THE JOURNAL OF BORDERLAND RESEARCH

BSRA No. 1: Published by Borderland Sciences Research Foundation, Inc., PO Box 548, Vista, California 92083. Edited by the Director, Riley Hansard Crabb, Doctor of Metaphysics in the Society of St. Luke the Physician.

The Journal is published seven issues a year, with the assistance of the Associates, at the Director's home, 1103 Bobolink Drive, Vista. It is mimeographed, 34 pages an issue. The Foundation was incorporated under California law, May 21, 1951, #254263, and has been in continuous existence since then. Address all correspondence to the PO box. The Journal is included in the association membership of $6 a year. Single copies of the Journal are $1.00. If you don't care to join you may receive the Journal by donating $6 or more a year to the Foundation. The Director's wife, Mrs. Judith Crabb, is office manager of BSRA.

PURPOSES OF BSRA: This is a non-profit organization of people who take an active interest in unusual happenings along the borderland between the visible and invisible worlds. In the words of the late Meade Layne, founder and director of BSRA from 1946 to 1959, "BSRA publications are scientific in approach but employ few technical expressions. They deal with significant phenomena which orthodox science cannot or will not investigate. For example: the Fortean falls of objects from the sky, Teleportation, Radie-thesia, PK Effects, Underground Races, Mysterious Disappearances, Occult and Psychic Phenomena, Photography of the Invisible, Nature of the Ethers and the problem of the Aeroforms (Flying Saucers). In the year 1946 BSRA obtained an interpretation of the phenomena which has since come to be known as the Etheric or 4-D Interpretation, and which has not been radically altered since that time. This continues to be the only explanation which makes good science, sound metaphysics and common sense."

The chief present concern of the Foundation is to make this kind of unusual information available as a public service at reasonable cost. Headquarters acts as a receiving, coordinating and distributing center. An important part of the Director's work is to give recognition understanding and encouragement to people who are having unusual experiences of the borderland type and/or conducting research in one or more of the above fields. For consultation on borderland problems, or for Spiritual Healing through prayer, write or phone (714-724-2043) for help or for an appointment. Donations toward Foundation research programs and expenses are welcome.

The 20-page list of BSRA publications was revised March 1968. It is available from headquarters for 50¢ in coin or stamps. Listings and prices of Mr. Crabb's tape-recorded lectures are included. Write to BSRA, PO Box 548, Vista, California, U.S.A. 92083.

YOUR THOUGHT IS A DISCORDANT MELODY

By Durin, Through Joan Dixon

You can call me Durin. That isn't a name but it is a title. We are the people of Durin, the people of the Rock. When you think of Durin think of endurance. Nothing is so tough as we.

We are the folk of the Rock, the people of hot lava; for we do not exist on the surface of your world, only except within the most rugged landscape; for what you call rock is only a crust. The surface layers are not for us. Deep within the earth we dwell, in the hard middle layers. We are not light and airy but heavy and dull. Dull? No, I see that is not the word; for it means something else to you.

I do not come willingly. Oh, I don't mind, really; but it is no pleasure to me. But you asked, it seems, whatever a Dwarf might be, and I guess I am of the race you call Dwarf.

Actually we call ourselves Durin and we have no special wish to communicate with you animal people. You move about too quickly and are here and there and gone. You are noxious and noisy and you crumble rather easily into what you call death. And these are merely some of your lesser faults.

You wish to know how I hear you call me, you animal people, always poking around wanting to learn new things. What's wrong with the old wisdom? But I suppose it is part of your quick scurrying nature to always dig around and seek new facts. Well, I will explain. First of all we do not "hear", as you animal people call it. Sound is of the air and water. We earth people and the fire people do not understand what you mean when you "hear". We are silent folk, the people of the Rock.

How then do we communicate with you, or even among ourselves? Well, I suppose you would say by conduction. Yes, that is a good word, excellent! Telepathy? No. That, too, is of the air. But I see you do not understand even what a thought is. So you call every form of communication without sound, telepathy. But we "hear" by means of conduction, much as you do when you move about. Oh, I see I've lost you again. How your thoughts flit back and forth. But you do "hear" yourself, you know. You "hear" your bones rattling, your blood circulating, the sound of your heart. If you could not hear these things you would get dizzy, experiencing a feeling of constant vertigo. You would feel like you were walking on air.

Sometimes animal people drink a mixture of fermented fruit that dulls the senses. They cannot "hear" and thus they do not.

June-July 1969 RR, Page 1
move about so easily. Certain types of what you call drugs will do
that to you also. That is the basis of our "hearing", conduction!
Sound travels through us, if sound it can be called.

Your thoughts reach out to us. Not telepathy, though maybe
you would call it that for lack of a better name. At any rate, I
feel you call me; for your thoughts are very strong. Stronger even,
I think, than you realize; and when you direct your thought in my
direction I feel it like a discordant melody. I must respond. It
is a silent command, and not to respond would be painful.

Thought is a powerful force. For by thought we were created.
By thought we can be destroyed. Thought in its simplest form is
nothing more or less than the ability to create or destroy.

Ah, me! I see I'm losing you again. Well, anyhow I'm stronger
tonight because what you call the Northern Lights are stronger.
They are of the Earth and Fire; though you animal people can see
them because of the Air; but they are of the Earth and Sun. The
Sun is of the fire, of course, the strongest and boldest fire.
It can create or destroy, like thought, but distant and remote.
But powerful. And it calls us and then there are the lights.

We are the people of color. Does that surprise you? What you
call color is a thing of which you are only vaguely aware. But you
are more aware of color than many of the lesser animals. Although
I hope that you will remember that you are like a lesser animal to
me. We are the people of color, and of the lights. Although all
light is of the fire people and we dwell within the earth in what
you believe to be total darkness. But we are not aware of light or
color in the same way you are. Yet without our magnetism there
could be no magnetic light, no Aurora Borealis. We FEEL this and
it feels good to us. It give us energy.

Now you are wandering again. I go now to play in the Aurora.
Good night.

Call me Durin (but next time let me call you).

*   *   *

PLAYING IN THE GOOD FEELING OF THE NORTHERN LIGHTS

During a lecture in Seattle several years ago, your Editor de-
scribed the function of the Lakhovsky Multi-Wave Oscillator as "giv-
ing a person an electronic showerbath" of radiant, magnetic energy.
We spoke of electro-gravity scientists living with the Eskimos in
Arctic areas, to closely observe and measure the Aurora. They were
startled to see the Eskimos welcome the close approach of the crack-
ling magnetic field and stand in it for stimulation and exhilaration.
After the talk a lady identified herself as a Norwegian who did much
skiing as a girl. "I did that, too, many, many times," she said.
"If we were tired we would attract the Aurora to us by waving our
skis or a blanket and the veil of light would swoop down to us and
bathe us for a few moments. It felt good, tingling all over."

June-July 1969 RR, Page 2
BEYOND RELATIVITY

By J.P. Roos

Einstein's theory of Relativity has served its purpose. Now it is time to move on to other concepts, to tackle problems such as the why of gravity and the continuous expansion of the earth. From a theoretical point of view Einstein's relativistic transformation is not the only one possible to give the well known simplicity in formulating dynamic events. Compressible fluid dynamics suggests a second transformation, justified by experimental evidence, that has the bonus of doing away with the concepts of contraction of time and length and the increase of mass for a body moving at high speed.

We have come to realize that the speed of light is merely the limiting velocity in a medium just as the velocity of sound gives rise to a sound barrier to the airplanes in our atmostphere. This medium can be called electro-magnetic fluid or ether. But it is unlike the ether concept of the 19th Century. The modern ether is dynamic, is subject to random wave motions and exhibits statistical properties of which the speed of light is just one. It is important to understand that the random wave motions are capable of exerting radiation pressure in all directions, just as Brownian motion of molecules in air will cause a hydrostatic pressure.

The speed of light is only constant in as far as the "temperature" of the ether or its random wave energy density is constant without a net flow of ether. Velocities beyond the speed of light of course are entirely feasible; first, as in group waves in analogy to the supersonic Brownian velocities in air; secondly, as a superposition of the speed of light on the propagation of the ether fluid with respect to an observer; and thirdly, in an imaginary supersonic nozzle for ether flow.

It follows from the propagation of electro-magnetic waves in vacuum and matter that both are pervaded by ether.

An interesting question is raised when considering the density of ether. Could it be dense enough to serve as a propulsion fluid for interstellar travel or even travel in our own atmosphere? Because matter is so transparent to this ether, conventional ways to determine its density seem fruitless. The known magnitude of the speed of light however, fixes the relationship between the density and the compressibility of ether. The conclusion is that either the density of ether is quite low or its compressibility is very high. Gravity can be simply explained with the above mentioned concept of a dynamic ether. Every cubic inch of space is subject to random wave radiation from all directions. Under normal circumstances the vector sum of all these radiation pressures is zero.
THE PUSH/PULL OF MASS

In the presence of mass, however, we can expect that some of the radiation pressure is attenuated, absorbed, in that part of space where the mass is located. The resultant diminishing of the radiation pressure from that direction causes two masses to attract each other with a force that varies as the inverse square of their distance.

