CLIPS, QUOTES & COMMENTS
THE JOURNAL OF BORDERLAND RESEARCH

BSRF No. 1 Published by Borderland Sciences Research Foundation, PO Box 549, Vista, California 92083 USA. Edited by the Director, Riley Hansard Crabb, MsD.

The Journal is published six issues a year with the assistance of the Associates, at the Director's home, 1103 Bobolink Drive, Vista. It is printed, 36 pages an issue. The Foundation is incorporated under California law, May 21, 1951, #254263, and has been in continuous existence since then. Correspondence is addressed to the PO Box. The Journal is included in the Foundation membership of $12.00 a year, domestic. Foreign membership/subscriptions are now $16.00. Single copies and back issues of the Journal are $2.50. A donation of $12 domestic or $16 foreign will also bring the Journal to those who don't care to join BSRF. The Director's wife, Mrs. Judith Crabb, is office manager and Secretary-Treasurer.

PURPOSES OF BSRF: This is a non-profit organization of people who take an active interest in unusual happenings along the borderland between the visible and invisible worlds. In the words of the late Meade Layne, founder and director of BSRF from 1946 to 1959: "BSRA publications are scientific in approach but employ few technical expressions. They deal with significant phenomena which orthodox science cannot or will not investigate. For example: The Fortean falls of objects from the sky. Teleportation, Radiesthesia, PK Effects, Underground Races, Mysterious Disappearances, Occult and Psychic Phenomena, Photography of the Invisible, Nature of the Ethers and the problem of the Aeroforms (Flying Saucers). In 1946 BSRA obtained an interpretation of the phenomena which has come to be known as the Etheric or 4-D interpretation; it has not been radically altered since that time. This continues to be the only explanation of the UFOs which makes good science, sound metaphysics and common sense."

The chief present concern of the Foundation is to make this kind of unusual information available as a public service at reasonable cost. Headquarters acts as a receiving, coordinating and distributing center. An important part of the Director's work is to give recognition, understanding and encouragement to people who are having unusual experiences of the borderland type and/or are conducting research in any of the above fields. For consultation on borderland problems or for Spiritual healing through prayer, write or phone 714-724-2043 for help or for an appointment. Donations and bequests toward Foundation research programs and expenses are welcome.

The 35-page list of BSRF publications is available from Headquarters for $2.00 in money, check or stamps. This includes brochures on borderland subjects, tape recordings of Crabb's lectures and of members of the Inner Circle, talking through trance-medium Mark Probert. Write to BSRF, PO Box 549, Vista, California 92083 USA.
THE CASE HISTORY OF A CONTACTEE, FRANCES SWAN

By Randall Fitzgerald, from "Second Look" magazine, October 1979, with CQC by the Editor

It is well to remember, in reading Mr. Fitzgerald's scholarly, orthodox approach to Mrs. Swan's contact with Affa from Uranus, that George Hunt Williamson and his Flying Saucer research group had already received messages from Affa and his friends over a year earlier. This was in Prescott, Arizona. The messages were received via Ouija board and short wave radio; and it was in July of that year, 1952, that space ships appeared over the nation's capital and moved around at will for hours, much to the consternation of the Pentagon and of the tower personnel who tracked the UFOs on the airport radar.

"Even as a young girl Frances Swan wanted to know the secrets of the Universe. She read everything and looked at everything and studied everything that life in rural Maine had to offer. She went to seances. She used the ouija board, with some accuracy it seems, for local farmers would come around wanting her to intuit the whereabouts of lost cattle, and her predictions rarely disappointed them.

"Frances Swan was a joiner. She joined the Congregational Church, and after her daughter was born, she joined and became president of the Girl Scout Leaders Association. She was elected to the School Board. She experimented, she tried almost everything, spiritualism, astrology: 'I dont think I missed many. I wanted to see what made it tick. Was it soul? Was it true?'

"Then one evening, Halloween night of 1953 to be exact, all of her searching abruptly ended: 'I always laughed about him coming on Halloween. He says isn't that what you call All Saints Day? He switched it on me. He has quite a sense of humor.'

"More than 25 years have passed since he walked into the Grange Hall as Frances Swan stood on a ladder hanging decorations and her memory of his features has faded. But she remembers something about him, a presence she will never forget. She thought he was a distinguished, very intelligent person. He came in and walked back out. Then he came in again. She had never seen him before, and she treated him like a stranger.

"He said later he was supposed to speak to me. He said he was really supposed to touch my hand by shaking hands, but he couldn't get up enough nerve because of all the people around. I talked to him and I was the only one that talked to him. That
seemed strange. He didn't tell me anything then. He just walked out. But ever after that night, if I looked in the direction he came in, I could almost see him. It was a strange thing, sort of like an impression that had been left. And that was exactly what he came for.'

"About six months after this encounter Mrs. Swan began to hear in her left ear a shrill whistle, like a soft, flat musical note A. On April 30, 1954, at 5 p.m., she received her first message: WE COME WILL HELP KEEP PEACE ON EARTH DO NOT BE FRIGHTENED."

Only a few days earlier, April 16, 1954, our Founder-Director, Meade Layne, had received a letter from Gerald Light describing his trip to Muroc Dry Lake on the high desert of California, and the viewing of landed Flying Saucers at Edwards Air Force Base. According to Light, dozens of people in high official capacities of one kind or another -- including President Eisenhower -- were flown to Edwards and allowed to view the UFOs under the tightest of security conditions. The story is told more fully in our brochure, "Flying Saucers at Edwards AFB". The UFOs had been there for weeks, perhaps months.

A month earlier, on the beach at Lossiemouth, Scotland a landed space ship was seen and photographed by Cedric Allingham. He also communicated with the pilot and got a going-away snapshot of the Martians. This is described in his book, "Flying Saucers From Mars". It appears that Affa's contact with Frances Swan was only a part of a world-wide effort to awaken mankind to the reality of the presence of these Visitors. Apparently the effort failed on the part of the mass of mankind, largely because of the murderous opposition of vested interests here on earth and their Controls on the Lower Astral plane.

"WE ARE CONSTANTLY WATCHED"

"On May 2, at 2:30 p.m., she heard the ringing noise and again felt compelled to write: WE ARE ON MOON WE ARE BEING WATCHED CONSTANTLY. . . . (she began to scrawl lower case). . . . We are ready to make flight to earth under cover of barrage of weather balloons. . . ."' 

"The entity speaking through Mrs. Swan's automatic handwriting identified itself as Affa, from Uranus, Bell Flight Signal M4 M4, cruising above Earth in a spaceship 753,454 feet across. Affa said he was the man Mrs. Swan had seen at the Grange Hall in October. He had come to 'place a network of magnetic lanes over the danger spots which will reinforce the wasted magnetism brought about by the sin and greedy hearts of men on your planet. Do not be frightened at anything we may ask of you,' he counselled her, for 'you are selected to contact your people.'

"By the early morning hours of May 14, Mrs. Swan was picking up transmissions from Affa's associates within the Universal Association of Planets -- ANKAR from Centaurus, Pommor from Pluto, July-August 1981 RR, Page 2
and Alomar from Mercury. Mrs. Swan remained distrustful of these entities, for she could not quite believe what was happening to her.

"I knew there was flying saucers out there, but there was all kinds of weird things. They said we've come to make use of you, and I thought that might be wrong because I always figured there might be a Devil around, too.'

Yeah, Devils, lots of them, human and non-human. This is what Affa was referring to when he told her, "We are being watched constantly". The evil beings who have great masses of mankind under hypnotic control want no interference, from awakened humans here on the surface of the earth, or from advanced beings from outer space!

"THESE POWERS FEAR US!"

Two years earlier, August 31, 1952 to be exact, the Williamson contact group in Prescott, Arizona had it spelled out more clearly. Their short wave radio was silent that night so they turned to their home-made Ouija board: "Actar (from Mercury) speaking. Certain great powers in your world wish to see us go away or see us destroyed. Neither will happen. These powers fear us, and when you fear anything you hate it. All planets have come to help certain ones on Saras (earth). Those of the right mind are one with us! We will not harm anyone, only their own thoughts can do that. Evil destroys evil. Bounceback! Certain seeds (Star people) have been placed on Saras. To the apples we salt, we return."

And Mrs. Swan is probably one of those "seeds" who had chosen to serve through a normal earth life; thus forcing contact with her was not really a violation of her free will, but rather an awakening which had been planned before birth.

"They interrupted her repeatedly at all hours," continues Fitzgerald, "announcing their presence with a sharp ringing in her ear so loud that she experienced extreme discomfort. They could 'sense' her feelings as well as her thoughts.

"I resented them at first because I didn't think they had a right to look into my mind like that. I didn't know what they were, and they wanted complete mind control. I really fought it quite a lot.'

"On May 18 Affa told Mrs. Swan to write a letter to her government. He suggested that she send it to the Navy, since they had short wave sets that could tune in to his messages. Affa wanted everyone to know that aliens are friendly.

"Mrs. Helen Knowles remembers being in the kitchen when her neighbor Frances Swan knocked on the door. They were only casual acquaintances and Mrs. Knowles was frankly surprised to see her
standing there. Mrs. Swan seemed upset. She asked to speak to Admiral Knowles, who was in the back yard gardening.

"RADM H.B. Knowles, several years retired from the Navy, had developed an interest in the UFO phenomenon largely because of retired Marine Major Donald E. Keyhoe, who had recruited him to serve on the Board of Governors of NICAP, the National Investigations Committee on Aerial Phenomena. Mrs. Swan explained to Admiral Knowles how she was being contacted by extraterrestrial beings. She pleaded for help and understanding. Admiral and Mrs. Knowles were skeptical but sympathetic.

NOT ONLY WATCHED BUT BLOCKED!

"Just after noon, on May 26th, according to notes made by Admiral Knowles, he and Mrs. Knowles arrived at the home of Mrs. Swan. Affa had promised to appear in person at 1:12 p.m. The four of them (Mr. Swan was also present) sat and waited. The hour passed without a stranger materializing in their midst. 'Mrs. Swan appeared to be very much provoked at the failure of Affa to arrive,' wrote Admiral Knowles, 'and was indignant to the point where she declared that if he couldn't produce for her she was about ready to be through with the whole deal. All at once, at about 1:25 p.m. she began to write the following message, 'I am very sorry person not to be able to get there at the time appointed. . ."

"Admiral Knowles asked a series of questions of Affa. 'The answers came through without hesitation, any apparent premeditation or confusion on her part. She wrote swiftly and smoothly in a peculiar hand. . . During the whole time she is receiving messages there is a ringing in her ears which has been so intense at times to be painful and on one or two occasions the ringing has been heard by her husband.' Admiral Knowles asked Affa the distance of his satellite from earth, what sort of landing field Affa would need, and whether Affa desired any guarantees for a safe landing and departure. (If Affa made replies of any kind to these questions from Admiral Knowles, there is no indication of it in Fitzgerald's article).

"Later in the day, while she sat alone, Affa apologized for not appearing as promised. 'Even though you feel that you have been duped I am real. . . you have seen me I do know that you have faith in me. . . I need you very much.'

