Mr. Faber's mode of accounting for the history may be very satisfactory to the person who is blessed with a lively faith ; but the story is plainly nothing but a part of the ancient mythology of the Magi and Brahmins respecting Cristna ; who was believed to be an incarnation of the Supreme Being, of one of the persons of their holy and mysterious trinity—to use their language, *the Lord and Saviour—three Persons and one God.*

Mr. Faber's argument to prove the antiquity of this prophecy, as given at length in his book, seems quite satisfactory.

The reason why the three Magi who came to adore Jesus at his birth were called kings was, because the heads of the Magi were always called kings. It was a title of honour, like what we have in our Heralds' Office, *Kings at Arms.* “ De non assumendo sacerdotio, testimonium dat Cicero, in libro De Divinatione referens : ‘ Nemo potuit esse Rex, antequam coluerat disciplinam Magorum : nec magis ut quisque esset Magus quàm ut esset Rex.’ Istorum itaque ‘ erat non tantùm reges in rectâ religione instituere, sed et eos inaugurare, ut in Christianismo ‘ fieri solet.’ ”¹

“ Ex hujusmodi Persarum Magis, celebriores aliqui fuerunt illi qui nostrum Salvatorem Christum in infantia visitatum venerunt ex Perside in Bethlehem.”²

“ Ab isto itaque Rege missi sunt (vel saltem, eo haud inscio, venerunt) Magi. Nam quòd ‘ Persis revelata fuerit Christi nativitas, certi sumus ex Evangelio : et præterea plerique autores, ‘ iique doctiores, idem statuunt.’ ”³

The real skulls of the three kings of the Magi are to be seen at Cologne : they were called Caspar, Melchior, and Balshazzar. It may here be observed, that the Magi were an order of men, not a nation, as is vulgarly imagined.

It has been before observed⁴ that the Trinity of Plato was correctly the Trinity of Jesus, as described in the Gospel of John, and that the two accounts travelled *pari passu*, until they arrived at the famous *verbum caro factum est*. This is just as much a part of the Trinitarian system as the remainder, as is proved by the Brahmin history of the incarnation of Cristna, from which it was evidently originally taken. The idea of an incarnate God being among us now in modern times few persons (the followers of Johanna Southcote excepted) can entertain ; but it was common to all ancient nations. Osiris, Bacchus, Adonis, were all incarnate Gods : taught by the priests ; despised by the philosophers ; believed by the rabble. They were probably all derived from the story of Cristna born in the eighth month, which answers to our December, on a Wednesday at midnight, in the house of Vasudeva, his father, and Devaci,⁵ his mother.⁶

Thus the *verbum caro factum est* is not peculiar to the Christians, but was in fact acknowledged in almost every nation in the world. This was the Logos of the Persians and the Greeks, whose birth was originally fixed to the moment of the winter solstice. This Logos, we have seen,⁷ was the second person of the Trinity—the Iao of the Gentiles.

Tertullian, Jerom, and other fathers of the church, inform us, that the Gentiles celebrated, on the 25th of December or on the 8th day before the calends of January, the birth of the God Sol, under the name of Adonis, in a cave, like that of Mithra, (in Persia *Mithra* ; in Egypt, Phœnicia, and Biblis, *Adonis*,) and that the cave wherein they celebrated his mysteries was that in which

⁶ Maur. Bram. Fraud. exposed.

⁷ Vol. I. pp. 119—122.

Christ was born in the city of Bethlehem, or, according to the strict meaning of the word Bethlehem, *in the city of the house of the sun*.¹ This God Adonis is really and literally the Hebrew word אָדֹנָי *Adn*, yet retained in the Welsh Celtic *Adon*,² which is translated into Latin *Dominus*, into Greek *Κυριος*, and into English *Lord*, the peculiar name of honour given to Jesus Christ.

On this day, at the moment of its commencement, the followers of Mithra began to celebrate the birth of their God. He was born in a grotto or cave precisely as Jesus Christ was. For though, in our Gospels, he is said to be born in a stable, yet in the holy land, at Bethlehem, the place exhibited is *a cave*. The stable no doubt was in a cave. The early fathers of the church acknowledge that the most probable of all the suppositions of the Pagans respecting the origin of the religion, was that of those who derived it from the Persians.

The same God was believed, by the inhabitants of Persia, Asia Minor, and Armenia, under the name of Mithra, to have been born in a cave on the 25th of December, to have been put to death, and to have risen again on the 25th of March. In their mysteries the body of a young man, apparently dead, was exhibited, which was feigned to be restored to life. By his sufferings he was believed to have worked their salvation, and on this account he was called *their Saviour*. His priests watched his tomb to the midnight of the vigil of the 25th of March, with loud cries, and in darkness; when all at once the light burst forth from all parts, and the priest cried, Rejoice, oh sacred *initiated*, your God is risen. *His death, his pains, and sufferings have worked your salvation*.³

In every case the God is supposed to become incarnate: in every case the place in which he was actually born was exhibited to the people. The night of the 24th December the Persians call the *Night of Light*. Stukeley observes, that the worship of Mithra was spread over all Gaul and Britain. The Druids kept this night as a great festival, and called the day following it Nollagh or Noel,⁴ or the *day of regeneration*,⁵ and celebrated it with great fires on the tops of their mountains, which they repeated on the day of the Epiphany or twelfth night. The Mithraic monuments, which are common in Britain, have been attributed to the Romans, but this festival (in consequence of its being kept by the Druids) proves that the Mithraic worship was there prior to their arrival. The Romans took nothing from the Druids, but on the contrary persecuted them, and put all whom they could make prisoners to the sword.

At the first moment after midnight of the 24th of December, all the nations of the earth, by common consent, celebrated the accouchement of the Queen of Heaven, of the Celestial Virgin of the sphere, and the birth of the God Sol, the infant Orus or Aur, the God of Day, called by the Gentiles *the hope and promise of all nations, the Saviour of mankind* from the empire of Ahriman and darkness.

The Egyptians celebrated the birth of the son of Isis on the 25th of December, or the 8th day before the calends of January. This Eratosthenes says was the God of Day, and that Isis or Ceres was symbolical of the year. The son of the *Holy Virgin*, as they called Ceres, was Osiris: he was born on the 25th of December. At his birth, Plutarch says, that a voice was heard, saying, "On this day is born the *supreme Lord of the universe*, the beneficent king Osiris." On this day, at the same moment, the Romans began to celebrate the feast of the Brumalia in honour of the

⁴ Noel is the French name for Christmas-day.

⁵ Vall. Coll. Hib. Vol. III. p. 464.

birth of the God of Day—of the Sol invincible—Natalis Solis invicti—described in vast numbers of very old pictures in Italy, with the legend Deo Soli, perhaps mistaken by the monks, and thus retained; or perhaps having a secret meaning.

It is remarkable that we have very few examples of infant Gods among the Greeks and Romans, though we have them in innumerable instances in Egypt; but I suppose them all to have been converted into Madonnas. I have no doubt whatever that great numbers of the exemplars of the BLACK Mother and Child were infant Jupiters, or at least infant Gods; indeed, I should think every one of them: for, wherever there was a black child painted on an old wall, if it were renewed, it was painted like its predecessor *black*. This I myself have seen done in Italy. Cicero says,¹ “Is est hodiè locus septus religiosè propter Jovis Pueri, qui lactens cum Junone Fortunæ in gremio sedens mammam appetens, castissimè colitur à matribus.” Bryant notices an inscription in Gruter:² Fortunæ Primigeniæ Jovis Pueri, D. D.

Again, Bono Deo Puero Posphoro.³

All the boy Gods which were not destroyed, were adopted as Bambinos.⁴

Nothing is more common in the North of England for the sign of an inn, than *the black boy*. I very much suspect, that the little Negro, as he is always described, is an infant Cristna.

Perhaps it may be thought by some, that the observations which I shall have to make on the celebrated lamb of God ought to have come here, but on consideration I have judged it better first to make a few observations on the resurrection.

2. Throughout all the ancient world we have seen that the birth of the God Sol, under different names, was celebrated on the 25th of December,⁵ the day of the birth of Jesus. Thus, in similar accordance with the history of Jesus, the God Sol, on the 23d of March, was, by one means or another, put to death: and exactly three months succeeding the 25th of December, viz. on the 25th of March, he was believed to be raised to life again; and his resurrection was celebrated with great rejoicings.

The most important of all the different parts of the complicated system of Christianity, are the Crucifixion of Jesus Christ and his Resurrection from the dead. It will now be my duty to shew whence the collectors of traditions drew these particulars respecting him; where the *great men*, the *venerable fathers*, who believed that there were *four* Gospels because there were *four* winds—that men were raised from the dead *sæpissimè*—that boys were defiled and girls became pregnant by demons—found these traditions, and applied them to a person said to be put to death in Judea.

The reader has already seen that Jesus was mistaken for Iao or the Sun, and that all the Gods—Bacchus, Osiris, Hercules, Adonis, &c., were personifications of that great luminary. As Jesus and Iao were both born on the 25th December, it follows that as Jesus rose again on the 25th of March, the Vernal Equinox, after being cruelly put to death; so the different incarnations of Iao, from whom his birth was copied, should be found to have been put to death in a similar manner: and this we shall presently find was exactly the fact.

The resurrection of the human body to life and immortality, which was one of the leading doctrines of the Persian Magi, is of such an artificial nature, and includes in it so many circumstances apparently contrary to the evidence of our senses, that it is the acme of absurdity to suppose, that two nations should arrive at the same result by any common chain of reasoning.

⁴ See Bryant's Anal. Vol. I. p. 125.

⁵ Dupuis, Vol. III. pp. 117, 118. ed. 4to.

Hence it is evident, where such coincidence is found one must have copied from the other, or they must have drawn from a common source.

It must be recollected that it is not the mere resuscitation of a person newly deceased to life : it is the re-collection of the parts of a body long since reduced to a mass of filth and corruption, or scattered in dust by the winds or waves, eaten by animals of various kinds, and thus by becoming component parts of them, and converted by man to the support of his life, they form fresh subjects for resurrection to immortality—each part by some miraculous process unknown to us still supporting its identity : each man, though by this process forming parts of thousands of other men, and they again parts of thousands or millions of others, still retaining his absolute original identity, and the thousands or millions whose bodies had been partly composed of his body or of the bodies of each other in succession, all, like the original first man, rising to life and immortality. The subject is appalling : the divines say, when pressed upon it, that at the resurrection the body will be changed in the twinkling of an eye, into a spiritual body. As the word spirit is in meaning exactly the opposite of the word body, substance, or thing, they may as well say, that a *some*-thing will be raised to life and immortality in the form of a *no*-thing. But we must leave this to the divines ; those of them are the wisest who pronounce it a mystery, and therefore beyond our comprehension—a thing to be believed, not to be discussed or reasoned about.

We are told by Diogenes Laertius, that the ancient Persians or the Magi believed in the resurrection of the body. To go no further, his evidence is unquestionable. But the following extract from Beausobre¹ will place the matter out of the reach of doubt :

“ The Sadduceism of Manes did not consist certainly in denying the existence of spirits, (des esprits,) their immortality, and the punishments and rewards after death. So far from this, that Sharastani puts among his dogmas not only that thought, *but that the sensible faculties of seeing and hearing are never lost.* It follows, then, that he could not have denied the resurrection of the body. In fact, *the Magi believed in the resurrection,* as Diogenes Laertius testifies.² It was one of the articles of the religion of Zoroaster.³ Mr. Hyde had no doubt that the Magi had taught the resurrection of the dead ; and, besides the testimony of *the ancients*, whom he produces to confirm it, he cites a relation which had been sent to him from the Indies, in which the ancient faith of the Persians is explained and the resurrection positively taught.⁴ If I am asked, what idea the Persians had of the resurrection, I answer, that, apparently, they had the same idea as the Jews : with bodies, the same as at present ; with the same organs ; the same animal functions ; (I know not any that were excepted ;) to drink, to eat, to have women : to live a tranquil and delicious life upon the earth, purified by fire, was the hope of the Persians, as was that of the Jews, who never spoke so clearly of the resurrection as since they were captive with the Assyrians. It is only since that time that the sects of Pharisees and Sadducees existed.”

Here we see the resurrection of the dead proved to have been the doctrine of Zoroaster or of the Persians, upon evidence of the most unquestionable kind. It seems impossible to doubt the fact. This is not a mere future state of life ; it is the actual resurrection of St. Paul, with a real

body, but yet with a spiritual body, i. e. a body purified by fire, as it is here described. It is an exact picture of the enjoyments of the Christians during the expected Millenium, and the reign of Jesus upon earth for a thousand years—the Hindoo renewal of the cycle of the age of gold.

But a belief in the resurrection was not confined to Persia; it extended, like the doctrine of the immaculate conception and solstitial birth, to every nation in the world.

Osiris was cruelly murdered by his brother Typhon, on his return from a progress in which he had performed many great actions for the benefit of mankind. The place of his burial was claimed by different provinces of Egypt. Relics of him were shewn in the temple of Philæ. To swear by those relics was the most sacred oath of the Egyptians.¹ In their caves or the adyta of their temples they annually, during the mysteries of Isis, celebrated the misfortunes and tragical death of Osiris, in a species of drama, in which all the particulars were exhibited; accompanied with loud lamentations and every mark of sorrow. At this time his images were carried in procession covered, as were those in the temples, with black veils.² On the 25th of March, exactly three months from his birth, his resurrection from the dead was celebrated, as already mentioned in reference to other Gods, with great festivity and rejoicings.

The birth of Horus, the son of Isis, was also celebrated, in another part of Egypt, like that of Osiris, and at the same time. His death and resurrection were, in a similar manner, celebrated on the 25th of March. They were the same Gods, in fact, only under different names.³ This was the reason why these religions seldom occasioned any intolerance, persecution, or religious wars.

The birth-place of Bacchus, called Sabazius or Sabaoth, was claimed by several places in Greece; but on mount Zelmessus, in Thrace, his worship seems to have been chiefly celebrated. He was born of a virgin on the 25th of December; he performed great miracles for the good of mankind; particularly one in which he changed water into wine; he rode in a triumphal procession on an ass; he was put to death by the Titans, and rose again from the dead on the 25th of March: he was always called *the Saviour*.⁴ In his mysteries, he was shewn to the people, as an infant is by the Christians at this day, on Christmas-day morning in Rome. On the 23d of March, the dead body of a young man was exhibited, with great lamentations, and on the 25th it was supposed to be revived,⁵ when grand rejoicings took place, as in the other instances already specified.

In Crete, Jupiter Ammon, or the Sun in Aries, was painted with the attributes of the equinoxial sign of the lamb. This Ammon, who, as Martianus Capella informs us, was the same with Osiris, Adonis, Atys, &c., had his tomb and religious mysteries; and, though I have not found so much respecting his birth, death, &c., as of some of the others, they were probably all alike.

Apollo had his tomb at Delphi, where his body was deposited after he had been killed by Python. Three women bewailed his death, analogous to the three women, Mary Magdalene, Mary the mother of James, and Salome, who bewailed the death of Jesus. He was called the Logos, the light which had come into the world to enlighten it. Python was the great serpent of the pole, which annually brings back the autumn, the cold, the snow, and darkness—over which Apollo

¹ Maur. Ind. Ant. Vol. III. p. 214, 8vo. ed.

² At this time of the year the images in Italy are all covered, in like manner, with black veils, even to this day: as any one may see who will go thither a little before Easter.

⁴ Ib. pp. 195, 197, and notes.

⁵ Ibid.

triumphs when he returns to the sign of the lamb at the vernal equinox, thus restoring the empire of light, with all its blessings. Pythagoras engraved on this tomb some mysterious verses,¹ which proves that he was a devotee or follower of this God, who was Apollo of Claros, of whom I have formerly treated.² The three Marys, of whom we read so much, were known in Gaul long before the time of Christ; and in England, for there is an altar at Doncaster, *Tribus Matribus, tribus Mariebus*.³

Three Goddesses, called *Mairæ*, were worshiped at Metz.⁴

In front of a temple at Metz was the following inscription :

“ In honore Domûs Divi
Naëdis Mairabus
Vicani vici Pacis”⁵

In the following extract, from an anonymous author, the same story is shewn to exist in India :
“ The Eleusinian mysteries are applicable to the mythological account of Buddha, the son of
“ Maya, who, as the God of Love, is named Cam-deo, Cam, and Cama : signifying ‘ desire :’
“ evidently the Grecian Eros : in this character, the Hindoos profess that he aimed an arrow
“ from his flowery bow, at the heart of the supreme God, Maha-Deo : for which offence he was
“ punished by a flame of fire descending and consuming his corporeal nature. Then follows a
“ procession of priests, who accompany his widowed consort : the beloved Ketî, who bears an
“ urn, containing the ashes of the God, amidst the tears and lamentations of the people. Heaven
“ and earth are said equally to lament the loss of ‘ *divine love* :’ insomuch that Maha-deo was
“ moved to pity, and exclaimed, ‘ Rise, holy love !’ on which Cama is restored, and the lamenta-
“ tions changed into the most enthusiastic joy. The heavens are said to have echoed back the
“ exulting sound, that the deity, supposed to be lost, was restored, ‘ *hell’s great dread, and
“ heaven’s eternal admiration.*’ ”

“ Thus *Meru* is the worldly temple of the Supreme Being, in an embodied state, and of the
“ Trimurti or sacred Triad, which resides on its summit, either in a single, or threefold temple, or
“ rather in both, for it is all one, as they are *one* and *three*. They are three, only with regard to
“ men involved in the gloom of worldly illusion : but to men who have emerged out of it, they are
“ but one : and their threefold temple, and mountain with its three peaks, become one equally.
“ Mythologists in the West called the world, or *Meru*, with its appendages, the temple of God,
“ according to Macrobius. This worldly temple is also considered, by the followers of Buddha,
“ as the tomb of the son of the spirit of heaven, whom I conceive to be the first man, re-emerging
“ in every calpa, or the first lawgiver, often confounded with the first man. *His bones or limbs
“ were scattered all over the face of the earth, like those of Osiris and Jupiter Zagræus. To collect
“ them was the first duty of his descendants and followers, and then to entomb them.* Out of filial
“ piety, the remembrance of this mournful search was yearly kept up by a fictitious one, with all
“ possible marks of grief and sorrow, till a priest announced, that the sacred relics were at last
“ found. This is practised to this day by several Tartarian tribes of the religion of Buddha : and
“ the expression of the bones of the *son of the spirit of heaven* is peculiar to the Chinese, and some
“ tribes in Tartary.”⁶ The latter part of this passage identifies the worship of Buddha with that
of Osiris, Adonis, Bacchus, and the other Western Gods, whose followers observed this ceremony.

⁶ Asiat. Res. Vol. X. p. 129.

It is peculiar to the worshipers of the Bull. The Lamb, Hercules, or Cristna, was slain, but his bones were never in this manner collected.

The same account is given of Atys. His worship prevailed more particularly in Phrygia. Various histories were given of him in different places, but all terminated in the usual way with his being put to death, and being raised to life again on the 25th of March. As Jesus was said to be *suspensus in ligno*, so was Atys. It is useless to enter into particulars; they may be found WITH ALL THE AUTHORITIES cited by Dupuis under the head Atys;¹ as may those of Osiris, Mithra, Bacchus, &c., under their respective heads. It has, I think, been sufficiently proved, that Bacchus and Hercules answered to the Buddha and Cristna of India, and that the Western nations were only copyists of those of the East. If the reader will turn back to Volume I. pp. 144, he will see there, that Cristna was made “*périr sur un bois fatal (un arbre), où il fut cloué d’un coup de flèche, et du haut duquel il prédit les maux qui allaient fondre sur la terre.*”

Certain priests of the Church of England account for the location of the birth of Jesus Christ on the same day as that of Adonis, Mithra, &c., by saying, that it is known not to have been his actual birth-day, but that it was adopted by the church the more readily to draw the Pagans to the true faith. The only answer necessary to be given to these persons is, that those of them who have any information at all upon the subject *know*, that the question of the day was a subject of great dispute among the early Christians, and THEY KNOW also very well, that the reason they assign has not a word of truth in it.

In ancient authors we constantly read of the burials and funeral obsequies of the Heathen Gods, and we are told that their bodies were interred at different places. Now I think this is a mistake, and that these obsequies were only the originals, and, in fact, were precisely of the same nature as the obsequies of the Romish Church for deceased kings and popes. At the time I am writing this, those rites have been celebrated for the deceased Pope Leo the Tenth at various places in Christendom. Except the great Pyramid, where the bones of the Beeve were found, be one of them, I have never met with the ruins of any monument which could be considered those of one of the Gods.

3. The resurrection of Christ was fixed precisely to the time of the Passover of the Jews, of which passover I shall now treat.

Cedrenus fixes the primitive creation to the 25th of March. The first day of the first month, he says, is the first of the month Nisan, which answers to the 25th of March of the Romans. In this day Gabriel gave the salutation to Mary to conceive the Saviour. On the same day the God, the Saviour, rose again from the dead—that day which the ancient fathers called the passover or the *passage of the Lord*. The ancient fathers fixed the second coming of the Lord to take place on the 25th of March. Cedrenus represents Christ as having died in the nineteenth year of Tiberius, on the 23d of March, and to have risen again on the 25th. From this comes the custom, he says, of celebrating the Passover on the 25th of March. On this day the true light rose from the tomb. Though the festival of the resurrection is now on the Sunday after the full moon of the equinox, it was formerly on the 25th of March, as Cedrenus asserts. This is confirmed by Theodore of Gaza.² This festival is known *in the writings of the fathers* by the name *pervigilium paschæ*. St. Augustin has a sermon entitled, *De Esu Agni in pervigilio Paschæ*. “It is on this day,” says this father, “that the Lamb who takes away the sins of the world is slain for the salvation of man. On this day our gates ought to be marked with blood. Let us prepare for the immolation of the Lamb.” Isidore, of Seville, speaks in the same manner of the *Pervigi-*

¹ Asiat. Res. Vol. X.

² Dupuis, Vol. III. p. 56.

lunam Paschæ. Lactantius says the same thing, and fixes the middle of the night for the rising of Christ from the tomb. Constantine was accustomed to cause the town where he was at this time to be illuminated, so that it was as light as noon-day.

The following passage from Georgius will shew, that the crucifixion and resurrection of Buddha took place *precisely at the same time* as all the others: In plenilunio mensis *tertii*, quo mors Xacæ accidit.¹

Sir William Drummond has endeavoured to shew that the Mosaic account of the creation, in Genesis, and also various other parts of the Pentateuch, had allegorical meanings, and were descriptive of the correction of the ancient calendar, which, in consequence of the precession of the equinoxes, had fallen into great confusion, and had caused great confusion also in the mysteries and festivals of the Jews. It seems from almost every part of his work, that previous to the time of Moses the Bull must have been the equinoctial sign, though it may, perhaps, have ceased to be so for some time. The signs of the Zodiac, taken as the standards of the tribes, and Taurus, Leo, Aquarius, (or the man carrying water,) and Scorpio, being evidently the signs of the equinoxes and solstices, are a proof of it. The four equinoctial signs in the chariot, as it is called, of Ezekiel, is another proof of it.

The signs of the Zodiac, with the exception of the Scorpion, which was exchanged by Dan for the Eagle, were carried by the different tribes of the Israelites on their standards; and Taurus, Leo, Aquarius, and Scorpio or the Eagle, the four signs of Reuben, Judah, Ephraim, and Dan, were placed at the four corners—the four cardinal points—of their encampment, evidently in allusion to the cardinal points of the sphere, the equinoxes and solstices, when the equinox was in Taurus. Aben Ezra says, that the cherubim in the temple had also the faces of those four signs. See Parkhurst's Lexicon. These are evidently the cherubim described by Ezekiel, and also the beasts described by John, full of eyes before and behind, and having the likenesses of a *Calf*, a *Lion*, a *Man*, and an *Eagle*. All these coincidences prove that this religious system had its origin before the Bull ceased to be an equinoctial sign, and prove also, that the religion of Moses was originally the same in its secret mysteries with that of the Heathens—or, if my reader like it better, that the Heathen secret mysteries were the same as those of Moses.

It is also clear that the equinoctial sign must have changed from Taurus to Aries, before Moses ordained that the beginning of the year should open with the month Nisan. I can scarcely conceive how any proof can be more convincing of the change which Moses was carrying into effect.²

If any unprejudiced person would read the accounts of the plagues of Egypt, the passage of the angel over the houses of the Israelites, when the first-born of the Egyptians were slain, the hardness of Pharaoh's heart, &c., &c., and give an honest opinion, he certainly must admit that they are absolutely incredible. Then what are we to make of them? The fact is, they are parts of an astronomical allegory—if not invented, at least compiled or written about the time allotted to the reigns of the first three kings, Saul, David, and Solomon. The whole history of the plagues, &c., keeps pace very well with the Labours of Hercules, the Conquests of Bacchus, the Argonautic Expedition, &c.; each literally believed by the people, and each in its literal sense despised by the CHIEF priests, whose object in that age, as in this, was and is to keep mankind in ignorance and darkness.

Sir Wm. Drummond has shewn very satisfactorily that the feast of the Passover, veiled under the story of the Exod from Egypt, is nothing more than the Egyptian festival which was cele-

¹ Georg Alph. Tib. p. 510.

² See Dupuis, Vol. III. p. 240.

brated at the vernal equinox ;¹ in which, under one emblem or allegorical personage or another, two natural events were celebrated—the triumph of Ormasdes over Ahriman, of light over darkness, the ascension of the God Sol from the lower to the higher hemisphere ; and the passage of the vernal equinox from Taurus to Aries. The same allegory applies with great truth and precision to both ; and I am quite certain it was meant for both.

The same festival we also found in the Yajna sacrifice of the Hindoos.²

In the accommodation of the history of the Exod from Egypt to the passage of the Sun, we have a striking example of the mythic spirit. When we consider that this passage festival of the Sun is celebrated at the same moment with the Jewish festival, with nearly the same rites and ceremonies by almost all the nations of the world, and we consider also the way in which the triumph of the sun is celebrated in them all by a history of human actions, how is it possible to be blind to the identity of that of the Jews with all the others ? In all of them the secret object of the festival was to celebrate the praises of the sun, or of that higher principle of which the sun is the emblem and shekinah.

The universal dissemination of this worship is worthy of the most attentive consideration. We have already seen that in Hindostan and Britain the procreative power of nature was celebrated on the day of the vernal equinox by Phallic rites, Huli festivals, May-poles, and April fools, and is even yet continued in these extreme points of East and West—of India and Britain—where the young girls with their swains little suspect the meaning of their innocent gambols—gambols which, if our devotees understood, they would view with horror. On the same day, in Persia, as I have just observed, the triumph of the Good over the Evil principle took place, the triumph of the victory of Light over Darkness, of Oromasdes over Ahriman. At the same time in Egypt, Phrygia, Syria, were celebrated the deaths and resurrections of Osiris, Atys, Adonis. In Palestine, again, we find on the same day the Jews celebrating their Passover, the passage of the equinox from the sign of the Bull to that of the Ram, or of the Sun from the inferior to the superior hemisphere ; and, to conclude all, on this day we Christians of Europe still continue to celebrate the victory of the God Sol, known to all the nations above enumerated by his different names—by us, “ the Lamb of God which taketh away the sins of the world ”—on Easter Sunday having risen to life and immortality, triumphing over the powers of hell and of darkness.

4. Although the identity (not the similarity merely) of the modern systems of Christianity and the systems of the ancient Persians, and other worshipers of the God Sol, must be admitted, and indeed cannot be denied ; yet many persons may have a difficulty in forming an idea how or by what steps the two systems became amalgamated or consolidated ; so as either to form an imaginary human personage in one case, or in another case to attach themselves to the character of a real human being, or a divine person who appeared on earth in the shape of a human being. It is very certain that the same circumstances which took place with respect to the Christian religion, took place in the religions of Bacchus, Hercules, &c., in former times. Histories of these persons with miracles, relics, circumstances of locality, suitable to them, were as common, as well authenticated, and as much believed by the devotees, as were those relating to Jesus Christ. And where can be the difficulty of conceiving, that that should happen again, which we know from experience has happened before ? To this it may be replied, that though it may be believed to have taken place, yet the means by which it has been effected are not so apparent. No person can be very much surprised that the *modus operandi* should not be very apparent, who gives due attention to the indisputable fact, that the priests, with all the powers on earth at their disposal, have been

¹ CEd. Jud. Dissertation on the Paschal Lamb.

² See Vol. I. pp. 260, 389, 446, 584, 718.

employed for fifteen hundred years, in garbling, forging, and suppressing evidence, to prevent this *modus operandi* from being discoverable: but, notwithstanding all their efforts, a reference to some of the facts which have been detailed in this work will in a great measure remove the difficulty. Until the time of Luther and the Protestants, tradition was the grand support, and indeed the most powerful of all the engines used for the raising of the Romish Christian edifice. This engine was discarded by the Reformers, because their object was to take down part of the building, not to increase it; and the only difficulty was, to know where to stop—to know how much or how little was to be removed without endangering the whole edifice. It was evident that if they allowed the powerful engine *tradition* to remain, that edifice was impregnable. The Romish priests were well aware of the importance of their engine, and therefore exerted all their ingenuity to protect it: and for this purpose they found it expedient to give up some part of its power to secure the remainder. It is evident that nothing can be more liable to abuse than tradition. The tradition which the Jesuit of the present day will describe as the tradition of the church, is very different indeed from the tradition which was *in reality* used in the early ages of darkness. Every idle rumour circulated by ignorance and credulity became tradition, if it happened to suit the views of the priests. The frightened rabble, genteel and ungentleel, always timid in proportion to its ignorance, had not the most distant idea of any thing like biblical criticism. In order to secure its salvation, this rabble was only anxious to believe enough. It might believe too little, it could not believe too much. This cause operated in the ancient religions, as much as in the modern. Dr. Hyde¹ justly observes, that the ancients, always fearful of believing too little, kept constantly increasing their rites and ceremonies from surrounding nations. “*Existimando melius esse religione suâ abundare, potius quàm in aliquâ ejus parte deficire sic enim erat eorum mos, nova quævis amplecti, eaque veteribus accumulare.*” This was exactly the case with the Christians. This cause is extremely powerful, and is the more dangerous because its power is not easily perceivable. This cause continues to operate as *really* as it ever did in former times, and exactly in proportion to the ignorance of the people. And it is evident that it will continue to operate so long as belief or faith is held to be a merit: for, if belief be meritorious, unquestionably the more a man believes, the more he merits; therefore to make salvation secure, it is wise to believe as much as possible—to believe every thing. If a person believe every thing, he must believe the truth—which can only be a part of every thing—of the whole.

Notwithstanding the strenuous exertions of the priests, for the last two thousand years, to eradicate every trace of the means by which their various doctrines, rites, and ceremonies, have been established; yet they have not entirely succeeded. Circumstances, apparently trifling in themselves, may sometimes be met with which have escaped their vigilance, and which will enable the impartial and unprejudiced inquirer to form a pretty correct idea how such of them, as he cannot discover or exactly point out the origin of, may have been produced. Remains of the ancient superstitions may occasionally be observed, on which most of the rites, ceremonies, and doctrines, have been founded; and the priests seem to have overlooked the circumstance, that the ordinances themselves for the destruction of others of them, if remaining, would serve to prove the fact of their previous existence, in a way fully as satisfactory as if we had them now before us.

The adoration by the ancients of the celestial bodies, and in its turn of the constellation or sign of the Zodiac, Aries, or the Ram, is so well known that it is needless to enlarge upon it. M. Dupuis, in his treatise, *Sur tous les Cultes*, has settled this matter. The manner in which this constellation came to be personified, or applied to the person of Jesus, may, at first, be

¹ De Rel. Vet. Pers. Cap. vii. p. 139.

difficult to conceive. Like almost every thing connected with religion, this effect was not produced by design, but by accident: that is, by the favourable combination of unforeseen circumstances.

This constellation was called the *Lamb of God*. He was also called the *Saviour*, and was said to save mankind from their sins. He was always honoured with the appellation of *Domínus* or *Lord*. He was called the *Lamb of God which taketh away the sins of the world*. The devotees addressing him in their litany, constantly repeated the words, *O Lamb of God, that taketh away the sins of the world, have mercy upon us. Grant us thy peace.*¹

The following passage of Frickius de *Druidis* will prove that "the Lamb that taketh away the sins of the world" might very well be prophesied of by the Sibyls before the time of Christ. It will also complete the proof that the Jesus of the Roman Church was no philosopher of Samaria in the time of Tiberius. It proves also that our Litany is part of the ancient Pagan ritual, and as such gives it a new degree of interest.

"Rem dico admirabilem, omni tamen fide dignam, quam faciunt antiquissima Carnutensis ecclesiæ monumenta fastique, ac qui ex illis erutum tanti prodigii memoriam typis vulgarunt probatissimi scriptores; et in recentioribus quidem P. FRANC. POYRÆUS, acri judicio vir, integritate singulari, ac tenerâ in Deiparam pietate insignis, qui *triplicem coronam*, quæ hodie est omnium in manibus, pio sane et religioso artificio excellentissimæ, potentissimæ, optimæ matri contexit.

"Itaque sic à majoribus acceptum referunt: signum Carnutensis virginis, quod hodieque visitur, quondam excisum esse in sacrâ Carnutum sylvâ, et Prisci regis, procerumque illius gentis unanimi consensu per Druidum manus, sanctiore quodam in antro collocatum, ac consecratum *virgini parituræ*: sive id mysterium ex oraculis Sibyllinis aut propheticis intellexerunt, sive acceperunt divinitus, extraordinariâ revelatione. Moriens Priscus coronæ ac ditionis suæ Carnutensis heredem scripsit *virginem parituram*. Quæ autem occasio novæ illi religione fecerit initium, ita narratur:

"Quùm inter Gallos magna quædam exorta esset dissensio, nullâque interpositâ magistratum auctoritate graves iræ sedarentur, ac jam eo ventum esset, ut omnia publicis contentionibus labefactata pessum ruerent, cuipiam viro gravi, ad restinguendum tantum incendium, si quis alius, idoneo, imago cœlitus est oblata, cujus in basi hæc inscripta verba: *AGNUS DEI, QUI TOLLIS PECCATA MUNDI, MISERERE NOBIS*. Hanc ille imaginem quùm Gallis, qui in unum convenerant, palam ostendisset, pauca, quæ sibi monstrante Deo, revelata fuerant, præfatus, sic derepentè omnium animos affectit perniovitque, nemo ut abeundum sibi domum putaret, priusquam reconciliata pax esset. Ergo alii alios arcetè complexi, sibi invicem, quicquid peccatum erat, condonarunt. Porro ad perennem tam fortunatæ reconciliationis memoriam, *PARITURÆ VIRGINIS IMAGINEM EXPRESSERUNT*, quam summo deinceps honore sunt prosequuti. Hæc ferè RIGOR-DIUS."¹

Of this remarkable passage, I submit the following translation:

"I will relate an extraordinary circumstance, which, however, is worthy of all credit, on the authority of the most ancient monuments and annals of the church of the Carnutes, and of the most approved writers, who have thence derived and printed the records of so great a prodigy. Among the more modern of these authors is P. Francis Poyræus, a man of acute judgment, of singular integrity, and remarkable for his affectionate piety towards the Mother of God; who, by

¹ On an ancient medal of the Phœnicians brought by Dr. Clarke from Citium, noticed in Vol. I. p. 224, he is described with the *cross* and the *rosary*, which shew that they were both used in his worship.

² Frickius de *Druidis*, Cap. x. pp. 99, 100.

a pious and ingenious artifice wove the triple crown which is in every body's hands, for the most excellent, most powerful, and best of mothers.

“It is thus related, as handed down from antiquity—that an image of the Carnutensian Virgin, which is seen to this day, was formerly carved in the sacred grave of the Carnutes, and, with the unanimous consent of king Priscus and the nobles of that nation, was placed, by the hands of the Druids, in a certain holy cavern, and dedicated to the Virgin of the Conception. This mystery they either learned from the Sibylline or prophetic oracles, or they received it by an extraordinary revelation from heaven. When Priscus was dying, he named the Virgin of the Conception the heiress of the crown and dominion of the Carnutes. But the event which gave rise to the new worship is thus narrated:

“When a great dissension had arisen among the Gauls, and the authority of the magistrates had not interposed to quell the excitement, and it had arrived at such a height that every thing was falling into confusion through the public contentions, an image was sent down from heaven, to a certain grave personage, who was more likely than any other person to extinguish such a flame—on the base of which were inscribed these words: “O LAMB OF GOD, THAT TAKEST AWAY THE SINS OF THE WORLD! HAVE MERCY UPON US.” When he had publicly shewn this image to the assembled Gauls, and had repeated a few words which had been revealed to him by God himself, he so instantly affected and moved the minds of all, that no one thought of returning home till peace was restored. Each, therefore, embracing the rest, they interchanged forgiveness of all injuries. Moreover, in order to perpetuate the memory of so happy a reconciliation, they made an Image of the Virgin of the Conception, to which they thenceforth paid the highest honour.—Such nearly is the account of Rigordius.”

Rigord, quoted above, by Frickius, and whom L'Escalopier also quotes, mentions, that among the Gauls, and especially in Chartres, there existed, a hundred years (N. B.) BEFORE the birth of our Saviour, the prophetic tradition of a Virgin that was to bear a son—*VIRGO PARITURA*.¹ He also observes, that the Egyptians held the same persuasion, “and not only worshiped such a future virgin mother, prior to the birth of our Saviour, but exhibited the effigy of her son lying in the manger, in the manner the infant Jesus was afterwards laid in the cave at Bethlehem.”² “*Deinceps Egyptii PARITURAM VIRGINEM magno in honore habuerunt; quin soliti sunt puerum effingere jacentem in præsepe, quali POSTEA in Bethlehemiticâ speluncâ natus est.* For this passage L'Escalopier quotes a saint of the church, *Ephiphanius*; I say quotes, because his own authority is very slender.”³ The sacrifice of the Agni or the Yagni sacrifice of India already described, was allusive to the Lamb of Isaiah and of Gaul.

I think I may now assume that I cannot be accused of very gross credulity in believing, that the son of the Virgin of Isaiah, and the Lamb of God that taketh away the sins of the world, were the same—both existing long before the time of Jesus of Nazareth.

When I reflect on the many circumstances, new and extremely curious as they appear to me, which I have observed, I am tempted to ask, Can it really be that I have a clearer sight than others, which causes me to see what others overlook? If this be true, to an absence of prejudice only can it be attributed. Such is the sensation I experience when I observe such circumstances as the following; I cannot shut my eyes to them: in every part of Italy I observe pictures of the holy family, of extreme antiquity, the grounds of them often of gold. Of course they are said to be of a date subsequent to the time of Christ; but when I see them inscribed with the words *Deo*

¹ L'Escalopierus, de Theologiâ veterum Gallorum, Cap. x.

² As in Luke ii. 7.

³ Cleland's attempt to retrieve Celtic Literature, pp. 102, 103, 1766, 8vo. See Vol. I. pp. 169—171.

Soli, I cannot help doubting. These pictures represent the mother seated with a child on her knee, and a little boy standing close by her side. The lamb is generally seen in the picture. This is the very description of what Mr. Payne Knight calls Isis and her offspring, who were worshiped in Russia by the ancient Muscovites. And who was her offspring but Horus? He adds, they have in other pictures the symbol of a *golden heifer*, which is a symbol of the same person.¹ After reading the account of the Isis in every part of the North of France and England, of the Virgo Paritura, of the Lamb that taketh away the sins of the world, I cannot doubt that this is the same mythos in honour of the Beeve, which followed two thousand years after, in honour of the Lamb—a renewal of the same mythos for every new sign of the zodiac. Sometimes it was a Bull, then a Ram, and lastly, two Fishes, tied together by the tails on Popish monuments.

The first symptom of the worship of the lamb among the Israelites is to be found in the substitution of the Ram in the place of Isaac, by Abraham, for a sacrifice. When Joseph had become prime minister of Egypt, he married Asenath, a daughter of the priest of On or Heliopolis, the capital of Goshen, which word Goshen, Mr. Bryant states, means *the house of the sun*. Lucian² states, that the persons initiated into the mysteries of that temple sacrificed a sacred sheep, a symbol of the animal of the first sign, or of the equinoctial sign, which they ate as the Israelites ate their Passover.³ On the ancient monuments of Mithra, in the different collections, we see the Bull, whose blood is shed to take away the sins of the world. The Bull is now succeeded by the Ram, *the lamb without blemish*, by whose blood the soul is purified from sin. On an ancient Christian monument the lamb is seen slain at the foot of the cross, the blood of which is caught in a cup.⁴ This is a copy of the rite described in the celebrated Mithraic monument of slaying the bull.⁵

Some of the coins of Gallienus are stamped with the figure of a Lamb and the legend *Jovi Servatori*. And in another ancient medal is seen the legend *Ammoni Servatori*.⁶

The Egyptian God Jupiter, with the horns of a ram, the Ammon, is but the sun at the equinox, which is confirmed by Martianus Capella, who maintains, in his hymn to the sun, that the God lamb or ram is but the sun. Then if Christ be the sun, Christ, in the moment of his triumph and reparation, ought to be as the sun, figured by the symbolical lamb. This symbolical sign is essential to his triumph over the prince of darkness and the works of the serpent. But, in effect, he has this form. He is designated in the Scriptures by the mystical name of the Lamb, the Saviour. His mysteries are those of the lamb without fault; nature is restored by the blood of the lamb. Every where the blood of the lamb, which takes away the sins of the world, is presented to us. When the priest presents to the initiated the mystic bread which contains the Christ, he says, "Behold the Lamb of God, which taketh away the sins of the world." He calls it "the Lamb" which has been "slain from the foundation of the world."⁷ Every part of the Apocalypse turns upon the triumph of the Lamb over the powers of hell and darkness. The symbolical type of the sun, the redeemer, or of the first sign in which the sun had his exaltation and completed his victory over the powers of darkness, has been carefully preserved in the religion of the Christians, so that to name Christ or the Lamb is the same thing as to name the Redeemer.

⁶ Dupuis, Tome III. p. 325, 4to.

⁷ Rev. xiii 8. The Apocalypse is proved to be of very great antiquity by its having fixed the year to only 360 days.

Instead of the Crucifix, Christ is often represented over the altars on the continent as a Lamb. There is one at Cologne.

It follows, then, that the mysteries of Christ are the mysteries of the Lamb, and that the mysteries of the Lamb are mysteries of the same nature as those of the Mithraic Bull, to which they succeeded by the effect of the precession of the equinoxes, which substituted the slain *lamb* for the slain *bull*. The Christian mysteries of the lamb are proved to be taken from the mysteries of Mithra, of the Persians, by the circumstance that the Persians alone have the lamb for the symbol of the equinoctial sign: the other nations have the full grown Ram.

M. Dupuis observes, that the lamb was a symbol or mark of initiation into the Christian mysteries, a sort of proof of admission into the societies of the initiated of the lamb, like the private sign of the free-masons. From this came the custom, in the primitive church, of giving to the newly-initiated or newly-baptized, the seal of the Lamb, or an impression in wax, representing the Lamb.

Christians even now make their children carry about their necks a symbolical image of the Lamb, called an *Agnus Dei*.

There are not many circumstances more striking than that of Jesus Christ being originally worshiped under the form of a Lamb—the actual lamb of God which taketh away the sins of the world. “Though many churches in this age were adorned with the images of saints and martyrs, there do not appear to be many of Christ. These are said to have been introduced by the Capadocians; and the first of these were only symbolical ones, being made in the form of a Lamb. One of this kind Epiphanius found in the year 389, and he was so provoked at it that he tore it. It was not till the council of Constantinople, called *In Trullo*, held so late as the year 707, that pictures of Christ were ordered to be drawn in the form of men.”¹

Priestley is perfectly right: the custom of exposing the symbolical Lamb to the veneration of the people continued to the year 608, when Agathon was pope, and Constantine Pogonat was emperor. It was ordained, in the sixth Synod of Constantinople,² that, in the place of the figure of a lamb, the symbol used to that time, the figure of a man nailed to a cross should in future be used, which was confirmed by Adrian the First. But the Pope Adrian the First, in the seventh council, in his epistle to Tarasius, Bishop of Constantinople, had approved the representation of Christ under the form of the Lamb and adopted it.³

In the decree of the council of Constantinople quoted above, the knowledge of a most important fact is preserved to us by the decree passed for the express purpose of concealing it. If instead of this formal decree, forbidding the votaries in future to represent Christ as a Lamb, the practice had been merely discouraged by verbal communications, through the medium of the corresponding societies of monks, it would have been as certainly abolished, and this curious link connecting the ancient and modern superstitions would never have been discovered. It would have been irretrievably lost.

The following are the words of the decree, which I obtained in the Vatican Library, that mighty treasury of secret learning.⁴

In the Roma Sotterranea of Antonio Bosio,⁵ *Dell' Imagine di Christo in Figura di Agnello*—“ In

¹ Priestley's *Hist. Corr.* Vol. I. p. 339; Seuer, A. D. 707.

² Can. 82.

³ Dupuis, *sur tous les Cultes*, Tome III. p. 61, 4to.

⁴ The French supposed that they examined it. Silly fellows! The church took care that they should find as little of *secret learning* in the Vatican as they found of real *jewels* at Loretto.

⁵ Lib. iv. Cap. xxix.

“ quibusdam sanctorum imaginum picturis agnus exprimitur, &c.¹ Nos igitur veteres figuras “ atque umbras, ut veritatis notas, et signa ecclesiæ tradita, complectentes, gratiam, et veritatem “ anteponimus, quam ut plenitudinem legis accepimus. Itaque id quod perfectum est, in picturis “ etiam omnium oculis subjiciamus, agnum illum qui mundi peccatum tollit, Christum Deum “ nostrum, loco veteris Agni, humanâ formâ posthac exprimendum decrevimus,” &c. See Canon 83.² From this decree the identity of the worship of the celestial lamb and the Romish Jesus is certified beyond the possibility of doubt, and the mode by which the ancient superstitions were applied to an imaginary personage or to a real human being, Jesus of Nazareth, is satisfactorily shewn. Nothing can more clearly prove the general practice than the order of a general council to regulate it.

It requires no very great exertion of the imagination to form an idea in what manner the ignorant and fanatical devotees, when they applied the worship of the Lamb that taketh away the sins of the world to the man Jesus, should seize hold of and apply to him every doctrine, rite, or ceremony, which the idle traditions of the vulgar attributed to the Lamb in different countries where they happened to prevail. The God Sol, Mithra, and Iao, being the same as the Lamb of God, it seems natural enough that the ceremonies, &c., of the being passing under those names should be adopted by his followers. Hence it is that we find them all mixed together in the worship of Jesus. And, as the worship under the name of Mithra prevailed most in the different Western countries of the world, it is not surprising that his peculiar doctrines and ceremonies should most prevail in the new religion.

We have seen that Mr. Bryant, Dupuis, and others, have shewn that the worship of the constellation of Aries was the worship of the Sun in his passage through that sign, and this connects with the worship of the Lamb the different rites which were used by different nations in the worship of the God Sol—the Dominus Sol—under the different names of Hercules, Bacchus, Mithra, Adonis, &c., &c., their baptisms, oblations of bread and water, their births, deaths, resurrections after three days, and triumphs over the powers of hell and of darkness. In all this can a person be so blind as not to see the history of the God *Iaω*, *IHS*, *Ιησους*, the *α* and *ω*—the incarnate God—the Lamb of God sacrificed to take away the sins of the world? As might be expected, we find this Saviour originally described and adored under the form of a Lamb. In many places of Italy, particularly at Florence, he is described as a Lamb, with the cross held by his fore-leg. But, in most places, these representations have been destroyed in compliance with the bulls or decrees above-named, which unwittingly let us into the secret, which, without them, we might have guessed at, but could not have certainly known.

Over the high altar of the cathedral at Mayence, on the Rhine, is a golden lamb, as large as life, *couchant*, upon a book sealed with seven seals, and surrounded with a glory. Over the high altar of the cathedral of Bon, also, there is a Lamb in silver, as large as life, *couchant* on a book, sealed with seven seals, and surrounded with a golden glory. In the gateway of the Middle Temple in London may be seen one of these Lambs: he holds a cross with his fore-leg, and has the sun for his head, with a lamb's face. This is a relic of the ancient Knights Templars. In the late repairs of their building the lawyers have shewn much good taste in not destroying it. I rejoice that such of my countrymen as cannot go abroad, may see this remnant of the ancient superstition at home. I advise the Masonic Templars to add this to their eight-point *red* cross.

5. I will now shew my reader that the crucifixion of Christ is, like all the remainder of the Romish mythos, a close copy from Paganism.

¹ S. Io. Damasc. Orat. 3, de Imag.

² Baron. Annal. Tom. VIII. ann. 680, 692.

“Plato died about 348 before our æra. The beginning of John’s Gospel is evidently Platonic. This philosopher was himself believed to have been born of a pure virgin; and in his writings had drawn up the imaginary character of a DIVINE MAN, whose ideal picture he completed by the supposition that such a man would be crucified”¹—a supposition under which the *secret mythos* was evidently concealed, but which would be clearly understood by the initiated. Having penetrated into the mysteries, *we* understand it.

Prometheus is said to have been nailed up with arms extended, near the Caspian Straits, on Caucasus. The history of Prometheus on the cathedral of Bourdeaux here receives its explanation. Here the history of the Garuda, of the crucified Prometheus, in the Christian church, is accounted for: proved by the name of the river Garumna, in the department of the same ancient name, not to have been so called from any superstition of the middle ages. In our versions of the tragedy of Æschylus, Prometheus is always fraudulently said to be Bound. It is called *Prometheus vincitus*. He was nailed up in the form of a cross, with hammer and nails. The object of this impudent fraud need not be pointed out. In this case Protestants and Papists are all alike.

“The Prometheus Bound of Æschylus was acted as a tragedy in Athens, 500 years before the Christian æra. The plot or fable of the drama, being then confessedly derived from the universally recognized type of an infinitely remote antiquity; yet presenting not one or two, but innumerable coincidences with the Christian tragedy; not only the more prominent situations, but the very sentiments, and often the words of the two heroes are precisely the same.” “Prometheus made the first man and woman out of clay”—“was a God.” He “exposed himself to the wrath of God, incurred by him in his zeal to save mankind.”² He was crucified on a rock, instead of a beam of timber.

Æsculapius was the son of Coronis. This *Coronis* was the first of the Jewish Sephiroth, *Corona*, and answered to the Brahm-Maia of the Brahmins. Æsculapius was Asclo-ops, οψ, οπος, Logos, *voice*—as *fire* and solar emanation, described by the numeral letters, *klo*=600. Thus: γ=500, λ=30, γ=70=600. He was the voice of the solar cycle, or the voice of the mundane fire; for *cycle* and *mundane*, I think, are convertible terms. Or, judging from the serpent with which this Saviour God is always accompanied, I should say, the *serpent of the solar cycle*—As-clo-οφης.

Æsculapius is always conjoined with the serpent; and generally with a serpent coiling round something—*en-cir* or *en-cycling*, something.

The serpent not only tempted Eve, but the name Heva meant *serpent*. Αργας means serpent; Argha, the emblem of the female generative power, and Αεχλα, the ship in which the germ of animated nature was saved.

The Serpent, the Eva, the Argha, the Ship or Nau, the Cycle, the X=600, and the God, are all brought very near together if they be not identified.

Once, as the sacred infant she survey’d,
The God was kindled in the raving maid;
And thus she utter’d her prophetic tale,
Hail, great physician of the world! all hail.
Hail, mighty infant, who, in years to come,
Shalt heal the nations, and defraud the tomb!
Swift be thy growth, thy triumphs unconfined,
Make kingdoms thicker, and increase mankind.

¹ Taylor’s *Syntagma*, in answer to J. P. S. [Dr. John Pye Smith?] p. 95, note.

² *Ibid.* pp. 97, 98, and note.

Thy daring art shall animate the dead,
 And draw the thunder on thy guilty head ;
 Then shalt thou die, but from the dark abode
 Shalt rise victorious, and be twice a God. ¹

Mr. R. Taylor has stated, that he thinks the healing God² was related to the Therapeutæ, or Physicians of the Soul, as they have been called—as the name meant. And most certainly there are expressions in the verses of Ovid which shew a reference to the superstition of Virgil, and to the Christian, Promethean, and Hindoo incarnations and regenerations.

The following is an account given of the rites of Tammuz or of Adonis, or of the Syrian or Jewish אדן *adn* or אדון *adun*,³ by Julius Firmicius : “ On a certain night (while the ceremony of “ the Adonia, or religious rites in honour of Adonis lasted) an image was laid upon a bed, and be- “ wailed in doleful ditties. After they had satiated themselves with fictitious lamentations, light “ was brought in : then the mouths of all the mourners were anointed by the priest, upon which “ he, with a gentle murmur, whispered,

“ Trust, ye saints, your God restored,
 “ Trust ye, in your *risen* Lord ;
 “ For the pains which he endured
 “ Our salvation have procured.

“ Θαρρῆτε, μυσταί, τὸ θεὸν σωσμένον,
 “ Ἐσται γὰρ ἡμῖν ἐκ πόνων σωτηρία.

“ Literally, ‘ Trust, ye *communicants*: the God having been saved, there shall be to us out of “ pains, salvation.’ ” Godwyn renders it, “ *Trust ye in God, for out of pains, salvation is come “ unto us.*”⁴ Parkhurst⁵ gives the translation from Godwyn, and says, “ I find myself obliged to “ refer Tammuz, as well as the Greek and Roman Hercules, to that class of idols which were “ originally designed to represent the *promised Saviour, the Desire of all nations*. His other name “ *Adonis*, is almost the very Hebrew אדוני *Aduni* or *Lord*, a well-known title of Christ.”

On these rites of Adonis the Editor of Calmet says,⁶ “ Now these rites seem to be precisely “ the same with those described in the Orphic *Argonautica*, where we learn that these awful “ meetings began, first of all, *by an oath of secrecy, administered to all who were to be initiated*. “ Then the ceremonies commenced by a description of the chaos or abyss, and the confusion atten- “ dant upon it : then the poet describes a person, as a *man of justice*, and mentions the orgies, or “ funeral lamentations, on account of this *just person* ; and those of Arkite *Athene* (*i. e.* Divine “ Providence) ; these were celebrated by night. In these mysteries, after the attendants had for a “ long time bewailed the death of this *just person*, he was at length understood to be restored to “ life, to have experienced a resurrection ; signified by the readmission of light. On this the “ priest addressed the company, saying, ‘ Comfort yourselves, all ye who have been partakers of “ ‘ the mysteries of the Deity, thus preserved : for we shall now enjoy some respite from our “ ‘ labours.’ to which were added these words, ‘ I have escaped a sad calamity, and my lot is “ ‘ greatly mended.’ The people answered by the invocation *Ἰω Μακαίρα! Λαμπαδηφορος!* “ ‘ Hail to the Dove ! the Restorer of Light !’ ”

⁵ In voce תמז *tmz*, p. 789.

⁶ Fragment, CCCXVII. pp. 21, 22.

Here, I think, from this little scrap, which has escaped from the Argonautic mysteries, we see enough to raise a probability that in them were acted over, or celebrated, the whole of the Mosaic and Christian mythoses—the whole of what we have found mixed together in the rites of the Brahmins of South India, as given by the Jesuits, the mythos of Moses, and of the person treated on by the Erythræan Sibyl. It appears that these rites were celebrated in the autumn, to which they must, of course, have been removed by the precession of the equinoxes. We have seen before, Vol. I. pp. 822—824, that it was admitted by Clemens Alexandrinus, who had been himself initiated, that the mysteries of Eleusis were taken from the books of Moses. An interesting account of the tomb of Jesus, as it now is at Jerusalem, may be seen in the travels of Dr. Clarke. But in the writings of some traveller, but by whom I have now forgotten, an account is given that a miraculous fire descends from heaven at the festival of the resurrection, and nearly all the same ceremonies are gone through by the Christians at this day, as I have just now shewn were practised in honour of Adonis; which word Adonis, it may be observed, is nothing but the Jewish Adonai, which is always translated Lord in our Bible, in order to disguise the truth from its readers. This Adonis or Tamas was the same which we found at the tomb of St. Thomas, and the town of Adoni, in South India.

Adonis was the son of Myrra, which word, in the old language without points, would be nearly the same as Maria. He was said to have been killed by a boar in hunting. This will not, on any account, agree with the verses of Julius Firmicius; therefore there must have been some other history to which he alludes. We know that there were very few of the heathen gods which had not several different histories of their births, deaths, &c., and there must have been another of Adonis which has not come down to us.

It is said, that the Christians of Malabar are called Christians of Nazaranee Mapila, or Surians of Surianee Mapila. From this, when I consider that almost every other town named in the Christian mythos has been found, both in India and the West of Asia, I cannot help thinking it probable that a town called *Nazareth* will be found; as it is evident from the above, that there *is* or *was* a country called Nazarenee. As I have formerly observed, in the mountains at the back of the country where these Christians are found, upon the river Kistnah, is a town called ADONI, and another called Salem.¹ Let it not be forgotten that Adonis was Tammuz, and that Kistnah is Cristna.

The Christians of St. Thomas, as they are called, yet retain many of the old Brahmin customs, and are very different and quite distinct from the modern converts.² Part of them are said also to be rather lighter-coloured: this bespeaks them a tribe from the colder country of Cashmere or Afghanistan.

When I reflect upon what I have written respecting the Erythræan Sibyl, and that Justin Martyr says she told all the history of Christ, almost every thing which had happened to him, and that I have found the Tammuz or Adonis in the part of India where the Christians of St. Thomas were found, and compare it with what Parkhurst has said above respecting Tammuz, Adonis, &c., I can come to but one conclusion.

I must request my reader to look back to the description of *divine love* crucified, (Vol. I. p. 497,) and reconsider what has been said respecting Baliji, Wittoba, or Salivahana, the cross-borne, (ib. 667, 750, 764,) respecting the deaths and resurrections of Adonis, Æsculapius, &c., &c., &c.; and I think he will not be surprised to find a crucified Saviour among the Romans. This he will now see has been handed down to us on evidence in its nature absolutely unimpeachable. Minu-

¹ Vol. I. p. 666.

² Ibid. pp. 665, 666; and Asiat. Res. Vol. VII. p. 367.

tius Felix, a very celebrated Christian father, who lived about the end of the second century, in a defence of the Christian religion, called Octavius, has the following passage :

“ You certainly who worship wooden Gods, are the most likely people to adore wooden crosses, “ as being parts of the same substance with your Deities. For what else are your ensigns, “ flags, and standards, but crosses gilt and purified ? Your victorious trophies, not only represent “ a simple cross, BUT A CROSS WITH A MAN ON IT. The sign of a cross naturally appears in a “ ship, either when she is under sail or rowed with expanded oars, like the palm of our hands : “ not a jugum erected but exhibits the sign of a cross : and when a pure worshiper adores the “ true God with hands extended, he makes the same figure. Thus you see that the sign of the “ cross has either some foundation in nature, or IN YOUR OWN RELIGION : and therefore not to be “ objected against Christians.”¹

To whom could Cicero believe the acrostic of the Sibyl, mentioned in Volume I. pp. 574—576, applied ? I now answer, to the crucified person commemorated on the standard, and who that might be, I ask the priests—for it is their order which has destroyed all the evidence respecting him. But I think few persons will now doubt that it was the BLACK crucified person whose effigy we see in thousands of places all over Italy—the Saviour crucified for the salvation of mankind, long before the Christian æra.

I think no unprejudiced person will doubt that the practice of the Romans, here alluded to by Minutius, of carrying a crucified man on their standard, has been concealed from us by the careful destruction of such of their works as alluded to it ; and that its existence in the writing of Minutius is a mere oversight of the destroyers.

I cannot entertain any doubt that this celebrated Christian father alludes to some Gentile mystery, of which the prudence of his successors has deprived us. Perhaps the crucifixion of *divine love* in the person of Ixion, or Prometheus, or Semiramis. As I have shewn above, in the beginning of Christianity, Christ was not represented on a cross, but in the figure of a Lamb. This is proved by the decree of the Pope, which we have just seen, that he should no longer be represented as a Lamb, but as a Man on a Cross.

How great must have been the caution of the priests in leaving not a single Gentile, or, at least, Roman remnant of this crucified person, or any thing which could lead us to him, so that to this solitary, though very complete, Christian evidence, we are obliged for our knowledge of him ! This consideration is quite enough to account for *lacunæ* in our copies of Tacitus, of Livy, of the Greek plays of Æschylus, Euripides, &c., &c. : for, to copies made by the hands of priests, we are indebted for every work of these authors which we possess.

How very extraordinary that not a single icon should be left ! For their deficiency, there must be some other cause besides the astute care of the priests ; and that cause is readily explained—the icons have become Christian crucifixes. Of these great numbers are to be seen in all Romish countries, which have every mark of extreme antiquity. It is the same with the very old pictures carrying the inscription, Deo Soli, and Soli Deo Mitræ, and Nama Sebadiah, which we have found in Kaliwakam, in the Tamul language in India, noticed in Volume I. p. 776, *note*, p. 779, and in the Appendix, p. 835. However, it is certainly proved as completely as it is possible in the nature of things for a fact of this nature to be proved, that the Romans had a crucified object of adoration, and this could be no other than an incarnation of the God Sol, represented in some way to have been crucified. It cannot be doubted that to mere accident we are indebted for the passage of Minutius Felix.

¹ Min. Fel. Sect. xxix.

How can any one doubt that this was the Lamb slain from the beginning of the world—the Solar Lamb incarnate? The Lamb of God slain as an atonement for the sins of the world may be Romish Christianity, and it may be true, but it is not the Gospel of Jesus, the Nazarite of Samaria.

I have no doubt whatever that there has been some mythos of the *Xρησος* in the Greek and Roman Pantheons, which has been destroyed; and that, in innumerable places, the *Xρησος*, in being copied by the priests, has been converted into *Christos*; and very greatly indeed are we indebted to Dr. Clarke for having honestly given us the inscription at or near Delphi.

I now beg my reader to look back to Vol. I. pp. 549—553, and there he will see the account of the prophecy of Apollo of Miletus. This Apollo was called *Didymæus*; *Didymus* means *Twins*. In this country there was a place called *Thamas*. There was also a town called *Cresto-polis*. There was a river *Indus*, a place called *Sinda*, a town called *Calinda*, also the city of *Erythræa*, an island of *Calymna* or *Calamina*,¹ *Mount Chalcis*, *Larissa*, and the island of *Crete*,² called *Candia*³ and *Icriti*.⁴ I think in the *Apollo Didymæus* and the oracle of the incarnate person crucified by the *Chaldæans*, we cannot be blind to the mythos of *Cristna* and *Salivahana*, and the *Calli-dei* of South India at *Calamina*, or *St. Thomas*, or the *twins*. Close to *Rhodes* is *Portus Cresso*, the *Crestian Port*.

In this country also is a *Patara*. Wherever we have an *Apollo* we have a mythos of *Pataraë*, or *Patricius*, or *Patrick*. *Gen. Vallancey* has traced the *Miletii* from *Spain* to *Ireland*. The people of *Miletus* are called *Miletii*. On this coast is an island of *Calydonia*, and a cape *Kelidoni*. I cannot doubt, though the colony might stop at some place in *Spain*, that it first came from this country, at which time came *Calydonia* to *Scotland*, and *Patrick* to *Ireland*, who brought the mythos of the God incarnate crucified by the *Chaldæans*—the God *Icriti* or *Critika*, which was both *bull* and *ram*—the God alluded to by *Apollo of Miletus*.

Col. Tod says, “When *Alexander* attacked the ‘free cities’ of *Panchalica*, the *Poorus* and ‘*Heriçulas*, who opposed him, evinced the recollections of their ancestor, in carrying the figure ‘of *Hercules* as their standard.’”⁵ Here, I have no doubt whatever, was the crucifix of *Prome-theus*, of *Ixion*, of *Cristna*—the crucifix of *Balii* or the *Lord* (if *Bal* meant *Lord*) *Ii*—the crucifix which *Father Georgius* found set up at every cross road in *Tibet*—(not observed by our *English travellers*, though the *Jesuit* could see it)—the crucifix of *Minutius Felix*, and the crucifix *black* or *copper colour* at every point WHERE ROADS CROSS IN ITALY, (which will be accounted for by and by, when I treat of the *Etruscan Agrimensores*,) and in hundreds of the churches. In short, it was the peculiar emblem of the *Pandean* or *Catholic religion*; for *I have no doubt whatever*, that both these words have the meaning of *universal*; and *I suspect* that the perfect mythic history is yet secreted in the recesses of the conclaves of *Tibet* and *Rome*: and that, in ancient time, it was the doctrine of the *Panionian temple* at *Ephesus*, in *Asia Minor*, of the *Pandion* of *Athens*, and of the *Ceres* or *Xρησ* of *Eleusis* and *Delphi*. In short, it was the universal *esoteric religion* of the world. Every common *Catholic priest* will swear to-day that he knows this to be false, and to-morrow he will get absolution for his oath, for he knows nothing about it. It is confided to very few persons—whether to *TWELVE* of the *Cardinals* may be matter of doubt. Here we see the reason why the *Catholic Popes* have every rite and ceremony of the ancient *Heathens*, as they are called, in their religion—the *CATHOLIC religion*. If I am mistaken, then the

³ *Candy* or *Ceylon*.

⁴ Evidently the Indian *Kritika*.

⁵ *Hist. Raj.* Vol. I. p. 51, note.

Brahmins of Italy are precisely in the situation of the *Brahmins of India*, and have lost their secret system.

Where my friend Col. Tod learned the fact he has stated, respecting the standard, I do not know; but I suppose he borrowed it from Arrian, who says, that the troops of Porus, in their war with Alexander, carried on their standards the figure of a man. This must have been a Staurobates or Salivahana, and looks very like the figure of a man carried on their standard by the Romans. This was similar to the Dove carried on the standards of the Assyrians. This must have been the crucifix of Nepaul.

Georgius says,¹ “Ad hoc planè tam impiæ ac fœdæ superstitionis caput referri debent, quæ de *secunda Trinitatis* Tibetanæ Persona narrat ex P. Andrada La Crozius in H. Chr. Ind. p. 514: ‘Ils conviennent qu’il a répandu [Cho Conjoc] son sang pour le salut du genre humain, ‘ayant été percé de clous par tout son corps. Quoiqu’ils ne disent pas qu’il a souffert le ‘supplice de la croix, on en trouve pourtant la figure dans leurs livres: Leur grand Lama ‘célèbre une espèce de sacrifice avec du pain et du vin dont il prend une petite quantité, et ‘distribue le reste aux Lamas presens à cette cérémonie.’”

The Cambridge Key says, “Buddha, the author of happiness and a portion of Narayen, *the Lord Haree-sa, the preserver of all*, appeared in this ocean of natural beings at the close of the Dwapar, and beginning of the Calijug: He who is omnipotent, and everlastingly to be contemplated; the Supreme God, the eternal ONE, the divinity worthy to be adored by the most pious of mankind, appeared with a portion of his divine nature.”² Jayadeva describes him as “bathing in blood, or sacrificing his life to wash away the offences of mankind, and thereby to make them partakers of the kingdom of heaven. Can a Christian doubt that this Buddha was “the type of the Saviour of the world?”³ Very well, I say to this learned Cantab, I will not dispute that the Cristina crucified, Baliji crucified, Semiramis crucified, Prometheus crucified, Ixion crucified, were all types of the Saviour, if it so please him; but let me not be abused for pointing out the facts. Type or not type must be left to every person’s own judgment. On this subject I shall quarrel with no one. But then the Gentile religion must have been a whole immense type. This will prove Ammonius right that there was only one religion.

In the Apocalypse or Revelation, ch. xi. ver. 8, is a very extraordinary passage. It has two readings. In one it says that *your Lord* was crucified in Egypt, in the other, the received text, it says *our Lord* was crucified, &c. Griesbach says of the former *indubiè genuina*. This evidently alludes to the man crucified of Minutius Felix, who was thus crucified at Rome, in Egypt, Greece, India, at Miletus, &c. This is obviously a piece of Heathen mythology, of which, in the West, the priests have nearly deprived us; but there is no room to doubt that it is one of the Salivahanas, Staurobateses, Baliis, Wittobas, Prometheuses, Semiramises, and Ixions, of the East. If we take the passage to mean *our Lord*, we have the Heathen or Gnostic cross-borne of Egypt, (for Christians do not pretend that Jesus was crucified in Egypt,) grafted on the Romish Christianity, like all their other rites and ceremonies. I have little doubt that the crucifixion of every Avatar, as it passed, was simultancously celebrated at each of the five temples of Solomon in Egypt, wherein the Jewish prophet declares that the name of the true God shall be praised.

I have *some suspicion* also that the cross of Constantine was a crucifix. When he and Eusebius

¹ Alph. Tib. p. 211.

² In the Haree-sa, *the preserver of all*, we have the Hebrew *ere* γενεατριξ, and *iso* ישוע the Saviour; and in the Haree or Heri we have also the Greek *Eφας*, Divine Love, the Saviour of all.

³ Camb Key, Vol. I. p. 118.

were lying, (as Lardner has proved they were,) it was only taking the matter by halves not to take the *body* with the *cross*. However, this suspicion imports but little, as it is very clear that a *crucifix* was the object of adoration from the Indus to the Tibur; and I suspect even to the *fire tower* at Brechin, in Scotland.¹ Col. Tod says,² “The Heraclidæ claimed from Atreus: the *Hericúlas* claim from Atri. Euristhenes was the first king of the Heraclidæ: Yoodishtra has “sufficient affinity in name to the first Spartan king, not to startle the etymologist, the *d* and *r*, “being always permutable in Sanscrit.” Surely the identity of the Greek and Indian Hercules cannot be doubted, nor the identity of their ancestor Atreus?

It seems to me quite impossible for any person to have read the preceding part of this work with attention, and not to have felt convinced that there has originally been one universal mythos, repeated in a vast number of different and very distant places. It cannot be expected that the *whole* original mythos should be found any where; the eternal law of change forbids this: nor can it be expected that it should be found in every respect the same in any two places. This again the law of change forbids. For the mythos must change in *all* the places, and it is a million to one that in any two it should be found after several thousand years to have made in each the same change, so that at this time they should be exactly similar. But a sufficient degree of similarity is found to mark the fact, in great numbers of them, and in some really much greater than could have been expected. What can be more striking than that which we have found in Rome and Tibet?

In almost every mythos we see the same immaculate conception, the same ten months' pregnancy, the same attempts of an enemy to destroy the infant, the same triumph of the infant, his glorious and benevolent character and life, his final violent death, and his resurrection to life and immortality; and all this constantly connected with a town on seven hills, &c., &c., &c.

When I reflect deeply upon certain facts which cannot be disputed, and upon the identity of the worship of Tammuz, in Western Syria, of Taminuz in Egypt, and Tamus both in Northern and Southern India, that is, the two Eastern Syrias; upon the high probability, (shall I not say certainty?) that the Esseneans of Egypt and Western Syria were Pythagoreans and followers of the *Χρησ*, that is, *Christians*, before the time of Jesus of Nazareth; upon the account of Christian doctrines in Southern India, given by the Jesuits—and upon the extraordinary fact that, when the work of Eusebius is properly translated, as given by the Rev. R. Taylor, the whole doctrine and church establishment of the Christians is found among the Esseneans in Egypt; I cannot help suspecting that the church of the Pagan Christian Constantine was nothing but the transplantation of the Essenes to the West, and that the secret, allegorical doctrines of these monks were those of the God Adonis, or Thamas, the Saviour re-incarnated or renewed every new cycle.

6. I presume it is well known to my reader, that in the first two centuries the professors of Christianity were divided into many sects; but these might be all resolved into two divisions—one consisting of Nazarenes, Ebionites, and Orthodox; the other of Gnostics, under which all the remaining sects arranged themselves. The former believed in Jesus Christ crucified, in the common, literal acceptance of the term; the latter, though they admitted the crucifixion, considered it to have been in some mystic way—perhaps what might be called *spiritualiter*, as it is called in the Revelation: but notwithstanding the different opinions they held, they all denied that Christ did really die, in the literal acceptance of the term, on the cross. These Gnostic or Oriental Christians took their doctrine from the Indian crucifixion of which we have just treated,

¹ See Celtic Druids, Introd. pp. xlvi. xlvii.

² Hist. Raj. Vol. I. p. 51, note.

as well as many other tenets with which we have found the Romish Church deeply tainted. This my reader must see will enable him to account for many extraordinary things.

I have already remarked, that the Pagan Roman crucifix was purposely concealed; for no one can doubt that there must have been some history connected with it. And persons may believe or not believe as the impressions on their minds or their prejudices may dictate; yet the evidence of the fact—the authority of Minutius—is complete and cannot be disputed, on any principle of sound criticism. And the fact must have been purposely concealed, or we should have had notice of it in some of the Roman historians or writers. I know that for honestly bringing forward this and many other facts, it will be said that I am not a Christian; at least by great numbers of those who will not allow any person to be a Christian who is not of their sect. I shall be accused of not believing the crucifixion, except as an allegory. But I may doubt this fact (though I expressly say, I do not here state my opinion upon it), and yet be a Christian, as much, at least, as the celebrated Christian SAINT, APOLOGIST, and MARTYR, the orthodox writer against heresies, the BISHOP of LYONS, SAINT IRENÆUS, from whose works I have extracted the following passage. I think I surely have a right to call myself a Christian, if I am of the religion of this orthodox Saint and Martyr: but I repeat, at present I do not state my opinion.

Lib. ii. Cap. xxxix. of Dr. Grabe's Irenæus has the following title: "Ostensio quod uno anno non præconiaverit Dominus post baptismum; sed omnem habuisse ætatem." And it contains the following passage: "Omnes enim venit per semetipsum salvare: omnes inquam, qui per eum renascuntur in Deum, infantes, et parvulos, et pueros, et juvenes, et seniores. Ideo per omnem venit ætatem, et infantibus infans factus, sanctificans infantes: in parvulis parvulus, sanctificans hanc ipsam habentes ætatem, simul et exemplum illis pietatis effectus, et justiciæ, et subjectionis: in juvenibus juvenis, exemplum juvenibus fiens, et sanctificans Domino. Sic et senior in senioribus, ut sit perfectus magister in omnibus, non solum secundum expositionem veritatis, sed et secundum ætatem, sanctificans simul et seniores, exemplum ipsis quoque fiens: deinde et usque ad mortem pervenit, ut sit¹ *primogenitus ex mortuis, ipse primatum tenens in omnibus* princeps vitæ, prior omnium, et præcedens omnes. Illi autem, ut figmentum suum de eo quod est scriptum, *vocare annum Domini acceptum*, affirmant, dicunt uno anno eum prædicasse, et duodecimo mense passum, contra semetipsos obliti sunt, solventes ejus omne negocium, et magis necessariam, et magis honorabilem ætatem ejus auferentes, illam, inquam, proveciorem, in qua edocens præerat universis. Quomodo enim habuit discipulos, si non docebat? Quomodo autem docebat, magistri ætatem non habens? Ad baptismum enim venit nondum qui triginta annos suppleverat, sed qui inciperet esse tanquam triginta annorum: (ita enim, qui ejus annos significavit Lucas, posuit: *Jesus autem erat quasi incipiens triginta annorum*, cum veniret ad baptismum): et à baptisinate uno tantum anno prædicavit; complens trigesimum annum, passus est, adhuc juvenis existens, et qui necdum proveciorem haberet ætatem. Quia autem triginta annorum ætas prima indolis est juvenis, et extenditur usque ad quadragesimum annum, omnis quilibet confitebitur: à quadragesimo autem et quinquagesimo anno declinat jam in ætatem seniore: quam habens Dominus noster docebat, sicut Evangelium 'et omnes seniores testantur, qui in Asiâ apud Joannem discipulum Domini convenerunt, id ipsum tradidisse eis Joannem. Permansit autem cum eis usque ad Trajani tempora.'"

Και παντες οι πρεσβυτεροι μαρτυρουν, οι κατα την Ασιαν Ιωαννη τω τε Κυριω μαθητη

συμβεβληκοτες,¹ παραδεδωκεναι ταυτα την Ιωαννην' παρεμεινε γαρ αυτοις μεχρι των Τραιανω χρονων. Quidam autem eorum non solum Joannem, sed et alios Apostolos viderunt, et hæc eadem ab ipsis audierunt, et testantur de hujusmodi relatione."

"A demonstration that the Lord preached after his baptism not (merely) for one year; but that he employed (in preaching) the whole term of his life. For he came to save all through himself: all I say who through him are born again to God—infants, little children, boys, youths, and old people. Therefore he came (preached) in every stage of life: and made an infant with infants, sanctifying infants: a child among children, sanctifying those of the same age as himself: and at the same time supplying an example to them of piety, of justice, and of submission: a youth among youths, becoming an example to youths, and sanctifying them to the Lord. So also an elder among elders, that the teacher might be perfect in all things, not only according to the exposition (law or rule) of truth, but also according to the period of life—and sanctifying at the same time the elders, becoming an example even to them: after that he came to death that he might be the first-born from the dead, he himself having pre-eminence in all things, the prince of life, above all, and excelling all. *But to establish their own forgery* that it is written of him, *to call (it?) the acceptable year of the Lord*, they say against themselves that he preached (during) one year (only?) and suffered on the twelfth month (of it?) They have forgotten—giving up every (important?) affair of his, and taking away the more necessary, the more honourable, and, I say, that more advanced period of his, in which, teaching diligently, he presided over all. For how did he obtain disciples if he did not teach? And how did he teach—not having attained the age of a master (or doctor?) For *he* came to baptism who had not yet completed thirty years of age: (for thus Luke who indicates his years lays it down: and *Jesus* was as it were entering on thirty years when he came to baptism:) and after (his?) baptism he preached only one year:—(on) completing his thirtieth year he suffered (death) being as yet only a young man, who had not attained maturity. But as the chief part of thirty years belongs to youth, (or, and a person of thirty may be considered a young man?) and every one will confess him to be such till the fortieth year: but from the fortieth to the fiftieth year he declines into old age, *which our Lord having attained he taught* as the Gospel, and all the elders who, in Asia assembled with John the disciple of the Lord, *testify*, and (as) John himself had taught them. *And he* (John?) remained with them till the time of Trajan. And some of them saw not only John but other apostles, and heard the same things from them, and bear the same testimony to this revelation."

Although this passage is very difficult to translate, arising probably from a wish of the translator out of the Greek into the Latin, to disguise the true meaning; yet it is evident that Irenæus accuses the other party of FORGERY, in representing Jesus to have been put to death only one year after he began his ministry. But I shall discuss this more at length in a future book.

I do not doubt that what I have said respecting the evidence of Irenæus will excite great surprise, and probably smiles of contempt in many persons; but I call upon all such individuals, not to give way to their vulgar prejudices, but to try this evidence by the rules by which evidence is examined in a court of justice. This is the only way of bringing the matter to a fair decision; but I believe there are very few, of even educated persons, who ever think upon the nature or value of evidence, or know that the consideration of the subject is of any consequence. This is the

¹ " (Συμβεβληκοτες) Ita Eusebius loco citato et Nicephorus, Lib. iii. Cap. ii. Sed in Georgii Sincelli Chronographia p. 345, edit. Paris, 1652, excuderunt συμβεβηκοτες, et ne quid varietatis dicit, in margini posuerunt συμβεβιωκοτες."

reason why so much nonsense is found to be believed, even by persons who, on other topics, evince a sound and discriminating judgment.

From this passage of St. Irenæus's, which has so fortunately escaped the hands of the destroyers, we learn the fact which cannot be disputed, that the doctrine of Christ crucified, preached in so pointed a manner by St. Paul, was, to say the least of it, a *vexata questio* among Christians even in the second century: this shews that we are merely a sect of Paulites.¹

If Col. Wilford may be believed, the orthodox were not the only persons who disputed the age of Christ. Speaking of the sectaries, he says, "Some insisted that he lived *thirty, thirty-three, forty*, and others nearly but not quite *fifty* years. Stephanus Gobarus has collected many of these idle notions, in the extracts made of his works by Photius."² They may be idle notions in the opinion of Col. Wilford, but they support the evidence of Irenæus, and what I have said, that it was a *vexata questio*.

Every oriental scholar knows, that Sir William Jones, Wilford, &c., have proved that the God Indra, of India, is the Jupiter Pluvialis of Greece; and I have proved that Jupiter is the God Iao of the Hebrews, and the Jesus of the Romish church. Then we have Iao crucified on a tree,³ in Nepaul. See my figures, Number 14. I beg my reader to turn to the map; he will there find, in the Golden peninsula or Chersonesus, the Crysen or country of $X\epsilon\gamma\eta\varsigma$,⁴ the kingdom of Judea and Mount Sion at the top of it. In Nepaul and Tibet there are the Eastern Pope and his monks, &c., and a *crucified* God. Again, in the promontory of India, in the South, at Tanjore, and in the North, at Oude or Ayoudia, there are the crucified God Bal-Ii, St. Thomas, Montes Solumi, sons of David, icons of Noah, Job, Seth &c., &c.: and again, in the West, there are Bacchus, Osiris, Atys, &c., &c., all put to death and raised the third day; and this done, let him declare what he thinks of it. If he be satisfied, with Parkhurst, that all these things are *types or symbols of what the real Saviour was to do and suffer*, then I ask him to say what he thinks of the evidence of Irenæus, that the real Jesus of Nazareth was not crucified by Pontius Pilate. Perhaps he will not believe Irenæus: then do I tell him, that Irenæus, in a court of justice, is evidence conclusive, that he heard, as stated, from the old men of Asia, &c., &c., and, if the reader do not believe him, he entertains an opinion contrary to evidence. I maintain, that the evidence of Irenæus is the best evidence which we possess of the death of Jesus Christ; because it is the evidence of an unwilling witness. This brings to recollection the doctrine formerly noticed, of certain heretics maintaining, that Christ was crucified in the heavens; that is, I suppose, in the $\epsilon\upsilon\kappa\epsilon\iota\tau\omicron$ *regio* of the second verse of Genesis. It also reminds me that Justin Martyr, after Plato, maintained him to have been described on the world or universe in the form of a cross.⁵ All these facts, which tend to one point, cannot, I think, mean *nothing*; and this leads me to a suspicion, that there lies hidden under them a most important and profound part of the esoteric religion. The $\chi\rho\iota\varsigma\text{-}\omicron\varsigma$, was the Logos; the Sun was the Shekinah or Manifestation of the Logos or Wisdom to men; or, as it was held by some, it was his peculiar habitation. The sun was crucified when he seemed to cross the plane of the Equator at the vernal equinox. He was slain at every passover; but he was also slain in his passage, at the vernal equinox, from Taurus to Aries; and this is described by the young man slaying the Bull in the Mithraic ceremonies, and the slain lamb at the

¹ Paul was, however, preceded by *Peter* in preaching *Christ crucified*. (See Acts ii. 23, 24, 32, iii. 13—18.) Might not believers in the doctrine of "Christ crucified," therefore, be as justly denominated "merely a sect of *Peterites*" as "of *Paulites*"? *Editor*.

⁵ Vol. I. pp. 788, 789.

foot of the cross in the Christian ceremonies. The man Jesus was the Logos, or Divine Wisdom, or a portion of Divine Wisdom incarnate: in this sense he was really the sun or the solar power incarnate, and to him every thing applicable to the sun will apply. He was the Logos crucified in the heavens; he was the being described, according to Justin, in the heavens, in the form of a cross, and when the man Jesus taught the Chrēst *Χρηστ crucified*, this, or something like it, I suspect, was the doctrine which he taught. When we find from Irenæus that he was not murdered or killed, all we can make out of our four gospel-histories is, that they were allegories, parables, apologues, to conceal the secret doctrine. The evidence of Irenæus cannot be touched. On every principle of sound criticism, and of the doctrine of probabilities, it is unimpeachable. The doctrine I here suggest unites all the discordances of every kind. I know that a great outcry will be made at me for saying that Jesus Christ was the sun. In the *vulgar acceptation* of the words, I can only say that this is not true. But that Jesus or the Logos was believed to be a portion of ethereal fire by every one of the early fathers, is a fact; whether their belief was true or not, is another question. He was the *Χρης* of India; He was the *χρης-εν* of the Tamul, which had *εν* for its termination; the *Cres-us* of the Sanscrit, and the *Chres-us* of the Latin, which had *us* for their terminations.

The ancient philosophers being much too refined and correct in their ideas to take up with the vulgar opinion, formed in a comparatively barbarous period, that the world was created by *spirit*, that is, *air in motion*, (the correct and *only proper meaning* of the word spirit, if it have any definable meaning) were driven to have recourse either to a refined igneous principle, in fact, to fire, or to use the word *illusion*. And they came to the last, because they found, on deep reflection, that they could form no idea of the First Cause; but of the emanations from it, they could; and, therefore, they conceived that the Creator was a refined fire, emanating from the *Το Ου*, or from the *illusory* unknown being. All the mistakes of moderns arise from inattention to Locke's unquestionable doctrine, that man can possess no ideas which he does not receive through the medium of his senses; consequently, man erroneously fancies he has *an idea* of an unknown existence, called spirit or a spiritual being—an unknown existence, which he chooses to call by a word that means *air in motion*. This unknown *Πατηγ αγνωστος* the philosophers called the *Το Ου*—surely a much better word than that which only meant *air in motion*. But, in fact, by this nonsensical word, the moderns contrive to deceive themselves, and gratify their malice by separating themselves from the ancient philosophers, who, if alive, would be very much ashamed to be of their company.

The view which I here take of this subject perfectly reconciles the passage of Irenæus in question, with the passages where he quotes our four gospel histories. I cannot conceive any other mode of reconciling them. Let those who disapprove it produce a better. All this is in perfect keeping with the whole of the esoteric doctrines of Jews, Gentiles, and Christians; and all this will be confirmed still more by the examination of our four gospel histories into which I shall enter in a future book, and which I shall shew were intended for the purpose of concealing a secret system. No one can deny that these books are full of parables: *without a parable spake he not unto them*. The whole is a parable, which covers the esoteric religion—a parable which it was impossible for the popes to explain to persons afflicted with insanity, like Luther and Calvin.

7. In the Old Monthly Magazine, in the numbers for October 1803, p. 221, Nov. 1803, p. 305, May 1815, p. 308, will be found a curious inquiry into the question, Who wrote Wisdom? In the same Magazine for December 1815, p. 407, August 1817, p. 35, Nov. 1817, p. 313, Who was the author of Ecclesiasticus? And in January 1818, p. 505, and in August 1818, p. 36, Who was the author of Sirach? A careful perusal of those essays will clearly shew, why these books have been

determined by the church, or rather, I should say, by modern priests, to have been written after the time of Jesus of Nazareth. They are *refused* by Protestants because they never knew any thing of *esoteric* Christianity. They were *received* by the members of the Romish church, because they understood the *esoteric* Christianity. I must beg my reader to recollect what I have said, in Volume I. p. 198, of the renewed avatars or incarnations of the Jews, then I think he will see from the following essay, January 1818, p. 505, an example of a crucifixion before the time of Jesus Christ among the Jews to match the crucifixions of Buddha and Christna, and the Christ of the Romans.

“The claim of the son-of-godship at Jerusalem, however legally vested in the house of Hillel, “was practically usurped by the house of Herod. If the representative of David was king *de jure*, “the tetrarch was king *de facto*. In the eye of the reigning dynasty, whoever claimed to be Son “of God advanced a treasonable claim; and under a constitution so strictly theocratic as to identify the sovereign and the Lord, (see, for instance, Exod. xxxv. 30,) would technically be indicted for blasphemy. Some such accusation (xi.) our Jesus incurred, was in consequence “crucified, interred, and rose again from the sepulchre. Here is his own account of this extraordinary and momentous incident of his life.

“By an accusation to the king from an unrighteous tongue, my soul drew near even unto death, “and my life near unto the hell beneath. They compassed me on every side, and there was no “man to help me; I looked for the succour of men, but there was none.”—Ecclesiasticus li. 6 and 7.

“They said, ‘He professeth to have the knowledge of God, and he called himself the child of the “Lord. He was made to reprove our thoughts: he is grievous unto us even to behold; for his “life is not like other men’s,—his ways are of another fashion. We are esteemed of him as “counterfeits: he abstaineth from our ways as from filthiness: he pronounceth the end of the just “to be blessed, and maketh his boast that God is his father. Let us see if his words be true; “and let us prove what shall happen in the end of him: for if the just man be the Son of God, he “will help him, and deliver him from the hand of his enemies. Let us examine him with despite- “fulness and torture, that we may know his meekness and prove his patience: let us condemn “him with a shameful death; for by his own saying he shall be respected.’—Wisdom ii. 13—20. “‘Thou art my defender and helper; thou hast preserved my body from destruction, and from the “snare of the slanderous tongue, and from the lips that forge lies, and hast been my helper against “my adversaries; and hast delivered me from the teeth of them that were ready to devour me, “and out of the hands of such as sought after my life, and from the manifold afflictions which I “had,—from the depth of the belly of hell, from an unclean tongue, and from lying words.’—Ecclesiasticus li. 2, 3, 5.

“But one inference is possible: there cannot have been two Menechmi¹ at Jerusalem, both “named Jesus; both born of a virgin, to whom a miraculous conception was imputed; both educated in the temple; both sent into Egypt; both undertaking a mission to reform the Jewish “church, and lecturing to that effect in Solomon’s porch; both claiming to be the Son of God at “Jerusalem; both arraigned for blasphemy; both crucified; both interred; and both reserved for “resurrection from the sepulchre. Yet all these things are true of the son of Sirach by his own “shewing.” But there *were* two Menechmi at Jerusalem. I do not doubt that there were nine or ten of them. They were all Jesuses or Saviours.

¹ Construed *comforters*: but I suspect we have here the Celtic word *mannus* and חכמ *hkm*, *man of wisdom*. I think it probable that the word has had both meanings.

I think no person will be surprised at the above, or will have any difficulty, who recollects the proofs which I have given of the identity of the Jewish and Gentile systems; and the numerous immaculate conceptions, crucifixions, and resurrections, of the Gods of the Gentiles, of the East and West.¹

The book of Ecclesiasticus, or the wisdom of Jesus, the Son of Sirach, is much corrupted, and its parts dislocated. It was written by a different author from the book of Wisdom. As we might expect, it is called *the book of parables*.² The translation of this book of the Romish church was not made by Jerom, but is found in what is called their older Vulgate, but by whom that book was made they do not know. Jerom says he saw it in Hebrew.³ But the learned Calmet makes a most important observation, the effect of which he does not see, which at once proves that the translation is much older than the Christian æra. He observes, that the translator uses *obsolete words*: thus he puts *honestas* for riches, *honestus* for a rich man, *respectus* or *visitatio* for the punishment of God on wicked men; *supervacuitas* for vanity or vain glory; *animalia supervacua* for dangerous or noxious animals. When I consider that we have the Mosaic mythos intermixed with that of the Gentiles in the Sibyl, which contained all things related of Jesus Christ,—that Clemens let out, that the same mythos⁴ was to be found in the mysteries of Eleusis, and many other circumstances described in the preceding parts of this work—I cannot help suspecting that the counterpart of the crucified person described by Minutius, is to be found in these two works. It is a very important fact, that the whole of the mythos which I have given from the Monthly Magazine is taken in part from the book of Ecclesiasticus, and in part from that of the Wisdom of Solomon, hereby affording a high probability, that the whole mythos was originally in each of them; but that it has been destroyed, or at least so much mutilated in each book as to render it in each case unobservable on slight inspection. In fact, after the time of Christ, it would be disliked equally by Jews and Christians. Of course the Jews have not these books in their Canon, because they have no books in their Canon after Haggai, who lived long before the entrance of the sun into Pisces, or the time when this eighth or ninth avatar was supposed to have lived; but the two books most clearly prove that, in the secret history of the Jews, they had the history of the crucified Avatars like the Gentiles, and that it was *their secret doctrine*.