Another subject is: What happens with the energy absorbed by mass? If combined with the knowledge of an ever increasing earth the conclusion could be that it goes to help create matter from ether. Hence mass is an ether sink. The then required flow of ether towards the earth and its mild inter-action with matter can be a second term that adds up to the force of gravity. This term as well as the gravitational force also vary as the inverse square of the distance between the masses.

As yet we have not mentioned the experimental evidence of compressible fluid dynamics that so rudely discards the older relativistic concepts, which include the contraction of time and the length and the increase in mass for a body moving at high speed.

First of all compressible fluid dynamics arrives at a differential equation in the velocity potential φ by considering Bernoulli's theorem, the theorem Mass x Acceleration equals Resultant Force and continuity:

\[
\frac{u^2}{c^2} \frac{\partial^2 \phi}{\partial x^2} + \frac{\partial^2 \phi}{\partial y^2} = 0
\]

By transformation of the coordinate "x" with respect to "y", this equation can be written as that for incompressible or idealized flow:

\[
\frac{\partial^2 \phi}{\partial x^2} - \frac{\partial^2 \phi}{\partial y^2} = 0
\]

If we take arbitrarily \( Y \) equals \( y \) we obtain the Einsteinian result: \( x \) equals \( X / \sqrt{1 - (u/c)^2} \), where the coordinate \( (x) \) in the compressible medium is shorter for a body moving in the medium with velocity "\( u \)" than the coordinate \( (X) \) in an incompressible or non-relativistic environment. For the latter "\( c \)" is infinite. If we take arbitrarily \( X \) equals \( x \) we obtain \( Y \) equals \( \sqrt{1 - (u/c)^2} \). The fluid dynamic interpretation of the latter is that the upward extension \( (y) \) of a velocity field is greater in the compressible flow than in the incompressible flow. As the velocity of sound is approached \( \sqrt{1 - (u/c)^2} \) tends to zero and causes the height of the disturbed flow to increase without limit.

The experimental evidence and justification of the last transformation exists in the physical formation of shock waves which extend tangential to the direction of travel of a body at sonic speed.

The above argument is carried through to its logical con-

May-June 1969 RR, Page 4
clusions as follows:

1. The electro-magnetic medium can be treated as a compressible fluid.
2. The relativistic contraction of length in the direction of travel is not real.
3. The relativistic slowing down of time is not real.
4. The relativistic increase of mass is not real.
5. A body travelling at the speed of light forms an electro-magnetic shock wave which extends tangential to the direction of travel.
6. The energy that was thought to go into the increase of mass in reality contributes to the energy required to generate the shock wave.

Associate Roos is president of the Association For Pushing Gravity Research, with hq at 2007 Eaton Lane, Austin, Tex. 78723. Write to that address if you wish to join gravity research. Now follows a pertinent letter from former Associate Fred Woodruf that should "silence the would-be ether 'silencers' who claim in their own ignorance that Einstein disposed of the Ether and was a devout and bitter foe of it."

"SIDE LIGHTS ON RELATIVITY"

This is a little-known and long-forgotten, 55-page booklet by Albert Einstein, translated and published by Methuen & Co., London, 1922. Quoting from his chapter on Ether and the Theory of Relativity, delivered as an address at the University of Leyden, May 5, 1920:

"More careful reflection teaches us, however, that the special theory of Relativity does not compel us to deny the ether... There is a weighty argument to be adduced in favour of the ether hypothesis. To deny the ether is ultimately to assume that empty space has no physical qualities whatever. The fundamental facts of mechanics do not harmonize with this view... Newton might no less well have called his absolute space 'ether'... But inertial resistance opposed to relative acceleration of distant masses presupposes action at a distance; and as the modern physicist does not believe that he may accept this action at a distance, he comes back once more, if he follows Mach, to the ether, which has to serve as a medium for the effects of inertia.

"But this conception of the ether to which we are led by Mach's way of thinking differs essentially from the ether as conceived by Newton, by Fresnel and by Lorentz. Mach's ether notonly conditions the behaviour of inert masses, but is also conditioned in its state by them... Mach's idea finds its full development in the ether of the general theory of relativity... The conception of the ether has again acquired an intelligible content... The ether of the general theory of relativity is a medium which is itself devoid of all mechanical and kinematical qualities, but helps to determine (Concluded in CQC, Page 32)"
A SCIENTIFIC BASE FOR THE UNDERSTANDING OF RADIONICS AND RADIESTHESIA

By Rev. Dr. S.L. Jamison
Universal Life Church

The conventional scientific literature is beginning to include reports of work done using waves of radiation of different frequencies in controlling insects in grain storage bins (radio frequency waves or RF waves), promoting the growth rate of chickens by the use of sound waves of selected frequencies on the eggs to be hatched, the use of natural electricity from the atmosphere to promote the growth and production of plants (electroculture circuits such as the DeLand Frost Guard) and similar trials of the above.

The situation is such that it reminds me strongly of the work done in the years prior to the discovery and subsequent use of the antibiotic, penicillin. It may come as a surprise to you to know that antibiotics were known years before the discovery (or rather observation) of penicillin. The use of these antibiotics was not practical, as many of them were much too toxic to the patient. Penicillin was the first of the relatively non-poisonous antibiotics.

The important thing was that nobody followed the lead shown by the existence of the natural antibiotics in a search for the relatively non-toxic ones. The reason for this was the thinking of the time. It was geared to the chemical approach by the great work of the German organic chemists dating from Liebig, in 1842, 127 years ago. The search was for chemical drugs, Magic Bullets, 606, or salvarsan, neoprontosil, sulfa drugs and the like.

The biological effects of harmful radiation has been but lately studied to any extent, just since the advent of the atomic bomb.

The biological effects of beneficial radiation has not been studied by any other than people trained in physical science. The key work on this subject is the book by Georges Lakhovsky, an electrical engineer, titled "The Secret of Life". This work was ignored, as the physics specialist did not know enough biology, and the biology specialist did not know enough physics to properly understand the book.

At about the same time as Lakhovsky was reporting his work (1931-1939) Dr. George Crile, an eminent American surgeon, reported his findings on the electrical nature of life in his book, "The Phenomenon of Life". This work was from a different approach than Lakhovsky's, but supported and extended the findings of Lakhovsky very well.

In scientific work, when the results of two independent inves-
tigators in different parts of the world done at the same time are in substantial agreement, the conclusions are likely to be correct. This is the case in the work done by Lakhovsky and the work done by Dr. Crile.

We have the human body consisting of billions of cells, each one of which is a small wet battery generating current, capable of receiving and transmitting waves (radiations) over a wide range of the electromagnetic spectrum, and being affected for good or bad by the frequency of the waves (radiations) it receives.

PROOF POSITIVE OF NEGATIVE PEOPLE

People fall into three well defined categories. This can be shown by disconnecting all but a short length of wire from a small table radio antenna. If the small length of wire is grasped between the thumb and index fingers of a positive person (one who readily receives and transmits radiation from the electromagnetic spectrum) they will function as an antenna and the volume of the radio will increase. If a neutral person, there will be little difference. If a negative person, the radio will much diminish in volume.

No value judgement is implied here by the terms positive, negative and neutral.

The positive person is one for whom the dowsing rod or pendulum will work well. The neutral person will get no results from either. The negative person will get results just the opposite from the positive person.

This was not properly appreciated in the past. This is the reason why operators of radionics machines could not be trained with any degree of certainty. Some learned readily. These were the positive persons, about 30% of the population.

At this point in the development of our society we have the most odd situation you could imagine. A small segment of it is using pendulums (radiesthesia) and radionics machines routinely, mostly for diagnosis and healing, and the larger part of society is actively opposed to the use of such methods and equipment as sheer nonsense, as there is no scientific basis for their operation. As usual, both sides are partly right, and partly wrong.

The reason there is no scientific base for the operation of the radiesthesia and radionics units is two-fold:

1. Years ago a scientist investigated the operation of the pendulum and concluded it was without foundation. The reason for this was no motion of the pendulum could be shown when it was sus- pended from a beam and various objects put under it.

The flaw in this experiment is that the pendulum is merely an antenna for the detection of radiation by the human operator of it. It is like putting your glasses on the floor and expecting them to

May-June 1969 RR, Page 7
read a book for you. This did have the effect of discouraging scientific investigation of the phenomenon of radieesthesia, as the fundamental mechanism was not known at the time; so the negative results were regarded as conclusive for all time. This was error.

2. Scientific assumption that fluid vortex motion of an ether did not exist was made from the results of the famed Michelson-Morley experiment first performed in 1881. This was not justified. For information on this point send 25¢ to C.F. Krafft, 4809 Columbia Road, Annandale, Virginia 22003 and ask for a copy of "The Structure of the Atom".

This work by Krafft supplies the missing key. The ether is the carrier of the waves or radiations detected by the radieesthesia or radionics operator.

Krafft's theory of theether and atomic structure is supported by factual observation, independent of the science of radieesthesia. The science of radieesthesia supports and confirms Krafft's theory. At this point in research on radiant energies, this forms a very powerful scientific argument.

* * *

SUCCESSFUL PREDICTION DISPROVES NUCLEAR THEORY, from C.F. Krafft

In 1955, on pages 46-47 of "The Ether and Its Vortices", the writer predicted that the radius of an atom would be found to be slightly more than twice the radius of its core structure and that the valence bonds would be found to terminate, not on the periphery of the atom as taught by the nuclear theory, but on the periphery of the core structure. Similar predictions were again made in "The Structure of the Atom", first published in 1960.

