. But as to what is meant in physics by a "force," we can only say that it has no more real existence as a pure cause of anything than heredity or expansion or any other mere formulation of events.

The problem of explaining the causes of things does not belong to material science at all. Real existence is personal, conscious, intelligent; a higher science must interpret it—a philosophy rather.

There is one more point which must also be mentioned here; one that, like the other, is being recognized now by men of science themselves. This is that the laws laid down as defining the limits and possibilities of nature are not exact, but only approximations. To make a law that will fit all cases is as impossible as it is to draw a straight line on a globe. It will fit for a short distance, but then it begins to deviate.

And, since laws do not remain invariable when spread over a large number of cases, is it not also likely that they change in time, and that what is a law of nature today may not have been so for the ancients and may not be so for posterity? Do laws of nature gradually change as seasons roll?

New Conceptions of Matter—Centers of Radiation

AS one stands looking down upon the dry baked earth, and scanty dead-looking shrubs, it all seems as if life were extinct, as if the hot sunshine had extinguished it forever. Then one notices a little movement; a hitherto unobserved procession of ants is crossing the path. They are of fair size; one or two walking alone, quite large.

Soon, on closer watch of the earth, it becomes clear that there is much more life. Minute spiders are running about, and there is a spattering of little ants, so little as to be almost at the limit of visibility.

Then, with a hand glass, another plane of still minuter life comes into view, insects of which only specialists know even the names. We know further that if we took up a pinch of the earth, and gave it microscopical examination, still another plane of life would come into view, bacterial, unicellular life, in its way as vivid and purposeful as the others.

And modern research of the last year or two has shown us that beyond the visible bacterial world is another, invisible, known to us only in its effects. And lastly, modern research of the last few weeks has demonstrated that the very crystals of "inorganic" nature are also alive; when in water and at their earliest stages they move about, subdivide, give birth, struggle, grow, consume each other, are even subject to disease. And there is no doubt that the erosions and other forms of disease are also due to yet minuter and so far inconceivable forms of life.

We have nearly got to the molecules and atoms. And, even here, nothing is dead. They too are constantly radiating yet minuter "ultimates"—"ions" and what not.

If analogy goes for anything, the last centers of streaming life are not yet reached. "In life we are in death," ran the old saying. Let us reverse it: In "death" we are in life. The dead silent earth we were looking at turns out to be shining with life. "Shining" is the proper word, no metaphor. For so thoroughly do we now know that every active cell, whether of crystal, ("cell" is here also the proper word) plant, or animal, is radiating electricity and (to us) invisible light, that there is a question in science whether matter is anything *but* centers of radiation.

It would surely help the growth of our minds, keep them clear from clouds and promote a deeper insight into the meaning of our own bodies, if we habitually regarded both them and the earth as light. *Grey weight* is too much our conception of matter. Let us try *light* and *life*. It may seem rather like poetry, but in certain lines of investigation we are finding it more and more true that the poetry of yesterday is the science of today. Whereupon poetry begins to write the science of tomorrow. What we call imagination is often intuition, a looking into. STUDENT

Prof. Atwater's Position Regarding Alcohol as Food and Poison

SMALL numbers of scientists, inside and outside the ranks of medicine, still make an occasional deliverance in favor of the use of alcohol as a food. And these utterances are always noisily welcomed by a certain section of the public, which has its own reasons for wishing them accepted.

The statements rest on the fact that up to a certain small quantity (1 ½ ounces), alcohol taken into the body is not recoverable as such. It is therefore assumed that its services have been retained in the role of food. But what a food! One might as well argue that a mass of pneumonia bacilli have acted as food because, in a given case, taken into the blood, they did not cause pneumonia, having been consumed by the white blood-cells. It is doubtless these cells that consume the ounce-and-a-half of alcohol, sacrificing *their* health that *we* may remain unpoisoned.

The well-known Professor Atwater was one of the scientists we refer to, and a recent utterance of his excites much attention rather, however, on account of his eminence than its novelty. Although he only took the old view that a certain quantity of alcohol acts as a food, he has been as much applauded and quoted as if he had said it was the only food worthy of civilized beings. Since then he has defined his position. Paying a recent visit to Paris, he was congratulated on his courage by the few physicians who also regard alcohol as a food. In reply to the plaudits of M. Duclaux and others, he said:

We affirm that alcohol is an aliment. But whereas M. Duclaux affirms that it is a good and excellent aliment, I say that it is an evil and detestable aliment.

It was thereupon concluded by his French defenders that such pressure had been brought to bear upon him at home that he was forced into a practical recantation. He had, of course, recanted nothing, but his supposed change of attitude, we learn, "destroyed their faith in American science and American teachers."

We are glad that Professor Atwater's position is now clear, for his original words have been used in support of contentions to which they had evidently no relation. STUDENT

One Radiating X-Rays for One Hundred Years

SPECIMENS of uranium-pitchblende ores taken from the mines in 1806 exist at Vienna. After 100 years they show no inferiority in radio-activity to specimens removed today.

These radiations, formerly known as Becquerel rays, are really a compound of several kinds of rays. As a whole, they are easily detected, even by the amateur. They possess photographic efficiency, even after passing through thin metal, paper, paraffin and other substances. They make air electro-conductive, and if damp and free from dust cause it to deposit its damp as a mist. They consist of a mixture of Cathode Rays, X-Rays, N-Rays and various others, all with separate sets of properties.

✧ The Good News Spreads ✧

"SYLVIA," said Rose, as the two girls walked home together one autumn afternoon, "do you remember your Aunt Ella telling us of a wonderful place that she once visited in California, where

all the people believed that Universal Brotherhood was a fact in nature, and were so unselfish, and the lovely amphitheatre like the old Greeks had, and the little homeless children who are cared for there, and the beautiful way the children sing and play? I so often think of it, did she ever tell you anything more about it?"

"No," replied Sylvia, "I remember now you mention it, how enthusiastic she was that night, but she was not with us very long and so many people called to see her that we had not much time to talk of anything just by ourselves."

Some few months later, Sylvia Watson called to see Rose Dare who was confined to the house by a badly sprained ankle.

"Aunt Ella sent us these papers and photographs by the last American mail," she said, "and remembering that you were interested in what she said, I have brought them for you to see."

"How very kind of you!" replied Rose, kissing her visitor. "My poor lame foot keeps me a close prisoner still, and it will be so delightful to have something really interesting to read, one gets so tired of novels and you cannot sew all day."

"I should think not," exclaimed Sylvia, whose needlework was not her strong point.

"I like to be busy and feel that I am doing something useful," continued Rose reflectively, "for I have always longed to be of some use in the world since I was quite a child, but it is difficult to know what one can do, and I don't seem to get much nearer the goal," she finished with a little sigh.

"How strange that you should speak like that," Sylvia said, opening wide her eyes, "Aunt Ella wrote to mother when she sent these papers, saying that at last she had found her ideal realized in a community where people lived an unselfish life, and where everything was so beautiful and simple and soulful, and that she intended to settle in San Diego, and that she hoped in time if found worthy, to become a member herself."

"Mother was so astonished, for we were always accustomed to look upon Aunt Ella as a woman who just lived for pleasure, she has always been wealthy and since her husband's death has well-nigh traveled the whole world over, apparently caring nothing to be of any use in the world.

"Father wasn't so surprised, she has always been his favorite sister and he said even when she was a tiny child, she always shared her toys with others and gave up her plans for play if the others wished it otherwise, saying, 'you all be happy and baby'll be happy.'

"Of course we have all read about Lomaland in the NEW CENTURY PATH now, and father seems quite taken with the idea, but I must go now, dear. Good-by, and I hope you will soon be well enough for us to resume our walks together, I miss them so."

"And so do I," returned Rose heartily "but it doesn't do to forget that the sun still shines behind the clouds, when our days are dull and gloomy."

"May be I needed just this little rest in the shade, and when the clouds pass, the days will be brighter than ever by contrast."

Sylvia left and Rose settled herself down for "a good read" of the NEW CENTURY PATHS. Absorbed, she read on until the light grew too dim to see by, and then she lay back on her pillows and thought.

Of a surety, some picture of a life she barely dreamed possible lay spread out before her, a life that would realize her highest ideals of usefulness. She saw again Mrs. Murray's pretty, earnest face, as she described her visit and told them of what she saw in Lomaland and felt again the thrill that went through her heart as she listened; then she followed in thought the story of the activities and the glories of the place of which she had just read, and the hints of a broader, deeper life to be realized; but how describe in words the wonderful, beautiful feeling of expansion that comes to those, when, for the first time in this life, they hear of the larger life that is the heritage of all, that does not separate but binds in a living tie of brotherhood all nationalities and races, tracing with a wide comprehensive sweep, a prehistoric past and a future brilliant with promise for all that lives.

"Are you all alone in the dark, dear child?" said her mother, coming into the room, "your father was unexpectedly detained, and that made us late. No fire either, you must be frozen!" and so saying she swiftly lit the gas and put a match to the fire.

"I am neither cold nor lonely, mother dear," answered the girl with an exultant tone in her voice. "I think I can never be that any more, for I know now, life is full of such immense possibilities of usefulness, and we all have a work to do."

EMILY I. WILLANS

WORK

by E. B. BROWNLOW

WORK! use all thy will, give all thy might,
Ply all thy strength
Until the golden dawn of early light
Shall change at length
Into soft purple shades, soft, pure and bright,
That bring glad tidings of the peaceful night.

Work! while the subtle seasons onward roll,
In certain course
The ways of this frail world to help control:
That keen remorse
In life's last moment---ere thy deeds unroll
May strike no sudden anguish to thy soul.

Work! taking lessons for the mighty Past,
What men have done:
Yet let not those old masters hold thee fast,
They have begun
What later souls must finish. They have cast
The first stones at earth's evil---not the last.

Work! but seek not false Ambition's flame
To light thee on:
Not so the men of wisdom ever came
In days long gone:
No sordid dream---no bare desire for fame
Has left on Memory's lips one worthy name.

Work! in the hope of sowing seedlings great:
Let others reap---
That when stern Nature bids thy step abate,
Thy body sleep.
Thy soul shall tremble not at Death's dark gate,
But calm and sure shall meet its After-Fate.

THE CHILDREN'S HOUR

THE RAJA YOGA QUESTION BOX

HISTORY teaches us that there is a magic in environment. We learn by studying the lives of the great characters who have made history, how to look beneath results and effects and see causes.

1. Who was Lao-tze?

ANSWER—Lao-tze was the librarian of the Emperor of China, and was also a Teacher. He lived in the Sixth century before Christ. He wrote a history of the events of his time and also a wonderful book on religion in which he taught simple living, compassion, and that we should love one another.

2. Who was Socrates?

ANSWER—Socrates was a Teacher who called forth the soul in those whom he taught. He was born in Athens, 470 B. C., and spent his whole life in helping men to become wise. He was greatly persecuted and at last unjustly condemned to die.

3. Who was Isabella of Spain?

ANSWER—Isabella was a good and wise queen who ruled her country so well that Spain became more prosperous than ever before. She was a friend of Columbus and it was through her help that Columbus was able to discover America.

Two Fairies

"I WILL tell you the one Granny told me," answered Hester, in reply to a pleading request for a story.

"Please! please!" exclaimed Gertrude and Fanny.

"Granny told me about two fairies, very strange and wonderful fairies! They are almost hidden behind shining veils! And one records little deeds that don't seem to matter much, and the other records great and heroic ones.

"And the very strangest thing about these fairies is, that people can not see them with their eyes; but if they have overcome many naughty thoughts and feelings, they become beautiful within, and that beauty lifts the shining veils.

"And, when Granny was quite a little girl, she wondered a whole lot about these fairies, and she longed to know them; and one night she did, in a dream! She just found herself beside them, and the shining veils were so beautiful, she was almost afraid to breathe. Then, one by one, the veils lifted and she saw the fairies!

"They didn't talk, but they allowed her to know what they were doing—she just knew, she couldn't remember how. And one fairy was weaving together kind little deeds, and when a boy or girl had many of these, a great heroic deed blossomed from them, and then somehow it seemed to belong to the other fairy! And the very instant Granny thought so, she suddenly saw far, far away into a city, and she knew some one had done a grand and noble action, and she could see others striving to do something great, too, so that they might be talked about, but somehow they never did—they couldn't, because they hadn't given the fairy enough little deeds to weave into a great one. And then she turned to the fairies again, but—everything had changed! The two fairies had disappeared, and in their place was a still more wonderful shining veil. And slowly that, too, changed and became a golden light, and in it one of the fairies.

"The beauty and the silence was so great that she was dazzled and awed, and she bowed her head. But she knew the fairy was trying to tell her something, and it was, 'To those who think little deeds of little importance and great deeds of great importance, there are two fairies; but those who grow beautiful within, and learn that little loving deeds are the petals to the perfect flower that we call 'Heart-life,' will see the golden glorious beauty of the Joy-life.'"

A LOTUS BUD OF IRELAND

BE GOOD

by CHARLES KINGSLEY

MY fairest child, I have no song to give you;
No lark could pipe to skies so dull and gray.
Yet, ere we part, one lesson I can leave you
For every day.

I'll tell you how to sing a clearer carol
Than lark who hails the dawn or breezy down,
To earn yourself a purer poet's laurel
Than Shakespeare's crown.

Be good, sweet maid, and let who will be clever;
Do noble things, not dream them all day long;
And so make life, death and that vast forever
One grand, sweet song.

A. P. D.

A Sensitive Cat

THERE are some people who think that kindness to animals does not make much difference, because the animals, these people say, cannot feel what we think about them. But they do know, and a story told to me by a Raja Yoga girl, shows how much some of them can feel.

At her home, far away, there are several cats who are always kindly treated, and are always happy to be with the grown-ups. But once the cats were left at home for some days, and they missed their friends very much indeed. They were so sad that the groom, a kind-hearted old negro, made them little paper collars which he hung with bells.

"Why did you do that?" he was asked.

"I had to do something to distract their attention!" he said. *He must have known that the best way to be happy is not to have idle thoughts.*

When the cats' mistress returned home the bells were taken off, but her own favorite cat still proudly wore his white collar. All night he wore it, and the next morning it was still there, as he sat on the carpet by her door, quite happy to be near her.

But a thoughtless visitor in the house passed by and saw the collar. It made him laugh aloud—because it *did* look funny. He never thought the cat would care whether he laughed or not. But in a minute the collar was on the floor. The cat was so hurt from being laughed at that he tore his collar off at once as if he were ashamed of it.

In the same house was a little black chicken, whose mother died when it was very young. In many places the cats would have eaten the chicken, because they would not have learned what it is to help others and to be kind. But here, where all were kindly treated, the cat took the little black chicken to play with her kitten; and at night the little black head would look out from under the cat's white fur and say "Peep! peep! peep!" It was very pretty. They called the chicken Richard, and even now that it has grown to be a big hen, it will look up when "Richard" is called, as if to say, "Here I am!"

But Richard seems a funny name for a hen, doesn't it?
BROTHER PHILIP

THERE are wonderful happenings in the Raja Yoga School in Lomaland these days. One is the forming of several new classes in clay modeling in the Art Studio of the Aryan Temple. Before long the children themselves may have something to tell you about this.

Students'

Path

THE PATH OF ROSES

by PRISCILLA LEONARD

BEFORE some happy feet
 The roses blossom all along the way
 In fragrance summer-sweet.
 O careless path of joy!—yet happier they
 Who, toiling on alone
 Where never has the road been aught but rough,
 And never rose has grown,
 Find, even in their stumbling, strength enough
 To plant with patient hand
 The seeds of gladness, till behind them spring
 Flowers in the desert land,
 Roses more rich than careless joy can bring!

—Selected

Past and future are the wings on whose support, harmoniously conjoined, moves the great spirit of human knowledge.—*Wordsworth*

In defiance of infamy and misunderstanding, one must stand on his honor.

The Religion of the Schoolboy

A CURRENT *Contemporary Review* article asks what is the religion of the schoolboy, and answers the question by concluding that he has none. At any rate his creed can be fully summed up in the phrase, "Honor among thieves." Religious matters, in the ordinary sense, wholly bore him and have neither place in his thoughts nor effect on his conduct.

We may lament this state of things, but no one with any knowledge of public schools, and especially boarding schools, will question that it obtains. For one boy to mention religion to another as a practical matter would be as intolerably opposed to schoolboy etiquette as it would be contrary to social etiquette to do so in a drawing-room.

But religion of a certain very practical kind the average schoolboy assuredly has. The code of conduct covered by the words "Honor among thieves" is often—within its limits—a high one, requiring much self-sacrifice and constant attention. Boys who follow it could just as well follow a better, and with no more cost of moral energy.

But they do not know a better. The better has not been comprehensively taught them. To teach a child about God, the Kingdom of Heaven, the soul, redemption and Jesus Christ, is to begin at the wrong end, the end which is furthest from his personal consciousness, his personal knowledge of himself. To begin a child's religious education by instructing him that he is essentially sinful is to open the campaign with an affront. He feels this affront, it may be without knowing that he does so, and is repelled from all that is subsequently told him. The impression of something unpleasant never leaves his consciousness again.

Why not take him into your confidence, and get him to feel that he is co-worker with you against an alien element of evil in his nature which need not and shall not be there? He will become interested in the problem, interested, as an infant, in an "abstruse" piece of practical psychology. His sense of honor can be easily evoked as an aid in the work and the satisfaction of this sense will give him a steady source of pleasure. When he has begun to understand himself, there will be no trouble about deeper concerns.

The real block in the way is the ignorance of parents and teachers, of their own nature. They do not know the battle, the combatants, nor the reward of victory. How can they teach what they have not learned? They must use the formulas of the pulpits to cover their ignorance of themselves and of life. Truly the world is urgently in need of that psychology which is based on Theosophy, psychology which is self-knowledge and which brings mastery over every evil and limitation in the whole nature of him who learns it.

STUDENT

The Teacher and Disciple of Old—Study in Ancient Tradition

FREEDOM of one part of our nature always requires the bondage of another part. In the old schools about the temples of ancient peoples, the teachers and disciples fully recognized this, and the latter voluntarily submitted to a most stringent control and regulation of their habits and outer life. They submitted voluntarily; they offered themselves to the discipline because they knew that through it alone could come freedom for their higher natures, the flowering of their finer possibilities. So they handed themselves over to a teacher whom they had learned absolutely to trust. This relation of teacher and pupil became at once unique. It was no domination of mind by mind; the teacher never sought that, was careful that it should not occur. It would not be so that the pupil could ripen his possibilities. It was his aim to grow up to and assimilate the mind of his teacher, but the relation never approached that of hypnotizer and subject; of that there was no element. The pupil remained himself, wove his own pattern of himself, achieved an ever completer spiritual freedom.

As to the daily life. Once the pupil was enrolled, he had no more concern with the earning of his living. His daily work was set him, and it had a dual relation to him. It had relation to his existing capacities, previous habits and temperament: and alternatively with this, it was designed to call forth capacities he needed but lacked. As to his assignment of work, he was expected to trust the teacher; and not only to do the work faithfully, not only with entire peace and content, not only with the utmost use of every faculty concerned, but also with a quality of enthusiasm. And he was expected to be always ready to leave it regretlessly for any other. And his daily habits were so gathered in under rules that he needed to expend a minimum of mental energy in arranging them for himself. This economy he effected by the simple process of obeying the rules. His mind was therefore freed for other matters.

The trust he had in the teacher, and—as he proved worthy—the teacher in him, begot an intimate and sacred mental relationship with which space and verbal communion had nothing to do. In a certain sense, the mind of the teacher was opened to him, that he might take what he could. Threads to weave into his own mind and to dye with his own color were thus offered to him ready for the weaving, threads necessary for the pattern, which, under any other circumstances, might have cost him years or lifetimes of experience and pain to extract and spin for himself from the raw mass which life offers. And in return the teacher received energy for his work, and even protection, from the atmosphere of trust and love kept about him by his pupils.

The whole arrangement was therefore one of economy, both of time and energy. The pupil was, so to speak, in a spiritual forcing house. The experiences of a whole ordinary, slow-passing lifetime were compressed into a year, a month, a day. For the relation of the pupils to each other was under the teacher's direction, and was constantly changed, groups being formed and dissolved, new combinations constantly produced, so as to afford a maximum of experience in the least time. When we remember that almost all that we get out of life, all our experience, all our pleasure and pain, comes from our association with each other, we can see that in the great temple schools it was possible for the teacher to compress into a short period all the experiences of any deeply educative value which a whole slow lifetime in the world would hardly give. Much of it, to the pupil, would seem unjust and unnecessary. But he had only to recollect how much of his life incidents in the world, were he there, would also seem unjust and unnecessary. Yet he would have trusted to the Law for their value, for their profound justice and necessity. Here, he also trusts in the Law as manifested in the teacher, focalized, made swift, undiluted with resting places.

The teacher's credentials were only the intuition of the pupil; he offered no other. If the pupil once recognized in the teacher a soul far in advance of his own, the relation became established and sacred. And both knew that if at any future time the pupil should lose his trust, his whole nature would fall into confusion. He accepted the danger open-eyed, because of the possible reward—the attained goal. And the teacher was willing to accept the care, knowing that if the pupil did win on to the goal, another helper and teacher of humanity, another Guardian of the Mysteries, would have been born, born and baptized in the fire of experience. HERBERT CORYN, *Camp Karnak, Point Loma, July 11th*

THE SECRET OF LIFE

DEATH has no power th' immortal soul to slay.
That, when its present body turns to clay,
Seeks a fresh home, and with unlesened might
Inspires another frame with life and light.
So I myself (well I the past recall),
When the fierce Greeks begirt Troy's holy wall,
Was brave Euphorbus: and in conflict drear,
Poured forth my blood beneath Atreides' spear.
The shield this arm did bear I lately saw
In Juao's shrine, a trophy of that war.

—Pythagoras in Dryden's "Ovid"

WHAT WE CAN DO

OF old things, all are over old,
Of good things, none are good enough; ---
We'll show that we can help to frame
A world of other stuff.

—Wordsworth

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question What is the aim and object of the Raja Yoga School, and what is Raja Yoga?

Answer The object of the Raja Yoga system, or, rather, of its foundress, is the same as that of the Great Teachers of all times, which is, plainly, to help the soul express itself; but, unfortunately for humanity, those who have had charge of education in the ordinary sense of the word have not been philosophers, nor have they known very much about the soul-life. They have, indeed, too often been the first to persecute the Great Teachers when such an one comes with a larger message of education. But today we are beginning to realize that the real life is the heart-life, not the life of the brain-mind, and that real education is not the education of the head alone, but of head and heart together.

The object of the Raja Yoga School is not to fill the child's head with a heterogeneous collection of facts, but to build up a store of love in his heart. If brain-mind education is enough, then I ask you, why is it that our penitentiaries are filled with men of power and men of education? We well know that physical education alone goes but a little way. We are beginning to learn that intellectual education goes but very little further. And yet the education of the heart alone is not enough. This gives us a magnificent workman, but no tools with which to work, a glorious builder, but no materials with which to build. By the simplest logic in the world, the true education would be a union of all three, mental, physical and spiritual, and this is the meaning of Raja Yoga.

The word itself is from the Sanskrit, meaning "royal union;" Raja—"royal," and Yoga—"union." And it stands for that ideal which expresses itself in a threefold, perfectly-balanced education, for knowledge that is not of the head alone, but of head and heart and hand, is truly the kingly knowledge, the royal key to complete life. As Katherine Tingley says: "Raja Yoga is the perfect balance of all the faculties, physical, mental and moral, and true comradeship is the one condition of its fulfillment."

The Raja Yoga system comprises all that the world calls educational and very much more. Raja Yoga children not only become acquainted with art, music, and with mathematics and the sciences, but they get also an acquaintance with courage and fearlessness and compassion and joy, those glorious qualities of the heart which have been for so many centuries little more than possibilities. To the Raja Yoga child duty becomes the greatest privilege, because he has not only a knowledge of his own nature, but a grasp of himself. He lives not according to this or that rule, but by the highest law of his own being, and his life is wholesome. He not only knows *how* to dominate his body, but *why* it should be dominated, and conquests over appetite which are made in the world at heavy cost, when they are made at all, are here easy and natural, because of the daily régime. The aim of the Raja Yoga system is to provide the ideal environment and to give the soul room to grow.

How absurd, anyhow, are some of our educational methods! What

gardener would expect to get results if he twisted and worried and bothered little growing plants, and pulled them up by the roots every now and then to see how they were getting on? And yet how many mothers and fathers and teachers do just this and then wonder why they graduate boys into penitentiaries and girls into sanitariums!

The Raja Yoga system is unique in one particular: that it requires of its teachers not only high ideals, but the power to make these ideals actual. It requires not only pure lives, for the schools of the world, in general, require that, but right motives; not only a knowledge of the arts, of letters, of the sciences, but a knowledge of human nature.

The object of the Raja Yoga School is to give the child a chance to live according to the highest law of its own nature. As an educational system it is absolutely scientific and perfectly practical. Over all and through all is the heart touch, for Raja Yoga is the science of heart-life.

G. K.

Question

What constitutes or defines a Christian?

Answer

There should be no difficulty in answering this question. I would say that a Christian is a follower of the teachings of Christ, and this means a *doer*, not a mere believer. But Theosophy has thrown new light on Christ's teaching and everyone who has carefully studied the matter, knows that Christ's teachings are essentially the same as the teachings of the other saviors of the world. He himself said, "My doctrine is not mine but his that sent me." And the doctrine of all the great helpers of humanity is from the same divine source. Furthermore, we know that what we have of Christ's actual teaching is a very small part of what he must have said. It is very fragmentary and incomplete, and deals only with certain phases of human life—by no means with all.

Then again, what do we mean by "Christ"? This was not his name, his name was Jesus, and he is so spoken of all through the Gospels. He is also called "Jesus the Christ"—*i. e.*, the anointed. Jesus said, "Greater works than these shall ye do;" he laid this injunction also upon us, "Be ye therefore perfect even as your Father in Heaven is perfect," and St. Paul spoke of our becoming like him.

Does this mean that we also may become the Christ, Christos? What else can it mean?

We can then give a deeper meaning to the term Christian and define it as "a follower of *the Christos*," and that Christos is the divine light within each, it is, to quote again from the Gospels, "the Light that lighteth every man that cometh into the world," it is the very Light of Divinity itself, one with the Source of all Light.

Is not this in perfect consonance with the teachings of Jesus, and if we took this as the meaning of the term Christian, if we followed the example and the life of Jesus the Christ, would not all the discords and divisions of Christendom cease? Would not Christianity come to mean "living and doing," and not mere belief and dogma, or the acceptance of a creed? We can do much if we are more careful in our use of words, giving them their true meaning and full significance. It sets other people thinking, and once that people begin to think what it *means* to be a Christian, they have taken the first step towards actually becoming such and towards realizing that it is more than a mere profession.

One word more, the teaching concerning the Christos was not only the teaching of Jesus, but of all the great teachers; it is, in fact, the teaching of Theosophy. We thus get a broader and deeper conception and this must by so much make our life fuller and richer and make it more possible to become like him and all other great teachers who have come as messengers of truth, as helpers of suffering humanity. J. H. F.

SOME men think they are in tune with the infinite merely because they are out of tune with the definite.—*Selected*

A Saying from Epictetus

"EVERY matter," says the Roman Stoic, "has two handles, one of which will bear taking hold of, the other not. If thy brother sin against thee, lay not hold of the matter by this, that he sins against thee; for by this handle the matter will not bear taking hold of. But rather lay hold of it by this, that he is thy brother, thy born mate; and thou wilt take hold of it by what will bear handling." And we call Epictetus a pagan!

Sentence Sermons

THERE is no short cut to happiness.

Virtue is not a matter of vocabulary.

Nothing succeeds where the soul fails.

A little silence may save a lot of sorrow.

With God life and love are synonymous.

A sharp man always cuts his own fingers.

Repentance cannot tear up the roots of the past.

No man reaches the stage of triumph but by the steps of trial.

The man who takes life as a dose always finds it a bitter one.

A man makes no particular progress by patting himself on the back.

Virtue may be its own reward, but it is not its own advertising agent.

Some men expect to acquire all their good habits in their second childhood.

— Chicago Tribune

Irish Legends and Irish Imagination

LADY GREGORY'S new book of Irish legends, *Gods and Fighting Men*, is a welcome addition to the translated literature of Gaelic antiquity. The tales are full of the breathing life of nature, and of the celestial power of the Imagination, the heritage of the Celt, weaving a magic spell round the simplest events. No! the imagination does not *conceal* anything; in truth, it *reveals* that which is within—the inner luminosity which all things and events emit. It is a teacher—a builder. All great men have been richly endowed with it. The creators or narrators of these romances had their minds “hitched to a star.” The commonplace did not exist for them, as it need not exist for us. It is but one of the limitations of our own making. They lived in the eternal; they felt the inward sweetness; they heard the music of life's rippling current, which is hidden from most men by their killing selfishness; they knew that this world was no vale of tears to be gotten out of as quickly as possible, but a place of glorious possibilities, a place for strong, joyous work, rich with promise, waiting for men to awake to the knowledge of their godlike nature.

An essential part of the Theosophical movement is the quickening of the power of the imagination leading to a higher appreciation of the beauty of nature. Dull reason has held sway too long. If we turn to the wonder tales of long ago and enter into the thoughts of the ancients, as learners, we shall feel ashamed of our unhealthy, morbid, artificial life of over-pressure. Sir Philip Burne-Jones, an English artist, who has been studying American life very closely, quotes a remark from a wealthy and leading New York society woman, who complains that in spite of

all her privileges and possessions, her gaities and luxuries, life is positively not worth living! She wishes she had never been born! The writers of the quaint and poetical Irish legends had, and the readers who can enter into their natural magic have, too, some knowledge within that makes such thoughts seem almost incredible. To such, as to the students of Katherine Tingley, life is a song of joy, every sunrise brings a new opportunity for service to man, a new opportunity to get nearer the center of being, whence personal possessions of mind or body are seen at their true worth. The time is approaching when it will be as well known as the multiplication table, that the only real happiness is found in getting out of the habit of ceaselessly dwelling on our personal interests, and into the habit of actively thinking of and working for the welfare of others. Enormous and delightful surprises await those daring souls who have the courage to do this and face their lower nature, thus making a commencement at the life of brotherhood.

The following extract from Lady Gregory's book gives a fair idea of the inspiration of the epics. It is from a description of Emhain, the ideal world of peace:

I bring a branch of the apple-tree from Emhain, from the far island around which are the shining horses of the son of Lir. A delight of the eyes is the plain where the hosts hold their games; curragh racing against chariot in the White Silver Plain to the south.

There are feet of white bronze under it, shining through life and time; a comely level land through the length of the world's age, and many blossoms falling on it.

There is an old tree there with blossoms, and birds calling from among them; every color is shining there, delight is common, and music, in the Gentle-Voiced Plain, in the Silver Cloud Plain to the south.

Keening is not used, or treachery, in the tilled familiar land; there is nothing hard or rough, but sweet music striking on the ear.

To be without grief, without sorrow, without death, without any sickness, without weakness; that is the sign of Emhain; it is not common wonder that is.

Golden chariots in the Plain of the Sea, rising up to the sun with the tide; silver chariots and bronze chariots on the Plain of Sports.

Gold-yellow horses on the strand, and crimson horses, and others with wool on their backs, blue like the color of the sky.

The host race over the Plain of Sports: it is beautiful and not weak their game is: death or the ebbing of the tide will not come to them in the Many-Colored Land.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Signs of the Times Simple & Apparent

THE times are full of signs; but not always correctly may they read. They are both simple and apparent to the very casual observer, and the recondite and difficult to follow. The destiny of several of our greatest nations is today hanging in the balance of Divine Justice; and yet the warning cry of more than one modern Jeremiah has sounded in vain. They will not listen, these nations, and it would seem as if the bitter fruit of repentance must of necessity be mixed with their tears.

But jeremiads, of whatsoever kind they may be, are rarely listened to with respect. The state of our poor human mind at this stage of the evolutionary development of ourselves is, after all, one which needs comfort, not condemnation; compassion, not anger; brotherhood, not separa-

tion of individual interests; the practise of altruism instead of *laissez faire*.

What a curious commentary on our civilization is, indeed, our manner of viewing the offspring of that civilization! Unanimously we decry any attempt to belittle the achievements attained in this our epoch, and point with searching finger towards the shadowy past, asking silently whether those who have preceded us had risen to the heights we now occupy. We have deified material attainment; and the apotheosis of

Have Sold Ourselves as Bondsmen

Yet those ancients had, as we now have (in theory), ideals which made them great. To them, life was not an insolvable mystery; nor was the individual existence of man lost in the maze of spiritual and mental uncertainties, which to us moderns is a veritable Cretan labyrinth. We have lost the Ariadne's thread thereof, and wander purblindly hither and thither seeking the light we have lost.

It was the moral qualities in man which the ancients gave formal place to. With them the apotheosis bestowed was not on things, but on the man himself. A noble and dignified manhood, and a true and strong womanhood, were their standards of attainment; and those quickening powers in the human breast which raise from death into the life of the ages, were the inspiration of those deeds of heroism concerning which so much has been echoed and so little understood. The Roman Augurs, so it is said, once declared that only Rome's choicest and most precious treasure could close the yawning gulf in their Forum. The Patrician

Spirit of He- roism Makes Men Great

That spirit in man which impels to deeds of self-sacrifice in times when need is great, is the spirit which saves a nation; it is the soulful power which makes a people sublime in achievement, and splendid in act; which raises the clay of the body to electric life, and sets upon the brow of him it inspires, the crown of the hero.

Such, truly, were the moral ideals of the ancients; but as man is yet but man, and as the destiny of peoples runs upward and then downward again, each epoch registers itself in the Book of Eternity as one of growth, of maturity, and of decadence of the power of this immortal spirit in man.

It would seem, therefore, that it is Things which we today worship, and not qualities. And as it is the inevitable fate of Things to find an eternal rest in dust, why what feeble strands have we woven into the anchors of our hopes!

Man is in truth not bound; his higher will is the will of Eternity, and

Sin, Suffer- ing and Hu- man Misery

all shall dissolve like a morning's mist before It. His higher purposes are those of the god within his breast, and if man would but surrender the reins of his temporal power, to grasp those of his spiritual nature, the things he would do, and leave undone, would very quickly lift the heavy weight of the world, a weight of sin, and of suffering, and of human misery.

There is a lost art: it is the Art of Self-control. He who possessed it fully might rule the world, for the world would be prone before him; and if this control of self were that of gentle divinity and of simple altruism, such a one would pass to posterity as a savior of his fellows.

Our citizenship compares ill with that of many of the peoples of the past; and were our national ideals judged by the Higher Law in contrast with those of some of the ancients, the comparison, possibly, would not flatter us.

Therefore, what has the future for us? What individual and national legacy are we now in process of bequeathing to our posterity? Is it one for which we shall receive grateful remembrance? Or is it one which will lay so burthensome a responsibility, and so chafing a destiny upon our descendants, that our memory will be thought of with aversion?

The signs of the times, which are now so many, what story do they tell us? They are vocal with menace, yet vocal with hope. How shall we interpret them? What lesson will we learn from them? G. DE P.

"A New Age Is Not Far Away"

WE implicitly believe that in this curve of the cycle, the final authority is *the man himself*. In former times the disclosed Vedas, and later, the teachings of the great Buddha, were the right authority, in whose authoritative teachings and enjoined practises were found the necessary steps to raise man to an upright position. But the grand clock of the universe points to another hour, and now man must seize the key in his hands and himself, as a whole, open the gate. Hitherto he has depended upon the great souls whose hands have stayed impending doom. Let us then together enter upon another year, fearing nothing, assured of strength in the Union of Brotherhood. For how can we fear death, or life, or any horror or evil, at any place or time, when we well know that even death itself is a part of the dream which we are weaving before our eyes?—W. Q. Judge

The "Sayings" of Christ

EVERYONE will remember the discovery, seven years ago, by Drs. Grenfell and Hunt, at Oxyrhynchus, of a fragment of papyrus containing eight non-canonical "sayings" of Jesus. They have repeated this discovery, and five more "sayings" arouse an even keener longing for the whole papyrus.

The second of the new group is the most important. Unfortunately it is so mutilated that many gaps have had to be bridged by guesswork. The discoverers thus restore it, the attempted restorations being in italics:

Jesus saith, *Ye ask who are those that draw us to the Kingdom if the Kingdom is in Heaven.*

... the fowls of the air, and all beasts that are under the earth or upon the earth, and the fishes of the sea, these are they which draw you, and the Kingdom of Heaven is within you; and whosoever shall know himself shall find it. Strive therefore to know yourselves, and ye shall be aware that ye are the sons of the almighty Father.

There is another clause, "And ye shall know that ye are in the city of God, and ye are the city," but the restorations necessary to complete it are regarded as exceedingly conjectural. But for the rest, excepting perhaps the word "almighty," it is hard to see what other words than those supplied in italics could possibly have been used by Jesus.

Of the first series, the fifth is the one that most people would least wish to forget:

Jesus saith, Wherever there are *two*, they are not without God, and wherever there is one alone, I say I am with him. Raise the stone and there thou shalt find me; cleave the wood, and there am I.

"Raising the stone," and "cleaving the wood," strike one as mystical and symbolical expressions, rather than indoctrinations of Pantheism. The first certainly, the second probably, would find interpretation in the rituals of the old *Mysteries*. "Raising the stone" (of the sepulchre), was often used as a symbol of the purificatory efforts made by the neophyte in order to free his own higher nature. "Cleaving the wood" (or trunk) of the Tree of Life, might symbolize the separation of the lower and higher ("right" and "left") currents of impulse.

The sayings are preceded by an introductory passage which Drs. Grenfell and Hunt thus very reasonably restore:

These are the *wonderful* words which Jesus the living *Lord* spake to . . . and Thomas; and he said *unto them*, *Every one that bearkens* to these words shall never taste of *death*.

If no more than these thirteen sayings are ever discovered, they are worth the labor they cost. But we think that much more will follow. The fields of discovery are yet but partially explored, and what remains to be found will undoubtedly clear up many obscure passages and dark meanings in the present well-known standards. The spirit of Christ lives yet as a perfect dream in man's mind; yet how have not the teachings of the man Jesus been distorted? We do not believe in chance, nor that the cry of modern humanity for a closer touch with the spirit of Christ and for a far fuller knowledge of his teaching will go unanswered. If that which has now come, and will hereafter come, had been known fifteen hundred years, it would have shared the fate of the Gospels, would have been tampered with by some pious early father, would have been the nucleus of a dense casing of dogma, would have been ill-redolent of centuries of controversy, and would have been hackneyed almost beyond the possibility of attracting fresh interest and attention. STUDENT

A Prophecy of San Diego

From the San Diego News

THE *News* is in possession of a file of the Southern California *Informant*, a weekly newspaper published in San Diego sixteen years ago. In the issue of July 28, 1888, appears an article which closes with the following prophecy of San Diego. The author still resides here, and though too modest, apparently, to permit the republishing of his name, sees no reason to amend what he then wrote:

SAN DIEGO THE METROPOLIS

In and out through the Silver Gate will pass the laden vessels, bearing to many a port the varied products of this semi-tropic land and bringing in cargoes for distribution. Here will ship and car meet and exchange their burdens. This will be the distributing point.

Here will be the bonded warehouses and the banks. This will be the financial and commercial center of this extensive and rapidly developing section.

In the whole history of the world we find the highest civilization to have been attained in semi-tropical latitudes.

The Atlantians, Aryans, Phoenicians, Jews, Egyptians, Greeks and Romans, the Incas of Peru, Mayas of Yucatan and Aztecs of Mexico are familiar illustrations. At one time—thousands of years ago, probably—the Southwest was the most civilized portion of what is now the United States.

When New England and the Middle and Western States were inhabited only by bands of roving barbarians, who, clothed only in the skins of wild animals, hunted their game in the dense forests or over the snowy prairies, there dwelt upon the sunny plains of Arizona a people far advanced in civilization. The East is now the most advanced because it has been longest settled by the Caucasian. But now the Southwest is rapidly settling up with the best class of people from beyond the Rocky Mountains. Every Eastern community has contributed one or more of its most active and wideawake citizens to aid in the development of this section.

The flowers of music, poetry and art seem to spring spontaneously from the soil where grows the orange and the palm. Beneath these sunny skies shall come again a golden age, such as made Greece famous for learning and for art. Here shall the poet sing his sweetest song; here shall

Fame forsake the camp and blade
And turn from purple fields,
Again to wreath her meads for those
Who bid the canvas glow, the marble breathe.

With the grand mountains and the beautiful sea ever present, and sun and cloud forever displaying upon them new effects of light and shade, there will here be bred an esthetic race from which will sometime spring a second Phidias who will delight all future ages with his inimitable art. Here will be born a poet who will weave the legends of the mysterious ruined cities of the plains into a grand epic that will go "down the corridors of time" side by side with the *Iliad*.

Entrance to Acropolis Theatre --- Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week, is a view of the entrance to the Theatre at foot of the Acropolis, Athens. This was the grand entrance to the building; but in olden days a winding path-stairway led to the tiers of seats from the Acropolis itself. The acoustics of this venerable Theatre are wonderful; the human voice being heard distinctly on the topmost tier. One of the fashionable boulevards of present-day Athens runs along the structure's front.

Greeting from E. A. Neresheimer

THE following letter has just been received from Brother E. A. Neresheimer. His devotion to the great Cause of human fraternity and to The Universal Brotherhood Organization is so well known that this letter will be of very real interest to all members of The Universal Brotherhood:

NEDERLAND, Colorado, July 28th, 1904

DEAR COMRADES IN LOMALAND: The longer I stay in Colorado, the more I appreciate dear old Lomaland to an extent I did not think I would, much as I loved it before. While this is a beautiful country, a country still in the making, and full of great things for the future, I feel that I belong with those at our Headquarters. While my body is here I, truly, am with those at the Point.

Although I shall be detained here for some months with my important business obligations, I shall count the weeks until I get back home again. I consider the plan for the International Congress, a very unique one; and as especially adapted to enlarge our Work for all countries. I am heart and soul with you and the Leader, in all your efforts.

THE CENTURY is doing enormous work; it is one of the greatest factors we have for propaganda, and it is my earnest hope that all members will do their utmost to enlarge its scope. For it acts as a great International Messenger—a link in the work of H. P. Blavatsky and W. Q. Judge. E. A. NERESHEIMER

Some Views on XXth Century Problems

Physical Degeneration & Its Results

THE physical degeneration of the British lower labor classes, is the subject of a careful and important book by Mrs. Watt-Smith.

Proof of this degeneration lies in the fact that notwithstanding the steady lowering of the physical requirements for army recruits, a steadily decreasing number of men are found answering to these lowered standards. And of five men, after two years' service, only two can remain in the effective army.

The *cause* of the degeneration is town life; and this gives the matter not only a British but a general importance. For in almost all civilized countries, town life tends to increase at the expense of natural life.

Now physical degeneration means very much more than decline in muscular power, in health, in height and weight. These obvious signs go hand in hand with others not so obvious. There are invisible degenerations of the deeper, more intimate, mechanism of the body, nerves, and brain. The higher tones of feeling are consequently unheard; there is moral degeneration. The child sent winter after winter to school, half-clothed and unfed, and at the earliest age thereafter doomed to the treadmill of factory life, is not as morally responsible for its thoughts and feelings and deeds as the rest of us of a gentler upbringing. So badly is it handicapped by its physical degradation that in many cases a response to the music of its soul is as impossible as a response from a clothes-line to a note from a harp. It is in a condition which is not a disease, and is not so named, for the reason that it is the root or field of all diseases. The particular evil plant has not yet declared itself, indeed may not for many years.

It is true that the soul gives of its consciousness to the body, and because of that we are something more than the animal. It is that spark which speaks and thinks in man when he says "I." The moral nature exhibited by each of us on earth depends on the preservation of the channel between our thinking consciousness and the soul from whence it came. But for this, it must not be *too* heavily handicapped and hampered by its physical instrument. It must not find every nerve-cell under-nourished, half developed, crippled and degenerate from its origin, or in mute pain. Not so can it work out its higher nature, or even preserve the memory and feeling that there is any higher nature.

Shall we say that such a child, youth and man, is as responsible as we for all it does? Yet that is the type which we are seeing and to see, in increasing thousands year by year, in our great cities.

The great cities grow greater, more sunless, more diseased, worse atmospherized. Degeneration goes further, becomes more intimate. The degenerate breed the more degenerate, physically and morally—but *not necessarily mentally*. For complete selfishness and moral deterioration often cause the mind to develop into an extraordinary instrument of calculating cunning. And that is the type which is becoming more and more frequent. We shall one day be *compelled* to face the grim problem which we are permitting to rise before us little by little.

The lines of remedy are many. But let us think of prevention, and by some method, at all costs, induce the country dweller and the land worker to stay with nature. If we find out why he now will not, we have made a beginning.

STUDENT

English and American Stimulants

SOME curious figures have just been published on the comparative use of certain stimulants in America and Great Britain. Coffee is the great American non-intoxicant drink; tea, the English. A noted divine once said that he did not know whether coffee or tea were the most provocative of revolutions; for whereas tea made you *think*, coffee caused you to *act*.

The American drinks one and a half gallons of distilled liquor in a year; the Englishman one gallon. But on the other hand the Englishman drinks thirty gallons of malt liquor to the American's eighteen gallons. To which the American replies again by drinking one-third more wine than the Englishman. Thus, it is seen that on the whole, both nations sin about alike in this matter of "personal liquefaction." C.

Divine Law versus Human Whim

EMERSON'S "Over-Soul," the Greek Logos, has fallen on evil days. At the hands of a new school of "thought," which nevertheless claims the august parentage of Emerson, it has become sentimentalized, appearing as "The Encircling Good," and even the "All-Love Power"! Moreover, it is at anybody's beck and call. "Every physical need," we are told, "and every desire of the human heart, can be claimed and received" from it "by the true believer." Its existence, in fact, constitutes a standing appeal to sentimentality, laziness, selfishness and sensuality. In works of this school it stands revealed as a pander and procurer, at the beck and call of every love-sick youth, knave or simpleton. It is enough that they are "true believers."

There is a story, "The Idyll of the White Lotus," breathing the very spirit of old Egypt, in which some such Power is conceived as having sway for one night. For one night the desires of all the people of a great city are gratified. The city goes mad; hell is unbound; the "true believers" in the evil goddess are rewarded. But she is not called the "Encircling Good;" she is painted as the conscious focal point of all earth's evil. And no other than that could be a Deity waiting to grant "every physical need and every desire of the human heart."

The "Encircling Good" *does* grant human desires, sooner or later, in this or another birth, every one. But because it is "Good" is precisely why it does not grant them when desired, but only when they will either come with a lesson or pave the way for one. It abides its own time. Otherwise all the earth would be like the hell-stricken city in the "Idyll of the White Lotus." It is black enough as it is, through the *deeds* of men; were their *desires* fulfilled as and when they gave them birth, human life could not long endure. He only can sway the "Encircling Good" who has become that Good itself, in greater or less degree. And the only way to that becoming is the *giving up desiring anything for self*, the achievement of altruism and unselfishness.

A celebrated critic suggested that the method of Faust was an easy alternative to this. As Goethe and Marlowe painted it, it might seem so. Mephistopheles may be willing enough to accept anybody's soul; but if he is expected to pay for it, to give value, it must be *big enough to be worth his paying for*, master of all its desires save one, and into that one it must have passed its totality; master of all its failings, slave of nothing. Who answers to the call? Not, we think, the "All-Love Power's" clientèle.

STUDENT

Model Farm Gardens for Children

ONE often wonders what will become of the great cities, gloomy, sunless and airless, breeding places of every vile thing, when we have become too civilized to tolerate them.

To a certain extent, an answer comes from New York and a few other cities. In the heart of these, some small areas of ground have been cleared and furnished as "Model Farm Gardens" for children of the very poor. So far as the space permits, it is treated as a miniature farm and garden, having in the center a little model farmhouse. A selected number (in the case of the New York clearing, about 250) of children are instructed in the details of farming and gardening by a competent matron. They spend a part of every day in this work, hoeing, weeding, planting, reaping and caring for the farm-house. One of these farms even boasts a pig! The children take vast interest in their admirable toy and enthusiastically carry out every item of the toy duties. Of course, they gain greatly in health and intelligence and real civilization. But more than all, they gain a love of country life. We should say that no millionaire could much more usefully gratify his philanthropic instincts than by buying up some congested spot in the wretched heart of his city, and having it cleared and transformed into one of these "Model Farm Gardens."

STUDENT

Too often reason deceives us; we have only too much acquired the right of refusing to listen to it; but conscience never deceives us, it is the true guide of man; it is to man what instinct is to the body, which follows it, obeys Nature, and never is afraid of going astray. Conscience does not hesitate nor doubt nor mislead.

Art Music Literature and the Drama

The Origin of Music—A Suggestion

NOBODY has yet attempted, so far as we know, to make a certain very beautiful and suggestive application of the sound-picture experiments of Mrs. Watts-Hughes. Every one now knows that fine powder, subjected under certain conditions to the action of tones, takes form. The forms are of all kinds, from the simplest geometrical figures to the shapes of leaves, plants, trees, and even groves of foliage in great variety.

That is as far as the experiment has been taken. We remain wonder-struck, do nothing and deduce nothing.

The most obvious deduction, which would serve as a beautiful provisional hypothesis, is that a minute thread of tone, very prolonged, very slow in its changes, drawn out very thin, does exist within a growing plant and tree, and is the cause of its form.

An equally obvious application would be to make a note of and register the succession of tones which, when played on to a plate of fine powder, cause it to assume the succession of forms leading up to the form of a tree with leaves and blooms.

We should surely then have one of nature's own melodies, an audible instead of a visible nature-form. Might it not be possible that we had got back to the origin of music?

According to the ordinary hypothesis, primeval man expressed his emotions in various grunts and attempts at the imitation of the sounds of animals. These, repeated rhythmically, gave him pleasure, and constituted the rude and remote roots of music.

We cannot pretend to the slightest respect for this theory. We do not believe that primeval man was a savage, or that the savages of today in the least degree represent him. We think they are degenerates of old civilizations. If it turns out, with advancing scientific knowledge, that they are so, then the orthodox explanation of the origin of music must go overboard.

There have always been abnormal persons, probably decreasingly abnormal, to whom sounds suggest color, and colors sound, who hear red, and see the blare of a trumpet; and others to whom sounds suggest forms and pictures. It is possible that these are phenomena of atavism, sporadic modes of perception once universal among "primeval mankind." Is it going too far to suggest and imagine a primeval man whose psychic and spiritual nature had not been desecrated and obliterated by sensuality, whose reasoning intellect had not awaked, and who was so closely in touch with nature as to perceive her ways with a clearness now long lost? Sounds to us inaudible would be plain to him, and we could understand an origin of music from subtler elements than grunts and barks.

He who can see the good in art-works is an abler and a far superior critic than he who sees only faults.—*Merz*

THE world is full of musical treasures, but we are not being enriched by these to half the extent we ought to be.—*Booth*

STRICT moral and mental training produces our best men—why should not strict art training be required in order to train artists? The principles of true morality and those of pure art taste must be inculcated early in life.—*Merz*

The Wonderful Artist Craftsmen of Japan

A STUDENT now in Japan writes, in a recent letter, about the artist craftsmen of that splendid land:

"I have just visited the workshop of one of the most famous Japanese artisans, a carver in wood. You have no idea how the Japanese work. The merest craftsman is an artist and would not think of allowing another craftsman to draw his designs for him. Each carver is his own designer and I fancy the long training in writing the beautiful ideographs which compose their language has much to do with the facility acquired by the Japanese in this line. I wished to have a small box carved and the design chosen was of course, in this land, the lotus. To my astonishment the little craftsman took up the box, turned it over, examined it, and then, with a few deft strokes of his brush, indicated roughly upon it a mere sketch. That stood for the design.

(How our American craftsmen would have labored and traced and agonized over the simple matter of transferring a design to that box—that is to say, some of them.) Then he began carving away at what proved to be lotus petals. Three days later I called and the box, exquisitely carved, was completed. Every artisan here seems to be an artist and every piece of craftsmanship is a work of art. The divorce which is so usual in your land between the design and the craftsman's work appears to be here entirely unknown."

I AM more and more convinced that the power of music is one of the greatest civilizing and refining forces that has yet been introduced into the public schools, and our people should ever keep working until music is one of the regular branches in our public school curriculum.—*Hall*

The Work of a Pioneer

IT is almost impossible to believe that the great Joachim has been sixty years before the public, Joachim, the best known living exponent to-day of the purely classical in violin music. The influence of his work will be permanent, for it has been he, more than any of his contemporaries, who has fostered a real love in his pupils for the classical masterpieces. A criticism in the *Musical World*

(England) 1859, gives better than any general statement an idea of the pioneer work Joachim had to do and the barriers he had to break down. In that year he was only twenty-eight years of age:

So long as virtuosi walked (or galloped) in their proper sphere, they amused by their mechanical *tours de force*, charmed by their *finesse*, and did no great harm to musical taste. They were accepted *cum grano salis*, applauded for their dexterity, and admired for the elegance with which they were able to elaborate thoughts in themselves of very slight artistic worth. But recently our virtuosi have been oppressed with a notion that to succeed in this country they must invade and carry by storm the "classics" of the art, instead of adhering exclusively, as of old, to their own fantasies and *jeux de marteaux*. One composition after another by the great masters is seized upon and worried. If they were things of flesh and blood, and could feel the grip, be conscious of the teeth, and appreciate the fangs of these rapid-devouring virtuosi, concertos, sonatas, trios, etc., would, indeed, be in a pitiable condition. Happily they bleed not, but are immortal.

But Joachim kept right on! There may have been inadequacies in his interpretation, for the ideal is rarely, nor should it be, the ideal of tomorrow. But he has proven himself loyal to his ideal. E. M.

IT is better to be a crystal and be broken
Than to remain whole, a mere tile upon a
house-top. — From the Chinese

A MEMORY OF L'ANCIEN REGIME
From private collection of one of the Point Loma Students

NOW that which is inevitable in the work has a higher charm than individual talent can ever give, inasmuch as the artist's pen or chisel seems to have been held and guided by a gigantic hand to inscribe a line in the history of the human race. This circumstance gives a value to the Egyptian hieroglyphics, to the Indian, Chinese, and Mexican idols, however gross and shapeless. They denote the height of the human soul in that hour, and were not fantastic, but sprung from a necessity as deep as the world. Shall I now add, that the whole extant product of the plastic arts has herein its highest value, as history; as a stroke drawn in the product of that fate, perfect and beautiful, according to whose ordinations all beings advance to their beatitude?—*Emerson*

STUDENT

"POISE THE CAUSE IN JUSTICE' EQUAL SCALES,
WHOSE BEAM STANDS SURE, WHOSE RIGHTFUL CAUSE PREVAILS."

Margaret Fuller Ossoli

SHE was one of those fair and flower-like natures which sometimes spring up even beside the most dusty highways of life—a creature not to be shaped into a merely useful instrument, but bound by one law with the blue sky, the dew and the frolic-birds. Of all persons whom I have known she had in her the most of the angelic—of that spontaneous love for every living thing, for man and beast and tree, which restores the golden age.

IN these words Margaret Fuller described her mother. They are eloquent, as giving us one reason for the warm heart-life of this woman whom the public looked upon as being merely brilliant and intellectual. Margaret Fuller was the most remarkable woman of her day in certain respects. She was as typically cultured—using the word in its ordinary sense—as was Goethe. A Greek born out of time, she brought into her work a rare intellectual insight. Spiritually she could not delve deeply nor soar to heights beyond those to which the brain mind could carry her, for the real Light was in her day not come. The peer of her contemporaries, Emerson, Thoreau, Theodore Parker, Clarke, Alcott, Dr. Channing, she had one gift which none of them possessed in so rare a measure, the gift of conversing well. The pen always tired her. In speech her Pegasus found his wings.

"She is inspired," said one friend. So simple, so direct, so cultured, so filled with a deep humanity was she, that one could easily forgive the occasional glimpses of apparent egotism and her positive manner of expression, a manner which came, really, from her intense and abiding convictions. As a teacher she was marvelously successful, particularly in the languages and history. German, Latin, French and Italian she had mastered, and her translations are not mere transcriptions but genuine works of literary art.

As literary critic of the *New York Tribune* she discovered Hawthorne and undiscovered, so to speak, Lowell and Longfellow. For two years she was editor of *The Dial*, that remarkable but short-lived magazine to which most of the New England Transcendentalists were contributors.

But deeper than her intellectual culture was a rich heart-life. For the unselfishness that was so characteristic of her during every event of her life Margaret Fuller Ossoli deserves not to be forgotten. While a mere girl she cheerfully gave up long-cherished plans, at her father's death, to support her mother, sisters and brothers. For eleven years she toiled, at last, in a trip to Europe, realizing her life's young dream. In Italy she became stirred by the struggle of the brave young hearts of that land for freedom. It was then that she met the Marquis Ossoli, a young Italian who had sacrificed rank and fortune in the cause of the Roman Republic. They were married in 1847 and together they worked and fought for the free and greater Italy of their hopes. During the following summer occurred the siege of Rome; and it was passed by both in the hospital "Pellegrini," which was put under Margaret Fuller Ossoli's personal direction. "The weather was intensely hot; her health was feeble and delicate; the dead and dying were around her in every stage of pain and horror, but she never shrank from any duty she had assumed."

It was in September of that year that her little son was born. She named him Angelo, her husband's name. Their love for each other rose above all the cares of life like a pure white star. The child came as a blessing and a benediction. The comradeship which is as unusual in this world as it is ideal put forth the rare twin blossom of motherhood and fatherhood, and then came, shortly, their end.

It was not long after the fall of the Republic that Margaret Fuller and

her husband, with their son, embarked for America. Both had grave anticipations of danger.

"I have a vague expectation of some crisis," she wrote to a friend, "I know not what. Yet my life proceeds as regularly as the fates of a Greek tragedy, and I can but accept the pages as they turn."

Three months prior to sailing she had forebodings of shipwreck. "If so," she wrote, "I pray that Ossoli, Angelo and I may go together and that the anguish may be brief."

Of the disaster that came as if in answer to that prayer all the world knows. The barque on which they sailed was wrecked near Long Island, less than a hundred yards from the shore. The women were urged to leave, as there was no chance of saving all. Margaret refused to desert her husband and, with their child, they perished together.

She was still young. Her death was an irreparable loss in those days, for so few who had intellectual knowledge lived the heart life. She had her misconceptions, she made brain mind mistakes that, in the wiser day that is dawning she would not have made; but as one of the pioneers, at that critical time when the national mind was forming and the national heart was beginning to beat; those days when Emerson was bringing to us glimpses of the ancient wisdom; when Alcott was teaching his little school; and when Thoreau was writing philosophy and pegging shoes in the Concord jail. Her life was strong and fearless. She lived in honorable intimacy with her highest ideals. She loved humanity and for that reason surely the occasional chill of her intellectualism may be forgiven. E. M.

MARGARET FULLER

The Emotions

IN order to find out from what part of our nature the emotions spring, we have but to observe their results. "By their fruits shall ye know them." The possibility of one extreme includes its opposite as inevitable, and whoever, in feeling, is swayed from one to the other is sure to experience suffering. It is plain then that, if in any instance

our emotions bear the harvest of pain, they must in all cases germinate from seeds sown in the soil of the lower nature. In the divine nature there is peace and calm—there is perfect equilibrium, which cannot be disturbed. The lower nature declares itself to be in an ecstasy of happiness today because it is realizing some cherished desire. Let this possession be withdrawn and tomorrow it will be plunged in deepest despair. Thus it has no safeguard against emergencies; it is ever the puppet of circumstance.

We have all sought happiness through the emotions, little dreaming that in doing so we were feeding that side of our nature which paralyzes and dwarfs the mind and closes the door, leading to all the higher possibilities of the soul's influence, building a solid blank wall between us and a clear understanding of life's realities.

Most people, indulging emotions, open their natures to influences of which they are totally ignorant and unconscious. Something feeds upon them. Have you not observed the sad, hunted, fearful and impoverished look in the face of an emotional woman? There are actors behind the scenes who are fattening upon this havoc. Shall we, who have been permitted to raise the curtain and behold the truth, sit with silent tongues when we know a remedy? So great has been the power of false ideals, and so deeply rooted are they in the human heart, that only heroic methods can rid us of their power. The first glimpse of the truth in regard to these matters is like a dash of cold water in the face of a sleeping man. It startles him, but it wakes him up. That is what humanity needs. No matter if the bath is cold at first, it is in the end refreshing and opens our eyes to the light of a new day, a day wherein we feel the power to control our minds and liberate the heart-force. STUDENT

Mrs. Maybrick's Release

THE release of Mrs. Maybrick after fifteen years of confinement in an English prison, has again brought to the attention of the public one of the most remarkable cases in the annals of our courts, and one on which the old judgments bid fair to be reversed. Florence Maybrick was the victim of circumstances well utilized by those who were determined to accomplish her ruin. Her husband's fortune was the bone of contention and Mrs. Maybrick, to put it plainly, was looked upon by the persons who appeared to have their own reasons for accomplishing her ruin, as being very much in the way. Looking over the testimony, it is absolutely impossible to understand how she could ever have been convicted. Traces of arsenic were found in Mr. Maybrick's body, it is true, but the facts are that during the very week of his death the physician (who was later a witness against Mrs. Maybrick), administered three doses with his own hands; also James Maybrick had long been in the habit of taking arsenic, often daily and in large doses, himself. Add to that the testimony of Dr. Charles Meynott Tidy, M. B. F. C. S., Official Analyst to the British Government at the Home office, and Dr. Rawdon Macnamara, F. C. S. I., one of the greatest living authorities on poison. These together wrote a toxicological study of the Maybrick case, giving the history, among other things, as facts within their own cognizance, of two cases in which traces of arsenic, given medicinally three and five months before death, were found in the body after death, although death occurred from quite another cause.

Add to this the fact that Dr. Humphreys diagnosed the disease from which James Maybrick died, as gastro-enteritis, brought about by high living and the unrestrained use of liquors, and that, as he has admitted, it never occurred to him that James Maybrick might have died from arsenical poison, until the latter was suggested to him by one of those determined to ruin this unfortunate woman. Was he hypnotized? Did the suggestion made have its effect? The fact that this physician could not remember distinctly when or how he gave medicines, or even the exact dose, would indicate that he was a fit subject for hypnotic control at any rate. And as to the jury, the record is somewhat laughable. It could scarcely be considered a scientific one, composed, as it was, of two plumbers, one carpenter, one provision dealer, a glazier, a grocer, an iron-monger, a painter, a milliner, a baker and two farmers, not one of whom expressed sufficient interest during the entire trial to ask a single question, and, according to a Southport, England, paper, one of whom could not read, much less write, his own name. Sir Fitzjames Stephens, the Judge who sentenced Mrs. Maybrick, died, by the way, in a madhouse. But what was it that started this poison gossip, anyway, and was there any foundation for it whatever, except in the unreasoning hatred of one or two?

Florence Maybrick has spent the best part of her life in prison. Who is responsible for the wrong that has been done? Who are the sharers in this responsibility? What was the power behind the throne? Isn't it time that we looked deeper, that we learned a lesson or two from the wrong that has been done this woman? And will human hatred never lack puppets and allies?

It is interesting to know that it is to two women that Mrs. Maybrick owes practically all the relief she has known from the difficult régime of an English prison, and, in fact, her freedom. Her transfer from a penal institution to a country home was an act almost unprecedented on the part of the British authorities, and it was due to the intervention of the Duchess of Bedford. From the time of her conviction, Mrs. May-

brick's mother, the Baroness de Roques, has been unremitting in her efforts in behalf of her daughter. It was she, aided by influential friends on both sides of the Atlantic, who finally succeeded in getting the death penalty commuted to imprisonment for life, and it is she who has finally obtained her daughter's freedom. According to a recent dispatch, Mrs. Maybrick left England on the 20th ult. for France, and went to Rouen with her mother. When she reaches this country she will find to greet her, in all probability, one of the largest petitions ever gotten up. The object of the petition is to secure for her a free pardon, thus cleansing her reputation from the stain of murder, through the offices of King Edward. Years before any general public interest in Maybrick's case was manifest, Katherine Tingley openly declared Mrs. Maybrick to be the innocent victim of a conspiracy. Not only her influence, but that of many of her students has been exerted in defense of this unfortunate woman, and the results of such efforts time will serve to disclose.

Think of it—young, sincere, true-hearted, the mother of two beautiful children, her good name ruined, her life torn into shreds to satisfy the hatred of two or three jealous individuals, because Mrs. Maybrick stood between them and a fortune, possibly because her life may have been a reproach to their own! The Maybrick case is one of the most remarkable in all the history of jurisprudence.

STUDENT

A TWENTIETH CENTURY MARTYR: AN AMERICAN WOMAN

WHAT recompense can Mrs. Florence Maybrick ever receive for the long weary years of imprisonment and suffering? Marked by the law of the land as a criminal—a murderess, but innocent! Well may justice weep o'er man's inhumanity to man.

This persecuted woman was a martyr to Twentieth century selfishness: more subtle in its deadening force than that which created the rack and thumb-screw and faggot which tore the life from Joan of Arc. Let us appeal to the Higher Law in the hearts of noble men and women; and let us see to it that never again shall innocence be crucified.

Let the women of the Twentieth century, through the dignity of their calling, reach the heart of the common law by their purifying influence on the hearts of men. Too often is the law used to distort justice: let the noble hearted of the Twentieth century make the law which shall restore Justice.

The Divine Law in its mercy has not deserted the crucified woman: nor will it pass by those who have crucified her.

KATHERINE TINGLEY

The Indian Drama

AN interesting paper on the Indian drama was read by Mr. Sarath Kumar Ghosh, the author of *The Romance of an Eastern Prince*, at last week's meeting of the Society of American Women in London. The lecturer, after referring to Schlegel's theory of the Indian origin of Western culture, cleverly disproved from the actual internal evidence of the Indian drama the generally received idea that Hindu women hold an inferior position. He showed instead that women have always been treated in India not merely with respect, but with homage and every distinction and recognition since the time of the classic drama. At a time when, not so long ago, actors and actresses were still classed in England as "vagrants, vagabonds and

sturdy beggars," in India they were ranked next to princes. Sarath Kumar Ghosh is at present the only Indian writer of Indian fiction in Europe, and at a time when the interest in Eastern drama is awakening ever more fully, it is doubly interesting to hear from an Indian novelist of Indian life as he has lived it, and not merely as it has been seen by some of our English novelists.—From *Public Opinion*, an English journal, May 27th

The contributor who sent in the above makes the remark that a lecturer on Shakespeare, at the present time, might just as well show "from actual internal evidence" of the dramas that the English people at that time not only spoke in blank verse, but have done so ever since!

"NO ONE can deny that, so far as concerns style, brilliancy, musical intelligence, and, above all things, remarkable self-possession, little Wilhelmina Neruda is an extraordinary personality." Thus wrote Eduard Hanslick, in 1849, after hearing the gifted little girl who today is known throughout the entire musical world as Lady Hallé.

AN esteemed contemporary says: "It is interesting to note that of the six best selling books on the July *Bookmaker's* official list, just half were written by women"—and those American women.

THE home cannot be looked upon as an eating-house, as a laundry, as a sleeping place; it is the school of life, and anything which renders it more efficient is worth paying for.—Ellen H. Richards

Brief Glimpses of the Prehistoric World

Who Were the Ancient Egyptians?

WHO were the ancient Egyptians? How came old Egypt by her mystic lore? What was the secret of that archaic civilization, which has sent its echoes so ringing down the corridors of time, that today we are beginning to learn that most of what we know had been anticipated by this mighty folk? What questions! How many brains have wearied under the weight of these questions; and how little, in point of fact, do we now know about the origins of the Egyptians. Certain names have been rendered illustrious for all time by the results achieved: Champollion, Brugsch, Mariette Bey, Maspero, Ebers and Petrie, will never be forgotten. The difficulty is, that the reputation of more than one branch of our modern scientific thought would be imperilled, were certain data pertaining to Egyptian history once fairly collated in a whole; and, furthermore, every branch of our science is needed for a lucid and fit demonstration, an exposition, of the questions above put. Therefore, the lips of our latter-day scientific Oedipuses remain sealed, until such a time as facts shall break the spell.

When the first historic settlers in Egypt, coming from the East, reached the land of the Nile, they found two races dwelling there: one fair, and the other dark; the invaders themselves were of Asiatic stock, and their ethnic peculiarities challenge our intelligence to class them with the Caucasian, in its broadest sense. Melanochroi, as the late Professor Huxley might class them; this would ally them racially with the ancient Hindus, Bactrians and Baluchis, with the so-called Indo-Iranic group of peoples generally; and ethnologically, with many of the wandering hordes in Central Asia, known to the ancient Greeks as Skolotai, generically; also with the northern Mediterranean branch of the early Aryan immigration into Europe. H. P. Blavatsky, in this connection, suggests, and most reasonably indeed, that this invading people in Egypt, were the defeated bands of Manu Vina's men. Kolluka Bhatta, the historian, records the fact that Manu Vina, being abandoned by the Brachmanes, and seeing his fortunes wane in the Punjab, left the country, and passing ancient Iran (Persia), traversed Arabia and settled finally at Masr. El-Masr is the name of Cairo to this day, given to it by the Arabs. Mena, or Menes, the first historical king of Egypt, seems not to depart, philologically, too much from Manu (Vina), while the distinct cranial marks of the historic Egyptians designate them as one of the Asiatic branches of the human race. Supposing that these ancient Egyptians indeed hailed Central Asia as their racial cradle, this would be only a step forward into the night of pre-history. The writer has himself examined many an old Egyptian skull, and the straight hair, sometimes reddish in tint (in cases where no chemicals could have touched it), the nature of the cranial marks, the teeth and the general shape of the skulls, disposed at once of the idea of an African origin.