I now beg my reader to look back to the Appendix to Volume I. p. 832, and to observe what I have said respecting the Gospel of John, found in the vault under the ancient Jewish temple. I have there noticed a pillar under the Temple of Jerusalem, on which we are told, by Nicephorus Callistus, that the Gospel of John was found, to which I beg my reader to refer. I have there said, that I thought nothing was more likely than that this gospel should have been concealed there from a time long anterior to the Christian æra. Here were concealed, in the temple, the leading Gnostic doctrines as displayed by me in the last chapter of the first volume, and the history of Jesus the son of Sirach, which we have just read, and which would as evidently apply to the history of the Jesus of the *eighth* age, as to the Jesus of the *ninth* age. The Christians have evidently got possession of this book, and have accommodated it to the history of Jesus, the Nazarite of Samaria. It is of no use to meet this by shewing parts in John's gospel which would not apply to Jesus of Sirach. Mr. Evanson has proved, (in his Dissonance of the Gospels,) that this Gospel was never written by persons connected with Judæa, and that it is full of interpolations, almost from

¹ See Calmet's Dict. on the word WISDOM, for some information on this subject. This reminds me of the account in Enoch of the *Elect one slain*, noticed in Volume I. p. 549.

² Rees's Ency.

³ Ibid.

⁴ Vide Appendix to Vol. I. p. 838.

one end to the other. It was accommodated to what was wanted, though in some respects awkwardly enough; for the first chapter betrays the Gnosis and Cabala in every line.¹

Perhaps I shall be told, that the story of the book of John having been found in the crypt of the ancient temple is a forgery of the Papists'. Protestant devotees easily dispose of unpleasant facts, and blind themselves by such kind of assertions; and undoubtedly their brother Paulites of Rome have given them plausible grounds enough for them. But it must be asked, in this case, Why the Christians, after the time of Constantine, should wish to teach that *the Jews* concealed the Gospel of John, in so solemn a manner, in this the most sacred place of their temple? Here I am quite certain, if persons would put aside their vulgar prejudices they would see, that there is a high probability that the story of Nicephorus, as far as the finding of the book goes, is true, and that all the remainder of his story is made up to accommodate the fact to his gospel history or Christian faith. I believe it is maintained both by the Papist and Protestant churches, that the gospel history of John was not written till after the burning of the temple. But whether written before or after that event, who should put it into the Jewish crypt? It was directly against the *interest* of the Christians to have put it there, as well as against that of the Jews, unless it formed a part, as I have suggested, of the Jewish secret Cabala. Supposing the Gospel of John to have been put into the crypt by the Jews, what could have been their object? If they believed the book, they were instantly Christians. If they did not, they must have detested and not venerated it. All Christians hold that from long before the time of the writing of John, the gospel histories of the other three evangelists had been written, and universally dispersed in the world, and that the book of John had been in like manner dispersed from the time it was composed.

The books of Ecclesiasticus and Wisdom most clearly prove, that the Jews had the mythos, and that it was a secret also. All this tends wonderfully to support the whole of the theory of the secret doctrines and mythos which I have been unfolding.

Suppose it a pure, unadulterated lie of Callistus': for what object did he lie? People seldom lie without some object. It could add no credibility to the genuineness of this book, written, as every one must know, in that day, if it were the fact, long after the destruction of the detested temple. It is very improbable, given as that age was to lying, that Callistus should risk so absurd and so unnecessary a lie. The probability is, *on the evidence*, that the story is true, and that all the appendages told about the temple by Callistus, are awkward lies to endeavour to account for this disagreeable, and, to him probably, unaccountable fact.

We are not to suppose that the book found and called the Gospel of John would be, word for word, the same as that which we have; a loose and general resemblance would be quite sufficient to cause and to justify the assertion of Callistus. The whole, in a very striking manner, supports and justifies what I have said in Volume I. p. 198, respecting the Jewish incarnations; and it also supports, in a striking manner, the doctrine which I have held, that the *χρησ*-tian mythos was the secret mystery of Eleusis, Delphi, and, indeed, of all nations.

The observations of the learned Calmet that the Latin language, into which the books of Ecclesiasticus and Wisdom are translated, was obsolete, is very important, as tending to shew, that the doctrine of a crucified God existed in Italy from a time long anterior to the Christian æra.

¹ I refer those persons, who cannot reconcile their minds to the dearth of information in the Jewish books respecting the different avatars, to Mr. Whiston's *Essay on the True Teat of the Old Testament*, for a decisive proof that these books have been very greatly corrupted since the Christian æra, and corrupted, too, *for the express purpose of concealing every thing respecting our Messiah or any Messiah or Avatar*. I have on another occasion praised the Jews for not corrupting their books; more inquiry has proved to me, that my praise was very unmerited.

I must now beg my reader to review all the different accounts of the mythos which he has seen in all quarters of the world—lastly, taking that of Tibet, the part of the world whence the Ioudi came, and let him consider all the proofs of the identity between it and Rome—the same monks and monasteries, nuns and nunneries, by the same names of Beguines, (Romish monks and Beguine nuns, as it will be said, founded by Nestorians,) the same *tria vota constantialia*, the same tonsures and dresses, the three sacraments of orders, eucharist, and baptism, and many other things,—and I think he will at once be obliged to allow, that there are in both the remains of the same mythos which I have been describing. In Rome, in its rites and ceremonies, it remains almost perfect, and in Tibet nearly the same.

8. I now request my reader to turn to the history of Pythagoras, given in Volume I. pp. 150, 151, and to consider carefully all the particulars enumerated respecting him, as they so remarkably coincide with the gospel history of Jesus Christ; then to p. 168; then to p. 210, and observe the close connexions of the Indian avatars and the date of Pythagoras; and, lastly, to pp. 95, 96, of this book, and I am quite certain he must admit the identity of the two mythoses, histories, parables, or whatever he may choose to call them, of Jesus and Pythagoras. Mr. Kuster, Dr. John Jones, and other devotees, have endeavoured to disguise to themselves the fact, by assuming that Porphyry, Jamblicus, and others, who have written respecting Pythagoras, have copied the life of Jesus Christ in order to run down the Christians: but unfortunately for these writers their fine-spun web is at once broken to pieces by the observation of *honest* old Maurice, that the most important facts are taken from the works of authors who lived before the Christian æra.

Now I contend that, when all the peculiar circumstances are taken into consideration, there is a high probability that in the *man crucified* of Minutius, we have Pythagoras; and that the Christians, from whom we receive all our books, have suppressed the history of the crucifixion, and inserted in the place of it the story, that Pythagoras was burnt in his house by the populace. We must not forget that he established his school at Cortona, which I have shewn, in Volume I. p. 787, was the same as Cristona, and that we learn from Jerom, that one of the earliest of the names borne by the Christians, was the same as that of South India, Crestons,—of India, whence we have seen the Camasene, the Loretto, the Pallatini, the Saturnia, &c., &c., came to Italy.

There can be no doubt that wisdom is a quality of man which can never be desired too much, or appreciated too highly. An idle attempt has been made to divide what is called the wisdom of man from the wisdom of God, and the wisdom of man has been called foolishness. It is only necessary to say to this, that if it be foolishness, it is not wisdom. Nothing can be wisdom, that is, *really wisdom*, which does not include within it every thing necessary to man's WELFARE in the most extensive sense of the word,—*welfare* here and hereafter. Hence it is very apparent that man can only *approximate* to a state of wisdom. From this beautiful and refined view of the subject has arisen the idea that this godlike quality, in fact, well deserving to be classed among the Divine attributes, was incarnated in some degree in every human being. This gives us the explanation of the Hindoo assertion, that there have been hundreds of thousands of incarnations. Whenever we get to the bottom of the doctrines of these people, we are sure to find that they, the *sages* of old, possessed no small or common share of the quality we here treat of.¹

But though, on a superficial consideration of this subject, we may be led to assign this attribute

¹ Probably the *seven wise men* of Greece were the Genii or divine incarnations of Wisdom or the Logos of the seven cycles, misunderstood by the Greeks, which had preceded the times of the authors who lived in the cycle preceding the Christian æra, which made the eighth before Christ. Of the person who was the Hero of that age, of course they could not speak with certainty. Perhaps they sought him in Alexander the Great.

to the Supreme Being, yet the profound sages of India, the Pythagorases of the East, did not dare to assign it to the Supreme as an attribute or quality; but they assigned it, in the only way they could do so, viz. by way of an emanation, from the Supreme to the Trimurti or Trinity. If it be said by objectors, that the Supreme, the Πατήρ αγγωσις, could not cause it to emanate from him, if he had it not; the reply is, that substance and all matter are, according to the doctrine of these objectors, in the same predicament; and here we arrive again at the true meaning of the *illusion*. How can we know what are the attributes of the Το Ου—of the Πατήρ αγγωσις; how vain and monstrous to attribute to Him any thing of which we have only received a knowledge through the fallible medium of OUR senses! All above the Trimurti is *illusion*, as is indeed the Trimurti itself. It is impossible to conceive a word more appropriate. It is the Maia; it is the Brahme-Maia.

I now beg my *learned* reader to bear this in mind, and then to turn to his Cruden's Concordance and read the texts which he will find there under the head of Wisdom. My *unlearned* reader, not used to consult Cruden, if any such should ever dip into this passage of my work, may consult the Apocryphal books of Wisdom and Ecclesiasticus; and, lastly, he may consult the book of Ayub or Job,¹ brought from Upper India to Arabia; from which beautiful and sublime allegory, if he understand it, he may really learn Wisdom,—a wisdom more precious, indeed, than the compass to the mariner,²—wisdom, indeed, above all price—the wisdom of patience and submission to the Divine decree—an humble resignation and contentment with our lot, and a firm reliance on the goodness of the Supreme Creator, as designing ultimately, although perhaps through temporary misery, to bring us to eternal happiness.³

Whenever the Holy Ghost was described as given to man, it was in the form of fire, if visible to the eye. Its effects always were, wisdom accompanied by power; but the power was never supposed to exist independently of the wisdom. This wisdom was the Holy Ghost, as we have seen, and whenever we closely analyse this, we always find the igneous principle at the bottom. Is it, then, a wonder, that we find the ancient Indian, Chaldean, or Collidean Ioudi, and the Persians, in the earliest and most uncorrupted state of their religion, offering their adoration to the solar fire, either as the emblem of the creative wisdom and power, or as the Wisdom and Power itself? Is it not surprising that the popes, in their anxiety to support this doctrine, should have yielded to the popular wish in adopting the rites and ceremonies with which the ancient system, in fact the system of the real γνωσις, was always accompanied?

To understand perfectly all the beauties of the doctrine of Wisdom, much and profound meditation on the word is necessary. It must be considered in all its bearings, which are almost innumerable.

¹ The least attention to the names of the actors in Genesis and Job will shew that they are parts of the same mythos.

² Job xxviii. 18: "*For the price of wisdom is above rubies.*" This ought to be rendered, *For the price of wisdom is above the loadstone or magnets*, (see CELTIC DRUIDS, p. 113,) and, consequently, above the mariner's compass, well known to the ancients. But how beautiful is the simile of the magnet or loadstone to the Supreme and to wisdom—causing to emanate and its invisible power or influence to draw to it the iron—and, again, pointing at its pleasure to its favourite north—where it "sits in the sides of the north," guiding amidst the dangerous shoals and quicksands the benighted mariner! All this, and much more, is lost in the nonsensical *rubies*.

³ If we consider the Chaldee language of South and North India to be the same, and that language to be the origin of the Tamul, we shall have no difficulty in thinking it probable that the principal actor in the book of Job, Eliphaz the Teman-ite or T'm-an-ite, was a Tamulite; the syllable *an* in Te-man being only the terminating *en*, which we know was a peculiarity of this language. We must not forget the Tamul Kaliowakim, which can, in fact, be called nothing but a book of wisdom, if the book in our canon deserves the name. The Persians had their book of Sophi or Wisdom; so had the Jews; and so had the Tams—no doubt written in their alphabet of sixteen letters. See Jeremiah xlix. 7. The Goddess Cali was from the Greek Καλος *beautiful*, and the Latin Calleo and Callidus, *a cunning or wise person*.

9. If we turn our minds back to what we have seen, we shall find with the Romish church every rite of Paganism; every thing which has been disguised by being charged to the Gnostics is found there, without a single exception. Irenæus was evidently a Gnostic. If he were not, how came he to place the Zodiac on the floor of his church? a part of which, not worn away by the feet of devotees, is yet remaining. He was of the sect of the Christ *not* crucified. How is all this to be accounted for, except that what the first Christian fathers all taught was true, namely, that there was an *esoteric* and an *exoteric* religion? A great part of what I have unfolded, indeed almost the whole of it, applies to the Gnostics; that is, to the Jesus described by the disputed chapters of Matthew and Luke—to Jesus of Bethlehem. St. Paul preaches, in a very pointed manner, *Christ crucified*; this was in opposition to the Christ *not* crucified of the Gnostics; and, in later times, of the Manichæans and Mohamedans. Gnosticism was the secret religion of the conclave. They had Jesus of Bethlehem for the people, Jesus of Nazareth for the conclave and the cardinals. For the people, they had and have *Jesus crucified*; for the conclave, Jesus *not* crucified. This will appear to many persons at first absolutely incredible. Most fortunately the church has been guilty of the oversight of letting the passage of Irenæus escape. One of the earliest, most celebrated, most respected, and most quoted authority of its ancient bishops, saints, and martyrs, tells us in distinct words, that Jesus was *not* crucified under Herod and Pontius Pilate, but that he lived to be turned fifty years of age. This negatives the whole story of Herod and Pontius Pilate. This he tells us on the authority of his master St. Polycarp, also a martyr, who had it from St. John himself, and from *all the old people of Asia*. It will, perhaps, be said, that Irenæus was a weak old man. He was not always old, and he must have heard this when young, under his master Polycarp, and have retained the knowledge of it during his whole life, and thus must have had plenty of time to inquire into the truth of what he had heard; and, weak or not, he was a competent witness to the dry matter of fact, viz. that he was told it by St. Polycarp and the elders of Asia.

The escape of this passage from the destroyers can be accounted for only in the same way as the passage of Minutius Felix. Two passages escaped, among, probably, thousands destroyed, of which we know nothing, under the decrees of the Emperors, yet remaining, by which they were ordered to be destroyed.

We have seen great numbers of remains of the mythos of the different incarnations of the Buddhas, Cristnas, Salivahanas, &c., in India, recurring again and again in each cycle, as foretold by the Cumæan and Erythræan Sibyl, before the time of Christ. We have seen all the things which happened to the *Χρῆστος* foretold before his birth. [We have seen that the mythos of the crucifix was common to all nations, before the time of Jesus of Nazareth, from Thule to China. Whenever our travellers in India found any nations holding the doctrines of this universal mythos, the history of Adonis or Tammuz, which, of course, though substantially the same, vary in the detail, they instantly determined them to be corrupted Christians. A similar effect took place in Italy. The ancient proofs of this mythos were either destroyed as *corruptions*, or *adopted*: the latter was the case in vast numbers of very ancient crucifixes and paintings of the Bambino, on which may be seen the words *Deo Soli*. Now these two words can never apply to Jesus Christ. He was not *Deus Solus* in any sense, according to the idiom of the Latin language and the Romish faith. Whether we construe the words to *the only God*, or to *God alone*, they are equally heretical. No priest in any age of the church would have thought of putting them there. But finding them there, they tolerated them. Without examination they took for granted that they could apply to no one but their God, and endeavoured to explain away their *Unitarian* meaning as well as they were able. These considerations most satisfactorily account for the disappearance of the *heathen*

crucifix in Italy, India, and Britain. Where it was not destroyed it was adopted. The passage of *Minutius Felix* places its existence out of reasonable doubt.

Upon the fire tower at Brechin, described in my *CELTIC DRUIDS*, pp. xlv., xlvii., plate 24, we have the man crucified and the Lamb and Elephant. As I have said there, I thought these completely proved the modern date of the tower, but I now doubt this; for we have, over and over again, seen the *crucified man* before Christ. We have also found “the Lamb which taketh away the sins of the world” among the Carnutes of Gaul, before the time of Christ. And when I couple these and the Elephant, or Ganesa, and the ring, and its cobra, Linga, Iona, and Nandies, found not far from the tower on the estate of Lord Castles, with the Colidei, the Island of Iona and Ii, and the Hebrew names, &c., found in Wales, I am induced to doubt my former conclusion. The Elephant, the Ganesa of India, is a very stubborn fellow to be found here. The ring, too, when joined with the other matters, I cannot get over. All these superstitions must have come from India whilst the Hebrew, that is, Celtic language, was in use.

That the ideas of the Trinitarian character of the Deity should be taken from the doctrines of the ancient philosophers, will surprise no one who considers how much they are praised by the most respectable of the Christian fathers—I speak of Clemens Alexandrinus, Justin, Ammonius Saccas, Origen, &c. Clemens expressly says, that the rudiments of celestial wisdom, taught by Christ, may be found in the philosophy of the Greeks; this is Esoteric Christianity. And Justin says, that Socrates was a Christian, and that, before the advent of Jesus Christ, philosophy was the way to eternal life. He calls it *Μεγιστον κτημα*, “a thing most acceptable in the sight of God, and the only sure guide to a state of perfect felicity.” The opinion of the early fathers on this subject may be seen at length in Vol. II. of Vidal’s translation of the Commentaries of Mosheim, note, p. 114.

The division of the secret Christian religion into *three* degrees, the same as the division at Eleusis, namely, *Purification, Initiation, and Perfection*, described in my *first* Volume, p. 822, is of itself sufficient under the circumstances to prove the secret religions of the Christians and Gentiles to be the same.

In Mosheim’s Commentaries, Cent. II., may be found almost innumerable proofs, that a double meaning was universally, or very nearly universally, acknowledged to be contained in the gospel histories, until after the middle of the second century. But it is Mosheim’s object to represent this as an innovation, introduced about that time; he therefore very skilfully assumes that no Christian writers before the time of Justin held this doctrine, though he is obliged to admit that it was held by Philo and the Jews. Mosheim must have well known, that the double meaning was held by all authors whom we possess before the year 150, as well as, I believe, by all after it, for many years. I challenge any polemic to produce to me the undisputed work of any author before that year, in which it is not expressly supported. But I object to pretended quotations from the works of the ancients by Paulites. If the reader will peruse Mosheim’s Commentaries, keeping in mind that his object is to represent the *Arcani disciplina*, or, as he calls it, *that more secret and sublime theology styled by Clement of Alexandria γνωσις*, as a new doctrine, he must, I am certain, be obliged to see that Mosheim most abundantly, but unwillingly proves, that it was the received doctrine from the beginning, and *no new thing*. In fact, the literal exposition was not adopted by the higher classes of society, till all classes were equally degraded in intellect; then the literal meaning of both the Old and New Testaments was, for the first time, received by the higher ranks; and the existence of a secret doctrine began to be denied.

The favourite objects with Ammonius, as appear from the disputations and writings of his disciples, which I stated in Volume I. pp. 824, 825, were those of not only bringing about a reconciliation between all the different philosophic sects, Greeks as well as barbarians, but also of pro-

ducing a harmony of all religions, even of Christianity and Heathenism, and of prevailing *on all the wise and good men of every nation* to lay aside their contentions and quarrels, and to unite together as one large family, the children of one common mother. With a view to the accomplishment of these ends, therefore, he maintained, that divine wisdom had been first brought to light and nurtured among the people of the East by Hermes, Zoroaster, and other great and sacred characters; that it was warmly espoused and cherished by Pythagoras and Plato, among the Greeks; from whom, although the other Grecian sages might appear to have dissented, yet that with nothing more than the exercise of an ordinary degree of judgment and attention, it was very possible to make this discordance entirely vanish, and shew that the only points on which these eminent characters differed were but of trifling moment, and that it was chiefly in their manner of expressing their sentiments that they varied.¹ Surely nothing could be more desirable than the objects aimed at by Ammonius, or more deserving of the exertions of a good man.

Amidst all the confusion of sects, two leading doctrines may be perceived—that of those who held the literal meaning, at the head of which was Paul; and that of those who held the allegorical or learned, of which were Pantænus, Clemens, Origen, Justin, Philo, and Plato.

In reply to these observations I shall have some foolish explanations pointed out to me, given by or attributed to Clemens, Origen, &c., of the allegories. This mode of treating the subject may serve to blind readers of little thought, but can never change the facts, either that allegory, i. e. parabolic reasoning, was meant, or that it was attributed to these writings by the first Christians. The foolishness of the explanations (probably only given as a matter of *state policy*) may be fairly urged against admitting allegory, but against the fact that the writings were intended to be allegorical, it can never be urged.

The more I reflect upon Gnosticism, the more I am convinced that in it we have, in fact, the real science of antiquity—for a long time almost lost—but, I trust, by means of our oriental discoveries, yet to be recovered. Perhaps, from being placed in a situation to take a bird's eye view of its various departments, we may be better qualified to form a just estimate of it than any of our predecessors for some thousands of years past. In order to do this, we must, I think, divest our minds of the respect with which we have been accustomed to look upon the early Christian authorities, and to consider them as in reality no better guides than we consider the leaders of our sects of Ranters, Jumpers, and genuine Calvinists; and, I apprehend, though a Wilberforce and a Halhed may sometimes be found in modern, as an Origen and Clemens Alexandrinus were in ancient times, yet no philosopher will think of placing even those persons in the same grade of intellect with the learned and profound Locke, or the unlearned glove-maker of Salisbury,² or the printer of America.

Ammonius Saccas, the greatest of the early fathers, held Jesus Christ in veneration, as a person of a divine character and a teacher of celestial wisdom.³ It was not till after the time of Justin Martyr that the Paulites of Rome began to prevail against the philosophers of Alexandria, where, in its catechetical school, the original *Chrēstianity* was taught; and from the hands of such men as Plato, Philo, Pantænus, and Ammonius, it fell into the hands of such men as Calvin, Brothers, Wilberforce, and Halhed; and the consequence was, that instead of a religion of refined philosophy and wisdom, it became a religion of monks and devil-drivers, whose object, by the destruction of books and their authors, was to get the upper hand of those they could not refute, and to reduce all mankind to their own level. With these people, the popes, who were equally desirous of power, formed an alliance, and, to conceal this, fabricated the Acts of the of the Apostles, the

¹ Mosheim's Comm. Cent. ii. p. 132.

² Thomas Chubb.

³ Mosheim's Comm. ut sup. p. 127.

Latin character of which is visible in every page: for a proof of this, Mr. Evanson's Dissonance of the Gospels may be consulted.

The sect of early Christians, the lowest in intellect of all, having, with the assistance of an unprincipled conqueror, obtained possession of the supreme authority, did precisely what the followers of Cranmer, the Ranters, and the Calvinists, would do at this day if they had the power,—they destroyed all their superiors in science, and burnt their books; and we, following after them, being in fact their children, inherit their confined and mistaken views. Our minds, by the viciousness of our education, are unable to form a correct estimate of our own feebleness; and until we are convinced of this truth, we shall in vain endeavour to search after the lost science of antiquity. I have found the difficulty of unlearning the false learning of my youth, much greater than that of acquiring the real learning which I possess. Very truly has Thomas Burnet said, *SAPIENTIA PRIMA EST, STULTITIA CARUISSE*.¹

M. Matter has observed, that, in real knowledge, we are very little in advance of the ancients on that kind of subjects on which we treat; that, though we are very verbose upon many which are of a trifling and unmeaning import, upon great ones we are silent.² For an instance of what I mean, I ask, Whence comes the soul, and whither goes it? How is it combined with matter, and how is their separation effected? The observation of M. Matter is very just. Fortunately, perhaps, for me, the discussion of these points is not in my plan; I have only to notice the history of the attempts to remove the difficulties with which, in all ages, they have been surrounded: and, I think, whether true or false, the candid reader will allow, that the system of the oriental Gnosis was, as I have called it, *beautiful and sublime*.

Throughout the whole of my work, it has been my sedulous wish to conduct my abstruse investigations with the strictest impartiality, and never to flinch from a consideration of imaginary injury to religion; for, if religion be false, the sooner it is destroyed the better; but if it be true, there can be no doubt that *veritas prævalebit*, and that it is very well able to take care of itself. But I will not deny, that when I meet with any theory which takes religion out of my way, and leaves to me the free investigation of the records of antiquity, I receive great pleasure; for my object is not to attack religion: my object has been to inquire into the causes of innumerable facts or effects which have hitherto baffled the efforts of the most industrious and learned inquirers. Such is the observation made by the learned Parkhurst on the subject of Hercules and Adonis,³ that they are symbols or types of what a future Saviour was to do and suffer. It must be obvious, on a moment's consideration, that all the histories of the births, deaths, resurrections, &c., of the different Gods, may be easily accounted for in the same manner; and if this be granted, it is equally obvious, that the nearer they are to the history of Jesus Christ, the more complete symbols they become; and thus the development of the ancient histories, to those who admit the doctrine of symbols, becomes a handmaid instead of an opponent to the religion.

I am well aware that the doctrine of Mr. Parkhurst comes with but an ill grace from priests, who have never ceased to suppress information, and that the time of the discovery by Mr. Parkhurst is very suspicious. But notwithstanding this very awkward circumstance, I beg my philosophic reader to recollect, that the want of principle or the want of sense in priests cannot in fact change the nature of truth, and that it is very unphilosophical to permit such want of principle or want of sense to influence the mind in his philosophical inquiries.

¹ See the passage quoted, in Vol. I. p. 29. *Ed.*

² That may be very justly said of us which Sallust said of the Roman Senate, *Satis eloquentiæ, sapientiæ parum*.

³ In voce *ly* oz V. pp. 520, &c.

On the reasonableness of Mr. Parkhurst's doctrine I shall give no opinion: to some persons it will be satisfactory, to others it will not be so. But, as the opinion of our church, I have a right to take it. If any ill-judging member of the church should deny this doctrine of Parkhurst's, then I desire him to account to me in some better way for what we have found in the histories of Buddha, Cristna, Salivahana, Pythagoras, &c. If he fail in his attempt, let not the honest inquirer for truth blame me. I have fairly stated Mr. Parkhurst's opinion and mode of accounting for the facts which I have developed, because I consider them the best which I have seen, and because I should not have acted with fairness and impartiality had I not stated them. They have a tendency to promote the interests of science, not to injure them.

In his first chapter and seventeenth verse Matthew says, "So all the generations from Abraham to David are fourteen generations; and from David until the carrying away into Babylon are fourteen generations; and from the carrying away into Babylon unto Christ are fourteen generations." Surely nothing can have a more mythological appearance than this. We must not forget that the Bible says, the age of man is seventy years; by which we have already seen that the sum of seventy-two years is almost uniformly meant. These three series of generations make 42, which multiplied by $71\frac{1}{2}=3003$. If we add 14 more generations before Abraham to the $42=56$, we shall have $71\frac{1}{2}\times 56=4004$, the correct orthodox chronological period. If we then add, in the same manner, 28 for two series more, making $84\times 71\frac{1}{2}$, we shall have six series for the 6000 years, which completes the mythos. Nimrod says, "As to their Manichæan romance legends we may observe, that the succession of Great Abad, (Bauddha, or Abaddon from the bottomless pit,) and the thirteen Abads, implies the thirteen generations of Solimans or theanthropic rulers from Adam to Nimrod."¹ Now the Great Abad or Buddha and the *thirteen* make fourteen, and this makes up the correct number to complete the mythos, as it is evident, from Nimrod, that the Manichæans made it out. Besides, it appears that the reckoning, by periods of *fourteens*, is exactly in character with the gospel history. The author of the Cambridge Key has made an observation which shews, in a very striking manner, the universal nature of the mythos: "I may observe, that of the first fourteen dynasties of Manethon, seven are without names; and that in the first fourteen dynasties of every other nation the same omission is observable. The Hebrews only give the names of Adam, and the six princes in the race of Seth, who *reigned* in succession. The Hindus and Chinese give the first created, and six princes in the same line: the Chaldæans those in the race of Cain: each nation omits the names in the other race, that is, the names by which they were known as sovereigns. The Old Chronicle, which treats of Upper Egypt, gives the dynasties, or more properly reigns, complete, *making Noah the fourteenth.*"² This accounts for the series of fourteen before Abraham not named by Matthew. It is probable that the difference between the Samaritan and Hebrew chronology has arisen from a corruption of the Hebrew, to make it suit to certain mistaken times of the equinoxes or solstices of the Greeks and Romans, of eight or nine days alluded to by Columella, who is doubtful whether it was eight or nine days—all which will be noticed at large presently. To prove this, if we take 56 generations and multiply them by 72, and add for the 8 days and part of 8 days, in all 9 days—9 generations— $9\times 72=648$, we shall have 4680.³ But if we take the nearly correct time for the precession in one sign, $+2153+2153, +357\frac{1}{2}+16\frac{1}{2}=374=5$ degrees, and a fraction of one degree, we have 4680; and if we take another fraction of one degree, we have $2153+2153+357\frac{1}{2}+36\frac{1}{2}$, we have 4700. If we multiply the more correct Manwantara, $71\frac{1}{2}$ by 56, the number of generations, we have 4004. Here we see the real cause of the difference between the Samaritans and Jews. The former took the

¹ Vol. II. p. 509.

² Vol. II. p. 135.

³ See Vol. I. p. 191.

correct time by the precession, which did not cause the error of the Greeks and Romans of 9 days; the latter took the common erroneous Greek and Roman, and thus got their 4004 years. It seems to me impossible to devise any thing more satisfactory than this. We must not forget what I have said formerly, that these calculations will all be right if made in round numbers, if the error do not exceed 71 or 72 years, which mode of calculation, for the festivals, is justified by the state of the case, as well as by the observation of Columella. This we shall see presently.

An Antara, often called Outar¹ by our travellers, of India, means a generation or age, and a Manw-antara is an age, that is evidently *an age of man*, and consists of seventy-two years, or of seventy-one and a fraction—rather better than a *half*—the age of man spoken of in the Bible. Here we have the fifty-six Manwantaras exactly agreeing with Usher. It will not have been forgotten that, in our calculation of the cycles, we always deducted for the precession of one sign, 2160 years. An age or generation was also thirty years. The Persians said, that there were seventy-two Solomons, that is, seventy-two *wise men* before the flood: these were $30 \times 72 = 2160$, the years of the precession in one sign. In these cases the Solumi were probably incarnations of wisdom or the sun, reigning in the towns where the temples of Solomon were built. Mr. Niebuhr has contended that, from the peculiar division of the first kings of Rome into astrological periods, making up the number 360, combined with other circumstances, it is apparent that not a real history but a mythos must have been intended, and this reasoning has been received by learned men with almost universal approbation. Now, in consequence of meeting with the history of Solomon and Saul, (or Talut² as he is called both in India and Western Arabia,) and many other particulars of the Jewish history both in India and Western Syria, the use of astrological numbers in the history of the Jews, and the extraordinary and unaccountable fact, that Herodotus never names the magnificent empire of Solomon, it is apparent that the whole Jewish history is an allegory, is, in fact, the same kind of history as that of the first three hundred years of Rome.³ It is one of the parables of the Christian religion, in the gospel histories of which Jesus Christ is made, in so peculiar a manner, to teach his doctrines. The peculiarity of the fourteen numbered periods at once proves that this was not meant for real history. It is totally incredible that such round numbers should come out in real life and complete the sum of the 6000 years. The Mathematicians or Chaldeans, as I shall presently shew, were the only persons who really understood the principle of the mythos in the time of Cæsar, which induces me to believe that the whole Xρησ-tian mythos was a Masonic or Rossicrucian mystery; first, in part, let out by the publication, under *Ptolemy*, of the Jewish Scriptures, (or of what were perhaps only a part⁴ of the Jewish Scriptures,) and never, in fact, all openly known in any thing approaching to a whole—never put together or explained openly, until now so done by me. It would originally be known at every great temple, like Delphi, Eleusis, Dodona, &c. As time advanced, parts of it got out by the treachery, indiscretion, or insanity of the initiated, and all became every day more doubtful, in consequence of the neglect of intercalary days, which was throwing the system into confusion.

¹ The word Outara means *an age*, and a Man-outara is *an age of man*.

² See Vol. I. pp. 546, 740, 741.

³ The Abbé Bézin says, "No Grecian author cited Moses before Longinus, who lived in the reign of Aurelian." *Phil. of Hist.* p. 159. This seems a very curious and important observation indeed.

⁴ The book of Genesis shews evident marks of its being a compilation, and of mutilation. The way in which the tree of life is named, ch. ii. ver. 9, shews that some account of it, now wanting, must have preceded. The amalgamation of the Xρησ-tian with the Jewish mythos in North and South India, in which they differ from the present canonical mythos of the Jews, which does not include the crucifixion, resurrection, and ascension, &c., shews that we have not the whole; but we have it clearly in the Apocrypha, which proves that the mythos was a secret doctrine. This is confirmed by the extraordinary circumstance of the whole mythos being found, as we have seen, in Mexico—Book I. Chapter IV.

Whenever we get back to the earliest point to which we can go, we always find the Chaldei or Mathematici—those persons who are said by Josephus to have handed down the cycle from the Antediluvians, the persons, I think, (as shewn by Mr. Hammer,) who, under the name of Mathematici, were certainly Freemasons. The historical evidence that the Chaldeans were Chasdim, or that the Chasdim were Chaldeans, is clear; but I think Mr. Bryant's objection to the etymological derivation of Chaldean from Chasdim is well founded. The fact, probably, was, that the Chasdim or Chasidim, were persons of the college of Casi, which was in Ur of the Chaldees, or Callidiia, or, in the country of the di-cali or ia of the the holy Cali. We have a Casi to which students in medicine went to study the Chaldean language in two places in North India: Benares, anciently called Casi, and the temple of Solomon in Casi-mere.¹ This order of Cyclopes or Calidei or Mathematici were the builders of Stonehenge and Abury in the West, and of Dipaldenha, the temples of Solomon, the Pyramids, &c., &c., in the East, beginning with the simplest of all temples, a Gilgal, that is, *stone circle*, and ending with the highly finished York Minster. The Chasdim or Kasdim or Casi-di-im were Kasideans, and both the same as the Callidei or Chaldei or Chasidim. The Chalidi were followers of Cali, the female deity of love; the Casideans were from חרש *hrs*, as we say *Chrs*, *Ερωσ*, the male deity. In my opinion that the Chasideans or Kasideans were Chaldei and Mathematici and Freemasons, I am supported by Scaliger, who makes them *knights of the Temple*, to whom the duty was specially devolved of maintaining that structure. Scaliger says, that they were *not a sect, but an order or fraternity*, and consisted of men of great wealth and power.² The circumstance that the Kasideans or Casi-deans were an order, and not a sect, is very important; for this accounts for their being found in several sects or religions, like Freemasons, and for the Templars being Kasideans. The description applies to the Freemasons in every particular; and this accounts for their being found among the Essenes, in consequence of which they have been thought to have been Essenes. I have some suspicion that the Caraites were a branch of them, and were named after the district called Cozar or Cæsar, whence the Caspian sea was called Kistr. I think we may be pretty certain that the Kasideans were masons and successors of the Cyclopes, the fabricators of the stone circles, cromlehs, &c.³ It is very curious to observe, that not one in a thousand of the inquirers into the antiquities of nations ever condescends to bestow a thought on the authors of these very numerous edifices, and the most stupendous monuments on the face of the earth—to be found in all countries, even of the *new* as well as of the *old* world. I find from Mr. Sharon Turner,⁴ that the year of the Anglo-Saxons began on the 25th of December. The night before that day, they called Moedreneh, *Mother Night*. It was spent in religious ceremonies. Our month of December was called Giuli, or Ærra Geola, and the month of January was called Æftera Geola. Bede says, the Saxons called the months above-named Geola from the turning of the sun on that day.⁵ Now there does not seem any reason to believe that they had learned this from either the Romans or the Christians; and, if this be admitted, we have here, in the correct fixation of the solstice, a decisive and triumphant proof that the *Barbarian* Saxons were better skilled in astronomy than either the Greeks or Romans, in the time of Cæsar. This affords strong presumptive evidence that the priests or Druids, or Callidei, were descendants or had derived their learning

¹ See Vol. I. p. 702.

² Basnage, Hist. Jews, B. ii. Ch. xi. p. 126.

³ The numerous circles which are found in India are said by the inhabitants to have been erected by a race of people called Chæones or Chaons, who are said to have been pigmies. Why they are supposed to be pigmies I cannot imagine; but the word Chæon is only the aspirated Æon or the Greek Αἰων, and has the meaning of *cycle* as well as *emanation from the sun*, and is thus a cyclop, one of the Pi-clo or of the Cyclopes.

⁴ History of the Pagan or Anglo-Saxons, Vol. II. Ch. iv.

⁵ The Geola is evidently our goal, used in racing.

from the Chaldæans of Tartary, or Eastern Scythia, or North India. There are only two ways of getting over this. The first is, to attribute it to accident. The second is, to suppose that these ignorant barbarians took their Festival from the corrected calendar of the Romans—with whom they were at perpetual war. Man was considered a *microcosm* by the Mystics; and as he was made after the image of God, and as God was the Kosmos, Mundus, he was made after the image of the world, the Το Παν, the Το Ον. We have before observed, in numerous instances, his close connexion with the renewing cycles, and on this account the first race of one-eyed beings, called Cyclopes or Κυκλοπεις, made after the image of God, *the sun*, had only *one* eye. After some time, and for the same reason, the Hero Gods—Jupiter in the West, and Vishnu in the East, came to have *three* eyes in imitation of the supposed image of the Trimurti. In strict accordance with this was the renewed incarnation of the Solar Deity, the Λογος, in every cycle, in every *neros*, in which every thing was supposed to be renewed—new Argonauts, new Troys, &c. Thus the Genius of each cycle, every year as it revolved, was celebrated microcosmically. In allusion to this, he was born with the new-born Sun on the moment when the sun began to increase on the 25th of December, and he was feigned to die, and be put to death, and to rise from the grave after three days, at the vernal equinox. The God was continued by renewed incarnation till he came again, till the cycle ended and was renewed, till the end of the 6000 years. This is still exemplified in the Lamas of Tibet, and in the Popes, in all things yet more similar than, from the lapse of time and their great distance, could be expected. Here we find the reason why some of the Popes, intoxicated with silly vanity, let out the secret and called themselves Gods upon earth; and this is the reason why, as incarnations of the Creator of Heaven, Earth, and Hell, they wear the *triple* crown. The ceremonies of the Romish church consist almost entirely of scenic representations of the acts of Jesus Christ. All his history is acted over every year; a measure well calculated to keep the mythos in the minds of the people, for which our reading of the gospel histories has been substituted. Of the same nature were our sacred dramas, or mysteries as they were called, of the middle ages. Of the same nature were the plays of Æschylus, in which, as I have before remarked, we have the Prometheus *bound*, so called to disguise it, but which ought to be the Prometheus *crucified*. After his resurrection Jesus is said to have gone before his disciples into Galilee; ¹ that is, Γαλ-αλ-ια or גל-גל-גל *gl-al-ia*, the country of the circle or revolution. We must not forget that Sir William Drummond proved that all the Hebrew names of places in the holy land were astronomical. I have no doubt that these names were given by Joshua when he conquered, settled, and divided it among his twelve tribes, and that all those names had a reference to the solar mythos. The same mythos prevailed in almost every country, and this is the reason why we find the same names in every country. They were the sacred or religious names, the places, probably, having other common names, and were necessary for their religious rites; their search for the members of Bacchus, of Osiris, &c., or for the journey of the Mary's to look for the body of Christ. We must not forget that we have the three Mary's in Britain and in Gaul, one of them the *Virgo Paritura*, and at Delphi, as well as in Palestine. All the great outlines of the mythoses were evidently the same, though, of course, in a long series of years, they varied in small matters. But the similarity, as we find, would continue the longest in the names of places and countries,—though, as I have just said, I do not suppose those sacred names were those in common use. I have no doubt that every country and place had *two* names at least. Each independent territory had its sacred mount or Olympus, &c. In time, as one state or tribe

¹ Mark xvi. 7.

conquered another, or as a country of twelve tribes divided, the two mythoses would be thrown together or divided, and perhaps a new mount adopted by part of the tribes, as a new mount was adopted at Jerusalem. It was not in the nature of things that either the twelve tribes or their mythos should always continue. We have hundreds of Jupiters or Gods I E, η or Jah; all the Gods were Jah and Rajah, or Roi-Jah. We have numbers of Mithras, Bacchuses, Herculeses, &c., &c. Sometimes they were multiplied by the genii of the nine cycles, all going by the same name. Sometimes, as in the case of Bacchus or Hercules, by the God or Genius of one cycle taking the same name in many different countries. All this has led to the confusion which, in these matters, has hitherto prevailed, and necessarily prevailed. In my opinion the singularity of the regular periods observed by Niebuhr sufficiently proves the mythos; but there are traces of another period, of which Mr. Niebuhr had no knowledge, to be found in Cato,¹ who gives a different account, and says, that Troy was taken 432 years before the foundation of Rome. Here we have evidently the two numbers on which the cycles of 2160—21,600—432,000, are founded. In the multitude of our researches we have very often met with the word $\square\psi$ *sm* or $\square\delta$ *sm*, as a name of the sun. I feel greatly surprised at myself that my mind should have never been turned to this curious and important word, evidently the Roman Sumnaut.² Its numeral power is $\Sigma=200$, $M=40=240$. For reasons which we shall soon see, this has probably been its meaning in the Latin or Etruscan. But as I have, in a future book, established the fact on as good evidence (viz. a high probability) as these matters will admit, that the last three letters of the alphabets were interchangeable as far as regards their powers of notation, we may consider the Hebrew meaning to be the same, namely, 240. In the Hebrew, as a verb, it means *to place in order*. In its plural, it is applied, in the first verse of Genesis, to the *planetary bodies*, and, generally speaking, I believe it may be rendered a planetary body, ranking the sun as one—for it is constantly used for the sun. Mr. Parkhurst observes, that probably the idol Chemin of the new world was the same word, as it had the same meaning. As a name of the sun, it came to denote *the trinity* (as Mr. Parkhurst shews that it did). In strict keeping with all my previous doctrines, it means *to place in order with great care*, and *to make waste and utterly desolate and in disorder*; herein exhibiting the Generator and Destroyer. It meant an *onion*, from the regular disposition of the involucra or integuments.³ An onion was considered to be $\alpha\iota\omega\nu$ $\tau\omega\nu$ $\alpha\iota\omega\nu\omega\nu$.

I must now request my reader to turn to Volume I. pp. 647, 648, 658, and he will see it proved, by various authorities, that the fish Oannes was in name the same as John. John was the cousin of Jesus. Now, I think, there can be no doubt, that Arjoon, of the Indians, is the same as the John of the Christians. His name with the prefix Ar, which I do not understand, is the same. Arjoon was the cousin of Cristna, and nearly every thing which was said of Rama is said of Ar-joon. It is remarkable that Cristna and Rama are said to be the same. Then, if Rama is the same as Arjoon, Arjoon and Cristna must be the same. John is the cousin of Christ, Arjoon of Cristna. Christ is represented both by the Lamb and by a Fish or the Fishes. The Lamb is Ram, the Fish is John or Oannes. In the state of the Planisphere at the ninth cycle, John or Oannes or Pisces, had been running 360 years, or was declining before Jesus, in the ninth cycle of the Neros, had begun. Though different cycles, they were, as forming a part of the whole large one of the Zodiac, or 2160 years, the same. Thus John had passed 360 years, more than half of a cycle of 600, when Jesus began his cycle. All the cycles of the Neros would be cycles of the Ram or Lamb, whilst the equinox was passing

¹ Antiquit. Rom. Lib. i. Sect. lxxiv. p. 59; Hom. et ses Ecrits, par D'Urban, p. 41.

² Refer to Appendix of first Volume, p. 833, for corruption of *Tam*, Sam, Cam; it shews Sam to be the original.

³ Numb. xi. 5; Parkhurst in voce; Hutchinson's Works, Vol. IV. p. 262.

through Aries ; and of the Fish, whilst it was passing through Pisces. Thus Rama and Cristina were the same. Joannes=240, and RM=240, the name of the sacred number of Rome, or the city of Rāma, as pointed out by Niebuhr. The period of 360 years, which John or Pisces preceded Jesus, will form a cycle with the 21,600, as well also as Rome's sacred number of 240. Thus we find Ramas in the history of all the cycles connected with Cristina, and subsequently we find Johns. I think the Eastern nations, in a particular manner, attached themselves to the number 6, the *vau*; and the Western to the number 5. (We must never forget Pythagoras's doctrine of numbers.) The first, to the $6 \times 12 = 72$, and $72 \times 6 = 432$. The latter, to the $5 \times 10 = 50$, and $60 \times 10 = 600$. The 6, the *vau*, the even number, was for the *female*; the 5, the odd, for the *male*; and the two united formed the cycle or sacred number, 4320. The five is the η or He, the male in Saxon and Hebrew. The two together make the *Evau*; and also the $\aleph\aleph$, *iuaa*,=28. Although I cannot exactly explain how or by what steps it arose, yet it is clear to me that the sacred number, 240, of the Romans, arose from $\square w sm = 240$; and, in the plural, their God Saman. Mr. Niebuhr has shewn how both the number of 360, and the number of 240, were used by the Romans, in each case making up their number of 1440, from the destruction of Troy to the founding of Nova Roma, by Constantine, on the seven hills, in the Thracian Romelia or the Romelia of Thrace, where the widows were burnt on the funeral piles of their husbands—in a country called Sindi, having the religion of the $X\epsilon\gamma\eta s$. Although I cannot explain how it was made out, I think I can see a high probability, that this mythos of the Romans and of Constantine was closely connected with, or was an integral part of, the mythos of the East, of Virgil, as we might expect from the doctrine of Ammonius Saccas, that, in the main, all the religions were the same. I must now make a few observations on the want of *absolute accuracy* in round numbers, which shews itself in almost all the calculations; but, if we look closely into the matter, we shall observe, that this is an effect which, in most cases, must necessarily arise from the primary numbers of nature, on which they are founded, not being accurate. Thus, for instance, the Millenium is founded on the Neros; but the correct Neros depends, by nature, on the fraction of a second of time: and the question often presents itself, whether we are to take 2153 or 2160. It is obvious that, by taking a fraction, I could easily bring out my whole round number of 6000; but *cui bono*? It is sufficiently near for the vulgar runners after the Millenium. It is evident, or in a few minutes will be so, that all these little errors were perfectly well known to the Chaldeans. In addition to these considerations I shall shew, in a future book, that the Chaldeans foresaw that a Comet would affect the earth in more than one of its progresses; and, by its disturbing force, necessarily cause an irregularity, from its nature unknown, but, on the whole, even of several years. This is perfectly justified by the retardation which astronomers observed to take place in Jupiter when the Comet [of 1680?] approached that planet.¹ I think these considerations are quite sufficient to answer the above *small* objections for the present; and I shall now proceed to the complete development of the *secret* Romish system.

If my reader will revert to Volume I. pp. 175, 182, 191, he will observe that the Indian scholars agree in stating it to be the unanimous doctrine of the Brahmins, that their Cali Yug began 3101 years before Christ, that, at that time, the flood took place, and that the sun entered the zodiacal sign Aries at the vernal equinox. Here, in the date of the sun's entrance into Aries, there appears

¹ The Author's apparently premature decease prevented his filling up the blank he had here left in his MS. If he referred to the Comet of 1680, (as submitted in the brackets,) his statement is directly opposed to the conclusions of Dr. Halley, who, "having observed that" it "came very near Jupiter in the summer of 1681, above a year before its last appearance, and remained several months in the neighbourhood of that planet, judged that circumstance alone sufficient to have considerably retarded its motion and prolonged the duration of its revolution."—*Essay towards a History of the principal Comets, &c.*, pp. 64, 65, *Glasgow*, 1770.—*Editor*.

to me to be an error of nearly 600 years, which has never been observed by any of our oriental astronomers. The Brahmins, when questioned upon this point, say, Those events happened when the Sun and Moon were in a certain position, which was observed at the time it took place, and *that* time is only to be known by back-reckoning. This error is of great moment, and, if I be right, it is a most extraordinary circumstance that it has been overlooked by all the orientalist: for the Sun certainly did not enter the sign Aries until about 2520 years before Christ. If our orientalist did not observe it, the fact proves with how very little attention they read, and how very superficially they consider these subjects. At all events I believe they have never made any observations upon it.

I will now try to explain the error, and to shew how it arose. "Columella says,¹ the 17th of December the sun passes into Capricorn; it is the WINTER SOLSTICE, as Hipparchus will have it. "The 24th of December is the winter solstice, AS THE CHALDÆANS OBSERVE."²

Now it is well known that Cæsar, with the assistance of a celebrated Chaldean astronomer from Egypt, called Sosigenes, ascertained the winter solstice to take place on the 25th of December, at thirty minutes past one o'clock in the morning. And it is a striking circumstance that he appears from the expression of Columella to have availed himself of the reckoning of the Chaldeans, whom my reader will recollect I have shewn to have come, with Abraham, or the Brahmin, from India, and whom our historians affect to treat with contempt, as having, in the time of Cæsar, become mere charlatans or conjurors; but who were, as appears from the facts above-named, in reality the only persons who had a sufficient knowledge of astronomy to correct the calendar, which had fallen into the utmost confusion. This any one may see by looking at our common globes, where he will find the Vernal equinox fixed to the 30th of Aquarius, which makes the equinox to fall on the 25th of Pisces, or March, 1800 years ago, by calculating back the precession 25 degrees, at 72 years to a degree. Now, from the 17th of December (the solstice, according to Hipparchus) to the 25th, according to the Chaldeans, there is a space of 8 days, which answers to 8 degrees, and as the solstice precedes a degree in 72 years, it makes in time, calculated on these data, an error of 576 years: $8 \times 72 = 576$. The Brahmins at this day, as we have formerly shewn, fix the entrance of the equinoctial sun into the sign Aries and their Cali Yug, 3101 years before the time Usher fixed for the birth of Christ; in which he made a mistake of four years. Now, if we allow for this error of Usher's of four years, the time to the date of the Cali Yug is 3096 years B. C., and the error of the Brahmins is exactly 576 years. For, from the 25th of Pisces, reckoning back to the first of Aries, there are not 43 degrees, as the Brahmin calculation would require, but 35 degrees only; which number, multiplied by 72, gives 2520; and this sum added to 576 makes $3096 + 4 = 3100$. This proves that the present Brahmins, when they fix their Cali Yug by back calculation, are exactly in the same error as Hipparchus, the Greeks and the Romans were, as to the time of the solstice.

The next question which arises is, How the Brahmins fell into this error of *eight* days in the date of the solstice, and into its consequent error of 576 years? And now, I think, we shall find another striking and curious coincidence, which will go far towards proving that the Hindoo system must have been founded on observation, near 5000 years before Christ. We have seen that there were *eight* Avatars believed to have passed in Siam, and eight Sæcula believed to have passed at Rome, at the birth of Christ. These eight Avatars and Sæcula I have shewn to be Neroses.³

Lalande, in his astronomy,⁴ says, "Si l'on emploie la durée de l'année que nous connoissons, et

¹ Book xi. Ch. ii.

² Bentley, Hist. Ast. p. 281.

³ See Vol. I. 175—177, 215.

⁴ Tome II. Ast. 1570, ed. 3.

“ le mois synodique tel que nous l’avons indiqué ci-devant, c’est-à-dire, des mois de 29j, 12^h, 44’, 3”, chacun, l’on aura 28^h, 1’, 42” de trop, dans les sept mille, quatre cent, vingt-une lunaisons : “ ainsi la lune retarderoit de plus d’un jour au bout de six cents ans.” If my reader will look back to Volume I. p. 169, he will find the above passage quoted, and a promise there made that I would return to it. From this observation it appears that there was, in fact, an inaccuracy in each Neros or Sæculum of more than one day in calculating it exactly at 600 years ; which, if the solstice were settled, as of course it would be by the cycle invented for the purpose of settling it, but without taking the error into the account, would, in *eight* Sæcula, cause it to be fixed to the 17th day of December, instead of the 25th, and produce the mistake of the eight days, and the consequent error of 576 years. To keep the reckoning right, a day and part of a day ought to have been intercalated every 600 years.

The truth of what I have just now stated may be shewn in another way. In reality the space the sun passed through, that is, preceded, from his entrance into Aries to the time of Christ, was thirty-five degrees, which make or answer to two thousand, five hundred, and twenty years : $35 \times 72 = 2520$. The time the Brahmins fixed for their Cali Yug and the entrance of the Sun into Aries being 3100 years B. C., $3100 - 2520 = 580$, which was their mistake. But $580 \div 72 = 8$, with a remainder of 4, which, Usher’s mistake corrected, is 576, the exact number it ought to be. The eight degrees answer to the eight days which the solstice, in the time of Cæsar, was wrong.

In or about the year 3100 was a remarkable conjunction of the planets, as Sir W. Jones, Bailly, and others, profess to have ascertained. This is the pivot on which all the Brahmins’ calculations hinge ; and as the MODERN Brahmins reckoned by the Neros to the time of Christ, *without understanding the principle of the calculation*, they thus got wrong in their solstices eight days.

The difficulty which Figulus¹ and others found in making out the true time arose from inattention to, or ignorance of, the necessity of making the requisite intercalation ; and the error had reached, in the time of Figulus, to within a very few years of an entire sæculum. This would increase the difficulty, and, in fact, would render the number of cycles doubtful,—that is, whether the new cycle—that of Christ—was the *ninth* or the *tenth*. This accounts for Virgil’s policy in writing in such an equivocal manner, that his prophecy might answer either to the latter part of the current cycle, or to the last cycle.

Now, I apprehend, after the philosophers found that the cycle of the Neros made a cycle with the number of years of the precession in ten signs of the zodiac, namely, in 21,600 years, they adopted the plan, in calculating their time, of starting from the flood or the Cali Yug, both backwards and forwards, as a kind of fulcrum, and of deducting the sum of 2160 years, the precession for one sign, because at that period a new system of calculation necessarily began upon a new principle. The former calculation was made upon the cycle of 360, the days in a year, and the lunar time of 30 days in a month. These two formed a perfect cycle : no intercalations would be wanted : and all the knowledge of astronomy, as far as was of any consequence to the first inhabitants, would be known and reduced to the smallest space imaginable. They found, that if they calculated backwards by the periods of years of precession in a sign, (as they must in future calculate forwards by them, if they meant to keep their time correctly,) these periods would exactly agree backwards with the calculation forwards ; so that they could calculate backward before the Cali Yug, as correctly as forwards from it,—the 360 days in a year making a perfect cycle, and these years, in periods of 360 or 720 or 2160 years, making a perfect cycle backward, in a circle to the 21,600 the years in ten signs, as they were obliged to calculate forwards to the same period. In short, by this contrivance, notwithstanding the great change in the lengths of the

¹ See Vol. I. pp. 185—187, 233.

year and month, which I shall explain hereafter, the calculations backwards would be perfectly assimilated to those forwards, and would, supposing the equinox to precede only about 50" in a year, or on the average or in mean time to precede after this rate, and that the Soli-lunar period of 600 years was correct, be also perfectly true. Thus they would be able to calculate by signs round the circle of the zodiac backwards, as they did in like manner by signs forwards, and, correctly too, for any length of time. It is also very worthy of observation, that the cycle of 360 makes a perfect cycle with the great precessional one of 25,920 years.

Now, if the reader will examine carefully the different astronomical calculations which I have made in the fifth book of the first volume, he will find no satisfactory reason given for the fact of the different arithmetical sums coming out correct from the calculations, the sum of 2160 years being first deducted; though the coincidence of the numbers shewed that it could not be the effect of accident, but that they must be true, whatever might be the cause. Here we find the whole satisfactorily explained, and an adequate reason assigned for the conduct of the astronomers. Very certain I am that I shall prove, all the ancients believed that the year was originally only 360 days long. Whether this be true or false, I contend, that I have raised the very highest probability, that, in their calculations of time, they proceeded upon this belief, and that its admitted duration had changed in a later day.

The lustrums *five* and *six* were the roots of all the calculations. The *five* was the lustrum when the year was 360 days long: the *six* when it came to be 365. In the first case the precession of the equinoxes was supposed to have taken place after the rate of 36" in a degree, and of 36,000 years in the circle. Thus we find the sum of 36,000 to be called *the great year*. (The Neros 600, and the Millenium 6000, make cycles with this.) In the second case, when the precession was supposed to take place in 50", and 25,920 in the circle; 25,920 was *the great year*. But with this the former number will not make a cycle; therefore, as said formerly, *ten signs* were taken, which, at 50" to a degree, and 72 to a sign, make 21,600; and with this, both the *five* and *six*, and the old numbers, all make cycles. Now, it is worthy of observation, that the *five* and its multiples make a cycle with the great precessional year 36,000; and the *six* and its multiples make a cycle with the great artificial year of 21,600, the united cycle of the two, with the great year of 36,000, and with the still greater artificial cycle of 432,000, as well as with the real cycle of 25,920.

The Romans must have had two computations of time, both of which were wrong. For, besides the misplacing of the solstice, which we have learnt from Columella, their "*year differed by an excess of 67 days from the true time.*"¹ Now, although some of their festivals, which they did not understand, might be wrong 67 days, we cannot believe that the solstice could get so far wrong. We may almost as soon suppose they would mistake the equinox for the solstice.

It is worthy of observation that the persons employed by Cæsar were the Chaldeans, and that these mere *fortune-tellers* and *conjurers*, as our priests call them, were so well informed, that they could fix the time of the solstice to half an hour—to half past one in the morning. It is evident these Calidei, or Chaldeans, or Casi-deans, or Chasidim, or Mathematici, or Templars, or Rosi-crucians, or Nousareans, or Mandaites, or Iohnites, or Essenæans, or Carmelites, or Freemasons, were then the best calculators and astronomers in the world.

Columella² says, "Nor am I ignorant of Hipparchus's computation, which teaches, that the solstices and equinoxes do not happen in the eighth, but in the first degree of the signs. But in this rural discipline, I now follow the calculations of Eudoxus and Meton, and those of ancient astronomers, which are adapted to the public sacrifices; because husbandmen are both better

¹ Niebuhr, Vol. I. p. 208, ed. Walter.

² Book ix. Ch. xiv.

“acquainted with that old opinion which has been commonly entertained: nor yet is the niceness and exactness of Hipparchus necessary to the grosser apprehensions and scanty learning of husbandmen.” From this it is evident, that the festivals were not fixed with *niceness*, to use the words of Columella; but, we may fairly suppose, in whole numbers, which will justify me in doing the same. Thus, like Columella, I have calculated roughly and by round numbers; but this was not the way the Chaldean magicians or conjurers reckoned. They formed their calculation to a minute—to thirty minutes past *one* in the morning; consequently they must have known that it would be necessary to intercalate one day and part of a day every 600 years: and this I have no doubt that they did, wherever they had the regulation of the festivals in their Judæan, secret, masonic, Χρησ-tian festivals.

If my reader have attended closely to what he has read, he will have observed that there is an error of a day and a part of a day, about one-eighth of a day, every 600 years, and that I have only accounted for the day.

This remaining error I shall now account for. I think it will not be denied that I have unveiled a pretty large number of curious mythoses; but the most curious of all I have now to unfold. We have seen that all the Buddhas, Cristnas, Salivahanas, Adonises, Atyses, Mithras, Bacchuses, Herculeses, were put to death and rose again from the grave, part certainly, and all probably, after *three days*,¹ to life and immortality. We have seen from the unquestionable testimony of the Roman Saint, Bishop, and Martyr, Irenæus, that the real Jesus of Nazareth was not put to death. But yet, according to the Romish gospel histories, he was actually put to death by crucifixion. In the gospel of the Romish Jesus, we merely have the account that he was a part of three days in the grave. But tradition informs us that he was buried on the evening of Friday; he continued in the tomb till midnight of Saturday was past, and rose the moment the morning of Sunday commenced. Thus he occupied the tomb in three successive days, though for only one day of 24 hours, and a part of a day of 24 hours' duration. This professed entombment is meant figuratively to represent a certain time that was considered necessary to be intercalated, in the *neros*, as I shall now describe.²

There is an error in the Soli-lunar cycle of the *Neros* of one day and a part of a day in every

¹ In the case of Orisis in Egypt, and of St. Denys or Bacchus in Gaul, whose limbs were scattered in forty places, and sought forty days, I apprehend the last three were the days of the processions only—the days on which the parts of generation were sought.

² Whether or not the Author be right in his conclusion, the following anecdote, in Farrar's *Life of Howard*, the Philanthropist, may serve to illustrate the oriental custom of reckoning days: “Mr. Howard found, on arriving at Constantinople, in 1786, that the chief topic of the day was a summary and sanguinary punishment which had recently been inflicted on the grand chamberlain. The particulars were these:—the grand vizier sent one day for the grand chamberlain, who had the charge of supplying the city with bread. Yielding immediate obedience to the summons, this officer arrived at the palace of the minister in great state; and being introduced into his presence, was asked why the bread was so bad. He answered that the harvest had been but a very indifferent one. ‘Why,’ continued the vizier, apparently satisfied with this excuse, ‘is the weight so short?’ ‘That,’ replied the chamberlain, ‘might have happened by accident to two or three, amongst such an immense number of loaves as are required for the supply of so large a city;’ but he assured his highness that greater care should be taken for the future. Without further observation the vizier ordered him to quit his presence; but no sooner was he obeyed, than he commanded an executioner to follow the unhappy man and strike off his head in the street, where his body was publicly exposed for a day and a half, with three light loaves beside it to denote his crime.

“When the circumstance was related to Mr. Howard, he was told that the chamberlain's body had lain *three days* in the street, on which he expressed his surprise that it had not bred a contagion, and then he learnt that in point of fact it had not been left so long, as they were not entire days. It was evening when the head was struck off, and this was reckoned one day; it remained the whole of the second, and was removed early on the succeeding morning, which was accounted the third day. The eastern mode of computation is the same now that it was in the time of the crucifixion and burial of Jesus Christ, when three days were similarly reckoned.” Pp. 195—197. *Editor*.

cycle, as we have seen ; and this space of time it is necessary to intercalate every 600 years, in order to correct the error. This required intercalation is figuratively described by the burial of all these Gods, and of Jesus Christ. Every 600 years they were put to death, remained buried a day and part of a day, after which they rose again to new life—a new six hundred years commenced—a new Phœnix arose from its ashes.

We have before seen that the year of the sun was 600 years ; that the Phœnix¹ lived 600 years ; that the Phen or, in Irish, Phenniche, meant 600 years. As much as the cycle got wrong, it was necessary to intercalate. For this period the God was buried. In the six thousand years he would be mystically or feignedly buried ten times. And I have very little doubt, that when the old Phœnix burnt itself, a certain time elapsed before the young one arose from its ashes. But it was not to be expected that the priests would tell us this, if, indeed, they knew it. I have somewhere read, I believe in the work of Mr. Faber, a work which has no indexes, though paid for by subscription, that, in the ceremonies of the initiation into the mysteries of Buddha, a man was *supposed to be killed ; and, after lying on the ground some time, was simulated to be raised from the dead.* This is very like the practice in the Romish church of imitating, in their ceremonies, all the recorded acts of the life of Jesus Christ. This is in accordance with the resurrection described in Georgius and in my plates, figure 14.

The same ceremony is stated by the Abbé Bazin² to have taken place in the mysteries of Eleusis. He says, “These mysteries were, *according to Tertullian*, somewhat tarnished by the ceremony of regeneration. It was necessary for the initiated to appear to revive ; it was the symbol of the new kind of life he intended to lead. A crown was presented to him, which he trod under foot ; the Hierophantes then drew forth the sacred knife, and the initiated, whom he pretended to strike, also pretended to fall dead at his feet : after which he appeared to rise again, as it were, from the dead. A remnant of this ancient ceremony still exists among the Freemasons.” In the Gospels we have the following statements respecting the burial of Jesus : *Matthew* (xxvii. 57, 62) says, “When the even was come :—now the next day that followed the day of preparation,” &c. *Mark* (xv. 42), “Now when the even was come, because it was the preparation, that is, the day before the Sabbath.” *Luke* (xxiii. 53, 54), “And he [Joseph of Arimathea] took it down, and wrapped it in linen, and laid it in a sepulchre that was hewn in stone, wherein never man was laid before. And that day was the preparation, and the sabbath drew on.” *John* (xix. 42), “There laid they Jesus, therefore, because of the Jews’ preparation day.”

The Gospels all agree that Jesus rose on the Sunday morning, and pointedly and unnecessarily, unless there was a particular meaning intended to be conveyed, say, “very early before day-light.” But the tradition is, that he rose the moment after midnight of the second day. At Rome, in some of the churches, the ceremonies begin at this time, and in Syria, in commemoration of the resurrection of Adonis ; and now, in the same place and at the same time, the ceremonies of the resurrection of Jesus Christ begin to be celebrated.

If the calculation of the mythos be commenced on the moment of the conjunction of the sun and moon, and the neros last 600 years, 28^h 1' 42", there must be, to make it come right, an intercalation in every neros or 600 years, of 28^h 1^m 42^s. Then this will make the life of the sun end precisely in such a manner, in such a part of a day, as will be 28^h 1^m 41^s. before a third day begins, making it go one second into the third day to complete the 28^h 1^m 42^s. Thus the reason

¹ The Greek word φαίνω or φαίνω to shine came from the name of the sun φηνη=600, or φηνην=608.

² Translation by Wood Gandell, p. 220.

why he is in the grave, as it is called, three days, is apparent. The Millenium cycle was supposed to have begun at such an hour and minute of the day on which the sun first entered Taurus at the vernal equinox, as would make the eighth cycle or neros end at an hour which may be found by close examination of the history. It is said that Jesus was buried before the *sabbath began*; that would be before *six* on Friday evening. Then if he were the shortest time possible in the grave, to be consistent with the history, he would be there from six to twelve, or the last *six* hours of Friday, *twenty-four* hours of Saturday, and say *one second* of Sunday, and he would rise *very early*, as the text says, on Sunday morning. This makes one day, six hours, in the grave. Now what is the time necessary to be intercalated to correct the error to a second of time? It is one day, four hours, one minute, forty-two seconds. Then the authors of the myths were in error the difference between $1^d. 4^h. 1^m. 42^s.$ and $1^d. 6^h. 0^m. 0^s.$ This is $1^h. 58^m. 18^s.$, which, on 7421 lunations, the number there are in the cycle, makes an error in the moon's period of somewhat less than one second. This, I think, is bringing the matter pretty nearly to a point.

If the reader look back to Volume I. p. 175, he will find the Brahma period stated to begin 3164 years before Christ. We will try to find how this arose. By calculating backwards and allowing a day and part of a day for the error every six hundred years, the calculators made, in the eight neroses, *nine*, but not *ten* days: thus $9 \times 72 = 648 + 2160 = 2808 + 360 = 3168 - 4 = 3164$. This seems to me to be a real arithmetical proof of the truth of my explanation of the three days, or, more correctly, the day and part of a day in the grave.

From Taurus to Aries.....	2160	3164

The history of the sun, I repeat, is the history of Jesus Christ. The sun is born on the 25th of December, the birth-day of Jesus Christ. The first and the greatest of the labours of Jesus Christ is his victory over the serpent, the evil principle, or the devil. In his first labour Hercules strangled the serpent, as did Cristina, Bacchus, &c. This is the sun triumphing over the powers of hell and darkness; and, as he increases, he prevails, till he is crucified in the heavens, or is decussated in the form of a cross, (according to Justin Martyr, ²) when he passes the equator at the vernal equinox. But before he rises he is dead for one day and about four hours. This is nearly the time necessary to be intercalated every six hundred years, to make the calculation come right; at the beginning of the third day he rises again to life and immortality. The twelve labours of Hercules are his labours in passing through the signs of the zodiac, which are so similar to the

¹ Mr. Bentley states, p. 52, that the sun entered Pisces at the vernal equinox, 746 years B. C. He is here in a great error, or Cæsar and Sosigenes were in a great error in fixing the solstice to the 25th of December; and our globes are equally in error now in fixing the equinox to the first or thirtieth of Aquarius. This seems a mistake of Mr. Bentley's which I cannot comprehend. The sun certainly only entered the sign Pisces five degrees, or $5 \times 72 = 360$ years B. C. I will not assert the fact, but I have very little doubt that the intentional fraud Mr. Bentley speaks of in the Brahmīn astronomers, all arose from the mistake of the 576 years, and the neglect of the intercalary days, of the necessity for which the modern Brahmīns were ignorant.

² See Vol. I. p. 789.

history of Jesus Christ, as to induce the reverend, pious, and orthodox Parkhurst to declare them *types of what the real Saviour was to do and suffer*. These celestial images are what induced the learned Alphonso the Great to declare, that the whole history of Jesus Christ might be read in the stars.

No doubt this explanation of the three days' descent into hell will be separated from the other explanations of the mythos, and thus, taking it alone, it will be represented as extremely ridiculous. But, I ask, What were the entombment and resurrection of Bacchus, Atyr, Apollo of Miletus, of Adonis, of Cristina, of Buddha, &c., &c.? Were these real deaths and resurrections, or astronomical mythoses?

In this book I think I have proved, that every rite, ceremony, and doctrine, which is found in the Christian religion, was a close copy of that of the Gentiles. Mr. Mosheim¹ is obliged to admit this, nearly to the extent here stated, and he endeavours to disguise and palliate it by pretending that they were taken into the Christian religion. But as I have proved that every rite, ceremony, and doctrine, of the Romish church is taken from the Heathens, and existed before the time of Jesus Christ, I beg leave to ask, Where is the remainder which is not Pagan, and which is to constitute the Christianity of the present day? The Christianity of Jesus Christ, from his own mouth, I shall exhibit in a future book, in its native and beautiful simplicity, unalloyed with Pagan, Paulite, Romish, Lutheran, or Calvinistic nonsense.

That which I have written is intended for the use of philosophers, as I have said in my Preface. How should the generality of mankind, occupied in the affairs of life, be expected to understand such a book? No, no; let them attend to their secular concerns, count their beads, and say their prayers, resting content with the religion of their ancestors, and be assured that God is equally present with the pious Hindoo in the temple, the Jew in the synagogue, the Mohammedan in the mosque, and the Christian in the church. Peter said, very wisely, *Of a truth I perceive that God is no respecter of persons; but in every nation he that feareth him, and worketh righteousness, is accepted with him.*²

I must fairly admit, that I cannot read what I have written without an indescribable melancholy. In what a state of delusion have four-fifths of mankind been kept, and still are kept, by the dishonesty of the remainder; and, in the teeth of my humble and feeble efforts, I fear always will be kept! But, at all events, I have done my duty; I have endeavoured, with no little labour, to draw aside the veil. I know what I deserve; I fear, I know what I shall receive, from my self-sufficient and ignorant countrymen. But yet, a new æra is rising. There still is hope in the bottom of the box. But one word more I must say of the Eternal City, before I close this article; it may serve for a warning.

It is a striking circumstance that the Pagans themselves boasted of the greatness of Rome, not only as the capital of the empire, but as the head of their religion, of which it was the centre; on account of which it was called by Atheneus *Θεοπόλιν*, or the Holy City, Ruma Mamma, the residence of the Gods.³ It was called the Goddess of the earth and of the nations, at the very moment that the axe was laid to its root, and that, by the treason of Constantine, its altars were about to be overthrown, its religion destroyed, and it was to be degraded to the rank of a provin-

¹ Comm. Cent. ii. Sect. xxxvi. n.

² Acts x. 34, 35.—For most of the articles in the above parallel between the rites of the ancient and modern Romans, I am indebted to a small treatise lent me by my friend Ed. Upham, Esq., entitled, “*Les Conformitez des Cérémonies Modernes avec les Anciennes*.” Imprimé l’An 1667.

³ Lucan, lib. i., Deûm Sedes, Mart. lib. xii. Epigrorum. 8; Claud. de Laud. Stillic.

cial town. Thus, at this time, when loaded with corruption, its religion rotten to the core, and evidently at its last gasp, still, as in former times, it calls itself *eternal*; its pompous, empty, tawdry cardinals, bending beneath ermine, fat, and ignorance, waddle about their grass-grown streets and crumbling ruins, which would long since have yielded to the pest which surrounds them, had not the remnant of the fine arts of Greece procured to it a temporary respite. But, proud Rome, thy race is nearly run—thy day is nearly over. One century more, and, like haughty Babylon, the curious stranger, probably with fear and trembling, will ramble round thy ruins, and say, This *was* the eternal city! Here *was* Rome!

Sure as the shaft that slayeth in the night,
The pestilence glides slowly, robed in light.
All-glorious Italy, o'er thy fair champaign
The smiling fiend extends her silent reign,
And desolation follows. Lo! she stands
On the proud capitol, with noiseless hands
Showering the secret ruin on the dome
Of thy great temple, everlasting Rome!

I. THE following book will chiefly consist of a development of the mode in which the most important of all the various branches of human science, the art of writing, was discovered and brought to perfection. But before my reader begins to examine it, I must beg him to re-peruse and reconsider the Preliminary Observations in Volume I., which have relation to the origin of letters and figures. Those Observations, chiefly taken from my work on the CELTIC DRUIDS, I inserted there, for the purpose of assisting in this investigation.

When I go back to the most remote periods of antiquity into which it is possible to penetrate, I find clear and positive evidence of several important facts. *First*, no animal food was eaten—no animals were sacrificed.¹ *Secondly*, it is recorded, and it seems probable, that the Gods had no names, and that no icons were used;² and almost all ancient nations had a tradition, that they once possessed sacred writings in a long-lost language. The possessors of these writings and this old language, I think, must have been the people who erected the Pyramids, the gigantic stone circles, and the other Cyclopæan buildings, which are found of such peculiar character and size all over the world. The language of these nations, or, in fact, the lost language which they used, we will now try to discover—assuming, that it was the first written language of man.

In the Preliminary Observations, Section 31—47, I have shewn how I suppose the Latin, Etruscan, or Phœnician, system of describing numbers by right lines arose—each number described by a collection of these lines, having had the name of a tree given to it. I find my opinion on this subject strongly supported by a passage of Vallancey's, which, when I wrote the Preliminary Observations, I had overlooked or not observed.³ He says, "The Romans used literary characters as numerals, and in alphabetic order as the Chaldæans did, so late as Julius Cæsar's time. In the sixth century a Julian kalendar was dug up at Rome, on which the days of the month were numbered by letters in alphabetic order, beginning with A at the first day of January, B to the second, and so on to H, or the eighth day, which was their *Nundinæ*, from which day they began again with A B C D E F G H, instead of I. II. III. IV. V. VI. VII. VIII., which were the Phœnician and Palmyræan vulgar numerals."⁴ If we could be certain that Palmyra was built by Solomon or the Jews, we should have a very good reason, indeed I may say a certainty, for

¹ Sacrifice—Sacrum Festum—sacrificium.

² This was because the God of Wisdom, or the *wise* God, was worshiped.

³ Coll. Hib. Vol. V. p. 186.

⁴ Vide Scaliger de Emend. Temp. p. 160.

believing that the right-lined numbers of the Phœnicians were also those of the Jews. As it is, we have a very high probability that they were so.

Before we begin the following speculation we will suppose that man had advanced so far as to have given names to trees, and to have called a certain tree Elm, another tree Birch, and others by appropriate appellations, and had called his first number, described by the mark I, *Ailm*, and his second number, described by the mark II, *Beth* or *Birch*, &c. In this case I would denote an idea of number, viz. *one*, and a sound, viz. *Ailm*; and II would denote an idea of number, viz. *two*, and a sound, viz. *Beth*; and each would denote a tree generally, and the two would also denote two peculiar trees, as distinguished from others, viz. the Elm and Birch: so each arithmetical figure or little collection of lines would have five significations. It would denote a number, a tree generally, a Birch tree, and a sound; and, after the discovery of alphabetic writing, a letter. Thus there would be a language like what the Chinese language and the Runes of Scandinavia are at this day. That is, there would be a symbol for every sound or name of a thing, for the thing itself, and for a number, and the number would, by association of ideas, be closely connected with leaves and trees. Thus this language of symbols would have five meanings, exactly as the language of the sacred books of the Tamuls is said to have had; and a question naturally arises, whether this language of numeral symbols may not have been the very language referred to by the Tamulose, as that in which their sacred books were written. This induces me to make a few observations on the Tamul language before I proceed further. At first, the distance of the place in which we find the Italian and the Phœnician right-lined letters or figures, from the country of the Tamuls, South India, certainly seems very great, but it becomes less, when it is recollected that we have exhibited individuals miscalled Christians, but who, in fact, were the followers of Tammuz, in South India, using the Pushto language of Syria, and the absolute identity of the worship of the *fishes* in both countries.

Dr. Babington says, "I cannot touch on the Tamil characters without remarking, that their extreme simplicity seems one among many circumstances which indicate that the language is of high antiquity. The Sanscrit of the South of India is written in characters (the Grant'ha) derived from the Tamil." The learned Doctor then proceeds to give reasons for the Tamil having an independent origin, at least equal in antiquity to the Sanscrit itself.¹ The name of the Tamul language is Pushto, and the root of this word Push, which I shall examine hereafter, means a *flower*, and this system of letters was sixteen in number, like that of the ancient Jews. The language of the Chinese, which we have just observed is a language of symbols, was called *the language of flowers*.²

I consider my system to receive no small support from the following passage of the Universal Ancient History:³ "That the ancient language of the Chinese was pretty nearly related to the Hebrew, and the other tongues which the learned consider as dialects of it, notwithstanding what has been advanced to the contrary, we own ourselves inclined to believe. Ludovicus Thomassinus, Philippus Massonius, Olaus Rudbeckius, and Augustus Pfeifferus, seem to have proved this almost to a demonstration." M. Balbi, in a late learned work, has turned the arguments of the above-named persons and our Edinburgh historians into ridicule; but my experience teaches me, that ridicule is never had recourse to, till argument fails. Near Gaya, which is the place where Saca or Sacya finished his doctrine and became Buddha, is a tree called by the Chinese *Poo te choo* or the *Tree of Knowledge*.⁴ The Chinese in a particular manner call their written

⁴ Neuman, Catechism Shaman, p. xix.

language the flowery language, which I suppose is the language of *flowers* or *leaves*.¹ I apprehend this comes from their numeral symbols having had the names of plants.² This tree of knowledge seems to have been the Pushto, or Push, or Pote-sato. Every thing tends to raise a probability, that the Chinese and the Western languages of symbols were the same. I will now proceed with my theory, but I shall return to the Pushto and Chinese presently.

After man had used the right lines for some time, he would discover the art of making a figure to use instead of the collection of lines, and we will suppose him to have made or invented twenty-eight figures for the twenty-eight numbers which I have supposed him to have discovered; how this was done I will presently explain. We have an example of this in the tree alphabet, Table I. Nos. 8 to 10, and in the Runic alphabet, in *THE CELTIC DRUIDS*, pp. 4, 5.

We have thus, I think, very easily found how it is probable that the first *symbolical* system of writing was invented; but we have not yet found out the grand secret—the art of syllabic or alphabetic writing—though we have symbols for ideas and sounds.³

On this art Mr. Astle⁴ says, “Those authors whose learning and ingenuity entitle them to the highest respect, and whose writings have furnished many useful hints towards the discovery of alphabetic characters, *have not filled up the GREAT CHASM* between picture writing and letters, which, though the most difficult was the most necessary thing for them to have done, before they could attempt to account for the formation of an alphabet!” Mr. Astle does not pretend to have filled up the chasm. I think I shall be able to do it.

2. For the reasons given in the Preliminary Observations, (pp. 2, 3,) I cannot have any doubt that one of the first recorded ideas would be the moon’s period, for which the twenty-eight numbers would be used, and perhaps one of the first *things* recorded would be the moon herself, by means of these numbers. In this case the record would be described by XXVIII, and by its component parts called Iod (i. e. Yew) pronounced twice, and Eadha (i. e. Aspin) once, and Ailm (i. e. Elm) three times. The use of these symbols for the twenty-eight numbers would soon lead to the formation of arbitrary signs for other things; and, in short, to the present Chinese writing—a mark or symbol for every word: and on this plan the Chinese have proceeded, exerting all their ingenuity, as we know, for thousands of years, having never left their first habit, or changed their first style of writing; the reason for which, I think, we shall discover hereafter.

The Western nations took a different course, and fell into the habit of making their letters for sounds instead of ideas of things, and thus in some way, which we will try to find out, the syllabic system arose. We have supposed that they first described the moon by marks which would represent twenty-eight units, that they would write it thus XXVIII; and, I suppose, that they would perform the operation in the following manner: if a man had to desire his neighbour to assist him to record the moon, he would say, make on the stone tablet or in the sand the mark Iod (yew), and he would make X. The speaker would then say, make or mark another Iod, and again

¹ Neuman, Catechism Shaman, p. 63.

² It seems to me that a language of symbols is totally unfit to communicate *proper names*, for which reason in translating from the Chinese, if the written account is to be followed, that is, the idea of the thing to be given, our names ought to be rendered as we render them. If the sounds used by the Chinese in speaking, for our names, are to be described, then a writer may copy the sounds as well as he is able. I suspect it is from a wish to do both, that Mr. Neuman has rendered proper names in so odd a manner. England is called *Ying keih le*; the Russians are called *Go lo sse*.

³ In the symbols for sounds began the first idea of music, an art considered by the ancients, and particularly by Pythagoras, as of much greater importance than it is with us; the reason for which I shall try to explain by and by.

⁴ Origin and Progress of Writing, p. 11.

“Tapocon Græci soliti sunt appellare genus scribendi deorsum versus, ut nunc detrorsum scri-
“bimus.”¹

And it appears from a letter of Gen. Vallancey’s to General Pownall, that the ancient Irish also wrote in the perpendicular line.² And to these nations I have to add the Ethiopians. “Ethiopi-
“bus olim hunc modum (meaning the writing from top to bottom) familiarem quoque fuisse,
“docet Alexander ab Alexandro.”³

I suppose that the experiment above mentioned, as made by man on the Moon’s cycle, would, after some time, lead him to attend to the sounds of the trees’ names, and that he would necessa-
rily fall on the sounds of the first letters of the words, and be induced to try if he could call this
word XXVIII by them: this he would do with ease, on the very first attempt, by pronouncing (a

XXV I I I

XXVII I

very remarkable word) IIEA, I I EAAA, or in the other way, I I V AA, which was the word
chaunted by the Bacchantes of the Greeks, in their nocturnal orgies—Evohe, Evohe, and, in short,
Eva, addressed to the Moon; and also the word Yeve or Yeye, chaunted by the Hindoos in their
ceremonies.⁴ I have seldom been more surprised than I was when I discovered this process to
bring out the Moon’s name; but yet, when I consider the matter, it appears only natural if my
theory be well founded. This word is also nothing more than the name of Ieue, described in
Genesis by the word in the feminine gender אֵלֶיִם aleim. In this extraordinary word we have
united, first the monograms of God *I* and *II*, by which he is called in the Chaldee targum, and
secondly ΕΥΑ or VA חוה *hue*, the two names of the male and female principles of nature. We may
now see another reason why the letter or symbol *I* and the tenth letter, the jod, came to be con-
sidered the symbol of the Self-existent Being, and how the irregular verb היה *hie* or היה *hie* of the
Hebrew arose, and came to mean self-existence.

In the first two letters of this word “*ii*” we have the name given in the Annals of Ulster, and in
sepulchral monuments now existing, to the island of Iona or Columba, in Scotland, the name of
which island, I shall hereafter shew, meant the *generative power*. It is also remarkable that this
word “*ii*” is always used in the Targum for the name of the Creator instead of IEUE. But I can
find the grammatical explanation of it in no Lexicon or Grammar, and I believe it cannot be shewn
that it belongs to any verb or noun.

I believe that this word, from its connexion with letters, which I have just pointed out, and with
the soli-lunar cycle of 28, came to be the name of the Creator of the male generative power, and the
vau to be the name of the female. I believe that the jod *i* has the same meaning in Hebrew and
English; and that the word *is* which we use for the third person singular of the present tense of
the verb personal *he is*, must be the first person singular of the present tense of the Hebrew help-
ing verb *u is*, and means *I am*, or *I is*, being the same as *I exist*. It probably must be the same
in the first, second, and third persons singular. It also means, Parkhurst says, *substance*, and, as
we might expect, from the word which describes the Self-existent Being, PROFOUND WISDOM;
and this I consider very deserving of consideration.

I could not have wished for any thing more proper for my purpose, than that this word should,
in this very extraordinary manner, from the names of trees and the powers of their numbers com-
bined, thus unexpectedly give out the name of the moon as used by the Bacchantes—the name

that the Ethiopian language was Chaldaic. Punic Inscription, III. 24, 40, 75; and Vallancey has undertaken to prove
the ancient Irish to be a colony from Phœnicia.

⁴ See Vol. I. pp. 325, 452.

described by numerals having the number of the cycle peculiarly appropriate to it, which I shall presently shew that all the other heathen Gods also had; and also the name of Jehovah IEUE the Chaldæan God, and PROFOUND WISDOM. It amounts to a proof of the truth of the system much more complete than could have been reasonably expected. It forms a very strong presumption that I have actually fallen upon the very process which must have taken place. But this will be much strengthened presently.

3. To return to the symbols. After man discovered the art of recording numbers by right lines, in the way already described, to the amount of twenty-eight, he would endeavour to find out some means of recording additional numbers, at the same time that he would try to simplify the process; and I suppose that after making one line thus, I, for *one*, he would, instead of making two lines for the *two*, make one straight lined symbol thus \mathcal{J} , and again call it by the name of *Beth*, the name of a tree (Birch); that for *three* III, he would make a symbol thus \neg , and call it *Gort* (the Ivy); that for *four* IIII, he would make a symbol thus Δ , and call it *Duir* (the Oak): and that thus he would proceed with the remainder of the twenty-eight numbers, making twenty-eight single right-lined and angular forms for his twenty-eight numbers. And I suppose that during the performance of this operation, which might take many years, (for in nations which actually made some progress in this process it never was completed,) he found out the means of recording additional numbers by discovering the decimal notation or arithmetic—the contrivance of beginning anew, when he got to *ten*, till he reached *twenty*; then beginning anew with tens as he had done with ones or units; thus I was ten, K was twenty, A was *thirty*, and so on. Thus he contrived a symbol for each figure. But if we consider this process carefully, we shall find, that each symbol was not only the representative of a thing or idea, namely, in the case of the second number, or chequers, of two stones, or of two lines on the bark of a tree or in the sand, but it was in each case also the representative of a sound, and of that sound which was the name of a tree, Beth, the Birch; and the representative of a number, *two*; and, in several instances, of a high and powerful number; as for example, Σ for 200.

This is all strengthened by the *facts*, that the first Celtic Irish and Hebrew letters were called after the names of trees, and that the first Greek letters were in lines, γραμμα, to use their word for them, and actually still continued to be called πεταλα, or leaves, after the knowledge of the reason for it was lost; and they will justify the inference that the theory which I have suggested above is well founded, because the theory shews a probable reason for the name of πεταλα having been adopted. If the letters of the Greeks were not originally *leaves* like the Hebrew¹ and the Irish or Celtic, why should they have given them the name of *leaves*? What connexion on any other scheme is there between πεταλα, leaves, and letters?

We have found that the Chaldees had their letters in *lines* or *gramma* also; and, as the Hebrew letters had the names of trees, and as the Greeks had their letters from Syria, nothing is more likely than that they should have originally called them after trees as the Hebrews did. But Pezron has shewn that the Greek came from the Celtic, that is, from the Hebrew. But if the Hebrew names of the letters had not, in later times, in the Greek language, the meaning of trees, this makes nothing against the system, because we may readily suppose in the long time that the Greeks may have existed before the arrival of the Cadmæan colony, they may have lost them. Vallancey has said, that the Chaldaic was only used as numerals, not as letters; that the Chaldee

¹ It must not be forgotten, that I assume I have proved that the Celtic and the Hebrew were the same. See Vol. I. pp. 461, 518, 709.

language is the same as the Estrangelo, which is the Pushto. This is also stated by several other learned men.

The word for letter in Latin is *litera*, which has been said to be derived from the Arabic *لطبف* *letif*, which signifies *an occult or mysterious meaning*. This Arabic *letif* is evidently our *leaf*, and shews that it is highly probable, as I have supposed, that the Arabic letters had the same names as the Hebrew. In fact Hebrew and Arabic are the same. Here in the old Latin or Etruscan *litera*, as in the Greek, the Hebrew, and the Celtic, we have the *leaves*.

Dr. Lingard, in his history, says, "I would attribute to these ancient priests the Rhÿn or mysterious language, so often mentioned by the bards (of Wales). To every tree and shrub, to their leaves, flowers, and branches, they seem to have affixed a fanciful and symbolical meaning; and these allegorical substitutes for the real names of beings and their properties must have formed, in their numerous combinations, a species of jargon perfectly unintelligible TO ANY BUT THE ADEPTS."¹ But why did not Dr. Lingard try to find the meaning of this jargon? ² The Rhÿn here alluded to, is the Rhythm or the Arithmos of the Greeks; it was the Arithmetical system of letters formed by straight lines, having the powers of numbers and the names of leaves, and carried, I doubt not, to a much greater length than the first twenty-eight of the Arabians. It was the language of trees, of leaves, of flowers. It was in truth, probably, the first original Pushto, or language of flowers, corrupted, which I shall discuss by and by.

A learned writer, in the *Universal History*,³ maintains, that the Syrian or Assyrian characters, (or Pushto,) which he calls the Estrangelo or Mendæan, in the time of Darius Hystaspes, were used by the old Persians, Assyrians, Syrians, Arabians, and Mendæans or Chaldæans, and that from this letter all the others in the East were derived; and Mr. Bayer has maintained, that, from the Estrangelo, the Brahmin characters were derived. Now we know that the Estrangelo, called also Pushto, was the letter of the Tamulise, and was in all probability older than the Sanscrit. Mr. Bayer also comes to the conclusion,⁴ that the square Chaldaic character was the primigenial letter of the East. As he comes to this conclusion without knowing any thing of the fact—that it was the vernacular letter and tongue of a tribe, namely, the Christians or Crèstans of Malabar, his opinion seems to deserve the greater respect. I apprehend that the square Chaldee letter was the primeval letter of the East, because it was, as Vallancey says, a letter of numeral symbols, of the first written but unspoken languages. Bayer maintains that the Pehlevi, which he calls Parthic, is derived from the Assyrian alphabet, called Estrangelo.⁵

I beg my reader to observe, that if the unspoken language of numeral symbols were written from the top to the bottom, the consequence would be, that when those symbols were used for syllabic letters, they would necessarily come, in different countries, to be used in different directions—sometimes from right to left, and sometimes from left to right; so that the same word would come to be pronounced in ways totally different: for instance, *sor* might be *ros*, and *ros* might be *sor*.