In the January 1964 issue of "Science and Mechanics" magazine, on page 69, there appeared a recent photograph of some iron atoms which completely verified the above predictions with quantitative precision. The vortex structure of the atom is therefore no longer a theoretical speculation but an experimentally established fact, and although the nuclear theory is still in all the books, its days are numbered.

* * *

"WHAT WOULD NOW HAPPEN," wrote C.L. Sulzberger in the New York "Times", March 1, 1968, "if an embittered army, the finest we have ever fielded, were brought home as the nation's first defeated force? Might not the unsolved race question in United States cities prove to be America's 'Algeria'? . . Our enemies call for 'two, three, many Vietnamese' inside the United States itself. This deliberate policy has already been embraced by some of our violent Negro leaders. Would this theorem wholly bypass a humiliated army returning home?"

May-June 1969 RR, Page 8
WHAT IS THE TRUE NATURE OF MAGNETISM?

Some Answers by Lao Tse
Of the Inner Circle

In view of the articles which preceded this, an interview with an Earth Elemental who lives in Etheric rock, the one on gravity -- itself a manifestation of Etheric energies, and on radionics and radiesthesia -- two means of making useful measurements of certain Etheric vibrations, it would be appropriate to present another view of Etheric forces.

This view is from a person who is free from the tomb of the five senses. He enjoys the privileged position of being able to observe Etheric energies from within, rather than from without. These observations were made in reply to questions by Meade Layne, during a Mark Probert seance of Jan. 3, 1948, and are from BSRA 8-B. Lingford was in control of Mark when the above question on magnetism was asked, but Lao Tse replaced him to answer Meade.

"You will have to excuse me for pushing your American friend out, but I think I can do a better job. (Q) There is interplay of energy between the so-called material earth and the astral earth. (Q). Yes, one is much more refined than the other. (Q). No, there is no way of detecting ether with your present instruments. Magnetism is a flow between my earth and the material earth; your ether acts as a carrier or vehicle; it is a phenomenon of the finer ether or etheric earth. (Q). Yes, sensitives can see the magnetic field, very often.

"(Q). Yes, we have for example, a true copper; it consists of the emanations of the copper on your plane. It is the slow returning of the copper to its source. It arose from a kind of condensation of etheric copper (i.e., into the copper of dense matter), and it returns to the etheric state by emanations. Like the rusting of iron, whereby iron returns to the ether from which it came. There is a back and forth exchange of energy. (Q). Yes, all copper is basically the same, otherwise it could not manifest beyond the physical plane. Yes, this emanation copper exists in and with and through the dense copper of your plane. (Q). Yes, it would be the same for glass."

"If you have a glass lens of a certain shape," asked Meade, "does that affect the emanation-glass, so that it also has a lens shape?"

"No, it does not," replied Lao Tse. "No, the emanation is not affected by manipulation of the dense matter. Yes, the emanation is formless. (Q). No, in the lens of the camera there is no lens
of etheric glass, unless one should be shaped there by some entity. (Q). Yes, that is done sometimes, but such experiments would go on only if there was someone on your side trying to prove some theory or idea -- and then most likely this manipulation of matter would be projected and you on your plane could see it."

**ASTRAL ATOMS ARE DIFFERENT**

"How far is the structure of etheric matter independent of dense matter?" asked Meade. "Suppose you took a lump of your emanation sulphur and held it so a physical wire carrying our electrical current passed through it. Would there be any effect on the flow of current?"

"It would avail you nothing," replied Lao Tse. "The difference in atomic density would make such effect impossible. The wire would pass through the lump of etheric sulphur, but there would be no contact, it would in no way be affected. The only way any of your physical apparatus can be affected from our side is by a partial materialization. (Q). Yes, differences of potential between condensers can be affected if there is a mediumistic person present. In such cases materializations may appear in a magnetic or electrical field."

In reply to a question about PK (Psycho-Kinetics) effects, on the fall of dice, etc., Lao Tse continued, "Your PK effect depends on training of the muscular system to obey the will automatically in throwing the dice."

"You mean, Lao Tse, that a PK effect can be obtained when the dice are thrown by a machine?"

"Yes, proven so."

"What kind of energy is this?" asked Meade.

"It is a magnetic energy, the magnetic field is affected. (Q). Yes, to some extent it depends on the presence of the physical organism of the person."

"Could you, from your side, affect the fall of the dice in that way?"

"I don't know. I have never tried that," replied Lao Tse. "Is it not odd that with all the communications you people have had, with the instruments at your command, you put more faith in a piece of machinery than in people. No man has the least faith in his fellow man -- not the least."

"PK is observable up to about 30 feet," said Meade. "We don't understand the nature of the force or energy."

"I would have to observe the machine," said Lao Tse. "It's not the machine. The observer wills a certain number."
"Will you excuse me for a few minutes? To get back to that mechanical device you are using," said Lao Tse, "even in setting a machine to perform any mechanical action, the energy of the mind is involved; you are working in a magnetic field. You wonder why this doesn't fit in with passing a copper wire through a lump of astral sulphur. In one you are trying to make direct contact with no gradation of the flow of magnetic force; in the other you are giving free rein to the gradation of the etheric flow. Any of your physical objects can be lifted about by mental direction, given the right conditions and right persons. (Q). This resembles PK effect; ectoplasm has nothing to do with it. (Q). When dice are thrown by hand, the mind prepares the muscular reaction, but with a mechanical throw there is a control of the magnetic field. In the first case the muscles sense exactly the amount of force to be used for a desired cast. (Q). No, one need not be in proximity to the machine; you could be here and the machine in Los Angeles. Much depends on the individual, his ability to control and direct thought-force. Telepathy utilizes the same force; it is and works as a magnetic field.

"The atomic whirl of electricity is much slower than that of mental force, or mind flow -- it is easier for the latter to travel. The passage of thought is faster than that of electricity. (Q). Yes, mental energy, like all energy, can be measured -- it has its own units of magnitude. (Q). Yes, one person can interfere with the dice throw of another mentally, especially if he knows how to control the thought energy. The stronger of the two forces prevails. This is true in all life. (Q). We can direct energy onto your plane only insofar as are able to come down the grade into the level of material construction. (Q). Yes, the difference of potential between charged plates can be affected by us, provided you have a medium present, or one who is in some manner sensitive. You will get spontaneous materialization in the magnetic field.

"But you cannot get away from the use of a medium or sensitive."

* * *

HAVE 20 YEARS OF ELECTRONIC RESEARCH BRIDGED THE GAP?

In 1948 Lao Tse said we had no instruments for detecting etheric energies. Today it may be different, as indicated in the following article in the January-February 1969 "Newsletter" of the Parapsychology Foundation, Inc:

"The recent discoveries of Cleve Backster, a New York polygraph (lie detector) expert, and his colleague, were the subject of articles in the February-March issue of 'National Wildlife' and in the winter 1968 issue of the 'International Journal of Parapsychology'. The article in 'National Wildlife', which is illustrated with beautiful color photographs, describes the experiments started in February, 1966, when Mr. Backster first began to suspect that plants experience emotions. To test this theory, he first attached

May-June 1969 RR, Page 11
the electrodes of his polygraph to the plant leaves, and then attempted to think of ways he might harm the plant. At the moment he thought of burning a leaf with a match, the polygraph recording pen, which had until then been charting the normal plant rhythms, showed a dramatic change. 'I had not moved, or touched the plant, so the timing of the PGR pen activity suggested to me that the tracing might have been triggered by the mere thought of the harm I intended to inflict upon the plant. This occurrence, if repeatable, would tend to indicate the possible existence of some undefined perception in the plant.' Mr. Backster regards it as significant that his intent to harm the plant produced a stronger reaction than the actual harming.

"Further experiments which involved the plant's reaction to the death of brine shrimp led him to the hypothesis that perhaps a cell broadcasts a signal to all other living cells when it dies. He has tested his hypothesis not only on plants, but on amoeba, paramecium, fresh fruits and vegetables, mold cultures, blood samples, etc. The signal is definitely not within any known frequency; distance seems to impose no limitation.

"The experiments of Mr. Backster have attracted so much attention that he has been invited to set up a demonstration booth at the International Flower Show, held at the New York Coliseum on March 8-16."

In the April 1969 issue of "Beyond" magazine, Wentworth Williams gives more details of Backster's research on plant and animal reaction to negative human thought in his article, "ESP Can Cause Plants To Either Flourish Or Die": "I noticed that if something more interesting than shrimp distracted the plants, they wouldn't react," said Backster. "So to give them plenty to worry about, I introduced shock conditioning a la Pavlov... After awhile I had only to think about shocking them, and they'd go into a coma like a person painting. It wasn't only shrimp. Any violence to any cell would produce a reaction... It got so that if I'd harrassed the plants enough I could be miles away, and the moment I thought of returning to them, the pen would start rising. What does it all mean? Is there perhaps a primary sense that came in evolution before the other senses? Think of the implications!"