Indeed, qualified contactees are needed! A year earlier, February 1953 to be exact, those qualifications were spelled out to George Adamski by two Visitors from other planets in our solar system. In Chapter 6 of "Inside the Space Shipts" we read: "We had you under observation for some years before I finally contacted you (on the California desert, November 1952), and we felt sure that your knowledge of telepathy would be adequate, . ., inasmuch as you had been photographing our craft for several years your thoughts were inevitably coming our way. We felt the sin-

July-August 1981 RR, Page 4
cerity of your interest. It remained to be seen if and how you would translate this interest into action, how well you could stand up under the ridicule and skepticism bound to come your way, and whether you would be tempted to use your contacts with us for self-aggrandizement or commercialism. . . In the face of all the derision, disbelief -- even when the validity of your photographs was challenged -- we saw how staunch you remained to that which, within yourself, you knew to be true."

THE PUNITIVE HAND OF MIRO

Earlier Adamski was told: "You are neither the first nor the only man on this world with whom we have talked. There are many others living in different part of the Earth to whom we have come. Some who have dared to speak of their experiences have been persecuted -- a few even unto what you call death. Consequently, many have kept silent. But when the book on which you now are working reaches the public, the story of your first contact on the desert with our Brother from the planet which you call Venus will encourage others from many countries to write you of their experiences. . ."

We're inclined to believe that if Affa had materialized a tangible form that afternoon of May 26, 1954 there would have been grave consequences for both Mrs. Swan and for Admiral Knowles, especially the latter; for he had been an authoritative figure in the command structure of the U.S. Navy, one of the strong arms of the Military-Industrial-Religious Oligarchy which runs the nation. Such threats would have been made directly to Affa on his own Astro-Etheric level. As an advanced being he was well aware of his responsibility for whatever happened to Mrs. Swan as a result of working through her, and to lose her would be to nullify the years of preparation which preceded her awakening.

Beyond that, an Admiral of the U.S. Navy is scarcely the ideal choice for publicizing the reality of Flying Saucers. He would be inclined to offer an aircraft carrier at sea or some secluded military base for UFO landings. We already know what happened to the Flying Saucer landings and continued presence of the Visitors' craft at Edwards Air Force Base that spring -- the news was buried in the Top Secret files of the Pentagon -- except for the few hundred subscribers to Meade Layne's Round Robin Journal at that time. A UFO landing at a secluded military base was dramatized for us in "Close Encounters of the Third Kind".

"As Mrs. Swan scribbled out Affa's messages," continues Fitzgerald, "she noticed static sparks on the paper, and on her hands. Affa called the effect magnetic overflow, for she was being controlled by magnetic impulses 'such as are used by the brain'.

"The next day, May 27, Admiral Knowles wrote a letter to Rear Admiral C.F. Espe, Chief of Naval Intelligence in Washington D.C. He described Mrs. Swan as 'about 40 years of age, of average education and perhaps better than average intelligence'.

July-August 1981 RR, Page 5
and deeply religious.' He said he did not believe that 'she has the knowledge or ability to manufacture. . . the fantastic story. . . She has the appearance of one being impelled into doing something over which she has little control.' He requested that Navy intelligence attempt contact with Affa using Band CMM 306 repeating the signal M4 M4 AFFA as Affa had earlier suggested to Mrs. Swan."

THE CONTACT THAT GOT NOWHERE

Mrs. Swan's naivete is understandable. In a situation such as this the average patriotic citizen turns to Papa government; but if Affa wanted his presence known publicly on earth, she couldn't have made a poorer choice than Admiral Knowles! By writing to the Chief of Naval Intelligence he made sure her name was added to the list of contactees already being kept under surveillance, and if government agents couldn't keep things under control for MIRO there is always the Lunar Mafia with their Men-In-Black to frighten, threaten, beat up or even kidnap the contactee. No doubt the radio frequency suggested by Affa was tried by Office of Naval Intelligence agents, but whatever the results, they would be buried deep in the files of one of the most secret of government agencies.

"On May 28, at 8:35 a.m., Affa explained why Mrs. Swan had been selected as an intermediary. 'The reason we have chosen you is because of the spiritual development you have achieved.' For the first time Affa began to reveal information about himself. He claimed to have a home the size of Mrs. Swan's, except that he has 'one more fireplace in the kitchen' and his wife likes 'to cook over an open fire'. Affa has seven 'lovely daughters' who each have 'faith and love of God'. Affa says the population of Uranus is 787 million, the terrain of the planet being 'exactly as your earth. Our government is very much like your own. . . Some of us dress the same as yourselves. . . many of our young girls like to wear long skirts for dancing. . . we also have animals similar to yours. . . yes, we even have roadside eating places on Uranus.'

"Admiral Knowles asked Mrs. Swan on June 6 to transmit a three-page statement to Affa in which it was suggested that Affa signal, with a blinking light or radio, to let Air Force planes know that alien visitors were in contact with humans in southern Maine. Affa agreed to attempt such communication. Admiral Knowles then sent another letter to Admiral Espe: 'I am sending you a second and more important installment of messages from and concerning AFFA. . . Believe me, these messages are real. . . communication has been established with earth through Mrs. Swan. . . Can you read these communications and believe they are the product of Mrs. Swan's imagination?

"Naval Intelligence in Washington apparently could no longer ignore Admiral Knowles. (To be continued in the next Journal.)

July-August 1981 RR, Page 6
"STORY OF THE DOTTO RING"

Gianni A. Dotto was born in Venice, son of a prominent engineer who was the designer of two hydro-electric generating plants on both the American and Canadian sides of Niagara Falls. His father was an Italian Marquis and since Gianni is the eldest son, he would have inherited the title had he not become an American citizen. The family is directly descended from Galileo and the Galileo Coat of Arms has been adopted for use as the Foundation’s letterhead.

Before World War II, Gianni had received flight training but Mussolini never did trust the Dotto family so Gianni was drafted into the Italian Army as a paratrooper. When Italy surrendered, Gianni was able to join the American Air Force as a fighter pilot in time to participate in numerous engagements against the German Messerschmitts before the war ended.

After the war, Gianni became head of the racing division of Alfa-Romero and started race-driving cars of his own design. His racing career ended when his wife, Renata, served him with an ultimatum: “Either give up racing or me.” He is a prolific inventor as he is owner of many Italian patents bearing on the automotive industry and, subsequently, just as many American patents.

He is highly educated, holding the Italian equivalent of an American Ph.D. in nuclear physics from Milan University and the same degree in mechanical engineering from another Italian technical school. Subsequently, he received a degree in electrical engineering from Wayne University of Detroit.

While Gianni was teaching at Milan University, the medical school requested the services of a physicist to collaborate with the doctors on a research project. This started him on a career as a “Bio-Physicist;” that is, a physicist that specializes in the area of the science of physics that bears on the human body. This embraces an amazingly wide field as it has to do with magnetic fields, polarity, the various vibrations and pulsations generated by the brain and, of course, the effect of the many facets of nuclear fission on the human body.

It was there that Gianni discovered that magnetic fields induced by an electric coil and by permanent magnets had a small effect on the human body, but that a mild magnetic field created by adjacent hot and cold areas was definitely beneficial. In other words, the thermal unbalance created a magnetic field that matched the natural field of the body. The development of the "Dotto Ring" was Gianni’s practicable way of producing a piece of equipment that could impress the beneficial magnetic field on the body. The ring is 27 inches in diameter, made of heavy copper and has an adjacent heated and refrigerated area.

Through the ring he has reproduced in a compact, accessible form the same magnetic environment responsible for the good health and longevity of the Hunza people. Visitors to Hunzaland always attribute this great advantage to their diet, air and water but Gianni could not accept his belief because there are many valleys in the Himalaya Mountains where the diets, air and water are similar to that of the Hunzas’ but the inhabitants of these valleys are devoid of the same health and longevity manifestations as in Hunza. With the principle of the “Dotto Ring” in mind, a panoramic view of Hunza valley makes Gianni’s theory easy to understand. At the head of the valley there is a huge glacier or ice mass and in the valley itself, the temperature becomes quite warm thus creating the thermal unbalance mentioned previously and which is re-created in the principle of the “Dotto Ring.” When a Hunza travels across his valley, he receives a beneficial treatment from a mild magnetic field. The similarity of the “Dotto

July-August 1981 RR, Page 7
Ring" to the Hunza valley is interesting to say the least.

Gianni has written what he describes as a "simple explanation of just how the ring works." Simple to a physicist perhaps but difficult for a layman to understand; consequently, the following preliminary explanation has been outlined for the purpose of clarification:

The nucleus of each cell contains a material known as the DNA, which is an abbreviation for deoxyribonucleic acid. This substance contains the life or genetic code. The presence and function of the DNA has long been suspected by our doctor-scientists and had been presented as a theory, but is was only about seven years ago with the development of the electron microscope that the presence of the DNA was confirmed. Now it can be seen, photographed and sketched. Imagine a tiny ladder twisted together in a coil fashion until the unit forms a double helix. The DNA is pliable and rubbery and is never still as it constantly vibrates in resonance with brain signals and even outside influences. The DNA is polarized, one end being plus and the other being minus. A healthy DNA reproduces healthy cells and aids the body to naturally overcome and eliminate an invasion of bacteria or toxins. This, of course, adds up to good health. When the body stands within the beneficial magnetic field of the "Dotto Ring," polarization of the DNA is oriented properly and resonance is synchronized to that of a healthy cell.

Important animal tests required by the medical authorities have been underway for the past three years, culminating in seven official tests that were conducted under rigidly controlled conditions. The tests were conducted by Professor Gerald L. Willis, Biology Professor at the University of Dayton, and Dr. Robert E. Zipf, Ph.D. Dr. Zipf is owner of a group of biological laboratories and has been Coroner for Montgomery County, Ohio for twenty years. The room in which the tests were conducted was kept under triple lock so that only Professor Willis had access to the area. Dr. Zipf performed the pathology on the test mice.

Mice, six per cage, and 8 cage per test were injected with cancer cells. In three tests, C-32 cancer cells were used and in two other tests, Krib type carcinoma cells were used. The most recent tests were conducted on mice that had induced leukemia.

Results have been very good indeed. The untreated mice died in about seven days while, with a few exceptions, the treated mice survived. When the treated mice were finally sacrificed, they showed no evidence of cancer. These tests, as well as actual experience using the ring on the human body, prove definitely that there are no side effects.

Gianni Dotto has now had five years of experience in the use of his ring. For the past two years the ring has been in operation in his Bio-Physics Laboratory in Kettering, Ohio. Results have been uniformly good.

Following is the scientific paper prepared by Gianni Dotto:

**BACKGROUND OF THE THEORY OF THE "DOTTO RING"**

Most of the external physical factors which have been implicated in the evolution of life are of an electromagnetic nature. It has now been established that throughout the reviewable geological period the biosphere has been a region of electromagnetic fields and radiations of all the frequencies known to us—from slow periodic variations of the earth's magnetic and electric fields to gamma rays.

It is fundamentally possible on the basis of general considerations that any of the ranges of the electromagnetic spectrum could have played some role in the evolution of life and are involved in the vital processes of organisms. This has already been demonstrated for a considerable region of the spectrum: for electromagnetic radiations in the infrared to ultraviolet range (photobiology) and from x-rays (radiobiology).

The situation is different with the vast remaining region of the spectrum, which includes electromagnetic fields (EmFs) of superhigh, ultrahigh, high, low, and infralow frequencies. Experimental investigations and theoretical considerations suggest that EmFs can have a significant biological action only when their intensity is fairly high and that such action can be due to only one process: conversion of the electromagnetic energy to heat or vice versa.

There is an increasing amount of reliable experimental data which indicates that EmFs can have non-thermal effects and that living organisms of diverse species, from unicellular organisms to man, are extremely sensitive to EmFs.