But what about the two races whom these invaders found living together on the banks of the Nile: one fair, the other dark? Time itself, and profound research, will set this question at rest. While the ancient Egyptians were very probably racially akin to the ancient Phenicians, etc., and while they belonged to the human stock we may call Eastern Æthiopians, (adopting a classic term), the startling points of similarity between the Egyptian civilization in archaic days and that of the prehistoric Americans, are so numerous, and so peculiar, that one can only regard both as either cognate peoples, or as different peoples in close commercial and social affinity with each other. May not the known history of Egypt appertain to the later Asiatic immigration into Egyptian territory? And archaic (pre-historic) Egypt was possibly, nay probably, settled by another race, whose beginnings may be traced to prehistoric America. The Sphinx has more than an "Egyptian" look; its stony, silent features bespeak America, rather than Asia or Africa; while the abundance of pyramids and pyramidal structures in both Egypt and America, utters silent yet unimpeachable testimony. What honest man of science has not paused in wonder before the amazing identities found in the forests of South America, and on Easter Island in the Pacific, and in Egypt? Let the identities speak; we can wait with patience until Truth shall claim her own. G. DE P.

Sacred Mountains of All Nations

THE description, in a recent issue of the NEW CENTURY PATH, of Fuji-yama, the sacred mountain of Japan, recalls some of the traditions and mystical legends which, among so many other peoples, have been associated with real and symbolic mountains.

Of such mountains the Hebrews celebrated several. There was Mount Ararat, (meaning "creation" and "Holy Place") where the ark rested after the waters had subsided—obviously symbolic. There was Mount Horeb, "the mountain of God"; and Sina or Sinai, "on which the glory of the Lord abode"; and Zion, "the perfection of beauty", and the dwelling-place of God.

The Hindoos had many sacred mountains, chief of them being Mount Meru. Meru is variously celebrated as the "Gold Mountain," the "Jewel Mountain," and as "Abode of the Gods."

Central America was apparently known to the Hindoos, and referred to in the Mahabharata epic as Heranmayaka. It was said to contain three mountains, one full of gold, another of silver, and another of diamonds. Tradition had it that on (or near) one of these dwelt a famous spiritual teacher, a woman, who had attained "self-illumination." The name America has been thought to be derived from Meru.

Among the North American Indians there were many sacred mountains. The chief god of the Mohaves of Colorado dwelt on "the white mountain." The Blackfeet relate that their tribe came forth from Nina Stahu, "the chief of mountains." All the Natchez group of nations relate that "the Master of Breath" dwelt in a cave in a hill, "High Hill," or "Bending Hill," "King of the Mountains," and that here he fabricated them of clay. The Tupis have a sacred mountain, glittering with gold, near the river Uaupe, whereon dwelt a great seer. To some of these mountains colors were ascribed, white, black, red, and yellow, according to the four cardinal points.

In Germany there was the Hartz mountain, scene of the Walpurgis Night revels; which, as a legend had it, contained the "cave of Venus." And there was the mountain covering the castle of Kyffhäuser, where lies the great Frederick wrapped in mystic sleep awaiting his hour to come forth.

In this connection one recalls the account given by Plato—as coming from Egypt—of the mountain in the center of Atlantis. On it dwelt an earth-born maiden, Cleito, beloved and married by the god Poseidon. Poseidon made the mountain inaccessible to mortals by surrounding it with alternate belts of land and water. And he led to it two subterranean streams, so that all things necessary for food grew luxuriantly—a sort of Garden of Eden, except that that had four streams.

One might extend the list indefinitely, and from the lore of nearly all peoples. It would not be difficult to make a classification of these mountains. Some, like Olympus of the Greeks, were the abode of Gods. Concerning others, no gods are mentioned, but the hills are crowned with light, the divine glory. A third group contains caves in which Gods or Demons dwell, in which man is made, in which heroes sleep till their time comes for reappearance, or in which the winds are stored. There must be many caves over the earth in which there are actually archeological remains, so far unsuspected, of the utmost interest and value. If men's attention was sufficiently fixed on caves to suppose Gods to be there, it was sufficiently fixed to store there their most cherished remains and records, especially under the guardianship of the inhabiting Deity or Force. It is quite possible that future cave finds may push far into the past the veil hanging between the prehistoric and historic. STUDENT

The oldest-going clock in England is that in Peterborough Cathedral, which was built about 1320. It is wound up by a wooden wheel about 12 feet in circumference, over which passes a galvanized cable 300 feet long, with a leaden weight of 300 pounds, which is wound up every day. The construction is more primitive even than that of de Nick, made in 1370 for Charles V of France. It stands in the northeast tower, some 120 feet high. The striking is done by an eighty-pound hammer on the great tenor bell, which weighs 3,200 pounds. There is no dial on this ancient time piece, and the hour of the day is indicated on one of the wheels.

Hygienic Properties of the Eucalyptus

THE first notice of the Eucalyptus tree, as far as we know, was taken by Labillardière, who in 1792 observed that in the blue-gum forests of Tasmania, notwithstanding the marshy nature of the country, the fever usually produced was practically unknown.

The tree, indigenous to Australia and Tasmania, has been introduced into southern Europe since 1854, and into Algeria, Tahiti, New Caledonia, Natal, India, and California. It was found to have the same effects in the marshes of Italy and other places.

This is an example of what is called "Nature's Hygiene" in providing a remedy drawn from the very source of the disease. It is not easy to say whether we are to understand "Nature" as a wise and beneficent rival of the Deity, or as his ally, or as being only the Deity under another name. Fortunately people do not always care to spoil their intuitions by insisting too strongly on making them square with theological formulas, and so they adopt a "poetical" or "figurative" way of speaking. At any rate they do recognize that there is a mind at work, whatever they may choose to call it. Perhaps the Eucalyptus tree has something of its own answering to a soul or mind or conscious life. Our bodily functions and vital processes are the outer manifestation of our inner consciousness, and perhaps it may be so with the trees. But, as their bodies are differently organized from ours, their consciousness may also be different. If there is any truth in these ideas, then a Eucalyptus grove might convey a moral influence as purifying to the soul as its chemical influence is to the body. But we fear we shall be accused of trying to revive ancient superstitions about sacred groves.

Chemically speaking, it seems the leaves of the eucalyptus absorb oxygen from the air, and this combining with the essential oil of the plant produces a compound analogous to ozone. It is this compound, known as an organic peroxide, which has the hygienic properties.

The pine-tree plays a similar part in northern climes and may be called the eucalyptus of the north. Its essential oil is similar and has the same properties.

Pine forests are celebrated for their hygienic effect, and the advantages of pine wood in hospital construction have been proved. Among other of Nature's remedies may be mentioned the camphor-tree, the lime, the hop, parsley, and thyme, all of which have their places in the pharmacopœia as possessing valuable essential oils. There are several different varieties of the eucalyptus, but all of them have the same powerful, but by no means unpleasant, odor, and medical science is beginning to appreciate the value of this hardy and prolific tree.

WHO KILLS THE BIRDS?

by MARY DRUMMOND

WHO kills the birds?

"I," said the Woman, "although 'tis inhuman,
I must have dead birds."

Who sees them die?

"I," said the Man, "whenever I can,
For my sport they must die."

Who tolls the bell?

"I," said the Boy, "I love to destroy,
I toll the bell."

Who digs their graves?

"I," said the Girl, "for a feather's neat curl
I'd dig all their graves."

So the men and the boys by the woodland and streams,
And the women and girls, with their hats like (bad)
dreams.

Are robbing the earth of its bird life and song,
With never a thought of their rights, and our wrong.

—Selected

BRANCH OF AN ALMOND TREE

The Almond is a *drupe* or stoned fruit, having an outer coat or *epicarp*, a tough inner pulp or *mesocarp*, and a hard shell or *endocarp*, which last encloses the kernel that we eat.

CHRYSALIS OF THE HUMMING-BIRD MOTH

This shows the larva of the Humming-Bird Moth (*Macroglossa titana*) in its pupa stage. The rudiments of the future wings are seen in an advanced stage, and the masticatory apparatus of the caterpillar has already become transformed into the suction-tube of the insect. The Humming-Bird Moth may now be seen in considerable numbers, poised in the air near the flowers at dawn and at sunset. On the wing it is so like a Humming-Bird as to be with difficulty distinguished from it. It is about the same size, poises itself in the same way by a peculiar motion of the wings, takes the same rapid darts, and dips into the flower a long tube which resembles the Humming-Bird's beak. Closer inspection, however, reveals the dull moth-color and the flexible character of the proboscis. It sips the nectar from the calyx, while it is probable the bird relies more on the small insects for its meal.

their chamber wall in order to get to the open air, leaving little windowed tubes or flutes behind them. Through these small windows or openings the wind plays, and produces the beautiful sounds that give delight to the listener and the tree its name.

The Adaptation of Plant Communities

IN a recent lecture before the St. Louis Academy of Science, Professor Eikenberry read an interesting paper on plant communities and plant adaptation. Every region, large or small, possesses a plant family exactly adapted to meet those conditions. As the conditions change, the character of the family changes. As a pond changes to a swamp, the lilies and other pond flora give place to the vegetation of a swamp moor. As this dries, swamp shrubs appear, changing slowly to a forest of swamp trees, tamarack, pine, and others. If the water totally disappears, and the climate becomes torrid, there will at last be nothing but the cactus, a little sage, and similar plants that can almost provide themselves with water. The crowns of some giant cacti, ninety feet high, contain gallons of cool water, collected and secreted somehow in regions where there is no rain for years.

So every region has its own community, exactly adapted to its conditions, and the members strike a balance among themselves. Seeds from foreign flora may fall there, but either they do not sprout at all, or the plant never reaches the flowering stage, or the flower is so ineffective as to attract no fertilizing bees.

But the power of adaptation to changing conditions possessed by some plants is very great. It is said, for example, that the cactus was primarily a water plant, like the pond lily, and that as the inland lakes and ponds dried away with changing climatic conditions, the faithful cactus kept adapting itself; and now it has effected so thorough a change in its habits that much water kills it. It would be an interesting experiment to lead it gently back to a tolerance of water and finally to a residence therein. Some new-old beauties might perhaps be developed, and at all events, the experiment would be most interesting.

The Whistling Tree—The Work of Insects

ONE does not generally have occasion to bless the depredations of the larvae of insects, but there is one case in which they are indirectly productive of exquisite music comparable to that yielded by the Æolian harp.

There is a species of acacia, found in Nubia, the Soudan, and the West Indies, much affected by certain insects, and known as the "Whistling tree." The insects lay their eggs in the young shoots, and when the larvae hatch, the irritation causes the swelling of the shoots into a sort of spindle which the grubs eat hollow. When the insects hatch from the chrysalis, they eat small holes in

Universal Brotherhood Organization

Central Office Point Loma California

BESIDES a very pleasing program of instrumental musical selections by students of Isis Conservatory of Music, there were three very interesting addresses by older Point Loma students at the regular meeting of The Universal Brotherhood and Theosophical Society, in Isis Theatre last Sunday evening. The first of these was by Dr. Gertrude W. Van Pelt, entitled "Why the Theosophical Movement Is Opposed." She began by quoting H. P. Blavatsky, who, when asked why there should exist such a terrible ill-feeling against Theosophy, replied:

"You must bear in mind how many powerful adversaries we have aroused ever since the formation of our Society. As I have just said, if The Theosophical Movement were one of those numerous modern crazes, as harmless at the end, as they are evanescent, it would be simply laughed at—as it is now—by those who still do not understand its purport, and left severely alone. But it is nothing of the kind. Intrinsically, Theosophy is the most serious movement of this age: and one, moreover, which threatens the very life of most of the time-honored humbugs, prejudices and social evils of the day—those evils which fatten and make happy the upper ten, and their imitators and sycophants, the wealthy dozens of the middle classes, while they positively crush and starve out of existence the millions of the poor. Think of this, and you will easily understand the reason of such a relentless persecution by those others who more observant and perspicacious, do see the true nature of Theosophy and therefore dread it."

Only infinite compassion could have been H. P. Blavatsky's incentive to action, said the speaker. Her work was to change the mold of materialism into which the thought of the civilized world had been hardening for hundreds of years, and of raising new ideals for humanity—ideals that will yet become actualities. To even faintly understand the magnitude of this undertaking we must reflect upon the selfishness of the age and contrast it with the selfless life which Theosophy enjoins.

"The religions have done the same, to be sure," said the speaker, "when they were alive in men, as in their beginning, and had a vital hold upon their lives, they were opposed with all the bitterness and venom which truth always excites among the evil-doers. But here is something which roots into every nook and corner of the moral, intellectual and physical worlds, which ignores all time-honored customs, which defies public opinions, which takes one thing after another and shows what it is, and then creates a picture of what it should be, and places it beside it. One thing after another it uncovers, removes its outer garment of respectability and lays bare before the eyes of all who wish to look, the rottenness, the deceit, the falseness which have lain hidden. Those who are honest, are of course thankful. They want the right thing, but they have not seen clearly. But what of those of whom, alas, there are vast armies, who do not want the truth, who prefer their own pleasures, their own ambitions, their own comfort and ease to anything else? Will not they criticise, scoff at, even persecute a movement which is going to create a public opinion which will no longer hold them in respect, which will not, perhaps, even tolerate them? Most assuredly. And it is for this reason that Theosophists rejoice in persecution. They know it simply means that the heaven is working. To be popular in this age, they would deem no flattery."

In his address on "The Power to Know," Mr. H. T. Patterson quoted from Katherine Tingley: "A pure, strong, unselfish thought beaming in the mind lifts the being to the heights of light."

The savants of the day were not the real knowers, said Mr. Patterson. That which is real knowledge is not done up in parcels of "many words and long phrases between the covers of the numberless books on science, sociology and the like. The real knowledge, or rather the wisdom which transcends knowledge, has been and is held by the great teachers—the Buddhas, the Krishnas, the Solomons, the Lao-tszes, the Blavatskys, the Judges, the Tingleys. Fortunate are we, we of this city,

and we of Point Loma, and we of the world, that we have one of them in our midst—most fortunate if we recognize the teacher as such; less fortunate if we do not so recognize, but fortunate, more or less, that we even touch the teacher, so to speak, through being incarnated at the same time."

"The power to know does not come from book study," quoted the speaker, from W. Q. Judge, "nor from mere philosophy, but mostly from the actual practise of altruism in deed, word and thought; for that practise purifies the covers of the soul and permits that light to shine in the brain mind."

"Most of you must, of necessity, be aware, from your own reading, of the marvelously striking similarity between the utterances of these different teachers of divine wisdom. This similarity cannot be accounted for by any theory of imitation in circumstances, and conditions prohibit us from cleaving to such a theory. Whether it be Katherine Tingley, with her grace and charm of voice and gesture, her gown in perfect taste, her power to sway an audience; or William Quan Judge, stalwart and giant-like; or Helena Petrovna Blavatsky, the Russian noble woman; or Gautama, the Buddha, a prince of India; or Confucius, the sage; or Lao-tze, less known to the western world, they all tell the same truths; they all make the same call; they all send out the same pleading cry to humanity; and we know, as we know that the leaves of a tree have the same trunk and the same roots, that these helpers are all moved by the same spirit; that in their hearts have grown the same seeds—yearning, love, compassion."

Mr. Cranston Woodhead's excellent address on "An Old Chinese Philosopher," dealt largely with the philosophy of Lao-tze, the contemporary of Gautama Buddha. He gave some quotations from the only one of his books extant, *The Word of Heaven*, a few of which are as follows:

"How calm it is! How incorporeal! Alone it stands and does not change. It goes everywhere without hindrance, and can thereby become the world's mother. I do not know its name."

"The good, I meet with goodness; the bad, I also meet with goodness, for virtue is complete goodness. The faithful I meet with faith; the faithless I also meet with faith, for virtue is complete faith."

"One who knows others, is clever; but one who knows himself is enlightened. One who conquers others, is powerful; but one who conquers himself is mighty. One who is contented is rich."

"Contemplate a difficulty when it is easy. Manage a great thing when it is small. The world's most difficult undertakings necessarily originate when easy, and the world's greatest undertakings necessarily originate when small."

"I have three treasures which I preserve and treasure. The first is called compassion. The second is called economy. The third is called not daring to come to the front in the world. The compassionate can be brave. The economical can be generous. Those who dare not come to the front in the world can become perfect as chief vessels."

"Requite hatred with goodness."

Mr. Woodhead said there were recurrent periods in the world's history which were times of transition. "Old faiths have not stood the test of imperfect human interpreters, and have lapsed from their premature divine simplicity. Old ideals have become encrusted with the speculative superfluities of intellect and ambition. Eye service has gradually supplanted the Doctrine of the Heart. It should, however, never be forgotten that this Doctrine of the Heart has ever been the same, the foundation and sum total of all the world's great teachers far back into the night of time. Only when the pure original teachings have lapsed from their true interpretation does it become necessary to recall them once again. Every keen observer of current events will perceive that at the beginning of the Twentieth century, we have arrived at just one of those periods of transition."

Some Bits of Wisdom from the Writings of Helena Petrovna Blavatsky

The human heart has not yet fully uttered itself.

Man requires but one church—the Temple of God within us.

No Theosophist has ever spoken against the teachings of Christ.

The day of domineering over men with dogmas has reached its gloaming.

Each day brings the reactionists nearer the point where they must surrender despotic authority over the public conscience.

Truth, high-seated upon its rock of adamant, is alone eternal and supreme.

Philosophy has room for no other faith than an absolute faith in the omnipotence of man's own immortal self.

The contest between public conscience and the party of reaction will result in the overthrow of error and the triumph of Truth.

By combining science with religion the existence of God and immortality of man's spirit may be demonstrated like a problem of *Euclid*.

Omnipotence comes from the kinship of man's spirit with Universal Soul—God.

The Trend of Twentieth Century Science

The Disappearing Kanakas of the Pacific Islands

THE problems in ethnology left to the white man to solve, as regards the peoples of the islands of the great Pacific, are still today in process of solution. What interesting reading it would make, were the folk-lore and legends of the different groups of islanders once collated from all sources and compared; for may it not be that tradition is more authentic than so-called history—much of it? That which is passed down from generation to generation through ages of time, loses probably much in the way of detail; and possibly gains much in the way of minor additions to the tale of the whole; but the root facts remain, and it is just these root facts of the tale or myth which constitute “history” even among civilized peoples.

Perhaps, when the day comes when the sayings and stories of these islanders shall be gathered together, and comparison becomes the means for obtaining accurate knowledge, there may be found again certain knowledge of the far past life of them; and the folk-lore of all nations of the earth may be found to have a common beginning, and a common history, and a common origin.

Like the Rider on the White Horse, the white man leaves behind him a trail of death wherever he goes. The savage and barbarian tribes of the earth acknowledge his “superiority,” and disappear from before his face. An instance in point is that of the Hawaiians. In 1900 the number of Hawaiians, both pure and mixed, was 37,635; fifty years before, the number of pure blood Kanakas amounted to about double that. A writer in a recent number of one of our magazines says that the condition of the natives, especially of the pure blood Hawaiians, is very far from satisfactory. Among them, small families are the rule; many of their children die in infancy, while with regard to the adults, consumption and other diseases indicating a low vitality, are alarmingly prevalent. Oddly enough, though, the physical stamina and general health of the mixed races are far superior to those of the pure breed Kanaka. There are two types of these mixed races: the Caucasian Hawaiian and the Mongolian Hawaiian. Of these two, again, it is universally conceded that the Mongolian (Chinese) Hawaiian is the better race, not only physically, but mentally. The Kanaka by no means avoids intermarriage; he rather courts it, and the number of such unions is on the increase. Now here is a curious thing: while as a rule union between the white man and the savage soon brings its fruit in the extinction of offspring through general debility and disease, with the Kanaka the opposite takes place; the children of such unions have more physical stamina than the “savage” parent. Yet, while the islands supported a slightly increasing population before the advent of the white man, since his arrival and settlement, the *pure blood* Kanaka is dying out, and dying quickly!

In 1872 the census gave a return of 1487 part Hawaiians; in 1884 the number was 4218, and in 1900 7848. The statistics of children attending school show the larger proportion of children of the mixed races. In 1902 there were 4903 pure Kanakas to a total population of 29,787; and 2869 part Hawaiian children to a population of 7848; which shows that the proportion of children is about double among the mixed races as compared with the pure race. As the Hawaiians, both mixed and pure, are eager for education, it is likely that the figures are fairly accurate.

Does all this mean that in a few generations the pure Hawaiian will have passed away, and that the weaker will have become absorbed into the stronger mixed race, to form a new stock, possibly the germ of a new people?

The Latest Comet Is Receding from the Earth

PROFESSOR BROOKS, of the Smith Observatory, Geneva, U. S. A., has just discovered his twenty-fourth comet. Save one, this comet has a greater perihelion distance than any known. It is receding from the earth and from the sun, and is, moreover, lessening in brightness. It has been many years since those not possessing telescopes have seen a comet with the naked eye, and when the appearance of one is announced from an observatory, the heavens are eagerly searched in quest of the pyrotechnic display.

The Bacillus of Age—Is Old Age Contagious?

PROFESSOR METSCHNIKOFF, of the Pasteur Institute of Paris, a famous chemist, is of opinion that senility is caused by a bacillus which probably resides in the large intestine. He even regards it as proven that old age is so definitely a disease as to be contagious.

Doubtless there is a bacillus associated with old age; maybe many. But to regard it as the cause of the senility is somewhat like regarding the lilies as the cause of the ponds in which they grow. The pond being there, lilies take advantage; and their decaying leaves poison its waters against man's use.

As we move through life, from week to week our bodies change their character a little. Most of these changes afford conditions favorable to the growth of minute plant vegetation, parasitic, called bacilli, and more or less noxious in accordance with the “dead leaves,” that is, secretions and death products. Probably by very far the larger number of species of these are invisible to any microscope we now have, and the same statement may be true in a thousand years. The slightest and briefest change in our constitutional state must permit of the brief residence with us of a special horde, replaced by another as we pass to another state. Mostly, the poisoning symptoms they induce with their dead foliage, are not recognized. When very marked, we give them a name; and of such is the material of our medical text-books.

Some of the bacilli live with us a long time, and keep us poisoned. Such would be the behavior of Metschnikoff's “old age bacillus.”

But it is clear that though the dead leaves poison the pond, there would be none of them if there were no pond at all. The real disease is the constitutional state of which the bacilli avail themselves. It is that which we must prevent. We must live according to nature. And that means much more than athletic exercises, and drinking two gallons of water a day, and sleeping with our windows open. There are sets of mental states linked as inevitably with death as others with life. We habitually poison ourselves with our moods, gloom, resentment, hate, irritability, envy. These stop digestion as surely as a dose of opium. Whereupon fermentations occur; a cloud of bacilli arrives and riots and sheds dead leaves throughout our blood. In a day or two there is a bad cold or something worse. Who connects that with the fact that he scowled or was angry all through the dinner hour?

And old age, in the sense of senility and loss of reason, is far more the result of all scowlings and rages and hates and envies and sensual longings than it is of faulty diet or unhygienic surroundings or heredity or any other of the usually named causes. Some decay of physical faculties there will be, but even that can be greatly deferred and minimized. Dimming of consciousness there need not be; it will retreat from the outworks, from contact with the small things of immediate event. But *pari passu* with this, it can become richer, deeper, wiser, more spiritual, surer of the realities of life. And it can go on learning from life to the very end, for the ultimate seat of our embodied consciousness, if unpoisoned, is the last to cease functioning. It is, indeed, whatever man may will to have it.

Some Interesting Facts About Deep Sea Monsters

THE Prince of Monaco, curiously enough, is among the scientists. He recently read a most interesting paper before the London Royal Institution, detailing some researches and ideas of his own on Cephalopods (Cuttle-fish, Octopods and Decapods). He thinks he can prove that the mid spaces of ocean—between the surface and extreme depths—are occupied by enormous and terrible creatures of the Cephalopod type. Many new species of these he claims to have himself discovered. Cephalopods are part of the food of whales, and if the destruction of the latter animals proceeds at its usual rate, their prey must surely greatly increase in numbers and perhaps in size. Should that prove to be the case, the perils of fishing, diving, and even bathing, must in some places be considerably augmented. There is really little reason for the continuance of whale-hunting. The oil for which they were and are killed is now abundantly replaced from mineral sources. K.

THE CHILDREN'S HOUR

The Raja Yoga Question Box

WE should know better the meaning of the life-work of great souls. Their work has been as a glorious light upon the world's pathway:

1 Who was Homer?

ANSWER—Homer is called the "Father of Poetry." His poems were famous at the very dawn of Greek history, and are the best of their kind still. They were not written down at first, but were chanted, and lived in the memories of the people, stirring them to heroic deeds. But little is really known of Homer's life, though it is said that he was blind. Seven cities of the ancient world claimed the honor of being his birthplace.

2 Who was Aspasia?

ANSWER—Aspasia was a beautiful and gifted woman who lived in Athens about 440 B. C. She was the friend and adviser of many of the great men of that glorious age. Even Socrates called himself her pupil.

3 Who was Paolo Sarpi?

ANSWER—Fra Paolo Sarpi was born in Venice A. D. 1552. He was a man of learning, a true patriot, a wise leader, and the "greatest of the Venetians." He wrote many books. His heart was pure, and the light of his life spread over the whole world.

The Story of a Little Cubana

DEAR CHILDREN: Many of you remember Mrs. Tingley's first Crusade to Cuba five years ago. It was just after the war and the island was filled with homeless, hungry, sick and unhappy people. Thousands had starved to death and thousands had died of fever. It did seem as if the whole island contained scarcely a bright spot; and one of the saddest places of all was the Plaza de Dolores (Place of Sorrow), in Santiago de Cuba. But it was in this place that the International Brotherhood League flag went up, and it was this place that was changed into a "Place of Joy" very soon. It was here that hundreds and thousands of suffering men and women and little children came day after day for food and clothing and medicines, and it was here that Mrs. Tingley and her helpers worked day after day in the heat and amid discomforts such as you and I know very little about; and when she returned to America, among those who begged to come with her was a little Cuban girl named Carmen. She was one of a family of four children, all of whom came with Mrs. Tingley, and she had known more sorrow and suffering than I could tell you. Her father, a gifted man and a true Cuban patriot, had died from starvation. She herself had often known what it was to be very, very hungry, and her poor little body was almost worn to a shadow with fever. But when she reached Lomaland how different everything became! For a little time, not being strong enough to go into the Raja Yoga School as a regular student, she made her home with the good friend who brought her to this Paradise for little children; and how strong and happy and helpful she became! She learned to speak English almost perfectly, and her great desire was to fit herself to become a helper to her own people. And by and by she became the comrade helper of a group of little tots in Lomaland. Ever so many things she taught them, and not a day passed that you could not see them at their play, the merriest troop of little folks one could find in a week's journey. One day the photographer saw them, and that is how you have this picture. But who could not be strong and happy and hopeful in Lomaland? For there is a magic in environment, as you know, and as many others will yet learn.

AUNT ESTHER

CARMEN AND HER LITTLE COMRADES IN LOMALAND

Festivals of Japan

AMONG the national festivals of Japan are the Dolls' Festival, especially devoted to girls, and the Feast of Flags, which is the boys' especial gala day. And who among us, who may have driven by orchards sweet with apple-bloom, or carried home in the spring air branches of dogwood and hawthorn, or feasted our eyes on flaming autumn leaves and vines, can fail to feel a thrill of delight at the thought of the "flower festivals" of Japan! How simple and natural a pleasure to go forth with one's friends to view the cherry-blossoms, the glorious wisteria, the iris, the lotus, or the morning-glory! Surely, in the hearts of a people whose national life fosters such pure joys, there must remain some memory of the golden childhood of the race.

M. M.

MAGNETS are frequently made in the form of a horseshoe or letter U, but a horseshoe magnet is really nothing more than a bar magnet bent. As both poles will attract iron it is apparently twice as strong as when

in the bar form. A piece of iron laid across the poles is attracted by both of them. In this case the poles act on opposite ends of the iron and do not destroy each other's effects, for each pole magnetizes the portion of the iron opposite it. The iron therefore becomes a strong magnet with its north pole touching the south pole of the horseshoe magnet and its south pole touching the north pole. This is popularly called a "keeper," because it "keeps," or preserves, the strength of the magnet, which becomes much weaker when the keeper is left off.—St. Nicholas

DEAR CHILDREN: In a city on the Mississippi river there lives a real dog hero. Surely he knows what brotherhood means and has earned the right to be a helper. Sport rides with the driver of a laundry wagon, watching the bundles while the man is calling on patrons. Recently he saved the life of his master's horse. While driving near the river the horse and wagon went over the bank. The horse swam toward the center of the river where the current is strong. Sport realized the danger and swam to the horse's head, caught the bridle in his teeth and led the horse to shore. Just as all real heroes, Sport seems unconscious of his fame. He is a shepherd. AUNT JESSIE

MY FOX TERRIER

A LITTLE demon, in defense;
Brave as a lion he.
I wish I had the courage
Of this atom on my knee.

A little universe of love;
Unselfish as the sea.
I wish I did by others
As he has done by me.

A little lump of loyalty
No power could turn from me.
I wish I had a heart as true;
From fear and favor free.

A little fountain full of faith,
Forgiveness, Charity.
I wish I had his patience
And true nobility.

A little flash of fire and life,
Whate'er the summons be.
I wish that I could face the world
With half his energy.

A little white fox-terrier,
In whose brown eyes I see
The little windows of a soul
Too large to live in me.—Selected

Some Pen and Camera Glimpses of the Private

Offices of the International Theosophical Activities at Point Loma, California

ONE of the most active branches of the work at Point Loma, is that found in the private International offices of the Leader, Katherine Tingley. The building in which these offices are, was first called the North House, and is a short distance from the Homestead, which is the great center of Theosophical work, under the direction of Katherine Tingley. The building is most charmingly situated, surrounded with shrubs, flowers, and trees, many of which have been brought from a far distance, and from many different countries. The cosmopol-

plicity and taste. In the center are large desks of plain redwood, artistically fashioned, the work of some of the students of Lomaland. The seats are of the same material, something similar in design to those of very ancient times. Near a few occasional tables are some modern chairs, sacred to William Q. Judge, a former Leader of the Theosophical Society, and H. P. Blavatsky's successor. The great table is always covered with documents and papers, letters from all countries, and heaps of manuscript. Here, often sit E. A. Neresheimer, and other officers of the

FULL VIEW OF THE PRIVATE OFFICES OF THE INTERNATIONAL ACTIVITIES OF THE UNIVERSAL BROTHERHOOD ORGANIZATION

itan character of the trees and shrubs, from the Scotch fir, to the graceful palm, is peculiarly appropriate at this International Center; as if Nature were in visible harmony with the life of the place. This spacious building is surrounded with broad verandas; and with the tiled roof, gives one the idea of solidity and beauty. The main entrance faces the broad expanse of the Pacific, several hundred feet below the high cliffs. On entering the main door of this International Center, one feels at once the atmosphere of an International life. On every side this is evident—even to the great library, the delight of a student, for its contents are gathered from all quarters of the globe; beautiful paintings and statuary are there; and shut in behind glass cases, protected from the ravages of time, are studies for the antiquarian and the archeologist, from all parts of the world.

All that meets the eye in the different corners is so arranged as to instruct and serve. Here, in this spacious place, are entertained on rare occasions, National Representatives, people coming from all parts of the world, seeking further knowledge of the educational system of the Universal Brotherhood.

Moving on, we go up a broad stairway, that leads to the private office of the International work, which is one of the Departments of the Universal Brotherhood Organization. It is difficult to convey a correct idea of this interesting place, for the whole upper floor is one great office, the wide windows opening out to the north, south, east and west, and charming nooks and corners are there: everything bears the stamp of intense effort, as well as of sim-

Universal Brotherhood, working to advance the interests of that great body for the people of the Earth.

In a large corner of this place, facing the east, is where Katherine Tingley carries on her private correspondence, and her work for the children; in another corner, facing the south, is the International Representative, G. de Purucker, who acts as Mrs. Tingley's Private Secretary. At a big desk, hidden in the west corner, buried in a pile of papers, is the working place of H. Patterson, one of the old workers of the Theosophical Society.

Other workers go and come from this office, as their duties call, among them S. A. Charpiot, who has his special place, as an assistant in the translation of official matter in connection with the furtherance of the new work established in France by Katherine Tingley; and also J. F. Knoche, Manager of the Homestead.

One of the most devoted workers to be met at this Headquarters, is Katherine Tingley's companion, who acts as caretaker of all this sacred work, Ellen Andersen, a Swede. Serving in this capacity, she brings in the Nature touch, and beautiful floral decorations, in which she takes a great pride; these flowers are gathered from the gardens of Lomaland: the pride of the students, and a charm to all who behold them.

In spite of all the activity of this interesting center, there is a quiet, in touch with the exterior of the building, which more resembles a peaceful Oriental dwelling than the modern idea of a center of official life. Quite an interesting dweller in one of the sunny corners of this build-

A LOMA-LAND ART DOOR

Some Pen & Camera Glimpses

Offices of the International Theosophical

ing, who salutes the visitor with the Theosophical slogan, "Life is Joy," is Poll, the Brotherhood parrot.

Those who know, say there is more work done in this great Headquarters in one day, than was done seven years ago in the whole Theosophical Society in the same time.

Few people have any conception of the enormous amount of work carried on by Katherine Tingley; she edits the *NEW CENTURY PATH*, a very high class weekly,

devoted to the teachings of Theosophy; she has a correspondence with all parts of the world, and with members of The Theosophical Society and Universal Brotherhood. All activities connected with the Point Loma Homestead and the Raja Yoga Schools there, and in other parts, come under her supervision. It is a small wonder that she often finds little time either to eat or sleep! "By my enemies," Mrs. Tingley remarked with a smile, "I am supposed to be resting in that big arm-chair, possibly offering burnt butter to the gods." This she said while sitting at a great pile of work on the table. During the brief space of time that one may pass there, one hears knocking every few moments at the door, and students of the Organization make their appearance with letters and cards from people who have often traveled long distances to see Mrs. Tingley.

From the windows on all sides of the house one meets with a wonderful view over sea and land, and brown and rugged cañons. To the east lies the calm, land-locked harbor of San Diego, or "Port Orient," as Katherine Tingley has named the city: as blue as the sky overhead, is the bay. Beyond it the city stretches towards the foothills; while at a distance of fifty miles the mountains form a vast circle, the like of which cannot be seen in any other part of the world. On the west side, the eye is carried to a deep ravine, and beyond it but far below, over the placid waters of the ocean, from which, even during the warmest days, the constant breeze is cool and invigorating. The views from the east side of the house and from the west side are as different as possible, each magnificent in its own way; and both taken together they are strikingly suggestive of the connection of East and West by means of the power for International Unity and Universal Brotherhood proceeding from the one Center.

The Leader and Official Head of The Universal Brotherhood is carrying on the

work of H. P. Blavatsky and W. Q. Judge, in making Theosophy a living power in all life. She declares that "Unbrotherliness is the insanity of the age;" and that men should awake to a consciousness of the divine soul within them. Point Loma, it is held, will be, and even now

Activities at Point Loma, California

is, a center for all nations and peoples, therefore an International Center. Nearly every nation is already represented among the students at Point Loma, and it is impossible to attribute this to mere chance. Yet, on the highest sum-

mit of the Lomaland hills, daily waves Old Glory. The International Center is held as a place of hope, and peace for all nations; from it goes a helpful influence encircling the world—it is like the blood flowing to the heart and lungs, and then back again to all parts of the body.

In all ages, and in every country, people have consciously or unconsciously followed some leader, but very often the leaders of men have been animated by selfish aims, and whatever powers they possessed were used, not for the good of those who followed them, but for their own aggrandizement. But those who know Katherine Tingley as Leader have the assurance that she is acting unselfishly, and for their good continually. In the words of the old Egyptian hymn, she "lays her life down for a pathway."

(Rev.) S. J. NEILL

THIS is what the true content means—that hearty willingness alike for calamity or joy or weighty responsibility, which is inspired by the magic secret that in each condition alike there is some *Divine spring of help*, some opportunity of so dealing, that the actual conditions, however apparently calamitous, shall be better, there and then, than any alternative, however bright—resourcefulness of the highest kind, involving a spiritual elasticity of the highest kind, a power to transform what often seemed like mere wounds, and pangs, and fetters, into new strength, and life and freedom.—*Selected*

THE following anecdote is related of the Polish patriot, Thaddeus Kosciuszko. He wished to send some bottles of good wine to a clergyman of Solothurn; thinking his servant would smuggle part, he engaged a young man named Zeltner, and desired him to take the horse which he himself usually rode. When Zeltner returned, he said that he would never ride his horse again, unless he gave him his purse at the same time. Kosciuszko asking what he meant, he answered, "As soon as a poor man on the road takes off his hat and asks for charity, the horse immediately stands still, and won't stir till something is given to the petitioner; having no money about me I was obliged to make believe to give something in order to satisfy the horse."

INVOCATION

by THOMPSON

YE mysterious powers,
Whose ways are ever gracious, ever just,
As ye think wisest, best, dispose of me;
But whether through your gloomy depths I wander,
Or on your mountains walk, give me the calm,
The steady smiling soul, where wisdom sheds
Eternal sunshine and eternal peace.—*Selected*

The Revival of Learning a Factor in Religious Growth

THE light and liberty which we at present enjoy have reached us, not along one line of development only, but along several. In the Nineteenth century the progress of science has done much towards enlightening and freeing the minds of men: though it must not be forgotten, that it intensified the danger of materialism. The human mind is always prone to seek extremes. The rebound from one thing carries to its opposite. The course of progress is not a steady, even march onward and upward, but a vast series of wavelets, now ebbing, now flowing. In the age-long conflict with bigotry the various branches of science, such as biology, geology and astronomy, have been powerful helpers, but they, in turn, have established a new monarchy, the empire of the senses. Century after century we observe the fashioning or the sharpening of some new weapon to cut asunder the bonds of ignorance, bigotry and superstition. And frequently the presence of the Helpers of humanity has been evidenced quite as much by the bursting of fetters as by any very great advance toward the more perfect life. For men had been making fetters for themselves for hundreds of years. In political matters, in mental and in spiritual affairs there was bondage on every side. This bondage could not be terminated except by the working out of a steady purpose. Historians write of the diffusion of a knowledge of Greek literature as the cause of the progressive movement that set in after the fall of Constantinople, and continued through the Renaissance and the Reformation, and on till the present time. But, instead of being the cause of the upward movement, it was only one of the instruments used to produce the desired effect. For, assuredly, had the knowledge of Greek been a sufficient stimulus to move the world to better things, it would have prevented the decadence of Greece and the downfall of Rome. The moving force was something deeper, and it used the diffusion of Greek learning as a means to an end. Had there not been kindled in the minds of many an aspiration towards freedom, the teachers of Greek would have found no pupils. If we suppose that from the Fifteenth century onward, many of those who stood foremost in the world of thought had once been Greeks, then we have no difficulty in accounting for the Reincarnation of the spirit of freedom and learning. Then we can account for the wonderful avidity shown in the study of Greek, and the vast labors accomplished by some of the early printers of Greek books.

While all historians have noted the powerful influence exerted by the diffusion of Greek learning, few have noticed the influence of Hebrew. Yet it is a remarkable fact that every period of the Christian era, which has been marked by vitality and progress, has witnessed a keen interest in the Hebrew language and literature. It would appear that not only must the Aryan nations of the West receive their religion from "Semitic sources," but ever afterward there must be a mingling of Aryan and Semitic forces in order to produce certain results necessary to the progress of humanity.

No student of history needs to be reminded that from the Second century onwards to the Revival of Learning, the Scriptures of the Old and New Testaments were held to be the Supreme Authority, not only in purely religious matters, but also in other departments of knowledge as

well; nor has this attitude entirely been outgrown to this day.

Keeping this in mind, we are comforted with the strange thought that though these Scriptures, being in Hebrew and Greek, of necessity demanded a knowledge of these languages for their correct interpretation; yet, with the exception of Origen, Jerome and perhaps a few others, Hebrew was practically unknown to the Christian world for over 1000 years, and Greek was but little known. This is one of the strange facts of history! It is said, and reasonably so, that Divine Wisdom designed that the books of the New Testament should be written in Greek, because it was widely known, and in other respects fitted to be a vehicle for the diffusion of Truth. Yet we find that, in the hands of the Romish Church, the original tongues are laid aside, and Latin is made, with a few exceptions, the language of the Scriptures till the invention of printing. For, while it is a good thing that the mass of the people should have the Scriptures in their own tongue, it is not a good thing that scholars should lose touch with the fountain-head, and with all the realm of thought which that implied. Hence it is that the dawning of a better time is marked by the recovery of lost knowledge—the restoration of Hebrew and Greek.

It is in Spain, at Toledo, during the last quarter of the Eleventh century, that we find the revival of Hebrew learning in the West, in the person of Ibn Ezra; and also through the teaching of Rashi whose influence extended through France and Germany. Again, during the latter part of the Twelfth century, in France, at Narbonne, we find the same spirit at work in the person of the celebrated David Kimchi. The so-called Authorized Version of the Old Testament is said to bear the stamp of Kimchi on every page; and his influence, for nearly half a millennium, was dominant throughout Europe, and is potent still. These three lights had a powerful influence on Luther, and were necessary steps towards the Reformation.

While these stages of emancipation were being laid, the forward movement was marching along other lines at the same time. In one place after another the seeds of our present freedom were sown. The Crusades had done much to make the West acquainted with the East, and had paved the way for commerce and discovery. Universities began to be founded and learning spread. In England influences were at work which had wide results. Towards the close of the Thirteenth century, we find the first Parliament with representative government; and the establishing of the law that taxation must be by consent of Parliament. In Sweden and Denmark we find a similar step forward.

In the last quarter of the Fourteenth century we see the forward movement gaining strength at many points. It was at this time that the great Papal Schism took place, and Urban VI and Clement VII hurled awful anathemas at each other, and Europe was divided on the question of their authority.

Turning eyes to England we see the "Morning Star of the Reformation"—Wycliffe, the founder of English prose, and the first translator of the Bible into English. This great man struck the keynote of religious and civil liberty, at a very important time and place, and it has been sounding through the centuries ever since.

If we prize our civil and religious freedom, and that sturdy spirit of independence which will not permit any ecclesiastical meddling in civil affairs, we must turn to Wycliffe with feelings of gratitude. And yet, the remarkable thing is, that great as was his influence it waned after the close of the century, and seemed to be extinct in England; but in Eastern Europe, in Bohemia, the light shone forth with fresh energy, in the person of Huss. This is one of the few cases where the general law appears reversed, and light moves from West to East instead of from East to West. Prof. R. Lane Pool, of Oxford, says:

The true tradition of Wycliffe is to be found, not in his own country but in Bohemia where his words were eagerly read, and multiplied, and where his disciple, John Huss, with less originality but greater simplicity of character, and greater spiritual force raised Wycliffism to the dignity of a State religion. To Huss, whose works were to a great extent a Cento of extracts from Wycliffe, Luther owed much, and thus the spirit of the English teacher had its influence in the Reformed Churches of Europe.

We may also learn the lesson that the light cannot perish, though it may be shrouded for a time. S. J. N.

EVERY action of human free will is a miracle to physical science.—*Lord Kelvin*

AFTER MUSIC

by JOSEPHINE PRESTON PRABODY

I SAW not they were strange, the ways I roam,
 Until the music called, and called me thence,
 And tears stirred in my heart, as tears may come
 To lonely children straying far from home
 Who know not how they wandered so, nor whence.

If I might follow far and far away
 Unto the country where these songs abide,
 I think my soul would awake and find its day,
 Would tell me who I am and why I stray—
 Would tell me who I was before I died.—*Selected*

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question Has Theosophy any relation to Orthodoxy?

Answer Theosophy is a profound and luminous knowledge and wisdom, embracing all that can be known, which has been in existence through all ages. In brighter periods of human history—golden ages we may say—such as have existed in the past and will exist again in the future, this divine science was known and practised by the many. But in dark periods, of which the present is one, Theosophy disappears from among men and is replaced by dogmatic religions. But it is never lost, as the knowledge is kept in secret by a few unknown ones, who pass it down through the centuries. And from time to time a great Teacher appears, such as Buddha, Jesus, or Zoroaster, and proclaims this Wisdom-Religion among men. But, as the cycle is dark and materialistic, his teachings always suffer degradation after he has passed away, and are transformed into a religion with fixed dogmas and a code of rules so framed as to place power in the hands of an ecclesiastical hierarchy.

Thus the Christian creeds of today have taken their start from the Theosophy taught by Christ two millenniums ago. The world in general does not know much of what Christ actually taught, but enough has been preserved in the Gospels to show that it was very different from church doctrine. He expressly condemns many of the things which the church is teaching today, and enunciates many truths and maxims which form the very essence of Theosophy. Read *Matthew*, v, vi, vii and xxiii.

In the epistles we find that already Peter and Paul are teaching quite different doctrines; Peter having materialized and formalized Christ's teachings into the basis of a church creed, and Paul putting a highly Theosophical interpretation upon them. Mme. Blavatsky quotes much from Paul in her elucidation of some of the principles of Theosophy (see *Key to Theosophy*).

Religions distort the teachings of their founders, chiefly in taking away man's faith in his own divinity, and replacing it by the doctrine that man is dependent for salvation upon some human intermediary; and also in taking the meaning out of the founder's practical rules for daily life, and reducing them to vague axioms and maxims which do not much influence present life.

Theosophists seek to rescue and reinstate the teachings of Christ, to free them from the superstitions and misinterpretations which have gathered about them, and to present them again to the world as eternal truths founded on the eternal laws of Justice and Compassion, and as being identical with that eternal Wisdom-Religion which today is known as Theosophy.

(Read at Aryan Theosophical meeting, San Diego, California)

Question How are man's life and evolution governed by cycles? How can there be progress if we continually come back to the same point? (*Continued from the issue of July 24, 1904*)

Answer Continuing the quotation from the lecture of W. Q. Judge, we now come to the question of the cyclic return of civilizations:

Who are we? Where are we going? Where have we come from? I told you that the old Egyptians disappeared. If you inquire into Egyptian history, the most interesting because the most obscure, you will find, as the writers say, that

the civilization seems to rise to the zenith at once. We do not see when it began. The civilization was so great it must have existed an enormous length of time to get to that height, so that we cannot trace it from its beginning, and it disappears suddenly from the sky; there is nothing of it left but the enormous remains which testify to these great things, for the ancient Egyptians not only made mummies in which they displayed the art of bandaging that we cannot better, but they had put everything to such a degree of specialization that we must conclude they had many centuries of civilization. There was a specialist for one eye and a specialist for the other, a specialist for the eyebrow, and so on. In my poor and humble opinion, we are the Egyptians.

I think in America is the evidence that this old civilization is coming back, for in the Theosophical theory nothing is lost. If we were left to records, buildings and the like, they would soon disappear and nothing could ever be recovered; there never would be any progress. But each individual in the civilization, wherever it may be, puts the record in himself, and when he comes into the favorable circumstances described by Patanjali, an old Hindoo, when he gets the apparatus, he will bring out the old impression. The ancients say each act has a thought under it, and each thought makes a mental impression; and when the apparatus is provided, there will then arise that new condition, in rank, place and endowment.

So we retain in ourselves the impression of all the things that we have done, and when the time comes that we have cycled back, over and over again, through the Middle Ages perhaps, into England, into Germany, into France, we come at last to an environment such as is provided here, just the thing physically and every other way to enable us to do well, and to enable the others who are coming after us. I can almost see them; they are coming in a little army from the countries of the Old World to endeavor to improve this one; for here ages ago there was a civilization also; perhaps we were in it then, perhaps anterior to the ancient Egyptians. It disappeared from here, when we do not know, and it left this land arid for many thousands of years until it was discovered once more by the Europeans. The ancient world, I mean Europe, has been poisoned, the land has been soaked with the emanations, poisoned by the emanations of the people who have lived upon it; the air above it is consequently poisoned by the emanations from the land; but here in America, just the place for the new race, is an arable land which has had time over and over again to destroy the poisons that were planted here ages and ages ago. It gives us a new land, with vibrations in the air that stir up every particle in a man who breathes it, and thus we find the people coming from the Old World seeming to receive through their feet the impressions of an American country. All this bears upon our civilization and race.

Consistency

CONSISTENCY is generally conceded to be a jewel of rare value. It is a virtue which every one praises, and a quality which when absent is much regretted. And yet it is a thing not well understood. Everyone, no doubt, believes he knows what consistency is, and yet many praise it where it does not exist in any real way, and lament it where it is present in abundance.

These different perceptions are due to the varying degree and depths into which different people look in life and nature. Some think that a uniformity of method implies consistency, whereas, very often, it really means just the opposite. What it certainly indicates is, that the person concerned has fallen into a rut, that he is not working toward any definite point, but is simply repeating himself like a machine. A truly consistent person is absolutely flexible on the surface; ready to change methods any moment, and adapt them to the ever changing situations. He has a fixed, unswerving purpose and never loses sight of it. The slightest turn may alter the whole kaleidoscopic surface of events, and consistency would require one at least to try to grasp the new arrangement, and deal with it to suit his ends.

There is not the slightest danger of confusing one who delicately and intelligently threads his way in and out of the moving, ever changing pictures thrown upon the screen of time, with one who is stirred to move now here, now there, by the various currents of thoughts and passions generated and liberated in the laboratory of human minds. These two classes are quite distinct, but the distinction is not perceived by those who belong to the second class.

What would be the verdict as to the consistency of a general, who determined to advance upon the foe, whatever the circumstances, whatever the obstacles? The truly great general is quite likely so rapidly to change his decisions, to alter his whole policy as to lay himself open to the charge of fickleness to the ignorant. But such criticisms naturally do not alter his purpose.

Consistency is a treasure, clearly, which does not lie loose upon the surface. To find it, one must look deep. G. W. VAN PELT

The Festival of the Sun

ANCIENT Egypt is dead, yet liveth among us! Those mystic festivals of long ago, held at the time when the sun arrests his course northward, and prepares to resume his path in the heavens of the south, at the time of the summer solstice, had a meaning to the ancients beyond our conception today.

The astronomers of France, with other of France's well-known sons, have agreed to establish in perpetuity a Festival of the Sun, to be held annually at the time of the midsummer solstice. These festivals will be celebrated with invocations to the sun, with hymns in praise of the beneficence of the solar orb, and of the beauty and loving care of the divine Mother, Nature.

The first of these festivals was held on the 21st of June last, on the top of Eiffel Tower. Those present included many of the best known of French astronomers and savants, as well as a number of their friends of poetic and artistic fame.

But the astronomers dined afterwards, and dined well, as Frenchmen, and even poetic astronomers must do. They dined late, at about half past ten o'clock, on the top of the Tower some thousand feet above the housetops of Paris. M. Janssen, the doyen of the astronomers of France, delivered the opening discourse in celebration of the first Festival of the Sun. Now, in spite of the gastronomic drawback to the beauty of the affair, what a curious and suggestive matter the above is! A revival of sun worship, as it will undoubtedly be called, and that revival initiated by many of the most widely known savants of one of the World Powers, seems but the preliminary step to others of a like nature. What does it mean? The era of naturalism, which seems to be sweeping over France, and which appears to be now present among Frenchmen, like an echo from the days of the Revolution has, as does have everything else, its two sides—the ideal of the beautiful, and the itch for the sensational. That natural beauty of Life, which we in our materialistic and utilitarian age have nearly forgotten, that coming closer to the Heart of things which we no longer permit to affect us as an inspiration to be better and stronger, and to do better and more nobly, will have its way with us sooner or later, and we shall perforce acknowledge it more and more as fleet-footed time speeds over the hours of life.

Nevertheless, a resuscitation of the belief in the essential divinity of natural things, with the Godhead beyond and behind, has come upon us; and the signs of its advent betray their presence on every side.

Silence

A HIGHLY amusing little pamphlet has just been published in England, entitled *Wordless Conversation*. The idea it embodies originated in this way:

An English gentleman happened to be standing one evening in a crowded London drawing-room. Looking around him, he was suddenly struck with the reflection that all those who were present were talking with the voices of macaws, the result being a mixed chorus of sounds resembling those audible in the parrot-house at the Zoo.

Everyone was talking in a sort of scream or yell. Then he saw one woman make a gesture to another at some little distance. She pointed interrogatively to the next room. The friend nodded, and the two went off together.

An idea was immediately born in the onlooker's brain. Why not devise a complete system of gestures, say a hundred or so, which should cover all the remarks made in society, that is to say, at ballrooms, afternoon teas, bazaars, fashionable assemblies, on stairways, and at carriage-doors? Having acquired these—and they are given in the pamphlet, no more waste of energy would be necessary. "Have you been to the Academy?" "What did you think of —'s (name only to be spoken) picture?" and similar efforts, would all be made silently.

The idea, of course, is a satire, and aimed at the emptiness of ordinary conversation. But it could be carried out more seriously. Casual talk may not seem like work; but it is, and of an exhausting kind. And when, as with many people, it is carried on all day, the brain cells are kept in continual small commotion. As fast as they accumulate a little force, it is hurried away to the muscles of speech. They have no material for real thought, no strength to use in storing anything in memory.

The chatterer is a personality of no weight. Not only are his (or her) opinions immature, unreasoned, and worthless, but he lacks that magnetic something possessed by nearly all silent persons which inspires respect before they speak, and which creates the feeling of speech even in their silence.

PHYSICIAN

To the Members of The Universal Brotherhood Throughout the World: In order to expedite improvements in the different Departments of The Universal Brotherhood Organization, it is necessary that all communications, connected with the work of the Universal Brotherhood, should be directed to Katherine Tingley, Loma Homestead, Point Loma, California.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

True Reform Must Begin at Home

This is only one of many evils which we, the community, allow to go on in our midst. We also permit children to be ill-treated, women to be ruined, and workers to be poisoned. We live a life of complete absorption in our own interests. The community is a machine for baking our bread, laying our daily paper on our breakfast table, and making cars for us to ride in; the nation is a machine for making laws to protect us. We have no duties to either. But now and again our heart is wrung and conscience pricked over something that our neighbor does. We ag-

AN official report on vivisection, recently published, showing that over 19,000 experiments were performed last year, gives occasion for some reflections as to the remedy for this evil which is such a source of real pain to compassionate hearts.

itate for redress; but soon find that, to bring about reform, we shall have to take off our coats and go to work. We find too that we cannot go about preaching virtue in a stained garment, but must clean our own robes first; also that he who wishes to bestow must be ready to sacrifice. And so we sink back and let the things go on.

An evil like vivisection is deep-seated, having roots in many of the desires and predilections which, in other forms, we are ourselves indulging

The Curious Ambitious and Shallow

all the time. If we ask what makes a man vivisection, we shall find that it is merely the same motives, combined in different proportions, as those which prompt our own actions. He is curious, ambitious, callous to suffering; are we otherwise?

Is an evil of this character to be exterminated by a meeting of amiable people who will separate and live the same old careless indifferent lives as before? Can it be stopped by writing and speaking?

But this is not said to discourage the work that is done by compassionate souls in a good cause; rather to strengthen that work by showing, if possible, how strength can be added. Let antivivisectioners not do less than they are doing, but more.

It is cruelty that is the foe, cruelty based on a deadening of the heart and Soul and grossening of the brute nature, cruelty buttressed by a degraded form of science. We must attack it first in our own nature—"Charity begins at home." A man or woman with a truly compassionate heart would be a shining light whose influence would spread around in ever-widening circles, and kindle other hearts which in their turn would become radiating centers; and thus more good would be wrought than by a thousand pens or tongues.

A Truly Compassionate Heart

But no mere sentimentalist can work this miracle. When we say "a truly compassionate heart," we mean a person in whom the Heart-life has become so real and strong that it has changed the whole basis of life, overthrown all selfish motives, and kindled the light of true wisdom and discernment in the brain. Such a person could bestow freely of his grace, having an inexhaustible source to draw from. He would care naught for rebuffs and deprivations, sacrifice being the balm of his life. These are the kind of people that have always achieved reforms.

There is a mighty Power whose effectual aid can be invoked in the cause of relieving suffering. It is the power of the Heart—of compassion. It dwells in the hearts of the many, but dwells in solitude until one shall come who has the right and the power to invoke it. And that one is he who is always obedient and loyal to that Power. So we have to ask ourselves whether we are as sincere as we would like to think, or whether we are not perhaps unconscious hypocrites, undoing our own work. Or, if hypocrite be too harsh a term, are we mere sentimentalists, that is, people subject to generous impulses which do not last because they are not rooted deep?

Each Man First in His Own Heart

Anyone who expects to exercise beneficent influence over others must always keep a tight hold on the reins of his own nature; an athlete must not violate the rules of health and temperance when off the field. We do not make much headway in temperance reforms on account of the general self-indulgence of our own lives, and it is the same with selfishness and cruelty; we keep the noxious plant well watered at the roots and waste our strength in hewing at the branches. It is a natural form of human frailty to prefer to reform evil as it is manifested in the actions of other people, rather than to eradicate it each man from his own heart.

H. T. EDGE

Ikuta Temple at Kobe---Frontispiece

THE illustration on the cover page of the NEW CENTURY PATH this week, shows the principal entrance to one of the most famous temples in the district around Kobe, Japan. It is the Ikuta, (Shinto), Temple of that city. The stone lanterns, of which an excellent example is in the right-hand corner, are highly symbolic in Japanese mythology. The Shinto temples have one form of architecture, which dates from very ancient times and which never varies, no matter how rich or well-known the Temple may be. Such temples are always accompanied by the curious rectangular gateways called *torii*, which bear so close an analogy to the Egyptian temple Pylon.

The Commonwealth Memorial Stone

NOTWITHSTANDING freedom from superstition, people still go on preserving relics and historical spots, from an unformulated feeling that these retain some property or influence derived from their old associations, and that this property or influence is in some way effectual in influencing subsequent events. No one dares to utter, even mentally to himself, the truth that his intuition perceives; and so some such phrase as "a certain interest attaches," is used.

Thus the Australians are preserving the stone on which Lord Hoptown stood when he proclaimed the Commonwealth, and also the spot whereon he took the first oaths of office as Governor-general. The stone is a hexagonal block of trachyte from Bowral, and is from the same quarry as the block sent by the Australian Theosophists to Point Loma for future use in the Temple. (We lay down our pen to take a look at this dark-gray, rather small-grained crystalline rock, as it lies, with many others from all corners of the earth, a few yards from where we write.) The six sides represent the States of the Commonwealth,* and it is perhaps not without significance that the unwillingness of New Zealand to join the federation, preserved the highly symbolical form of a group of six united in one whole which is the seventh; for such sexagenary forms, seen in snow-crystals and cleaved rocks, are one of nature's symbols of a perfect group. The stone is to be placed on a pedestal of freestone, surrounded by a trachyte paving, and enclosed with railings, and to be called "The Commonwealth Memorial Stone."

Russia's Aftermath

THE recent tragedy in St. Petersburg is one which must evoke widespread condemnation. Notwithstanding whatever crimes of which the unhappy victim may have been guilty against moral law and human right, the manner of administering justice used in this instance is one unqualifiedly more harmful in its nature than may at first sight appear. Stern repressive measures, sterner and more harsh than now known, will undoubtedly be the inevitable outcome; and against those very measures will rebellion in one form or another, raise her million voices. Minister von Plehve has met a terrible fate, though less terrible by far in itself than in what it will evoke. The ministerial position is not an enviable one; for the mass of the Russian people regard its incumbent, and possibly rightly, as very nearly more responsible for the destinies of their great Empire than the Emperor himself. Sipiaghin, von Plehve's predecessor, met the same fate; and the steps taken by the Government towards a further repression are well remembered, as far as we know what they were.

Nicholas II is a monarch to be pitied. His character, as we know it, is a mild and gentle one; and were he given fuller liberty by the iron customs of the country, and by those who surround him, the history of his Empire might hold another story for the future. The simple inertia of Russia is enormous; its diverse peoples and the complexity of its bureaucratic system are alone enough to cause the downfall of almost any other folk. It is infinitely to the credit of the Russian people that they possess such a fiery patriotism, and such devotion to their fatherland, that Russian history has been enabled to make itself, as it has, since the day of Peter the Great. It is to their credit; yet it is strangely pathetic too, for never has there been such a contradiction between noble qualities in the human breast as that today manifest in the sons of this great Power. Revolution seems to show its gaunt face here and there in the provincial districts, and in the attics of St. Petersburg—aye, and in its palaces too. It is to be most devoutly hoped that there will never be a repetition in Russia of the awful horrors of the French Revolution. Selfishness and materialism are the twin causes.

STUDENT

The Theosophical Searchlight

ON the 15th of August, there will be issued the first of a series of Bulletins from the Leader's Office, bearing the well-known name of "THE THEOSOPHICAL SEARCHLIGHT," containing general information of the work of the Theosophical Movement throughout the World; and also important instructions necessary for the advancement of the Universal Brotherhood and Theosophical Society, in all Departments. The first number of this series will be sold at fifteen cents per copy; succeeding issues of the SEARCHLIGHT, ten cents per copy. Mail your address and fifteen cents, to Clark Thurston, Esq., Manager; NEW CENTURY CORPORATION, Point Loma, California.

Poetry and Science

MANY people fear that science is sounding the death-knell of poetry, that facts and the commonplace are killing imagination. The fear may have some temporary justification. For poetry is an affair of feeling; science, of the senses and mind. And science is very apt to maintain that what cannot be brought within the range of the senses by its very nature, does not exist. Which is just as reasonable as would be the contention of a man who had only the sense of smell that nothing existed which did not appeal to the nose. Poetry depends on the perception of that which is of another nature than anything perceivable or conceivably perceivable by any of the senses. And the perception of this spiritual something, possible to all men, is easily dimmed by over-occupation of the intellect with matters of sense, and continuous reasonings thereon.

If a man is moved by the beauty of a flower, and can with appropriate words communicate his feeling to others, he is a poet. The inner consciousness, which generates and harbors the feeling of beauty, is awake, and on the presentation to it by the senses, of the beautiful thing, reacts.

So far, a perfectly painted or modeled flower would do as well. But in poets of a higher order, as also in other men who cannot write poetry, there may be more than this.

The flower is alive, a little soul, a point of nature-consciousness. And along with its colors and form and scent, it throws off a spiritual something from its very essence which to those who can feel and recognize it is a veritable communication, a message. In the true poet this is recognized and accepted and responded to—even if at that very moment his intellect thinks him fanciful. Our language provides us with no exacter word for this recognition—which may amount even to a sort of sense of companionship—than "feeling." It is just the margin beyond that which would be excited by some lifeless representation of a flower, painted, modeled, however perfectly.

Therefore is the poet so much more alive than other men. He accepts from every direction the messages of life, which are pulses of life itself. He is in the stream of being. If the poet were poet all his hours, how could he die? But the modern scientific spirit will have nothing of this spiritual perception, this actual communion and interplay of life with life. Upon the five senses alone does it fasten attention.

Nevertheless, the spiritual consciousness that marks the true poet is returning to the world. It is not coming by way of the "pagan" spirit that inspires the "art-for-art's-sake" schools; nor of any of the so-called æsthetic crazes; nor any other form of "preciosity" or morbidity.

It comes back to us hand in hand with the perception of human brotherhood. For it belongs to the same field of inner consciousness as that perception, to the same group of sublime intuitions and feelings. All living things are related in life, and among them all, man may know and think of the relationship. The pain of the world is opening men's eyes to their brotherhood—which is the pain's remedy when practised. And this same brotherhood applies to all that lives. With its pain-compelled perception will come back a profounder sense of the beauty of nature, profounder than was ever yet attained by man. Seeing beauty everywhere, sensing life everywhere, we shall ourselves lead lives filled with life, not dimmed with death-shades; in every change of consciousness shall feel the joy of nature, and hear the undying music of existence.

STUDENT

Point Loma Electric Railway

SAN DIEGO is growing rapidly on many lines which serve to build a prosperous city. Under the spur of new enterprises, there is quite an enthusiasm among some of the most prominent townspeople, because they have reason to believe that we shall soon have an electric railroad running from San Diego to Point Loma.

This, beyond question, would prove a factor of no small importance in rendering the stay of tourists more pleasant in this part of California. From all parts of the world tourists come to this locality, to secure health and rest; and an electric road would make possible quick and convenient transportation, for the thousands who go to Point Loma, to see the great International Center of Theosophic work. At this point, one commands a view of mountains, hills, and the beautiful Pacific. For the benefit of the citizens of San Diego, as well as for tourists, it is to be hoped that an electric road such as we have described, may become a reality.

Some Views on XXth Century Problems

When Wars Will Cease and Why

COUNT TOLSTOY has given to the world one of the most powerful attacks on war that has ever been written. Not a point is missed, and the whole glows with prophetic and denunciatory fervor. But we had heard it all before; we had thought it all before; there is not one man in ten who would disagree with a word of it. The practical remedy remains as far away and as dimly outlined as ever.

There are two or three pointers visible which may indicate the way of the ceasing of war. One is the increasing tendency of other nations to interfere. Already they insist in having a very definite voice in the settlement of the final treaties of peace, taking advantage of the exhaustion of the combatants and often depriving the victor of the whole of his spoils of victory. The knowledge of the probability of this unpleasant conclusion to their labors will undoubtedly tend to check the enthusiasm of governments for settling their quarrels by war. And not only do the around-standing nations threaten to come in at the finish, but they make more and more pressing offers of officious intermediation during the active course of hostilities.

Another is the increasing dislocation and injury of commerce which even remote wars occasion. For instance, the price of bread went up in several European countries because Japan and Russia were fighting. As the nations draw commercially closer and closer together, this fact will become more urgent, and may at last lead to an absolute refusal to tolerate war.

Another is the possible combination of two or three or four powerful nations, enlightened enough and consciously unselfish enough to be sure of their unity, forcibly constituting themselves a court of appeal, and determined to permit no more war. In this possibility, we think, lies a real hope.

And the last is the formation of a Parliament of Nations, a great extension of the principle of the Hague Tribunal. This, in its day, will assuredly come; but it will, we think, grow out of the previous combination to which we have referred. The nations are not on a par of civilization. The van must be led by those who see a light. And behind all this, there is something more which all must see, which is most essential.

STUDENT

Theosophy the Proof of Immortality

AS an instance of direct intuitive perception of the truth, however distorted by intellectual prejudices, the following claims high merit: It is a most fortunate law of our instincts that, in a healthy and normal condition, we cannot realize that the life we enjoy can ever be non-existent. We can easily persuade ourselves of the destruction of others, but imagination obstinately refuses to make us spectators of our own decay. It is inexplicable, but it is true; and it is fortunate that in the most violent opposition to all the evidence of history, our brains persist in clinging to a sort of unexpressed illusion that we, alone, cannot die.

Everything in the universe, however transitory and varying may be its outer garb and its changes, has an eternal seed. Beyond all changes is that which changeth not, and all the vestures of Nature conceal eternal Nature herself. Behind the qualities of a thing there must be an entity to which the qualities belong; a thing cannot be *all* attributes—there must be a reality somewhere.

Man is a living being; his moods are transitory and his body subject to decay; but these moods and this body must belong to something; man cannot be *all* illusion. This Something is the eternal Self. It is this which gives us the feeling of eternity and forbids us to believe that our life can ever be wholly non-existent.

It is true, however, that, as the eastern books say, we are always in a state of delusion which consists in our confusing the real with the unreal, the transitory with the permanent; so that, while we feel, and rightly so, that we are immortal, we do not recognize the eternal Self for what it is, but mistake for it our personal self made up of transitory moods and impressions. This personal Self lasts only so long as a single life. It is the real Self alone which is immortal and this is no illusion.

Separateness Is But an Illusion

It will be noticed that the author of the remarks quoted makes a point of the distinction between one-self and other people. In this distinction between I and You lies a great mystery which must have at one time or other made the brains of most people reel in an attempt to grasp its meaning.

We cannot imagine other people going on living after we have ceased to exist. If I cease to exist, the whole universe comes to an end—that is the feeling. To put it in another way—I cannot imagine myself as being *altogether* separate from other people.

Nor am I altogether separate from others. It is possible, so teaches the Wisdom-Religion, for me to sound the depths of my consciousness so deeply that I shall reach a point where the distinction between myself and others will disappear, as the limbs of a tree disappear in the trunk.

There is a great Self, a great I, which connects all the lesser separate selves; and as our personal life has a tincture of this one all-embracing life in it, we feel that we are immortal, though at the same time badly confused as to which of all the elements of our make-up are mortal and personal, and which universal and immortal.

Now, orthodox religion has banished from our minds this very necessary idea of the One Self—the ocean of life from which all lives flow—and has put instead the theological Deity. Consequently all logic and philosophy are thrown into confusion, and we have creeds and beliefs which contradict intuition and reason. Hence, our author's confusion and thought, and praise of the Creator for giving us a pleasing delusion. All through modern thought we find the struggle to reconcile what one feels must be true with what one has been taught to believe.