Backster's violently negative approach to this highly sensitive area of research is typical of the unenlightened orthodox science of today. No doubt his former superiors in the Central Intelligence Agency have already thought of ways of using this new knowledge to maintain mass control of the hearts and minds of the American people, through fear. It is this kind of war-oriented, government sponsored research in university laboratories that has young people rebelling against the Establishment that encourages it. Happily, Wentworth balances his article with a review of Rev. Franklin Loehr's positive experiments in making plants flourish through prayer. We are glad to say that this outstanding work on ESP, "The Power of Prayer on Plants", is now available again in paperback, and should be on book stands across the country.

THE HISTORY AND DEVELOPMENT OF RADIONICS

Part VI. The Calbro-Magnowave Equipment

By The Radionist

The second half of the decade of 1920-1930 witnessed the development of four types of radionic equipment, all more advanced than the Abrams E.R.A. apparatus, and each having its own particular features. These four types were:

The Calbro-Magnowave
The Pathoclast
The Radioclast
The Drown equipment

Each of these types will be described in this series, as they all played a part in the development of the art.

The Calbro-Magnowave had the greatest tuning scope of any of the four, including on its tuner panel four horizontal rows of tuning dials, six dials per row, giving a total of 24 dials. This permitted the use of more advanced technique than could be utilized on the other types of equipment. Other features of the Calbro-Magnowave:

1. A rubbing plate warmed by a built-in, low power electric heating element. It was found easier to elicit signals on a rubbing plate kept warm.
2. A slotted-screw adjustment for tuning the rubbing plate assembly.
3. A button which, when pressed, would clear the instrument of all accumulated radiations. This sometimes was of help to avoid carry over of radiations from one condition to another, and was always of use when changing from one patient to another.
4. A specimen well into which a test vial containing a sample of a vitamin, mineral, food or remedy could be inserted, to ascertain what effect the radiations from the test substance would have upon the patient's organ functions and disease readings.
5. A treatment circuit which for the first time used the same type of tuning for treatment as for the diagnostic procedures. This permitted the art of radionic treating to be developed to a far higher peak of selectivity and effectiveness. It opened the door to a tremendous variety of treatment effects, such as had never been known previously. Most of the remainder of this instalment will be devoted to the treatment aspect of the Calbro-Magnowave.

Previous use of radionic treating had been on the basis of
one tuning; for each type of disease. However it was learned that, for example, strep in the liver required a different treating rate for effective elimination than for strep in the thyroid, and similarly a different treating rate was required for treating that bacteria out of each different organ or gland in the body. Also, the treatment rate that will most effectively eliminate strep (to continue to use an example) from one person's liver will not be the rate that will most thoroughly eliminate it from another person's liver! Every individual has different bio-chemical and electro-chemical reactions, just as every individual has different fingerprints and foot-prints. These differences mean that only by individualized or personalized adjustment of treatment tunings can the quickest and most thorough results be obtained.

The prime virtue of the Calbro-Magnowave is that for the first time it permitted the utilization of "personal" treatment rates, individually developed for each patient, for the most thorough elimination of disease factors from specific organs, glands or other tissues of that particular person. This was done by providing precise matching of individual bio-electric radiations in specific organs of the person, as altered by specific disease factors. This introduced a degree of precision into therapeutics which far outmatched anything available in medical practise to this day, over 40 years later.

Personal treatment rates are only possible when the tuning apparatus in the treatment circuit is of the same type as used in the diagnostic circuits. Also, personal treatment rates cannot be satisfactorily used on instruments of limited tuning scope such as the Pathoclast or Drown instruments, and most of the Radioclast models.

With the Calbro-Magnowave, and successor instruments to be described later, the operator first performs the diagnostic analysis and determines which organs require treatment and also determines what disease conditions should be eliminated. Usually there is more than one disease condition or type of tissue pathology, and more than one organ that needs attention. Choosing the condition and organ to be treated first, the tunings for the condition and the organ are placed on the tuner panel, the intensity of the adverse condition in that organ is noted, then the tuning dials on the treatment row are brought into play, from one end of the row to the other, the operator determining for each dial the setting that will best neutralize the disease condition in the organ or location involved. This determination is made by means of resonance detected on the rubbing plate, which is used constantly during the period of time in which the operator is developing the personal treating rate. The procedure is not automatic, and results vary with the skill of the operator.

Assuming a competent, skilful operator, the procedure opened up a whole new field of therapy. It permitted conditions to be cured which hitherto could not be touched. Examples will be given toward the end of this series. Right now, the nature of the treatment current should be mentioned.

May-June 1969 RR, Page 14
In contrast to the Abrams Oscilloclast, which used a small number of short-wave radio frequencies for treatment, the Calbro-Magnowave and successor instruments used the emanation from one side of the 110-volt house current, tuned radionically by the treatment row of tuning dials.

In conventional electricity it is not generally known that a current can be obtained from one side of the electric line -- from the "hot" side only. However, the fact that such a current is obtainable is known to some radar experts, as it is a disturbing factor in radar. The presence of such a current can be readily demonstrated with a 1/25th watt neon test bulb; connecting one terminal of the bulb to the hot side of the alternating current line, the bulb will light dimly when its other terminal is touched with the finger.

This current, obtainable from one side of the alternating current line, is extremely low in magnitude; thus it does not disturb or upset the normal flow of nerve energy in the human being. It is therefore an ideal carrier wave for the subtle effects of the tunings introduced by the radionic treatment dial settings -- effects which would largely be lost or seriously overwhelmed by more gross electrical currents such as the sine wave or faradic.

Any Calbro-Magnowave instruments that may still be in existence inevitably have badly corroded, worn or loose contacts due to the age of the equipment, and would need to be completely rebuilt in order to function properly.

The first word of the name, "Calbro-Magnowave", was obtained from the last names, Caldwell and Bronson, of the two men who formed the company that developed and made the equipment. The second word was coined. Over a thousand of these instruments were said to have been sold during the late nineteen twenties and early thirties. It was the first radionic instrument to attain such a side sale, and possibly the only one that did so. A convention of users of the equipment adopted the term "radionic" as descriptive of the equipment, and at the same convention an association of users was formed, termed the "International Radionic Association", which continued in existence for nearly thirty years. (To be continued).

* * *

"BISHOP MARCOS G. MCGRATH, of Panama, , , agreed that there must be a revolution in Latin America, and that whether it is violent or nonviolent is 'not so much a problem of ethics but a problem of tactics. Some Christians interpret violence not only as the destruction and death brought about by, say, guerillas or street riots, but also as the silent violence of hunger, malnutrition and disease which kills every night and day thousands of innocents through the (South American) continent. And on this premise, these Christians side with armed revolution'."

May-June 1969 RR, Page 15
A SATURN RITUAL FOR ABUNDANCE

By Riley Hansard Crabb

We've had several requests from Associates for a ritual which would stimulate the flow of more worldly goods and wealth in their direction. Here is one example we worked up from the Kabalistic material in Vol. III of the Golden Dawn. A serious reading of the following pages should tell you that Ritual or Ceremonial Magick is not something to be taken lightly. Certainly the Elementals who are expected to answer the prayer take themselves seriously, as indicated in the following excerpt from one of Joan Dixon's letters, about her contact with Durin and his People of the Rock.

"This Being (Durin), or whatever it is, is becoming more familiar to me. I guess he can even hear my thoughts sometimes. When he was telling me about his so-called powers and about primitive tribes, the thought just passed through my mind, 'I wonder if these earth-spirits are the ones to whom they dedicate their horrid fertility rites?' A couple of hours after I finished writing the message I was relaxed and the thought entered my mind, 'By the way, the Water People are in charge of fertility'. As is my usual contrary custom I immediately rejected it with 'Oh nuts, what does water have to do with fertility?' And the reply came immediately, 'The sea is the cradle of the world, the mother of all living things. All life as you know it begins in the womb, in a sea of warm liquid. When the rains come in spring things begin to grow. That's what water and the Water People have to do with fertility!' Well, I guess he really put me down. But other than that one episode I still don't know if he's for real.

"Later still in the same message he offers to teach me and give me power. I guess you might say he'd make a good witch out of me. But I'm just not the witching kind. I was going to say 'in the first place I don't know a thing about Ceremonial Magic'. But as I was typing up the message I realized that he spelled it out for me in a nutshell. 'An incantation is made, a name pronounced, our power evoked.' I remember at the time I was wondering why he was going on and on. Why didn't he just say, 'When a ceremony is performed' or something like that? No, he gave me the whole ritual; so that I can use it if I want to. I suppose next he'll teach me the incantation too. When I'm not looking, of course. So now I know the first thing about Ceremonial Magic. But I somehow have a feeling there's a little more to it than just mumbling a few phrases..."

How right she is! We don't have the ritual Durin gave her but we do have the basics worked out so long ago by MacGregor Mathers, Wynn Westcott, et al, and here's a streamlined version for Earth.

May-June 1969 RR, Page 16
BINAH RITUAL of the Fifth Pentacle of Saturn

1. Prepare place of working.
2. Kabalistic Cross (face east).
3. Lesser Banishing Ritual of the Pentagram.
5. Invocation of Adonai, God of Earth (face north).

"Oh Adonai Malekh (start) (make sigil for each name) with dagger or sword in air before you.)

(finish)

God made manifest in Nature.
Reveal to us Thy face in the things of Thy creation.
That they may be holy unto us.