Finally, it has been found that very weak natural EmFs can affect organisms of various species. All this indicates the necessity for a fundamentally
new approach to the problem of the biological action of EmFs and for the need to reconsider the question of the possible role of EmFs in the vital activity of organisms. (Parin)

It is believed that my work is not the first attempt at such an approach to the problem on the basis of the concept of the informational role of EmFs in the evolution and vital activity of organisms. There exists three kinds of “biological activity of EmFs”:

1. The effect of natural environment EmFs on the regulation of vital processes.
2. The role of internal fields in the organism in the coordination of physiological processes.
3. The interaction between organisms by means of EmFs.

It is not sufficient to consider only the energetic aspect of the interaction of EmFs with biological systems and a portion of my past investigations have dealt with the informational functions of these fields in living nature.

I have constructed equipment necessary to conduct my cancer research. A substantial data bank of case histories has been accumulated. Not all case histories are well defined but general results are amazingly good. This is understandable, however, since I am in the process of establishing the first formulation of a new biological problem.

My concept of the informational functions of EmFs in living organisms and the hypothesis expressed in this respect will undoubtedly rouse interest in a wide circle of the medical readers.

The objectives of this research project are:

1. Prove that the human body responds favorably when exposed to EmFs.
2. Establish what type of EmFs are more effective.
3. Determine the specific frequency of EmFs for different types of disease.
WORKING THEORY OF THE "DOTTO RING"

There are four basic, major, but disparate theories explaining the development of cancerous tissue.

1. Virus (theory supported by scientists of Sloan-Kettering, N.Y.).
2. Low negative voltage across cancer cell skin (Cone, NASA).
3. Excess of base pairs per turn on DNA double helix (Dotto).
4. Alteration of the DNA code due to a certain type of virus (Temin).

The first theory would be correct if we are to accept the hypothesis that all the viruses of the four groups responsible for the manufacture of the nuclei (even if similar in size, shape, and crystal form) are tuned to a different frequency, according to the location in the human body of different groups of cells. In this case, a virus out of position can create the Temin phenomena of mixing up the sequence of the DNA code. If this is the case (The theory that some day immunization against cancer will be as simple as polio immunization is unrealistic. The variety of cancer immunization viruses will be in the numerical magnitude of trillions.)

Theory #2 (Cone, NASA) would be acceptable if we consider a cancerous cell a parasite cell, to some extent.

According to Theory #3 (Dotto), the magnetic charge of the genetic code is maintained at the proper level by the electrical property of the double helix, which functions as a common transformer; where the voltage of the primary and the secondary winding is proportional to the number of the turns of the coils.

If the DNA double helix of a cancer cell has a lesser number of turns than the DNA double helix of a normal cell, then the voltage across the cancer cell must be lower than the voltage across the normal cell; consequently, the number of base pairs per turns will be greater. Greater base pairs per turn of the double helix and eagerness of completing the outer electron orbiting of the atomic structure of the nucleuses leads to a greater capability of reproduction of the DNA.

The second and third theories then are similar in principle but explained from a different observer's viewpoint. One explains the result, the other explains the cause.

Theory #4 (Temin) is a consequence of Theory #1 (Sloan-Kettering, N.Y.)—however, with an incorrect interpretation of the phenomena. Due to the tremendous variety of viruses classified in 8 distinct groups, 4 RNA types and 4 DNA types, there is no way in which to resolve the immunization capability unless the immunization factor can be obtained with the natural method described in the second Dotto patent application #42,301, filed June 1, 1970. "Milk taken from the right breast of a nursing mother is maintained separate from the milk taken from the left breast. On high 'g' centrifuge, viruses are separated from proteins and fats. Immunization will start with oral or injection methods, by using RNA type viruses from the right breast and repeated two months later with DNA type viruses from the left breast. In the human breast, there are all the variety of viruses necessary for the immunization."

Why, then, the electronic reactor (Dotto Ring Device) and not chemistry to resolve the problem?

To begin with: In the normal process of life of a healthy body, when a new cell is produced, the orbital electron spinning of the new cell assumes a direction opposite to the one of the mother cell, in order to maintain the mutual attraction. When the increasing kinetic electron energy of the new cells overcome the energy of the mother cell, the orbital electron spinning of the mother cell is forced to change direction and mutual rejection occurs. In the process, the entire energy of the mother cell collapses (in the same fashion as a transformer core) and its energy is absorbed entirely by the new cells.

However, if the energy potential and derived magnetic field in the human body is diminished or unbalanced, the new cell loses the body support to increasing kinetic energy and the dying cell never changes directional electron spinning. The dying cell, then, maintains enough residual energy to be attracted by the new born cell and becomes its parasite. The DNA of the new cell now must perform double work: support the new cell and the parasite cell, with the result that the life span of the new DNA will be shortened. The oncoming new DNA must now have enough energy to support the dying cell and the parasite cell. Furthermore, it cannot rely any longer on the body support due to a weak or unbalanced magnetic field. In a desperate attempt to be liberated of the parasite cell, the DNA sends a message to the enzymes. Most of the time the enzymes are too busy in the assimilation of the processed food of modern civilization with the result that the DNA of the new cell now has to support two parasite cells, and so on . . .

When the combined energy of the parasite cells
becomes greater than the energy of the new cell, the new DNA loses control over the RNA in the formation of protein. The RNA's are then formed by the combined genetic code of the DNA of the parasite cells. This will occur when enough or greater genetic code in the summation of parasite cells overcomes the control of the normal DNA. The DNA code so completed may have all the information necessary to sustain life, but in the wrong sequential order; and a new strange life in the life is born. This phenomenon is known as cancer. From the above explanation it is quite obvious that a cell in the dying process must lose its entire energy to be removed by the blood or lymphatic system, otherwise the body must have enough enzyme supply to destroy the cells before they become parasites.

To prevent and control cancer several methods can be applied:

1. Magnetic intensity, homogeneity, and orientation in the human body must always be maintained at the optimum level.
2. Mineral balance and proper distribution are essential.

That is, the cell needs copper to convert AC impulse from the nervous system to DC energy. This energy is necessary to maintain the DNA in the proper oscillation frequency.

Aluminum and zinc are necessary to maintain the voltage level.

Iron is necessary to accumulate inductive energy EMF.

The most important elements, magnesium and oxygen, are necessary to insure the total collapsing effect of the iron when the electron orbital spinning in the nucleus reverses.

In modern civilization, where the entire environmental surrounding is bound to destroy humanity, the above conditions are essential for survival. While natural food consumption maintains the proper mineral balance, and may maintain the enzyme proportion in the high level, the most important factor is to supply the body with enough energy to maintain the magnetic field as described above. However, we must clarify that we call magnetic force any energy capable of attracting or repelling matter. In reality, there are four different types of magnetic force, each one caused by a different physical phenomenon.

No. 1—Permanent magnet. If we try to magnetize a bar of copper, we will never succeed because in the copper the outer orbit of the electrons increases in the kinetic energy without shifting electrons from one orbit to another. The same effect we will obtain if we try to magnetize a bar of nickel.

Now let's take a copper-nickel alloy, such as alnickel, and expose it to the EMF of a high inductive coil. The directional spinning of the electrons orbit in the nickel does not change, but the orbital spinning of the electrons in the copper reverses its direction. Result: Any atom of nickel strongly attracts an atom of copper, creating a dipole. The energy summation of all bipoles combined creates one of the strongest permanent magnets on the market—alnickel V. Every permanent magnet then must be composed of at least two different atoms, one of which is willing to change the orbital spinning direction of the electrons. This type of permanent magnet is not recommended for any therapeutic purpose for the human body.

While in mice tests this type of permanent magnet seems to be very promising (Barnothy, Pressman, etc.), the physical working principle is similar to the H bonds attraction that holds together the DNA. The tumor in the mouse disappears due to the disassembly of the DNA in the affected cell by the demagnetization effect of the H bonds. At the same time the genetic code of the healthy cell is also altered and the consequences in the following generations could be very undesirable.

No. 2—Electromagnet. This type of magnetic field obeys the third Newtonian law of motion (to every action there is always an equal and opposite reaction).

If an iron bar is inserted in the center of an inductive coil, every electron traveling along the coil wire forces one electron in the iron bar to travel in the opposite direction. This type of magnetic field is not recommended for any therapeutic purposes. On the contrary, it has been proved to be detrimental even in mice tests. Electrons flowing along the magnetic coil will shift electrons from one part of the body to another. In this process RNA type viruses of negative polarity will be shifted from diseased cells to healthy cells in the same fashion as the electrons. Furthermore, the shifting of electrons deprives the healthy cells of the energy necessary to support life and will produce severe side effects of dizziness that will last for several days thereafter.

No. 3—Electrostatic attraction. When we rub a bar of hard rubber or a bar of amber one acquires electrons in excess and the other loses electrons from the outer shell orbit. Consequently, one will attract particles rich in electrons, the other will attract particles poor of electrons. This type of magnetic attraction is not recommended because
one will weaken the energy of normal cells. the other increase the negative potential of the skin of the cancer cell, thus facilitating the growth of the cancer.

No. 4—Thermomagnetic field. The thermomagnetic field is the product of the Thompson-Peltier effects combined known in physics as the Seebeck effect.

The thermomagnetic field is responsible for the general gravitation system. heat (sun) attracts cool (planet) and vice versa. According to Dotto law:

\[ F = \frac{GM^M}{R^3} \sqrt{1 - \frac{K''}{K''}} \]

where:
- \( F \) is the force of attraction
- \( G \) is the gravitational constant
- \( M \) and \( M' \) are the masses
- \( R \) is the distance between the masses
- \( K' \) and \( K'' \) are the gravitational constants

The Newton law of attraction can be applied only between two masses having the same temperature.

This type of magnetic field is the only type of energy proven to be beneficial to animals and humans. Since humans for millions of years have lived in this constant magnetic or gravitational field, the body has become very sensitive to any variation.

What is the Thompson Effect?

One end of a copper rod is heated and the other is cooled. If the hot side is heated high enough, it will thermally increase the kinetic energy of the outer orbit electrons to a point where their kinetic energy (1/2 mv^2) will be greater than the work function and allow them to discharge into space. Due to the copper conductivity the electrons, instead of dissipating into the air, will shift in tremendous quantity toward the cool side in straight lines, following the heat propagation velocity. By reaction, excited electrons from the cool side will travel in the opposite direction at the speed of a particle (1/2 mv^2) toward the hot side encircling the copper rod by gyroscopic phenomenon and following the Fleming’s rule. The product is very low voltage (few millivolts) as a resultant of the electrons traveling in circular motion. But, as in any electrical circuit, the EMF in the copper rod is governed by the Ohm’s law \((- = I)\), and will be \( E = \frac{V}{R} \) in the range of several thousand amperes.

Peltier effect

In a metal alloy bar (such as constantan, 60% Cu, 40% Ni) one end is heated and the other is maintained cold. When the hot end is heated enough, electrons of nickel and copper atoms become excited. The electrons of nickel force the electrons of copper to reverse orbital spinning (as described in Part 1). By centripetal force electrons from the cool side shift toward the hot side. The hot side becomes negative in respect to the cold positive side, exactly opposite to the Thompson effect.

Of course, the Thompson and the Peltier effects are temporary; they last only until the proportion between the cool and the hot side reaches the electrons numerical balance.