Theosophy, as so often shown, brings back intelligence to enlighten faith, and points to the ancient Wisdom-Religion as the only consistent science of life.

STUDENT

Electricity to Become a Moral Agent

NO small improvement in the *moral* atmosphere of great cities will ensue upon improvement in the *physical*. The ever extending employment of electricity may bring in its train some evils of its own. But there will be no more oxygen stolen, to be replaced by carbonic acid. It has been estimated that the fuel burned annually in New York city delivers into the air nearly a million and a half tons of this poisonous gas. In some of the airless, stagnant, summer days, the lower parts of the city must become a dense pool of it.

This grave and constant source of poisoning will disappear with the extended production of electricity from natural power. Professor H. B. Smith has pointed out that it is now possible to deliver in San Francisco, from the melting snows and glaciers of the Rockies, electrical energy for machinery at a smaller cost than would be needed to generate it from fuel on the spot, even were the cartage of the fuel free.

Assuredly a sigh of relief will go up from the millions of stokers and firemen whose health is sacrificed to our civilization, when some one shall invent for us an accumulator light in weight and small in bulk.

It is a civilization that does not rate human life at a very high value. It has not yet learned that either good or ill health is contagious, except where the ill health has some definite name and germ to legitimize it among the diseases. Nor has it learned that a poisoned or enfeebled brain cannot fully respond to the higher human nature, cannot concrete and fashion for daily use the ideas whose roots are beyond the physical nature.

STUDENT

THE French News Agencies report that within the last few weeks, over 30,000 nuns have applied at the different Employment Bureaus in the Republic, for positions of all kinds. There is something about this action which reminds one of Dicken's famous Micawber. While shadows are gathering darkly over the French Roman Catholics, these latter, nevertheless seem determined to hold on, if not in one way, then in another, waiting for something to turn up. There is an evidence of hope among them that the church will in time prove stronger than the state. The French Government naturally looks upon this last move of the nuns with caution, for it means that direct and personal influence will be brought to bear on the family life more vigorously than ever. The situation is both interesting and curious.

Art Music Literature and the Drama

The Faery Lights of Erin

AS the sons of Mile landed on the soil of Ireland, the *file* Amairgen chanted a poem in honor of a marvelous science: "This divine science, indeed, penetrating the secrets of nature, discovering her laws, and mastering her hidden forces, was, according to the tenets of Celtic philosophy, a being identical with these forces themselves, with the visible and the material world; and to possess this science was to possess nature in her entirety."

In Erin, in olden times, water was a sacred element. It was deified. And today, around the lakes linger echoes of profound truths—truths, hidden and entangled in misty legends and traditions, interpreted, and related as fanciful Faery Tales, to amuse the unbelieving tourist.

But Erin's wisdom is still sacred to those whose ears retain listening reverence for the guidance of spiritual teachers, and are willing to follow within, for knowledge. The wisdom of the silent Sphinx is still for those who will dare the inward march, and face truth in their own natures.

The beauty of the Lakes of Killarney is alone equaled by the beauty of their legends; and kinship they might claim with a few of the different ages through which humanity has traveled:

Nennius says that these lakes were encompassed by four circles of mines; the first was of tin, the second of lead, the third of iron, and the fourth of copper. In the several mountains, adjacent to the lakes, are still to be seen the vestiges of the ancient mines of iron, lead and copper, but tin has not as yet been discovered here. Silver and gold are said by the Irish antiquaries to have been found in the early ages.

The legends tell that in other times, where now are the lakes, were fertile vales, peopled by men and women who lived in stately palaces. But through lack of vigilance to keep the entrance to an enchanted fountain closed, all was covered with water in a single night. But all the people did not die; only those in whom watchfulness had waned, and whose nature could be lulled and entranced by untrue joys, which veil the future flowing of tears within fleeting allurements. Sometimes, in Loch Lene, "the Lake of Learning"—the Lower Lake—a wondrous light is seen through its clear depths. Tall, shining towers rise in glowing splendor:

The fisherman strays,
When the clear cold eve's declining,
He sees the round towers of other days
In the wave beneath him shining.

Another legend tells of one who is supposed to have lived in Ross Castle, on the shores of Loch Lene—the famous O'Donaghue, a man of miraculous powers, of great wisdom, just and kingly, and of "great humanity." Like the prophets in the Bible, he had power and control over water. Obedient to his will, it parted; he walked upon its surface. Long life without the appearance of age was his heritage.

One day, after saying farewell to his friends, he floated through the air, over the lake, then descended. The waters divided, then closed over

him. In a few years he returned shining with "the radiance of the sun, making day joyful," to those who saw him. Afterwards he continued to come and go, until it became by tradition a good omen to see him. "His approach is, sometimes, preceded by music inconceivably harmonious; sometimes by thunder inexpressibly loud."

It is to the ancient "Wisdom Science" that we must look for light to transform the legends from hypothetical Faery Tales, to scientific truths, by unfolding the miraculous events and enchantments, through nature's laws. Hoary with age is the philosophy telling humanity of the heaven within, where the light of divinity shines as the sun.

True interpretation of those teachings weighs, not lightly, the warrior courage, the self-control and watchful vigilance that entrance to divine realms demands. Clearly, it has been voiced that the powers of the soul, which crown man king over the elements, are guarded within the magic of self-mastery; the magic which enlightens, and confers freedom from ignorance—the well of human tears.

What fountain could be more enchanted than one in which can be stayed the tearful tides of sorrow and grief!

Could not the "Faery Light," and shining towers of other days, seen through clear waters, harmonize with the Light of Heaven within?—trusted from afar! even through mists in the Vale of Tears. ANNIE P. DICK

AMONG THE LAKES OF KILLARNEY, IRELAND

MUSIC

HOW sweet the moonlight sleeps upon this bank;
Here we will sit and let the sounds of music
Creep in our ears; soft stillness and the night
Become the touches of sweet harmony.
Sit, Jessica. Look how the floor of heaven
Is thick inlaid with patines of bright gold;
There's not the smallest orb which thou behold'st
But in his motion like an angel sings.
Still quiring to the young eyed cherubins.
Such harmony is in immortal souls;
But whilst this muddy vesture of decay
Doth grossly close it in, we cannot hear it.—Shakespeare

Those who have gone most deeply into the study of music know something of its effect upon the mind and the heart. The right music purifies and uplifts the whole nature, giving not only tone, but unity, to all the faculties. It opens the doorway into that higher knowledge toward which we aspire, but to gain which we are not always willing to sacrifice. It brushes away the mental clouds that would certainly leave life gray and dull. Pure music is the universal language, because it is the expression of the heart. STUDENT

Nature, the Inspiration of the Soul

IN the following words Gounod tells us how he came to write the opera of *Faust*. It was during one of his sojourns in

Mediterranean Europe when he often walked alone among the hills:

The beauty of the night in such a climate and at that season is well-nigh unimaginable. The vault of heaven literally quivers with stars like an ocean with waves of light, so full does infinite space appear of twinkling, tremulous luminaries. During my fortnight's stay I often sat listening to the eloquent silence of these phosphorescent nights. I would perch myself on some steep rock, and stay for hours gazing out on the horizon, rolling a big stone down the precipitous slope from time to time, to hear it bound and bound till it struck the sea below and raised a ruffle of foam and spray.

Now and again a solitary night-bird uttered its mournful note, and made me think of those weird precipices whose horror Weber has rendered with such marvelous power in that immortal incantation scene in "Der Freischütz."

It was during one of these nocturnal rambles that the first idea for the *Walpurgis Night* in Goethe's *Faust* struck me. I never parted with the score; I carried it about with me everywhere, and jotted down in stray notes any idea which I thought might be useful whenever I made an attempt to use the subject for an opera. This, for several reasons, I did not attempt to do until seventeen years afterwards.

WOMAN'S WORK

"KNOW YE NOT THAT YE ARE THE TEMPLE OF GOD AND THAT THE SPIRIT OF GOD DWELLETH IN YOU"

The Temple

Verily, that body, so desecrated by materialism and man himself, is the Temple of the Holy Grail, the *adytum* of the grandest, nay, of all the mysteries of nature in our solar Universe.—H. P. Blavatsky

THAT the body is the Soul's temple, its abiding-place and shrine, has been a part of the doctrine taught by all great Teachers. A living realization of this truth leads one to the very portals of the Mysteries. We know this doctrine to be true. Do we live as if the knowledge of it were an abiding conviction? Are we as absolutely certain of this fact as we are, for instance, of the fact that if we do not eat we shall be hungry? The world is not; if it were, we should not witness the daily spectacle of bodies so soiled and degraded that the soul is absolutely driven out. Drink, drugs, and a thousand forms of mental and sensual immorality, do their share. Even children, through the carelessness or the ignorance of their parents, are actually *taught* from babyhood to defile and degrade their bodies; *taught* to eat food for its relish alone, *taught* to seek pleasure for sensation's sake, and encouraged to make the mind unfit for the service of the soul by jealousies, by suspicions, by greed, by coarse and selfish thoughts. These are harsh statements, but they are true, nevertheless.

What is our duty? For we, as women, have a duty. By virtue of the very fact that truth has been given us have we been appointed, to a greater or lesser degree, teachers of humanity, "watchmen over the house of Israel." How can the soul express itself through a body that is unhealthy, unclean, neglected, or devitalized? How much of the soul's light can penetrate a mind that is foul with mental sensualism or atrophied by selfishness? It is very well to talk about Homer being blind, about Beethoven being deaf, Carlyle a dyspeptic, and Sydney Lanier a life-long invalid, as showing how independent the soul is, or may be, of bodily conditions. Theosophists cannot afford to stop with half truths.

Of course the soul can do *something*, just as a musician can produce *some* music from a fifth-rate piano or a violin with a string or two broken. But for whom would we have most respect, we who are listeners, for the musician who smiles contentedly and says to himself, "I am really doing wonders considering this defective instrument," or for the one who uses every reasonable means to remedy the defects?

Then, too, there is a deeper reason why we should strive to keep this Temple of mind and body as pure and clean, as strong and beautiful, as possible. We as women, as students of Compassion and of Life, are preparing ourselves to go out into the world as helpers and teachers. Do we realize that we give others more than spoken words, more, even, than the outer example? The very tone of the voice may be more potent, for good or ill, than the words we speak. And do we realize that, as there is a constant interchange of thought and feeling, so there is also of the finer physical particles of our bodies?

Think of this and then consider what must be the effect on others if our bodies are neglected or unhealthy; if our minds are all out of tune because we have allowed some like or dislike to tyrannize over us. We would stay away from others if we had small-pox or leprosy, out of sheer compassion. Yet how many think nothing of mingling with their fellows when all out of sorts with indigestion, nervous from need of a bath, foul with unbrotherliness or reeking with mental filth?

These things are just as contagious and sometimes far more deadly in their contagion! Yet our greatest inspiration lies in this very fact. If physical or mental disease is contagious, so is physical or mental health. Truly, our real opportunities lie within our very grasp, but too often, like Naaman of old, we fail to seize them, thinking them too simple, thinking that the real remedy must be something else. DAUGHTERS OF LOMALAND IN THE HOMESTEAD GARDENS

The Children's Stars

THE Indians possess a remarkable degree of intuition, inherent in their nature and also fostered by the primitive life they lead. Their tribes contain many seers and medicine-men and others who pierce into the world beyond matter and discern the future in a remarkable way. The knowledge they possess they are very jealous of, and being naturally extremely reserved they very rarely give any information to the white man.

A legend related to the writer by a medicine-man of a certain tribe of Indians, is so significant

and so beautiful in its poetic thought that it is given here, briefly, as follows:

The Indians of his tribe believe that there is a group of stars which can be seen only in the morning and at certain seasons of the year. Thus they appear in May, then they disappear for a season only to reappear again in the month of August.

The mystic who related this said that this group of morning stars symbolized the rebirth of little children and are called the children's stars. He said further that the children of long ago knew all about the stars in the heavens and their positions, also how they are connected and related with one another.

In regard to the children's stars, there seems to be an idea that a child dying, must reincarnate very

soon and this group of stars presides over that law. It is probable that a great deal of information was reserved by the mystic, who would tell no more. E. C. S.

ACCORDING to statistics the whole system of our elementary education has practically passed into the hands of women. In many of our States they constitute more than 90 per cent of the students of our Normal schools; in Connecticut 99 per cent, while in the State Normal school of an eastern state there is not one male student. In the high schools of the United States which, in 1870, had only 50,000 pupils, nearly all boys, there are now 329,000 boys and 406,000 girls. In the Universities over one-third of the number of students are women, and this percentage is yearly increasing. STUDENT

WHITE lilies will I plant
In my soul's garden.
And one Rose mystical
In my soul's garden.
The myrrh of suffering
In censers rich to swing
Shall come all hallowing
From my soul's garden.
Life's fadeless flowers must bloom
In my soul's garden;
The dew shall softly fall
In my soul's garden.
The hawthorn white shall glow
An altar-cloth of snow,
With globe-flowers fringed below
In my soul's garden.—Selected

A Tribute to Annie P. Dick

I OPENED the doors of my heart. And behold,
There was music within and a song.
And echoes did feed on the sweetness, repeating it long.
I opened the doors of my heart. And behold,
There was music that played itself out in Aeolian notes;
Then was heard, as a far-away bell at long intervals tolled.

LIGHT, laughter, love and joy—are these the powers through which the Soul manifests? We hear and stand amazed, awed into a reverent silence by the wondrous beauty of the possibilities of the future life unfolded unto us.

Could we better sense the soul-life of each one about us; could we see a little more clearly through the lights and shadows surrounding our fellow travelers on the path, think you not we should find our companions very, very different from what they seem to us now, judging from our narrow view-point? Yes, very different. Sometimes, perhaps, inferior, but oh, how many times are they far ahead and beyond any conception we may have previously formed of them. Too often we awaken to the knowledge that we have allowed a rare jewel to slip away from us unknown, unperceived. A great soul penned in to a diseased, delicate body, perhaps, fretting itself away in its unrest for larger things. Could we but have known! How it must have beat against its prison walls, longing to escape yet held to its prison through human ties of friendship and love and its strong desire to serve!

The passing away from her comrades of one such lovely soul as "A. P. D.," as she is known to our readers, strengthens all who are left in a firmer bond of union, a stronger wish to serve. She is now reaping the joy which comes from unselfish service to one's fellow beings. The following words—her own—are taken from a review of the poem "Psyche," written by Mrs. Tighe, the Irish poetess. Although they were written in praise of the poetess, for whom "A. P. D." had the greatest admiration and sympathy, they also very aptly describe the writer of them:

"And so we leave the soul once more united to its own nature. 'Psyche' is more than a beautiful poem, it is an outpouring from a gracious queenly heart, that knew true love and the false, and lingering thoughts dwell on the lovely author—a woman of whom Erin may be justly proud.

"In her we see a type of the higher womanhood, motherhood in the highest sense: a woman who recognizes the light of the soul, and is fully awake to the dangers which beset its path through life. Such will be the woman of the future, who shall safely guide the child."

ELIZABETH C. SPALDING

HERBERT SPENCER in his *An Autobiography*, says of his friend G. H. Lewes: "His death ended a domestic union of nearly twenty-five years' duration. One might have expected that the expressions used in the dedication of George Eliot's MSS. to him, would have sufficed as proofs of his devotedness. But there are not a few who gladly find occasion for unfavorable comment, or assume occasion if they cannot find it; and most people have no scruples in circulating adverse statements without asking for evidence. So far as I saw (and I have had opportunities for seeing), they exceeded any married pair I have known in the constancy of their companionship; and his studious care of her was manifest. I remember that when, on one occasion, I had been saying that, though possessed of so many advantages, I valued life but little, save for the purpose of finishing my work, they both ascribed my state of feeling to lack of the domestic affections, and simultaneously exclaimed that their great sorrow was that the time would soon come when death would part them."

Ancient Homes of Ireland

THAT dear little plant that springs from our soil,
When its three little leaves are extended,
Denotes from the stalk we together should toil,
And ourselves by ourselves be befriended.
And still thro' the bog, thro' the brake and the mireland,
From one root should branch like the Shamrock of Ireland.

HISTORY tells us that the houses of the ancient Irish were round and built of wood. Among the better classes, a residence consisted of a number of these circular structures grouped together. Each member of the family had a separate room, or "house"; also the guests. And there was always a special one, occupying the most favored spot, called the "greenan," that is, "a sunny house," for the private use of the women of the household. Home life in Ireland has always been characterized by a gracious, warm-hearted hospitality.

It is accepted that the influence of education on childhood expresses itself in the character of manhood and womanhood. So perhaps this royal characteristic of the Irish race may be traced to its education in early, or rather ancient times, when the people were instructed by the most learned in the land—the Druid priests and priestesses. To become a Druid, "the course of training was sometimes protracted over twenty years." Officers of state were always chosen from among them. "On

all public occasions they held the place of honor near the king." Education was completely under their control. And may it not be that the harmony, the universal nature love in their teachings, greet us through the Irish heart—a heart that has gladdened and inspired many wanderers seeking for truth—their only resting-place and home?

The monasteries of old were schools of learning, where religion found no conflict with science; nor were bodily needs forgotten. Each monastery had a "guest-house" always in readiness to receive travelers, and class-distinction gave

no wound in the welcome. High-born and low-born, rich and poor, were equally sure of a "hospitable reception." From records we learn that the people's trust in their teachers was unbounded. Thus, the universal nature-truths, the seeds that were sown, found a ready and fruitful soil.

Women Writers of Japan

THE Japanese poet, Yone Noguchi, is reported to have said in a recent interview regarding the women of Japan:

Our Japanese woman has much to do yet to control circumstances, you know. Today is terrible fight at home under all things; the old Japanese against modernity, and it will not end soon.

Long ago, in the early Middle Ages, women were stars and even sun and moon of our country. They were the greatest poets and the greatest writers.

We let a cloud come from China, thinking it was good to fall upon our country. We listened too blindly to the teaching of Confucius, which is so good in many respects, but our women faded from their places in the heavens.

So you can see it is not natural with us that women became slaves. We thought it was right teaching and many a mistake was made.

Ichijo Higuchi, the girl who died seven years ago, that wonderful writer, has spoken the heart of our Japanese women who lost their high places. We have only some few women who write well today. One is the Baroness Nakajima, the wife of the Japanese Minister to Italy; another is Kaho Tanabe, the wife of Set-surai Miyake, who is the very idol of our young students.

Of course, education of modern women is but in its beginning, as, if I may say so, is also in America, and is not at all in certain countries of Europe.

In connection with the remarks of above writer concerning the teachings of Confucius, it is worthy of note that H. P. Blavatsky said years ago that Lao-tse, the predecessor of Confucius had the true teachings which were veiled from the profane after his death. The most learned of the true Lao-tse doctrine are found among the Japanese initiated priests who laugh at the blunders of the European Chinese scholars. E.

Aztec Immigration into Mexico—A Priceless Aztec Document

Translated from *El Mundo Ilustrado*, Mexico City

THE discovery of a most important and priceless Aztec document, concerning the history of ancient Mexico, has been the subject for not a little discussion here. This document had been known to exist, but had been lost to knowledge for many years; and was only lately rediscovered in a sale of antiquities in a small shop of the City of Mexico.

The find gave rise to a lawsuit between the National Museum and Sr. D. Hipolito Ramirez, a descendant of the learned Mexican D. Jose Fernando Ramirez. The latter claims that the document rightly belongs to himself by right of inheritance, and therefore the National Museum has no title thereto. In any case, the find has aroused the keenest interest among historians and archeologists, who affirm that the matter is worthy of all possible attention on the part of scientists.

The illustration we here reproduce, taken from a Mexican "Atlas," is a *facsimile* of Page No. 1, in colors, of this document. The full name of this ancient record is as follows: "Historico-Hieroglyphic Illustration of the Peregrination of the Aztec Tribes Who Peopled the Valley of Mexico," and is amply explained by the above-named D. Jose Fernando Ramirez, sometime Director of the National Museum.

The "Illustration," or "Picture," for the better understanding of the explanatory notes, is numbered in the "Atlas" from 1 to 49 consecutively; each number marking a distinct spot reached by the Aztec tribes, from the time of their leaving upper California until they arrived in the "Valley" of Mexico. The more or less parallel lines in the illustration here given, indicate the exact route followed. With reference to the different places touched by the immigration, No. 5 represents Cincotlan, where the tribes remained 10 years; 6, Tocolco; 7, Otzotlan; 8, Mizquiahuala; 9, Jalpan; 14, Papantla; 18, Cuauhtitlan; 20, Atzacapotzalco; 21, Chalco; 25, Cuauhteppec; 34, Apam; and 48, Tenochtitlan. Certain especial events during the immigration are likewise represented in the "Atlas" by numbers. Forty-two, for example, indicates that on that spot a human sacrifice was celebrated; and No. 47, that a woman of prominence gave birth to a boy child.

The immigrants, according to the same historian D. Jose Fernando Ramirez, avoided separating up to the locality marked by the number 18; there "one separated, taking a cross route;" and on the rest arriving at Chapultepec (No. 36), they again dispersed, certain "ones" going on to Tlaltelolco (No. 37). "Then the emigrants, who had remained at Chapultepec, moved forward in their turn, crossing over to the middle of a lake(?)—(No. 39); but there only 'three' stayed, the others continuing their journey as far as the seat of the present capital of Mexico (No. 49).

As may well be judged from the above description, mere outline as it is, the document in question is certain to prove of the greatest possible interest to archeology and history.

INDIVIDUALS in definite streams return in regularly recurring periods to the earth, and thus bring back to the globe the arts, the civilization, the very persons who were once on it at work. And as the units in nation and race are connected together by invisible strong threads, large bodies of such units moving slowly but surely altogether reunite at different times and emerge again and again.—*W. Q. Judge*

The Symbolism of the Mistletoe Among the Druids

WHY the Druids used the mistletoe as a symbol of immortality has long been a matter of question. The berries and leaves of the plant grow in triads on one stock, and this may have formed part of the symbolism, as it does in the similar case of the shamrock. For the Druids also had *their* trinity like every other ancient people. In fact it might almost be said that a study of ancient religions is a study of the trinities under which man has always worshiped the divine.

But the employment of the mistletoe may rest on a fuller reason than that its berries and leaves happen to be in threes on one stock.

The mistletoe is ordinarily said to be a parasite. In a sense, it is so; but it pays for its board very amply. The relation between it and its host is known in botany as *symbiosis*, the joining of two dissimilar plants for their mutual benefit. The seeds of the mistletoe are usually scraped from the beaks of birds, who have been eating the berries, on the bark of some tree, ordinarily the oak or apple. When they germinate, the little root penetrates the bark, and passes into the moist woody tissue beneath. On the juices of this it feeds, finally attaining considerable growth at the expense of its host. So far, it is undoubtedly a parasite.

But in the winter, when the host is stripped bare of leaves and the sap has retreated, the evergreen guest contributes to the nutrition of both. It constitutes the winter foliage of the pair. Probably some of the channels in the wood of the host, down to the very rootlets deep in the earth, belong to the guest. One works in summer and the other in winter.

The Druids must have reflected on this quite obvious fact in their choice of the mistletoe as a symbol. Druidism included the idea of Re-

incarnation. Periodically the leaves of the tree die; the sap retreats to the root; the tree itself seems dead. But in the spring comes rebirth, and the leaves reappear to greet the sun. The tree is alive once more; in a sense, reborn.

Yet whilst it was apparently but a dead thing, the mistletoe held the thread of its life unbroken. In the summer a double life, in the winter it was single.

So the mistletoe symbolized the spiritual nature, that which grows *with* us while we are incarnate on earth, that into which we pour our whole consciousness at death, that which preserves our continuity through the spaces of both life and death, and spans the gap between death and the next birth. It is as the moon, reigning by night while the sun is hidden.

Corresponding with this, many medicinal virtues were formerly ascribed to it. "Some," says old Culpepper, "have so highly esteemed it for the virtues thereof, that they have called it *lignum sanctæ crucis*, wood of the holy cross, believing it helps the falling sickness, apoplexy and palsy, very speedily." In ancient times some preparation of the berries, gathered at a particular period of the moon's cycle—the sixth day—was drunk as an elixir held capable of so affecting the brain that spiritual things were seen and comprehended. Its analogy with the soma (or moon-plant) juice of the Indians is thus very close.

Animals That Sleep Through the Summer

THE strange faculty of *Æstivation* or sleeping through the summer is practically the same as that of hibernation or sleeping through the winter, which is more familiar to us dwellers in temperate climes. The *New York Sun* mentions some instances of this phenomenon.

So far as certain knowledge goes, only one mammal *æstivates*, the tenrec of Madagascar, a beast corresponding to our hedgehog, which retires to its burrow and sleeps during the hottest three months of the year. But there are many lower animals which are known to do so.

The wheel animalcules can be dried up into a dust-like substance, and yet revive as soon as they get access to water. In South America and Africa various reptiles *æstivate*; in the llanos of Venezuela, the alligator, the land and freshwater tortoises, the boa-constrictor, and several smaller serpents, lie motionless in the baked mud during the hottest part of the year.

In Brazil, Australia, and South Africa, lizards, frogs, tortoises, and insects pass months of the rainless season enclosed in hard earth.

Fish in many parts of the world can survive in the mud of dried-up ponds. In Arizona, pools in the desert, surrounded on every side by an arid region, across which it would have been scarcely possible for water fowl to convey the living spawn of fishes or batrachians, as soon as the thunder-showers have filled them, are found to contain fishes, frogs, and fresh-water mollusks of which not a trace could previously be seen.

But perhaps the best and most extraordinary as well as the best known of such instances of *æstivation* are those of the mudfish of Africa, and its relations in the rivers of South Africa and Queensland, which are provided not only with gills but with a rudimentary lung. They can thus breathe ordinary air, and at the time they are encased in mud they leave a small opening through which they can inhale it. There are, too, many cases on record, of seemingly good attestation, of still completer burial. If one may believe them, reptiles have been found alive under such circumstances as to preclude the entry of any air whatever. All the *processes* of life must have been perfectly suspended, and yet life itself preserved in sufficient force to check any tendency to degeneration. Cases are reported from India of men being buried and remaining alive.

Some Interesting Data About the Huge Icebergs

ICEBERGS are formed in the Arctic regions from the gigantic glaciers and ice-sheets which drain the snow-fields of those frozen lands and slide slowly down towards the sea. Here pieces break off and float away. Their size and shape varies greatly, but lofty peaked forms are common, and they sometimes rise two or three hundred feet above sea-level. As the mass of ice below water is nine times as great, the size of the sea-monsters may be guessed, and it makes them things to be steered clear of by vessels. Geikie gives a picture of a tabular iceberg which looks like a neatly finished breakwater or mole, perfectly rectangular and straight, and as high as the masts of a ship. Dr. Kane's Arctic expedition saw a glacier two and a half miles long and as many wide, aground in half a mile of water in Melville bay.

A SONG OF CLOVER

by SARE HOLM

I WONDER what the clover thinks---
Intimate friend of Bobolinks,

Lover of Daisies, slim and white,
Waltzes with Buttercups at night;
Keeper of Inn for traveling Bees,
Serving to them wine dregs and lees,
Left by the Royal Humming Birds,
Who sip and pay with fancies words;
Fellow with all the lowliest,
Peer of the gayest and the best;
Comrade of winds, beloved of sun,
Kissed by the dewdrops, one by one;
Prophet of Good-Luck mystery
By the sign of four which few may see;
Symbol of Nature's magic zone,
One out of three and three in one;
Emblem of comfort in the speech
Which poor men's babies early reach;
Sweet by the roadside, sweet by rills,
Sweet in the meadows, sweet on hills,
Sweet in its white, sweet in its red---
O, half of its sweetness cannot be said---
Sweet in its every living breath,
Sweetest, perhaps, at last in death!
O, who knows what the Clover thinks?
No one! unless the Bobolinks. — Selected

OPEN-AIR HONEYCOMBS AT POINT LOMA

How Is Honey Made?—Modifying Theories

WE know very little as yet as to how honey is made, what part of the process is contributed by the flower and what is due to the bee. Our ideas on this question are constantly being modified. It now appears that honey is the result of the action of ferment, and is not secreted as such by the flowers. The first bee who enters a flower makes a scratch at the base of the petal, so as to get at the slightly sweet sap. After he has gone, the point "bleeds"; a little more sap is poured out, along with traces of soluble and insoluble starch. The little bead of exudation now undergoes fermentation—which, in this case, is partial digestion—into honey. The "ferment," or active agent in the process, was contributed by the bee. After a few hours another bee arrives, and, though the visit of the first was not fruitless, that of the second is much richer in its result. We need not, however, lavish any pity on the first, for at his next visit he will certainly find that he has been agreeably preceded.

It is evident that we are at the beginning only of our knowledge of the mysterious processes known as fermentation. We are only just learning that some of them are in an upward direction and not mere steps backward. In other words some fermentations are *constructive*.

STUDENT

Some Adventurous Bees at Point Loma

A SWARM of Point Loma bees recently indulged themselves in the odd idea of building some honeycombs on the branches of a bush in the open air. There are no hollow trees on the Point, and the only rocks which have cavities suitable for the bees are a soft sandstone, which would not give a sufficiently firm, smooth surface.

Neither are there any empty buildings within several miles of the Homestead, so that when this swarm left the hive it was obliged to camp out. It will be noticed, by the picture, that they suspended the combs at about the same interval that

they would have had in the hive. A close inspection of the comb shows the most marvelous skill in building around the twigs which were encountered, and in the finishing off with the least possible waste of cell space on the edges of the oval.

Fortunately, their work was not put to the test of use, not having yet been filled when found. We fear that the added weight would have undone them and brought the structure down in ruins.

Incidentally they furnished one of the best possible testimonials to the Point Loma climate, because bees are so sensitive to inclement weather that out-of-doors comb-building would be utterly impossible if any bad weather had occurred.

As soon as found, they were provided with a proper hive, and their strange adventure of last spring is now ancient history with them. One wonders, sometimes, in studying the ways of bees, whether if we had an exact account of them from some observer 10,000 years ago, we should find any change. Do they have rises and falls in their wonderful complex civilization? Have they anything to learn in methods? Or have they reached *their* perfection? Interesting questions, these. Z.

Universal Brotherhood Organization

Central Office Point Loma California

At the regular meeting of The Universal Brotherhood and Theosophical Society in Isis

Theatre last Sunday evening, the large audience was delighted by the choral singing of the Raja Yoga boys and girls of Lomaland. Several of their favorite songs were given in their usual inimitable manner, the applause being hearty and generous. There were also several instrumental musical numbers by students of the Isis Conservatory of Music, which were as usual thoroughly enjoyed.

The first address of the evening was given by the Rev. S. J. Neill, on "San Diego." Briefly, but graphically, he reviewed the early history of this city since the landing of Cabrillo in 1542, and then said:

"We like to believe that something akin to a divine instinct led the early settlers to this southern part of California. They could not have come here for rich gold mines, nor yet for green pastures, through which rippling rivers ran. No doubt the early settlers were led hither, they knew not why, by some prophetic foretaste of what the place was destined to become. It is surely time that this prophetic instinct should be quickened in the breasts of the present citizens of San Diego. It is time that San Diego awoke, and arose to her destiny. We have admired the bay and the climate, and the encircling mountains for a long time. We see nature has done her part. But we are part of nature; we are part of destiny, and it is now high time for man to cooperate with nature and do his part."

Touching the future, the speaker said: "When this war in the East is over a mighty impulse will begin to move in all those countries, which we call Oriental China and the adjacent countries. They will reach out their hands to America, and especially to this side of America. The Pacific will be as it never has been before, the great highway of commerce. It will keep the Western States of America very busy to supply all the needs of over one-third of the human race. The gateways to the Orient are Seattle, San Francisco and San Diego. They will all be kept busy; and have as much to do as they are able to do. Much depends on the active spirit of the people at each of these places, as to the lead which will be taken by that Port of the Orient.

"Then, before long, when the mighty streams of commerce flow east and west through the Panama Canal, San Diego will possess special advantages. None of this is guess work, we all know it. San Diego should rouse herself and make ready for the things which *must* come in the near future. It would surely be very tantalizing if, when the golden opportunities arrived, San Diego had neglected to take the means of utilizing them.

"It is surely most reasonable to suppose that nature works with a worthy purpose. Can we think that nature has brought together in one place all the beauties, all the advantages which we find here, without meaning something great to follow?

"You have heard it said that San Diego is to be a great seat of learning, and surely nature points in that direction. We can work with nature, indeed that is why we are here, that we may carry on and fulfill the grand and beneficent purpose of nature.

"Greater than Corinth, greater than Athens, or Jerusalem, or any of the great places of ancient times, we can make this the heart of the world, from which healing streams shall flow to all peoples. We can make this place a city set upon a hill giving light to all nations. We can do it by becoming that light, by becoming free, open channels for the Divine power and radiance. 'Arise, shine, for thy light has come.'"

Miss A. C. Lester, Superintendent of the Raja Yoga Academy at Santiago de Cuba, who is now at Point Loma on a vacation, presented a highly interesting address on "Cuba" and Katherine Tingley's great educational work there. "The average Cuban child has suffered much," she said. "Almost all, rich and poor, white and black, have known what starvation is, what it is to see their homes destroyed, to be forced to live without shelter, exposed to the heat and heavy tropical rains of that climate; they know what it is to see their fathers, mothers, and in many cases their whole family, die before their eyes through the misfortunes of war; they know what it is to be bereft of those advantages in the way of education which the poorest child in this country receives; and in order to endure these things they have had to call into action qualities of character which come from a higher source than that of the mind, and which, having come into operation, need a new kind of care and training—qualities which cannot be governed nor controlled by a system of education of which, while it furnishes much that is necessary in the way of technical knowledge, does not understand nor take into account those finer, vital forces which lie within the nature of the child. This has probably given rise

LOMALAND STUDENTS AT ISIS THEATRE

San Diego's Splendid Future
Success of the Raja Yoga Work in
Cuba Boy Orator on Discipline

Reprinted from the San Diego News

to the popular idea among conventional teachers that the Cuban child is a little savage and uncontrollable.

But may it not be that the trouble lies in the system and its exponents to some degree and not altogether with the child?

"I can testify, as a Raja Yoga teacher in Cuba, that if the Cuban children have the disposition to refuse things for which

they have no respect, they also have the capacity of a great loyalty and devotion to whatever can prove itself worthy of their regard, and they have methods of determining the worth of a thing, which are at least very natural and not without a touch of wisdom. They are born revolutionists. This could not be otherwise. By nature they appear bound to resist the assumption of any sort of authority. For they seem to think or feel that, if it cannot control them, it is not entitled to pretend to do so. And the easiest way to find out is to try it and see. But if it stands the test, they accept it readily and whole-heartedly, apparently on the basis that there must be something in it if they are not able to upset it.

"In this I believe they have some good ground; for they surely have ways of setting aside authority more subtle and difficult to handle than American or English children, and these know something on this line themselves. Cuban children are not to be touched by considerations that are often used in ordinary methods of education to control children. To try to threaten them with fear would be folly. They already have undergone such terrible sufferings and privations that ordinary ones hold no terror, especially when the great principle of the right of government is at stake, as is the case when one assumes to teach and guide them. The instinct to understand a situation in this way seems to be an element in their very blood.

"There are two Raja Yoga Schools in the city of Santiago—one a free day school, and the other constructed on lines as similar to those at Point Loma as present circumstances will permit. Today there are on record the names of over one thousand children in this city waiting until there is room for them to be admitted to these schools.

"It would be hard to describe the prejudice and suspicion which existed in some quarters—and which were set on foot by the same influences that made similar ineffectual attempts in the city of San Diego—when these schools were started. I have seen children enter our schools, defiant, rebellious, suspicious—who had been told, and probably believed, all the lies that were current about the Raja Yoga School at that time—and without a word of contradiction or explanation from any teacher, I have seen them change within a few hours.

"The intuition of the child has become so quickened by the experiences through which he has passed, that he is soon able to detect the genuine from pretense. When you appeal to him in honor and truth and courage, feeling these as living forces in your own character, you can at once invoke the same in the child, and he not only knows, but feels that they are worthy of his own regard, in other words, he feels a finer part of himself, and it is as though a resurrection had taken place, and he stands up in conscious knowledge of a something divine in him."

"The Value of Discipline" was an excellent address by Master Iverson Harris, a paper prepared entirely by himself and which he had read in the afternoon at the dedication exercises of the Senior Boys' Military Camp of the Raja Yoga School at Lomaland.

"The value of discipline," said he, "is that it keeps a man toeing the mark and forces him to live up to those principles which he is supposed to represent, which are, sincerity, straightforwardness, self-sacrifice, unselfishness, unity and various other virtues, which, when staring a man in his face, cannot help but have some effect towards arousing good in his nature. Again, those who have this discipline, are generally placed as guardians of the nation, and thus arises in them the necessity for eternal vigilance.

"Thus, when they have this outward vigilance they have gained a step towards an inner vigilance against the lower self, which, being naturally a coward, but appearing very bold when it finds the higher self off guard, does not even attempt its work of destruction.

"Again, when one has acquired this vigilance, his mind will be so on guard that it will not allow itself to get into such a condition as to tolerate incessant and useless talking. We find that in trying to get over the habit of flippant jesting we go at it in the wrong way; that is to say, we go at the result instead of the cause. It is not the talking we should fight, but the condition of mind which allows the talking. Thus we will find we improve ourselves in more than one way, whereas, if we went at the talking first, we might overcome the habit of talking, but the condition of mind that caused it would still be there to show itself in some other way."

✻ Theosophy and Freemasonry ✻

TWO kindred bodies, with one common root, and be it said one common aim in many ways, are Theosophy and Masonry. Basing a common claim to an aforesaid universal recognition upon a nearly (in many ways) common teaching, Theosophy, the mighty ancient Wisdom Religion of immemorial time, from which all systems of thought have sprung; Masonry, the child and noble descendant of the ancient religious Mysteries, which once upon this earth kept alive the spirit of Theosophical doctrine in men's hearts; though, truly, Theosophy has worn different names in different times, and in different places. Acknowledging one common Supreme Architect, one common doctrine, and the searching power of the All-Seeing-Eye, these twin children of the Widow have a great and common interest on earth.

The Organization of the Universal Brotherhood includes among its members large numbers of prominent Masons. To such, and, indeed, to all others, the following excerpts from a speech recently delivered in San Bernardino, California, by George N. Black, on the occasion of the dedication of the Masonic Temple in that city, will be full of interest. Omitting the speaker's opening remarks, I shall choose here and there such allusions as I feel to be of interest to all:

"Thus was conceived and erected that spacious and magnificent Temple of Solomon which all the ages have acclaimed as the pinnacle of earthly splendor, and which has furnished us with so many of the proud traditions, the tragic memories, the beautiful lessons, the inspirations and the aspirations of Freemasonry.

"King Solomon's Temple was surpassingly beautiful, not because it was constructed of Parian marble and precious stones, and adorned by the cunning skill of the Artisan of Tyre, but rather because it stood in that age and for that people as a monument to all that is beautiful in the mind, the heart, and the soul of man.

"It was a symbolic edifice. When the people entered it, everything they saw spoke to them in the mute but eloquent speech of symbolism, teaching them to think nobly, to act justly, to walk uprightly, to revere God and to love their fellowmen.

"Here, on your altar, will be kindled the three great lights of Masonry. May they ever burn brightly and radiate their pure influence upon all who enter here to assume the unselfish obligations and responsibilities of our noble brotherhood.

"We meet here today both as operative and as speculative Masons. I shall not impose upon your time and patience by reciting to you at this time the statistics of Freemasonry, nor by tracing at length its secular history. Those who are interested can always find the data desired in the reference works on the subject.

"But in this solemn hour the central idea that presents itself to me is this—that we are not building for Time, but for Eternity. We combine with the building of lumber, brick and stone, the building of character. The former, being finite, may be destroyed by fire or flood. In the passing years it may disappear from the face of the earth. The millstones of Time may grind it into powder.

"But the materials out of which we build up character here are indestructible, everlasting. They have lived since time began. They will endure when time shall be no more, because they are of the Divine spirit.

"Underneath this building is a foundation deep and strong, and cemented solid in the solid earth. But beneath that foundation is another, still deeper, more lasting, imperishable. It rests upon a faith that is the very Rock of Ages—the fatherhood of God and the brotherhood of man. Since time immemorial, this faith has united men of every country, every condition, every sect and every opinion. It is not at all improbable that this basic Masonic principle was perhaps the original expression of religion in man.

"And when the time comes, as come it must, when the human family shall sink its sectarian differences in one common faith, and worship in unison the One true God, the symbol of that universal religion will not be the Crescent nor the Cross, not the Shield of David nor the emblem of Confucius, but the Masonic emblem of the All-Seeing-Eye.

"Now as to this building: Was it erected simply for the teaching of signs and grips and passwords, for the conducting of ceremonies and the

making of mysteries? If so, our meeting here today is vain and purposeless. If so, it were a great mistake ever to have laid one brick upon another. But happily we know that such is not the case. We know that this Temple was erected in honor of a world-wide, age-old institution, as a visible emblem of an invisible force that lights up the dark places, that brings hope to the hopeless, fathers to the fatherless, food to the hungry, aid to the needy, comfort to the stricken, freedom to the bound and justice to the free.

"No building was ever built in vain whose mission is the teaching of such principles as brotherly love and affection, charity and protection, truth and honesty, temperance and morality, fortitude and courage, prudence and discretion, justice and mercy.

"This fine new edifice impresses us today with its strength and its solidity and its lasting qualities. But we must realize that, like mortal man, it is doomed to die. It will last for years—perhaps for generations—or even for centuries. But it will pass away. It will crumble and decay into the dust from which it sprung. In the mutations of time this land may even become submerged by water and all these evidences of your skillful handicraft may become swallowed up and forgotten in the impenetrable mystery of the sea. But Masonry teaches us that the spiritual edifices erected here will never cease to exist. It is a great comfort to believe that the flesh is mortal but the spirit immortal, that the gross and the evil shall be washed away, and only the pure gold of the good and the beautiful shall remain. It is a great comfort to believe that all the good that was ever done by the children of men is stored up forever by the Supreme Being in the treasure vaults of eternity.

"Where is King Solomon's Temple today?

"Where is all that Parian marble, those cedars of Lebanon, that gold and silver and all that regal splendor? Gone! The unsparing ravages of barbarous force have laid it waste and destroyed it. Nothing remains of it today but a precious memory. The 70,000 entered apprentices or bearers of burdens; the 80,000 fellowcrafts or hewers on the mountains and in the quarries; the 3,300 masters or overseers of the work; and our first three Most Excellent Grand Masters have long since gone to their reward.

"But they builded better than they knew, for the system of morality which they established for the government of their craft, has endured unchanged for thousands of years and still rules the conscience of the world.

"Is there not in all this a solemn, a divine significance? In all these ages countless institutions have come and gone, and history has not even written it down that they ever existed. Empires, kingdoms and provinces have appeared and disappeared. Ideas and peoples have lived and died. Like so many comets, have religions and dogmas, sects and creeds emerged from obscurity, flashed for a time across the vision of man, and then disappeared into oblivion.

"But our ancient and honorable fraternity, whose origin is lost in the mists and traditions of antiquity, and which must have existed in some form when man was a child and time was young, that venerable institution still lives, greater and grander, more virile, more powerful, more widespread, more influential, more numerous, more humane, more merciful, more blessed, more useful to God and more beneficent to man than ever before.

"No complaint is ever heard from Masons as to the burden of Masonic charity, because such obligations as we take and such responsibilities as we assume are self-imposed. No man is ever asked to become a Mason. No good man is ever disappointed when he is made a Mason, or ever fails to become a better man because of it. It is a Masonic axiom that no man can be a bad citizen and a good Mason.

"Let us therefore remember well our obligations; set a good example for our fellowmen; foster truth and promote virtue; guard well our outer door and join with one another in maintaining unblemished the proud heritage of the past. Let this beautiful new temple, so clean and spotless, continually admonish to similarly build that spiritual temple which each of us is erecting in his own soul."

The Degrading Teaching of the "Transmigration of Souls"

THERE is a vulgar belief among some eastern peoples that the human Soul passes after death into animal bodies; but this belief is a degraded relic of the true teaching as to Reincarnation. It may well be that some of the materials that go to make up a man's carnal nature may, after being broken up by death, be afterwards used again in the animal kingdom; and probably the erroneous belief in transmigration referred to above may have arisen from a misunderstanding and perversion of some such ancient teachings about the transformations of life-atoms. But this has nothing whatever to do with the human-Soul and its destinies. Once human, always human; and a human Soul, once endowed with the impress of the Divine Free-will, cannot ever go down into the lower kingdoms.

Hence, it cannot be too strongly insisted upon that Reincarnation has nothing to do with any such *degraded and degrading teaching as that which is commonly understood by the term "Transmigration of Souls."*

As to the genuine doctrine of Reincarnation, we can, of course, barely outline it in the limits of a brief reply; but we can assure the inquirer that any perplexities that may arise in his mind on first acquaintance will be rapidly dissipated by further study of this most luminous teaching.

Reincarnation is the only doctrine, as to the destiny of the Soul, which is consistent with reason and with the conclusions we must draw from the facts of life. It was formerly an article of faith of the Christian Church, but was erased from the canon at the Council of Constantinople, some five hundred years after Christ, in consequence of the growing influence of western materialism. And since the belief in a single earth-life does not square with a belief in Divine justice and wisdom, the modern church doctrine of heaven and hell had to take its place.

Looking at human life, we see that a single human career is not a complete drama, but merely an episode. Souls entering earth-life do not *begin* their experience, but take it up again where they left it before; and this is why all are at different stages of growth and knowledge. Again, at death, each Soul leaves his career of experience all unfinished. It is evident that a single earth-life is merely a day in the life of the Soul. If this life is the only one we live, or have ever lived, on earth, then it is impossible to account for the inequalities of men's fate. A single earth-life is not sufficient for the garnering of all the experience necessary to a Soul. Again, we see that many deeds done in this life do not bear fruit, and this fact causes us to question the Divine Justice. But Reincarnation allows ample time for a man to reap what he has sown and to experience the consequences of his actions. These are, in brief, a few of the reasons why Reincarnation is the only consistent doctrine. We must just touch upon the leading features in the teaching itself.

The Soul of man is threefold—spiritual, human and animal. The spiritual Soul is the real Self of man, the Divine part of his nature; the animal soul contains the instincts and passions in which he resembles the animal creation; the human soul is the ordinary mind of man, which shares the influences of both the spiritual and the animal nature. The

divine Soul of man is endeavoring, through the human soul, to overcome and tame the animal nature, turning it into a servant; and the animal nature, in its turn, continually strives to wrest the empire of the mind from the divine Soul. After death, the body decays, and the animal soul also disintegrates soon after. But the divine Soul passes, in company with the best part of the human soul, into a state of spiritual bliss which is to some extent represented in the church doctrines of heaven. But the necessity for further experience of earth-life, the desire for further conquests of nature, and the need of adjusting the unfinished affairs of its earthly career, compel the Soul to enter once more into a bodily tenement. Thus life on earth, and beyond earth, alternate like waking and sleeping.

We cannot be clearer on this subject without entering into other Theosophical teachings relating to it; but we trust we have said enough to remove some misconceptions and to give inducement to further study. At all events we have shown up the character and intellectual capacity of those amiable individuals who have been trying to tell the people what they ought to think about Theosophists, and to make intelligent children believe that Theosophists teach that men will be peacocks or monkeys in their next incarnation—a theory which is perhaps not so absurd after all in the case of some people!

Neither does Theosophy teach that a man who sweeps his crossing well in this life will be promoted to the rank of a cheesemonger in his next! But it does teach that each Soul will find the kind of experience which best accords with its merits and its needs. H. T. E.

A Crownless King

PRESIDENT DIAZ, of Mexico, who is generally considered to be one of the greatest and most successful statesmen of this age, is said to consider himself "a failure, because after twenty-eight years of effort he has not succeeded in freeing himself from the necessity of being an autocrat." To most persons it seems almost miraculous that he has been able so well to govern what is, perhaps, socially, the most heterogeneous country on earth, except Russia. Mexican subjects range from the wild Indian tribes of the mountains, some of whom have scarcely even seen a white man, to the highly-cultured, refined and luxurious planters of the lowlands; yet this wonderful man, himself an Oaxaca Indian, governs them all, wisely, patiently, waiting and working for the time when they shall be a more united and fraternal people. Most men would exult in their success in holding power so long—this man strives to render himself unnecessary. Scarcely a stronger proof, were one needed, could be given of Plato's dictum, that "a state can be well governed only when it is ruled by unwilling men who perform the duties of office as a necessary labor, but despising the rewards and honors attached thereto." It is only the cheap ambition of the self-appointed leader which clamors for ambition. True altruistic philanthropy is always willing to remain as obscure as possible. STUDENT

✻ The Trend of Twentieth Century Science ✻

Ancient Metaphysic in Modern Dress—Ideal Types

PLATO taught that all things pre-exist as forms in the invisible before they take clothing in this gross visible. They are metaphysical before they are physical.

This doctrine—of ideal types—has touched the imagination of poets, has been defended as philosophy, has been spurned as “mere metaphysics,” but has assuredly never been accounted science. Yet there is no more conspicuous example of the fact that *back to the ancients* is the formula secretly guiding modern science.

Every few weeks a new “element” is discovered; but at the same time it is more and more completely recognized that—as the ancients said—there is only *one element*, the “elements” being various compoundings of that with itself.

What differentiates an atom of sulphur from one of gold, since both are made of the one element? We can only answer: The *pattern* in which the ultimate units of this one element are arranged within the minute solar system we call the atom; the *number* of those units; their *motion* among themselves; and their *rate* of vibration.

So a square of metaphysical entities constitutes the true being of an atom of anything, that whereby it is not an atom of something else! This square is exactly Plato's ideal type. It is repeated when the atoms combine to make molecules; again, when the molecules recombine to make cells and crystals. It is the *idea* of the atom. Whoever will press his thinking far enough will see that it can only be born and exist in a consciousness, and that that is why it is conceivable in a consciousness. This consciousness in which it is born, is the logos or mind of that atom.

The positivist and materialist will object to the consciousness, and will speak of law. But what we call law, in this sense, is only a formal way of stating the facts. It is no explanation. The only possible explanation is a guiding consciousness. The non-material, that is, the motion and pattern, *is*. And that which exists, yet is not material, not objective, can but be subjective, namely, consciousness. But science will not immediately get so far as that.

A recent interesting suggestion is worth noting: that radium is not an “element” even in the usual sense of that word, but a radio-active *condition* into which some or any other “elements” may pass. Hence its apparent omnipresence.

STUDENT

Curious Behavior of the Star Delta Orionis

SOME remarkable observations have lately been made of the star Delta Orionis, which may be the beginning of entirely new interpretations of the meaning of the dark lines crossing the rainbow-tinted spectrum. This star is one of those whose light when sifted by the spectro-scope into its components shows a regular, periodic displacement according to the direction of motion of the star in its orbit. During its approach towards us in the line of sight the Fraunhofer lines are moved up towards the violet end of the spectrum, and when it recedes the converse happens, the lines are dropped towards the red end. They are raised or lowered a tone, so to speak, precisely as the sound waves from the whistle of a locomotive are raised and lowered in pitch as it approaches and passes a station at high speed. But in the case of Delta Orionis, while the majority of the lines behave normally, the K lines of calcium resist the periodic displacement of the other lines and remain immovable! It has been suggested that the fixed K lines indicate a stationary cloud of calcium vapor between us and the star and quite independent of it. This is pure speculation, for there is no other evidence of such a cloud. It may be that the true cause of the anomaly will remain unknown for a long while.

In her frequent remarks concerning the solar spectrum, H. P. Blavatsky points out many difficulties in the way of fully accepting the orthodox scientific hypothesis of the day concerning the condition of the sun based upon spectroscopic observation. Since she wrote, the discovery of Radium has corroborated much that she advanced, for here is a substance giving out light and heat indefinitely without apparent cause. So without committing ourselves to any theory we may watch for further observations of Delta Orionis with great interest.

R.

Lightning-Burns Are Not Photographic Reproductions

FROM time to time one reads stories in the daily papers of persons struck by lightning in the neighborhood of trees, whose bodies are subsequently found to be marked with an apparently “photographed” impression of a tree with its trunk and branches.

One such fatal case has just been going the round of the London dailies. The impression was upon the victim's chest, and the usual detail is added that the marks were the exact picture of the neighboring tree.

It is difficult to understand these impressions as photographically made. Where is the reducing lens? Moreover, such an explanation is unnecessary. The body offers considerable resistance to the passage of a current. A flash of lightning passing down from the head would be broken into rivulets, taking various channels according to lines of lesser resistance. And that part which ran down the skin would behave in the same way, branching and rebranching. The resulting burns or other marks would therefore have a pretty close resemblance to a tree with its trunk and branches. The “tree” would in this case be upsidedown, but if the lines of less resistance happened to converge instead of diverging, the trunk would be below.

We do not know whether this explanation covers the facts in all cases. But before the reporter's usual remark—that the impression was exactly that of the nearest tree—is accepted, we would suggest that the tree should be photographed from the victim's standing place, and the photograph compared with the skin-marks.

A faculty of perception is growing in man, enabling him to descry facts and truths beyond our ordinary ken.

Is it too much to believe that man should be developing new sensibilities and a closer relation with nature?—H. P. Blavatsky

Death in the Pot—English Mortality Statistics

SOME extraordinary mortality figures are to hand from England, a study of which should, one would think, preclude anyone from adopting as his life-work the occupation of innkeeper. Taking the average mortality of males as 1,000, we find this average to be reached as follows:

Clergyman, priest, minister	533
Farmer	563
Laborer in agricultural counties	666
Hosiery manufacture	696
Carpenter, joiner	783
Fisherman	845
Coal miner	935
Hair-dresser	1,099
Musician, music-master	1,214
Brewer	1,427
Innkeeper, wine and spirit dealer	1,642
Earthenware manufacture	1,706
Inn, hotel servant (general)	1,725
File maker	1,810
Innkeeper and servant (London)	1,838
Innkeeper and servant (industrial districts)	1,948
Inn servant (London)	1,971
Innkeeper (industrial districts)	2,030

These figures mean that among clergymen life is twice as long as the average; among innkeepers it is half as long.

The causes of death are also striking.

Calling the average tendencies to suicide and nerve diseases respectively 15 and 102, among innkeepers they are 35 and 192.

Calling the average tendencies to pneumonia and phthisis 107 and 192, among innkeepers they are 257 and 305.

Calling the average tendency of members of all trades and occupations, to alcoholism, 13, among innkeepers it is 94 and among London inn servants 139.

The ratio of liver diseases in ordinary men to their frequency in innkeepers is as 29 to 248.

While we do not draw from the above figures the deduction that whoever wishes to live a long time must become a clergyman, we do say that he must *not* become an innkeeper.

Wife and Friend

MILLICENT lay back among the cushions on the pretty divan in one corner of her cosy sitting-room. She could not help feeling satisfaction as her eyes wandered around, from the walls hung with etchings and photographs, to the bookshelves filled with the beloved books—she knew the place of each one. In another corner stood the tea-table, and here her eyes lingered, for she was housewife enough to feel pride in its appointments of dainty china and embroidered linen. With her own hands she had wrought all this daintiness.

Her home was a suite of rooms high up in one of the city's great apartment houses, and when Erastus had said good-bye to her in the morning, she found it a pleasant task to pass the hours of his absence, in doing all that was necessary to keep in order an apartment with all the modern improvements.

She looked at the clock—at any moment the bell might ring—and up would come Ada, eager for a long talk with her friend, or Marian, brimming over with lively news, for it was Tuesday afternoon, and there was that about Millicent, that had made her little receptions popular among her friends.

The bell rang. Out into the hall ran Millicent. "Marian," called a voice up the speaking tube, and presently Marian appeared at the door.

Marian Alford and her husband were types of the gay, irresponsible young married people, of whom there are so many in large cities. They possessed a good income, and were free from cares of any kind. Life was to them one round of enjoyment, and withal they were so bright and entertaining, that the more serious Millicent and Erastus, to whom city life was a new experience, found them interesting companions. The four were on very friendly terms. Millicent was especially attracted by a certain energy and capability displayed by Marian in her pursuit of pleasure, and often thought that these, otherwise directed, might make her friend an exceptionally helpful woman.

Before the greetings were over, Millicent saw that Mrs. Alford was not in her usual blithe mood.

"I came early, just as soon as I thought all these little household duties of yours would be done," said Marian, "for I want to speak to you before any one else comes. I must unburden my mind to some one. Millicent, I am so anxious about Fred. He has not been himself lately at all. I have thought and thought about it, but I do not know what to do. You are such a wise little body, and, at any rate, I feel sure you will not scold and condemn me as Aunt Rita would, so I am going to tell you the whole story.

"You know I have always acted on the principle that I must join my husband in everything, and not be so squeamish about amusements that he would think me a bore, and tire of taking me about with him. And I love a gay time, and pretty clothes, and we *have* always spent our entire income on just these things. And lately we have met a new set of people, who are even more—well—extravagant, than we have been, and though I have never seen any harm in going to the races, or even betting a little, I have begun to feel uneasy about Fred. Since we have met the Woodward's, he is so much more reckless, so much more eager for excitement. I have mentioned this to him, but he only laughed and said, 'Well, really Marion, if *you* are getting squeamish about such little things!'

"And several times lately, Millicent, after all these years when we have gone everywhere together, Fred has left me, to spend the evening with the Woodward's and their friends, and has stayed *so* late. And though I did not feel angry—for I want him to enjoy himself—still I feel uncomfortable about him, and as if we had started on some new path that leads I know not where. Indeed, I do know where, for Fred is not steady and careful as he used to be, and it is essential for him, in the position he holds, to be both.

"I know his life is telling on him. Something will happen. And to

think he will not listen to me! If only I could do something to make him realize what he is doing. I feel sure, Millicent, you would be able to do something. But, there, dear, it is a pity it rains, you would be glad to see some one else come in, after hearing all my woes."

But Millicent's sympathetic look assured her friend, and Marian went on:

"You know I have always remembered something you said once, when we were discussing the foolish and untimely giving of presents, that has become so general. You said, 'Ah, well! aside from giving there is always something we can *be* to those we love, something brave and helpful and tender. Now, Millicent, if I could *be* something like that to Fred now, when he will not listen to my words.'

Here the bell rang again, and soon the little room was full of friends chatting cheerily around the tea-table. Millicent could only bid her friend good-bye affectionately, without referring to the confidences of the afternoon.

As the weeks and months passed, Mrs. Alford had reason to be more and more anxious about the change in her husband. Into their pleasant hitherto care-free life together had entered a new element, and Marian needed all the buoyancy of character natural to her, to help her face what the days brought. More and more she sought the company of Millicent, and one day, going to the little apartment and finding its mistress busy in her kitchen, she said:

"You will not mind my saying it—I believe I must learn to be poor, for I soon shall be poor. I know it is coming to that."

"Marian, are you afraid to be what you call poor—to have a limited income, much less than you ever had?"

"No; I am not." And the frank face showed that she meant what she said. "I should not mind being poor, having ever so little, in fact, if I could *only* feel that I was doing for my husband all that I know you do for yours. There is something about a woman's life, Millicent, that I have not learnt yet."

"Do you really mean, Marian, that you would be happy even if you had to give up your lavish way of living,

and the certainty of having beautiful gowns and going about, as you have done for so many years, without thinking where the money came from?"

"Yes; I do." And the true woman-heart spoke in what followed: "If I could learn, dear, to be to Fred what will help and hold him, in the cruel awakening that I feel is near to him, I should not care about any of the things I have enjoyed for so many years. I am not in despair even now, though I do not see the future clearly. I know when Fred comes to himself he will realize his foolishness and make a fresh start. Oh, Millicent, can I learn to give him then what he will need so sorely?"

Millicent's eyes shone.

"Dear, your words, your longing to do it, prove that you are a true wife. Trust yourself. Keep a brave heart. Fred will turn to your loving strength at last."

And so it was. When Fred Alford awoke as if from a long dream, and realized that his recklessness had ruined him, and that he had to begin at the foot of the ladder again, the manhood in which his wife had trusted was touched and strengthened by her courage and unwavering confidence and hope.

His eyes followed her wonderingly, as she gaily adapted herself to the changed, and often discouraging, circumstances of their life. Well might he watch and wonder, and gradually grow strong in purpose by her side. From the seed of her love and trust sprang a new relation that revealed husband and wife to each other in an ever deeper and more enduring friendship.

STUDENT

A LITTLE consideration of what takes place around us every day would show us that a higher law than that of our will regulates events: that our painful labors are unnecessary and fruitless: that only in our easy, simple, spontaneous action are we strong, and by contenting ourselves with obedience we become divine.

THE CHILDREN'S HOUR

The Raja Yoga Question Box

WHO was Plato?

Plato was the first of the pupils of Socrates, whose teachings he set forth in writing. His writings have always been like a light upon men's minds, keeping before them the immortal life of the Soul.

2 Who was Diotima?

Diotima was a sincere and gifted woman, whose wise words about heart-light

were an inspiration to both Socrates and Plato, and taught them many things.

3 Who was Donatello?

Donatello was a sculptor who lived in Florence in the end of the Fourteenth and beginning of the Fifteenth centuries. While he was also a painter, he was best known for his wonderful bas-reliefs and statues. His works are still to be seen in Florence and many of the cities of Northern Italy.

The Three Knights

By a young student in Raja Yoga School, San Diego, a branch of Raja Yoga School, Point Loma

IN a far off country there once reigned a king who was so truly kingly that his subjects were willing to do anything for him.

One day he received the news that his brother, who was also a king, was sick unto death and wished to see him. The good king hesitated not a moment and soon he and his attendants were speeding through the dark forest that separated the two kingdoms.

He lingered many months. At last his people became alarmed. Mayhap he had lost his way in the forest. At length the king's minister resolved to send some one in search of him. He therefore had it proclaimed throughout the kingdom that he would choose three of the bravest knights in the kingdom to send in quest of the king.

Of the many that assembled in the palace next day, some for the reward, some for the honor and glory and a few for the sole purpose of finding the king, the minister chose three knights, Sir Guilroy, Sir Keith and Sir Mortimer, thinking that if one or another failed, surely one of them would succeed. Sir Guilroy started. "Ah!" he thought, "if I bring news of the king, rich will be my reward, and I will wed the fairest lady in the land."

In his heart was greed. As he rode gaily along, building monstrous air-castles, a fierce lion sprang out from the bushes and devoured him. His frightened horse ran back to the palace gates. When the people saw the horse they knew that Sir Guilroy had failed.

Next Sir Keith was sent. In his heart was the love of glory. "Oh!" said he, as he rode briskly along, "if I succeed the whole kingdom shall bow down to me, and the king will make me a great lord."

Many days the gallant Sir Keith hunted. Perhaps he was blinded by selfishness, for, though he hunted high and low, no sign did he see of the king. At last, discouraged and famishing with hunger, he changed clothes with a peasant and traveled on foot to the kingdom as a beggar, in order that his comrades might not recognize him, for he too had failed.

The minister waited. Finally, thinking that Sir Keith had also been killed, he sent the young knight, Sir Mortimer.

Sir Mortimer was one of the few who really wished to find the king, and who thought not of self or of the reward. As he, too, rode gaily through the forest, he suddenly came upon an opening. In the opening on the tree stump sat the king, his royal garments torn and all his attendants gone. Sir Mortimer lifted the king gently on his horse. He was very weak, and Sir Mortimer gave him what little food he had.

As they neared the palace gates, all the peasants danced round them and the little children sang gay bits of song and even the birds seemed to join

in the merry-making. A great feast was given, to which every lord and lady, and even the peasants, were invited, and grand ladies danced with peasants and many a lord danced with a timid little shepherdess, and all, whether of high or low birth, were treated alike. But before the great rejoicing ended, the king bade every subject of high or low rank, to bend the knee to the noble Sir Mortimer. "For," said he, "when he was hungry he gave me his food, when he was thirsty he gave me his wine, and when he too was weary, he tended me. Let every bell in the kingdom peal out its allegiance to Sir Mortimer." Thus Sir Mortimer got his well-earned reward and the love and respect of all, only because he forgot himself and worked with his higher nature. F. G.

Young Filipinos

DEAR CHILDREN: You have all heard of the Philippine Islands, for the great war that we had in defense of the people of Cuba served to bring them very, very close indeed. And yet, in spite of all that, we do not know as much about the people as we should. There are very many islands, hundreds of them, in fact, some of them quite small, some, like Luzon, large; and there are many tribes of natives living upon

them, some of which are but little known, a few being entirely unknown, as yet, to the white race. For centuries they have lived their own life and gone their own way and been sad or happy, I have no doubt, in their own fashion; but with the American flag came

the touch of a new spirit. While there have been many drawbacks, there have been great advantages. A new door has been opened to the Filipinos and it may be that the little children will pass through it before their elders. How we wish they had a knowledge of Raja Yoga, for that would give them the power to take into their hearts all that is best in our civilization and to shut away all that is weakening

and bad. Many so-called savage peoples have not been strong enough to do this. That is the saddest part of the story. But we have failed in our duty, too, for we should have known how to teach them and we should have been unselfish enough to carry to them only our best.

DEAR CHILDREN: A friend has written me of how a party of whalers once chased a mother bear across a field of ice, away up in the Arctic circle. The bear was burdened with the care of two funny babies and the sailors thought it would be an easy matter—and great fun too—to hunt her down. At last, as they gained upon her, she began throwing her cubs on before her, and the cubs themselves seemed to understand what this meant, for after every throw they picked themselves up nimbly and waited for her to take hold of them again. And at last she got away safely, which was the best part of the whole story, wasn't it? **COUSIN EDDYTHE**

A FILIPINO HOLIDAY

MY LITTLE LASS

by JULIA HARRIS MAY

AND so you have lost your little lad,
And I have lost my girl,
The dear little girl that once I had,
And whose hair I used to curl.

She ran at my side, and she chattered so,
As her tiny hand I took;
But she skipped away, not long ago,
And I know not where to look.

For a maiden stands in the baby's place.
She is fair and tall and sweet,
She is full, so full of girlish grace,
From her head to her dancing feet.

She is singing a song I used to know,
(And I still confess its truth),
A song of bud beginning to blow
In the happy heart of youth.

She is mine, the maiden so tall and fair,
The maid with the voice divine;
But I think she has hidden away somewhere
That dear little lass of mine.

THE SECRET OF DEATH

by PAUL HAMILTON HAYNE

SAD mortal couldst thou but know
 What truly it means to die,
 The wings of thy soul would glow,
 And the hopes of thy heart beat high;
 Thou wouldst turn from the Pyrrhonist schools,
 And laugh their jargon to scorn,
 As the babbling of midnight fools
 Ere the morning of Truth be born:
 But I, earth's madcap above,
 In a kingdom of stormless breath—
 I gaze on the glory of love
 In the unveiled face of Death.

I tell thee his face is fair
 As the moon-bow's amber rings,
 And the gleam in his unbound hair
 Like the flash of a thousand springs;
 His smile is the fathomless beam
 Of the star-shine's sacred light,
 When the summers of Southland dream
 In the lap of the holy Night:
 For I, earth's blindness above,
 In a kingdom of halcyon breath—
 I gaze on the marvel of love
 In the unveiled face of Death.

Courtesy

COURTESY may be defined as the art of expressing good-will. Hence there are two indispensable factors in it—the good-will and the expression thereof. Like a sacrament, it has “an outward and visible form and an inward or spiritual” grace; and, like an art, it has inspiration and technique.

When either of these two essential components is lacking, the result is faulty. If the inspiring power of good-will is deficient, the courtesy becomes mere formal etiquette. When the art of expression is wanting, then the courtesy is clumsy and may be misunderstood.

But the more important element of the two is the inward and spiritual grace, because this tends to create its own gracious means of expression; the mere practice of etiquette will not make a malevolent person kindly.

Yet we must by no means underestimate the importance of caring for the outer form of politeness—and here I may surely assume that the reader is already inspired with the requisite kindly intention. It will not do to air the fallacy that conduct does not matter so long as the heart is right. For man was created for the express purpose of giving outward and visible form to inward and spiritual graces; and to keep them always inward and strictly spiritual is to shirk one's natural function and duty.

A heart is of no use either to its possessor or to anyone else, unless it does something. This is evident and familiar enough; but it is not all; there is more trouble yet. For, if the good-will does not rule the acts and conduct, then *something else* will. If our body and its actions are not actuated by our better desires, then they will be run by our worse desires, such as selfishness, greed, indolence, and the like. We may be ever so well disposed inside, but we shall behave like a clown or a pig.

Will it avail us to plead absent-mindedness, or modesty, or simplicity, or any of those familiar excuses for clumsy behavior? No; and the really well-intentioned man would not dream of so excusing himself. If you have ever wanted to please anyone very badly, you took care *not* to be absent-minded or indolent.

To come at once to the point—the body and its functions need training to wean them from old habits of servitude to selfish and unlovely instincts, and make them quickly and automatically responsive to the good-will we have acquired. For this, constant *watchfulness* may be needed, or we shall perhaps go along the street with our eyes in our pockets.

Or perhaps undue modesty, an insidious form of self-conceit, may make us afraid to show our real kindness—preposterous delusion!

I have dwelt on the need of attending to the outer form of courtesy, and yet it seems as if in reality all defects in the form were due to defects in the spirit; in short, if we are negligent in our politeness it is because we do not want to badly enough. Still, if we had not attended to the form, we should not have found this out; so it *is* necessary.