Come to this temple prepared for Thee
And speak to the heart of he (she) who invokes Thee here,
That Thou mayest be seen in the inner eye, in the darkness,
And heard with the inner ear, in the silence,
And interpreted by the heart to the mind,
And manifested in Earth, Thy kingdom.

Let the soul of man arise,
Called forth by the power of Adonai.
Let me stand firm, with my feet planted on earth of earth!
Let my soul declare:
In my flesh shall I see God, even Adonai,
God made manifest in Nature."

6. Invocation of the Forces of Binah.

"By the Holy Names of God written in this book, the Bible, and by the other Holy and Ineffable Names written in the Book of Life, we conjure ye to come unto us promptly and without any delay, appearing in a beautiful and agreeable form and figure, by these Holy Names and Symbols: (chant the Name as the Sigil is drawn)"
7. Greater Invoking Ritual of the Pentagram, for Earth.

(Now the actual invoking of the Earth People who carry out your wish or prayer, two Pentagrams drawn in the air before you, at each point of the compass starting from the North, and turning clockwise. Chant the Noly Name as you draw the Pentagram, then chant the charge as you draw the central symbol, first the Equilibrating, then the Invoking, eight pentagrams in all.)

**Equilibrating**

1. **Chant**
   - NANTA

2. **Charge**
   - AGLA
     (Atot Geator
     Le olom
     Adonai)

**Invoking**

1. **Chant**
   - EMOR

2. **Charge**
   - DIAL
     HECTEGA

3. **Charge**
   - ADONAI

"Oh King of the Invisible
Who filled the abysses of the Earth
With Thine omnipotence.
Thou who shakest the vaults of the world,
And causest the seven metals
To flow through the veins of the rock.

Monarch of the Seven Lights,
Rewarder of the Cavern toilers,
Lead us into air desirable
And unto the realms of splendor.

We watch and we work,
We see and we hope,
By the twelve stones of the Holy City
By the hidden talismans
By the pole of lodestone
Passing through the center of the world!

Savior, Savior, Savior,
Have pity on those who suffer.
Expand our hearts, elevate our minds,
Enlarge our entire being!

Oh stillness and motion,
Oh day clothed with night,
Oh darkness veiled in splendor,

May-June 1969 RR, Page 18
Oh Master who always pays the wage
Of Thy laborers in the whiteness of silver,
In the splendor of gold,
In crown of melodious diamonds!

Thou who wearest heaven on Thy finger
Like a sapphire ring.
Thou who concealest in the stone of earth
The marvelous seed of the stars,
Live, reign, dispense the wealth whereof
Thou hast made us the wardens. Amen."

9. Wish, Prayer or Request

(Magician -- and participants, if any -- now visualize and/or
chant for material goods, money or whatever is needed for pro-
gress and service. A written prayer is good. This can be lit
at altar candle and burned with these words of release.)

"Oh El most strong, Oh Adonai most powerful,
Thou who hast established all things in Thy wisdom;
Even as the smoke and the flame of this prayer
Rises to the heavens and its ashes descend to the earth
Do we thank Thee for the wealth of Thy creation
Added unto us, as we share our human love.

By the Name of the Living God
Who hath formed the heavens above
And hath laid the foundations of the earth beneath;
By the Holy Names of Binah,
We are grateful to Yod He Vau He Elohim,
To Tzaphqiel, to the Aralim and to Satariel
And his dwellers in the dark
For sharing with us the labors of the earth
This day (or night) and for the days to come,
That the righteousness of our prayer be fulfilled."

10. Greater BANISHING Ritual of the Pentagram for Earth.
(Starting from the North again, but Counter-clockwise.)

Equilibrating
Chant
NANTA
Charge
AGLA

Banishing
Chant
EMOR
DIAL
HECTEGA
Charge
ADONAI

May-June 1969 RR, Page 19
11. Lesser Banishing Ritual of the Pentagram. (Facing east).
12. The Lord's Prayer, concluding with the Kabbalistic Cross.
13. The ashes of the written prayer can be returned to the earth as the appurtenances of the ritual are disassembled and put away until the next time.

* * *

In publishing a magickal ritual like this it is difficult to decide how much to commit to print and how much to leave out, not because there are any secrets! There aren't, as we quoted Dion Fortune several issues back. It's just that the history and literature of Ceremonial are so tremendous, and the training and preparation so involved. Ceremonial Magick is an art, and like any art it has to be studied and practised regularly -- IF one is to be proficient. Obviously, steps one through four and 12 and 13 are given on the assumption that the Celebrant, priest or priestess, is already familiar with the necessary preliminary preparations of mind, heart and aura, not to mention the usual physical equipment, including the drawing of the Fifth Pentacle of Saturn, from the "Key of Solomon".

We read somewhere that a ritual loses its power when published or given to the world freely. This is probably true in that the Spiritual Forces who worked with the creator of the ritual when he designed it and used it, are not bonded servants who must go along with the piece of paper when it is transferred to a new owner. He can pick up this psychic tool and make it live and work again by charging it with his own Forces! To believe that a ritual has power of itself is superstition.

In our occult study series, "The Invisible Reality Behind Appearances", we try to give the student of life a reasonable basis on which to develop his spiritual powers for a healthful, helpful and meaningful existence. These are practical workbooks combining theory and practice. In Part II of the series we get into the simple protective rituals of the Kabbalistic Cross (the final phrases of the Lord's Prayer) and the Lesser Banishing Ritual of the Pentagram. If you would speak the language of the Gods, you must have some proven means of swinging your personality 180 degrees on its axis, for the time of meditation and/or ritual at least; so the spiritual forces which were directed outward into your worldly activities, are directed inward toward the development of your interior life.

There is no one authority in metaphysics or occult science, especially in the field of Ceremonial Magick. The Teachers of our race have scattered this material among a hundred authors. It is part of the work of your own Ministering Spirits to bring these scattered fragments to you when and as you need them. Out of them, by trial and error, you develop the spiritual system which suits your needs in this life. You become an Eclectic, just like Potamon, Ammonias Saccas and others of the famous Alexandrian School of the Second Century A.D. We write our own ticket in this day, just as they did in theirs.
THE BLACKFOOT INDIAN TREATMENT

"I had hoped to learn something at the Ortman Clinic (Canistota, South Dakota) but really can't put my finger on a thing. The only thing the chiropractor would tell me is that they think their method removes tension. Of course if it does it will remove the cause of subluxations, though I don't see how their methods can as the touch is so light and rapid, and through the clothes. Their treatment lasts less than two minutes! They were treating 430 people daily, and in the past have treated as many as 1300 in one day and turned others away. There are six chiropractors there, five of them named Ortman, and the odd one -- our doctor -- was a son-in-law. He said, 'You will hear many theories, magnet healing among them, and they are all wrong.' I talked to one man who has been coming there a couple of times a year for 28 years. After the first treatment he laughed at himself for being a sucker, but after their treatments restored the use of his bad arm, he didn't laugh any more.

"We also visited a Ph. D. at Moorehead, Minnesota. He teaches at the college there. On his table I found a copy of Max Freedom Long's 'Secret Science Behind Miracles'. When I asked about it he said he bought it for the college library, saying it was about time such books were available to students. How about that?"

Al Goeke, Redmond, Washington

All we know about the Ortman treatment is from Dr. Nelson Decker's description of his visit to the Clinic in the early '50s. He took the full course of five treatments, not oftener than one a day to allow the body to react to the invisible healing forces at work. The main expense is the living for five days, nearby. The first treatment knocks out tensions. Decker said he really felt limp afterward and had an irresistible urge to go to bed early that night. The second treatment releases the mucous in the system. He had a runny nose, loose bowels, etc., afterward on the second day. The last three treatments are healing or re-building treatments. There is no apparent difference in the technique from day to day. The chiropractor simply presses his thumb lightly along the patient's spine on each side. Very unimpressive except for the results on some people, and for the great numbers who flock there for healing, year after year. Decker said this was an American Indian technique, though apparently the Ortman don't know it or won't admit it. Canistota is a wide place in the county road about 30 miles west of Sioux Falls, South Dakota. Take U.S. Hiway 16 to Pumpkin Center and beyond about nine miles, turn right a couple of miles to Canistota. It was this experience which awakened Dr. Decker to the untapped healing forces within him.

May-June 1969 RR, Page 21
WHAT OR WHO IS LEMURIA?

"My wife and I are greatly pleased with your quick response and your information publication. Enclosed you will find a check to cover cost of BSRA 9-D and BSRA 14. Now for some questions:
1. What or who is Lemuria? The name keeps popping up.
2. Do you know any more books by or about M.K. Jessup, other than 'The Case for the UFO'?

M.A.G., Pt. Deposit, Maryland

In occult literature Lemuria is the name for a vast continent that once almost circled the earth. Easter Island in the Pacific is one remnant of it and the gigantic statues there are probably fairly accurate portraits of some of the inhabitants of that region of Lemuria. James Churchward dug up a lot of archaeological material about the continent. His books are now available in paperback. Another good source is Besant and Leadbeater's "Man, Whence, How & Whither", probably still available from the Theosophical Press, Wheaton, Illinois.