Let’s now combine the Thompson and Peltier effects together in the thermocouple fashion. In the Thompson effect the electrons move from the hot side toward the cold side. In the Peltier effect the electrons travel from the cold toward the hot side, and back to the hot side of the copper to complete the circuit. The temporary phenomenon of the Thompson-Peltier effect now combined becomes permanent for as long as the temperatures of the hot and cold junction are maintained unbalanced. In physics this is known as the Seebeck effect.

Let’s now reduce the Peltier effect rod to the minimum possible length according to the equation Con R = Cu Rx. The electrons, in the reaction phenomenon described in the Thompson effect, instead of traveling toward the copper hot junction, will be attracted by the centripetal force of the electrons spinning in the Peltier effect, and the free electrons in the Peltier effect will be attracted by the hot junction of the Thompson effect. Furthermore, to obtain a sawtooth effect of a unijunction transistor, a silicon pellet is added between the two cold junctions, and the EMF becomes unidirectional with oscillatory frequency of approximately 1.9 megacycles. In this condition 95% of the EMF traveling in linear velocity motion equal to the heat propagation will be accelerated time and time again by the hot side of the ring, and the resulting kinetic energy in the orbital electron spinning will be so great that the various electron shells will travel on the same orbital plane. As a result, portions of the atom proton energy will be exposed toward the center of the ring. The phenomena then that occur in the Ring Device are unique in their nature and not replaceable by any artificial means.

In the "Ring Device" the following phenomena can be detected:
1. The voltage is maintained at a minimum of 25 to 45 millivolts. This EMF will produce 120 gauss at the ring circumference, and 10 gauss at the center of the ring. This is approximately 5 times the earth's magnetic field. This magnetic field is sufficient to maintain the orientation of the human body, but too weak to jeopardize the orbital spinning in the H bonding of the DNA.

2. In the electromagnetic field and permanent magnet the electrons travel from the south toward the north pole. If this type of magnetic field is applied to the human body it will have the same deteriorating effect as if the jumper used to start a car is connected to the opposite polarity of the battery. In the ring the EMF travels from the positive pole toward the negative in the same fashion dry batteries are instantly charged by inductive methods.

3. Like in any electrical circuit, the energy across the ring is regulated by the Ohm law where

$$ E = \frac{V}{R} = \frac{9,000 \text{ amp}}{5 \times 10^4} \text{ volt} $$

It is quite obvious that there is enough energy to supply every one of the 8.3 trillion human cells the proper energy needed. The energy from the ring is transferred to the body by an inductive method similar to the one used to instantly charge a dry battery. During the treatment the ring is maintained at constant slow motion of 1½ inch per second. This velocity is sufficient to cause energy transfer from the ring to the body by inductive method, but not fast enough to create any disturbance to the electron orbital spinning in the DNA H bonds. In the process, the parasite cells (cancer cells) are also charged to the energy level of the healthy cells, and like a faulty car battery, they release the energy and reverse polarity at each end of the inductive effect. Four to five passages of the ring near the tumor are sufficient to deprive the cell energy and to reverse the orbital spinning of the electrons in the phosphate bonds. In this condition, the bases of the DNA repel each other and the DNA dissolves. At the end of the cell life span the tumor disappears. Of course, for the “Ring” to be effective, the treatment must start when the disease is first detected. Radiations of any nature prior to the ring treatment will accelerate the orbital electron spinning in the DNA H bonds, and will jeopardize the benefit of the Ring treatment.

From the above clarification it is quite evident that the “Ring Device” does not remagnetize, re-orient, and homogenize the magnetic field in the body by external magnetization, but by energy transfer in the inductive fashion.

Let's explain with an example: Let's consider an electric generator where the rotor is formed of a plurality of magnetic poles. If the rotor is rotated by external means, the coil winding of the stator absorbs and transfers EMF at the expense of the magnetic pole (electric generator).

If EMF is supplied to the stator winding, the rotor generates power (electric motor) at the expense of external EMF, while the magnetic pole of the rotor will gain intensity.

The human body is like a rotor with an infinite number of poles, DNA frequency, field orientation, etc. By applying energy from the stator (Dotto Ring) the body will create power, while the magnetic level, DNA H bond and the field orientation gain intensity. The Ring then transfers energy to the body and does not force the body to give up energy by means of external magnetic field. Furthermore, as will be explained later, the electrons at the end of sugar phosphate rod and in the atom of hydrogen (H bonds) present at the ends of the bases (nucleotides) have the electron orbital spinning in different directions. This is to insure that sugar is bonded only with phosphate, Adenine only with Thymine, and Guanine only with Cytosine.

When in the 6 billion bases joined together to form the human DNA, one or two electrons spinning in the phosphate bond are forced to reverse orbital direction by means of a cosmic ray, radiation, high energy photon, microwave beam (Radar), permanent magnet, high intensity electromagnetic, laser, etc., due to the property of the sugar crystalline of rotating the plane of polarized light to the right, the DNA immediately will release the hit base and attract a new one to reestablish the genetic code. But now it is quite possible that the new base connects itself upside down: phosphate with phosphate, sugar with sugar, and Adenine or Thymine with Cytosine or Guanine. The elements attract each other because of opposite directional spinning of the electrons in the H bonds and not because of different chemical composition.

The DNA now is completed again but with a wrong sequence in the genetic information. By reestablishing the homogeneity of the magnetic orientation of the DNA by means of inductive energy, the wrong base is rejected again and the proper one is attracted. In nature plants like peach, apricot, etc., restore the proper DNA se-
Aging process

To understand the human aging process, let's now examine the structure and the function of the DNA. Imagine a flexible ladder 1 meter (39" long) composed of 6 billion steps. Each step has the form of two capital T's facing each other. The horizontal line of the "T" has 70% of its length made of sugar and 30% of phosphate.

The vertical line is of a different composition: Adenine or Guanine, or Thymine, or Cytosine.

At the vertical ends of the "T" there are atoms of hydrogen. (The hydrogen, first element in the atomic chart, is composed of one proton and one electron.

Refer now to the alnickel permanent magnet explanation.

At the end of the phosphate rod the orbital electrons spin clockwise. At the end of the sugar rod the orbital electrons spin counter-clockwise. In the hydrogen atoms, at the end of Adenine and Thymine the electrons spin clockwise and in the hydrogen atoms at the end of Guanine and Cytosine spin counter-clockwise. This type of "T" is called base or nucleotide. The DNA is then formed by 12 billion nucleotides facing each other and connected in a straight line to form the double helix (deoxyribonucleic acid) or DNA. This is the genetic code and every one of the 6.3 trillion cells of the human body has at least one.

To form a new cell the DNA must repeat itself. This is accomplished by splitting the ladder along the middle of the step and reforming two DNA's absolutely identical and in the same sequence. To form two DNA's, another 12 billion nucleotides are necessary.

Inside the cell nucleus there are constantly at least 8 different types of virus, 4 RNA types (negative charge), and 4 DNA type (positive charge). Every pair of virus (one RNA and one DNA type) attract each other to form a bipole. They do so first to protect themselves against any external magnetic disturbance, and second to accumulate energy in the following manner:

Inactive viruses are crystal forms, but in active status, such as inside the cell nucleus, they reveal one RNA or DNA core covered with protein. Of course, even in active status they still maintain all the properties of a crystal, and as a crystal they are very sensitive to the high sound frequency.

Under sound frequency up to 5 megacycles the two viruses continuously strain each other and produce energy due to the Piezoelectric effect (the same principle is used in the energy conversion effect of the supersonic generator). In the ultrahigh sound frequency over 5 megacycles, an isolated inactive virus can be excited to alter the transition temperatures or Curies point and disintegrate (Ruben). The human DNA (like Yogi antenna one meter long) is tuned to any radio emission between 375-385 megacycles.

Furthermore, the DNA is under the constant influence of charged ions traveling through the nervous system and acting as a modulation frequency. The combined action of the two physical phenomena force the DNA to emit a high frequency sound in the range of 1.9-2 megacycles in order to detect, by returning echo, what type of protein is missing in the cell. These sound frequencies are not only necessary to the DNA in scanning the type of RNA to produce; but also maintain active the virus in bipole form by means of the strain effect.

To control the energy level from the Piezoelectric effect, the RNA type virus covers itself with phosphate and the DNA type virus with sugar. In forming this special type of coating the virus, like any living organism, produces waste.
wastes are accumulated in the center of the rod just formed and will be called Adenine, Guanine, Thymine or Cytosine, according to the type of virus in the bipolar. The process to make the coating is accomplished at the expense of the electrical charge accumulated by the Piezoelectric effect. At the end of the charge, to remain active the group of viruses removes the coating that now is in the form of a capital “T” and exposes itself to the high-frequency sound produced by the DNA and the process starts all over again.

Due to the described phenomena, the DNA has always enough bases available to produce RNA strains and to reproduce itself. Now, let’s go back to the flexible ladder composed of 6 billion steps. Suppose we twist this strange ladder so many times to have only a few steps for every turn of the coil so formed (these steps are called base pair per turn). Since every base has different polarity according to the code formed by passed generations, the DNA can be compared to the multi-polarity rotor of an alternator. In the alternator, the speed is inversely proportional to the number of poles and the output power is directly proportional to the energy applied. At every electrical impulse flowing through the nervous system the DNA moves back and forth as many degrees as one base is separated from the next one. The more base pairs per turn the less degree the DNA has to move and less energy is required to make it vibrate.

Then three are the controlling factors for the DNA to reproduce itself and create a new cell:

a) The kinetic energy of the electron in the H bond.

b) The number of the base pair per turn in the double helix (DNA).

c) Energy and the frequency of charged ions traveling along the nervous system; i.e., the DNA of the embryo cell in the mother womb has 46 base pairs per turn; the kinetic energy of the electrons in the H bond is weak; charged ions coming from the mother’s body are strong. Result: the DNA produces one cell per second. After 6 weeks of pregnancy, the DNA in the cell of the embryo has 34 base pairs per turn; the kinetic energy of the electrons in the H bond increases, the charged ions from the mother are unchanged; the DNA produces one cell every minute, and so on... By the time the fetus is in the 10th lunar month, the single DNA (half from the mother, half from the father) has already reproduced itself more than 6 trillion times.

When the baby is born, the slowing process of reproduction increases. At the age of two, the DNA winds again to have 22 base pairs per turn 14 at the age of 21, and 10 at the age of 72. From the age of 35 to 55, the 10 base pairs per turn in the DNA do not change. At approximately the age of 55, the base pairs per turn are reduced to 6. By this time the kinetic energy of the electron in the H bond and the energy of the charged ion become very weak and the DNA stops reproducing itself and the aging process begins. To slow down the body aging process, three factors must be considered:

a) Ways of stretching the DNA to increase the base pairs per turn back to ten, by means of energy in motion up and down along the body as in the “Ring Device.”

b) Increase the electron kinetic energy in the H bonds by means of proton pulling force. The proton energy available (as previously explained) toward the center of the ring is high enough to attract (in the vacuum) one electron 20 feet away.

c) Increase the energy of the charged ions in the nervous system by means of exercise and proper diet.

At this point it is necessary to clarify one important factor that is the basic secret of life creation. Without explaining the working principle of this secret, we will never understand the vital importance of the homogeneity and orientation of the magnetic field in the human body. All the 6.3 trillion DNA’s of the human body are absolutely identical, all are tuned to the same resonance frequency, all have exactly the same genetic sequence code. Yet the 6.3 trillion cells in the human body, where each DNA is enclosed, are all different, and each one of these cells fits exactly the proper place and functionality in the human system. How is this possible?