To sum up then—the spirit is all-important; and, if we are ever vigilant over our heart and keep it always, not well disposed, but actively gracious, then the form will take care of itself and we shall instinctively find means of making our good-will felt, as we desire. But, since many of our actions have become automatic in wrong grooves, we need to watch the mechanism and train that as well.

H. T. E.

Gratitude

GRATITUDE is one of the nobler qualities and is rooted in the spiritual part of our nature. Ingratitude is purely selfish and is one of the most ignoble qualities of the lower nature, or we may call it the absence, in an active form, of the spiritual quality of gratitude.

While gratitude has in it an element of justice causing a desire to make return for favors received, yet it is something more, for true gratitude does not cease with any return for that which may have been received. It is as eternal as the spiritual nature of which it is a part.

Those who do not recognize a spiritual nature in animals will think this is not true, for many animals have gratitude in a very pure form and do not forget the friend who has served them in time of need and for whom they will risk their lives when danger threatens; and in case of domestic animals there is a constant exhibition of affection and gratitude. Animals are still largely under the sway of the primal spiritual impulse which started them forth on their spiral journey of evolution.

Those who have attained the greatest spiritual development have the truest gratitude and are grateful for whatever is done to help humanity, as they live for this and not for themselves.

Gratitude increases as selfishness is overcome and our perception of the true nature of things clears. Then we are able to be grateful for what in a more selfish state we would resent because of its hurting the lower self through its pride. We are grateful because whatever shows us our faults helps us to rise above them if we have the right spirit. When we no longer identify ourselves in our thoughts with our lower nature but with our higher, we see things in a different way and arrive at a truer basis of gratitude.

What cause for immeasurable gratitude have we whose privilege it is to be here at this spiritual center with all its helps and opportunities for the overcoming of our selfish selves and becoming fit instruments in every part of our being for the use of the Divine Spirit in the service of humanity. When we think of the great evil and darkness that threatens to overwhelm the world at this time, what an inestimable privilege is ours to be able by simple faithfulness, and trust in the working of the Law, and doing our best, whether it seems little or great, to help to stem the tide of evil and turn it back forever. If we fully appreciate this, surely our gratitude to the helpers of humanity who have made possible this work will be so great and so true that the utmost devotion to the cause of Universal Brotherhood can only partially express it. BANDUSIA WAKEFIELD

Shakespeare As a Catholic

IT has been variously ascertained, “from internal evidence” mainly, that Shakespeare belonged to every profession, and also that he was a murderer. Also that he never existed; and that there were two of him. He was literate and illiterate, and belonged to various ranks of society. He had no religion, and was profoundly religious. He was a convinced Protestant, and now it is stated that he was a Catholic!

The evidence is of the same final character that causes us to accept all the other contentions. We had thought of taking a part in this game and writing a book showing, from the internal evidence afforded by the play of Hamlet, that Shakespeare was a Dane. But as a study of other plays had convinced us that he was a Scotchman and an Italian and probably also a Frenchman, we have decided not to publish. The above mentioned critic is therefore the last comer into the arena. Yet how many students of Theosophy have not found *that* glittering in many a line? Reincarnation and Karma are instances. STUDENT

UNIVERSAL BROTHERHOOD

by J. A. SYMONDS

THESE things shall be:—A loftier race
Than e'er the world hath known shall rise,
With flame of freedom in their souls,
And light of knowledge in their eyes.

They shall be gentle, brave, and strong
To spill no drop of blood, but dare
All that may plant man's lordship firm,
O'er earth and fire, and sea and air.

Nation with nation, land with land,
Unarmed shall live as comrades free,
In every heart and brain shall throb
The pulse of one fraternity.

Great minds shall rise, with ampler powers,
A loftier wisdom to impart;
And arts shall bloom of nobler mould
And mightier music thrill the heart.

Then want and woe, and sin and shame
No more shall triumph 'neath the skies,
But every life shall be a song,
And earth be more like paradise.

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question
members united?

It is stated that the Theosophical Society demands no acceptance of belief from its members. Upon what basis are the

Answer

In spite of all experience, in spite of all history to the contrary, there seems still to be a fixed idea in the human mind, that it is possible to hold people together on the strength of a common belief.

It is unreasonable to expect this. No two minds are alike and no two can look through their different minds at any subject in exactly the same way. Even if they should chance to today, they are not likely to tomorrow, unless they have minds which do not grow in the least.

Who can express the final truths of being in words? And even if this could be done, what two people could understand them to the same extent? Who shall decide whose interpretation shall be accepted? And who will dare narrow down the truth to the present interpretation of any mortal? It has been a method used in the churches. They have dared. But the result has been not unity, but dissension, conflict, bitter warfare, persecution. Every so-called religious body has split itself up into sects without number, each trying to get away from the other and form a little heaven to itself. In fact there is nothing in the history of the race which has aroused more hatred, more diabolical tendencies, than the insistence upon a common religious belief.

The Theosophical Society knew that unity is necessary, but it was too wise to seek to bring it about in this way. On the contrary, it said, believe what seems to you the highest truth, and respect this in others as you wish it respected in yourself. But for unity it struck deeper. It went to the heart, and announced as its object the formation of a nucleus of a Universal Brotherhood. In an ideal people can unite. For a living, vital truth which is dear to their hearts, they will hold together and work together, but not for a belief.

Many people have longed to unite for an ideal, and have done it for a time. But the simple reason that the Theosophical Society succeeded in forming a nucleus for a Universal Brotherhood, and that this latter organization which has absorbed the former, still exists and grows stronger and greater day by day is this: It was brought into being and has been gradually shaped, and held in line by a leader, who in the line of evolution is far above those who are led—by a leader who understands the human mind and its weaknesses; the pitfalls into which it must surely drop if not guided; who understands the needs of humanity—the final goal to be attained and how to attain it, and who, above all, is filled with the necessary courage and compassion to undertake the herculean task of conducting those who are willing, out of the maze of confusion into which they have put themselves.

Without this the Theosophical Society would be nothing. They might

have had the highest ideals. Some might even have conceived the idea of forming a Universal Brotherhood, but no two would have agreed as to how it should be done, and long before this they would have disintegrated themselves into atoms by quarreling about methods. Some one must lead, and the leader in any undertaking must always be one who knows how to get to the place he starts for. He must know the road, its dangers, its short cuts—to use if need be—and its obstacles. He must have traveled it before. Anyone unqualified, attempting to lead to such a goal as Universal Brotherhood, would be routed by a thousand foes before many steps were taken. And it is plain that without such a leader humanity could never attain the delicate adjustment, the wonderful blending which must precede such a state of consciousness as Universal Brotherhood. That is the real secret of the union among the members. G. V. P.

Question

If we do a wrong thing, not meaning to, and are truly, truly sorry, will we have to suffer hereafter? Please answer.

Answer

The very question carries with it a deep undertone, and seemed to me as I read it like the heart moan of some one who had glimpsed just enough light to reveal in all their awfulness the shadows, some one who had realized just enough of courage to feel the full agony of fear. It is the question that half the world is asking today, the half that has not grown reckless and therefore unafraid. The brain-mind has no answer. The heart has.

What governs the world, chance or law? What is life's real key-note, selfishness or compassion? Is humanity helped and loved and guided by the Great Ones, or are we victims of those wiser than we, who when they are kindest deign to leave us alone? Never. Every fiber of our being protests against such an idea. Every throb of our heart declares that there is a guiding Law, universal and infinite, and not lightly to be misunderstood. He who breaketh that Law, even ignorantly, sets into motion causes that cannot fail of their effects. The babe who places its hand in the fire is burned and suffers, though he does it in perfect ignorance.

And yet in this seeming injustice there lies infinite release and a great hope. Who are we? What are we? Are we not souls, infinite, eternal and divine, masters of the law? which does not mean triflers with it, by any means. Dare the master of tone harmony, work contrary to the laws which he knows to exist? Can he break the strings of his harp or break the laws of musical theory with impunity? The very fact that he understands this law makes him its master, but only in so far as he becomes coworker with it. That is the glory of this higher knowledge and only those who are beginning to step from the shadows into the sunlight can realize how sadly the world has needed it.

But the question again. Imagine that you have contracted a debt which one day will be presented, with interest, for payment. You may suffer on that day of reckoning or not; that depends. If there is an abundance in your treasury that debt will trouble you but little. If you are bankrupt then you face ruin. Now the simile holds equally good in the moral world. If we have spiritual treasures in abundance can we not meet our creditors, scarcely inconvenienced and with a smile? If we are spiritual bankrupts, then of course we go down in the general wreck; and herein lies the inspiration of Theosophy, for it *does* open the doorway into that treasure house of soul wherein may be found riches in abundance and store exhaustless upon which we may draw ever and ever when sorrow crushes and events grow harsh. Treasure upon which we may draw for the payment of all debts; treasure, which if we lose not the key is ours to command always and in fullest measure, and *Theosophy is that key*.

G. K.

INSTEAD of saying that man is the creature of circumstance, it would be nearer the mark to say that man is the architect of circumstance. It is character which builds an existence out of circumstance. Our strength is measured by our plastic power. From the same materials one man builds palaces, another hovels; one warehouses, another villas: bricks and mortar are mortar and bricks, until the architect can make them something else. Thus it is that, in the same family, in the same circumstances, one man rears a stately edifice, while his brother, vacillating and incompetent, lives forever amid ruins; the block of granite which was an obstacle in the pathway of the weak, becomes a stepping-stone in the pathway of the strong.—*Carlyle*

Look Forward

Forgetting those things which are behind, and reaching forth unto those things which are before.
—Philippians 3:13

HOW often when we take up the pages of that ancient Scripture, which has been the comfort of so many suffering, toiling pilgrims in the West, do we find a brilliant, illuminating phrase, able to unlock closed doors in the heart, to unveil mysteries in life. The text quoted above is one of such and is in perfect accord with the teachings of all the wise ones. Do not waste force looking back. Even the proverb says, "Do not cry over spilt milk," and the allegory of Lot's wife being turned to a pillar of salt carries the meaning. Katherine Tingley never wearies of impressing upon her pupils that each day should be as the beginning of a new life. Every time you sit down and groan over past misdeeds you weaken yourself in exact proportion to the energy you spend in vivifying the past. Look forward, build up tomorrow as it should be! Another scripture says, "Regret nothing, cut all doubts with the sword of spiritual knowledge"—that spiritual knowledge which is the realization of our oneness with the Divine, that spiritual will which can change all things in us in the twinkling of an eye.

How we hypnotize ourselves into the belief that we are miserable sinners! We have had this depressing idea impressed upon us so forcibly by interested persons that we are really proud of it! But the strong soul will get up, and, pushing aside such puerilities, will gird on the armor of light, and in the strength of the Christ within, the warrior indomitable, fight for humanity. Let us remember the advice of W. Q. Judge about building up new thought-forms which will gradually replace the old, and never being overwhelmed by the shadows of past mistakes. We may learn by thinking over our past, but self-condemnation by itself is morbid. Away with it. Live in the Eternal.

STUDENT

To the Members of The Universal Brotherhood Throughout the World: In order to expedite improvements in the different Departments of The Universal Brotherhood Organization, it is necessary that all communications, connected with the work of the Universal Brotherhood, should be directed to Katherine Tingley, Loma Homestead, Point Loma, California.

(Signed) KATHERINE TINGLEY, Leader and Official Head

THE NEW CENTURY PATH is in almost every library in the United States and Europe and a very large number of the subscribers are made up of the thinking earnest minds of the age who are searching for such knowledge as will help them to lead a more perfect life. Its object is to advance human fraternity.

The Empire of Silence

The fulness of the seeming void.—Voice of the Silence

TO many of us the idea that arises in the mind on hearing the word "silence" is one of blankness and vacancy. Sound seems to be something, but silence appears to be as nothing, a negation. A little thought, however, should convince us that silence is the root and origin of all sounds, for out of the primeval silence emerged the worlds with all their sounds, and into the silence all will one day subside when the cosmic clock strikes once more the hour for periodic rest. Just as a yard measure is an infinitesimal portion of infinite length, cut off and bounded by the limits of a rod of wood, so our speech is made of fragments of the silence, broken up and thrown into vibration by the organ of the voice. In the bosom of Infinite Silence lie in their potentiality all the voices, the cries, the songs and the music of the visible universe that forever utters a ceaseless roar of blended sounds as it whirls on its noisy pathway through the silent depths of space.

Consider for a moment how rich and full that exhaustless storehouse of sound which we call the Silence, must be. All the singers, the poets, the sages and the teachers who have ever gladdened the weary world have emerged from the Silence. Silently they took possession of their visible bodies and then spoke out as much of the message of the Silence as they could. Their life-work done, they passed behind the heavy veil that shuts the empire of the Silence from the world of sounds. All that was ever sung or spoken and all that ever will be, lies hidden in the unfathomable abyss of eternal silence.

There is an element of stability and inexhaustiveness about the idea of silence. All sounds, however sweet or terrible, begin and end. The music opens and has its close, but the silence! It ever is, and he who has trained his ears to listen to its undying harmonies has found an exhaustless treasure-house, a sure asylum for the soul wearied by the stress and clamor of the discordant voices of men.

But though the silence is so rich and full and offers a refuge so secure, none but the brave may hope to enter in. The coward who ventures to lift the thick curtain is terrified by the oppressive quiet of that soundless realm. Without the familiar din of voices, he feels lost and homeless, and so it is that only those who dare and have the persistence of intense desire, can hope to claim their own.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Philosophy & Common Sense

THE philosophical teachings to be found in books on Theosophy are meant to be practically applied as guides in daily life; but the habit of making our philosophy abstract and unpractical often prevents us from making any use of such teachings. The tendency to make of philosophy a mere intellectual pastime, and to let actual life run on without its aid, is strongly ingrained.

One of these teachings is that the universe and all life is pervaded by the eternal duality of Spirit and Matter. Let us try to reduce these terms from mere metaphysical abstractions down to familiar terms in the language of common life.

Human life consists in the perpetual endeavor to realize ideals—to give expression to an unseen spirit. Here, then, we have this duality—

the spirit and its expression. It is only reasonable to suppose that all life, *all* growth, is similar; and that the animals, the plants, and the very rocks and waves, are all continually engaged in giving expression to unseen thoughts and ideals in the great universal Mind.

Thus we get a meaning for the words *Spirit* and *Matter*, as used thus broadly. Spirit means every unexpressed ideal, thought or sentiment; and Matter means the form or shape which represents that Spirit in the visible world. To illustrate this duality, thus defined,

Duality ---	by a few instances, we may enumerate—
Motive and	Principles and practice;
Conduct ▸	Motive and conduct;
	Ideal and achievement;

Genius and talent; desire and attainment (or possession); inspiration and technical skill (in arts), and so on.

It will help all students of life to keep this philosophical principle of duality ever in mind; for there is always the tendency to be too narrow in our outlook, and to see only one side of a question at a time. All history shows men rushing from one extreme to the other, now creating new doctrines, laws and institutions, to embody their ideals and aspirations, and now breaking them up under the stress of a new tide of inspiration and changed ideals. And the history of any one individual life will show the same fluctuations. In making these perpetual changes we are but obeying the external law of growth. The Spirit is ever trying to express itself outwardly in act and conduct; the Mind is ever striving to embody and give form to the fiery Spirit. But the Spirit cannot be fettered in a fixed and rigid form, and in its impatience it breaks up the old modes; and Mind, in its turn, hates formlessness

Let the Soul Sit as the Spectator

and loves order and preciseness, and so continually binds the Spirit with new forms.

But, while we obey this inevitable law of life, the illuminated mind can understand its meaning, and thus preserve a balance which will keep the Soul calm and self-possessed through all changes. Narrow and partial views will disappear in this broader light, and opposed schools of thought become reconciled in one. We shall realize the necessity of caring for both Spirit and Form, instead of alternately sacrificing the one to the other.

Thus it will be seen that principles and conduct are both equally important, and that each is necessary to the other. It will not do to be saying that motive is everything, and that behavior does not matter so long as motive is all right; nor that behavior is all-important and principle does not matter. In an art, inspiration and technical ability are both absolutely necessary; for an artist without ideals produces formal correctness without inspiration, and an inspired genius who has no technical ability cannot produce anything at all.

Break up the old habits that fetter one's larger aspiration. Form larger habits to embody and render effective these aspirations; but some day these habits, too, will be outgrown.

Habits That Fetter True Aspiration

We must not rest content with being merely good men, and contributing to the stock of good intentions with which hell is said to be paved. There are plenty of well-intentioned people in the world, but they might as well be out of it. In this world we need people who can make their goodness felt; and an average man who does as well as he knows how is more useful than the one who knows how, but cannot do it.

Did not Christ tell us to make our ideals effective, when he said:

Ye are the light of the world.

A city that is set on a hill cannot be hid.

Neither do men light a candle, and put it under a bushel, but on a candlestick; and it giveth light to all that are in the house.

Let your light so shine before men that they may see your good works, and glorify your Father which is in heaven.

We must have ideals and live up to them. Man's whole duty and function is to manifest the Divine intention. To see the Light and not to manifest it, is to refuse our sacred mission as creators. We have to make the perfect Man and Woman, and to construct new and better types of every human institution, for the use of a world that has outgrown its old types. Conduct and organization are all-important. Brotherhood must be made real, visible, tangible and effectual. Then only can real life *begin*. For the attainment of Brotherhood is the tuning of the instruments before the symphony.

STUDENT

The Need of a Guiding Hand

SAINT PAUL says in one of his Epistles that all nature painfully awaits the time of the redemption of man. This has been a dark saying for a long time, but now, with the awakening sense of responsibility to guide us we can begin to perceive its meaning. When we take a stroll through the woods and fields we see it written large upon everything. That dead tree is fallen against that sapling and will deform, or perhaps kill it. That lusty sprout is dwarfing and spoiling what should be a fine tree. That bush has choked itself with exuberance of growth in a good season. That lowland lies under stagnant, slimy water, whereas it should be a meadow watered by a brooklet. A little intelligent human effort would quickly put these things to rights, but Nature, working by slow cosmic processes either can do nothing or does it so slowly and clumsily that her protégés are often the first victims of her helpful efforts. Meanwhile man, who was commanded to have dominion over the earth and care for it, does nothing which does not directly serve his own narrow personal selfishness. His "redemption" has not yet come, and, still unable to adjust human affairs in rational, harmonious unity, he is neither willing nor able to perform his rightful task of caring for and adjusting the progress of the animal, vegetable and mineral kingdoms. The crown of Upper, Lower and Middle Egypt belonged to the divine Kings, as Man's triple crown of sovereignty shall belong to him when he lets go of himself and claims his rightful throne. STUDENT

The Great and the Small

HE who has found out the desirability of systematically directing his attention to those ideas which lie outside his own personal interests will have discovered a world. If he is wise he will enlarge his views thereupon until it becomes for him a source of joy and inspiration. The busiest man needs an occasional rest for mind and brain, and there is no surer way of refreshment than by seeking it on the bosom of Mother Nature.

The civilization of the Twentieth century has tardily acknowledged all this, and has applied it in a thousand ways. The joy of nature-life on ocean, river, prairie and mountain give strength and vigor to many a fatigued and harassed seeker for worldly success. They drink of the fountain of health, and return to the tenor of their daily occupations in the cities of the plain. And so an ideal is gradually extending that the city of the future will provide for homes in which a closer union with nature will be possible. This slow return to a more natural and less hurried and feverish method of living is a sign of progress.

Let us give one picture which must have already presented itself to every student of life.

It is a cloudless night and the stars are shining in the dark blue vault of heaven, covering the dome above us with the same chequered pattern which was seen by our forefathers from time immemorial. What are these scintillating specks of light of which modern science can tell us so little? Are they worlds, inhabited like ours, by conscious beings? How far are they away? Scientists tell us that light travels at the rate of 192,000 miles per second, and that, at this rate, it has taken the beam of light (from some of them) which enters our eye, more than 4,000 years to travel the distance which intervenes. So that the light left on its long journey more than 2,000 years before the Christian era. Think of it! We have often heard of these stupendous distances, and have tried to realize them. They do not affect us, for our minds fail to grasp them. We can only look upwards and ponder on the infinite grandeur which lies in the boundless depths of space.

Place any small insect under a powerful microscope. Note the gradations of color, and absolute perfection of form, which surround every part of it, down to the exquisite finish of the tiniest visible detail. Increase your magnifying power and new perfections are developed until the limit of your instrument is reached.

Between these infinities we stand. We can only see a very little way with our mortal eyes in either direction. In vain we seek to find the source of being or put a limit on the limitless. We call things great and small, but these ideas are only relative to the human frame which we inhabit and which prescribes our boundaries. By looking further with the eye of imagination and with the eye of trust, we may see that these two infinities meet and make a perfect circle, embracing all things. E. V.

The People of South Africa

THE great South African country is a land on the whole not very unlike our own Idaho, Utah or Wyoming. The inland is desert land, a high plateau, with countless ridges of mountains, and many of them flat-topped, saw-toothed as if they alone had been left standing high while the rest of the country dropped down a thousand feet or more. In the summer, between December and March, this desert is green and decked with flowers, while the rest of the year it is a barren waste covered with a few straggling "karroo" bushes. This is, in fact, the great karroo country, and here and there you see an ostrich race with the railroad train as you travel along, or a "hartebeest" run for shelter, or you will perhaps see the stately, secretive bird stalk along with deliberate steps; but of the hordes of elephants and giraffes and zebras that formerly made their home in this region there remains not even a trace.

The coast looks different. There you find a more or less narrow fringe, with a vegetation almost tropical, and the country there looks more like the Africa of our imagination. And so is the north, the country beyond the region of the tsetse fly, through which no horse can pass and live.

All this country, vast in extent, varied in aspect, is populated by a people different in character from that which you find anywhere else on the globe. In our own country we have a conglomerate population recruited from all parts of the world, but so strong is the ruling national spirit that they have amalgamated, and form a new and distinct type.

In South Africa the white population has also come from elsewhere, but, instead of their becoming like one people, they have largely held aloof from each other and refused to merge into a common nationality. Perhaps it is partly due to the fact that so many go there intending to stay only for a while; and even if they die there and a new generation springs up in their place they in their turn speak of their parent's country as "home."

There are four separate divisions of people in British South Africa. There are the natives, locally called by the general name of *Kaffirs*, and comprising all people of unmixed negro blood. Then there are the Boers, mostly of Dutch origin but strongly mixed with and influenced by the descendants of the Huguenot refugees, who came shortly after the Dutch first began to settle the country. The *Afrikaners* form another large and important division, including all native-born of British descent. And the *Uitlanders*, that is foreigners, mostly British and American, form a fourth and a very important subdivision.

The Kaffirs originally formed a very strong population, though unable to compete with the hardy and well armed Dutch. The latter might never have left the fertile coast regions had it not been that they were unwilling to adapt themselves to the more up-to-date civilization brought in by the British; rather than to submit to a change in their simple habits, they chose to wander further inland, into a barren country where they had little to expect except their much-beloved freedom. For a while they were left unmolested, except that they were constantly at war with the natives, but at last the find of gold and precious stones brought the British into the new country, and the old hatred between the races again burst into flame and brought about several conflicts, culminating, as we know, in the late war. It was the battle between conservatism and progress, a conservatism that tried to maintain simple habits, it is true, but also indolence and ignorance, against a progress largely on material lines. It is this lack of any high ideals which made the fight so bitter; but, enemies as were the Boers and the British, both were brave, and then at last they found one common ground to stand on, one ideal common to both; and so it came to pass that the very war did much to bring the two great races nearer together and that there is today a brighter hope than there has ever been for the fulfilment of a United South Africa. E. T. SEDERHOLM

Island and Harbor of Corfu---Frontispiece

THE NEW CENTURY PATH's cover-page this week gives a view of the island and harbor of Corfu, Greece. A number of foreign men-of-war may be seen; while to the left are dimly visible the mountains forming the rocky coast of Epirus (Albania), which will be remembered as containing the ancient town of Dodona. The Dodonæan oracle, sacred to Zeus, was famous in antiquity. Corfu belongs to the group of the Ionian Islands, and was called by the ancient Greeks Kerkura. It is a very fertile and beautiful island; but besides the town of Corfu itself, it contains only a few villages. Besides being a resort for invalids, it is the winter residence of the King and Court of Greece.

Some Views on XXth Century Problems

Definition of Sanity Is Difficult

EVERY law case involving the question of insanity makes the definition of the limits of the disease more difficult. The cross-examination of medical experts on this point is the easiest and showiest form of legal dialectics. The reason lies in the attempt to draw the line between sanity and insanity *within the region of insanity*, where, consequently, no such line can be. The real line is in another place; and it is a line across which we, the self-assertedly sane, are constantly passing to and fro. Every man whose mind proceeds at any moment to think thoughts of *its own choosing*, pulled by its desires towards some line of associated ideas, has crossed the boundary. It may not think anything very obviously absurd or out of accord with the fitness of things, but it is on the path towards doing so. If we make some sort of ideal of the perfectly balanced man, it will be one whose mind is continuously under the direction of his spiritual will, and whose thoughts are checked in advance of their production, whilst they are but feeling, by judgment. But to watch the faces of nine men out of ten whom one meets in the streets, is to see that their minds have run away with them. Looking into the eyes of some hard, calculating faces, faces of men who would be ordinarily judged pre-eminently sane, one sees a fierce, strong, concentrated mind, following its steady purpose. *It is running itself*, under the lash of a desire; but of a directing soul and will, there is no sign. Strictly speaking, the man is a lunatic. There is no sort of guarantee that the next moment the mind will not proceed with the same intensity to make ideas that even *we* can see are insane. Indeed, it has already evolved one—that its interests are separate from those of its fellows over all the field of human life. This is an insane idea, and the world is a lunatic asylum in proportion as that idea obtains. But lunatics who are equally insane do not imprison each other. The only strictly sane man is he who has “seized hold on himself, and asserted and realized his potentially all-dominating soul-existence;” he who has made his mind understand that *he* intends to rule, and from that standpoint—the soul—gathered in under his domination all the elements of his nature.

STUDENT

There Is no Death--Only Liberation

THE preposterous aphorism of a happily dying school of science—that consciousness cannot exist apart from the material body—receives an emphatic disproof at no small number of deathbeds. The “dying” are often living witnesses to their own survival. That which survives death, is all that which is best of the individual. And many of those who in life have recognized that, turn back from their progress towards their light and their freedom in order that they may convey through the stiffening lips what they now *know*. And it will then become obvious that as the flame of bodily life burns down lower and lower to its coming extinction, that of consciousness burns brighter and clearer. It will be obvious that the powers of the body are being for the last time *used* for the deliverance of the compassionate message. The words in which the vision of the growing light is phrased, vary with the previously set beliefs of the individual. But under all its differences of phrasing, the essential message is the same. *There is no death*. And if we live our lives in that conviction, and daily try to feel ourselves as enduring souls, we too, as we pass the gateway, can turn back and leave behind us on earth something of the divine message that will then be ours to give. In proportion as we so live as to gain the power to do that, we shall bring into human life a peace, a freedom and a joy, which it has long lacked. And we shall have destroyed the demon of death-fearing, whose black wings have for ages hidden the true universe and its sun from human eyes. *There is no death*. There is liberation from all that ties down the soul, from passion, from the limitations of flesh. Instead of the death we picture and dread, there is entry into an unimagined freedom of consciousness. And if we were to go through life with that idea, marking every noble impulse, every lofty moment, every aspiration, every gleam of real unselfish love, as hints, foretastes, and anticipations, death would come clothed in light.

WITNESS

Prof. Stetson on Modern Witchcraft

PROFESSOR HERBERT L. STETSON, of Kalamazoo College, is a bold man. Not only does he believe in obsession and witchcraft, but he recently said so in a lecture to the divinity students of his college. Of course it required less courage to say it to them than to other kinds of students; for the Bible, their textbook, is full of that sort of lore, and to reject the occult would be to reject very much of both Testaments.

The Bible is nowise singular in this respect. Back as far as history and tradition record, and so on to our own time, every nation has believed in miracles, witchcraft and the occult generally. Science has done little to kill this belief even in the West; nothing at all in the East. Indeed, it is rapidly discovering a good deal of it to be very well founded. But to return to Professor Stetson—he said:

The possession of devils and evil spirits is not a fiction. It is as real as anything in human experience, and is growing all the time. Many persons are ruled by personalities other than their own. It is impossible for these victims to disenthral themselves. They grow away from their own selves by sheer force of sinister and occult influences over which they have no control. This kind of witchcraft has reached dangerous proportions, and it is one of the most important problems with which science has to deal today.

Possibly science may have to “deal with it,” but assuredly it will not have the least idea how to do so. At present it is actively making the case worse, for that very thing which *we* call hypnotism, including the subjection of one will by another, the induction of false personalities, and the injection of insane or immoral ideas, was in the Middle Ages called witchcraft. So the first way to “deal” with witchcraft is to *stop practising it*, stop teaching it at the hospital clinics, and make it illegal on the public platform.

And the individual may rest assured that if he lives up to his highest moral standard and keeps in the light of his own soul, he has nothing to fear from anybody's occult practises, nor any sort of “evil spirits.”

A Bishop Advocates Vivisection

A BISHOP advocating vivisection is a phenomenon that commands our respectful interest. It is exhibited in his own person by the Protestant Episcopal Bishop of Massachusetts. His argument is that as we already use animals for food, dead, we may as well use them alive to provide us with medical knowledge. And he adds some embroidery about anæsthetics. He omits to consider the vast and continuous series of operations done without anæsthetics; to consider the cases in which, even where anæsthetics *are* used during the work, the animal is not then killed, but awakes and lives with its wounds, tubes and sutures; to consider the moral atmosphere generated in himself and in the often witnessing students by the operation, and the often hypocritical pretense of a yearning desire for the welfare of “suffering humanity” which all these have to maintain; and, as a presumable Christian, to consider that all things living are of one essence and of one parentage, and that we have no right to send an animal soul back to its source thrilling with pain, which it indissolubly associates with human agency; to consider, in fact, that vivisection is a crime against brotherhood.

It will not be long ere this is recognized. But when it is, our western humanity will hardly turn gratefully to the official exponents of the “Gospel of Compassion,” who, if they had combined, might have long ago stopped this continuous outrage. It is from other sources that we have to learn the unity of life. That which is self-consciousness in man is already stirring in the higher animals, and their primal education should be even now reckoned as a sacred duty.

Some years ago an English Bishop created something of a sensation by declaring that, in his opinion, the strict carrying out of the principles of the Sermon on the Mount was incompatible with the preservation of society.

A defense of child-labor in factories would now be in order from a third Bishop.

Art Music Literature and the Drama

A "Wonder-Child" Who Is a Natural Child

"AFTER that Mendelssohn and Vecsey played with toy soldiers until it was time for him to leave. When his visit came to an end he could not leave the room until he had imprinted a kiss upon the fiddle." The above is quoted from an interview with one of the friends of little Franz Von Vecsey, the eleven year old boy who has been startling all Europe with his amazing performances on the violin, and the incident related occurred during the child's visit to Mendelssohn's son, who allowed him to play at the time upon a valuable Stradivarius. The writer adds further, as if it were something exceedingly abnormal and queer, "After breakfast he will take up his violin and play for five minutes or so; then he will put it down and turn his attention to his tin soldiers or some other childish amusement." Well, why shouldn't he?

A genius isn't necessarily a freak of nature, although so misunderstood have been many gifted souls during their childhood, so overstrained nervously have some of them become through false systems of education, so many young genius lives have been wrecked through avarice on the part of parents, it is today unusual to see a "wonder-child" who is a natural child at the same time. But it argues a strange incomprehension on our part that we should be startled at seeing genius and healthy childish tendencies clasping hands. We are psychologized with the idea that nervous unbalance, moral insanity, and a desperate lack of equilibrium somewhere, are certain signs of genius and therefore expressions of the laws that are supposed to govern it.

The fact is, genius has expressed itself well or ill not *because* of these things, but *in spite of them*. God speed the day when the child-soul, so transparent to all that is infinite and divine, so liquid, almost, in its ebb and flow from mood to expression, shall find environments which will make possible a balanced, wholesome, happy, unselfish, and yet inspired life.

The Higher Value of Poetry

DR. HENRY VAN DYKE said recently in *Harper's Bazaar*:

It is a great mistake, in my opinion at least, to use poetry, and especially good poetry, as a medium of grammatical instruction and scholastic or domestic discipline. To parse *Paradise Lost* is to lose it again, and probably forever. The teacher, or parent, who gives out *The Ancient Mariner* or *The May Queen* to be learned by heart as a punishment, should be most severely dealt with—compelled to commit to memory several reports of the Bureau of Education, or attend the sessions of a summer school of metaphysics for six successive years. One reason why so many young readers conceive a lasting dislike for poetry is because at the beginning they are forced to put it to *base uses*. It should be treated always as "a dear and genuine inmate of the household of man," welcomed for the pleasure that it brings, read for the light of wonder and joy that it throws on the world in which we live and on the secret movements of the human heart.

I do not say that everybody is capable of finding an equal enjoyment in all kinds of poetry. There are mental limitations, no doubt; and intelligence of a certain fiber can never be woven into silken purses. But leather also has its uses, and will hold good money. I do say, and I firmly believe, that every normal human being is capable of learning easily, naturally, and very pleasantly, to enjoy some kind of good poetry. When a girl tells me, "But, you know, I don't like poetry," I almost invariably feel inclined to answer: "Poor thing! Who crippled you?"

The Artist's Measure of the Commonplace

THE "Thames Etchings" were almost the first among Whistler's works that did not meet with immediate ridicule from his contemporaries. He had made some magnificent etchings before these had appeared, but they were worse than not appreciated; and it was not until after the publication of the "Thames" set, when his reputation was already established, that his work was really sought after. He might be called the poet of the Thames in one sense, and his etchings have a double value in declaring the artist's view-point no less than in translating for us that jeweled idiom that we call "the commonplace." To quote the words of one of Whistler's unfanatical critics:

So much of what is best in his art was inspired by this historic stream. Put him down among the squalid surroundings of the river banks, on the docks, on the bridges, in a boat, at any view-point commanding the shipping, the huddle of grimy old warehouses along the shore, the distant silhouette of buildings, the smoky skies, the network of masts, yards and cordage, the fleets of clumsy barges, the picturesque contours of the bridges, the play of reflected lights and shadows along the surface of the water, the thousand-and-one commonplace objects which combine to make a sort of commercial chaos of a great river winding its way through a great town; let him select for his design a most unpromising composition, exactly what most artists would avoid, and he makes of it all a fascinating, unique, memorable etching. He leaves out a good deal, but nothing that is essential to the effect, nothing that falsifies the character or belittles the grandeur of the theme. His drawing is careful, but not niggling. He draws with extreme gusto. What fun he is having, and how he communicates this pleasure to us! Every stroke of the needle is a sort of caress.

Laughter and Song Good for the Health

"IT is good to laugh," says *Health*. "There is probably not the remotest corner or little inlet of the minute blood-vessels of the body that does not feel some wavelet from the great convulsion produced by hearty laughter."

The same, and much more, may be said of song. One can imagine that laughter may be outgrown by humanity—but not from sadness. We may decline to be seized by the songs of the merely incongruous and shaken to pieces.

But song is natural speech, the perfect outcome of feeling, and a directly formative power acting upon the body of him who generates it, and upon everything which its vibration reaches. It is a form-maker. *Health* advises laughter as a remedial agent. Very good—provisionally; but where most needed it will not come. And no one can laugh for you. But while you are learning to play music upon your larynx (and no one cannot and every one should), others can make it

for you. A musical instrument? By all means, but *sing* also; use the instrument nearest, and the whole body and nature will profit. Who can speak can sing, can at any rate take his voice from between his teeth and the back of his nose, place it where it ought to be, and—if he have but three notes compass—make them *musical*. And his three would soon be more. Natural speech is musical, and because nothing in our civilization is natural, our speech is—what it is.

L'ENVOI

by RUDYARD KIPLING

WHEN earth's last picture is painted,
And the tubes are twisted and dried,
When the oldest colors have faded,
And the youngest critic has died,
We shall rest—and, faith, we shall need it—
Lie down for an æon or two,
Till the Master of all good workmen
Shall set us to work anew.

And those that were good shall be happy;
They shall sit in a golden chair;
They shall splash at a ten-league canvas
With brushes of comet's hair;
They shall find real saints to draw from—
Magdalene, Peter and Paul;
They shall work for an æge at a sitting,
And never get tired at all.

And only the Master shall praise us,
And only the Master shall blame;
And no one shall work for money,
And no one shall work for fame;
But each for the joy of the working,
And each in his separate star
Shall draw the Thing as he sees it
For the God of Things as they are.

Woman's Dress

THERE is nothing that reveals the character of a woman so much as her dress.

The woman who follows fashion just because it is fashion, ruthlessly casting aside everything that is not "up-to-date," reveals her own empty-headedness and frivolity. She dresses to attract attention and amuse herself; and having no thought of her own to express, naturally rushes to the extremes of fashion to deck out her person, as if vainly attempting to conceal some of her own shallowness.

The strong-minded woman who wears any ugly clothes that serve her purpose, with little concern as to her appearance, shows a certain selfishness and lack of true womanly refinement and artistic feeling. Such an one is an extremist.

The woman who affects the masculine in her attire reveals a desire to be thought "independent," and her friends label her "eccentric."

Those who follow the esthetic craze, continually posing in flowing draperies, whether they are suited to the occasion or not, show a lack of discrimination. They are without the backbone of common sense. They have no true perception of symmetry and proportion. Yet without these no true art is possible. With the new life beginning to be lived at Lomaland, in harmony with nature, it follows imperatively that we have a new style of dress; for a new purpose, a new aim, will underlie and determine the form of its outer vesture.

We women of Lomaland try to avoid all extremes, for extremes are follies, not rushing into any uncalled-for eccentricities, but getting at the root ideas of a sensible, healthy and artistic dress.

In adopting our students' costumes we support one another in making a united step towards a true reform. We free ourselves from any sense of bondage to fashion and make a break with some of the old conditions. Nature is ever slow in bringing to birth that which is of much value. Yet even now slowly we are passing into that more ideal stage, when dress will evolve naturally and artistically, according to our needs, *a dress adapted to the woman who lives to express the soul life and not to pamper the personality.*

The *Uniform*, then, appears to meet the needs of a transition stage, and must still have some regard for prevailing conventionalities, at least such as are not glaring affronts to taste. It might supply us with a neat and ladylike suit, complete in itself; one that would be inconspicuous in the public streets, while it keeps clear of all fashionable extremes and unnecessary adornments. This would save us from bewildering our minds every

morning with the puzzling questions "What shall I wear now?" and "How shall I fix this or that?" It would relieve us from self-consciousness and put us at our ease with strangers.

But the new dress that must grow for those who are ever living more and more closely in harmony with nature, must be a part of that harmonious living. It must blend with their daily life in its perfect adaptability to the occasion and the person. It seems to me that each garment should be the work of an artist, designed for a special purpose, and with due consideration as to its becomingness to the person who is to wear it. When each garment has this thought bestowed upon it, it will follow that it will be made of good and durable material. We shall take great care of it, looking upon it as a most valuable possession, and take pure delight in wearing it. Its value to us would not lie in its costliness, but in its perfect adaptability and beauty.

To suggest some ideas on which a *working dress* of the future might be built up: All constriction round the waist and the throat prevent the

free movement of the body and the proper functioning of the internal organs. This unsuitable at all times, is especially for a working dress. It seems natural that the strongest bony formations of the body should support the greater weight *viz.* the shoulders and the hips. The skirt must be short, well above the ankles, full enough to

permit perfect freedom of movement, and might hang from a tight fitting girdle round the hips; a large pouch or pocket in front may carry whatever is needed for the work. This might be made of leather, beautiful and artistic in workmanship. The upper garment, falling from a shoulder yoke might cover the skirt completely, or it might be quite short. It should be severely simple in its draperies, not to impede the worker; the folds, if any, falling from the shoulders and caught in with a girdle below the bust. For decoration, I can imagine a very simple yet beautiful border, adapted to every line or curve, by the hand of an artist.

Then the artists will make living pictures of the sons and daughters of nature; and will get their inspirations anew from them, as they go about their daily occupations, making harmony in their every movement.

STUDENT

A MANUFACTURER of gloves in London discloses the fact that the hand of the average woman has been enlarged a quarter of an inch in five years. The increase in size is attributed to the popularity of athletic exercises, which has developed so rapidly among women of the world and especially those of England, where athletic sports are quite popular.

NOTHING is so insatiable as the human heart. If it has enough to eat and drink, it longs for costly gear; and if it obtains that also, it would fain have the blue sky for a table-cloth.

—Johanna Ambrosius

Feminine Attire

IN the great purpose of life, which is balance and harmony, every outward expression is an indication of growth, for growth is from within outwards. The brain and heart form the soil where germinate all that manifests outwardly as the handiwork of man. To serve this end, the body is used by the soul as a means for its work, and just as the body serves as a means, indicating by its characteristics and conditions how well or how badly it can serve this purpose, so does dress serve a like purpose as a means of helping or hindering the mind, the heart and the body in the doing of their work.

Is not the general appearance of a person, and dress forms half of it, the sum of almost all that helps us to judge of the person? It is, of course, true that no two people receive exactly the same impression of anything, each judging from his own ground, but the fact as a general one holds good. From away back in the ages woman has been continually putting upon herself hindrances and limits to her progress, until she has come to realize in this age that what she has been building up around her is really a prison wall, for woman is in prison in a thousand ways, and dress is one of her jailers. This is particularly impressed upon her on stormy days, when beside her, through the rain and sleet or wind, walks a man, free-limbed, with ease and comfort, while she struggles, with long muddy skirts, wraps, hat, umbrella and bundles, in pitiful discomfort, getting her mental self all out of gear in consequence. Woman's dress too often indicates that woman in general is out of gear. Surely, very little grace and simplicity, very little dignity, very little utility and very little beauty, are represented by feminine attire today. The other side of life expressed through it, the darker and sadder side, is more often pictured by it. Even in its most innocent and purest phases vanity lurks; the gaudy bit of ribbon and lace and jewelry tell the story. Often it is ugly, useless, gaudy, tawdry or vulgar. This bedecking of the woman's body indicates the trend of her mental and moral life. For a woman who is striving to make her life sweet and pure and noble cannot be guilty of gaudy and vulgar attire. It is not in her nature.

She who is ignorant of her divine duty as a woman, who lives the life which panders to the lower nature, will probably not care to wear simple, unadorned and useful garments, for her life does not call for them. This is all plainly evident and much more. What of the hours, weeks, months and years of her life that she spends looking into shops, examining styles, and talking away her strength and energy with all her friends and a dozen dressmakers, milliners and tailors? Alas, her slavery to the institution of fashion prevents her from getting sight of the freedom that awaits her when she shall have thrown off these shackles. And until the time comes when the real beauty of her nature awakens and she becomes eager to change this condition, she will still go on in the old confusion.

STUDENT

WHATEVER unjust acts the Empress Dowager of China may have perpetrated during her reign, the women of China have reason to thank her for the imperial edict which has just been issued, to the effect that Chinese women shall let the feet grow. How such a barbarous custom as bandaging the feet to dwarf the growth could have been observed as long as it has, is incomprehensible. But the adoption of American ideas acquired by the Chinese women living in America has been the potent factor in bringing this about.

For years the Chinese women living in this country have removed the bandages from their feet, although suffering intense pain for some time after doing so. Truly it is hard to comprehend the workings of the law. Woman must have retrograded mentally somewhere in the past, or such physical limitations could never have had any existence. It is encouraging to see the awakening in the Oriental countries and the gradual liberation of their women by the casting aside of abused customs. N.W.

Collecting Kelpies at Point Loma

ONE of the most striking natural curiosities of Lomaland is the broad band of seaweed growing on a submarine ledge which extends for many miles parallel with the western shore but separated from it by a channel of some depth and a mile or so in width. This kelp being kept up at the surface of the water by numerous air bladders forms a natural barrier against the ocean waves, and by reducing their size and force has preserved the land from being washed away long ago. It acts almost like oil upon the troubled waters, for, although there is a nearly eternal fringe of tumbling white rollers along the ocean side of Point Loma, thanks to this natural breakwater, the process of wearing away the cliffs is a very slow one.

The kelp bed adds greatly to the beauty of the outlook from the heights of the Point, for around it the water is always calm and often even mirrorlike. It is usually darker or lighter than the surroundings, and with every passing cloud varied colors play over its shining surface. Daily the white sails of the fishing fleet gleam along the kelp, and sometimes a school of whales will feed there, their spouting foam shining white against the blue.

COLLECTING KELP AT POINT LOMA

Often a quantity of the weed is cast upon the beach. The leaf-shaped fronds grow in rows upon stalks perhaps a hundred feet in length and each has a little air bladder attached to its base to buoy up the plant. When these kelpies, with their round heads and long leaf bodies are dry and hard they are very quaint and bear the oddest resemblance to queer little urchins or grotesque old witches. Entangled among the kelpie-roots a wealth of animal life is found, even after being thrown upon the shore; a particularly delicate little scallop shell is very common. Deft hands among the workers in the Woman's Exchange and Mart string these fragile shells into useful devices of fascinating beauty, and such like; but the odd little kelpies are the most useful, for they lend themselves to a great variety of decorative purposes.

Occasionally a stalk of extra length is washed ashore attached to a big air ball, five or six inches in diameter from which two smaller stalks arise, the whole giving a comical suggestion of some horned creature. These make effective decorations for large wall spaces. A peep into the Department of Natural Resources in the Industrial Building at Point Loma reveals the kelpies transformed into fascinating and artistic souvenirs of this part of the Pacific Coast. STUDENT

Trailing Skirts and Microbes

IN a recent number of *The Family Doctor*, Dr. Casagrandi, of Rome, stated that he had made a careful bacteriological examination of the long skirts worn by some women in a promenade about the city, and had found large colonies of the most noxious germs.

Among these microbes were included such as those of influenza, tuberculosis, typhoid fever, tetanus, all on one gown. It seems almost incredible he goes on to say, that women knowing these facts continue to wear long skirts on the streets, gathering up these germs which they carry later into the privacy of their own homes. M.

THERE has been no change in Indian women's dress for four thousand years. All wear the sari, a single piece of stuff a yard and a quarter wide, ten, twenty, thirty yards long. It is arranged on the body, and forms skirt, garment, veil. First plaited with the band in accordion folds in front, wound round and round, and the richest end, if embroidered or woven with gold, finally brought over the head. It may be of simple cotton cloth; of silk, plain in design, woven with golden threads; solid with embroidery; strung with pearls; or of kincob, the royal cloth of gold. Some cost thousands of rupees. No pin, hook, button, or string. The garment is formed on the architecture of the body, and takes its expression and nobility from its perfect harmony of the human form.—Ex.

Latter Day Englishmen as "Sun Worshipers"

A CURIOUS spectacle is to be seen at Stonehenge at 3:44 on the early morning of the twenty-first of June. Large crowds assemble to watch the sunrise.

As the sun rises on that day, his beams glance full upon the great stone known as the "Friar's Heel." This stands about 200 yards from the circle of huge boulders. In a few moments the central altar stone is illuminated, and the sun is fully up.

The great crowd of matter-of-fact English men and women participating in this ancient ceremony make a remarkable scene. Many of the men bare their heads as if they felt something of the spirit that brought together the Druid priests and their followers to the same spot at the same hour and occasion in the summers of centuries long gone by. All unknown to themselves, they are perpetuating an immemorially ancient ceremony. And whether they aspire to it or not, they are getting some of the benefit of their unconscious observance, if only in a hygienic way.

"For more than two thousand years," says an English paper, "the custom of watching for the sun on the longest day of the year has been observed at Stonehenge." For more than that; far more. No one knows the origin of Druidism; for all we know it reached Britain from Atlantis. Connected with sun worship, it took special note, in its ceremonial, of the solstices and equinoxes. And this fragment of its ritual survives, even though mutilated and colorless, to this day. Perhaps some of the people would stay away if they knew what they were doing.

Nearly all ancient religions and ceremonials took special note of the moment of sunrise. They enjoined silence and meditation then, so that the first beams, stirring the currents of their bodies and minds, should accentuate for the day only that which was good. And around this idea were grouped many others, objectivized in ceremonial symbolism. We have forgotten it all; but perhaps as that crowd stands round the mighty boulders of the Stonehenge circle, something stirs in the race memory, faint and undefined, and an inexplicable hush is upon them for a few minutes. R.

As to the Mental Capacity of the American Indian

READERS of stories and accounts of the Red Indians constantly meet with the word "medicine," used in a very incomprehensible way. Stones and idols are "medicine;" men are "medicine;" even certain days and certain aspects of the moon are "medicine."

Nearly all the Indian languages contain a word whose meaning is very difficult to get at, and when understood, very difficult to render. "Medicine" conveys but a fragment of the idea. Differing in the different dialects, its signification is in the highest degree abstract, and more than anything, it reminds one of the "Tao" of the Taoists. The words all contain the idea *above*, and with this are associated *power*, *mystery*, and sometimes *healing*. Beside "medicine," it has been rendered "spirit," "magic," "God," and "religion."

In the Algonkin dialects we have *oki*, meaning *above*, and *Manito*, probably from *anit*, to be superior, higher. In the Guarani is *tupa*, connected with *tupir*, to go higher. Similarly with the other dialects.

The word, in whatever dialect, is obviously of a highly abstract nature. It expresses a *quality* of supernaturalness which may inhere in anything or any person or time or place, and which makes that which manifests it entitled to respect and often reverence.

It is everywhere agreed that the power of making abstract conceptions and of words to fit them is a mark of the civilized intellect, not manifested by any savage. Yet here we have such a conception, pre-eminently abstract and non-objective, embodied in various words, and in habitual use by tribes universally regarded as savage. The steps by which the conception was reached are lost; according to the ordinary working of the savage mind, natural phenomena are personified so as to make their causes comprehensible; in this case the comprehensible is *de-personified* and abstracted into a supreme generality. Have we not, in the existence of this one set of words, no small bit of evidence that the Indians of America are remains of an older civilization?

STUDENT

The Ancient Parish Church of Saint Michan

IN and around Dublin there are many primitive old churches, some of them built upon the ancient prechristian sacred sites. Owing to the depopulation of the country many of them have been let to go to ruin, but some have been restored. Just north of the river Liffey in the center of Dublin city is the ancient parish church of St. Michan, which, with the exception of the tower and vaults, was rebuilt in the Seventeenth century.

The church is of some interest to Americans for it still contains the chair in which William Penn did penance; and in the churchyard the reputed grave of Emmett, the patriot, is situated. But the most curious and unique feature of this church is the extraordinary property possessed by the vaults of preserving the bodies deposited in them from decay for many centuries. The sexton will show visitors a few from which the wooden coffins have fallen away. No special means have been used to preserve them and it is singular that, although the vaults are close to the bed of the Liffey, the air in them is extremely dry and has a peculiar, though very slight, pungent odor. The flesh has been transformed, to an adipose substance, the skin looking like parchment, but it is not dried up or withered as in the Egyptian mummies. The cause of this dismal lingering of these mortal shells has, we believe, not been scientifically ascertained. We have heard of other similar vaults in connection with monasteries in Thibet and elsewhere, but do not know what idea or belief lies at the root of their use for such a purpose.

In any case, to the average visitor, the sight of the bodies carries a pressing argument for cremation.

A Potlatch—Queer Custom Among Alaskan Indians

WHEN a young Indian of a family of the Coast or Alaskan tribes comes of age, a "potlatch" is held to celebrate the event. According to the carefully defined rules of procedure, blankets are given to him which he loans at a high rate of interest, to be paid in a certain time in blankets. There may be no refusal, and the whole idea is carried out on the lines of the tribal laws, so complicated that only an approximate notion of their working may be acquired by a stranger. Thus it is that by a system of giving and borrowing at high interest with, as it were, forcible loans, a chief acquires his several names, one by one, at the tribal feasts. At the same time much grease—dog-fish and seals contributing their oil—is eaten in large spoonfuls from a curiously-fashioned and carved grease-tub, to the great satisfaction of the guests.

In proportion to the amount to be given away the chief acquires dignity. The great aim appears to be the acquisition of a conventional reputation as a despiser of wealth, because the often enormously valuable gifts have a way of coming back at future "potlatches." The grand ceremonies of olden days are now on the wane, as they are much discouraged by the Government of British Columbia. Yet only last winter a \$3000 "potlatch" was held in the north of Vancouver Island, although this is by no means large compared to the amounts (in blankets) that have been given at one time by a chief. Mostly the blanket is used as the unit of currency on these occasions.

It is remarkable how the Indian tribes will accumulate wealth. They spend comparatively little; the men can earn by fishing far more than they need for their simple wants, and although they have a way of stopping work just when they please, the little they do is ample according to their notions of life. This explains to a certain degree their magnificent ideas of giving away large gifts as "potlatches," particularly as wealth is largely communal rather than individual. So also the labor in the settlement is communal, the chief being the patriarch directing the affairs of the village.

No little commiseration has been excited in the mind of an Indian fisher when told that in England firewood must be bought at a price, and actually rent paid to live in a house. Such a state of affairs appears to them as the very opposite of "civilization." Such is the effect of looking at things from a different point of view.

How Plants Spread Their Seeds

THE many and marvelous contrivances adopted by plants for the carrying and scattering of their seed, is a never-failing source of wonder for those who study Nature's works. If this is not the work of a mind, it is the work of something better than a mind, even if we prefer to call it automatic action or some other such name derived from the mechanical theory of the universe.

Harper's Monthly gives an account, with illustrations, of some of these devices. The thin circular fruit of the elm, with the seed in the center, falls flatwise and floats a long way before it reaches the ground from the tree-top. The "maple-key" and the pine seed, with their fans attached, spin round, and in a breeze are carried far before alighting. The linden has a bunch of fruit like peas, attached to a leaf that acts as a kite, being kept at right angles to the wind by the stiff connecting stalk. The bladder-nut has a balloon with three separate compartments, filled with air and each containing a seed; and thus it is enabled to float, should it fall on water.

This mention of first air and then water reminds us of a certain Australian tree whose adamant seed husks do not yield to any known influence except that of fire. These trees form the great forests which from time to time are burnt down, and the intense heat bursts the refractory husks and liberates the seed.

With small plants, where the seed has not far to fall, a more elaborate device than a mere fan or parachute is necessary; and we have the class of tufted seeds with their silky down that carries them away and aloft. The thistle is the most familiar instance; and the dandelion is well-known to our childhood, as is the groundsel. In some plants, however, where the down is within the pod, as in the pussy willow and the cotton, this seems to have another use, namely to cherish the young seed in its warm folds.

It is to be observed that the writer in *Harper's* does not make the usual expressed or implied contrast between the theory of evolution and the belief in a divine architect, but rather recognizes evolution as our own attempt to formulate part of that architect's plans; and also that he speaks more than once of the universal prevalence and of the indispensable necessity of *Brotherhood* as the inspiring spirit in all life—in marked contrast to the now happily passing theory of "struggle for existence" and universal competition. To quote:

We shall find most comforting evidence of the unity of nature, and of the love and care of nature's Author, in the fact that the highest and most successful beings of both kingdoms are those that are most self-sacrificing. . . . In the composites their success is due largely to the socialistic habits of the individual flowers, which combine into large heads for mutual benefit.

He also says that Mother Nature, accused of cruelty, has been growing kinder as the ages have passed [he must mean "our conception of her"] "and bestows her highest gifts in both her great kingdoms on those who labor for each other, and who also hold their infant life most sacred and protect it with tenderest care."

Surely an encouraging sign of the times that Brotherhood should thus be recognized as the essential spirit of life, and be found not to contradict but to illumine science!

SOLITUDE

by CARMEN SYLVA

GREAT Solitude will let thee listen. Hark!
The voices of the Infinite are singing.
The thoughts of thousands who have thought before thee
Come crowding round thy brain and fill the air,
And seek a new expression on thy lips.
Thou art in such ennobling company,
That Solitude becomes the gorgeous feast,
For which thy soul is clothed in white and purple.
Thy feet unshod tread on the holy ground
Where God has spoken. Hark! Great Solitude
Hath thousand voices and a flood of light,
Be not afraid, enter the Sanctuary.
Thou wilt be taken by the hand and led
To Life's own fountain, never-ending Thought!—*Sweet Hours*

MULBERRY LEAVES AND FRUIT

A Natural Boarding House—The Mulberry

NEXT to the worms themselves, the foundation of silk-farming is mulberry trees, and the silk culture industry's orchard at Point Loma contains over a thousand thrifty trees whose whole duty in life is to raise leaves, nothing but leaves, for the ever-hungry little worms to eat.

The mulberry family is a large one, and the foliage of different species is so unlike that their relationship would hardly be suspected at first glance. The sturdy, drought-enduring Russian marks one end of the line, with its heart-shaped leaves six or eight inches long, and great, coarse, sweet berries; at the other is the distant cousin, whose profusion of small, five-fingered leaves almost entirely conceals the scattered clusters of little, currant-flavored fruit. There are sour, black varieties, and some that taste like spiced raspberries, and white ones; each one as large as a big thimble, and with a flavor of pure sweetness, like watermelon juice. Of course, there are also all sorts of intermediate and connecting types in both leaves and fruit.

The birds are very fond of the berries; especially of the soft, juicy kinds that do not easily fall off; and they come in regular picnic parties to enjoy the feast while it lasts. It took them a long while, though, to learn that the white and light purple sorts were actually ripe; but then they made up for lost time. Such chattering and singing was nowhere else to be found, and birds were seen in that orchard which live nowhere else on the Point. The birds would be freely welcome to all they could eat if they only would refrain from using the leaves for napkins to wipe their beaks on. This vexes the dainty appetite of the worms, who refuse to eat those leaves; so the birds make much trouble to offset the pleasure

they give us. These berries cannot be used for market, because they will not keep over twenty-four hours, but for home-use they are very nice, cooked or raw, according to the variety. The juice stains one's fingers badly, but a little lemon juice turns it blood-red and takes it right off. Soap "sets" it so that it needs days or weeks to wear away.

The wood of these trees is hard, fine-grained, of a light yellow color, and valuable for many purposes, while the roots are soft and a brilliant yellow. On the whole, it is well worth while to have one or two mulberry trees in every family orchard, even if for no other purpose than to attract the birds.

G. W.

THERE is something in being near the sea, like the confines of eternity. It is a new element, a pure abstraction. The mind loves to hover on that which is endless, and for ever the same. People wonder at a steamboat, the invention of man, managed by man, that makes its liquid path like an iron railway through the sea. I wonder at the sea itself, that vast leviathan, rolled round the earth, smiling in its sleep, waked into fury, fathomless, boundless, a huge world of water-drops. Whence is it—whither goes it? Is it of eternity or of nothing? Strange, ponderous riddle, that we can neither penetrate nor grasp in our comprehension; ebbing and flowing like human life, and swallowing it up in thy remorseless tomb—what art thou? What is there in common between thy life and ours, who gaze at thee? Blind, deaf, and old, thou seest not, hearest not; neither do we understand, who behold and listen to thee—unconscious of thy greatness.—*Hazlitt*

Universal Brotherhood Organization

Central Office Point Loma California

OF the five speakers at Isis Theatre, Sunday evening, at the regular meeting of The Universal Brotherhood and Theosophical Society, three of them were children—Raja Yoga boys and girls from Lomaland, who came over to help their elder fellow-students of Katherine Tingley present the teachings of Theosophy and Universal Brotherhood to the usual large audience—greatly to the liking of the latter, as was shown by the frequent and hearty applause.

The first address of the evening was by Mr. Lawson Scott, entitled "The Religion of Humanity." He characterized as "malefic influences:"

"The teaching that man's happiness is a thing of the hereafter and the elsewhere and not of the here and now. The teaching that man is essentially and incurably evil, but can be saved by submitting his will to some extraneous power. The teaching that man's intelligence is limited and his will impotent. All teachings that tend to throw discredit upon the joy of life, the worship of beauty, the natural and healthy social amenities, and, in short, all essentially human institutions, and to substitute for these a love of gloom and austerity, ugliness, retirement, and things in general which are visionary, unsocial and non-human.

"The most insidious trick of this malign influence is that, by identifying itself with sacred things, it makes all antagonistic forces seem to be irreligious and wicked. Thus people may stay from church from a natural and healthy aversion to a dreary or debasing form of religion; but they get the name of reprobates, and all sorts of healthy inspirations may be forced to assume an illegitimate and discreditable name, because all sacred and reputable names have been taken in vain.

"For this reason, if we attempt to preach a religion of humanity, or a religion of common-sense, or a religion of facts, we are likely to be accused of materialism, secularism, profanity, atheism, or any other ism or ity of that class.

"Nevertheless, a religion of humanity is what we intend to advocate and what is needed most today; a religion of practical common-sense and matter-of-fact.

"We cannot get beyond our own selves; and the natural facts in the life of man—his aspirations and necessities—must be the ultimate foundation of our beliefs and faiths. But, if we recognize man as divine, and acknowledge the divinity of the true human nature, then there will be nothing irreverent or degrading in a religion of human nature. It is only when we make of man an essentially and irremediably sinful creature, that such a religion can be thought of as degrading. A religion of humanity does not mean a worship of the brute in man, or an exclusive culture of the bodily functions and animal passions.

"We have elevated our religion to the clouds until it has become a dreamy abstraction, and we have lowered the ideal of human nature down almost to the level of the animals; and so we have come to underrate human nature and regard it as something profane and opposed to religion. And any attempt to look upon it with proper reverence may be construed into a deification of the animal passions—a thing that actually does take place sometimes.

"But there is a reverent and elevating way of regarding human nature, once known upon earth, but long vanished from it—to be restored, however. This consists in the recognition once more of the higher nature of man, that nature which is above the selfish instincts and the doubting mind, and which prompts all that is good and noble in us, mastering the passions and instincts. This divine nature has been insulted and denied, and its recognition has been replaced by the notion of the theological deity."

Little Margaret Hanson was the next speaker, charming everybody with her sweet, clear, childish enunciation and pretty manners. "Some of the Things That I Think Little Girls Ought to Learn from the Flowers," was her subject.

"Flowers grow in the sunlight," she said, "and they are never unhappy nor cross. That is because they grow the right way, for there is a wrong way, and the wrong way makes unhappy little girls. We can have sunlight too, just like the flowers if we want to. Sunlight is heartlight, and that is joy, and joy is Raja Yoga—that is why I believe in Raja Yoga—because it teaches us to grow the right way. All the lessons that flowers teach us are Raja Yoga lessons. Near my little home in Lomaland is a beautiful flower garden. We take care of it together. Some of us are American and some of us are Cuban, but we all know about heartlight and Raja Yoga and duty, and so we never neglect our flowers. And that is why, I think, they teach us so many lessons. Just now some of the mother plants are taking care of their little seed babies, getting them ready to start out some day and find homes of their own. Plant mothers are never selfish. I never saw a little seed baby neglected, did you? Now isn't that a wonderful lesson, and I have heard

LOMALAND STUDENTS AT ISIS THEATRE

Young Raja Yoga Orators Assist
Older Students in Presenting the
Truths of Theosophy in Fine Music

Reprinted from the San Diego News

that there are fathers and mothers, somewhere—a long, long way off—who need to learn that lesson. I never saw any, but then I have always lived in Lomaland, or nearly always.

"The flowers can teach little girls about silence. Flowers never say careless words, and they never make each other unhappy by talking unkindly. Another

lesson is helpfulness. There is a little vine in my garden that was so tiny and weak it was going to die, when one day I went out and there it had hold of hands with a big strong plant and was climbing right up by the side of it, and the big plant was trying to help it. If little girls knew about Raja Yoga they would understand flowers better than they do now, and they would learn to live in God's sunlight, just as the flowers do; that is the Raja Yoga way to live. God's sunshine is everywhere, if we don't shut ourselves away from it by selfish thoughts. Little girls ought to know about Raja Yoga because then they would always hear the joy note in their hearts, and they would find the beautiful sunshine there too."

Alice Westerlund, another of the talented Raja Yoga children, told about Raja Yoga work for Art. Her paper was entitled "The Coming Art." She said: "The common idea is that the way to learn how to draw is to begin by copying other peoples' drawings, or else to start by drawing lines. But these things are simply drawbacks and they shut away the greater things. They prevent higher work by giving a wrong start and cultivating a hard, meaningless way of looking at things. The natural way is much better. Raja Yoga teachers aim to bring out the true art spirit that is in the soul of every one, and to help each one develop his talent in the natural way.

"We in Lomaland—we children of the Raja Yoga School—are building up something new in an art life. We are taking all that is best in the art of the world, and are adding to it something of our own—something new that Theosophy and Raja Yoga has taught us. We feel that we are pioneers and that we are going to carry a great art message around the world."

Master Iverson Harris, Jr., presented a fine address on "What Is True Progress?" "True progress is developing our will-power and doing what we know is right," he said. "Most people think that true progress is being able to write books and to gain wealth, even though we may make other people suffer, but that is a false idea. When we look at the lives of our great men and women, such as Abraham Lincoln, George Washington, Thomas Paine, Joan of Arc, and many others, we find that most of them had very little opportunity for education as children, and scarcely any money; and yet these people stand as examples of true progress because they were noble-hearted and pure, and they expressed their nobility in kind, unselfish and heroic deeds. You cannot make progress unless you have courage—courage to overcome all your bad habits and courage to have pure thoughts. You must stop thinking of yourself and think of others, and try to make them happy, and if you will study yourself you will be surprised at the number of faults that have to be overcome before you can make true progress.

"Progress is like walking along a path. When we are selfish and unkind, the Path is all dark and we cannot see where to step and so we make mistakes. When we have joy in our hearts, that is like a light over our Path, and we can see the way. I think the best way to progress is to do our duty and obey the laws that Jesus and other great Teachers have given us. They taught us to love our neighbors as ourselves, and that is worshipping God in the right way. Religion is simply Truth. There is no religion higher than that. There is good in all the religions we have, and if people would only take the trouble to understand their own religions, they would find the truth underneath them all. Then we should have more true progress and more brotherly love. I do not believe that we ought to think so much about creeds, for it seems to me this kind of thinking shuts our hearts away from the light. Then, too, we do not help others by feeling that they are separated from us, because they believe a little differently. True progress depends upon the love in our hearts, and if people would think for themselves and not let other people think for them, they would find that love, and then if they would express it in kind acts, the world would be better very soon. True progress means doing kind deeds, developing our higher nature and being brotherly."

A very interesting feature of the meeting was given by Mr. J. H. Fussell, in reading selections from the writings of William Q. Judge. He quoted mainly from Mr. Judge's address on "Universal Brotherhood" at the Congress of Religions at the World's Fair in Chicago.

ERRATA—In the *Searchlight* just issued we note this error: The extracts from Private yearly Records, etc., were begun JULY 6th, instead of June 6th, 1904.

✻ Some Lomaland Visitors ✻

THE strangers who pass in and out the great gate of the International Theosophical Center are interesting studies. They come from all parts of the World; and they come in all sorts of moods and with all sorts of questions. Some, simply curious to see the "strange people who live on the hill;" and others, many of them, earnestly seeking for information which will, to a degree, explain the real life of the Students here, and help them.

Our guides who meet the strangers, and escort them about the grounds, often open the pages of their journal to me. Just the sayings of these strangers: the questions they ask, their criticism, and the general impression made upon them, are recorded in a very graphic way. "It is said that Theosophists are very serious people; and it is not in their religion to smile," I heard a visitor at my elbow say who was waiting to enter his name in the guide's book. I accentuated the contradiction to this statement by a hearty laugh which echoed over the hills. "Human nature," I said, "is a queer, queer study." And, oh, the varieties which one meets in the crowd of visitors!

Ever since I read the guide's interesting journal, I have pondered much upon the needs of Humanity; and I have decided that one of the greatest proofs we have that Humanity is divine, is that it can keep its head above water in this great Babel of human contradictions and unrest. A very serious study is this; and I am comforted with the thought that there is one place in the work-a-day world of today where a few souls are united to use their life and energy to hold back the great Juggernaut Car of ignorance which is crushing out the real life of man.

Now, among the strangers who come here, there are some who say, "Surely, this is a dream; so real, and yet so unreal; so silent, and yet so full of life and activity." The artist exclaims, as he gazes out over the high hills of Lomaland, across the blue Pacific, and on the purple-touched mountains' grandeur, "Oh! the wonder of it all! Surely, this place is the Paradise of the World! This is the home of the true artist."

Another, one of the World's hard workers, a stately personage, with an earnestness of manner, and a dignity of character which show him to be a thinker, and a man of influence in the World, looks about, charmed with the scenery and wonderful architecture; he listens to the grand music in the Conservatory; he visits the great Amphitheatre of the School of Antiquity, and sees for himself the old drama depicted; and the old ideals of beauty and pure life demonstrated.

Then to the Art Studio, where the young students are at work; then into the Homestead, to look at the great Rotunda; the interior decorations; and the wonderful mystical paintings which hang in the galleries there. Even here he is still silent; interested; absorbed. The next place he visits is the great Temple, where the Raja Yoga children are gathered—at school, beginning to study life's mysteries in a new way. Our visitor spends an hour silently in watching all that happens here, and then a change takes place: the face softens; a smile lights up his stern countenance; the shoulders of this man, which were bent under the burdens of life, straighten; he raises his head, turns his eyes heavenward, and to the astonishment of the children and those about him, he says, "I have never seen anything like this Raja Yoga system for the education of children! It is perfect. No time should be lost in making this system a practical thing in every city. With such a work as this, we might hope that in a few years there would be fewer prisons, less crime and more happiness."