Jessup also wrote "The Expanded Case for the UFO", "The UFO and the Bible", and "The UFO Annual" covering sightings in 1955. Additional material on Jessup, including what appears to be some messages from him after his passing, have been assembled in "The Strange Case of Dr. M.K. Jessup" by Gray Barker, Saucerian Publications, Box 2228, Clarksburg, West Virginia 26302. $3.95

POLARITY RESPONSE TO VITIC

"I secured the Alnico magnet and carbon rod for the Vitic experiment and it seems to be working. Although at first I got spotty results until I figured out that polarity plays a part, and polarity in turn seems to be dependent upon the acid-alkaline balance of blood/body system. As I have hypoglycemia, my blood fluctuates from alkaline to acid and vice versa. This gave the spotty results apparently. Diabetes or any other type fatigue might do the same.

"The polarity system I worked out for me is as follows: If system be alkaline (which is normal and acid blood is mal-normal) then left hand be negative and right hand positive. Since it seems that energy wants to flow from negative to positive, I found best results when the North (negative) pole of a horseshoe magnet was toward palm and South pole upwards in palm of right hand, with carbon in left hand. This may or may not be valid for anyone else but it works for me.

"The 'white light of soft radiations' discussed by John Brown in the B-Cell brochure tally very closely with Dr. Wilhelm Reich's discovery and observation of Orgone energy. I am also interested in the Eeman Screens and wish to experiment with them. Enclosed is a check for BSRA #26 and a pair of the Screens."

J.L.W., Ft. Worth, Texas

May-June 1969 RR, Page 22
"Enclosed is a check for $12.00 to cover purchase of Vitic, Two Inventors Return, The Cameron Aurameter, and Color, A Bridge to the New Age, and also an Associate membership. Thank you for the prompt dispatch of the previous publications. My experience with the MWO is that it is more effective in sparking in slow intervals about 1/4 or even 1/2 second each. If sparking is rapid the effect can be too strong and one can actually feel worse as a result. I have tried to construct a duplicate and get as much as a two-inch spark, but cannot make it spark across the coils. Can Bob Beck give me a suggestion? The original MWO of Lakhovsky should be described and diagrammed. What was its high voltage? What size and diameter were the coils? I have tried making coils of copper tubing (He must mean antennas, RHC.) and while fully able to make it spark, got the impression that it was adverse in its effect. The copper tubes were mounted on a plastic strip and by tilting could assume the form of a cone. The BSRF Journal could possibly have an article on Homeopathy. Sulphurous acid and/or oxygen in homeopathic attenuations have cured many cases of emphysema. Lathyrus Sativa is a far better preventative of Polio than the Salk or Sabin vaccines -- and cheaper! 100 doses for a dollar. I you wish, I could write you such an article."

Former President of Homeopathic League,
Chicago, Illionis

An article on Homeopathy would be welcome, especially now that our Radionist is revealing the importance of Homeopathic remedies. Radionics also proves that the reactions of individuals to specific diseases vary tremendously. This principle would also apply to individual reactions to the "electronic or etheria shower-bath" of the high-frequency field of the MWO. One person may be highly stimulated, another may be depressed by the out put of the same machine. We haven't seen the MWO built by the Chicago Association, but the Bob Beck adaptations of Lakhovsky's MWO built in 1964 arced all the time, at several places between the first, second, third and fourth rings. It would seem logical that a low intensity or slow arcing MWO would require a longer exposure to the field. If a person wants to build a Tesla Coil which produces a two-inch or longer spark, he should write to one of the popular electronics magazines. Every once in awhile they publish an article and diagrams on big arc-producers which any amateur can build. As for details on Lakhovsky's original equipment, try writing directly to his son in Paris, Serge Lakhovsky, 25 Rue des Marronniers, Paris 16, France. We understand Serge is still manufacturing his father's equipment, at $3,000.00 per machine. How to get it through Customs at New York should be quite a problem. Our brochure on Bob Beck's miniaturization of the MWO, with schematic and examples of its use, is still available at $1.50 a copy. A domestic supplier of adequate Tesla Coils at $25 apiece is also listed. This commercial coil is designed to drive ultra-violet lamp skin-treating equipment used in beauty shops.

May-June 1969 RR, Page 23
"NO WONDER THE TEEN'AGERS ARE REBELLING"

"We have just finished reading the book, 'The Rich and the Super Rich' by Ferdinand Lundberg. It is frightening to think how far away we are from the Founding Fathers' plan, and going downhill like a snowball, all due to the greed and lust of a favored few. Recently I got the thought, the Bible does not predict beyond the year 2000, neither does Nostradamus. His last stanzas predict a war to end all wars in the 1990s, they say. I remember, from Bible reading as a child at bedtime, the Earth will be destroyed by fire. I wondered then how this could be, with an ocean on either side. Now we have the A & H bombs. If Nostradamus is right would our planet be cleaned off, as the Moon looks today? Would the earth lie fallow for a period of time before it would be again fit for habitation?

"We know the aims and passions, greed and lust of today's humanity. Are any on earth qualified for life in the New Heaven and the New Earth? Would then our Space Friends bring in a new race, compatible to live in peace for a thousand years? These are the thoughts bugging us these days. What are yours about this?

"We also want to read the new book, 'The Vatican Empire' by Nino Lo Bello, Trident Press. We have read 'The Passover Plot' and now 'Those Incredible Christians' by Dr. H.J. Schoenfield, both paperbacks. Both books are very revealing. No wonder the teen-agers are rebelling. We should join them for they are getting wise to the shenanigans going on today, all over. Don't name us on the above thoughts. Being Senior Citizens we want to live in peace and quiet if we can."  

B.E.G., Mt. Misery, New Jersey

THE ABE FORTAS SHENANIGANS

University Park, Pa. (AP) -- "U.S. Rep. Adam Clayton Powell charged Friday (May 16, 1969) the Nixon Administration leaked information that led to the resignation of Supreme Court Justice Abe Fortas to get back at liberals on the Court. Powell said President Nixon and Attorney Gen. John N. Mitchell were angry over the Court's decision to investigate a fraud case involving the El Paso Natural Gas Co., a client of the Nixon-Mitchell law firm. "The week after (the court decision), the Department of Justice then fed Life Magazine the story that had been in their files for five months'."

"WHAT IS THE POWER BEHIND ALL THIS?"

"How does it come about that a man gets himself elected President of a country? There's more compulsion in it than meets the eye. We all agree by now (borderland researchers, at least, RHC) that anything vital has a frequency rate, or rates, according to its nature, singular of compound. We humans are fine examples of this; for when a man with the correct frequency rate matches up with his country's rate, there is little he can do about it. He complies if he has what it takes. Compulsion drives him. The com-

May-June 1969 RR, Page 24
munity elects him. What is the power behind all this? The destiny of a country can be recorded on a graph which shows the rises and falls, the tidal flows, as in all things. President Nixon is a servant of Mammon. Who isn’t? He also has fine aspirations. He also has bosses, and he has to choose which one of them he is going to serve. He knows that he can go out on his ear, or he can play along with the power coterie. I wouldn’t like to be President of America, no sir, not at this stage of my evolution.

"Alice Bailey’s writings may help to sell the Journal, but of course you know that they rank with a hundred other splurges that use words like ‘invocative. . . focus the invocative cry.’ My God, what next? Did Jesus of Nazareth hold his people with such verbiage? I made a test of the Bible. How much of it is Divine Law? Seven per cent is the score; the rest is the parables hiding that which is inspired, or from Divine Intelligence -- beautiful, simple statements of TRUTH. They are hard to discover until we have reached the stage where we can instinctively recognize them and love them for what they are. Millions worship the camouflage! We are all on this journey and of course we are all treading, one of the many paths to the top. A good many of us join a school that offers short cuts. We learn, perhaps too late, that we must go back to where we left the straight and narrow and get back on. There just aren’t any shortcuts."

Roger Walpole, Murrays Bay, New Zealand

We got ourselves into this mess, Roger, and we’ll have to get ourselves out! Quoting the Bible: "Ask and ye shall receive." What else do we have but prayers or "invocative cries"? No power on earth, no human leader, can stay the destruction of this civilization. What is the power behind all this, you ask? It is the military-industrial complexes that prop up the political front men in Washington, Moscow and Peking. But the physical M-I leaders are front men too, consciously or unconsciously controlled by shadowy, black-robed figures in the Astral wings of the world stage, a planetary tragedy well named "The Twilight of the Gods" by Richard Wagner, an earthly mouthpiece of a hundred years ago for our Western Mystery Tradition and its Occult Lodges. To quote the Bible again: "There will be no place of safety for the unchanged of heart."

We discussed the death of the Old Age and the birth of the New in an early UFO talk, "Flying Saucers and America’s Destiny". A few copies are still available at $1.00, post and tax paid.

NO BABY PELICANS THIS YEAR

Why do civilizations die? Because they must make way for new and better civilizations, thank God! If a civilization is too big to be destroyed by an outside invader then it strangles to death on its own unsolved problems. The terminal symptoms of the cultural disease of old age in America became distressingly clear during a candid exchange between President Nixon and the mayors of ten big American cities, at the White House in Washington, the last week in April. Here is some of what was said and reported in "Newsweek":

May-June 1969 RR, Page 25
"... For two and a half hours they (the mayors) gave the President, Vice President Agnew and White House urbanist Daniel P. Moynihan an almost-too-candid mayor's eye view of city problems. Along the way, the mayors sharply challenged some of the new Administration's ideas and strategies. ... And to nobody's surprise, the mayors emerged from the White House with no real hope that their pleas for immediate financial help would be answered. ...