The human DNA, as mentioned before, is approximately 39" long (1 meter), has 6 billion steps formed by 12 billion bases. The entire length of the DNA is necessary to maintain and transmit from generation to generation the entire genetic code. Yet only a portion of the DNA (different in every cell) is used to create a specific cell. How is this accomplished?

Suppose we have a thread one meter long. On this thread we insert 46 nylon light beads ½ inch long. Let’s insert now, this strange chain in the
center of an electrostatic tube with bipole orientation. After a few seconds all the nylon beads will be charged with the same electrostatic energy and they will repel each other, leaving an interspace between them. They will repel each other, but not with the same force. The interspace between the beads located near the north side of the electrostatic charge will be shorter; gradually toward the opposite polarity of the tube the interspace will be longer. Now the only part of the thread we see is the one not hidden by the beads. Let’s now call the thread DNA and the 46 beads chromosomes. Since the chromosomes act as a shield, the only portion of the DNA that controls a specific cell is the one of the interspace between the chromosomes, which for every cell has a different length according to different magnetic intensity, polarity and orientation in the human body. Each chromosome encloses 1,250 DNA’s lengths (genes) and each gene is formed of 100,000 base pairs (microgene). Of the total 6 billion steps of the ladder (DNA) only 250 million are really controlling the cell life.

The chromosomes appear immediately after the DNA is formed and they disappear when the cell is completed and just before the DNA is ready to repeat itself, to reappear again only in the new DNA. If the chromosomes of the new DNA, due to the phenomenon previously explained, have the wrong interspace sequence, it is quite possible that the DNA will produce (i.e.) in the neck a cell that belongs to the kidney or vice versa. This also can be called cancer.

Furthermore, like in a musical instrument, the sound produced by the DNA in the scanning system has different harmonics according to the chromosome’s interspace.

The virus responsible for the creation of nucleotides in a different group of cells of different harmonics, adjusts the equilibrium potentials of the component charges in the crystal lattice. This pressure effect in the electrical field distribution governs the final crystal structure of the many compounds of the virus. If a group of RNA type of virus with final crystal structure as a result of harmonics of one group of cells is transferred by means of electromagnetic reaction in a different group of cells, under the influence of the new harmonics, will alter the transition temperature (Curie points).

In this transaction it will lose the protein coating and release the core RNA to control the protein creation in the new cell (Ruben). As a result a new type of cell will be created different from any surrounding cell, and this also will be a cancer cell.

From the above described phenomenon, well known in physics, the Temin theory that the RNA type virus uses its own RNA core as a template to modify the structure of the genetic code and create the reversal of the DNA is absurd. If the phenomenon exists, it could not be a creation of the present civilization, but has existed from the beginning of time. And there are no records available of claims of apes deriving from humans.

Theories #1 and #4 of the introductory explanation support the principle that some form of cancer and leukemia are caused by isolated virus. In this case a physical principle known as Pyro Piezoelectric effect will be the solution of the problem.

If a Rochelle salt crystal is rapidly cooled from 25° to 0°C, the polarization increases so fast that the normal conductivity cannot bring about equilibrium and a transient potential as great as a thousand volts can be produced between the two electrodes contacting the crystal (Ruben).

Since in the isolated virus crystal, the RNA or DNA type core acts as an electrode between the two poles, when the voltage potential overcomes the core’s DC resistance, the energy discharged across it will be so great to disintegrate the virus core as a common electric fuse. The same phenomena, of course, is applied to the joint virus (one DNA and one RNA type) existing in the cell nucleus and responsible for the DNA creation. Because of the electrical principle that in an inductance, two joint EMF’s opposite and contrary they eliminate each other, no voltage will appear across the joint virus.

In an experiment with dying AKR mice (mice carrying leukemia), a constant laboratory temperature of 35° was maintained. The cage containing the mice was placed two times a day for 20 minutes each time in a small refrigerator where temperature was kept at 0°C. After five days of treatments, the mice were sacrificed and pathological studies revealed no evidence of lymphosarcoma. A Piezobaric chamber, where a temperature body change of 25°C can be obtained in less than 1 minute, is under construction to repeat the experiment.
CONCLUSION

By evenly re-establishing the orientation of the body’s magnetic field, the virus groups responsible for the manufacture of the nucleii (necessary to the reproduction of the DNA) are bound to stay only in the specific group of cells tuned to their own resonance frequency with no chance of spreading to other parts of the body.

With the correction of the environmental resonance frequency of a group of cells, a virus out of position will become inactive in the same fashion as a portion of a variable capacitor not facing the stator. In Theory #3 (Dotto), the Ring re-establishes the proper number of base pairs per turn on the DNA double helix due to the phenomenon known as “Wunder” effect.

In a vacuum, a suspended secondary coil inserted in a primary coil of fixed number of turns, adjusts itself to the same primary number of turns when voltage is applied, with capability proportional to the current intensity and inversely proportional to the square of the spring reaction strength of the secondary coil. This principle is widely applied in automatic tuning devices for modern color television. By applying to the human body voltage, EMF and magnetic intensity similar to the value existing in the DNA of normal cells (in the human between the ages of 35 and 55) a voltage of 45 to 70 millivolts maintains a linearity of 10 base pairs per turn in the double helix (Crick-Watson). The DNA of the cancer cell adjusts itself to the proper level of functionality, regardless of cell condition, since absorbed energy will be inversely proportional to the existing cell energy level.

In the case of 6 base pairs per turn in the double helix (humans over 55), when the DNA stops the reproduction capability, the base pairs per turn are triggered back to 10 and so remain as long as the magnetic intensity is reapplied at least once every 14 days. This results in slowing down the aging process.

Another important factor must be clarified: In widely known mice experiments (Presman, Barnothy), a combined action of a constant permanent magnetic field and microwaves in the Giga-cycle range proved to be very efficient in causing tumor recession in mice. This phenomenon is caused by the disturbance action of the microwaves on the normal orbital spinning of electrons in the DNA H bonds. But we must not forget that to the humans we must give the right to live not merely to survive. However, frequency in the range of 1 to 3 Mc. and modulation frequency of 80 to 200 Kc. is known to penetrate deeper into the human body and is capable of breaking the thin skin of the cancer cell without jeopardizing the DNA code of normal cell. (Presman).

For this reason, the Ring is pre-tuned on the Peltier junction to the average frequency of 1.8 Mc. and modulation frequency of 100 Kc. to obtain current fluctuation chopping effect similar to a unijunction transistor. The Ring is also a 350 Ohms television antenna, where the lower band resonance is tuned to a VHF (Thompson effect junction), and the upper band (Peltier junction) is tuned to UHF resonance. The upper frequency then maintains, on the correct level, the activity of the normal cell, while the penetrating low frequency neutralizes the activity of the cancer cell.

Theory #2, which postulates that cancer cells, to some extent, may be considered as parasitic cells, is proven correct as far as the Ring is concerned. The Ring is an inductive coil. In the motion along the body, the Ring recharges the cells to the proper desired level. While the normal cells retain the charge, the cancer cells behave like a faulty battery. At the passage of the Ring, the temporary magnetic charge collapses in the same fashion as transformer lamination.

This collapsing effect is detectable by electrodes of an EEG sensitive to electrical brain impulses. By synchronizing a recorder to the Ring velocity, the location of the collapsing tumor can be detected with 5 cm accuracy.

Many years of investigation have proved the Ring to have no detrimental or side effects. On the contrary, it has proved to be very helpful for people who have suffered from exposure to radiation, cobalt, linear accelerator, etc.

For all the reasons stated above, the Ring should be considered primarily as a tool for physicians in disease prevention and disease control rather than a cure.

The above document was signed before me, a notary public, by the said Dr. Gianni A. Dotto this 8th day of February, 1972.

Notary Public
CLIPS, QUOTES & COMMENTS

THE PUNITIVE HAND OF MIRO

Poor Gianni Dotto, he found that his adopted country is not the "land of the free and the home of the brave" that he thought it was when he and his wife became American citizens, not if you invent a cancer cure which threatens to wipe out the comfortable $25 billion backlog of cancer business enjoyed by the sick industry. Once he published his successful findings on the performance of the Dotto Ring, the harassment began, with criminal breakins, by government agents, of Bio-Physics Research Foundation laboratories at 121 Pines Shopping Center, 1130 Perry Highway, Pittsburgh, Pennsylvania 14237. Dotto set up a movie camera and, by automatic triggering, obtained motion pictures of the government thieves in action. But he found that his evidence of this criminal activity was of no value in court, before a bought judge, and biased jurors. It's possible that even his attorney had been encouraged to make less than an all-out effort in Dotto's behalf. This is what the late Dr. Chapman found out here in Vista, after his trial and conviction of fraud for using Radionics in his medical practice -- that his attorney had received a higher fee from the medical political action committee than Chapman was paying the man. Dotto finally realized that he was in a no-win situation in this country and returned to Italy -- thereby probably saving his life -- though in the case of Dr. William Koch there were several attempts on his life even after he had exiled himself to Brazil.

MEADE LAYNE'S "SPECULATIONS" ON FLYING SAUCERS

An Associate sends in this interesting quote from the recent book, "The Tujunga Canyon Contacts", by Ann Druffel and D. Scott Rogo, published last year:

"The first formal paraphysical theory about UFOs was offered years ago by Meade Layne, a San Diego-based UFO enthusiast. Based on information given to him by a local psychic, he argued that UFOs are nonphysical in nature, and are psychic creations, somewhat like apparitions, and composed of 'etheric' matter. Layne's theory was provocative at the time he suggested it (in the 1950s), since at that time everyone interested in the UFO question merely assumed that flying saucers were interplanetary spacecraft. Of course, the source of Layne's 'information' is suspect. I personally knew the psychic whom Layne relied upon for his information when the former was living in Los Angeles, and never trusted his alleged 'psychic' abilities or personal integrity. He conducted some of the most nonsensical seances I've ever attended."

Rogo is certainly confused here if he is alleging that Mark

July-August 1981 RR, Page 19
Probert was a Los Angeles psychic! At the time Mark's psychic abilities developed spontaneously in San Diego in 1945, he and Irene were living at 931 E. 26th St., San Diego, California and they were still living there when she passed on in 1967 and Mark made his transition in 1969. It's too bad that Rogo has Probert confused with some "Los Angeles psychic hold nonsensical seances" for it closed his mind to the possiblity of obtaining an understanding of the 4-D hypothesis of the origin of Flying Saucers put forth by Meade Layne in the late 1940s.

"Layne's speculations, no matter what their source, started a whole new way of thinking about the UFO mystery," continues Rogo, "but there was one major flaw to his ideas. We now know that UFOs are at least partially physical and at least temporarily 'real' in every sense of the word. They leave residue, can produce radiation burns on witnesses who venture too close to them, and have been known to leave behind a whole gamut of physical traces."

Here Rogo reveals his almost total ignorance of the BSRA material on Flying Saucers put out by Meade Layne, our Founder-Director, in the 1940s and 1950s. Issue after issue of the Round Robin Journal and of the separate Clips, Quotes & Comments of that time, contained reports of UFO residue, of radiation burns and of airplanes colliding with 3-D solid Flying Saucers -- the Mantell Case, for instance -- which indicated to Meade that some Flying Saucers do reach the bottom of the Scale of Tangibility -- fully materialized.