4. After I had finished what the reader has seen on the origin of language, I met with a passage in Boucher's Glossary, appended to Webster's Dictionary,⁶ which supports every thing which I have said respecting the ancient Hebrew language in these islands, in a remarkable manner. Indeed, whenever any learned man undertakes to shew the similarity of any two old languages, he

¹ Vol. I. p. 18.

² Ogum craobh, "the branch writing," is surely decisive as to the correctness of the opinion of those who advocate the *Tree* system. One of the three Seronyddion (Saronides?) of Britain was Gwyddion, *the Diviner by trees*. *Cambrarian Mag.*

⁴ *Ib.* p. 82.

⁵ See *Act. Erudit.* Jul. 1731; Hagar, *Babyl. Bricks*, p. 14.

⁶ P. xxxv.

is always right. The principle applies as well to language as to geometry—things similar to the same are similar to one another. “If any language can be pointed out to which the Welsh is materially indebted, it is the Hebrew;¹ for, there are several radical words that are the same in both languages; there is also a similarity of sound in certain letters of both alphabets; and they are likewise alike in some peculiarities of construction, especially in the change incident to several letters in the beginning of words. The analogy between the Welsh and the Hebrew proves, that since (as far as any negative can be proved) the former was not the original language, it must be indebted, in a very considerable degree, for its origin, to the latter; for according to Rowland,² *there are more sounds in the Welsh that agree with the Hebrew, than there are in all other languages put together.* And it is extremely remarkable and peculiar, that the Welsh has no resemblance to, nor coherence in, sound and signification (its own immediate cognate dialects excepted) with any other language in the world, now known, except the Hebrew.” I must now beg my reader to refer to my *CELTIC DRUIDS*, Chapter II. p. 63, where he will find full and *complete proof* that the Welsh is really Hebrew. He will there find not a few words sufficient to support the assertion, according to the doctrine of Dr. Young, but actually a whole sentence from the Psalms of David, where the Welsh and the Hebrew words, when written in the same letters, are identical. I must now beg my reader to turn to the Plates in Volume I., Figure 26, the coin on which has a Hebrew inscription. To which I have to add, that some time ago, in one of the books of antiquities, but which I have forgotten, I met with a description of a Hebrew inscription on a large stone in some part of Wales. And now I wish to ask any one how a coin with the head of Jesus Christ and a legend, *in a language obsolete in the time of Jesus Christ*, should arrive in Wales and get buried in an old Druidical monument? I contend, that the probability is, that it is a memorial older than Jesus Christ, of the son of that individual of the three Marys, to whom, in his infancy, the line referred, which Mr. Davies suppressed, as stated by me in Volume I. p. 593, the Son of the Virgo Paritura of Gaul. Whether this medal represents the son of the Virgo Paritura, found in the Western countries long before the Christian æra, or Jesus Christ, cannot be reduced to a demonstration. Many things of this kind, I believe, have been found in different times and places, but always immediately discarded, as merely superstitious works of devotees of the middle ages. Thus truth is disguised, without any ill intention, by well meaning persons. In like manner Sir I. Floyer *throws out* the acrostic from the Sibyls, because he says it is a Christian forgery. In like manner Mr. Davies,³ in a translation of a Welsh bard, leaves out the last two lines, because he says the bard had introduced a Christian idea representing *the son of Mary as the pledge of his happiness.* This Mary was probably one of the three Marys of Gaul, and her son, the Lamb of the Carnutes, the Saviour,⁴ or one of the three Marys found upon an altar of Hercules at Doncaster. In this feeling of authors, influencing them for thousands of years, I doubt not may be found one of the chief causes of the disappearance of the Judæan mythos.

In addition to the above, and as a strong support of what I have elsewhere said respecting the Saxon language, I cite the following passage, which is in p. xxxviii. of Boucher: “For, by the

¹ “See Llhuyd’s comparative etymology in the *Archæologia Britannica*, where he shews that the Celtic, itself from the East, was the common parent of all the languages of Europe. See Pezron, Dr. Davies’s preface; Holloway’s Originals, and lastly, Rowland’s Comparative Table of Languages, in which he hath paralleled three hundred Hebrew words, with an equal number taken from the ancient languages of Europe, corresponding therewith, both in sound and signification, more than one half of which three hundred words, are shewn to have a surprising affinity and resemblance with the Welsh.”

² “See his *Mona Antiqua*, &c., p. 271.”

³ Celt. Myth. p. 253.

⁴ See *supra*, p. 108.

“operation of one of the simplest figures in rhetoric, metathesis or transposition, *i. e.* merely a different arrangement of the same, or nearly the same letters, many Celtic words, even now, might easily be made Saxon: thus *draen* readily becomes *dorn* and *thorn*, and *daear* no less naturally *erd* or *earth*.” This arises merely from the different ways in which the line has been turned when the writing was changed to the horizontal from the perpendicular. The Celtic reading from left to right, instead of from right to left, of course places these words in contrary ways, as found here. But if I have shewn (in my Celtic Druids), as most assuredly I have, that the Celtic is Hebrew, this proves the Saxon to be Hebrew. For the Saxon being Celtic, and the Celtic Hebrew, the Saxon must be Hebrew.¹ Things like to the same must be like to one another. Besides I beg the doctrine of Dr. Young on probabilities may be applied to this. It is extremely curious to observe how learned men labour to exclude themselves from the benefit of the real learning of their predecessors. This arises from various causes; one of which is, the great antipathy which almost all philosophers have to the oldest books in the world—the books of Genesis; and this dislike arises from the manner in which these books are made subservient to their selfish purposes by both Jewish and Christian priests. For fear, therefore, of aiding them, the philosopher can never be brought to examine those books like any others; but the moment they are named, off he goes; he will neither examine them, nor listen to any one who does. Therefore if any person attempts an impartial examination, he is instantly poh-pohed down; the philosopher is instantly aided both by Jews and Christians, for they have as much objection to a fair examination as the philosopher. This extends to the language in which the books are written, to the Hebrew, because the priests endeavour to bolster up their interests and their fooleries by maintaining that the Hebrew language is the *oldest*, and therefore the *sacred* language. No man has been more successful in his antiquarian researches than Vallancey; but, I really believe, merely because he has traced the old Gods, &c., of the Irish to the Phœnician or Hebrew language, the philosophers have been foolish enough to join the priests in running him down. The latter soon discovered that Vallancey was likely to discover too much for them; and almost all the English joined in decrying the literature of the Irish, because they envied them the honour of it, and because they hated the nation they oppressed and plundered. Of all this Mr. Adrian Balbi, in his *Ethnography*, furnishes a fair example. For, in treating of the Mexican language, notwithstanding the close affinity between the Hebrew and the Mexican, which, in defiance of monks and priests, has been so clearly proved, he never notices it. He acts in nearly the same manner with regard to the Irish alphabets, and says, “De grands historiens et des philologues profonds ont déjà apprécié convenablement ces rêveries historiques, et ont démontré que ces alphabets, qu’on prétendait être antérieurs à l’alphabet Grec, ont été fabriqués par de pieux moines dans le moyen âge.” If M. Balbi had looked into Vallancey’s works, at the Irish alphabets, the Bobeloth and the Bethluisnion, of which I have given copies in Vol. I. p. 9, and had used his understanding, he would in one moment have seen, that they both possess the digamma or *vau*, which the Greeks never used after the time of Aristotle, and, therefore, that they could not have been copied from their alphabet by the monks of the middle ages; and secondly, that they both possess correctly and simply the Cadmæan letters; and therefore it is totally incredible, that the monks should

¹ The Celtic is PROVED to be Hebrew in the Celtic Druids, (p. 63,) and in the Monthly Magazine, Vol. II. p. 609, and Vol. III. p. 10. The Celtic and the Hebrew are proved to be the same, in the Universal History, Vol. XVIII. p. 363, Vol. V. p. 411. See also Diss. on Hist. of Ireland, Dublin, p. 48, 1763. I also beg my reader to turn to Vol. I. p. 109, and *supra*, Chap. I. p. 4, and to consider well what the well-known excellent Hebrew and Saxon scholar, Dr. Geddes, has said, in his Critical Remarks, respecting the identity of the Hebrew and Saxon.

have copied them only, leaving out the additional or new letters. The two facts taken together prove, that the old Irish or Celtic letters were not taken from the Greek, but were the same as the sixteen-letter alphabets of the Hebrew, the Tamul, and the Pushto or Peshito. Speaking of Gebelin, Balbi says, "Parmi les fautes grossières dont il fourmille, et que ses partisans ont répandues dans un grand nombre d'ouvrages, on y lit, entr' autres, que le Persan, l'Arménien, le *Malais* et l'Égyptien sont des dialects de l'Hébreu." But very certain I am, that, notwithstanding the dogmatical assertion of the learned Balbi, this must not be classed among the mistakes of the learned Gebelin. The Count Gebelin is right; because all the languages of the world contained in syllabic writing, unless the Sanscrit be excepted, may be traced to one, and the Synagogue or Samaritan Hebrew is nearer to that one, merely from the accidental circumstance of its concealment in the Syrian temple. Wherever it and the Chaldæan priests went, there the remains of it will be found. It was the language of Ayoudia. It was the language of Pandea, in India, of Ceylon, Scotland, Ireland, and of Syria. Whenever a learned man attempts to shew the affinity of any two of *these languages*, he always succeeds; in the same manner he always succeeds in shewing their affinity to the Hebrew. No doubt it may be shewn more clearly in the languages of some nations than in those of others,—for instance, in Arabic and Celtic, than in Indian. This I attribute in a great measure to the fine Sanscrit having by degrees superseded it. Only in the broken dialects of India can it be expected to be found, and upon all these the Sanscrit has exercised an overwhelming influence. The observation of the Count Gebelin, respecting the MALAYS' speaking Hebrew, noticed just now, forcibly recalls to my recollection what was said by my learned friend Salome, respecting the Hebrew-speaking Malays, found by him in the dépôt of the English India house.¹

All that I have said respecting the Hebrew I think may be said to be *unwillingly* admitted by the learned Balbi in the following words: "Dans ces dernières, l'Hébreu *surtout* offre, pendant "une longue suite de siècles, une étonnante fixité, soit dans les formes, soit dans les mots: fixité "qui est d'autant plus remarquable que, durant ce long intervalle, les Juifs subirent les plus grands "changements politiques."² This astonishing *fixité* of language, I have shewn, had its reason or cause in the accidental preservation in the temple, combined with the dogma which forbade all change. Had we any other sacred book of any one of the mysterious temples, we should probably have found it the same. Though the manuscripts might be torn and dispersed in the time of Jerome, yet still they were parts of the old book. Various opinions have been held respecting the primitive race and language, which have been often confounded, though by no means necessarily so; but unquestionably the great majority of learned writers have come to the opinion, that the Hebrew, as a written language, is the oldest, and this without any regard to religious considerations.

I mentioned in the note of p. 1, that Dr. Wait had observed "there were an IMMENSE NUMBER "of Chaldee roots to be found in the Sanscrit" language. I surely need not point out to the reader of this work what an amazing support the disinterested evidence of this learned man gives to my theory. It almost amounts to a proof that the ancient Tamul, the Estrangelo, the Pushto, must have been the Hebrew-Chaldee-Ethiopian-Syriac on which the Sanscrit was built. That is, it actually proves the truth of the hypothesis advocated by me in the above-mentioned note, that the Sanscrit was, in a great measure, founded on the Hebrew—a proof which I was not able to give in consequence of my ignorance of the Sanscrit, but which Dr. Wait has supplied. In the Sanscrit language there is scarcely a single word connected with mythology, which will admit of a

¹ See Vol. I. pp. 432, 442, 596, 665, 751.

² P. 58.

rational etymological explanation. All this class of words was formed long before the Sanscrit language, and they were only the old words written in the Sanscrit letter: from this it naturally follows, that they are inexplicable by the artificial rules of Sanscrit grammar—by the general application of which rules to every case, Sanscrit scholars run into the greatest absurdities. With the Brahmins it has become a point of faith to hold up their fine Sanscrit as absolutely *perfect*, and, in this, they are followed by some of its modern professors. This is with the Brahmins exactly the same as it is with the Jews and their *points*; but wherever faith begins, the use of reason ends. It is always their object to refer any word to a verbal root; but to accomplish this, they are obliged to neglect the signification, and often, also, to run into the most absurd and arbitrary assumptions with regard to the form of the words. A few examples will best illustrate this. The word swan, the Greek *κων* a dog, they derive from the root Si, (pronounced like the English word See,) *to sleep*—third person present *sete, he sleeps*—and they assign as a reason for the derivation, that a dog sleeps, or is a lazy animal. I think it will be allowed that nothing can be more forced than this. As a second example, Aswa (Latin equus, a horse) they derive from the root As, *to eat*, because a horse eats.

The Rajah Rammohun Roy informs me, that the word Age in Sanscrit means *to go*, and *quickness* or *velocity*; and thence, as fire is *quick*, it came to take the name of Agni or Yajni. Every thing in nature, the Rajah says, was supposed to have an angel presiding over it, according to the system of the Jews, which was also the system of the Hindoos—the angel being called a *deus*. Thus the Angel or Deus of Fire or of Agni came to be the God or Deus Agni. This is exactly the Jewish regimen. Now here, I think, we have an example of the Sanscrit scholars' losing a word by attention to their artificial grammatical rules, by which they conceive themselves strictly bound in accounting for the origin of any word, and by which they become involved in inextricable difficulties. It is almost evident to me, that the assumption of claims to absolute originality in the Sanscrit is a modern assumption. I apprehend the word age, *quick*, is the Latin Ago, which means *to move*, and the Greek *αγε* which has a similar meaning. It is certainly not impossible that the word *αγνος* *hostia pura*, or agnus *lamb*, being a burnt-offering, may have taken the name from the *fire*, and thus the Agni may have come to mean Lamb. Innumerable are the absurdities into which the Brahmins are obliged to run, in order to compel the language to bend to their artificial grammatical rules, and by these processes they can and do coin words which are found in their modern Lexicons, (and their Lexicons are all comparatively modern,) but in no other books; but to account for this, the roots are said to be obsolete.

As there are many words thus formed which probably never had in reality any existence, so there are many left out of the Lexicons which are in the books, but which are left out perhaps, because they cannot make them bend to their rules.

The following are obsolete Sanscrit words, occurring in the learned Dr. Rosen's Rig-Vedæ Specimen, and not to be found in any Sanscrit Dictionary:

प्रथान	<i>prat'hāna</i>	glorious, celebrated.
वोह्ल	<i>vohla</i>	host, army.
अजिरं	<i>ajiram</i>	quickly, speedily.
चित्	<i>chit</i>	and.
दम	<i>dama</i>	house, dwelling.

दमे	<i>damé</i>	at home (<i>domi</i>).
गृभ्	<i>grībh</i>	to seize, to take hold of.
पृत्सु	<i>prītsu</i>	in war, in battle.
भर्गम्	<i>bhargas</i>	light, lustre.
चर्षणि	<i>charshani</i>	man, human being.
दाषा	<i>doohá</i>	by night, during the time of night.
वस्तरू	<i>vastar</i>	by day-time.
बिश्पति	<i>vīspati</i>	a lord of agriculturers, i. e. a prince, a king.
मीह्लु	<i>mīhlu</i>	wealth, riches.
ईला	<i>ild</i>	food, nourishment.
सध	<i>sadha</i>	with, together with.

The Irish word Ogham and the Acham of the Sanscrit I have shewn to be the same. When we consider this we shall not be much surprised to find the language of Scotland called Sanscrit, or Gael-doct, that is, *learned Gael*—but this we shall find by and by. I suspect the Acham of the Sanscrit is nothing but חכמ *hkm*, the Jewish word for *wisdom*. Door is in Sanscrit Dwara or Dura,¹ in Saxon *dora*. It is found nearly in all languages, and is no doubt an original word. In Greek it is *δωρα*. In Chaldee it is תרע *tro*.² The Sanscrit word to walk is *valg*: this is evidently English, that is, Saxon or Hebrew.

It has been observed by my friend, Professor Haughton, that all barbarous languages form their words of great length, and the observation is very correct, as we are in the habit of representing them by letters. But I think this only applies to unlettered languages. I much suspect that the fact of the languages having come to be described by syllables and letters, has had the effect of making all of them assume the difference of character which we see between them and the Polynesian and Mexican languages. The arts of writing and reading are so difficult to be learned, that efforts would naturally be made at first to render them as simple as possible; and it is on this account that we find all the first alphabets consist of right lines. It is perfectly clear that after most of the words of a language had been put into writing either by letters or symbols, whether confined to a high class or not, that language would naturally become more fixed than it was previously. Ben. Wasigh, of whom I shall speak presently, has let us into the secret of the monstrous complication in their forms, by having shewn us that all these forms were adopted for the sake of secrecy. The fact which he gives us is supported by tradition, by analogy, and by the general character of secrecy which was adopted all over the world. But though this made the forms of the letters complicated, it had no tendency to make the spoken languages so. The same cause which would make the spoken language of a barbarous people rich or complicated, would make the written language of its first inventors poor; for in writing, I think, as little labour as possible would be expended upon it, as it must have been

¹ Tod, Vol. I.

² See Webster on word Door.

an extremely difficult thing to accomplish. Every kind of contrivance would, therefore, be adopted for the sake of brevity, which would also tend to secure its secrecy.¹ It is perfectly clear that all the principal written alphabets of the world are the same in principle—have all been originally derived from one, and, it is probable, that that *one* was the numeral alphabet of the Arabians. In obedience to the eternal law, it would, of course, have a tendency to change—for nothing stands still. It would be pronounced by various nations in various ways, and we, by following their pronunciation, endeavour, as far as in us lies, to augment the mischief arising from the law of change; we labour to increase the change instead of endeavouring to decrease it as far as we can. For instance, suppose we take the letter *y o*, which, by its power of notation, *seventy*, is clearly fixed to the omicron of the Greeks, by their *o*, and by no other letter ought it to be described, and certainly not, as some persons would do, by the *ng*. This is clearly what we ought to do if we mean to denote the same idea as the Greeks and Hebrews by the same symbol. The sound has little to do with it; the idea is what we ought chiefly to attend to in these investigations.

We constantly find that travellers meet with persons of all classes speaking what they call the Arabic language. Now, if I be right in my idea respecting the identity of the Arabic and Hebrew languages, how is it likely, if not written, that they should be *distinguished* in India. This accounts for the Christians speaking Syrian in Malabar. The case with the Hebrew and Arabic languages is exactly the same as that of the six dialects of the British Celtic—the French, Manx, Irish, Welsh, Cornish, and Scotch, notoriously all the same, but now become nearly unintelligible to one another, although the common meaning can be perceived by any person who understands them all. But no person in the more civilized parts is able to understand a person of any of the other countries without great difficulty. This is, in the case of the Hebrew and Arabic, much aggravated by the artificial modern letters, in which they are written. It is perfectly clear that the Sanscrit is like all other languages in this, that it had its infancy, and was brought to perfection by degrees. The progressive state which the several Vedas shew, puts this out of all doubt. The most learned Brahmins now can scarcely read and understand the first Veda. The circumstances attending the Yajna sacrifice, and that the meaning of it is lost, are decisive proofs, either that a part of the language is lost, or that this sacrifice, which, when it is offered, is now *public*, was formerly secret.²

I must here beg my reader not to forget that the old Syriac or Estrangelo or Chaldee is called, though not the letter of the leaf or tree, yet very near it, the *letter of the flower*—Pushto—and which must be considered really the same: in this it is similar to the Welsh Celtic, lately noticed from Dr. Lingard. But I shall discuss this farther by and by.

The first Greek letters being in lines or *γραμμα* and called leaves or *πεταλα*, and their notation being yet in right lines, and the Etruscan or Italian being also in right lines; and the Irish and

¹ In my observations on Hieroglyphics I have overlooked an important notice of them by Ammianus Marcellinus, lib. xvii. 4, who says, that a certain Hermapion had written a book containing translations of hieroglyphics into Greek. From this the learned Heeren comes to the conclusion, that he must have understood the hieroglyphic writing and language. Now it so happens, that from this I come to a conclusion quite the reverse, namely, that like M. Champollion, he only pretended to understand them, but really knew nothing about them. If he had understood them, they would all have been instantly translated. Had they been used as the Edinburgh Review says, for the purposes of common life, Hermapion would have had no occasion to make a book of translations. He was evidently a pretender, to whom no attention at the time was paid, and he would not be worth a moment's notice if he did not add to the proofs already given by me, that they were lost at the time of the conquest of Egypt by the Greeks, and that therefore the discovery of the names of Ptolemies and Cæsars proves M. Champollion's discoveries to be all delusions. I think it is evident that Hermapion attempted to explain or translate them as M. Champollion has done.

² See Vol. I. pp. 260, 389, 640, 667, 707, 718.—For Sanscrit see Drummond's Orig. Vol. IV.

the Hebrew having been in right lines, and having both the names of trees, are not theories but facts, and will justify the conclusion that my theory is in substance correct. All this is strengthened by the numerous allegories in the old Arabic, Syriac, Welsh, and other languages relating to the tree of knowledge and of letters—Arbor in medio Paradisi, &c., and we shall find presently, that the first system of letters of the Chinese consisted of right lines. I think it must have been this numerical system which they had. Each of the numbers would constitute, correctly, one of their symbolic letters. We may be pretty certain it was the same as that which the people of Sumatra used, and we know from Jambulus that it consisted of 28 figures.¹

I believe that no person who has studied the subject ever doubted that there has been one original, universal language. Mr. Bryant says, “There are in every climate some shattered fragments of original history, some traces of a primitive and universal language; and these may be observed in the names of Deities, terms of worship, titles of honour, which prevail among nations widely separated, and who for ages had no connexion.”² On this subject a very learned and ingenious treatise, by Mr. Sharon Turner, may be consulted, in the first volume of the Transactions of the Royal Society of Literature. I have no doubt that in very early times a sacred or secret written language of numeral symbols existed, which was in use over the whole world, and that that language, as was a natural consequence, consisted of a definite number of words and ideas, each word and idea represented by a number. As long as a certain pontifical government lasted, which I shall shew was the first government, and was the inventor of this symbolic letter, this would remain. By degrees the priests of this order, but of distant nations, would add words to it, till the number became cumbersome, and then the discovery of syllabic writing being made, the numeral system would by degrees be deserted. This would be the first language both written and spoken, used in all nations. By degrees in each nation new words would be formed in addition to the old, and often exchanged for the old; so that we might expect what we find, namely, some of the old first words in every language. From the observation of Cluverius, that he found a thousand words of other languages in the Hebrew, and from the circumstance that it is in a less changed state than any other written language with which we are acquainted, an effect which has arisen from the accidental concealment of it, in the recesses of the temple of Syria, I am induced to fix upon it as being the nearest to the original language.

In the twenty-eight angle-shaped forms or arithmetic figures, there was evidently an unspoken symbolic language, or language of symbols. It is highly probable that after man had got thus far, he would very soon multiply these symbols by making new ones, as the Chinese have done—a symbol for each idea—or by making drawings of the objects of nature as the Mexicans have done with their hieroglyphics.³

6. We have seen how, in the name of the Sun and Moon, we obtained the first word of literal syllables. We will try another example or two. The Jews and Egyptians had a cycle of *fourteen* days.

Suppose man wanted to record the cycle of *fourteen*, he would write the sign which stood for *ten* and the sign which stood for *four*, calling one *Iod*, *Jod*, or *Yew*, and the other *Duir* or *Oak*, and

¹ Vide Prel. Obs. in Vol. I. p. 5, Sect. 22.

² Vall. Coll. Hib. Vol. VI. p. 4.

³ The Mexicans must have gone from the old world after the decenary system of notation was invented, but before it proceeded to symbolic writing. If symbolic or Chinese writing had been invented and known to them, they would not have fallen back to hieroglyphics. Their hieroglyphics are not a secret system, but known to all; in this, differing from that of the Egyptians. I have no doubt that the periods of the planets were among the things first recorded—the recording signs at first being used as figures of notation, and not being representatives of sound, and therefore the signs

he would get $\text{I}\Delta$ or *Iodur*, *Iodi* or ΔI *di*, the Hebrew $\text{י} \text{ד}$ *di*,¹ which came to mean *holy* or God. Thus would be surmounted the immense difficulty of finding out the art of making signs for letters or syllables instead of things. And now every sign would stand for a number, a sound, a thing, a letter, and a syllable. The signs for things would be soon lost, the signs for letters and syllables remaining; and I fix upon this word ΔI *di* as likely to be the first written word in the first syllabic language, as we find it in the oldest languages.²

In the St. Kilda dialect, and also in that of Mexico, *Di* means Great and Lord. It is also written *Ti*. This justifies the explanation of *Ti*-bet by Georgius. It is the word of numerals $\text{Di}=14$. From this, as Malcolme says, probably came the name *Dey*, the King of Algiers.³

When a man had got the collection of *three* stones or lines, or the sign standing for them, to be called *Gort*, and in like manner the parcel of *four* to be called *Duir*, I can easily conceive how he would come to describe the word *Dog* by the signs for the 3 and the 4, called *Duir* and *Gort*. I think if he endeavoured to describe the animal by signs as he had done the cycles, he could do it no other way than by using the signs of the numbers, whose names had their beginnings with the sounds which he wanted to describe. The number of units in a cycle led a man naturally to describe it by the symbols, but nothing of this kind could lead an inquirer to fix upon any figures to describe the word *dog*; but in the place of this the sounds of the first letters would instantly present themselves; and thus he would describe it by the symbols for 4 and 3, because these numbers had names which began with *D* and *G*. He would find from this that, by taking the symbols of each number⁴ and putting them together, he would produce a certain useful method of recording any thing he wished. Thus he discovered the art of giving sounds as letters, or of converting into letters the symbols of the numbers. This, I think, is the mode by which the most useful discovery in the world may have been made. All this is confirmed by ancient medals.

In the way which I have described, a symbolic language would be formed, each symbol standing for a number, and also for an idea. Men would understand one another perfectly, though the language could not be spoken. Every symbol for an idea would be a monogram. This is nothing but Chinese writing—the powers of notation of the respective signs having been lost when the Arabic system of notation was discovered; for the monograms would continue useful as writing, but be useless as numbers. The memory would be greatly assisted, at first, by the powers of notation, in the learning of such a language: and it is evident that, however varied the forms of the symbols might become, as long only as the ideas of the powers of notation remained unchanged, and however varied and unintelligible to each other the languages of men might become, yet the system of writing would be understood by all.

Supposing the written language of symbolic figures to have been in use for several generations, the spoken language must have been gradually changing; and then, if we suppose the syllabic language to have been brought into use by priests writing into it the words before preserved by them

which afterward became vowels would sometimes be used. Thus the Sun would be called *Sul* or *Suli*, as the case might be—as 336 or 366 was meant to be represented.

¹ I must apprise my reader that he will not find the Hebrew word $\text{י} \text{ד}$ *di* in Parkhurst construed to mean God, but I feel no hesitation in giving it this meaning, since he allows that the Celtic *De*, *Di*, *Dia*, the Latin *Deus*, and the Greek $\Delta\iota\alpha$, and the Goddess $\Delta\eta\iota\alpha$, *Ceres*, were derived from it. See Greek and Hebrew Lex. in voce.

² Lord Kingsborough shews that God is called *Dios* by the South Americans. *Antiq. of Mexico*, Vol. VI. p. 63.

³ From the ד *id* came all the mounts called by us *Ida*, by the Hebrews $\text{ד} \text{י} \text{ד}$ *ido*: $\text{i}=10$, $\text{d}=4$, $\text{0}=70=84$.

⁴ If this be thought complicated, we shall presently find man to have recourse even yet to a practice much more complicated, described by Sir S. Raffles.

in unspoken symbols, we may easily conceive how differently the words would be spelt in different countries. The only surprise to me is, that any similar words should be found. Sure I am, that many more instances of identity of words in different languages have been found than could be expected.

We have not yet found why BD, as observed in Vol. I. p. 155, came in almost all nations to mean Creator. Buddha is, I have no doubt, the first God, whose written name we possess. Among other names we find him called *Bad*. This I think may perhaps have been his first name, and it may be AB or BA, meaning *father*, joined to the cyclic word *di*, making *Holy Father*. The *Ba* is the numeral emblem of Buddha, because the two letters represent the number *three*, the Trimurti, which was incarnate in father Buddha, or in the holy father. But here in *Bad*, we have the word for Wisdom, Logos, Divine Love, to mean evil. This was for the same reason that *hostis*, a host, and a peace-offering, meant enemy; and as the city of *On* or the Sun, or the generative principle, was called *the City of Destruction*, all these mistakes arose from confounding the creating and destroying powers. But the word BD may be derived from another source, which I will now explain. We have formerly found PD, as well as BD, to mean *giver of forms*. The Jews had a cycle of 14,¹ which they multiplied by 6, and thus made a cycle of 84, which must have been in this case, not BD, but PD; $P=80, D=4=84$; Pad or PD, the name of Adonis, and of the river Don, the Po, and the Ganges, evidently one of the names of Buddha—Pod-en² who was supposed to live 84 years. Though formerly puzzled to know why BD, or PD, should mean *creator* or *former*, we may here, perhaps, find the reason.³

Rapin⁴ states, that the ancient Britons used a cycle of 84 years. This, in a very remarkable manner, connects the Eastern and Western world, and is on this account of the greatest importance. I shall return to this cycle in a future page.

We have seen that the first division of time or first cycle would be into a period of 28, the days of the moon's age, called cycle or circle from its constant renewal. The second would be into fourteen $ID\ 10+4=14$ or XIV, and the 28 might be two fourteens— $ID\ ID$ —which became afterward the Syrian $AD\ AD$, and the $\aleph\ ihd$ treated of in Vol. I. p. 392. Man's first conception of God, after he acquired the idea of his existence, would be, of a being *one* and *holy*, and this *one* or *monad* he would describe by the figure which he used to describe the tree after which he called his first number or unit or digit⁵ or *one*. Having, I suppose, found or made the D or Di stand for the name of the first cycle of *fourteen*, or in fact of the sun, of God, it almost necessarily followed, that the initial of the name of the monad, when man got to the use of letters, should be joined (to form the name of the God) to the general term for the idea: thus A was joined to the DI or D, and he got *Ad*. This was the *Ad* of North India, Eastern Syria, and also of Western Syria—*Ad ad* corrupted to *Hadad*. The *ID* was *Di*, the Hebrew $\aleph\ di$; and from this we have the DI and D prefixed or post-fixed to words as Di-va, Maha Deva, the great Goddess Vau, or the mother Goddess Vau or Va. But *ad* might be $a=1, d=4=5$, the root of the cycle of 60. The Vau we have before found called Venus or the Mother:⁶ thus we have *di-va* or *Di-eva*, *Deva*. This sacred cycle of

¹ Basnage, p. 436.

² See Vol. I. p. 153.

³ But the BD may also come from $B=2, D=4=6$, which is the Vau, or, as we say, Eva, the mother of all living. Eva is only Vau, and the emphatic article *the*—making *the Vau*. Thus the Vau was the female generative principle. It was the root from which sprung all the various cycles depending on the number 432. It cannot be objected to the meaning given to the *Eva*, that the first letter is the Heth and not the He, because the Heth is not one of the old sixteen, but a new letter, and we have formerly seen that these two letters were commonly substituted for one another.

⁴ Vol. II. Ed. Eng. B. III. p. 67.

⁵ The very word digit for the numbers under 10, shews the origin of the figures.

⁶ Vol. I. 221.

fourteen is no theory. Plutarch tells us it was the Egyptian sacred cycle of Isis and Osiris—*derived*, he says, *from the moon*—14 solar revolutions of the moon; therefore, properly a Luni-solar cycle. It was, I suppose, as above described by *id* 10+4, and thus it became the name of God and holy, being the first natural cycle. The reduction into its still lower cycle of seven, by dividing it, does not make a natural cycle like the fourteen light and fourteen dark days of the Moon. Thus came *Da* or *Di* to mean *holy* or *God*.

From γ *di*, *holy*, came *do* to give, and *donum* and *divus*, in fact *the giver*—in Hebrew γ *tn*.—In the word A joined to the D=5, I think we have the first syllable of the word Ad-am, and in M, or Om the second. Or the second might be *ma*, great. It was the 5, the odd number and the male, in opposition to the $\alpha\gamma$ *eua*, the *vau*, the 6, the even number, the female. Our word *od* is $ad=5$, our word *even* is the $vau=6$, Eve with the Tamul termination. It is a remarkable fact, and of the first importance in this inquiry, that the names of the trees in the old Irish alphabet should all begin with the letters which give the sounds required to make the words that constitute the names of the letters. For instance, the Ivy, called Gort, to stand for the sound of G; the Oak, called Duir, to stand for the sound of D. This was because the number 4 was called Duir, meaning Oak. Thus the number was first called Duir after the Oak, then the letter was called Duir after the tree and the number. This is not the case in any language except in the ancient Celtic Irish, and just enough in the Hebrew, which was Celtic, to shew that the same rule obtained in the formation of its alphabet. A necessary consequence followed from this, that the letters, whose designations arose in the manner I have suggested, should have the sounds of the first letters which we now find in those names of trees, and no other: for instance, that the Duir should give the sound of D, and not of O or of any other. This chiefly contributed, perhaps entirely caused, the discovery of alphabetic writing; and it seems to me to be a very striking proof of the truth of my theory. But if what I have said in the Preliminary Observations (Volume I. pp. 13—15) be carefully considered jointly with what I have said here, I think no doubt will remain that the Hebrew, and consequently also the ancient Arabic, (which are, in fact, the same language,) had originally the same names of trees as the Irish. It is impossible to believe so many trees to have had the names of letters and this quality to have arisen from accident.¹

The two Greek terms for letters, viz. $\pi\epsilon\tau\alpha\lambda\alpha$ from $\pi\epsilon\tau\alpha\lambda\omicron\nu$ *a leaf*, and $\gamma\rho\alpha\mu\mu\alpha\tau\alpha$ from $\gamma\rho\alpha\mu\mu\eta$ *a line*, confirm what I have said, that letters were originally *leaves* and *right lines*. A book is called in Irish *barac* or *barc*, which also means a leaf, which Vallancey says² came from the bark of a tree.³

¹ The Morning Herald for April 16th or 17th, 1827, states, that the Bible Society in Ireland was giving Hebrew Bibles to the native Irish, because they found that they understood them in the Hebrew quicker than in the English. What I have said respecting the Hebrew and Irish names of trees seems to furnish a satisfactory reason for this, if the Herald be correct. And my theory is very much strengthened by what I have shewn from the preface to Boucher's Glossary, and from other authorities, that the Welsh, which was originally the same as the Irish, had a very close relation to the Hebrew, but to no other language; in fact, it was really Hebrew. It may be observed, that they were the humble peasantry of Ireland to whom the Hebrew was intelligible,—people removed from towns and improvement, and consequently change. I lately learned in Scotland, that the people of some of the most remote parts understand the people of the Western coast of Ireland, but the more civilized and cultivated parts of each population do not now understand one another. I was also told that some Miners came out of Cornwall to Mr. Pennant's slate quarries, and they understood, though with some difficulty, the Welsh who were working there.

² Coll. Hib. Vol. V. p. 134.

³ We have found Bacchus called Liber, and Boc or Book; we have found him called Kiakiak in Siam; (Vol. I. pp. 639, 643;) and we have found him called by most of the Cycles, as Nss=650. The Hebrews called writing $\kappa\gamma$ *dk-dk*. We have found him, in Ceylon or Siam, called Dak-po. This is Dg-Padus or Po. I believe the Kiakiak is

7. When we reflect upon the general tradition that Teut, Thoth, or Hermes, was the inventor of letters,¹ and that in the very old histories they are always connected with the idea of something magical, the following observation of the Abbé Guerin de Rocher will be thought striking: “Il est surprenant que quantité de savants, qui ont fait des recherches sur Thoth ou Athoth, n’aient pas observé que c’est le même mot qui en Hébreu (אתות *atut* sigma, אותיות *autiut* litteræ) signifie signes et lettres, parce que les lettres sont des signes des mots. *Athiuth*, qu’on prononce *othioth*, et qui vient d’*athut* ou *othoth*, signes, est le mot constamment employé dans toutes les grammaires Hébraïques, pour signifier les lettres. Ce mot nous indique donc que bien des choses attribuées à Thoth ou Athoth, chez les Egyptiens, peuvent avoir rapport aux signes des Hébreux: et le mot de signe, chez les Hébreux, signifie quelquefois des signes naturels, quelquefois des signes miraculeux, et enfin des signes artificiels, tels que les lettres. Je montrerai en effet par-là l’origine d’un Thoth aussitôt après le déluge; d’un autre dans Moïse, qui a bien droit à ce nom, et par les signes miraculeux qu’il opera, et par les signes ou lettres sacrées qu’il écrivit. C’est que je développerai et prouverai dans la suite des règnes.”²

I have formerly observed that I thought that letters were secret and considered magical. This opinion is confirmed by this observation of Guerin de Rocher, that the word used for letters or symbols of notation is also used for the idea of miracle, and is used in Genesis i. 14, as signs to divide the times. When a person considers the astonishing effect or power of letters and figures of notation, he will not be surprised that they should have given name to any miraculous effect. Nor is it surprising that the signs TT, which described, in the first symbolic letters, the soli-lunar cycle, should come to mean signs or letters generally, letters being considered the conveyors of the knowledge of Wisdom or TT, or OM.

We have found (*supra* pp. 8, 163) Bacchus called Liber, a book, and also the bark of the tree whereon letters were written. Now the אתות *atut* spoken of above by the Abbé, is evidently Tat or the name of Buddha. But TT is here a letter, and Tiut, or the plural, letters: this is Thoth, which is clearly nothing but the Hebrew plural of Tut. Vallancey³ says, “Literarum verò characteres in animalium, ARBORUMQUE figuris invenit THOTH.”⁴ Again he says, “טטא *tta*, in Chaldee, means Vates and Haruspex; this is Tuatha in Irish;” and he gives an Irish verse thus translated:

Vates (Tuatha) Hiberniæ vaticinabantur
Adventurum (tempus) pacis novum.⁵

Here, as usual, we have the prophecy of a new age. I beg my reader to refer to p. 23, *supra*, and to consider what is there said of the Thoth, Tat, and Bacchus, among the Mexicans.

Our word Book is evidently a diminutive of the word Boc, Bac, Bacchus. Bacchus is liber, a letter, a book; the bark of the tree on which the book was written is liber. אתות *atut* is תות *tut* and the emphatic article: it means Buddha and a letter. By the tree comes salvation, life; the inner bark or the liber on which the law was written, is the life of the tree, as anatomists say. Thus the tree is *the book of life*.

Cicero⁶ says, that Hermes or the fifth Mercury, whom the Egyptians call Thoth, was the inventor of letters. This is nothing but the renewed incarnation of Hermes or the fifth Buddha in Egypt.

דקדק *dkdk*, and that it meant a cycle, for which we have not yet found a God—unless it be Dag-on. $\rho=20$, $\gamma=4=24$. Here I suppose a corruption of the ρ for the γ *c* or *k*. As this is contrary to my system, I name it as a suspicion, but nothing more.

⁴ *El. Sched.*

⁵ *Coll. Hib. Vol. VI.* p. 312.

⁶ *Natura Deor. lib. iii.*

The Oak and Beech gave out oracles at Dodona or Bodona. They were called *arbores loquaces* by Julius Valerius, Vol. III., and Firdausi mentions *speaking trees*, which revealed the decrees of fate to Alexander. These were books; liber, a book, was a tree—its leaves the leaves of the tree. A book is a prophet. What do we mean when we say, Consult the prophets, but the books of the prophets, to see what is foretold?¹

Can any thing be more nonsensical than the story of the trees giving out oracles? This affords a fine example of the absurdity of the moderns in taking the mythological stories of the ancients to the letter, instead of giving them credit for what they assuredly possessed—common sense—and instead of endeavouring to discover the hidden meaning of their ænigmas! The Runes of Scandinavia, and the ancient Greek letters, were inscribed on triangular pieces or staves of Beech wood, and the word Buch signifies both a book and a beech tree.² Thus we see why the Beeches of Dodona spoke and gave out oracles. The word Rune, in the Anglo-Saxon, means, whispering, secrecy, magic. The word Runeh is Phœnician, or, more properly, Arabic. In Hebrew רנה *rne* means *a song* or *to sing*.³ We must recollect that Olen was the first who celebrated the praises of the God at Delphi, with song or poetry.⁴ I have read somewhere, but where I have forgotten, that on the pedestal of the God at Delphi was a frog. In Latin *Rana* means *a frog*. Here we see the same mystic play upon the word. There is a peculiar kind of small green frog which, in the spring, keeps a up continual singing, very different from the croaking of our frogs; and what is remarkable, it lives at that time not in the ditches, but on the tops of the Beech-trees. I have heard it often in the Netherlands on the banks of the Lower Rhine. Ladies in Paris keep it in a bottle for a weather glass. In fine weather it comes out to the top, in bad, it is at the bottom.

The staves of wood on which the Greeks wrote are called by Mr. P. Knight⁵ Tablets; but he gives the Greek *Δελτοι*. I suppose they had this name from the similarity of the top of the staff to the Greek *Δ* delta. However the tripods might become changed in form in later times, when the Greeks lost all knowledge of the meaning or origin of their mythology, I have little doubt that, originally, they were nothing but these three-sided pieces of wood, the writing on which enabled the prophetess to give out her oracles—and thus the Beech-tree spoke.

From the word *אלף* *alp* joined to the second word Beta, the Alphabet evidently has its name. It means *chief*, *principal*, *leader*. It means *a guide*, and in this it is easy to see, that it means *knowledge* or *wisdom*. It also means a principal number; this I believe is mystical, and, in fact, means, as the first, the fountain of number or numeration. It means both a Lamb and a Beeve. The Elephant or Ganesa being the God of Wisdom, that beast had his name of *Ἐλεφας* from this word. He was the *first* and *wisest* of Beasts: from all this, when read in the Greek style from left to right, *אלפא* *plā* came to mean the word Pallas or Minerva. In the Egyptian language, the island of Elephantia was called Philoe or Elephant.

The first word of the Alphabet is often *one*; which one is often described by the monogram I. Here the idea of *unity*, the *Το Ου*, and *self-existence* are united. The number ten is also the same monogram, and means *excellence* or *perfection*, and has the same reference to the hundreds that the 1 has to 10, and constantly describes the *Το Ου*. In Arabic numerals, *one* and *ten* were the same—1. They are the same in Roger Bacon's calendar.⁶ In French we have the *Ie* in the pronoun *je*, I. All this exactly agrees with what we learn from history—that the first Etruscan

³ Fry's Lexicon.

⁵ Prol. to Homer.

and Scandinavian or Runic letters or numbers were right lines; that with the Irish¹ they were called after trees; that with the Greeks they were carved on staves—*Axibus ligneis*—and that they were formed of right lines and called *Γραμματα* or *Πεταλα* or leaves, or petalon or leaf (I believe tree); and that they are found with the mythos of Virgil and the leaves of the Sibyl, and in the Rhythms or Runes of Wales. Now all this leads to the important result, that this system was not at first intended as a record of language but of ideas. We see in the Arabian and Hebrew alphabets perfect order as concerns numbers, but perfect disorder as concerns letters for names of letters or of sounds; and we shall find presently all the planetary bodies and astronomical periods described by numbers, as, upon my system, they ought to be found; for I suppose the use of numbers, for sounds and the formation of words, was not discovered till long after arithmetic and astronomy; and that the letters, selected at first without any regard to system in reading, though afterward altered by the Greeks, in their system, to accommodate it to a certain mythological superstition, very evident in the 6, 60, 600, *ss*, *samach*, *xi*; again, in the 9, 90, 900, *Teth*, of which I shall treat at large presently. In addition to this, I am quite convinced that an attentive consideration of the plates of letters given by Mr. Astle, will satisfy any person, that not only have the ancient systems once been all the same, but the forms of the letters have been nearly so. It will also shew the remains of the practice of making the letters from top to bottom, and of their being read sideways; as, for instance, the S M, the 8, ∞, and many others.

There are several parts of my system which are *facts* not *theories*. They are facts, that in that system of letters which we have, and that probably the oldest, viz. the Irish, the letters are called after the names of trees; that there are enow of the old Hebrew yet so called, as to raise a very high probability that they were all so originally; and that each tree's name begins with a letter answering in sound to the sound of the letter. It is a fact, that the moon's name in numbers, as above, is the name by which it was invoked in the orgies of Bacchus. It is a fact, that the Greeks called their letters *gramma* and *petala*; that the letters of all the oldest languages were in right lines, at angles, (though some of the nations certainly corrupted their alphabet to humour the mythos,) and that, at first, they mostly wrote from the top to the bottom.

If a person will impartially consider the great number of duplicates in the Arabic, he will at once see how unnecessary they must have been for a new-formed language: 4 symbols for d, 4 for Z or S, and 3 for T. All these were necessary for numbers; but, in an unformed language, must have been incumbrances; and thus, when numbers grew into letters, *as letters* they were dropped. With the Greeks the vowel *v* became *f*, and, in consequence, they were obliged to use for their figures two *ς* s, and place the *vau* at the end. We have seen the Chaldee or Hebrew written language traced to North India, the land of the *Sacæ*, and we have here the same alphabet of *sixteen* letters, brought by a tribe, as their history says, from the same place. If this was a forgery, how came its authors not to copy the Latin, the Greek, the Hebrew, of *twenty-two* letters, or the Arabic of *twenty-eight*? It is out of all credibility that the monks or bards of the middle ages should have known of the *sixteen* letters.²

¹ See the Callan Inscription, Celtic Druids, Figure 13, p. 5.

² No one can doubt, I think, that the following are all one language:

<i>Sanscrit,</i>	Ec,	Dwau,	Traya,	Chatur,	Pancha,	Shat,	Sapta,	Ashta,	Nova,	Dasa.
<i>Hindoo,</i>	Ek,	Dwau,	Teen,	Char,	Panch,	Ch lu,	Sat,	Ath,	No,	Dos.
<i>Latin,</i>	Unus,	Duo,	Tres,	Quatuor,	Quinque,	Sex,	Septem,	Octo,	Novem,	Decem.
<i>Greek,</i>	Είς,	Δύο,	Τρεις,	Τεσσαρες,	Πεντε,	Ἑξ,	Επτα,	Οκτα,	Εννεα,	Δεκα.

8. It is now expedient to suspend our search into the origin of Letters, and to resume our inquiry (from Volume I. pp. 685, 686) into the origin of the most remarkable of all the mysteries of the world—the meaning of the Om of Egypt, of Syria, of India, of Delphi, of St. Peter's, of the Kremlin, of Lambeth—or, the Om of Isaiah, of Buddha, of Cristina—of the sacred, never-to-be-spoken *Om*. Inquiries among the most learned of the Jews of the present day incline me to suspect that they really have lost the Cabalistic meaning of the letter M. They all know that it had a secret meaning, and, in order to conceal their ignorance, they say it is the thirteenth letter, and assert that it is used in the middle of a word to denote thirteen attributes of God, which they pretend to find in Leviticus. This is manifest nonsense. But I am quite satisfied that there is no part of the Cabala, properly so called, which had not a rational and useful object, and the object in this use of the letter was the same as that of using a fringe of a peculiar number of knots, to keep in remembrance the beautiful cycle of 600 years. I have little doubt that the fringe was invented before the art of syllabic writing. They say that the M, the middle letter, means 40, that A, the first, means 1, and T, the last, means 400; then, by taking off the ciphers, they make 9, the emblem of eternity, and form the word *מטא amt*. This is exactly like the Greek Apocalyptic Alpha and Omega, and the Chrismon Sancti Ambrogii. It brings us again to Om-Amet, Om the desire of all nations. It has already been stated, (*supra*, p. 162,) that the first word of infant man was probably Ab or Ba. On examining the numeral powers of this word we find they mean A=1, B=2=3. Every where we find this word figuratively applied to the divine nature. God, or the

In Greek *ψηφος* is a *pebble*, and *ψηφίζω* to *calculate*. We learn from Herodotus, that the Egyptians made use of small pebbles or little stones to calculate.

James Grant, Origin of Gael. p. 47.

The 28 Arabian letters consist now of only 17 figures; the other letters are made out by points. The old Arabic of Mohamed is not now commonly understood. Enc. Lond. Vol. XII. 164. It is studied at Mecca, like Latin at Rome. We continually hear of letters being invented by different people. I do not doubt that there were almost as many letters as writers; but there was, in fact, one system at the bottom of all, which is yet clearly visible in every civilized nation. There have been many forms of letters, but there have never been but two alphabets or systems, the symbolic numeral Chinese, and the Cadmæan or sixteen-letter system. If there has been a third, it must have been the Sanscrit.

Male generative principle, is always called Our Father. The numeral meaning of the word in a very striking manner applies to the Trimurti or Trinity. The coincidence visible here I attribute purely to accident; and a question may arise, whether the coincidence does not vitiate the theory of the origin of the numeral language; or the origin of the first infantine language which I have laid down. Applying to this the doctrine of probability laid down by Dr. Young as applicable to language, as stated in Volume I. p. 449, and which will be equally applicable to this case, I reply, I think it does not vitiate it, but on the contrary, as I will now shew, confirms it. I have stated the fact that, in almost all written languages, the word Ma or Am is found to mean Mother—to mean also Goddess, the female generative power—the Alma Venus—the מלכה *olme*—the mother of the Gods.¹ If this M, Am, or Ma, should be found accidentally to dovetail into the Mythos, in the way the word Ab accidentally fits into it, then, upon Dr. Young's principle, two such accidents will certainly vitiate my theory of the origin of the first language. But if, on the contrary, the numeral system do not dovetail into it in any way, but on examination is found to have been forced from its original simplicity as taught by me, to make it fit to the first language; then, on Dr. Young's principle, it amounts to almost a mathematical proof of the truth of both the systems. Two accidents could not be received, and the chances or probabilities would have been as a thousand to one that the names of Ba and Ma had been given to suit the mythos, but were not among the first written words of man: but the fact, that the alphabets are forced to make them suit the mythos, places the chances the other way. If we examine the alphabet we find that the M is not the centre letter of the twenty-eight, but a letter is thrown out in the Hebrew to make it so, and the letters are reduced from their natural or original number 28 to 27. By this means the M becomes the central letter, and this was done to make the Ma or Am the navel, the Delphus, the Omphè, the central letter,—the Mia, the female of Plato's Το Ου . The original numeral alphabet of the Indian Arabians had 28 letters or forms. The Jews changed the number to 27, to make the M the centre. The Greeks changed their number to humour a superstition, the same in principle, and to make the two letters which described their cycle, the cycle of 650, the centre letters. If we examine this closely, it is exactly the same as the plan of the Jews. The benignant dæmon of the cycle was the Son of Man, $MN=650$; and thus arose the generic name of the species—Man, Mannus, the Male, afterward joined to the female, making Am-mon or Om-an; and, when aspirated, Homo, hominis, hominem. In accommodation to the same mythos, the Greek vau or digamma or number six, was written ς having the sound of the number $\xi=60$, three lines or three ς s or ξ es, and the number $\chi=600$. In like manner the M final and 600 of the Hebrews was constituted of the Samech, the 60 and 600, and the vau was, as the Vulgate calls the mother of the race, *Eva*. The E and U, the 5 and the 6, were the generators of all the cycles. They were both Lustrums. Thus came Eva or Eve, the mother of the race of *MN*, the root of Homo, of Man, the root of Mun-di, *holy cycle*.²

The manuscripts of the Poems of Homer are now all written without the digamma; but it is a fact admitted by all Grecian scholars, that when they were composed (not necessarily written) they must have had it. No satisfactory reason has been given to account for this extraordinary anomaly. I suppose when these poems were composed and sung, the use of letters was not known; but that when they were committed to writing by Pisistratus, the letters had been so long invented as to have given time for the *vau* to have been excluded (probably for the mystical reason above-mentioned) from its place in the alphabet, and therefore they were written without it. In the whole story of their collection and committal to writing by Pisistratus, the knowledge of let-

¹ See Vol. I. pp. 110, 111.

² The sacrifice of a woman is called aumoman, woman, euaman.

ters is assumed, as no new invention; therefore, it is probable that they had been in use a sufficient length of time to have given an opportunity to make the alteration of the expulsion of the *vau*. It is almost certain that if this sacred poem had been written before the *vau* was rejected, it would not have been improperly written by leaving that letter out. It is impossible to account for the omission of the *vau* except from some mystic reason. The strong probability is, that if the *vau* had been in use when the poems were first written, they would have been written with it, and would never have been written without it. They alone would have kept the letter from being lost. It seems to me a strange thing that we should call this letter digamma, when it was evidently nothing but the Hebrew *vau*. I know scarcely any thing more absurd than calling the Hebrew *vau*, which is now only used in the powers of notation, in the Greek language, by the name of digamma. It is evidently our letter F, come from where it would; but it would not have looked learned to have merely called it F. It proves that Bentley and those who gave it that name, with all their boasted knowledge of the Greek language, actually did not in the least understand the principle of it. What they call digamma is nothing but the Hebrew *vau* growing into the sound of V, hard f. The sounds UV and VU are both the same.

When I reflect upon all the circumstances attending the knowledge of letters, I feel no doubt that they were not only considered to be magical, but that they constituted a great part of magic itself. Let us consider, only for a moment, what miracles, as figures of notation in solving problems in arithmetic, they would enable their possessors to perform. Let us consider alone the foretelling of eclipses, and let us add to this the knowledge of the periods of some of the comets, which I think I shall shew in a future book that the early literati did possess. In the passage quoted in Volume I. p. 675, from the Revelation xiii. 17, 18, the whole of my theory both of wisdom and of the system of using numbers for symbols and letters is, in one sentence, clearly expressed. The knowledge of the number is called *wisdom*, and the letters are called *marks*, that is, monograms or symbols, names, and numbers. Daniel (ix. 2) says, he knew a thing מוספרים בספרים *bsprim mspr*, from or by the letters in the book.

From ספר *sp* a letter, or symbol of notation, comes סף *sp* or Sup, or Soph, *wisdom*. The idea of wisdom and of letters is never separated.

Vallancey says,¹ that *storia* is an Egyptian word, meaning what we should call *news*. It seems to have been the Hebrew שטר *str*, which I think meant a scribe.² I believe the scribes were a learned order, a kind of priests, and that they were the only people who understood the art of writing.

In the very learned and ingenious work of the Marquis De Fostia D'Urban,³ my attention was drawn to a passage of Josephus,⁴ wherein he states, "That they pretend that they have received them from the Phenicians and from Cadmus: yet is nobody enabled to shew that they have any writing preserved from that time, neither in their temples nor in any of their public monuments. This appears, because the time when those lived who went to the Trojan War, so many years afterward, is in great doubt, and great inquiry is made whether the Greeks used their letters at that time: and the most prevailing opinion, and nearest the truth is, that their *present way of using those letters was unknown-at that time*. However, there is not any writing which the Greeks agree to be genuine among them older than Homer's poems," &c., &c. Now I conceive that

¹ Coll. Hib. Vol. V. p. 209.

² ספר a scribe has several significations in scripture—a secretary, a commissary or muster-master of an army, an able or skilful man, a doctor of the law, a man of learning, &c. Calmet in voce.

³ Homère et ses Écrits, p. 111.

⁴ Whiston's Joseph. ag. Ap. Book i. Sect. 2.

this opens the door most decidedly to my theory. The expression, *the most prevailing opinion was*, that the use of writing was not such, in the time of Homer, as that which obtained at that day, instantly produces the question, Then, what was the kind of writing alluded to? P. Knight says,¹ "The age of Homer is, however, so much anterior to all monuments of art, or authentic records of history, that we cannot even tell whether or not he had the knowledge of any letters, there being but one passage in his works where writing is mentioned, and that is so equivocal, that it may mean either symbolical or alphabetical writing." The following is the passage to which Mr. Knight alludes. Parkhurst, under the word ספר *sp̄r* may be consulted for the authors who have discussed it.

Πεμπτε δε μιν Λυκιηρδη, πορευ δ' ὄγε ΣΗΜΑΤΑ ΛΥΓΡΑ,
ΓΑΡΨΑΣ εν πινακι πτυκτω, Συμοφθορα πολλὰ
Δειξαι δ' ηρωγει ὃ πενθερω, οφρ' απολοιτο.

"To Lycia the devoted youth he sent,
"With *Marks*, expressive of his dire intent,
"GRAV'D on a tablet, that the prince should die."

It appears to have been a common opinion that some unknown kind of writing had existed, though it seems to be implied in the words of the text, that it was then unknown. If we suppose that the works of Homer were first written into the language of numeral symbols, a written but not a spoken language, many difficulties respecting them will be removed.

When we recollect the Indians admit, that the meaning of their celebrated and most sacred word OM is actually lost by them, I think we are allowed great latitude in our investigations; and if I be right, that the ancient Hebrew or Chaldee, the old sixteen-letter Tamul, Pushto, and Afghan language was the original dialect of India, it is not absurd to seek this celebrated word here. Then its ancient sacred representative would be simply the letter $\equiv=600$, so mystically found in Egypt, in M-om-ptha, and in Isaiah, in Om-nu-al, Om, *our God*. We have lately seen that the number *fourteen* described the first name of God. By the insertion of the final Caph, the letter M forms the fourteenth letter. I am by no means certain that a mystical connexion has not existed between the M and the cycle and the *Ερωσ* *divine love* and Ma, *mother*, and Amo, *I love*, and Eri, *the Saviour*. I believe both Venus and Cupid were called *Ερωσ*, like the Canya of India, and the Cama. Surely my mysticism is not more mystical than this! All the sixteen-letter languages ought to be considered but as dialects of each other, unless the artificial Sanscrit be excepted; and this assertion I feel confident that I should clearly prove, had I lexicons from English into Hebrew, Greek, and Sanscrit, as I have from these languages into English.

The monogram for the Virgin Mary—the Regina Cœli, is the M. Some of the early fathers called her a fourth God, an adjunct to the Trinity. But the most beautiful emblem is the Mother suckling the infant. See my Fig. No. 8. Here, in this beautiful icon of Buddha, I have no doubt, the male and female principles are described.

On reflecting deeply on what I have written in my *Celtic Druids*, (pp. 197, 198, 201,) respecting the word IEUE, and in several places in this work,² I am convinced that I have been hastily led into a mistake by the modern Jews. They hold that the sacred word IEUE is the word which ought never to be spoken. On reflection I think this was only formerly told to the vulgar Jews to satisfy them, and to evade their inquiries; but that the word of the Indians, OM, was the sacred word. It is probably, with most of the rest of the Cabala, lost.

¹ Ess. Gr. Lang. p. 19.

² Vol. I. pp. 67, 107, 158, 319, 320, 323, 430; and *supra*, pp. 5, 17, 137, 151.

The Jews could not be taught the Decalogue, nor could they read the Bible in the synagogues without violating the very law they were learning, or which Moses was repeating to them, if the secret word were IEUE. I believe that the real *secret* meaning of the text has reference to the word OM; and that it means *Thou shalt not speak the name of thy God* IEUE irreverently, meaning the secret name. Or the text may be correctly translated, *thou shalt not speak the name of the self-existent God* (IEUE meaning *self-existent*), and that the word referred to was the OM of Isaiah, described every where by the monogram M, as M-OM-ptha. When Moses asks God by what name he is to describe him to the Jews, he is told, that he is to describe him by this supposed forbidden name. How could this be? Here is a direct contradiction! It is said, the Jews write the word יה *ie* or יהוה *ieue*, but pronounce it, in English, Adonai. But though it may be very pious to call him after the Gentile God Adonis, it is directly contrary to the command of God, who tells them what they are to call him, not what they are to write him. My explanation removes this difficulty.

Surely nothing can be too absurd in religion! God tells Moses he will be called *Ieue* by the Jews; in strict obedience Moses goes to them and tells them, they are to call him Adonis! The Jews say it is written *one way* and spoken *another*. When God is said to speak to Moses, there is no question about *writing*. The account in writing of the scene between Moses and God is altogether a different matter.

9. But this raises in my mind some questions respecting the Jewish Targums. If it be true, as Gen. Vallancey maintains, that the Chaldee letter never was in common use as a letter, but only as figures of notation, how came we to have the *Targums*, as they are called, in that letter? The story that they were written for the use of the Jews, when the old Hebrew was no longer understood by them, does not seem very probable, because, not the *Chaldee*, but the *Syriac*, was their vernacular dialect in the time of Christ. Gen. Vallancey says, this never was the letter of the Assyrians of Babylon, and this is confirmed by the fact I have noticed in another place, that no inscription was ever found in this letter at that place.¹ But this letter and dialect are found even to this day in use in the country of the Callidei in North and South India, with all the mythos of the Jews, joined with the mythos of a crucified Saviour or Messiah, (as is the case in Mexico,) foretold by name in these Targums, over and over, in the clearest terms. It is said that they were read in the Jewish synagogue alternately with the old Hebrew, first a verse of one, then a verse of the other, for the accommodation of the Jews after they had lost the old Hebrew. I do not know what is meant by the old Hebrew letter, for we have only the Samaritan, the Syriac, and the Chaldee letters; and the Syriac was the spoken language of the Jews. I begin very much to suspect that the Targums have been brought from the East, and that they are the sacred books of the Callidei of the East, suitably accommodated or corrupted—retouché.

A person who fancies himself very learned has triumphed greatly over my ignorance in not knowing that the Targums were written about the time of Christ; for, in my *Celtic Druids*, I have placed them after the time of Origen. Before I delivered my opinion I examined these books with very great labour and very little profit; and carefully inquired into their history. They were, in my opinion, more favourable to the Christian cause against the Jews than any books which I had ever read;² but that, notwithstanding they must have been informed of them by the Jewish converts if they had existed, yet neither Jerom nor any one of the ancient fathers before him ever quoted them: therefore I said, and I say again, that there is every reason to believe that they did not exist before the time of these authors. I do not wish to praise my own learning, but I feel

¹ Vol. I. p. 778.

² Onkelos foretells the Messiah *twice*.

bound to say, that this is not the only time I have been accused of *ignorance* for knowing rather *too much*.¹

A great mystery hangs over the Targums. It is acknowledged that there is no certainty when or where or by whom they were written. It is very extraordinary that neither Origen, Jerom, Epiphanius, nor any other of the early Christian fathers, knew any thing about them, particularly Jerom and Origen. Prideaux and Michaelis² will bear me out in this, that they are written in the Syro-Chaldaic dialect, that which was used about the time of Jesus Christ, and was in short the last language spoken by the Jews whilst a nation, and it is the language now used in South India. Their *professed object*, we are told, was to enable the unlearned Jews to have the consolation of reading and understanding the divine word. If these Targums had been written for this purpose, as it seems not to be doubted that they were, I think there can be no question but that some or other of the Jewish proselytes would have informed the Christians, Origen, Jerom, &c., of them. All the reasons which Dean Prideaux gives for their concealment by the Jews, are in favour of their publication or exposure by the converts from Judaism to Christianity, even supposing them to have been concealed. If a single convert had been made of any respectability, the secret must have come out, that the Jews had some books which they were charged to conceal from the Christians. But how could they be concealed, if they were in common use by the unlearned Jews?

Origen and Jerom both lived in Palestine for some time, the latter a very long time, expressly for the sake of gaining information respecting matters of this kind, and he wrote commentaries³ in which the Targums, if known to him, must have been of the very first importance to his argument. Then how does it happen that neither of them has ever, in all his voluminous works, noticed them in the slightest degree? Epiphanius also understood Hebrew, or Syro-Chaldee, yet he never notices them. Several fathers of eminence in the Christian church were converted Jews; then how is it possible to believe that they would have failed to notice the Targums after their conversion, which would both have aided them in their arguments against their countrymen, and have justified themselves for their conversion.

Respecting Jerom and his search for the Bible in Judæa, whither he went to collect information, the author of the *Revue Encyclopédique* gives the following account: "À la sollicitation du Pape Domase, ce père de l'église parcourut plusieurs païs. Il fut obligé d'apprendre le Chaldéen pour recueillir les copies les plus authentiques que les Chaldéens avoient eu des Juifs. Il dit qu'après bien de veilliés, de fatigues et de recherches même les plus exactes, il rassemble beau-coup de lambeaux dispersés," &c., &c.

The present Jews look upon the Targums of Onkelos and Jonathan with such high veneration, that they assert that they were delivered to Moses by God himself from Mount Sinai, with the rest of their oral law. It cannot be doubted that these Targums are much more favourable to the Christians than the old Hebrew text or the Septuagint; then, I think, when the Evangelists were quoting passages as prophecies of a Messiah, they would have quoted from them, or at least have noticed them; and when Jesus was denouncing the oral law and traditions, he would have said something either for or against the Targums if they had been in existence. De Rossi, who is named in the *Dissertation on the Poetry of Isaiah* by Louth, professed to have *proved* that the present LXX is not the same as that translated for Ptolemy. Sabbathier collected all the passages which purported to be taken from

¹ It is not uncommon for a man, if he be more learned than his contemporaries, to be accused of ignorance. It would manifestly serve my purpose to uphold the great antiquity of the Targums; but I reason for *truth*, not for *victory*. They shew the opinion of the Jewish church in the time I allot to them, which is enough for me.

² Ch. iv. Sect. vi.

³ Prid. Con. Vol. IV. Pt. ii. B. viii. p. 633.

an Italian or Latin version of the Old Testament, made before the time of Jerom, or which he supposed were taken from it, as he did not find them in the Hebrew, the Vulgate, and the LXX; and he gave them to the world under the pompous title of an Italic version; but I believe much which he collected was taken from the scraps of the sacred books of different Italian or other temples, which had escaped from their adyta. There is a copy of a Bible in Anglo-Saxon, in the British Museum, made by Aelfric in the tenth century, in which the variations prove that it can never have been made either from the Vulgate, the Italic, the LXX, the Hebrew, or the Samaritan.¹ The account of Ararat in Phrygia, proves that the Sibyls did not take their account from our Bible. The omission of Jacob, in Enoch, proves that he did not copy from our Bible, and the account of circumcision again proves that Aelfric did not make his translation from any of our books. The same argument may be applied to the accounts in China, in North and South India, and in Mexico. The same mythos is in all; but they have internal evidence that they are not taken from the Jewish books. All this tends to prove the truth of the remark, in the *Revue Encyclopédique*, that the books of the Jews were *lambeaux dispersés* at the destruction of Jerusalem. I cannot conceive how any one can look at the difference in the chronology, as given by Whiston, to say nothing of the other numerous variations, and not see that the histories are substantially different. How different must be the account in the Sibyls from that of the Jews, which places Ararat in Phrygia or old Room! All these speculations go to prove, that this Genesis, at least, was the secret book, or a book containing the substance of the first Pontifical government of all nations, and accommodated in some degree to their varied circumstances. Thus, when the Jewish Paulite sect arose, it could see nothing but the Jewish system or account of the mythos; all others, in its eyes, being copied from the Jews: and as this sect, through favourable circumstances, got possession of the power of the world, it succeeded in destroying almost every thing that operated against its system, or in corrupting, intentionally or unintentionally, all that it suffered to remain.

Mr. Sharon Turner, in the *Transactions of the Society of Literature*, to which I must refer my reader, has, at great length, endeavoured to shew that all languages must have been derived from one original. Every argument which he uses is strongly in favour of my theory of one original *written* but *unspoken* language; but this is nothing against his doctrine of one original spoken language also.

I think there can be no doubt that the use of letters was at first strictly confined to mythology;

¹ On this translation I have received the following information:

“The Anglo-Saxon translation alluded to was made by the celebrated Aelfric, Archbishop of Canterbury, elected to that see in the year 993; but this work was completed before that period, while he was yet a monk. It consists, 1st, of the *five* books attributed to Moses; and, 2dly, of the books of Josue and book of Judges. These seven books Aelfric styles the ‘Heptateuchus.’ They are preserved in a very ancient MS. in the Bodl. Lib., and thence published by Ed. Thwaites, dedicated to Hicks. To these he added Aelfric’s translation of the book of Job, from a MS. in the Cotton Lib.; the Gospel of Nicodemus translated by an unknown author from Latin into Anglo-Saxon; and, lastly, a Fragment of the History of Judith, in the same language, completes the volume.

“The most important of these are the Pentateuch. Aelfric assures us, that he made the translation from Latin—from what Latin translation I know not. It does not agree with the Vulgate, nor yet with the ancient *Italic*, if Sabbathier’s restoration can be relied on. It differs much from our common translation, and the differences are frequent and material. Yet where it does agree, the Anglo-Saxon is almost in every instance marked by superior brevity and clearness. In some instances it clears up passages quite unintelligible in our Version. Many passages are omitted in the Anglo-Saxon, and some most important laws—as that in the code of Sinai *for the circumcision of all males*. Aelfric’s work does not, however, seem to me to be an abridgment, and I am inclined to suspect, that this law of circumcision was not an ordinance of Moses, because, if it was, why was it not obeyed during the time that the Israelites wandered in the Desert? but came first to be enforced upon their settlement in Canaan, as we are assured of in the the book of Josue. Be this as it may, this Anglo-Saxon translation may be of good service in some subsequent and better version.”

and in consequence of this it is, that we find every really ancient mythologic name, when examined to the bottom, admit of explanation by numbers. Let the reader look at the definitions of the first book of Euclid, at the lines, and remember that all numbers, and all letters, were described by right lines. Let him think upon the Arabian Oriental Algebraic art, the date of which no one knows—the art of Geometry, the Pythagorean forty-seventh proposition of Euclid, and the letters, symbols of numbers, and lines, and doubt if he can, that this art was known to the great explicator of the universe, Pythagoras, who declared that all knowledge centred in numbers and lines, and who was burnt by his more wise and orthodox countrymen, for the wickedness of teaching this and similar doctrines.

The word Yoni is acknowledged to be the same as Iune. It is the same as the יונה *iune* of the Israelites, which means *dove*. It is the name of the islands of Java and Sumatra, which thus carry the same name as the island of Iona and of Columba, of the Hebrides of Scotland, both, no doubt, *sacred isles*. It is the same word as the Juno of the Latins.¹ It is a word composed of the Hebrew word יי *ie*, or the Syrian word *Io*, and the word *ni*, which I do not understand; but which, perhaps, may be only a nominal termination, like *en* in Cris-en, or *os* in Χρησ-ος, or the Latin *us*, in Christ-us. It is the IE of the Apollo of Delphi. It is the Jan-nus and Ja-na of the Romans. It is the Diana or Di-ja-na or dwa-ja-na. It became, when the Greeks perfected their language, by the invention of a neuter gender, the Το Ον, or the Ι Ον. It is the Hebrew יי *ie* or יהוה *ieue I am that I am*—or, grammatically,—*I shall be what I have been*; or a definition of the creative power. It is the root from which great numbers of the Sanscrit and Indian Gods have been formed. Yavana, is the *ie* and *vaha*, to carry, one of the meanings of the word *ana*, but which must have another meaning; because the word Ya-vana means a sect professing the superior influence of the female over the male nature;² and I believe it means to bear as well as to carry, and has precisely the same meaning as our word to bear, used to carry a burden—to produce a child. Hence we see why the Ya-vanas became Ionians. It is the root of Nar-ay-ana. Nar in Sanscrit is water, the Hebrew נהר *ner*, river or water, and the word means IE carried in the, or on the water.³ It is Kanya; that is, Can or Cunia, &c., &c. It has the same meaning as the *Amba* of India,⁴ and the Omphé of Greece, and the Om and Ammon of Egypt; these latter being of both genders, which, I am persuaded, answers to one sense of the Bya of India,⁵ meaning Bis-Ja, Double-Ja—male and female. Finally it is the Argha.

The more I study my subject, the more facts I discover to prove that the Pythagorean doctrine was true, that all learning and science resolved itself at last into numbers. We find the Hebrew God called EI and I. We read much of Ion, of Ion-ia, of Jan-a, Jun-o, Iav-anas, and of Bet-on, בית-ון *bit-un*, and Beth-aven, בית-און *bit aun*. Now, how comes ON to mean, as I have shewn, the generative principle? It is the neuter of the Greek pronoun ὄς,⁶ meaning existence, which always carried along with it the idea of destruction, and necessarily reproduction, that is, the generative principle; and I-ον is the ON of I, and I, the jod, is ten, the X, the perfect number, the numeral meaning of the ten avatars, eternally renewed, of the creative God, the ΛΟΓΟΣ. It is also the Το Ον, the Τλαν ON, that is, the cross of Ezekiel, with which the believers were marked in the forehead, after the manner of the Buddhists of India, and, indeed, of all the sects of India, who are marked with some sign or other. In the same manner the Christian priest, in baptism, marks the child on the forehead with the cross. If Plato had not made the ον the fountain of his mythos, I should have thought this too refined or mystical to be credited.

As the city of ON or Heliopolis, or of the generative power, was called the *city of destruction*, so

¹ Asiat. Res. Vol. III. p. 364. ² Ib. p. 358. ³ Ib. ⁴ Ib. p. 360. ⁵ Ib. p. 358. ⁶ Participle ων, qu.? Ed.

the *Καλος* or *beautiful* of Greece was the Cali or *Goddess of destruction* with the Indians. From this principle she became the Goddess of Time, because Time is the greatest of destroyers; and from her, the last age, when all was supposed to be destroyed or finished, was called the Cali-Yug or Cali-age. The same feeling in Europe which makes devotees deal in nothing but damnation, makes the Indian Goddess Cali a favourite, her devotees having first converted the *beauty* into *destruction*.

The meaning of the *יה* of the Hebrews, as I have repeatedly remarked, is *the self-existent*. It seems singular that, unless he were the Supreme, he should have this name. But the same thing happens in India, whence no doubt it came. The supreme Being in the second Veda says, “*From me Brahma was born; he is above all; he is Pitama, or the father of all men; he is Aja,*¹ or “*self-existing.*” From him, Col. Wilford says, they represent Adima (which word means both *first male* and *female*,) to have descended. She is the same as *Iva* or *I*, the female energy of nature, or descended from *I*—the same as *Isa* or *Isi*, male and female.² All these are nothing but Hebrew names written in Sanscrit.

If a person will think deeply he will have no difficulty in forming an idea how, when the art of writing was secret, a written word would be magical. A few lines scrawled in the presence of a person on a bit of leaf or bark might be given to him, and he might be told, whoever is a magician or initiated on seeing that scrawl, will know your name, or any other desired fact. A person must think deeply on this, or he will not see the force of the argument which arises from the dupe having no idea of the nature or power of conveying knowledge by symbols. As the Chaldæan priests were the only people who understood the secret of writing, it followed, that they were all magi or magicians; and when the secret did begin to creep out, all letters were magical or supernatural. This and some other secrets—the telescope, astronomy, the loadstone—made the Chaldæans masters of the world, and they became Moguls. Mogul is but Al-Mag, *The Mage*. On this account all the princes of India desire to be invested with the pallium by the old Mogul of Delhi, successor of Gengis Khan, of Tartary, the last incarnation of divine Wisdom. The mythos at last always reverts to its birth-place, Indian Tartary—the Mount Solima, the snow-capped Meru, where the Gods sit on the sides of the North. How the Mogul comes to be Lord Paramount of the world, I shall explain in a future book.

10. The observation of Dr. Young respecting probabilities is very important; for, as the *written* languages of all the nations of the old world contain a considerable number of words in common, the probability that they are all derived from one parent stock rises almost to a certainty. This leaves the question of the derivation of the genus *man* from one or more original pairs, nearly untouched. For the diffusion of the Pandæan, Catholic or Universal Buddhism, which seems evidently to have gone with the secret system of letters, will readily account for a certain number, and a considerable number, of the same words in all the different languages. It will also readily account for the variety which may be observed in their mixture. Wherever either the arithmetical or the first syllabic system extended, there a mixture of words might be expected; and it seems probable, from hundreds of circumstances, that the language of the Chaldæan Brahmin, which was that of which the Hebrew, Arabic, Ethiopian, Tamul, Pushto, and Syriac, were close dialects, was the language into which the arithmetical language was first translated, by means of the then newly-invented syllables. If we suppose the languages of the earth to have been at that time widely spread, and that dialects had begun to be formed, when the art of rendering the arithmetic into letters and syllables was discovered; the secret society of initiated who discovered it, in every

¹ Here is most clearly the Hebrew *יה* *ie*, or *יה* *ie*.

² *Asiat. Res.* Vol. V. p. 247.

country, would begin to translate it each into his own dialect. This theory, I think, will readily account for Hebrew and Indian words in Britain, and words of Britain in India. The possibility of a written, unspoken language is proved by its actual present existence in Java, which cannot be denied. The possibility of its existence by means of numeral ciphers must be admitted; and I am quite certain that the actual existence of the custom of using arithmetical signs to describe certain mythic words, and the possibility which I have shewn of many others having been formed from arithmetic, raises a very strong probability, that the arithmetical system has been general. Of a theory like this proofs can never be expected; probability alone must be looked for. To this theory I see no objection; but if there be certain difficulties which, when pointed out, I cannot explain, in such a case as this, they cannot be considered to invalidate it, as long as a possibility remains of an unknown explanation of them being discovered. If the theory be true, it is not within the scope of probability, that all difficulties should be removed, even if all the learning and talent in the world were employed upon it; much less when they are attempted to be removed by a solitary individual, who claims neither much learning nor much talent; and who, from the peculiarly recondite nature of his subject, can obtain no assistance.

I consider that it admits of no doubt, that all the written syllabic languages with which we are acquainted are the same, with merely dialectic variations; and that all the alphabets or systems of letters are one, only with the letters in different forms, as we have the English language and letter though one, yet WRITTEN IN DIFFERENT forms. The Arabic table of letters and numbers, compared with the Greek, proves this. We have here all the numbers in order, but the letters in disorder. We ought in considering these subjects never to forget, that all the various dialects of the world are like the spokes of a wheel, as we go back converging towards one another, till they meet in the centre; and, in a contrary direction, diverging, till at last they are no longer visible to one another. I believe that historical circumstances might be adduced, which would render it highly probable that, fifteen hundred years A.C., the people speaking all the then existing languages, could, though perhaps in some cases with difficulty, understand one another.

11. If we consider the effect of these numeral letters of this unspoken language, we shall immediately see that, when the numerals or ciphers became changed into letters, they would necessarily come to be read and pronounced, sometimes from right to left, and sometimes from left to right.

After man had made the discovery of the syllabic word Iinaa, as described above, in Section 2, p. 150, perhaps the next attempt would be made on a word for the Sun, in the following manner. We will suppose a person wished to record the Sun, and to do it by means of numbers having the names of trees, these numbers, that is the numerical system, having so far advanced as to be simplified into a symbol or monogram for each number forwards—as we find it in Greece. He would then inscribe it thus, in right-lined angled symbols, having the meaning of one of the cycles which I suppose him to have invented.

Σ^1 — \square the sign of 300, called Suil.

U^1 — V the sign of 6, called Uern.

L — \perp the sign of 30, called Luis.

336 the name of the Lunar Year.

I apprehend that the names of all things would be at the first monosyllables of the simplest

¹ It will be observed that the Author here, as in many other instances, conceived himself at liberty to use either Hebrew or Greek letters for his numerals. *Editor.*

kind; and that the first name of the tree called *Suil*, would be, not two syllables of four letters, but one of three—*Sul*, which, in numbers, gives the first lunar year of 336 days. Now, when a person wrote the three symbols $\square V \square$, he could not very well help observing, that by pronouncing the three first sounds of the three names of the three trees, he would, by a fortunate and remarkable accident, have the sound of the name of the tree *Sul*. Here, then, we have correctly a sound, *Sul*, described by symbols or marks which were now, in this case, become letters, each mark or letter standing for a sound, and the three marks describing a sound, a number, a tree, the Sun, and the Lunar year—in all having five meanings. This would lead him to try if he could not describe other things as he described this tree (now unknown to us). We will suppose the *Eg*, as an example. He would look for a tree out of the twenty-eight, whose name should begin with the sound which we call *E*, and he would find *Eadha*, the sign of *five*, and having the mark or monogram *E*, and he would inscribe *E*. He would then try to find a tree which had a name that began with the sound which we call *G*, and he would find the *Gort*, having the mark or monogram Γ ; he would then inscribe that mark below the other, and he would have $\left. \begin{matrix} E \\ \Gamma \end{matrix} \right\}$ or $\left. \begin{matrix} E \\ \Gamma \end{matrix} \right\} \text{Eg.}$ Thus he would discover the art of using the monograms or symbols for numbers, or symbolic numerals, as letters to describe syllables, and letters, and sounds, and the symbols for the numbers would thus become letters.

Now the next word of letters discovered might be *Suil* or *Suli*, found in the same manner to denote the solar cycle of 366 thus,

$$\begin{aligned} \psi &= 300 \text{ Suil.} \\ \upsilon &= 6 \text{ Uern.} \\ \beth &= 50 \text{ Luis.} \\ \text{'} &= 10 \text{ Iodha.} \\ & \quad \quad \quad \hline & \quad \quad \quad 366 \end{aligned}$$

and thus the *Sul* changed into the *Suli* as science improved.

This is the *Suli* *Minerva* of Bath—the cycle that we find in the name by which Stonehenge was called in Welsh, *Emreis*—that is, $\epsilon=5$, $\mu=40$, $\rho=100$, $\epsilon=5$, $\iota=10$, $\sigma=200=360$; or, $\eta=8$, $\mu=40$, $\rho=100$, $\eta=8$, $\iota=10$, $\sigma=200=366$. In *Su-li* we have a word of two syllables; and thus we advance another step in literal and alphabetic writing. In the word $\psi\lambda\psi$ *sls*=630, *salus*, health, salvation, *Salus-bury*, we have another step; and our word *Sun* has probably been *Sin*=360, or *Suni*=366.

The word $\psi\lambda\psi$ means *three*. I cannot help suspecting this to refer directly to the Trinity. It has both the meaning of *three* and of *director* or *chief* or *DISPOSER*, as $\beth\psi\psi$ *smim* in Gen. i. 8.¹

12. Joseph was considered to be one of the divine incarnations or avatars for the salvation of the Egyptians. He was the Phoinix which appeared every 600 years. “Et vocavit Paroh nomen Joseph *Saphenath Pahaneah*.”² Καὶ ἐκάλεισε Φαραω το ὄνομα Ἰωσηφ, Ψοθηομφανηχ—פעהח צפנת *zpnt-ponh*.³ This passage is rendered by Jerom, “*Vertitque nomen ejus (Pharao) et vocavit eum, Linguâ Egyptiacâ, SALVATOREM MUNDI.*” And in Suidas Joseph is called by a name still more curious: “Cum autem FAUNUS insidiis appeteretur à propriis Fratribus in Egyptum fugit.”⁴ The Hebrew word has been rendered *Revealer* of the Secrets of the Stars. But I think no one can doubt what the Abbé de Rocher has pointed out—that the Faunus and פעהח *ponh* is the

¹ Vid. Parkhurst in voce $\psi\lambda\psi$ *sls*, IX.

² Pagnin.

³ Gen. xli. 45; see Vol. I. p. 502.

⁴ Dict. de Suidas, verbo Φαυνος.

Roman Faunus and the Phœnix. But Joseph was also called by another name שׁלִיט *slit*. Gen. xlii. 6.¹ In the שׁלִיט *slit* and שׁלִיט *slt* we have a trifling *misspelling* (if any attention is to be paid to radical letters) of the feminine termination of the שׁלִיט =360, for the origin of Salus, Salutis, for the name of the Sun, the Phœnix, and the *Redemptor* or *Salvator Mundi*. And in old Irish our female *Sall*, שׁ *s*=300, ל *l*=30, שׁלִיט =360, means a year.²

Several authors have thought that the Proteus of the Greeks, which word has the same meaning as שׁלִיט *slit*, was Joseph. This, I think, arose from his repeated incarnation in new cycles—different, but yet the same—in each cycle a Saviour or *Redemptor Mundi*; thus they made him a Proteus. His name Psonthom Phaneah, is our Proteus, or Phantom, and the Santon of the Orientals. The Phaneah is the פְּרִיט =608.³

The shrines in which the Gods were placed in India were called Stalls. These are the stalls of our Cathedrals, and of our Cow-houses. Hog, in his history of Cornwall,⁴ says, that the sanctuary of the God *Hu*, or the Sun, or the Bacchus of the Druids, was an Ox-stall, where the God presided as a living animal,⁵ or as the image of a bull. The name of the Bull, in the numeral symbolic letters, I have no doubt, was the same as we have found him so often.—*Stll*, or *S*=200, *T*=300, *LL*=100=600.⁶ When the numerals became letters, the habitation of the *Stll*, by the regimen, came to be the place *Stll*. In this way, from this formation of the Hebrew, when in regimine, innumerable words took their origin. I believe the *Hu*, which is the common name of God in Wales, is only a corruption of the Hebrew pronoun הוּא *eua*, meaning HE. In India, the Gods are placed in the temples in *stalla* or stalls, that is, *recesses* or places of safety. In the West, the Gods were placed in *Cellæ* and *CONCLAVIA*. Hence come the cells and stalls in our cathedrals.⁷ The Cell is the עֵינַל *eikl*.

To be wise is to be enlightened. *Lux* is the Logos by whom all things were made; and the Logos is *Rasit*—*Rst*, ρ' , σ' , τ' =600. And *Lux* makes *Lucis*; then *LX*, χ' λ' =650. Again, *L*=50, ו *u*=6, שׁ *s*=300, י *i*=10, שׁ *s*=300=666.⁸ The *Fleur-de-Lis* is the Lotus, the flower sacred to the *Lux*, or the *Sul*, or the Sun. The *Auriflamme*, the flame of fire or fire of gold,⁹ was the standard. The three Lotuses or Lises were the coat of arms, emblems of the Trimurti, the three persons of the triple generative power, or of the Sun or *Lux*. שׁלִיט *slé*, *Shilo*, is probably שׁלִיט *sil*=360, or χ =600, λ =50=10, ו =6=666. This is *Silenus*. I have no doubt it was the invocation in the Psalms, called *Selah*, שׁלִיט *slé*.

The Greek word Ἡλιος is nothing but a variation of the *Suli*, *Sul*, and *Sol*. *H*, η , is the Hebrew emphatic article, and the word is soil, that is, suil, and *slé*=360 or 366, or *sul*=336; *Sun* in Sanscrit is *siona*, the first three letters coalescing into one. Hence evidently our Sun. Here we find the meaning of Mount Sion—Mount of the Sun; the same as *Har-ol-ump*, that is, *Har-al-om*,

¹ See Parkhurst in voce שׁלִיט *sls*. From שׁלִיט the word Sultan is said to have been derived; but it is from the word *slt* or *slt*.

² See Guerin de Rocher, Vol. I. pp. 113—120; Vol. II. p. 213; Vol. V. p. 22.

³ See Vol. I. pp. 169, 181, 199, 500, 587, 607.

⁴ Note on p. 158.

⁵ This was the Welsh Bull with three Cranes on his back, called Budwas Trigeranon, answering to the Indian Buddha Trivicrama-ditya, or Buddha with triple energy, as explained by Col. Tod.

⁶ Here, it will be observed, the Author again quits the Hebrew, and makes *stll* equal 600, partly by Greek and partly by Roman numerals. Yet see his note 5, *infra*, p. 187, and Chap. ii. Sect. 1. Editor.

⁷ Jurieu, Vol. II. p. 248.

⁸ On this mixture of numerals see note *supra*. Editor.

⁹ We have formerly found (Vol. I. p. 600) the χρῆς and the χρῆς connected. The χρῆς was an incarnation of the *solar fire*. Here the aurum and aur, the *gold*, and the *fire*, are connected.

Mount of the God Om. Gebelin, in his *Monde Primitif*, has undertaken to prove, that the minuet was the *dance oblique* of the ancient priests of Apollo, performed in their temples. "The diagonal line, and the two parallels described in this dance, were intended to be symbolical of the Zodiac, and the twelve steps of which it is composed were meant for the twelve signs, and the months of the year."¹ Little do our village girls, when dancing round the May-pole, and our fine ladies when dancing the Cotillon  think, that they are exhibiting the most profound astronomical learning; but they are doing so nevertheless. Dancing was originally merely religious, intended to assist the memory in retaining the sacred learning which originated previous to the invention of letters. It began in sense, it is continued in nonsense. But why not? Does it not make them happy? Then merrily may the bonny lasses dance; they shall never be disturbed by me. Alas! disturbance will come soon enough, without me.

The Salii were Sullii or priests of Sul, who was worshiped with circular dances, whence the French or Franks, who were peculiarly attached to the dancing superstition, were called Salii. The president of the college of Salii in Rome was called Præsul—our officer is called Consul. Indeed I believe, that there were no parts of the rites and ceremonies of antiquity, which were not adopted with a view to keep in recollection the ancient learning, before letters were known. Thus, as I have just said, that which began in sense is continued in nonsense; for since the art of writing has become known, all forms and ceremonies are really nonsense. But it served the purpose of the priests to retain them, and that is the real reason of their continuance. It was the same in the ceremonies of the Jews. The whole system was held to be a microcosm of the Deity, the Templum, a part of it, and with reference to this every part of it had a meaning. But I shall discuss the microcosm at large in a future book. It may be enough to notice here, as one example, the fringe of the Jewish dress, which is formed of cords knotted in fives and sixes, and tens and twelves, of knots contrived, as the Jews say, so as to form, in their various combinations, the number 600, and the name of it is ציצית *zizit*, which is $t=400$, $i=10$, $z=90$, $i=10$, $z=90=600$. In these fringes, directed to be worn on the garments, and to be looked upon in a particular manner, (and called 600,) we have, if I mistake not, an example of Moses, under divine direction, practising that which Sir William Drummond called *buffoonery*.² But this word has several meanings, which are remarkable. As *zi* it describes exactly the carns of Tibet, of Scotland, of Ireland, and of Arabia also, a very striking and important identity.³ It also means a flower, and a thin plate of metal.⁴ The temple was a microcosm of the globe. The high priest in his pontificals in the Sanctum Sanctorum, surrounded with his Tzizit, was a microcosm of the tree of knowledge with its flowers, in the garden of delight. The flowers are said to be of the colour of the Hyacinth, as I understand, because it is blue; but I think this is not the meaning. The Lotus of the Nile is blue. I shall probably return to this. The parcels of knots in five and sixes, with their various combinations, are beautifully descriptive of the lustrums, and of combinations to form the double cycles of 360 and 432.⁵ Here we see more proofs of what Pythagoras meant, when he said, that all science resolved itself into numbers.

13. We will now try to find the meaning of the word Solomon; often spelt Soleiman, Sulimon,

¹ Hog's Hist. Corn. p. 460.

² See Numb. xv. 38, 39; Deut. xxii. 12.

³ Vide *Parkhurst* in voce.

⁴ Vide *Fry*.

⁵ The Catholic beads and a string of them called a Rosary are the same. The Rosary is from the word *ras wisdom*; the Bead, in like manner, is from the word *Ved*, or *Wisdom*. *Beten*, in German, is *to pray*.