"It was the sense of urgency that the mayors tried hardest to convey. 'Only those of us dealing with these problems every day realize the life-and-death struggle of the cities,' said Cleveland's Carl Stokes, the prime mover in arranging last week's meeting and the chief spokesman for the group. He warned the President: 'We are losing control of our cities. We can't stop the black violence -- and the white violence will surely come next.' ...

"The President also got some new insights into the problems the mayors face. Such publicized ills as pollution and traffic congestion, he was told, are not deeply disturbing because they can be treated with money; instead, the real crisis lies in the complex social problems that no one knows how to approach. Surprised and a bit skeptical, the President polled the table: was this true? Everyone agreed. For example, said Stokes, most of the turmoil in Cleveland is being caused by 13- to 18-year-olds. 'What do you do,' he asked. 'Send the National Guard into a high school?'

"Similarly, Mr. Nixon was told that the fiscal crunch on the cities is felt not in funds for providing physical facilities, but in the hard cash needed to operate them and respond quickly to new problems. 'We can build all the swimming pools we want with bond issues,' said New York's John Lindsay, 'but we can't find the tax money to pay the operating costs of life guards and cleaning.'

"The sharpest exchange came after the President had left the meeting, when Agnew announced that he was 'going to be deliberately provocative, and proceeded to read the mayors a lecture on the need to channel funds for the cities through the state governments. 'It was peppy,' one participant recalled. In fact, Atlanta's Ivan Allen literally pounded the table. Republicana mayors (Wm. Walsh of Syracuse and Milton Graham of Phoenix) joined Democrats (Boston's Kevin White and San Francisco's Joseph Alioto) in insisting that state governments, dominated by rural interests, have little sympathy for city problems. 'We can't have it,' Stokes said later. 'We can't survive if Federal funds go through the states. They funnel it all off, and it never gets to the people who are intended to get it!'

"The Administration group showed no sign of backing down on this issue, but for the moment at least it was irrelevant anyway: because of the demands of the war in Vietnam and the need to hold down spending to curb inflation, there simply weren't any Federal funds to be had... The President did offer one small plum. If Congress accepts his proposal to end the 7% investment tax credit..."
for business, he said, at least part of the $1.8 billion in added exc revenues would be earmarked for helping the cities. This was not as encouraging as it sounded, since any such funds would be offered as revenue sharing administered through state governments. Congress would almost surely insist on keeping substantial control over the use of the money and would specify city programs, but the process would probably take months to work out. 'We're talking about money for this summer, and that's an eternity for us,' protested Chicago's Richard Daley.

"The mayors left the White House smiling but hardly pleased . . . 'Everyone left with a feeling of frustration, of uncertainty,' said one mayor. 'None of us felt sure the problem had been grasped. If what we said didn't take, we're in even greater trouble.'"

THE JOB IS TOO BIG FOR THEM?

And what was the response of the state governors to this? Silence. For instance the Republican governors were holding one of their periodic meetings, this time in Kentucky; but there was no official word from them on concern about the plight of the big cities. They seemed more concerned about the coming Kentucky Derby and their holiday meeting with the President.

We did get a semi-official, professional opinion from the former Secretary of Health, Education and Welfare. Wilbur J. Cohen was in Los Angeles, April 29th, to address the County Tuberculosis Association meeting on welfare and related problems in America. In his opinion the state governors and legislatures are not ready, willing and able to handle the big-city-assistance ball tossed to them by President Nixon and Vice-President Agnew. Cohen told the TB meeting: "Today, many governors and legislators of the big city states, as well as those of the rural southern states, acknowledge that the welfare job is too big for the states." If the mayors had heard him they would have been even more unhappy!

WHAT ABOUT OUR "CAN DO" GIANTS OF INDUSTRY?

Sad to say, the tycoons who made America great just aren't interested in these domestic problems. There isn't enough money in them! Not in comparison with war profits on war business, anyway. And didn't our president reassure them recently, that war would go on for another year at least? We got the latest word on this from the "Saturday Review", May 24, 1969:

"Expectations have been high that military-aerospace suppliers might welcome an opportunity to serve domestic social needs. Former Secretary of Defense Clark Clifford, for example, has said: 'We now have a military-industrial team with unique resources of experience, engineering talent, management, and problem-solving capacities, a team that must be used to help find the answers to complex domestic problems as it has found the answers to complex weapons systems. These answers can be put to good use by our cities, and our states, by our schools, by large and small business alike.'

May-June 1969 RR, Page 27
"Yet, in two award-winning reports last December, Washington
'Post' reporter Bernard D. Nossiter found a distinct disinterest
among aero-space management in cultivating any other major market.
'Basically, we're a big systems builder for military weapons,' Ed-
ward J. LeFevre, vice president of General Dynamics, told Nossiter.
'Over 90% of our business is military. We're in that business to
stay. 'Our future planning,' added James L. Ling, chairman of Ling-
Temco-Vought, 'is based on visible contracts. One must believe in
the long term threat.'

"The disturbing fact, from the standpoint of the aerospace
companies,' said Nossiter, 'is that economic rewards for solving
civil problems appear to be low. As a rule of thumb, the industry
figures that if it earns $20 million from research on a device, it
will pick up $200 million for developing and testing it and $2 bil-
lion in production. That is why everybody says that 'the money is
in the hardware'. . . Typically, aerospace companies do not spend
their own money to build plants; they lease factories constructed
by the Government. . . Much of the elaborate equipment in aerospace
factories is also government-financed. . . Defense contracts . . .
provide liberal allowances if the cost of a weapons system exceeds
the estimated price -- and it usually does -- by a substantial mar-
gin. . . Finally, the Government finances the production line itself.'

"Concluded Nossiter: 'It appears, then, that the major pro-
ducers of sophisticated weaponry will continue to devote some time
and money into tentative forays in nondefense business. But their
words and plans make it clear that the bulk of their resources will
be spent on the development and promotion of new arms.'"

DUGWAY, A MICROSCOSM OF WHAT'S WRONG WITH AMERICA

Remember that front page news item of a little over a year ago?
In the middle of March, 1968, 6400 sheep died a mysterious death
in Skull Valley, Utah. Immediately suspect was the U.S. Army's
chemical and biological testing station over the mountains in
the next valley at Dugway. Army and government spokesmen denied
that highly poisonous nerve gas, VX, was being tested at that time;
but a month later it was publicly admitted. This story, which sud-
denly revealed the Pentagon's billion-dollar-a-year poison gas pro-
gram, was headlined everywhere around the world except in Utah!
Reporter Seymour Hersh of "Ramparts" magazine visited the state to
examine this de-emphasis on the threat to mankind. His story in
the June 1969 issue included an interview with Dr. D. Avaron Osgu-
thorpe, a Salt Lake City veterinarian and expert on sheep ailments.

"Like most state officials I talked to in connection with the
incident, Osguthorpe firmly believes that the nation must pursue
its research and testing of chemicals and biologicals and that such
work must be conducted at Dugway. 'We've got a defense business
bringing in $35 million a year into the state; sheep bringing in
about 1/35th that amount. Which is more important for Utah?' he
asked.

"Perhaps that explains why even Osguthorpe, despite his battle

May-June 1969 RR, Page 28
with the Army, at no time considered informing the public of the real dangers inherent in the chemical and biological research at Dugway. But he knew. As chief veterinarian for the four ranches in Skull Valley, he'd seen some strange things happen. 'In the last three years I've bumped into some new livestock diseases that I couldn't treat with antibiotics.'

"And in early April, Dr. Kelly H. Gubler, chief of staff at Tooele Valley Hospital some 35 miles from Dugway, told the Medical World News, '... I've treated Dugway workers in the past for an overdose of anticholinesterase (nerve gas) agents, even though the Army denied they were contaminated at the proving ground.' Gubler added that 'the important question is not what killed the sheep, but what are the real human hazards involved in chemical and bacteriological testing...'

"His remarks were picked up by the wire services and published in newspapers around the world. Gubler promptly denied making the statement, and Tooele, a prosperous town of 16,000 which is financially dependent on Dugway and other nearby military bases, accepted his denial. Two weeks later the Tooele County Chamber of Commerce voted to express publicly the city resident's confidence in the installation. The Chamber's reaction was typical; when I visited the town in late July, concern was directed not at what the base was doing, but at the possibility that renewed criticism might force the Army to move the base. 'Everyone here has two cars, a camper, and a pickup truck,' said Sheriff Gillette. 'They don't want to lose that!'

"The Dugway incident had little outward impact on the 500,000 residents of great Salt Lake City. Only a few letters about the sheep deaths were published in the two Salt Lake City newspapers, reflecting perhaps the relative lack of interest displayed by the newspapers themselves. The Dugway story consistently showed up in the second section of the city's major newspaper, the Salt Lake Tribune, even when it was front page news elsewhere. ... The military secrecy, the heavy state dependence on military expenditures, and the seeming apathy of the Salt Lake City residents provide the kind of atmosphere in which operations such as CBW can prosper with no questions asked.