As this earnest man went away, down over the hills to the tally-ho, waiting to take him back to the restless life he was engaged in, my thoughts went with him. I knew that his heart had been touched; and that he had caught a glimpse of the beginning of a new life for Humanity. A little later, I went to the books of the guide to see the name of this man who had interested me so much. I wanted to know who he was, imagining that I might possibly find out what had touched his life with such a sadness. I found that he was Judge —, State of —. He was one of the principal Judges of the Superior Court eastway. He knew human nature, and pitied it.

Another study I met that day, was a very odd old lady, wandering about the grounds with a guide. I must confess she was the oddest looking mortal I had ever seen. She seemed all out of place with Na-

ture, and so awfully gruesome, and ferret-like in manner. Her dress conformed somewhat to her character, for it was anything but picturesque and tidy; and there was a lack of that womanly dignity which adds so much to the make-up of one who is leaving youth behind her. Those cork-screw curls—I shall never be able to forget them! These seemed to be in harmony with her agitated mind: all out of sorts. Oh, she was curious; and the questions she asked—so fearfully, so timidly, so suggestively! After she had tired out the guide, who stood gazing at her with a sort of an alarmed stare, I took my turn as a substitute to show her about. It was this time that I found that I had to use all my will-power to hold back and subdue my risibilities. Then she said, "What are them folks doin' down there?" pointing to a group of young students who were going in their Greek costumes to the Temple to practice for a rehearsal of one of our Greek plays.

"Good Lord! In Heaven's name, do you allow them folks to walk around the Hill in that kind of a dress?" Before I could quiet the agitation of the old lady, she suddenly turned, and, looking up at the Homestead, said (in a whispered voice), "Is that where they are all shut in?"

This question puzzled me amazingly. I knew that there were such things as "shut-ins," out in the World, but not here; and I decided that the old lady had made a mistake, and had that morning started for an insane asylum and had missed her way.

But she persisted in seeing the "shut-ins." So I humored her fancy, and went around to the broad entrance of the Homestead, and asked permission to take the visitor about. Just to the left of the entrance, were a number of the young lady students, busily engaged in working up floral decorations for the next day's festival. Heaps of flowers were all about, making a beautiful setting for the bright, cheery faces of the students. As I was about to call the attention of my visitor to this picture of real life, she suddenly made a bee-line to one of the corners, where sat a very pale and sickly-looking young lady. Although I had been here for several years, I had not seen her before, and as I was wondering who she might be, the curious old lady approached her with a very triumphant air, which said more than words, that, at last, she had found a "shut-in."

"Poor thing!" she said. "How pale and weak you look! You must be very unhappy, and very sick, too. Don't you want to get out of this awful place?" "No," answered the young lady, "but I am quite ill, Madam. I have only been here two days. I came here to recover my health, and to learn something about this beautiful students' life. When I have been here a few weeks, I expect to look as rosy and happy as do all the others here!" Turning from the old lady impatiently, she moved away. There was a look of disappointment on the curious old lady's face. Here was a chance for me to laugh loud and heartily—but there was a sense of pity in my heart for this gruesome visitor. Neither of us said a word. We got out of that bright, cheerful corner some way, and before I could ask her if there were anything more she wished to see, she hailed the tally-ho and went home. Poor dear old lady! she came here prejudiced, with no end of misconceptions; and she could not give them up.

I afterwards learned that she was connected with a certain Bible Class in a city near by; and that she always had felt it to be her mission to rescue sinners: to save them from the eternal wrath of God.

Here was the contrast: the dogmatic life even in honest endeavor had shut out the light. She was the "shut-in," and the happy, joyous students on the Hill were the striking contrasts to her life.

Yes, Theosophists smile, and laugh, and are happy, and are human, and are reasonable. And they believe that the divinity of a man's nature ever keeps his soul on the sunny side of life. As the sun went down over the hills, I wandered back to my bungalow, thinking of my day's experience, and of the studies in life I had met. And I pictured another day, near at hand, when there should be no tired hearts in the world; no hopeless suffering; no hypocrisy; no delusions; no unbrotherliness.

It was a comforting thought to me, to feel the heart-work of our earnest people on the Hill, and of those out in the World, who are supporting the Universal Brotherhood in its strenuous efforts to make possible better things for our fellows.

OBSERVER

❁ ❁ Illusion and Reality ❁ ❁

by LYDIA ROSS, M. D.

THE man was married. He had sought to win beauty, fame, and personal power, and he had linked them all with his name. Around him was a wide circle of desirable things; within, was a restless center of discontent.

Far into the night he sat musing over his career. His ambitions had been gratified beyond his expectations: he could name no unfulfilled desire; yet the thought of it all carried with it no feeling of satisfaction. Just now his keenest sense was of the ache in his breast, which so often came of late at quiet times like this. "It is all illusion and disappointment," he said bitterly. "Marriage is a failure; fame is a mockery; happiness is not had at any price, and life is not worth living."

What was that nameless hunger from which he suffered, which was so baffling and which devoured all the pleasures in his possessions? he asked himself. Why was it so impossible to find the meaning of this dreary want? With all the new inventions for lighting the world, why was there no illumination for the dimness of the inner life?

Seeking the light he drifted into the Land of Dreams with its countless pictures. There he saw a moving figure, which was himself, and yet not himself. The form had in it no familiar lines; but the eyes were his own and through them he read the thoughts.

He knew that this traveler had come from afar. Along dusty highways, in shady by-paths and green meadows, through thickets and unwholesome swamps, and across waters, he had played a part in many scenes. Youth and strength and gaiety were his companions, and together they sought by many ways to find novel pleasures. Through places all unknown and often full of hidden dangers, these companions made their way with merry jest and song and idle noise, fearing nothing save it was the Silence.

One day the Traveler grew tired of strains, of noisy mirth, and empty songs and poisonous miasma. He longed for solitude and rest. As his companions sped along the road, he turned aside and wandered into the deep forest. Throwing himself wearily upon the ground, he lay beneath the great trees with eyes closed, and fingers threaded through the soft grass, finding refreshment in the touch. He breathed the clear air, and as the cool quiet stole into his blood, the throbbing pulses sank into a healing stream.

Time passed unheeded. He had found some pleasant places in the old life that seemed so far away now, but this was beyond compare. Filled with a novel sense of awakening, the past appeared like a feverish dream. The sweetness of the place seemed to be taking from somewhere near and to be surrounding him with a delicious perfume. As he raised his head and looked around, his wondering eyes fell upon a new-blown rose near by. The dainty folded petals had uncurled and opened out until its golden heart was centered in a film of tinted light. Its fragrance filled the air with a subtle tenderness. It was beautiful!

He had not failed to gather flowers, too, in his time—conventional hot-house blooms and gorgeous tropical beauties, and some with cold, odorless petals—how many had drifted through his hands. Never was there one among them all like this. Standing out against the guardian green leaves like the beloved queen it shed a royal circle of uplifting peacefulness over everything.

Softly the Traveler knelt before this symbol of purity and loveliness, with its message from the world of light and peace. The soul of the rose glowed upon him with tender beauty and glad fearlessness. His own soul stirred into life and looked out of eyes all too sadly strange to their indwelling guest. All the littleness and folly of his past seemed like fading pictures of half-forgotten dreams. He knew that this was the awakening; this was the steady, noble, tender glow of real life.

His heart felt the touch of all that life might mean—its dignity, its love, its aspiration, its unspeakable destiny. Oh, but he would struggle to keep alive this new sense of things! His rapt gaze rested on the Rose until its mystery of color and light and sweetness entered into his very being. He felt himself a part of the life, and his confident soul swept out to the unseen stars to claim its own. Beyond, throughout distant space, everywhere, was a flush of light and beauty and a radiant heart of peace.

Then came a memory—a mere shadow from his dream-life—and a selfish doubt brought him to earth again. The Rose smiled upon him in sweet trust. He would never leave it, but together they would live the larger life. As the wind whispered in the trees, the Rose bent and brushed his cheek, while a sudden wave of tenderness surged over him.

What if some one else should find this flower and should rise upon its power as he had risen? What if he should lose it? A hungry look stole into his eyes, and his old self, in a misery of longing, cried hoarsely, "Never: it shall be mine, mine, only mine." He leaned forward until the petals quivered beneath his breath. What if it should turn from him? "It is mine, mine," panted the lower self, as with eager, passionate grasp he kissed it and crushed it close, close, until he grew faint and sick.

He is stung with pain. Ah, the Thorns! Impatiently he tries to pick them

out, but the sting remains: and, oh! the pitiful Rose that he holds, so crushed and weary and broken! Gone is the delicate fire of the higher life that breathed through every curve of its free-born petals; and the fragrance which had radiated waves of tender gladness falls like the faltering breath of some beautiful, wounded, dying thing.

In the dim light which fills the mind in sleep a mountain scene took form upon the moving screen. Up the steep path a Hunter toiled, burdened with weapons and game. In his strangely familiar eyes was a weary, dissatisfied look. The well-worn trail he had followed grew indistinct and was lost; but, pushing onward, he reached a place where the rough mountain side stretched out into a broken level of fertile plateau. How grateful it seemed after the steep climb! This was the place to rest, he thought, catching sight of a tiny sheltered lake and turning his steps that way. Even now he can see its unruffled surface reflecting the blue sky and a drowsy chorus of encircling pine trees.

On the shore of the lake the Hunter stood spellbound with the beauty of the scene. The spoils of the chase and the weapons dropped from relaxed fingers as with uncovered head he drank in rest and comfort and inspiration.

As the wind swayed the bordering pines, flecks of light came and went through the shadowy circle of scintillating water, where the glint and tint of glossy stone and delicate shell lighted the mosaic curtain of shadows with the fire of a living iris. Deep and dark and clear was the mystical center. The bank was fringed with tall, slender grasses, which softened and deepened the lake's liquid beauty like the lashes of a sentient eye.

A feathery cloud floated by overhead, its reflection brushing the surface like a breath of fancy—a mere passing thought. The opalescent gold of the sunshine sank down, down, down, until transmuted into a look of love in unfathomed consciousness its glow was diffused through the limpid depths.

Beyond the beauty of the lake was its infinite calm, its untouched purity and perfect peace. The atmosphere was filled with restfulness. In the lighted depths of the lake he read an answering look. The soul of the lake spoke its message in lingering softness and silence. The iridescent picture of a passing bird fell into the clear water—a song in colors. He saw his own face bathed in a tender light.

He will seize this mysterious beauty of living calm and hold it forever. It should reflect only his face, he thought, jealous of the very sky. "This treasure is for me, for me alone," he said, as his eyes followed the shafts of light that illumined the shadowy depths; "for me," plunging in and stretching out greedy hands.

The first footstep broke the mirror of light into troubled water. The sand and soil rose beneath the desecrating feet in a sorrowful cloud, hiding the glory before and around him. "The peace lies deeper yet," he thought, watching the center and pushing on. But ever before him rose the obscuring cloud of his own creation. He can no longer wade but strikes out boldly to plunder the lake of its secret. At last he finds that no physical force or finesse can touch the delicate beauty he desires, and after vainly striving to grasp the fine lines of soul sense he returns to the shore, weary, disappointed and bitter.

"It is all an illusion he railed; "no other hunter excels me in strength or skill, yet when this promised happiness is almost within my grasp it fades and disappears. There is no reality behind the dissolving pictures of a deceitful world."

The Dreamer looked from the strength of the Hunter upon the bank to the restless water. The reflection he saw there was his own figure—broken image with pessimistic poise. Then the light which he had longed for shone full upon his mind. He was the Traveler whose rude selfishness had despoiled the trusting Rose; he was the Hunter of Happiness. Around him were the rejected trophies of his skill—sweet-voiced songsters and creatures fleet of foot and quick of eye. Too well they vouched for his unerring aim in bloody breast and broken limb and dull, unseeing eyes. He had wasted the life that gave these things their joy and beauty and only the pitiful, unlovely forms were his possessions, from which his wearied senses turned in sick distaste.

The Dreamer's eyes fell before the luminous scene, in which the Hunter was a marring blot. How worse than blind his whole career had been: his life was but a crowded list of failures. How fair were Nature's pictures everywhere before he spoiled them with greedy, sordid touch. Now he saw that the world was alive with a wondrous reality for him who sought unselfishly for truth. "The fault is all my own," he groaned, in bitter shame. "That is mine, indeed, all mine," pierced with so keen a heartache that he awoke.

Through the open windows the dewy morning air came floating in, sweet with the breath of flowers and song of birds. The great elms brooded over the lesser things with stately tenderness, while with slender, outstretched branches like waving, magnetic fingers, the noble trees soothed and awakened the freshened earth. In the east the lavender veil of dawn dissolved before the sacred flame which daily brings new hope and strength to light dull lamps of clay.

✻ The Trend of Twentieth Century Science ✻

Progress in the Vegetable World—Man Aids Nature

THE cyclic law of nature which governs every detail of life is never inactive. To the searchers for the missing links of evolution H. P. Blavatsky described the upward trend as progressing spirally, using the figure of a mountain road as a symbol of nature's growth. The missing links may be on the far side of the mountain, invisible to us, while the next higher and next lower degree of attainment may be visible from the point where we stand—as the threads of a screw appear, from any one side to be arranged in distinct steps, although in reality they are continuous. She predicted that obsolete states of life now unknown to us would reappear, on higher lines, as the world progressed. Even languages, we are told, are amenable to this law, for they too are living entities. As with most of these teachings, there are major and minor applications. A statement of the mighty cyclic laws of eternity contains those that relate to cycles of lesser duration, even to the smallest. Thus by the laws of analogy we may attain to some degree of personal proof of the greater law. If this view of the cyclic law is correct, we have in the vegetable world some remarkable factors to consider, of late years in the evolution of new flowers, new vegetables and new fruits which it would appear to be man's duty to aid into manifestation when ready to take their place. These come not as wild inferior growths requiring ages to develop, but as finished products of evolution, remotely similar in this respect to the bee and wheat, which are said to have arrived already matured in previous existences, temporarily lost to sight.

The carnation and tomato are mentioned as recent developments—both of these being immensely improved of late years. The well-known Concord grape was a result of the infinite patience exercised by the late Ephraim W. Bull of Concord, Massachusetts, in educating the wild grape.

Luther Burbank, with whose name is permanently associated the progress of California, has a world-wide reputation as the creator of new fruits, new flowers, new trees, until one wonders where he will stop, since the vegetable world seems to recognize in him the sympathetic nature which can call out its latent forces by patient devotion and discrimination.

The romance of the seedless navel orange has already appeared in our pages in a previous volume. And now we hear of a seedless apple. Details once accepted as quite a necessity are now found to be capable of transformation, with gain in the economical value of a fruit.

The United States government is not behindhand in this great work, as an article in the July *Cosmopolitan*, entitled "Creating New Fruits," amply demonstrates. Working along lines of least resistance experts prolong the season of a fruit by a month or two; render tropical and semi-tropical vegetation hardy enough to withstand more vigorous northern climates; add scent to a flower; make fruit grow in previously barren ground; modify the food principles in plants; influence qualities, refine, eliminate, combine, transform, add, subtract, and in many ways increase the economical efficiency of this kingdom of nature.

And this appears to be but the infancy of a new science. In these strenuous times a new cycle is evidently with us, a cycle in which a year's progress is possible every day as compared with prior standards. As the years go by, there will be ever more and more wonderful manifestations of the law that works now for human progress with such intense momentum that all things seem possible in the new day that has dawned for the people of the earth and all creatures.

P. A. MALPAS

PROF. SYLVANUS THOMPSON announces that some experiments which he has been making give promise of the ability to prospect for metals by electricity. Waves of electricity can be sent into the earth; their normal flow is known, and any variations due to the presence of metal can be indicated by telephonic apparatus. It is not expected that any accurate positive results can be obtained, but the discovery, if it can be put into practical form, will certainly save much waste of time and expense in making borings where there is no ore; while, even if the metal sought is not found, the indications show that boring will be rewarded by the discovery of some kind of ore.

STUDENT

Why Sleep Is a Blank to Most Men

WHAT "being sleepy" means, on the scientific side, is not yet known. But science seems, nevertheless, to be approaching the matter. The usual theory is that the brain cells are poisoned by the products of their own activity. But how do they behave before and after the poisoning? Of course no one can say exactly, but some very reasonable guesses can be made. The cells concerned with thinking are little octopod-like creatures, with a body and long arms. They are just separated from each other by a gelatinous, clear, almost fluid substance which, after death, becomes white. It is supposed that, as we think, the long arms of the cells wave slowly about through the jelly; and that when an arm of one cell touches one from another, a minute current passes for an instant—which permits of the making of a link of thought or memory. A vast amount of this waving goes on independently of our wills, for the mind is never still. But when we think intentionally about anything, we are ourselves directing the process. *How* is a mystery; just as no one knows exactly how he is able to move his arm or his leg.

It is supposed that as night comes on, the cells get tired; which, again, is supposed to be due to their getting overwhelmed by the accumulated products of their long day's work. The movements of their arms get slower and slower, and at last cease. Then we are asleep. The soul goes to its own place, and proceeds with thoughts and work which brain cells can not render, or can only render in glimpses, or symbolize crudely in such pictures as are comprehensible to us.

By day we are awake in the world, conscious, most of us, of the presence of the soul. But very dimly conscious; knowing nothing of its work or its mode of thought; knowing only of a vague something inspiring us to "come up higher" and be better and nobler. Even that we should not know unless we were of common nature with it, in fact its embodied ray or emanation, dwelling among the brain cells, and through them being kept aware of all that is happening all over the body and of what the senses are seeing. We are so filled with the doings of this busy world as almost to think there is no other. Limited in this way to the contents of the brain, and accustomed to expect nothing else than what they contain, it is natural that sleep, which frees us from them, should produce at first a blankness. Nothing of the expected, nothing like the day's panorama is now present to us. We are with the soul, once more part of it. As we come downward into waking, the busy mart of the body once more claims our full attention.

Our work is to blend the two worlds, to have both present at once. So far, we only touch the outskirts of the upper world when we are profoundly moved, or in the hush of mind that follows the hearing of great music.

This is where Theosophy takes up the story as science leaves it; but it may none the less be sometime science.

Flower Colors—Some Chemical Researches

SOME interesting chemical researches have recently been made into the coloring matter of flowers, with a view to the possible use of them as pigments. Just as the flower is itself an evolution of the leaf, so are the colors of flowers in a certain sense, evolutions from the green color of chlorophyll. Though the colors can be extracted, they tend to alter quickly in the sunlight, and so far their pigmentary value is nil. A fuller understanding of their chemistry may enable us to build up more permanent imitations.

STUDENT

An Important Hedgehog—A Fossil Found in Dakota

THE hedgehog tribe has hitherto been regarded as an exclusively Old World product. But the fossil of an extinct species has just been discovered in the middle Tertiary deposits of Dakota. One more link is thus found between the Eastern and Western Hemispheres, and an additional fragment of evidence that the northern parts of both are of one zoological area. This means that they communicated at the bridge now cut by the Behring sea, and that their climate was temperate.

The Story of Two Lives

ONCE there were two young girls who were rivals; rivals at school, rivals in society, born rivals, and rivals remained until—well, let me tell my story. Let us call one Jane, the other Ann. I will not enter into a description of either, but will simply, briefly, give the story of their lives.

Both belonged to wealthy families; both were of aristocratic lineage; both were well educated; both were beautiful. Jane married the man whom both loved. He was successful in adding to the wealth she inherited. He was a man of fine abilities, and commanded the respect and admiration of all. She had no children, so she was the sole idol of her husband. Everything seemed possible for him to do for her, so he did everything and thought of everything and procured everything for her. She gave—yes, she gave to the law which brought her all this—something in return, not her whole self, which was the amount of her indebtedness, but a per cent of her self. That made her look well in the eyes of the world, and made her feel comfortable, too. In fact, she felt very comfortable her whole life long. But at its end, the sheaves she had gathered made a comfortable showing only. No great effort had been put forth, no great results achieved. It looked all right to most people; that was all.

Ann was younger and her life was full of bitterness. She failed to marry whom she thought the right one. Instead, sorrow was heaped upon her. The one she married disgraced her, for in time she learned that he had a living wife; while she was left alone—a mother, too—to battle with the world. He loved her, he said, that was why he married her.

And his gift of love proved to her that the love was centered upon himself, of course; while she, her soul roused to action by the broken law, refused to accept what belonged to another, even a good name, and took her child away and let it suffer, too, that the law might be fulfilled.

She drank the cup to the very dregs, for herself, and more than all, for her child; for the child was a girl, delicate, refined, capable of the keenest suffering.

And the world let her suffer in spite of the protecting arms held out by the mother. The mother thrust herself between the girl and the world and received the stabs first herself. But, alas! they passed right through her frail body, it seemed, with unabated force.

The girl died, broken-hearted, and left that mother alone. But the fountain of love, which she herself had energized within herself, could not be dammed up. It increased in strength and force, as all real love does, until it became a power that nothing could withstand. The good law made room for it, as it always does, and gave her an opportunity, the opportunity to follow the dictates of her heart. Her work was for those who suffered, as so many do in this world because of the selfishness of men, and the results were proportionate to the amount of energy expended.

She gained a world for women from a little realm of self-seeking to a world of loving action, and when she died, with difficulty she bid life good-bye, because of so many opportunities for *doing*. Only the thought of her return, with new and better opportunities, at last made her willing to go. And the world then wakened and called her blessed, and after a time wrote into a fair record her life-story.

The other life left no impress on the hearts of men and so the days passed until it was forgotten.

STUDENT

A Springtime Lesson

SOME of the trees were still in bloom. On others the tiny fruit showed through the young green leaves.

Two girls walking in the orchard with linked arms paused before a snowy plum-tree.

"Why that solemn face, Beatrice?" said Margaret.

"I was thinking how dear old Mother Nature embodies our lessons for us all around, have we but eyes to see and ears to hear."

Margaret looked her enquiry, and Beatrice responded with, "How long and patiently the tree gives of its strength, its very life, to produce the luscious fruit. It is not something apart, but its *very self*, and I thought how all *true* gifts must be a *part of ourselves* to be really acceptable offerings, must cost us something of personal effort, be a sacrifice of our selfish selves, in short."

"Those kinds of gifts are rare," answered Margaret, thoughtfully, "people hesitate to give what costs them *something*."

"That is where we make the mistake," said Beatrice, "we cannot get anything for nothing and, foolish that we are and blind, we neglect to profit by what Emerson shows to be a truth, as Christ and others did before him, 'Take what you will, quoth God, and pay for it.' It often comes back to me when I see people surrounded with luxuries, giving perhaps carelessly of their surplus but never stinting themselves for anything, how little they reckon the price they will pay for their selfishness, finding in future lives themselves in stern grip of abject poverty, and poor and weak in the soul qualities which alone ennoble life and make it true."

Margaret gazed in open-eyed wonder. "Beatrice," she cried, amazed, "where have you learned to talk like that? It makes me quite uncomfortable?"

"I hope it does," she answered, then smiled. "Margaret, we have always been friends, haven't we, you are one of the few I have dared to speak to of what is in my heart, and these days the needs of humanity keep pressing up against me, and I have wondered and wondered what I could do to help, and as we walked among the blossoms the answer seemed to come, '*Give yourself*,' and I understood the meaning clearer of the message Theosophy is bringing to the world, that we are our brother's keeper, bound as we are together in a Universal Brotherhood, fellow souls on the journey whose end will be freedom from the thralldom of the senses, the selfish side of human nature. You see we must choose, must take of the gifts and opportunities that life holds out for us, or let them slip

by, and in either case we are weaving our future destiny. Our destiny—but what does destiny mean? Life after life comes to its close with hopes unfulfilled, and work undone; forward—a sea of longings, and behind a record of lost opportunities, pitiful mistakes and regrets.

"Margaret, dear heart—can you not step outwards—just a bit beyond yourself and see life's meaning? Do you think this span of seventy years or so is all? No, dear, it is but a link in an infinite chain."

"Then you believe what the Theosophists say of reincarnation?"

"Does it need discussion? Is there any explanation for life without it? Where is our immortality? The old, old teaching is true, though we must *do the deed*, to know the doctrine! must act as souls, to feel our divinity, and the first step to take is to give ourselves in loving service to the sorrowful of earth's children."

"Let us shorten our walk," said Margaret, "and take that lovely spray of apple blossoms to little lame Nellie."

EMILY I. WILLANS

"HE IS NOT UNWORTHY"

by WILLIAM J. LAMPTON in February Success

IF one has failed to find the end he sought,
And out of effort no great good is wrought,
It is not failure, if the object be
The betterment of man: for all that he
Has done and suffered is but gain
To those who follow, seeking to attain
The end he sought. His efforts they
Will find are guide-posts in their way
To that accomplishment which he
For some wise purpose could not be
The factor in. There is a need
Of unsuccessful effort: 'tis the seed
Whose mission is to lie beneath
The soil that grows the laurel wreath,
And he is not unworthy who
Falls struggling manfully to do
What must be done in dire distress
That others may obtain success.

THE CHILDREN'S HOUR

The Raja Yoga Question Box

EVERY age of history has its poets, who reveal the heart-life of the people, and its martyrs, who, by their acts of faith and protest, win for mankind a greater knowledge of man's nature and destiny.

1 Who was Sappho?

ANSWER — Sappho was the greatest poetess the world has ever known. She lived in Lesbos, an island of Greece, about 600 B. C., and was the head of a school where the art of poetry was taught. Many gifted women were among her pupils. Sappho's fame was so great that Plato called her "The Tenth Muse."

2 Who was Dante?

ANSWER — Dante lived in Italy 1265-1321 A. D. What Homer was to the

ancients, Dante was to the Middle Ages. He put into verse the heart-life inspired by the Christian religion. Dante was a great soul, a true patriot. He has been called "The First Italian," for he believed that the many petty Italian States could unite and progress as one.

3 Who was John Huss?

ANSWER — John Huss was a Bohemian reformer. He was rector of the University of Prague, and wrote and preached boldly against the false teachings and evil practices of the church. He was unselfish, and loved freedom and progress. He was cast out by the church and burned at the stake 1415 A. D.

SLAVES AT LUNCHEON ON THE PLANTATION OF CARLOS MANUEL DE CESPEDES. XACARIAS — "We will have to pass all our lives in this accursed slavery."

THE NIGHT ATTACK ON THE CUBAN FORCES ARRIVAL OF THE SENTRY GIVING THE ALARM. — "Los Espanoles! Los Espanoles!"

AFTER TAKING BAYAMO. CAPTURE OF THE SPANISH SPY. GUARDS — "Kill him! Kill him!" CESPEDES — "We do not make war on such vermin."

CARLOS MANUEL DE CESPEDES GRANTING FREEDOM TO HIS SLAVES AT THE BEGINNING OF THE REVOLUTION. CESPEDES — "I am no longer to be considered as your master, for if you follow me and this flag, I shall be nothing more than your Leader. I hereby grant you all your liberty."

MIDNIGHT CONFERENCE OVER ATTACK ON THE CITY OF BAYAMO. MARCANO — "At half-past six we can be at the entrance to the city, and if you see fit we can enter."

The Cuban Raja Yoga Drama Given in Santiago de Cuba

ON June ninth, the closing day for one of the Raja Yoga Schools established by Katherine Tingley, in Santiago de Cuba, the children held a great fiesta, one of the features of which was a Cuban drama. In this, as is shown by the photographs, was pictured most vividly the Cuban struggle for freedom. No nation has written a more pathetic record than this sister nation who is our neighbor. In the hearts of no people burns a brighter flame, the flame of the higher patriotism, lighted upon the altars of even the little children's hearts by the sacrifices of heroes who have passed away, and kept ever-burning by the memory of selfless and noble deeds.

Katherine Tingley has often said "There is in the hearts of the Cuban people a quality of devotion which expresses itself in a patriotism sincere, unselfish and pure. In that alone lies the assurance of Cuba's future, the assurance that the hopes of her noble patriots shall not pass unfulfilled."

Of the dramatic presentation the pictures are more eloquent than words. They are but another proof of what Mrs. Tingley long ago pointed out, that there lies in the Cuban nature dramatic possibilities that are beyond limit. Their suffering, their devotion and their heroic perseverance have made them peculiarly receptive to great truths that by many others are little understood.

A LOTUS GROUP TEACHER

CESPEDES SPEECH BEFORE THE EVACUATION OF BAYAMO, which is being burned to save it from again falling into the hands of the Spaniards. — "The glory of this day will shine in the history of these dark times, the same as this star will shine in the hearts of our Cuban people, awakening intense patriotism."

THE SAME. CESPEDES — "Cuba must yet suffer in a way unknown to any other country, but in the end she will awaken to a happiness yet unknown to any other people."

Students'

Path

"NO SURRENDER!"

I WILL not yield! although no aid be nigh,
Although my foes be many as the sand,
Although the echoes mock my desperate cry
As slips the sword-hilt from my nerveless hand,
I will not yield!

Disgraced, defeated, broken, shamed,
Besmeared with filth and blood, all maimed,
All crippled, wounded, thrust
Down to the very dust,
Faint unto death ---
While I have breath
I will not yield!

I will not yield! The courage of despair
Thrills through me; from the wreck of youthful hope
Springs fierce resolve; now all seems lost I dare
As ne'er before; in ruin Will finds scope.
I will not yield!

Not dreaming now of vast renown,
Of laurel wreaths and golden crown,
Of place among the Gods,
I face the fearful odds,
And for dear life
Maintain the strife.
I will not yield!

I will not yield! I cannot choose! For lo!
I, too, have seen --- seen what the end might be,
The far-off sun-kissed pinnacles of snow,
The perfect life of selfless liberty.
I will not yield!

For, having seen, I can but seek
The highest, though the heavenly peak
Lies ages hence away
From this foul bed of clay,
It can be won!
Child of the Sun,
I will not yield!

I will not yield! The fault is all my own
That I have fallen; evil seeds bear fruit.
Loins girt for years with pleasure's silken zone
Have failed to stand the strain; but to the brute
I will not yield!

No! though the struggle be in vain;
No! though I rise to fall again;
Unto the utmost end,
Until the night descend,
I stand my ground;
Vanquished or crowned,
I will not yield!

Theosophy and Nature

IN the crowded city we are apt to give an undue importance to the ordinary affairs of life, to the work in the factory, in the stores, in the office, or in any of the thousand-and-one places where we may be "earning a living." We think that the sun rises and sets over our work, and that the world would come to a standstill did we but stop it for an instant. But let us leave the city for a little while and go out into the country, out to its green fields and woods. How small now looks the city and all that it contained! How insignificant our work that so engrossed us before! We begin to see its true relation to the universe and our own position in it as well. We may perhaps take a part in the work on the field; then it, too, comes to have a new meaning to us. That which before appeared so commonplace and so much like drudgery is all at once filled with a sweetness and a dignity we never

dreamed that it possessed, with a charm which will never again desert it. We have been touched by the magic hand of Nature.

Wherein lies this wonderful power of nature to so inspire us with pure and noble thoughts? According to the popular conception, Nature is but a great storehouse for the material convenience of mankind. Nature furnishes us with food and clothing, and all that we need in our daily life, and all that we have to do is to see that we do not exhaust the supply, so that we may not suffer in consequence. Man is the master over Nature, to rule it as he wishes, and as far as his powers extend, and to profit by it. That is the generally accepted idea of the relation between man and nature, but if it were the true one, how then would it be possible for such a mere mass of trees and grass and rocks alone to exert such a powerful influence over us?

Nature is much more than she is commonly thought to be. According to Theosophy, she is a great, throbbing, sentient, conscious being, with stern commands to us and rich with fairy gifts. She does not speak to us in words, and yet she brings us a message such as never words did bring before. She speaks to all who wish to hear, who come as friends and lovers, wooing her instead of but to plunder. She has her secrets most profound, and guards them well against intruders, yet parts most willingly with them to one who has a wish to learn and comes prepared. For she is very exacting. Demanding prompt obedience to her laws, she never listens to excuses. She gives according to deserts, no more, no less.

Man is the master and the ruler, but tyrant King never received from fearing and unwilling people that which they gladly give to a beloved monarch. Nothing is ever obtained by force, nothing that really is worth having. We do not use force with our friends, but when we wish to get close to them we blend our thoughts with theirs and rise above the limitations that come from thought of benefit for self alone. We rise then to the level of their soul, then soul will speak to soul, and each gives to the other that which each has best. So must we also approach Nature, as Givers, with the riches of our hearts as gifts, and she will give us hers and bid us welcome.

Nature does not speak in words, yet she speaks to us with a thousand tongues. The laughing brook, the steady-flowing stream, the ocean's deafening roar, all have their tales to tell. The waving grass whispers its secrets to us, as do the restful-sounding, stately forest pines. The mighty mountains speak to us of majesty and power, the open sea and cooling breeze and light of freedom. The desert sand and stillness speaks, of death not, but of ever-present, lasting life. There is no thing inert in Nature, nothing that is not moving steadily in regular, magnificent procession towards higher life. The steps and grades are many, yet whatever be the present state, of stone or plant, or animal, each is inspired by its overshadowing soul which guides it on, and it is this which finds expression in the different forms and speaks to us its words of wisdom.

Nature is always true. Her language, veiled, is always inspired by the inward truth, by the urge to give expression to the life within. For what is any form of life if not just this constant desire of the Divine to manifest itself in outward forms, in forms symbolic of the indwelling spirit? If we will but listen, we will hear God's voice in all that surrounds us, and it is that voice which makes the power of Nature so supreme.

E. T. SEDERHOLM

Ingratitude

IN the eyes of Nature's Law ingratitude stands as the unpardonable sin, the most base and ignoble crime that is possible for a human soul to commit. Such betrayal of the Divine Life, the source of all inspiration, knowledge and virtue, is almost unimaginable. Nevertheless, the fact stands unimpeachable that, age after age, ingratitude has been the weapon used to destroy the mightiest and bravest of Humanity's Helpers. No matter what the death may have been, whether it was burning at the stake, or crucifixion, or imprisonment, it only in part expressed the baseness of the ingratitude.

But in the darkest periods of the world's history there have always been those who have given their lives as a sacrifice for humanity. The knowledge of their noble lives and deeds may be obscured, their names almost obliterated or degraded by false historians—but the record of their great service in Humanity's cause stands unblemished in the light of that Divine Law, whose servants those noble Souls were, and shall yet be known among men in all nations of the earth.

W. S.

HOPE

IN a vast wood, whose arches, deed and cold,
Won no pale glimmer from the stars o'erhead.
I made a grave, and heaped it high with mould,
And wrote upon a grey stone at its head,
The words, "Here Hope lies dead."

Then, as I turned away, lo! one stood there,
Radiant, his bright wings tipped with morning flame,
Who shook the dank earth from his robes and hair,
And smiled triumphant as he told his name,
And, "I am Hope," he said.—Selected

Question How are man's life and evolution governed by cycles? How can there be progress if we continually come back to the same point? (Concluded from the issue of August 7th)

Answer We give here the last of the extracts, selected from W. Q. Judge's address on the subject, as having a bearing on the question:

We are here a new race in a new cycle, and persons who know say that a cycle is going to end in a few years and a new one begin, and that that ending and beginning will be accompanied by convulsions of society and of nature. We can all almost see it coming. The events are very complete in the sky. You remember Daniel saying, "A time, half a time, and a time," and so on, and people in the Christian system have been trying to find out the time when the time began, and that is just the difficulty. We do not know when the time began. And the only person who in all these many years has made a direct statement is Madame Blavatsky, and she said, "A cycle is ending in a few years, you must prepare." So that it was like the old prophets who came to the people and said, "Prepare for a new era of things, get ready for what you have to do." That is just what this civilization is doing. It is the highest, although the crudest, civilization now on the earth. It is the beginning of the great civilization that is to come, when old Europe has been destroyed; when the civilizations of Europe are unable to do any more, then this will be the place where the new great civilization will begin to put out a hand once more to grasp that of the ancient East, who has sat there silently doing nothing all these years, holding in her ancient crypts and libraries and records the philosophy which the world wants, and it is this philosophy and this ethics that the Theosophical Society is trying to give you. It is a philosophy you can understand and practise.

It is well enough to say to a man, Do right, but after a while, in this superstitious era, he will say, Why should I do right, unless I feel like it? When you are showing these laws, that he must come back in his cycle; that he is subject to evolution; that he is a reincarnated pilgrim soul, then he will see the reason why, and then in order to get him a secure basis, he accepts the philosophy, and that is what the Theosophical Society and the Theosophical movement are trying to do.

From the consideration of the question and the extracts given, is it not perfectly clear that instead of asking "how can there be progress" if the teaching regarding cycles holds good, the contrary statement hold good that our progress is by means of cycles? Furthermore, we do not come back to the same point. We well know that no moment of time can be repeated, however near we may come to it in recollection and try to live it over again. It is different, and we are different; each moment adds its experience that can never be wholly effaced. Nature may take a million years to produce a modification, but each one of those years plays its part in bringing about the final result, and there is no standing still in the whole universe. But it is given to man to work with the cycles of nature or against them, and thus his progress is in his own hands. If we will but learn to know the times and the seasons, we may sow seed that shall not fail of its harvest. The harvest will come whether we sow ignorantly or with knowledge, but if we will use our knowledge we may sow what seeds we will.

STUDENT

As to Plagiarism

A WRITER on this subject in a late number of the *Academy*, heads his article with the title, "The Art of Plagiarism;" and the words of his title may be an unconscious imitation of a sentence in Isaac Disraeli's *Curiosities of Literature*, where we have these words, "The plagiarism of orators is the art," etc. The writer is discussing a supposed plagiarism of Disraeli, the son, and yet himself borrows without acknowledgment, words from Disraeli, the father!

Plagiarism in itself is not only literary theft, it is the using of the words or ideas of another with the purpose of making the hearer or reader accept them as our own. It is not the taking and using of the words or ideas of another, but the intent or purpose of deception which constitutes real plagiarism. The word plagiarist originally signified *man stealer*, from *plagio*, to surround with a net. Hence it is used to describe that act in which a man takes the ideas of another, and so changes them that even the author would not know them, and thus he gives them forth as his own. It is in this sense that Isaac Disraeli uses the word, when he says the plagiarist disguises the speeches of others "in such a manner that it becomes impossible even for the author himself to recognize his own work, his own genius and his own style." But usually plagiarism means the unacknowledged use of another's words or ideas, even without any attempt at disguise. Emerson says:

It has come to be practically a sort of rule in literature, that a man, having once shown himself capable of original writing, is entitled thenceforth to steal from the writings of others at discretion. Thought is the property of him who can entertain it; and of him who can adequately place it. A certain awkwardness marks the use of borrowed thoughts; but as soon as we have learned what to do with them, they become our own.

Voltaire uses the expression, "honest plagiarists," where he speaks of all "makers of dictionaries repeating the thoughts of others, backwards and forwards, their opinions, errors and impostures." And much the same thing might be said of our scientific men, who, as in the matter of the composition of the atmosphere simply copied the one from the other for about one hundred years, until the discovery of *argon*, a few years ago, showed that they had all the time been copying, not investigating.

We are probably not so original as we think we are. When we compare modern scientific conceptions with those of Lucretius and others long before his day; or when we trace to Plato the springs of much of our advanced thought which is called modern, we may well say with Solomon, "There is no new thing under the sun." Shakespeare owes much to the Bible, as well as to other writers. In fact there is no such thing as absolute originality—for as Tennyson says, "We are heirs of all the ages." Today we are the sum total of all past yesterdays.

Besides all this, we find that discoverers, living at a distance from each other, have often made the same discovery about the same time, showing that there is some realm of knowledge which is open to all minds of the same development. May it not be so with many of our ideas? If thoughts be realities, and ideas realities, our minds may often receive ideas without knowing whence they came. It is no unusual thing for one person when writing to put down a thought which another person sitting in the same room, has had in mind at the same time. Nor is it a very rare thing to find in an old author thoughts which you honestly believed to be original to yourself. The utmost we can hope to do is to give to the thoughts or ideas which others have had, some added coloring derived from our own experience, even as we add our lives, whether a minus or a plus quantity, to the sum total of all the past. S. J. N.

The Maltese Faldetta

THE first impression of a stranger in Malta is that the main portion of the female population is composed of nuns. Almost to a woman the black poke bonnet with its veil is worn, with a distinctly depressing effect. This faldetta was originally a punishment imposed by the priesthood on the women of Malta, after the excesses which occurred at the end of the Eighteenth century, when the island was captured and held for a short time by the French. This mark of penance has been worn for the prescribed century, but the Maltese have become so much accustomed to its use that they wear it still. It is remarkable that such an arbitrary order imposed upon this island people should have been so binding, and perhaps still more so to find its influence engrained in them to such an extent that they have no wish to discard this mark of disgrace.

Odds and Ends

America's First Greek Amphitheatre THE first Greek amphitheatre ever built in America is the one at Point Loma, on the grounds of the School of Antiquity. Katherine Tingley constructed this amphitheatre in 1901. In 1898, she presented Æschylus' *Eumenides* in New York city and Buffalo, with great success. Later, she recast the tragedy in its original Greek form, at Point Loma, California. It is expected that not later than January, 1905, other of the classic Greek plays will be presented by the students at Point Loma.

The Tibetan Expedition It is very interesting to watch developments of the Tibetan expedition. It is said that two-thirds of the struggle is over. Those who have visited Lhasa, or who have ever had any communication with that place, know well the nature of the difficulties that Gen. Macdonald must meet. The ordinary strategy of military operations will do little to accomplish the object of the mission. The citizens of Lhasa, as well as all Tibetans, feel it to be their religious duty to protect from foreign invasion what is to them a sacred land. There are some foolish enough to say that the Tibetans are not courageous. This same class of critics said the same of the Japanese! There will be many disquieting events in the history of this mission before it has finished its labors. It is to be hoped that the rumors of negotiations for peace are true; that no more blood will be shed, and that justice will preside over all the doings of both the British and the Tibetans.

Agricultural Education at Point Loma. A FARMER should have a thorough education. Many an honest man, energetic and devoted to his work, has lost his money and courage in farming, because he had not the knowledge necessary to make his agricultural ventures a success. The School of Agriculture at Point Loma serves to remedy this defect to a very large degree. We are teaching some of our young lads to become good farmers as well as good citizens, scholars and helpers to humanity. The United States has the greatest Department of Agriculture in the world. The following is an extract from one of the reports of the Agricultural Department at Washington:

The act of Feb. 2, 1903, enables the Secretary of Agriculture to prevent the spread of contagious and infectious diseases of live stock. Rigid inspection has

protected our cattle against infection from abroad, and has established the highest credit for our meat products in the markets of the world. The earth has been searched for weapons with which to fight the enemies that destroy the growing crops. An insect brought from near the great wall of China has checked the San José scale, which was destroying our orchards; a parasite fly brought from South Africa is exterminating the black scale in the lemon and orange groves of California, and an ant from Guatemala is about offering battle to the boll weevil. Broad science has been brought to the aid of limited experience. Study of the relations between plant life and climate and soil has been followed by the introduction of special crops suited to our varied conditions. The introduction of just the right kind of seed has enabled the Gulf States to increase our rice crop from 115,000,000 pounds in 1898 to 400,000,000 pounds in 1903, and to supply the entire American demand, with a surplus for export. The right kind of sugar beet has increased our annual production of beet sugar by over 200,000 tons. Seed brought from countries of little rainfall is producing millions of bushels of grain on lands which a few years ago were deemed a hopeless part of the arid belt.

A Clock Which Will Run 30,000 Years THE *Scientific American* says that a radium clock has been constructed by Mr. Harrison Martindale, which will run indefinitely. The principle of this apparatus is simplicity itself, the registration of time being made in two-minute beats, while its function is to exhibit the dissipation of negatively charged alpha and beta rays by radium. The clock comprises a small tube, in which is placed a minute quantity of radium supported in an exhausted glass vessel by a quartz rod. To the lower end of the tube, which is colored violet by the action of the radium, an electroscope formed of two long leaves or strips of silver is attached. A charge of electricity in which there are no beta rays is transmitted through the activity of the radium into the leaves, and the latter thereby expand until they touch the sides of the vessel, connected to earth by wires, which instantly conduct the electric charge, and the leaves fall together. This simple operation is repeated incessantly every two minutes until the radium is exhausted, which in this instance it is computed will occupy thirty thousand years.

THE Truth, if it is to endure, must show itself in conformity with the will of a beneficent God and with the laws of Nature.—*Giordano Bruno*

It were better to be of no church than bitter for any.—*William Penn*

To the Members of The Universal Brotherhood Throughout the World: In order to expedite improvements in the different Departments of The Universal Brotherhood Organization, it is necessary that all communications, connected with the work of the Universal Brotherhood, should be directed to Katherine Tingley, Loma Homestead, Point Loma, California.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 30 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

A Rational Explanation of Genius

THE origin of Genius in man, is considered today to be an insolvable riddle. It is regarded as a mystery; and its cause is thought to be forever unknown. Speculations without number are indulged in as to what makes the difference between the poet, the musician, the general and the artist. It is thought by some to depend upon the number of the convolutions in the brain, and upon the especial and particular activity of certain mysterious cells; one set of them going to build the mental structure of the artist; another, the musician; another the poet, and so forth, *ad libitum*. The presence of Genius excites scientific curiosity; and the majority of us admire silently that hidden power which by its flame and fire startles the world.

Genius is called a "gift," and we ignorantly worship its mystery and

power; but what makes it, baffles the inquiry of our thinkers.

While Carlyle has said that Genius is the capacity of one for taking infinite pains, I doubt whether the most laborious schemes of painstaking endeavor would engender that spark of something which raises a man so far above his fellows as is the Genius. A Genius is born, not made; and that capacity for taking infinite pains, is an integral part of his whole make-up, certainly not the cause of his sacred gift.

Neither Heredity nor Gray Matter

Neither heredity, nor the amount of one's brain matter will explain it; for the heads of certain Geniuses have been found by measurement to be not as large as those of individual savages; and as to heredity, it is only too apparent a fact that our geniuses are not by any means born of genius in the parents. Shakespeare reached immortal heights by the intrinsic energy of his inspired mind; yet his father was a respectable merchant in Stratford, and his mother was a good woman, but devoid of anything like genius. Beethoven's father was a musician, it is true, but by no means a Genius, and his mother was the daughter of a cook. The great Wagner's father was an employé in a police court, and his mother showed no especial gifts of any kind. Then again, it is often said to be the case, that the children of Geniuses are frequently inferior to the average mentality of the day, and they do not share in the parent's quickening life.

How about what Schopenhauer says? This thinker postulates that every human being possesses the spark and fire of Genius, but that it remains latent and sleeping in the huge majority of us.

Now, is indeed, the origin of Genius so inexplicable? Why is it that thinking men have not paused to consider whether the Reincarnation of the Soul of man might not illumine this dark question? May not a man bring back to life the fruitage of that which he labored for in other lives—perhaps through many lives, struggling, striving towards the perfection of a predominant trait in his character?

In Reincarnation Lies Only Clue

If this characteristically dominant trait be something apart from that which returns to dust at death, how can it help but endure? If the mind be set upon things which are of a permanent nature, and of a universal kind—something so broad and so generous in its scope that the entire human family feel it as a reality—Music, Art, and Poetry for instance—such a mind partakes of the nature of the thing it loves; it receives a spiritual baptism, so to say; and therefore that part of the mind is as eternal as the Muse, for it is indrawn into the Muse itself.

Schopenhauer is right. In each of us there dwells a silent god; it sleepeth still, but that is because we have not yet ourselves awakened. Every Son of Man is a Genius; in some the divine fire Prometheus stole from highest heaven leaps home, heavenward; in most of us it is but a spark. The message Theosophy has brought to man lightens many an obscure problem. Its explanation of life is perfect, utterly satisfactory and full of sweet comfort.

G. DE P.

The March of Civilization

IT is a pity we cannot have statistical records of the war-mortality of preceding centuries of this Christian era. Then we should know how civilization was really progressing with us. During the century just closed, only fourteen and a half millions of men were slain in war. A great many more, of course, died of starvation; lands were laid waste; and there are the widows and orphans unprovided for, to consider. We know, from each others' constant assurances, how very civilized we are; and it therefore follows that preceding centuries must have exhibited an even greater mortality. From our knowledge, thus derived, that war-mortality is lessening, we are able to infer our advance in civilization. It may look like reasoning in a circle; but what else are we to do? we must prove the case somehow. The figures are Dr. Charles Richet's, and the total is thus made up:

Napoleonic wars, 8,000,000; Crimean wars, 300,000; Italian war, 300,000; American Civil War, 500,000; Franco-German war, 800,000; Russo-Turkish war, 400,000; civil wars in South America, 500,000; various colonial expeditions (including, one supposes, "peaceful missions") in India, Algeria, Mexico, Tonquin, Abyssinia, South Africa and Madagascar, 3,000,000.

Sometime, we shall have to make a definition of civilization that will not be contradicted by the above facts, and others relating to crime, drink, suicide, insanity, etc. The difficulty may teach us something. S.

Art, Religion and Science---Sisters

A WRITER in one of the *Reviews*, protesting against the oft-repeated statement that Art is the handmaid of Religion, makes matters no better by saying that Art, Religion and Science, "though mutually helpful, are entirely independent in their spheres." He adds:

Religion purifies the heart of man. Art gives expression and development to the imagination, and Knowledge feeds and nourishes the mind. . . . Art does not diverge into the domain of Religion, nor does Religion, unless tainted with presumption, trench on Science. Each should retain its individuality if it would maintain its power.

He makes the three "sisters," but not united, only coldly sympathetic. Theosophy entirely dissents from this view, and this dissent marks a most important point of divergence between Theosophy and current ideas.

Art, Religion and Science, together with all other departments into which human aspiration and speculation may be divided, are one in essence, and the more they become sublimated and purified from the dross of ignorance, superstition and sensualism, the more closely do they blend. Their separation is due to the gross elements that have combined with each. In this state of debasement the only union that can take place is a meretricious or servile one, from the idea of which the irritable critic pardonably revolts. We would not preach any such forced union.

On the contrary, what Theosophy does towards Art, Religion and Science, is the same as what it does towards men; it does not force them together into an artificial union, but shows how and wherein they actually *are* united, and urges them to cultivate the homogeneous part of their nature instead of the discordant elements.

Religion, Art and Science are all united in the sacred *Gnosis* or *Wisdom-Religion*, that great ocean of knowledge whose existence has been forgotten during the fighting and drinking ages. When the Truth appeals to us through the heart we may call it Religion; when through the imagination, Art; and when through the intellect, Science. But the Truth is one. Since, however, none of the three sisters as worshiped today has much of the Truth in her, the bond of union is lacking.

We can understand the gulf between the communion-table and the dissecting-bench, and it is not difficult to realize the chasm between Little Bethel and an art-studio; but our ideas of Religion are not confined to churches and prelates, nor our notions of Science and Art to the materialistic and conventional forms they usually take. If Religion were beautiful, as it should be, Art would not need to sneer at it. If Art were as chaste and inspiring as it might be, Religion would not need to sniff at it. It is because Science grovels and trifles so much, that the others can afford to ignore or shun it.

Theosophy elevates and reinstates Religion, Art and Science, so that their innate and inalienable kinship becomes obvious and there is no question of trenching on each other's private domains. It restores to Religion the beauty of Art and the luminosity of Science, and to the other two the noble purpose of Religion. And all three unite in the common end of ennobling life.

H. T. E.

A Linguistic Marvel---Human Capacity Has No Limit

THE newspapers tell of Professor Trombetti, an extraordinary linguist who has been living in Italy unknown and unrecognized, although he knows 400 American languages, all the modern languages, all the dead languages without exception, and all the Eastern languages or dialects.

He began life as one of the very poor, and was successively a barber, a jeweler, etc. During this time he could not go to school, but this made no difference—he seemed to be educated by magic. When a little boy he bought a German grammar for five cents and so learned German. One day he saw a Hebrew book translated into Latin, and learned the latter that he might read it, and then went on to the original. Another day he saw a life of Abd-el-Kader, and so learned Arabic. He came to light by winning £400 offered for the best work on languages, his book being the *Genealogical Connection Between the Languages of the Old World*.

Here we have one of those numerous cases where hard and unblushing facts flatly contradict comfortable theories. We have a materialistic philosophy by which the scope of human faculties is limited to suit our limited aspirations, and some one forthwith exhibits a degree of capability

that ought not in common decency to be possible, as it makes both other people and their theories look so foolish. Infant prodigies are born into the world with a ready-made equipment of consummate accomplishment, and calculating boys do sums instantaneously by unknown methods. Every day some new fact shows that there is nothing we may not expect in the way of mental phenomena, and that no limits whatever can be set to the range of human possibilities.

The memory may be developed to any extent—it is only a question of time and application—or people may be born endowed with a limitless and all-retaining memory. Certain classes of facts go to indicate that the mental functions can be practised to such an extent as to become automatic and so to go on working of themselves while the attention is engaged elsewhere. This suggests the possibility of being able to do several things at once with different parts of the mind.

William Q. Judge, speaking of the uses of books in the acquisition of knowledge, says that man has, latent in his nature, the power to glean all the information he needs without such an adventitious aid as a book; and we can trace various degrees of approximation to this capability, since highly organized minds will rapidly skim the essence from any book they see, while others may require slow study and pondering. All ideas ever thought are recorded in a way not known to present science, in that "mind-stuff" which pervades the universe, and of which our minds are the receiving and transmitting instruments.

Why should not a trained organism, as natural results of a clean life, be able to tap those sources?

In short, as the thought-world is infinite and replete with all possible variety of materials, and as man's organism is a marvelous electrical instrument capable of unlimited elaboration and perfection, we need be surprised at nothing in the line of mental prodigies.

STUDENT

Masonry and Taxation

A MASONIC Lodge situated within the jurisdiction of the Cawnpore municipality, in India, has been regularly subjected to house-tax for many years. In spite of continued protest the Treasurer was made personally responsible for the payment, but in 1902 he refused to pay what he considered an unfair tax. His arrest followed, and he brought suit for damages on account of its illegality. The ground of protest was to the effect that it was illegal to tax a temple, and evidence was given that the worship of the Deity was carried on in the Lodge. After a hearing, which lasted many days, the decision was given for the plaintiff, damages to the extent of 2,500 rupees being awarded, with costs. The position taken by the municipality, both in taxing the Lodge and in arresting the Treasurer for resistance of payment, was shown to be illegal, thus acknowledging the justice of the protest.

Hadrian's Arch---Frontispiece

THIS week's cover-page of THE NEW CENTURY PATH shows one of the most picturesque views of Athens, Greece. Even in the picture the effect is fine, but with the play of light on the broken columns and through the arch, in evening or morning, with the purple hills beyond, the effect is superb. The Arch in the foreground is called that of Hadrian. The graceful row of columns beyond, is all that remains of the famous temple of Jupiter Olympius. There now remain standing on a raised platform 16 of these columns, Corinthian style, each of which is fully 60 feet high. These imposing ruins lie on the handsome boulevard leading up to, and past the Acropolis. On all sides of the platform on which the Temple of Olympian Jove was built, and which is still a grand and very remarkable picture, lie remains of age-old buildings of many kinds. Broken columns, shattered plinths, fallen stone—the whole speaking with silent voice of a past art in a half-forgotten civilization.

The ancients did indeed build grandly, for they built to defy time. Had not the ruthlessness of man combined with the natural forces of destruction in the shape of earthquakes—wind, rain, sun and the gnawing teeth of time would have left us nearly intact, most of these superb monumental evidences of another time. Though the voices of the thronging multitudes of ancient Greece are stilled, yet their life comes back to us through the cycling of those past centuries as we gaze upon their gifts, for the life of a people is built into its architecture.

Where will *ours* be two thousand years hence?

Some Views on XXth Century Problems

Hypnotism a Mistaken Method

WRITING on medical hypnotism, in *Cosmos* (Paris) Dr. L. Menard makes the following salutary remarks: By cultivating the tendency to passivity and credulity which is at the bottom of the hypnotic state, we cause in the subjects a sort of habitual automatism, a need for direction, which is injurious. Neuropaths are not apt to be self-controlled; we should strengthen in them the will-power, the power of control, and diminish the tendency to impulsive acts. Just the opposite is done in hypnotizing them; this makes them still less reasonable. The morbid symptom is sometimes cured, but the psychic state is not bettered—the congenital or acquired weakness that makes them the sport of their impressions, and incapable of throwing off their obsessions and of governing their emotions.—(*Literary Digest Translation*)

The Doctor, however, goes on to recommend, in place of this method of therapeutic suggestion, an indirect method of applying hypnotism, which consists in throwing the patient into a trance and then urging him to throw off his neuropathic obsessions and paralysis and regain sensibility in his organism. But, as this method seems to us but little, if at all, better than the other, since it likewise involves hypnotization and dependence on the will of the operator, we must equally condemn it. Now, what, let us ask, is the essence of the evil in hypnotization?

The Moral Nature and the Will

It is this: that the moral nature of the patient is supplanted, excused from duty, and its work done for it; when it should be aroused and persuaded to be watchful and do its duty.

The patient's moral sense, inspired by the light of Soul-wisdom and the warmth of noble aspiration shining (however dimly) from the spiritual center in the Heart, should use the Will and by its aid subdue and gain control of the entire organism, mental, emotional and vital. This is the proper sequence.

Then how can we help the patient, as it is our love-inspired duty to do?

Answer: we must appeal to his moral nature, and this cannot be done by bullying and commanding. We must reason and *persuade*. To use our own will, to employ brute force, is to usurp the sovereignty of the patient's own will and to take his Soul's duty out of the hands of his Soul and attempt to do it ourselves.

These remarks do not apply exclusively to hypnotism. Hypnotism is only a particular case of a general process which includes *all* forms of personal interference with another's will. All people influence each other, in ordinary life and without trance, both in the right way by good example and inducement, and in the wrong way by domineering and compelling.

And the same ethical principles apply throughout.

Raja Yoga Evokes the Soul Power

This is recognized in the Raja Yoga educational system. In this system the Soul of the child is evoked, and he is thus aided to use his own power in governing himself. Other systems resort to the influence of fear and self-interest; and often in bad cases this is the only effectual means of discipline that can be found, in the absence of properly constituted educational systems with teachers trained in the Raja Yoga principles. But, if control by fear is ever necessary, the necessity is regrettable; and while it may do for the culprit the best that can be done for him under the circumstances, it would have been still better could his higher nature have been reached.

What should be done to a neuropath—one who has lost control over his thoughts, emotions, actions and bodily functions; who is the victim of obsessing ideas and bad habits?

His highest aspirations and his best intelligence should be appealed to, that they may come to his aid and use the Will to control the faculties. But what if the victim is too far gone to be reachable in this way, as is the case with many of the victims of habits; if the organism is so debauched and depraved that the mind is misled by it so that the Will can get no grip?

Then it is a case for the doctor, who should be the assistant of the moral physician, or combine both functions in himself. The doctor cures the body with medical treatment and regimen, and the moral doctor

An Unnatu- ral & Useless Process

persuades the mind. But to throw the patient into a trance, oust his mind and soul from his organism, and place therein a viceroy or military governor of our own—that is an unnatural and useless process. We once knew a European naturalist who said he had been initiated into an order of Lamas in Thibet, where he was traveling in pursuit of his researches. He declared that these Lamas governed the people by hypnotism, and was most enthusiastic over the peace and order thus produced. But this is not the kind of community we want in America. We look for a community in which every individual shall be absolutely *free* to follow the guidance of a Light recognized by all as proceeding from the Soul—free alike from his own passions and from those of his fellows.

Hypnotism will not be needed when we have a body of people united in Soul-life. They will have at their disposal a moral influence sufficient for every emergency, and a wisdom that will put all the arts of the physician and all the beneficent healing powers of Nature into their service.

The Cure of Self-Con- sciousness

ONE of the current monthlies has an article whose aim is to teach us how to get over our self-consciousness. It is apparently written for the benefit of the blushing young man who dares not hear the sound of his own voice, or look frankly at a woman as he addresses her. What we really want is *more* self-consciousness, not less. Who would blush apologetically for his own existence if he had even begun to realize what *I am* means?

That which is ordinarily called self-consciousness is simply fear—fear lest the person to whom you are talking may be constructing an idea of your mind, body, or even clothes, which you do not wish him to have. Self-consciousness is the *cure* for this.

No one is less or more than a human being; consciousness in and of one's human beinghood is self-consciousness; consciousness of the shape of one's nose or trousers involves *loss* of self-consciousness.

So our formula for the pathetically situated young man would be: Stop thinking thoughts and doing deeds that are below the dignity of your humanity. The ground being thus cleared, think of yourself henceforth as a *human being* face to face with other equally and indefeasibly human beings variously embodied and clothed. In the one inner essential of their humanhood, all are equals, and in that lies self-consciousness—really the *soul's* consciousness.

STUDENT

Musical Vibrations & Materialism

EVEN habitual association with music cannot save some people from their instinctive materialism. It appears that Archbishop Farley has just discharged non-Christian musicians from the Catholic church-choirs of New York. *The Musical Courier* unfavorably criticizes this, arguing that: "The playing of the organ and the singing of hymns are not one whit different whether performed by Christians or by Jews or Buddhists, providing, of course, that the performers are all of equal musical merit," and that "a voice can simulate to perfection a very ecstasy of religious emotion, even if the singer be an out-and-out infidel."

This means that the singer radiates nothing from himself except aërial vibrations; and the instrumentalist, nothing at all. Does the writer really suppose that feeling and thought radiate nothing; that each man lives in his own absolutely walled-off world of consciousness, save in so far as he makes little—very little—windows through by means of words or gestures? Is humanity only an army of almost completely shell-cased solitaires? Surely even the recent discoveries of the constant human radiations of electricity and light in various forms, might teach one better than that. Let us hope that the musician who knows nothing outside the traditional limits of his own art may soon become an anachronism. For its full growth requires that he also energize every *other* department of his being, and thus fulfil the period of his usefulness. STUDENT

Art Music Literature and the Drama

The Province of Museums—A New Departure

IT was in 296 B. C. that the museum of Alexandria was founded by the Ptolemys as "a great university, the abiding place of men of science and of letters." Other museums were doubtless established before; others have been founded since, many of them writing heroic records of attempts to add the treasures of antiquity to those already in the storehouses of the modern world. How much have these vast museums done for humanity? Excepting in rare cases the help has not been commensurate with the hopes and plans of those who founded them.

There is written in an old Swedish inn this proverb, "You will find here excellent bread, wine and meat, providing you bring them with you." This gives us a hint of the real reason why our museums, in spite of the treasures they contain, have done so little to really uplift the people. The masses have brought with them no culture; they take, therefore, little away. Thousands wander through the rooms, buy catalogues, read every label, sign and description, and what do they get? Eye-strain, headache, and little else, in nine cases out of ten. The guide-books and even the best of catalogues, have almost no human interest, and are useful merely to the student; and at last modern founders and directors of museums are beginning to realize the need of a closer touch with the people themselves. In many museums short daily lectures are being inaugurated, and these do much, depending, however, on the attitude of the public, as well as on the humanity of the lecturer.

I say "humanity," because a mere collector of facts, a mere distributor of information, such as some lecturers unmistakably are, has but a slight message at best and finds but meager response. What is needed is not only deep sympathy with the hearts of men on the part of those who would reach them with this message from the past—and this our museums do record noble glimpses of—but a deep awakening on the part of the masses themselves. Of this awakening we have now but the promise, yet the hearts of men are calling, yea, hungering and thirsting after righteousness, "the Good, the Beautiful and the True," the pearl of great price. They are begging for light upon the old brain-mind conceptions of architecture, archeology, history and art. These sciences are entitled to new life, new spirit. The founders and directors of museums are beginning at last to learn that there is no real value in their collections, only in so far as they serve to bring back to us that which was best in the life and culture of the ancients, that which was purest in their heart-life. The masses are no longer content to be treated as mere information-gatherers, mere sight-seers, mere sensation-hunters.

They demand help—even though the demand is not yet voiced in written or spoken word—in gaining from these evidences, these fragmentary records of ancient civilizations, something that will rekindle the fires upon the altars of their own hearts. The time for a new departure is now, and its urge is surely felt in every aspiring heart. STUDENT

A Tribute to a Great Brotherhood Worker

GEORGE F. WATTS, R. A., the English poet-painter, the greatest of the few great Victorians who survived the Queen, has just passed away at the ripe age of eighty-seven, full of honors. As a prophet in art he was almost unique in this money-loving generation, and as a painter he was in the first rank. His works recall the great days of the Old Masters, his life was a benediction, and his public spirit was unbounded. Every morning this wonderful octogenarian started work at sunrise, thus affording a shining example to younger men.

His working power steadily increased with the years. This year not only had he his picture, "A Fugue," which is equal or superior to anything he had previously done, on exhibition at the London "New Gallery," but in the Royal Academy he showed a colossal equestrian statue "Physical Energy," which possesses qualities of the highest order. His work has made men think, for who has not profited by his "Hope," "Love and Life," "Love and Death," the terrible "Minotaur," even if these may be only seen in reproductions? He was essentially a teacher, and by the inspiration he and Burne-Jones brought to allegorical painting in the latter half of the Nineteenth century, the reputation of English art has been preserved.

Watts disliked to sell the work into which he put his soul, but he loved to give it. A witness to this is the splendid group of portraits of great men and allegorical pictures which redeems the credit of the Tate Gallery of London. He believed intensely in the principles of Brotherhood and consistently acted upon them. His favorite text was, "What doth the Lord require of thee, but to do justly, love mercy, and walk humbly before Him."

A true Greek in feeling, in thought, and in love of Nature, he was Hellenic in spiritual ideals. When, a couple of years ago, he was approached on the subject of the eternity of the soul and Reincarnation, he said:

It seems to me the most satisfying of hypotheses. It would explain many things. Why, for instance, should I have been born with this deep passion for Greece and Grecian things? From my earliest boyhood the word Greece, the thought of Greece, filled

me as nothing else could do, and to this day I have an intenser sense of sympathy and union with classic Greece than with any other country. All through my life I have longed for the realization of the old Greek ideals of art to give the people a sense of the beauty and sacredness of things, and to overthrow the fear of death.

How illy we can spare a man who said and acted upon the following:

My intention has not been so much to paint pictures that charm the eye, as to suggest great thoughts that will appeal to the imagination and the heart, and kindle all that is best and noblest in humanity.

Carved upon his sun-dial was the keynote of his life, "The utmost for the highest." Ruskin once said of Watts,

A great painter of thought. He aimed not so much to paint pictures as to suggest great thoughts that would appeal to the imagination and the heart, noble and pure ideals that would kindle all that is best in humanity. ART STUDENT

I AM inclined to think that only men of genius understand each other fully and thoroughly.—Schumann

THE RAJA YOGA CHORUS, POINT LOMA

SIGHT

by A. LAMPMAN

THE world is bright with beauty, and its days
Are filled with music; could we only know
True ends from false, and lofty things from low;
Could we but tear away the walls that graze
Our very elbows in life's frosty ways;
Behold the width beyond us with its flow,
Its knowledge and its murmur and its glow,
Where doubt itself is but a golden haze.

Ah, brothers, still upon our pathway lies
The shadow of dim weariness and fear,
Yet if we could but lift our earthward eyes
To see, and open our dull ears to hear,
Then should the wonder of this world draw near
And life's innumerable harmonies.

WE ARE NEGATIVE AND INERT IN MAKING OUR LIVES GLOWING EXAMPLES
OF RIGHT LIVING. KATHERINE TINGLEY

What Bringeth the Days?

A GENERAL outcry is being raised in pulpit and press against the excessive card-playing that prevails among women at present.

In the more exclusive circles, the game of bridge whist played for high stakes, has become so popular and absorbing that at least one club of men, whose wives are addicted to this amusement, has been formed with the avowed object of checking the card habit. Among another class of women the fascinations of the game of euchre, played for prizes ranging in variety from a diamond sunburst to a cheap nick-nack from a bargain table, are such that there are euchre clubs for play in the morning, and in the afternoon, as well as in the evening, and it is reported that the women in one city have even been known to *pay a fee*, for the privilege of joining in this game in the houses of their friends!

The playing of cards has, in these cases, ceased to be a pastime; it has become the means of introducing into the homes and social life the element of gambling, that is the bane of the financial world, and lurks with kindred evils in the dark shadows of men's lives. Indulging in amusements of this kind has a deteriorating effect on the whole nature, rousing as it does, the ignoble passions of intense love of gain, and of inordinate excitement, and fostering a selfish disregard of others. It can result only in a moral and physical weakening.

But the preaching of sermons will not effect the reform needed. The truth of the matter is that women require recreation, and there is nothing reprehensible in the pursuit of enjoyment, even with keen interest, provided that the energy and interest be directed to some form of the exercise of body or mind that promotes the "perfect physical sanity" which was so prized by the ancients, and which goes hand in hand with the lucid minds and alert will, that can deal wisely with situations of whatever kind. We learn by bitter experience that amusements, which thus benefit the whole nature, do most truly *amuse*, while those that corrupt the heart prove to be merely forms of dissipation.

How many of the women who spend hours of daylight playing cards, know anything of the pleasures of the gymnasium?

How many of them know anything of the pleasures of an out-door game suited to their strength, and played with strict and *courteous* adherence to the accepted rules of the game? The difference between dissipation and relaxation is great and should be understood.