Suleimon, and שלמה *slme*. Pezron has found the word Sol for Sun among the Celts, and I consider that, having it in Latin, we have it in the Etruscan. We have it also, I think, in the language of ancient Britain, in the Fons Solis at Bath. As we have just seen, the first word Sol, or Sul, or Suli, forms the cycles of 336 and of 366, and spelt with an X or ס final, probably of 666. The second word is the נט=90, and also סט=650. This MN or Menu was in a particular manner the symbol of mind. Minos or Menu or Numa was a wise lawgiver. The Mn formed the only animal in the creation possessing mind, called *man* for this reason. Thus the wisdom of the Sun became Solomon.¹ With reference to the same mythos we have the Lm 650, the Lam or Lam-da, holy LM, and LM B=72, and the Men-des or holy Goat, which is the same as the Sheep. And when science improved, we have the M=alone equal to 600. With reference to the same, we have the fig-tree called Lamed, the sacred tree of the Indians, which fructifies in its own peculiar manner something like the Lotus.² We have also Mount Meru, called by the Siamese Menu, or, at least, Maria called Mania, which, combined with the circumstances that we have seen relating to mounts and meres of the Aja or Lamb and Goat, justify a suspicion that Meru was Menu. With reference to this, the centre letter of the two Irish alphabets is in one called Moiria, and in the other Muin, substituting the N and R for one another, but each the centre letter. I cannot help suspecting, that all our Meres and Marias were corruptions of Menus or arose from them. I think it probable that Salman-asar was the Cæsar Solomon—Salmon-Æsar.

The second person of the Trinity being an incarnation of the solar power, the word של *sl* came to mean Saviour,³ and from this comes the word שלום *slum*, and שלם *slm*, peace, and שלה *slē*, Shilo, Saviour, as is proved by his being called by Onkelos משיחא *msiha*, that is, THE Saviour or THE Messiah. From this we may now see where the Soli or Suli-Minerva of Bath comes from. She comes from the Saviour Minerva thus: Sol or Sul is Saviour, as the Sun is always called, therefore the Sul is both Sun and Saviour, and Miner is also Saviour.⁴ פלץ *plz* is the same as the Pala noticed by me in another place, and is the origin of the Pallas.⁵

I imagine that the following is the true translation of 2 Samuel xii. 24 and 25: "And he called his name Solomon (שלמה *slme*), and Ieue loved him. And Nathan the prophet put his hand upon him (וישלה-ביד *uislh-bid*) and called him after Ieue, (or on account of IE בעבור *bobur*) Jedidiah," (ידידיה *idilie*) that is, the most holy IE, or, in Hebrew idiom, Holy, Holy IE. Here we have the χριστονομία and Christening, or giving the Christian name, usually given with us at the baptism. I assume that the *d* in the word ביד *bid* ought to be *r*. With this the whole is *sense*, without it the whole is *nonsense*; and I think most Hebrew scholars who shall go through my work, and see all the proofs which I shall give of my theory, will agree with me that the emendation ought to be made.

The Milyans of Lycia were called Solymi. They were also called Telmissi and Ternillians.⁶ They came from Crete. At Miletus was the crucified Apollo,—Apollo who overcame the serpent, פתן *ptn*, or the evil principle. Thus Callimachus celebrating this achievement, in his hymn to Apollo, has these remarkable words, lines 103, 104—

¹ I have little doubt that the monkey was called Hanuman from the same principle, and that the word Hanu was a word of qualification, as perhaps, *half-man* or *inferior man*.

² Vall. Coll. Hib. Vol. V. p. 130.

³ See Parkhurst under שלה *slē* and שלם *slm*.

⁴ See Pausanias, and also Parkhurst in voce מנר *mnr* and פלץ *plz* II, where she is shewn to be the same as Venus, and to mean the generative power of the Heavens; and the same as אשרה *asre* Venus or the Saviour. See Parkhurst in אשר *asr*, IV.

⁵ Vol. I. pp. 629, 630.

⁶ See Beloe's Herodotus, Vol. I. p. 236.

— εϑυ σε ΜΗΤΗΡ
Γεινατ' ΑΟΣΣΗΤΗΡΑ —

“Thee thy blest *mother* bore, and pleased assign'd
The willing *Saviour* of distress'd mankind.” DODD.¹

From this root also come the word פתר *ptr*, to *expound* or *interpret dreams*, and פתור *ptur*, *interpretation*, and *pateræ* leaves, i. e. the *divining leaves* of the Sibyl;² also the name of a town in Mesopotamia, (Numb. xxii. 5; Deut. xxiii. 4,) from an oracle at that place, and Patræ in Achaia, and Patara in Lycia, from an oracular temple of Apollo, whence Horace calls him Patareus. Hence also the priests among the Gauls were called Pateræ.³ Whence also came the little images of the Phœnicians Παταϊκοί or Pataeci by Herodotus. In Python, the Serpent, may be found the destroyer, the Evil Spirit. Apollo was, I doubt not, the son of one of the females to whom we find the altars inscribed with the words *Tribus Mariibus*, who was the *Virgo Paritura* of Egypt and Gaul. Patra or Patta, in Sanscrit, means a *leaf*. The cups used in sacrifice in Sanscrit are called Pateras, and are made of a large leaf. The Greek word Petalon is the same as this.⁴

14. We may suppose another of the earliest words discovered, precisely in the same manner as the Sul, would be □, I, W, denoting 360. I suppose that the words which we found above, pp. 160, 161, to stand for the cycle of *fourteen*, namely, *di* or *id*, in order perhaps to imprint the day strongly on the memory, or from religious motives, had become sacred or holy.

Now we will suppose man called a certain river the river of the Solar orb: he would, in numeral letters, first call it the river of Sin, or 360, and next, the river of the *sacred* or *holy Sin*—and that would be *Sindi*; which was the name of a sacred river in Thrace, and of the river Indus in India—one the river of the Jews of Thrace, and the other the boundary of the great Mesopotamia of *Ioudia* or *Ayoudia* or *Judæa* of India.⁵ But the important part of this observation to us, at the present, is, that we have got another name of two syllables.

Bud is B=2, D=4=6, the root of 432. Father is ab, abba. He is the first of all created and creating beings; thus he is B=2, A=1=3, the Trimurti, and the root of almost innumerable superstitious fancies about the generation of numbers. Thus, also, Ab-ba 3+3, the root again of the cycle of 432, a Roman Lustrum. I suspect Abba was both *parent* and *father*; as Beeve is both *cow* and *bull*; and as Khan was both *king* and *queen*.

We have found God called Ad, in India, and in Western Syria. A, is one, and d, is di—holy one or monad. And the word Monad is Mn 650, di, holy, A, one, the *holy one*, or To ON; that is, ON, the Generative power,⁶ called Ἡλῖος by the Greeks.

Every thing was microcosmic: Adam and Eve, made after the image of God, were a microcosm of Brahme and Maia,⁷ their three sons a microcosm of the Trimurti. Noah, his wife, and three sons, were the same. It would have been singular if we had not found Adam and Eve in the arithmetical language. אדמ *adm*, is I (or the Monad or root) of the di, *holy*, cycle of Om or M, —the God described on the fringe of the priest's garment.

¹ Parkhurst, p. 602.

² See Celtic Druids, p. 93.

³ See Bochart, Vol. I. p. 666.

⁴ Asiat. Res. Vol. VI. p. 499.

⁵ The river Sind is also called Abba-Sin, or *father Sin*. (Tod's Essay on the Indian and Theban Hercules, Trans. Asiat. Soc.) I have little or no doubt from the word (Abyssinian) Abbasinian, that the Upper Nile was once called Sin-di, or Abba-Sin. The term father was constantly applied to the Nile in Egypt—as we say, *father Thames*.

⁶ See Vol. I. p. 109.

⁷ Ibid. p. 348.

In Volume I. p. 643, I say that the word \beth *ob* has the meaning of Serpent, and that I shall explain this in a future page. The letter \beth *b* denotes 2, and the letter γ *o* denotes 70, and the two denote the recurring cycle 72, the most common, and, perhaps, important of all the sacred cycles, but not more common or important than its emblem the Serpent.

Why did Jesus say he founded his church upon a *rock* or stone? I have shewn (in note 2 of Volume I. p. 346) the word *stan* or stone, both in India and Europe, to have the same meaning; therefore it follows, that it is a very old word, probably an arithmetical word. May it have been $\sigma=200$, $\tau=300$, $\nu=50$, $\nu=50$, *stnn* cycle of 600? It is very true, that the whole system was founded upon that cycle. What was the loadstone, which I have supposed carried in the Amphiprurna as its mast, the mast of Cockayne,¹ of Minerva, of Wisdom, but L'-di-stone *the holy stone*? It was, most assuredly, of all inanimate things, the best emblem of Wisdom. What can be more precious than the magnet? This is highly figurative, no doubt; but who can deny that the language of Jesus was figurative, and as highly figurative too? This Lapis would be the Lapis of 600; then, by regimine, the lapis stnn.

I am quite certain that no one who considers that Jesus taught in parables, as he said, that he might not be understood, will think it unreasonable to go to an ænigma for the meaning of the ænigmatical expression to Simon Peter, Cephas, Pierre, *Thou art Peter, and upon this rock I will build my church*: Matt. xvi. 18. Now I think the stone on which Jesus meant to found his church, was Saxum, Sax, Saca, in short, *Buddha* or *divine wisdom*. This is in perfect keeping with other equivoques which Jesus is said to have used. The stone of Sax would become the stone Sax, with the Latin termination. Jesus Christ was a disciple of Buddha; that is, of Divine Wisdom. Who will deny this? Thus we come at the first name of Buddha, *Saca*. Littleton says, Saxum a stone— $\sigma\alpha\xi\omega$ $\pi\epsilon\tau\rho\alpha$, עֶלֶם *slo*. Κηφας , Chald. et Syr. כִּפְיָא *kipia*, Heb. כֶּה *kp*. A play upon language, or an equivoque being *clearly meant*, no objection can be taken to an explanation arising from an equivoque. *Sax* is evidently divine wisdom, Buddha. It is also a stone, the anointed stone of Jacob, the emblem of the generative power or *wisdom*. Now, when I reflect upon the way in which our *c* has changed to *s*, and to ζ , and upon the collateral circumstances, in defiance of rules of etymology I am induced to suspect that the כֶּה *kp* is the סֵפֶר *spr* or letter which we have found always connected with wisdom, and the Zephir or the Holy Ghost; and that it is also Sup and Soph.

15. The works of Fabricius shew that the Cryptographic writing by ciphers was common with the early fathers of the church; but this was practised in India to a much later date, as may be seen in Col. Tod's Rajahstan;² even to the year 1204 of the Hegira.

The work noticed by Col. Tod is said to have been written by a man who styles himself a *ShufEEK* of Arungabad, or, as the Colonel says, "Rhymer of Arungabad." I doubt not that he was a poet, but he was also, probably, a *ShufEEK* or *Sophee*. The work is called *Bisat-al-Gnaém*, or, in one sense, "*Display of the Foe*;" but it is meant also by these words, the Colonel says, to describe the year 1204, in which it was written. He gives "the numerical value of the letters which compose the title" thus:

"B. S. A. T. a. l. G. N. A. E. M.
2. 60. 1. 9. 1. 9.1000.50. 1. 10. 40."=1183.

In Hebrew numerals it would stand thus:

¹ See Volume I. pp. 340, 344, 345.

² Vol. I. 235.

16. I must now return for a moment to the subject of the ancient vowels. (The vowel points of the Hebrew I have long since proved in the *Classical Journal*, and in the Appendix to my first volume, to be *modern*.) It has constantly been said, that all ancient written languages were without vowels. This, I have no doubt, has passed down as a tradition from the earliest times, like many other old sayings without thought, by ignorant people. It is not true, and never was true of any of them, as a person may at once satisfy himself by looking into any of the old languages. But it was partly true. The least consideration of the manner in which I have shewn that the system of *figures* grew into a system of symbolic *letters* will prove, that it could not be otherwise than as it is, and this will tend strongly to prove the truth of my whole system. For it is evident that, after the trees acquired names, and the figures were called after the trees, and the first *unspoken* but written language was made by using the figures or ciphers, whether the words were composed out of the forms which were afterward vowels or consonants or both, as in the word *iivaa* for 28, it would be merely an effect depending, in each case, upon the contingency whether the names of the trees used began with a vowel or a consonant; this is the reason why, in the twenty-eight letters, we have several letters with the same sound, though of different powers of notation. In this case the names of several of the trees must have begun with the same letter; and this is the reason why, in the words of the first language, the vowels and consonants are mixed without any system whatever. In some words there are no vowels, others consist in part of vowels, and some of all vowels; and this takes place in the Celtic, the Hebrew, in fact, in every language which we have been able to trace up to a very remote antiquity, and among them was anciently included the Greek.

If I wished to form a word from the names of three symbols, and if those names began with three consonants, the word would have three consonants: if, of a consonant and a vowel, as Beth and Eadha, it would be written B E; if, of two consonants, as Duir and Luis, it would have no vowel, but merely two consonants, D L. In this manner most words would be written almost without vowels. But after some time the same cause which made man have recourse to the sound of the first parts of the names of trees, would occasionally induce him, in order to enable him to pronounce a word, to add a vowel answering to the sound in the words, where it could not otherwise be spoken. The first syllable of almost all words may be pronounced without a vowel, but not the second. Thus we have much oftener a vowel in the second part of a word than in the first; but there is nothing like a rule. It is evident that this process arose solely from the letters having been taken from the first sounds of the names of the trees of which the letters were formed; as, D from Duir. The order of the figures is natural, as it is natural that two should follow one, and three two; but the order of the letters arose solely from the names of the trees attached to the numbers having the respective sounds in their first letters. For instance; A is the first letter, because it is the beginning of the word Ailm, *which stands for the first number or number one*. If written language had been formed by the premeditation and reflection of Grammarians and Philosophers, we should have had the alphabet in a very different order; we should have had all the labial letters together, all the dentals together, all the vowels together, &c., and not, as it is now, in the order of notation. This orderly system in the Sanscrit tends strongly to prove it, comparatively speaking, a modern and artificial language. Indeed I think it does prove it to be so. I can readily suppose that, after man had found out how to make a syllable by taking the first letters of two words, as in the case of *Id* for 14, he would easily form other syllables by taking the sounds

Hebrew, Gen. x. 15, 19; Judges xviii. 28; 1 Chron. i. 13. Sidon or Zidon would, therefore, signify, in numbers, 154; and to justify תרוך being considered as equal to 603, the ך must be taken for the Greek *ζ*. *Editor.*]

of the first letters of words, or beginnings of words, to form other syllables; as I have shewn that he would take the first of Duir and the first of Gort, to make Dog or Dg.

17. The art of acrostic writing, which we find in the Tamul, the Psalms, the Runes of Scandinavia, &c., arose from the mode of making out a word from the first letters of numbers. The word IIVAA is really an acrostic; and it was this which led the ancients into the apparently foolish practice of acrostic writing, of which we find, in the languages and works above enumerated, so many examples. The words Bisat-al-Gnaim for 1204, lately quoted from Colonel Tod, are correctly an acrostic.

Mr. Mallet has observed, "that the ancient Scandinavian poetry abounded with acrostics of various kinds, as much as the Hebrew;"¹ the Scandinavian, that is, the Saxon.

The practice to which our grammarians have given the scientific or technical name of Anagram, partly arose from the accidental transposition of the letters of a word, when changing the writing from the numeral system or system of ciphers, and from the top downwards, to the literal and horizontal, and partly from indifference as to the order in which the letters stood, when the language was in unspoken symbols. With respect to language, I believe our grammarians give too much credit to system, and by no means enough to what we call accident. A moment's reflection will shew any one that, in the unspoken language of numerical symbols, it was not of the least consequence in what order the symbols were placed. For instance, in the word Sul, whether it were Slu or Sul, precisely the same idea would be conveyed. This was the origin of Anagrams and Metathesis, to which we have given these fine names.

This explanation of the hitherto unexplained deficiency of the Hebrew and Celtic vowels, seems to me to be the most satisfactory of any part of my system, and to connect the whole together as perfectly as could be expected in cases of this kind. The number of characters in the old Arabic and other systems having the same names, for instance,² the three D's, shew, that they were originally never *intended* for *letters*, but merely for numbers.

I am of opinion that the Eastern or Cadmæan system, as the Greeks called it, was originally invented from the Arabic, and was kept a great mystery by the Masons, who were of the tribe or religion of the Chaldeans and of the Ioudi of Thrace. That the Ioudi were the persons who invented it, I shall endeavour to shew by and by. The irregular and unsystematic use of vowels shews that the change from the use of ciphers or figures or symbols to letters, was done without *any system or contrivance* which *had language or literature for its object*. The selection of the sixteen letters, both in Syria and in Greece, shews signs of the religious mystery, and in Greece, particularly, it shews that the leaf or petala system or practice was abandoned, in part, from compliance with the sacred mythos which prevailed. At first, after letters were discovered, the initial of the name of every number would form a letter, but several numbers being called after trees whose names began with letters having the same sounds, only one would be retained, and thus only sixteen or seventeen were kept in use. The characters of the trees also shew, that they did not arise from premeditation; for, if they had, such trees as the Spanish chestnut and the pine would have been selected. I can imagine no other cause for the selection but accident. But they are all inhabitants of high latitudes. They would thrive equally in Tartary and in Ireland.

Endless is the nonsense which has been written respecting the ten Jewish Sephiroths; but Moore has, perhaps, alone explained them. Their name, in fact, tells us what they are. They are well known to be ten symbols; and what is Sepher but Cipher?—the ciphers of notation up to ten, which, it is evident, contained in themselves, in the numeral language or language of

¹ Northern Ant. Vol. II. p. 144.

² See my Prel. Ob. Sect. 52.

ciphers, in its endless combinations, all knowledge or wisdom? This was really Cabalistic.¹ This was the meaning of the ænigma of Pythagoras, that every thing proceeded from numbers.

In this language of ciphers, every cipher or figure, to a certain extent, was, of course, the symbol of a word, viz. to 9 inclusive. At first this would be the case up to 28, and if we look to the tree alphabet, we shall see each of the grammata or lines, by means of the ligature, made into one. After the Arabic notation was invented, although all the figures from 9 to 99 would consist of two symbols, they were in fact representatives of but one idea. Basnage says, that the writing on Belshazzar's wall, interpreted by Daniel, consisted of but a letter or symbol for a word; this is correctly cipher writing. It is not surprising that the Chaldæan Daniel should have possessed this Cabalistic knowledge or the art of writing the symbols in some phosphoretic preparation, which should only be visible, perhaps, when shaded from the lights. M. Basnage remarks, that the same practice was observed on ancient inscriptions, where a letter or symbol stands for a word. For various mystical or superstitious purposes the Greek alphabet was varied from the Asiatic one, and if we look to other alphabets, we shall be able to perceive superstition at work, and the same superstition,—the same gratification of the passion or fashion of making riddles or ænigmas, which really seems to have been the leading occupation of the priests, or initiated, for many generations; in fact, in all time before Herodotus, who was called the *father of history*, from being its first inventor, i. e. of history as separated from the historic, mythologic ænigmas.

18. We will now consider the number 9.

The \beth Teth of the Hebrew stands for *nine*. I have no doubt that we have this letter nearer the original in form in the Greek Θ Theta, a circle including a central point, though the Greek Theta is not unlike the Teth both in name and form. This has the same name as the Tha or Thas of the Egyptians, and the $\phi\theta\alpha\varsigma$ of the Copts. It is called the everlasting number, because, by whatever number it is multiplied, if the figures be added, they make 9. Thus $7 \times 9 = 63$, and $6 + 3 = 9$; or an equal number of nines, and for this reason it has the emblem of eternity for its figure, viz. a point and a circle. This Tha or Thas is the ninth or last number before the tens begin. The Tzaddi is the 90, the second nine before the hundreds begin; and the Tzaddi *final* is the third 9, standing for 900, before the thousands begin.

If the reader look to the Irish alphabets in my Preliminary Observations, Chapter I. Sect. xlvi. p. 9, he will find each of them to consist of seventeen letters, the ninth letter in each is the centre letter; it is the M. In the first it is called Moiria, that is, Maria; and in the second it is called the Muin=666, of which we have seen and said so much.² Can any one believe this to have been the effect of accident? And if it be not accident, can any one doubt that it is the effect of a secret system, and of the very system which I have been unfolding?

Georgius shews that the Pema or Lotus is the Padma softened to Pema. I suppose Padma is Sanscrit and means Pad, one of the names of Buddha, and Ma, mother; the same as Om, the male and female united in the Lotus flower. The word Ma or the M with a vowel, without which it cannot be sounded, was, as I have stated, the old word for mother or the female principle—the matrix; and, on this account, it might be that the central numeral letter of the alphabet came to have the name of M. It was the Ma or Om figure, and thus the tree figure or vine-tree came to be called MN, or Muin, or 666—M-vin the vin of M. It should be remembered that the Jews of the present day have numerous mysteries attached to the M as the central letter, (many more, probably, than I am acquainted with,) so that this is not merely a theory. A moment's inspection shews that the Arabic alphabet was constructed without any regard to the mythos. Mystery

¹ See Basnage, p. 199.

² Vol. I. pp. 174, 273, 659, &c., also *supra*, p. 180.

itself is a mythos, as I have shewn—M-istory—perhaps, I-story—om—the Story of Om. This was correctly the case with all early history.¹ But it is quite clear to me that after the Hebrews had adopted the first sixteen letters, the others were added, without any regard to the wants of the language, as a moment's examination will shew. For what, then, could it be, but to humour this mythos?—partly, perhaps, out of regard to the Moon's cycle of twenty-seven days, partly to make the M the central letter; for, without the contrivance of the final letters, it would not answer. The final letters are not indispensably necessary, as most of the letters do without the finals. The Arabians kept all their numbers for letters, but it is evident that if they had been composed to serve the purpose of letters, they would not have had three letters T, or three letters S. I have before shewn that it seems probable that the Greeks at one time had the same number of numeral letters as the Hebrews, or letters having the same power of notation; but that they purposely contrived to leave out the Koph, in order that they might have the two centre letters for their monogram of Bacchus, Mn=650, eleven letters on each side. One effect of this would be to make the last three letters of their proper *old* alphabet have each, in succeeding times, two numeral powers.² I have taken great pains to prove, and I am certain I have proved, that the last three letters of the alphabet had each two numeral meanings. Here we have a satisfactory explanation of the mode by which that effect was produced in the Greek. After they had given names to gods or things, from the symbols having the original powers of notation, they would never be able entirely to destroy these first names and substitute new ones. If new ones were given, it is evident that both would continue.

Man in Sanscrit means a *human being*; in Chaldæo-Hebrew, *intelligence*.³

Mani is always called Mane: now this will give us nearly the numerical name.

M=600	M=600	}	M=600	H= 8	}	Persian Hour.
A= 1	N= 50		I= 10	M=600		
N= 50	I= 10		N= 50	—		
I= 10	or {		U= 6	608		
E= 5			A= 1	E= 5		
666	666	666				

Om—Mani—Pami or Pema—Om. One is nothing but the M=600. Mani is Numa or Minos or Menu. We have seen how the Nu is נח *Nh* or Noah,⁴ and I believe it is the NH—*Mn* 650.⁵

We constantly read of the *Son of Man*. I have often wondered why a human being should be so called. I have little doubt that by this was meant, *Son of the Solar Incarnation, Mn*.

Man was the image of God, of the being described by the number 650; in short, he was the microcosm of God. Mind was Sapientia; and this was only to be made perceptible by one man to another by means of the Logos or speech. Thus mind came to be described by the word Logos, the speech or anima in motion, the spirit of God, of which the Linga was the emblem. The organ of generation, for a similar reason, was called Linga, or Lingua, language, or speech, or Logos. Mind was the Το Ου. "Every thing tends to the Το Ου"—"to the centre." For this reason,

² ΑΒΓΔΕΖΗΘΙΚΛΜΝΞΟΠΡΣΤΥΦΧΨΩ.

³ Volney, Res. Ant. Hist. Vol. II. p. 403.

⁴ See Vol. I. pp. 234, 236, 420, 626, 649, 714.

⁵ Let it not be forgotten, that when I speak of these matters, I suppose the Greek and Hebrew letters to be the same or nearly so—not yet to have changed.

when the alphabet consisted of only twenty-four letters or figures, the two centre letters, the MN=650, formed its name. The name of that part of the Hom or Homo, which more immediately partook of the nature of the Θ To Oυ , mind and man-min-di, viz. *divus*, holy or sacred, that is, MN. After the sacred number, the Neros was found to be 600 and not 650, the number of the letters was reduced from 28 to 27, and the M=600 was the sacred number.¹ When this was the case, it is evident that those *who did not understand all the reasoning* might take either the LM or the MN for their sacred number 650. Thus came the *Lama* and the *menu*. Thus the Lamed came to be used indiscriminately with the Nun, as Ficinus tells us. And thus, as we might expect, *Lama*, *Menu*, and *Mani*, were all the same. The Lamed is, in fact, the LM-di, Holy or Sacred Lama.

At last, the Lama came to have the same name as the sheep, as the solar constellation, and as "the Lamb that taketh away the sins of the world," because, in the language of figures, it was L=50, M=600=650. For a similar reason the Goat, which was the same as the Lamb, was called Mn-des, M=600, N=50=650.

The Indian Fig-tree was sacred to the Sun.² It was the tree of the Lam; then, from the regimine, the tree Lam-di.

The reader may probably recollect the observations which I made in Volume I. pp. 606, 837, 838, that the Goat and the Sheep are the same genus of animal, and that they will breed forward, or continue the breed, like the Greyhound and the Pointer, not like the Horse and the Ass. This accounts for the Goat being often found where a Sheep might be expected. At last the two animals came to be equally adored, one as LM=650, the other as MN=650.

Parkhurst says, מנדע *mndo*, knowledge, understanding.³ From this root ידו *ido*, probably, comes the name of the Docetes. He says, דעת *dot*, knowledge.⁴ I believe it was one name of the Gnostics, and from this probably came the Latin *Doctus*. We have found *munda* to mean a cycle or circle. I suspect this arose from the figurative similitude of the divine mind to the circle which we meet with every where, to the Θ , To Oυ ; and that man had this name from being an emanation from the divine mind. From the word ידו *ido* comes the word *idea*, which is so closely connected with understanding, knowledge, and mind. And thus the mounts *Ida*, of *Crete* and *Troy*, or *Tr-ia*, might, with little or perhaps no violence, be construed *mounts of knowledge* or *wisdom*.

The Iod has the meaning of hand and ten, and may be the root of the word *Ioda* or *Juda*. It is the ידו *ido* of the Hebrews, which means *to think*, and figuratively knowledge, Wisdom, in fact, our *Idea*. When a man has no ideas he has no wisdom. We have before seen the close connexion of letters and knowledge. Here, I think, we may find the meaning of *Ayodia*—*the place of wisdom*. The tribe of *Judea* may be nothing but the tribe of *Judia* or *Idii*. The *Idei* of *Crete* were Δακτυλοι, *Dactyli*, as the learned say, because they were *ten*, the number of a person's fingers. I apprehend they might also be so called from the *Iodi* or *Idæi*, that is, votaries, or the inventors or possessors of the system of letters, and also from the word *Iod a hand*. We have here several meanings similar to what we found in the *Tamul*. From the Hebrew word ידו *ido*, *Idea*, the ideas of letters, knowledge, wisdom, head, cannot be separated. The French *Tête* is *Tat*, *Ras*, head.

¹ Thus, when it was desired to retain the allegory of the tree of knowledge and letters in the alphabetic numeral system, and the mansions of the moon and the days of the moon's period were found to be more correctly described by 27, the letters were reduced to 27.

² Vall. Coll. Hib. Vol. V. p. 130.

³ In voce ידו *ido*, VII. p. 274.

⁴ Ibid. p. 273. In a future page we shall find the language of Scotland called *Gael-doct*. The latter word came to Scotland with the Jewish abstinence from Pork, and was derived from this word, meaning learned *Gael*, or *Sanctum Scriptum*.

The Cretans of Mount Ida were said, by the Greeks, to be Jews. They probably constituted the monastic body, the remains of which still continue as Christian monks on Mount Ida.¹

Virgil seems to have known the true nature of this mythos from an expression in the Æneid, Lib. x.—

Alma parens Idæa Deüm.

This Idæa was the Maia of Greece. Proclus, upon Plato, uses the expression, *Μαῖα Θεων ὑπάτη*: Maia, the Sovereign or Supreme of the Gods.²

We know certainly that, after the use of the numeral symbols as letters commenced, the custom of using them as symbols did not cease; but, on the contrary, that they were continued in common use for superstitious purposes by the early fathers; and it is easy to imagine, that, after the numeral powers of the Coptic and Greek letters became changed, the Gods should, in some instances, be called, or rather be described, by the symbols in their new application. For instance, that what before was *tr* should become ΣΡ=600. And, again, ΤΣΡ and ΧΣΡ. I think each of the letters PΣΤ came to have *two* meanings. All this might readily arise in the infancy of letter writing, and during the gradual cessation of symbol writing. I think the very easy manner in which the unmeaning names of the Gods resolve themselves into numbers, and those the precise numbers which are required to describe the sacred cycle, as it advanced to perfection, and the way in which they are recorded in the numbers of pillars in the temples, and the way in which, as I have shewn, they were used to make up the periods of the Hebrew chronology, as taught by Usher, Marsham, and Eusebius; and the way in which the monograms descriptive of Jesus Christ are formed of the numbers of the three cycles, leave nothing wanting to the proof of the truth of my explanation of the system. The probabilities are as a million to one in favour of its truth.

It should also be recollected, that we are not to be tied down in our reasoning respecting the meanings of symbols and letters in the first years of their invention, in the same strict manner as we ought to be, when we reason about those of the fastidious Greeks, at the time when they had brought their beautiful alphabet to perfection, and fixed, with great precision, the power of every letter.

The attempts to tie down inquirers into the early periods of Greece, or any other country, to the strict grammatical rules adopted or formed in later times, when these countries had become highly civilized and their language fixed by these grammatical rules, can only serve, if permitted, to conceal truth. There is no reason to believe the ancient languages different from the modern with respect to their uncertainty; and how uncertain are they! The following passage of Sir John Maundeville, a learned Englishman in the fourteenth century, will shew in how short a time even a written language changes: "Aftre that thei ben zolden (yielded) thei sleen hem alle, and "kutten of hire eres, and soween hem in vynegre, and there of thei maken gret servyse for "Lordes." Similar examples may be found in every language.

I must also beg my reader not to be surprised if he should find several etymologies for a word. He must recollect that I pretend *to prove* nothing, only to raise different degrees of probability in each case; and when I give two explanations, the reader may take which he chooses; I believe he will find either of them consistent with the remainder of the theory. But I think it probable that, in many cases, words were designedly so formed as to have several meanings. It must also be recollected, that the meanings of words would change with time.

¹ For *Iod hand*, see Ouseley's Coll. Vol. III. pp. 62, 105, 418.

² Jurieu, Vol. II. p. 91.

19. After man began to theorize on the First Cause, he naturally designated it by the Monad or Unit, which was at length described by a point: on this arose many most refined speculations. It was on the Monad, on which was erected all the other numbers, till we get to ten; the whole of the fingers which formed one circle or whole, as it contained in itself all numbers. Then, by the invention of adding the other numbers over again, all numbers are formed. Thus the point came to be the foundation of both series, and the • or pruktos, or prick, or point, ' or jod, to be descriptive of self-existence, and of both one and ten, and from this in time might arise the Hebrew verb היה *ie*, to be or exist; with its irregular forms, and its 'i existence and יה *ie*, or, Syriacè, יו *io*, joined to די *di*, יוד *iud*, and the people of Io-di, the holy Io; and, Chaldaicè, יודא *iuda*, and God self-existent, thus formed from the root • the Ailm, on which all letters and numbers were carried or formed, and consequently all knowledge. Thus it was the creator, and the foundation or mother of figures, letters, and knowledge: from this, the Iedi of Judi were the followers of the holy I, or Ie, or Io. From this being the origin of letters as well as of creation, the golden fleece (holy wisdom) and the apple of the Hesperides, apples of the tree of knowledge, holy wisdom came.

The first figure would, of course, be what we find it, I: when it got to *ten* it was X or ' in Hebrew, that is, Iod—Io-di—the sacred *Io* in the Syriac, or יה *ih* in the Hebrew, translated into the Greek IH of Delphi, or the XH=608. Jesus Christ, Basnage says, was described by IH. This shews that the ΗΙ of Delphi was written both HI and ΗΙ. In several of the old languages the *first* number is described thus, I, and the *tenth* in the same manner; and sometimes both by a point. This is the Hebrew Iod, and the Latin Iota. This is, I apprehend, the Το Ου of Plato. Iod is *hand*, and also, in Hebrew, the Ivy, which is called the five-finger-leaved tree, and the *Plantavita*.¹

In the Dalmatian or Illyrian alphabet, the form of the I is X; and this, I cannot doubt, was originally the Roman, and the I or j was the *ninth*, and the X the *tenth*. The small variations in the alphabets shew, I think, that they have in most countries got into use by degrees; escaped, in fact, from the crypts, before any thing like grammar was thought of.

Duret says, "*Que Dieu est le chef de toutes les choses, tant de celles qui sont, que des autres qui doivent estre et ne sont encore.* Aussi ceste note de nullité 0, qui est circulaire et résolvable en soy mesme. Sans fin, et commencement, ne fait rien de soy, mais avec l'unité constitué le nombre de 10. Et de-là se va multipliant en la compagnie des autres, jusques à l'infini."² Or, it may be the Jewish and British and Indian cycle of 84—I=10, O=70, D=4=84. But I rather prefer the former. From this numerical theory, the Io of Syria, arose the Jewish irregular verb היה *to be*. As the *i. d.* or 10 and 4, made the half of the moon, when the year was supposed to be 336 days long; so the יה *i. e.* or 10 and 5, made the half when the year was supposed to be 360 days long.

The ' *Iod* is the tenth letter of the old alphabet of figures, the ם *mem* is the tenth of the new one of letters.

The sacred tetragrammaton might be either יהוה *ieue*, or 'Ο ων, και ὁ ην, και ὁ ερχομενος; or it might be, יהויה *aeie*, which comprehends them all.

I apprehend the origin of notation, or of figures or arithmetic, is very fairly represented in the Preliminary Observations, and the beginning of this book. We will now try to find how the Arabic system was discovered, or I had, perhaps, better say, how the systems of calculation, by calculi or cowries, or right lines, was perfected. For, though I have spoken of calculi or little stones

¹ Vall. Coll. Hib. Vol. V. p. 131.

² Origin des Langues, p. 159.

only, yet I apprehend the African and Indian and Chinese custom of using little shells or cowries, and which are yet used in all the oriental countries, soon came into use instead of the calculi. I suppose that man, after a certain experience of the use of lines or cowries for numbers, proceeded to invent arbitrary figures for each parcel of lines or cowries, and thus he made a 2 for two cowries or lines, a 3 for three, and a 9 for nine of them; each of these parcels answering to a part of his fingers, and the 9 to nine of them. I have no doubt that in the forming of all these symbols, fanciful or mystical reasons would influence the formation of them, and when he came to the last finger or digit, and he cast about to determine what sort of a figure he should make for it,—for it, which was the total of the fingers,—he formed the sign of the circle as, in his opinion, the most proper; and this it really was, for many reasons, so evident, that I suppose I need not repeat them. Thus he got the 1, 2, 3, 4, to 9 and 0. When he examined this, he would find that he had one total. He laid his cowries or inscribed his lines one below another, and he found if he took three of them thus,

$$\begin{array}{r}
 1 \\
 1 \\
 1 \\
 \hline
 \text{they made } 3, \dots\dots 3
 \end{array}$$

and four would in like manner make 4. If he took ten of them, in like manner they made 10 or 0. That is, they made one 0, or one total, that is, 1. 0. This brought him instantly to simple addition, as far as to nine figures, and perhaps to ten. He would observe that the one total, or 10, was descriptive of all the cowries he had in his hand, and that the figures on the right described ones answering to his fingers or digits, and the next figure on the left ten digits. He then took two parcels of cowries of ten each, and he said,

If one of these parcels is described by one total. 1 0,
 two of these parcels ought to be described by two totals 2 0,
 that three might be described by three totals. 3 0,
 and so on till he got to nine totals 9 0,
 and, at last, that a hundred cowries would be described by ten totals, thus. . 10 0.

This would immediately shew, that the first number on the right described digits, the next on the left tens, and the next on the left, parcels of ten tens each. In the above we have the sums—ten, twenty, thirty, &c.

About the same time that man got so far as to form the 10, and to describe the sums 20, 30, 40, &c., he would observe, if one and a circle, made one total,¹ and that the one in the second line to the left always answered to ten, that, if instead of the 1 and 0, he put 1 and 1, he would describe the eleven cowries, which he had in his hand; and if he put 1 and 2, he would describe the twelve cowries which he had in his hand; and hence he discovered how to describe 11, 12, 13, &c., to 20, or two totals. In this manner, again, he was led to discover, that the first line on the right was digits, the second to the left tens, the third to the left, parcels of ten tens, or what we call hundreds. After this, I think the mode in which man would proceed with the combined assistance of his cowries and figures, to underwrite the number of the odd digits on the right, carry-

¹ The word *Total*, which I have made use of, is al-tat; the tat or tot meaning τ'τ' = 600, and has come from the cycle of the neros, the perfect and complete cycle, including the whole time which the sun and moon took to come from any point to that same point again. It formed the Latin *totus*.

ing over the overplus parcels of tens to the next line, or to the tens, and the overplus parcel o. tens to the next line or the hundreds, is so easy to be imagined, that I need not pursue the analysis any farther. In the same manner, by taking one collection of cowries from another, he discovered subtraction, and in a similar manner division, and multiplication—using cowries, as they are yet used, even in the most complicated astronomical calculations, in India and China, a very interesting account of which may be seen, in the *Kāla Sankalita* of Col. Warren. If a person will only take a parcel of pebbles or shells, he will soon find how very easily the art of arithmetic must have sprung from the combined use of calculi or cowries, and the infant art of writing, by numeral symbols, and of letters, when the latter were in the act of being discovered, and were coming into use along with the former.

20. The Chinese are said to have a God called Xangti, whose name is kept a profound secret, never mentioned on any occasion, but entrusted alone to those in the higher mysteries, who meditate on it with the most profound reverence. Here we have the exact history of the OM of the Indians, and of the IEUE of the Jews of the twentieth chapter of Exodus, which, when properly and mysteriously translated, means, as I have already stated, “Thou shalt not mention the name of $\eta \epsilon \eta \text{ IEU}$, that is, of *THE Self-existent Being*.” I mentioned above, p. 190, that, in the ancient language of ciphers, the *first* and the *tenth* figure were the same, I, and Θ ; but the tenth was also represented by the mystic X. From this the X, the monogram of God, came to be confounded with the I, or $\text{\textcircled{H}}$, also the monogram of God, and therefore may be here put for the I: and the *a* is the Hebrew ηe and the *y o* corrupted into the *ng*. This produces the *Iao*. The *ti* is $\eta \text{ di}$, Holy *Iao*. In Tibet they have the same God; he is called Xiang-siouph. This is more correctly reported and is the monogram X and *Iao*—the *soph* or *wise*, or the wisdom of *Iao*, and they have him also called Jang ti.—*Divus Iao*.¹ Here I suppose I shall be accused of taking etymological liberties. But it may be observed, that I do not entirely depend on the explanation or analysis of the word, but much more *on the history and the circumstances attending it*. These, in the analysis, or etymology, as it is called, of words, ought never to be lost sight of, and, I flatter myself, are never lost sight of by me. I think it must be allowed to me to take much greater liberties of this kind, with words which, by those liberties, dovetail into my system, when that system is shewn to be nearly established and supported by hundreds of other circumstances, than I could be allowed to take without them. It may be recollected that I have formerly shewn from Georgius, that the *Ti* meant *di* or *holy*, in the word Tibet. This being premised, I must add that, after I had written the above, I found the following passage of D’Herbelot: “*Ng* est une lettre Chinoise, qui répond “à l’ain des Hebreux; Monument de Christianisme en Chine.” I think I could not well wish for any thing more to my purpose than this; and here we see a striking proof of the utility of adhering to the simple forms of the Hebrew alphabet, as given by me, and regulated by the powers of notation. *Ie* or *Io* was Logos, a tree was wisdom. Wisdom was letters, letters were a tree. Thus a tree was wisdom, because its leaves were letters; $\eta \text{ iox}$ was the word used for letters. *I* was one, 1; one and a circle were 10, X; one and a circle were *Io*, which were IH or XH, the circle 608; one and a circle were a dot and circle, the emblem of the eternal monad— Θ . It was Θ , $\text{\textcircled{9}}$, the emblem of the eternal number, as they called it. A circle is a cipher; it is the emblem of eternal wisdom; it is $\eta \text{ sup}$ — $\eta \text{ sup}$, $\Sigma \circ \Phi$, wisdom. Theta was nine, because 9 was the emblem of eternity; conformably to this, the first letter of the hieroglyphic alphabet was an *owl*, the emblem of wisdom. I must be permitted to repeat, that *Ida* is $\eta \text{ Id-o}$, *idea*, *mando*, (vide Parkhurst,) $\eta \text{ mando}$, *knowledge*, *wisdom*, a circle, a cycle, a cipher. Stars were letters,

¹ Yao, volo, *I will do*; $\omega \eta \eta \sigma \omega$. Web. on Greek and Chinese Language, p. 35.

but each star was dedicated to a certain tree, or each tree to a certain star. A constellation was a wood, שְׂתַל *stl*, *satal*, whence *stella*, a star, or $\sigma'=200$, $\tau'=300$, $\rho'=100=600$; and the Hebrew, English, and Sanscrit, *stl*, *stalla*, place of rest or settlement, $\sigma'=200$, $\tau'=300$, $LL=100=600$; and the Mexican Ttl=650, Teotl. Mndo is מִנְדוּ=650—דִּי *di*, holy Mandaites, followers of Wisdom. They were Nazoureans or Nazarenes, therefore Nazorenes were followers of wisdom—therefore Jesus's followers were followers of wisdom. Jesus was a Natzir or flower of Nazareth, but the place where it grew was in *Carmel*, in the garden of God. Of this more presently. Buddha was crucified for robbing the garden of a flower: this, perhaps, we may understand by and by. The union of the mythos and the numeral symbolic alphabet, I think, can alone explain why the wood or grove in which the Gods were worshiped, the niches or stalls in which they were placed, and the groups of stars into which they were changed, should all have the same name—Stall.

In our Bibles we every where find the writers reprobating the adoration of groves or trees, which are ordered to be cut down and burnt. Mr. Landseer, in his Sabæan Researches, has most superabundantly proved, that those things which we call *groves*, and which in the Hebrew are called אֲשֵׁרָה *asre* and אֲשֵׁרָה *asire*,¹ were some kind of instrument of the nature of our celestial globes or armillary spheres. From these words, in fact, come the Latin *aster* and our *star*, and the Asteroth of the Sidonians, and the Goddess of the Saxons called *Eoster*. The word *Asre* came to mean a tree, because those instruments were covered with groups of stars, each star marked with a letter, which letter had the name of a tree. They were formed upon a microcosmic system, which I shall explain in a future book; by this, the earth or globe was divided into tenths, from which the tithe that I shall shew was paid by all nations came to be called *Ashera*. We constantly read of the fortunes of men told by the stars, of the life and actions of Jesus Christ being recorded in the stars, &c., &c. Every star having the name of a tree, it would also be a letter and a numerical symbol, and a group of them was called a constellation, of which there were two kinds. Of one kind, which had the names chiefly of animals, there were forty-eight: the other kind consisted of divisions formed by lines, each line distant from another five degrees, which would divide the sphere into seventy-two parts, as described by Plutarch. These lines, if taken from North to South, or from East to West, would divide the surface of the sphere into parallelograms seventy-two in number. By means of the forty-eight hieroglyphics and the numeral symbols, it would be no difficult matter to record a history, the parts of which would present themselves consecutively every night, so as to finish the story in a year, or in a period of years or cycle, at pleasure. Thus we have the labours of Hercules described in the zodiacal signs, as they are so satisfactorily explained by M. Dupuis. If the history of Hercules and his labours could be portrayed and described by the constellations, so might the history of Jesus Christ: and these labours are so similar to the sufferings of Jesus, that the reader must remember that the pious and Rev. Mr. Parkhurst has been obliged, much against his inclination, to acknowledge, that "they were types of what the real Saviour was to do and suffer."

The word *stella* has the same meaning as *aster*, and is the same as the word שְׂתַל *stl*, which means both a group of stars, i. e. a constellation, and a wood. All these varieties arise from a similar cause, namely, from the stars being marked by letters or symbols, which letters had the meaning and names of trees. I have very little doubt that the *Zodiacs* of Esne and Dendera were instruments of this kind of perpetual almanack. Of course, if those instruments were set up in the temple, they must have been set up by the priests, by the initiati, and they must have appeared to the ignorant as something very extraordinary, as they would seem to enable the priests

¹ See Parkhurst, p. 47.

to foretell eclipses and other matters. Thus it is very natural that they should become objects of terror to the ignorant, who, in consequence, destroyed them when they obtained power.

Maimonides (in *More Nevoc.* ch. xx., Townley's translation, p. 263) says, "But the Zabii " being ignorant of the nature of the true God, and regarding the heavens and the heavenly bodies " as that eternal being who was free from all privation, and supposing that from thence all kinds " of power flowed down into images and certain trees, called in the law asheroth אַשְׁרוֹת *asrut*, con- " concluded that those images and trees inspired the prophets with the prophetic language which " they uttered in their visions, predicting good or evil." These Asheroth are the instruments of which I have just treated.

We every where find the later Jewish writers, and particularly the prophets, reprobating the Ashres, but yet we find them in their Temple under the best of their rulers: they are repeatedly said to be set up *under trees*. And Abraham set up an *Ashera* in *Beer-sheba*. This shews that the Jews had their sects like the moderns. When an ignorant race of devotees, like our evangelicals, obtained power, they destroyed the images, burnt the books and Ashres or astronomical instruments, as John Knox and other Reformers did. Our books are come to us from this race of people, and for this every philosophical inquirer ought to make allowance. No doubt, like the Protestant reformers, many of them were honest, and destroyed some gross abuses, such for instance as the human sacrifices of prisoners of war, ordered by the law, of which proof enough may be found in "the devoted thing, both of *man* and *beast*," Lev. xxvii. 28, 29; also Lev. x. 14; Exod. xxix. 28; Numb. xxxi. 41, the *heave offering* of the men prisoners.[?] But if they reformed abuses, they indulged in their antipathy to learning, without judgment or discrimination, and this is proved by their destruction of the Asherim or astronomical instruments. Our modern devotees are surely not less inimical to learning, than were Jewish and Protestant Reformers.

I beg my reader to pause here, and to reflect upon the state in which he would be placed at the end of a period of 600 years, if he had had no historical account of what had preceded that time; and, again, if he had a tradition or a writing giving an account of the immaculate conception, of the adventures of a divine person, and a dogma that this was to be renewed every 600 years; that, in short, all the affairs of the world were to be renewed periodically. He will at once see, that his very limited experience would not enable him to correct any chronological error.

The stars, the lights in the firmament of heaven, were, by the omnipotent voice of the Elohim himself, appointed to be "for signs and for seasons, and for days and years." The proper use of the asherim was, no doubt, in part for ascertaining and manifesting the movements of those signs, seasons, &c., and I imagine that they were used to foretell the political events which would happen, (as the mythos dictated,) as well as eclipses, conjunctions of planets, &c.; and men must have been very different from what we have ever known them, if priests and rulers did not make them subservient to their selfish purposes. This would, of course, expose them to the attacks of reforming fanatics.

In the case of the Hebrews we have an example of a temple whose sacred writings have escaped to us—in all others, of temples whose writings have not escaped; and in this, at last, consists the great difference between them. It is evident that struggles were constantly taking place between the patrons of images and iconoclasts—between reformers and anti-reformers—and our writings are those of the iconoclastic party, which at last prevailed. From this circumstance, and from being educated as partisans of this system, every thing takes in our eyes a suitable colour.

I have very little doubt that the stars were allotted to the numeral symbols, so as to make them into a kind of calendar or perpetual almanack, and this is what was meant by the declaration of the great astronomer, that the life and actions of Jesus Christ might be read in the heavens. It was contrived either for a year or six hundred years. Either the Roman Catholic system of por-

traying the actions of Jesus every year, or the system of Virgil in his new Troys and new Argonauts every six hundred years, was adopted. Vallancey and several others have had a glimpse of the truth, but they have had no success in making it out.

No person can look at the Mem final without seeing that it is the Samech, and the example in the word לִמְרֵבָה *lmrbe* of the use of it for the Mem, sufficiently justifies and proves, at least in mystic inquiries, its indiscriminate use. So far I consider that we are certain, independent of the innumerable other proofs of it which I have given.¹ It is the same as the Greek hissing ξ' which stands for sixty, and the חכּם *hkm*, wisdom. The Sa is the ζω or ψω *iso* or Saviour or the 600: the same mystic system goes through the whole. With reference to this, the Six was described by what we call the Episemonbau or Vau, the hissing ς'. The first cycle was 6; the second 60; the third 600; the next 6000. The following passage will shew a similar kind of superstition of the Mohamedans in a late day, when in fact the knowledge of letters had rendered all such theories absolute folly and nonsense, but which, *before their discovery*, deserved rather to be called *wisdom* than *folly*.

The following is a metrical account of the verses, &c., of the Koran, taken from a very beautiful copy, once the property of the unfortunate Tippoo Sultan, but preserved in the public library at Cambridge. It was copied by me from a manuscript of Professor Lee's, lent me, at his request, by the secretary of the Royal Society of Literature.

“ The verses of the Koran, which is good and heart-delighting,
 “ Are six thousand, six hundred, and sixty-six.
 “ One thousand of it command, one thousand strongly prohibit.
 “ One thousand of it promise, one thousand of it threaten.
 “ One thousand of it read in choice stories,
 “ And know, one thousand of it to consist in instructive parables:
 “ Five hundred of it in discussions on lawful and unlawful;
 “ One hundred of it are prayers for morning and evening.
 “ Know sixty-six abrogating and abrogated.
 “ Of such an one, I have now told you the whole.”

In the 6666 and the 6600, exclusive of the abrogated part, I think may be seen the remains of the cyclic system.

21. We will now inquire into the famous Ἐἷς, μῖα, ἓν, commonly called the three genders of the Greek numeral adjective, which word describes our idea of unity.²

¹ See Vol. I. pp. 168, 172.

² Grammarians call it an irregular noun. In all the written languages except the Sanscrit, there are many words which grammarians can bring into no rule of grammar, and this gives them much trouble, because they proceed upon the idea, that language, both written and verbal, is to be accounted for on principles of what are called philosophy, when, in reality, they are much more the effect of what is called accident. Grammarians and Philosophers never had any thing to do with them, till they were come to a very advanced state. The more I inquire and think upon the subject, the more I am induced to have recourse to what we call accident, in the case of language.

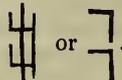

Plato, who lived in the fourth century before the Christian æra, was the first that considered Grammar; Aristotle the first who wrote on it, and reduced it to an art; and Epicurus the first that publicly taught it among the Grecians. If an inquirer will only think one moment upon these facts, he will be obliged to admit that what I have said of Homer's poems must be in great part correct. They must be indebted almost entirely to Aristotle and his companions for the perfection of their language. According to Suetonius, the art of Grammar was first brought to Rome, about 170 years B. C., by Crates Malotes, the ambassador from king Attalus to the Roman Senate. (Pref. to Bosworth's Saxon Grammar, p. xxiv.) If these facts be considered, we shall instantly see the absurdity of being tied down to observe the niceties of the language of the later Greeks and Romans. For, most assuredly, before the invention of Grammar, there could be nothing like precision in language. It seems quite certain from this, that the poems of Homer must have undergone a great dressing up by Aristotle, to bring them to their present perfection. But an ob-

I have shewn that the first recorded ideas of man were probably numbers. I think I may assume, that all written language came from Asia to Greece, and that the Greek language was formed from the oriental. Now I think we may observe something very striking in the Greek word for the idea of unity. A Greek grammarian would tell you, that the word for one is ἕἰς, and that it is irregular, making μῖα in the feminine, and ἕν in the neuter. But it is evident these words are not formed from one another, but are three separate and distinct words, for three separate and distinct ideas. If I be right in the primary formation of numbers, they may be sought for among the most ancient languages, and I think we shall find the Greek words above alluded to to have come from the East.

Priscian says, that in the Greek word *Mia* for *one*, *I* is considered the principal letter, and the *M* as mute. We constantly read in grammarians of words being paragogic and heemantive and formative. In nine cases out of ten these learned words are only used and contrived as a screen for ignorance. Almost all the words connected with mythology are of so old a date that their origin is totally unknown in all countries, and this is because they were formed before the art of syllabic writing was known; and before this book is concluded, I feel confident I shall satisfy every reader, that they took their names from the first numeral art of writing which I have been unfolding. The mere assertion of Priscian, that the letter *m* is mute, is by no means satisfactory, as my reader can hardly fail to admit, when he has considered the circumstances which I shall disclose. I suppose that the word consists of the monogram *M* and the Hebrew *IE*, or, *I*, *self-existent*.¹ This opens a door to the explanation of many other words. I do not doubt that in the Mute, *M*, we have the monogram of the *Om* of India—three words coalescing, to use Sir W. Jones's expression, and forming the word *O-M*, or *M*, the *Mem* final of *Isaiah*. In a similar manner we have the *Monos*, which is the Latin *unus* with the *Monogram* prefixed.

This seems to restore this important word to something like rationality. Ἐἰς, in the Hebrew, may be עִשׁ *Eis*, *THE is* or *ens*, *existence* in the masculine; עִשׂ *Eie* *THE ie*, *existence* in the feminine; and ἕν *the ov*, Το *Ov*, of *Plato*, in the neuter, or the *ens*. I have not a doubt that, when these words were formed, grammar rules had never been either heard or thought of. There is not in the world any thing like a written or spoken language formed by rule, except the *Sanscrit*, and in this very formed rule, its modern character is evident. Every language written and spoken is the child of circumstance, improved by grammarians, as our language and all languages of civilized nations are improving every day.

Some time ago, p. 190, I observed, that the *M* was the tenth letter of the new or *Cadmæan* alphabet of letters, and answered to the *jod*, the tenth letter of the old alphabet of numbers, which was often described by the hissing *X*. Our learned men say the numeral letter *six* was described

by two digammas thus, F . Now I think it has been originally the same as the French

hissing \square with the *sedilla* under it thus, F \square . This is the hissing *sixth* letter. The *tenth* hissing letter was the *X*, and the *sixteenth* letter was the *Samach*, or the terminating form of the tenth alphabetic letter *M*, and was formed by three lines or forms Ξ ξ , or three \square s, and denoted 60 and 600, and called by the hissing word *Xi* and *Chi*. We have no alphabetic name for the pre-

servation made by Mons. Dugas-Montbel, in the *Journal des Savans*, September 1831, that "Plato, Aristotle, PLUTARQUE, citent des vers de l'Illiade, de l'Odissée, que nous ne retrouvons plus dans les manuscrits et les éditions d'Homère," proves, indeed, that they have been recensés in later ages.—Homère et ses écrits par Marq. Fostia D'Urban, p. 252.

¹ He says *L* was often used along with the *N* for 50. This we know to be true. *Supp. Ency. Brit.* Vol. I p. 522.

sent numeral letter 6. I suspect it was originally called *Sam*, the name of the Sun in various dialects, and that the name for the number 60, *Samach*, was *Sam* and סכמ *akm*, and the same for the 600; and the form of it in the Greek was made to describe the triple power, of which the Sun was the emblem—the triple wisdom. That much mystery is hid under these words, cannot be doubted; whether I have suggested a probability as to its *true explanation* I leave to my reader.

At the head of all beings and their works the Oriental or Gnostic sects placed the *Monad*, *Μία αρχη*, also called *Πάνηρ αγνωστος*, which M. Matter truly observes, was found in all the doctrines of India and Persia, and of the ancient world.¹ And who was this *feminine* *Μία αρχη*, who was also the masculine *Πάνηρ*; I answer, the androgynous *Brahme-Maia* of India. This *Monad*, *μια*, is the feminine of the Greek word *έις*, *μια*, (or Ionicè *ia*), *έιν-unus*. The word *έις* may be a formation of the Hebrew איש *ais*, *substance*, or the verb יש *is*, *he is*. It is joined with both genders and numbers. *Έν*, as used here, as the oriental language had no neuter, must have been purely Greek. But as it is the neuter of *έις*, *one*, it may be *substance* or *matter*, which was with the Persians and many of the Gnostics the origin of evil, or the destroying or evil principle, and may have been only a dialectic variation of the word *ον*. The neuter of the word for the idea of *Unity* can evidently be nothing but *matter*; that is, in idea it cannot be separated from *matter*. We derive our idea of number solely from *matter*. If I be right that all languages are derived from one, it seems not unreasonable to search for the roots of the originals of words in different languages. When the surprising manner in which ancient languages have become changed is considered, it cannot be expected that any thing like an entire original language should be found any where. But I think with skill and diligence, and the absence of prejudice, it is not out of probability, that the original language might be nearly recovered; but yet I think we are at present a long way from it. As an example, the Greek word *έις* would be the Hebrew יש *is*, the word *μια* the Indian *Maia*, and the word *εν* or *ον* the Hebrew אין *an*.

The example of the words *έις*, *μια*, *έν*, being oriental, is exactly similar to that noticed in my *Essay on the Celtic Druids*, in the Eleusinian mysteries, of the three sacred words ΟΜ ΠΑΞ ΚΟΤΞ ,² commonly used both in India and Europe. No one will doubt, I think, that all these things have an intimate connexion. The three words used at Eleusis were purely Sanscrit; yet the Athenians would have been much offended to have been told that they were *barbarous*, though they admitted that they did not themselves understand them. They were brought to this temple when the name of the *Sinde* was brought to the river in Thrace, and the custom of burning the widows, and the name of *Χρης* given to the God. They were a form, like our *Amen*, which the priest at last used like the talk of a parrot, without thought; till, like our *amen*, its meaning was forgotten. The language kept changing, the form remained fixed. It is like the case of the words *Ite, missio est*, at the end of the Roman mass, the meaning of which is now unknown.³

But I have one more observation to make on this subject. The *Έις*, *Μια*, *Έν*, are descriptive of the Creator, Preserver, and Destroyer. The first is the male, the יש *is*, self-existence, *PROFOUND WISDOM*; the female is the *Μια*, the *Λογος*, both male and female, and *Μια αρχη*—*πατηρ αγνωστος*, the *Έν* or *Ον* is the neuter symbol of *matter*, the Destroyer. In *Exod. iii. 14*, God says, *Εγω ειμι ο Ων*. *Ο Ων απεσαλκε με προς ύμας*.

When I consider the great number of Druidical, that is, of Cyclopæan, buildings in every part of the world, all having nearly the same generic character, I feel surprised at the fact, that there is not on one of them any thing to be found like an inscription. The facts of many of them, the

¹ *Hist. Crit. du Gnost. Vol. II. Ch. iv. Sect. ii. p. 266.* He also observes, that this was the Θεος αγνωστος which St. Paul found at Athens; and if he be right in this, he here curiously unites the Christian and the Heathen religions.

² *Beausobre, Vol. II. p. 350, n. 198; Asiat. Res.; and in Vol. I. p. 253.*

³ See *supra*, p. 61.

Pyramids for instance, displaying great astronomical knowledge, and the stones of the circular and elliptic buildings, like Stonehenge, Abury, &c., having the numbers of the ancient Cycles, the Neros, that of Meton, &c., being considered, I am sometimes, notwithstanding what I have lately said on the subject of secrecy, inclined to suspect, that the knowledge of astronomy preceded the knowledge of syllabic letters much longer than we have been led to believe. I confess it is difficult to believe that astronomy should have so preceded; but yet it is difficult to account for the fact, that there is no such thing as an inscription on any really very ancient building. And the Orientals still continue, notwithstanding their knowledge of the Arabic figures, to work very difficult problems, and to make long arithmetical calculations, by means of their cowries.

22. We will now inquire a little farther into the ancient history of Signs or Seals or Crests or Monograms. We have found that the *M*, and the *I*, and the *X* †, were all commonly prefixed to words, for the sake of mystery, as it is said, but, as it ought to be said, for some cause which is unknown. It is a very common practice with all authors in writing, to assert or to say, a thing is so or so, without any qualifying word or clause to express doubt or opinion, when they merely mean to express their opinion. This is constantly done without any ill intention; but it is afterward quoted as authority, it being assumed that it is not opinion, but the assertion of a known fact, which thus obtains credit from the respectability of the assertor; and thus falsities are established and truth is concealed. It is one of the thousand ways which nature has devised to prevent our knowing too much of the realities of by-gone ages. It is often very difficult to discover whether an author is asserting a fact or delivering an opinion. When the saint, and bishop, and martyr—Irenæus, asserts a fact from his own knowledge, in which he has no interest, or in which his assertion is against his interest, we may believe him; but who would give a farthing for his *opinion* on any subject, where sense or judgment was required? Thus to apply this reasoning to the case before us, when an author says, “the *I* is prefixed for the sake of mystery,” he evidently knows nothing about it. When it is said, “it is put into a word for the sake of the metre,” this looks more like a certainty, because the truth of the assertion may be examined and the fact known. But if it were inserted for the sake of the metre, it was selected because it had a secret meaning. It is like the *M* and the *X*, a monogram, a sigillum, a seal. I believe the *I* was the sign of the *male* generative principle, called in the Targums *I* or *II*, and came from the word *II* in the word *üeva*,—that the *M* was the sign of the *female*, and that the *X* was the sign of the *united two*. Each might be a mark of sect. The Romish bishops all continue to use the *X* before they sign their names. It was the origin of seals. Those who could not write used their seal; sometimes with *ink*, sometimes with *wax*, to express their assent to a deed. In the same manner it was used as a crest; it was a Crestian distinction. I believe the use of a sacred name, called a Crestian name, descended to us from the most remote antiquity, although it may only have been used in modern times as a signature in signing the name. Lords and bishops, even now, do not use it. The monograms were all of the nature of crests, or seals, or ciphers, as we call them. And I believe there are vast numbers of words beginning with the *I*, the *M*, and the *X*, the meaning of which we do not discover, because we do not separate the monograms from them. What should we make of Bishop Doyle’s *X Doyle*, if it were written in one of the ancient languages, in which there is no distinction of *capital* from *small* letters, and no separation of words, and his name had happened to have been *Adoyle*? We should then have had him *Xadoyle*. Thus it is with the *Momptha* of Egypt, and the *Iixthus* of the Sibyl, and probably the *I-χιον*—the *crucified Ixion*.¹ These monograms arose, as we have seen, from the first numerical letters, and constituted a small part of the endless ænigmatical science of the ancients. Almost to our own time, every useful art,

¹ See Vol. I. pp. 500, 503.

every science, every new discovery, was concealed, as far as possible, to a chosen few. The possession of a useful secret, I do not doubt, would be a passport into some of the secret crafts. All this, however, is now nearly gone, and in another century it will not be believed to have existed. From a careful consideration of the word SACRED, I am quite satisfied that it is a plant of modern growth. It was originally *secretum*, *secret*. By degrees secret matters came to be looked on with awe or fear; from this arose our *sacred*. I have some suspicion that the word sacred has no definite idea annexed to it. I consider the subject of monograms to be extremely curious, and to deserve much more examination than I have bestowed upon it.

23. After what I had written on the word $\chi\rho\eta\varsigma$ in the first volume, (pp. 580—589,) was printed, I met with a passage of Mr. Payne Knight's,¹ which completely bears me out in what I have said respecting the Sigma-Tau, and the substitution of the T and Σ for one another. After representing that the Σ is classed separately by itself, as being neither mute, aspirate, nor liquid, and that it was commonly used by the Lacedæmonians and Aristophanes for the Θ , he says, "In other instances both the Dorians and Æolians employed the T for the Σ , as in the pronoun $\Sigma\Upsilon$, which they wrote $\Upsilon\Upsilon$. The possessive, however, derived from it, was written with either letter, indifferently, by the poets, as suited best with their Rhythm and Metre." Again, "Both the English and French now sound the T as an Σ before the I in many instances, particularly in the abstract substantives derived from the Latin." Again, "The case is, that Σ being only a T aspirated in a particular manner, would naturally be confounded with it in the different modes of pronunciation which habit or caprice gives rise to in languages not fixed by any established rules of orthography, which the Greek was not till the Macedonian conquest, when the later Attic became the common dialect."

Mr. Payne Knight has also observed, that the Lacedæmonians commonly used the R for the S,² which I have elsewhere shewn, was the constant practice with the Hebrews. This has a strong tendency to support my hypothesis, that the R, the S, and the T, all had two numerical meanings. If Mr. Knight be correct as to the unsettled state of the Greek language till the Macedonian conquest, as I have no doubt that he is, how absurd is it to tie up inquirers into its earlier history by the rules adopted to fix the meaning of the language in later times!³

When in other cases I find the letter *s* changed for the *t*, and the *t* for the *s*, as Sur for Tur, and Tur for Sur,—and I consider the practice of writing every thing in numbers, I am induced to suspect that *Tam* is a corruption of the solar name, in Sanscrit *Sama*, and in Hebrew טש *sm*, on which I treated above, p. 197, and means ד Samech=60, ש Shin=300=360; and that, from an application to this mythos, in some way or other, the Hebrew טש *ss*=360, became שש *ss*=600; that the Greek Εξ and our *six* came from the same source, and that the name of the Greek Ξ the *trilinear* and triformed letter, was called Χι or perhaps ΙΧ . But *I* was the ancient emphatic article of the Saxons.⁴ This at once accounts for its use in many cases which we have discussed, and it must have been once the same with the Hebrews, if what Dr. Geddes said was true—that

¹ Hist. Gr. Alph. p. 14.

² Ibid. p. 125.

³ The Dorians and Æolians changed the σ into τ , as $\tau\nu$ for $\sigma\nu$, as stated by Mr. Knight; but the Æolians also changed the Σ into P, as $\mu\alpha\rho\tau\upsilon\rho$, for $\mu\alpha\rho\tau\upsilon\sigma$, ἵππορ for ἵπποσ , $\alpha\rho\eta\eta\eta$ for $\alpha\rho\sigma\eta\eta$. Dores, pro *σος*, *σα*, *σον*, dicunt *τεος*, *τεα*, *τεον*— τ et ρ pro σ , in atticâ dialecto σ pro ξ . (App. Scapulæ, pp. 64, 65.) Attica dialectus mutat σ modo in τ , modo in ξ — θαλασσαν , θαλατταν — σειτλον , τευτλον .— Σ pro ρ utitur: nam pro θαρος , θαρσος , &c. Scapula. Hhapats in Hebrew (*to desire*) in Arabic (*to incline*) is, in Syriac, Hhapet. Thus the Greek $\mu\alpha\zeta\alpha$, a kind of cake, the same as the Hebrew *Matsa*, was pronounced by the Bœotians $\mu\alpha\delta\delta\alpha$. South M. As. R. Again, τεσσαρα in the Attic is τεττερα . Thus the Latins have the *tu* from $\sigma\nu$.

⁴ See Etym. Dict.

Saxon was Hebrew. It is very remarkable that the emphatic article should so often be the name of God: Arab. *Al*, Coptic *Pi*, Hebrew π *e*, and *I*, and *II*.

In his late work, the learned Dr. Pritchard says, "In a variety of languages, either for the sake of euphony, or from caprice or accident, sibilant letters have been interchanged with dentals. "The conversion of the Greek Sigma into Tau is familiar to all classical readers."¹ But I beg it to be observed that they *have* changed. Thus *Xρησος* became *Χρητος* and *Chrétien*, and often *ς*, as *Nesos* from *Nestos*. They would change by degrees, and the *χρησος* on the monument of the Youth of Larissa is the middle of the change, from *χρησος* to *χρησος* and to *χρητος*. He also observes, that the *r* and *s* are very often interchanged in the Indo-European languages.² It appears when those letters changed as letters, they took their power of notation with them. So that the T came to represent 300, the S=200, &c.; but this must have been long after the mythic names had got into use, and this will account for and justify the explanation of them by the same powers as the Hebrew.³

In matters of this kind, after all our inquiries, nothing but a probability can ever be expected to be obtained, and I think a pretty strongly probable case is made out, that the last three letters of the old alphabet were, in the numeral powers, confounded with one another. It may also be observed, that if they changed in different periods, as we cannot now distinguish them, they will have all the appearance to us of being used in common, and the effects will be the same to us.

When I consider that the T and the S in the Chaldee and Hebrew, two such close dialects, were used indiscriminately for the same idea, the Sun in *Sr* and *Tr*, and Cushites and Cuthites, and that the S and T were in like manner used by the Greeks, in their Sigma-Tau, one for the other, and the singular and unaccountable variation between the last numbers of the Greek and more Eastern alphabets, and when I consider also the apparently universal practice of the ancients of describing names by numbers, and the great number of mythological words which might have then been explained by numbers, but which cannot, as they are now, be so explained, I cannot help believing that the Shin and Tau must have been used indiscriminately for numbers, as we find them for letters; that is, that the Shin must have been used both for 300 and 400, and the Tau for the same. I state this merely as a suspicion, and leave others to determine; but, for my own part, I cannot help believing that this was the fact; and before any person decides upon this point, I must request him to take his Lexicons and consider, in both Greek and Hebrew, how many words are spelt with similar letters—letters used for one another, Samech for Shin, Xi for Chi, and almost innumerable others. As I have before observed, it seems absurd to be tied down in our inquiries into the early ages, by the fixed rules of later times. There can be no rule on the subject. Thus, I think, that the Greek Σ came to represent both the Σ and T, and took the name of Sigma-Tau; and that *their* powers of notation, as well as that of the P or Rho, changed from what they were in the ancient Arabic. It is difficult, if not impossible, to say, with certainty, how the change arose. Perhaps, with respect to pronunciation, the change might arise from the same cause as that which caused the word *πelasγος* to soften into *πελαγος*, Christian into *Chrétien*, Casmillus into *Camillus*, *Nestos* into *Nessos*, &c., &c. There can be no doubt that the letters must have been at first in their numerical powers the same as the Hebrew and Arabic, and the reason why in the names of gods, cycles, &c., the Sigma may sometimes stand for 300, sometimes for 400, may have arisen from their having received their names before or after the change. Whatever might be the cause, I am persuaded the S and T, and S and R, came to have, in a considerable degree, as far as related to the powers of notation, a common meaning. No doubt in the

¹ Eastern Orig. Celt. Nat. p. 58.

² *Ib.* p. 59.

³ See *Lempriere* in voce *Salii*.

early times of the first invention of the art of writing, where nations were separated by seas, variations would arise, as well as a great want of precision. It is very certain that the Greeks took their system of letters, either mediately or immediately, from Syria; then, finding the T and the S used indiscriminately for one another, in the word for the Sun, might not this cause them to use those letters as numerals, indiscriminately, in the same manner? If this be admitted, the names of gods would, in several cases, turn out the mystic numbers. After I had come to this conclusion, I discovered that, in the epistle of Barnabas, there was authority for this, which I had overlooked.¹ If a Protestant should say the epistle of Barnabas is a forgery, I then reply, that the person forging it must have known whether or not the Hebrew Tau denoted 300. I believe that both in Hebrew and Greek the S and T were in common.

The reader has seen what I have said of the interchangeable character of the S and T, both as numbers and letters. If, then, we make $\psi s=200$, $\gamma o=70$, $\delta p=80$, $i=10$, we shall have for the meaning of *Sopi*=360. Now, when the numerical meaning of so many other words is considered, I think this furnishes another presumptive argument, that the S and T were, as I have suggested, used promiscuously. No one will deny that Sophia is Greek. Will any one deny that it is Persian, in the case of the Sophees? We may expect to find the idea of Wisdom, the first emanation of the Solar power, described by every variety of numeral letters which will make up 360, 600, 608, 650, or 666, or any solar cycle. The name of Sumnaut, mentioned in Volume I. p. 792, is $\delta s=60$, $\gamma u=6$, $\delta m=600=666$, added to the word Neith, *wisdom*—Solar Wisdom.

The following will serve as examples of sacred numbers, if we consider the letters to have had two meanings.

$\xi' = 60$ $\rho' = 100$ $\sigma' = 200$ <hr style="width: 50%; margin-left: 0;"/> 360	}	$\Xi P \Sigma$ X R S Cross.	Samaritan + (\aleph) 400 Resh. (\aleph) 200 Van (\aleph) 6 Xi, Samech . . (\aleph) 60 <hr style="width: 50%; margin-left: 0;"/> 666	}	Crux.	$\xi' = 60$ $\rho' = 100$ $\epsilon = 5$ $\sigma' = 200$ <hr style="width: 50%; margin-left: 0;"/> 365			
<table style="border-collapse: collapse;"> <tr> <td style="border-right: 1px solid black; padding: 5px; vertical-align: top;"> $\gamma R = 200$ $\delta S = 60$ $\gamma U = 6$ $\delta T = 400$ <hr style="width: 50%; margin-left: 0;"/> 666 </td> <td style="border-right: 1px solid black; padding: 5px; vertical-align: middle; font-size: 2em;">}</td> <td style="padding: 5px; vertical-align: middle;">Wisdom.</td> </tr> </table>							$\gamma R = 200$ $\delta S = 60$ $\gamma U = 6$ $\delta T = 400$ <hr style="width: 50%; margin-left: 0;"/> 666	}	Wisdom.
$\gamma R = 200$ $\delta S = 60$ $\gamma U = 6$ $\delta T = 400$ <hr style="width: 50%; margin-left: 0;"/> 666	}	Wisdom.							

We have seen the Tau, or last letter of the alphabet, written +XT; in short, in every form of a cross. In the titlepage of my Latin Vulgate, given me by a Catholic priest, the name of Christ

is thus written, XPΣ. It is placed on the breast of the Pope, surrounded with a glory. What can the secret meaning be, but the renewed incarnation in the person of the Pope? The mark above, of the sign \sphericalangle Libra, at the autumnal equinox, shews that it is astronomical and equinoctial. I have never found a Catholic priest who could, or would, explain it to me. I have no doubt this monogram has several meanings. It is the sign of the sun, when in the equinox, in the sign of the Bull—this the \sphericalangle shews most clearly.

¹ See Jones on the Canon, Vol. II. p. 424; and Basnage, Book iii. Chap. xxvi. Sect. iii.

The existence of the *χρησολογια*, both in Europe and India, long anterior to the Christian æra, I am quite sure that I have proved. By the Chrestologia, I mean the whole of the refined Gnostic doctrines which I have laid before my reader. It is also very certain, that this was not the public doctrine of the rabble in any country; then there remains nothing for it to have been, but the doctrine and object of the mysteries of Bacchus, of Apollo, of Ceres, &c. The *χρησος* on the tomb of the youth of Larissa really proves it. The *χρησος* on the tomb is an exact counterpart

of the *XPΣ* on the Pope's breast, and of the Fishes tied together by the tails, of Italy. This beautiful and refined system, whether true or not, was at the bottom of every religion or mythos of the world, however diversified, and however, in later times, degraded. This was the religion of Pythagoras, of Plato, of Philo, and of Cicero. This was the religion of Jesus, of Moses, of Melchisedek, of Zeradust, of Cristna, and of Buddha. It was equally the religion of the Chinese and the Mexicans. There was no part of the world so celebrated for its mysteries as Delphi and Elensis, and it was here the *Χρησ* was discovered; and it is connected with India, by its Orphean Trimurti, its Buddha, its river Sinde, its burning of widows, &c., &c. I have clearly proved the system to have taken its rise in a very remote period. I have shewn how it is connected with the Cyclopæan buildings, with all the various mythoses, both Jewish and Gentile; and yet, as we find no account of it, in any of the books called histories, it seems to me impossible to avoid believing that it constituted a part of the far-famed mysteries. Although there be many things which I have not been able to explain entirely, and some which I may have mistaken, yet I am quite certain, that there is enough, not only to shew the reality of the system, but also the nature of it, and, in many respects, even the particulars.

23. I must now beg my reader to look back to what has been said in Volume I. pp. 505—509, respecting the Amazon, and of the male and female being formed originally in one body, and I think we shall perhaps find the origin of the word *אדם adm*, or, as we call it, *Adam*. This is Ad, the Eastern and Western Syrian name of God;¹ and the monogram M, the sign of the Om, the cycle of 600 years. The Ad is, A=1, D=4=5, the Lustrum.² Then *Adm* will be the holy M. Adm is Adma, or Ad-am, both *male* and *female*; and I suspect that Adam was supposed to be like the Siamese Boys; and when I consider the universal opinion, that the life of the first man was extended to many hundred years, I cannot help suspecting that he was supposed to have lived 600 years, or the length of one cycle. It is very clear that the book means to express, that he was not to eat of the fruit, and that if he had not eaten of it, he would neither have died, nor have propagated the species, and that it was only by eating of it, that he learnt to know his wife. Then I think this countenances my idea, that it was believed that he would live one cycle, and then be renewed, or absorbed into the *To Ov*—similarly to what Virgil taught in the renewal of cycles. If it be said that the construction which I have put on the second book of Genesis is in contradiction to the first; I reply, that I cannot be responsible for this; but, if I be correct, the fact proves the want of wisdom in pretending to give a higher authority to those books than reason and sense will justify. Nothing can be more manifest than that the first chapter and first three verses of the second chapter of our Genesis, is a different work from the following parts; and the fact that the generality of Christians read them, and do not observe the circumstance, exhibits a striking proof, that the prejudice created by education is sufficiently powerful to blind mankind to the clearest daylight. The fairly-implied prohibition of animal food in the first, marks the humane and benevolent

¹ See Volume I. pp. 402, 519, 722; and *supra*, p. 181.

² Lustrum, L'Ustrum—*ἵστερος second*—*ἵστερα the womb*—*עש os*, factor—*עשר osr*, ten—*ושט ust*, two.

Buddhist; the permission, in the second,¹ to use it, though only in the sacrifice of the Lamb, as exhibited in the story of Cain and Abel, from which the pernicious doctrines of human sacrifices and the atonement have been justified or excused, exhibit the Brahmin school—followed, of course, as might be expected from such doctrines, by every species of atrocity. The persons found every where, but of whom we have no account, called *Aborigines*, an inoffensive, unwarlike race, I apprehend are Buddhists, the remains, probably, of the great Pontifical nation, whose history I shall exhibit in the next Book, reduced to barbarism by causes which will be there developed,—a barbarism which would have rendered them an easy prey to their Brahmin persecutors and conquerors,—to the successive tribes coming from the great central hive of Brahminism in North India or Tartary, called Celtæ, Scythians, Sacæ, Tatars, Huns, Goths, &c., if their bloodless and inoffensive habits had not otherwise done it. It is evident that a nation of Buddhists or Quakers, can only exist, as the Tibetians do, on the sufferance of their neighbours.

CHAPTER II.

DIS MARIEBUS.—SYSTEMS OF LETTERS.—LAST AVÁTARS. MOHAMED, &c.—NAMES OF THE GODS OF THE WEEK.—CHINESE WRITING.—ABACUS AND NABATHEAN ALPHABET.—JAVA.—NORTHMORE'S SYSTEM.—VON HAMMER'S BOOK. SAXONS.—BACCHUS. JANUS. OGHAM.—RHYME. BARDS. FATES. VEDS.—CHINESE.—IMMACULATE CONCEPTION OF SACA.—PALLIUM.—APOCRYPHA.—DEISUL.—HAMMER'S ARABIC BOOK.

1. We have seen, p. 180, that in Judia of Siam, Maria and Mania were the same. Maria was one of the persons whose altars are inscribed *Tribus Mariebus*, of which one was the Virgo Paritura. On the Heathen and Christian monuments the letters D. M. are constantly found. The Christians say, they mean Deo Maximo, and the Heathens say, they mean the Dís Mariebus, of whose history it is pretty clear they were ignorant. But in fact they were the same, and meant Dís Mariebus—the *holy three*, who had the care of the dead Christ, and embalmed him. They were the three Parcæ of the Europeans, who cut with their scissors the thread of life. On a Christian tombstone, in the Church of St. Clemens at Rome, they are *Dís Manibus*; however, the letters *is* and *anibus* have of late years been filled with cement to disguise them. But upon many Christian monuments the letters are, D. M. *Sacrum XL*.² This beats all our Christian antiquarians; they can make nothing of the XL. But it probably meant Deo M. 650. I think the three Marys or Parcæ were the Trimurti—Tri-mr-di, the holy triple Maria or Maia. One was Mary, *Sal* or *Sul*, Om; the second, Mary Mag (or Magna) di-Helen or Magdalen; and the third, Mary the mother of Jesus. The Mag is the same as Mogul—Mag-al—and the Almug-tree, of which the sacred part of the temple of Solomon was built, was the wood sacred to the *Mag-al* or *ul*, or great God. From this, by the regimine, came the name of Mogul, as priests came to bear the names of their Gods.

When I consider the superstition connected with the M, the mystic nature of the M, the name of that letter *M-uin*, the other name of that letter Samach—*Sam-akm* or *Akm-sa*, the name of the next letter N-vin, and the Lamed, its name L-am-di, and that it has the same numeral power as the N, viz. 50, I cannot help suspecting a great mystery in the LMN; that they are like the

¹ This ends with the last verse of the fourth chapter.

² Basnage, B. iii. Ch. xxiii. p. 237, Eng. Trans.

Alpha and Omega of Ambrose, called *χρησιμα*, and the Staff of Osiris Ϝ , called *χρησηριον*.¹ These three letters would be emblems of the Trinity; and I think these letters of the Greek alphabet have, at one period, been so contrived as to make them the three centre letters, (though they are not so now,) similar to the contrivance of the Jews to make the M the centre letter of their alphabet; and from this, the L and the N, came each to have the power of notation 50. The Lamb was the messenger of God; he was the first of the *Αγγελλοι*. The word *Αγγελλ* means 72, the same as $\text{LMB} - \text{L} = 30, \text{M} = 40, \text{B} = 2 = 72$. If it were not on this account, why was the letter B put into the word *Lamb* for a young sheep? We constantly read of the Angels of God being 70 (read 72) in number. Here we find why they had the name of *Αγγελλ*. The LMN also describe the Etruscan cycle of 120. The central LMN = to 120, look very mythological.

“The letter H, in the old Greek alphabet, did not sound what we now call η, but was an aspirate like the English H. This was proved by Athenæus, and has been since further evinced by Spanheim, from several ancient coins; and there are no less than four instances of it in the Sigean inscription.”² All this proves the early unsettled state of the language. The last learned observation made by the celebrated Porson, was on the letter H. He said, “If this be authentic, here is an additional proof that the η was anciently used and pronounced as we do our aspirated H.” The reporter then adds, “I replied, It certainly was; and as to the authenticity of the Prænestine Pavement, I believed it could not reasonably be called in question.”³

Herodotus says, he saw specimens of the Cadmæan letters on tripods, in the temple of the Ismenian Apollo at Thebes, in Bœotia. These tripods I believe to have been triangular blocks of wood, and the temple was that of *ε-σμιν*—the Lord or Baal of the Planets, the leader of the heavenly host.

I consider that Carmel, on a part of which was the monastic institution of Nazareth, of the Rassees, or Essenes, or Carmelites, was called Carmel or the Vineyard of God, from the allegorical connexion of the vine with wisdom, as exhibited in the Greek *Βοτρως* and Latin *Racemus*.⁴ The settlement of the followers of the Rasit, in Syria, is beautifully described in the allegory of the Vine in the 80th Psalm, verses 8—16.

In great numbers of places in the Old Testament, the allegory of trees and letters is referred to. What was the Rod of Aaron which threw out branches or leaves or buds? What were the magical peeled rods of Jacob? What was the meaning of the branch from which the stem of Jesse was to arise? Was Jesse I-esa? The Gnostics frequently called Jesus *the Tree of Life*, and the tree itself which grew in the middle of Paradise, and, at other times, a branch. My idea that the fruit of the tree of knowledge was the acquisition of the knowledge of letters without initiation, is supported by the assertion of Enoch, that the wickedness of the world, which caused the flood, consisted in the attempts of men to obtain forbidden knowledge. It is also strengthened by a passage of Proverbs, Chap. iii. 13, 18, where Solomon says, “Happy is the man who findeth wisdom,”—“She is a tree of life to them that lay hold upon her.” I suppose certain of the leaf-names of figures of notation were selected by a society, as a secret system of syllabic writing, after the symbolic system had been long in general practice, and that this society being spread about in different countries, slight differences in the mode of selecting the sixteen letters took place. Thus the religious mythos was not every where described in exactly the same manner; hence we see the small variation which shews itself between the Hebrew and the Greek.

2. We are in the habit of talking of the alphabet of Greece, and of the alphabet of Phœnicia, as if

⁴ See *supra*, p. 9.

these countries had each one certain alphabet ; while it is evident, that each country had great numbers of them ; and yet they are all reducible into *two*, one of which is only a part of the other, that other being what we call Arabic, but anciently Cufic, and probably having its origin in the country of Arabia, between the Indus and Ganges, of the *thousand* cities of Strabo. In fact, every learned man had his alphabet—each differing from another in form, but each the same in substance. In the book of Ben Wassih, found by Mr. Hammer in Egypt, which contains the alphabet of Plato, we have upwards of seventy¹ of them. I have seen upwards of sixty more, in a manuscript of Sir W. Ouseley's ; so that I have little doubt I could collect hundreds. Every man who was initiated into the mysteries, and who aspired to be a philosopher, is said to have had his own alphabet, in which he concealed his doctrines from all but his followers. At last, when writing became no longer a masonic or magical secret, each country acquired, by degrees, the habit of using some one of them. Their powers of notation, however, kept them all nearly the same, both in principle and order. (That they have all the same numerical power, has been proved by Gen. Vallancey in the plates to his fifth volume of the Coll. Hib.) And so, I have no doubt, they continued, to a very late day, with only the little variation in the last numbers of the Coptic and Greek. I think the probability is, that the order of men, (who were not, strictly speaking, priests, but nearly an order of priests, and some of whom might, perhaps, sustain the priestly office,) called Chaldæans, from central India, were the original inventors of the syllabic from the numeral system ; and as for the numeral, I know of no people more likely than they to have been the inventors of it also. If the numeral were the system of the priesthood, it is not unlikely that the inventors of the syllabic system should have formed, at first, a new secret society, which I think would necessarily, by its superior talent, soon become possessed of sovereign power. There is no fact more certain than the general solicitude of the learned ancients to keep every part of science, as much as possible, a secret, each to himself, or his sect or followers. There was an unceasing struggle between the Bees, who tried to discover, and the Drones, who endeavoured to secrete ; and, for thousands of years, the Drones succeeded in preserving their science and power, by admitting only the most talented or rich of the Bees into their order, which operated doubly in their favour ; it took strength from their enemies and added it to themselves. It is impossible to deny that numbers of the alphabets are formed in unaccountably complex shapes ; these were the alphabets of the drones, trying to envelop every thing in mystery. If the bees invented any, they would, for the sake of publicity, be of the simplest kind—like the first alphabets of the drones, made by them before the power and utility of the art were known, and before the necessity of using extraordinary care to keep it secret became manifest to themselves.

It thus appears that, in times which may be called almost modern, every learned man had an alphabet of his own, for the use of himself and the followers of his school. But I have no doubt that the art of writing was at first concealed, and was probably a part of the high mysteries, and most anxiously guarded from the public for many generations. In times such as these must have been, I need not point out what advantages such a magical possession would give to the initiated. After it became almost common, the learned had recourse to the inventing of new forms, to restore the art to secrecy, as far as it was in their power ; but every form, unless the Chinese and the hieroglyphics are excepted, is founded on the first Cadmæan original. Though every philosopher or his school had an alphabet of a peculiar form, each alphabet was evidently founded on that of Arabia. The first alphabet was the Arabic alphabet of *numbers*, each number having the name of a tree, and amounting to twenty-eight. The second was the alphabet of *letters*, of Cadmus, which

¹ The first letter of the Hieroglyphic alphabet is, as I observed above, the Owl, the emblem of Wisdom.

consisted of the *sixteen* culled out of the twenty-eight. After some time, these sixteen were increased by adopting the whole twenty-two numeral Arabic letters, as they stand marked by the increasing numbers.¹ The more I meditate on thousands of trifling circumstances connected with these subjects, the more convinced I am, that, for many generations, the arts of reading, writing, and the higher branches of arithmetic, were in the hands of a ruling order, and this order was that of the priests of Ur of the Chaldees; that is, of the country Uria of Calida, that is, Calidi—country of the *holy Cali*. The high-priest and ruler has been the Mogh-ul from the most remote period. But the time when and the country in which the *first* letters were invented, is an ænigma which I fear must remain unsolved. However, I think we may be assured, that the place was East of the Indus, and West of China—probably in the tract of country between the Nerbudda and sixty degrees north latitude. I think we cannot come nearer than this to the place. Samarkand, Mundore, Oude, and Tibet, have nearly equal claims, and there does not seem to me to be much room for speculation on the subject.

If letters were kept as a masonic secret, as I suspect they were for many generations, the date of their discovery seems hopeless; we are then led into the inquiry as to the time when they first became publicly known. No where upon a Cyclopæan monument is any thing like an inscription, either in figures or in letters, to be seen. The first, perhaps, may be the Runes of Ireland and Scandinavia. These are evidently figure letters. The A is one line, the B is two, the C is three, and so on. I know not where or by whom the alphabet was discovered which is in Tab. II. Fig. 10, p. 5, of my Celtic Druids; but it seems to differ from the Callan inscription of which Dr. Aikin professes to have discovered the meaning, an alleged fact of which I entertain great doubt. Whether they were really cipher letters applicable to the sixteen-letter system or not, it is very clear that they would constitute such letters. The arrow-headed letters of Persepolis would evidently do the same. All circumstances tend to shew their great antiquity, and I cannot help thinking it probable, that they afford examples of the first figure alphabet. Almost all learned men endeavour to find the origin of languages by a comparison of the affinities of their forms and grammatical constructions. This seems to me to be a great mistake. For, as they advance down the stream of time, they generally keep improving, and, at all events, changing and becoming, in consequence, less like each other.

3. General Vallancey² has shewn, that the old Chaldee alphabet is strictly the same as the Estrangelo, (vide his Plates,) and *that* the same as the Phœnician, which is, in fact, Hebrew or Syriac. These are the languages which we have found (vide Vol. I. pp. 702, 765) in the College of Casi, near Oude or Youdia, or Benares, or at the Temple of Solomon, at the Mere or Mount of Casi, in Cashmere, the country of the crucified Indra. And again, a thousand miles to the south, in the country of the crucified Ball-ii or Wittoba, in South India, at Terpati or Tripoly or Trichinopoly, called Pushto and Syriac and Chaldee; in each place both the Christian and Jewish mythos are recorded—the two, in fact, are united in one. Again, we have found the same Hebrew language, and the same double mythos, amalgamated in Mexico, carried thither before the invention of letters or iron. The amalgamation of the Christian and Jewish mythoses, found in both India and Mexico, and the ignorance, in the latter, of the knowledge of iron and letters, are facts which can never be separated. It is impossible to have clearer proofs that the whole existed before the time of Christ. Can any thing be more striking than the fact so simply and, apparently, inadvertently permitted to escape, by the blind and prejudiced Buchanan, that he found a man, having the Jewish name of Joseph, celebrating what he thought to be some part of the Romish

¹ See Celtic Druids, p. 248.