THE FIRST PSYCHIC THEORY OF UFOs

"Even though Layne conceived the first psychic theory about the nature of UFOs, this idea was midwifed and nurtured to maturity some years later by John Keel, a writer and investigative reporter by profession," writes Rogo.

Wrong again, Scott. Meade Layne didn't conceive the 4-D hypothesis of the origin of Flying Saucers, it was forced on him by members of the Inner Circle through Mark Probert, and they maintained the 4-D explanation over the 20-plus years of the Probert seances. Keel picked up the 4-D theory from our literature in the early 1960s but discarded all the occult philosophy and science offered by the Inner Circle; thus Keel became a metaphysical wilderness crying for a voice -- and never found it. And this is true of all the UFO researchers who ignore the moral and philosophical aspects of the phenomenon and search and search in vain for an orthodox scientific explantation

"As a result of his own investigations beginning in the 1960s Keel came to believe that UFOs are linked to paranormal phenomena in general. He has never truly formalized a specific hypothesis about the nature of the UFOs (of course not! Keel has no toography of the universe in which he can frame a sensible hypothesis, only occult science offers that!), but his general attitude toward

July-August 1981 RR, Page 20
the issue can be found by reading his books on Fortean topics.
His most notable volume on the subject was his epoch-making 'UFOs: Operation Trojan Horse', published in 1970. Being the first full-length volume ever written arguing that UFOs are paraphysical in nature, it included specific suggestions about the psychic nature of UFOs. His subsequent books, for example 'The Mothman Prophecies' and 'The Eighth Tower', laid the foundation upon which he developed his later thinking. Although his factual accuracy can often be questioned, one cannot help but view him as a pioneering, insightful and creative theorist.

YOU ARE A TRANSITORY ENERGY FORM

"Keel has suggested that UFOs are basically transitory energy forms that mold themselves into various shapes based on the pre-disposition or biases of the viewers. (We are all 'transitory energy forms', Scott.) UFOs are thus real physical objects, Keel maintains, but only temporary creations. The root of the UFO mystery, though, does not rest solely with us. Keel suggests instead that it is produced by some sort of supermind or alien intelligence that is in some mysterious way linked to our planet and to our civilization.

"This supermind projects the UFO phenomenon into our world. Why? Keel has never formally addressed this problem fully. He has, however, proposed two different possibilities. The first is his concept of the 'trickster'. Keel believes that this extra-dimensional intelligence is a cosmic practical joker that, by its inherent nature, likes to deceive mankind in a sometimes malicious and devious way. UFOs are therefore one product of the trickster's efforts to bewilder his earthly brothers."

Not one trickster, John and Scott, but dozens! Each protecting his earthly kingdom of millions of blind mortals. These are the "powers and principalities" Paul spoke of in his letter to the Ephesians a couple of thousand years ago when he wrote of having to "wrestle against them". In a message to Williamson's contact group in Prescott, Arizona on Aug. 31, 1952, Actar of Mercury referred to these tricksters briefly "Certain great powers in your world wish us to go away or see us destroyed. Neither will happen." The most obvious ones are the world's billionaire families and corporations which will commit any crime to prevent loss of their wealth. The less obvious ones are the false gods of the world's great religions: Looeamong, the false Christ; Kabalactes, the false Brahm; Enochissa, the false Buddha; Thoth-Gabriel, the false Mohammed, etc. The true Saviors of these religions are Sun Gods. The false "saviors" are Moon Gods who will also commit any crime to prevent loss of their principalities of hordes of religious fanatics who worship them for selfish, personal reasons.

As the Master D.K. wrote through Alice Bailey in "Treatise On Cosmic Fire": "If man only realised it, the devas of the
astral plane at present (the Moon Gods) largely control what he does and says, and his goal of evolution, his immediate goal, is to liberate himself from their control in order that he, the real Ego or thinker, may be the dominating influence." (page 662)

An important part of that control is the scientific and religious dogma that this is the only inhabited planet in the universe! The greatest effort to break that control was made by President John F. Kennedy with his all-out support of the space program in the 1960s, and he paid for that support with his life.

THE WALL OF SPACE

Sept. 21, 1963, at Brooks Air Force Base, Texas the night before his murder, Kennedy spoke forcefully of breaking free from the confines of the planet: "This nation has tossed its cap over the wall of space -- and we have no choice but to follow it. Whatever the difficulties they must be overcome. Whatever the hazards, they must be guarded against. . . With the help and support of all Americans, we will climb this wall with both safety and speed -- and we shall then explore all the wonders and treasures that lie on the other side."

And we'll also come to understand that the religious wars here on earth are only a small part of a larger War in Heaven, between Sun Gods and Moon Gods. On page 834 of the "Treatise" D.K. writes: "The moon or moons in any scheme are systemic effects, and are not causes. In certain planetary relationships, they are considered causes (the Lunar Mafia certainly cause a hell of a lot of trouble here on earth!), but in connection with our solar system they are not. . . War wages cosmically as yet between the systemic 'lunar' lords, and those Entities who are analogous to the solar Lords on cosmic levels. . . Until the force of the cosmic lunar Lords is sought for, the fact of there being entire constellations beyond our solar system in process of disintegration in time and space in a manner similar to the disintegration of the moon (whose decaying evil influences saturate the earth) will not be known nor the effects of this traced." One obvious effect of this evil influence is the continuing Silence Policy on Flying Saucers by all the governments of the earth. "Eventually our solar system will pass into a similar state," concinutes D.K. "The true mystery of evil lies here and the true reality of the War in Heaven must here be sought."

"John Keel has also suggested that UFOs might be the product of a clockwork-type 'control system'," continues Rogo, 'placed or generated here on earth by some superintelligence to guide our evolution. But, adds Keel, it seems as though this control system has gone haywire and fitfully produces anomalistic phenomena in our world in a haphazard manner."

And it will continue to seem haphazard, without rhyme or reason, to journalistic and academic flatheads until they accept the primary message from outer space: This is a Moral Universe!

July-August 1981 RR, Page 22
We are responsible for what we do. There is a universal "police system" which sees to it that cosmic, galactic, zodiacal, solar and planetary laws are enforced. It is true this enforcement may seem haphazard and even unjust to finite mortals entombed in the flesh -- especially in this jail of the solar system -- nevertheless the enforcement is there for those who see, rather than merely look, at life.

"THE COMING OF THE GUARDIANS"

The truth of the Flying Saucer phenomenon will forever elude those metaphysical illiaterates who try to understand it from the limited 3-D point of view; but Meade Layne was an occult scientist with a 4-D point of view; and so he could compile a 4-D explanation of the origin of the UFOs (materialization and de-materialization); thus he pulled together information about the Guardians of the planet and their patrol ships received through Ralph "Rolf Telano" Holland. Meade also analyzed the first intelligent data on Flying Saucers given us by the Inner Circle through Mark Probert. His opus "The Coming of the Guardians" also contains notes on the Probert mediumship, and the chart of the Etheric Zones around the earth from which the UFOs materialize. $4.75 postpaid.

WHERE WILL THE SUN RISE AFTER THE POLAR FLIP?

"I have two questions to ask you regarding the shifting of the
earth's axis coming at the end of this century or the first part of the next. Approximately how far to the south will the city of Cleveland shift or move to the south after the earth's axis has moved and stopped? Also, after the earth has shifted and settled in its new axis, in what direction will the sun rise?"

N.N. Cleveland, Ohio

The sun will continue to rise in what we call the East, though due East will be about 6° off its present direction, according to what I worked out from Hapgood and Campbell's calculations in the 1950s. The chart below and on page 23 are based
on their centering of the enormous mass of ice at the South Pole far enough off the axis to give a tremendous sidewise thrust along 96° East. That and Cheiro's prophecy in the 1920s that northern Europe would become uninhabitable because of a coming new Ice Age. The charts and a more detailed analysis are in our illustrated lecture, "Flying Saucers and America's Destiny". The previous polar flip, of 9564 B.C., was about 2000 miles from the Hudson Bay region of North America, for the North Pole, to its present location which, at that time, placed the Vernal Equinox, March 22nd when the days and nights are of equal length, at 0° of the constellation of Aries. That imaginary point in the Zodiac has now drifted into Pisces. After the next Polar Flip the Zero line of the Vernal Equinox will point to another constellation in the Zodiac. And of course there will be a new Pole star over the North Pole. A 2000-mile shift of the Poles would put Cleveland that much closer to the Equator, about where El Salvador is now -- with a real tropical climate -- and Vista, California within 5° of the Equator. Some change!

GET THEE BEHIND ME, BURIED TREASURE!

"In Mexico we had a free physical medicine clinic for a few years, until we ran out of maintenance funds. During that time our patients would tell us of treasures in the area and give us maps, etc. However, one seemed to stand out as to documentation. This man, of German descent, had actually been in the cave and removed some of the treasure; but, believe it or not, when he returned to the area he could not find the cave even after returning many times.

"He gave us a hand drawn map of the area, which is just a mile or so from the main highway to Culiacan. We checked and discovered that government officials (old timers) know of the treasure in the uncomplicated terrain and said many had tried to re-discover it, but to no avail. The man who had been in the cave showed us the few remaining coins he had taken. He said the treasure was huge and that his grandfather had been shown its location after befriending an officer during the last big revolution. Officials in the area verified much of the information given us by this man.

"We took the map and the story to a psychic in Tucson, Arizona, Mrs. Lewis, a lady of excellent reputation who can be called a specialist in the field of lost treasures and mines. She has an impeccable record and has had many well known clients in the area. She studied the map for a few days and informed us the reason the man had never been able to re-discover the treasure. There is a strong psychic force there which doesn't want him to find the treasure again. Those guarding the area told her the man had misused the money he had removed from the cave. Two of the guardian forces were relatives of the man before passing on. They knew that if he obtained more money that way he would misuse it again and ruin his life. One of
the guardian relatives was the spirit of the grandfather who first showed the man the location of the cache -- who is now the most frustrated man I have ever known.

"We suggested to him that hypnotic regression might help him, for he had actually been to the cave, and that memory is still logged in the subconscious. But that psychic force might be strong enough block his recall. What do you think? We need your valuable help and advice here, Riley, What do you suggest? If you can offer us assistance that leads to the re-discovery of the treasure we will see that you receive some of the valuables or compensation resulting."

W.G.K., Lebanon, Oregon

I think you have answered your own questions. I have no inclination to try to break the spell laid on your German-Mexican friend by his relatives; neither did Mrs. Lewis of Tucson! And if she did involve herself in such a treasure hunt for personal reasons, she would probably lose her psychic powers. Then there is the responsibility for what happens to the people who suddenly get their hands on a great mass of unearned money. BSRF and its attendant responsibilities are enough "karma" for the present, thank you.

We have an Associate who prides himself on his psychic sensitivity. He map dowsed the location of a buried Jesuit treasure in southern Arizona, and spent thousands of dollars digging for it, hauling in bulldozers, etc. and finally had to give up when he ran out of his -- and his friend's -- money. He wanted us to verify his findings. Wisely, we refused.

AN INFERNO OCCUPIED BY HELLISH SPIRITS

New York "Herald", January 4, 1903: "Alpine, Texas Saturday. Another futile effort has just been made to explore the shaft and underground workings of the so-called haunted Refugio mine, in the Chispa mountains, 60 miles southwest of here. The mine was worked by the Spaniards more than a century ago. It was abandoned and forgotten until about 20 years ago, when an American mining engineer, Henry Boyd, while looking up the title to a Mexican mining property, came across a mention of it in the archives of the State of Coahuila, at Saltillo, Mexico.