"The Dugway incident is a microcosm of what's wrong with America, of what's really meant by the phrase 'military-industrial complex'. In Utah, a tiny group of state officials exchanged participation in classified briefings for public responsibility. Few, if any, were operating solely for personal financial gain; the good of the state was justification enough. 'Good', to these men, is measured simply in terms of military contract dollars, those contracts that congressmen fight among each other to announce. The others involved in the Dugway issue limited their responsibilities to the narrow question of clients' rights, or the proper role of their federal agency, or whether the incident was worthy of front-page play and an editorial. None of the participants saw fit to
warn the citizens of Salt Lake City publicly of the dangers inherent in a major CW test facility 80 miles upwind. The Dugway incident, prompted, in effect, a breakdown of the basic institutions of democracy. What happened at Dugway is happening, in a sense, in South Vietnam, at antiballistic missile defense sites, and perhaps even in the White House."

We started this section of CQO with the title, "No Baby Pelicans Born This Spring". What does this have to do with the unconcern of our national leaders over our unsolved problems? Just another indication of a sick civilization poisoning a whole planet. For over 20 years now California farmers have been spraying tons of DDT on the fields and orchards of the state to control insects. Some of the DDT washes into the sea. There it is taken up by the primitive cellular forms of sea life on which the fish feed and grow. Pelicans live on fish. Adult female pelicans now have so much DDT in their systems it now affects the quality of the shells of the eggs they lay. Their eggshells are so fragile they don't hold together long enough for the little embryos to finish growth and hatch out. This is why there will be no baby pelicans born this spring along the California coast.

WHAT SAYS THE ASHTAR COMMAND?

Are any on earth qualified to go on into the New Age? Asks our Associate. Yes, we believe some are and that the separation has already taken place. They've chosen themselves by listening to the voice of the Spirit within. We have this informative Command Bulletin #37, through White Star:

"The work of the Host who came to gather from the four winds has been accomplished; while those steeped in materiality closed their eyes and ear to the Manifest Wonders and to the Herald's call. No longer do we approach the unapproachable, but remain steadfast with those to whom we have been assigned. No longer do we thrust forth to capture souls whose choice has been refusal of the Spirit. No longer do we strive with those who stand upon their fence prepared to jum in any direction, caring not for Truth but only self-fish preservation.

"Rapid is the decline of human values; for the Angels whose posts held a balance, even in falsehoods, to hold until holding could no longer assure gain to the Spirit, now have been called away; and now structures of falsehood shall tumble by their own weight of decadence. But those structures which have sought after Truth, with willing sight to learn, even though falsehoods dwell within their foundings, shall be greatly charged with Hosts whose attention now remains steadfast to their righting toward Truth in its fullness.

"Fortified in the face of all challenges shall be those whose hearts turn to the Spirit of Life, and their suffering shall only be when their eyes fall on false images. It was said: Many are called, but few chosen. This mystery no longer is veiled; for the call went forth to all; and only those who answered were chosen.

May-June 1969 RR, Page 50
for man himself first must choose before he can find acceptance by
the Spirit of Man. The days ahead will be wonders to those whose
direction stands high, even though chaos spins its final pattern
for an Age which no longer exists for man. Forewarned and fore-
armed are all who stand ready. As we shall stand ready at each
moment to fulfill the need of that moment. Peace shall be in those
who accept each moment, but torment fills the minds of those who
wander away from the power of a moment. The Spirit of Life is NOW
and he who searches with anxiety beyond the Now wanders afield and
finds himself tormented by questions whose answer can only be mani-
fest at the time of his need. . . "

ALTRAN OF JUPITER SPEAKING

In July 1967 White Star received a "report on the present en-
ergy conditions in the solar system. Particularly conditions of
Earth stability and ability to absorb and properly disperse incom-
ing cosmic waves. Solar system presently fringing Cosmic Barrier
prior to Arc break-through. Entire system undergoing structural
vibrational changes. Present Earth atmosphere, devoid essential
components to hold balance between elements, is not sufficiently
stable to pass through the Belt Barrier without combustible condi-
tions causing outbreaks of violent atmospheric reactions. This
will create winds, storms and fires, plus tension explosions, ten-
sion in the cellular structures of all material forms, animate and
inanimate. It is a necessity for planetary stabilizing groups, ac-
ting as anchors for incoming forces, to align themselves with their
contact sources. . .

"Since the effort to awaken the brain-cells of intellectual
humanity has failed, our only recourse, by Cosmic Law of Right Ac-
tion, is to eject into the atmosphere counteractants which will as-
sure planetary security, but will tend to increase human unrest.
The Nature Elements will respond without resistance, but man's
brain blocks the sensations of change in his own field of reaction.
Only those who accept these accelerated energies with relaxed faith
and cooperation will survive without marked physical and emotional
results."

We have discussed and diagrammed the Cosmic Barrier and the
Arc break-through in our Saucer talk, "Flying Saucers and America's
Destiny", still available here at BSRF headquarters. In relation
to the above information, how do our guides and ministering spirits
feel about this? Here's the opinion of Lance, spirit friend of
Marion Hartil for 20 years. Through her he channeled this message
in February:

MANKIND GOES ITS WAY, HELL BENT

"Mary. We have tried to bring forth upliftment to mankind in
words and messages but mankind goes its way hell-bent towards its
own goals. We find there is little incentive in trying to place
pearls before swine that trample and foul our efforts. So we with-
draw and pray that mankind will be awakened by sheer weight of his

May-June 1969 RR, Page 31
descent into darkness. Send out your light to all who cry for light in this time of trial; for we need your assistance and love to do the work of sustaining others like yourself in their tests. Replace ego with Christ and there will be Light and Love enough for all Spirit and Flesh."

SIDELIGHTS ON RELATIVITY (Concluded from Page 5)

"... mechanical and electromagnetic events. What is fundamentally new in the ether of the general theory of relativity as opposed to the ether of Lorentz consists in this, that the state of the former is at every place determined by connections with the matter and the state of the ether in neighboring places.

"I think that the ether of the general theory of relativity is the outcome of the Lorentzian ether, through relativation. ... As to the part which the new ether is to play in the physics of the future we are not yet clear. ... Recapitulating, we may say that according to the general theory of relativity space is endowed with physical qualities; in this sense, therefore, there exists an ether. According to the general theory of relativity space without ether is unthinkable..."

This is the answer to the ether "silencers", who claim in their ignorance that Einstein disposed of the ether and was a devout and bitter foe of it.

"SPACESHIPS ATTACKED APOLLO 8"

This is the headline on the feature story in the May 19, 1969 issue of the "National Examiner", a New York weekly sent to us by a Brooklyn Associate. During the second night on the way to the moon, Anders, Borman and Lovell saw a "ghostly white-glowing apparition appear out of the velvet black night. It was disc-shaped and began to fly parallel with Apollo 8. Suddenly, all Apollo's major systems seemed not to function... Then the mysterious spaceship attacked the U.S. ship with intolerable high frequency noise (which may explain the rumors that the Apollo's crew are suffering from ear damage) and with blinding lights. Interminable, agonizing minutes later" the attack broke off and the UFO disappeared. The astronauts and their ship recovered without damage and proceeded, with minor course corrections, on to the moon. There was another short, radiant energy attack by an even larger UFO as Apollo 8 went into moon orbit. "Waves of heat" filled the cockpit. The "Examiner" quotes Houston Flight Control Supervisor Russell Holcombe: "We did not know what was going on up there but we knew that its orbital security had been seriously jeopardized." 11 minutes later the attack was broken off as quickly as it had started and the UFO disappeared. Apollo 8 was put back on orbital course by self-navigation of the astronauts. If this is true we can only surmise that the Guardians are giving major support and protection to America's first feeble efforts at the peaceful exploration of space. The phenomenal success of each Apollo mission so far, in comparison to Russia's repeated failures and loss of cosmonauts, is proof to your editor that the American space program is getting plenty of outside help.

THE PASSING OF COL. A.E. POWELL

We have no word directly, but Max Freedom Long's last Huna Bulle-
tin to Col. Powell at his Sherman Oaks, California address was re-
turned unopened. The Post Office had marked it "Deceased"; so if
you haven't heard from him recently, this may be the reason.

May-June 1969 RR, Page 33
The Five Rites of Rejuvenation outlined, explained and illustrated in Peter Kelder's printed booklet, "The Eye of Revelation", have been known and used in Himalayan monasteries for thousands of years. The intelligent and regular practice of these Rites or Vital Energy exercises does stem the tide of premature old age, with its attendant weakness and senility.

Your editor has been using them for over two years now. The testimony of friends and Associates proves they work! The result is a much improved sense of well-being and general over all appearance. Kelder's revelation from the Himalaya proves that the Fountain of Youth is within us! Ponce de Leon and thousands of others who have searched the world over for the secret of health and vitality would have given all they possessed to have this information.

Why do the Rites produce remarkable physical and mental rejuvenation within a month of regular, daily use? Because they restimulate the flow of all-important vital energy throughout your etheric and physical bodies. The East Indian Yogins call this Prana. Some American Indians call it Orinda. The Hawaiian Kahuna has a name for it, Mana, and the Kabalist terms it Ruach or perhaps the Aether of the Wise. The greatest result of this increased flow of etheric energy comes after the 10th week. This is true for men, for whom the Rites were originally developed, and for women, who benefit just as much. Order Direct from BSRA Hdg, tax and postpaid. . . . . . . . . $2.00