Picture a nervously irritable, or what shocks us more, a coldly triumphant woman returning from an afternoon card party, clutching a coveted prize, won in a game of chance from her friends! But look again, and be witness of a return from the field. See the merry, interested faces. The burdens of years have rolled from the shoulders of these ball-players—if for but one hour—and in the interest roused by the game and the test of growing skill, barriers of personality have been broken down between woman and woman. There has passed an hour of healthful self-forgetting that will benefit body, mind and heart.

Sing ho! for the field, and Æolus shuffle the cards!

STUDENT

The Psychological Influences of Modern Life

IT seems incredible that we may be surrounded by influences which are producing definite and perceptible results, and yet that we are ignorant of their existence. Women suffer and know not the cause; nor do they seek to know, but simply drift on and on, without the courage or the enterprise to face real conditions and seek liberation.

We do not use our powers as we might. We feel at times that we are mighty to achieve; for a moment a light burns in our hearts, and then we let it fade, and we drift. This is a negative condition, which opens the nature to those forces whose only aim is to destroy. They are like a vampire, which tempts, uses and feeds upon us, because we do not suspect its presence, because we do not assert our divinity and step forth, throwing off its appalling weight.

It comes to us in alluring forms, it calls upon our sympathy, it demands a certain sentimentality, and in the name of kindness and even of love, we render up life and strength and independence to foster and nourish this tyrant, Selfishness, which walks daily at our side.

Women need not remain in ignorance of the true nature of these dark forces. That there is a way of deliverance, a way of bringing this unseen, mysterious disturber of peace forth into the light, is a fact beyond question. Before we can find this way, we must have a positive determination to become enlightened, to *dare to see things as they really are*, to discriminate, and to act with decision. Then the soul steps into the arena and takes a visible and active part in our lives, and we see that there is another side to this question of psychology. We find that a beneficent power is quietly waiting to take command.

E. W.

LET the whole field of reality be laid open to woman as well as man, and then that which is peculiar in her mental modification, instead of being, as it is now, a source of discord and repulsion between the sexes, will be found to be a necessary complement to the truth and beauty of life. Then we shall have that marriage of minds which alone can blend all the hues of thought and feeling in one lovely rainbow of promise for the harvest of human happiness. — George Eliot

Heroism of a Greek Maiden

Heroism feels and never reasons, and therefore is always right.—*Emerson*

STILL another brave deed of heroism is added to the long list already recorded to the credit of women. Word comes to us from Geneva, Switzerland, relating the heroic act of a Greek maiden, Mlle. Hadjilazaro, who saved her brother from an awful death, recently, in an Alpine crevasse.

M. Hadjilazaro an experienced mountain climber and member of the Geneva section of the Alpine Club, started with his two sisters from Zinal to the mountains, taking no guide, trusting to his own expertness and knowledge. After scaling the Grand Cornier, they began the last and most difficult feat, the descent of the Glacier de Moiry. It was here that the greatest danger lay in the concealed crevasse. The instinct of the guide is sure enough to warn him of such danger—but not so with the Greek. Suddenly the treacherous snow gave way beneath him and he fell, pulling with him as he went down his sister who was tied next on the rope. Quick to act as she swung over the crevasse she braced

The Professional Slanderer

A YOUNG lady, a school-teacher, of Rhode Island has recently brought suit against a fellow citizen for slander. She has asked \$20,000 damages.

One of the discoveries that lies in wait for professional slanderers of the Twentieth century is, that no longer shall a blot cast upon the fair fame of a woman, pass unchallenged. It is true that women have had their champions, in a spasmodic kind of succession, and from various motives, some egotistical and emotional, and a few we know from a truly chivalric sense, and a real endeavor to do justice. But *no longer*, just because a woman cannot hit back from the shoulder as a man can, shall the bearer of false witness, who has it in him to say just anything arising in his foul mind about a woman, be permitted to hold up his head among his fellows; and not very much longer shall false swearing be a secure ally for the blackmailer.

The true and wiser reason why these things shall not continue, is that there is at last a unity and coherence in the relation of women to one

WOMEN STUDENTS OF POINT LOMA, CALIFORNIA, IN A GAME OF BASKET BALL. "A FREE THROW"

herself with one limb on either side, thus holding the entire weight of her brother suspended upon her hips.

There was nothing to be done but to stand there in this awful position, to save her brother from instant death, while the other sister hastened down the mountain to the nearest village for assistance. Not until thirteen hours had elapsed did she return with the relief party—and all this time the noble Greek maiden had firmly held to her position which was one of the greatest torture. The rope cut into her hips and the pain was excruciating, but stand she did with the reward at the end that her brother's life was saved.

Words are too commonplace to express what one feels towards the doer of such a brave act. There is a protective feeling inherent in true womanhood, perhaps arising from her maternal nature which leaps to the surface in such hours of danger, and the woman seems to have no thought of any risk to her own life—only to save the one in danger. E.

POSTMASTER JOHN MCKAY of Des Moines, Iowa, who made a recommendation to the Department at Washington favoring the removal of the ban that limits the civil service examination for letter carriers to males, said:

When you send a woman on an errand, she will return in half the time that a man will. We find them equal and even superior to men in the money order, stamp, and other divisions, and I favor giving them a trial in the delivery section.

another, that has given rise among them to a new kind of invulnerability, proof against the professional slanderer. Let him beware! The power to endure, that practice has made well-nigh perfect in women, is being transformed into courage to act, and this, sustained by the feeling of unity among them is coining for them a new armor. Many there will be who shall fall before it!

In the years to come, secure in this armor, women will make a crusade into history, and rescue from the fogs of unworthy interpretation many of their sex, who for ages have been victims of slander, the lustre of their fame tarnished, and their part in the world's work far from being fully recognized or understood. T.

THERE is a curious idea prevalent in the minds of some women, that they become "emancipated" when they adopt certain customs and habits of men, many of which are to be deplored in men, such as gambling, drinking and smoking. The Countess Johanna Rhedey of Hungary who recently died was a striking example of this particular kind of "emancipated" woman. She was a strong advocate of women's "emancipation," appearing always in public with a cigar in her mouth, and thick stick in her hand. She wore her hair cropped short and a man's hat and coat. But worse than all was her gambling habit—playing cards daily with men in coffee-house until she had squandered her fortune.

Bath-room of the Homeric Palace at Tiryns

THE ancient Achæan city of Tiryns, spoken of in Homer, stood on a small rock in the plain of Argolis, about three miles from the sea, and was said to have been founded by King Proetus, the brother of Acrisius, who was succeeded by the hero Perseus. It was the scene of the early life of Heracles, and the massive walls are said to be of Cyclopean workmanship. Its period of greatest splendor was between the Eleventh and Tenth centuries B. C., and it was destroyed about 468 B. C., through the jealousy of Argos.

Schliemann and Dörpfeld excavated part of the rock in 1884—85 and exposed a Greek palace of the Eleventh or Tenth century B. C., which is most valuable as a key to Homeric descriptions. This contains many courts, apartments and chambers, whose uses have been identified by these descriptions.

Our illustration shows the bath-room, which has been described by Pausanias, the antiquarian who lived under Hadrian and Marcus Aurelius. The following description is taken from him (Vol. III.—J. G. Frazer):

The floor is formed by a gigantic block of limestone 13 feet, 1 inch long, over 10 feet broad, and averages 2 feet, 3 1-2 inches in thickness. Its weight must therefore be about 20 tons. At regular intervals along the border are found two holes close together, these holes probably served to fasten wooden panels of wainscot which lined the walls; the panels, we may suppose, were fastened by dowels let into the holes. The central part of the great block which forms the floor is well polished and slopes gently so as to let the water run off into a gutter at one corner. Tubs filled with water must have been placed on the floor of the bath-room for the use of bathers. A fragment of such a tub was actually found. It is made of thick terra-cotta, and in shape resembles our own bath-tubs.

BATH-ROOM OF THE HOMERIC PALACE AT TIRYNS

Important Archeological Research in & About Palestine

ABOUT midway between the Jordan and the Mediterranean, and thirty miles south of the Sea of Galilee, is the Plain of Jezreel. Commandingly overlooking this plain is the Hill of Mutesellim, and on this hill it is supposed there once stood the City of Megiddo, of the Israelite Kings, a city fortified by Solomon and, five thousand years ago, held by the Pharaohs.

Here, researches are going on. A trench has been made, already seventy feet deep, which has cut through seven cities, one below the other; but not yet has the lowest been reached. One of the objects found was a seal, bearing the legend: "Of Shema, the servant of Jeroboam." This is the first thing excavated in Palestine bearing a well-known Biblical name. Other inscribed material of the Israelite time will doubtless follow. Six cuneiform tablets from the pre-Israelite period have, however, been found three or four miles from Mutesellim.

The hill is proving very rich in finds. A large prehistoric Canaanite temple was unearthed, and also a spacious subterranean chamber built for some unknown use. There were many graves, full of weapons, jars, and instruments; and a Babylonian cuneiform cylinder. There were twelve great monoliths, stone masses adored and used as shrines by the Israelites of the days of the Kings. These bear ancient Hebrew letters. There was an Israelite shrine containing nine jars filled with infants' bones, sacrifices. "The children were suffocated with dry earth and ashes filled into the jars, in accordance with a cruel adopted Phœnician cult," says Mr. Ravndal's report. This was the sacrifice of the primogenitary and of twins. There were also all kinds of idols, pieces of pottery, weapons and Egyptian scarabs.

We shall watch further research here with great interest. Much light is needed on the history of Palestine. Nothing, for instance, is known of the origin of the great cromlechs and circles of stones found east and west of Jordan. Can they be of the same source as the similar remains at Stonehenge, Carnac and elsewhere? Legendary explanations that once prevailed in Palestine, fully corroborated, of course, in the Old Testament, ascribed them to a race of primeval giants who dwelt there. Perhaps remains of even these may come to light.

Mysterious Race of Intelligent Cave-Dwellers

UNDER the heading of "Masonic Mysteries," the *Trestle Board* quotes a remarkable story of a race of civilized troglodytes in Central America. Colonel J. C. Tucker is reported to have reached this hidden city after traveling for several hundred miles through forest and jungle.

By shooting a pair of man-killing lions in the jungles, Colonel Tucker appears to have gained the friendship of the exclusive race he describes. The city is hewn out of the solid rock and entered by secret passages. Large, commodious rooms, furnished in old mahogany with a great hall for meetings, all scientifically ventilated and lighted by electricity, indicate a close

touch with civilization kept by the tribe, as does the good English spoken by the high priest.

Effective protection against enemies is provided for by the storage of poisonous gases in proximity to the entrances, capable of being used to fill the passages, but not the dwelling-places.

Arrangements for observing the skies are described, and indications of high civilization are found among them.

The Colonel says he was an attendant at their meetings, where he found Masonic rituals in use, said to be inherited from an unknown ancestry. Some of their old hieroglyphic manuscripts he secured, but is unable to translate.

Such is the story, by no means an isolated one. In many parts of the world are similar narratives of secluded and isolated centers of a civilization that desires no open contact with our modern life. In Honduras, Brazil, West Africa, and other places, instances could be quoted. In fact, the writer once regretfully had to forego an opportunity of being guided to such an underground civilization in Africa, in spite of the guide's guarantee that he was so sure of being able to actually show some of the fair-haired, white-skinned inhabitants in less than three days that he was willing to renounce all claim to payment if he failed in so doing. And the detail he gave of their life was amazing.

That much of the world's ancient knowledge—some now forgotten, lost literature, missing links of history, arts and sciences—lie quietly secluded in the possession of remnants of peoples who have learnt the value of silence and have escaped the modern fever of publicity, there can be little doubt. The universality of such records, stories and legends of mysterious guarded cities may give a clue to the things that await their time to reemerge into active life.

A Christian Tablet Near the Ancient Capital of China

IN the Fifth century, A. D., Nestorius, patriarch of Constantinople, promulgated his dogmatic views as to Christian belief; and being as violent and bigoted as his opponents were, and as most of the characters in early church history seem to have been, he aroused much strife. This ended in the Council of Ephesus, where he was condemned unheard at the instigation of his chief opponent, the notorious Cyril, who had aroused the popular clamor against Nestorius' doctrines (or alleged doctrines) upon some unimportant but fiercely debated theological technicality. The emperor Theodosius being unable to withstand the pressure of feeling against the patriarch, he was deposed and ultimately banished.

Nestorianism, driven from the Roman empire, found toleration under the rulers of Persia, and spread to India, Arabia, China and even among the Tartars. A paper (*Light and Life for Women*) describes an interesting monument of this historical fact. It is a stone tablet, some ten feet high, carved in a dragon pattern at the top, with a Greek cross, and with a pedestal in the form of a tortoise. It is situated near the highway at Hsi Au Fu, capital of Shansi and ancient capital of China, 800 miles from Peking, and has for 1300 years borne silent testimony to the advent, work and ascension of Jesus. It is the work of a Nestorian priest, and has remained unmolested, and thanks to conscientious workmanship in engraving, undefaced during all those centuries.

A Vicious Chain—The Battle With Nature

IN the early days of sugar-planting in the West Indies, the plague of rats which came from the shipping became so burdensome that the deadly per-de-lance snake was introduced to kill them. Incidentally, a part of the duty of this fearful reptile was to kill and frighten negro slaves who ran away from the estates.

The snake succeeded.

Then came the plague of the per-de-lance, which was intolerable. Dropping, as he did, from a tree overhead, his bite was not easy to foresee and avoid. It was always considered incurable, and the negro never attempted to do other than accept the matter in a spirit of resignation when bitten.

Then the mongoose was introduced to kill the snakes. This little relative of the weasel seldom lets his reptile prey escape. Biting the enemy behind the neck (as in Kipling's story of *Rikki-tikki-tavi*), he never lets go until the snake is dead.

The mongoose succeeded.

Now, all the snakes being practically, if not quite, extinct, the mongoose is exterminating poultry also. From eggs to chickens his capacity has no limit, and the mongoose is speedily increasing in numbers.

Now, the question is, how about the mongoose?

Small boys suitably rewarded appear to be at present the only check on an evil which is of such moment that a Colonial Parliament within the last few years specially met to discuss ways and means on the report of a mongoose being sighted in the island. Only when it proved to be a yellow kitten or some such uninteresting masquerader, did the public apprehension admit of the adjournment of the Colonial Legislature.

With the English sparrow, the Norway rats and the Australian rabbit, this is a burning problem and a rebuke against lightly upsetting the balance of Nature.

Illustrations of Some Curious Sunsets at Point Loma.

THE gorgeous or delicate tints of the Lomaland sunsets over the Pacific Ocean, and the sunrises over the eastern mountain peaks, are famous, but little has been said about the weird and peculiar shapes the sun itself occasionally assumes as it sinks beneath the wave. Our sketch shows a few of these extraordinary transformations. Nos. 1 to 5 show the successive changes of the setting sun's appearance at a few minutes interval on July 9th. Nos. 6, 7, 8, 9, are singular effects which are occasionally seen. The pyramid (No. 9) is perhaps the most frequent, but none of these strange refraction phenomena are common, even here. It would be interesting to hear from some correspondent whether similar observations have been made elsewhere, for these effects are very different from the common refraction appearance shown in figure 10, which is to be seen everywhere under certain conditions of the air.

Of course the height from which the observations are made, and the exceptional clearness of the air at Point Loma, introduce a combination of conditions rarely to be met with elsewhere. The number of air-strata of differing density through which the setting orb is seen, cause its outline to be distorted in a complex degree. Perhaps too it is not so much the actual sun, as the illuminated clouds that we see.

LIMITS OF THE SEA

by D. G. ROBERTS

CONSIDER the sea's listless chime;
Time's self it is, made audible—
The murmur of the earth's own shell.
Secret continuance sublime
In the sea's cad; our sight may pass
No farlong further. Since time was
This sound hath told the lapse of time.

Listen alone beside the sea,
Listen alone among the woods;
Those voices of twin solitudes
Shall have one sound alike to thee:
Hark where the murmurs of thronged men
Surge and sink back and surge again—
Still the one voice of wave and tree.

Gather a shell from the strawn beach,
And listen at its lips; they sigh
The same desire and mystery,
The echo of the whole sea's speech.
And all mankind is thus at heart;
Not anything but what thou art;
And Earth, Sea, Man are all in each.

A Duet in the Orchard—Birds & Intellect

WE have enjoyed the presence of a pair of mocking-birds in our orchard, this year, and surely any one who enjoys music would consider that their constant songs amply repaid any damage they could possibly do. Hour after hour, it would be a constant melody, always changing until it seemed as though they were trying to see how many songs they really did know. Even at night, if the moon was near the full, they would continue the concert, and at one or two o'clock A. M. be singing as cheerily as twelve hours before.

Mocking-birds can be taught to speak like parrots, but it is claimed that they know what the words mean and use them appropriately. We should be glad to hear from any one who knows whether that is true. Possibly it may be only certain gifted individuals who attain so far; as some dogs, horses, etc., which know words quite independently of the tone in which they are spoken, and when they refer to objects to which no tone could possibly refer. Most animals, however, understand certain words merely because they are always pronounced in the same tone and thus appeal to the emotional comprehension, which is their normal *mental* faculty. If any words whatever are spoken in that same tone the effect or meaning conveyed to them is the same.

But our feathered friends have such a keenly knowing look, and thread their songs together in such melodious succession that we venture to believe that they are of the gifted few who really choose what to say and how to say it, though we would scarcely wish to cage them to test the idea.

N. L.

The Parasol Ant and His Wonderful Horticultural Work

IN many tropical countries, especially among the West Indian Islands, the parasol ant is a conspicuous roadside object of interest. These little workers may frequently be seen crossing a road in one long procession, often many yards in length, each with its little leafy umbrella, like that of an African potentate, often larger than its owner. There is

no confusion, no crowding. Thousands of laborers going and returning execute a grand chain in perfect order. The object of this busy chain of life is a peculiar one, for the parasol ant is by nature a gardener, and all this work is in the course of the business of planting. Each ant, one after another, seizes a section of leaf, which is buried in the chosen garden until the hot moist tropical climate induces a fungoid growth, which sustains the little gardener. A remarkable thing is this growth, not of a plant from a seed, but the cultivation, as it were, of a mushroom patch. Now this, it must be admitted, is a branch of horticulture that has been realized as possible by human science only within the last few decades, but these strong-jawed lilliputians of another kingdom have utilized it for untold ages. Nor is this an isolated instance in natural history wherein the creatures of inferior grades of intelligence are known to be in touch with forces and laws of Nature that man has only cognized by ages of the most laborious experimentation and investigation. And these facts would seem to be sufficient warrant for the assumption, on the part of a less egotistical civilization, that possibly its methods of progress toward the complete mastery of nature, are not the best. N.

THE SETTING SUN AT POINT LOMA

IDRONE

Universal Brotherhood Organization

Central Office Point Loma California

THE large audience at Isis Theatre Sunday evening at the regular meeting of The Universal Brotherhood and Theosophical Society paid the closest attention to and bestowed most hearty applause upon the three excellent addresses delivered by three of the older Point Loma students.

One of the very pleasant features of the evening, aside from the ever delightful instrumental work of the students of the Isis Conservatory of Music, was a splendid piano solo by Miss Julia Hecht, the well-known Isis Conservatory piano teacher.

The first address of the evening was by Miss Ethelind Wood on "Opportunities for Studying Human Nature at Point Loma." While there were not lacking opportunities for such a study in any quarter of the world, the speaker thought the opportunities were peculiarly favorable at Point Loma. "There are few places, if any, where the pages are wiped so free from dust," she said.

"There is a force and training at the Point which clears and strengthens the inner eye which is to read these pages. People have come here from the four quarters of the globe, with the avowed purpose of studying themselves and others, in order that they may better serve the race. There is, so to speak, an atmosphere for this study created, just as distinct as a musical, an art, a commercial atmosphere, in certain centers. This must in time develop within itself a special atmosphere for all that is beautiful and noble and worth learning, but it must be the greater, the all-inclusive atmosphere; for the center at Point Loma is for excellence, a center for character building. Whatever else is built, must be built upon that.

"The world at large has been handicapped in this study, because it has lost the knowledge of the true philosophy of life and of the laws which govern the universe. Of what use would it be for one, for instance, to examine a huge machine, operating at full speed, with no knowledge of mechanics, with no instructor to explain? Only a master mechanic would stand any chance of understanding the workings of that machine. But the other would stand helplessly by and wonder, or in case he was so ignorant as to be egotistical, he would make false guesses, and state them to others, equally ignorant, as facts. So, in like manner, what chance has one to make an intelligent study of human nature, who does not know the elements of which it is made up; the laws which govern it; the subtle forces which play upon it? Theosophy teaches these things. Simply an understanding of the duality of human nature clears the vision marvelously, and liberates the mind. It is perhaps due to this knowledge that we have had so much success in our efforts to help children.

"Some of the Cubans have said they began to respect their teachers here, where they discovered they could not fool them. This is one of the secrets of bringing out the good, never to allow the evil to come to the front and cover it and declare itself to be the good. This is the game which is played over and over again—an exercise which is practised in a majority of human natures until they have become proficient in it. Children are fortunately in most instances a little clumsy at it. But in many adult natures it actually seems as if the whole education and training had consisted in simply this—in learning, not how to reveal and strengthen and bring to the front the pure and real nature, but how to conceal it and place in the foreground the selfish nature and make it appear as the other. And the effort to deceive has been so persistent, that they have arrived at the point of deceiving themselves. The selfish nature may take the pose of a saint, a wise man, even a selfless man, working for the benefit of the race, and yet one motive behind another may be uncovered, until finally we arrive at the most powerful one, that which underlies and keeps all the others moving, and it may be as black as night. All these things become perfectly true philosophy. The children at Point Loma do not get a chance thus to bury themselves."

Miss Nan Herbert, in her address on "An All-Round Education for Women," took occasion to deprecate the lack of balance in the average woman of today. She who can bear with equanimity petty trials, goes off on a tangent when real troubles cross her path; conversely it is often the case that a woman who has gone through heavy grief like a heroine, goes to pieces when the dinner burns or the dress fits illy. Miss Herbert believes that the system established at Point Loma approximates the all-round education.

"There are times when one is rested in getting away from details and taking a broad view of life, and at such times one almost forgets that humanity is composed of a thousand, thousand entities, struggling and helping, and disagreeing, so much does it seem, in its moving light, like one all-embracing soul. And such it is, for the soul is *one*, and it is at those moments when we realize this, that we grow conscious of humanity's deeper needs. It is sometimes not a bad plan to dwell for a moment upon the lack here and the want there, even though it aims a gentle blow

LOMALAND STUDENTS AT ISIS THEATRE

Three Very Able Addresses by the
Misses Wood and Herbert and Dr.
Coryn --- Delightful Music

Reprinted from the San Diego News

at our own self-conceit. What is the great need of men and women today, particularly, it would seem to me, women? Life at Lomaland has made me feel that the crying need is an all-round education. Glance about you. Look at the city in the sunshine and on its seamy side, and what do you see? A lack of balance almost everywhere.

There is the literary woman, the genius, whose pen may, perchance, sway multitudes, and yet who tips over everything by her own personal appearance, her ignorance, perhaps, of the first principles of dress. There is the advocate of this or that health regime who—how many of them you have seen—looks like a consumptive or a chronic dyspeptic. There is the reformer, one who has, perhaps, a real love for humanity, and who, on certain lines, is wise in his methods, and yet who prevents his audience from having any respect for his opinions by the slovenly or careless way in which he stands. Look at our teachers, whose equipments are so largely intellectual. How many of them know how to care for the physical body? How many of them know how to so conserve their energy that vacation time does not find them worn—you will pardon the expression—to a frazzle? There are not so many as formerly, but you meet them still on every hand. How many of them know how to call upon that vast treasure-house of sympathy and strength to which the heart-life is an open doorway? How many of them, indeed, have within their hearts a living realization of their own divinity? What wonder that at vacation time, instead of stepping into a wider life, to grasp opportunities that never were so close as they are today, nine-tenths of our teachers are worn out physically, mentally depleted and spiritually sometimes almost bankrupt from sheer nervous exhaustion?"

Dr. Herbert Coryn spoke on "Theoretical and Practical Theosophy." He showed how the one should supplement the other, and he laid much emphasis upon the palpable effects of imagination, which, in itself, is not palpable. He cited Calvin's imagination of hell for infants, which he declared was a nightmare, mis-called a religious tenet. This imaginary thing had caused unutterable woe in the world. Continuing, he said:

"Imagination is connected with the life of the heart. The theoretical Theosophist lives only in his brain. He has read that the Divine Law has appointed to us all the conditions of life that are good for us. And so when he hears of those in prison without a ray of spiritual light, when he hears of starvation, of child-labor, of the misery of slums, he says: 'It is all good for these people; it is the Law; it is their Karma.' There are such so-called Theosophists.

"But if they had used their imagination, if they had let their brains be illuminated by their hearts—and that *is* imagination—they would have known that it is also the Divine Law that suffering, and spiritual ignorance, and destitution, should be relieved by those who have the power and knowledge. The Law has to work through human instruments, and it exists as an appeal in the heart of every man. But if he is a sensualist, or selfish, or a mere theorizing intellectualist, he will neglect it. Truly it *does* appoint to every man the conditions that are good for him; and part of those conditions is the need of others for his help.

The real Theosophist will use his imagination about this Law, thinking constantly of it, and standing closer and closer to it. And he will find that it and his imagination play together into each other's hands. It will urge him to the faith-fullest performance of his duties; it will fill him with compassion so that he will be wanting to better everything that is amiss. It may make him an enthusiastic town-councilor; or a slum-visitor; or a giver of libraries or parks; it drove Sister Dora among the lepers, and Howard to the prisons, and Gladstone to the gaols of Naples, and Joan of Arc to the fagots. It breathed in the Declaration of Independence, and it marches with the armies of Japan. Wherever right is being done, that Law is finding feet and hands.

"And wherever you find pessimism, or cynicism, there you find a man refusing service to that Law.

"It is the Law of Evolution. Scientists study it and think it blind. But as it brought the plant from the stone, so it brought man from the animal. And so, to the end that man may go still higher, it works in every heart, and presses us to our work both great and small. It would fain wind itself into the whole life of us all and into every act. Life is squalid, is what it is, is monotonous, because the millions of men will not heed it. They take no notice of its call to vaster destinies.

"Those who look into their own hearts, and try in every common duty to serve this Law which has appointed to us all our duties, will in no long time feel that new things are close upon us. The Law they serve will teach them that, if they think upon it constantly. All outer signs point in the same way, but they will not need them. And as human life is really one, those who let the Law into their own lives, who trust it fully, let it into *all* life, and make possible the near coming of that day or hour when it shall burst all bounds, be felt in every heart, change the whole basis of human conduct, and suddenly make a new heaven and a new earth."

The Lower Animals and Man

I HAVE often thought what a reflection it casts upon human beings, as I have noticed the deep-seated fear which so many animals manifest towards man. The birds fly away as he comes near, and no amount of coaxing or kindness, in the form of food, will cause them to diminish that "safe distance" which they ever keep between themselves and man. What a disgrace it is to man, "the lord of creation," that the lower animals regard him, not as their friend, but as their foe; regard him as a creature of prey. It is the senseless cruelty of human beings which has made it so. I think there is scarcely anything which shows such evidence of degradation as man's cruelty to inoffensive creatures. "Man's inhumanity to man" is certainly bad enough, but cruelty to helpless creatures that claim man's help and protection is utterly base.

Who has not noticed how birds, even of different kinds, will come together without fear, and in a friendly way will pick up seeds or crumbs, and sip at the same water. But let a hawk, or a cat, or a man appear, and they immediately take alarm. Thus man classifies himself with the things that kill and devour.

In a "state of nature" it is not so. Those who have landed for the first time at some little island where sea-fowls congregate, find that the birds show no fear of man at first. The sailors could come "quite near to the birds and knock them over without their taking to flight!" But experience of man's cruelty soon puts the lower animals on their guard against him, and the fear is no doubt inherited.

With many people "sport" means the pleasure in *hunting and killing* something. Not long ago I listened to a man who boasted of how many doves he had shot one day, and how many at another time. It was not for the sake of gain, for each shot cost perhaps as much as the bird was worth; it was simply the pleasure of killing. I felt very humbled and sad, for Theosophy teaches us that the "sin and shame of the world are our sin and shame."

There can be no doubt that this cruelty of man to animals places barriers in the way of human progress, for it puts man, to that extent, out of harmony with Universal Life.

I always remember what a person said in regard to the Preamble to the Constitution of the Universal Brotherhood: "Those words, 'for the benefit of the people of the earth, and *all creatures*,' it was that which fetched me." It is well, it is very important, that we should grow in the spirit of kindness to each other, but it is also well that we should not forget the Preamble above quoted.

It is a matter for rejoicing that in this country and in other countries there are groups of people who strive for the protection of the lower animals. Yet even this, noble and right as the object is, should not occupy the whole field of vision, nor so absorb all the sympathies that none are left for poor human sufferers.

"For the benefit of the peoples of the earth, and *all creatures*:" that is a noble ideal which we should keep before our minds continually, not as a thing to behold afar off, but in order to make it part of ourselves.

"Thou shalt be in league with the stones of the field: and the beasts of the field shall be at peace with thee," are the grand words of the book of Job. And there have been men such as Saint Francis d'Assisi, and Thoreau, who almost realized this close intimacy with nature. What hinders us from all doing so? St. Paul says, "the whole creation groaneth and travaileth in pain together until now"—"waiting for the revealing of the sons of God." How slow is this process of "the revealing of the sons of God!" Let us all hasten it. N.

Precept must be upon precept, precept upon precept, line upon line, line upon line, here a little and there a little.—*Isaiah*

THEY (the medieval churchmen) not only rejected the study of science out of the Christian schools, but they persecuted it. . . . It is owing to this long interregnum of science, and to no other cause, that we have now to look through a vast chasm of many hundred years to the respectable characters we call the ancients.—*Thomas Paine*

WHEN the soul firmly adheres to that which is enlightened by truth and real being, it understands and knows it, and appears to possess intellect; but when it adheres to that which is blended with darkness, which is generated and perishes, it is then conversant with opinion only, its vision becomes blunted, it wanders from one opinion to another, and resembles one without intellect.—*Plato*

The Purpose of Our Order

WHAT new thing is it that you teach? is a question constantly offered to members of The Universal Brotherhood. It is a question natural enough, for on every side new doctrines are being shouted in the market-places.

Now, The Universal Brotherhood has never regarded it as part of its duty to set before the world any new doctrine or philosophy whatever. On the contrary, it has taken the oldest doctrine and philosophy in existence; one which, though capable in some of its aspects of taxing the highest intellects, is also capable of having its present essentials reduced to the very simplest forms of expression.

Assuredly it is of nothing new in the way of thought-systems, creeds, doctrines and philosophies, that the world stands in need. It is provided with everything. Yet to what profit? Plenty of cultured and recondite thinking is being done; there is plenty of religious speculation and pronouncement, plenty of graceful and intellectually stimulating writing about the soul, God, and the future of life.

So The Universal Brotherhood has never proposed merely to add to this. That is easy work. It is easy to write; and men will read anything, talk at any length about anything, lend bland and facile assent to any elevated doctrine—and then lead contrary-pointing lives unaltered. Their tolerance is really profound indifference beneath their intellectual interest.

The Universal Brotherhood exists primarily to evolve in its midst men and women who shall *be in their own persons* what they exhort others to be.

And, secondly, it was founded with the hope—now becoming a certainty—that some of these would force themselves so far forward in their growth as with their hearts to touch the Heart of the world, and therefore be receivers and transmitters of its tremendous spiritual pulsations.

In order that the pulsations of that Heart shall fully reach the hearts of men, be understood and be there operative, requires human intermediaries, people whose consciousness is, on the one hand, fully in the world of common human consciousness, and, on the other, in the world of spiritual Light.

It is no new school of recluses that is now wanted, no mere training grounds of saints. No one can get into the full Light of that world-spirit which spoke as Christ, unless he seeks it with the full intention of immediately translating what he shall get into that which is visible and helpful here. Nothing will be ultimately held back from such a man. He will become in his own person a message. His voice will light fires. He will sow Light. He, or rather they, will be the expected fruit of the Universal Brotherhood.

H. CORYN

The Raja Yoga Academy for Boys and Girls

THE opening, this autumn, of the new Raja Yoga Academy at Point Loma, for boys and girls, has aroused quite a wave of enthusiasm among parents who have been waiting for an opportunity to place their children under the Raja Yoga system of training. The fact is, that for quite a long time past there has been no room in the Raja Yoga schools at Point Loma, so that many applications have of necessity been refused.

With the present arrangements for the Academy, 200 children can be received; and in the course of a year other buildings will be erected to meet the demands.

Considering the ideal conditions of climate and natural surroundings of the Point Loma school life, and the intrinsic beauties and value of the Raja Yoga system, it is no wonder that the most advanced educationalists are willing to admit its excellence. While ignorant of the secrets of this system, they acknowledge its results with surprise.

The meaning of the term "Raja Yoga," is unknown to many. It signifies the perfect union of the spiritual, mental and physical life of man. The Twentieth century has yet to attain a larger comprehension of the meaning of this term, and its application to human needs.

The establishment of the Raja Yoga Schools at Point Loma in 1900 was the beginning of a great work for humanity. Already there are two schools in Santiago de Cuba; one in London; San Diego city, California; and on October 1st, a large one will be opened in San Francisco.

Who provide much wealth for their children, but neglect to improve them in virtue, do like those who feed their horses, but never train them to the manage.—*Socrates*

Truth and Reason

BEFORE the dawn of the Modern Age, when men were fighting religious battles, blind faith in dogma authoritatively prescribed was the order of the day; and to such an extreme was that principle carried that, with the rise of the Modern Age, men rushed to the opposite pole and it became the cry that nothing should be accepted as true unless it could be proved by reason.

But these two fashions of thought are, as said, extremes, and each of them is a departure from the proper balanced mental attitude. Faith and reason should be one in their operation, as they are one in essence, though for purely argumentative purposes metaphysicians may distinguish between them.

The craze for "reason" and "proof" has been in its day as gross a superstition as blind faith, chiefly on account of the total inability of most people to reason with any approach to accuracy. Usually the cautious and qualified opinions of great scientific and sociological thinkers are carelessly skimmed by superficial readers, who exaggerate them far beyond the original intention of their authors, and turn them into popular catch-words. Thus these distorted and misapplied theories become simply dogmas, hard tyrannical dogmas, as despotic as they are unreasonable.

For instance, a great student having traced out, and attempted with all due reserve and modesty to formulate, a principle of "struggle for existence" in the physical world, this principle is (1) assumed to have been fully proved, and (2) its applicability is enlarged so as to make it a law of morals as well as of physics. Thus was born a dangerous dogma of our times, threatening to break up all law and order by undermining the great moral law of mutual forbearance.

It is unnecessary to multiply instances of cases where laws, observed (or imagined) to hold good in physical science, have been erected into moral laws and thus turned into harmful superstitions. All can supply such instances for themselves.

But let us consider if we cannot now see our way to terminating this continual swinging to and fro between the extremes of religious and scientific superstition, this unnecessary antagonism between two divine functions of the God-given mind, the function of faith or intuition and the function of reason.

The first thing to observe is this: that, if we cannot prove a thing by either the deductive method of the old schools or the inductive method of modern science, it does not follow that we must forthwith tumble into the abyss of superstition and swallow the thing on blind faith. Edgar Poe, in one of his satires, has shown the folly of slavery to these two schools of logic. He says, in effect, that when an obvious truth is announced to the world, popular clamor and jealous academical authority immediately demand of the announcer how he arrived at his truth, whether by the deductive or the inductive method; and, if by neither, then the truth cannot be true. Whereas, the real test of a truth is its fitness, its beauty, its power to enlighten and explain.

It is because people have allowed their powers of perception and discrimination to grow dim from misuse, or from abuse of their minds and bodies, that they have been obliged to try to guide their lives by the method of intellectual groping. And when they no longer feel the rope of so-called logic to which they are trusting, they begin to cry out with the fear of falling into the pit of blind faith.

The above remarks were suggested by the question as to what should be one's attitude towards Theosophical teachings; for some people seem to think that if these teachings cannot always be dovetailed exactly into the fashionable system of ideas known as modern rationalism, then they must necessarily be swallowed as dogmas.

For answer we would ask, What is one's usual attitude towards teaching in general? Is it not something like the following? We are attracted by the evident excellence, desirability and utility of the teachings; we see somebody teaching them with success; and we determine to put our-

CILGERRAN CASTLE, WALES, HOME OF GERAINT

selves under that tuition that we, too, may learn and profit. We put ourselves in the attitude of learners and get ready to hear something that to us will be new and perhaps contrary to our old notions. We do not go to the teacher as if we wanted to *teach* him, and demand that his teachings shall agree with our previous notions. But neither, on the other hand, do we undertake to lie down mentally on our backs and passively absorb anything that may be told us.

Take the case of a teacher of arithmetic. He gives you a new rule which he says is true. What will you do? Will you say, "I won't accept this until I see the

reason for it"? If you say this you will never see the reason for it, because it is necessary to try the rule (as the teacher advises) before its truth can become manifest. Or will you copy the teacher's words and figures like a parrot, and do the operation by rule of thumb and memory, without understanding the meaning of it? One meets with both these kinds of pupils; but the kind that learns is the kind that with open mind takes good advice and profits by it.

There are in the world today these same classes of people. First, those who are afraid to open their minds to anything the least unfamiliar to them. These remain in their old ruts. Second, those who are too lazy and jelly-like to think. These swallow any superstition and any leader that will save them the trouble of thinking. Third, we have the kind of people who realize that there are some things they do not know, and would be glad to know, who ask for advice and direction, who accept it, and who prove for themselves the truth and value of the advice and teaching they have received.

Theosophy, then, demands an open mind and an eager intellect. We must recognize that there can be an ocean of knowledge compared with which our own little mental equipment is as a stagnant pond. E.

The New Venezuelan Constitution

IN the recently published Venezuelan Constitution, the fifteenth since the United States of Venezuela amalgamated into one Republic, are several points of interest to foreigners. In international treaties the following clause shall be inserted: "All differences between the contracting parties shall be decided by arbitration without appeal to war." No contract of public interest made by the Federal Government, or by other public authority, may be assigned wholly or in part to a foreign government. All companies for executing such contracts shall be Venezuelan, with head offices in Venezuela. The Federal Executive may admit or refuse the admission of foreigners to the service of the Republic; it may prohibit, when deemed expedient, the entry into national territory of foreigners who have no settled domicile in the country, or to expel them therefrom; and may prohibit and prevent the entry into the territory of the Republic of foreigners specially devoted to the service of any worship or religion, whatever may be their order or hierarchy.

That the Venezuelan people, if properly led and governed, are capable of good work, is testified by the electric power plant at Encantada, seventeen miles from Caracas, worked by a forest waterfall, and comparable in cleanliness and efficiency with any foreign enterprise similarly situated; by the factory in Caracas which produces chocolate unsurpassed by any in the world; by the pearl fisheries of Margarita Island, commenced by Columbus and still worked profitably under foreign capital. But the almost constant fear of revolution is a terrible handicap to the development of the possibilities of the Venezuelan nation. Countries dominated by religious influences are considered low in the scale of freedom by the Venezuelans. As soldiers their endurance is astonishing, and of their business acumen none are doubtful.

The poorer classes are harmless, and courteous when treated reasonably, but long acquaintance with civil war and selfish ends have made them stand still as a nation. To such an extent is this uncertainty of life carried that a Venezuelan "regiment" in a transport was lately found by a visiting warship in possession of two sets of raiment, one government, one revolutionary, to be adopted as occasion arose! STUDENT

The Trend of Twentieth Century Science

Some of the Causes of Cancer, Casual and Real

MEDICAL studies of the causation of cancer make very perplexing reading. For whilst, on the one hand, they present figures showing the steady increase of this malady, on the other they enumerate causes which are not increasing, which are but as they always were. So it is clear that they have yet to light on the really effective factor. The *Los Angeles Medical Journal* has an interesting article in its current issue which points our remark. First come the statistics of increase:

In the last thirty years the mortality in England from this disease has doubled; in the United States it has trebled. . . . If the relative death rates for cancer are maintained, Dr. Park calculates that the mortality in 1909 from cancer will be larger than from consumption, smallpox and typhoid fever combined.

In England the proportion of deaths from cancer to 100 deaths from all causes of persons from the age of 35 and upwards is 8.5. The disease caused one death out of twenty during the year. The striking increase is phenomenal because of the improved hygienic conditions. Across the Channel, Ireland's figures are alike alarming, showing an increase of 30 per cent in ten years. In fact, the Registrar-General issues a special report on the disease. England and Wales alone report, in 1900, 26,721 deaths.

To every twelfth one of us who has passed the age of forty must come this dread disease.

Then come the causes. The areas of the world where cancer is thickest are examined. They are found to be those that are richly wooded and watered; and those where beer is most freely consumed. Beer and forests are the causes. As to beer, the writer says:

The evidence is striking. Lille, in France, has a phenomenal cancer rate, and the consumption of beer is extraordinary. It is needless to multiply cases. In no country can a low cancer mortality be found with a large consumption of beer.

As to forest areas:

The large cancer mortality at San Francisco is extremely suggestive. In Bavaria the wooded portion of the State shows the highest cancer rate; on the other hand, deforested sections have a low cancer rate. It is well known to the laity that houses surrounded by large trees, as well as the wooded sections of towns, have frequent cases of cancer, but the houses without shade or vegetation are exempt.

Disregarding the possibility of the contagiousness of cancer, we have here stationary causes assigned for a progressive disease. Beer-drinking is even less than it was, in England; so is the English forest area. Yet the disease has doubled.

The writer finally turns to the view that cancer is a result of lowered vitality. If, through beer-drinking, residence in an overwooded locality, or other reason, your cell vitality is low, and you escape other diseases, cancer probably awaits you.

So the real cause of cancer must be an increasingly low condition of public vitality, accentuated here and there by habits or environments, which, while not more detrimental than formerly, nor more frequent, show up the real cause in strong relief.

Cancer has never been proved to be due to a germ; it is a mutiny of a group of cells, which the nerves can no longer control. And we think we see the lines of its causation in increasing waste of vitality in sensuality of many kinds, and in child-labor. The ideal of self-control in the spheres of mind or body now hardly exists in the west of the world. What wonder that the body which we do not control loses the power of controlling itself? And what is child-labor but a robbery of the very soil of vitality ere the roots of health have had a chance to sink into it?

STUDENT

Nerve Currents Made Visible

IT has now been shown that our nerve currents can be transmitted along a wire, and then made indirectly visible. An excited or transmitting nerve passes its current in waves. These are from 750 to 800 per second in number, with a wave length of about one and a half inches. From the nerve they can be taken up by a wire, carried to a plate of phosphorescent calcium sulphide, and will then increase its phosphorescence.

Spontaneous Generation—Does Life Begin in the Sea?

ARE we to speak of spontaneous generation in the same tones as of squaring the circle or perpetual motion? On the whole the verdict of science is—yes; but an occasional dissident is not wanting. The last is a Dr. Littlefield of Indiana, who claims that he has evolved living organisms, resembling gnats, from inorganic matter. Because this is much too large a claim for immediate acceptance, one need not take refuge with the tacit assumption of science, that inasmuch as spontaneous generation has not as yet been detected in happening, therefore it does not happen. It might for instance be an almost omnipresent phenomenon through the deeper layers of sea-water, and yet remain undetected. According to the teaching of H. P. Blavatsky, it is occurring to this hour.

It has lately been shown that there is a stage in the formation of crystals, whilst they are collecting themselves from their solution in water, when they seem to behave as little living beings. Before they set into crystalline fixity, they seem to be cells, with a cell-wall, a nucleus, nucleoli, and a granulated cell body. And they are very active in all their doings. Suppose this to occur in sea-water, where there is a certain quantity of organic nitrates; and suppose them to take up some of this organic nitrogen into their composition; and to remain in the active intermediate stage; one can easily imagine the origination of an organic cell.

A French scientist has lately taken the position that sea-water was actually the place where life first arose. It arose as single cells, which, he says, are practically the same today throughout all parts of the animal kingdom. And in the bodies of all animals, the cells are bathed in a fluid which, whether lymph or blood, differs but little in its composition from sea-water.

Upon this view, two comments suggest themselves. First: that though the nerve-cell of a man and a newt may microscopically look alike, there must be profound differences beyond the ken of the microscope. Second: that this interior evolution of the cell, as we go up the animal kingdom; and that exterior evolution which consists in the ever increasing complexity of the combination of the cells into higher organisms; requires a conscious power behind, forcing the process. And we would suggest further, that if, by means of evolution, a home is being provided for higher and higher forms of consciousness, it is the overshadowing consciousness itself that is to be homed, that is a part of this forcing power; perhaps the whole of it. We cannot offer proof of this view; it must carry its own appeal.

It is interesting, by the way, to find a modern scientist corroborating the very ancient speculation that "from the Great Deep arose all things." Perhaps, however, the old Babylonians meant more by "the Great Deep" than we do.

The Mystery of Bird Flight—A Change of Polarity

IN the NEW CENTURY PATH of March 20, 1904, a correspondent asks the question, "Can bird flight be mechanically explained?" and quotes in answer a suggestion by a writer in the *Saturday Evening Post*, that birds have the power of reversing the force of gravity, and rising instead of falling, by their own weight.

On page 271 of vol. iii of *The Theosophist*, the same question is raised, and it is suggested that perhaps birds have the power to make themselves heavy or light at will. To this the editor (H. P. Blavatsky) replies:

There must be something more than instinct or unconscious volition. What is it? It is "a change of polarity and of normal gravity" not yet admissible by science. With birds and animals—as instinctive a mechanical action as any other they execute; with man, when he thus defies the familiar conditions of gravity, it is something he can acquire. Though the former act unconsciously, and he changes his polarity at will, the same cause is made operative, and both produce an identical effect. There are certainly alternating changes of polarity going on in the bird, while ascending or dropping, and a maintenance of the same polarity while sailing at a given altitude.

It is said that man's body is the storehouse of the reserves of all past evolution; has man forgotten the secret of changing his polarity. STUDENT

The Widening of an Horizon

MRS. PERRY returned to her native town after a lengthy absence abroad, to find the ideal of perfection she had cherished of her childhood's home shrinking daily as she took up the threads of her old life there. The town itself had expanded somewhat, but her companions of those olden days seemed changed almost beyond recognition; and she felt with a kind of dismay, this gray autumn afternoon, as she sat by the fireside reflecting upon the present situation, that the mental outlook of the social sphere in which she now lived, was well-nigh limited by the town boundaries.

"Is this my destiny," she cried in rebellion, "to be engulfed within a stagnant pool of self-satisfied mediocrity? Alas! my only chance of conserving the remnants of our fallen fortunes is to settle here, and for my children's sake I must of necessity endure it."

And so a weary round of uneventful years began. With limited means many wanted luxuries disappeared, for the needs of four healthy, robust growing boys demanded most of the sadly decreased income.

"They are positively uncouth," sighed the affectionate mother, one fine morning, as she watched them racing off to school, shouting gleefully as they ran—"they are beyond my control now."

And as she sighed, a little network of fretful wrinkles showed round her mouth, and perhaps explained her loss of influence with the children. Turning from the window she listlessly picked up the morning paper, when her attention was arrested by an advertisement setting forth the qualifications of a tutor.

"The very thing," she exclaimed; "why did I not think of it before?"

The upshot of it was that the beginning of the following month found Hubert Masters installed as tutor with four unwilling charges to win over before he could impart any teaching likely to result in benefit to his pupils. Taken from a school where discipline fluctuated between undue severity and laxity in accordance with the moods of the presiding genius, and where companions were mostly mischievous and undisciplined, the prospect of tuition by "their ain fireside" did not appeal to the boys.

Peter was stubborn, Charlie was mischievous, Alec was apathetic, while Reggie seemed to combine all four qualities and manifest them in turn.

A preliminary examination revealed a greater paucity of information than Mr. Masters was inclined to credit, but his doubts took on outward expression, and the boys were dismissed at its conclusion, uncertain as to the effect of their organized rebellion.

"By all means, Mr. Masters, you may have full control; I put them entirely into your hands; only see that they are gentlemanly in behavior, as well as honest, upright and manly, which I feel quite sure they are now, or they would not be their father's sons," said Mrs. Perry, with a slow smile.

Hubert Masters had ideas of his own about education. He believed in drawing upon the higher natures of his pupils, and his appeal was never to their pride or fear. And he was a student of human nature, and did not expect paragons instead of human beings overflowing with energy—so oftentimes misdirected—in the boys he came across. So he took them in hand primarily as souls and worked towards helping to bring out their hidden virtues, and in the struggle that arose inevitably in thus changing the current of four young growing lives, the irresistible weapons

he used were sympathy and love, while he called to his aid nature, and music, and art.

As the weeks grew into months, the clattering of noisy and muddy feet through the polished hall ceased. No unseemly shouting, no more stooping shoulders or slouchy gait. Marion Perry found herself the recipient of many a thoughtful little gift—Peter's first strawberries, or Charlie's pansies, or a wisp of silk from Alec's and Reggie's silkworms.

At luncheon Mr. Masters always tacitly assumed that the boys' interests were of paramount importance to their mother, and their reticence, born of remembered correction and disapproval, vanished in the face of her growing enthusiasm over their new studies and occupations.

What had Mr. Masters brought into her boys' lives? They were positively transformed. There was something far deeper than surface polish in their thoughtful acts and courteous bearing, while their affection and devotion to their teacher were very patent. She

had asked him once if he did not find Hurstville a very dull place, for she had early seen that he was a man of wide culture and experience, and his reply had left her in a very thoughtful mood:

"Is the field dull to the farmer who has sown it with golden grain and awaits the harvest? Is it of more interest to aid a struggling soul to free itself from the bondage of its lower nature within touch of one of our modern Babylons, than in the peace and tranquillity of some remote village? I think each are equal tasks in the sight of the Master of Souls."

"Yes, poor man, it was very sudden, I am sure I do not know what I shall do with my boys now, Gertrude and I were agreeing how fortunate you were to have Mr. Masters, so few clever men care to leave the cities, and yet our children here in the country are in just as great need of good teaching as the children of the cities," and Mrs. Perry's visitor sighed.

"George and Harry," she continued in a more cheerful tone, "have never done talking of the day that they spent in the woods with your boys and their tutor, and of what he told them of the trees and stones, and of the beauties in nature."

A sharp struggle went on in Marion Perry's mind. Why should she share her benefits with others—they were the result of her own forethought. Why should she—a picture of a bright transformed little Reggie rose before her mind's eye, as she had seen him that morning.

"So of course we helped him carry it home, mother," he had said, "it was far too heavy for the poor weak little fellow. Mr. Masters says that brotherhood is the real thing, that all great people are helpers and the way to grow great is to begin right away now in little things; it's the only way to be happy, he says, and he helps, and I guess he's happy."

That evening Mrs. Perry had a consultation with Mr. Masters, and the outcome was, that he applied for the vacant head-mastership of the town college.

And in the after time Mrs. Perry never regretted her decision in "helping and sharing," for that forward step on the path of brotherhood opened up to her undreamed of possibilities in her nature, and in a life of wider sympathy she modified her over-critical mental attitude and entered into the joy of a tolerant and loving view of those "who, in their pain and sorrow, are borne along with us" to alike work out, hand in hand and heart to heart, a common human destiny.

WAITING

by JOHN BURROUGHS

SERENE I fold my hands and wait.

Nor care for winds, nor tide, nor sea:
I rave no more 'gainst time and fate,
For lo! my own shall come to me.

I stay my haste, I make delays:
For what avails this eager pace?
I stand amid the eternal ways:
And what is mine shall know my face.

Asleep, awake, by night or day,
The friends I seek are seeking me:
No wind can drive my bark astray
Nor change the tide of destiny.

What matter if I stand alone?
I wait with joy the coming years:
My heart shall reap where it has sown,
And garner up its fruits of tears.

The waters know their own and draw
The brook that springs in yonder heights:
So flows the good with equal law
Unto the soul of pure delights.

The stars come nightly to the sky,
The tidal wave comes to the sea:
Nor time, nor space, nor deep, nor high,
Can keep my own away from me.

THE CHILDREN'S HOUR

The Raja Yoga Question Box

HUMANITY has had helpers in all ages — men and women who, from the light in their hearts, have known how to teach their fellows the noble uses of earth-life, and to see the soul in all.

1 Who was Quetzacohuatl?

ANSWER — Quetzacohuatl was a Teacher who came to the Toltecs, the earliest people of ancient Mexico. He not only was a wise ruler, teaching his people to live a pure and simple life, and to avoid war and violence, but he also taught them the useful arts of picture-writing, work in gold and silver, and building.

2 Who was Deborah?

ANSWER — Deborah was a judge and leader of the people of ancient Israel. She inspired her people to rise against their oppressor, and when they won their freedom, she sang a glorious song of triumph which is read to this day.

3 Who was Æschylus?

ANSWER — Æschylus was a Greek patriot, who fought in the famous battles of Marathon (490 B. C.) and Salamis, and afterwards wrote wonderful dramas, in which he taught the life of the soul, touching the hearts of men, and thus leading them to a higher life. One of his Dramas was the *Eumenides*.

CLASS IN BUFFALO LOTUS GROUP

DEAR CHILDREN ALL

OVER THE WORLD: How often we in Lomaland think of the faithful hearts in the Lotus Groups here and there in all the nations! Week after week your work goes on, and the Lotus Buds of Lomaland send you messages daily which I am sure must reach your hearts and help you.

You in return send us the same help; and as you, through the NEW CENTURY PATH and in many other ways and by other publications, keep in touch with the activities in Lomaland, so we are en-

abled to keep in splendid touch with your life in the Lotus Groups and with the wonderful work you are doing in so many ways.

So many interesting reports come in from month to month, it is utterly impossible not to feel that a great light is being spread over humanity, and that the hearts of men must feel it, even though as Katherine Tingley has so often said, "their minds are turned away." And one who has kept pace with Lotus-Group activities month in and month out for a number of years, notices how much closer the Buds and Blossoms are to nature than ever before. From one of the Swedish Lotus Groups the Superintendent writes:

The last Sunday of May we devoted to the spring thought, the coming of spring, the joy of nature and the beneficence of the sun sending down to earth its warmth and life, the growing of flowers, the awakening of the birds and the buds. It was a great day for the little ones. On May 8th, we celebrated the memory of H. P. Blavatsky, and after speaking of her, one of the members spoke of the lotus as a symbol of the soul.

During the meeting on Pentecost we spoke of its significance in connection with the higher meaning of the nature-myth of Narcissus, and we distributed a narcissus to every child.

The following is from one of the flourishing Lotus Groups in England:

The most important event of the last month was, of course, the celebration of White Lotus Day. This took the form of a country ramble to one of the prettiest spots on the Cheshire side of the River Mersey, Bidston Hill. All gathered together, teachers and pupils, from the Old Swan, the Liverpool and the Everton Groups. We were favored with what the Buds have learned to call "real brotherhood weather," and the sun shone gloriously. After luncheon a very interesting program was given, including songs, recitations, and a beautiful little play in which each child represented a flower. The entertainment was concluded with the singing of the brotherhood song. Following this came a delightful climb over the hill and through the wood. The sun was setting in all his glory and the time for returning came all too soon. Our work progresses steadily and more than satisfactorily. Interesting nature talks form part of each meeting, and the children are showing the greatest possible enthusiasm.

Sweden sends in reports from many Lotus Groups, from which we

have room for only these extracts today:

Two little Lotus Buds, one only a year old and the other not three years, were with us for the first time. On the first day of May we had seed-sowing and tree-planting among the lessons, and the little ones showed the greatest interest. The talk for the day was about the magician Thought. On May 8th, we celebrated White Lotus Day. The "Lotus Home March" was played, and after that the new membership cards from Point Loma were distributed. Both children and teachers spoke of H. P. Blavatsky, and there was an undertone of deep gratitude throughout the meeting. The lodge-room was beautifully decorated.

On May 24th, a special program was arranged, each child taking part, some in speeches, others in dialogue and in song. Three songs were sung in English by those who are studying in the English class. It was a real spring festival, and when, at the close of the meeting, the children stood grouped about our beautiful Swedish flag, all with small flags in their hands, the tiny Lotus Buds stepped forward and the eldest recited a little poem. Then the little girls distributed flowers. Attendance is regular and children most interested.

During the last month our lessons have been carried on as usual and the children have learned two new songs, "Blossom, Blossom, Sweet and Fair," and "Spring Flowers." At one of our meetings we planted seeds and the children gained many lessons. They were told how to take care of the growing plants in the summer, and were so delighted that they carried home the little flower-pots as if they were rare treasures. The last meeting was held in the open air in a lovely park in the immediate vicinity of the city. The children sang several of their Lotus Group songs, and under the blue sky and beautiful green trees one of the teachers spoke to them of our beloved Leader, whose sole endeavor is to help humanity, and who stands as such an inspiration to the Lotus boys and girls throughout the world.

And our American Lotus Group teachers add their helpful notes to the great nature-loving chorus:

Our Lotus Group held a most interesting open-air meeting recently, about five miles in the country. Leaving the car-line we walked to the edge of a lake, under trees, through a most rocky and romantic path, and made our camp opposite a little stream under a spreading oak. There were enormous boulders scattered about, and between two we built a fire. After luncheon we climbed the hill and had a quiet talk under the towering shade trees. It was an ideal spot, the land gently sloping down into a valley, with a tiny stream murmuring below over the pebbles. A little further we came upon the lake, which was itself surrounded with trees and melodious with birds. After a long walk and the gathering of many wild flowers, we went back into the city most reluctantly. The whole afternoon was an inspiration.

AND, to quote but the tiniest part of the report sent in by the group whose picture you see at the top:

One glorious day not long ago the members of the Buffalo Lotus Group held a patriotic meeting out in the park, and several songs were sung by the children.

THE BIRDS

by EMILY P. SHERMAN

HAVE you ever found a bird's nest
In the meadow low,
With five baby Bob o' Lincolns,
Feathers yet to grow?

From your window in the morning
Have you looked to see
Five grave quiet little Phoebes
In an apple tree?

Have you seen the blue-gray birdlings
Far above the ground,
Dainty nest and limb for perches,
Mother hovering round?

On the bank beside the river
Have you watched them try,
Four young gray and speckled Bluebirds,
Stretch their wings to fly.

If you have not, then directly
Open wide your eyes,
And you'll find in field and tree top
Many a surprise.—*American Ornithology*

TRUTH

IF ye lay bound upon the wheel of change,
And no way were of breaking from the chain,
The Heart of boundless Being is a curse,
The Soul of Things fell Pain.

Ye are not bound! the Soul of Things is sweet,
The Heart of Being is celestial rest;
Stronger than woe is will: that which was Good
Doth pass to better---Best.

I, Buddh, who wept with all my brothers' tears,
Whose heart was broken by a whole world's woe,
Laugh and am glad, for there is Liberty!
Ho! ye who suffer! know.

Ye suffer from yourselves. None else compels,
None other holds you that ye live and die,
And whirl upon the wheel, and hug and kiss
Its spokes of agony.

Its tire of tears, its nave of nothingness.
Behold! I show you Truth! Lower than hell,
Higher than heaven, outside the utmost stars,
Farther than Brahm doth dwell.

Before beginning, and without an end,
As space eternal and as surety sure,
Is fixed a Power divine which moves to good,
Only its laws endure.—*Light of Asia*

Theosophy in Commercial Life

THE impression is general that Theosophy and commercial life have nothing in common; that their purposes are all cross purposes. For this there are several reasons; one is, that Theosophy itself has been misunderstood and misrepresented. This is due largely to the efforts of certain self-styled reformers who have used the word Theosophy and the name of the Universal Brotherhood organization as ballast for their own pet theories and to further their own schemes. Many of the inquirers who send letters to Point Loma think that Theosophy is something quite up in the clouds with no particular connection with anything that has its feet on the earth. Another reason: half of the world is psychologized with the idea that religion and business never did dovetail and never will. In fact it has almost become a matter of ridicule to say that religion and business may walk together under one banner, and one sees smiles when a *business* man is spoken of as being a *religious* man.

Why is this so? Is it not because the philosophy of life we have been taught these thousands of years has not been a practical one, that it has not reached the deeper and truer heart life of the people? Commercial life is a great and important factor in the world today, and may it not be merely a means for the greater evolution of man's soul, one of the stepping stones by which man may attain to a happier state of existence?

There are eternal principles and eternal laws which govern every detail of life. Casual daily observation proves this to be a fact; and Theosophy sheds much light upon these principles and laws.

Our business men challenge the great law of justice and equity—that law which is the most basic of all of those principles which are today called Theosophic. Because of this, and because men work contrary to this law of justice, of balance, the business world suffers its share of chaos. If men understood, if men knew that they were divine, and that the *real* life was the life of the *soul*, I ask, would the money-making motive be the all-absorbing question in Humanity's life today?

The Theosophist knows that unless commercial life is based upon certain eternal principles, which are ever the same in all true religions and in all true philosophies of life, it cannot stand, it cannot last. The sordidness that exists in our commercial life today and the millions of failures yearly, alone prove the need of a better understanding of Theosophic

principles, and their honest application to all business and social life.

There is no crime in barter and exchange; there is no crime in profits, if justice and honorable dealing are the motive power. A man sows his grain, and his harvest is a thousand fold; a man does right, and happiness ensues; so when a man invests a dollar, why should he not naturally in an honorable way expect his talents to increase? What is worth a great deal to one man, may not be worth much to another.

Men say that brotherhood is not practical, but, as a business man, let me assure you that it is.

If business men realized that they were dealing not with rivals and competitors, but with comrades and brothers, would it be so easy to sacrifice the city's good for the private purse? If business men realized that absolute, inviolable, eternal law, and not chance, governed all the processes of commercial life, would some of the strong be so quick to take advantage of the weak? And if the weak knew if they understood human nature—and Theosophy is the only system of ethics which gives one the key to an understanding of human nature—if the weak understood this, would they allow themselves to be imposed upon and gulled? What a spectacle our commercial life furnishes us in some particulars—good men dying in our workhouses because they could not hold their own against those who are dishonest and unprincipled; good men driven to suicide by catastrophes for which others are directly responsible; the children of worthy parents deprived and neglected because the rivalry in business life forces the weak to the wall.

And the fever to make money! that is the most curious spectacle of all. So few have any worthy object in making it. Do not misunderstand me, for the Theosophist, believing as he does that the commercial life—and this term is widely inclusive—is one of the most dignified and important factors in the life of the nation, has no quarrel with money, nor with legitimate methods of making it. But the Theosophist has an object quite other than that of the man who merely hoards his money, or the man who spends it selfishly, or the prodigal. Without money the Theosophist in his work of reform, in his work of feeding the hungry, clothing the naked, caring for the motherless, defending the persecuted and relieving suffering wherever found—without money and a good deal of it—the Theosophist would be seriously handicapped.

Nor does commercial life shut one out from living purely, acting unselfishly and behaving honorably as some religionists seem to think. The fact is, many a business man has greater opportunities for living the true, brotherhood life—for brotherhood means putting one's theories into practice—than does the religionist who writes a sermon or two each week and conducts a few literary clubs, but has no chance to demonstrate his theories in practical everyday life, and who has had no practical experience of the workaday world. Commercial life is an important factor in the world, yet we should remember that it is but a mere incident in the greater life of the soul—it is but a part of that which goes to make life complete.

J. F. KNOCH

Gratitude

GRATITUDE is the only natural compensation for all acts on any plane. The word is defined as "duty to benefactors," and duty is that course of action to which the Voice of the Silence, the inward divine Voice, ever prompts, and which includes all true thought and all true action. Our greatest benefactors are the Saviors and Helpers of Humanity, they who waken the heart-life.

The very thought of the word, "Gratitude," should warm us into life. Gratitude!—is it not a beautiful, gracious word? A thankful heart, warming and expanding, and giving out of its abundance! A benefit received, appreciated—and then a giving out of the radiation of the heart, a passing on of love and blessing to others who are in need! It always means a giving, and as we give in gratitude, the great heart forces of the Universe flow through us.

Gratitude prompts to action, action from the heart, not servile, or mere words from the lips, but a doing for others; and in the larger sense, when we have received and recognized the spiritual help that has been extended to us, this becomes a doing for and a serving of all humanity—all with whom we may come in contact. As the heart thus expands with true gratitude, all Nature opens her doors to us, and we find joy in each experience of life, joy in the sunshine, the flowers, the winds, the birds, and more than anything else, joy in serving and helping others. This is truly what Brotherhood means to men and to all creatures. H. G. S.

AMONG the noblest in the land,
Though he may count himself the least,
That man I honor and revere
Who in the city dares to stand
The friend of every friendless beast.—*Longfellow*

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question Does Theosophy teach anything in the nature of reward or punishment after death?

Answer Theosophy teaches the law of cause and effect in the most full and complete manner. It teaches that this is a divine law and extends to every plane of being. Every thought, every feeling, every physical act, is the result of some cause, and instantly becomes in turn the cause of some effect about to be. Nothing is too insignificant to fall under this law. Chance is inconceivable in this orderly universe. Every great event, every momentous crisis is but the culmination or the focusing of a number of lesser effects. So that all the forces man allows to play through his nature, bring their legitimate and inevitable result. Each second that a man lives he registers in the book of life his record. And the rewards and punishments, so called, come with the moments and years, in the very nature of things.

The life of man is exceedingly complex, being made up of so many elements, and the forces may so interact as to bring a series of results one after the other, perhaps for years, which may bear the semblance of rewards, while more disagreeable results, usually denominated punishments may be held in abeyance; but no seed planted will fail to yield its fruit the moment the soil becomes favorable. It may lie latent for centuries, but sometime it will sprout and have to be dealt with.

All this appears so natural, that it seems hardly worth while to state it. It is impossible to conceive of life without it. What change should death make in the manifestation of this law? I think to a mind which had not been twisted by creeds and dogmas, the idea that punishments and rewards are to be reserved until after death, would seem very curious. It would seem strained, peculiar, and would puzzle a normal mind to find out how a seed which was planted here in earth soil, could bear its fruit in some other state of existence, where presumably there is no such soil. Why indeed struggle after a far-fetched theory, when the simple plain truth is before every one's eyes?

Theosophy, of course, teaches that there is a relation between the life before and after the change we call death. They too must bear to each other the relation of cause and effect. But the effects which in their nature belong to the union of a soul and body, must await for their fulfilment until these conditions appear again, or until that soul again takes up a body after its needed period of rest.

What the condition after the death of the body is like, it is impossible for us through the brain mind to conceive. But it is plain that one whose desires and thoughts throughout earth life had been of a material and selfish nature, could not enjoy the same consciousness as another whose ideals had been noble and whose thoughts had been constantly for others. The attractions of the two would be different, and each would inevitably be led to his own.

When weighted with a body, one is often more conscious of limitations than power, but this obstruction removed, what is to prevent the realization of one's highest aspirations? But the aspirations of some being higher than others, their realizations must likewise be different.

G. W. VAN PELT, M. D.

Question Is the theology of the present day in harmony with the laws of the universe?

Answer It is hardly possible to say what is "the theology of the present day." There are many systems, varying from that enjoined by the Pope (which is that of St. Thomas Aquinas) to that of Lyman Abbott or Rabbi Hecht.

The average or current theology changes from age to age. It represents men's conceptions about God. Calvin, some few hundreds of years ago, a great theologian, thought it to be one of the "laws of the universe" (or of God) that if you were not one of those whom God had selected

for salvation from before the birth of time, nothing could prevent your eternal damnation to hell-fire. We do not now regard that as one of the laws of God.

And similarly: that which our theologians of today tell us of God, may in 200 years, from that higher standpoint and riper wisdom, seem as barbarous as the theology of poor Calvin seems to us.

We may be sure that as time goes on, and the spiritual sunlight from God falls more and more gloriously along its track, our conceptions of God—that is, our theology, in its true sense—will grow ever nearer the truth, will grow ever more into correspondence with the God-given "laws of the universe." But that which they are moving towards is ever greater than they. The mountain up which we climb has no top. From every new level we see more and more of the universe. But it is the very beauty and interest of life that no number of finites will sum into the infinite. No addition of knowns will equal the *to-be-known*.

Theology must necessarily therefore be incomplete. *But it need not be erroneous.* Theosophists hold that much of the theology of today is utterly erroneous, has nothing whatever to do with any facts or laws in heaven or earth; but also that some of it does contain the beginning of a future science of spiritual things.

Man has through ages grown up in and of this universe. He is beginning to comprehend it. The last and youngest flower of the universal which has grown up in his mind is his sense of justice. And if God is the soul of the universe, it is useless for theology to try to make us believe anything to be a law of the universe which our sense of justice rejects. True theology is that which the soul of man tells him of the soul of the universe. By our own souls we, each for himself, must test the theologies—by our own souls and by the facts we see around us.

STUDENT

Question What is man's ultimate future? Is there any mountain top?

Answer The first part of the question may be answered by quoting the words of Jesus (from the *Revised Version*), "Ye shall be perfect even as the Father in Heaven is perfect." When Jesus uttered these words he was proclaiming one of the fundamental teachings of Theosophy—the innate divinity of man; and man's ultimate future is the perfect realization of divinity, *i. e.*, the attainment of perfection, even as the Divine Source from which man sprang is perfect.

Is there any mountain top? There is, and when that is reached, there is another beyond, and when that other is reached, there is seen another and then another and another. For since man has his source and origin in the Infinite, his goal can be no less and no finality can be placed upon his progress; that too must be infinite.