"The records gave a careful description of the property and its location. They showed it was worked for 40 years prior to 1791, and that it produced during that time more than $7,000. 000 in silver ore. Accompanied by a Mexican guide, Boyd left Saltillo for the Chispa mountains. It was a long and fatiguing trip, and the two experienced great hardships until they reached the little Mexican settlements along the Rio Grande south of here, where they made their headquarters while they explored the rough country north of the river in search of the mine. The records showed in a general way where the mine was situated but

July-August 1981 RR, Page 26
the exact spot could not be found until a Mexican sheep herder
one day informed Boyd that he could show him the ruins of an an-
cient smelter. These ruins were situated in a deep canyon, and
after a patient search Boyd came upon the mouth of the shaft.

BOYD GETS "THE TREATMENT"

"A crude ladder, made of hides of wild animals, still hung
in the shaft, and other evidences of a sudden abandonment of the
mine were seen. What occurred when Mr. Boyd attempted to explore
the mine is told in a letter which he wrote to James E. Meade, who
resided in San Antonio at that time, but has been engaged in
business here for several years. The letter said:

"'A horrible and most astonishing thing happened to me when
I attempted to explore the mine. My moze (servant) Pedro, let
me down to the bottom of the shaft, a distance of 100 feet, by
means of a rope. A candle gave poor light, but I could see that
a great deal of net ore still remained in the workings. I had
started to explore one of the drifts when a noise like the burst-
ing of a thousand cannons sounded in my ears and was followed
by a most terrific rush of air which came from the drift that I
was about to enter.

"'I was lifted off my feet and thrown against the rock wall
of the shaft with such force that I was badly bruised and almost
knocked senseless. The rush of air gradually subsided, and as
it did so there came echoing out of the murky drift one of the
most piercing and plaintive cries I have ever heard. It was a
wall that produced indescribable and uncontrollable terror in
me. I fled for the rope, and quickly tying it around my body,
I yelled to the Mexican to draw me up.

"'There was no response from above. I yelled and yelled
but Pedro did not come to the rope. I then realized that he had
heard the mysterious demonstration and had fled in superstitious
terror. It was lucky that the rope was fastened to a mesquite
trunk at the surface, as I was able to draw myself out of the
shaft hand over hand, bracing my feet against the walls. Just
as I reached the surface the underground phenomenon was repeated.

"'I found my Mexican at the home of the sheepherder five
miles away. The story that the mine is haunted has spread
throughout the Mexican settlements here, and as I can get no
one to help me, I have abandoned all hope of exploring the won-
derful mine at this time.'

"Mr. Boyd went to San Antonio to organize an expedition to
undertake the work of exploring the mine. Before he had got his
men together, he died. Mr. Meade then took charge of the expe-
dition. They spent three months at the mine, but made only one
attempt to explore the underground workings, and that experience
was so terrifying that the men, including both Americans and
Mexicans, threatened to leave if forced to make another effort.

"They sunk a new shaft near the old one to a depth of 50
feet but the noises became so pronounced that the workmen refused to go on with it, and the whole project was abandoned. Since then many attempts have been made to explore the mine but the experience has proved more than any man is willing to stand a second time.

"Capt. Louis Sefton was at the head of the latest expedition to the haunted site. He is one of the most prominent stockmen in Texas and has a reputation for great courage. In a spirit of adventure he left his ranch in Sutton county a few days ago for the mine, taking with a half dozen of his cowboys. At the mine they let a rope ladder down into the old shaft and Capt. Sefton and two of his cowboys went down to the bottom. All was quiet, and they had just started to enter the drift when the phenomenon suddenly broke forth in all its fury.

"The three men were hurled with great force several feet and thrown repeatedly against the jagged rocks of the shaft. It was only with the greatest effort that they could climb back up to the surface. Their bodies were covered with bruises and their clothing was torn. 'I am not superstitious,' Sefton said, in describing his experiences later, 'but if the interior of that mine is not an inferno occupied by hellish spirits, I won't believe what I see with my own eyes hereafter!'"

The "hellish spirits" are undoubtedly the souls of the Indians enslaved by the Spaniards to work the mine a couple of hundred years ago, and worked to death or beaten to death on the site. Add to that the sorcery of a Yaqui "shaman", a "Don Juan" of the type described by Carlos Castaneda in his writings. Such a pagan magician would organize those lost, earthbound souls into a powerful and enduring curse against the hated white man, aided and abetted by Gnomes who have little use for cruel, selfish, greedy human beings. The German composer Wagner describes these underground guardians of buried treasure in his operas.

Gary Mangiacopra and Lucius Farish supplied the 1903 New York "Herald" news item to Mary LeVesque, editor of "The Hollow Hassle", PO Box 255, Santa Fe, New Mexico 87501 and she published it in the May 1981 issue. Subscription is $6 a year. "The Hollow (Earth) Hassle" is dedicated to research of the interior of the planet.

Our own modest contribution to this profound study is BSRF 2-E, "The Reality of the Underground Cavern World", an illustrated lecture about the interior of the earth and those who live in it, with such subjects as: The origin of the Serpent Race, a magical ceremony evoking cavern dwellers in the Alps, the Shaver Mystery and the Deros, the Catacomb of Hal Saflini on Malta, human dwarfs and 20-foot giants, the Kingdom of Pan -- Fauns and Satyrs, the Planes of Consciousness in the Earth and a guided tour through the interior, and in conclusion a message from an Earth God who looks forward to the New Age when communication between humans and non-humans becomes safe, productive and mutually beneficial - $3.50.
MORE ON PETER BETER'S ROBOTOID CLAIM

"I took note of Dr. Peter Beter in the last issue of the Journal. It seems Beter's name is on everyone's lips these days, in regard to his 'robotoid' claim. Being editor of 'Shavertron', a lot of bits and pieces of little known info cross my desk. Mary LeVesque sent me the following quote from John Keel's article, 'The Sentinels', which appeared in 'UFO Report', Dec. 1977.

''Richard Shaver was the star of 'Amazing Stories' in those days, with his stories of the Dero who lived deep in caverns and controlled the world through their rays. An item on the Shaver Mystery in the June 1946 issue contained this bit of intelligence: 'Mr. Shaver wrote that he'd been told by a cave woman that a Dero meeting under London and Berlin had been held to determine to determine what to do about us. (Now we know where Beter gets his information! RHC.) Our Editor (Ray Palmer) was to be investigated. One result of this meeting was a plot to kidnap both our Editor and Mr. Shaver, together with everyone families, and to cover up the kidnapping, trained doubles for all of us were to be substituted in our place.' This was the first modern reference to the 'clone' rumor -- a rumor that is still circulating and enjoying a new revival in 1977.'"

"I was pleased to see Trevor James' article on the continuing research into the Ideoplasms, as well. I wish that all your readers could have a chance to see Luciano Boccone's book: 'UFO la Realta Nascosta', for it is indeed an impressive book, with beautiful and fantastic color photographs. The Italians have taken the infrared photo technique to a new zenith.

"For the enclosed check please send a copy of your book 'Are You Pagan, Mystic or Egghead?' Your BSRF publications are the best.'"

Richard Toronto
309 Coghlan St.
Vallejo, California 94590

And for all we know Dr. Peter Beter himself may be a trained double from the Cavern World and, having started this fantastic story, where does it end? If ex-President Carter was replaced with a trained double or robotoid, as Beter claims, have the Russians also replaced the leaders of other nations with trained doubles? Destaing of France, Thatcher of England, Schmidt of Germany, Indira Gandhi of India, John Paul of Rome, and now President Reagan? I suppose Beter is claiming that Reagan, being a robotoid, could easily be healed of his gunshot wound with replacement parts from some hidden Russian factory!

"HIS ENEMIES ARE NOT COMMUNISTS"

"In the name of truth, which frees rather than frightens, I want to make some hasty comments. President Carter is a Synthetic, not a Robotoid. He changed over at the time of the race, which was"
clearly documented in the sports magazine quoted by Peter Beter. Our agriculture is 'cloning' in plant propagation. My pendulum friends 'get' that the political people are dead as mentioned. I've listened to each Beter tape several times and checked where possible. His enemies are not Communists but the faceless money-bags that run your country and the world.

THE PROTOCOLS OF THE ELDERS OF ZION

"Maybe the Protocols of Zion are being implemented? His earthquake-producing cobalt bombs used in current geophysical warfare, the cosmic spheres, etc., are, I think for real. I think it will take more than Christ's love to enter the hearts of the Bilderbergers and direct them. I am hoping I don't need an Omega shield. The Christ within and the unbelievable mysticism and power of the Christ Light and Love should suffice."

Love alone will not suffice for protection, as many a martyred Mystic has discovered down through the ages. Love should be balanced with Wisdom and backed up with Pagan Power for more complete protection. If you find that the tapes of Peter Beter are a source of comfort and information -- even inspiration -- in these troubled times, by all means continue to listen and learn from them.

"I also want to say -- being perhaps in the same frying pan as you -- that I am sorry the California earthquakes are so near now. I don't want Vista to go floating off towards Hawaii or the Galapagos -- yet! Be sure anxious thoughts are with you."

Name Withheld By Request, Auckland, NZ

A Galapagos move for Vista and Southern California is the more likely of the two, if our Polar Flip calculations diagrammed on page 24 are correct. It is true that the number of earthquakes in this general area have noticeably increased, even though most of them are not as destructive as the San Fernando quake of ten years ago. I am reminded of one victim of that quake who fled to the west coast of Florida with his family, settled down in a new mobile home, and had that place wiped out by a hurricane! Nevertheless, this is the problem faced by millions of earthians now -- as well as ourselves. Should we stay put until a natural catastrophe forces us to get out? Or should we get up and go while options are open to us and the appurtenances of living the full life are still intact? The fact that a number of Associates have "gotten up and gone" to the Sedona, Arizona area in the last few years may be a straw in the wind.

ANY ADDITIONAL INFORMATION ON ARTERIOSCLEROSIS?

"My mother has a severe case of Arthritis. My father has Arteriosclerosis, Bursitis, Angina Pectoris and Parkinson's Disease. I have your Lakhovsky MWO brochure and publication July-August 1981 RR, Page 30
List. Do you have any additional information pertinent?"

B.M., Oxnard, California

Glad to hear from you and learn of your concern for your parents and their health -- or lack of it! But are they concerned enough to ask for help themselves? Suppose your father has deep guilt feelings based on a hidden martyr complex. If so, he may feel the need to suffer -- for wrongs real or fancied -- done to others. As for your mother, arthritis, a partially crystallized body, indicates a partially crystallized mind. If she could change her mind she could change her body, but maybe she doesn't want to change that much.

These are questions only they can answer. By all means go ahead and build the MWO and experiment on them, if they are willing subjects. There is another effective treatment device, the Chapman Low-Level Polarizer, described in BSRF No. 33-A, "Radionics, the New Age Science of Healing", now $5.50, plus $1.00 postage. Dr. Leonard Chapman developed it in years of clinical research here in Vista and worked out treatment rates on almost all conditions, including the ones you mention above. He rented the Polarizer to patients so they could take it home and treat themselves when convenient. In some cases he sold the device for $50, back in the 1950s. We located an electronics technician in nearby San Marcos who would build one for us, 20 hours of labor at $10 an hour and $50 worth of parts! The treatment rates are in the Atlas of rates in the Radionics book.