² Coll. Hib. Vol. V. p. 201.

religion in the TEMPLE OF JAGGERNAUT, in the Chaldee language, as he says, if my memory do not fail me. The above are indisputable facts ; I submit them to my reader, and I beg he will reflect upon the way in which they all dovetail into the system of immaculate conceptions, deaths, and resurrections, and the renewals of cycles, of India and of Virgil. It is not improbable that in the temple of Jaggernaut, described by Buchanan, may be found the whole mythos. And if it should be found there, Europeans will be deluded as they have been in Tibet and Tartary, by being told, that its owners are Nestorian Christians.

The Bedoweens or nomade tribes of Arabia, are said to speak the purest dialect of Arabic.¹ The Bedoweens are nothing but Buddeens or Buddhists. These people are Tatars or Tartars, followers of Tat. In ancient times the tribe of Juda or Ayoudia was one of them. After a certain time it settled and established its capitol, first at Samaria or Gerizim, and afterward at Moriah. The tribe of Ishmael was another, an offset from the former ; after some time it fixed its capitolium or acropolis at Mecca. They were like all other tribes, followers of the sacred Buddhist OM.² Titans are Tat-ans, i. e. Buddhists. The Tartars or Tat-ars, I doubt not, are both from North India, and the Sacæ, from the country of the thousand cities of Strabo. They are the Arabians of the Indus, and in Om-Ahmed, or the renewed incarnation, the last, the tenth incarnation or Avatar of Buddha, the M, the 600 in the arithmetical language, the desire of all nations, may be clearly seen the reason why these Eastern Tartars, Arabs, Afghans, were the first proselytes to Mohamed. Of what religion were the nomade tribes before the time of Mohamed ? There is every reason to believe that they were for the most part Buddhists, though under some corrupted form probably—some, perhaps, of the same character as those called Christians of St. Thomas. And now we may begin to perceive why the wandering tribes, both of Asia and Africa, so readily came over to the Mohamedan faith. From European Christians the truth has been concealed by various causes, but not the least, the cunning of the priesthood, ending at last in its own as well as its devotees' ignorance. The system must have been well known, or we should not find the Asiatic princes all pretending to be Avatars, and perhaps each believing himself to be so. For, what opinion is too absurd for human vanity to entertain ? Alaric, the Goth, was clearly so. Nadir³ Shah's name shews him to have been one, and after him all the *Shahs* of the house of Ali : the Ommaides were the same. Genghis Khan was another.⁴ But we must not forget that miscreant the GREAT Constantine the first, who, no doubt, affected the same thing, but did not succeed, at least with posterity. I believe that if the empire of any of these persons, except that of Constantine, had extended itself as Mohamed's did, we should have had in him an Om-Ahmed ; and twenty years after his death there would have been no difficulty in making out a Koran from amongst his half rotten papers ; and in telling the rabble, when it made its appearance, that it was an improved version of a former corrupted one ; which it might perhaps be, in some degree. But I shall discuss this subject of imperial incarnations at large in a future book.

I have just said, that the Bedoweens, followers of Bεδου,⁵ whom we have found invoked in

Thrace, were probably Buddhists under some corrupted form, perhaps Christians of St. Thomas. We have always heard of these Christians being Nestorians. Now the opinion of the Nestorians, or of the followers of that German, was, that Jesus Christ was a portion of God, incarnated in him; and, in short, his doctrine was very nearly the same as that of the followers of Cristna. On this account I do not doubt that, whenever the orientlists were met with, by Christians, holding these opinions, they were, without more inquiry, determined to be Nestorians. This seems to me to account satisfactorily for all the Nestorian nonsense in Asia, about which we read so much. I will now return to the subject of letters, from which I feel that I have too long digressed.

4. I believe the etymology of the names of the seven Gods of the Week has hitherto set all the learned at defiance. When I consider their very great antiquity, their priority to all other Gods, and the general practice of the ancients in calling their Gods after numbers, and that, if my theory be correct, they might consistently be called after the oldest cycle, I cannot help suspecting that originally they all meant the erroneous and oldest cycle of 666.

MONDAY may be—

$$\begin{array}{r}
 M=600 \\
 I = 10 \\
 N = 50 \\
 U = 6 \\
 \hline
 666
 \end{array}
 \quad \text{and in process of time} \quad
 \begin{array}{r}
 M=600 \\
 N = 50 \\
 \hline
 650
 \end{array}$$

TUESDAY or *Mercury* may be—

$$\begin{array}{r}
 T=400 \\
 U = 6 \\
 Z = 90 \\
 Q = 100 \\
 O = 70 \\
 \hline
 666
 \end{array}

 666
 \end{array}
 \right\} \text{Markoles.}$$

Mercury in Chaldee is called כוליס *kulis*, from כול *cul*, to measure. (Query, to *cull* or *count* or *select*?) May this have been כולעם *kulos* or 666? It is not a very violent corruption.

The אתיית *atiut* is Thoth, the Egyptian inventor of Letters. Thoth is Mercury, called Tuisco. I think this may have been Tust, T=300, U=6, S=60=666. We have formerly seen that this word in Hebrew meant letters.¹ The Indathyrus of Strabo is Bacchus,² T=300, R=100, S=200, U=6, S=60=666.

In WEDNESDAY or *Woden's-day* I fail, but I ought to fail if the system be right, because Woden, which has given name to this day, is not the original name of a God or cycle, but a corruption, as we have formerly seen, of Buddha.³ But the word Mars, Martis, is the Αρης of the Greeks, with the monogram prefixed. Thus M. A=1, R=200, E=5, T=400, S=60=666.⁴ He was also called Mavors, which I think was M. α'=1, υ'=400, ε'=5, ρ=200, σ=60=666.⁵ He was also called Quirinus, Q=100, R=200, I=10, N=50, U=6, S (ψ)=300=666.

¹ See *supra*, p. 164.

² Cleland.

³ See *supra*, p. 4.

⁴ Tata is an old word for *father*. It is the Celtic Tat or Tad, the Greek Αττα. Pezron, p. 359.

⁵ Here it must again be borne in mind, that the Author felt himself justified in referring to either the Hebrew or the Greek numerals in favour of his theories. *Editor.*

The THURSDAY is T=400, U=6, R=200, S (D)=60=666—the day of the Bull.

We have found the German and Scandinavian Saxons called after their ancestors, the Sacæ, and they from their God Xaca, who was Woden, who was Buddha.¹ We have in the same country a tribe called the Frisii, whence came Friesland or Fries-ia; and these Northern tribes had a favourite Goddess called Freya, which I think was only the softened Freas-ia. Hence our FRIDAY. Then this will be in Greek and Hebrew—

$$\begin{array}{r} \phi' = 500 \\ \rho' = 100 \\ \acute{\epsilon} = 5 \\ \acute{\alpha} = 1 \\ \text{D} = 60 \\ \hline 666 \end{array}$$

This Lady became, afterward, Αφρο-δι-τη, the holy Φρη—that is, φ'=500, ρ'=100, η'=8=608. She had a son, *divine love* or A-DON, the WISE, who was killed by a wild boar! Can any thing be more nonsensical? But this wild boar was an Apries, that is, Α-φραεξ. This Phre was the solar title in Copt-ia or E-gupt-ia or Egypt. The mysticism of this is very profound. Divine wisdom, which has existed through all cycles, was killed by the hypostasis described by the number 666, Α-φραεξ, the boar; but it rose again as the holy φρη=608, or the φηνν. This Adon was a resident of the country called Φηνν-icia or country of Phen. In this mythos, as in all others, the mother and son, the *male* and *female*, the Unity, Duality, and Trinity, the singular, dual, and plural, are all confounded or identified; for they are all three in one, and one in three.

In India, Saturn is called Sati. We all know how some of the Northern nations change the *an* into *iern*, as Christian, Christiern. Then Saturn will be Satiern, and in Greek numerals—

$$\begin{array}{r} \sigma' = 200 \\ \acute{\alpha} = 1 \\ \tau' = 300 \\ \acute{\iota} = 10 \\ \acute{\epsilon} = 5 \\ \rho' = 100 \\ \nu = 50 \\ \hline 666 \end{array}$$

Our sixth day is not called *Saturn-day*, but SATURDAY, that is, in Hebrew,

Samech = 60	}	which became	σ' = 200	}	Whence Strn-ia.
Tau = 400			τ' = 300		
Vau = 6			ρ' = 100		
Resh = 200			η' = 8		
<hr style="width: 50px; margin: 0;"/>			<hr style="width: 50px; margin: 0;"/>		
666		608		650	
		}	σ' = 200		
		Satur-day.	τ' = 300		
			ρ' = 100		
			<hr style="width: 50px; margin: 0;"/>		
			600		

¹ See *supra*, pp. 1-4.

The Saturn of India is called Sani and Satyr, which latter is STR=600.¹

We will now examine the names of some other of the Gods, keeping this principle in view. It would have been remarkable if we had not found the God *Osiris* in the arithmetical language. It is,

$$\begin{array}{r}
 \psi = 70 \\
 \omega = 300 \\
 \nu = 10 \\
 \gamma = 200 \\
 \nu = 10 \\
 \delta = 60 \\
 \hline
 650^2
 \end{array}
 \qquad
 \begin{array}{r}
 \nu = 6 \\
 \sigma' = 200 \\
 \rho' = 100 \\
 \delta = 60 \\
 \hline
 366
 \end{array}$$

Mnevis is, M=600, N=50, U=6, I=10=666.³

In Ireland, the Chaldees were called Culi-dei. Here we have X'=600, L=50, U=6, I=10=666, or, in the epithet of *beautiful* or *καλός*, K=20, L=30, I=10=60. I doubt not that the Culidei came to Ireland before the beauty of the numbers 60 and 600 was discovered.

Pol, alluded to in Volume I. p. 652, is Pall, is Φλλυς,

$$\begin{array}{r}
 \phi' = 500 \\
 \lambda'\lambda' = 100 \\
 \nu = 6 \\
 \delta = 60 \\
 \hline
 666
 \end{array}
 \qquad
 \text{or}
 \qquad
 \begin{array}{r}
 \phi' = 500 \\
 \lambda' = 50 \\
 \lambda' = 50 \\
 \hline
 600
 \end{array}$$

Pol means Head, Wisdom, Minerva Polias, and Palumba, a *stock-dove*.

The words Ras and Buddha are different from the other names of Gods, and might be only names of attributes. All the incarnations were Rasees, and I think the name of the first Buddha would be Xιυν=666—the Buddha or Ras of Siun or of the Sun. And, again, Xiun-sup, Wisdom of the Siun, or Sun, Solar Wisdom. Here I think I have the triumph of my system. The first name of the God was Xιυν=666.⁴ He was the God of Sion, or of the Mount of Sion. When astronomical knowledge improved, his name was written with the Saxon emphatic article I-Xin—Xν-650. As it improved a little more, he became XH-608;⁵ and at last X=600: and Basnage was not far from right when he said, “Would not any one have believed the Xn was Christ victorious?”

We have Xαξε or Xξαε=666, or Ξχαε=666.

We have formerly seen that divine love was crucified under the name of Ixion.⁶ I have a great suspicion that this word was the monogram X and siun or X-sion or X-sun. Or might it be the monogram I, which has the same meaning as the X, and Xiun or Siun? These are mere speculations; how far probable must be left to the reader.

The Tibetians have the word *Zin*, which is proved to be no other than *Xin*, called *Zin viventem*

¹ Camb. Key, Vol. II. p. 392.

² See Class. Journal, Vol. XX. p. 184.

³ The Egyptians are said to have had 666 kinds of sacrifices, which a learned writer in the *Encyclop. Brit.* voce *Sacrifice*, says, is incredible. This was, I suspect, merely a mistake. They had a grand sacrifice for every year, having some trifling variations relating to the year of the cycle of 666, which it shews that they had among them. Perhaps they killed as many animals as years of the cycle had passed, to mark the time, before the art of writing was known. Several of their Gods had the same name.

⁴ See *Etymol. Dict.* voc. I.

⁵ Vide my Vol. I. p. 224.

⁶ See *Ib.* pp. 500, 503; and *supra*, p. 198.

et largitorem vitæ. A close attention to the pages 682 and 683 of Georgius (Alph. Tib.) will shew that the first of their names descriptive of God, *Cjang-cihup* vel *cihub*, is Kion or Kian, unde Hesych. *χιονέαν, λευκαν η φωνάδη* et Sinis Can ; in short, Sion and *Xin*: and the second, *cihub* sive *cihuph*, is the Hebrew קִיּוֹן or קִיּוֹן or קִיּוֹן *sup* or *zup*, *wisdom*, the root of the Greek Σοφία , and the meaning will be *the wisdom of Sion* or *Xin*,—the wisdom of the God described by the

$$\begin{array}{r} X=600 \\ n= 50 \\ \hline 650 \end{array}$$

in the Coptic language, or the סן (סן) *sn* 650, in the Hebrew. When the peculiar manner in which the astronomical doctrine of the origin of the cycles 666, 650, 608, 600, and the sacred numbers of the Gentiles, together with the monograms of Christ, are considered, as dovetailing into one compact body, supported by many other circumstances, I think the truth of the system must be admitted to be demonstrated. Bring it fairly to the test of probability, and the arguments in its favour will be as a million to one.

When we consider the striking manner in which, as I have shewn, so many sacred names came from literal numbers, numerical letters, it is only reasonable to expect the same result from the roots of that most important word *Wisdom*. We have found the word *Souphun* among the Arabians. This is, $Z=90$, $O=70$, $U=6$, $\phi'=500$, or Σοφία . And our *Wisdom* is, W or $Y=400$, $S=200=600$, *di* holy— OM —*Wisdom* of the holy OM . Having found the word for the Sun *Sr*, also written *Tr*, the two indiscriminately used for one another, may it not be, that the *Sr* is only *RS*, read in the opposite direction? But *SR* is *TR*, and *TR* is 600. In this I am justified, by the unimpeachable evidence of Barnabas lately quoted.¹ Without this double power of the *S* be admitted, but I think it cannot be disallowed, I have not the ancient cycle in *Ras*. I have it, however, in רשות or רסות *rsut* the plural of *Ras*, thus: $r=200$, $s=60$, $u=6$, $t=400=666$, and we must observe whenever the word *Rasit* is paraphrased, either by the Jews or Samaritans, in the word חכמות *hkmot*, or by the Gnostics in the *Acamoth*, the word is always in the plural number. This shews us what the word *Rasit* ought to be, viz. the plural—and its plurality is allusive to the Trinity; and they are all feminine.

I believe we have the ancient *Sacæ* in the tribe of *Rattores*. They are, I think, *Rats-ores*,² the *ras* with an oriental sigma-tau. When their tribe settled in Germany, it founded *Ratz-burg* and *Ratis-bon*— $r=200$, $t=400$, $u=6$, $s=60=666$ —*Rtus-burg*; or, perhaps, $\rho'=100$, $\tau'=300$, $\sigma'=200=600$. The Persian *Rustan* is the same word *Rstn*— $\rho'=100$, $\sigma'=200$, $\tau'=300$, $\nu'=50=650$.

In Ethiopia the prince is called *Ras*. It was so written, because when the Ethiopians turned their upright writing, they turned the word thus to read it; but the people a little lower down the Nile, whom we call *Copts*, turning the column the other way, as the Greeks did, have it *Sar*. Thus they have *Sar-oub* or *Sar-Oph*, or Prince *serpent* or *wise* Prince. Thus in Egypt, it is the Prince *Sar*, in Ethiopia, the Prince *Ras*.

I repeat that, if we reflect deeply upon the nature of the arithmetical language, which *was* not, and in its nature *could* not, be spoken, we shall instantly see, that it would make no difference whether a word was called *Menu* or *Nume*; and this fact will reasonably account for all the anagrams in proper names.

It seems to me, that the way in which almost all the names of the Deities are described by numbers or numerical letters, is a very decisive proof of the truth of the whole system. It is

¹ See *supra*, p. 189.

² As *Hastimalle* became *Hatimalla*, so *Rastores* became *Rattores*.

notorious that all proper names had meanings, but the names of most of the Gods are an exception to the rule, and this they ought to have been if their appellations were derived from the ancient cycles. A Deity might properly be described by every variety of numbers which would form any of his cycles, and, in respect to each cycle, by any combination of numbers which would form the sum of the cycle. Thus he might be called Sul—S=300, U=6, L=30=336; or Rqul—R=200, Q=100, U=6, L=30=336; or $\psi\psi=600$, or $\tau'\tau'=600$. And from this arose the multitude of Gods, all in fact being, as I have formerly proved, merely the names of the Solar Deity. And now, I trust, my reader will admit, I have fulfilled the promise I formerly made, that I should shew before I finished, that the custom of describing persons or Gods by numerals, was any thing but *buffoonery*, as Sir William Drummond called it. And here it must be obvious how easy it would have been to have reformed the religion of the Pagans, instead of burning its beautiful temples and murdering its votaries, by merely teaching them to raise their minds from the Sun to the sun's Creator. All the mischief arose from the pernicious, monopolizing spirit by which the priests endeavoured to keep all knowledge to themselves. But it gave them power and wealth, and this is the real secret.

I long endeavoured, but in vain, to discover why the planets were called by the same name, for example, Venus or Mercury, as that which designated God or the Sun; but I think I have, at last, discovered a probable reason for it. I think it is to be found in the poverty of ancient written language. I trust I have clearly made out, that the first cycle—that of 666—was the name, or perhaps I ought rather to say the designation, of every one of the planetary bodies. This was the name of the cycle and of the Divine creative power also, and this double effect arose from this fact, that if the Sun or the Deity was to be described in the arithmetical symbolic language, it was almost necessary that he should be described by some number connected with him, or in some way related to him; and *that* could be no other, because there was no other, than the length of the Lunar or Soli-Lunar year. Thus he became first Sli=360, next Suli=336 or 366. Upon the same principle he was afterward called by the name of the greater cycles as they arose. Now, by regimine, the planets would each be messenger of God, or messenger God, or messenger or Disposer Mars, or messenger Venus, &c.; the name of the God being, in arithmetical signs, 666. This is exactly similar to the priests' taking the names of their Gods by the regimine, as I have before described.

As it is evident, that God or the Creative Power might be called by whatever name arose out of any combination of numbers, which made up the sum of 666, as long as 666 was thought to be the number of his cycle, so it came to pass that God or Sol or the Creative Power had all these names, and that the old Gods, the Planets, each acquired one of these names. This is also supported by the fact, that the שמים *smim* or planets or disposers had at first no names, or icons either with the Druids or in Etruria or Greece or Syria or Persia or India. When the Hebrew language became lost in Greece, and the Greek arose, they acquired each a name described by 666, and it would necessarily be 666, if at that time 666 designated the First Power; and they changed as astronomical science improved. Thus we see how the words Saturn, Mercury, Mars, Ceres, Venus, &c., &c., arose. All this is much strengthened by the fact, that the names very seldom have any other rational etymology.

In a similar manner, kings and dynasties (Pharaohs for example) came to have the names of Gods. All kings were priests; in fact, they very often became kings or rulers, from their superior wisdom, knowledge, or cunning, and were thought to be emanations of the Deity, or persons endowed with a greater portion of the divine nature, mind, $\psi\chi\eta$, anima; and they were emanations of $\phi\rho\eta$, or emanations $\phi\rho\eta$. Thus, by degrees, without being conscious of any thing wrong, they allowed themselves to be called by the names of their Gods, and also received the same

honours. Thus, incarnation of God, or Apollo, or Mars—the incarnation God, Apollo, Mars. We every day do what is very similar without being conscious of any thing wrong. Henry the First would have been shocked to be called majesty, although it has become the name, the title of all our kings. To be called majesty is presumptuous enough, but I may be regarded as still more presumptuous, for I am *the God Freya*—Godfrey! If an age of darkness should arise, accompanied as it certainly will be, if it do arise, with a race of ignorant, evil-disposed fanatics, ready to misrepresent and distort every thing, William IV. and I may be abused for our presumption and wickedness.

As these effects arose by degrees without any formal record of their origin, it was soon lost. This is not *theory* but *fact*. It is similar to what we see every day. Many religious rites arose in the same way. For example, *fasting*. What could make *fasting* a merit? When foolish men quarreled, as we are told by all the Indian histories that they did quarrel, about the prevalence of the male over the female generative power in nature, the *female* was reprobated by the *male* devotee, and it became a merit to refrain from intercourse with the sinful creature. Thus arose monkish vows of chastity; and directly from this it came to pass, that fasting was recommended, as it was found, from experience, the most effectual device to assist men in the performance of their difficult task, keeping the vow of abstinence from the female. The cause or reason for the fast was forgotten, and the *fast itself* was esteemed a merit. Thus the thing which arose in sense is continued in nonsense; for it was founded in sense, that abstinence would keep down passion; it is *nonsense* to suppose that there is merit in refraining from a necessary or an agreeable quantity of food, and in taking only as much as will barely maintain life. From this abstinence all self-denial might have its origin, and come to be regarded as a merit.

When I look at the written representations of the numbers of all the ancient great nations, some barbarous oriental islands alone excepted, I instantly see that they formed one system, and were originally derived from one source; and the fact is precisely the same with respect to letters. But I find the forms of the figures of old Italy and Greece, to have been very different from the oldest forms of the figures of the oriental nations, which we possess. It is not improbable, but on the contrary it is very probable, that the colonies arrived from India in Greece and Italy before the art of notation had been committed to writing, but still not before the beautiful decimal system had been discovered, and not before the art of counting the moon's period of 28 days had been discovered. If this had not been the case, the Western nations would have had the Arabic figures 1, 2, 3, 4, 5, 6, &c. When I find these figures in use all over India, Tartary, and Persia, in their oldest books, I can feel little doubt that their antiquity is very great. Equally little doubt can I feel that the Cufic alphabet as figures (in some shape or other, for in the lapse of many years the shape of all written letters and figures must imperceptibly change) must originally, and for many generations, have served for the purposes of arithmetic as well as of letters, and for letters as ciphers. They must have been like monograms, symbols of words, very like the Chinese. Probably at first they would be confined to the 28 figures.¹ These would be the symbols of their cycles of the sun and the moon, and their number would be increased by degrees by the addition of other symbols. This would be an *unspoken* literature, as the literature of numbers and symbols in Algebra is still unspoken with us. I repeat, the letters would be symbols for *ideas*, not for *sounds*.

5. The language of the Tibetians, as found by Georgius, seems to exhibit a mixture of the system of the signs of the Chinese, and of the letters of the West. Sir W. Jones says, "It seems at

¹ The order of the ancient Cufic alphabet is the same as that of the Hebrew. (Univ. Hist. Vol. XVIII. p. 421.) This is an additional proof that Hebrew and Arabic were originally the same.

“ present, from the influence of Chinese manners, to consist of monosyllables, to form which, with some regard to grammatical derivation, it has become necessary to suppress, in common discourse, many letters which we see in their books.”¹ These were their figure letters, as was the case with the Arabic notation, which was reduced to 16, as letters. The Chinese, the Japanese, and the Siamese, are known to be all nearly the same; and Georgius has proved that the Tibetians and the Siamese are closely connected. This, I think, all goes to shew, that the Judæan mythos must (as found in China by Paravey) have gone thither before the letters were known or publicly used. I think a practice which still prevails in Japan is an admirable example of what the first universal language of figures would be. The Cambridge Key to the chronology of the Hindoos says, “The Japanese, by the use of symbols, continue to carry on, not only correspondence, but trade, with provinces, the inhabitants of which, were they to meet, would not be able to converse, from a total ignorance of the language of each other.”² A convincing proof that a knowledge of letters does not necessarily militate against the use of symbols.”

The people of Cochin China, Tonquin, and Japan, each speak a dialect of their own, very dissimilar from the Chinese; but all these nations, although they cannot understand each other by speaking, yet do so perfectly by writing. Du Halde says, their books are common to all of them. These characters, therefore, are a species of *arithmetical signs*, which each nation expresses by a different word, although among them all they *represent the very same number*, and excite the very same idea.³ Here is evidently the first numeral symbolic language, which I have discovered without going to China for my information.

M. Abel Ramusat has imagined that he could point out the remains of Hieroglyphics in the Chinese letters. He has shewn very conspicuously both his own learning and ingenuity; but from such an infinite variety of figures as that of which the Chinese letters now consist, it necessarily follows, that an ingenious and industrious man may find almost any similitudes he wishes for.

There is the same system in Java. Sir S. Raffles informs us, that the natives of Java, that is, I think, the island of *Ieue* or *Jehovah*, call their ancient, now unused, language, *Káwi*. This, I think, is merely the Iao aspirated. He says that, for many years, it was almost entirely confined to the family of the chief, and that the Javanese have a mystical language. He also says,⁴ “For ordinary purposes, the Javans use a modification of some of the letters of the alphabet as numerals, but on occasions of importance it is usual to employ certain signs or symbols in lieu of these ordinary numerals, and this practice appears to be of great antiquity among them. These symbols consist in a certain number of objects, either represented in design or named, *each of which is significant of one of the ten numerals*. Of the former class are said to be those found in most of the ancient buildings and coins, which in that case usually bear no inscription.” I think I see here, in the language of the island of Java, the original practice which I have been describing of a system of writing by ciphers. Though in this there is nothing absolutely to prove the truth of my system, there is what strongly tends to add to its probability, and probability is all that can ever be expected. Here, however changed in the space of four or five thousand years, are found the remains of the original first system of writing, and it is found among what must have been anciently the followers of Ieue or Iao, by whose Chaldæans I suppose the art of writing to have been first invented, and by whom I suppose it was kept a masonic secret for thousands of years. In consequence of this discovery of symbolic writing, the adoration of the *Al-ieu*, by his

¹ Asiat. Res. Vol. III. p. 11.

³ Spineto, Lect. Hier. p. 273.

² Camb. Key, Vol. I. p. 396.

⁴ Vol. I. p. 371.

original name, remains, although lost by all the rest of the world. The Javanese practice, or something very like it, is described in the following extract: "The characters of Cochin China, of Tong-king, of Japan, are the same with those of the Chinese, and signify the same things; though in speaking, those nations do not express themselves in the same manner; of consequence the language of conversation is very different, and they are not able to understand each other; while, at the same time, they understand each others' written language, and use all their books in common."¹

The first Chinese written letters were formed of right lines, and were called, *Ukim* and *Yekim*, this is the emphatic article of the Sacæ I and the חכמ *hkm* Wisdom—letters of *the Wisdom* or *Wisdom of IE*. Their invention is ascribed to Fo-hi,² whom we have formerly shewn to be Buddha. Bailly has observed, that from their division into fives,³ they appear to have been originally numerals, and the system founded on the number of the fingers on the hand repeated.⁴ The least attention to the Latin or Greek numerals will shew how applicable the observation is to them, I. V. X. XV. XX. The Ogham letters, or Ogum Craobh or branch-writing, of Ireland, have this peculiar character of division into fives, as well as the Runes of Scandinavia, that is, of the Saxæ or Xim or Sinenses, for the Chinese are nothing but the Sin, or Saxons, or Buddhists, having the whole myths of the immaculate conception, the tree of knowledge, of life, the crucifixion, resurrection, &c., according to M. Paravey; all which had been previously related by Bergeron and De Guignes. "Bayer observes, that the Chinese letters consisted of nine simple characters, five of which were plain lines, and the other four are two or three of them joined together." This is the exact description of the Roman numerals. The Irish Ogham is most unquestionably the Scandinavian or Saxon Rune, and they are all here identified with the Chinese and Eastern Xacæ, Saxæ, Sacæ, Xin, or Xin-di. Here we have the numerals and the letters identified in Runic letters.⁵

After I had finished what has been stated respecting the origin of letters, and cipher or numeri-

¹ Ency. Brit. Art. Philology, Sect. 117.

Dr. Morrison, in his "Chinese Miscellany," p. 1, thus confirms this striking fact: "The Chinese language is now read by a population of different nations, amounting to a large proportion of the human race, and over a very extensive geographical space,—from the borders of Russia on the north, throughout Chinese Tartary on the west, and, in the east, as far as Kamschatka; and downwards through Corea, and Japan, in the Loo Choo Islands, Cochin China, and the islands of that Archipelago, on most of which are Chinese settlers, till you come down to the equinoctial line at Penang, Malacca, Singapore, and even beyond it on Java. Throughout all these regions, however dialects may differ, and oral languages be confounded, the Chinese *written* language is understood by all. The voyager and the merchant, the traveller and the Christian missionary, if he can *write* Chinese, may make himself understood throughout the whole of eastern Asia."—Gutzlaff's Journal of Three Voyages along the Coast of China, in 1831, 1832, 1833, p. xxii.—*Editor*.

² As Fohi is said to have founded his kingdom 200 years after the deluge, perhaps we should be nearer the truth in supposing a more recent inventor.—"The written language of China, alike unique and ancient, is, from the singularity of its structure, and the extent to which it is employed, one of the most remarkable that has been used amongst mankind. The knotted cords, [see *infra*, p. 218,] originally employed as the record of events by them as well as many other nations, in the first stages of their social existence, were superseded, at an early period in their history, by symbolic records. The founder [*Veng-Vang*] of letters lived about 1100 years before the Christian æra, and the art of printing has been in use among them for 800 years."—Gutzlaff's Journal, *ut sup.* p. xiv. See Vall. Coll. Hib. Vol. V. p. 102.—*Editor*.

³ We read constantly of *the Vau* or אֵוָה *Eva*, the Venus or mother, standing for 6, called Lustrum, L' str=600, or L included, 650; but from what Astle has said, p. 183, I have little doubt that the *five* also had this name. This community arose from their being the matrices of the cycles 360 and 432, and ultimately of the common great cycle, 432,000. As we should say, they are both mother numbers. Pliny divides the circle of the Heavens into 72 constellations or Lustrums. This makes them 5 each. I have already shewn that the L was emphatic, in Hebrew, as it is in French. I have lately met with a learned Jew who agrees with me on that subject.

⁴ Vallancey, Coll. Hib. Vol. V. p. 102.

⁵ Asiat. Res. Vol. II. p. 50.

cal writing, I met with an Essay by John Hoskyns, Vice P. R. S., July 17, 1686. He shews that the Abacus was really the same among the earliest Romans and Chinese, and exhibits drawings of each. He then goes on to explain the ancient numerals of the Chinese, and he describes one stroke or line to mean *one*; two lines to mean *two*; three to mean *three*; a cross to mean *ten*; two crosses *twenty*; three crosses *thirty*, and so on to a hundred. He then says, "Upon perusing all the accounts I could meet with in books, I found very little satisfaction as to what I principally inquired after, which was, first concerning the method of the character, whether it consisted of a certain number of marks methodically disposed like letters in a literal, or like numbers in a numeral, or like radicals in composite and decomposite derivations. 'Tis said to be legible into a great many languages, considerably different one from another, but how this is effected is not related, only 'tis said, that the marks *are of the nature of our arithmetical figures* (which are become almost universal, at least to us here in Europe); and secondly, concerning the number of these characters. To which I found as little satisfaction; for, by some relations, I found that there were 120,000 of them."

I think no one can well doubt, that here we have a specimen of the first numeral system of writing by symbols, which I have been describing. Here is every thing required by the system which I had previously discovered—*first*, the right-lined characters; *secondly*, the decimal notation; and *thirdly*, the symbol denoting a number, an idea, and a word, but for a word which would be different wherever the words of two languages for one idea varied; by which means it comes to pass, that the different nations of the immense Chinese empire all perfectly well understand one another by writing. And here we see the reason why the Chinese have never adopted the literal style of writing; though, from what I shall presently shew, it is probable that the *sixteen letter* system, under some form, is known and used by them.¹ I think from what Mr. Hoskyns says, it is probable, that the numeral powers of the symbols being lost and only the ideas remaining, this will render the art of writing more difficult to learners. Of all the follies of Europeans, none has been more common than their abuse of the Chinese for not adopting the literal syllabic style of writing. We know very little of the Chinese; but the little we do know gives one reason to believe, that they are the wisest people in the world, and, perhaps, in nothing more wise than in keeping European pirates from their shores as much as possible. When they look to the conduct of all the European nations in India—the Dutch, the Portuguese, the French, and the English, and at their repeated attempts, by means of missionaries, to create disturbances in China, they can only consider them as pirates.² The wisdom of their government is sufficiently marked by the fact, that their immense empire has been at peace from foreign war for more than two thousand years, with little or no intermission, except when they were attacked and conquered by the Tartars. But in this, more than in all other matters, their wisdom was conspicuous; for their

¹ If I be correct in my theory, that the art of syllabic writing arose by degrees, they were necessary consequences that all the uncertainty and small variations which I have developed should be found in the different languages, both in the numeral and literal capacity of the letters, but still that the same system should, on the whole, be every where apparent.

² That Europeans are thus regarded by the Chinese is fully demonstrated by the following passage of Gutzlaff's "Journal (pp. 263, 264): "June 3, (1832,) Ma and his friend Le came again on board. He explained the reason that we were treated with such suspicion. 'You are,' he said, 'very clever; understand making charts, are well versed in the management of business, and always ready to act. We know all this, and are therefore on our guard. Some Coreans were last year shipwrecked near us; we permitted them to travel through different provinces, allowed them to see every thing, and to return by way of Leaou-tung to their native country; for this nation is stupid and take no notice of the things which fall under their immediate observation. Nevertheless, if, by a proper statement to the Emperor, you can prove that your sole object is trade, and not the acquisition of power, we will unite our entreaties with yours, that trade to this place may be established.'"—*Editor*.

institutions and their conduct were such, that they, in fact, conquered their conquerors, and instead of becoming a province of Tartary, Tartary instantly became, and yet continues, a province of China; their enemies disappeared, and their celebrated wall became no longer of any use. Thus, by this despised system of writing, the Emperor's proclamation is intelligible in all the diversity of languages of his immense empire.¹

It appears to me that in China, in India, and, in short, wherever the Jesuit missionaries went, they were at first encouraged by the governments of those countries—who must have seen that the religion of the Europeans was only their own religion, which, in some respects, was in a less corrupted state than it was in their own country; and the encouragement continued till the missionary fools, acting under the instruction of the rogues at home, shewed clearly that the object was to bring those countries under subjection to a foreign power. The object was probably first exposed by the claim of tithes—a claim which the church never surrenders on any account,² though it may permit it to be in abeyance. The cause of this will be clearly explained hereafter.

6. The Greek name of Numeration is *Ἀριθμός*—of Rhyme or Measure *Ῥυθμός*. The Persians, according to Chardin, call it *Abged*, which word is evidently the a, b, g, d, of the Hebrew and Greek, and our a, b, c. And the symbolical letters of the Indian Algebra, are called *Abekt*, evidently at the bottom the same as the first letters of the Hebrew and Greek.³ In the same manner the instrument used by the ancient Greeks and Romans to count with, and at present by the Chinese and Japanese, was and is called *Abacus*. Count Paravey observes, very justly, that the names *Abged*, *Abekt*, *Abacus*, *Apices*, prove the identity of figures and letters, and that the latter were derived from the former.⁴ If persons would only gravely call to mind, how our own words are constantly going out of use, and how new ones are every day introduced, not only among the learned, by their coining them to answer to and supply the wants of new inventions and discoveries, but even among the vulgar, by their forming what we call *cant* or *slang* words, they would no longer be surprised at languages varying from one another in long periods. Thus we have often a word remaining in one nation which only remains as a name in another; such might be *Draco*, the Latin for Dragon, now only found in the name of the inexorable judge; and the matter must have been much worse in ancient times, before the arts of writing and printing were discovered.⁵

¹ “According to Pinkerton, it may now be considered as extending from those parts of the Pacific Ocean, called the Chinese and Japanese Seas, to the river Sarason, or Sihon, in the west,—a space of eighty-one degrees, equal to 4200 geographical, or 4900 British miles. From North to South, it stretches from the Uralian mountains, in North latitude 50°, to the southern border, about 21°, being twenty-nine degrees of latitude, 1740 geographical, or nearly 2300 British miles.”—Gutzlaff's *Jóurnal*, ut *supra*, p. xiv.—*Editor*.

² Had the Author lived to read the account of the rejection of the Irish Tithe Bill, in August 1834, by an overwhelming majority of Lords *Spiritual* and Temporal, his language would probably have been couched in terms of equal, if not greater, indignation. *Editor*.

³ Vide *Bija-Gauita* of Bhascara.

⁴ Essay on Figures and Letters, p. 59. In almost all nations we read of a learned lost language. No one will deny that Algebra must have been considered a profoundly learned science in all nations. The Greek letters were taken from the Hebrew or Arabic; then here we have the name of this Indian learning in the names of the Hebrew letters. This almost amounts to something more than a probability—to a proof—that the Hebrew was the first language of the Indians.

⁵ In Java one of the alphabets reads from the bottom upwards. Crawford's *Hist. Ind. Arch.* Vol. II. p. 77.

In Malay, *Kapala* means *head*; this is the Greek *Κεφαλος*, and the Latin *Caput*. In Javanese, *Sira* means head: this, *Hebraicè*, is *Rasi*. *Ib.* 110.

Sakti, in Sanscrit, means *power* or *energy*; in the Polynesian languages it means *supernatural power*. *Ib.* 112.

The Chinese call the Sanscrit language the *Fan* language. This is, language of the *Fanum*, or the church, or the

I think, by means of the Greek or Latin numerals, a correspondence in an unspoken language would be readily carried on. But as soon as what are called the Arabic numerals 1, 2, 3, 4, &c.,¹ were invented, the process would be greatly facilitated. This might be the secret and forgotten language so generally spoken of. This would be an unspoken language at first. But I suspect that the tribe of the Yadu or Iod-di or Yo-di, or of the holy Io, or of the followers of the Cali-di or holy Kali or Cali, were the inventors of the Cadmæan system, and kept it to themselves, as a masonic secret. If we consider the extreme difficulty of learning the art of reading and writing, we shall instantly see the ease with which this secret might be kept by an order.

Although I cannot shew how, or into what language the system of ciphers was rendered, yet I think the Japan and Java practice is a decisive proof of its feasibility, and is probably a remnant of its first use. From the system of ciphers used as powers of notation arose written symbols, and the perfect, secret sixteen-letter system of the tribe of Ioudi or Chaldæans; and to them, I doubt not, it was confined for many generations—the Buddhists first, in like manner, keeping the system by figures unimproved.

Mr. Astle² informs us, that the first Chinese letters were knots on cords. Here we have the correct Quipos of the Peruvians, the country of Tanga-Tanga, treated of *supra*, p. 37.

After I had nearly finished what the reader has seen, I discovered in Hyde³ what in a very remarkable manner confirms my hypotheses, but which will not surprise those who have read what I have written respecting the Judæan mythos of the Mexicans and Chinese. It is an alphabet of the Tartars who now govern China, and also an alphabet of the Mendeans, who, I suppose, are the Mandaites or Nazoureens or Christians of St. John or Nabathæans.⁴ A moment's consideration will satisfy any Hebrew scholar, that they are both, notwithstanding the difference in the shape of the letters, correctly Hebrew. They do not differ even in a single letter. After this no one will be surprised to find the Judæan mythos in China. But this Tartar alphabet must be kept a secret as the use of letters is prohibited.⁵

7. Sir Stamford Raffles is disposed to believe, that the island of Java, and not Ceylon, has been originally the Taprobane or ancient sacred island. It seems both the peninsula of Malacca and the other islands all carried the name of Java or Kawi. Sumatra was called *Jabadios*, that is, *holy-iava*. From what he says, I am inclined to think he may be right, but that, in fact, there were several islands, each, in a succession of years, claiming to be the *sacred* one. The temples have evidently been first Buddhist or Jain, succeeded by those of Cristina. The first, situate in the province of Kedú, which is a corruption of Iedu aspirated, in fact, of Judia or Juda, he calls Boro Bodo: this, I do not doubt, ought to be Bra Buddha, whose icon alone remains unmutilated.⁶ The largest of the temples are generally in the form of a cross, and have been numerous and magnificent almost beyond credibility. It is curious to see them all tumbled into ruins by the hands of their owners, at the instigation, not by the command, of the followers of Mohamed, for hither

sacred building of the Latins. By Fan language is meant *holy*. It is the same as φηνη, often noticed before. The Latin word means holy or sacred building: in Greek Νεωσ or Σηκος. Neuman, Catechism of Shamans, p. 36.

A Nun in Chinese is called Pekewne; in Sanscrit she is called Bhagini. We have here the Beguins of the Romish church. (Neuman, Catechism of Shamans, p. 46.) Thus we have not only the same Papist Nuns in China, Italy, and Tibet, but we have them by the same names—of course carried thither and adopted by the *heretical* Nestorians, who account for every thing, but who, I believe, are not known to have ever had any Nuns.

⁶ Vide plates, fig. 34, in my Vol. I.

Mohamedan *conquerors* never came. Reason alone succeeded in converting the nation to the faith of the consummation of Christianity, in fact, of the Prophet, as I believe it did in most other places. The natives seem to pay little attention to the trumpery of the Koran, but they fix merely on the two great points of the religion, a belief in the Unity of God, and in the mission of the prophet; that is, that Mohamed was a Resoul or *Sent of God*—a belief which any philosopher may receive, if he will only ask himself candidly what, in the common exoteric religion, the word Resoul meant. Mohamed disclaimed all supernatural or miraculous power, and merely maintained that he was pre-ordained and sent to effect a reform in the debased religion of the world.

Jesus and Mohamed were philosophers, preachers of wisdom and morality to their countrymen, and, like Socrates and Pythagoras, neither of them left a single word of writing behind him. Some persons believe Jesus to have been murdered by the priests, others state that he escaped them; but at all events he seems to have offered no active opposition. Mohamed, on the contrary, when struck, returned the blow and beat his enemies. But in each case the moment the preacher was gone, books enow were manufactured by those whose interest it was to establish a dominion over their fellow-creatures. In each case, I have no doubt, the early actors in the dramas were well-meaning fanatical devotees. I doubt not that in India and in Europe millions went over from the religions of the two Cristnas (the God of India and the God of Rome), to that of the new Avatar, who, in the West, protected them by his arms against the sectaries of the old Avatar. For though the followers of the new Avatar never persecuted, the followers of the old one always did. It is not very surprising under these circumstances, that the new Avatar should have protected his followers by his arms. This would excuse, if it did not justify, the wars of Mohamed, and also account for his success.

Java is called by the natives *Tana* (the land) *Jáwa*; or *Núsa* (the island) *Jawa*.¹ It is also called *Zaba* and *Jaba*, and *Zabaja*, that is, *ia-Zaba*, country of *Zaba*, and by Ptolemy, *Jaba-diu*. The term *Jawa* is also applied to the Malayan Peninsula and the Eastern islands.² The word *Tana* is the common term in the West for land or country, and the *Nusa* is evidently the same as the Greek *Νῆσος*. Sir S. Raffles shews, that *Zaba* comes from *Java*, *Jaba*; but *Saba* or *Zaba* in Coptic means *Wisdom*. We see from this, that the word *Saba*, whence come the *Sabæans*, has been originally nothing but a corruption of the Hebrew word *Ieue*; and here we see how it came to mean *wisdom*. Sir W. Jones acknowledges he does not know the meaning of the word *Sabian* or what was the *Sabian* faith.³ I believe there never was an exclusive sect of *Sabians*; the word *Sabian* is merely a descriptive term. The Christians of St. John were *Sabæans*.⁴

In the fifth volume of the work of the Abbé de Rocher⁵ it is said, “Selon *Horus* grammairien “d’Egypte, *Sbo* signifioit *érudition*. C’était ce que les Egyptiens appelloient *Sagesse*. Encore “aujourd’hui chez les Coptes ou Egyptiens modernes, le mot *Sabé* veut dire un *Sage*.” I think from the above we may understand how the God *Ieue* became the God of *Sabaoth*,—how the planetary bodies, the intelligent disposers, were called *Sabaoth*, the plural of *Saba*, and whence the *Sabæans* had their name. From this also may come the French word *Savoir*.

In the middle ages the women of France had a nocturnal festival called the Réunion des *Sabats*; this it is clear, from attendant circumstances, had nothing to do with the *day of rest*. I have little doubt that it related to the God of wisdom. It is said⁶ to have related to the mysteries of the God *Pan*. I think it probable that the day set apart to the God of wisdom was called

⁵ P. 83.

⁶ Hist. Phys. et Mor. de Paris, par Dulaure, Tome VIII. p. 90, ed 3d.

Sabbath or שבת *sbt.* From this it was a rest-day, and from this the word came to mean *to rest*. When I find the word Zaba or Saba in Coptic to mean *wisdom*, I can entertain little doubt that originally it must have had this meaning in Hebrew. But, indeed, Sir S. Raffles's explanation gives us a probable etymon in the corruption of the Hebrew name of God. This is similar to the corruption of the Hebrew *y o* into *ng*, as I have pointed out in the word Jangti, *supra*, p. 192.

I must now beg my reader to turn to the Index of Volume I., and reconsider the several passages where the word Saba is treated of, and he will see that the discovery which I have made, with the assistance of the Abbé, that it means *wisdom*, will remove several difficulties, and furnish a link which was wanting in the chain of my theory. It will shortly be shewn why the Chaldæans were called Sabæans.

8. Until I had nearly finished what had been presented to the reader, I had not seen the plan of a gentleman of the name of Northmore, detailed in the *Encyclopædia Londinensis*.¹ It will there be found, that he has, in substance, actually and unconsciously hit upon the ancient universal language which I have been describing and proving to have once existed, without his having any idea that it had really ever been in use, viz. a language of ciphers. He thus describes it: "The character is real, not nominal; to express things and notions, not letters or sounds; yet to be mute like letters and arbitrary; not emblematical like hieroglyphics. Thus every nation will retain its own language, yet every one understand that of each other, without learning it; only by seeing a real universal character which will signify the same thing to all people, by what sounds soever each express it, in their particular idiom. For instance, by seeing the character destined to signify *to drink*, an Englishman would read *to drink*; a Frenchman *boire*; a Latin *bibere*; a Greek $\piινειν$ —a Jew $שתה$ *ste*, and so on: in the same manner as seeing a horse, each nation expresses it after their own manner, but all mean the same animal." He then adds, "this real character is no chimera: the Chinese and Japanese have already something like it: they have a common character which each of these nations understand alike in their several languages; though they pronounce them with such different sounds, that they do not understand one another in speaking." It is then surely very remarkable that this Gentleman should choose the very same symbols, which I have detected in use by the first authors of any kind of written symbols, viz. what we have been accustomed to call the Arabic numerals. The following is a specimen of a sentence:

9, 8, .5,—7̂, 6̂. *I never saw a more unhappy woman.*

He undertakes to shew that 20 signs would be quite sufficient for 10,000 words; then, probably, my 28 Arabic numerals would give infinitely more than would be wanted. Although Mr. Northmore's plan is not exactly the same as that of the ancients, detected by me, yet an attentive reader will see that in principle they are strictly the same.

9. In my Celtic Druids, p. 311, I have noticed a book in the true Ogham character, and in the Arabic language, discovered by Mr. Von Hammer in Egypt, to which I also referred a little time ago.² I have a copy of the translation of that work, published by Nicol, Pall Mall, A. D. 1806. It contains upwards of seventy different alphabets. There are, among others, the alphabets of Plato, Pythagoras, Cleomenes, Socrates, Aristotle, and Hermes. On the alphabet of Hermes or of the hieroglyphics, the author says, "Every one of these kings invented, according to his own genius and understanding, a particular alphabet, in order that none should know them but the sons of *wisdom*." On examining these alphabets, they turn out to be every one of them founded on the Arabic, in fact to be Arabic, however varied the letters may be in shape. It is quite clear

¹ Vol. XII. p. 203.

² *Supra*, p. 205.

that they all answer to the Arabic arithmetical figures, and will all suit to one key. It is, I think, also quite clear, that they will answer to a syllabic system, or to a symbolic one like Mr. Northmore's. Figure 1, in my plates (in Volume I.), is an example of one of them. The first figure of the hieroglyphical alphabet, as I have before remarked, was the *Owl*, the bird of Wisdom.

I must now notice a curious circumstance, overlooked by me before, which is this—We have seen how the doctrines of Plato are connected with the doctrines of the Trimurti, and of Emanations and the Jewish Cabala, and how all this is connected with the secret allegories of the tree alphabets and the Syriac, and the Tamul Pushto, and that the ancient sacred language of the Tamuls had *five* meanings. This premised, I have to observe, that the tree alphabet or Ogom Craobh or branch-writing, as it is called in Celtic Irish, given in my first plate, to which I have just referred, and found by Mr. Von Hammer in Egypt in the Arabic language, from which he translated it, is said by Ben Wassih to have been the Celtic used by Plato, and that each letter had several significations.

In Jeremiah xxv. 26, we read of a king called Sheshack. This person has puzzled the commentators very much. He has been thought by some, and correctly thought, to be king of the Sacæ.¹ This man was king of the Shepherds of Pallestini, who, I do not doubt, were Sacæ or Saxons, and Scythians, the conquerors of Egypt.

The Abbé Jacques-Jules Bonnaud² says, “Il faut encore observer que, suivant les auteurs anciens, et Herodote lui-même,³ les Perses donnoient à tous les Scythes en général le nom de “Saques.” He shews,⁴ that the Sesach, who pillaged the temple of Jerusalem, was one of these Saxons. In fact to call these tribes Saxons is the same as to call them *Buddhists*, or, as to call the natives of Europe *Christians*. But still, when our posterity read of great armies of Papists, of Greeks, of Protestants, of Lutherans, of Germans, and of Spaniards, they will read about those who were all Christians and all Europeans; and if they do not take more care, and exercise a better judgment than we have done, they will be in still greater confusion than we are.

To the early history of Java no attention whatever can be paid; nothing can be made out respecting it, except that a judgment may be formed and general consequences deduced from insulated facts. It is said, that among the earliest of the occupiers of Java was a race of *Rasaksa*;⁵ but what these were, is, I think, nowhere explained. I suppose the word ought to be Ras-Saka. There is also mentioned an *Adi-Saka* or *Aji-Saka*, who is considered the same as a chieftain, called *Tritrestra*, who is said to have conquered the island. Here we have clearly the same mythos as that described by Georgius, in North India, which found its way to Europe, brought by people with the name of Saxons. Sir Stamford Raffles observes, that Saka means an *æra* in Sanscrit, and that Sir W. Jones says, very truly, that it is a name of Buddha.⁶

He further states,⁷ that the word Saka was also applied to the founder of any *æra*—that Bala Raja of Guj'-rat was called Di-Saka, or Deva-Saka, which was a name of Salivahana—that the Caliyuga, or age of Cali, was divided into a number of Sakas. The fact was, that each God was Di-Saka, which, in regimine, meant God of the Saka; and Saka was 666—650—608, and at last 600. We read that the prince of *Rom* sent twenty thousand families to people Java.⁸ I think it probable that this was an invasion of Brahmin religionists from Ceylon, which was called Ram or Rom, who, after several repulses, ultimately conquered the island, abolished Buddhism, and established the religion of Cristna, which seems to have united here, in some measure, with Buddhism,

⁸ Ib. p. 69.

the latter having preserved its temples. I think this may be inferred from the existence of the icons of both in the temples, as well as from their traditions. After Cristna comes the reign of the Pandus. The reign of the Pandus was probably nothing but a treaty of peace, or rather truce, under some Afghan conquerors, between the two sects, which ended the war of the Mahabarat and established the Holy Catholic or Pandæan faith—the adoration of the *double principle*, leaving each in the state in which it was at the moment of the truce, as we have seen was the case with the Amazons at Athens. This will account for all the anomalies which we have every where found. It is supported both by tradition and circumstances, and I think it is consistent with what we know of the character of man, from experience—after a storm there generally comes a calm.

The God to whom Thursday, or *the day of Jove*, or Iao or Ieue, is dedicated in India, our Orientalists call *Vrihaspati*. The true name of this God, I do not doubt, is to be found in the interesting history of Java, as described by S. Raffles. He gives it *Raspati*, that is, evidently, *Father of Wisdom*.¹ Arka, (this is the Greek Ἀρχη,) he says, means the sun.² The Javans have a celebrated poem on their mythology, called *Kanda*, that is, *Kan-diva*.³ Sir S. Raffles declines giving it, on account of its indecency. One meaning of the word *kan* is pretty clear. This poem is also called *Pepakam*. This, probably, is *Pi-akm*—*The Wisdom*.

I can entertain little doubt that, if a fair and impartial examination were made, remains enow of the Judæan mythos would be found both about Jeddo in Japan, and in Java, to prove that it had formerly been established there. From the prejudice which every inquirer has hitherto had (without any unfair intention) against every thing of a Jewish appearance or tendency, the discovery of the mythos has had every disadvantage. In Siam it is so marked, that it cannot possibly be disputed; it is not probable that it should be established there, in China, and in North India, and not have extended to the sacred islands. Georgius says,

“Indorum litteras, et linguam Balabandu nuncupatum ex Hebræo suam originam habere, perspicuè demonstratur, judice La-Crozio Epist. 32, ad Bayerum in Thes. Epistol. T. III., ex multis litteris Balabandecis, quæ si cum Hebraicis comparentur, ejusdem pene formæ videri possint. Simile quiddam in mentem mihi venit, quum de origine Tibetanarum à Syriacis fortasse litteris deducenda cogitarem. Nam et hanc suspicionem La-Crozius ipse in animum mihi pridem injecerat. Quamobrem operæ pretium duxi earum complures, ne dicam omnes, cum iis conferre quas Syri Estranghelas appellat.”⁴

Vallancey,⁵ as I have before observed, says, the Estrangelo was the common alphabet of the Chaldæans, and that the present-used square Chaldaic letter was never used by the Chaldæans, except as numerals. I doubt the truth of what Vallancey says, if by Chaldæans, the society, not the Babylonian nation, be meant; but he probably does not mean this.

I have often before observed, that the most ancient historians, of all nations, speak of a primeval and sacred language, which in their time was lost. Pythagoras taught that all the ancient sacred

¹ Peti-ras-Urii. Hist. Jav. Vol. I. p. 475.

² P. 414.

³ The first priests were called, in the old language, כהן *ken*, whence, I doubt not, came king. Kings who have received the χειροτονια are all priests. The Jews say their priests were called Cohens; under this is concealed the word *ken*. Among the Jews in London are certain honoured, but not very rich, persons called Cohens, who are believed to be lineal descendants of Aaron. They still perform a peculiar service in the synagogue on the feast of the Passover. Khan is Cuning, Cuning, Kunig, King. Mr. Cleland has somewhere shewn that it was of both genders, meaning both king and queen, like our word sovereign, and that the Saxon word *Cyning*, a king, comes from *ken*, *knowledge*. In Yorkshire, *to ken* means *to know*. In Gothic, *khaan* meant king (*αυαξ* in Greek); this was *k*=20, *n*=50, *aa*=2=72; or *γ* *k*=500, *η* *n*=50, *η* *n*=50=600. Again *χ'*=650. In almost every case these numeral names have two meanings—both appropriate to the circumstances.

⁴ Alph. Tib. p. 583.

⁵ Hib. Coll. Vol. V. p. 201.

learning was concealed in numbers. Almost as extended as the tradition of a lost language, was that of an universal empire—that of Pandæa. I apprehend that all these traditions referred to the universal language of numbers, in which the secret of the common mythos was concealed. Although this numerical language might not be equal to the present written language of any nation, yet I think it would be available for all the purposes of communicating and continuing a common mythos, which chiefly depended upon numbers. It would be correctly a cipher. The first language which it would represent would continue *fixed* for many generations, at the same time that the language spoken was dividing into dialects in great variety. This variety would still be increased, when this language of *numbers* began to be exchanged for a language of selected *letters* taken from the numbers. The latter would be so much more convenient that, in all the common concerns of life, it would soon supersede the other; from this it comes to pass that we have now no remains of the first language, except in the mythology. And here, in the names of Cycles, Gods, and Days of the Week, we have it. In truth, it may be in many other words, but we have not the means of detecting it. At first, it might be a representation of *ideas*, not of *words*; but it would not long continue so: the only word not strictly mythological, which I can fix on, is, I think, the Ⓢ *ab*, for *father*.¹ But I think it yet exists, though greatly amplified, in the Chinese language. Except as a secret of the Tartars, the sixteen-letter system having never penetrated into China, a system nearly the primeval one yet remains. Of course the changes and variations which it must have undergone, to have suited it to the necessities of a great and civilised empire, preclude all hope of finding much of it among them.

I must now beg my reader to refer to Volume I. pp. 3, 4, 6, 30, 177, 653, 746, 763, and consider the theory which I have proposed for the origin of the cycles and the sacred numbers: then next to *ibid.* pp. 216, 221, 223, 224, 230, 499, 500, 590, and consider how this is strengthened by the monograms, and the use of the cross, and the records of all these sacred numbers, the number of the beast excepted, in the number of the pillars in the respective temples—and this done, when he has observed the manner in which all these things are connected together, and how they mutually account for and support one another, I defy him to doubt the truth of what I assert, that I have discovered and explained nearly the whole secret of the ancient mythology—that I have penetrated to the very inmost recesses, and laid open the most secluded of the mysteries of the temples.

10. It is, perhaps, unnecessary to remind my reader of the close, and hitherto unaccountable, connexion between the v *in* or wine or vine, and Janus and Noah, called Menu in the Bible, and the Indian Menu, and the fourteen various Menus, the Latin Mens, and the Greek *Noos*, Mind, the Mannus or Man, the Mene or Moon, and the God Bacchus, to all which I have so often adverted already, but to which, together with several other matters, I must be permitted here again to advert. When I consider the close connexion of all these, and the failure of all attempts hitherto made to shew how it arose, and the avowed custom of the ancients, and particularly of Pythagoras, in describing all their mythoses by numbers, as, in so many ways, I have proved, I ask, may not this connexion have been described by numbers? Thus, *MN*=650, the number sacred to Bacchus, who was Menu, who was Noah, who was Janus.

In the Hebrew alphabet, I repeat, the centre letter M stood for 600. The modern Jews admit, that a great mystery lies under this. I have, in part at least, developed it. But in the Irish language, probably as old as any we possess, the Mem is called M-VIN or M-UIV. This is the word Vin, or OIV, or IUV, with the Monogram prefixed—in short, the name of Bacchus. But Bacchus was Buddha, Βοτρυς:² but Βοτρυς means *a grape*. Bacchus was also *wisdom*. In Latin, Race-

¹ This is correctly the first name for *God the Father* of the Jewish Cabalists—the Trimurti. See Vol. I. p. 70.

² See *supra*, p. 9.

mus means a *grape*, which is the Greek $\rho\alpha\zeta$ a *grape-stone* or *kernel*. Here the *ras* is evidently the *wisdom*; thus the word signified both *Grape* and *Wisdom*. It is very curious that in the Greek we should find the *Buddha*, and in the Latin the *Ras*; thus, from this double meaning, shewing how Bacchus became the God of wine. This might give rise to all the drunken revels and nonsense in honour of that God; and in a similar manner, probably, arose many of the absurd mythologies both in India and the West—amusing to the people, but contemptible to the philosophers and the initiated. Nimrod says,¹ “I conceive that the Feminine principle is adumbrated “by the vine and ivy which cling for support either to the ivy-mantled tower, or to the marital “elm, both of which alike designate the *Arbos Antiqua Ithyphallus*.”

Now the M, as the centre letter, represented the M-phalos or Omphalos, the Ioni, (qu. $\text{I}\nu$), the Matrix, the Delphus, the Nabli or centre of the earth; in fact, the female generative power. This M was the monogram² of M-ia, which was מ-י-א *m-ie*, M the *self-existent*; and M-aia—the M-aia or Mother Ia, or Jah, and, as repeatedly remarked, with the Hebrews it was 600.

Now I have often wondered why the letter following the M-uin was called N-uin. If we examine the Greek alphabet we shall find that the Sanpi is not a letter, as it has no alphabetic sound attached to it, and all letters were once like this, and that the Greeks have only 26 forms for their letters, the two central ones being the M-UIN and N-UIN corrupted into Mu and Nu, from the Irish Celtic, which jointly make the number of Bacchus=650—the *Mc Nu*, the *Nu Ma*, the *Me Ne*.

Noah is said to have had a fourth son born to him, called Inachus; this is Bacchus, $\text{I}\nu$ — י-נ-ה-כ-ו-ש *Inekus* or י-נ-ה-כ-ו-ש *Inakus*—Iin the *black* or *Ethiopian*; that is, the black or Ethiopian Jin or Jan, or Ian-us. Iacehus, I suspect, is Ia or Ie-chus or Ie-kus. As I have said before, I believe that the name of every God which was not a mere provincial or dialectic variation or corruption, was described by a *number*. Buddha was a Menu or Nu, or Menu was a Buddha, and Buddha lived, according to some of his followers, 56 years—N=50, U=6=56. One of the names of Buddha was the same as that of the famous Mani; and Mani was MN=650; and Mani was called Sin, or, in Chinese and Coptic, Xin, X=600, N=50.³ But ס-י-נ-ה *mnes* in Hebrew means comforter. From the same origin came the Mounts of Sin and Sion, and the river of Sin-de or the *holy Sin*; and the Sines or Chinese; for which see, at great length, Georgius as quoted above. He also shews the close connexion of the Hebrew words ס-י-נ *sup* and ש-י-נ *sup* with the words *sio* and *cyo*. Hence, he says, comes the Syriac *Sciuphoio*, (*Scio-suph*), which means, with the Gnostics, &c., *purus spiritus*, which, he says, the religion of the Lama holds to migrate into human bodies for the salvation of man.⁴ Here in *Suph* the *purus spiritus* we have *wisdom*, and in *Scio* we have *I know, knowledge, sapientia*, and the island of *Scio* in the Mediterranean. This *Zin*, *Sin*, or *Xin*, Georgius shews is the same as the $\Sigma\tilde{\eta}\gamma$ *quod est vivere*, of the Greeks.⁵ He shews that the *Sio* is the same as the *Siang* or *Sihang*, of the Tibetians, but without attempting to explain the reason why the *o* and the *ng* are substituted for one another. This is the Hebrew *y o* corrupted into the *ng*, as in *Ganga, Jiam Gang, &c., &c.*; and the C-ı-o and *Sio* are only the word *Io* aspirated. All this profound learning will be disputed on account of its depth; but I beg those who dispute it, on this account, to recollect, that it was not deep learning to those who invented it, and to whose inventive faculties it must have offered itself by degrees.

Vallancey⁶ calls Ogham the God of Wisdom; this makes me suspect Ogham to be a corruption

¹ Part I. (1826) p. 271.

² Monogram as we call it, but called *Omen* by Martianus Capella. See Vol. I. p. 192.

⁴ Ibid. p. 683.

⁵ Ibid. p. 682.

⁶ Coll. Hib. Vol. IV. Part I. p. 416.

of חכּם *hkm*. He adds,¹ that Ogham means עוגם *oug̃m* circles, and that Oga means an *explorer of wisdom*. I think the Ogham of Ireland and Acham of the Sanscrit, are nothing but modifications of the first חכּם *hkm*. The Ogham of Ireland is certainly the knowledge of letters and of the tree of letters. Again, Vallancey says, “Had this Lexiconist known that Drui in Irish, and Daru in Persian, signified *Sapiens*, and that it was the title of a Persian Magus of the second order, he “could not have been at a loss.” He then goes on² to shew, that Seanoir, a *wise man*, from the root SEAN, is the epithet for a Druid, and that it has the same meaning as Ogham, consequently this makes the Ogham to mean *wisdom*, and the Ogham language or letter will be *the language or letter of wisdom*; this justifies me in explaining the name of the Ogham of Ireland and Acham or secret letter or language of India to be the Hebrew חכּם *hkm*.³ Sean and De-Saine and Desanus were names of Hercules or the Sun. The above word Sean I believe to be a corruption of Sion, or rather, I should say, the same as Sion. Then the Mount of Sion was Mount of the Sun, of Hercules, or of Wisdom; the sun being the shekinah of divine wisdom. Aga [*Ogga*] was a name of Minerva.⁴ Is the Irish book of Lechem any thing but the book of the Ocham, L’Acham? And from this Aga came Aga-memnon, and the Aga of the Janissaries. In an Irish MS., Vallancey says, Ogham is described to come from Guam, which means *wisdom*. In consequence of this I can scarcely doubt that Guam is a corruption of חכּמה *hkme*. Thus, in endless variety, in all nations and ages, the doctrine of WISDOM is found to extend its secret ramifications.

11. The word Rhyme, I apprehend, comes from the Greek ῥυθμος, Rhythm, Rhyme, Rime, Rune. Much learned discussion has taken place to determine whether what we call Rhyme was invented by the Saraceni, i. e. Arabians, or by the Northern nations. After what the reader has seen advanced by me of the Oriental origin of the Scandinavian Sacæ, and of the Arabians from the North of India, he will not be surprised that I should entertain a suspicion, that it arose among the original inventors of letters, somewhere east of the Indus. All the sacred mythoses were in Rhyme, because at first they were unwritten. They were first written when syllables arose, and they were counted and subjected to rules for the sake of the memory—for the assistance of which music, chanting, and recitative, were invented. For the purpose of composing these verses and setting them to music, the Baid̃s arose, and with them their Bedas or Vedas or Sagas—books or songs of wisdom. By regim̃ine the singers of the Baid̃s or Veds became themselves Baid̃s or Vates; for the Bairds were formerly called Baid̃s, i. e. Buds and Vates and Fates, *tellers of truth or wisdom*, and hence the Fetische of Africa. In this way, by the regim̃ine, innumerable names had their origin. It rationally accounts for the effect, and no other cause will do it. Thus singer of Baid̃ became *singer Baid̃*; priest of Chryses became *priest Chryses*.

By the British the Druids were called Vates, by the Greeks Ouateis (Borlase). The origin of this name is preserved in the Irish Baidh, and Faith, but stronger in Faithoir or Phaithoir. The first was written Vaedh, a Prophet (evidently Veda), by the Arabs. Baid̃ is the Chaldæan בּדא *bd̃a*, prædicavit, and בּדּימ *bd̃im* Divini and mendaces.⁵ This is evidently the Buddha of India.

The verses of the Vedas are the leaves of the holy tree.⁶ The Ved, Bud, or Bed,⁷ and Vaid and Baid̃ and Vates, is, in Irish, *feadh, fiodh, fodh*, (i. e. *vodh*), which means a *tree*, knowledge, art, science.⁸ In Sanscrit, Veda means knowledge.⁹ The Indian Vedas are never read, but only sung or chaunted. I believe that, like the Vedas or Bairds,¹⁰ if the Pentateuch were not closely shut up in the temple, its perusal was confined to the order of priests.

⁸ Vall. Coll. Hib. Vol. V. p. 147.

⁹ Vide Asiat. Res. ut *supra*.

¹⁰ Bairds, Forster’s Travels, p. 41.

The collection of Persian books, called the *Dabistan*, the Cambridge Key tells us, are called *Vedas*;¹ and the first Veda of the Brahmins is called *Rich*. This is a corruption of *Ras*.² *Reeshees*, persons skilled in the *Vedas*.³ The Jews call their first book of Genesis, from the first word, which means *wisdom*, *Barasit*; thus the first Veda is called *Rich* or *Ras* or *Wisdom*—*Rich Veda*.

I suspect that the seven *Rishis* of India, or the seven wise men, were the same as the seven wise men of Greece, and were the seven incarnate genii of the seven ages or *Neroses*, preceding that in which the authors lived, who wrote of them. It is remarkable that there should have been seven wise men in each nation. The Greeks having lost the meaning of their *mythos*, sought it among their men of learning, and, by some of the old authors, they were supposed to have all lived at one time; but it is evident that the Greeks were as ignorant of this as of all the remainder of the *mythos*. Many *Hindoos* believe the *Vedas* to have been written in a divine language, long since extinct.⁴ I think this was the old Hebrew or Chaldee language, and the numeral symbolic letter—the language which furnishes an immense number of roots to the Sanscrit.

Van Kennedy says, *Veda* is derived from *vedati*, contracted *vetti*, he knows; whence comes *vidya* learning,⁵ *vidivan* a learned man.⁶ We have this in the Saxon *vidanti*, Greek *ειδονται*, Latin *vident*, Anglo-Saxon *witton*, and the Indian God *Wit-oba*. But the *vetti*, he knows, is closely allied to knowledge, and knowledge is wisdom; and I think the *Witton* is a form of our wisdom, and hence comes our *Wittena-gemote*, or assembly of wise men.⁷ From the same root comes *video* *I see* and *vates* a prophet or seer, *κατ' εξοχην*, a seer before. From the same root comes *ειδω* and *idea*, which is *knowledge*, and the Hebrew *ידו* *ido*, and the mounts *Ida*, of Phrygia and of the island of *Χρης* or *Crete*, and of the French *Chrétiens*.

Sanscrit grammarians say, that the *b* and *v* in their language are permutable; this may, perhaps, account for the name of the God of wisdom being called *Buddha*, for it may be a formation, grammatically, from *Veda*. The same, without the digamma, is the *Edda* of the North, or of the Saxons or Scandinavians. The first name of *Buddha* was *Saca*, *Saxa* *σω* *ss*=360, afterwards followed *Tt*=650, then *תת* *Tt*=600 or *Tat*.

Thus *Buddha* is *Veda*, and the *Veda* is the *Vates* or person wisely inspired: from the infallibility of the *Vates* came *Fate*; and from this *mythos* came the infallibility of the *Pope*, the inspired or incarnated divine *Wisdom*—the same as the *Lama* of *Tibet*.

The principle of the fates was this: The First Cause was believed to ordain a law, or fore-ordain to each cycle what should happen. In every cycle the same things were repeated: the *vates* or fates only declared this law. *Jupiter* was bound by his own pre-ordained law, because, when he made that law, he, being omniscient, foresaw that he should not change it; he foresaw every thing, which, on the whole, was for the best, and, in agreement with that, he ordained every thing which would happen in the cycle, and for ever. However long the cycle may be, still if it be a cycle every thing will recur. This, although it may be false, is much more refined than our feeble conceptions, that *God* is changing every day, at the request or prayer of every fool who chooses to petition him; or, at least, as our book says, “when two or three are gathered together.” What is for the best, the First Cause will enact, and if he enact it *in time*, he must enact it in a cycle, for time cannot exist out of a cycle; we can only form an idea of what we call *time* by means of our idea of circle or cycle. We know or believe from our senses that

¹ Vol. II. p. 129.² *Ib.* p. 127.³ *Ib.* pp. 121, 122.⁴ *Ib.* Vol. I. p. 261.⁵ P. 210.⁶ This *Vidya* is our *Widow*—a knowing person—a person who has known man.⁷ In the Saxon, the sigma *tau*, is in fact found in the word for wise, which is *Wit*, to know, and *Wist*, to know; and, query, wiss? (*Vide Lemon* in voce *Wi*.) Is *Witt-oz-mote* meeting of wise men of letters?

events proceed in succession: how can we believe that events will proceed or succeed, for ever, without a stop? We may say we think they will, but of this we can form no idea, as we shall find, if we examine the course of our ideas closely. The Indians, meditating upon these matters, came at last, after the end of each cycle, to place the First Cause, as well as the Creator, in a state of absolute quietude; but what would this be, if continued, but Atheism? To avoid this, they made him rest a given time, then begin and enact anew the former order of things, to create happiness—begin a new cycle. I shall be told, that this will deprive man of free will, and perhaps God too. I cannot help this. It is not my fault that this theory of the ancients is attended with a dangerous result. My declaration of their opinion or faith does not change it, or make it. If my reader will try some other theory he will soon find himself in an equal difficulty; and this arises from the fact, that we here come to the extreme of our faculties. If we go farther, we go beyond the power of the human understanding, and then, if we talk at all, we necessarily talk nonsense, as all the profound metaphysicians, like Berkeley, and the professors of the Vedanta philosophy, do.

If the mind of man could be brought to the consideration of the subject of prophecy without prejudice, he would instantly see, that in its common and usual interpretation it involves the very acme of absurdity. For what is it that God the omnipotent chooses to reveal? Something to man for his good, which will happen in future; but, wonderful to tell, he always does this in such a manner, that man shall not know that it has been revealed, until the thing has happened. He gives it by the mouth of the priest, who is supposed sometimes to understand, sometimes not to understand it. But can any thing be more derogatory to the divine attributes? Why does not God make his priest speak out, intelligibly and clearly? Why did not the prophet tell the Jews, that their next Messiah should be a *spiritual* not a *temporal* Messiah, like all their former Messiahs? But every prophecy is an ænigma to be expounded by the priest. Here, again, we have the system of secrecy which prevails through every part of the ancient world. Every thing was allegory and ænigma, contrived for the purpose of supporting the power of the favoured initiated.

12. We have lately seen the Vedas, or books of wisdom or of the prophets, connected with the tree of letters. We will now return to the Chinese, with whom we shall find the same thing.

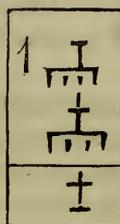

The Chinese have *si*, a tree, the root of *su*, a learned man. (The French have the word *savoir*.) *Sai* is learning, wisdom (whence comes Sci-en-tia); *su*, a book; also *siah*, derived from *soah*,¹ a tree. *Tsu*, doctus; *Xu*, arbor; *Sai*, doctrina; *Xi su*, literatus, doctus. The symbol at the top expresses a flower and books.² Here I think is Xaca.

Hio scientia, this is the *cio* of Georgius.

Xu, *tsu*, liber, epistola.

The word Shekia or Sakia סכיא *skia* in the Chaldee means prophet. This prophet is a Vates, a Ved, a Bed, *wisdom*.³

Alvarez Semedo says, "The third sect (meaning sects of Chinese) is from India, "from the parts of Hindostan, which sect they call Xaca, from the author of it, concerning whom "they fable—that he was conceived by his mother Maia, from a white elephant, which she saw in "in her sleep; ⁴ and, for the more purity, she brought him forth FROM ONE OF HER SIDES, and

The sym-

is because a

from India,

¹ Vall. Coll. Hib. Vol. V. p. 141.

² Ib. pp. 142—145.

³ Hagar, p. 8.

⁴ Ganesa, the God of Wisdom, is always described with the head of an elephant, and certainly no emblem could be more appropriate. But we see here why the white elephant is adored by some of the Eastern kings. This superstition has been carried even to the extreme length of great states going to war for the possession of an elephant of this colour. This is not unlike the story that the siege of Troy was undertaken for the possession of a statue of the moon,

“ then directly died, being but nineteen years of age: that he did penance in the snowy mountains under four masters *for twelve years*, so that by the time he was *thirty years* of age, he was “ accomplished in the science of *the first principle*. He took the name of Xekia or Xaca: he “ taught his doctrine *for forty-nine years*. He had many scholars who spread his doctrine through “ all Asia.”¹ After this Alvarez goes on to shew, that the *wisest* of the sect have a secret religion, “ placing their whole intent on the understanding of the first principle, (which is properly “ the doctrine of Xaca,) whom they believe to be the same in all things; and all things to be the “ same with him; without any essential difference; operating according to the extrinsic qualities “ of the subject; as wax is formed into several figures, the which being dissolved by liquefaction, “ remain in substance the self-same wax.” After this he shews that they use the tonsure, that they have nunneries and monasteries, and several other customs similar to the Christians; and that they believe in the metempsychosis. They are called Bonzes.

The Chinese hold letters in religious veneration, and, when they have done with any writing, burn it with peculiar ceremony.² Semedo says, that to form all their multitude of letters, they use only nine strokes—compounding them for new significations.³ Their mark for *ten* is a cross. It is difficult here to avoid seeing the Arabic system. It appears⁴ that they understand and practise the stereotype printing or printing from blocks.⁵

Saca being one of the names of Buddha, of course all the particulars of the life of Buddha are told of him;⁶ and Saca is proved, over and over again, to be the origin of the words Sacæ and Saxons. It follows, then, that when I say all Europe was Saxon, I use the same kind of expression as when I say, all Europe is Christian. Saxon is the name of the religion—Buddha is merely an appellative, meaning *wisdom* or the *wise Saca*. I believe the word Cama is similar. Cama is ama or am or Ma or Om aspirated; or, perhaps, X-ama, ama with the Monogram, meaning *maternal love*. Camaria and Cama, or Coma-rina is the same. Comisé is used for Pisces; X-om-iso, the same—the appellative of divine love. It should be remembered that every God was a *saviour*.

Thus we have Cama-marina, Cama-maria, Cama-deva, Cama-isé, and Cama alone. And, with the monogram, it resolves itself at last into the mysterious *Maria* or *Maia*, and we may now ask whether we have not this word in *Mare*, *the sea*, and in the sacred mere or lake, and the Mount Meru?—whether *Maria* was not the *aria* of *M*—that is, *place of M*,—residence of the female generative power? I beg to refer to the passage which I have given from Mr. Payne Knight on the word *Ice*, and to what I have said on the subject of sacred water, in Volume I. pp. 530, 531, and *supra*, p. 19.

I much suspect that the Cama was a corruption of the ancient word $\square\aleph$ *sam*, the name of the Sun, and that we here have the name of Sema of Hierapolis,⁷ of Semiramis, of Camarina, Comorin, and of Zamorin, of South India. We have found Semiramis and the Sema-Rama of India closely connected with the dove. We have found the Samaritans also attached to the worship of the

Selene, (probably the Palladium,) or the war between Venice and Bologna, for a picture of the Saviour, painted by St. Luke.

Man is said to have been made after the image of the God of wisdom. Surely the Fabricator must have failed totally!

¹ History of China, pp. 89, 90.

Jesus was born from the side of his mother. (?) He was tempted for forty days, in the desert. He disputed with the doctors at twelve years of age. He began to preach at thirty. Irenæus says, he lived about fifty years.

² Vide Alvarez Semedo, Hist. China, p. 34.

³ Ib. p. 33.

⁴ P. 34.

⁵ See note, *supra*, p. 215.

⁶ See Georgius's index.

⁷ Vide Vol. I. p. 497.

dove; and I have formerly (Vol. I. p. 596) noticed, that the Samaritans, in some versions, are said to place their Ararat in Serendive, though where I have read this account I cannot recollect, and find I have not noted the authority for it; but it seems to shew a connexion of the ancient Jews (i. e. the Samaritans) with South India, the country where we found the Mosaic mythos. Now I have a strong suspicion, that they took their name of Sama-ritans from this worship of the Cama or Sama of South India. When we recollect the Mosaic mythos at Trichinopoly, we need not be surprised to find the Ararat in the sacred island in the same neighbourhood. The Calida or Colchis, the Judaic mythos, and the neighbouring Serendive or Ararat, greatly add to the probability of the origin which I have given of the word Samaritan.

Ca is used for the pronoun I, in Siam; *Noca* in Peru; *Anok* in Egypt; *Ego* in Chinese, Greek and Latin; *Agam* in Sanscrit; *Aku* in Malay; *Ic* in Saxon.¹ All these are the X. In the Chinese language Y is one.²

Webb, in his essay to prove the language of China the primitive language, writes the name of the Supreme Being XEAN-TIA, on the authority of Texeira, a Spanish author; but according to Père du Halde, and the French way of writing Chinese words, it is written Chang-ti, and Tchanti.³ This shews the extreme difficulty of finding the truth, among the misrepresentations, intended and unintended, of authors, for want of some system. The Xean-tia may be *di* or *divus* Sion, *God of Sion*, of the Siamese; or, it may be X-eao, the ng=0, or Georgius's *cio*.

For a proof that the Chinese had the doctrine of the Trinity and the Fall of Adam, see Bryant on the Logos.⁴

The Tartars are called Nestorians by Forster. But he confesses that they are professors of the religion of the Lama. They, that is the Nestorians, use the words Hom-Mani-Pema-Om. They also use the language of the country.⁵ This shews that these pretended Nestorians are only followers of Cristna.

13. We have seen the mythological character of the Cæsari. The author of a memoir of a map of the country near the Caspian sea, says, that their chief was called, by the Byzantine historians, *Χαγανος*, which he translates Khan. But here we certainly have the Saga or Xaca. He says they built a town and called it *Σαρκελ*, Sar-kel. This is the ancient Scotch or Saxon Kel or Cil, for church, and *ras* wisdom. Here we have a colony of the Chaldæan or Cæsarean mythologists, called by their proper name, the people of Xaga, Xaca, Saca, Sagesse, building themselves a city for their capital, and their temple of course, the name of which was the *city of the Kel* (Cil) or *temple of the (ras) wisdom*. The name of Cæsar so universally spread in the world, the consultation by Cæsar of the Chaldæan astronomers, to reform the calendar, and many other circumstances, tend to shew that Cæsar was a Chaldæan or initiated person. The Arabian Kbosru was Cyrus and Cæsar. From the ancient word in numerals, T. S. R. or Tzar or Cæsar, came the Hebrew word for King, *רש sr*, and for Queen, *רשה sre*. Tr. and Sr. were, as I have before remarked, convertible terms in the numeral language. From the *Tr* came the Greek word Tyrannus. The Queen of the Scythians was called Zarina.⁶

Vallancey says, "The Lamas persuade the people, that their God Xaca, or Tschaka, was incarnated 2000 years before our æra, to be born of a Virgin whom they name Lam-Oigh-iupral, that is, the Lama or Luam of Oigh-a-breall, as the Irish would express the name; i. e. Virgo clitoris castæ. Xaca, says Mons. de Paw, should be written Ischaka, and signifies Lord."⁷ Here we

¹ Sharon Turner.

² Ency. Brit. art. Philology, p. 530.

³ Malcolme's Letters.

⁴ P. 290, Appendix.

⁵ Forster's Disc. on the North, p. 105, 4to.

⁶ Diod. Sic. Lib. ii. Cap. xxxiv.

⁷ Vall. Coll. Vol. IV. Part I. p. 451.

have again the immaculate conception of Buddha, i. e. of Xaca. The Ischaka is *isha* or $\psi\omega$ *iso*, the saviour *Saca*. It is the Arabic name of Christ, Ischa.¹ Ishaka, is *Saca* with the Saxon or Celtic emphatic article. But *Ishaka* means a *fish* in Irish, and ישׁ *ise* means *wisdom*.

Arrian² names the country of the Assaceni and of Astaceni, whose capital, Massaca or Massaga, he calls a *great city*. By Strabo this city is called Magosa or rather Mosaga. I apprehend Assaceni means the *Sacæ*. The first syllable being the emphatic article, included, as usual, in the name, and *Ma-saga* is the *great Saca*. We have formerly seen, *supra*, p. 2, that Herodotus stated that the Scythians and the Saxons were the same people. The following extract from Mr. Oconnor's *Chronicles of Eri*, p. cl., note, will shew us how this arose: "In the sixth chapter of 'Melpomene, Herodotus says, 'generally speaking, these people are called Scoloti, but the Greeks called them Skuthai.' In Scoloti, the *i* is mere termination, and the letter 'o' is Grecian, for euphonia, *ore rotundo*. Now, if you sound the comparatively modern mutation *Scolt*, 'Sciot', from the original *Sagiot*, you will readily recognise the identity of all the many literal changes in so many different countries, through so vast a space of time." Mr. Oconnor's observation seems to me to be perfectly correct. The Scythians, the Saxons, and the Chaldæans, all had the same name. Cato, *de Originibus*, notices the Scythia *Saga*. The *Sagæ* and *Caldai* had the same name. In Ireland *Saga* signifies a *priest*.³ Stephen, Byzant. and Pliny state the *Sacæ* and Scythians to be the same.⁴

Saca is probably found in Egypt in *Saca-ra*; and in the district of Saïs is found a town called *Siuph*, probably the town now called *Sauafe*—our word *safe*, from $\psi\omega$ *iso*, to *save*. In *Siuph*, I think we have *Soph*. Saïs has been thought to be connected with *Saca*. It is not improbable, when all is considered which we have seen of the close connexion between the Saviour, wisdom, Logos, that both the ancient words for Saviour $\psi\omega$ *iso*⁵ and the word for wisdom $\Sigma\phi\iota\alpha$ should have come from the *Se*, *Sio*, or *Cio*, $\text{X}\iota\omega$, *Xaca*, &c.; Saïs, *Salvation*,⁶ and ישׁ *ise*, *wisdom*.

The canal of Joseph runs between the lake Mœris and the Nile; and between them also is a place called *Beni Suef*. I suspect that *Suef* is $\Sigma\phi$. May not Joseph be $\text{Io}-\sigma\phi$, *wisdom of Io*? On the west of Egypt is the desert of *Selimé*, i. e. Solomon, שלמה *slme*.⁷ This cannot have been named after the Jews of Jerusalem. Was not *Selimé* in the Montes *Solumi* or *Mons Æsar* of Ptolemy? This confirms the doctrines of the Abbé Guerin de Rocher.

Mr. Alwood⁸ says, he thinks Typhon is the same as *Suph-on*, the word שׁפן *sup* of the Hebrews, meaning *destroyer*. This, as usual, comes from the Creator, Logos or Wisdom being the same as the Destroyer.

14. I have a suspicion, that the *Amphibolus* was the *Pallium*, and the same as the *Sagum* of the Saxons; and that their chief magistrate or *Cyning* was the *Sophi*, the *Ras*, or the *Cunning man*, and at last the *King*. The *Pallium* is made of white lamb's wool, the lamb having been offered on the altar by the nuns of *St. Agnes*. The *Amphibolus* I have ridiculed in my *CELTIC DRUIDS*, p. 201, as the origin of the *Saint* whose adventures are told by the Romish church. This furnishes a good example of a *mythos* described under the guise of a history. But in fact under this guise

¹ See Vol. I. p. 583.

² See *Hist. India*, ch. i.

³ *Vall. Coll. Hib. Vol. V. pp. 11, 12, also p. 23.*

⁴ *Ib.*

⁵ Of ψ *is* and ישׁ *isi* and $\psi\omega$ *iso* enough has been said—the same of *Lama*. I think *Is-lam* is the doctrine of the *Lamu of Is*. (See the Appendix to Vol I.) The name of *Sinan*, the chief of the Assassins, was probably שׁין *sin*—s=300, i=10, n=50=360—*Sin*. *Saladin* is probably *Sul-ad-in*, or *Sul*=336, and *Ad*. I have little doubt that the ancient orientalisks considered it religious to adopt the mystic names of God, as we do to adopt the names of our Saints, *Matthew*, *John*, &c.

⁶ See *Nimrod*, Vol. III. p. 195.

⁷ *Reyn. Herod. Vol. II. p. 165.*

⁸ P. 252.

much lies hid. When Elijah left his *prophetic* power to Elisha,¹ he conferred it on him or installed him in his office, by the *investiture* of the Cloak, or *Pallium*,—the power of the Vates, or Bed or Ved or Bud, or the Pall, the Pallas, the Palladium of Ter-ia, or Troy, was conferred on him; for all these words, applied to different purposes and several of them the same, only corrupted, mean *Wisdom*. In the Roman church, though a man may be elected by his suffragans, he is no Archbishop till he has the Pallium *from the God on Earth or the Vicar of God*, who has, *quoad hoc*, the power. It was the origin of the Palace or Pola or *πυλις*, or the King's-Bench, where he administered justice, and it is the Divan, Div-ania, *place of holiness* or *πρωσπε* or Sopha, of Eastern despots—the *sacred* or *secret place*. In the middle ages, we read of great struggles between popes and kings—the latter wishing to have the power of investiture of the bishops with the Pallium, which the former never would grant. In fact, to part with this, was to part with an essential portion of their sacred character or power. If they had consented, they could not thereby have prevented the kings' having the power of communicating divine inspiration. I suspect the investiture with the Pallium was a higher species of *χειροτονια*.

As we might well expect, we find the Tam in the Greek word *Θεμισεις*, meaning *Laws, ORACLES*:² and *Θεμις* the *Goddess of Oracles*. *תם tm* has also the meaning of perfection, truth; this is closely connected with the Sacred Wisdom. It has also the same meaning as the *נלפ pla*—wonder, miracle. I have no doubt that it had the mystic meaning of wisdom; and, as it was the name of the Palm-tree, the tree, ever-green, supposed to be everlasting or to renew itself for ever from its roots, the favourite tree of the East, and the blessing of the Desert, it was carried before Jesus Christ, by his followers, in the procession to the Temple,³ as the emblem of *everlasting wisdom*. I have no doubt that the sacred or secret books of some sects, called the books of perfection, had also the meaning of *wisdom*. Of course all this is kept out of lexicons, by those who suppressed the meaning of the word *Rasit*.

Mr. Turner⁴ says, the leaves of the Palm-tree, in Tibet, are indestructible by vermin. If this be the case, here we see a beautiful reason for this tree being an emblem of eternity, and also of wisdom, engraved on its leaves, and of its connexion with letters.

We have seen that Cyrus was a solar epithet. Dr. Parsons says, “Between the Caspian and Euxine seas there formerly dwelt two sorts of people, the one called *Rosci*,⁵ on the river Cyrus, “or rather on the *Ros, Ras, or Aras*, called by the Greeks *Araxes*.⁶ Here we have the solar title and the *Ras* or *Wisdom* identified; but, on the South-west of the Caspian, there is a town, called by Fraser⁷ *Reach* or *Resht*, the capital of Ghilan, in Mazanderan, which contains about 80,000 people. I beg my reader to recollect that the chief of the Assassins, the *tenth Avatar*,⁸ came from Ghilan. We see that the capital of the country which he left, to come to Western Syria, was called *the town of wisdom*. This countenances what I have said, that his object in coming to the West was to possess himself of the real city of Solomon.

The ancient Etruscans had a story of a certain *Tages*, who arose from the earth, and taught them all kinds of useful knowledge. The discovery that Etruria, the country of *Itala* or *Vitula* or the *Bull*, was originally called *Ras-ena* or the country of the *Vine* or of *Wisdom*, has nearly convinced me, that this *Tages* ought to be *Sages*, *Sagesse*, or *Sagax*.⁹ When the changes of the *T* for the

¹ “He took up also the mantle of Elijah that fell from him.” 2 Kings ii. 13.

⁹ Vide *Creuzer*, Vol. II. pp. 458—462.

S, and of the S for the St, &c., are considered, it will not be thought that I am very credulous, in suspecting that this famous Tages, who arose from the ground to teach the Etruscans learning and science, ought to be Sages or Sagax.

15. The doctrine which I have taught of an universal Catholic or Pandæan Judaic mythos having every where prevailed, I know from its singularity and its opposition to the priesthood of the present day, will, at first, be treated only with contempt: but there are certain facts which must be accounted for, or in the end the theory will prevail, or I ought rather to say the truth will be no longer doubted. It is a certain fact, that the temple of Solomon and the tomb of Moses existed in Cashmere when the Mohamedans arrived there, and were destroyed by them; therefore they were not named by them, or built by them. The city of Oude or Ioudia, the Montes Solumi, country of Daudpotri, &c., are in the same predicament if they are admitted to have had these names before the arrival of the Mohamedans; and this cannot be denied. It is not credible that these places should have been built, or had these names given to them, by the emigrant Samaritans, the bitter enemies of the system of David, Solomon, &c. The above are *proved* facts, not theories, and must be accounted for.