Question Is the practice of Brotherhood essential for any reason other than the happiness of mankind?

Answer Yes, for the reason primarily that Brotherhood is the law of man's own being and is a fact in nature.

STUDENT

John Wesley and "Primitive Physic"

IT is not generally known that among the innumerable literary activities of John Wesley, and in addition to his 40,000 sermons, he wrote a book called *Primitive Physic*, on the prevention and cure of disease. Some of his aphorisms are just as good today as one hundred and fifty years ago. Here are a few of them:

For studious persons about eight ounces of animal food and twelve of vegetable in twenty-four hours is sufficient.

Water is the wholesomest of all drinks; it quickens the appetite and strengthens the digestion.

Those who write or read much should do it standing; otherwise it will impair their health.

Walking is the best exercise for those who are able to bear it; riding for those who are not.

Malt liquors, except clear and small beer, or small ale of due age, are extremely hurtful to tender persons.

Coffee and tea are extremely hurtful to people who have weak nerves.

We demand for a spoliated past that credit for its achievements which has been too long withheld.—*From the writings of Helena Petrovna Blavatsky*

Native Americans at the World's Fair At the World's Fair in St. Louis are now assembled groups and families of the strangest peoples on earth. In no portion of these wonderful displays has a finer sense of selection obtained, possibly, than in the assembly of North American Indians. Chief among these are the Zuñis, Mokis and Pueblos, to be seen at the Cliff Dwellers' Concession. The North American Indian of the story-books is familiar enough to all Americans, but the Cliff Dwellers' descendants have really not been known to the outside world since 1897, when the first effort was made by scientific men to study and describe their manners, habits and customs. Like all our native races the Mokis have their priesthood. This is made up of old men, who are said to possess the power of divination. Mokiland is an arid country, rain is scarce, and the Mokis and Zuñis, never a savage people, live largely by agriculture. Hence the need of rain; hence in the still lapse of ages the cultivation of a mysterious rite by which the dwellers of the western continent sought to draw the replenishing waters from the skies to their parched fields. The Snake Dance is that rite. It is danced every year on the 25th of August, at Wolpi, in the Painted Desert. After it has been danced, the ceremonial requiring several days of body-racking labor, which no white man would survive, the priests consult and fix a day when the rain is asked of their deities. This rain, strange to relate, is often granted the Moki priests. After their consultation, they announce the time when their prayers will be answered. The priests, medicine-men and dancers use snakes in this dance; not harmless little ones, but eight and ten-foot rattlers, poison-fanged, whose bite would be instant horrible death to any living white man. During the dance the priests vex the snakes with feather wands; they tease them to madness, and the more the reptiles are aroused, say the priests, the surer are the signs of rain.

Useless Factors in Life EVERY new undertaking for the betterment of humanity always attracts to itself a certain class of useless factors. A careful analysis of this specific genus shows, as a rule, that they are almost useless

in any position in life. These are the kind who go about from pillar to post, trying to fit in somewhere, generally seeking prominence and positions which they are wholly unsuited to fill.

Common Sense

COMMON sense, applied to the daily duties of life, is in time bound to bring a man into place. It may seem a slow process; it is; but it is sure. Whatever difficulties the man of common sense may meet in following this line of conduct, he should have the discernment to know that they are lessons. When he has found himself in place, he can look back and count every struggle as a step for his ultimate good.

Duty and Wisdom

DUTY, rightly performed, leads to wisdom. Seeking wisdom, and neglecting the smallest duty, leads to retrogression.

What Is Duty

WHAT is duty? "There's the rub." In the name of duty we have seen our fellows persecuted unto death. Past history is full of records of this kind. No end of crimes have been committed, in the name of duty. Without common sense, we cannot gain wisdom; without wisdom, we cannot know our duty. To find the common sense lines, we must love principle, and we must have faith in our divine natures. It is the divine light which serves man in finding the path of righteousness.

It is a great deal braver to try to do something to better conditions, than to lounge around and criticise. If you mean to help along, don't get in front and block the way. Get behind and push. You will then see how little you feel like finding fault with the burden-bearers, after you have shouldered part of the load.

If a man should stand by a limpid pure spring and curse it, the spring never ceases sending up pure water. If he should cast clay into it, or filth, it will speedily disperse them, and wash them out, and will not be at all polluted.

The "Searchlight" Now Ready

THE THEOSOPHICAL SEARCHLIGHT, issued August 15th, is for members of the Universal Brotherhood only. It contains general information of the work of the Theosophical Movement throughout the World, and also important instructions necessary for the advancement of The Universal Brotherhood and Theosophical Society, in all departments. The first number of this series is now selling at 15 cents a copy. Mail your address and 15 cents to Clark Thurston, Esq., Manager, New Century Corporation, Point Loma, California.

To the Members of The Universal Brotherhood Throughout the World: In order to expedite improvements in the different Departments of The Universal Brotherhood Organization, it is necessary that all communications, connected with the work of the Universal Brotherhood, should be directed to Katherine Tingley, Loma Homestead, Point Loma, California.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

The Law of Peace and Mercy

THERE is no law with which we are more familiar, and none which so constantly enfolds us as the law of cause and effect, or Karma. H. P. Blavatsky calls it "the ultimate law of the universe, the source, origin and fount of all other laws which exist throughout nature." It is the constancy of the law of causation which makes life possible. If we found that fire burned sometimes but not always, if we discovered that water did not always find its level, if gravitation acted only now and then—what an uncertain thing; what an impossible thing life would become! That, under like conditions, the same cause will produce a given effect, that is the very foundation of the world, and of all life; that is both the mercy and the justice of the universe.

Consider what life would be if we could not trust this great law. If

when we sowed wheat something else sprang up. Or if when we did a good deed, misery was the result—would there not be an end to all effort? The law that what you sow you reap is at once kind and just. It is the temporary insanity caused by selfishness that often makes some people think they should reap wheat after sowing tares.

What Karma, or the law of causation, is in itself no one knows; indeed we do not know the ultimate nature of anything. We can but say that the highest cause is the divine, the unnameable.

We Know the Ultimate of Nothing

What we call a law is the constant mode in which we find that a given thing acts. The law of gravitation is not the force that attracts things towards the earth. What that power is we do not know, though we have to take every step in harmony with it. Much or the whole of one phase of training in life is to know thoroughly the way Karma, or the law of cause and effect, works on the physical plane. The child learns that fire burns, that a fall hurts, and so on with all other things. There is no questioning of the invariableness of the law, and we all soon learn the working of Karma on this physical plane. But we do not learn the workings of Karma on higher planes. The world as a whole is not thoroughly convinced that all moral law is as invariable as are the known physical laws.

What a different world it will be when all know thoroughly that all untruthfulness, all dishonesty, all selfishness of every form must assuredly produce a bitter result which the doer must reap. Thus we know how Karma acts in a general way, though we do not know what it is, unless we say it is the working of the divine in all things—the ever present God "in whom we live and move and have our being." Karma is not at all akin to fatalism. We weave our own Karma from day to day. Of

We Weave Our Karma Day by Day

course we do not reap the harvest next day, or next year, but sooner or later, the result is sure to come. In the way some so-called Theosophists look at Karma there is a good deal of narrowness. If we say when we see a person suffer, "Oh! it is his Karma, serve him right!" a hard and unfeeling spirit will be engendered. We should remember that we are all related—all branches of the one great life tree—and the wind that shakes the tree affects each leaf and twig. There is race Karma and national Karma, and on this account we may for a time suffer as a unit of the whole; but here also perfect justice and mercy operate, for all unmerited Karma is made up to us again. Take for illustration the case of a great helper coming into the world to uplift the race. That helper must suffer keenly in the midst of human wrong and misery and cruelty—that suffering in him is caused by pity, by sympathy for those needing help, and his reward in the end must be unspeakably glorious.

It is not always safe therefore to conclude that the sufferer must have sinned to bring about his suffering—it may be that the sorrow of others has descended upon us, in our trying to help these great souls who hold back the heavy Karma of the world. Generally speaking, however, the

Reap the Har- vest of Our Own Sowing

sufferer is reaping the harvest of his own sowing, and it is in this way that nature teaches us to avoid the evil and to choose the good. H. P. Blavatsky describes Karma as the "law of readjustment which ever tends to restore disturbed equilibrium in the physical and broken harmony in the moral world." The universe is harmony and by virtue of the power of this eternal principle all that tends to disturb harmony is eventually overcome.

We may infer from this that while we work for, or in unison with this life of the universe our work stands, but in as far as we work out of harmony with the great law our work will be brought to naught.

Karma is, of course, closely connected with the law of Reincarnation: and as men are brought to a full realization of these two great truths or facts of the universe, they will shun the evil and do the good—thus will the world be lifted up and saved. There is no more deep-seated fallacy than that which men believe when they say in their hearts, that somehow or other they will escape the results of wrong doing. This fallacy is the evil principle at work, and when it is backed up in the name of religion we must see how very fatal it is to the life of humanity. We need to ever keep repeating, until it resounds through the whole world, "Be not deceived, God is not mocked, for whatsoever a man soweth that shall he also reap."

S. J. N.

What Is 'Nature'?

IT has been remarked that, notwithstanding the freedom from ancient superstitions, on which we pride ourselves, we often unconsciously lapse into expressions which would seem to imply a belief in them; as, for instance, when historians inadvertently use in their arguments stories like the Trojan war, forgetting that these have been relegated to the limbo of myths and fables. And the use of the word "Nature" with a capital initial is a case in point. We speak of Nature's handiwork, Nature's wise and loving provisions, and so on, just as if we believed Nature was a goddess, wise, potent and beneficent, as did the ancients. And, for the moment, we ignore our religious formularies and our scientific theories, according to which the universe is run by mysterious "laws" and "forces," and presided over at a distance by the deity as a kind of titular and honorary president, and we introduce another deity who can scarcely be claimed by either religion or science, but is undeniably pagan. Finally, when called to account for this, we say, Oh, it is a mere figure of speech, a poetic license, and that kind of thing.

This reminds one of Macaulay's definition of poetry as the art of producing an illusion upon the imagination, and of similar ideas as to poetry which represent it as a means of exalting and pleasing the soul by means of illusions and phantasies.

Personally, we find a difficulty in believing that humanity can everlastingly console, exalt and inspire itself by illusions; and we believe that every illusion is based on a reality. These figures of speech and poetic fancies, which our irrepressible intuitions force upon our reluctant tongues, are no illusions but realities. The illusions are the "scientific" and theological theories we invent.

A remarkable inconsistency arises in this connection. We find people talking about the universal wisdom and care of Mother Nature, and yet shrinking in pious horror from the idea of a "Divine in all things." Not wishing to have the Deity inconveniently near, they have elevated him to a throne in the skies, and placed on earth in his stead this pagan deity, who is perhaps felt to be more complacent and less exacting of moral duties than the theological God.

The dry fact of the matter is that we know perfectly well that the universe is an expression of vast wisdom and illimitable power, and we feel that there is a Soul in it which is sympathetically connected with our own. And the sincerity of deep emotion and enthusiastic appreciation compels us to utter the truth.

"Nature" is the mind of God, or that part of His infinite mind which ensouls the plants and rocks. Nothing in the universe can be external to God; all manifestations, whether of force or of matter or of mind or of soul, whether human or animal or vegetable or mineral, are divine. Our intuitions are more reverent and more reasonable than our intellections. Let us then be faithful to them.

STUDENT

Where Eating Is a Sacred Ceremony

THE population along the Finnish coast has very tenaciously held on to and preserved many old-time customs. That this is not due simply to inertia is shown by the readiness with which they adapt themselves to new conditions and orders of things brought about by the steady progress of civilization. But they are a simple people, largely made up of fishermen, who spend by far the largest part of their time either in their open boats or else on the shore of some barren granite island near where their deep-sea seines are set. Theirs is a life very close to nature and that is largely the reason why they do not easily lose sight of that which is good in the old.

Some of their meals are regularly eaten in their boats or at least out of doors, but no matter what the situation is, they eat them with bared heads and in silence. They may not be entirely silent, but no light talk is indulged in, nor are any matters relating to their work taken up. To them a meal is *sacred*, and they approach it with reverent minds. They may not always say grace with their lips, but they feel grace in their heart. To them it is a sacrilege to eat with their hats on their heads, but toward others they are tolerant, for they realize that other people have other customs, and that each one is entitled to live according to what he considers right.

May it not be that in this custom of eating they are honoring not merely an ancient usage brought down from antiquity, but actually one of the fundamental rules of right living as known and understood during the Golden Age?

E. T. SEDERHOLM

A New Religion

IT is reported by the boundary commissioners in British Guiana that a new religion, or rather church, was discovered in the Rovaima district. An Indian chief named Jeremiah, conducts services three times a day in a church of his own building. Dressed in an enormous pair of boots, a very old pair of trousers, an ancient jacket, without any shirt or vest, elaborately constituted canonicals, seeing that the congregation are innocent of any adornment at all, this sacerdotal autocrat performs a highly original ritual.

First, there is counting from one to ten by the priest, or bishop, as he prefers to style himself, repeated by the congregation. Then a recital of the English alphabet similarly repeated, the whole being gone through ten times in succession. The devout worshippers then disperse, greatly edified, no doubt. The tribe, not improbably, may claim that they have the heart and idea of some missionary's teaching without the expense of formal attachment to any European creed. For the native mind, curiously enough, thinks about these things. The writer may quote as an instance, in Africa, an interview with King Prempeh, of Ashantee fame.

A prisoner in the hands of the British at Sierra Leone, chafing at confinement, surprised every one by deciding to go to church in state—much to the delight of the missionary world. The natural question arose, since he knew no English and could not possibly understand a word, "why did he go?" His grave and aged chiefs replied that by so doing he hoped to favor the conditions for his freedom. And the tale they told from the native point of view, of the Gospel preached in Ashantee, was not beautiful. The U. S. mails might well reject a detailed account of it in a public print. The native mind, not unnaturally, listens to the Gospel, but believes what the lives of its preachers tell, and is quite capable of forming its own conclusions from the contrast so often seen, even to the extent of declaring himself a convert for business purposes, while remaining at heart as before.

An Accusing Picture

IN one of the churches at Barbados, West Indies, there is a remarkable picture by Benjamin West, the noted artist. It has now been restored, but at one time suffered the loss of both eyes under strange circumstances. For, neglected and forgotten, it lay in a rum cellar several years. Now it so happened that a colored man was in the habit of stealing the spirit from this cellar with little risk of being detected. After a time the delinquent came upon the picture and the well-known property of the eyes of a picture seeming to follow and stare at an observer in any part of the room became apparent. It seemed to the negro as if the Christ were looking at his pilferings in mute accusation and the sensation grew so marked that he cut the eyes out of the picture and fled in terror of the silent witness and his strangely roused conscience. The painting is one of the sights of the island.

STUDENT

On the River Teifi---Frontispiece

THE cover page of the NEW CENTURY PATH this week shows a scene on the River Teifi, above the town of Cardigan, which lies on Cardigan Bay. The river takes its rise in one of the beautiful Welsh lakes, Llyn Teifi, fifty miles above the source; and, flowing through the center of the county in a southwesterly direction, falls into the sea at Cardigan. Cardiganshire in South Wales is exceedingly wild and mountainous, being composed of the Lower Silurian formation. Its mountains, however, have little grandeur, and there is a tract of dreary almost desert land along the sea-coast. But the country abounds in lakes and rivers, and many of the valley scenes are of entrancing beauty, especially near the mouths of the rivers.

SYDNEY, July 9th, 1904

NEW CENTURY PATH. Dear Editor:

In connection with a quotation in your issue of the 5th of June, 1904, from a letter by a Mr. Finch Hatton, referring to the aborigines of Australia that "the blacks of Queensland have been almost entirely exterminated by a system carefully planned and deliberately carried out by the Government of the country," and the comment thereon, that the aborigines of Australia "have been literally butchered out of existence," I also "unhesitatingly declare," from a knowledge of the facts, that these statements are not true. Faithfully yours,

T. N. WILLIAMS,
Representative Universal Brotherhood Organization for Australia

Some Views on XXth Century Problems

To Prevent Unfit Marriage

THERE is a proposal to amend the marriage laws of the State of Iowa to the following effect:

Whenever applications are made to the clerk of the district court for a license to marry, said applicants shall provide said clerk with a certificate from a reputable medical practitioner vouching that said applicants are physically qualified, and have been under instruction regarding the duties pertaining to the marriage relation.

The amendment is due to the efforts of "The Iowa Society for the Suppression of Disease and Degeneracy." This society is impressed by the great and increasing amount of physical, mental and moral degeneracy. It proposes to treat it by the double method of the instruction of parents respecting the natural laws governing parenthood, and by the legal prevention of the marriage of the physically unfit.

It is impossible in a short note to make more than a general comment upon so large a subject. We should, however, like to know what would be the qualifications expected in the "instructors." Would they be doctors, physical scientists, ministers of religion, or university professors? Or the writers of the malodorous books on "Marriage," "Love and Courtship," and so forth, with which the advertisement columns of so many journals now teem? We may express our belief at once, that *outside the teachings of Theosophy*, no true instruction on the profound laws called into action by marriage, is now to be had. They were known to some of the ancients, but the knowledge has long been lost to public view. *When they are once more fully understood—and this will come about through Theosophy—disease and degeneracy will disappear, and human life will become, in dignity and power and in its duration, what it has not been for ages.* All, and more than all, that the "instructors" can say of marriage, might be summed up in the injunction: *Raise the relation to its highest terms, and hold it sacred.*

Hypnotic Power of the Stage

TO those who assert that the stage has no educative influence, the recent arrest of a boy of 18 at Philadelphia should be of interest. The lad had seen a vaudeville act in which a performer altered with ease checks and bank notes, in illustration of forgers' methods. So impressed with the act was the youngster's mind that he attempted to raise the value of five money orders, with the usual result of detection, arrest and confession.

A pitiful tale, and a sad testimonial to the ability of the artist and the hypnotic power of the stage! Weak and sensitive natures, with no strong bias either to evil or good, abound in our day, and from their ranks come no small proportion of the criminals whose acts fill our police reports. Once detected, imprisoned and disgraced, they are sealed to evil, for the law cannot discriminate. There is no remedy, till the people themselves discountenance the depiction of crime in a favorable light, whether on the stage or in literature.

And yet there is another valuable deduction to be drawn from the miserable story. For if the vaudeville stage, poor as it has been made, produces such results for evil, what unlimited possibilities must the stage possess for good! In ancient Greece that was the case. The great dramatists were the teachers of the people, and a mixed Athenian audience was content to sit out three stately tragedies on one day.

Twentieth Century Refinements

ONE hears a good deal from time to time of the refining and elevating influence of art, and in this noble work it is admitted that even photography plays its humble part. Here is a case in point. The agent of a bioscope company has come to an arrangement with the Governor of Canton by which all executions are to be saved up, as it were, for one month. The exact number of dollars required . . . to lead him to make such an arrangement is not stated; but the idea is that by postponing the daily executions till the end of the month there will then be the respectable number of 200 to be polished off, and the biograph man hopes thus to secure a charming and delightful film for the benefit of his patrons.

"I once saw a photograph of an execution of Chinese pirates at Canton. . . . How proud and delighted must the present batch of criminals feel to know that

their farewell performance will be Kinematographically recorded for the purpose of providing a post-prandial bioscopic sensation for the highly cultured nation that provides them with Bibles, missionaries, opium and gin!—*From a current periodical*

Presumably this enterprise is not a joke, but only a specimen of the wonderful civilization we have attained; so wonderful, that having eliminated all the evil in their own country, missionary zeal has to find an outlet in "converting" the Chinese to—what?

STUDENT

A New Era Is Really Dawning

ARE we not too pessimistic in our views of human progress? Are we not too much given to assuming that changes can only come about through stretches of centuries? Yet even our metaphors might tell us better. We say that the keynote of human action is selfishness, self-preservation; that without this motive men would not act or work at all. As Sir Oliver Lodge recently put it:

There are those who think that only by maintenance of the Darwinian struggle for existence can the human race be kept in the path of energy and progress; that if the keenness of competitive struggle were suspended or even lessened, a reaction of inertia and decay and degradation would set in.

Yet we forget that in the terms of our metaphor a keynote can change by one passing chord of modulating dissonance. When Peter the Hermit preached the Crusades, thousands suddenly forsook their common limits and selfishness, and with wild and all-sacrificing enthusiasm went life in hand on a mission that was beyond the interests of their personality.

And the same may at any moment become true on a much vaster scale. One can conceive that so great a pulse of spiritual light might go out from the Center that throughout vast masses of humanity a new consciousness spread. Sir Oliver Lodge, in the conclusion of the noble address from which we have already quoted, caught a glimpse of this coming illumination, though in his enthusiasm he thought it was already come. He translated the near future into the present; in the modulation he already heard the resolution. These are his words:

We are, as men, beyond the struggle for existence now; we have entered on the area of cooperation and mutual help. We can control the forces of nature. We have not any longer to adapt ourselves to an environment; we can amend it; we can make our own environment. We are driven by the lash of no blind necessity; we can choose the good and eschew the evil, or we can choose the evil and forsake the good. Our destiny is largely in our own hands; we have become as gods.

STUDENT

Increase in the Height of Men

A LARGE woolen firm at Leeds has undertaken to compare the physical measurements recently made of its operatives with those made a couple of generations ago, and finds that the average chest and height measurements work out at three per cent increase. Workmen in the shipyards of the Tyneside and district are very much bigger than they were fifty or sixty years ago. Though here and there among special classes of workers, people of diminutive physique were found, the investigation proved that, on the whole, stature is increasing; a result which is, we believe, in accord with results derived from other observations. A generation ago a six-foot man was considered unusually tall, which is hardly the case today.

These facts are held to contradict the complaint that physique is deteriorating, but they do not necessarily imply an increase in the general constitutional strength. The Russian giant does not compare favorably in endurance or activity with his little Japanese antagonist.

Moreover, the figures relate to Leeds, a relatively small town in the midst of healthy and bracing country. The stress of deterioration falls on the population of great cities, from whose dregs the army is largely recruited. These facts tend, therefore, to corroborate a lesson with which the next generation will have to reckon. Great cities, as now built, with sun-excluding sky-scrapers, with narrow streets, with smoke-vomiting manufactories, with overcrowded and airless tenement houses, are a menace to national health and morals. They are constantly recruited from the best blood of the country, which, from the time of its arrival, steadily deteriorates.

Art Music Literature and the Drama

A New System of Music Study Needed

A CRUSADE has recently been initiated by German physicians in Berlin against overpressure in pianoforte teaching. According to the dictum of one of the physicians, no girl should begin the study of music before the age of sixteen. There seems to be scant logic and little sanity in this, even from the standpoint of a remedy. It is true, of course, that while much can be said in favor of, much also can be said against, the universally recognized system of music study, for overpractice is general. It is equally true the overpractice is but one, and sometimes a very unimportant one, of the factors that go to produce abnormal condition during adolescence, that period when the whole system is peculiarly sensitive to overstrain. But to attribute to the use of the piano, or even to the abuse of it, the ills that result from abuses in a dozen other directions, is absurd. Because the voice of one boy-singer is ruined through the avarice of manager or parent, is it logical for a physician to declare that no boys should be taught to sing until after the voice changes?

What students of music, or of anything else, need, is a better system of living, a simpler regime, a wholesome environment and a supervision that makes impossible morbid and unhealthy habits either of mind or of body. As to overpractice in music study, one can say everything against it and nothing for it. According to the rational system that is being worked out at Point Loma, where music is considered not as a mere accomplishment, but as a part of life itself, it is found that one hour's practice daily will give results that one, two, three, and even four hours' practice daily do not give in the Conservatories. The secret lies in *the life*, and when the life is regulated, when the desires are controlled, when the child gets a conscious grasp upon himself and an early and positive understanding of his own nature, then he can become proficient in music or in any branch of science or of art without danger of being graduated into a sanitarium.

The Battle and the Song

LORD WOLSELEY has declared that "soldiers singing as they march will not only reach their destination more quickly and in better fighting condition than those who march in silence, but, inspired by the words and music of national songs, they will feel that confidence and self-reliance which is the mother of victory." It has long been the custom for the soldiers of the Japanese army to sing as they go into battle and particularly when they rush to the charge. During the operation of the allied powers against Peking, the favorite song then, as now, was *Kimi Goyo*, the national anthem, which may be freely translated as follows:

May our Lord's dominion last
Till a thousand years have passed,
Twice four thousand times o'er told,
Firm as changeless rock, earth-rooted,
Moss of ages uncomputed.

In the Russian army tests were made a few years ago to determine whether or not music was of any value while soldiers were on the march. These tests resulted in the decree that regiments on the march and advancing to charge should sing national songs. Yet one more proof that, though the minds of an army may be ten thousand, the Soul is forever one. Let the colors be unfurled, let the music begin, and there is accomplished in a single moment the miracle. The personal becomes impersonal. The army moves on as one Soul.

STUDENT

The Color-Visualisation of Sounds

A T short intervals the papers fall to discussing the color-visualisation of sounds to which some people are subject. Though there evidently is such a relation, no conclusive work on it has as yet been done. The matter is by no means simple. Some people attach one color to one instrument, whatever the note it plays. A good proportion of these, for instance, associate with red all the notes of a trumpet. It is possible that careful investigation would show that in these cases the shade of red altered towards crimson or rose, the higher the scale was ascended; but this has not yet been shown. Another source of confusion lies in the fact that named notes have no definite pitch. The note C, for example, according to one scale of pitch, is B-flat or D, in others. To say that a person sees C as red therefore means very little.

Again: a note would surely appear as of a different color according as it was viewed by the mind as a keynote or as some other note in the scale. C is a keynote in its own scale, but a dominant in the scale of F. This may account for the difference of the colors attached by different people to the same note. It is possible, too, that each person may have his own favorite keynote, belonging in some way to his physical being; and to that, as a keynote, he may unconsciously refer any isolated note he may hear, giving it the color belonging to that relation. Clearing up of these points needs much experimentation.

STUDENT

MUSIC is not only one of the refinements of life; it is part of life itself.—*Katherine Tingley*

Over all and through all and beneath all that we call music, and, in fact, all that we call life, are undertones and overtones of surpassing beauty. At last our scientists are beginning to find what they consider proofs. But were our sense of hearing more refined, is it not possible that we might hear these marvelous symphonies of overtones as they rise upward to higher planes? The fact that these overtones exist is recognized by science. Do we recognize that by them all that is purest in the heart-life finds a noble and true expression? We feel that something like a connecting line or link exists between soul and soul; yet do we realize that its expression is musical? To listen deeply and reverently to good music has

long been recognized as a means by which the soul might be developed. But we have lost one great opportunity, which has been that of cultivating the voice, the noblest and at the same time the most misunderstood and neglected musical instrument on the face of the earth.

STUDENT

LET this suffice: I feel more than fully rewarded for my trials, my sacrifices, and artistic struggles, on noting the impression I have made on you in particular. To be thus completely understood is the most ravishing gratification of my longing.—*Liszt in a letter to Wagner*

FEW composers of popular songs have been more successful than Stephen Adams, of England, composer, among others, of "The Warrior Bold," "Nancy Lee" and the "Holy City." According to one of our exchanges, the name Stephen Adams is the pen name of Michael Maybrick, brother-in-law of the unfortunate Mrs. Maybrick and her chief persecutor. He is now said to be extremely wealthy, ex-Mayor of Ryde, Isle of Wight, and quondam entertainer of royalty. Mrs. Maybrick herself had received in her girlhood a fine musical education and had an excellent voice. It was she who first sang the "Holy City," and it was she who aided the man, who later did his utmost to ruin her life, in setting the words of this song to music.

TEMPLE, KOM OMBO, EGYPT

EVERY great national architecture has been the result and exponent of a great national religion. You can't have bits of it here, bits there; you must have it everywhere or nowhere. It is not the exponent of a theological dogma; it is not the monopoly of a clerical company; it is not the hieroglyphic writing of an initiated priesthood; it is the manly language of a people inspired by resolute and common purpose, and rendering resolute and common fidelity to the legible laws of an undoubted God.—*Ruskin*

ONE occasionally sees an individual woman of that progressive type which has not yet been classified by the paragrapher's ready pen. She is very much in the minority, but is significant in inverse proportion to her numbers.

A decade or more ago the aggressiveness of certain types of pioneer women, and the novelty of their position, gave them the reputation of being "masculine." That the woman-soul was trying to work out wider opportunities for expressing itself was beyond the narrow conception of that generation, as it is largely above the average comprehension of the present time. The effort to attain the consciousness of activities other than those which conventionality had labelled "woman's," was thoughtlessly considered an attempt to encroach upon man's territory.

Since the dominant tone of thought in any age is sounded by the opponents as well as by the allies of a movement, naturally enough a few venturesome women, who left the narrow hearthstone to learn something of the world's work, also believed that success somehow depended upon masculine methods and appearance. The old caricatures of "strong-minded women" gave distorted yet, in a sense, true pictures of the way in which many advocates of women's rights borrowed men's costumes and manners, with a frankly inartistic result.

With woman's rapid acquisition of various human rights, the racial limitations have so suddenly been extended that the reaction has too often perverted the new-found liberty into license. The comparatively quick removal of old restraints has here and there left its mark in the loud and ill-bred freedom and familiarity of the younger generation of both sexes. As parents we have not yet learned how to teach the children of a more fortunate age the lesson that added liberty brings increased responsibility and calls for greater dignity.

It is a wholesome sign, however, to note the disappearing of the aggressive manners which at one time were cultivated as a fad by certain crude but conscientious pioneer women. The principles underlying the practical utility of men's costumes have been sought for in making suitable, modish tailor-made garments and business women's apparel. Much which has been exaggerated in feminine thought and speech, has developed beyond the transitional stage of modern "swagger" into a simple directness of address. The truly progressive woman realizes, even though unconsciously, that the true, though so-called "masculine," quality which broadens her humanity, is a fundamental principle of thought and feeling and not a superficial detail of physical form or dress or speech.

A New Type of Woman

Thus it has come to pass that the rare woman whose keenest desire is an inner urge toward truth, has experienced

in rapid review the indignation against limitations, the novel sense of sudden liberation, the rather inco-ordinate attempts to use new powers and, finally, the resulting poise that comes from increased knowledge of her own strength.

It goes without saying that this type of women is misunderstood; the disciples of truth have always paid that price. She arouses the general opposition of conservatives, but is especially antagonized because she eludes conventional classification. It is not clear to her critics why she is so objectionable; for her ability, sincerity and deep feeling culminate in a broad impersonal insight that is confidently hopeful and free from bitterness. She puts aside the hot indignation, the sarcastic tone, the stinging wit, in discussing humanity's wrongs, which would be so hopelessly pathetic did not the suffering entailed carry with itself the ultimate cure. She has gained too clear a conception of the length of time the race has been in error to expect speedy reform. She has come to see that the "only sin is ignorance," that the cause of darkness is a lack of light.

This new type of woman, who sometimes is and as often is not, college bred, usually combines practical experience with the culture which comes from a study of life. Though her ideas are so feminine, her critics instinctively feel that "unwomanly" is not the word; while in breadth of view she too far outmeasures the average man to be called "masculine." Her garments, while seldom cut on the extreme lines of fashion, are not made nor worn like men's, her manners are less striking than the operation of her mind. The opposition she arouses is as much a matter of feeling as of thought, for the narrow prejudice and blind bigotry in the social mind know subconsciously that she is an undaunted fighter for liberation, and that her victories are won by their defeat.

A woman of this type was recently lecturing upon the "Socialization of Society." The subject was handled with a synthetic grasp of humanity's age-old evolution, and with a logical adjustment of economic relations to the ethics of development as a whole, which justly located the milestone of class consciousness on the road of impelling purpose by which the race seeks the greater consciousness.

The language of the speaker, her gestures, her masterly treatment of the subject touched her audience with the novel largeness of an impartial view, which is hopeful because it recognizes the trend of things.

With a delicacy of touch distinctly feminine, she sketched salient points in the workings of general principles, which could not have been more broadly outlined by the best masculine mind. The listeners forgot their partisanship in her statement of universals, which made them more conscious of their humanity. In short, the effort was a logical, masculine presentation of an intuitive feminine knowledge of truth.

These occasional individuals of the new type, whether working out the destiny of a public or private life, are active with the impulse of a message which is more subconsciously felt than understood. They possess, to a degree, the masculine and feminine qualities of mind and heart, which deeply underlie the outer sex divisions of form and bearing. Their mental and physical development and their personal lives are too much influenced by heredity and the prevailing sordid standards of life to be perfect in expression. But individually they stand as promises of a coming humanity that shall be broadened and refined, strengthened and sweetened in the larger consciousness that includes, while it transcends, the distinctions of sex. They are significant signs of the times that link a great past with a greater future. Mother Nature is ever wise in her selective choice of fitting forms. Knowing that mere intellect is blinded and deceived by the selfishness which everywhere masks the face of life, she trusts the intuitive woman-heart to feel and know the meaning of this message of a returning golden age, when developed humanity shall become ideal lovers of truth. L. R.

The Position of Woman

AH, how deep Hawthorne went into this world—how far beyond its conventionalisms! Hawthorne did impose a lien upon the future—just one. That was with regard to the position of woman. I do not believe that there is a sweeter page in literature than at the close of the *Scarlet Letter*, where Hester is seen, her troubles past, the letter no longer a stigma, bringing to her side women with wasted and burdened hearts.—*Moncure D. Conway*

And what could have been more prophetic than the words Hawthorne puts into expression, through Hester Prynne, when she assures these erring women "it is her firm belief, that, at some brighter period, when the world shall have grown ripe for it, a new truth would be revealed, in order to establish the whole relation between man and woman on a surer ground of mutual happiness? . . . The angel and apostle of the coming revelation must be a woman, indeed, but lofty, pure and beautiful; and wise, moreover, not through dusky grief, but the ethereal medium of joy." M.

China's Awakening

THE old is fast taking on the new, and in the flying trip from station to hotel one sees startling and picturesque contrasts and combinations—a Manchu woman with her satin black hair, wound around a broad, flat pin, the shape and size of a shingle, working an American sewing machine; or the sign of American bicycles hung on one of the wonderfully carved and gilded old shop fronts, a fine fretwork of men and trees, boats, houses and towers, carved in the open and the round, and once brilliantly gilded.—*Eliza R. Scidmore in Exchange*

ALTHOUGH the public of Brooklyn is unaware that such is the fact, yet it is true, that the largest and best-equipped livery stable in that city is owned and perfectly managed by two young ladies. The drivers in their employ are the best paid and treated of any in the city. At a recent strike of liverymen in Brooklyn the drivers of this stable refused to go out, giving, as their reason, they had no cause for complaint. It may be that woman is yet to give the touch that is needful in the solution of the labor difficulties which occur so frequently in this country. E.

The Woman's Exchange and Mart

MANY women at this, the very end of their journey to the "Far West," have found inspiration and delight in a visit to the Woman's Exchange and Mart at Point Loma. Their interest is aroused by the exhibit of artistic work, but a lasting enthusiasm is the result of a visit to the workrooms.

Imagine a spacious building, the windows of which have an unobstructed view of the blue Pacific. Everything in it is found to be unique, from the working tables and chairs of quaint and most practical design, to the skilful management of light screens arranging the space for the many departments.

And what a wonderful scheme of work!—developing in each worker a sense of responsibility and solidarity, that does away with the need of many intermediate workers and makes for each a place of trust. And in this day of specialties, of lifetimes spent in the repetition of one detail, is it not refreshing to see here the same woman at one hour doing the most exquisite work in hand book-binding, and at another busy with some simple duty of caring for the room? No one is bound to one line of work alone.

As there is no mercenary aspect to the work done here to hem it in, the Soul of these women-workers is free to express itself in their work; and new departments are being constantly added, as they discover in themselves some unthought of skill in the production of the beautiful and useful. The nature touch is everywhere.

One feels that the work of the Exchange and Mart, is a new departure in woman's work. The furniture, the interior decoration, the costumes made

there, have all a touch as of the hand of one wise in Nature's ways, so wise that cruelty and plunder will bear no part in the use made of Nature's gifts to mankind. All is blended in a sweet harmony that promises to the fortunate spectator a day in the near future when the hands of women will be free to work joyously in the making of real homes for the world's workers. M. M. T.

A Chinese Lady as Hostess in Washington

THE daughter of the Chinese Ambassador, little Miss Liang, enjoys the unique distinction of being the first Chinese lady to act as hostess in Washington society. She says:

My main object in coming to this country is to obtain an English education. I am already studying English under the tuition of an American woman. I am anxious to make great progress in the language of this country, so that I can mingle freely with the American girls. Things here seem very strange, of course, but every one is so kind to me that it is impossible to get very homesick. The young girls especially seem to realize what it means for a Chinese girl to be suddenly transported to a new world. I do not mean to criticize, but there is one thing that I don't understand about American girls, and that is their eagerness to discuss the subject of dress. Almost the day of my arrival in this country questions about the style of dress began to be put to me, as though that were the most important of all subjects. In my country these things are considered very trivial, and only the unlettered women waste time talking of them. As a matter of course, we dress according to the most approved custom, and think no more about it. S.

A Woman's Quick-wittedness

One of the most interesting incidents connected with the St. Louis Exposition was the prevention of a disastrous panic by a woman's song. During a severe thunder-storm the lights went out in Festival hall while a concert was in progress. The audience, as usual in such cases, became panic struck, but some quick-witted woman started in to sing America—others joined in with her and in a short time all passed out in safety. N. M.

Indian Heraldry---Totem-Poles of the North

THE totem-poles of British Columbia and Alaska, so often regarded as "savage" emblems are in reality as complex and accurate a system of heraldry as ever Europe could boast. The rules as to size of the device, the acquisition of the right to display tribal crests, the variety of the crest adopted, are all governed by ironbound customs which any of the coast Indians would scarcely ever think of wrongfully breaking. And the system possesses a real value in that a stranger from a great distance will, on arrival at a village, look for the totem of his tribe, and in the house so marked will be made welcome to bed and board during his stay in the district.

This reception by his lodge is looked upon as no particular favor, but as a matter of everyday courtesy and social right. Often a high token is obtained by marriage—such as the immense pole in Seattle which was taken from Alaska at great risk of serious disturbances.

But in the old slave days of a few decades past some of the emblems were acquired by conquest. The slave idea now is scarcely dead, some "adopted" children being regarded as such by their guardians.

The totems are skilfully carved according to conventional patterns in a wonderfully short space of time. The model is first made, perhaps two to six feet in height. This approved by the Chief, the final carving is proceeded with, sometimes requiring an immense fir, or more usually cedar, for its basis; but occasionally it is made of one or two pieces. The symmetry is extraordinary—the two sides of a face being carefully and exactly adjusted.

It is said that the Indians of British Columbia were not originally wood carvers, but that they acquired the art through their slaves, taken in Alaska during the last century. It is certain that in its way there is an unsuspected degree of artistic feeling in the Siwash Indian carving, but conventionalism is carried almost to an extreme. For instance, an engraved design has been described offhand as that of a grizzly bear, only to be corrected by the remark:

"No, it is an eagle, I can see its beak!"

The coloring of the totems appears to possess some sort of significance although it is doubtful whether there is any sort of strict science about it as there is about the size and description of the image. A white-faced man is regarded as the sign of a tribal feast—called a "potlatch"—but although practically every totem is highly colored, the significance appears to be uncertain. Some, indeed, of the smaller totems, such as those that mark graves, are merely painted pieces of flat board.

Far from being meaningless images, the totems possess an interest which vies with that of the symbolism of heraldic days, and although they show a degradation rather than a height of culture, there is evidence in them of a very high degree of civilization once attained by these tribes.

Researches in the Aryan Cradleland of the Human Race

LONG ago, H. P. Blavatsky recommended archeological research in eastern Persia, western Turkestan, and the adjoining regions, remarking, for instance, that "the immense 'Salt Valley' of Dasht-Beyad by Khorassan covers the most ancient civilizations of the world." Central Asia, she asserted, in the face of most modern opinion, to have been the cradle of the Aryan race. And she quotes the ancient Greek geographer Strabo, who calls by the name of *Ariana*, the land of the Aryas, the whole country between the Indian Ocean on the south, the Hindu Kush and Parapamisis on the north, the Indus on the east, and the Caspian Gates, Karamania, the mouth of the Persian Gulf on the west.

THOUGHTS FROM H. P. BLAVATSKY

OF all the beautiful ideals of the Past, that truly religious feeling that manifests in the worship of the spiritually beautiful alone, and the love of plain truth, are those that have been most roughly handled in this age of obligatory dissembling.

The periodical rise and fall of human character on the external planes takes place now, as it did before, and the ordinary average perception of man is too weak to see that both processes occur each time on a higher plane than the preceding.

There are still men who, notwithstanding the present chaotic condition of the moral world, and the sorry debris of the best human ideals, still persist in believing and teaching that the now ideal human perfection is no dream, but a law of divine nature; and that, had mankind to wait even millions of years, still it must some day reach it and rebecome a race of gods.

Part of this region is now being attended to by Professor Pumpelly, financed from the Carnegie Institution at Washington. He is at work on the many mounds scattered over Russian Turkestan, just over the northeastern frontier of Persia. There are here, as H. P. Blavatsky indicated, remains existing at a far greater depth than in either Egypt or Babylonia. The excavator has now reached a depth of no less than 174 feet, finding relics throughout all that extent, relics beginning with the stone age, passing through the copper, and culminating in the iron. The pottery of the greater depths is entirely hand-made; nearer the surface it begins to be wheel-made.

Within the strata of the iron age lie the remains of the great city of Anau, and here are glass and enameled pottery. Professor Pumpelly does not commit himself to dates, and has sent home large quantities of the remains for expert examination. It is time we learned something more than what the Vedas indicate about the origin of our Aryan ancestors. And at last we seem to be fairly on the track. C.

A Race of Living Cliff-Dwellers in Northern Mexico

DR. BUSH, an American archeologist, has discovered in the interior of northern Mexico an existing race of cliff-dwellers. Besides the similarity of their dwellings, their habits appear to be the same as those which are indicated by the remains found in the deserted cliff ruins in North America. The stone-carved hieroglyphics in both cases are the same; the mummies in both cases are the same; and the newly-discovered living people are the same in size as the mummies. The hieroglyphics could not be interpreted, and Dr. Bush was unable to comprehend a word of the spoken language of these people.

This is a most important find, and may be the key to a great field of knowledge. For the writers of an immense mass of hitherto undecipherable hieroglyphics are here living and talking. It only remains for some one to go and cultivate a little friendly intercourse with them.

America is not the only site of cliff-dwellings. There are some on one of the islands of the Greek Archipelago, in Switzerland, and in Minorca. In none of them is to be found evidence of any high level of civilization. From remains found in neighboring cañons, it would appear that the cliff residences were often only resorted to as modes of escape from enemies; and the way to them is usually by ladders and staircases now in ruins. Indeed, they have often disappeared entirely, and the dwellings are entirely inaccessible. These people probably represent a descent from much higher forms of civilization. STUDENT

Indian Tales, Myths, and Legends of the Siwash Tribe

THE myths and stories of the Indians of the Northwest Coast of America are difficult to obtain in correct form, for, simple as the Siwash Indian seems, he has a deep sense of the value of silence as to his tribal traditions, and of the speech that hides the speaker's thoughts. It has been said that they will never repeat a story twice in the same way, and often will conceal under an appearance of ignorance their most cherished legends. Several of the better known tales, however, so closely resemble the stories of ancient Greece as to leave no room for doubt as to a common origin, although they have their original points. The story of Klisalagila, the Sunmaker, in Fatherland, is almost identical with the story of Phaeton driving the sun-horses in wild career out of their daily course. The legend of the Restorer resembles the Savior idea, which is universal. There is, an ingenious human side to these tales, in that they unconsciously ingrain into the childish character such ideas of morality, courage and manly behavior as few methods could.

Man and Nature in the New Order of Life

WHAT is to be Man's relation with Nature in the new order of life to which we look forward as a result of the reign of Theosophy and Brotherhood? To what ideal should we tend, what ought we to expect? We are told we must learn to walk hand-in-hand with Nature, to work with her, and to imitate her methods and processes. What does this mean?

Looking abroad in the world at things as they are and have been, we find two kinds of relation between Man and Nature. These are briefly summarized in town life and country life. In the one the object seems to be to get away from Nature as far as possible, and to replace her environment with an artificial environment better adapted to the lives we mean to lead in those cities. Nature is too large and slow and open and fresh for the occupations of a center of business and pleasure, and her trees and meadows have to be removed and hard, straight causeways laid instead; the vast spaces have to be circumscribed, and things made generally warm and snug. In short, the life of a city, the life which includes what we call progress and culture, demands an escape from Nature.

In contrast with this we have country life, which, in proportion as it is more natural, is less advanced and cultured; and which is progressive only in the same degree as it is modified by the introduction of artificial elements from city life, such as railroads and post-offices.

We have not yet learnt to use Nature or to co-operate with her. Instead, we either shun and banish her, or else yield and are swallowed up in her vastness. We have the city-man and the boor and some intermediate stages or blends. We go to the country for rest, but return to town for business, study, and for many kinds of pleasure. Active life is of the cities; country life is apt to tend towards barbarism and inaction.

Nature is too strong for us; she overwhelms us, lulls us to sleep. To get to work again, we must have our rooms and streets, our shaded lights and other bodily supports and mitigations. Nature is the great passive potency of the universe, and the divine human Will is the active energy. These two, cooperating, are creators. But Nature is in man as well as outside of him, and it is because man has not yet learned to direct his own nature that he is not strong enough to direct external Nature. We succumb to the powerful influences which we should master.

It will take a generation less puny and impatient, a race stronger and more forceful, than our own to be able to live with Nature in the proper relation, to be able to direct her with the power she demands and to utilize the gifts she bestows. It is written that he who would control Nature must be able to resist her seductions; and that she loves and reverences the will that can resist these seductions, and will minister to it. This means we have to do this in ourselves and overcome the seductions of our own nature first. Answering the original question, then—we may look for a new relation between Man and Nature to arise when

WHERE GOD STILL REIGNS

by S. E. KISSA

COME to the woods, O weary one,
For faith and hopes are there;
Under the leaves God's will is done,
His glory fills the air;
There is joy in the piping from the pond,
There is triumph in the velvet froud.
Come to the woods, O doubting heart,
And learn that earth is fair;
The city and heaven are far apart,
But God is near, out there
Where all is obedient to His will—
The woods are His, as He made them, still.

the new order of life, based on brotherhood, is established. This new state of affairs may be a revival of what obtained in very ancient times. The few natural forces we have to some extent tamed, such as heat and electricity, are nothing to what there is in Nature for the humanity strong enough to tame it. We may look for a life in close touch with Nature, in which natural potencies not now dreamed of will be used, and used, not for harmful purposes, but for the general benefit.

Instinct of a Magpie and a Sidelight from Theosophy

A FRIEND of mine had a magpie which was taken from the nest at a very early age and brought up by hand. It had never seen a

surface of water, because it was always given its drink by mouthfuls at a time from a glass tube.

One day, when it was fully fledged, a saucer of water was brought into the room, when immediately the young bird showed signs of the liveliest satisfaction. It fluttered its wings, couched on the floor of its cage and went through all the characteristic motions of a bird taking a bath. Of course, it is easy to say "inherited instinct," but this does not explain what instinct is, nor how it is handed on by the parent birds.

May it not be that, as "there is no new thing under the sun," the animating soul of the nestling's body had lived as a bird before and that it needed only the bright surface of the water to reawaken its memory of other baths in past lives?

The suggestion is not intended as a final and complete explanation; but in a case where materialistic science has nothing to offer but a learned phrase which explains nothing, any idea which makes the mystery more thinkable should be welcomed. Moreover it is so simple that any child can understand it, which may, however, be a disadvantage in the opinion of the brain-burdened scientist. W.

Inquisitiveness of the Humming-bird

AMONG many interesting things to be seen at Point Loma are humming-birds, of which there are several species, one quite large. They all have one characteristic in common, and that is curiosity respecting human beings shown in their courageous approaches for the purpose of investigation.

They seem also to have a disposition to cultivate a friendly acquaintance. They will hover in the air a few feet away with their swiftly moving wings and gaze at this wonderful being first from one point of view and then from another, never omitting the front view by which they may look into the face and eyes. Frequently they make this close scrutiny from all sides, winding up with a near view just above the head; then, apparently satisfied, fly to a bush or tree near by and settle on a branch. And the object of all this curiosity wonders how he appears to that marvelous little bundle of life whose humming wings so swiftly move that they seem but a shimmering film about the iridescent hovering form. And the curiosity is not all on one side. There is a fellow-feeling that would easily ripen into friendship on the part of both, and man and bird are not so far apart as they appear; in fact, one common life binds both together, and each has a lesson for the other.

DRIEL FERRY, ARNHEM, HOLLAND

Universal Brotherhood Organization

Central Office Point Loma California

THE good-sized audience which despite the unusual heat of last Sunday evening, comfortably filled Isis Theatre, at the regular meeting of The Universal Brotherhood and Theosophical Society, was well repaid for attending, and by frequent and hearty applause manifested entire sympathy with the sentiments expressed in the three admirable addresses of the evening. The first of these was presented by Dr. Gertrude W. Van Pelt, entitled "The Realization of Personal Freedom." Among other things she said:

"It is odd to think of the volumes that have been written on this subject. Free-will and fatalism, these are the two poles between which the human mind has swung. One can imagine the smile of pity and amazement with which the men of one or two centuries hence, will look back upon the age in which we live and those which have recently rolled by us, and wonder how so-called great men could have written such ponderous treatises on a question which every one, even every child ought to be able to answer. It is an admirable example of the utter inability of the human mind to find out truth, when it takes the lead, and ignoring or despising the faculty of intuition, assumes the position of teacher. The whole controversy is such a comment on the ignorance of man regarding himself, who and what he is, and of the purpose of life, that without an abiding faith in the divine essence in human nature—now alas, so often buried—and in those great, compassionate Helpers who have made this essence manifest in the flesh, the situation would seem hopeless. But thanks to this, there are now a growing number of people all over the world who are on the road to finding themselves, and placing this marvelous and powerful instrument—the human mind—where it belongs, and can be made to do real service.

The beginning of the confusion here as everywhere is in the failure to recognize oneself. It is so common for men to think they *are* their desires, so that when these are not gratified they say they are not free. They want this and that, and finding themselves hemmed in, unable to obtain the object of their desires, they declare themselves slaves, the creatures of fate. If they are identifying themselves with these desires, this is undoubtedly doubly true, for they *are* then the slaves of slaves. What stability could there be, what possibility of peace, harmony and freedom, in a universe where all the personal, contradictory and clashing desires and ambitions were allowed to run riot. A persistence in this personal view of life, the determination to get what one wants for oneself, naturally brings its results in a present or future life; misfortune and helplessness in this direction come sooner or later, and then to the man ignorant of himself, comes the conviction that he has no freedom, and he curses his fate."

Miss Amy Lester presented an address entitled "The Reason of Many Things." Touching on the subject of the dual nature in man, Miss Lester said:

"Which has the right to—which shall live in my nature—a gluttonous appetite, which will destroy the whole body in catering to its insatiable cravings, or the enjoyment of that power which can control such tendencies and provide the body with that amount and quality of food which will give to it the most nourishment and beauty and strength?

"Which shall live in my nature—the withering force of the love of money—just to have it—or that power which loves to make useful and beautiful things—that will give to my labor a value?

"Which shall live in my nature—the impulse which would waste my life in flippant, empty, evanescent pleasures, or that power which gives the joy of following a noble, purposeful, light-hearted line of action?

"Which thing shall live in my nature—the disposition to be sanctimonious—self-righteous, to offer the sickening sympathy of whining cant—or the exhilaration that comes from exerting a healthy and generous influence by the sincere, unconquerable and glad performance of the things that need to be done every day?

"Shall I permit little scheming ambitions for position and prominence to fester in my nature, or shall I enrich and strengthen my whole being, and give of health and nobility to my surroundings and associations by the dignified execution of what belongs to my hands wherever I am standing?

"Why should I permit the need of simplicity, with all the beauty that this really means, to become distorted by crankiness and excess, into ugliness and uncouthness?

"This choosing is not only the necessity—it is the privilege of every human being. And the fact of any conflict is the sign that all life has not left the man on the inside, and that he yet has the capacity to live.

LOMALAND STUDENTS AT ISIS THEATRE

*** "The Realization of Personal Freedom," "The Reason of Many Things," and "The Brilliant Past" ***

Reprinted from the San Diego News

"It is good to make the choice and enter the conflict for the reward that it will bring. Sustain ever repeated effort, no matter what phases may seem to occur—the reward is certain. Things difficult today become easier tomorrow—because these forces of character, brought into play by honest and faithful effort, will grow and become strong in their very exercise—as is true in any physical organ or function. And every moment there will be an increasing hope and faith and satisfaction in what the future will bring. This is a *good* way. But it seems to me that there is a new way, and a better.

"I believe that somehow it is possible to have that feeling which will give a delight in doing all rightful things, and will give the power to sustain every conflict that is right, simply because it is right. In this way there is no need to think or bother about reward, or wait for the real joys to come in some future time. Somehow, I am sure, very soon, in this way, will come a something that is beyond *all* price—something that is better than any price that could be thought of, no matter how big or fine—something that could not be bought, because there is nothing else that is worth nearly so much. And I believe that, even after the first touch of it comes, there is no more waiting or dependence upon the future, because every moment, every action done in this line, is filled with this feeling, which is of the very essence of Life. You would not have to hope for it, because it would bring newer and larger and fresher hopes. You would not have to have faith in it—rather, it would endow you with a new and a purer faith. Is there not that something in itself—that unseen thing—of which Hope is but the evidence and Faith but the substance, and that it of itself can furnish every other need and strength? Would you have to explain it? You would have done with all that bother. It itself would be realized to be the Reason of Many Things."

Mr. Fred G. Plummer, the well-known scientist, spoke on "The Brilliant Past." In proving his contention that the ancients had, in many respects, reached even higher stages of civilization than we have yet attained, Mr. Plummer delved into many arts and sciences and made statements showing the remarkable heights attained by the ancients. He cited the Damascus steel whose temper no cutler today can approximate. He cited the flexible glass and the prismatic glass of the "elder days," whose perfection are the despair of glass-blowers today. He cited the rustless iron of the Orientals, the hardened copper of the Romans, the immaculate linen of the Egyptians, the perfect silks of the Chinese, the subriparian conduits which irrigated the hanging gardens of Babylon, the never-fading frescoes of Pompeii, the musical scale of Pythagoras for which musicians of fine ear long for today but in vain.

He said that the compass was known to the Hindus scores of hundreds of years ago. He said that the five orders of architecture handed down by the Greeks have never been improved upon and a sixth cannot be found. He said that modern city building is puerile contrasted with the work that built the mighty cities of Babylon and Nineveh. In short, modern science and art would seem mighty small in the eyes of scientists and artists who have been dead and buried these eons and eons. In conclusion, he said:

"This subject has an application to a problem of the present day. We are confronted by a Yellow Peril, and the real reason that we fear, and have cause to fear, the New Mongolian is that he threatens to combine his old wisdom and experience with latter-day knowledge and invention. The combination is a strong one, and we shall be forced to do the same thing and do it better, quicker, and more thoroughly. Our Good Ship of Progress has a very pretty cargo of mechanical inventions and toys, albeit much of it is contraband of Law. It is true that if we take on some good solid ballast, we shall not show so much red paint, but we shall ride the seas of time better.

"We must be broad enough to recognize that the philosophy of the ancients was, and is the best, and indeed the only one we have. Our modern sages but repeat part of the wisdom of olden times, culled from every venerable nation, whose teachers studied *themselves*, and taught how we might know *ourselves*. And in the sacred realm of religion the same truth holds good. All good precept and "means of grace" comes to us from the star-spangled night of time when the Golden Rule was as strict and inflexible a measure of duty as it is today. The heavens have always declared the glory of God, the true God who has spoken by the mouths of his holy prophets since the world began."

Mrs. M. J. Dobson, a devoted Liverpool member, passed away June 18th, in Liverpool. We extend our sympathy to her family and friends.

REPORTS from the Stockholm Lotus Group indicate unusual interest and steady advance in all branches, particularly in the children's English classes.

✻ An Old Chinese Philosopher ✻

STUDENTS of history, in its broadest and deepest aspects, have long realized that the great events of the past have come into being under some universal law which governs the world's evolution. The material earth has passed through its various geological ages, under the law, until it became molded and hardened into the shape in which we see it today. Civilizations and empires have risen and been swept away at cyclic intervals by the same law of governance; and coincident with these, and in some degree underlying them, have been those systems of belief and ideal action which we are accustomed to call the world's religions. So that the general progression of all events, whether outward and material, or inward and spiritual, is foreordained for the perfection of all things, and is written in the stars, that man may some day come into his great inheritance.

If this be so, then there must be recurrent periods in the world's history which are times of transition. Old faiths have not stood the test of imperfect human interpreters, and have lapsed from their primitive simplicity. Old ideals have become encrusted with the speculative superfluities of intellect and ambition. Eye service has gradually supplanted the Doctrine of the Heart. It should, however, never be forgotten that this Doctrine of the Heart has ever been the same, the foundation and sum total of all the world's great teachers far back into the night of time. Only when the pure original teachings have lapsed from their true interpretation does it become necessary to recall them once again.

Every keen observer of current events will perceive that at this beginning of the Twentieth century, we have arrived at one of those periods of transition. It becomes a matter of deepest and increasing interest to know what occurred in the past at similar cyclic periods. We would do well to learn what we can from those teachers who (as is stated in one of the old Aryan scriptures), whenever there is a decline of virtue and an insurrection of vice and injustice in the world, have come forward "for the preservation of the just, the destruction of the wicked, and the establishment of righteousness."

Almost exactly fifty centuries ago such a teacher, Krishna, appeared in India. He and his disciples and his immediate followers were the founders of a pure spiritual faith, which law, the foundation of the glory of ancient Indian civilization, is now almost forgotten.

Twenty-five centuries ago appeared two great men—Gautama, the Buddha, in India, and Laotze in China—the foundation of whose teachings were identical with that of Krishna.

Laotze and his disciples, and particularly one of them, Confucius, were the founders of those religious systems of ancient China which have now so largely departed from their original purity and spiritual simplicity.

Laotze was born about the year 604 B. C. He seems to have been a prolific writer, having written about 1,000 books; but only one of them, the *Tao Teh King*, has been preserved to us. This work fortunately contains, however, the very gist and heart of his doctrine. The book contains only about 5,000 words, but it is full of instruction and enlightenment to him who will read with an understanding heart. The translation of the words "Tao Teh King" is the *Way of Heaven*. Some translators have thought it better translated as the Word of Heaven, or the Heavenly Voice.

Let us see what this old philosopher can tell us about the Way of Heaven. It is surely worth while to know what were the ideas of this man 2,500 years ago, the origin and founder of the religion of the most ancient and populous empire in the world, consisting, as it does today, of 400,000,000 of people, about a quarter of the population of the earth.

One remarks very soon in reading Laotze's Way of Heaven that he lays no claim to originality—he is continually quoting the sayings of the "wise men of old." Thus he says in one place: "By holding fast to the Heavenly Way of the Ancients, the present is mastered and the origin of the past understood." And in speaking of Revealers of Truth he says: "Those of yore who have succeeded in becoming Masters are subtle, spiritual, profound and penetrating." All through the book he refers to the great ones who have gone before and expounds afresh their wisdom.

Before going further, we will now quote some of the sayings in the

Way of Heaven. Laotze says:

Therefore, the holy man embraces unity, and becomes a model for all the world. He is not self-displaying, and thus he is enlightened. He is not self-approving, and thus he is distinguished. He is not self-praising, and thus he acquires merit. He is not self-glorifying, and thus he endures. Since he will not quarrel, therefore no one in the world can quarrel with him.

There is a Being, containing all things. It existed before the heavens and the earth. How calm it is! How incorporeal! Alone it stands and does not change. It goes everywhere without hindrance, and can thereby become the world's mother. I do not know its name.

The holy man is always a good savior of men, for there are no outcast men. The good man is the bad man's instructor, and the bad man is the good man's capital. He who does not esteem his instructor and he who does not love his capital, though he may be intelligent is deluded.

One who knows others is clever; but one who knows himself is enlightened. One who conquers others is powerful; but one who conquers himself is mighty. One who is contented is rich.

The good, I meet with goodness; the bad, I also meet with goodness, for virtue is complete goodness. The faithful, I meet with faith; the faithless, I also meet with faith, for virtue is complete faith.

Contemplate a difficulty when it is easy. Manage a great thing when it is small. The world's most difficult undertakings necessarily originate when easy, and the world's greatest undertakings necessarily originate when small.

I have three treasures which I preserve and treasure. The first is called compassion. The second is called economy. The third is called not daring to come to the front in the world. The compassionate can be brave. The economical can be generous. Those who dare not come to the front in the world can become perfect as chief vessels.

Requite hatred with goodness.

Chevangtze, one of the disciples of Laotze, thus describes his master's teachings:

There is the *Tao* or Way of Heaven and there is the *Tao* or Way of Man. Practising non-self-assertion and yet attracting all honor, is the Way of Heaven; asserting one's self and being embarrassed thereby is the Way of Man. It is the Way of Heaven that plays the part of the lord, it is the Way of Man that plays the part of the servant. The Way of Heaven and the Way of Man are far apart. They should be clearly distinguished from each other.

It will thus be seen that Laotze's great book, *The Way of Heaven*, is not merely a book of ethical precepts. It is far more than that. It is a book of devotion, intended for the student of his own inner and divine nature, and is thus similar in character to *The Voice of the Silence* written by H. P. Blavatsky. And here we have a very wonderful and remarkable coincidence. It has already been stated that some translators say that *Word* or *Voice* is the best English translation of the Chinese word *Tao*, and so Laotze's book becomes the *Heavenly Voice*.

A large portion of the *Tao Teh King* is not immediately obvious. It will only reveal itself when pondered over in careful thought. The world today has too little of this inward brooding over the great principles which should guard the inner life. As Tolstoi the Russian thinker says:

If all men would only employ the tenth part of the energy that is wasted on the acquisition of purely material advantages, in settling the questions of their conscience, the world would soon be reformed.

But how are we to settle the questions of our conscience? And what is this conscience that will, fortunately for us, obtrude itself upon our inner, conscious life, whether we will or no? Can any doubt that it is the voice of the divinity within us, the unspoken word which leads us to the "Way of Heaven"—the "Voice of the Silence" which speaks to us clearly when we will listen, with its unspoken words? The world has too long lost the clue to this, the greatest inheritance of the human race. But the way is still open, and the "Lost Word," which is no word, may once more be found. "The Way of Heaven" and the "Voice of the Silence" are the same.

STUDENT

WHEN the sword is rusty, the plow bright, the prisons empty, the granaries full, the steps of the temple worn down and those of the law courts grass-grown; when doctors go afoot, the bakers on horseback, and the men of letters drive in their own carriages, then the empire is well governed.—*Chinese Saying*

A Sorcerer Dissected

WE lately met with a boy's fairy story, founded on a medieval legend of a sorcerer. This sorcerer possessed many strange powers, and he put them all to effective use in carrying out his fell purposes. He could cause his body to glow in the dark. He could raise himself several feet into the air, and stay there suspended upon nothing. He could deliver a sort of shock to any one whom he touched, and the spot where his hand had rested soon became very painful and ulcerated. When one of his hands was cut off in a fight, he reproduced it in a few days. He could fascinate by his glance, so that his victims were unable to take their eyes from him. And he obtained great reputation by predicting storms and rain several days in advance when as yet there was no sign of them.

All these things sound absurd, predicated of a man. Let us see if they are less so under other circumstances.

On consideration, one finds the elements of this formidable gentleman scattered over the animal kingdom. When he made his body glow, he was but doing what the glowworm exhibits to us every night. The power of giving electric shocks, ascribed so credulously to him by the old story, is possessed by several sorts of fishes. As to the ulcer which his touch left, we have lately learned from the naturalist Oswald Latter, that the imago of the moth *Dicranura Vinula* secretes from its mouth a very strong solution of caustic potash with which to dissolve and penetrate the tough silken cocoon in which it is immured. Why it does not destroy the tissues of its own mouth is not known; but then it is not known why the stomach does not digest itself along with every meal. The sorcerer could reproduce an amputated hand; but then the lizard can reproduce an amputated tail as many as 127 times. He could predict the weather; but so can many animals, and they take precautions to meet it. As to his levitation, the case is not so clear; but it is now becoming admitted that some of the phenomena shown by birds in their flight and ascent to great heights, as well as the power of some of them to remain under water against an upward pressure greater than their weight, and stay motionless, is inexplicable according to any known laws. And it may remain so, until we provisionally credit them with the power of changing their polarity with respect to the earth.

So the sorcerer turns out to be a mere abstract of some of the more remarkable powers at work in the animal kingdom! STUDENT

Despondency Is Selfish

NO condition is so bad that it cannot get worse, and it is a good plan when despondency is filling the mind with gloom, and when every way toward the future seems blocked with a blank wall, to stop short and organize the mental faculties and reflect that it all could be much worse. Then to that add the self-evident truth that there is a duty to life and to fellow-beings, which should be performed as faithfully as lies within human power.

Do not be contrary and stubborn and resentful towards life and the guiding force behind it, if things have not gone to suit. May be the way that would have suited was not the best way.—*Baltimore Herald*

THE duty of cheerfulness was one of R. L. Stevenson's favorite texts. Despondency is selfish, for it is indulging a private mood unwelcome to others. Look at that individual who plods along with bowed shoulders, eyes on the ground, and face of despair! Give him a wide berth, his presence is not inspiring. If that is how I look when I have the blues, I will take care to keep them to myself in future. Let me enlist pride and dissimulation in a good cause and turn them into virtues. To others I am not my private self; I am a friend and comrade, looked to for help and pleasure; I will still be that to them.

I can stop the self-reproductive power of gloom, by which fear and wrath, breeding with doubt and suspicion, generate new evils; and I can generate instead better luck. A downcast mien will frighten away the friends who might help me, and a gloomy spirit will guide my footsteps into paths of darkness.

Besides it is not *I* who am dejected; *I* am independent, ever the same, detached from the past, and always making a new start. The old hymn says, "I am weak, but Thou art strong;" let us alter it and say, "Thou (my lower nature) art weak, but I am strong." We may fall in the mud but there is no need to sit down in it. H. T. E.

AS ONE of the few occasions when the wit of Rufus Choate was foiled an incident is recalled, when that brilliant lawyer was examining one Dick Barton, chief mate of the ship *Challenge*. Choate had cross-examined him for over an hour, hurling questions with the speed of a rapid-fire gun. "Was there a moon that night?" "Yes, sir." "Did you see it?" "No, sir." "Then how did you know there was a moon?" "The *Nautical Almanac* said so, and I'll believe it sooner than any lawyer in the world." "Be civil, sir. And now tell me in what latitude and longitude you crossed the Equator?" "That's more than I can give." "Indeed. You are chief mate and unable to answer so simple a question." "Yes, the simplest question I ever was asked. I thought even a fool of a lawyer knew that there is no latitude at the Equator."—*Selected*

The Trend of Twentieth Century Science

Some Testimony from Shells Found in an Artesian Well

SCIENTISTS are continually finding evidence that great and widespread changes of climate have occurred upon the earth; not once, but many times, and such evidence is cumulative proof of the *Secret Doctrine* teaching. One accidental discovery—if accidents can happen—was made near Tacoma, in the State of Washington, and is in the line of conchology.

During the boring of an artesian well, three shells were brought up from a depth of four hundred feet, and were immediately recognized by an expert as belonging to species found only in the tropics. That these shells should be found at a point nearer to the north pole than to the equator seems to prove two things: that the climate has changed since that four hundred feet of soil began to cover them, and also that the shells have not changed during the great interval of time that has elapsed, for they are identical with existing forms. The *Mitra episcopalis* is found from the Philippines to Ceylon, and has the form of a bishop's mitre, as its name signifies. Its beautiful markings of bright

orange on the white body are undimmed by the centuries which have passed since it was the home and protection of its little maker. The *Terebra maculata*, or auger-shell, is the larger of the three, and is white, with small brown markings on the whorls. It is found in the Philippines, in the East Indies, and on the coast of tropical South America. *Conus littoralis*, or the cone-shell, is also a native of the tropics, although one of this species is found as far north as Point Loma. It is white, with small brown spots arranged in rows, while the basal spiral is figured radially.

Such finds as these offer opportunity for speculation and theory-building, but the cautious investigator is never hasty. In this case there can be little doubt that the "find" was genuine, as the shells were picked up as they came from the mouth of the sand-pump, in the presence of reliable witnesses, and were immediately identified by Professor C. M. Drake before their ownership changed. There is, however, always the possibility of the mechanical migration of fossils and other geologic material; for instance, by ocean currents. The writer once found a large block of stone bearing several hundred cretaceous shells on a beach several hundred miles from the parent ledge. Its migration would have forever remained a mystery had not this stone been found firmly held by the roots of a great tree-trunk which had floated with its burden and been cast up on the beach. In a few more years the wear of the waves would destroy the wood, and the stone would have remained, possibly to bear false witness.

Research by Light May Check Vivisection Barbarities

THE exquisite researches of M. Charpentier into the N-rays may do something to check the present worship of vivisection. It is through anatomy supplemented by vivisection that the nerve tracks and motor paths and areas in the brain have been mapped out. Exactly this work is being done by the N-rays without pain or bloodshed to man or animal.