AN ARTICLE ON THE ASSASSINATION ATTEMPTS?

"We were thinking that perhaps you could write an article on the two assassination attempts on highly political persons. Does the attempt on Reagan erase the 20-year cycle of death in office? What does the Tarot say? Where there are two there will be three, the AMORC Rosicrucians say. Who will be the third?"

A.E.D., Paradise, California

It seems that your last question was answered with a headline story in the Los Angeles "Times" the day your letter arrived at BSRF headquarters, with the symbolic popgun attack on Queen Elizabeth in London. If martyrdom is not in the life-plan of the public figure such assassination attempts will not succeed -- though there are many other reasons why a President may not finish his term in office -- or a Pope his papacy. In both cases the would-be assassin was an extreme right-winger. This indicates to your director that the driving force behind the attacker was the angry thoughts of people of the leader's own political and/or religious persuasion. Reagan has already alienated the New Right of religious leaders who wanted him to be as extreme as they are; and the Curia that runs the Church in Rome is angry with John Paul for getting out and mixing with the people, instead of staying a remote, God-figure in the Vatican.

July-August 1981 RR, Page 31
WHO NEEDS A GUN?

The potency of such concentrated thought, backed up with powerful emotions, was revealed to me by Mrs. Five-by-Five, pastry cook at a coffee shop here in Vista a few years ago. It was my habit to stop in there about ten every morning after going to the post office and the bank. By that time her pies and cakes were out of the oven and cooling and she was ready for a coffee break and an exchange of anecdotes.

Mrs. Five-by-Five was a widow. Years earlier she had suffered a great shock in the sudden death of her husband. Shock added to shock when the realtor demanded that she vacate their rented house immediately. Mrs. Realtor had a customer, cash in hand, who wanted to buy the place. Self-righteous anger welled up in Mrs. Five-by-Five and she asked for time to get her affairs in order -- without having to hunt for a new place to live; but Mrs. Realtor was adamant. This put Mrs. Five-by-Five in a towering rage and she yelled, "I hope you drop dead!", and stormed out of Mrs. Realtor's office, determined to stay in that house for the rest of the month if necessary -- unless forced out by the sheriff.

Meanwhile, without a love partner she had all those un-polarized generative energies to pour into her thoughts and feelings of hate for Mrs. Realtor. As it happened, she did find a place to move to within a few days. It was there, perhaps a week after the showdown with Mrs. Realtor, that a friend, reading the local Vista "Press", said: "How would you like to attend Mrs. Realtor's funeral?"

"I'd be glad to," replied Mrs. Five-by-Five. "When and where is it?"

And when the friend obligingly read off the date and location of the funeral services at the Vista mortuary, Mrs. Five-by-Five was overjoyed to realize her friend wasn't kidding. Her hated enemy, Mrs. Realtor really had suddenly dropped dead in her real estate office. No regrets on Five-by-Five's part. She believed she had rid the world of an evil being.

The story does point up a principle of operational magick: When you have other people in your power, and succumb to the temptation to abuse that power in action, be fully prepared for the inevitable reaction, otherwise you may wind up real dead, and, like Mrs. Realtor, find yourself standing outside your body wondering "What happened?"

Your victim may have unsuspected retaliatory powers carried over from a past life, and stirred from subconscious latency by an emotional storm which overrides all ethical or moral values. The Master D.K. gives us the key to this in the chapter on Thought and Fire Elementals, page 1003, in "The Treatise On Cosmic Fire", where he gives the basic principles for the successful creation and materialization of a thought-form, for good or evil.
UNCONSCIOUS RECOLLECTION OF ATLANTEAN FORMULAE

"Men (and women) are as yet too impure and too selfish to be trusted with this knowledge," writes D.K. through Alice Bailey. "Their thought forms would be constructed in order to be sent on selfish missions, and for destructive ends; and until they are more spiritual, and have gained control over their lower natures, the magical words which galvanise into separated activity the form in mental substance will not be available for their use.

"It might be asked how it is that men (and women) do achieve their ends, through concentration and visualization, and do manage to send forth thought forms which reach their objective. In two ways this can be brought about:

"First. By an unconscious recollection of methods and formulas known and used in Atlantean days, when the magical formulas were public property, and men (and women) produced results through the prononucement of certain sounds. They did not achieve their ends through mental ability, but principally through a parrot-like capacity to repeat mantrams. These are, at times, hidden in the subconscious nature and are used unwittingly by the man (or woman, Mrs. Five-by-Five) who is feeling strongly enough.

"Second. Through the thoughts and ideas of the man (or woman) fitting in with the plans and purposes of those who do know, either on the path of white or black magic. Then they utilise the form with its inherent force and galvanise it into activity, and a temporary separate identity, thus sending it forth to accomplish its purpose. This accounts for many of the apparently phenomenal results achieved by selfish or by incompetent (though good) thinkers.

"The magical words are only communicated under the seal of secrecy, to men (and women) working under the Brotherhood of Light, to initiates, and to pledged chelas, owing to the great danger involved. Occasionally, too, they are ascertained by men and women who have brought about a condition of alignment with the Ego (Higher Self) and are therefore in touch with the inner centre of all knowledge within themselves. When this is so, the knowledge is righteousness and the words being emanated by the Ego 'are lost in His sound' -- as it is occultly termed -- and will not be remembered by the physical brain when not under the influence of the solar Angel. . . ."

CLERGY AND LAITY CONCERNED -- AND THEY SHOULD BE!

"In El Salvador it has become a political crime, punishable by death, to teach people to pray the Our Father when they ask for their 'daily bread'. In recent months, more and more Christian workers have been killed or have disappeared for doing nothing more than teaching the poor that they have a right to their daily bread -- a decent life. El Salvador has become a nation of
people suffering violence and terror each day under the leadership of its present regime.

"We Americans take for granted the freedom of belief and the right to basic food. Most of us are appalled by what is happening in that small nation. Yet, our government continues to give support, license and blessing to the present junta's treatment of its own people and of American citizens in that country.

"American involvement in El Salvador is an affront to everyone whose heart can feel compassion, whose mind can still understand the meaning of justice -- to everyone of us who believes that there are religious/ethical values which must guide the lives of persons and governments.

"CALC (Clergy and Laity Concerned) has been making innumerable efforts to help all such Americans express their views. Press conferences, massive prayer vigils, seminars and demonstrations have drawn more and more support across the country. CALC is determined to continue these efforts -- with your help.

"But we cannot think only in terms of El Salvador. Something as tragic and frightening is happening in our own country. Most of us, perhaps people like you and me, have never had to ask for our 'daily bread' in the basic sense of the term. But there are millions right here in this country who have to. They are surviving right now with less than a shred of dignity only because we have social programs that meet some of their basic needs.

DESPERATION THAT MAY LEAD TO VIOLENCE

"Now, under the guise of balancing the federal budget, the present administration is mindlessly cutting back these programs. The elderly, children, the unemployed, veterans, the poor and sick will soon be pushed to destitution, a state of personal terror and desperation that can lead only to violence (which forecast of things to come reminds us of Manly Hall's analysis of the nation's star map for the year, page 23 of the May-June Journal, 'Public opinion may inspire or impel major changes in the structure of government. The situation could become critical in September and October. A psychological revolution could result in a revelation concerning America's assignment with destiny').

"We believe that the budget should be balanced. But we do not believe it can be done by sacrificing lives and human dignity in order that there will be more to spend on unnecessary armaments that will further endanger the lives of people throughout the world. In July, Congress will be asked to approve the financing of several new military projects. Among these will be the MX missile. This project alone will cost a minimum of $108 billion. Its social, economic and environmental effects will be staggering and it will ultimately destroy an entire Native American tribe.

"The consequences of our government's clearly articulated decision to give human rights and life a low priority in its con-

Considerations are coming home to roost. Therefore we call upon each of your whom we know shares this concern and ask you to: Write to your senators and representatives protesting US involvement in El Salvador. Raise your voice against the wasteful spending for the unnecessary MX missile. Let your Congressman know what you think -- not just once but as many times as possible.

"By July, if enough of us speak out, we can defeat the MX. And, if we persist, we can stop US support and involvement in El Salvador. Only with the help of caring people like you will CALC be able to work for a future where no one will have to go without his/her 'daily bread' -- or fight for it -- or steal it; a future where everyone has an opportunity to earn it and the freedom to enjoy it. I ask you to please be as generous as you can. We need your financial support."

Sr. Barbara Lupo, MM, Codirector Clergy and Laity Concerned 198 Broadway, Room 302 New York, NY 10038

Well, it certainly is encouraging to see some practical Mysticism developing among the clergy of the nation, especially the priesthood of the ultra-conservative Mormon church in Utah -- who have always been enthusiastic supporters of America's highly profitable munitions industry. They claim to worship the Prince of Peace. Now they have a chance to demonstrate that worship as the Department of Defense threatens to rape their state with the MX missile program, and make them a target for Russian weapons.

If Clergy and Laity Concerned is successful in organizing popular opposition to the MX program and stops it, they should be encouraged to take on an even more awesome task, stopping America's wealthiest family, the DuPonts, from manufacturing any more enriched uranium and plutonium for atomic bombs. We already have enough of those to blow ourselves and the Russians up twenty times over! 15 years ago, during the Vietnam war, the then Secretary of Defense posed this question to the nation: What is our choice, suicide? Today the answer still seems to be, yes!

WALTER RUSSELL, THE ARTIST AND SEER

"About what Dr. Joseph von Moger told you about Dr. Walter Russell, you can obtain Dr. Russell's works from the University of Science and Philosophy, Swannanoa Palace, Waynesboro, Virginia 22980, USA. Since Dr. Russell departed from this world in 1963, his wife Louise Russell has been running the University. The most remarkable works of this couple are: The Universal One, The Home Study Course of Science and Philosophy, The Secret of Light, and Atomic Suicide. Dr. Russell had a 'scientific' revelation, instead of a religious one, and he claims that God revealed to him how the universe works. Dr. Russell indicated in 1926 that atom was only a conical Archimedes spiral, and his words were

proved in 1974 by Dennis Milner and his team at the University of Cambridge with high voltage pulsed photography. Those works are in the book 'The Loom of Creation', published by Nevill Spearman in 1975. This is only one example of what Dr. Russell disclosed. I have seen the proofs he includes in his works, and it is my opinion that everything was bared to him. He did not place a veil upon the teachings as did the Cabalists, and reported everything as he had been told to do."

Jorge Resines, Buenos Aires, Argentina

Thank you for the information on Walter Russell, Jorge, a great artist and visionary who did lay down some first principles for space science as revealed to him by God -- but which God? The God of the planet Earth? The God of the Solar System? The God behind the Sun in the Zodiac, Sirius? The God of the Milky Way Galaxy? Or the God, or Goddess, of the Black Void which separates our Galaxy from the next -- who may be more feminine than masculine. As a Mystic, Russell wouldn't be concerned with such differentiations; but students of the Cabala are -- as are astro-phicilists; and if one is to make voyages into space, free from the body and/or the planet, one must have a topology of the Universe. Only occult science can give you such a road map of the heavens. Ours is based on the Western Mystery Tradition and we "place no veil" on our teachings of the Cabala. Our BSRF No. 24 A thru M series of lessons based on the Cabala are available to anyone who has the price -- plus the 70% increase in third class, printed-matter postal rates. So now we must charge $2.00 for our 34-page catalog of BSRF publications, which includes descriptions and prices of the 24-series Cabala lesson material.