The same system is found near Cape Comarin; in Siam; in China; and in Mexico: all these things must be accounted for. It is true, the whole detail of the system is not found in the latter places to be exactly the same as it is in the former, because the system is accommodated to the country, and to existing circumstances in each case; but the fragments of it which are found, which, like the broken pillars and capitals when found, prove a temple anciently to have existed, render it highly probable that the very same system once existed. Indeed, they do more, they *prove* it: while the fact that, with these fragments the most important parts of the Christian system are found to have been amalgamated before the Christian æra, raises a grand obstacle to the truth of the Judæan and Christian system, *as at present laid down*. It may be fairly asked, How comes the Christian doctrine—the crucifixion for instance—if there was an ancient Judæan doctrine and the crucifixion was a part of it, not to be clearly found in the system of Moses and the Jews of Western Syria? I contend that the whole Christian mythos was an esoteric system; the system concealed in the mysteries and in the Jewish unwritten Cabala; which, in this case, will have been, in reality, no way different from the ancient mysteries of the Gentiles. The opinion that there was a Cabala or unwritten doctrine among the Jews was never denied. If there were such a thing, it *must* have been taught somewhere, in some place, to its possessors, and this place *must* have been their temple, though we read nothing about it. Thus, in fact, there must have been Jewish initiations at Jerusalem as well as at Eleusis. We know that circumcision, baptism, confirmation, and I believe the eucharist, the doctrine of a murdered and resuscitated person, were all parts of the secret mysteries; the former three of these we know for certain were Jewish, and the Apocrypha tells us the last was.¹

That there is not a more full account of the adventures of the incarnate God in the Jewish canon, proves a fact which is, indeed, proved by a thousand other circumstances—that the mythos was originally an unwritten secret, kept in all countries from the mass of mankind, or a secret kept in allegories or parables, but chiefly in the latter, the favourite resource of the religion. The knowledge of the regenerated and reincarnated God was probably never openly published, as long as it could be kept concealed. It was a great mystery. It constituted the high mystery in all the temples in which the high mysteries were celebrated. There is not a country where the

¹ The Author does not here quote any passage from the Apocrypha, but he probably had in view Ecclus. li. 2, 3, 5, 6, 7, and Wisdom ii. 13—20. See *supra*, p. 124. *Editor*.

leading points of it are not to be discovered, and always, when discovered, found to have been carefully hidden—points sufficiently important and sufficiently numerous to warrant the conclusion, that the remainder of the system must have been known, though perhaps it is not now in our power to discover it. But I do not doubt when the very existence of the iconoclastic temple became endangered by the violence of the idolaters, the books of the Apocrypha, or secret doctrine, were written to preserve it, if possible, from being lost. But though we do not find the *eight* Saviours clearly made out in the books of the Jewish canon, yet we have found one of them in the Apocrypha;¹ and they are most clearly and repeatedly foretold in the Targums by the term Messiah. The Jews were always expecting this Messiah. They believed Julius Cæsar, and, afterward Herod, to be the Messiah. But, as neither of them restored the kingdom of Solomon, he was no longer regarded as a Messiah; he passed away and was forgotten. But their books clearly state, that Cyrus *was* a Messiah: that was, because he restored their Temple.²

16. I some time ago made an observation on the attachment of Pythagoras and the ancients to music. I have no doubt that music was closely connected with religion. All the ancient unwritten mysteries, (and all mysteries were once unwritten,) were originally preserved in rhythm or metre, and *set* to music, or *contained* in or *preserved* by music. Rhythm, metre, and music, were all invented for the purpose of aiding the memory—of assisting it more correctly to retain the sacred numbers, &c. For many generations after the use of letters became public, there were no writings in prose: all were in poetry or rhythm. All the stone pillars in the temples, erected or placed according to the numbers of the cycles, were partly for this same purpose. The sacred dances and scenic representations were for the double purpose of doing honour to the God and aiding the memory;³ precisely as the scenic representations of the acts of Jesus Christ by the Romish church originally were, or perhaps are at this day; and of which the plays called mysteries in Elizabeth's time were a remnant. The Bards were an order to preserve and regulate the choirs, the Salii to preserve and regulate the dances. The origin of the Salii was, in fact, unknown to the Romans, and they were equally ignorant of many other of their institutions. The Salii were originally twelve in number. Their chief was called Præ-Sul,⁴ which serves to shew that they were properly Sul-ii—*priests of Sol*. They had an officer called Vates, *a musician*: they were probably all Bards. But the most important of these rites were the processions, or voyages of salvation, or what were called the Deisuls.⁵ In these, I have no doubt, that the whole life and adventures of the incarnate God were represented—from his birth to his resurrection and ascension.

The exact process which took place in the formation of the Bardic order cannot, perhaps, be clearly made out; but there can be little doubt that it became almost exclusively devoted to the composing and singing of the sacred songs. Originally all sacrifices were feasts, and feasts were sacrifices in honour of the Deity; at these the Bards sung their sacred songs. And it was not till these matters became common, that the Bards descended to celebrate the praises of love and war. At first, these feasts were strictly confined to the temple, and to the elect; but, as the labouring

¹ The Author again omits quoting any passages in proof of his assertion; but he probably had in view those referred to above, and as given at length in p. 124. *Editor*.

³ It is observed by Niebuhr, that the ancients never grounded their tragedies on real, but on *mythic* history only. Rom. Hist. Vol. I. p. 341, Ed. Walter.

⁴ These were priests of the Sun; and I suspect they were *πρης-σουλ*, and from hence our word priest might be derived. See *supra*, p. 179.

⁵ See *supra*, pp. 20, 21.

classes became more enlightened, they insisted upon joining their superiors ; and, by degrees, they discovered all the secrets : till, at last, *horribile dictu*, there is now scarcely a secret left ! I have formerly stated that Clemens confessed that the Judæan mythos was in the ceremonies of Eleusis.¹ These were the continuation of the celebration of the mythos from the time when it was really secret. What else could cause them to be in the secret mysteries ?

17. I believe, as I have repeatedly remarked, that for many generations the arts of reading, writing, and the higher branches of arithmetic, were secret, sacred, and astrological ; that they were solely confined to the priesthood, which, chiefly by their means, ruled all nations ; that one system of *sixteen* letters pervaded the whole world, and the priesthood was probably that of which we read so much in the Indian books, described by the name of the empire of Pandæa. If at first the written language were the same as the spoken, yet a moment's reflection will shew, that the latter would diverge in a variety of ways, in different countries, as time advanced. This is the allegory of the *confusion of tongues* mentioned in Genesis. We every where read of a sacred, *lost* language. We find this tradition with the Tamuls, with the Brahmins, with the Greeks, with the Druids, indeed, with all nations. And I am quite certain, that if the language of numeral symbols was not the lost language, the Synagogue Hebrew, in consequence of the state of seclusion in which it has been kept in the temple, is now nearer to it than any other.

The doctrine of probabilities, taught by Dr. Young,² respecting languages, is very important, and applies in a very marked manner to almost all my speculations. He has remarked, “that no-
“thing could be inferred with respect to the relation of two languages from the coincidence of the
“sense of any single word in both of them, that is, supposing the same simple and limited com-
“bination of sounds to occur in both, but to be applied accidentally to the same number of objects,
“without any common links of connexion ; and that the odds would only be three to one against
“the agreement of two words ; but if three words appeared to be identical, it would be more than
“ten to one that they must be derived, in both cases, from some parent language, or introduced
“in some other manner from a common source. Six words would give near 1700 chances to one,
“and eight would give near 100,000 ; so that, in these last cases, the evidence would be little
“short of absolute certainty.” Now, admitting that there are 339 words in Greek and Sanscrit
identical ;³ what are the odds ? But admitting this fact, that there are 339 Greek, and 263 Per-
sian words, the same as in the Sanscrit, what is the doctrine of chances ? And again, admitting
that there are in the Sanscrit and the German 163 words identical, how stands the doctrine of
chances ? Is it probable that the Sanscrit is derived from the *three*, or the three from *it*, or all the
four from a common source ?

We may always calculate upon the same causes, in similar circumstances, producing the same effects. We every where see, that spoken language becomes so completely changed, in a very few years, as to have merely a resemblance to what it was a few years preceding. This we see in all illiterate tribes, and to a considerable degree even in nations which have their languages fixed by dictionaries and grammatical rules. Now in all the written languages, even those which are the most distant from each other, we find a surprising identity of words having the same meaning ; for instance, we will take the Sanscrit and English, as in the Sanscrit word *sam*, and English word *same*, both meaning, *like*, *similar*. This I suppose to have arisen from the secret, unspoken language of ciphers or figures having extended over the whole world, and continuing fixed for many generations, after all similarity in the spoken languages had disappeared. I think the words which we find reduplicated, in the different and distant languages, are the words of the secret, numeri-

¹ See Vol. I. pp. 822—825.

² See *supra*, pp. 175, 176.

³ See Vol. I. p. 449.

cal, or sacred language, accidentally fallen into common use. I think the example of the seventy-three languages or systems of letters, all having the Arabic for their foundation, treated of in the work found by Mr. Von Hammer in Egypt, raises a strong presumption that Arabic (which I consider to be, in fact, Hebrew) was the parent of the whole, when in its early Cufic state, though now, no doubt, in every way changed. The fact that almost all the roots of the Hebrew are found in the Arabic, proves them to be only close dialects of one another. This idea also is supported by the place to which I have traced the Arabic—North India—where we found an Arabia and a Suracena. I need not remind my reader, that the Syriac is a close dialect of the Arabic and Hebrew; and it is scarcely possible to believe that its names of Pushto and Estrangelo should be given to the ancient *sixteen* letter language, (now called Tamul,) without its being, or having originally been, the same language.¹ Let it be remembered that the Judæan mythos is found in both North and South India. It is also expedient to retain in recollection, that the Thamas is, in a very peculiar manner, found both in Western Syria and in the Tamul-speaking part of India.

After I had come to the conclusion, that the first language must have been a language of ciphers or symbols, I was informed by a very learned orientalist, who had never heard of my theory, that, after long and careful examination of many of the unknown characters in which vast numbers of inscriptions in India are written, he had made up his mind that they were written in cipher. Here we have an admission which might reasonably be expected, if my theory be true. These inscriptions are remains of the first system now forgotten. They are examples also of the commencement of the practice of putting inscriptions on buildings. This cryptographic system is not yet entirely disused in India.

When we consider the great number of letters having the same sound, and therefore totally unnecessary, the truth, that the system was formed for *numbers* and not for letters, becomes more apparent. In the seventy examples in Mr. Hammer's work, we find, in fact, seventy examples of the original, *first* numerical alphabet reduced to practice as letters, but all evidently founded on the Arabic system of notation, ending, at last, with hieroglyphics. The fact of the Mexicans having the knowledge of the powers of *notation* and not of *letters*, confirms what I have said. In reality, the hieroglyphics of Mexico must have been like these seventy alphabets, and as easily read. No person originally inventing an alphabet would ever think of inventing so many letters for the same sound as are found in these alphabets. The difference between the Mexican and Egyptian hieroglyphics is this: the former are meant to be public, the latter are meant to be secret to all but the initiated. These seventy alphabets are seventy examples of learned men, converting the Arabic numeral system to the purpose of literature, each, as the book says, to contain and conceal his peculiar doctrines; but which any person would be able to read into a certain given *written*, though, perhaps, *not spoken* language, who understood the notatory key which I have given in the numbers in figure 1, of my Plates.

I consider the chequers still used in our exchequer (as I am told)² a remarkable example of the first custom of counting by stones. The calculi of Italy we call chequers, as well as the squares on a table. Mr. Von Hammer says the numerical signs (called by us Arabic, and, by the *Arabs*, more properly *Indian numbers*), used, *vice versâ*, for letters, form an alphabet, which is generally known, and particularly used in the daftardam, or treasury office, for accounts.³

Isaiah (xxxiv. 4), when properly translated, says, "The heavens shall be rolled up because they are a *book*." Postellus says, "whatever is in nature, is to be read in the heavens." Sir W.

¹ Vide Georgius, Alph. Tib. p. 583.

² Their use was abolished in 1834.

³ Hammer on Anc. Alph. p. vi. Lond. 1806.

Drummond, on the prophecy of Jacob, has almost proved this. I suspect that the whole was of the nature of a perpetual almanac for the cycle of the neros, and that the Zodiacs of Esne and Dendera were also for this purpose, only in an earlier day. On this principle it is that the Janampatri of Cristna will be found to give his birth, as Mr. Bentley admits, for the 600 years before, or the 600 years after Christ, or at the birth of Christ. But still I think the workmanship of the long zodiac will prove to have been executed, when the midsummer solstice was in neither Leo nor Virgo, but just changing from one to the other,—was a Sphinx, half Leo, half Virgo. If there be any thing like strong probability respecting this monument, it is, that it has its date, as now fixed by me, from the work of Sir William Drummond on this subject.

For thousands of years man would want to record nothing but cycles, and of these he would have daily and most pressing need; the knowledge of them from their very difficult and abstruse nature would necessarily be a secret. They are, in fact, a secret in this enlightened country. How few persons in Britain could of themselves make out the length of the solar year! This is a natural effect of a natural cause. The knowledge of this abstruse science would fall, of itself, into very few hands, and it would give its possessors the dominion over the remainder. The regulation of their seed-time and harvest, and all their religious festivals, would be with the Cyclopes.

Cicero calls the country where the Chaldæans lived Syria; and Lucian, who was born in Syria, calls himself sometimes a Syrian, and sometimes an Assyrian.¹ Of this country, Heliopolis was the capital. It was anciently called the city of Zobah. This was Saba, *Wisdom*. The province was Cyrrhastica (Crest-ica).² The temple at Heliopolis had its sacred *fishes* and *tank*, exactly like those of India at this day; and its temple was surrounded with forty pillars.³ Its kings were called Ad, and Adad. In front of the temple was an immense Linga. Syria and Assyria seem to have been confounded together. Its language has been thought the oldest in the world, because places and persons named by Moses are better derived from the Syriac language than from any other.⁴ It has twenty-two letters, which, with only a difference in shape, are evidently the same as the Hebrew. The Universal history says, “The Syriac was not only the language of Syria, but also of Mesopotamia, Chaldæa, (for there is no more difference between the Chaldee and the Syriac than between the English and Scotch,) Assyria, and, after the Babylonish captivity, of Palestine.”⁵ Dr. Hagar says, “The Estrangelo or ancient Syriac, which is also called Chaldaic.”⁶ This Syriac character consisted of lines at angles; the following is a specimen of it:

Sir William Jones says, “The gross *Pahlavi* was improved by Zeradusht, or his disciples, into “an elegant and perspicuous character, in which the Zendavesta was copied; and both were “written from the right hand to the left, like other Chaldaic alphabets, for they are manifestly “both of Chaldean origin.”⁸ Again, he says, “The oldest discoverable languages of Persia were “*Chaldaic* and *Sanscrit*.”⁹ Again, “The square Chaldaic letters found on Persian ruins, appear “to have been the same with the Devanagari before the latter were enclosed in angular frames.”¹⁰ When we consider that the Chaldee and the Hebrew are really the same, and we find the Sanscrit here using the Chaldee forms of their letters, only with the addition of a frame as it is called, how

can we well doubt that the Chaldee or Hebrew must have been the original root of the Sanscrit? Again, "His Pahlavi (i. e. Anquetil's) strongly confirms my opinion concerning the Chaldaic origin of that language."¹ Again, "Examination gave me perfect conviction that the Pahlavi was a dialect of the Chaldaic."² Again, he says, "The ancient letters of Cufah, had unquestionably a common origin with the Hebrew or Chaldaic."³ Nothing can be more certain than that the Syriac letter is a varied form of the Hebrew; and it is nothing but the inclination every one feels to multiply and divide ancient matters of every kind which prevents this being seen.⁴ Sir W. Jones says, that the Armenian language was originally the same as the Zend and the Pahlavi.⁵ When we consider that all the Judæan or Chaldæan mythos is here, this is what we might expect.

I believe the most common of all the causes of confusion in languages has arisen from the almost universal mistake of learned men, in supposing that, because they see different forms of letters, they see different original alphabets. If they could be brought really to consider them all the same (the different forms of letters making no difference) with only some trifling corruptions, as is really the truth, they would instantly see what a mass of confusion would disappear. I may as well be told that our three forms of capitals, small capitals, and small letters, (to say nothing of our *written* characters,) are three alphabets, or that the Greek two forms ΑΒΓΔ, αβγδ, are two alphabets. Mr. Von Hammer's book has completely established the fact, that all the nations had one alphabet anciently, as the French, German, and English, have only one alphabet now.

On the Syriac language, Mr. Astle says, "It was also the language of Mesopotamia and Chaldea.—As to the arts and learning of the Syrians, they were by some anciently joined with the Phenicians, as the first inventors of letters; but without entering into this matter, certain it is that they yielded to no nation in human knowledge and skill in the fine arts. From their happy situation they may almost be said to have been in the centre of the old world; and in the zenith of their empire, they enriched themselves with the spoils, tribute, and commerce, of the nations far and near, and arose to a great pitch of splendour and magnificence. Their language is pretended to have been the vernacular of all the oriental tongues."⁶ Again, he says, "The Syrians therefore are supposed to have been the first people who brought the Persian and Indian commodities into the west of Asia."⁷ Their letters are of two sorts—the Estrangelo and the Fshito.⁸ I think neither of these words is understood; but the word Fshito, into which the word Pushto is written, is an excellent example of the mode in which modern writers caricature ancient words.

CHAPTER III.

ROMA. FLORA. PUSHTO.—ALLEGORY OF THE FLOWER CONTINUED.—GENERAL OBSERVATIONS.—ALLEGORIES.—ALLEGORIES CONTINUED.—RETROSPECT.

1. WE have seen the way, or something very like it, in which man first discovered the written language of numerical symbols, and by what steps he probably proceeded to discover the art of alphabetic, syllabic writing. After he had discovered the advantage and followed the practice of calling the sun by the different combinations of figures which made up his first cycle of 666, and which, as I have shewn, proceeded from unthought-of and unforeseen circumstances, he would begin to try to form the next words or the remainder of his written language, whether it were symbolic or syllabic, upon some system; and I think we have an example of this in the connexion of the various words having a relation to the first superstition, that is, to the adoration of the female generative principle, in the words Flora, flower, flour, pollen, Pallas, &c., &c. We shall discover examples of this in the history of the name of the *eternal city*, Roma, which we shall find to have a near relationship to the letters of the Tamuls of India.

Though the Tamuls now chiefly reside in the southern part of the Peninsula, yet it will not be denied, I think, that the Tangut and Tangitani of the North of India are the same in name as the people of Tangiers, and Trichinopoly, and the Telingana country, or Trilinga¹ of the South.² We have found in North India the country of Daud or David or Daoudpotra,³ or the country of the children of David. On the coast of Coromandel, or the Tanjeer or Tanjore coast, we have, in the country of the Telingana language, a district called Dravida, from which, no doubt, our fortress there has very properly taken the name of Fort St. David. In the same way the Portuguese, settling near the tomb of the holy Tamas, called it, and properly so, the settlement of St. Thomas. One name of Tibet is Pue-achim or Puek-achim. The meaning of the word Achim is clear; the Pue or Puek is probably the same as Push, meaning *flower*. It is said to mean North,⁴ but it evidently is, either the country of the wisdom of the flower, or of the flower of wisdom. But here we see obvious signs of the universal mythos. The learned Georgius shews, that the language of the Tangutani was probably that called *Estrangelo Syriae*: here, by another road, we arrive at the Pushto again, for Pushto was the name both of the Syriac language, and of that of the Tamul in South India. And it may be well not to forget the Tanga-Tanga of South America, and the traces of the Hebrew language which we found there, and that the Pushto has a manifest resemblance to the Chaldaic. Sir William Jones says, the language of the Afghans in North India is called Pukhto or Pushto,⁵ and it is EVIDENTLY Chaldaic. The chief town of their country is called

¹ We may be permitted to ask the meaning of the words Telingana and Trilinga. The second at once offers us the meaning of triple language; but I think this is not its import, and that it will mean the *triple Linga*, the emblem of the Trimurti; and that Telinga means only the country or *anu* of the Linga, by the Hebrew name of תעלר *told* or תולר *tuld*, which has the meaning of Linga. In English, we have the word in tali or tally. Telinga is the same word as Kalinga, but it is written and pronounced by the islander *Kaling*. Crawford, Ind. Arch. Hist. Jav. Vol. II. p. 226.

² Vide Hamilton.

³ Daud is Dis or Di-oud—the *holy* man of Oud or of Ayoudia. From reference to this, he is called the “man after God’s own heart.” This is similar to the Talut of Saul, noticed in Volume I. pp. 546, 740, 741.

⁴ Ency. Lond. in voce Tibet.

⁵ Asiat. Res. Vol. II. pp. 68, 76.

Paish-wer, or Paish-or, that is Paish-town.¹ It is situated 34°. 6' N. L., 71°. 13' E. Lon., on the Cabul, and was built or more properly rebuilt by Akbar. The Afghans are said to be partly Sunnis and partly Shiah:² whence I conclude, though they may be Mohamedans, they are of neither sect, but of the Sofees, who existed before Mohamed, one of whom I have shewn him to have been. They are called Rohillas and Solaimani, and also Patans,³ and I believe Battanians. They dwell on the Mount of Solomon.

A writer in the Oriental Repertory⁴ says, the Afghans or Avghans have a language called Peshtu. *It has a peculiar character, and seems to be FULL OF OLD PERSIAN.* They are settled near Aud, where they are called Rohillas, and in the Deccan they are called Patans.⁵ The *proper* name, that is the *old* name of the Afghans, is Pooshtoon, and in the plural Pooshtauneh. It is also called Pookhtauneh, whence the name Pitan, by which they are known in India.⁶

I sought long, and inquired among my oriental friends, for the root of Pushto or Pushpo; but nothing like a root could I find, till I had recourse to the system of figures, and there I found it; and it is very remarkable that not one of the names of the first Gods, which I have found in figures, is to be traced to any rational or intelligible etymon. Nothing could well be more in favour of the system than this: Pusto is P=80, S=200, T=300, O=70=650. Pustp is P=80, U=6, S=200, T=300, P=80=666. Petalon is P=80, T=400, L=50, O=70, N=50=650. I will thank any friend to give me an intelligible etymon, either of Pusto or Petalon.

Thus the language of the Syrians and the Tamuls, of the Afghans and the Arabians, the Estrangelo, or of the Chaldæans and the Jews, was the language of the Flower—650: and what flower was this, but the flower which grew in Carmel, the garden of God, which grew in Nazareth, or in the place of the Natzir? What flower was this but the flower of which we so often read; which gave a name to the capital of Persia—Susiana or Susa—the Lily or Lotus? What flower but the water rose, the rose of Ise, Iseur, Isuren, of Sharon? “Susan, Liliū vel Rosa, Uxor Joachim.”⁷

This was the flower *κατ’ ἐξοχην*, described in Parkhurst by the *ϣζ* *zz* with a mutable but omisable *π e*, meaning *to open* or *burst open*, and by the word *ϣϣ pzz*, *to open*, and by the word *ϣζ zz*, *to break open as a flower*, and as a noun *ϣζ ziz*, *a flower*. Here in the word *ϣϣ pzz* we have the Push-to. The word *ϣζ zz* is translated in the LXX. by the word *πεταλον*, a leaf, which Parkhurst says ought rather to have been a flower; and that flower, I doubt not, was the Lotus.⁸

An old picture found in Palestine by Dr. Clarke induced him to make some remarks on the Lotus or Lily, which, he observes, almost always accompanies the figure of the Virgin. He says, that Nazareth, at this time, signifies *a flower*, and, from St. Jerom, that Nazareth in Hebrew signifies *a flower*. This is the Lotus, equally sacred in India, Egypt, Greece and Syria. The bean which it produced in the Nile and Ganges, was that which, when the mythos was lost, was believed by the votaries of Pythagoras to be forbidden, in his mystics, to be eaten,⁹ but which he really never forbade.

The reader has seen the explanation of the Lotus or Lily, given by Mr. Knight, in Volume I. pp. 339, 340, and the reason why it was an emblem of the prolific powers of nature. We see that

¹ From this probably comes the title of Peshwa.

⁴ Vol. II. p. 249.

⁵ The circumstance, that the Hebrew, Samaritan, and Syriac or Pushito, have each twenty-two letters, and these the same letters, shews their original identity.

⁶ Elph. Cabul, Vol. I. p. 242.

⁷ Vall. Coll. Hib. Vol. IV. Part I: p. 264.

⁸ I beg my reader to refer to the Virgin and the Rose, in Mexico, *supra*, p. 32.

⁹ Clarke, Vol. II. p. 411, Ed. 4to.

Dr. Clarke says the Lily is an emblem of Christ, because the word Nazareth means *a flower*. But if I admit this means *lily*, does it not mean *a flower*? Clarke states, that “Marinus Sanutus” says, ‘Hæc est illa amabilis civitas Nazareth, quæ *florida* interpretatur: in quâ flos campi oritur, dum in Virgine Verbum caro efficitur. Ornatus tamen illo nobili flore, super quem “constat spiritum Domini quievisse. Ascendet, inquit Isayas, flos de radice Jesse, et requiescet “super eum Spiritus Domini.” It is surprising that Dr. Clarke should have forgot, that the Lily was sacred in Greece, in Egypt, in Syria, in the Jewish temple, and in India; and the bean of the water lily every where among the Pythagoreans. Christ was called a Nazarene because, according to Jerom, Nazir means *a flower*.¹ Fuller, in his Palestine, calls Christ both *rose* and *lily*.²

Nazareth, the town of Nazir or Ναζαρεθ, *the flower*, was situated in Carmel, the vineyard or garden of God. Jesus was a flower; whence came the adoration, by the Rossicrucians, of the Rose and Cross, which Rose was Ras, and this Ras, or knowledge or wisdom, was stolen from the garden, which was also crucified, as he literally is, on the red cornelian, the emblem of the Rossicrucians—a Rose on a Cross. This crucified flower-plant was also liber, a book, a letter or tree, or Bacchus or ΙΗΣ. This ΙΗΣ was Logos, Linga, letters, LTR=650. The God was also called Rose or Ras, because he was R=200, O=70, Z=90=360; or Rose=365; RS=RST=600; the Rose of the Water, or Water-rose, as it is called to this day. But this Rose of Sharon, this Logos, this word, was called in Arabic and Chaldæan *werta* and *werd* the same as our *word*.³ Thus it was both the Linga, the generative principle, and Lingua, a word, or words, language. How curiously the system is interwoven, like rods of willows into a basket! It was Flora, Φλα =650, which was the Flora of the Romans, and the פרה *pre* of the Hebrews, both meaning *a flower*. The famous Hesperides was the Hebrew עץ פרי *oz pri*. The פרי *pri* means *flower*, but the עץ *oz* means *letters* as well as *a tree*; and, I have no doubt, is closely connected, in some secret way, with the allegory of the Arbor magna, cujus rami sunt literæ, &c. Push-to and Push-pa are the same. Push, which means *flower*, is the root of both. The corruption is not greater between Pushto and Pushpa, than between Pema and Padma—names of the Lotus. We have found Buddha called Pema, Padma, the Lotus, a flower. We have found him called Poti-sato; therefore Poti-sato meant *flower*. This strengthens my conviction that the Pushpa and Pushto were the same, and that, in consequence, the languages of Western and Eastern Syria, and Tamul, were the same, or at least had the same name. I have observed, (in p. ,) from the Universal History, that the Mendæan alphabet was the Pushto or Estrangelo. Now the alphabet given by Hyde, and said by him to have been carried into China by the Tartars, is called the Mendæan. It is clearly the Hebrew in system.

The root פר *pr*, פרה *pre*, or פרה *prh*, in Hebrew means fecundus, fruit, blossoms; and from this as Parkhurst teaches, by a corruption, probably comes the Goddess Flora, or it is the same as the Goddess Flora. See Parkhurst, in voce, פרה *prh* II. and פרה *pre*. Sir William Ouseley⁴ says, Flora Φορα—Flora fertility—פרה *pre* fertility, a young heifer, a flower; he says, they call the Euphrates Φορα, which means *flower*. The Hebrew פרה *prh* meaning *flower*, I have little doubt, was the origin of the name of the Euphrates. I cannot help suspecting that Flora was an anagrammatic corruption of L'phora, that is, ל-פרה *L-pre*. I should not venture to derive Flower or Flora from Phora, had I not Parkhurst's authority, but I think his reasons quite justify him.⁵

¹ Tom. I. Epis. 17, ad Marcellam.

² Book ii. Ch. vi. p. 143.

³ Asiat. Res. Vol. II. p. 53.

⁴ Trans. Soc. Lit. Vol. I. p. 112: he cites Josephus, Antiq. Jud.

⁵ When I observe that the Apocalypse is almost filled with praises of the slain lamb, with which, in a remarkable manner, it connects the cycle of 144; that the ceremony of the slain lamb is connected with the flower and the pollen,

In addition to what I have said in several places respecting the similarity of Cristna and Jesus Christ, I now request my reader to observe (what I formerly overlooked), that the celebrated Arjoon, the brother of Cristna, is nothing but John with the epithet *Ar* prefixed. And I learn from Rammohun Roy¹ that he was not the elder brother of Cristna, as I have formerly stated, but, as John was to Jesus, he was his cousin. He assisted him in his labours for the good of mankind, and when he was killed, the Sun stood still to hear the lamentations of Cristna for his loss.

All the names of Rome are female—Roma, Flora, Valentia: nearly its first and greatest Goddess was Vesta. Heyne suggests Roma to be Ruma.² No person has puzzled all inquirers more than the Indian Rama,³ the cousin of Cristna. He has frequently been observed to have been to Cristna what John was to Jesus;⁴ and the similarity is so striking, that it puts the identity of the two mythoses out of all question. Rāmā is always written with the *a* long like the *o*. Then it is Raamaa: R=100, aa=2, m=40, aa=2=144, a number so celebrated in the Apocalypse, or the prophecy of the coming of the Ram-Lamb to take away the sins of the world. Lamb, we have before seen, is L=30, M=40, B=2=72, another number peculiarly sacred to the Lamb. On the word Ram, Georgius says,⁵ “ רם *Ram* vero, et *Rem* excelsum designat. Et quoniam רמ “*Rum* Samaritanis caput, et vertex capitis dicitur, petunt fortasse ut in eorum summitate capitis “*arcana illa ac mystica precatone oriatur splendidus et corruscans Mani.*” When I trace Ram to the vertex capitis, and recollect the Caput and Ras of the Arabians, I cannot help suspecting the *arcana doctrina* to have the same meaning in each country.

Mr. Niebuhr has shewn, from the numbers of the Roman periods, that their early history is a mythos. He observes that they have a peculiar and sacred number in 240. This makes, in the numerals, RM or Ram, R=200, M=40=240.

The country of Rome and the ancient city built upon the capitol, according to Virgil, was called Struia, country of the cycle of 650, or Satiern-ia, country of the cycle of 666, or of King Lateinos 666, according to Irenæus. Now the country of Roma would be Romaia, not Romelia, nor yet Romania.

Although it be difficult, perhaps impossible, to prove the fact, I suspect that, some way or other, as the Protestants say, (but my reason is not theirs,) Rome had the name of *the beast*.⁶ The Orientals called the country of Phrygia, which had the same name with it, the country of Room. Might it be a Tamul name, and be Rome, with a Tamul termination, thus—Rouma-en? The Satur-en is exactly in the Tamul style.

I cannot help suspecting that the Pushto is the same as the name Pesach, of the festival of the slain lamb; that Pesach, that is פסח *psch*, ought to be פסד *psd*=144; and that this *Psd* afterwards became *Post* or *Psto*. It is the union of the peculiar circumstances which renders this admissible as a probability; especially as we know of many other changes much greater than this. I am quite satisfied that, according to all the rules of rational probability, we can never calculate too much on the stories and names containing the most abstruse ænigmas.

¹ This great man died, near Bristol, on Sept. 27, 1833. *Ed.*

² See Vol. I. p. 376.

³ We have not yet found the origin of the word Ram the brother of Cristna, and of the animal of the zodiac. Now, in the first language of numbers, we find in the Hebrew the Samach and the Mem final to stand for the same number—the famous number 600. From this mutual convertibility I think the Ram and the Ras have been the same.

⁴ See Vol. I. pp. 648, 649.

⁵ Appendix III. p. 716.

⁶ When it is recollected that almost every heathen God had the name of 666, we need not be surprised that the first Christians should call it *the number of the beast*.

R = 100

O = 70

U = 400

M = 40

A = 1

E = 5

N = 50

 666

If this could be proved, I should have no doubt that the Ram and Rama of India, which meant both Beeve and Sheep, had originally the same name. All these things I leave to my reader, who must determine whether a number of *little* probabilities will amount to a *great* one. But all these effects ought to be found if figures were the first letters. Much curious matter respecting the secret names of Rome and Athens, may be seen in the third volume of Nimrod, from pp. 194—206.

Αρωμα, the sweet smell,¹ means also a flower, that is Pushpa or Pushto. This was the language of the followers of the Phasah or the Lamb—it was the language of the Flower, of the Natzir, of the Flos-*floris*, of Flora, of the Arouma, and of the flour of Ceres, or the Eucharistia. It was the language of the pollen, the pollen of plants, the principle of generation, of the Pole or Phallus, of the Pole which opened the Gate of Salvation, and it was the Gate itself, the Arca-polis, place of deposit of the sacred things of the state, which were the emblems of the *Αρχη* or *divine wisdom*,—it was the Pala, the Pallas, (the divine wisdom,) and the Palladium or pallium of Elijah, or of the Lamb of God.²

Ερωσ is amor, and this is ama, which ama aspirated is C-ama. Amor is Roma. *Ερωσ* is Sora or Sura,³ the Sun. (Sora-Cora-mandel.) *Ερωσ* being Cama is also Ama or Venus; in India, Cama-rina, Cama-marina, Sea-Goddess. Thus Venus and Cupid or Dipuc, that is, the Virgin mother and Child are the same; these are the *black* Madonnas and Bambinos of Italy. If Rama be Roma it is Amor or *divine love*, and is the same to Cristna as Arjoon or Jnana, *wisdom*, cousin or assistant of Jesus, is to Jesus.

There is a plant called Amomum or the Jerusalem Rose. Littleton says, “Cum sit Assyrius frutex, nomen etiam ipsum ab oriente sumpsisse vero simile est. Quippe Arab. voce *חמאמא* (*hmama*) Amama dicitur, ab *חמאמ* (*hmam*) i. Columba, cujus pedem refert. M. The herb called Jerusalem or our Ladie’s Rose.” With the leaves of this plant *the Phoenix built her nest*. The Egyptians used it in embalming their dead; whence Mummy, Momia, Múmia, Amomia. *Voss*.—Here we have mystery enough. I do not doubt that this was *Ama* or *Amor* or *Om*, and that this is closely connected with the famous *Om* and *M*. All inquirers have agreed that the first sound of love was *ma*. The cycle of 600 was an emanation of divine love, whence it was identified with the central letter, M, and thus prefixed as a monogram to the vin. Of all the parasitical plants, there is no one more lovely than the vine creeping up and embracing the marital Elm or Alma.⁴

¹ Jones’s Lex. ² *חמאמ* Sax., Rose Fr., Rosa Lat., Ros or Rhos Celtic, *ῥουσιος* [*ῥοδον*?] Greek, Rose English.

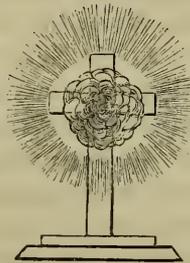

³ The Persians call the Sun *Συρη*. See Vol. I. p. 136. From the Am or Ma comes, by a beautiful genealogy, I love. *Lascivus* is from Laschmi the wife of Cristna. I suspect that Core and Cyrus and *Συρη* and Ras and Ros-e and Sir, and O-sir-is and *שרק* *srq*, a choice vine, were all mystically connected. Joachim was Abbot of a place called Flora or Sora, in Calabria.

⁴ See Pezron, pp. 245, 257—259.

Piromis, in Coptic, signifies *a man*, and is Pi-romi.¹ Here Romi evidently means *Man*. Brahma or Brama is often called Birouma, which is nearly the Pi-romi of Egypt, and Pi-romis of Greece, which, Herodotus says, means *καλος*. “Indeque nata videtur Singalæorum vox Piriimia “La-Crozio, Piriimijaa Relando, mendosè fortassis Piriimha.”² It is probable that the Piroma, the Pi Brama, is the Bacchus, Bromos, Bromios, Bruma; that Pi-rouma is the Pi-Roma, and th is Roma, that is Brama, means *former* or *creator*; and, that the words Bra and Pra, *to form* or *reform* or *reformer*, was the first emanation which flowed or emanated from the Supreme, and is the same as the Greek *ῥέω* *to flow*—Pi-roma the efflux, *κατ’ ἐξοχην*, of the Supreme. The fact that Piromis means *καλος* connects it with the Indian Cali and the Calidei or Chaldæans. The original word for Brahmiu may have been *ברא* *bram*, in the plural *בראמון* *bramin*. The word may come from *בר* *br*, which means *to create*, or *a creator* or *giver of forms*. *Bra* means *factor* and *fecit*; and as the priests, in consequence of the regimen style, i. e. the rude, unfinished, inartificial style of writing, took the names of their Gods, so came the name Brahm. A Bram, or one of the Bramin, was a priest of *Bra* or of the *factor* M or OM, or the *factor* M or OM. Let it be recollected that I have shewn, it was from the invention of the cycles, that all these religions or superstitions had their origin. The cycles with the *high* priests produced astronomy, with the *low* priests and the vulgar, superstition. *Br Son*, by the reg. Son of Br, has been converted into *Son Br*.

Georgius says, that Amida or Omyto, maximus Deus Japonensium, is un emblème de la révolution des siècles.³

To the celebrated society of the Rossicrucians or Rosé-cruixians I have before alluded.⁴ I am not a member of this society, therefore I cannot betray any secrets. This society is closely allied to the Templars; their emblem or monogram or jewel, or as malicious and bigoted adversaries would say, their object of adoration is a Red Rose on a cross, thus—

When it can be done, it is surrounded with a glory, and placed on a Calvary. When it is worn appended and made of cornelian, garnet, ruby, or red glass, the Calvary and glory are generally omitted. This is the Naurutz, Natzir, or Rose of Isuren, of Tamul, or Sharon, or the Water Rose, the Lily, Padma, Pema, Lotus, crucified for the salvation of man—crucified in the heavens at the vernal equinox: it is celebrated at that time by the Persians, in what they call their *Nov Rosé*,⁵ i. e. Neros or Naurutz. The word *Nov* is the Latin *novus*, and our *new*, which, added to the word *Rose*, makes the *new* Rose of the vernal equinox, and also makes on the Rose of the *PΣΞ* *Rss*=360; and the *ΞPΣ* *Xrs*, or cross, or *crs*, or, with the letter *e* added, the *Rose*=365; in short, the God of Day, the *Rss* or *divine wisdom*, *X*, *PΣ*,⁶ Cross-Wisdom (Ethiopicè). When

⁵ Malcolm's Hist. Pers. II. p. 406.

⁶ The monogram with which the title-page of the Latin Vulgate is ornamented, which, as I have stated, was given me

the word רשית is used in the first verse of Genesis, instead of רש *rs*, it may either be in the plural or the *s* and *t* may be used, like the Greek Sigma-tau,¹ joined to the very common practice of inserting the sacred name of God I or jod, as our learned men say for the sake of metre, (in which, I doubt not, *sacred writing* was originally written,) but the learned Jews say it was thus used for the sake of a mystery. The word is, then, really *Rst*.² Templars, Rossicrucians, Royal Arch Masons, you all know that there is nothing incredibly recondite in this.

2. Buddha is said to have been crucified for robbing a garden of a flower. He is also, like the emblem of the Rossicrucians, called a Flower, a Rose, a Padma, a Lotus, a Lily, and Jesus Christ is called a *flower*. The Virgin in the pictures of the annunciation, is always presented with a flower by the ministering angel, and that flower is the Lotus or Lily. In Mexico the same thing is done, only the flower is a *rose*.³ I account for the fact that Buddha was both the *flower* and the *robber* of the *flower*, from the *regimine* of the language; (the Indians admit their ignorance;) from which the robber of the flower became the robber-flower. If this were the case, it would be naturally aided by the beauty of the simile. The admitted ignorance of the Indians opens the door to this explanation, as a probability, till something more satisfactory is discovered. He was a flower, because as flour or pollen he was the principle of fructification or generation. He was flour, because flour was the fine or valuable part of the plant of Ceres or wheat, the pollen which I am told, in this plant, and in this plant alone, renews itself when destroyed. When the flour, pollen, is killed, it grows again several times. This is a very beautiful type or symbol of the resurrection. On this account the flour of wheat was the sacrifice offered to the $\text{X}\rho\eta\varsigma$ or Ceres in the $\text{E}\upsilon\chi\alpha\rho\iota\varsigma\iota\alpha$. In this pollen we have the name of pall or pallium, and of Pallas, in the first language meaning *wisdom*. From this, language, logos, lingua, wisdom, all came to be identified with letters, the tree, liber, Bacchus. Thus when the devotee ate the bread he ate the pollen, and thus ate the body of the God of generation: hence might come *transubstantiation*.⁴ From this it came to pass, that the double allegory of the knowledge of good and evil, and of the knowledge of the generative power in the female, then in the male, and the knowledge of letters and of wisdom arose, and were blended into one.

I cannot help suspecting, that from the association of ideas the words flour and flower, and *to flow* as the secretion of the female flows, the root of the word flour came to be connected with those different mythic subjects, and to have meanings, though evidently by association, connected, yet in almost every respect different. What do we mean by deflowering a woman? and whence arose the phrase? Surely the least reflection will tell us.

The Raj is an emanation of the Solar power, a Ray or Ras, wisdom. As the principle of generation he was the Push or Pollen, thus he was called a flower. The Raj may have been the Rose or Flower.

Professor Haughton says, in his *Laws of Menu*, "The translator, in rendering the word *Rajas* "by 'blood' has made the legislator adopt a vulgar prejudice to which he was superior. That "word does not mean blood, but, according to the Hindus, the fructifying medium; they apply it "equally to the pollen of a flower, or the monthly secretion of a female; both being indispensable

by a Catholic priest. It is placed on the breast of an allegorical figure which wears *three crowns* — three crowns, not solely, if it be at all, emblematical of Heaven, Earth, and Hell, but also emblematical of an incarnation of the Creator, the Preserver, and the Destroyer—an incarnation of the Trinity or the Trimurti.

¹ See Vol. I. p. 54—the word *cut* for *cus*.

² The *Rst* is the Persian mythological name *Rust-an*. If there was such a man he took the sacred name.

³ See *supra*, p. 32.

⁴ See *supra*, p. 64.

“ to precede production, the one in all vegetable, and the other in the human, and in some animal
 “ bodies. One of the terms by which this appearance is known in Sanscrit, viz. *pushpa* a flower,
 “ will strikingly support the idea of an ancient connexion between the popular opinions of the
 “ Gothic and Hindu nations.”¹ I beg my reader to look back to Volume I. p. 261, where he
 will find something which I did not then choose to explain.

‘Ροδον means a Rose. I cannot help suspecting that the word ‘ρoδ had its origin in the idea of
 Ray, Rad-ius. The Rose of Sharon being the Sun or Rhadius, Scythian reix, Punic resch,
 Spanish rey, French roy, all according to Postel from the Hebrew ראש *ras*, rosch, chief, head.

Radha² was the wife of Cristna: if the wife were Radha, the husband would be Radhus, i. e.
 Radhus, or the Sun, was Radius. The crucified *rose* and the crucified *solar emanation*, convince
 me of the close connexion, indeed of the identity, of the mythoses, though I cannot exactly con-
 nect them together.

The Buddhists, the natives, of Tibet hold the Grand Lama to be always the same person—same
 Buddha only reincarnated, or renovated, in a new mundane case or body. And I believe that
 Jesus Christ was considered by some Christians to be a renewed incarnation from Adam and
 Noah, and that this was *one* of the reasons for the careful setting-forth of his pedigree, in the New
 Testament. Thus he was, in fact, Adam. But Adam sinned, and for his sin he was, in the per-
 son of Jesus Christ, crucified. He ate the forbidden fruit, the consequence of which was that he
 immediately learnt that he was *naked*, yielded to temptation and stole the flower of the garden.
 But the flower which he stole was of a very different description from the common flower; he
 stole the flour, the pollen, of an animated plant. After his theft, in that plant there was no
 more pollen. In the natural circumstances of the first pair there would never be any more flower
 to be seen. The female plant would produce no more pollen. In the natural healthy state she
 would produce children so quick as to prevent the exhibition of more till it finally ceased. For
 this robbery he suffered death. The theft of this flower brought sin and death into the world.
 There was no sin before this theft.

My allegorical explanations will not be thought too recondite by persons who have studied the
 character of the oriental nations in these matters; many examples might be produced, but I shall
 cite only one. A Vizir having divorced his wife Chemsennissa, on suspicion of criminal conversa-
 tion with the Sultan, her brothers applied for redress to their judge. “ My Lord,” said they,
 “ we had rented to Féirouz a most delightful *garden, a terrestrial paradise*; he took possession of
 “ it *encompassed with high walls, and planted with the most beautiful trees that bloomed with flowers*
 “ *and fruit*. (Compare Cant. iv. 12—14.) He has broken down the walls, plucked the tender
 “ flowers, devoured the finest fruit, (comp. Cant. v. 1,) and would now restore to us this *garden*,
 “ robbed of every thing that contributed to render it delicious, when we gave him admission to it.”
 Féirouz, in his defence, and the Sultan in his attestation to Chemsennissa’s innocence, carry on
 the same allegory of the *garden*.³

3. I must now request my reader to look back to Volume I. pp. 428, 429, and he will there see
 a description of Callida or Ur of the Chaldees, and he cannot fail to be struck with the flattering
 account which is there given by Col. Tod without his having the slightest idea of what he was
 giving a description, namely, of the country and ancestors of Abraham. It well supports my opi-
 nion, that the Chaldæans were the first possessors of the knowledge of letters, and indeed of magic

¹ Haughton’s Menu, Note 66.

² See Vol. I. p. 586.

³ Parkhurst’s Lex. in voce ין *gn*, which means *garden*. This word seems to be the origin of our word *garden*, which
 was probably more like the ancient word; for words seldom grow longer by age. From this root came the Sanscrit
 protector of gardens—Gan-isa-ין *gn yw* *iso*: the Sanscrit from the Hebrew, as might be expected.

and astrology, which, in fact, were but the knowledge of that, a part of which I shewed, in Volume I. p. 677, to have been possessed by Roger Bacon. As the knowledge of these things gradually became public, they gradually ceased to be mysteries, until at last there were scarcely any left. And as this effect took place by very slow degrees, during thousands of years, it would not anywhere be recorded. In fact, it would not be perceived by the mystics themselves. The secrets of Roger Bacon were the last of them.

The learned Bailly, after years of patient inquiry and close investigation, came to the conclusion, that all the learning of the Greeks and of the Eastern nations was but the débris of learning of a nation of scientific persons who had lived in a former time; and I have no doubt that had he not been prematurely cut off by the miscreants of Paris, he would have proved the truth of his doctrine. This, however, appeared so paradoxical to his countrymen, that I believe no one has attempted seriously to follow up his discoveries. The more I examine the more I become convinced that there was a race of antediluvians, and that they were a very learned race.

I believe the ancient mysteries, like almost all religious rites and ceremonies, arose by degrees from circumstances, and from the natural failings and feelings of mankind. It cannot be denied, that man has a natural propensity to monopolize and appropriate to himself what tends to distinguish him from his fellow-creatures, and to elevate him above them. From the gratification of these feelings, when the art of writing was, by degrees, discovered, it was closely concealed, and became what we call, or a part of what we call, the magic art. I believe the ancient mysteries consisted in the knowledge of letters and the higher branches of arithmetic, astronomy, and the theory of cycles which I have described; and in other branches of natural science, such as the use of the loadstone, compass, the telescope, &c.¹ In short, every part of science which could be concealed, and as long as it was concealed, was a mystery.

If I be right in my idea, and I know no other way of accounting for many anomalous facts, that writing was made originally from the top downwards, was by symbols, was secret, and escaped from the mysteries by degrees, the extraordinary way in which proper names in all languages are mixed or written, which our grammarians have honoured with technical terms, such as *anagram* and *metathesis*, may be easily accounted for. Of this the name of God in Chinese, Tien or Neit² is an example. This will account, in a satisfactory manner, for the different directions in the styles of writing, as well as for the confusion in the powers of notation of the latter numbers of the Hebrew and Greek alphabets, and it will also explain the reason why we have so many places called by the same names. They were all, originally, secret and religious names, which by degrees came into common use. Every country had names of places to suit (in its religious ceremonies, processions, &c.) the universal mythos; but each must also have had other names, some only of which have come down to us. We now hear much more of the *sacred* names, than of the *common* ones, because all the ancient books, before Herodotus, were sacred books. Originally, writing was used for nothing but the affairs of religion. This theory, and I think I may say this verified theory, will account for every difficulty. The doctrine of secrecy which I here suggest, is in perfect keeping with what we know of all the habits of the ancients, and, indeed, of all mankind. Have we not in every trade a craft or mystery? The examples which I have already given of scientific discoveries secreted, which had no concern with religion, made by such men as Newton, strongly support me. There is no reason to believe that Pythagoras ever made public his knowledge of letters, even if he possessed it. He left not a written sentence behind him, though he dealt so largely in numbers—arithmetic and geometry. This is borne out by the positive testi-

¹ See Vol. I. p. 341.

² See Ib. p. 429, and *supra*, p. 36.

mony of the treatise found by Mr. Von Hammer in Egypt—that every learned man had a letter of his own, in which he endeavoured to conceal his doctrines. This book of Ben Wassih's is as good evidence of the fact as can be expected; and, all circumstances considered, it is really good evidence. The attempt to monopolise knowledge seems to have been one of the most predominant passions in all ages: and it is easily to be accounted for, as knowledge is power. The vanity of man is flattered also, in being wiser than his neighbour.

I once more repeat, that the sacred mystic dances, music, poetry, or the art of composing in rhythm or lines in certain numbers of short and long syllables, and acrostics, were all inventions for aiding the memory, before the art of writing in syllables was discovered. I find great difficulty in believing that the persons who possessed the astronomical science, evinced by their knowledge of the zodiac, by their placing of the pyramids, and by the cycles displayed in many of the Druidical monuments, such as Stonehenge, Abury, &c., can have been ignorant of the art of writing—and these facts, among other circumstances, induce me to think it was known long before it was made public. Although the Chinese language is called the flowery language, or language of flowers, it appears in this to include trees, so that it would have been better called *language of plants*.¹ They considered a tree to be a symbol of knowledge.

4. There can be no doubt that one of the meanings of Genesis was, that by eating of the fruit of the forbidden tree, the tree of wisdom or knowledge, a knowledge of the sexes was acquired, and the consequent propagation of the species. And when I consider again the numerous allegories drawn from trees, that the Hebrew word *עץ* *oz* means a fruit-tree, and *עצה* *oze* and *יעץ* *ioz* counsel, i. e. wisdom, all evidently the same, I cannot help seeing that the allegories allusive to trees and letters, are drawn from the second book of Genesis, or the allegory of the second book of Genesis, the tree of knowledge, &c., is drawn from trees and letters, and which of these is the case is a curious subject of inquiry.² There is great probability that the allegory of the tree and letters arose from natural circumstances. The bark, the leaves, and the stem of the tree, became vehicles for conveying wisdom by means of letters, from the fortuitous circumstance of being the most convenient substances on which to inscribe them. I suppose about the time the ciphers or numeral letters were invented, the plan or custom of using the bark of a tree on which to inscribe them would be also adopted. Perhaps the circumstance of the leaf of each tree being used to express a number, might give occasion to the first numeral letters to have the names of trees, and from a union of these causes might arise all the beautiful and almost innumerable allegories of Genesis, and of the Eastern nations. The origin of the idea of the tree being the emblem of wisdom is very clear.

Under the magical symbols which we call ciphers or letifs, leaves, letters, all science or learning or wisdom was concealed; and it is perfectly clear that the words letif, leaf, and letter, were really the same. But I do not see how the knowledge of *wisdom* should make man know that he was *naked*; this, I think, might be merely the gross and literal meaning of the text; and, from a consideration of all the concomitant circumstances, I am induced to suspect that this gross meaning was only used to conceal the beautiful and refined doctrines contained in the mysteries relating to trees and knowledge, but which would be converted, as far as possible, according to the prevailing fashion, into allegories also. All these allegories respecting trees must have been totally incomprehensible to persons who did not understand the nature of letters and writing. They

¹ See Vall. Coll. Hib. Vol. V. pp. 144, 145.

² It may be observed that it is not necessary that the allegory in the first book of Genesis should be the same as the allegory in the second. As there are certainly two histories, there are probably two allegories.

must indeed have been *an impenetrable mystery*; but I am quite certain that there are two clear and distinct allegories.

As I have just said the mysteries themselves arose from natural circumstances. I suppose the knowledge of the Trimurti and the other doctrines of the Gnosis or Wisdom, the branch of the Cabala called Berasit, explained by me, was the secret of secrets, the grand arcanum; that, along with this, one of the first secrets was the knowledge of the art of writing and reading. From the extreme difficulty of acquiring the art of writing and reading, it would almost necessarily be a secret science even without any intention at first of making it so. The knowledge of Wisdom became the knowledge of letters. All wisdom was conveyed by letters, by the liber, the leaves, the bole, the stem of the tree; thus the tree became the tree of knowledge to make man wise, forbidden to all but the initiated. I believe that all the deep sciences were mysteries—astronomy, astrology, the higher branches of arithmetic, and mathematics, were, at first, all mysteries—mysteries which decreased in number as these sciences or secrets were discovered by the mass of mankind; and all these sciences were concealed in letters, and letters themselves were concealed in the names of the leaves of trees. I believe that one class or caste, called by a variety of names, but by us Chaldæans, were, as I have repeatedly remarked, the possessors of the secret. Hesychius says, *Χαλδαιοι γενος μαγων παντα γνωσκοντων*.¹ The observation is very important. It shews the character which those persons had in his time. They were like the Freemasons of the present day; they became divided into different bodies, as we have Masons, Rossicrucians, Templars, &c.; and even each body, in different places, having some difference in their ceremonies as our Masonic societies have; but still the same general characteristic features are at the bottom. Such, for instance, as we see in the names of places in all countries, and all countries having the general mythos of the *ten* avatars to finish at the end of the six thousand years, and to begin again, and be renewed in *sæcula sæculorum*. It is the natural course of events, that, in different nations and in different periods considerable variations should arise, and not more have arisen than might be reasonably expected, allowance only being made for these natural causes. The Casideans, the Chaldæans, the Essenes, the Therapeutæ, the Mathematici, the Freemasons, the Carmelites, the Assassins, Magi, Druids, were all the same, and all held the Chrestian doctrine, and received, at their rite of baptism, which was universal, a Chrestian name, and, by this rite, were admitted to the first step of initiation into the mysteries. Here was the reason of the universal toleration after the union of the two great sects of the Linga and Ioni took place.

On admission into the highest mysteries, the rite of circumcision was administered, or, perhaps, originally, it was the general rule, that every one who was intended for the order, should be circumcised in his youth. The word circumcised, as I have before observed, has the meaning also of initiation. It is known that into the high mysteries of Egypt and Eleusis no person was admitted who was not circumcised,² though neophytes were constantly admitted. Besides, every person once admitted would choose to have his children admitted, and thus the order was kept alive; and thus it was that the order, as we have found, was both hereditary and not hereditary. The Monks constituted a class or order, at first perhaps the elect or perfect, or only the persons admitted into the very highest mysteries. Perhaps only the persons who performed the functions. In the Culdees of Iona and in Wales, there were both married and unmarried members of the convents; but probably this was an abuse. Pythagoras became a neophyte, and was admitted by the ceremony of circumcision.

We will now return to the flower. In India, Buddha, as already stated, robbed the garden of a

¹ Hesych. Lex voce *Χαλδαιοι*. Hagar, Bab. Bricks, p. 21.

² See Vol. I. pp. 304, 724, 759.

flower, for which he died. In Western Syria the female presents the fruit of the tree of the garden of love or wisdom to the male, by which means the death and regeneration of man ensue, and without which the species would not have passed on to futurity. Now what were the flowers of which the male deprived the garden of delight alluded to above? If my reader will carefully consider every meaning which the word flower or flour or pollen possesses in plants and animals, in short in all nature, he will then readily answer the question. And if he wish to know what was the kind of fruit presented by the female to the male to produce the prolongation of the species, he may ask any naturalist, or even village surgeon, and he will tell him that the apples of love, the ova, are not the produce of the male, but of the female. They were the apples of knowledge, because, by being presented to the male and tasted by him, he acquired a delicious knowledge which he never knew before, and he caused the renewal of the animal, from generation to generation, to be ultimately absorbed in the To Oυ . Here we have the apples of knowledge in the *garden of delight*. The flower spoken of above was that without which there would be no generations or regenerations, it was the grand ornament of the garden, and, in this sense, the flower or plant of wisdom or knowledge. Without its stimulating and nourishing power there would be no fructification. The plant was worthless without it. It was the flower of wisdom— $\kappa\lambda\upsilon\delta$ *Pla*, Pallas, Palladium, Pallium, and the Pollen of every plant; and, with men who did not possess the recondite knowledge of anatomy, it became, by mistake, the Phallus. I suppose I need not point out to my reader what, in this allegory, constituted the garden, the Can-ia, the $\Gamma\upsilon\upsilon\eta$.¹ The female presented to the male the apples of love, the ova.² He tasted and fell. With the increase of the species, cares and sorrows arose, the ground became overrun with thorns and briars, and the garden of delight faded away. From this first act came all the good and all the evil in the world; without it there had been neither good nor evil. The being man, mannus, homo, was [allegorically] not an animal; it was a plant. It is the only being in whom red blood circulates, who at the same time masticates food and produces flowers—which flowers bear fruits—of which flowers the male despoiled the female, and thus propagated the species. There is yet one other animal which, circulating red blood, bears flowers: but what is its Indian name?—Hanu-man, the Monkey or Ape.

The Greek was first written without vowels, and from top to bottom, and called Petalon. But Petalon means a leaf, or, as I suspect, a tree, and $\pi\epsilon\tau\alpha\lambda\alpha$ would be trees. From this came the petals of flowers. Æneas descending to the Shades, passed an elm-tree loaded with *dreams*. The alpha, in Irish ailm or elm-tree, was the trunk of the tree of letters, and has evidently a close connexion with the elm-tree of Virgil, and with the Greek style of writing, called *petalon* or *leaf writing*. Nothing can be more striking than that the Greek upright writing should be called a tree. But the letters were written upright, *aribus ligneis*, or on stems of trees. If we look at and consider these figure systems, evidently all identical, we must observe, that the first and tenth and hundredth forms are all the same. The *a* is the first letter of the tree elm, ailm, and answers to the figure *one*. I suspect that the first name of the elm was ilm; that there was originally no vowel *a*, but the *oin*; that it was afterward added to the *ilm* when found to be wanted; and that this tree was called, at various times, ailm, ilm, elm, or oeilm, or ulm. Being the name of the monad To Oυ , it naturally came to have the meaning of the first solar cycle, $M=600$, $U=6$,

¹ We read that the garden was robbed of its flower. Was this garden Eva? I think the Hebrew $\gamma\alpha\gamma\eta$ was not only garden, but it was also $\gamma\upsilon\upsilon\eta$. Here we have the same story, only somewhat differently told.

² As the woman possesses the seed, the ova, not the man, that text is peculiarly proper which says, "the seed of the woman," not the seed of the man, "shall bruise," &c.

the vates or true prophetism. Vates is evidently a corruption of veda, or veda of vates. Hence, in fact, the Greek root $\chi\rho\eta\varsigma$ means both $\chi\rho\eta\varsigma\omicron\varsigma$ *benignus*, *mitis*, $\kappa\alpha\lambda\omicron\varsigma$ and vates or $\omicron\upsilon\alpha\tau\epsilon\varsigma$ —and in the word $\kappa\alpha\lambda\omicron\varsigma$ we have the root or origin of the deity Cali of India, and of the Cali-dei or Cali-divi or Caldæans. As $\chi\rho\eta\varsigma$, vates, *perfect wisdom*, he $\kappa\eta\omega$ or $\kappa\eta\omega$ -ed every thing past, present, and future. In the Veda was recorded all knowledge—past, present, and future—the knowledge of the generations or re-generations of the man, the knowledge of the renewal of cycles in *sæcula sæculorum*, that is, of cycles of cycles—the esoteric meaning of *sæcula sæculorum*, or $\alpha\iota\omega\nu\ \tau\omega\nu\ \alpha\iota\omega\nu\omega\nu$, æones, emanations of divine wisdom. Our book which we miscall Genesis, or *the book of generations*, ought to be Barasit—that is, Wisdom—that is, Veda or Buddha. Thus it is called by the Jews.

But there were two trees in Paradise—the tree of knowledge and the tree of life. What was the tree of life? We are told, that if Adam had eaten of the fruit of the tree of life he would have *lived for ever!* What does this mean? (Of course I assume that no person reading this book is so weak as to admit the literal meaning.¹) A part of the text seems to be wanting. May it mean that, by the knowledge of the system of regenerations without having obtained such knowledge by previous *initiation* into the secret use of letters, of the Vedas, the Sophias, the $\rho\sigma\tau$ *rsut*, or of the knowledge obtained by means of letters, man would have become assured of his eternal existence; or, that, by knowing the sacred truth, he would have been induced so to modify his conduct as to ensure himself a speedy absorption into the $\tau\omicron\ \omicron\upsilon$, to shorten the period or number of his transmigrations? Was the fruit of the tree of life the consequence of the admission into the sacred, i. e. secret, mysteries which, by producing fruits meet for salvation, produced or hastened the salvation of the initiated? We know initiation was said exoterically to produce the most perfect happiness. The effect of initiation was, reformation of manners, the future practice of the most sublime virtues, the rendering of a man perfect—(“If thou wilt be perfect, sell all that thou hast, and give to the poor”—) inducing him to desert all the little, narrow, selfish gratifications of this life, for the purpose of securing those of a life to come. These, at least, were its tendency and its object. I say not that this was certainly the meaning of the allegory of the tree of life; but it seems to me, that it must have been this, or something very like it. At all events, I think the explanation of the second part of the allegory is in good keeping with, and is not unworthy of, the first; and they are both *beautiful*, perhaps *true*. All this is strictly masonic. I trust I am not improperly betraying the secrets of the craft, of the *Megalistor Mundorum*, when I state, that the designed effect of all masonic initiation is to render a man more virtuous—consequently more happy. A perfect Mason, if such a thing could be, must be a perfect Buddhist, a perfect Jew, a perfect Christian, a perfect Mohamedan. They are all $\chi\rho\eta\varsigma$ or $\chi\rho\eta\varsigma$ -oi or Christs.² And, from the most remote antiquity, a man in every new cycle has been looked for, who should be in a peculiar manner $\chi\rho\eta\varsigma$, to teach glad-tidings, divine wisdom, to mankind. Moses; the conqueror of Babylon, called for this reason Cyrus; Pythagoras, Herod, Cæsar Augustus, Jesus; *Mo* or *Om* $\alpha\eta\mu\epsilon\delta$ the cyclar *desire of all nations*; St. Francis; were all thought, each in his day, to be $\chi\rho\eta\varsigma$ -oi by their followers; and the vital principle which constituted a man, in each

¹ After nearly the whole of the first volume had been printed, I met with an observation of Mr. Christie's, (Essay on Worship of Elements, p. 25,) that Dr. Kennicott had shewn that only one tree standing in Eden was forbidden: this induced me to examine the question more carefully than I had done, and I saw at once that Dr. Kennicott was right. The whole context, of all the tracts of which Genesis is composed, relates only to one tree, except one short passage at the end of the third chapter.

² Christians were first called Christs. *Bingham.*

age, a member of this religion, and not a heretic, was a belief that this Χρῆς was come at that time, or had previously come.

I just now asked the question, whether the attempt to acquire illegal knowledge, or knowledge acquired by the possession of letters, was not the tree of life. Enoch says, the great sin of the old world, and that for which it was destroyed, was the attempt to obtain forbidden and illegal knowledge. This I consider of great importance.

In Genesis it is said, that man acquired knowledge—tasted of the fruit of the tree of knowledge of good and evil—illegally, illicitly, contrary to the command of God; in consequence, the ground was cursed, and in future he had to earn his bread by the sweat of his brow. Allegory or gross inconsistency is on the face of the story, respecting the curse of sterility fixed on the ground, in consequence of man's disobedience; for, it is said just before, that he was placed in the garden *to dress and till* it; and every one knows that the ground was not cursed: the sweet chestnut and the filbert, the plants of wheat and barley, bring forth their fruit, and are succeeded by the orange, the fig, &c., before they are decayed, as freely now as they always did. Then what does this mean? May it allude to the discovery by the people, by the uninitiated, of the art of writing, of letters, of the tree of knowledge, of the secrets of the priesthood? May it mean, that the people, as in Tibet, were taught the effect of good conduct by the initiated, but were not initiated into its arcana; and that, in future, the arcana would be known to those only who had gone through the labours of initiation? The expression of Enoch seems to favour this conjecture.

I think it probable that in the allegory of the trees of knowledge and of life, the latter was only to be obtained from first having tasted the former, or otherwise the devil must have been a very great fool indeed, in not first persuading Eve to taste of the tree of life, by which means he would have completely beaten his Creator. No one would have contrived to make the cunning devil so great a fool. This being admitted, and there is nothing in the text against it, the eating of the forbidden fruit of the tree of knowledge must have been the acquisition of the knowledge of letters by the uninitiated, and the fruit of the tree of life must have been the knowledge which was acquired by reading, by having tasted the knowledge of letters, of the eternal state of happiness intended for man by absorption into the Το Ου—happiness to be hastened by religious rites, mental abstraction—in fact, by the possession of a portion of wisdom or knowledge only to be obtained by initiation in the mysteries, and incarnated in the initiated by the Samach, χειροτονία, or imposition of hands, or investiture with the pallium. By this knowledge the initiated learned, that, by good conduct and the practice of virtue, they could hasten the period or shorten the sum of transmigrations.¹ This was only known to, and was a most invaluable privilege of, the favoured initiated few. This opens to us a most beautiful view of the ancient mysteries, a view in every respect justified by masonic mysteries of the present day, and anciently obscured by the unfortunate corporate and monopolising spirit, which excluded the mass of mankind from the invaluable secret, and thus kept them in a state of debasement—a weakness which seems inherent in the human character, at least a weakness attaching to the character of the great men of antiquity

¹ The ancient fathers generally believed in the metempsychosis, which was thus a part of the religion. Let me not be understood to mean that the professors of these doctrines really believed that, by the Samach or χειροτονία, a real inspiration was communicated. No: this was never imparted till after examination had shewn, that the neophyte had imbibed from his instructor—or that he had really acquired the divine knowledge of the divine wisdom—that he was imbued with divine wisdom—that, in short, divine wisdom suitable to the degree to which he aspired was incarnate in him, for it could not, of course, be in him, without being infused into him. It is exactly the same with our ordination of priests and bishops. The superior gives the χειροτονία—but it is not till after, by examination, he has ascertained that the divine knowledge or the knowledge of divine matters, is actually, or professedly, possessed by the neophyte.

with very few exceptions. In these exceptions we may place Socrates, Pythagoras, Jesus, who are said to have all lost their lives, not for divulging the secrets of the initiation; but, without being guilty of that offence, for endeavouring to teach the mass of mankind what the few learned from initiation, namely, that a virtuous life would secure eternal happiness; and probably for endeavouring to abolish the system of secrecy or exclusion. It has been always held to have been the object of Jesus, to open the Jewish religion to the whole world—that must have been the secret religion, the Cabala. The above was the simple and unadulterated doctrine of the philosophers of Athens, Crotona, and Nazareth. This was the Chreestism, as Justin Martyr said, taught equally by Socrates and Jesus of Nazareth. And one of the great objects of this work is to restore the doctrines of Socrates and of Jesus,—to draw aside their veils, as well as that of Isis.

5. Persons may dispute about the allegory of the tree, the arbor magna in medio Paradisi, and say this or that is not the meaning of the text; but I am certain that no philosopher will deny there is a high probability that the exposition which I have given of it, was the exposition of the ancients, and that upon which their secret system was founded. The sacred book of the Tamuls, as I have before stated, (in p. 15,) is said to have had *five* meanings. In India the mythos says, that the eldest son of God, the Adonis, the male, at the instigation of the female, robbed the *garden* of a flower, for which he was crucified; but that he rose again to life and immortality, and by this he wrought the salvation of man. May this be, that he secured the continuance of the generations of man? In the allegory of the fall of man, Adam and Eve having tasted of the fruit of the tree of knowledge, knew that they were naked and covered themselves with the leaves of the fig-tree, Ficus Indicus. I have no doubt it is on this account that the Indians give the name of Rawasit, that is, ראשית *rasit*, knowledge or wisdom, to that tree:¹ a tree peculiarly sacred to Xaca or Buddha.² And from a peculiar property which the *fig* has of producing its fruit from its flowers, contained within its own bosom, and concealed from profane eyes, its leaves were selected by Adam and Eve to conceal the organs of generation. Most of what has been said by Messrs. Maurice and Knight respecting the Lotus,³ may be said of the fig-tree. The emblematic fruit of the tree of knowledge has been generally considered to be the apple; but it was very often described by the *grape* growing on, or hanging to, the elm. On ancient cameos the tree of knowledge is constantly described by a vine, producing its fruit among the branches of the marital elm. There is nothing in the *apple* or its mythic history to favour its pretensions: but what was the *grape*, the fruit of Bacchus, but the Greek *βοτρυς*, or wisdom; and, again, *the Wisdom*, in the Latin *Rac-emus*?⁴ The Greeks made out the *apples* of the Hesperides and the *golden fleece* from this mythos. In the oriental language the fruit was *Souph* or *Wisdom*; and as *Souph* meant also *wool*, of course they took the gross idea, and instead of sacred wisdom, *Ἄρης*, *Souph*, made *golden fleece*. And their word for *fleece*, *μαλλος* or *μαλον*, meaning also *apple*, thus they got their *golden apples*. In a similar manner arose almost all the vulgar mythologies of the elegant Greeks—a very elegant but generally very unscientific nation. And this leads me to return to the *esoteric* meaning of the most beautiful, and, I am persuaded, the most general, of all the religious rites of antiquity—the Eucharistia—the sacrifice of *bread and wine*. We all know that Ceres was *bread*, Bacchus, *wine*. Love grows cold without bread and wine; “*Amor friget sine Cerere et Baccho.*” What is *bread*? It is the flour of wheat, the most useful plant in the world—of that plant, which, by a peculiar blessing of Divine Love, has alone the property of renewing its pollen or flour, when destroyed by any accident. Thus the flour or wheat or bread is the most appropriate emblem of

¹ Georg. Alph. Tib. p. 509.

² *Ib.* p. 17.

³ See Vol. I. pp. 339, 340.

⁴ Was the Vine hanging on the Elm, *Racemus* or *Bothrys*, M-Om crucified?

divine love; bread is the produce of the pollen, as the renewed or regenerated man is the produce of another flower, the infant man, the cupid, the pledge of love—the produce of the fruit which the female solicited the male to taste, and which he, by tasting, fecundated, at the same time that he became wise to joys hitherto unknown to him, and by which he caused the continuance of the species, regenerated for periods, *αιων των αιωνων*. The wine was the grape, the *βοτρυς*, the *racemus*, the emblem of *wisdom* or *knowledge*—the fruit of the tree of knowledge, of the elm, the first letter of the alphabet, which bore on its trunk all the tree of letters, of the vedas, in which were concealed all sacred knowledge. The two united formed the Eu Ca Ri STia or Eu X a P i Σ⁻¹ dia, the good deity *Χρης*, or Ceres: and from this the body and blood of the initiated or Gnostici arose. And, in allusion to this, Jesus is made to say, “I will drink no more of the fruit of the vine until that day that I drink it new in the kingdom of God.”² That is, I shall no more give you lessons, or join you in the search, of wisdom; no more initiate you into the divine mysteries of the *βοτρυς* or the *Racemus*, till we meet in a future life, in my Father’s kingdom; till we are all reunited to our eternal Father, absorbed into the *Το Ου*. I call this most beautiful allegory, not more mystical than Jesus’s calling Peter *a stone*, nor more equivocal in language; but no doubt it will be gall and wormwood to those who, in spite of the lessons of wisdom, continue to teach their countrymen, that God really failed to kill Moses at an inn. Fabius Pictor says, “Jani ætate nulla erat monarchia, quia mortalibus pectoribus nondum hæserat ulla regnandi cupiditas, &c. Vinum et far primus populos docuit Janus ad sacrificia: primus enim aras et pomœria et sacra docuit.” “In the time of Janus there *was no monarchy*,³ for the desire of rule had not then folded itself about the hearts of men. Janus first taught the people to sacrifice wine and bread: he first set up altars, and instituted gardens and solitary groves, wherein they used to pray; with other holy rites and ceremonies.”⁴

In every thing I observe that, the more deeply I search, the more I discover marks of the profound learning of the ancients, till I gradually mount up to the *Το Ου*.

I am told, (by persons who *believe* and who require me to believe on the most doubtful of records and evidence, that the water rose fifteen cubits above Chimborazo, and that God wrestled with Jacob, and walked in the garden,) that I have no proof of the learning of the first nation. But the proof which they require cannot, in the nature of things, be obtained. Every thing in ancient history resolves itself into probability. In scarcely any instance can a proof, or any thing of the nature of proof, be produced; probability is all that can be expected. Innumerable are the facts that we meet with which are totally unaccountable on any of the anciently received systems, but which are all rationally accounted for by the theory that I have produced, if it be true; and I beg to observe, that it is not *merely a theory*, but that it is supported by innumerable facts and circumstances dovetailing into one another. Whether its truth be probable must be left to my readers; and nearly as various as the readers will be their opinions. One thing I would ask, which is, that no one would form an opinion who has not read the whole book. But a compliance with this request is not to be expected from the generality of mankind, who will find, if they will examine themselves closely, that nine times out of ten they decide questions not from their knowledge, but from their ignorance. Nothing is more common than to hear persons saying, upon questions they have never had the means of investigating, “I do not believe such a thing, because

¹ From this the word *χαρις* might have its origin.

² Will any one say that this is not figurative?

³ Except a sacerdotal government, to be treated of hereafter—the empire of Pandæa.

⁴ Raleigh’s Hist. Par. I. p. 91.

“ I have never heard or read that it is so ;” and in this manner they set up their opinion against those who have investigated a subject, or who have heard or seen it discussed.

6. The consideration of the great length of time through which I have passed with my reader, the vast space of country over which we have travelled, and the great variety of subjects which we have discussed, or occasionally adverted to, in the course of our progress, suggest to me one or two observations, which seem to be interesting, and which I will take the liberty of offering to his consideration before I conclude this book.—In extent and complication of matter, perhaps no work has exceeded mine. To have amply discussed every subject would have required a thousand volumes ; and large as the work is, it can be considered as only a collection of the results of the lucubrations of philosophers on each subject. But this state of the case is not without its advantages. The philosophers of the world have been the industrious ants bringing in the grains of corn to be stored by me, as far as it was in my power, and placed in order in galleries for the use of the commonwealth. We have got a good store, gentle reader ; and now we will take a walk together through the galleries, and review a small part of what we have accumulated. A deep consideration of what we have seen, must, I think, satisfy any one, that an uniform system may be perceived to have pervaded the whole world, and to have come down to us from the earliest time. We must always recollect that a certain degree of uncertainty and doubt is inherent in the nature of these inquiries. If this uncertainty did not exist, with most of their interest, they would lose all their utility. We seem to be fighting against a law of Providence, which says, “ Man, thy power of vision is limited ; thou shalt not look too far either behind or before thee.” Our circle of vision, too, is narrowed not alone by Providence ; the cunning and all the evil passions of priests, and the prejudice of man, caused by his being educated by them, are leagued with his weakness to impede our progress, to embarrass our subject, and to render more doubtful, researches which, in their own nature, are sufficiently doubtful. When the priest cannot darken or throw into confusion, he burns, he forges, and he lies ; speculating, according to a theory or plan charged on the philosophers by Mr. Faber,¹ but which that gentleman appears to me to have practised himself in the case of M. Volney, and on the old proverb, that *a lie* uncontradicted for a fortnight, is as good as *a truth*. Therefore we must be content with probabilities, and not expect mathematical demonstrations.

In the foregoing disquisition, there is, upon the whole, no part so curious or so important in its results, as the *origin of languages and letters*. All the systems of the world seem to be intimately interwoven with them, or at least so connected as not to be separated. This naturally arises from the circumstance, that the systems of antiquity are only preserved in the letters of the different nations, and are only to be found in detached parts, a little in one, and a little in another.

In all the vast variety of systems or religions it appears to me, that no where is an original one to be found. All seem to be founded upon something which has preceded, and to have arisen out of it. If we consider the state of the human understanding, this seems natural ; for the mind of man is always jealous of being deceived, to a certain extent, and so far as generally to detect forgeries attempted *de novo*. We have several examples of the detection of attempts of this kind ; and I think there is reason to believe that none have succeeded. I am quite certain, that an un-

¹ “ It is said to have been a regular part of the atheistical system, on the continent, to misquote and misrepresent ancient authors ; and the honest principle of it is this : where one reader is capable of following the citer, ten will be incapable ; of those who are capable, where one takes the trouble to do it, ten will not take the trouble ; and of those who detect the falsehood, where one steps forward to expose it, ten will be silent. It may, therefore, never be detected ; and if it be detected, the voice of a single individual, when the efforts of a whole conspiracy are employed to drown it, will be heard to a very little distance.” Pag. Idol. Vol. III. p. 650.

prejudiced examination of every religion or sect will result in the conviction, that it was founded on somewhat which preceded it, and, generally, that it was got up more by fools than rogues; though I must not be understood to deny, that the fools were, in many cases, abundantly roguish. But there was, what they believed to be, truth at the bottom, which it was thought good or right to support, and in the support of which a little fraud was considered to be excusable, and, indeed, often meritorious. And under this pretext they ran into the greatest extremes of fraud. If we consider this, and admit it to be a fair representation of the case, we shall find it leads us naturally to the conclusion, that there can be no system existing which may not be traced to some other system which has preceded it; and this satisfactorily accounts for their all running back to the most remote antiquity. It follows as a necessary consequence, that they must do so; for, according to this theory, they would have been detected if they had been modern. The systems are like languages—both like the radii of a circle, diverging from a centre, as they advanced down the stream of time, but merging into a centre as we recede upwards. The origin of letters is a theory, and nothing but a theory, and so it must always remain. We have not any thing like a record of their invention; but from the discovery of the right-lined alphabets, I think a probability arises, that they have not been of an extreme antiquity. It may be doubted whether we possess sufficient data to justify a belief in their greater antiquity than two thousand years before Christ. Yet it is possible that they may have been much older. But if we admit this, I think we must suppose them to have been a magical or masonic secret.

On reconsidering the theory of the origin of letters and arithmetic, and their close connexion with the sacred numbers, and the division of the year and circle into three hundred and sixty parts, I can find nothing improbable; indeed, I can find nothing in ancient or modern times more probable than that which I have suggested; and I am quite satisfied I have proved, that all written languages had originally only one system of sixteen letters; (I speak not of the Chinese;) and the renewed reflection of each recurring day more and more serves to convince me, that it was of the nature of a masonic system, and kept a profound secret for many generations. I conceive that it was the first discovery of this secret art which gave rise to the castes of antiquity, thus making the initiated a race really superior to the remainder of mankind. We have a perfect example in Tibet of what they would be—the priests, the initiated idlers, ruling the uninitiated labourers.

The early monuments of man, in their scientific and gigantic character, every where display power and science too great to exist without letters and arithmetic, and in the unity of their character they prove that one system must have extended over the whole world. What can be more striking than the cromlechs, carns, and the circles round them, constantly used to describe the cycles and vernal festivals, equally found in India and Britain, and found also in all the intermediate countries? Had the science of letters not been a masonic secret, when the builders of Stonehenge and Abury were recording their astronomical cycles upon them in the numbers of the stones, they would have inscribed some letters upon them, as they are said to have done upon the pillars of the Siriad in later times.

What can be more striking than the universal adoration paid to the sun, in his character of Creator, Preserver, and Destroyer, or as the emblem of the Triple Deity, the Trimurti or Trinity—of Buddha, of Moses or Genesis, of Orpheus, and of Jesus of Nazareth? Is there a corner of the old world which has not been stained with the blood shed on account of this beautiful, but often-misunderstood, doctrine? The proofs are complete of its existence in the Aleim of the first verse of Genesis or Wisdom.

The doctrine of the androgynous nature of the Deity is as universal as the Trinitarian doctrine. There is no part of the old world where it is not found; and in the observations on the word

Alein, the plural feminine of the word AL, it is shewn to have existed as really with the Jews as with any other nation. All these, and many more, were the doctrines of the Cullidei or Chaldæans or Mathematici, evidently the most learned race in the world, as I have repeatedly intimated, and as I shall more satisfactorily prove.

In the Buddhist history of Wisdom, or, as we call it in Greek, Genesis, we have an account, and the first account, of the people called Chaldei. In India there are clearly found two Urs of the Chaldees, or Urianas of Collida, from either of which the Chaldei may have come. This Buddhist book expressly says, that the Brahmin who founded the Judæan state in Western Syria came from the East; therefore, if we are to believe it, they must have come from one of the two Urs which were in the East; and this is an admission of this book to which we cannot refuse our assent,—every circumstance, all history and all probability support it. And I think it must be concluded, that the Chaldei, both of the West and of Cape Comorin, were equally colonies of the Chaldei of central Asia or Upper India. And a little reflection may induce the belief, that settlements of Chaldei were also made even as far as Ireland, and the island of Columba or Iona.

In the Chaldei we have, most fortunately, preserved to us the name of these people from the most remote antiquity; so that this is not a matter entirely arising from inference. It is of the nature of a circumstantial proof of an historical fact, and its consequences are most valuable and important. It serves as a chain to connect together all the scattered scraps of ancient history, and the various detached parts of the one universal Pandean or Catholic system of religion, through all its varieties in different parts of the world: and, through all its varieties, carrying with it one generic character, that of the affectation of secrecy—a perfect Proteus, but still, at the bottom, Chaldaic and secret—mysterious to the end, even in its last dying speech in the Lodge of Antiquity, at Freemasons' Tavern, in London. I do not pretend to say I have *proved* that the art of writing was a masonic or magical secret for many generations. In the nature of the case it is not capable of *proof*, but I think this may, with great probability, be inferred. However, I shall assume that it has been proved, and in my next book I shall endeavour to shew the nature of the universal system above alluded to, and of the Pontifical dominion which the philosophers, in consequence of their possessing the knowledge of letters, acquired over the whole world; and, in the book following, a doctrine which they held will be developed—a doctrine which is now lost, or known only by effects totally unaccountable to us in consequence of our ignorance of their cause.

BOOK IV.

FEODAL OR FEUDAL TENURE.

UNIVERSAL PONTIFICAL GOVERNMENT.—RELIGION OF TIBET.—CHARTRES' STONE — THE LINGA.—ISLAND OF IONA. — FEODAL OR FEUDAL TENURE. — GAVEL-KIND. — FRANK-AL-MOIGN. — LANDS IN DEMESNE. — BURGAGE TENURE. — TENURE BY KNIGHTS' SERVICE. — ORIGIN OF MONKS AND NUNS.— LAND TAX OF INDIA.—THE SCYTHIANS.—THE ARABIANS.—MYTHIC DIVISIONS OF COUNTRIES, WITH THEIR OFFICERS. —TRADE, CRAFT, RAS OR CASTE.—CATHEDRALS, &c., WERE DRUIDICAL, THEN ROMAN, TEMPLES.—INGS LANDS.—ALLODIAL LANDS.—HISTORY OF THE ISLAND OF ii, OR IONA OR ICOLMKILL.—CEYLON.—CAL, —VITRIFIED FORTS OF SCOTLAND.—MYSTERY, WITTENAGEMOTE.—THE SCANDINAVIANS.—GERMAN ROS-SICRUCIANS. — DI-OM, D'OM, DOMUS, OM. — CERES, BETHLEHEM. — CHIVALRV. — SEA KINGS, RUNES.— GOLDEN AGE.

1. THE object of the two following books of my work will be to shew, that in very ancient times, of which we have scarcely any notice, a very powerful *pontifical government* extended its sway over the whole world; that it was learned as well as powerful; and that it must have been the author of the ancient Druidical works every where to be met with, and was probably the empire designated in the Indian books by the name of Pandea. I suppose this was an empire of Saca or Buddha; that it was first established to the north of India; and that it extended itself by sending out tribes or colonies under the command of its own order, which, availing itself of its superior intelligence, easily conquered the Aborigines, (who were a people, as I shall shew, that had escaped from a flood,) and established every where its dominion. I shall shew that the Supreme Pontiff was, in some respects, similar to the Lama of Tibet and the Pope—supposed to be a Vicramaditya or Vicar of God, and probably thought to be a divine incarnation of the Trimurti of India, or Trinity. I shall shew, that there were several floods, and point out, probably, the times when three of them happened, and that they were caused by a comet in its several returns.

2. No person has turned his mind to the consideration of the religion of Tibet, which is the only country in which we have the Buddhist religion in any thing like its original purity, who has not expressed his surprise at the wonderful similarity between its religion and that of Rome. But if we divest our minds of prejudice we shall see that they are, in fact, precisely the same, only disguised by our sectarian nonsense. Jesus Christ was supposed to be the *ninth* Avatar, (as they had the ninth Avatar in the East,) with the expectation of the *tenth*, till the failure of the millenium destroyed it; but a remnant of it remains among some persons, such as the followers of Brothers and Southcott, and Faber, Irving, &c., who expect a re-incarnation of Jesus Christ.

The Dalecarlians of Sweden have a dialect of their own, which is considered to be a relict of the Gothic, the Anglo-Saxon, and the Irish languages, with which it has a great similarity. Holsenius says the same analogy exists, with many other languages, such as English, Greek, Spanish, and Italian; and Dr. Thomson, who travelled in Sweden, tells us, that a Dalecarlian who spoke this dialect, being landed near Aberdeen, was understood by the inhabitants. The Swede was under-

stood because his language was the Celtic Hebrew—the parent of all the languages in a state almost primeval. Every where, when we go back to the most remote times, one language seems to have prevailed, and that, the Celtic-Scythic-Saxon-Hebrew; for, in those very early times, they were one. I also beg leave to draw my reader's attention to the fact, that the name of the crucified *Ii*, by which the Scotch island is called, which is precisely the name of Jehovah in the Targums, who was believed to be incarnate and to appear in the person of the crucified Jesus Christ, is also the name of the incarnate Bal or Lord *Ii*, who was the crucified God of the temple of Tripetty, on the promontory not far from Ceylon. It was in the country where we find this God, that we found some persons calling the language Chaldean, and all calling it Pushto or Pushpa, the name of the Syrian tongue; and here it was that we found the story of St. Thomas and the Crestans, and all the mythos of Moses, &c., as described by the Jesuits, and also the story of Robertus de Nobilibus turning Brahmin.

3. It cannot well be doubted that the stone at Chartres is precisely the same as the *Linga* in the cave at Bhobanéser, in the Carnatic, forty feet long, as described by Stirling in the Asiatic Researches.¹ In the dialogue between Justin and Trypho is the following passage: "For Christ is said to be a King and Priest, and God, and Lord, and Angel, and Man, and Captain of the Host, and *STONE*."² Now, if the stone here do not refer to the stone in the crypts of the temples and Christian churches, I should be happy to be informed to what it does allude. The equivoque of the *stone* and *Peter* evidently refers to the same thing. Trypho is made to say, "Suppose it be true that Christ was to be called a stone." This alludes to the Stone, *Linga* or *Logos*.

I understand Duchesne was one of the most celebrated antiquarians of France, and now ranks with our Selden. The following particulars were given me by my friend Robert Hannay, Esq.—*CHARTRES, its Antiquity*.³ "Cette ville est l'une des plus antiques, non de l'Europe, mais de toute la Terre. Les Gomerites envoyés pour peupler la Gaule Celtique, en jettèrent les premiers fondemens du temps de Noé, ce second père et ancêtre de la race des hommes, sous la conduite du grand Samothès.—Aujourd'hui la ville de Chartres se glorifie de son Eglise Cathédrale comme du plus ancien temple de la Chrétienté.—Avant que Cæsar l'eût assujettie à la grandeur de l'Empire, par tant de diverses guerres, les Seigneurs et Roitelets qui eurent la reserve de son gouvernement avoient puisé quelque créance dans la doctrine des Druides que d'une Vierge devoit naître au monde le Rédempteur des humains. Créance qui occasionna le gouverneur Priscus de la faire tirer et figurer embrassant un petit enfant, lui donner rang parmi les statues des ses Dieux et lui offrir des sacrifices." Here Duchesne recounts a miracle which occasioned the building of a temple to the Virgin: "Miracle qui l'emporta aisément avec Priscus au bâtiment d'un temple à l'honneur de cette Vierge laquelle n'avoit encore vu la lumière du Soleil, et qui ne la vit de plusieurs centaines d'ans après.—St. Pierre, chef des Apôtres, délégua les bien-heureux saints Savinian et Potentian en la Gaule, les quels s'étant arrêtés à Chartres, trouvèrent que ce peuple honoroit déjà la mémoire de la Vierge, qui devoit nous produire le Fils de Dieu, et que pour relever davantage son honneur et sa gloire ils lui avoient superbement bâti ce temple. C'est pour quoi ils imprimèrent aisément le caractère de la croyance Chrétienne sur ces tendres âmes et consacrant leur temple au nom de la sacrée Mère." He then, among other matters, observes, that the church had seventy-two Chanoines.

After the above, Mr. Hannay gives me the following curious history, and I think few persons will doubt that we have here, in the capital of the ancient *CARNUTES* of Gaul, a repetition of the

² Sect. xxxvi. Ed. Brown, p. 146.

³ Extracted from *Les Antiquitez et Recherches des Villes, &c.*, par André Duchesne, 1609, pp. 292, 294—296.

Linga worship of Buddha, and of Delphi, and of Jerusalem, named in the Appendix to my first volume. I request attention particularly to what I have said respecting the Carnutes and the Carn in Vol. I. p. 835, and to the Virgo Paritura, in the extract of Duchesne.

“Of the various histories of the Cathedral of Chartres not one have I been able to find in the British Museum, otherwise my notes on its Druidical remains might have been much extended. In the absence of authority allow me to offer my own evidence in proof of a very ancient and singular relict of the Druidical religion still extant there. In 1825, I spent some days at Chartres, when there happened a festival of that church. On Sunday the cathedral was crowded with the people of that city and its neighbourhood. At the close of the service I observed that no one left the church without kneeling and making a short prayer before a small pillar or stone, for it was without polish, base or capital, placed in a niche, and much worn on one side by the kisses of the devout; after prayer each embracing the stone and imprinting with reverence a kiss upon its left side. Curious to know something of this strange ceremony, I inquired of an official of the cathedral, who informed me, that this stone was of high antiquity, even earlier than the establishment of Christianity—that for many centuries it had remained in a crypt of the cathedral, where lamps were kept constantly burning; but the stairs leading to this vault having been worn away by the great resort of pilgrims to this sacred spot, to spare the expense of repairs and avoid the accidents frequent in descending, the stone had been removed some time ago from its original site to where it now stands in the cathedral above. Upon further inquiry into the motives for this singular adoration, I was assured that this was no common stone, but a miraculous stone, and that its miracles were performed by its intercession with the Virgin Mary.

“ROBERT HANNAY.”