A small fluorescent screen is placed in the subject's hand. As a wire conducting the rays is moved about the arm, up the neck, and over the head, an increase of the fluorescence is noticed as it moves along the path of the nerves to the fingers. The whole nerve track is thus made visible. A series of these experiments are in progress, and they mark the beginning of a new path of knowledge. For it is already known that the N-rays differ among themselves, and are related in their differences to different tissues of the body. When they can be properly separated, artificially produced in their diversity, and then applied in investigation, a real physiology and anatomy—of life, not of death—will begin to open. And it may turn out that their applications in disease are as specific as the serums of which every laboratory—with its stables and cages and kennels—is the prolific mother, as specific and further reaching.

Flying Dragons That Existed Outside of Legends

WHENCE the flying dragons of the legends of all peoples, of the nursery stories, and of the myths? Are they constructed from whole cloth, purely imagination-made; or are they memories of creatures that existed immense periods of time ago?

The student can take his choice; but there *were* flying dragons, even up to comparatively recent geological times; and the "primitive man" of the geologist could have met with them, fought them, and been beaten by them.

The Pterodactyl, for instance, whose fossil remains have been found in the chalk at Cambridge in England, had a wing-spread of at least twenty-five feet. It had an immensely long body, a long neck, a relatively small head, and a great beak. The wings were huge membranes, strung between the hind legs and the shoulders. It swam, ran, or flew, according to the requirements of the situation; and was consequently a terribly formidable antagonist. In a general way it carried the suggestion of a lizard; indeed, the tree-lizard of the East Indies would almost do for a pterodactyl, if one were to look at him through some appropriate microscope. And there is no reason to suppose that these creatures would have fallen short of the very considerable intelligence possessed by our modern little friend. If they were as eager after men as he after flies, life then must have been far from dull.

STUDENT

Crystallization Was Never Claimed as a Vital Process

A FRENCH chemist, M. Boyer, objects to the recent scientific view that crystallization is a vital process. A vital process, in his view, is a raising of elements into a new state. If a crystal of alum is to form, there must be already alum in solution in the water. But if a plant is to grow, that is, if protoplasm is to form, there need not be protoplasm in the water. The plant will make it out of simple chemical elements.

But M. Boyer is not drawing any real line. It was never claimed that crystallization is, as a vital phenomenon, *on the same plane* as plant growth. One is mineral life, and the other vegetable. Moreover, in both cases, that which is assimilated undergoes a change of state. The alum in solution in the water changes its state to alum in crystal. The simple salts in the water about the plant change *their* state, passing from simplicity to the complexity of protoplasm.

One can conceive of a third vital process, which, for all we know, may be going on in our own bodies. We know now that "elements" are not elements, but compounds of some simpler stuff, protyle, ether, cathodal units, or something. May there not be a vital process going on now, which consists in the fabrication of "elements" from this?

And, in wondering whether this may not be going on, in secret, in our own bodies, one may as well take the convenient opportunity of wondering also whether our bodies have really *quite* lost the plant's power of making protoplasm out of chemical elements; and whether, indeed, the man of the far future may not re-develop both to a very complete degree?

STUDENT

Man's Seeming Antipathy to Natural Antiseptics

MOST people forget that sunlight makes doubly for health. Not only does it arouse vitality, or give vitality—though we do our utmost to prevent it by means of clothing that permits none of it to reach the skin in the faintest glimmer—but it kills the germs of disease. No germ lives long under direct sunlight, typhoid germs, for instance, hardly twenty minutes. This we also prevent in our great cities by building the houses so high that there are portions of pavements, and even whole streets, upon which sunlight never falls. Germ life here flourishes, carefully protected by its human victims. The oxygen of air is another natural germicide whose beneficence we take even greater precautions to checkmate.

In fact we live as far from nature as we can. We clothe the skin so that it cannot breathe, the head so that we grow bald, the feet to exclude earth-magnetism. What else now remains to do?

STUDENT

✻ Lloyd Ab Cilcoed---A Legend of Old Wales ✻

WELL now, I must be telling you who it was that came into Dyfed after Pwyll and Rhianon had been reigning there for may be a year and a day, and what he did.

His name was Lloyd, the son of Cilcoed, and he was an enchanter and very powerful. Also he was a cousin to Gwawl, the son of Clud, and his dear friend; and after that there is no need to be telling you that he was as dark and evil as he was powerful.

Now this Lloyd heard tell of the game of Badger in the Bag, and very angry indeed he was, and also he was afraid of what might some day happen to himself. For it was he who had taught his cousin all the evil he could, and he was even more dangerous than Gwawl, because of his magic. Well then, when he heard of Badger in the Bag, he made up his mind to go into the Islands of the Mighty, and work such hurt and harm and injury as he could on Pwyll and on Rhianon and on the men of Dyfed in revenge. When really if he had had any sense and had stopped to think he would have taken the vengeance on Gwawl, whose wickedness had brought its own punishment, or indeed he would have taken it on himself who had helped to make Gwawl wicked. But then, you see, people so seldom think of these things when they're for taking revenge. And Lloyd did not.

So Lloyd came to Britain and to Dyfed, and with him came all his people, and all his vast hosts, for he was a great king in his own land, though no warrior nor leader in battle. Indeed I have heard, and I think it must be true, that they did not come sailing in proud ships as another enemy would have done, nor armed with swords and shields, but flying high above the sea in the guise of black crows.

And that Rhianon knew of their coming, and sent forth her three birds to gather together all the eagles and hawks and bright-eyed falcons in the Island, and that these met the crow army before it came to land, and killed many of them, and were about to drive them back. Then Lloyd went to his magic, and made his people fall into the sea, and changed them into fish, the smallest and ugliest fish in the world, and led them towards the mouths of the rivers of Dyfed. Then the Birds of Rhianon called together the white gulls and the black gulls from all the coasts of the three Islands, and the ospreys and herons and all the birds that catch fish on the seas and rivers and lakes, and these flew along the coast between the mouths of the Towy and Teifi rivers, and did what they could for Rhianon. And for their services, it is said, Rhianon gave them an island in the sea there to be their chief city. And certainly the island is that, to this day.

But Lloyd's folk were in such millions that more than half of them escaped the sea-birds, and swam up the rivers till it suited him to bring them to land. And then he changed them to multitudes of small black poisonous flies and they flew away to a place within the mountains where they might be, and from which they might work their evil on the land.

"Well," said Rhianon, "this will be a trial for the king; and the end of it all will be for good. We shall catch this Lloyd ab Cilcoed yet."

Three years were Lloyd and his people in Dyfed, and they could not be seen and were not known, for either they were invisible or in the form

of some bird or beast. And though they were unseen, they did not rest from their labors. Their chief, most of all, set himself to find out the hidden things in the hearts of the men of Dyfed; and wherever he found a seed of evil he tended and watered it till it grew big; and he put all the selfish thoughts he could into that man's heart, and in time he brought him to Gorsedd Arberth. And by degrees he had gained his victory over many of the princes and Druids and many of the people. And wherever he conquered a man, he filled that man's heart with thoughts of hatred against Rhianon.

At the end of three years, whispers began to reach even Pwyll himself, whispers against the queen. For there were those who said that it was an ill thing for a man to marry one not of his own race. Or again, that no son would ever be born to one who married an immortal. And then they grew bolder, and it would be—how was one to know whether such a being were of the peerless wise races, or a mere fairy of the woods and lakes with nothing but world-old beauty and gaiety? And then—why should she not, in spite of all seeming, be one of some unfriendly and destroying people sent out to bring ruin upon a man or upon the human race?

For a long time no one would have dared to even hint of such things in public, much less to speak of them before Pwyll's face. But he knew they were being said; and, alas, he did not act strongly with these slanderers, forbidding them for their lives to whisper such evil, or driving them forth from the land. But day by day he grew more troubled.

Once when he was very gloomy Rhianon asked him why he was so troubled. And after a few moments in thoughtful meditation he told her. Then she bade him always trust in her and in himself, and no harm would come. But still she was very sad, because day after day she saw him grow unhappier, and because he did not speak of it to her again. And, indeed, it was to be seen that he began to ask her advice less often, as the time went on.

And so the evil grew, and presently nearly half of the men of Dyfed were tainted with hatred for Rhianon. They knew well that it was she, more than all, who stood between them and their wicked plans; for indeed it seemed that she

did nothing but what would check some evil. For awhile they could do nothing but grumble and plot and hate; and always it was Lloyd ab Cilcoed who was behind them, and it was he who never allowed a dark thing to be lulled to sleep and silence in the heart of any one. Evil thoughts and selfish desires were his constant companions.

As for Rhianon, she foresaw sorrow and she foresaw joy beyond it; and if Lloyd never rested in his work, much less did she rest in hers. She trained the true warriors around her, that when the day came they might be the best helpers in the world. And she trained the little children where she could; and she kept her bright immortal birds singing their songs nightly through the sleep of those she could influence, so that there came to be a small but strong body in Dyfed that loved and trusted her, and that would not let utter ruin come upon the green melodious Streamland in its dark hour that was coming. And that hour came when Lloyd had gained more than half of the people and was able to work his mischief, to his heart's content.

✻ DREAMERS ✻

by JOAQUIN MILLER

AH, there be souls none understood,
Like clouds, they cannot touch the land,
Drive as they may by field or town.
Then we look wise at this and frown,
And we cry "Fool!" and cry "Take hold
Of earth, and fashion gods of gold!"

Unanchored ships that blow and blow,
Sail to and fro and then go down
In unknown seas that none shall know,
Without one ripple of renown:
Poor drifting dreamers, sailing by,
That seem to only live to die.

Call these not fools: the test of worth
Is not the hold you have of earth:
Lo, there be gentlest souls, sea blown,
That know not any harbor known:
And it may be the reason is
They touch on fairer shores than this.

THE CHILDREN'S HOUR

The Raja Yoga Question Box

THE Higher Patriotism claims justice and liberty for all men. Where any seek for self alone there is cruelty and strife.

1 Who was Roger Williams?

ANSWER — Roger Williams was a Puritan who came to Massachusetts in 1631. He claimed for all the freedom of conscience he had crossed the sea to find. The Puritans drove him out of the colony and he was forced to find shelter with the Indians. They were his friends, for he believed they had rights, and he would not seize their lands without giving a return. He founded the city of Providence. Under the government he started every man was free to follow his own belief.

2 Who was Anne Hutchinson?

ANSWER — Anne Hutchinson was a woman of great spirit and talent who came

to Boston in 1634. She spoke her thoughts about religion freely and boldly, and was a power among the people. The Puritans condemned her words and banished her and her friends. They went to the home of Roger Williams and founded in Rhode Island a little republic.

3 Who was Thomas Paine?

ANSWER — Thomas Paine was a patriot, whose writings taught his countrymen the idea of independence. He fought side by side with them to gain it, writing by the light of the camp-fire words that filled their hearts with courage. Paine loved humanity, and wished to help all men to be free. He was Washington's trusted counsellor.

Eschylus

Extracts from the report of a short talk given to the members of the Lomaland Lotus Group, at a recent meeting, by a Teacher

WHEN you are older and know more of life and of the laws that govern it, the laws that control the stars and make us what we are, you will better understand the meaning of the symbols that the world's great teachers have used to express their ideals. Most people today have lost sight of the inner meaning of things, and, indeed, some of the best teachers of the present time have lost sight of the truth that behind even the smallest thing that we do there lies a great meaning, provided, of course, that our hearts are right; that our hearts and minds are attuned and working together.

You have today paid a tribute to the teacher Eschylus. I do not doubt that he had his failings and weaknesses, but he was a great Teacher, a reformer, and *he loved humanity*. Now, the ancients had a great regard for the teachings and the customs of their ancestors, a regard that we do not have today, as we should. We should study the lives and teachings of these Great Helpers, *but not in the ordinary way*, for there is something finer and more beautiful to be gotten from the messages they left and the truths they taught and the lives they lived. It is probable that if Eschylus himself were to speak to the people today, he would speak not as he did to those in old Greece, but would adapt himself to the present time and the people with whom he had to deal. This you must bear in mind, and when you come here and study the lives and teachings of these great Helpers, men and women, you are paying tribute to the nobility of their purposes and to all that was good in the work they did for humanity.

One secret of the great success of the Japanese in the present war—and do not misunderstand me, children, for you know I do not believe in war—yet it is, however, true that the secret of the marvelous power the Japanese have lies partly in the fact that they love and revere the truths that their ancestors handed down to them. By their lives they pay tribute to these truths, they honor them and hold them dear, and it is the memory of their ancestors' heroism that inspires them to fight, even to death, and to sacrifice all to their country.

And so today, in paying tribute to the great Souls of the past, we are teaching you to reverence, in a sense, your ancestors, those who have passed life's way before. You are being taught great truths, and though you may not understand their full meaning now, when you grow up and go out into the world and your places here are taken by other children, you will look back and remember the sweetness of this hour, and you

MOTHER AND CHILD—MODERN GREECE

will be able to give to humanity a finer something than you would have been able to give if you had not known of these great Souls and had not tried to color and enrich your lives by studying the truths they taught.

In Greece

DEAR CHILDREN: If we could look, as the fairies can, I suppose, across land and sea and over mountains and beyond great valleys into the peasant homes of modern Greece, we should see many a mother, and many a little daughter, I think, like these whose pictures are here. And I can fancy that their children must often look wonderingly towards the ruins of the old Acropolis and ask their mothers, just as the little girl is asking her mother, "What do those buildings mean and why do so many people visit them? And why have you taught me that they are sacred?" And I doubt not many a simple Greek mother loves to go back in thought to the ancient days and tell her little girl all that she can remember—for the heart has a memory, as well as the mind, you know—and I doubt not, also, that, just as we love to hear tales of our great warriors and the days when our forefathers fought together for freedom, so those little Greek children must love to hear of those

days when the hill of the Acropolis was magnificent and full, surrounded by its noble nine-gated wall, the chief gate being the Propylaea, of which we can still form some idea from the ruins that remain. There stood also the noble Erectheium, many grottoes and forts, and we still see the remains of the old Pelasgic wall; and although the glory of Greece seems to have passed, even the age of Pericles, when Greek art and philosophy and drama blossomed like a purple lotus under a glowing sky, we know that the spirit of it all still lives in the silences, and is waiting—waiting—for the time when it shall come forth again. AUNT ESTHER

DEAR CHILDREN: What do you think of snakes as watchmen? I live in Maine, and not far from my home are the stone sheds of a large granite company. Now most companies of this kind employ a night watchman to prevent truant boys from stealing tools, but this particular granite company never employs a night watchman; and this is why. The quarry is the home of an enormous family of ring-neck snakes, which are as harmless as a kitten, but the sight of these great creatures—and a few of them are six feet in length—is quite enough to prevent any stranger from going into the quarry. It is more than fifty years ago that one of the owners of this quarry forbade his employes killing any of these snakes. He said he was fond of them and that they were better behaved than humans! Anyhow, after his death the custom was kept up of protecting the reptiles. A TEACHER

LINES TO A CRITIC

by SHELLEY

HONEY from silkworms who can gather,
Or silk from the yellow-bee?
The grass may grow in winter weather
As soon as hate in me.

A passion like the one I prove
Cannot divided be;
I hate thy want of truth and love---
How should I then hate thee?

"To Be or Not to Be: That Is the Question"

THE great help that Divine Wisdom or Theosophy brings, is that it is actually the truth about life; and the Truth shows us the unvarnished side of our furniture, the hidden, as well as the outside or public view. Though we may blame this or that for our difficulties, the truth shows us where the real cause of the difficulty lies; but it not only points to where the trouble is, and so gives us an opportunity to quickly and thoroughly get rid of it, but it shows us what a beautiful and glorious truth real life actually is: and that we can *be it* or have it as a living experience: for we have the power to alter our surroundings by altering our character, and we *can do it*.

This is one of the brightest, most hopeful and encouraging truths of Divine Wisdom, that *within* each of us lies the power to grow into perfection, or to realize to the full the purest and truest ideals. Accepting this as a fact in nature, then it follows that the contrary *cannot be true*, that others can do our work for us. So that our real friends will never leave us gazing too long, at the pictures made by the lives of others, that is the word painting we read in good books; or at the papers, speeches, talks and opinions of others; for though, if they are beautiful and true, it does show an appreciation in degree, but it also shows *selfishness*, a desire to get, and not to give, when it does not inspire us to immediately go and do the work *ourselves*, and in process of time to depend entirely on the God within. It is hardly realizable to what an extent we selfishly depend upon others, or vampirize them until we lose them, or they have the pure love and courage to free us, and at last we have to stand, as a *soul* without even their smiles and approvals.

But until we resolutely accept the Truth, that we *are souls*, we still serve the mammon of selfish desire, to get and not to give—the very foundation of vice and depravity, which shuts us out completely from the light, leaving us out in the cold instead of enjoying the unity, love and beauty of real life. So the greatest of all truths that Theosophy gives us, is that *we can attain*, and *must do our own work* or else it *will not be done*. The fact that we have read so many good books and studied their theories, and looked upon many beautiful pictures made by the thoughts and acts of others, and that they did us so much good, and were "so helpful" cannot weigh one feather in the balance when the Master comes, and asks us to show *our work*, what have *we done*.

Theosophy appeals to us as the Truth, and this priceless wisdom was given for no other purpose than to be made use of, to improve our characters and lives, and necessarily the lives of those around us. So, once we accept Theosophy, the question for us individually to ask ourselves, is: How much is the benefit I feel I have gained from Theosophy caused by my own work or the work of others? Just as a baby lives in its early years upon its mother's milk, so can we live for a time at the expense of another's Theosophy. The Supreme Law of Justice, as a man sows so he reaps, or the Lord or Master who expresses the Law, that is the Ruler, the Judge, when our "hour has come," will he say, "Depart from me, ye workers of iniquity," or, "Well done good and faithful servants, enter ye into the joy of your Lord."

Theosophy says: These are actual facts in nature and the hour comes to each one of us, by the opportunities given to us, when we are judged for what we are worth. In very truth the total of every day's thought and action is entered up on our page in the ledger of the Book of Life, with the accumulations of right and wrong, credit and debit, the judgments of the Eternal Law entirely alter our surroundings or environment. If we have been basking in the sun of another's good deeds, which was our just balance from the past, yet have we realized this has given us rich opportunities for service in the priceless companionship of noble souls. If we have received this selfishly, then this sunlight will only be temporary, and one day we shall be left out in the cold, having lost our priceless opportunities for service, and when the Master comes, we shall be as the foolish virgins with no oil in our lamps, entirely owing to our *own selfishness*; gratifying our desire to *get for ourselves* and not to give; thus breaking the first and the greatest of all rules of true Life, the very Law of Being.

T. W. W.

The Higher Duty, or the Choice Between Duties

OUR higher duty is our duty to the Higher Self, the Self of all beings, and is always that which will help all. It is the duty which ever lies nearest us in the performance of whatever we have to do, and the motive and attitude in the doing of it. We may perform the act required, but if we do it with a wrong motive, anything less than the highest motive, we have neglected our higher duty. We may do our work, but if we do it in a wrong spirit, our higher duty is passed by. We, who are here to help humanity out of the darkness into the light, out of the bondage of selfishness into the freedom of larger love, must ourselves dwell in the light and put the larger love into all we do. If we do our work with a feeling that some other work would be better for us, and feel a dislike for the work while doing it and that it is a burden, then we are adding to the burdens of humanity; we are making more difficult the Leader's great work in bringing brotherhood and peace in the world, and giving her pain where we might give her joy and strength, and we make it harder for other comrades to be true to the higher duty.

Let us put the larger love and the joy of life into the work we have to do, and we shall have chosen the higher duty. With unselfish motives and right feeling we shall have the light to choose between duties whenever choice becomes necessary; but there is only one real duty at any given time, and that duty is the obligation due each moment to the Higher Self. However, because man's nature is very complex, and because he has by his past acts formed attachments and contracted obligations in many directions, hence his duties appear diversified and leave room for argument and speculation and false theorizing.

One man, bound by material ties and material obligations, ignores his mental and spiritual needs and duties, and so sinks deeper into matter. Another, forgetful of his duty to mother, father, or children, pursues a selfish path in the morbid gratification of his mentality; while still others, ignoring all duties of sane and healthful man, seek seclusion from association with their fellows to cultivate what they would think was the spiritual part of their natures.

How mistaken in the light of Theosophy as taught by Katherine Tingley, for she has shown us the need of the perfect blending of all the faculties and how service in material things can be the highest service to the Higher Self; in short, how all service, if rightly performed, is but a service to the God within.

A. S.

WE are apt, sometimes, to regard compassion as something different from justice, but a deeper study shows that compassion, wisdom and justice are in reality inseparable and are all aspects of the law which is the very foundation of the Universe. How can there be true compassion except in one who knows the heart of man, whose own heart has been in the furnace of suffering? Would we realize what compassion is, we must turn to the great Helpers of Humanity who have labored unceasingly for the regeneration of man and the establishment of the Universal Brotherhood of the whole human race. Humanity has long wandered in the desert, but has never been forsaken by the Teachers of Compassion, though as we look back through the ages we see these Teachers denied, discredited, crucified. How great has been and is their compassion that they still work on and help, and how great the opportunity of those who have felt and recognized that help.

STUDENT

IF WE KNEW

COULD we but draw the curtain
That surrounds each other's lives,
See the naked heart and spirit.

Know what spur the action gives;
Often we should find it better,
Purer than we judge we should;
We should love each other better
If we only understood.

Could we judge all deeds by actions,
See the good and bad within,
Often we should love the sinner,
All the while we loath the sin;
Could we know the powers working
To o'erthrow integrity,
We should judge each other's errors
With more patient charity.

Ah, we judge each other harshly,
Knowing not life's hidden force;
Knowing not the front of action
Is less turbid at its source,
Seeing not amid the evil
All the golden grains of good ---
Oh, we'd love each other better
If we only understood.—*Selected*

THEOSOPHICAL FORUM

Conducted by J. H. Fussell

Question Please explain the Divine Principle in all things?

Answer The idea of God has been degraded by our materialistic and unspiritual way of living and by our dogmatic religions. The most reverent and the most rational conception of God is that of an eternal Presence, everywhere and in every atom of the universe, giving life and intelligence to the whole. All nature is but the outward semblance of God; but, as we see nature through the veil of our senses only, we do not recognize its divine soul. Could we but rise above the illusions of our minds caused by ignorance and selfishness, our senses would become enlightened and we should see and know and feel the divine Presence everywhere.

As it is, our gross manner of life and our loss of clear insight (due to unbrotherliness) have caused us to regard most of the universe as dead and unintelligent. And to make up for this we have invented a personal God. Let us consider our own nature. If we look at ourselves with our senses, we perceive a solid body composed of flesh, blood, etc. But, closing the senses and looking deeper, we find a conscious mind pervading every atom of that body. Looking deeper still, with the trained insight of a purified nature, we should find our true self—the immortal soul. And it is so with the animals, the plants and the very earth and rocks; all have an outer seeming of solidity, but all are equally vestures of the One Life or Divine Principle.

Modern science studies the outer garb of nature, but is lost in confusion when it tries to penetrate into the causes of things; then it can only talk vaguely about force and motion and attraction and chance and so on, which are simply other names for the divine attributes.

In our day, only poets and men of genius get occasional glimpses of the universality of the divine Presence, commune with nature and walk with God; but in ages of spiritual enlightenment it has been, and will be, otherwise. God reveals himself to the pure; and to realize the divine in all things, we must first realize the divine in ourselves, which we can do by purifying our hearts and lives.

Question Wherein lies the excellence of the Raja Yoga System of education over all other methods?

Answer To those who have had opportunity to see the results obtained in Raja Yoga Schools, no explanation is needed. The results themselves speak with sufficient eloquence. To those who have not seen, and who have become alive to the needs and welfare of children, the promoters of the Raja Yoga System proclaim:

The originator of the Raja Yoga System, Katherine Tingley, has, in the construction and operation of this system of education, brought into play a new, essential and fundamental factor, of which the whole modern educational world has come to feel the need, but has not yet been able to discover.

This bold and unqualified declaration is not the fruit of speculation. The value and power of this factor is no longer a matter of experiment.

Improvements of method, as are natural to the progressive spirit of the present age, are recognized, and due credit is given. But, Raja Yoga consists of something much other than the modification and development of ideas previously current. A good measure of its value is in its un-failing application of new ideas, new methods necessary to meet ever differing individual cases, and the ever new needs consequent to active growth and unfolding.

One inestimable advantage is that the teacher and pupil each become imbued with an enthusiasm which lifts the sense of task, liberating the faculties of both, and brings to the work of each a feeling of life and joy.

The teacher is an integral part of the system, and to be such requires qualities and forces of character which only training in the system itself and a constant living of its principles can produce.

It would do no real service to set forth words in exposition of the Raja Yoga System of Education, because, as any one can know, the words could be imitated elsewhere without that genuine life behind them to justify their use.

W. T. HANSON

Question How would you answer an orthodox person who says that Theosophy only teaches morality but no religion?

Answer I would ask him what he meant by religion; whether Christianity or Buddhism or Mohammedanism or Hebraism or any other of the world's religions; and, if Christianity, whether the Greek, Roman, or Protestant church; and, if Protestantism, which of the numerous sects into which that is divided.

The fact is, that while there is but one truth, grounded on the unchanging principles of morality, there are innumerable religions; the reason being that the truth is divine and religions are man-made.

Theosophy is a system that appeals equally to people of all races and creeds, and the Theosophical Society is the nucleus of a universal brotherhood of all races and creeds. How then can Theosophy teach any particular set of articles of faith, or favor any particular church or sect, out of the thousands that exist? Then again, Theosophy is as old as the human race, and Christianity is less than 2000 years old, while its present forms are still more recent and are to a great extent merely local or national.

There can be no separation between religion and morality. Morality is the basis of true religion, the basis of the universal and eternal religion. True religion is founded on the wisdom that is revealed to the pure in heart. Those who follow the teachings of Jesus as recorded in the Bible, which are also the teachings of Buddha, and Zoroaster, and all the other great religious teachers; those who live unselfishly and overcome selfish passions, anger, lust and the like, and make their hearts pure and their lives clean, will have all the wisdom necessary for life. Such people are the truly religious; they need no hard-and-fast theological dogmas; they need no church or priest to step in and absolve them, for they are safe under the guidance of their own pure hearts.

Theosophy cannot narrow down its broad and universal platform to teach the articles of any little church belonging to some one race of humanity. But it can and does throw a new light on each religion, revealing what is true and beautiful and eternal in that religion, and showing up what is false and man-made.

The history of our race, both past and present, shows that Christianity has become so split up into sects and so enfeebled by lack of faith and by empty forms, that it cannot save society from the dreadful consequences of human passions. Therefore Theosophy must help Christianity, restore it to its original unity and effectiveness, and turn it from a warring sect into a religion that is at peace with other religions.

H. T. E.

QUESTION: Do Theosophists declare that Christianity is a failure?

ANSWER: When dear old Dr. Bartol, of Boston, was once asked if Christianity had proven a failure, he replied: "It has never been tried yet."

THEOSOPHY uplifts the mind to heights of sublime conception.

"And Still It Moves" THE following taken from the *Cleveland Press* tells its own story. Comment is needless:

The Rev. John Alford Fisher, whose resignation as pastor of the Franklin-ave Congregational church was tendered, by request, last week, and accepted, was not permitted to finish his farewell sermon Sunday morning. The service broke up before the minister was fairly started.

The church was crowded, many of the congregation being strangers drawn there by curiosity. Rev. Mr. Fisher rose pale but calm. The first part of the service passed off without incident.

The subject of the sermon was "Liberty." Rev. Mr. Fisher said:

"To some minds, enslaved in tradition and bound by the narrow withes of an antiquated belief, the conception of God as a spirit, filling the universe and permeating all things, is impossible. To these intellects a man who tries to lead gently onward toward a higher conception of the Deity, eliminating the idea of a human God on a great white throne, is a thing to be cast out, anathematized and damned.

"The best blood of the north and the south was once spilled in striking off the shackles of a race of mankind. But I say to you that the man who attempts to bind the intellect is lower a thousand times in the grade of humanity than he who places manacles on the body of his fellow man. I would rather be a peasant, humble and lowly, than a mighty potentate of the church bound by the miserable shibboleth of dogma. The Bible has been set up as a fetich to be worshiped, and yet Jesus Christ, whose utterances it claims to set forth, wrote not a single line of the book. Then why should we, in this day and age, look upon it as an infallible decree of the Most High? They say that we shall be damned if we do not believe. Then I say that I would rather be damned."

Several men and women got up and walked out. Others in the front part of the church applauded. Rev. Mr. Fisher waited for quiet and continued:

"I adhere to the doctrine of free speech, but at the same time I do not think one has the right unnecessarily to offend others of contrary view. But when they have eyes and see not, and have ears and hear not, then I believe it is the duty of the enlightened—to use a vulgarism of the Bible—to 'unstop' their ears and preach to them the truth."

There was more applause and more hisses. Still more of the congregation left the church.

"Is there anything the matter?" inquired Rev. Mr. Fisher.

"Yes," shouted Thomas Henderson, a deacon of the church. His face was flushed. "There is something the matter. This man came to us pretending to be a minister of the gospel—"

"Shame!" "Sit down!" Such cries came from all parts of the church. But Henderson took advantage of the first instant of quiet, and said:

"It is not because of his liberal beliefs that we object to this man, but because he is unkind, untrue and illiberal. He is—"

He got no farther. Every person in the church was on his or her feet trying to be heard.

Trying to Be Heard "Deacon Henderson's remarks are unchristian," cried a voice. "Let Mr. Fisher go on."

"It is thus," began the minister, "that liberty is strangled in the house of God. Where God is, there is liberty—"

"He came here under false pretenses," shouted Henderson. "There will be no preaching tonight."

"I will say no more. All rise for the benediction," said Rev. Mr. Fisher. When he had pronounced this, he said:

"One word more. I bear no malice, but the charge that I came here under false pretenses cuts deep. I bore with me the recommendation of some of the highest men in the church, and they are still my friends. The congregation is dismissed."

The "Searchlight" Now Ready

THE THEOSOPHICAL SEARCHLIGHT, issued August 15th, is for members of the Universal Brotherhood only. It contains general information of the work of the Theosophical Movement throughout the World, and also important instructions necessary for the advancement of The Universal Brotherhood and Theosophical Society, in all departments. The first number of this series is now selling at 15 cents a copy. Mail your address and 15 cents to Clark Thurston, Esq., Manager, New Century Corporation, Point Loma, California.

To the Members of The Universal Brotherhood Throughout the World: In order to expedite improvements in the different Departments of The Universal Brotherhood Organization, it is necessary that all communications, connected with the work of the Universal Brotherhood, should be directed to Katherine Tingley, Loma Homestead, Point Loma, California.

The Raja Yoga Edition

THE Special Raja Yoga Edition of THE NEW CENTURY contains 122 beautiful half-tone illustrations of school-life, home-life, and out-door-life among the pupils of the Raja Yoga School at Loma-land. It is the most richly illustrated edition of a weekly journal ever published. By letterpress as well as by its matchless collection of beautiful pictures it faithfully depicts every phase of life in the Raja Yoga School.

It is double the size of the usual issue, containing 32 pages of matter and pictures descriptive of the Raja Yoga School and its pupils. Those who believe in Katherine Tingley's work for the children will want to preserve a copy of this beautiful and unique publication.

Ten thousand extra copies of this edition were printed, and though they are being sold very rapidly, there are still enough left to fill all orders. Some friends have ordered them by the hundred, sending them broadcast. The price is 20 cents a copy. If you send the names and addresses with the cash to THE NEW CENTURY CORPORATION, Point Loma, Cal., the papers will be mailed for you without extra charge.

Infidelity That Needs Compassion

THERE is an infidelity with which no good man should have any sympathy. There are infidels who are such, knowing what they oppose. There are men who, in no mistake, know the difference between good and evil, and distinctly knowing it, choose the evil and reject the good. But there is a state called infidelity, which deserves compassion rather than indignation—the dreadful state of one who craves light and cannot find it. I do think the way we treat that state is most unpardonably cruel. It is an awful moment when the soul begins to find that the props on which it has blindly rested so long are, many of them, rotten, and begins to suspect them all; when it begins to feel the nothingness of many of the traditional opinions which have been received with implicit confidence, and in that horrible insecurity begins also to doubt whether there be anything to believe at all.

It is an awful hour—let him who has passed through it say how awful—when

this life has lost its meaning, and seems shrivelled into a span; when the grave appears to be the end of all, human goodness nothing but a name, and the sky above this universe a dead expanse, black with the void from which God Himself has disappeared. In the fearful loneliness of spirit, when those who should have been his friends and counsellors only frown upon his misgivings, and profanely bid him stifle doubts, which for aught he knows may be light from Heaven, and everything seems wrapped in hideous uncertainty. I know but one way in which a man may come forth from his agony scathless; it is by holding fast to those things which are certain still—the grand, simple landmarks of morality. In the darkest hour through which

Hold Fast to the Old Landmarks

a human soul can pass, whatever is doubtful, this at least is certain. If there be no God and no future state, yet, even then, it is better to be generous than selfish, better to be chaste than licentious, better to be true than false, better to be brave than to be a coward. Blessed beyond all earthly blessedness is the man, who, in the tempestuous darkness of the soul, has dared to hold fast to those venerable landmarks. Thrice blest is he who, when all is drear and cheerless within and without, when his teachers terrify him, and his friends shrink from him, has obstinately clung to moral good. Thrice blessed because his night shall pass into clear, bright day.—Rev. F. W. Robertson

Does not this sermon illustrate the pitiable character of the variance between internal conviction of the truth and instilled intellectual belief? A man discovers, as well he may, that theology is not the true foundation of faith, and that the particular theology which he has been taught is not reasonable enough to be the foundation of anything. Then he imagines that all morality and hope for the future must go, along with the tottering props which were supposed to hold them up. Then, if he is a man of strong internal faith and conviction, like the writer quoted, he falls back on the real foundation of morality and religion—the voice of the heart and the clear vision of the soul. Finally he may endeavor to reinstate his original creed on a new basis, and to make it agree with his newly-gained convictions. Or he may be so disgusted with his creed that he cannot

H. P. Blavatsky Brought the Key

take it back, and may replace it by some philosophy or humanistic system. Or finally he may give up serious thought altogether and make the best of life as he finds it. Only very strong souls have been able unaided to pass from religious creed to a recognition of the true philosophy of life, and to construct for themselves a faith that is identical with Theosophy.

To a world full of such aching hearts and doubting minds came H. P. Blavatsky, the latest of the great world teachers that appear in such crises of human affairs, and proclaimed again the ancient truths of the Wisdom Religion, which can solve all problems. She showed how all departments of speculation had fallen into confusion because the keys were lost and everything therefore looked at from a wrong view point. And she showed how everything at once became clear and luminous when the right key to the mystery was possessed. The chief key was the forgotten doctrine of human solidarity based on man's essential unity of interior nature—many personalities, one soul; many heads, one heart.

Far back of recognizing this unity in our own nature, we had fallen everywhere into diversity and confusion, and our philosophies and religions were a mass of contradictions, and our life a tissue of inconsistencies.

Live and Work Close to Nature

We had a religion saying one thing and a science saying another and a life giving the lie to both. Theosophy was the great unifier, reconciling nature with God, science with religion, duty with joy, law with liberty. No longer need we choose between the evils of a fettered piety and a licentious independence; henceforth the paths of stern duty and of aspiring freedom were one.

The best thing for one in the throes of such a despair as that described would be to go out into a new country, unpoisoned by the emanations of centuries of civilization, and there, laying aside for a time all mental questionings, live the simple life of a worker with nature. For then he would get away from his imagination, filled with delusions, and come in contact with the realities of life. His health being restored, he would be ready to perceive that joy and vigor are at the foundation of all life and growth and progress; and the sunlight which had healed his body would begin to permeate his philosophy.

But think what it would be if, instead of finding in that new land mere fields and trees, he should find a little garden-city of people living a new life in harmony with the bright sunlight and sweet beneficence of nature and enlightened by the luminous and inspiring Wisdom-Religion. Would

not that be a healing for his soul and mind and body—a healing all through?
H. T. E.

A Recreation Ground for the World

IN 1850 California was admitted into the Union. At that time the interest of the East was directed to this part of the country on account of its gold. Thousands of people flocked here with the expectancy that the El Dorado of the old Spanish explorers had been finally discovered. Since that time the general progress of the State has attracted world-wide attention.

Only a few years ago travelers thought little of this part of the country, but now it is visited by people from all nations of the Globe; and it does offer, probably, more condensed interest to the itinerant tourist than any other one State of the Union.

Indeed, it surpasses in climate and wonderful scenery every other individual State.

Do the Americans sufficiently study their own country? Americans by the thousands may be met in the capitals of Europe, and donkey-riding on the banks of the Nile, who are most woefully ignorant of the great West, and the superb natural scenery of it.

Many are quite satisfied to be shut in within a big modern caravan-serai in an European city, provided there be attractions enough to hold them there for a season.

Many are presumably traveling for their health, and in vain; while many others seem to be traveling to spend money.

The writer has toured the world on two occasions, visiting some of the most beautiful places on earth; yet none of these, in point of climate and scenery, can equal the Wonderland of Southern California.

It is true, that many thousands of travelers have within the last few years found their way to this Garden of America, to spend a season; and they come again and again. A few years hence, this part of the country will be considered the ideal recreation ground of the world.

STUDENT

Raja Yoga in Cuba

CUBA, since it has attained its freedom from the Spanish rule, has not been slow in grasping every opportunity offered it for advancing the general interests of its people. Through bitter years of suffering the Cubans have learned the importance of having the best educational advantages for their children. The result is that there are numerous schools in the different cities of the island supported by the Government.

Hon. Emilio Bacardi, Mayor of Santiago de Cuba for many years, has worked untiringly on this line. His visit, two years ago, to Point Loma, California, made it possible for him to study the Raja Yoga system of education. This he declared to be the ideal system; and he has worked strenuously to promote it in Cuba. Less than two years ago Raja Yoga work for children was begun in Santiago de Cuba, and the two large schools there today are having a widespread influence throughout the island.

The opportunity offered in this system will make it possible for Cuban children to be educated on very practical lines, such as must necessarily help to build the national life.

An educated Cuban, working for the interests of his country, with impersonal motive, will prove a power wherever he may go. The Cubans love their motherland with a rare spirit of devotion; and they are building for the future when they sustain the unsectarian work of the Raja Yoga schools in their island. These schools are supported by the contributions of the members of the Universal Brotherhood organization, and by a few others who admire the work. The teachers are unsalaried; it is their enthusiasm in this work, and their great interest in the Cuban people, which has helped to make these schools the success they have proved themselves to be.

STUDENT

Japan After the War

IT is easy to see that the prosperity of Japan will advance at a rapid rate after the war. Already its praises are sung in every part of the world, and there is a permanent interest growing with all peoples to know more of that Oriental land, and of the sons and daughters of Nippon.

Probably before a year has passed, it will become the Mecca of the

World; people will flock there from East and from West. While the material interests of the country may be benefited by such an influx of money as will come to them, it is a fact that its people will have to endure much and suffer long from the impress which will be made by a horde of travelers, following in the trail of the war.

The Japanese are very wise, though; quite insistent on protective lines for their country's good; and they have a very clever way of ignoring the people whom they do not care to entertain. In this lies the hope of Japan.

May it never lose its fascinating and forceful individuality. And may it be wise enough to hold itself in the ways of peace for all the years to come, for the Japanese are, indeed, a peace-loving people. STUDENT

Reliance on the Law

THE law of justice which is the law of harmony and love, is unfailing in its operation, and may forever be relied upon. If our motive is right and we do the best we can, we have nothing to fear, and we may trust the law to help us, for without fail we shall reap what we sow.

People think the law hard and are unwilling to reap what they sow, only when they do the wrong kind of sowing. But the law is no less beneficent in this case than in any other, for the suffering that necessarily follows wrong doing teaches a needed lesson, and we learn to live in harmony with the law, which works ever for the highest good of all; and we can only be in harmony with it when we work for the same ends, but if we do this nothing can prevail against us.

We not only want to see these facts and accept them with our minds, but we want to take them to heart so that they will be "a living power in our lives." To recognize the fact that the law is beneficent and unfailing and ever works for our highest good, and then to fret and worry, is very foolish. Not only are we wasting our energy in a very bad way and making it harder for others to be happy, but we are not relying on the law that we know is to be relied on, and are making ourselves miserable when we might be happy. By just a little positive effort and will power, how we can bring the sunshine into our lives even if the clouds do seem to gather.

We ought to sing "Life is Joy" in our hearts all the time; then our seeming burdens would grow light, and the joy that would radiate from us into the world would come back to us many fold.

BANDUSIA WAKEFIELD

Frontispiece---William Q. Judge

THE cover-page of the NEW CENTURY PATH this week reproduces the familiar face of one of the great World Reformers and Teachers. The name of William Quan Judge is a household word in many countries, and with thousands of people who have been helped through his self-sacrificing life for their benefit. His compassionate heart was touched by the world's sorrows. He laid down his life in service on March 21, 1896.

A tribute to Mr. Judge, from the pen of one of his most devoted pupils, appears on page 11 of this issue.

Regions of Ancient Civilizations

It has been recently pointed out that the highest civilizations of historic and prehistoric times belong generally to belts on the earth's surface lying between the 30th and 40th parallels of both north and south latitude. On one such belt lie Southern Japan, Southern California, Georgia, the Bermudas, Madeira, Morocco, Algeria, Tripoli, Northern Egypt, Jerusalem, Mid Persia, Northern India and Thibet. And on another, South Australia and Sydney, Northern New Zealand, Juan Fernandez Islands, Valparaiso, Central Argentina, Uruguay, Cape Colony. F. J. D.

The "Searchlight" Now Ready

THE THEOSOPHICAL SEARCHLIGHT, issued August 15th, is for members of the Universal Brotherhood only. It contains general information of the work of the Theosophical Movement throughout the World, and also important instructions necessary for the advancement of The Universal Brotherhood and Theosophical Society, in all departments. The first number of this series is now selling at 15 cents a copy. Mail your address and 15 cents to Clark Thurston, Esq., Manager, New Century Corporation, Point Loma, California.

Some Views on XXth Century Problems

Concentration, Secret of Memory

THE other day, in an idle moment, the writer took up one of the large illustrated monthlies, imagining it to be the current issue, and began to read one of the "storiettes" at the end. In about ten lines it began to seem familiar. In another ten, the whole story was recalled, together with the circumstances and state of mind in which it had been read on an idle Sunday afternoon *three years before*. For on examining the cover, the magazine was found to be dated August, 1901. Turning to the other stories, they also were found to be familiar—for all of them had been read in those idle hours. The writer had never thought of any of them since; but they remained as pictures, occupying precious brain room, and even receiving space for the very words used by some of the characters.

This seemed a serious state of things. To how much better use could not that brain faculty of retention have been turned? People very commonly complain of their poor memories. They have really no such disability, and they can demonstrate it to themselves by finding that if they keep the back numbers of monthlies for a few years and then look at the stories they read once, they will remember them.

The secret is concentration. The story attracts the mind, and it stays upon the pages. Upon other matters less interesting it does not stay; it wanders between every two ideas into all quarters of the universe—or oscillates an inch. Which does not matter. The thread is broken. That which should be stored as a connected whole is stored disconnectedly, in different chambers as it were, like pieces of one kind of furniture scattered all over a house. A mind that is full, in this way, might just as well be empty.

And we read far too much, so much that we have utterly lost an art known to the wisest of the ancients, an art in whose practice the mind retreated into its own self and assumed the forms of wisdom. They came to know profoundly where we at best but speculate. It was not true, with them, that the mind can only know and speculate about that which the senses bring it. But we, with our much useless reading, have made our minds sterile. They can only receive, and even so not *thoughts* but pictures and "facts." The faint rhythm of tendency to retreat and become filled still shows itself at times—early in the day, for example, and at night. But we are careful that it shall get no headway. We seize a newspaper, a magazine, or a book (rarely), and soon reverse the impertinent tendency.

STUDENT

The Motive for Human Conduct

WE hope that the State Commissioner of Education for New York does not propound his view of the forces of modern society to the schools he visits. His words were:

You need not expect that people will stand aside because you have come. They are going to crowd you, and you will have to crowd them. They will leave you behind unless you leave them behind!

He was promptly "called down" for this, and accused of preaching the gospel of the prehistoric jungles. It may be so; but why, in that case, did not the critic extend his indictment to the last and all preceding books on political economy? For they also assume self-interest to be the one motive of human conduct.

In a general way it would seem that the books and the Commissioner are right. But a house-beam may preserve the solidest of appearance long after it has rotted within to a shell. We think it is nearly the same with the existing motive of human conduct. Men feel better than they act; but they are either waiting for the other man to begin, or wanting to be sure that if they began he would follow.

It is obvious that if this is true, a mere touch from the spiritual center, a breath, will topple over the old structure and display a new one already standing. And that touch is now very nearly ready for delivery. An enthusiasm for unselfishness would not be so hard to light up in humanity as some think. Possibly Theosophy may be the new timber. Who can prove it is not?

STUDENT

When the Other Man Is Loosed

IN vino veritas—"character in cups"—always comes up into one's mind in reading the records of disasters. What is a man's character—that which comes out in a flash under the urgent stress of vital peril? Or the one that prevails after thought? They are often quite distinct. When a man is slightly drunk, the elemental forces of character escape from control, and he does and says things much beneath his ordinary standard. But is it *his* character which is thus revealed; or the *animal* basis, sensual, selfish, common to us all? It is these same basic elements which rush loose from every quarter when, in a theatre, the cry of fire is raised. The other, higher, essentially human, last added, giving the keynote of the *man*, in moments of emergency comes on the scene a little later, after thought. This is seen in the captains of ships who leave the burning deck last; in that engineer who, crushed in a recent accident beneath his engine, refused extrication till he had dictated a letter disposing of his money for the protection of his family, lest he should die in removal without doing so; it is this which comes out in all heroism; and it is this which alcohol silences.

There are, of course, some whose soul has so entered into the fibres of the basic animal that they are heroes on the instant and by impulse. And there are others whose selfishness is but the more careful and calculated by time and thought. But both these are rare phenomena.

STUDENT

Many Finns Are Coming to America

DESTINY sometimes uses curious and devious methods to achieve her ends. In building a new nation here in America, she seems to have determined that the blood of every people on earth should course through the veins of the New-Worldsman of the future. She has by no means got through the list yet. The last infusion was from Finland. Up to recently there were hardly any Finns here. But in 1899 the Czar promulgated his decree depriving Finland of its constitutional liberty. The result has been that within five years 200,000 Finns have emigrated here. They are among the very best, the steadiest, the hardest working, the most sincerely religious, of America's adopted children. Under ordinary circumstances we should hardly have seen them here, for they have a deep and fervent love of home. So to that extent, against the record of its many evils, the tyranny of the Russian Government has this one good to set.

OBSERVER

Substitutes for Alcoholic Beverages

THE movement in Germany for the suppression of over-indulgence in alcohol has called science to its aid in designing non-alcoholic liquids which shall approach so closely in taste to their alcoholic equivalents as to be real substitutes. Most of the substitutes hitherto suggested and prepared in other countries, have been so only in name. They have had crude flavors and have been much too sweet. The new proposal is to distil off the alcohol from finished beer, and then carbonate the remainder. This will doubtless prove a satisfactory product, for the taste of beer is a taste, not an aroma. With wines, however, the aroma is the point, rather than the taste. And aromas are, of course, removed with the alcohol, in distillation. The only thing to be done is to add the ethereal "bouquets" afterwards with the carbonation. That this was not done is the cause of the failure of the latter attempts.

STUDENT

Ice, Alcohol, Health, and Longevity

DRINKING of ice-water and the icing of fruits and other foods, may be evils. They probably are, but they stand in the way of worse methods of relieving thirst. The American consumption of beer, for example, is eighteen gallons per annum for each person; the English is thirty gallons. Where the American has a glass of ice-water, the corresponding Englishman will have a glass of beer. The advantage, from the point of health and longevity, is here clearly on the American side.

Art Music Literature and the Drama

What Shall Constitute a School for Fiction Writing?

THE mass of fiction today published, might well suggest the crying need of a school where those who aspire to write fiction may master the rules and traditions of that art, at least acquiring a certain degree of technical excellence in writing, at the same time becoming familiar with the works of the great masters of literary style.

Such a project has recently been agitated in one of the New York daily papers, and a series of opinions and views pro and con published therein. But it seems that what really corresponds to such a school exists at present in the literature classes in colleges where the study of rhetoric and the rules of construction are part of the regular training of the students. And as Richard Watson Gilder pertinently inquires:

If the students of fiction will not heed Professors Scott and Dumas for story building, or Professors Hawthorne, Thackeray and Stevenson for style, or Professor Turgeneff for dramatic fire, is it likely that they will give heed to Professors Brown, Jones and Robinson, who can after all, do little but point to the example of the masters?

The truth of the matter is that a certain amount of technical skill in writing may be imparted; and it is worthy of note that in the last fifty years there has been a steadily growing mastery of this skill among American writers. But is this progress in the technique of writing, or even this added to the *rapport* with all the best that has been done in story writing, going to give the impulse to writers of prose fiction that shall bear the test of broader and higher standards of excellence? Bliss Perry in his *Study of Prose Fiction*, says:

The only promise of permanent life for a novel is in the creative imagination of the writer. Everything else has proved transient.

And creative imagination is not stirred to life by study of technique or classic models. It is the fruit of heart-life lived, and its riches stored deep in the nature. It is this that gives a writer the power so to fuse the characters and incidents of his books that life is revealed anew and the reader is refreshed and lifted for a space. We quote from Bliss Perry again:

We have a right to demand of the future novelist that he shall see and feel and think. But he shall see things as they are, the world as it is, God's world. He shall feel in the men and women around him the pulsation of the infinite heart.

The fiction of the creative writer of the future will awaken the human heart to a deeper sense of the realities of life, will reveal deeper currents of the heart impulses of men and women, will quicken a new formula of the laws of life into a vision for us.

And life shall be *his* school, pure unselfish life!

STUDENT

PROFESSOR BRANDER MATHEWS of Columbia University says:

Why, indeed, should there not be a school of fiction! Any art may be taught, and why may not a man be taught novel writing? Was not Guy de Maupassant the pupil of Gustave Flaubert?—and many think that the pupil excelled the master. What Flaubert was to de Maupassant was the studio of Carolus Duran to John S. Sargent. It may be said that the master could not make many de Maupassants, but what of that? Did everybody who went to Carolus Duran become a great painter? Hundreds come and go in the atelier of Julian. Some can never learn to paint at all, perhaps; yet, should not the master continue to teach?

Fiction is an art which has traditions and has methods just as any other. It has its formulæ, which the student may learn, which will be of great help to him. Why should he not learn them from a master of romance or of literary style?

FROM AN ANCIENT PAINTING, PROBABLY DATING 200 B.C.

The Marvel of Swedish Chorus-Singing

SINCE 1867 it has been generally admitted that in chorus-singing Sweden leads the world. The old Norse spirit showed itself not only in battle but in song, and it lives yet.

In 1867 a band of 100 Swedish singers competed for a prize of honor at the World's Exposition in Paris. They not only won it but also the honor of being declared *hors concours*, or beyond all competition. In addition the Empress Eugenie conferred upon them a special gold medal. Since then, so far as Paris is concerned, their career as competitors has been regarded as closed. At each World's Fair they have been rapturously welcomed, but might not compete. The others must have *their* chance!

Judging by the performances of another Swedish band now touring in this country (having been requested to come for the "Swedish Day" at the St. Louis Exposition), Sweden has in no way retrograded since her triumph thirty-seven years ago. This band is giving concerts in various large cities, and bids fair to secure the same unanimous verdict in America as in France. It is generally agreed that its technique is well-nigh perfect, and that in expression and shading it equals the demands of any possible composition.

In every Swedish school both music and part-singing are obligatory. The children grow up singing as naturally as they talk, so that a finishing touch is easily put on at any time. Much of the best and grandest Swedish music is especially written for these choirs, which are a part of the life of even the smallest villages. College students sing the purest and highest music their country has produced, and might well be taken as an example, in this respect, by the young men of this or any other nation. We are glad to think that the visit of this band may have an appreciable effect in drawing closer the already close links between America and Sweden. May this be the first of many such visits! K.

MADAME RISTORI, of all great actresses, was the most difficult to act with, for the reason that she placed immense stress upon tone quality and value. The end of every speech that preceded hers had to be delivered in a quality of tone that led up to and blended with her own, and gave that which followed it fullest effect. Over and over again the luckless player who lacked insight had to repeat his lines until she was satisfied. What a hint lies in this to the singer!—*Exchange*

SOMEWHAT interesting is the following opinion, *apropos* the proposed school of fiction, for when physicians themselves disagree, who shall decide? This from Frank

Moore Colby, formerly of the New York University and now associate editor of the *Bookman*:

It is really pathetic that it should be suggested that a school be established for the teaching of fiction, just as though novels were turned out like shoes. It is an ironical suggestion, I take it; a covert sneer at American literature. Yet after all, such a school might have its uses. It would prevent the grosser forms of stupidity. There is at present little that is vital in American fiction, although there are some notable exceptions. We have no such writers as Hawthorne and Poe in this age, although there are many young writers who have shown ability, and it may be said that the books for popular reading are much better, as far as their literary form is concerned, than were such books fifty years ago. I do not believe that it would be possible to teach in a school of fiction anything more than how to avoid some of the great mistakes.

THE great Wagner festival which is to be held at Munich this summer gives every promise of striking a still higher note in the interpretation of Wagner's mystic and wonderful music-dramas. STUDENT

I WAS struck by an article in a recent number of the NEW CENTURY PATH. This paper affords some very valuable suggestions to the thoughtful parent who is struggling with the problem of "How to manage the children." And before I go any further I would like to say that I hope all of you see the NEW CENTURY PATH week by week, and find it as helpful as I do, for I seldom take up a number without finding in it an answer to some problem that has been puzzling me, or some bit of information on current topics that I have been wanting to get, or at any rate some helpful and inspiring thought. I should not like to have to get along without it.

There are many parents who shut their eyes to all that is wrong in their children, perhaps because it is painful to face it, or because it is easier to shirk it, or because of simple ignorance of how to deal with it. To be blind neither to the higher nor the lower nature; to fully recognize the wrong-doing which is fully corrected; but to also recognize the higher nature, the rightful ruler, whose place is usurped by the lower, and to help the child to realize this duality in himself, by making him inflict his own punishment—to touch that higher chord! What a power of discrimination and sympathy must there not be in the one who can awaken in an apparently incorrigible child, the inherent nobility which is his real true self! Would that there were more of us possessed of this wise sympathy, for then we should feel that we had indeed the right to be parents, and the task of helping the wandering little feet to tread the right path would become a joy instead of a problem, as it too often is. But we need not despair—constant striving after this wisdom in the light of Theosophy, must bring something of it to us in time—and the following quotation from a speech by President Roosevelt casts, as it were, an X-ray on the subject:

"There are a good many contemptible creatures in the world, but on the whole the most contemptible creature is the one bent on going through life for the easiest time the world can give. Next to him comes the man or woman who, from weakness—for it is nothing else—neglects to make the child able to meet and overcome difficulties, but teaches it to shirk them."

With those last words as a warning and a guide, I think we may pluck

A Mother's Plea

Extracts from a paper read by Mrs. Shurlock at Aryan Theosophical meeting, San Diego

DIFFICULT as it must be for you to believe what I say, yet it is true that the Kingdom of Heaven is nearer at hand than you can realize, and that all the storms, trials and sorrows that we see now raging in human life are but indications of the passing away of the old order of things. All we have to do is to seize our opportunities, to do faithfully our duties as they lie before us, ingrain in the very atmosphere in which we live the finer vibrations of the Higher Law.—Katherine Tingley

up courage and set forth afresh. Do they not reveal a pitfall into which probably most parents have fallen, and may they not account for the blight which seems to fall across many natures which gave beautiful promise in childhood? We shall find much more behind these words than we can realize at once. To help the child to face and overcome each little difficulty as it arises, is to make him master of his own nature and thus master of his own destiny.

It seems to me that this must be part of the Raja Yoga training, the wonderful results of which we see in the Raja Yoga Schools at Point Loma and throughout the world. Let us beware of excusing little faults and weaknesses, under the plea that they are "only natural." They are natural, but of the lower nature, which is constantly seeking growth at the expense of the higher. An amateur gardener had in his garden a rose-tree, the lower part of which sent out young shoots which bore flowers. But none of the roses were as vigorous and beautiful as they should have been. He was advised to cut away the lower branches, but this he was very reluctant to do. He did not want to lose any of those flowers, and he argued that it was natural for them to grow like that—Nature knew best, and it was wrong to interfere. But as the tree grew more sickly, he summoned up courage and ruthlessly, as it seemed to him, pruned the lower shoots, and oh, the lovely rose that blossomed out at the top! It seemed the concentrated essence of beauty and fragrance—there was nothing to equal it in the garden.

Let us apply the lesson, let us unswervingly prune away all that we know to be weak and contemptible, natural though it may be, and we shall see such blossoming of love, joy and unselfishness as we never dreamed of.

JAMES BAH WE TUK YESH, chieftain of the remnants of the Chipewa tribe, was married recently on his death-bed to his squaw, Martha O-Nah-Shank, who had been his wife for forty years according to Indian ceremony. The legal ceremony was necessary because the law does not recognize the common law marriage of the Indians. Being possessed of considerable property, he wished to insure its safe keeping in the hands of his squaw and had the legal ceremony performed. E. W.

The First Picture Book

WHAT the modern home—the modern nursery—would be without a picture-book it is difficult to say. It is the link between the child and the greater outside world, which he longs to contact and toward which his own heart is pushing him. It is the mother's kindest helper, taking her place often when duties press and the child demands attention. It is a tie between her and the little group at her knee, when they gather about the fire at the close of a day's work and play. Yet it is a man whom the modern mother must thank for this veritable godsend.

Three hundred years ago Johann Comenius, a musty little German professor, was laboring over his theories of education when something flashed into his mind from that region where the intellect enters only on condition of its quiescence and its service.

It was a vision of something that should make learning a little less laborious for children; for in his day children were taught "by force of arms," as it were, and education and the birch-rod were looked upon as destined companions on the long pathway toward the heights. It was the vision of a picture-book, and it was the idea of this be-wigged University Doctor that, as he expressed it, "Children should be taught by means of sensuous impressions conveyed to the eye, so that visual objects may be made the medium of expressing moral lessons to the young mind, and of impressing those lessons on the memory."

So Comenius made his first picture-book, and he called it the *Orbis Pictus*, the "World's Picture." In its rude wood-cuts it must have been quaint enough, its trees and animals, its curious little men and women, and the modern child would doubtless view it rather with astonishment than with delight. Yet it was the beginning. W. H.

It is the same hand that works and that prays, not a different one; unless it can do both it has not fulfilled its highest opportunity; and it is given to you to train such hands that they in their turn may go into the world with the spirit that dignifies labor and that brings worship into every day life.—*President Hazard of Wellesley College to the graduating class at the Boston School of Domestic Sciences*

Australia's Orphans

AUSTRALIA has unique and wholesome methods of dealing with many problems, politically, socially and otherwise. One of them is that orphans instead of being placed in asylums become wards of the State. "Every child who is not supported by parents becomes a ward of the State and is paid a pension for support and placed in a private family, where board and clothes are provided until the fourteenth birthday." E.

Imagination

IN the bright days of childhood, before passion has darkened and blurred the inward vision and fettered the creative faculty of the imagination, the child lives in a world of his own. His soul is awake and in touch with Life; he lives bathed in life's joy!

Nature speaks to him—her green hills call invitingly to him, and as he watches the sunbeams that sparkle and dance on the crest of the wave before it breaks, his own blithe heart dances, too, in merry unison! King is the child of the fair world around him, owning his kingdom by the divine right of Love and Sympathy.

Where then, it is asked, are our poets?

Why is childhood's promise so often unfulfilled?

The answer lies with us. Did we (mothers and fathers) see to it that the child's real inner world never slips from his grasp, that with the approach of manhood and womanhood, the glory and the vision of early days still linger, but with an added power and the wisdom born of effort, of self-knowledge and of self-mastery, there would no longer be need of these questions. Genius would be not the exception but the rule.

Let us, too, in our turn, hasten the realization of our ideals by the exercise of this same creative faculty; making pictures on the canvas of time, of a world inhabited by beings whose development from the cradle has been surrounded by helpful and harmonious influences. Let us not lose the secret of happiness which was ours in childhood, and possessing this, possess all things!

Kings and queens still, as of yore, asking of the world but permission to serve and to share.

M. V. H.

THE body of the Cherokee wife of General Sam. Houston is at last at rest on Indian soil. About a year ago an old soldier who was with Price's army during its retreat through the Arkansas valley, discovered the location of the grave. When the

Cherokee Indians heard of this discovery they made strenuous efforts to have the body of the Indian woman buried in the National Cemetery at Fort Gibson. The War Department has granted their request and the reinterment will take place at Fort Gibson on September 2d. The body will be buried with military honors. There is something truly pathetic in this faithful observance of old customs and traditions which the Indians retain to this day. N. M.

"DIVINE pity" does move now and then the hearts of women. A wealthy New York girl, highly educated and a daring and expert swimmer, has recently joined the Volunteer Life-saving Service of the United States. She enjoys the distinction of being the first woman to be regularly enrolled in this organization. Q.

"Suffer little children, and forbid them not, to come unto me: for of such is the kingdom of heaven."

Brief Glimpses of the Prehistoric World

Archeology
Paleontology
Ethnology

Are the American Aborigines All of One Race?

THE varieties of humanity indigenous to America are very great. In the extreme north we find the dwarf Esquimaux, four and a half feet high, and in the far south the Patagonian, over six feet. The variety of complexions may be said to embrace every hue known elsewhere on the globe, except the pitchy black of the Negro.

About one half of all the known languages belong to America; and the nations exceed those of the rest of the world in number, though not in size.

There are different opinions as to whether all these peoples can be classified as one race or several; but, though they differ widely among themselves, they are by no means so diverse as the races of Africa or Asia. Humboldt says:

The Indians of New Spain bear a general resemblance to those who inhabit Canada, Florida, Peru and Brazil. We have the same swarthy and copper color, straight and smooth hair, small beard, squat body, long eye, with the corner directed upwards towards the temples, prominent cheek-bones, thick lips, and expression of gentleness in the mouth, strongly contrasted with a gloomy and severe look. Over a million and a half of square leagues, from Cape Horn to the river St. Lawrence and Behring's Straits, we are struck at the first glance with the general resemblance in the features of the inhabitants. We think we perceive them all to be descended from the same stock, notwithstanding the prodigious diversity of their languages.

Ethnologists point to a distinctive shape of skull in the Americans; and, what is more remarkable, to a uniformity of color which does not depend on the climate. A brownish yellow ("copper") pervades nearly all the tribes from the Arctic Ocean to Cape Horn; the darkest are found in the temperate zone, while within the tropics are found fair complexions and even blue eyes and auburn hair. The weather does not affect the skin, the whole body being of the same color, whether clothed or not, and the infants being born brown. Thus it is evident that the prevailing characteristic brown tone marks a racial feature.

Judged by language also the native American is *sui generis*, though he speaks more different varieties of tongue than the people of the Old World. The number of tongues is about 450, on an average estimate. The language is agglutinative, made up by combining syllables into immense words, like "head-tree-lip-hair," for "goat." This and other peculiarities point back to an original root-language.

The aborigines of this continent have been divided into *Toltecan* and *American*, the former of which shows more signs of civilization, while the latter includes all the barbarous races, except the Polar tribes, which are classed as Mongolian. The Toltecan family "embraced the civilized natives of Mexico, Peru and Bogota, extending from the Rio Gila in 33° N. latitude along the western shore of the continent to the frontier of Chile, and on the eastern coast along the Gulf of Mexico." They also occupied a strip between the Andes and the Pacific.

These two families have, since their subjection and dispersion by their Spanish conquerors, lost their distinctive character; but, judging them by their earlier history, we remark a great superiority in the intellectual faculties among the Toltec races, whose pyramids, temples, etc., with their bas-reliefs and inscriptions are giving us revelations of their former greatness.

The "Oldest City in the World" Unearthed in Babylonia

PROFESSOR BANKS, field-director of the Asian archeological work of the Chicago University, has unearthed the ruins of what is thought to be the oldest city in the world. This is Ud-Nun-Ki, or Adab, a city mentioned in the Code of Hammurabi. Excavating the site of Bismya, in Babylonia, he found the remains of four temples, one above another. Lowest of all, bricks were found identifying the remains as those of Ud-Nun-Ki. It is quite possible that beneath this are other layers, for the antiquity of civilization in the Tigris-Euphrates Valley appears to be beyond all reckoning. According to Berosus, the Babylonians had a traditional history extending back to 432,000 years previous to the deluge. This great cycle was also one in use among the Hindus;

not strangely, if one gives weight to the statement of H. P. Blavatsky, that the Akkadians, or pre-Babylonians, the mysterious and highly civilized people from whom the Babylonians got their writing and civilization, came from India into this land of then barbarians. Between the deluge and the second Babylonian supremacy—separated from the first by the Assyrian—the legend assigned a further period of about 35,000 years. Science, it is hardly necessary to say, takes no notice of these traditional figures, and dwarfs the whole period covered by them into three or four thousand years. But the foreshortening craze will not endure forever, and every important find in the mysterious regions of eastern Asia, once teeming with so rich and varied a life, brings its end nearer. No rational guess can be yet made of the age of the city of Adab. Its very name means primeval or first, and its ruins may contain something of its history.

STUDENT

To Preserve Cliff-Dwellings in Colorado & New Mexico

A NATIONAL endeavor is at last being made to preserve the remarkable cliff-dwellings in the Mesa Verde on the border line between Colorado and New Mexico. These wonderful ruins of prehistoric antiquity cover an area of twenty miles and one of the best preserved houses boasts 200 rooms. An amendment to the Indian appropriation bill which gives the President power to negotiate for the purchase of the lands and the preservation of the ruins has made this movement possible. The chiefs of the Ute nation will be approached by the government representatives and others interested in the acquisition of such national treasures and it is to be hoped that success will pave the way for a further practical recognition of the great need for similar work throughout the United States. Too much energy, too much money has been diverted from the archeological wealth of America to distant and more difficult work, while ruthless, commercial, Philistine hands have been destroying wholesale monuments of greater value to the nation and perhaps to the world. This with all due respect to the magnificent work of the University of California and other bodies who have possibly found national feeling blind to its own best interests in such matters and so preferred to go farther afield.

There is a national duty involved in the preservation of such national heritage; more, there is a moral Monroe Doctrine which should be assumed over the archeological treasures of the continent. It is so easy to forget that things whose value we can only guess are destroyed for a whim, or a few miserable dollars, while their antiquity of many thousands of years, their possible future recognition as priceless historical relics and records goes for nothing—because of our ignorance.

The shame of the loss of all the wonderful Mexican records, the destruction of their books, the obliteration of their arts is yet upon us as white men. Yet there is in the minds of some a suspicion that much remains merely concealed under a plain exterior, awaiting the time when we shall become sufficiently civilized to appreciate its worth. For, smile as we may, many of the Indians of this continent in their own silence regard us as but half civilized, unworthy to know much that they could tell us. These Indian people are not, as some think, becoming extinct either here or in Canada. They have their part to play in the future, and through them we may find an easier avenue to America's prehistoric past than any other. They are living prehistoric remains.

STUDENT

THE Creek Indians have a suggestive bit of symbolism coming in at the close of their annual Stomp Dance. After the dancing and feasting is all over, the chief medicine-man lights a great fire, symbolic of the common life of the tribe. All stand around silent, and when the blaze is well under way, the head of each family takes some of the burning fuel in a suitable dish, carries it to his own home and starts with it a fire on his hearth. In that way their common life is thought to be preserved.

NEWSPAPER wits do not always treat antiquities with proper respect. One of them remarked, upon reading about the discovery of a capstan two thousand years old in the Forum at Rome, that it must have been the one used in winding up the affairs of the once progressive Roman Empire.

Pan Is Dead—Man Has Banished the Gods

"PAN IS DEAD," laments the poet; and it is no mere figure of speech—at all events to us who believe in the sentience of nature and in the truth of many ancient beliefs as to the gods of nature. By neglecting to honor and recognize the gods we have perhaps banished them; that is, by refusing to respect and venerate certain natural potencies or intelligences, we may have actually caused them to cease acting. So that perhaps nature today is not all that she was yesterday; perhaps the ancients saw more in her because there was more to see; and perhaps the wonderful intelligent architects of nature, whose fabrics alone we can perceive, did actually reveal themselves to the more reverent and less pretentious observers of old. It may be that people whose lives were less artificial and impaired by unhealthy habits than ours, and whose ideas were not cast in the same formal molds, were able to so sympathize with their natural surroundings as to enter into a communion of souls with nature, and that this communion would be signified to the seeing eye by the vision of a form as of a god like those we see represented in the carvings.

Pan, the sea-nymphs and the wind-gods, are to us mere symbols; to these ancients perhaps they appeared visually.

But it may be said we are preaching polytheism. Not so; there is no idea of a multitude of rival gods, but only the notion that, just as there are men and animals, so there may be other intelligent beings whom we cannot see now.