I need not repeat that Delphi means *the navel*, and that it was called the centre and navel of the earth. In that temple there was a stone pillar to which the priests paid the most profound respect.¹ How can we doubt that here there were the same pillar and navel of the earth as we found at Jerusalem, Chartres, &c.? As we find the Lingas both in the temples at Jerusalem and Chartres were in vaults, so we find the Linga of the Rajahs of *Kesari* at the temple of Bhaskar-esar, or Bhobanéser, Maha-deo, is placed in a “subterranean vault” as far as possible; but, from its immense size, it projects out to a great height.² In the adoration of the Linga we have a very remarkable example of the diffusion of this religion—in the Kara-corums or stone circles and lingas or pillars. We have it first in Tartary, probably its birthplace; then we have it described at Bhobanéser in Orissa,³ in the Carnatic, in the Lingas and the name of the country; we next have it in the Gordyæan mountains; next in Carnac, in Egypt; next in Troy, with its Mount Gargarus, its stone circle and palladium, or sacred stone; next in the Temple of Jerusalem, as described by Nicephorus Calistus, with its stone pillar concealed in the cellar;⁴ next in Rome, with its Etruscan Agrimensorism; next in Chartres, the capital of the Carnutes, the exact picture of that described by Nicephorus Calistus; next in Choir Gaure or Stonehenge; and lastly, in the Linga and Yoni and Kara-corum of Scotland, with its sacred stone from Scone. To these must be added the fire towers of Ireland, Scotland, and, indeed, many other of the fire towers, as they are

¹ Paus. Bœotic. 25; Const. Vol. II. p. 343.

² Asiat. Res. Vol. XV. p. 311.

³ Ibid. Vol. XV. p. 306. Bhobanéser is also called Bhuvanésvara, and also Ekam-rakanuna, or Ekamra, or Ekamber. I have no doubt this was, as the city of the Linga, the city of the generative principle, the city of הכח *hkm*, the God of Wisdom.

⁴ See Vol. I. p. 832.

nonsensically called, in many parts of Europe, and also the towers of India, of the Callidei, or Culdees, or Cala-Desa, which are almost exact pictures of those in Ireland. In some instances, where they are very large, iron bearers, of a size almost beyond credibility, have been used; as for example, at the ancient desecrated temple of Jaggernaut. "But, in general, the architects have resorted, in the construction of their roofs, to the method of laying horizontal layers of stone, projecting one beyond the other like inverted steps, until the sides approach sufficiently near at the summit to admit of other blocks being laid across."¹ This, which is the most ancient mode of covering now remaining in the world, is precisely the same in the towers of Ireland and India. Not far from the famous Jaggernaut is the village of Kanarak: this is evidently the same name as the Carnac of the Carnutes in the West. It is called the Arka. Here was a famous temple of the sun. It was in the same style of building as those described above, and it tends to confirm what I have formerly said of the mystic use of the loadstone, that its roof, formed of overhanging stones, is capped with a large LOADSTONE; and in order to support such an enormous mass, bearers of beaten iron, which are yet remaining twenty-one feet in length and eight inches square, have been used. The stones of the roof have been fifteen or sixteen feet long, six feet deep, and two or three feet thick.² These stones must have been raised nearly two hundred feet high. The building is formed into a cross by its two magnificent porches. Each side, we are told,³ is sixty feet long. This would be, in feet of Cairo or of antiquity, at 8,7552 inches to the foot, about seventy-five feet. But when I consider the careless mode in which our travellers often make their measurements, I cannot help suspecting it has been seventy-two feet. It must have been a difficult matter correctly to ascertain the length of such a mass of ruins, amidst the jungle, the tigers, and the snakes. My friend, Professor Haughton, very nearly lost his life in attempting to penetrate to them through the jungle. In the front of the building stands a most beautiful pillar of one stone,⁴ which cannot fail to remind a spectator of the pillars in front of the churches in Rome, particularly that in front of Maria Maggiore, for the location of which no satisfactory reason can be, or at least ever is, given. The Indians call these stones Jaya Stambhas or Pillars of Victory. But I believe their name has descended from a very remote antiquity, when they were called, in the language of the Chaldeans or Callidei or Culdees, Pillars of יהוה *ieue* or יהוה *ieie*, the Self-existent God, commonly called in the Bible, the God of Sabaoth, of Armies, of Hosts, and of VICTORY. Jagannath is saluted with cries of—Jye Jagannath, which they say means Victory to Jagannath; but it is evident that this is the Hebrew יהוה *ie* or *ie*, always called the God of victory; and in both cases it really means, God the Creator, or the God of Wisdom, or Wisdom of the great IÆ or Creator. But it had probably both meanings, one private, the other public. The ancient Hindoo bridges, built of *overhanging* instead of *radiated* stones, are very common in South India.⁵ A history is to be found in Persia, evidently similar, though we have only a part of it. Benj. Constant⁶ says, "Lors de la destruction de Persépolis par les Mohamédans, on découvrit dans les *fondements* d'un des principaux temples de cette ville, une pierre précieuse appelée "Tutya, qui n'existe qu'aux Indes, sans que rien indiquât comment elle avait pu y être apportée." I think, after reading the accounts of the stone in the crypt or vault in the Carnatic, at Jerusalem, and in the capital of the Carnutes, no one will deny that there is a high probability that all these were for the same purpose, viz. to conceal the Cabalistic doctrines of the first chapter of John,—the adoration of the Logos, the Linga, or the Honover, as the Logos was called in Persia.⁷

4. We will now pause a little, and reconsider a few of the circumstances connected with the island of Iona. Artimodorus says, that there was an island, near to Britain, where sacrifices were offered to Ceres and Proserpine, the same as in Samothrace. We have seen how Ceres or Cres is identified with both Bacchus and Apollo, and it may be recollected how a sacred hyperborean island is said to have adored Apollo. It may also be recollected how we found in the East, close to Ceylon, on the promontory, the adoration of the crucified God, the $\chi\rho\eta\varsigma$, and the Callidei or Cullidi or Culdees, with their three Sacraments—of orders, baptism, and the eucharist—and also the Christians of St. Thomas. Let it also be recollected, that Diodorus tells us, Apollo was adored with dances, and that in this island the God danced all night. Now, from the Phœnician Ireland, of Mr. Henry O'Brien, (p. 227,) I learn, that the Christians of St. Thomas, till a very late day, celebrated their Christian worship with dances and songs. It may be recollected, that we have all these matters repeated at Delphi, where Dr. Clarke found the tablet with the $\chi\rho\eta\varsigma$. The reader must recollect the Linga and Nabhi in the cave at Bhobanéser—the Linga in the ancient temple of Jerusalem—in the cave at New Grange, in Ireland,¹ and at Delphi, and with the Carnutes of Gaul, whose monstrous temple was Carnac, and that this eastern country is called Carnate and Carnatic, that the languages of these countries were called Gael and Sin-gall and Sanscrit. He must recollect also the Camasene in India, Cape Coma-rin and Italy, and, what *we* have almost lost sight of, the April-fool and May-day festivals equally celebrated in Britain and India. The heathen custom of celebrating the rites of Thomas with singing and DANCING is, in fact, of itself, almost enough to prove the Thomas to be Tamuz, without the proofs which I have given in the first volume. But, as Mr. Baber² and our travellers give us no account of this dancing, it appears to have been suppressed since the arrival of the Protestants: hence we see how much more effective our Protestant missions are than those of the Papists, to suppress all the truths which may be of any real service to discover the nature of ancient history.

5. Perhaps among the circumstances which tend to shew the ancient connexion between the Eastern and Western nations, and to support my theory, that 'an universal sacerdotal empire extended its sway over the old world, there is not one more curious and striking than the existence, in the most widely separated parts, of the same artificial mode of occupying land, called in this country the Feodal or Feudal Tenure or system. This system is found equally in Britain and India. I apprehend it was first brought to the West from the latter, in very remote times, by a tribe of the followers of Xaca,—that is, by the Sacæ or Saxons. As the system is found both in Gaul and Scandinavia, it may have come hither by way of the former, or of the latter country. Every one knows that after the time of the Romans, in, comparatively speaking, a recent period, tribes of Saxons came to this country from the latter, but originally they came to both from Asia. Richardson truly says, "the feudal system in Europe is an exotic plant, but in the East it is indigenous, universal, and immemorial. In India, Persia, Tartary, and other Eastern countries, the whole detail of government, from the most ancient accounts down to the present hour, can hardly be defined by any other description than feudal." D'An-carville says, "Asia was then a fief depending on Scythia: it was the first governed by this kind of constitution, and here may be discovered the origin of the FEUDAL SYSTEM, brought into Europe by these very Sacæ."³ The system of feodal tenure supposes the natural state to be a state of rest—of peace—rest and peace to be the rule, and war the exception; and the granting of Jagheers or military fiefs—creating tenants by knights' service, is perfectly consistent with this.⁴ It is curious to observe the principles of

¹ Vide O'Brien, p. 320.

² See Vol. I. p. 668.

³ Vall. Coll. Hib. Vol. V. pp. 33, 228, 317.

⁴ The Jagheer is said to have been a Mohamedan institution; Patton on Principles of Asiat. Mon. p. 203; but this

the feudal system admitted to be lost equally in India and Europe, and the lawyers in each of these countries to be in perpetual strife about them, yet making out nothing satisfactory at last. Before letters, livery of seizin was the practice. When we look to the great countries of Asia we find every where immense military fiefs, or fiefs partly military and partly hierarchical; we generally, I think, see the priests grow into kings: in some we see the seat of the priest occupied by the general, who, having forced the priest to give him the unction or *χειροτονια*, thus becomes *sacred majesty*. In Europe we see the system falling to pieces in different ways—the municipia growing into free states—some more, some less assimilated to the despotisms of Asia. In France and Germany, principalities arose,—in Italy and Greece, republics. Mr. Patton, who is the most sensible writer I have ever met with on these subjects, observes, “The circumstance of land being *common* or the property of the society, and never possessed by individuals among the *pastoral tribes*, which has been so frequently pressed upon the attention of the reader, seems to offer a natural explanation of the rise and progress of the Asiatic constitution of monarchical government, which is uniformly and unalterably despotic. These peculiarities have been shewn to depend upon the absolute property of the land being vested in the sovereign, which precludes the rivalship of power through the means of great land-proprietors, who cannot possibly exist under such circumstances. But how this absolute property, of all the land of the state, came originally to be vested in the monarch or sovereign, *is the question which it is so difficult to answer*. If we suppose the pastoral state of society to have universally preceded the agricultural state in Asia, a supposition not void of historical support, a very obvious explanation seems to result from it. Among all pastoral tribes, the monarchical form of government is prevalent: the chief is the representative of the public, and, in time of war, is absolute. The first and earliest transition from the pastoral to the *agricultural* state of society, must always remain a subject for conjecture.”¹ Notwithstanding the multitude of writers of great eminence, both Jurists, like Spelman, and antiquarian philosophers, like Montesquieu, Dr. Stuart, &c., who have written respecting the origin of feudal tenures or fiefs,² it cannot be denied, that they have all failed to give a satisfactory explanation of it. It cannot be denied that something is still wanting.³ I flatter myself my theory will supply it. Mr. Patton observes, that Bernier, Manuchi, Thevenot, Chardin, Tavernier, all with one consent assert, that there was no private landed property in India—that the emperor was sole proprietor of all the lands within his empire.⁴ In China, the same appears to have been the case, and only a tenth of the produce was taken;⁵ and in Persia or Iran the same.⁶ And, again, the same in Siam or the Burman empire,⁷ which, in the laws of Menu, is called Dhasa-meda. The Dhasa, is the Latin *decima*, and the Meda the Latin *modius* or *measure*, and the whole the *tenth measure* of the grain or other produce. Of the word feoud or feod or feud, I have not seen and cannot give any satisfactory explanation. But if the tribes of Ioudi and the Sacæ were the same, I suggest for consideration whether *feudal tenure* may not be lands in the tenure of Pi-Ioudi, THE Ioudi. And in favour of this is the circumstance, that the part of the country whence the Ioudi came, namely, the Mesopotamia formed by the Indus and Ganges, is precisely the country where the Feodal system retains its greatest vigour at this day. Vallancey says, in old Irish Faoi-ud means, one under

I can scarcely believe. The word Jagheer seems old: *גג gr יא ia*, literally, country within a circular inclosure, a district, as districts in Ceylon and Germany were called *Circles*.

⁷ Ib. p. 264.

covenant,¹ and Feudal tenure, in Irish, is *Achusac*, in Arabic, Akhezet. This must be the Hebrew *חזק* *ahz*, possedit, obtinuit,² and the Acherah of the Mohamedans, that is, the payment of the tithe. In Irish *Achusac* also means *possessio*, and *Sean-achas* was a judge of a feudal code. I do not much doubt, that the Sean-ach became Senate. The first redditio was of the tenth of the produce, as the word *asera* implies, and this was paid to the patriarch at the head of the pontifical government, or his assigns, by nearly the whole world. The word Feud or Feudal is a generic term as applied to the occupation of land, of which there are several species. The first I shall notice is called *Soccage* and Free *Soccage*, which Blackstone says has been thought to be derived from the Saxon *Soc*, a *plough*;³ but he thinks better, from *Soc*, liberty, privilege. However, I think it was from *Xaca* or *Saca*. It was the land of *Saca*, for which only the service of the plough or an agricultural return was required by the priests,⁴ in opposition to the knights' service, for which, services of war or services which infringed upon personal liberty, were required by the military governors. The former were the lands of *Xaca*, *Saca*, *Saga*, *Sagax*, of Wisdom.⁵ *Socage* or *Soccage* has been defined to be a determinate service, the render for which was precarious, unlimited, and uncertain. This was certainly its nature; but it was not from this that it had its name. I believe that *originally* *soccage* estates descended to all the children: but certainly, in Henry the Third's time, primogeniture in *soccage* lands came to prevail very generally. There were *Soc-manni* and *Boc-manni*. The first were Seculars—the second the Regulars, the Moines or Monks or Book-men. The *mannus* was descriptive of the order of Menu, or sacred or secret order—from the secret writing. The *Soc* and the *Boc* describe the division of the caste into *first* functionaries, and *second* those whence the functionaries were taken, into first, Regulars, i. e. *Boc-manni*, initiati or ordered; and second, Seculars, not regulated, not ordered. The word initiated marks the distinction. In order to separate and know themselves, they initiated or circumcised themselves: this was the secret, i. e. sacred rite. Is not sacred, *Soc* or *Sac-rid*, *to be-rid*, quit of—free from the rule of monks, as well as free from the rule of military service?

When Joseph was the prime minister of Egypt, it is clear that, whether his history be taken figuratively or literally,⁶ a state of feudal tenure was established by him; the state of society described is exactly that which existed in India and Europe, after the sword divided from the crosier, and was beginning to prevail over it. (In the first ages of the tribe of the Jews the crosier alone prevailed.) This was the independent, or partly independent, state of the king at Thebes or Memphis, about the time when the priest at Philoe had power at his pleasure to order him to commit suicide.⁷ The king was not of the description of our officers bearing that title. He was only the general in chief of the sacerdotal forces. We must recollect that the Rev. Robert Taylor has proved, in his *Diagnosis*, that all the different degrees and orders of priesthood, or of the Christian hierarchy, formerly existed in Egypt.⁸ This premised, I suggest that Free

¹ Vall. Coll. Hib. Vol. V. p. 229.

² Ibid. 229, 265.

³ Blackstone's Com. B. ii. Ch. vi.

⁴ After the sword had divided from the crosier, or the two castes of soldiers and priests, the origin of which I shall explain by and by, had arisen.

⁵ The *Sacæ* are called *Sagæ*, Vall. Coll. Hib. Vol. V. p. 34; hence come *sacrum*, *sacrificium*, *sacerdos*. The Romans had a priest called *Sagart*, from the word *Sag*. There could be no sacrifice without this officer. From this word Cleland says came the *Sac-erdos*. Cleland's Spec. p. 22.

⁶ *Literally* as I would fain flatter myself, at least in great part, for I cannot part with the beautiful story without much regret. If it be not meant to be literal, it must be of the same nature as the *Cyropædia*. It contains, in the latter case, a parable, to inculcate some very fine moral doctrine, which, whether true or false, it teaches.

⁷ This is the exact case of the Grand Seignior and his Pashas at this day.

⁸ See *supra*, p. 71.

Socage is the Socage in Egypt of $\Phi\eta\eta$, פרה, *pre* or *Phre*¹ or of Pharaoh, or of the Solar deity; and, in the North, of the Scandinavian Freisia, and the Swedish Frij. The occupiers of the lands of the priests, when the crosier divided from the sword, held of the God Phre, and thus were free-men or men of the God Free, and exempt from military service. Thus, probably, arose the words *free* and *free-men*. They were men or tenants of the God Liber—of Liber-tas, or Liber-ty, (Liber-di, or God or *holy* Liber,) because the God Free or $\Phi\eta\eta$ was Bacchus, and because Bacchus was called Liber. From his close connexion with the tree of knowledge and letters, he came to be called by the name of liber, *a book*; from a similar cause the bark of a tree, on which the letters were written, was called liber, all which I have before shewn at great length, *supra*, pp. 163, 164. In the *state* of the world which I now contemplate, the present *state*, in fact, of Tibet, the Priests were the Lords of the creation. Their tenants, paying only *a tenth* of the produce as rent, must have been in a very easy and comfortable state. Here is one of the reasons of the state of freemen, so much envied. Those are the *Liberi-Sokemanni*.² (We must not forget, and I shall presently resume the discussion of the mythological meaning which I have shewn that the north country word *mannus* or *man* always had, and its connexion with the Om or Hom of India and Persia.) They were the men or manni of Liber or Soke or Saca. They were said to be in FREE soccage for the reasons just now assigned, and they were in a later day said to be in COMMON soccage, because the priests of whom they held, having become monks, possessed every thing, and yet possess it in Tibet in COMMON, in community. They held of the community. From Blackstone's expression it is evident, that he considered the word *soc* to have the same meaning as *liber*, and he calls it *free*. This all arises from the application of Liber not being known.

6. I believe what Glanville says is true, that all lands held in free soccage were held in Gavel-kind:³ “Si vero fuerit liber Socmannus, tam quidem dividetur hæreditas inter omnes filios quot-que sunt per partes æquales; si fuerit Soccagium ut id antiquitus divisum.” The *natural* process is for a man to divide his property among his children; the artificial is, by knights' service, to give it all to the eldest. I think the term Gavel-kind is formed from the British Gafaelu tenere or Gafael tenuta, and the word kind-red. The land was held by right of kindred, and not by grant from the Lord or King or Soldier; in return for which, service of war was rendered. It was held of the Priest, who did not care how it went, so that he got his vectigal. From this it would come to pass, in many cases, perhaps in all, that the occupiers of lands would do suit and service to one lord and pay tithe to another. Gavel-kind land did not escheat in case of the felony of its occupier. It was Folkland and Allodial, which terms I shall explain presently. It did not escheat, because it was not the property in any sense of the occupier. But it would escheat for the felony of the person of whom the occupier held it; in such a case, however, the occupier would not necessarily be disturbed, as our farmers are not disturbed for the treason of their landlord. They pay their rents to the new landlord. If they have leases the landlord's treason does not affect the rights granted by their leases. The nature of the general tenure of land in ancient times is perhaps no where better exhibited than in the grant of land made by Xenophon to Diana. He gave up to her the land, reserving to himself the cultivation and enjoyment of it, but this, subject to the payment of a tenth of the produce to her. Here she was Lady of the soil, for the use of

¹ I have formerly shewn that the word *Phre* denoted the God of Wisdom, in numerals, that is, in ciphers; *supra*, p. 209.

² Blackstone, B. ii. Ch. vi. *Liberi* and *Soc-manni* both have the same meaning: *Liberi-Socmanni* is a pleonasm, very common in language, arising from the terms not being understood.

³ The Gavel-kind tenure of Kent (Cantia, Qy. of Kanya, or *in* of *Cuni—Bel?*) Ran. Glanville de Leg. Ang. Lib. vii. Cap. iii. p. 49.

which she retained the tenth. The land in like manner was THE LORD'S in Palestine; but for him the Levites received the tenths. Niebuhr says, "So a tenth is the portion the state seems in general to have levied on corn, as the Roman republic did whenever it exercised its right of ownership."¹ Gilbert Burnet, in his history of the rights of princes, p. 115, has shewn that in the time of Clotaire the kings of France received the tithes or tenths, and that after they had given them up to the church, they took the tenth of the remainder, (if I understand him,) which was called the ninth. This, combined with the power of excommunication possessed by Charlemagne, seems to shew that the kings of France had some claims independent of the Popes, not now understood; and this is strengthened by the history of the disputes respecting the freedom of the Gallican church, which has always been involved in great difficulties. Sir Thomas Munro says, "among the *only* Hindoo chiefs unsubdued by the Mohamedans, the Rajas of Ceylon, Travancore, Cochin, and Coorg, the land-tax is still but ten per cent."² Mr. Cleland, without having the least suspicion of my theory, or that there ever was an universal system, has maintained there are proofs that, in very ancient times, almost all the lands in Europe belonged to the order of the Druids or Priests. I need not point out how this supports my theory. How the state of the world which I shall now describe arose, I shall endeavour hereafter to shew, but I believe that, in very early times the priest and king were the same, and that all the land belonged to the former. He was *jure divino* proprietor of the soil, and received from the cultivators, to whom he granted it, one tenth or the tithe of the produce for the use of it. The cultivators or Grantees answered to what in India are now called Ryots, and, in process of time, collectors were appointed who answered to the present Zemindars, who, at first, collected for the priests, and at last ended in renting the tithes of districts. The King-priest possessed the soil of the land, was Lord of the soil, as vicegerent of God. This was before the sword divided from the crosier; perhaps at the time now spoken of the sword was scarcely known. This might be the Golden Age of the Poets. The theory was, that the whole world belonged by divine right to the person who escaped from a great flood, who is called in the books of the Jews *Noah*, that he divided it or enfeoffed it to his three sons, and they to their children. And in subservience to this system, whether founded in truth or not, the monarchs of the East deduce their pedigrees from one of his three sons. This system I shall unfold in my next book.

7. The next tenure I shall notice is that of Frank-al-Moign. When two classes of priests arose, namely, the Seculars and Regulars, the lands in Frank-al-Moign were the lands held of the latter—held of the monks—les moines, or al-manni, both still being lands of Frank or Liber. The Seculars had that name from the Soc or Sac, both of which had the meaning of *αιωνος*. All priests were originally Seculars: the word Frank-al-Moign arose in time to distinguish the tenure of the Monks, the Regulars, from the tenure of the Seculars. The whole land was originally the property of the priests, as vicegerents of the Divine Power, Vicars of God, as the Pope claims to be the possessor of all lands, and claims the tithes of them as his tribute. They were Vicar-manni, which probably became corrupted, when its meaning was lost, into Vicrama, and Vicrama-ditya, perhaps Vicar-om-Manni. From the Priests the Soc-manni just named held their lands; and to them only were they amenable or liable in any way to account for their conduct; and they had their own tribunals. When in later times the right of the Pontiff was lost sight of and great conquerors gave away extensive districts to their followers or feudal Barons, in the interior of which lands occupied by the priests were of course included, the Barons claimed from the priest a service tribute or acknowledgment of superiority; but whenever this was granted, it was done

¹ Niebuhr, Vol. II. p. 136.

² Briggs, p. 400.

through fear, and a mental or verbal reservation of the rights of the church was always annexed to it; and as the extent of these rights was unknown, the claim, which in no case was ever given up, was a source of the most violent animosity. In consequence of this, in later times, an unceasing strife for power always existed between the Barons and the Priests; the priests by the terrors of purgatory generally at last prevailing. The Franks were first heard of on the Rhine as Ale-manni. The word Frank means *free*, and is probably a corruption of the word Φρη or Free—Liberi Sacæ. It was the religious name of the tribe, and in fact Saxons, as all the tribes probably were. Φρη and Freyas were arithmetical names of the same cycle, in its different stages of improvement, 666 and 608. From the word פּרַע *pro* Parkhurst derives the words Frank and Franchise, and the Franks, (who had a king or dynasty called *Pharamond*,) which tends to confirm what I have said. From this root may come our word Freehold, that is, land held of the God ΦPH. Our Freeholds are all held of a superior; in theory they all have suit and service to perform to the liege Lord, Priest or King, whichever it may be; that is, Khan or Pri-est, or Φρη-est, meaning *the real priest*. The word *est* is here a mere intensitive—the very Φρη. La Loubère¹ says, in the Siam language, Sion, that is, *Sun*, means *free*. On this account *the natives maintain that they have the same name as the Franks*. Their Pra means Creator; this is the Φρη of the Coptic and Greek. But Pra and Bra in the Siamese language are the same, and mean God; and here we come to the origin of the word in the numeral language—Φρ, and Φρη=600 and 608.

When, as I have lately said, the kings (as our William the Conqueror for instance) granted out large tracts to their generals, the latter claimed supremacy over the whole district; but they could not succeed against the priestly monks, who always denied the power of the kings to dispose, even by conquest, of the property of the church. But a struggle took place, whence arose the lay appropriations, in which the soldiers or laymen succeeded. When scruples of conscience and a refusal of absolution compelled the laymen to leave the patronage of the churches to the monks, the monks did not, until restrained by statutes, appoint rectors, but only curates or vicars keeping the tithes, which they claimed as the right of the order, to themselves. It is probable that the mode by which the orders of monks and seculars, after the Roman times, after having been divided, became united into one, was soon unknown to themselves. All we know is, that for a great number of years there was every where a marked separation of the two orders, and that there were perpetual divisions and disputes. Rapin says, the Franci and Saxons were the same, and he quotes Sir William Temple as authority;² and, the languages of the northern tribes were so near, that *they could all understand one another*, and that, as might be expected, their laws were all the same.³ I need not point out how this tends to confirm the whole of my system. The five dialects of the British Celts are become so changed, that the different tribes are now, in general, no longer intelligible to one another; that is, with the exception of some of the inhabitants of the most remote and secluded places. D'Ancarville undertakes to prove, "that the mythology of the Egyptians, Brahmins, Chinese, Japanese, and all other oriental nations, had that of the Sacæ as their basis".⁴ In his fifth volume of the *Collectanea*, Vallancey has given many striking proofs of the identity of the eastern and ancient Hibernian customs, which confirm D'Ancarville. "Franci et Saxones apud antiquos Socii et Amici, donec in diversas partes traheret imperii libido." Again, "Saxonum et Francorum nomen commune videtur aliquandiu fuisse gentibus, quemadmodum adhuc nostra ætate in orientis partibus universæ Europæ gentes dicuntur Franci."⁵ I feel no doubt that the Franks and Saxons were the same race of people. Perhaps the Franks

¹ Pp. 6, 7.² Vol. I. p. 207.³ Vol. II. p. 138.⁴ Vall. Coll. Hib. Vol. V. p. 35.⁵ Themis Ambrica Petri Frid. Arpi, pp. 244, 246.

might be a tribe of the Sacæ, as the Macdonalds are a tribe of the Scotch. But still the one were Sacæ and the other are Scotch. Thus the Franks were Saxons. In a very early age I think they may be found in Italy. Italy had its name from Vitulus a Bull, and every one knows the story of its Saturnalia; it was the country of Saturn; but the Saturnalia were festivals of Saca. Selden says,¹ “Sesach Numen est apud Jeremiam ab eo (sic volunt viri doctissimi) “Sacea, festum Babyloniorum, dicta, seu *ἡμέρας Σακεας*, uti apud Romanos Saturnalia à Saturno. “Atque ut Saturnalibus, servis epulantibus famulabantur domini, ita et in diebus Saceis; qui “quinque erant continui.” When we recollect the striking manner in which the Saturn-ja is found in North India, (see Tod’s map of Rajast’han, the country of the Sacæ or Buddas,) and the similarity of his Sacæa to the Saturnalia of Babylon and Italy, and we consider what Jeremiah has said respecting the king Sheshach, we cannot doubt, as I formerly remarked, that Shesach was the Scythian king, and that the followers of Saturn and the Palestini were Saxons.² But from Herodotus we know that the Saxons and Scythians were the same; and in my Celtic Druids I have shewn that the Celtæ were both Scythians and Galli or Gauls: but I shall discuss this, which is very important, by and by, when I again treat of the Scotch island of Iona. The persons who held lands in Frank-al-moign would have no grants, charters, or other title-deeds, to shew for them, as their owners were by descent successors of the first appropriators or possessors; and, in consequence of this defect of title, they were often exposed to the demands of the Barons; who, when their consciences would not let them dispute the right of the church to the seignorage or lord-paramountship, called upon the monks to prove their right to the usufruct of particular parcels as individuals or separate bodies by the exhibition of some title; and as the modern principle, that no title-deed, or immemorial possession, is the *best* title, was not established, they were obliged to have recourse to a measure which neither is nor can be denied, viz. a general forging of grants and charters. This was a trick easy enough to the liberi, Boc-manni—book men, impossible to be detected by the Barons, probably not one in a thousand of whom could read. I have spoken of the Moines or Manni as the same. We have seen the derivation of Homo for man or vir. I apprehend this was originally the name only of the Monks; they were the Manni Om, the first word in regimine. Whenever the word Mannus is found, it seems always to have a relation to something mystical, to the secret or mysterious doctrines. The Om-manni does not seem very unlike the Moines.

8. It is an important circumstance, that the Saxon kings claimed to have all the lands of their kingdom in demesne.³ This is precisely the Indian system; and in the claim of the fee or the soil, and the edict giving the tithes to the church, a compromise seems to have taken place between the sword and the crosier. The statute of Ethelred, which gave the tithes to the priests, was, in fact, nothing but a declaratory statute. I perfectly agree with Cleland, who says, “The result of “my researches has been, that the feudal system is at this moment very little understood. Most “of the writers whom I have seen upon that subject, have mistaken the monstrous deprivation of “that system, for the system itself.”⁴

9. Burgage tenure is nearly the same as the Soccage tenure, but applicable to towns. In this, the *house* of which the family property consisted, went to the youngest son, the rest having gone off or colonised or enlisted in the military class. It is a practice strongly marking the identity of the Sacæ of Tartary and Britain, it being common to both.⁵

10. The next tenure to be noticed is that of tenure by Knights’ service. Probably the Saxons

¹ De Diis Syriis, ch. xiii. p. 342.

² Vide Morning Watch, No. IX.

³ Hallam, Hist. Vol. II. p. 179

⁴ Spec. Add. art. p. xii.

⁵ Vide Du Halde, Hist. of China, and Blackstone, B. ii. Ch. vi.

had tenures by Knights' service as well as the Romans; but a moment's consideration will shew why we hear not of Knights' service after the Norman came, except as service to him. There are, therefore, no more old remains of it now to be found. Those which were not strictly Norman, and at that time new, merged into the service due to the Normans or Northmen. If Saxon knights did not do their service to the new king, they threw off their allegiance, they forfeited their lands, and a Norman took them. To do military service to another would have been rebellion, treason. The only lands in free Soccage or Burgage tenure left by William, as indeed they probably were before, were lands held of the Priests. See the exchange of lands named in Blackstone,¹ by the Archbishop of Canterbury, from tenure by Soccage to tenure by Knighthood. At first, when Priest and King were identical, all lands were held in Soccage, held, I repeat, as they are now in Tibet, of the Monks. I think when the Archbishop changed the tenure of his lands, the object in holding them of the king was, to secure them from the claim of the Barons, to whom he could not exhibit any title to them. They had descended to him from his Druidical predecessors. Judge Blackstone² very properly and very distinctly admits the Saxon origin of the feudal or feudal system, though he overlooks the almost inevitable consequence that, after the arrival of the Normans, the old Saxon tenures by Knights' service must necessarily have disappeared—a fact which he seems at a loss to account for. The ancient Folkland, or estates held in villeinage, Blackstone says, was strictly neither feudal, Saxon nor Norman. The reason of this was, because their owners were the first possessors before the arrival of the later Saxons and Normans, and if any lands were left to them they could only hold of the new Lords. The old Lords were either gone or sunk into the class of villeins by the arrival of the new comers. They became the Helots; they were the folks—*οἱ πολλοί*. Several other kinds of tenure arose in later times, but they are not worth notice.

11. Perhaps the Monks did not exist till the quarrels respecting the two principles began to arise. Then, *as usual in all such cases*, the two parties ran into the most absurd extremes, till they covered the Eastern world with blood. It seems probable that the war lasted for many generations; in short, I believe it never entirely ceased till both parties were conquered by the Mohamedans. From extreme devotion to the *male* principle, it is likely that both the Monks and the Eunuchs might arise. The last person of the second class perhaps may be found in the celebrated and learned Origen. On the other side, in opposition, might arise the Nuns. I believe there are no Monks among the Brahmins; they are, I think, solely among the Buddhists. The followers of Buddha affected the *male*; the followers of Cristna the *female*. But it is very possible that in India, as in Europe, after the two sects united and the cause of their existence was forgotten; still, as the religious principle of abstinence from sexual intercourse, which had become established as a meritorious act, remained, monastic institutions of both religions may have been founded. Nothing is more difficult to eradicate than a religious principle of this kind, when once established. Monachism is of such a nature, that *if not molested*, silently and peaceably, by stealth as it were, it will, in no very long time, by possessing all real or landed property, possess itself of the government of every country. Tibet is a striking example of the truth of this remark. The Papal see is now essentially monastic. I have no doubt that the first governors of nations were priests—Melchizedeks, Royal or King-Priests. After a certain time, when the difference to which I have just alluded between the followers of the two principles took place, the Monks arose, and, by degrees, got possession of the governments. No doubt, the ancient priesthood would not like this, and probably petty wars and contentions would arise between the parties, similar to what we

¹ Com. B. ii. Ch. vi.

² Ibid.

know took place in the early ages of the European Papacy. But when the *male* and *female* sects coalesced, the Seculars and Regulars, though perhaps hating one another, would have a common interest against the remainder of mankind. In the dark ages of Europe we read of great contentions between the Popes and the Monks; but I think, at last, the Monks prevailed, having first received modern Christian ordination from the Popes. If we read the histories we shall find that the Popes, the Seculars, prevailed; but in the imprudent admission of the Monks to orders, according to their own, i. e. the secular form, they opened to them the doors of the Vatican.¹ Once admitted, they soon proceeded to the election of Bishops, subject, it is true, to the approbation of the Pope, and to investiture by him; but in a very short time they themselves became Bishops, Cardinals, and Popes; and although there is yet a good deal of jealousy between them, yet a common interest always induces them to join against the remainder of mankind. Thus they both united heartily against the Kings, when the latter wanted to acquire the appointment of Bishops. Here we see the reason why the monastic establishments of Deans and Chapters have the appointment of Bishops and Archbishops. All the orders of our Cathedrals and Minsters are monastic institutions—successions, in most cases, of the ancient Roman priesthood, and they of the Druids. As might be expected, the Monks, successors of the Essenes, Carmelites, &c., were in a particular manner addicted to the allegorical nature of Christianity. This may be seen in their defence of Origen,² who was evidently one of them, holding the doctrines of emanation, and that of an esoteric meaning in the Scriptures. He said “the Scriptures were of little use to those who understood them literally, as they are written.”³ This is one of numerous instances to prove that the monks were the oldest Christians; the Seculars of modern times, put into power by Constantine, were the followers of Paul. The way in which their hierarchy arose is pretty clearly made out.

We are told that the first Monks arose, in the second century, in Egypt. The persons who say this, mean *Christian* monks; and that they were the first *Christian* because they were the first *Paulite* Monks. They were, in fact, Essenes or Carmelites, but became followers of the Paulites and Popes. It was held, that no person could be a priest except through the medium of the popes; and once a priest, he could never be unpriested, though he might be deprived of his functions—that is, of the power of performing the offices of the religion. But he always remained of the sacerdotal order or caste. In the brawls respecting Origen the true character of the religion may be seen. By our historians we are taught to believe, that the Popes and the Church were established in early times. The fact is, that until Constantine gave a preponderance to the Popes and Paulites, no party had any real superiority. Paul was the teacher of the literal meaning; Origen and the Monks of the Platonic Gnosis or mystery. As I have before said, the parties united; and this is the reason why we see in the churches of the middle ages the odd mixture of Gnosticism and Paulism, why we see the Deans and Chapters electing Secular Bishops. We are told that the monks were not priests. The truth is, they ordained one another or initiated their brethren on admission, after serving their noviciate. Ordination is nothing but initiation into the mysteries. We have an example in the Culdees of Iona. When the Popes ordained the monks anew, they said, they admitted them to orders, because they did not allow the legality of the previous ordination. With the admission of the Carmelites, Essenes, Therapeutæ, &c., into the Roman church, there entered all the rites and ceremonies of Gentilism, of which these were sects.

¹ The example of the overthrow of the power of the Seculars in the Papacy by the Regulars, has not been without effect. The Pope permitted the talented fanatic Loyola to establish his order; but the monastic spirit shews itself beautifully in the rule which excludes all Jesuits from the Papacy.

² Mosheim, Hist. Cent. iii. Ch. ii., Cent. vi. Ch. iii.

³ Ib. Ch. v.

Their ancestors were puritanical seceders from the corruptions of Gentilism. As usual, time cooled the ardour of the sects, and they became fond of corruptions or show, &c. Are not our devotees doing the same thing? The Scotch are admitting organs into their churches, and every new church, in London, has a wicked cross, the mark of the scarlet whore, as the sect in power politely calls the chief Bishop of their countrymen, at the top of it. Whether the monastic order, that is, the regulation of binding themselves by the three vows took place before the sword divided from the crosier or afterwards, I do not know, and perhaps it may not now be possible to ascertain, but certainly the Royal priests were never supposed to be bound by those vows; they probably never took them. The custom of calling the chief sacrificer a king, in Rome, Athens, &c., was a remnant of this state of things. No man but a king¹ could offer a sacrifice. The real origin of the monastic order is unknown; in some instances it probably swallowed up the Seculars, as in Tibet; in others it failed. I am quite of Mr. Cleland's opinion, that priests were the first governors, kings their generals, who, at last, usurped the supreme power of their employers. A little consideration of the circumstances will suggest a very simple explanation of the way in which the four ancient castes may have arisen. The *first* must have been the priests; the *second* the military, their soldiers, who, by degrees, in many countries, got the command of the priests. The caste of trades must have been the dwellers in towns; the farmers would be the shepherds or pastors, having, at first, no fixed habitations, (like the Bedoweens,) and at last settling down as agriculturalists. Thus we have the *four* castes, all jealous of one another; and thus coming, at last, to be completely divided, as they were in Egypt, and are in India. The natural tendency of mankind to run into castes may be observed in Britain. Our nobles are the soldier caste; our clergy the priests; the squires and their tenants the agricultural caste; the tradesmen in towns the trading caste; and the paupers and lowest order, as in India, the *out*-caste. How early the tribes of Saxons came to the West we cannot discover; but they were first heard of by the name of Saxons about the year 604 of Rome, 150 years B. C., when the Consul Caius Papirius met them in Noricam, defeated them, and drove them into Gaul.² In process of time, when wars arose, the Liberi-Sockmanni, and tenants in Frank-al-moign, protected by the priests, remained at home, free from war and military service. They were the Sacæ or Saxon men of the book, of Liber and Bacchus.

The words Liber *free*, the solar $\Phi\rho\eta$ of Egypt, and Liber *a book*, being, as I have shewn, closely connected—the bookish men, the men of Bac, Boc, Bacchus, were comparatively free from the rule of the warrior class, both in a civil and military point of view, and thence comes our *benefit of clergy*. If a man could read, it was at once a proof that he was initiated into the sacred order. If the benefit of clergy depends on a statute, it has probably been obtained by the priests to put their privilege out of doubt. It has been a declaratory statute. Although perhaps every man who was initiated could not read and write, yet I believe that every man who could read and write was initiated—these arts being taught to the initiated only in very early times. It has been said, that the privilege of clergy was granted to encourage learning. I believe it was used as a test, as a proof, that a man was of or immediately belonging to the sacred tribe, and therefore exempt from the jurisdiction of the court in which he had been tried. If he were acquitted, he said nothing; if found guilty, he pleaded his order and his reading. I have little doubt that the knowledge of reading and letters was a masonic secret for many generations, and that it once formed a part of the mysterious knowledge of Eleusis and of other temples. The triangular staves

¹ He must have been the Sag-art.

² Southern North Am. Rev. No. X. p. 339.

on which the runes were commonly written were called Bogstav, or Buchstab, Book-staves.¹ Here is clearly our book.² A great seminary of learning in North India is called the place or city of the Book—Boch-ara. Rapin³ calls Freelands, Bocklands, thus confirming much of what I have said above. In very ancient times all taxes were paid by a portion of the produce of the land—stamps, excise, and customs, were unknown. From the account given by Col. Briggs, it appears that this was always the case in India till very recent times, and the prosperity of the country seems to have depended in a great measure on the proportion of the produce which was taken by the government. It seems latterly to have varied. Du Halde describes this practice as still continuing in China. In the early times of the priests and rulers, a tenth was taken from the cultivators of the soil and no more—hence the origin of tithes; and there can be no doubt that, under this arrangement, a country would enjoy great prosperity. Mr. Cleland, as I stated above, is of my opinion, that priests were the first rulers of nations. He says, “It may, perhaps, at first sound rash and unwarrantable, that the words Ecclesiastical, Diocese, Dean, Cardinal, Bishop, Priest, and even Religion itself, do not originally mean any thing purely spiritual; being, in fact, in their origin, all terms of judiciary import, in those times when the law was absolutely blended with divinity, from which the law was proud of receiving its support. The law of the country was also its religion.”⁴ This was the Druidical system and that of the Jews; it is that of Mohamedism, and was that of ancient India. At first, before the invention of writing, every country had a *lex non scripta*, of which some remains may every where be found. After the discovery of writing, the religious code was the law of the land. When Sir Henry Spelman calls the *feodal system* the law of nations of the Western world, he might have gone a little farther; for it was most certainly the law of the extreme East as well as of the West.

12. In the address of my friend Lieut. Col. Briggs to the India Company on the subject of the Land Tax of India, innumerable facts which he has adduced have satisfactorily proved that a system, in every respect the same as our feudal system, must, at one time, have prevailed throughout that country; that the soil of the country was always admitted to belong to the sovereign, and to be held by tenants by the render of service in some way or other. The fact noticed by Col. Briggs, p. 84, from Arrian, of Alexander the Great, on his conquest of the Sacæ or Saxons, restoring their country to their chiefs, to be held by them by delivery of standards, (as the Dukes of Marlborough and Wellington hold their land of our king,) and by their consenting to do suit and service, and to supply a body of troops when required, is very striking. It sufficiently accounts for the existence of the feudal tenures in the West, wherever tribes from the eastern countries, like the Saxons, settled. Feudal lands had seven incidents—heriot, relief, escheat, wardship, scutage, marriage licence, and homage. These were precisely the same in India and Europe.⁵ Fee-udal might be land held of *the Iud in fee*. The Heriot was the payment of a sum of money, or some other thing, for the investiture in the fief. By this payment, the man saved his land. It was from the old words Eri and Heri, which in Greek and Arabic, consequently Hebrew and Sanscrit, meant *saviour*. It cannot for a moment be denied that the whole of our ancient common or unwritten law⁶ is most closely interwoven into the Feodal system. It appears, from a speech made by Lord Brougham in the House of Peers,⁷ that it has been a question among our old

⁶ It was unwritten because it was established before the art of writing was generally known.

⁷ “He alluded to what had taken place in the ancient kingdom of Scotland, of which the laws in former times,

lawyers, as the ancient law of Scotland was identical with the law of England, which of them copied from the other. The real fact was, that neither could be said to copy from the other. No doubt these laws were even older than our later Saxon ancestors. Let us look but for one moment at the states of Scotland and England after the last Saxon arrival, and consider whether at any time after that event there be the least reason to believe that either of these countries, in a state of perpetual enmity, would copy the laws of the other. In my mind this Indian polity must have come along with an oriental tribe much before the Saxons arrived from the Baltic. And I consider the "Regiam Majestatem" of Scotland as a decisive proof of the great antiquity of the system. When the lawyers of England and Scotland disputed respecting the superior antiquity of their laws, it never entered into the minds of either of them that they might both descend from a common source. They came when the Indian Gods came to Ireland. I suppose that this common source was a previous tribe of Sacæ, of the nation of Pandæa, or of the Buddhist religion, and who were the builders of Stonehenge, Abury, &c. The Saxon Heptarchy did not extend to Scotland, but the Lowlanders are called Saxons by the Highlanders. They were Yavanas or Ioudi, that is Sacæ, and Scythæ. I very much doubt the fact that the Romans governed here by their own laws, as asserted by Selden.¹ They probably governed their own people by their own laws, but the natives by theirs. The laws of Edward the Confessor were only declaratory laws. I believe our common law and feudal law both came from India at the same time. I believe what Fortescue says is true, that the customs or common laws of England, were the same under the ancient Britons that they are now; for though the Romans, Saxons, Danes, and Normans, successively reigned here, yet he tells us, that notwithstanding all these several mutations, the general customs or common law of England remained fixed and immutable, at least not actually changed, for so are his words,—In omnibus nationum harum et regum eorum temporibus regnum illud eisdem quibus jam regitur consuetudinibus continue regulatum est.²

13. We have yet said nothing of the Scythians; and it may very properly be asked, How, in regard to time, my Saxons or Sacæ would be related to them? All difficulties with respect to them, as in any way opposing my system, are at once done away by a passage of Herodotus, who declares that they were two names of the same people.³ From this I think there can scarcely be any doubt that the Celtæ, the Scythians, and the Saxons, were all tribes of the same people, succeeding one another, with some trifling variations which would naturally arise, in the lapse of time, from the natural tendency which every thing has to change. It may now be fairly asked, what has become, in modern times, of the mighty nation which was so numerous in ancient times as to send off successive swarms or colonies almost without end or number? I apprehend we had them formerly under Alaric, in the Goths, who were driven forwards to the West by the semi-human Huns. (Semi-human, if fairly represented by their enemies, but this I do not believe.) Afterward the same race are found in the

"widely as they differed now from the laws of England, were so identically the same with those of this kingdom, that the oldest treatise on law in each of the two countries is said to be a translation from the other, there being a dispute between the lawyers of England and those of Scotland as to which was the original. He was bound, as holding allegiance on a higher tie to the bar of England than to that of Scotland, to say—and he was happy to add, that he could really say it conscientiously—that he believed the treatise on English law to be the original. The treatise of Glanville, who was Lord Chief Justice in the reign of Henry II., was that from which the 'Regiam Majestatem' of Scotland was taken—a clear proof that at that early period of our history, the principles of the Scotch law were the same as those of our own."—*The Times*, Dec. 3, 1830.

Tartars, who conquered China, and they dwelt in the country, a part of which contained the thousand cities of Strabo, of which mighty ruins, though scarcely any thing but ruins when compared to their former magnificence, yet remain—the country to the east of the Caspian, and extending ten or twelve degrees north and south of Samarkand. Σακαι-ρες Σκυθας ετω φασι.¹—Scytharum populi—Persæ illos Sacas in universum adpellavere.² D'Ancarville says, the Sacæ were also called Sagæ. After having reflected upon the Sofees of Mohamedism, who, in fact, make it nothing but a continuance of the doctrine of Wisdom, which existed thousands of years before the time of Mohamed, we shall not be surprised to find our Saxon ancestors bearing the same name as Mohamed. The kings, as a proper name, were called Clytones, and their sons Clytonculi. It is worthy of observation, that the ancient system seems to have been forgotten about the same time in India and Europe, and about the same time to have run into all manner of complicated machinery. I think reflection on the natural course of events—of effects and causes—will lead to a conviction that these were the effects which naturally arose from a system such as we have seen attempted to be shrouded in secrecy, before the art of writing was generally known; and I think we need go no further for the origin of the wish to keep it secret than to the natural desire of all men for power and pre-eminence. It was always as true as it is now, that knowledge is power. The men who began to possess knowledge, soon perceived that it gave them power, wealth, and ease. The endeavour to keep knowledge to themselves was a natural consequence of the love of power. I shall by and by shew there is a high probability, that there were several floods, and that many people escaped the last, who constituted what are constantly called *aborigines*, and along with them also escaped a few of a learned and superior caste, who soon became the tyrants or governors of the others.

14. The Arabians assert, that there are two races of men in Arabia.³ This seems probable. I believe in every country there will be found at least two races of men. I believe, when Plato says there was an original race of men drowned by the flood, who had a language long since lost, he alluded, in fact, to such people as those Helots in Lacedæmon, who were the remains of a race drowned by the flood, but who were originally little better than barbarian, or became so in consequence of that catastrophe. It cannot be denied that the languages of the Chaldeans, of the Jews, and of Job, that is Arabians, were most closely connected dialects of one language. The Arabic of Job passes in the Jewish Canon for Hebrew. Parkhurst's Lexicon serves at once for the Hebrew, the Chaldee, and the Arabic of Job. Now, all the nomade tribes of Africa and Asia have a language called Arabic; and these tribes, from the peculiarity of their habits of life, have probably never had a foreign language imposed upon them, a fact which can be stated of scarcely any other nation. In South India, the lowest class, not the Parias or Outcasts of the Brahmins, but what Col. Briggs⁴ calls the Aborigines, are the most ancient; they have no distinction of castes, and have nothing to do with the present Brahmin religion. After them come the Brahmins from North India. The same people whom Col. Briggs calls Aborigines may be discovered in ancient Syria; in Greece, in the Helots just mentioned; in Italy, Germany, &c. It is from this purity of blood, as I may call it, that the Arabs of the deserts have retained the old language. In this they would be much assisted, wherever Mohamedism prevailed, by having the standard Koran to keep the language fixed. I believe no Englishman who is a good Arabic scholar, and who is quite master of the Chaldee alphabet, would have much difficulty in translating Hebrew or Chaldee into English. These Arabians I have traced from an Arabia on the Indus.⁵ Every where the yet nomade tribes

have the name of Bedoweens or Bedouins. Have they derived their name from being originally Buddhists of North India, like the Saxons from having been Sacæ from the same countries? I suspect it is so. Buddha, it has been shewn, was called Saca, his followers Sacæ. The most learned Mussulmans allow that there was an esoteric Mohamedism. This was Sopheism, which was Buddhism from North India—from the Afghans. The reason why there are no castes among the Bedoweens is because they are the shepherd caste, whose habit necessarily is to wander about: After a tribe of shepherds took possession of a country and settled in it, the distinction of castes would begin to arise. Caste is a natural effect, not an artificial institution. It is the produce of circumstances, and not of design. When I contemplate the surprising similarity between the feudal system of North India and Europe, I am compelled to look to some cause, for I cannot retreat to accident. Therefore I am compelled to believe either that Europe copied from India or that India copied from Europe, or that the same effect took place in both, arising from some peculiar and unobserved quality in the human character. As I cannot discover the latter, and as I know the copying cannot have taken place in modern times, I am obliged to believe that these tenures are of much older date than is generally imagined; that the same mistake has happened with respect to them as to many other things, and that they are said to take their rise when they are first noticed, and then only, because then we have the first notice of them. I believe that they were the effects of, or parts of the Pontifical government, known in India by the name of Pandæa, which extended over the whole world, and of which all the lands were held by feudal tenure. I have mentioned before, (p. 4,) what Dr. Geddes said of all the words of the Saxon language being to be found in the Hebrew or its cognate dialects. The feudal system came with the Sacæ or Saxons. Alfred and Edward the Confessor were Saxons: and might not the Norman convert Saxon institutions to his own purpose? It was strictly according to the custom of the country which he had left. Normandy was conquered by a tribe of Scandinavians or Northmen.

15. I believe that wherever a nomade tribe made a settlement, the mythos of their ancient country was established, and this is the reason why we have so many Merus or Moriahs, Parnassuses, Olympuses, Acropolises, &c. They were all Mounts of Meru in miniature; they might be all said to be microcosms of the great one of North India. They are very perceptible in Greece; but I think we have the best examples of the system in Egypt and Syria. In the latter, in the astronomical names given by Joshua. Gerizim was clearly the sacred mount, the national cathedral; the twelve tribes were the religious districts or divisions. The same divisions into *twelve* prevailed in Attica, in Asiatic Ionia, in Etruria, and on the Po, and in several other places. From this we may see, that the division of the country into twelve parts, was one of the parts of the mythos. Whether Palestine was subjected to any minor divisions does not appear, but certainly there were places of worship called Proseuchas and Synagogues—the latter, probably, erected for districts like our parishes. In Egypt we have the mythic division complete; and the Rev. Robert Taylor has shewn, that the whole of our hierarchy existed there, among the Essenes, absolutely in perfection.¹ And as we know that these Essenes existed in Syria as well as in Egypt, the same system probably obtained in both. I take the Essenes in each case to have been the professors of the highest order of the Cabala, the *perfecti*—the prophets of the Old Testament, and of Elias, their superior. The Essenes were Carmelite monks. What has become of them? When did the order die? But it did not die: it yet exists in the Carmelites. When Jerusalem or Mount Moriah was set up against Gerizim, the prophets of the two mounts got to quarrelling.² The five temples of

¹ Supra, p. 71.

² See Vol. I. p. 428.

Jehovah in Egypt,¹ I have sometimes suspected, were cathedrals of the Essenes. All these were what we call collegiate churches. They all had temples, and each had its *domus templi*. These assertions are all proved by what I have shewn—that every rite, order, and ceremony of the Romish religion was an exact imitation of a similar institution among the ancient Gentiles.² Wherever the Pandæan or Catholic religion prevailed, every state had its divisions, and, if large, its subdivisions; each subdivision had its temple; and each temple its *domus templi*, for the education of youth. In this way, I believe, arose the corporate towns of Europe, and they were closely connected with the astrological superstition of the Pandæistic mythos. We are told that our corporate towns associated to protect themselves against the tyranny of the barons and military chiefs. This I believe is quite true; but they first existed under the priests, who joined the people in procuring charters to grant them privileges and confirm what they had possessed from time immemorial, so as, in fact, to have no deeds to shew for their lands. In such cases, the charter granted their lands by name. All these became *Liberi*, *Sockmanni*. It is in consequence of this that we find the mystic Chaldæan numbers to prevail in all our corporations—the *twelve* aldermen and *twenty-four* councilmen. All this is closely allied to the feudal tenures established by the first settlers from the East. Wherever these people settled, they established their temples, their tenures, &c., &c. I suppose at first there were no other parishes than what are now comprised in the limits of our corporate towns. We know how, in later times, feudal chiefs established smaller parishes around their castles: hence arose our common parishes, our peculiars, &c., &c. At first, I have no doubt, every cathedral or Druidical circle had its sacred mount for its processions, called *Deisul* or procession of God the Saviour, *Dei Salus*, *Salutis*, an imitation of the progress of the God *Sol* from East to West. In fact, each had its *Olympus*, small or great, according to its means, which often afterward became a fortress, as *Clifford's Tower* at *York*. We find a *mote*, *hill* or *Olympus* in most old towns. At *Cambridge* and *Oxford* they yet remain. Sacred processions were made from the cathedral³ round these mounts, and they are yet continued in all Romish countries. On these mounts was a cross, and round this the fairs and markets were held every *Dies Solis*; and when the barons established little parishes in opposition to the others, they fixed their markets in the churchyards. The clergy or *liberi* of the barons, the *Seculars*, were always in opposition to the *Regulars*, or *liberi* bookmen, or the monks, who possessed the other parishes. It is very certain that whenever a feudal chieftain wished to establish a church and parish, it would be an encroachment on the monks; and as it would be in opposition to them, and as he could make no priest, he would be glad to avail himself of the aid of the Pope. The same reason would operate with the kings to procure bishops from Rome, and thus, by degrees, the *Seculars* got established. But certainly there are the most striking proofs of all the collegiate churches having once belonged to the monks. “The ecclesiastical polity of the Romish church is, to this moment, almost wholly Druidical. And as that ancient religion of Britain and the Gauls had its Pope, its Cardinals, its Bishops, its Deacons, &c., who were succeeded in their spiritual or temporal power and possession by the Christian Clergy, these last assumed identically those titles of which the others had been deprived,” &c.⁴ Cleland says, the word *Shire* is from the Celtic *Hir*, *Cir*, *Chur*, *Sir*, &c. Each *Shire* was a distinct state, subdivided into *Baronies*, *Parishes*, *Pareichs*, or *Bareiches*. *Par* and *Bar* meant a *judge*; *reich*, a *region*.⁵ From *Cir*, or *Shur*, comes our *She-riff*. The *Cir* is the Hebrew *גִּר* *gr*. We have found the circles or counties in the

⁵ Ib. p. 8.

island of Ceylon;¹ we have the circles again in the five northern Circars, a country on the West side of the Bay of Bengal, called the coast of Coromandel, from the fifteenth to the twentieth degree of north latitude. I have before shewn that Cora-mandel means the circle of Core.² This pleonasm has arisen from the intermixture of the countries, and from one word having come to have two ideas; for the Sur meant the solar circle, the cycle, as well as the sun. In these Circars may be found almost an exact representation of the circles of Germany, and the patriarchal system which I shall develop in my next book is well marked. Every district which Hamilton³ calls a village, is a perfect and complete municipium or urbs, orbis, a little world within itself, with all its officers from the highest to the lowest degree, in which state it has continued from the most remote antiquity. The account given by Mr. Hamilton is very interesting. I shall return to it in my next book, and merely add here, that India Proper was divided into these districts, and that the expression Northern clearly shews there has been a Southern, and probably a middle Circar or district. I think the term Deccan, which is called Daschnia in the Sanscrit, and which answers to the Decapolis of Western Syria, has been another division under the same system, and similar to the tithings of King Alfred in England. Cleland⁴ says, Ridings, Radtings—governments; Radt, a provincial ruler. A Council was called the Raadst, whence he who had most influence ruled the roast. The state into which the world was brought, when the Pontifical system, from the usurpation of its kings or other causes, began to fall in preces, is well marked in North India. Col. Briggs says, “The subdivision of the territory into townships, as described in the time of Alexander, still obtains everywhere. Each of these petty states maintains its municipal legislation, independently of the monarchy; and every state presents the picture of so many hundreds or thousands of these minute republics.”⁵ In Greece we see the remains of this system. In the Amphictyons we have the Wittenagemote. But we must not expect that any two countries would decline and a new order of things arise exactly in the same way. Mr. Cleland says, “The whole order of the law, temporal and spiritual, sprung from our colleges. The greatest part of the Gauls, of Germany, but especially of Britain, was College-land, Glebe-land, Parish-land, all which are better expressed by the word DOMAIN, at bottom a Celtic word, equivalent to *Barony* or *Government-land*, which maintained the Bishops, the Judges, the subordinate militia and its officers.”⁶ He shews that the *Maire Dom* or Mayor of the Palace was the Judge, the word *Dom* meaning Judge. From this, in the law-glossaries, the Domesday book is called *Liber Judicatorius*.⁷ From this the day of Judgment became Domesday. Mr. Hallam⁸ says, “The provincial cities under the Roman empire enjoyed, as is well known, a municipal magistracy, and the right of internal regulation. It would not have been repugnant, perhaps, to the spirit of the Frank and Gothic conquerors, to have left them in the possession of these privileges. But there seems no satisfactory proof that they were preserved in France, or in Italy; or, if they existed at all, they were swept away, in the former country, during the confusion of the ninth century, which ended in the establishment of the feudal system.” (Here I think he ought to have said the RE-establishment.) “Every town, except within the royal domains, was subject to some Lord. In episcopal cities, the Bishop possessed a considerable authority, and in many there was a class of resident nobility.” The old Lords were all of the nature of the Prince Bishops, or Palatines of Germany. The Thane was the same as the Optimas or Baro, and answered to the Antrustiones or Fideles or Drudes or Drudi. They were, I doubt not, originally of the Druid order, bearing arms, perhaps not having any religious functions,—perhaps not having re-

¹ Vol. I. p. 753.² *Ib.* pp. 760, 762.³ Gazetteer, in voce Circar.⁴ *Spee.* p. 7.⁵ P. 99.⁶ Add. to *Spec.* p. xiv.⁷ Second Add. p. 13.⁸ Hallam, Middle Ages, p. 210.

ceived the Samach, as there are Brahmins at this day who are not priests. The Thanes, I believe, originally were the only tenants *in capite*. When a Druid was employed to command an army, and he usurped the throne, many of his barons would be Druidi. The observation of Mr. Hallam that the Edict of Milan, by Constantine, in the year 313, recognises the existence at that time of ecclesiastical corporations,¹ almost justifies what I have said of our towns being the Roman Municipia, and of the existence of Monasteries; for what else could these ecclesiastical corporations in Italy have been? and, if in Italy, probably in Britain. The fact is, I think, that the municipal towns may be discovered as far back as we can go; although, perhaps, subject to suit and service to some superior: but this, so far from proving that they had no previous existence, raises a presumption to the contrary. Their possession of charters of incorporation, of certain dates, by no means proves, for several reasons, their previous non-existence, and the previous existence under the forms expressed in those charters. I have no doubt that our corporate towns in general are the municipia of the Romans, and also of a system previous even to them. We have seen that the Sacæ occupied almost all Europe, and that they were the Palli; from these came the Palatines and the Bishops Palatine, our three prince Palatine Bishops of Chester, Durhám, and Ely, (Lancaster was not old,) and the prince Bishops of Germany. I believe these were originally all mitred Abbots, with archiepiscopal authority given to them by the Popes, exclusive of their Abbeys; that they were Abbots exclusive of the Popes; that their chapters made them Abbots; that then the Popes made them Bishops, the object of which was, to get them, the Monks, in fact, into the pale of the Vatican. But the Popes probably did not foresee that this would open the door of the conclave to the Monks, which would enable them, at last, to get possession of it, and convert the Papacy into a monastic institution, sinking the Seculars into a second class. Function was not necessary to a Bishop. Episcopacy was an order. Mr. Hallam² expresses himself in terms of surprise that the Monks should have been so rapacious for wealth which they could not enjoy, and that they should hesitate at no fraud or forgery to obtain it. The reason of this rapacity is to be found in the doctrine, that the Supreme Pontiff, or head of the Priesthood, was entitled to the land of the whole world, as Lord of the soil; and these cunning and long-headed persons could not fail to see that, if let alone, the whole land would, in a few centuries, quietly and without struggle, come into their hands, and that then they would again become the rulers of the world, as, in the most ancient times, they had been. Mr. Hallam says, the tithes were not paid originally as at present, but all were received by the Bishop and distributed by him to the clergy. These were, I suppose, the chapter-elected Abbots, made Bishops by the Pope, who received the tithes as heads of the monasteries, and sent priests to perform service where they thought it necessary. We know that monasteries in later times endowed Vicarages, when they themselves took the great tithes. The circular buildings of large stones, of which the Sacæ, Saxons, brought the pattern from North India, where vast numbers of them yet remain, were the first Druidical temples. When the Romans drove out the Druids and took possession of the vacant lands, the stones, in many cases, were broken up to build their more finished temples; and after them, when the Christians prevailed, their temples were in great measure used for Christian churches and monasteries. Thus only such Druidical temples are left as were not subsequently converted into Roman or Christian temples. Perhaps there is not a more striking point of similarity between the feudal laws and customs of the East and West, than that of the trial by a jury of twelve persons. Richardson shews this to have come from the East; that it was common to the Chinese, and to the Mexicans, which made Grotius say, the Mexicans must have been from Scandia. Hornius³ says, “Quod vero Grotius infert, ex

¹ Hist. Mid. Ages, Vol. II. p. 2; Gibbon, Ch. xv. and xx.

“Scandiâ ortos Mexicanos, quia Gotti et Saxones olim duodecemvirale tribunal habuerunt, id leviculum est: nam apud *Mexicanos* et *Sinenses* solum regium consilium eo numero constabat.”¹ Cleland says, “that most of the ecclesiastical terms of the Romish church, as *Parish*, &c., are Celtic, in which light it may be said, that the primitive Christians, for rearing the fabric of their church, took what suited them, of the ruins of demolished Druidism, for a scaffolding; which they struck, and put out of the way, as soon as they had finished a nobler building.”² When I recollect that the adoration of the Virgin and Child—*Virgo Paritura*—were common to Gaul and Egypt, I am not surprised at the observation of Cleland. The parishes, &c., were equally common in Egypt and Europe, and Mr. Taylor’s exposé of them, in the former, is no surprise to me. The description of Eusebius is incontestible, viz. that the Essenes were Christians, and the whole together shews the original system most beautifully. Very justly has Bishop Lloyd observed that Christianity flourished here before the time of Constantine; but he might have added, also before the time of Christ.³

16. In India, every trade was a secret, and called by the word *Ras*, secret wisdom or knowledge. Trades in general constituted one great *ras* or *caste*; each trade again a little subcaste; it had its own *Ras*; each *Ras* had a Pontifex. Each trade or craft or caste admitted persons to its *ras* only on payment of a fine and serving an apprenticeship. Every trade, as well as that of Mason, was a craft: thus we have our crafts. This word is found in the *κρυπτος* of the Greeks. When a person was taught the craft, he was admitted to be a *liber* or *free* or *soc* man, of that craft. Every man who dwelt in the town was not a freeman; but those only who understood the liber or craft. All the crafts were originally bound together by religious ties or initiations; in which the doctrines of the Trinity, Baptism, and the Eucharist, are generally very prominent. Initiation itself was, in fact, ordination. Here we have the three sacraments of the Christians of St. Thomas, and of the Culdees of Iona, of Ripon, and of York. These religious rites among the crafts, in their initiations, have long entirely disappeared in Britain; but they remained till very lately in France and Germany,⁴ possessing almost all the outward appearances of Freemasonry, and being constantly objects of jealousy and persecution by their governments. The circumstance of the Culdees being found at York and Ripon can in no other way be accounted for, than by giving to those institutions an antiquity much greater than modern antiquarians are willing to allow. The fact, indeed, carries them further back than the Christian æra. I believe the Minsters were all Monastic establishments of Carmelites or Essenes or Therapeutæ or Cullidei. *Myn* meant stone. Stonehenge Meyn ambre. Hence came minster and monasteria.⁵ They were all Gnostici. I think that almost every very old church, of any magnitude and grandeur, was the work of monastic masons, built by and for Monks—for the Regulars, not for the Seculars; that, originally, the country was divided into districts, over each of which presided one of these institutions; that these were the first Parochiæ, called, in the Celtic language, *Bareich*; and that the monks possessed the tithes of the whole country. Ethelwolf was the first who passed a declaratory law in England, in 855, to make the whole kingdom liable to tithes; but traces may be found of their payment, under the Heptarchy, long before. In a similar manner a declaratory law was passed in the year 586, at the Council of Mascon, by King Guntham. I think the castes, in early times, must have been nearly the same in Europe as in India, and that they arose from the same natural cause. I have already shewn how the four great castes arose, in India, and that every trade is also a caste. These, as I have already intimated, are very nearly our crafts or companies of tradesmen taking apprentices;

⁵ Cleland, p. 144.

but the children generally succeeding their parents in the same trade, they were both hereditary and not hereditary. Guilds, Chancies, and Free-chapels, were suppressed by 1st Edward 6th. The Guilds are said to have been established to offer prayers for the souls of the deceased. They were poor persons who associated to procure this advantage. The Franchise or Liberty and right of Sanctuary arose from the double and confused use of the word Liber. A friend has observed, It is surprising that this has never been discovered before, if it be true. To which I reply, It would have been surprising if it had. For *first*, in early times, no one ever attempted to give a history except those whose object it was to conceal the truth, if they knew it, which, in most cases, is very doubtful. *Secondly*, they were men of the meanest understandings, incapable, from extreme bigotry, of taking an extended view of any subject. *Thirdly*, they had not the means of taking a bird's-eye survey of the world, as we have at this day. *Fourthly*, if what I have stated be the truth, they would have been instantly persecuted, like Roger Bacon, if they had published it. And, *lastly*, for want of the knowledge which we have obtained from India, only within the last thirty years, it was quite impossible that they could ever have arrived at the truth. The popish writers, enemies of the monks, tell us, and as usual we believe the evidence of enemies, that, in the early times, the monks were not priests; that is, because they assume that there can be no priest except by descent of cheirotonia from the Pope: this the monks could not shew; therefore their ordination was denied. The only instance we have of any thing like monks in their pristine state are the Collidei of Iona or Columba in Scotland; and it appears that they ordained one another before the Romish priests came among them; and, what is very remarkable, were permitted by the Romish priests, after they seized their monastery, to continue it. It is also very remarkable, that these Collidei or Chaldæans had the three sacraments which the Collidei or Christians of St. Thomas or of Tamul had, and no more, viz. Orders, Baptism, and the Eucharist; but taking with them also, or some of them at least, the three vows of chastity, poverty, and obedience. I take it, that I shall presently satisfy every one that the town of Columbo, in the island of Ceylon, and the town of Columba, in the island near Scotland, had each its name given by the same sect or people. I believe the Roman Senate was an hereditary sacred order or priesthood, like that of the Jews, and that of the Chaldæans or Cullidei, which married; but it was necessary, in all cases, to go through the ceremony of the χειροτονια, previous to performing the functions of a priest. The word Gosen or Goshen of Egypt, and Gosaen of India, read from right to left, instead of from left to right, described the land of the Soc above-noticed by Blackstone, and the Sag of Scandinavia; and I have a suspicion too, that all the Celtic tribes were Xacæ or Saxæ, so denominated from the name of their religion.

17. I can entertain little doubt that our cathedrals and churches, as I have already remarked, descended from the Druidical temples, and that by a very natural process. When the Romans overran Britain, they would find these places, with the lands belonging to them, *appropriated* to religion, or as seminaries of education, numbers of which we are told that the Druids possessed, but the remains of which are no where else to be found. The Romans would naturally use them for the same purposes: the building materials would be on the place; and, after the Christian religion overthrew the altars of the Romans, the same reasons which had operated with them, when they succeeded the Druids, to continue the appropriation of their institutions to religious purposes, I have no doubt, operated with the Christians in their succession to the Romans. We are told that our Collegiate Churches, and Deans and Chapters, were established in the eighth century. These, I have no doubt, were the remains of the colleges above alluded to, which underwent some change or regulation at that time. I do not doubt that they were monastic: the remains of the cloisters, dormitories, &c., about our cathedrals, prove this. I think it very likely that the junction between the Monks and the Pope, in this country, may have been effected by

giving them the appointment of Bishops. When the Romans left Britain, in the latter end of the fourth century, I suppose that Christianity pretty generally prevailed, though it might perhaps be of the mongrel kind which we find in Constantine, and probably the collegiate establishment which had existed in the time of the Druids had been succeeded by or converted into similar Christian establishments. I believe that, properly speaking, we have the remains of only one temple of the Romans in Britain, which is at Bath; and I think it very probable that, after they had completed their conquest of England, they treated the native religion indulgently, as they did the Egyptian. Their enmity to the Druids was occasioned by the Druids being enemies to them. What we read about human sacrifices, as the reason of the enmity of the Romans, is nonsense; for they practised this themselves, till the time of Claudius. I believe the Romans occupied Britain, as the Turks have occupied Greece, and that, after the conquest, they left the natives in possession of their religion, which would, in principle, be the same as their own, though differing in some small matters. It was what had been brought by the first tribes of Celtæ or Sacæ, in fact, by the Chaldees or Cullidei, who were, in reality, nothing but a sect of Druids, and similar to the Christians of Malabar. The Romans had altars in their castra, (caster, chester, &c.,) but they built no temples, unless in the former part of the four hundred years they were here. The corrupted Roman pillars, which we call Saxon, might be parts of temples which served both them and the natives. At the time of Constantine, the Roman religion was undergoing a radical reform, by changing to what we call Christianity: and, I believe, when the latter tribes of Sacæ or Saxons came, the religion of Britain was pretty much that of the Cullidei of Iona, York, and Ripon, possessing its colleges, formerly Druidical. The latter Saxons probably brought a new corruption or variety from Scandinavia; but we have no evidence that they interfered with the religion of the natives, (except with such of the Druids as were in rebellion,) and the two probably not very dissimilar. When the Romish priests or monks, under Augustine, came, then began the struggle between the Seculars and Regulars, the Cullidei and the Papists—the Cullidei, with their three sacraments, denied to be, or at least scarcely allowed to be, Christians, by the Papists.”¹ The Cullidei were monks; but yet some of them married. Here we have the remains of the first patriarchal religion. By degrees the Papists prevailed, and from the struggles for mastery between the two parties arose the very great variety which a close observer must see in our ecclesiastical polity: our collegiate churches sometimes without bishops, sometimes with them; the tithes sometimes possessed by Seculars, sometimes by Regulars; Bishops sometimes appointed by Kings, sometimes by the Chapters; the variety of the livings, donatives, peculiars, &c., &c. We have no history of these times except by Romish writers, whose object was to support their own party and to conceal the truth, when it happened to be against them. Before the sixth century, all Monks were Carmelites; but I do not think there was at that time any one head of the order over them all; this, however, is a point involved in darkness. In the dispute, (noticed in Volume I. p. 768,) which took place between the Bishops of York and Canterbury for precedence, it appears,² that the Archbishop of York grounded his pretensions on an assertion, that his see was founded by Scotch Monks, with which Canterbury, founded by Augustine, had no concern. Here, I believe, we have the Cullidei; and that in the northern parts of the island, the old religion, as we might suppose, was less changed, corrupted, by Romans, Danes, later Saxons, than in the southern: that, in fact, it was Cullidæan Christian, when Augustine came to Kent and converted the Saxons, whose religion perhaps had

¹ We are told that the Saxons were not Christians. Thus it is often said, that the Unitarians of this day are not Christians; and it is always said, that the Mohamedans are not. But what signifies such nonsense?

² Rap. Vol. II. B. VI.

become much more Pagan or corrupt, to the Romish Christianity, or to the faith of the *seven* instead of the *three* sacraments; the simple and first religion of Abraham, of Iona, in short of Buddha.

18. I apprehend in the most early times land was not appropriated, as it is now, except to religious uses, or at least to the use of the priests; but, that it was held more in the manner of our Ings lands, which changed hands every year. The remains of this ancient custom are yet to be found in many parts of Britain. The policy of nomade tribes, which arose from circumstances peculiar to their mode of life, must have been greatly against the appropriation of lands in perpetuity, and it was this policy which produced the custom of changing the land to which I allude. I believe oats and barley were the grains chiefly cultivated, as they required only a few summer months to bring them to perfection. At first, such tribes as were entirely nomadic would have no arable land. After a certain time they would invent a plough, and, in spring, would turn up a few strips of the waste and sow them with barley or oats. These strips (or *lands* as they are yet called in the north of England; in the common town fields one strip is a land) being appropriated only during the summer that they were growing the crop, and then being thrown open to the general pasturage. It would naturally happen, that (if the tribe remained in the same neighbourhood) the same lands would be repeatedly ploughed. This would arise in consequence of the greater ease with which the work would be done; a fact of consequence to those who had only such indifferent tools as the Hierarchy,¹ which we find in the hand of the Indian Hercules, at Muttra, and every where described on the Egyptian buildings. After some time it would be found that the lands had become exhausted, and fresh parcels would be resorted to—the old ones being left to become grass. This is the present practice in the Campagna di Roma. The same process took place with pasture land when dried grass became used. Each individual had a strip allotted to him, which varied every year. This is no theory.² Before a late inclosure of the parish in which I live, I had land in both these conditions. In this country, in my recollection, they were very common; and in this way, I have no doubt, that lands in many countries were anciently cultivated. As nomade tribes settled themselves in villages, small parcels of land would become inclosed around them, and I conclude that a parcel would always be appropriated to the temple and the priests, for their occupancy and residence. I think it is probable that these first villages would be formed of the aged and infirm who were unable to travel: these villages would by degrees grow into towns. At last the old, the rich, the priests, would stay at home, and the young would be sent off to the distant pastures, as the sons of Jacob were sent off to a distance, when Joseph was despatched by old Jacob to visit them. Thus, in many countries, Syria for instance, we find the wandering tribes yet mixed with the cities. When these wandering tribes quarrelled about the pastures, by degrees weapons would be invented, wars would arise, and with them generals and kings, disputing power with the priest in the city. The state of half appropriation of land described above, to be found with numbers of trifling customary variations in many parts of Britain, is a direct descendant of similar customs, upon a large scale, in North India and Germany. With many of the tribes of the Afghans, the lands change possessors after certain short periods. Mr. Elphinston particularly describes as an example the tribes of Eusof and Munder. The whole land of the clan or tribe seems to be in the possession of the chief, who, by necessity, can be no other than their trustee. At particular times a great meeting takes place, the whole is divided

¹ See Vol. I. p. 239.

² Tacitus (*Germania*, cap. i.) says, that the Germans cultivate sometimes one district, sometimes another, and often make new distributions of their lands.

among the subordinate clans by lot, who again divide it, at, under or in petty meetings, among the persons having a right to portions of the land. In some cases the lands are held for several years, in others only for one. All the people of a tribe are not entitled, but certain known persons, having the right; the others are in the situation of villains.¹ Mr. Elphinston observes,² that there are traces of this custom to be found in Khorasaun. Volney noticed the same in Corsica. Tacitus thus describes it with the ancient Germans: "Agri pro numero cultorum ab universis per 'vices' occupantur, quos mox inter se, secundum dignationem, partiuntur: facilitatem partiendi camporum spatia præstant. Arva per annos mutant." (Germania, xxvi.) Cæsar also has the following passage: "Neque quisquam agri modum certum aut fines proprios habet; sed magistratus ac principes, in annos singulos, gentibus cognationibusque hominum qui unâ coierunt, quantum eis, et quo loco visum est, attribuunt agri, atque anno post, aliò transire cogunt." The description given by Mr. Elphinston is exactly the description of the process in my village of Skellow, called Sconhalla in Dom Bec. The persons having rights met at the Mote-hill, now remaining around the Cross on the top of the Calvary, once a year, on St. John's day, the day of wisdom, when, at the mote or meeting, the lands of the *ings* were distributed, by lot, among those having rights. From mote comes the word meeting; and from this being the *lotting* day, the meeting was called the Leet. From this comes the letting or allotting of lands, and the moting or mooting of subjects of discussion at meetings; for, at these meetings, all parish matters were moted or moved. In level countries, to make a mote-hill it was necessary to make a ditch, out of which came the materials for the mote; hence circles of water called *Moats*; and as this ditch, in most places, would be a nuisance, when the hill became disused, the hill would be thrown down again into the ditch and thus it would disappear. The meeting was a miniature Wittage-mote. After finding the ancient Gods, &c., of India, correctly described by their names in Ireland, long before they had arrived here from our East-India possessions, and therefore not possible to be modern copies, we shall not be surprised to find the tenures of lands similar to those which we have found in India, also in Ireland. From the Brehon laws it may be observed, that anciently the lands, at certain times, entirely changed their possessors. They were given up to a common stock, and a new division took place. The feudal customs of reliefs, wardships, trial by Jury, &c., may be perceived—all of them strong signs of the same ancient system which we have traced from India, and by no means proofs, as has been alleged, of corruptions of the Brehon laws.³ I think it probable that the only land which would not be subject to change would be that of the priests. It would evidently be their policy to have their tenants fixed, and it would as evidently be the policy of the lay-lords or soldiers, when they arose, to have their tenants hold *their* lands by an *uncertain* tenure, which would not prevent them, on a sudden, marching to war or moving to fresh grounds with their Lord. Thus, by degrees, from the first, the class or caste of the priests arose; from the second, the caste of the soldiers or shepherds; and the stationary or resident occupiers of the lands of the priests would very naturally form the third class or caste of farmers: the residents of the towns, around the temple, would form the trades or fourth caste. A fifth caste or out-caste, or a certain unfortunate class of slaves or villains of no caste, the slaves of all the other castes, is every where to be met with. These slaves or villains were the performers of a variety of base or degrading works for the higher classes. In many cases they were what were called *aborigines*. By degrees they had small portions of land given to them, particularly by the priests, for which they rendered no suit or service like the other castes, being, in fact,

¹ Elphinston, Cabul, Vol. II. p. 17.

² *Ib.* p. 21.

³ Hallam, Const. Hist. of England, Vol. IV. pp. 189—191.

a kind of slaves before they received them. When the higher castes rendered their suit and service, they rendered for these villains also—the villains were included. Thus, by degrees, they acquired lands without suit or service, and in this way arose the Folk lands, of which we read; but, I believe, no where find, at least I never found any. These lands were evidently part of the lands of the sacerdotal class.

19. It is very clear to me that the nature of *allodial* property is not understood by any one. In India it is called *Bhoomia*.¹ This word is spelt by some *Bhumia*. This is, *ia-b-om*, *land of Om*. Col. Tod thinks the *Bhoomias* were the predecessors of the *Zemindars*, and the scions of the native princes. The word *Allodium* is not a Latin word. Littleton gives the meaning of the word to be a *Freehold*—to be land for which a man owes no suit or service.² It is *al-di-om*, *land of the-holy-Om*. It is also called *Boc-land*, that is, *book-land*,³ because it was originally a part of the land of the priests. I believe the *Folk land* was originally a part of it; but, in many places, it probably became a favourite mode of tenure. I believe that it was land originally held in occupancy by the priests, consequently it neither did suit and service, nor paid tithe. *Ecclesia non solvat ecclesiæ*. On this account it was the land of God—of *לֵא אֱלֹהִים*. In India it was land held *Bhoomia*—that is, land held by the right of *Om*. And when other lands changed every year, it was stationary—as *Om* signifies. From the *Pandæan* system the name of God, *לֵא אֱלֹהִים*, came to mean *all*; and from the *Om* having relation to the same doctrine, came the *Om-nis*, having the same idea. In India the holders of this property have no title-deeds to shew for it, but hold it without title, from immemorial antiquity. As it has no suit or service to render, it goes not to the eldest, but in equal divisions among all the children, like our *Kentish Gavel-kind* lands or *freeholds*. *Allodial* property passed by inheritance, both in India and Europe, without requiring any relief or investiture, or the performance of homage. *Salian Franks* were the *Franks of Sul*. In England, if the learned *Burton*⁴ may be believed, “no subject can hold land in direct or *al-*odial dominion.” This, I have no doubt, was once the case of every country in the old world. All was granted to tenants by the *Supreme Pontiff*, and the *vectigal* or *tithe* was the return, except from the priests, for land in their actual occupation. This holding was in *Socage*. Upon this, all the other kinds of tenure were engrafted. Whatever encroachments were made on the system were probably done away with by *William the Conqueror*. *Scheffer* and *Pontoppidan*⁵ say, that *Odhaf* or *Udal* signifies *land free from tax*, and is the origin of *Allodial*, and is in opposition to pasture land called *Scattald*, which paid tax. From this comes the *scotted* or *taxed* lands, in many parts, and particularly in *Hatfield Chace*, near *Doncaster*, in *Yorkshire*. *Scheffer* says, that *allodial* is *odh* *proprietas*, and *all* *totum*. If it be correct that only the pasture paid the tax, we see a reason for the use of the *Etruscan Agrimensores* and the crosses to divide the open, uninclosed wastes, in order to collect the *vectigal*—of which I shall treat at large in the next book.⁶ The crosses of *Italy* are found in the *Scandinavian Mark* stones of the *Scottish isles*.⁷ I beg this may be recollected. The view which I take of the subject seems to be confirmed by an observation of *Mr. Hallan's*, that “the ecclesiastical hierarchy never received any territorial endowment by law, “either under the *Roman empire*, or the kingdoms erected upon its ruins.”⁸ The fact is, I have no doubt, that every cathedral was a species of college or monastic establishment, of extreme antiquity, which formed, at last, when the Monks became Christian, or rather, I should say, *Romish*, priests, a *bishopric* or *archbishopric*. It is not difficult to imagine how the *Abbot* would, when

⁸ Vol. II. p. 4.

once ordained, consent to rise to a mitred Abbot¹ or Bishop, or an Archbishop. I take a mitred Abbot to be an abbot with the order of bishop, but often *without functions*, out of his convent. They have been succeeded by Bishops in Partibus. By this means the Popes brought all the Carmelites or Essenes, and their property, into the church, and in return, the Monks ultimately, as I formerly remarked, brought the Papacy into subjection to them. As soon as the Monks got possession of the Papacy, either absolutely or by influence, they shew it, by repeated exemptions of monasteria from the power of the Bishops of their districts.² But this was after the kings had acquired the power of appointing them. In the opinion which I have stated here, I quite agree with Rapin,³ who thinks the allodial lands were those of the priests, and that they were not subject to any feudal services: they were the domain of the priests. He derives Allodial from A, *non*, leud, *lands*. This is not satisfactory. The Allodial lands were those which the priests did not grant or subinfeudate to tenants, but which they themselves in part occupied, and in part let their servants occupy or cultivate. In Mr. Hallam's various attempts to explain the origin of the *feodal tenures*, the admitted earliest tenures of mankind in many parts of Europe, it is very extraordinary that it never should have occurred to him to ask the simple question, whether they might not have descended, in the whole or in part, from that people who must have been great and powerful, who built Stonehenge, Abury, and Carnac. Like all our historians, he has never thought it worth his while to ask himself the question, by whom these monstrous structures were erected. He has fallen into an error, very common with almost all antiquarians, that of determining that a thing certainly *did not previously* exist, because he finds no proof of its previous existence. But a thousand circumstances may render it probable that it did exist. If I find one arm-bone of a man, though I have no proof, it is, I think, probable that there has once been another. This, I think, has led him to place the establishment of several feudal abuses in late times, when the existence of the same abuses in India raises a strong probability, that the European abuse was only a continuance or renovation of earlier practices. The abuses to which I allude are not such, I think, as were likely to arise in different places merely from the similar state of the human mind under similar circumstances. But I do not deny that several abuses may be pointed out, owing their rise, probably, to the latter cause. Mr. Hallam,⁴ when acknowledging the universal extension of the feudal tenure, attributes it to importation into the different places by immigrant tribes in modern times, while I think what he observes are only the wrecks of the universal feudal state, which were continued by those tribes who found and preserved laws and customs such as they had left at home.

20. And this brings me to an inquiry into the history of the island of Ii, or Iona,⁵ or Columba, or Icolmkill, or Sodor, in Scotland.

The establishment on the island of Iona arose from an ancient Druidical settlement, and probably became one of the most celebrated seats of learning in the western world. Very extensive ruins are yet to be seen upon it. It is singular that this island should be called Iona and Columba, the former meaning *Dove* in Hebrew, the latter *Dove* in Latin. The Dove has always been the emblem of the Holy Spirit, of the Anima Mundi. A *black* dove came from the Hyperboreans to Delos and Delphi,⁶ where the priestesses were in a particular manner endowed with the Holy Spirit. When the Holy Ghost or Spirit descended upon Jesus Christ, at his baptism, it was in the form of *a dove*, and always a female dove. I have shewn that Venus was identical with Ceres, Hecate, and she was *black*—in fact, the Mother of the Gods as such. She had two doves. She

¹ The mitred Abbots had seats in parliament as of right; but in right of *what* I think does not appear.

² Hallam, Vol. II. p. 30.

³ Hist. Vol. II. p. 197.

⁴ Ch. ii. Part. II.

⁵ See Vol. I. p. 385, and *supra*, p. 262.

⁶ See Vol. I. pp. 137, 434, 502.

was the *Nes* of Plato, one of the persons of his Trinity, in reality the Holy Ghost. The island of Iona, the island of the Dove, or, in Latin, of the Columba, is directly identified with Jehovah or Ieue, by being called in the annals of Ulster *Ii*, the identical name by which Jehovah is always called in the Jerusalem Targum. On the most remarkable part of the word *Ii*-va, or *Ii*-vaa, see supra, p. 151.¹ The word Iona also means the female generative principle or the female organ of generation. In the cemetery of the convent or monastery of Iona, which was dedicated to the Saint or Holy Mary, the ruins of which remain, lie *forty-eight* kings of Scotland, *four* of Ireland, *eight* of Norway, and *one* of France, besides a vast number of other persons of great consequence, both known and unknown. Near the landing-place there were formerly a great number of *CARNS*. These were probably the most ancient burying-places, when this island was inhabited by Buddhists, who yet, in Upper India or Tibet, pursue the practice of making carns or large heaps of stones over their friends.² Of this island Dr. Garnet says, in his *Tour to the Islands*,³ "We had now examined the principal ruins of this island, and though they may be inferior in magnitude and grandeur to many that are to be met with, yet when we consider the situation of the island, the time when the buildings were erected, as well as the disadvantages under which they have been undertaken, they may be looked upon as the greatest curiosities of the kind in the British empire, especially when we connect with them the circumstances which have been already mentioned, viz. the flourishing state of learning at the time when the rest of Europe and of the world was wrapt in the dark cloud of ignorance and barbarism." The learning is proved by their library destroyed at the Reformation, and the scarcity of Druidical remains is easily accounted for by the the stones used for erecting more modern edifices, at the time when it had grown into a Christian monastery and college. The island is called, in an inscription on a grave-stone, *Ir*. It says, "*Johannis, Abbatis de Ir facta,*" &c. In another, "*Hic jacet Johannes Macfingon, Abbas de Ij,*" &c. In another, a Nun is called "*Prioressa de Iona.*" These inscriptions yet remaining on tombstones prove the truth of what I have said in my *Celtic Druids* respecting its name of *Ir*, which I quoted from the *Annals of Ulster*.⁴ Respecting the great curiosity of this island and its remains, Dr. Garnet has not said a word too much in the extract which I have given above. There is also a *St. Columb* or *Columba* or *Columbes* in Cornwall, which took its name from a *St. Columba*, a female saint and martyr. It is reckoned a sacred place. There are nine sacred stones set up in a line near it, called *the nine maids*.⁵ In Pegu and Ceylon Buddha is generally, when sleeping, overshadowed by *nine* Cobras. In other parts of India he commonly has *seven*, but in others only *five*. The number was probably regulated by the number of cycles of which he was the emblem at the time. This, I have no doubt, was the case with the number of the *Curetes* or *Saviours*, and the *Muses* or *Saviours* of Greece. Had the Cobras been meant to designate the planets, I think they would not have varied in number. The discovery of new icons, with different numbers, is no argument against this, as the devotees constantly make them after old patterns; they do not pretend to understand any of them.

The Roman Catholic historians account for the names Iona and Columba by the histories of Saints who were formerly bishops of the island, and for a very long time I was totally unable to reconcile the apparent strong testimony in favour of a *St. Columba* and a *Saint Iona* having really lived, with the evident mythological meaning of these names. At last it occurred to me, that it must have arisen from the absurd custom yet retained by our bishops of calling themselves after

¹ A particular account of this island may be seen in my *Celtic Druids*, Ch. v. Sect. xxxvii. p. 196.

² See Vol. I. pp. 409, 685.

³ P. 264.

⁴ See the reference, ut supra.

⁵ Hog's *Fabulous History of Cornwall*.

their bishoprics; thus we have Reginald Calcutta, instead of Reginald *of* Calcutta, and William Jamaica, instead of William *of* Jamaica. Of this sort of fooleries there is no end. This will account for the entries in the Saxon Chronicle and all the other difficulties; so that there may have been men who performed many of the acts recorded, and who signed themselves *Iona* and *Columba*. When this absurd custom began I believe no one can tell, and I apprehend it must have arisen from the regimine of the old language, by which Bishop *of* Iona, became Bishop Iona. This mistake of Bede and others is not more extraordinary than many other of their mistakes. A proper attention to the regimine—a natural effect of the poverty of the ancient language—I have no doubt will account for many mythological difficulties which have hitherto been totally insurmountable. It very satisfactorily accounts for the priests having the names of their Gods; and as in almost every case the king was the high-priest, it accounts for his being described by the name of the God, in the pontifical writings, which, in fact, are the only writings of these times that we possess. In every case in which a priest of any country using the old language is treated of, in the language of a country that had acquired the habit of forming its genitive case by inflection or by article, the consequence almost necessarily followed that the priest would have the name of the God given to him. In the neighbourhood of Iona there are many places with mythic and oriental names; and almost all the Indian Gods are found in Ireland.¹ The islands of *Bute*, *Arran*, *Ila*, and *Skye*, are thus called from *Buddha*, *Arhan*, *Ila* the consort of *Buddha*, and *Saca* or *Sakya*: the island of *Man* from *Man-anan* or *Mahi-Man*, or *Menu*.² All these were sacred islands, the same as Iona or *Columba*.³ The names of *Buddha*, *Arhan*, *Man*, *Mahi-man*, were well known to the ancient Celts. The first month of the Egyptians, August, was called *Thoth* in honour of the God. The first of August, in old Irish, is called the day of *La Tat*; that is, the Buddha. The *Saman*, or *Somono* or Sumnaut of the East, is found in Ireland in *Saman*, *Samhan*, and *Shamhna*.⁴ Vallancey says, in the old Irish language Budh, Buth, Both, means the Sun, Fire, the Universe. The Budh of Ireland was of the family of *Saca-sa*, or the bonus *Saca*. This is the Sacya, from whom the Buddha Muni of the Hindoos was descended. But though Sa may mean *good*, yet I do not doubt that it also meant *Saviour*. Many remains of the Buddhist religion are to be found in Ireland. He had a temple at *Budda-fan*, or *Butafan*, now Buttevant. פֹּתַר *Put* was the Apollo of the Chaldeans according to Bochart. *Abbuto*, or *Pater But*, is the Apollo of the Japanese. *Phutios* was an old Grecian epithet of the sun and Jupiter, according to Hesychius. It is said in the Asiatic Researches,⁵ “there is a luminary, which rese, like fresh butter, from the “ocean of milk, churned by the Gods: the offspring of that luminary was Buddha, or the wise.” Tradition gives Iona the character of having been a place very celebrated for education. It is probable that most of our Cathedrals, as I have before said, arose from Druidical or Buddhist institutions for education, founded about the time of Stonehenge; that they were Culdee establishments; for, in these, the Culdees were last found, as at York and Ripon. I am also of opinion that Cambridge, with its river Cam or Ham, its Castle Hill, its round church or Templum, its legend Alma Mater Cantabrigia—and Oxford, with its RIVER ISIS, its coat of arms, the BULL OR OX, its great tumulus at the end of the town, its Mithraic monument noticed by Stukeley, were both of them Druidical or Buddhist foundations. The reason why there are no pillars or columns, at those two places, like Stonehenge, is because they have been worked up into buildings since the time of Christ. If it had so happened that a college had been continued at Stonehenge, there would not now be any great circles of stones there. The tumuli only would have been found,

¹ See Celtic Druids, p. 183.² Fab. Pag. Idol. B. iv. Ch. v.³ Celtic Druids, pp. 199—201.⁴ Faber, Pag. Idol. Ch. v. p. 365.⁵ Vol. III.

wherever the establishments continued, though Culdees might remain as at Ripon and York, or legends or tumuli as at Oxford or Cambridge;¹ yet all the rough stone monuments would necessarily disappear. The same cause produced the destruction of the old temple and the production of the new one. The stones were ready and the lands unappropriated to private use, or rather, perhaps, I should say appropriated to sacred use. Thus monasteries and saints arose in Italy and Iona, on heathen temples. The great and rich foundations became cathedrals, the little ones churches or convents.

21. There are some circumstances relating to the island of Ceylon which we will now notice. The most rational part of its history states, that a conqueror, from the north of India, overran the Peninsula, advanced to Ceylon, and established there the religion of Guatama or Buddha the Second, as he is called by persons who do not understand the mythos. In this island is found a mount called Adam's Peak; in Cingalese called Himmaleh. In it there is also the mark of a foot, which Christians call the foot of Adam; but the Buddhists say it is the mark of the foot of Buddha. This is, because Buddha, who robbed the garden of a flower,² was a renewed Adam. There is a river of Calany and a temple of Calany, and, about six miles from it, a town called Columbo.³ Its old name is called Serendive or Serendib. (Ararat, as I shewed in Vol. I. p. 428, is called Serendib in the Samaritan version.) There is also a mystical mount called Zian, which means place of repose.⁴ At Rangoon is a God called Dagon.⁵ The God Kandi-kumara, that is, the holy Khan of Cuma, is called a Rabbie.⁶ This is correctly Hebrew, and means *prophet* or *seer*; that is, a seer forwards, a person who could see into futurity. It is remarkable that in the language of the ancient Gael the word *Ii*, the name of *Ieue*, should mean an island, and should be also the name of the sacred isle of the West—of Iona or Columba—and that *Devi*, in Sanscrit, should mean an island and be the name of God, and of the island of Ceylon. But I believe it means *Dev* or *Div*, that is, holy or saint *I*, shortened from *Ii*, the name of the crucified God at Tripetty, on the continent, not far from Ceylon, called *Ball-Ii*, or *Bal-Jii*. This will not be thought improbable when all the other coincidences between the sacred islands of the East and of the West, which I shall now disclose, are considered. That in the languages of the East, the word for island should be the same as that for God, and that a similar peculiarity should prevail in the sacred isle of Iona and all isles in the West, viz. *Ii*, I cannot attribute to *accident*, especially when I find the Popes claiming all islands as the peculiar patrimony of God.⁷ The great islands of Java, Ceylon, Japan, Sumatra, or Javadios, were all sacred islands. The language of the sacred isle of the West, Iona, was called *Gaeldoct*; the name of the sacred isle of the East, where we find the *Point de Galle*, was *Sin-gala*. Here we have the same Gael, but with the appellative *sin* instead of the *doct*. The same cause operated in causing the Chinese to be called *Sines*, and in giving a similar name to the *Sin-gala*, also to the river *Sinde* in North India, and to the river *Sinde* in Thrace, to *Mount Sinai*, and to the desert of *Sin* in Arabia, to *Jehovah Nis-si*, and to *Bacchus, Deo-nissi*, which I noticed in Vol. I. pp. 423, 606. I shall resume the inquiry into the *Sin* presently. The monastery of Iona was occupied by Culdees or *Cullidei*, or *Callidei*. I am persuaded that it was once the religious capital of *Caledonia*; and if we do not now find Ceylon called *Callida*, it most likely was so formerly, as we find a *Callida* now grown into *Cochin* upon the neighbouring promontory, to which it was doubtless formerly joined. But the *Cal* in the word *Cali* and the *Gal*

¹ For the origin of Cambridge, see Cleland's Specimen, p. 71. He considers Cambridge to have been a College before the time of the Romans.

were the same word corrupted, as is decisively proved by the name of the Prince of *Orugallu*, given in the Madras Transactions,¹ for he is called the prince of the Gallu or Gael, which is the same as the Cal of Ur or Urii. Having shewn the Celtic to be Hebrew, that is Chaldee, and these languages to be vernacular in South India, we have all the difficulties to the doctrine of identity of race and language in Scotland and India removed. An interesting account is given in the above-mentioned Transactions² of the opening of some Tumuli and Carns, which shews them to be the very same as those found in many places in Britain; but, perhaps, no where more satisfactorily than in the neighbourhood of Inverness. The observation of Dr. D. Clarke, quoted in the Transactions, that they are the works of a people of whom we have no history, is quite correct. My reader may refer to the Carn in Fig. 18, and to Vol. I. p. 241, *note*, for the account of the Cromlech given by Sir Anthony Carlisle. If my reader will look back to Volume I. p. 527, he will there see that the word *Selene* means the female generative principle, the same as the *Yoni*, or *Iune*, the name of the Scotch island. He will remember that the Island of Iona is called also *Columba*. This observed, we must recollect that the ancients often treated of the sacred islands, but where these were situated was always a matter of much doubt; some persons placed them in the West, some in the East. I consider the Iona or *Columba* of the Hebrides to be the Western sacred isle, and the island of Ceylon, or one of the Eastern isles, to be the Eastern one. Lempriere says, "The name of *Salice*, which we learn from Ptolemy to have been the native denomination of the island, is preserved in that of *Selen-dive* compounded of the proper name *Selen*, and the appellation for an island in the Indian language." But the word *dive* means God and *holy* as well as *island*. Here, then, we have one word in each island meaning the generative power, viz. *Selen* and *Iona*, and one word in each I or II, and *Dive*, meaning God or holy; and what is still more remarkable, the name of the capital of Iona is *Columba*, and of Ceylon it is *Columbo*. And if the reader will consider the word *Ceilan* or *Coilan* or *Ceylon*, another name of this island,³ he will see that it is nothing but the accusative case of the Greek word *Κοιλος*, (the meaning of which I need not explain,) who was the father of Helen, the mystical mother of the Roman Constantine the First, and also the Latin name of heaven. If my reader be credulous enough to believe, that all these etymological coincidences are the effect of accident, he had better shut the book; it is not fit for him. It has been observed by Dr. Townley, that *בַּל* *bol*, *Bal*, *Baal*, *Bel*, who was, in so particular a manner, the object of worship with the Irish, (who probably derived it from the Carthaginians,) was peculiarly the object of worship in Ceylon. He says, "Traces of this worship are still found in the island of Ceylon, where it is termed *Baliism*, a word of uncertain etymology, but which will remind an antiquary of the names of *Baal*, *Bel*, and *Bal*, given to the sun⁴ by the Chaldæans and other ancient nations, and the *Baltan*, or *Bealteine* fires of Ireland and the Highlands of Scotland. These Singhalese worshippers of the Stars are few in number, and generally conceal their opinions. The worship consists entirely of adoration to the heavenly bodies; invoking them in consequence of the supposed influence they have on the affairs of men. The Singhalese priests are great astronomers, and they are believed to be thoroughly skilled in the power and influence of the planets."⁵ Townley knew nothing, when he wrote the above, about the crucifixion and worship of *Bal-iji*⁶ in the promontory of India, not far from Comorin.

¹ Vol. I. p. 19.

² Pp. 30—32.

³ Mr. Adrian Balbi has observed, that the small number of places from Ceylon to the Himalaya, having names connected with the Brahmin religion, and the great number connected with the Buddhist religion, depose contrary to the Brahmin doctrines, that the religion of Buddha is the oldest (p. liij). The observation is striking and conclusive.

⁴ See Selden de Diis Syriis.

⁵ Townley's Diss. on Maimonides, p. 44.

⁶ See Vol. I. p. 667.

But the circumstances of coincidence are wonderfully striking. The Rev. Mr. Whiter¹ says, "The race of the *Cymri* was supposed to have been brought by *Hu Gadarn*, into the island of Britain, from the land of *Hav*, called *Defrobani*, as Mr. Davies has observed in his Celtic Researches, pp. 154, 165. This information is derived from the Welsh Triads. Defrobani is the Taprobane of the ancients or the island of Ceylon. This island is likewise called Serendib. In Sanscrit, *Div* is an island, and *Seren* is quasi Selan, the island of Ceylon." The circumstances and coincidences which I have pointed out above I think give a great degree of credit to the Welsh Triads, quoted by Mr. Davies. Bochart says,² "De Taprobana Diodorus: *venerantur ut Deos cælum quod omnia cælestia*. Item: *In festis et precationibus recitant et canunt hymnos et encomia in Deos: imprimis vero in Solem quem insularum et sui ipsorum dominum profitenter*. Ptolemæus notat ad ortum Portum Solis, et ad Aquilonem insulam *Κωρυ*, quæ Plinio est insula Solis. An à decurtato כורש (*curs*) *Cores*, id est, Cyri nomine, quod Solem interpretantur Plutarchus et alii, *Κωρυ* dicta sit ea insula videant doctiores." We must recollect that near this island is the coast of Coromandel, which I formerly explained. For the meaning of the *Κωρυ* and כורש *kurs* and Coromandel, and St. Thomas, and the *Χρησ*-ians having the three sacraments, the same as the Cullidei of Iona, the reader must look back to Vol. I. pp. 759, 760.

The Linga and Yoni are the peculiar objects of adoration in Ceylon. The language of the sacred island of Iona, of Scotland, is the Gaelic, but it is also called Shan Scieiu or Sanscrit.³ Here we have, most clearly, the worship of the Yoni of India and its language. I have shewn in Volume I. p. 448, from Cleland, that the word Sanscrit was called *Sanscort* or *Sanskroutan* in the Celtic, or *Sanctum Scriptum*. In which of the six Celtic dialects he had found it in this form, he does not tell us; but it was probably in Irish. In my *CELTIC DRUIDS*, p. 60, I have given it *San-Scriobhte*, in which Mr. J. Logan, a good Celtic scholar, tells me I am right; but, that the *bh* in the last word, in speaking, are not pronounced. Professor Haughton says, that the word Sanscrit is derived from the preposition *San* (like *con*, *with*) and *Crita*, *done*, *made*, and has an *s* interposed for euphony; that the Latin *concretus* is from the same root, but has a different sense,—for the word in Sanscrit means perfected, adorned, embellished, *CONSECRATED*. Here in the last word we come to the true idea, which is *sanctum scriptum*. *Sanscrit* are like *Greek* scholars who, not attending to what Plato told them, that most proper names came from the *barbarians*, never travel out of Greece for their explanations; for which reason they are seldom right. Thus the Sanscrit scholars go no further than the Sanscrit. I tell them to go to an earlier language for the *datoo*s or roots from which their fine language is derived. In the Scotch Celtic we have seen it is Shan Scieiu or Shan Scrief. In the Irish *Sean* and *San* mean old, venerable, holy; and Vallancey confirms this, and says, in many places, that *sean* means the Sun. Here, at last, we have the origin of the word. *Seanach*, in Irish, means a high priest, a Druid; this is, *Sean* and *Akme*, chief priest. In Hebrew שן *sn* means the revolving sun and the tropical year. The Scrief is evidently the Latin *Scribo*, *Scriptum*. Then *Sean* or *San-Script* will be *writing of the Sun* or *holy writing*. In Hebrew סופר *supr* is a scribe, and כתב *ktbi* scribo, scripsi, scriptum. It is not diffi-

¹ Etym. Univer. Vol. I. p. 118.

² Phaleg, Lib. Prim. cap. xlvi. p. 697.

³ While travelling lately by coach, in the Highlands of Scotland, an old gentleman told me the Gaelic language was called *Sanscrit*. On the coach-door being opened by the waiter, when we arrived at the next inn, the old gentleman asked him, in English, if he understood the Gaelic, and what was the name in Gaelic of the language: his answer was, *without a moment's hesitation*, Sanscrit! There could be no imposition here, the old gentleman was an entire stranger in that part, and had not had an opportunity to speak to the waiter. He told me he spoke the language very well, as it was his native tongue, but he never had been taught to write it, therefore would not undertake to write it correctly; but he wrote it in my pocket book, *Shan Scieiu*.

cult to see, though rather difficult to explain, how, from the two, the word *scriobhte* or *scrit* in the Sanscrit, was derived. This is a very good example for shewing how all these languages revolve back into one, when examined to the bottom, where, at last, we always find the Hebrew, the language into which the first numeral symbols were written.

At a little distance from the Scotch island of Iona is a small island, called by the sailors the Dutchman's Cap, which looks exactly like the Calvaries on which the Crosses are usually placed. It has three steps, having every appearance of being formed by art, cut out of the rock by manual labour. In old maps it is called Linga. I have no doubt that in ancient times a linga was at the top of it: whether any remains of it are now there I know not. Here we have the worship of the Linga and Ioni, and the female generative power, called Columba or the Dove, more clearly marked than we have found it heretofore. Thus the worship of the Linga and Ioni was equally prevalent with the Callidi of the East, of Comorin and Ceylon, as with the Callidei of Calidonia or Scotland. I suppose that the origin of the name Linga arose from the equivocal nature of the Logos. The idea of word and language cannot be separated. It is very certain that the Deity could not proceed to action *in any way of which we could form any idea*, except by creating or forming or producing, nor could he do this in any other way than by willing, nor could he exhibit this will except by speaking. He spake the word or he gave the word, and the world existed,—by the Word he formed or created it. Thus the Word or Linga came to be the generative power, or emblem of the generative power. I am persuaded that the *dove* was a *female*; and it is remarkable, that the Hebrew name of Dove is always female—יונה *iune*.¹ The word Aleim has a feminine termination,² and Haggai foretells the *promised desire of all nations* by a feminine word, the Amid or Om, or Mo-hamed,³ and the Mohamedan crest is a Crescent, always the emblem of the *female generative principle*. From this I am induced to suspect, that I have considered the Mohamedans to have been more exclusively devoted to the *male* generative principle than, in reality, they were. Perhaps it is the Turks and not the Saracens, or perhaps the followers of Othman or Omar only, and not those of Ali, who have the Crescent. The island of Iona I find is called Sudor, and there is a priest called the *Bishop of Sodor und Man*. The Western islands were divided into two classes, and called Sodoreys or Sudoreys, and Nordoreys or Nudoreys, which, translated, are Southern and Northern. I feel no doubt that Sudor or Iona was once the capital of the Southern state. In which of the islands the capital of the northern one might be I do not know. These islanders became great pirates; and, under the name of *Sea-kings*, constantly made war upon the Highlands. The Norde-roy is North-king; the Sudor-roy is South-king. They probably came from Norway—Nor-ia. As a protection against these people, the vitrified forts were built; and this consideration will induce me presently to make a few observations respecting them. The name of the Scotch language, Gaeldochd, is very similar, when examined, to the word Shanscrien, as we have found it is still called. We must recollect that we found a place in Ceylon called the Point or Promontory of Galle; this proves that the island was called Galle. Pray whence had Ben-gal, that is Beni, sons of Gall, its name? ⁴ In a note on Scott's *Chronicles of the Canongate*, Chapter X., is this passage: "The Deasil must be performed sunways, that is, moving from right to left. If misfortune is imprecated, the party moves withershins, (German, WIDDERSINS,) that is, *against the sun*, from left to right." Here we have the *sin*, as it ought to

¹ See Vol. I. p. 112.

² *Ib.* p. 64.

³ *Ib.* p. 679.

⁴ In ancient Italy Mount Alba preceded the Capitol as *the sacred Mount*. Scotland was called Alba. Much is said about a *white sow* of Alba, which was called by Cassandra *blach*. See *supra*, p. 34.

be, for the sun—Sin=360.¹ I apprehend the word Sin came to mean Lion, when the Lion was the emblem of the Sun at his summer solstice, when he was in his glory, and the Bull and the Man were the signs of the Sun at the equinoxes, and the Eagle at the winter solstice. Gael is the Hebrew גל *gl*, and means *circle*, and the sacred island of Serindive or Ceylon, where, as stated before, there is the Point de Galle, and the sacred island of Scotland, where there is the language of the Gael or Gaeldoct or Sanscrit, is the island of Singal or of the Solar Cycle, or Circle of the Sun. The people of Ceylon are called *Singalese*, not *Ceylonese*. I am satisfied that all the ancient names of places, which had any connexion with the mythos, had meanings: therefore, I am induced to try to find the meaning of the word Singala—the name of Ceylon; and, forced and absurd as my explanation will at first appear, I cannot help suspecting that I am right. We have found the word Gael or Gal in Ben-gal, and the Gaelic language in Scotland. Suppose we read the word Sin-gal, Hebraicè; then we have Log-nis. The explanation of the Nis or Sin, the name of Bacchus or the Sun, we have seen before, meaning 360. Bacchus we have also seen was called Liber and Bac, Boc, Book. He is also the Linga or generative power and the Logos, that is, the Log, the root of Logos: then I think Singal is the language of the Sin, or of Nis, or of Bacchus, or the Logos, or Lingua or Linga. The Gael shews itself in Ceylon in every way. We have not only Point de Galle, but Tengalle, Battigaloe, Galkisse, Bengaly.

As we might expect, we have the *feudal tenures* in Ceylon. Cordiner informs us, that the possession of the soil was in the chief of the government.² Each *corle* or district was governed by a *coral*. Here we may have our earls. It means al-cori,³ *chief of the corle* or *circle*. The officers were remunerated by a portion of the produce of the land,⁴ called *accommodesan*, that is, in other words, by a composition, in lieu of the vectigal. From this comes our word *accommodate*. I have read somewhere, I think, in Marsden's History of Sumatra, that Ceylon was once conquered by the Chinese, or the Sin. Then it became, probably, the Gal of the Sin: the word Sin meaning also Sun, as I have just shewn, and coming at length to mean the Lion, the emblem of the Sun at the summer solstice. The coat of arms of the Son of the Sun—the Emperor of China—and of the Egyptians, the natives of Alba-Sin, was a Lion. The capital of Scotland was Pere or Bere-gonium. It is now nearly gone; the cottages in its neighbourhood having the name of streets, prove that it was once *large*. Near it is the highest mountain of Scotland, called Ben-Nevis; that is, Ben-Navis. Here we have the same name as the Mount Ararat, Mount Baris, or Naubunda,⁵ or Mount of the Ship. The top of this mount is seldom free from snow, and is nearly covered with stones, though not very large. I think it probable that it formerly had a ship-temple. The persons who destroyed the temple would not fail to roll the longest ones down the sides of the mountain, as was probably done with the Linga in the island of the Linga. Was Ben-Lomond, Son of Le-mond? Was Alfred, who divided the kingdom into tithings, *Al-phre-di*? The tithings shew that this was an ecclesiastical division. The tithings of the Saxon Alfred are exactly like the tithings of the Chinese, each responsible for its own policy. Was the word Bareich—the name of Parish—Bar-roi—rey-rex? Were the Condés or Counties or Earldoms 72, and the Parishes 360? England, including Wales, has 52 counties. Did Scotland make up the other 20?—Of the peculiarities of the Jews perhaps there is not one more marked than their hatred of *pork*. It is very remarkable that, in the Highlands of Scotland, to the North of the Caledonian Canal, until within a

very few years, there was no such thing as a head of swine. It was detested, and this all Scotchmen will allow. But whence this dislike no one can tell. The Christians never had any dislike to swines' flesh. It came, I apprehend, with the Sanscrit and the Gael-docht from Sin-galla, and the Indian promontory, where we have found all the Mosaic mythos in the temple of Jaggernaut. But in this we have a strong circumstance to support my theory of the existence of a Judaism totally independent of the Judaism of Western Syria, and, in addition, of its existence all over the world, long, very long, before the time of Christ. It beautifully supports my theory, that the original Judæan mythos had its birth in India, and that the Western Syrian Jews were only a colony from the first great hive. This mythos came to Scotland when the Gael, Celtic, and Hebrew, were all one. I cannot help suspecting that the famous Scotch warrior Fingal ought to be Singal, and this is strengthened by the fact, that his bard, Ossian, was the son of OM. I have long suspected that if Macpherson had understood the nature of Ossian's poems, he might have made them into an epic poem, something in its nature similar to that of Homer. I think they are a series of epics, like the tragedies of Æschylus, or the historical plays of Shakspeare. The history of the poems of Homer is very simple, when the mist in which the learning of men, who are too learned to see any thing in a simple and natural way, has enveloped them, is cleared away. According to the written accounts which we have, they were songs to celebrate a continuous history, as I have just remarked respecting the tragedies and plays of Æschylus and Shakspeare,¹ and were first collected by Lycurgus, then by Pisistratus, and at last by Aristotle and a company of men who, by inserting parts where needful, formed them into the poem which we have. They are sacred poems. They are the praises of the unknown God, or songs about the God Om—becoming the songs of Om—the mythos concealed, as we have so often found, under a history.² They were the same, I suspect, in Mœsia, the land of the Mystery, in Asia Minor, and in Caledonia in Scotland. The SANSKRIT word Eri or Heri, added to the Om, makes it Om the Saviour. We must not forget that we have found the subject of the poem described in this *Sanscrit* word (for Om-eri is Sanscrit) in India; for example, Achilles, Ulysses,³ the Argonauts; and, in the Bible, Solomon, Iphigenia,⁴ &c., and the history of the Bible in India, and both again in Egypt.⁵ I have little doubt that the prejudice to which I have alluded in the latter end of my preface, has kept from us the truth respecting the father of Ossian, or has made Ossian the Omer, into the Son of Om. I beg my reader to recollect the manner in which the Vau changed into the F, and the F into the C, on which some very curious observations may be seen in Bishop Marsh's *Horæ Pelasgiæ*, before he determines whether it be not possible that the Fingal of Scotland may have been Singal. But what is Gael? Is it 60? We know that this word is always pronounced unusually long, correctly as it is written here: G=3, AA=2, E=5, L=50=60. Thus Cali may have been Caall: K=20, AA=2, L=50=72, or Caph final=500, LL=100=600. But it is often in India written Kalee; this will be, K=20, L=30, EE=10=60, or Kli, K=20, L=30, I=10=60. I must now refer my reader to the CELTIC DRUIDS, p. 63, and there he will find several whole sentences taken out of a Welsh Bible, with the Hebrew words above them, letter for letter. He will also find, in pp. 59—61, a great number of Celtic, Sanscrit and Latin words which are evidently identical, which, according to Young's doctrine, PROVE most superabundantly, that the Hebrew is Welsh, and that the Welsh is both Sanscrit and Latin; therefore, that the Hebrew is

¹ Vide what I have said in Vol. I. pp. 360—366; and pp. 542—544.

² From the deceitful and false character it always assumed we have our Hum for *deceit*, and Humbug for *Big hum*.

³ See Vol. I. p. 519.

⁴ *Ib.* pp. 364, 615.

⁵ See *supra*, pp. 17, 18.

Sanscrit. Thus we have the vernacular language of Cape Comorin and of the Celtic Hebrew all proved to be the same, in the same country. Here in Carnate we have the Mosaic mythos, and the two Mosaic dialects, the Chaldee, the Hebrew and the Gael, in Ceylon, called Singala and Sanscrit, and in Scotland Sanscrieu and Gaeldoct.¹ The Singala is Gala or Gael Nis. And I must repeat that, in India we have Mount of Nau-banda, *ship-cabled mount*; in Scotland we have Mount Nevis, or, I should say, Mount Navis, and Loch Ness, and Inver-ness; that Sin, when read Hebraically, is Nis, the name of Bacchus, of the river Sinde, of the president of the Jewish Sanhedrim;² and, in short, of the Sun, as shewn in Volume I. p. 606, having the numerical power of 360. Dr. Babington says, that the Sanscrit of South India is written in characters derived from the Tamul; and he and Mr. Ellis both agree in opinion, that the Tamul is a language not derived from the Sanscrit. Wilson says, it is not derived from any language now in existence.³ I believe there were many Sanscrit languages; it was an appellative term, and applied equally to the Gael or Celtic in India, and in Scotland. The Scotch Gael or Celtic, was the Gael of Singala, of Beni-Gael, of Point-de-Galle, of Oru Gallu, of the Syriac or Hebrew or Pushto. This very ancient and *first-written syllabic language* was, I cannot doubt, the Sanscrit or *holy writ*, and thus it is found in Scotland. This language, I confidently believe, was Hebrew or Chaldee, Syriac, Arabic, Ethiopic—in each country diverging a little, every year, from its first original, till it is now scarcely perceptible in any of them. After the Brahmin or Cristnu sect arose, it formed the Sanscrit, to distinguish itself from the others—which, originally secret, had become common, the effect of natural causes. And now the Sanscrit is, as I may call it, the victim of similar causes, and is public. After its sect acquired the sovereignty of India, it was a natural consequence that its Sanscrit, or Sanctum Scriptum, should become *THE sacred script*, particularly as the old sacred script every day became more nearly obsolete. We have precisely the same process in the Western Syria. The ancient sacred script, the Hebrew, became dead and a learned language, and no longer understood by the natives. The Arabic of the Koran is precisely the same: it is now a sacred script, or dead language, not understood by the mass of the people; but is studied as we study Latin. Thus all languages, written and unwritten, change. It is only the natural effect of a cause, and that cause is the first law of nature—that every thing should be in perpetual motion, that nothing should stand still, *except* the one First Cause, the $\text{To O}\nu$, the \odot , the circle being, whose centre is every where, and whose circumference is no where—Illusion.⁴ Every thing is in perpetual motion, in the act of emanation from the First Cause, or in return to it. By this all the apparent aberrations and irregularities of the system are accounted for. At the beginning of each system all would be in order; but still, it would possess within itself the principle of change, which we call disorder; although it is only *disorder* to our narrow views. If a person without prejudice would only give himself time to think upon the way in which spoken language is always changing, and upon what must necessarily happen when the names of places, gods, and persons, come to be put into writing, in widely-separated nations, he would soon see that the same person or place must come to be very variously written; and, in consequence, that, for the discovery of truth, we do not generally allow too much latitude, but too little. We will take as an example the words Callidei, Calidei, Chaldæi, Collidei, all which and many more words are meant to designate the same people. It is possible that sometimes, in taking the latitude I contend for, I may confound two persons or places; but all these cases must depend upon collateral circumstances,

¹ See Vol. I. p. 736.

² See *ib.* p. 722.

³ See *ib.* p. 736.

⁴ See *ib.* pp. 162, 530, 643, 803, 814, 818, 826—828.

on which the degree of probability attached to each case must depend. Demonstration is not to be expected;¹ it is contrary to the nature of things. But, by not taking this latitude, I am certain, if we do not make an occasional mistake, we shall do what is much worse—we shall make a darkness—we shall learn nothing as we have hitherto done.

22. I beg my reader to refer to Vol. I. p. 709, for the word Bathkol בַּתְּקוֹל *betql*, and he will find it explained, after the Jews, to mean the *daughter of voice*. This completely puzzled all commentators. It is evident that this word may also mean *daughter of Wisdom*, the word Cal meaning both *wisdom* and *voice*; from the words *to call*, as *voice*, and *calling*, as *wisdom*. Now we come at something like sense.² Now we come to the reason why the votaries of this mythos are every where found under the word Chaldeans and its variations. These people were the followers of *wisdom*, and thus the Goddess Cali, whom we have found near Cape Comorin, was *Wisdom*; and the Calidei of Iona or Columkill were followers of *wisdom*; and the language of these people was Hebrew, which was Celtic, which was the Gael, of Scotland and of Singala, and Bengal, and of the kingdom of Orugallu. It was the Gael-doct and the Sanscrit, Sanctum Scriptum—the Cel³ of Celtic and of Cal changed into the Gel and Gal (as Camel and Gamel). Thus the language of the Gael-doct would be the language of *the learned wisdom*, that is, the learned Celt or Hebrew, the language of Abraham, of South India, and of the Chaldæans; and this, at last, brings us almost to a conclusion, to which we have come by a variety of other ways, that the Hebrew was the sacred language, and was probably the first language into which the mythos was written. I am almost certain that the Synagogue Hebrew was the universal language of the world when the syllabic writing was first used, and this, being used only for the mythos in the temples, remained as it was—but that it was soon deviated from in speech, and thus it came to be the secret language of all nations; that the Jews never spoke it, but that the Syriac was their vernacular tongue. They learn it, as we learn Latin, but they speak it no where. It became the dead and secret language from circumstances; but it never would have been more different from the Chaldee and Pushto, than the Celtic of Scotland is from the Celtic of Ireland, if it had not been written in letters of different forms. Sanscrit scholars constantly endeavour to tie me down to the strict orthography of that language, as at present settled in their lexicons and grammars. This is not the way to discover the truth. They cannot deny that that language, like all others, was once very different from what it is now, and, as I have shewn, has partly become lost; and that it was, in fact, when the first Veda was written, in a state of comparative rudeness. On this account the strict modern orthography must not be permitted to stop inquiry, or to determine the identity of words, against circumstances and probability. In the beginning of all nations their orthography must have been as wild as the winds. It is a very curious and striking circumstance, that the Cambridge river, the *Cam*, should also bear another Indian name, that is to say, *Grantha*. We have had enough of the *Cama* of Cape Comorin; but the letters of this country are called the letters of the *Grantha*, which are said to have been derived from the *Tamul*, the meaning of which is, that they are the same as the *Tamul*. Is it possible to believe that the river *Cam* being also called *Grantha*, can be the effect of accident? I think not. I believe that the *Bede's houses*, or houses of *Buddha* or *wisdom*,⁴ had this name given to them when the river was called both *Cam* and

¹ People who do this, set up a system radically absurd, and contrary to all probability; and, in order to overturn this system, they require the most rigorous proofs.

² I believe that *Mimra* has been *M-om-rah*.

³ The churches were called *Kil* or *Cel*: this was *house* or *temple of Kel* or *Cel*: and as the temple at first consisted solely of a circle of stones, the word came to mean *stones*.

⁴ See Vol. I. p. 833.

Granta. In the Madras Transactions,¹ the words Cusuma-pura, Pushpa-pura, *the city of flowers*, and Pātāli-pura, are said to be synonymous. I believe that the word *Cusuma* answers to our Camasa and Camasene,² and that the Patali is the Greek Petalon. It is now expedient to recollect, that France, where we found the Bhoees, the Garuda, the temple of Carnac, and the Pattarini, is called *Gaul*, and the Welsh or English, *Celts, Galles*.³

23. I will now trouble my reader with a digression respecting the ancient *vitrified forts* of Scotland. That the vitrified forts were made for the purpose of places of refuge or defence cannot be doubted. The plate which I have given, No. 38, in my *CELTIC DRUIDS*, gives a very good idea of most of them. Several circumstances, which have been overlooked by those who maintain that they are mere beacon stations, prove this. They are much too large in general for mere beacons. The fort near Inverness is above eighty yards long and above twenty wide, and that above-named, in my *Celtic Druids*, is considerably larger. The quantity of wood which would be consumed before the wall would be vitrified, by filling it with wood as a beacon, is immense. Not only the whole wood of the mount on which it stands would be consumed by one fire, but the wood of several such mounts would be required. These forts run all round the coast, in several places across the island, and are in sight of each other, so that, to alarm the whole country, certainly not more than the size of a common *tar barrel* would be requisite on each. But it is not to be supposed that when one fort was attacked, it would raise a fire to alarm its neighbours. Supposing them beacons, for what use was the wall? Would not the wood lie on the top of the hill without the very expensive vitrified wall to inclose it? The Inverness fort is situate on a ridge, rising to a point on the West, around which the rock has been scarped away, and of the material which has been produced by this labour, the wall has probably been formed. This operation must have made the *west* end and the two sides inaccessible. The *east* end, by which the fort was entered, rises by degrees, and is defended by a double wall, in a somewhat similar way to the fort described in my *Celtic Druids*. It has been said, that the walls are more perfectly vitrified within than without. This was a natural consequence, and could not be prevented. I cannot conceive how it was possible to vitrify them, placed as they are, on the edge of a precipice, without producing this effect. I have no doubt they were made before the art of building with stone and mortar was discovered—when the natives lived, as they do yet in many parts of Switzerland, in houses built of timber, and pise, as in Devonshire and many parts of France. Of these materials very good and even large houses may be built; but it is very clear that they would not be used for fortresses, as they would be burnt in a moment. When the art of building with stone and mortar was discovered, the vitrified forts went out of use, and the castles were built—the ruins of which yet remain—placed, like the old forts, in such situations on the banks of the Friths and Lakes as to communicate with one another. I have no doubt that the whole of the Highlands and Islands, north of the Caledonian Canal, might have been alarmed either from the old or the new castles, in a few hours, except in very foggy or misty weather. In those times, the temples were formed of large stones placed upright in circles, and the prodigious number of them which their remains shew to have once existed, prove, or render it highly probable, that a much greater population than what it has at present once inhabited this country. At that time, the ridge and fur form of the land, which I am told is yet to be seen in many places, now covered with heath, was made. From this country very large quantities of fish, corn, and cattle, are every year exported, in exchange for bills or gold, which are sent away to pay the rents of absentee landlords, but which, if paid to resident landlords, in kind or service, as it was formerly paid, would again raise a numerous

¹ Vol. I. p. 55.

² See Vol. I. pp. 760, 777, 788, 808.

³ See *ib.* pp. 384, 745, 757.

population, and again soon restore the heath-land to the plough. By the present order of things, in lieu of the population of the country, we have the population of Manchester and Birmingham. I do not mean to say that the present order is not *the better* of the two; I only mean to say, that *thus it is*. The gentlemen who have maintained that the vitrified forts were beacon stations, have been enabled to support their theory very plausibly, because they would necessarily be used as beacon stations, as no doubt all the castles, by which they were succeeded, occasionally were. They must have been very uncomfortable as places of residence, and on this account they were succeeded by the castles, which were equally strong, and perhaps stronger, as soon as iron and the arts of cutting stones and using mortar were discovered. I suppose that, at first, the stone pillar was the object of veneration, and was adorned with flowers and anointed with oil. The Ganesa ¹ of India is now constantly anointed with oil. When the father, the Abba, the head of the tribe, made his residence stationary, it became the Bital² or Fanum. He was the Abbé, the wise man, the king and priest. When science and letters became known, and of course known more particularly to him than to most others, he associated with him such as he pleased,³ to whom were confided the secrets of initiation, and as one reason for the better securing of these secrets, celibacy may have been established; and to the same end poverty, that is *community of property*, and obedience, may have been enforced. In our Colleges, evidently remains or revivals of Druidical institutions, we have the Abbé, or Rabbi, that is, a contraction of Roi, or Ray-Abbé, R'Abbé, or the Maître or Maistre, the Dean, &c. The Abbé, with the prepositive particle, was S'Abs, which thus came to have the meaning of *wisedom*.⁴ The fellows, &c., were all celibats or monks; but when one of these monks went off to found another college or Bareich or Parish or Borough, he was allowed to marry, as he was then the Abba or Prior. St. John's-day was Midsummer-day. This John was Juana or Wisdom, and Wisdom was the Sun; hence the longest day was selected for his festival.⁵ The day of the Sun (Sunday) was particularly the day of instruction by the Druid *Sabs*; ⁶ whence it obtained the name of *Sab-aith*, the preaching of the *Sages* or of *the wise*; consequently that day, when the Sun was most predominant, was held in the greatest veneration. It was called the Great Sunday. From this day the sun decreased. Mr. Cleland observes, that it was in allusion to this, that John the Baptist is made to say, "He must increase, (who was born on the winter solstice,) but I must decrease," John iii. 30. "On the Sab-aith the Sar-onide preached to the people, in the Kirk Meyn or T'impul or Ey-cil-Lys, barbarised into Église and Ecclesia."⁷ The assembly was called Sabat; and in the name Sabbatines given to lectures on science or wisdom, in the colleges (on any day, not Saturday only) of France, the original name is yet retained. In the above names the Sar-onide is nothing but Ras, with a termination which I do not understand; the Kirk is the circle; the T'impul is *the temple* of the Templars, the origin of which we find here as well as of the circular churches of the Templars. But the words Église and Ecclesia are only the Hebrew word קהל *kel*. In allusion to this, and to their being

¹ See Vol. I. pp. 351, 420, 518, 651.

² *Ib.* p. 759.

³ The number of circumcised or initiated by Abraham, 318, explained in a way which cannot be disputed by Sir W. Drummond, (*Æd. Jud.* p. 103, quoted by me in Vol. I. pp. 214, 215,) furnishes an admirable example of numeral and astrological allegory.

⁴ Cleland's Specimen, p. 56.

⁵ *Ib.* p. 94.

⁶ "When Mr. Humboldt was in Cumana, in 1800, says Lavaysse, he constructed a fine sun-dial there. The Cumanaese say, on passing it, 'We owe this sun-dial to the learned Humboldt.' The word SABIO, which they employ on this occasion, signifies, in the mouth of a Creole of the Spanish Colonies, both wise and learned. They always apply the word Sabio to this illustrious traveller." *Globe Newspaper*, Aug. 2, 1832.

⁷ Cleland's Specimen, pp. 96, 97.

the builders or repairers of the temple, the Templars are *megalistors* of the temple—humble imitators of the architect of the temple of the universe—of the system which has the cross, with many points at the top of it, the pole-star of Juda. This is the reason why the cross of the Templars has not a line for the four cardinal points only, but many lines or points, now generally eight, probably allusive to the original eight planets. No doubt the cupola was the most glorious part of the temple; it was the top—the archè. It was also arched; this was the first arch. Was it from this *arch* or *pons* that the high-priest took the name of Pon-tifex? Did he not only place the *first* stone at the bottom, but did he also place the *last* on the top? I believe that he did, and that from this he became Pontifex Maximus. He was a microcosm of the Megalistor, M-wisdom, finishing the arch of the universe. It is curious enough to find the Mohamedans rebuilding the Jewish Temple, and the Christians adopting into its sanctuary the society of Templars, as the conservators of that building, which ignorant, uninitiated Christians hold that God repeatedly destroyed by a miracle (Titus and Julian) to avenge their cause. I beg my masonic reader to enter the new room at Freemason's Tavern, when lighted up, and there he will see what must have been the nature of the Cupolas at Komulmer¹ and Eleusis, when, as Chrysostom says, the ceremonies were celebrated under them, with *light music, dancing, and poetry*. The high-priest was the builder of the cupola or temple, which was only an imitation of the vault or arch of heaven. An arch is a *pons*. From this, as I have just now said, I suspect that the high-priest was called Pontifex. If my reader should think this far-fetched, I then request him to give me the reason why the high-priest is called bridge-maker or pontifex. The cupola is a diminutive of *cup*, which, though I can produce no authority for it, I believe meant the vault of heaven, and that *pons* had the same meaning. Cup, in Welsh, means *top*, the same as *ras* and $\alpha\epsilon\chi\eta$. But all these explanations are very doubtful. The Abba was king and priest; in some cases his monks were his assistants; Abraham, *the stranger*, had 318 of them, and when he returned from the war he submitted himself to the Abba of the country for permission to remain there. These monks were the *liberi*, the men of letters, the initiated, the circumcised, the possessors of the secret, that is, of the sacred lore; they were the persons who anointed the *linga* with oil, and crowned it with flowers. They soon became *sacred*; and, when they thought proper to save a criminal, they admitted him among them, and thus arose the sanctuary. These king or patriarchal priests were the owners of all the land, and received the *tenths* as rent, for the purposes of government and religion. In Britain, we find their successors, the monks, appointing vicars, when the increase of population required them. In Yorkshire there are two small towns on the Roman road, called Aldborough and Boroughbridge. The meaning of their names admits not of doubt. The first was the ancient capital of the Brigantes, called by the natives *Iseur*, by the Romans *Isurium*—that is, *Saviour town*, and in later times called *the old borough*. For proofs of this see *CELTIC DRUIDS*.² The name of the other is the bridge of the borough or burgh. They are distant about half a mile from each other. They each returned two members to parliament. The first is now an insignificant village, the second can raise a market, but with difficulty. When *Iseur* was the capital of a great state they must have been in one city. This city was destroyed by the Romans, and there can be no probable reason found for its ruins returning members to parliament, except that, before the arrival of the Romans, it returned them to the old Wittagemote of its own state or to that of the nation; but probably from the unusual number of *four*, it returned them as being the capital of the nation, as London now returns four; and when the Romans withdrew, and the old Britons resumed their power, and the Wittagemote was restored, it resumed the exercise of its rights or duties. I think, from the ac-

¹ Tod, Vol. I. pp. 670, 671.

² Pp. 152, 195.

counts which we read, that the Romans left the country by a kind of convention, it seems probable that the two nations never amalgamated, and that when the Romans went away, the old system, in great part, revived. It seems to have ceased to send members at one time, but to have resumed its right in the time of Philip and Mary.

24. The Greek word *μυστηριον* comes from the Celtic word *wist*, or *wise*, though this is rather contrary to the definition of secrecy.¹ It signifies *knowledge*. It is the radical both of history and mystery. A play was called a *History* or *Mystery*, from its being an historical representation.² In the middle ages sacred plays, called *Mysteries*, were performed. This was *isteries*, with the sacred M prefixed, and originally this was the case with all history. It was a *mystery*, a representation, in the form of parable or mythos, of the history of the sacred, never-to-be-spoken M or OM. The general assembly of the ancient Britons was called *Witt-age-mot* or *Witten-age-mote* or *Witte-mote*. This is, I believe, *Witt*, *wise—oz*, letters, and *mote*, *meeting*.³ This *Witte* is the same as the first part in the name of the crucified God of India, *Witto-ba*;⁴ and *ba* is *ab*—both together meaning *father of wisdom*. The word *wisdom* is *Witte* or *Wis-di-om*. *Wittage-mot* is *wise-mot*. *Wittage* may be one of the very common pleonasms met with in language. *Oga* is a name of wisdom or *Minerva*. *Wittage*, *witt-age* or *witt-oga*, is the same as *Cortage—Cor-Cir-age*, *circle of wisdom*. Mr. Cleland, in his *Specimen* and in the *Appendix*, in various places, has shewn that the Holy Ghost was well known to the ancient Celts; that their public councils were always opened by an invocation of it, and that their decrees were held to be inspired by it. There was a class or sect of people among the Gentiles called *Pneumatomachi*.⁵ The *Salic laws* were seventy-one or seventy-two in number: they were enacted in a place or field called *Salicam*, in Latin *Salius*, or *Sali campus*. They were proposed by the *Saloghost*, *Wiseghost*, *Bosoghost*, and *Undoghost*, which meant *Holyghost*; *Wisdom of the Spirit*; *Voice of the Spirit*; *Will of the Spirit*.⁶ I think the *Sali-ghost* is the *Ghost of Sali* or *Suli* of *Bath*, which I have explained in *Volume I.* p. 609. But here we have the *Trinity* and the *seventy-two*, the *microcosm*, of which I shall treat in the next book. By the imposition of the hand on the head of the candidate, the *Ghast* or spirit of authority was conveyed.⁷ This is literally the *Hebrew Gas*, *spiritual fire*, whence comes *Ghost—Galvanic*, *Electric fire*, the *Magnetic fluid*. I am convinced that the emanation from the *To Oy* was believed to be this fire. I am of opinion that all the ancient fathers of the church believed God to be a *Spiritual Fire*.⁸ Although the town of *Salisbury* is probably modern, being removed by *Edmund the bishop* from *Sarum*, in the beginning of the 12th century, it doubtless took the ancient names along with it; as it was not considered to be the building of a *new* town, but the removal of the *old* one.⁹ *Salisbury* was called also *Saresbury*; this is, town of *Sar* or *Sur*, in fact, *Sura* or *Syr-ia*, *place of Sur*.¹⁰ The *God of Wisdom* was, in a peculiar manner, the *God of Abraham the Chaldæan*, or of the *Callidei*, or of *Callida* of *India*; it is in connexion with this that we have *callidus*, meaning *wisdom* or *cunning*. *Call* in *Celtic*, *Cleland* says, means *learning*;¹¹ whence comes a man's *calling*. *Cleland* says the *L* is the *Celtic præpo-*

¹ See note *infra*, on the last page of this book. *Ed.*

³ I much suspect that the letters called *Ogam* or *Agham* of *Ireland* and *India* are the *γγ oz*, meaning *trees* or *letters*, and *Om*, that is, the letters of *Om*, having the names of trees. When I consider that the same word meant both trees and letters, and that the leaves were letters, and the substance whereon letters were written were leaves of trees, and the bark of trees, I am not surprised at the allegories from trees. sitive article.¹ This tends to strengthen my assertion that it is the same in Hebrew. The Oscians were T'Usci or THE Uscans or Tuscans.² Cleland, as I stated in Volume I. p. 822, *note*, explains the word parable to be *par-habul* by way of Fable. Habul gives the word Cabala used in Italy for a fable. He says from this comes the Pythagorean precept—*abstineto à fabis*. The beans of Pythagoras have puzzled all commentators: when he ordered his disciples to abstain *à fabis*, he meant from *fables*, not from *beans*.³ In fact, that they were not to take the parables in religion *literally*. I consider the veil of Isis to be a parable. Under that veil lay hid the book of wisdom. She was called Neith, which meant *wisdom*.

25. The traces of the oriental system of the Sacæ are evident in the Scandinavian kingdoms, in their traditions, customs, and names; for instance, in the name of the king, Hakim, the Crymogæa of Arngrimus;⁴ Thule, that is, *The Iule*; Finland or *Vinland*;⁵ and in the confraternities, which are the sodalitates of Italy, and are but a variety of the monastic establishments of North India, of Tibet, or of the Sacæ. The custom of sending round the cup, of saying the grace, and of pledging or drinking to the health of each other as the cup goes round, is nothing but a variation of the Eucharistia.⁶ It is the exact picture of Melchizedek and Abraham. Melchizedek first blesses God or invokes, or addresses a prayer to, God, that is, says grace; then he blesses or wishes blessings to his guest; drinks to his guest, who pledges him. The confrères of Scandinavia were all sworn friends, in sickness and health, in peace and war. They were the Culdees. The Saxons of Denmark had three cups, one to Odin, one to Niord (query Neith or wisdom, the Logos), one to Freya, and a fourth sometimes to Braga, the deity of eloquence and poetry, when the brave boasted or bragged of his exploits, in the presence of the fair—whence comes our word to brag or boast. The Scandinavians had their machinery of Demigods, who arose after the manner of those of the Romans and Greeks, by degrees, as the knowledge of the Trimurti faded away; and they, in like manner, became Christian saints. In fact, there was very little change; they were first *χρησ-iani Divi*; they afterward became *Christ-iani Divi*. The division into districts is also most clearly to be perceived in their Seigneurs and Seigniories, which came into Britain from them. Mr. Mallet has observed, that the Seigniors or Seigneurs were always members of the confraternities, and that this continued till 200 years and more after the rise of Christianity, as may be seen in a MS. of the 13th century, cited by Bartolin.⁷ This means no more, in fact, than till the Papist missionaries penetrated into these northern regions. I have no doubt (as Mr. Mallet suspects), that they were the originals of the confraternities of the present Rossicrucians, freemasons, &c., in Germany and many other countries. The Papist convocations and councils, from the earliest time, have always had a most bitter enmity to these societies; but they have never succeeded in putting them down.⁸ The true reason of this enmity probably was, because they were Christians before the rise of Romish Christianity. In Volume I. p. 106, I explained the origin of our Sir, Sieur, Mon-sieur, Mon-seigneur, from the Egyptian O-sir-is and the Indian Iswara. The Seigniors and Seigniories are all the same, both in name and substance. Seignior is *Lord*, and Seigniorie is Seignior-ia, *place of the Lord*. In Hebrew it would be written שיהקור *siegnur* as corrupted, but as in the Synagogue *sieour*. The ancient Britons divided the country into tithings, or into districts containing *ten* Fraternities, with a Lord of a Manor at the head of each; in the towns, ten fraternities of craftsmen or ten guilds. The tithing court, the lowest division, consisted of ten heads of families, who were mutual sureties for one another, as each, in particular, for all that were under him.⁹ The presidents of ten tithings formed a superior court,

and were called *sapientes* and Witan or Wites, i. e. *wise men*. Rapin observes, that this system is exactly that of China, that is, of Chinese Tartary, or of the Pallestini or Tartars, some of whom we formerly found at the mouth of the Po; in fact, the Sacæ. He adds, "the conformity is so great between the practice of the Chinese and the Anglo-Saxons with regard to these tithings or reciprocal pledges, that one can't but wonder, how two nations so remote from one another, should agree so exactly on this point."¹ The Lords of Manors inherited their power, and I think they were originally ecclesiastical. The very name Lord or Seignior shews it. They were heads of a sacred caste, from which, the persons invested with the functions of religion were selected. They were the original of such establishments as the Prince bishop of Liege, Osnaburg, &c.

26. The Rosicrucians² of Germany are quite ignorant of their origin; but, by tradition, they suppose themselves descendants of the ancient Egyptians, Chaldæans, Magi, and Gymnosophists; and this is probably true. They had the name of *illuminati*, from their claiming to possess certain secret knowledge, and, from their secrecy, they were also called *invisible brothers*. They use as a mark of distinction or monogram the three letters F. R. C., which probably mean *Fratres Rosi Crucis*.³ Luther took for his coat of arms, a cross rising from a rose. They are said to hold that an universal spirit pervades all nature, which they call Argheus.⁴ Here is evidently the Indian Argha. Under an old Carthusian convert at Baden, is a very curious series of secret prisons; they are said, in the town, to have belonged to the Inquisition; but I have not been able to discover that it was ever established there. On this account, and for some other reasons, I am induced to suspect that they belonged to these *invisible brethren*. The circumstances of the gradation of ranks, the initiation, and the head of the order in Persia being called the Grandmaster,⁵ raises a presumption that the Sophees were, in reality, the order of Masons. The most eminent of them are called Sheik, which is said to mean *reverend*, and this has the same meaning as *worshipful*. They are said to maintain, that the dissolution of bodies by the power of fire is the only way in which men can arrive at the first principles of things. Here I think we may perceive the resolution or reabsorption of all emanations into the First Principle, the Spiritual Fire, the *To Ov*. The word Ros is, in English, dew; by means of the similarity of this word to the word Ras, or wisdom, they seem to have deceived their enemies, and sent them upon a false search. But I think there is no doubt that along with other matters they were also Alchemists. I am quite of opinion that Roger Bacon was one of them. The name of the Deity was probably at first Lar, which was the origin of the Latin Lares; and Lar-di was holy or divus Lar, or Lord. After this, in the usual course, Priest of Lar-di (from the regimen) became Lardi and Lord. This was probably like our Majesty, the name of the Sovereign and of God, and of the priest or sacred Lord of the Manor; and from this, in time, came the lay Lords of Manors. The Lord was the Earl, that is, anagrammatically, *the Lar*, E-Lar-di. The writing anagrammatically is only a remnant of the Hebrew mode of writing from right to left. The Lar or Lord or Seignior resided at or presided over the Manor or Manor-ia, place of *Mnr*, of Minerva or Wisdom; or over the Lordship or Seignior-ia or Seigniory. The Earl or Lar or Lord was also the Spanish Conde, and Count and Compte, and County, that is, Count-ia, district of the Conde—the same as we found in Ceylon, in Volume I. pp. 753, 754; and the Conde is the Can, Khan, or Kan of Tartary, with the title divus or sacred, holy, can-di. Kan or Kin, in Celtic, means *head*.⁶ The words Censeo, Census, include the idea

of telling by the head.¹ Censeo, I opine, derives from Kan, the head, as penser from *pen* the head.² Khan is originally Ken, knowledge or wisdom. I ken a thing, or I know it; whence came *γνωσκω*. Y is the Celtic prepositive article, and stands for THE.³ If my memory do not deceive me, Cleland has shewn that the word Khan—the Khan of Tartary—was the origin of our word King, and that it was a sacred or pontifical title, and was both male and female.

27. Every temple was a *tecte* or *house* of God. Jacob's stone was a house of God or of Om—D'om—thence came Domus for *house*. In the northern language Dom meant a *judge*.⁴ Dominus was inus-Dom, that is, inus=366—Om. The Cathedrals were called Duomo, or translated Casa Santa. The Dome is the Domo; it is the Arch formed of large stones, overhanging one another, with a flat stone at the top. It is the house, the Domus. It is the place D'Om, D'Am, D'Ama, or Di-Om, Di-Am, Di-Ama, of the *holy* OM; thus it grew into D'om; and thus, as usual, the name of God, *di*, came to be the emphatic article, and thus the house of Di-ain or Di-om became Domus; Δις *holy*, [Jupiter] δῶ for δῶμα, a *house*—δι-ωμ-ια, *place of holy Om*. The stone on which the Vaid or Druid stood to preach was called Βωμος: this was like B-ras-it—*By Wisdom*. Βωμοε was B-om, stone or altar of Om. Thus Bacchus was ΩM-adios, *the holy Om*. The country or district of the Lar, Lord, Count, was his Domain. This was Domania; that is, ama or ia-d'-om. His kingdom was Kin-d'-om, kyingdom, and Earl-d'-om, whence Bishopdom; and the record in which the particulars of his estate were entered was called Dombec—that is, Liber or Book or Bec-d'-om. This, in a later day, was imitated by our William the Conqueror, from whom only we have the word Dom-bec. At that time it is probable that the surveys of the priests were called Bec-Dom as a proper name. Thus William had a Boc-Dom. Dom-day-book was originally the D'om-d-aiā, a record of the land of the Sacred Om, of the land which paid its tenths. This shews that there must have been at the time some which did not pay; and I apprehend these were glebes belonging to priests or convents. I beg my reader to look to the Celtic Druids, pp. 128, 129, to Vol. I. pp. 173, 232, 665, 729, and *supra*, pp. 68—71, where he will find it explained, that when the Jew received the *χειροτονια*, as Aaron received it from Moses, he was said to be *samached*, to receive the Samach, that is, the brand for 600, which the Samach of the Hebrew denotes. The Christian, in his Baptism, receives the Cross, X; this, again, is the mark for 600. But the Samach, as I have frequently remarked, is the M final—in fact, the OM. For a proof that Om, or Iom, meant also 360 days, or a year, see Vallancey.⁵ There is scarcely one of our very ancient customs, when examined to the bottom, which has not marks of the rule of the priests. Look at a coronation, in any of the ancient kingdoms. Every thing bespeaks the appointment by the priest of his Lieutenant or Vicra, or Vicar, after he has undergone the *χειροτονια*, or is *samached*, or anointed with oil, from the vessel called Ampulla. (Am is OM, and pulla is פאלא *pala*, or *wisdom*—the vessel of the wisdom of Om.) By the priest, he becomes his Vicra-ditya or *holy vicar*, or Vicra-ma-ditya—*holy* or *sacred grand Vicar*. With us rebellious wretches the Priest does homage to the King; not so in Rome and Tibet, where things move in their proper sphere—there the King does homage to the Priest. “OMM. Ce mot Arabe, qui signifie Mère, a plusieurs “ significations, selon qu'il est joint à d'autres mots. OMM Alketab: la Mère du Livre, ou des “ Livres. Le Protocolle, ou Original. Les Musulmans appellent ainsi, la Table, ou le Livre des

⁵ Coll. Hib. Vol. VI. p. 393.

“ décrets divins ;¹ où ils prétendent que le destin de tous les hommes, est écrit en caractères ineffaçables, au quel ils donnent encore le nom de Louh al-Mahfoudh, qui signifie, la Table gardée, ou secrète.

“ Le même titre d'OMM alketab, est encore attribué par les mêmes Musulmans au premier chapitre de l'Alcoran, que l'on nomme ordinairement, Soutat al-Fatehah.” It seems in a particular manner to mean Mother. Thus, “OMM alcora: la Mère des Villes. C'est le titre que les Mohamétans donnent à la Mecque, parcequ'ils regardent cette ville comme la Métropole du Musulmanisme. L'on trouve cependant que la ville de Balkh a porté aussi le nom de Cobbat aleslam, qui signifie, le DÔME, ou la Voûte du Musulmanisme.—Quelques-uns ont donné aussi ce titre à la ville de Bokara.”² The circumstance of the Koran being called Om, and the observation respecting the Vault of Mohamedism connecting it with our Dom-bec, with the Duomos of Italian churches, and with the Dome or Cupola at Eleusis, under which the mysteries or ceremonies (which Clemens says were copied from Jerusalem) were celebrated; and the title of Dominus given to the Archpriest or Archierist, make me suspect that the word Pontifex is only a translation of the word Dom. This suspicion is also strengthened by the circumstance that the first and last stones of these buildings were always laid by the hand of the chief-priest, with great religious ceremony.

28. Perhaps there is no word more deserving of consideration than the word Bethlehem בית *Bit*, חבל *lhm*. When I consider the very remarkable manner in which this house of Ceres is connected with the person whom I think I have pretty well proved to be the Male Ceres—the $\chi\rho\eta\varsigma$ —the R S T or TPΣ—the 600, and the Om=600, I am induced to suspect this word to be the emphatic article ל *l*, and חבל *hm*, a formation or corruption of the *Om*. The sacrifice offered in ancient and modern Italy to this God, described by XPΣ or TPΣ consisting of bread, is called Mola; this would be Hebraicè al-om. It is remarkable that this God is called ה' *ie* or the God of victory in Hebrew and Sanscrit; and this Hebrew name of חבל *lhm* means also pugna, or victory, a warrior, a captain.³ From this the Lucumones are thought to have come. I think from all this the house of L-hm was house of the Om or $\chi\rho\eta\varsigma$ or Ceres. I have frequently stated that, in the Greek and Hebrew, the word for country is *aiā* or *ia*; and that, in the West, it was *ana* or *ania*. Mr. Cleland⁴ has observed, that originally in Gaul, Germany, and Britain, the greatest part of the land was College land, Glebe land, Parish land, which maintained the bishops, judges, subordinate militia, and its officers; that it paid *tenths*, not as to priests, but to government, and was called by the word *Domain*: but he attempts no etymon of the word. I conclude from his silence that his system did not here assist him; but I think my explanation will give the etymon. I think the word *Domain* came with the Umbri, and with them the names of the river *H-umber*, North-umberland, C-umberland,⁵ &c., and that it is *aiā* or *ania* d'om—land of Om. And this, I think, brings me back very near to the Indian-Saxon time, when the king and priest were identical—before the sword divided from the crosier—when all the land was the property of the king and priest. Is it possible that when these Umbri or Ombri arrived here, and that, perhaps after a long time, they had stocked the country with inhabitants, the sword was not invented?

29. And now I come to the origin of our Chivalry, which I think is to be found in the adoration of Freya, the third person of the Scandinavian Trinity, the female generative power, the Creator

¹ This comes from the cycle of the 600 being the Om, and from its being the period in which every thing was believed, by the vulgar, to be renewed—the new Troys, new Argonauts. It was, in fact, a perpetual almanack.

⁴ Sup. to the Specimen, p. xiv.

⁵ See Vol. I. pp. 111, 408, 535.

and Destroyer, the Cali of India. From Freya, in the character of Cali, the day dedicated to her, our and the Romish Friday, become a day of misery, of fasting and humiliation—as the Sunday, or day of the Sun, was a day of rejoicing. But from this lady in her good character came our Chivalry—exhibited in devotion to the female sex—devotion, as Mr. Mallet has shewn, existing from a very remote time with the Northern Scandinavians.¹ Among that people, this and many other customs were retained, whilst in Britain, during the stay of the Romans they were in a kind of abeyance, ready to be restored, as, in fact they were, on the departure of the Romans and the coming of the Saxons, with whom, in their Scandinavian country, they had continued without any cessation. In the same manner all the Saxon customs and names I have exhibited above were easily renewed. Chivalry did not first *arise*, it *rose again*, in those times. It flourished, perhaps, the most, when the gallant but unfortunate Boadicea led her knights, 80,000 in number, to the combat; then it was, before the brave had fallen, before the city of Iseur was reduced, that chivalry took its rise. But with that Queen it fell; and with the return of the Saxons it revived. The Saxon architecture of the pillars under the chancel of the present minster, shew that the temple at Evora was of a more recent date than that of the remaining pillars at Iseur, when it was destroyed by the Romans. The Britons, by soi-disant antiquarians, are said to have gone naked, and to have painted their bodies. Very true; but if these short-sighted persons had looked a little farther, they would have seen, that the Britons went naked only in the day of battle, when they were painted to distinguish clan from clan, and different ranks from one another. Tacitus, in the first book of his Annals, has spoken concerning the nakedness of the Germans. Gebauer, in his work called *Mantissa*,² has shewn, that the Latin expression *nudum corpus* only meant uncovered; without armour; and this may probably have been the meaning of the nakedness of the Britons. But, as I have just said, it is likely that, as they fought naked, their bodies were painted or tattooed to distinguish them from their own officers or from their enemies. The Northern Picts were men *painted*. “To investigate this point fairly and authoritatively, it is even in those remote ages, antecedent to Julius Cæsar’s invasion, when, by the falsest of all consequences from the plainest of all premises, the Britons are imagined to have been little better than savages, though, in fact, they were, even at that time, under the most admirable of all human governments; but, like all other human things, not exempt from faults.”³ Cleland then shews, that the island was conquered from being divided into federative governments, without a sufficient bond of union; and, in the same manner, western Europe will, perhaps, be conquered. It took the Romans many years to conquer Britain.⁴ The Russians, since the time of Peter, have made much greater strides. In fine, in the beautiful account given by Mr. Mallet,⁵ of the Cromlehs, the Carns, the circular temples of enormous stones, and the *custom of burning the most beloved of the widows* of the prince on his funeral pile, sufficiently establish the identity of the Indian and Scandinavian Sacæ. I have just now expressed an opinion that the word Pict was meant to describe a painted man, like those referred to by Cæsar in speaking of the Britons. This is confirmed by a fact which I did not know before, that a class of persons in Scotland were called *black Gauls*, that *Aulaif* was killed by *Black Gauls*. But it also appears that he was killed *per Albanos*. I think, from the designations Black—*pict* or *painted*, and *white* or *albus*, the tribes were

³ Cleland, Spec. p. 32.

⁴ The Romans depended on armour, discipline, and Russian tactic—gold; the Britons on valour; and had they been united under one head, instead of being divided into clans and weakened by petty jealousies, the Romans would never have conquered them. The Britons were to the Romans, as the Europeans in general are to Russia.

⁵ P 213.

thus described from their colours in battle. If a person wish, with little trouble, to form an opinion of the *inextricable* confusion of the early history of the North, he may peruse article IX. in No. XXXI. of the Westminster Review. It is very curious to observe how generally the custom of conveying knowledge by apologue, ænigma, allegory, fable or parable, prevailed in the world. We have it in India, in the fables of Æsop, and in the Queen's riddle to Solomon, in Syria; and in the history of Samson; and it was the common practice of the Scandinavians.¹ Anagrams and acrostics were parts of the same system. The facts themselves have nothing in them remarkable; but the universality of the practice, for so great a number of years, is very remarkable. In the absence of every other kind of amusement or occupation, not filled by war or hunting, the art of making parables or riddles filled up the time of the rich in all nations. It was in itself very good; it injured no one; it kept people out of mischief, and it sharpened the intellect. It was better than smoking.

30. Every inquirer into our ancient histories has read of the Sea Kings, who invaded the northern parts of the island from Sandinavia. These were the people who had the Sagas for their sacred books. How came they to be Sea Kings? Were they like the Royal Shepherds of Egypt—all kings? The Sea Kings were the Sagara or Sea Kings of Rama, in the island of Ceylon. The island of Iona had its name of Columba, from ancestors of those sea kings, who so often invaded Scotland in a later day.² Mr. Mallet, by shewing that the ancient Runes³ were known to and used by the inhabitants of Tartary, (where inscriptions in them are yet to be found, and where no Christians, in the common acceptation of the word, ever lived,) long before the Christian æra, and by a variety of other strong arguments, proves that Ulphilas was not the inventor of them; but that, in fact, they are of an antiquity totally unknown; that they were brought with the Sacæ, and that for many ages they were considered secret, sacred, and magical, as I believe they were in all other nations which possessed the knowledge of them. A spell is a magical contrivance: this was the art of discovering the meaning of a word. Mr. Mallet also shews, that the oldest of the Runes were written in the manner of the Chinese—from top to bottom—afterward in the Boustrophedon style; and, at last, from left to right. In the antiquity of their poetry, he shews, that they vie with Hesiod and Homer, and I have a strong suspicion that in their fable of the Dragon and Thorah, we have the Tora of the Hebrews, and in their Scalds a corruption of the Chasdim or Chaldæans or Culdees of Iona, or Columkill, where their kings were buried, and where their tombs yet remain. But it was in the times when the immense circular temples⁴ were built, probably before the invention of the Runes, that the instruments were made with which they worked their mines, which have had iron edges, but the handles of which are gold;⁵ thus proving what I have suggested in my *CELTIC DRUIDS*, p. lxvi., that *gold* was once “the common metal for useful domestic purposes,” and “Iron, from its great superiority of *real* value, the precious metal.”⁶

31. Is it not possible that a golden age may really have existed; that is, an age when there were no wars;—that a scientific or learned race of priests, like those of Tibet, holding the system of the renewal of cycles—re-incarnations—which I have shewn existed in every part of the world, may have governed the whole?—If it be true, that a great flood destroyed the world, except a few fortunate individuals, and these grew into great nations—is it not evident that, by the time they had increased to any considerable number, the earth must every where have been in a situa-

tion so favourable for occupancy as almost to have absolutely forbidden strife or wars of any magnitude for the sake of property? If a dispute arose between two tribes emigrating from the parent hive, it would terminate like that between Lot and Abraham—one, under the mediation of the common father, the head priest or patriarch, would go to the East, the other to the West. The abundance of excellent land would be so great, that it would not be worth contending for. Thus the world, without war, would become peopled. I can readily conceive too, how a privileged and learned order, keeping to itself its mysteries, in such a state of things, might enjoy supreme power for many generations, claiming to be proprietor of the soil, and receiving its tenths, which, in such a state, would be no oppression—but, on the contrary, it would constitute a government to mankind the most beneficial, perhaps, that can be imagined. And I can readily conceive, that this state of things would continue until the land of the world, by being fully stocked, would become scarce; then, and not before, the sword would be invented—then would end the golden age, of which, alas! we have nothing now left but the tradition—but it is an *universal* tradition. During this age it was that the circular temples were erected, in cyclic numbers, to do honour to the Deity, and, at the same time, to record in imperishable monuments, as far as human means could avail, the cycles on which all the system depended—the cycles which equally regulated their festivals and the time of the agricultural labours, to which they looked for their subsistence. These labours became of daily increasing importance, as land became scarce, and as the golden age of peace and plenty began to decline—till it ultimately faded away and left no traces of it, but a dream. If we suppose the cyclic system to have been established before the flood which drowned Atlantis happened, and a few persons only to have been left, why may not all that I have suggested have taken place, and the learned class who must have known the fact by tradition, for many centuries, have adopted the invention of the cyclic temples, to record their knowledge as far as lay in their power? Look to the remotest period, and every thing tends to support this theory. Insulated facts innumerable meet us at every step, none of which can be accounted for in any other manner, but for all of which this theory readily accounts. All tradition, all history, sacred and profane, support it—natural philosophy, facts and circumstances, all combine to support it. This was really the golden age; it was the age of *Xeris* and *Xpous*—for there were no wars, and there was no iron. Gold was the common metal—iron was not known—and here we may observe how curiously the truth of the tradition appears. The ages were of Gold, Silver, Copper, Iron!¹ and it is very evident to me, that this is correctly the order in which the metals were discovered: thus it is actually the fact, that *the age of gold* would be the age of piety and happiness. If we consider carefully the nature of the animal *man*, and at the same time the nature of the circumstances in which I have supposed him to have been placed after the flood, it seems to me that, in the state of the world which I have suggested, the golden age would almost necessarily arise. The difficulty we have now, is to believe in the absence of wars, for so great a length of time as my theory requires; but when fertile land was so plentiful as to be worth nothing, the whole world being agrestic, what should men fight for? Was it not better to remove than to fight?² Trifling border squab-

¹ See Celtic Druids, p. lxvi., as quoted above.

² In the book of Numbers (xx. 17, 19) we have an account of Moses, with his tribe, asking leave to pass through the lands of the King of Edom, and offering to pay for what he wanted. Here we have an exact example of what must have taken place in nearly the earliest times of which I have been treating. The first people would extend their borders by degrees, till they increased to a great size, covering a vast extent of country. Then those in the central part would want to ease themselves of their superabundant population, and would send off swarms in succession—each succeeding swarm settling as near the borders of the settled country as it could, and asking leave to pass through the lands of its predecessors, till at last the swarms would arrive at the ends of the earth. I think this was what happened to the Canaanites when driven out by Joshua. They passed through Lower Egypt, along the settled coast of Africa, till they

bles, no doubt, would arise ; but an Abraham or a Lot would easily settle them. In such a state of the world many of our passions and follies would not exist. Would there be such a thing as the honour of nations? Would there be any jealousies arising from competition of trades? Would there be any wars or feuds of religion? The system of Buddha, of renewed incarnations to end at the remote period of 6000 years, would, for a long time, prevent them. When the first religious war, probably that of the Maha-barat, arose, then ended the golden age—the age of the universal religion. The universal prevalence of Buddhism is a fact, not a theory. I think I may almost say the same of the wars of the Maha-barat and the origin of sects. Every where as we advance in time, the remains of a decayed system, in endless variety, display themselves, and support the truth of the tradition of the story of *the golden age*—the universal tradition of all ancient and profane history. Every where we find the original system, and every where signs of its decay. I think attention to the nature of man will again let us into some secrets—will account for some effects which have hitherto been unaccounted for. We every where find works called the histories—History of Romulus, of Cyrus, of Theseus, of Bacchus, of Hercules, of Cristina, &c., &c.—at the bottom they are all identical, though, at the same time, each pretends to be a real history of a hero of the country where we find it, which, from the general identity, is evidently impossible. How is this? If one secret universal system, that of Buddha, prevailed, we may be very sure that as man, the *uninitiated* man, began to advance, by degrees, to his present state, he would begin to inquire into the origin of things—of the temples—of the religion—of the privileges of the favoured caste; and then it was that these mythic histories were produced to satisfy his curiosity, and to silence his inquiries. From various circumstances I think this process began in India, and by degrees became co-extensive with the system. The same policy is every where evident, along with the same system—but the system and its history varied in little matters to suit local circumstances, and to suit every new cyclic Avatar. This theory satisfactorily accounts for their similarity, and, at the same time, for their variety. It is not necessary to suppose a general agreement to account for this. Every where, as the 6000 years advanced, man would have the same curiosity, and, from state to state, the contrivance to repress it (having been once invented) would extend itself. Man, priests, and corruption, in all states, have been the same. As food became scarce, man became more unprincipled and priests more cunning. The earth every day produced more thorns and thistles, Gen. iii. 18, and the very remembrance of the golden age at last faded away with the absolute failure of the Millenium. If we figure to ourselves the first invention of a mythos of an immaculate conception, of an infant exposed, of his escape, of his victory, of his death, and of his resurrection after three days; or, under a parable of this kind, the passage of the Sun, from the winter to the summer, to be described, I think we may very readily suppose how, with the system of renewed cycles, this story would be every where propagated. From the peculiar circumstance, probably in its effect unforeseen, of the renewed cycles, it would require no superintending head to keep it alive. It is in its nature peculiarly calculated for duration; nothing could prove its falsity but time, and almost always a long future time, at least during almost all the time whose antiquities we have examined. Its system of mystery, masonry, and monachism, also tended strongly to its preservation. It also became, after a certain time, the universal test, the profession, the possession and bond of union of a peculiar order, that order in all states, after the union

got to the Straits of Gibraltar, where they erected the pillars described by Procopius, (vide Appendix to *Celtic Druids*, p. 314,) which forms the best proof now existing of any fact of so ancient a date as the Exod of Moses—a proof so strangely overlooked by all our priests, an oversight which can only be accounted for from their absolute ignorance of the nature of historical evidence. The history stated by Procopius is beautifully strengthened by the fact, that in the country on the opposite side of the Strait we find the City of Medina Sidonia.

of the Linga and Ioni, having an interest in opposition to the rest of mankind,—every where struggling with the sword for superiority—an order varying in different times and different states in small matters, but in great ones the same. Thus, for several thousand years after the wars of the Maha-barat ceased by the union of the Linga and Ioni, until the Christian æra, when the system began to be lost, we hear of scarcely any religious wars. About this time the mind of man had outgrown the mythos, the fable, the parable, which, as man improved, deteriorated till it became too bad any longer to be endured: the mystery then assumed a new shape—in the *vulgar* Christianity, and, after a time, in the *vulgar* Mohamedism; and in both religions, after the mythos and the mystery have both expired with time, we still cling to the ruins of the system, and look out for the millenium. As long as Buddhism lasted in its full extension, one ecclesiastical head, like the Lama of Tibet, resident somewhere, I think, superintended the whole, and kept it uniform, as I shall shew in the next book; but when the zodiacal cyclic incarnation of the Lamb succeeded to the Bull, and Cristna arose, then arose sects, varieties, and miseries, of every kind. Truly, indeed, do the votaries of Cristna maintain, that *he* came with the Cali Yug—with the *age of iron*! It comes out at last, that we have a *μυθος* and a *μυστηριον*. What is the *mythos*? What is the *mystery*? What is the parable, the fable? What is the secret doctrine? The mythos, the parable, is the fable under which the mystery is concealed; the mystery is the *secret* doctrine taught by Pythagoras, by Jesus,¹ by Mohamed—the renewal of cycles, the inspiration with the *holy ghost* of persons, in every cycle, to teach mankind the doctrine of a future existence of happiness or misery, according to their conduct in this life. Inspiration by the *holy ghost* is evidently a mere figure of speech, describing a person more enlightened than his neighbours. Whether this future life was taught by Jesus to be by a hell or by a metempsychosis, and an ultimate absorption into the *To Oυ*, I know not. With hope and humble resignation I await the event; and thus, gentle reader, I conclude this book.

¹ *Secret* as his words in the Gospels prove over and over again.—[Matt. xiii. 11; Mark iv. 11; Luke viii. 10.—It is remarkable that these are the only passages in the Gospels in which the words *mystery* and *mysterics* occur, and that in each case they are accompanied by an explanation which proves that the doctrines taught were *secret* or *mysterious* only because the hearers were gross in their understandings and disinclined to investigate the evidences of their truth. Paul, who, in many of his Epistles, uses the terms *mystery* and *mysterics*, obviously does so in the sense of a *secret*, a thing or things which had been unknown till then, but were now made *known*; not that the doctrines of the Gospels or of his or the other Apostles' letters, were *mysterics*. "Secret (things belong) unto the LORD; but those *revealed* unto us and our children," (Deut. xxix. 29,) as much under the Gospel as under the Mosaic dispensation. *Editor.*]

1. HAVING exhibited proofs innumerable of the reality of a general mythos, it now seems to be necessary, in order to complete the whole, that I should exhibit the object for which the mythos was formed. We shall find that this was invented, as might be expected, for the support of the dominant priesthood; and that for this purpose circumstances were made subservient. When favourable circumstances were not to be found in *true history*, they were invented. Thus the Jews tell of Noah and Tibe, the Egyptians of Menu (which is but Noë) and Tibe, and both describe their three sons, followed by a train of lineal successors. I think I shall not be accused of giving way to idle superstition; but, despite of incurring this accusation, I must say, that there appear to me, when all the circumstances which I have laid before my reader are considered, much truth and very great plausibility in a passage of Dr. Woodward's discourse on the Ancient Egyptians: "The colonies all carried these customs along with them to their several abodes: and there were
 "from the very beginning *priests*, sacrifices, temples, festivals, and lustrations, as well among the
 "ancient Germans and Gauls, in Peru and Mexico, in Siam, China, and Japan, as in Egypt." What can be more striking than the custom of circumcision among the Tamuls, in Mexico, in Colchis of Armenia, in Egypt, and in Guinea and the kingdom of Congo, on the coast of Africa? ¹ It is also very remarkable that this rite is found in all these places to prevail only among the Priests. This tends strongly to support the opinion which I entertain, that the order of Chaldei, a learned order, *did* escape from a flood, and, by means of their superior intelligence, *did* establish an universal pontifical empire, getting the command of the Aborigines all over the world, who were unarmed Buddhist barbarians, who also had escaped the flood; and, that the rite of circumcision, or initiation, as it was called, was invented before the art of writing was known, in order to distinguish that order from the rest of mankind. I think the knowledge of the art of writing

¹ O. Lopez, Hist. de Congo, ch. v.; Woodward on Wisd. of Egypt, p. 82.

and reading succeeded to it as a *test* in later ages. The fact that circumcision and initiation had the same meaning is very striking.¹ The universality of the practice also tends greatly to support my idea. When we look into the Jewish books we find that the Jews occupied Western Syria, precisely as the noble class of Romans did Italy, and as the Turks have done Greece—that is, as a separated and superior class or caste—the great mass of the ancient natives being left, as a species of Helots. The whole of the Jews were circumcised, because they are said to have been a *priestly nation*; and, if the history of Abraham can be believed, the Jews, properly so called, were all descendants of that Chaldæan Brahmin, and of the 318 persons said to be bred in his own house, who probably constituted the whole of the tribe, or of the high caste of the tribe, who had come with him from India. Though, for particular historical knowledge, memory, without writing, would reach but a very small space, yet for a simple story, or for a small collection of simple stories, closely connected with religion, or for any single, grand event, I think it would reach a long way back.² Such for instance as a great flood—like that of Noah—concerning which I must now make some observations.

2. We are told in the book of Enoch, that “the earth laboured and was shaken violently;” and in Chapter lxiv. Sect. xi., that “Noah saw that the earth became inclined, and that in consequence destruction approached.” I think few persons who have read the book of Enoch will deny, that this is a most curious and striking tradition.—It is a tradition of common sense, supported by all the outward natural appearances of the earth. Enoch afterward says, verse 11, that the earth was destroyed because hidden secrets had been discovered; and in chap. lxvii. he makes Noah say, that he, Enoch, gave Noah the *characteristical marks or signs* of the secret things inscribed in his book, and *concealed in the parables*. I think it will not be denied, that I could scarcely have wished for any thing more to my purpose than all this, which is evidently no copy from the Bible. It directly admits the existence of symbolic (or numeral) writing, and that it had been kept secret. I ask, is it not possible that, from some cause, the axis of the earth may have been suddenly changed, as Enoch says in Book ix. Chap. x.? Every natural appearance strongly supports the doctrine, that the change has been sudden; and a sudden large change no more operates against the fact of the earth being governed by general laws, than a breaking out of a volcano so operates. And I am of opinion that the *diminution* of the angle of the planes of the two axes is not the effect of a periodical oscillation, but is the effect of the conservative power which we every where see around us, operating to restore the globe to the first state from which it has been moved. I believe one of the most powerful obstacles, with many persons, to the reception of the opinion, that the change in the axis of the earth was the effect of what we vulgarly call accident, is to be found in their conception of the greatness of the event or effect. They acquire this idea from a comparison of that event with themselves, and with every-day facts, like volcanic eruptions. But the idea is a delusive one. They ought to compare it with the motions going on among the innumerable suns and worlds moving in the starry firmament, which our astronomers know, by means of their telescopes, are changing every day—some suns appearing to rise into existence, and some to be destroyed, or to disappear. If persons would think upon this, they would see at once, that the change in the axis of the earth is only a trifling matter. It will be said, that if the two planes coincided, the equatorial regions would not be habitable from *heat*, and the polar regions from *cold*. Well, and what then? Are the poles habitable now? The heat of the one is

¹ See Vol. I. pp. 304, 305, note 4.

² It was to remedy this defect that such great numbers of the Druidical temples were built, with their pillars in cyclic numbers, and that the arts of epic and dramatic poetry, music, and dancing, were invented.

no more an objection than the cold of the other. But, after all, is this so certain? All these considerations are mean and contemptible to the person who duly estimates the immensity of the universe, the diminutive character of our globe, and the little nests of quarrelsome pismires which infest it, and fancy themselves somebody.

3. All the traditions maintain, that a person whom we call Noah, by some means, no matter what they were, foresaw that destruction approached. Tradition says, that he erected pillars with inscriptions in the land of Syriad or the holy Sura. This might be the Syria of India or of Palestine or of Egypt, which was meant. It also says, that he buried the sacred books in the city of the book Sephora. We have a Biblos in Palestine, and the city of Boc-hara in North India, both meaning *city of the Book*. Every philosopher, and every fool, knows, that floods have taken place; and if we consider them independently of mythology, and if we use our endeavours, their nature and effects may, perhaps, in some degree, be collected out of the scraps of traditions left to us; for I see nothing improbable in truths having come down to us concealed in fictions or parables, since we know that the use of parables is one of the most striking characteristics of the religion which is contained in these histories. Now, if we suppose that the ruin did not happen in a moment, but that a year, or even more time, was required to effect the whole by successive earthquakes, is it not possible, if such a scientific and sacerdotal government existed as I have contemplated, that the supreme Pontiff and his court may have saved themselves and their secret literature in a ship or floating house? (If such a case were to happen, in Europe, half the people being destroyed, and tremblings of the earth still going on, before the end of the year, where, and in which of our great men of war would KING WILLIAM and the Archbishop of Canterbury be found?) And if by this, or any similar contrivance, they saved themselves, and they never moved far from the ruins of the city they previously occupied, why should it not be the city of Boc-hara—the city of *letters* or of *the book*? No person who has read the essay of Governor Pownal on the ships of the ancients, will doubt that they had ships nearly as large and nearly as sea-worthy against a rushing flood, as ours. Suppose there were several or many of these ships, and that only one or two were saved; the probability is, that the Pontiff or Patriarch would be in one of them, because *he* would secure the best. Why should not this ship have been built upon the Caspian Sea? It was the best situated of any place to preserve the ship in a flood.—But why should not the axis of the earth have become changed to its utmost extreme by various shocks? Why should not some of the earliest and most violent shocks have taken place hundreds or thousands of years before? and why should not the last shock have been only a very moderate one, just enough to sink Atlantis, or to break the banks of the Euxine, though lasting, at intervals, for a year or more? If religious prejudice did not stand in the way, I am quite certain that some theory, not very dissimilar to this, would be universally thought probable. The probability in the last case is, if it be probable at all, that it happened after the discovery of writing by symbols, but before its discovery by syllabic letters. The Druidical circles mark the numerals, but nothing like letters, and it is worthy of observation, that the word Sephor, which is the Hebrew name of the town where the books were said to be preserved, means much more properly a *cipher* or *figure of notation*, than a *letter*. By a little forcing *letter* may be made out of it; but its meaning is, *symbol of notation*. It is also worthy of observation, that the word used by Enoch for the signs of the secret things in the book, is not translated by Bishop Laurence *letter*, but *characteristical marks*, Chap. lxvii. And by a note on the latter word, it is explained by the word *SGINS*; this shews that, in the Bishop's opinion, *letter* is not meant. His explanation can apply to nothing but symbols similar to those of the Chinese.

4. Such persons as may feel disposed to take offence at my doctrine, that the flood may not have been universal, or think that the theory which I have proposed in Volume I. pp. 293, 294

of this work unsatisfactory, I refer to Diss. VI. of Vol. III. of the *Morsels of Criticism*, by Mr. Edward King, who will not be accused of want of piety and orthodox religion. Mr. King shews very satisfactorily, that, in the flood of Noah, according to *the fair construction of the Mosaic text*, the whole surface of the world was not covered with water, nor the whole of mankind drowned. What I have said respecting the violent change is perfectly in accordance with Cuvier's observation, that the revolutions of the world have not been gradual, but sudden and violent;¹ and what I have said above respecting the flood not having covered the whole world, is perfectly in accordance with what he has observed, that the marine remains are *not to be found* on the tops of the highest mountains.² Thus I have both the first geologists and first divines on my side in this matter. We might speculate to eternity, but it is impossible for us to know how a sudden change in the earth's axis would operate, or what would be its effects. The Pyramids of Egypt are of such a nature, that I think it not impossible that they may have escaped entire when every other building in the world was tumbled down. But my reader is not to suppose that I mean this to be the flood which threw up Mount Blanc or Chimborazo, but a much later one, which I have supposed laid bare the Delta of Egypt and broke down the banks of the Euxine, &c. If we suppose this to be the case, we readily account for the Druidical and Cyclopæan buildings found every where, and for the apparently long interregnum of darkness which seems to have taken place between their being built and that of the oldest of the modern ancient edifices and empires. It may be that most anciently the planes of the equator and the ecliptic coincided, that they were placed at an *angle* by a convulsion, that this angle was considerably larger than it is at this moment, and that it is gradually decreasing. In that case the polar regions must have formerly been much warmer than they are now, and, in consequence, may have been fit for the residence of plants which we now find only in warmer climates. For any thing we know, the reduction of this angle may have proceeded more rapidly at first than it has done in later ages, and this would account for the remains of plants which are not found growing there now. No doubt the change in the earth's axis would cause very great mischief; but the assertion, that the least check to the motion of the earth would cause *infinite* mischief, is but a gratuitous, dogmatical assertion, necessarily made in ignorance. I have a right to suppose only just so much retardation to take place as would produce the effects which we see and experience. Besides, the change might be along with, rather than against, the earth's motion, and this would make a great difference. That our country is gradually growing *colder* is proved decisively by the records of the suits in the exchequer between the parsons and the farmers for the tithe on wine. Every body knows that the northern and central parts of Britain, indeed, not any part of it, can now produce good wine.

An ingenious writer in an American journal has made some striking observations on the Deluge. He says, "There are many indications that a powerful current has passed over the continent of America from north to south, and the author of this article accounts for these appearances, by supposing that a change has at some period taken place in the velocity of the earth's motion on her axis. The surface of the earth at the equator revolves at the rate of more than 1,000 miles per hour, or 1500 feet per second, which is about the velocity of a cannon ball. We have no idea of circular motion like this. A wheel of wrought iron, of three feet in diameter, will fly in pieces before it reaches a velocity of 400 feet per second. Supposing the earth should be slightly checked in her daily motion—the Pacific Ocean would in a moment rush over the Andes and Alleghanies into the Atlantic—the Atlantic would sweep over Europe, Asia, and Africa—and in a few hours the entire surface of the earth would be covered with rushing torrents, excepting the

¹ Jameson's Cuvier, pp. 15, 16, 4th Ed. 1822.

² *Ib.* p. 18.

“vicinity of the Poles. The appearances presented on the surface of the earth are precisely such “as we would [might] expect after such a catastrophe.”—*Silliman’s Journal*. The probability is, I think, that a great flood did take place more than two thousand, but not more than about three thousand, years before Christ, which destroyed the greatest part of mankind, leaving only a few persons in different places. I am very much inclined to believe that, at the bottom of perhaps every mythic history, there exist some truths. Now, nothing could be more easy to transmit by memory than such a bare fact as that of the sinking of an island, or that of a great flood. And I know nothing more likely than that it should have been made into a mythos—that it should have been made subservient to the purposes of the priesthood. Beyond the æra of Nabonassar, or about the first Olympiad or the founding of Rome, which is as far back as the memory of man may be supposed to extend, and before Herodotus, the first historian, wrote, history is mere mythos, as Diodorus Siculus properly represents it. In some instances, as in the case of Rome, instead of *history*, the *mythos* was continued to a much later date. It is possible that the inhabitants of the world, at the time of the last flood, may have had traditions of former floods having taken place a few, perhaps four or five, hundred years previously, which may have served to warn them, together with some symptoms of which we know nothing, that another concussion was likely to happen. The words of the book of Enoch imply that Noah and others learned *from secret science* that it would happen. If the change were caused by a comet, is it not possible that the persons who were so profoundly skilled in astronomy, as to be the inventors of the Neros, may have been able to calculate the period of one, and to foresee that it would come near enough to the earth to cause the mischief? Enoch says, “Respecting the MOONS have they inquired, and they have known “that the earth will perish with those who dwell upon it.” Again, “They have discovered “secrets, but thou art free from the reproach of discovering secrets.” Chap lxiv. Sect. xi. If the word translated *moons* had been planetary bodies, it would have been instantly applicable to the knowledge of comets; and I think there is a strong probability that such ought to be the translation. In numbers of places the book of Enoch shews a knowledge of judicial astrology, and speaks of reading the course of events in the stars, similar to the expression of Jacob and his children. All these expressions might really, though perhaps secretly, be meant to apply only to the future planetary motions. Under all the circumstances I cannot think it improbable that the change in the axis of the earth should have been caused by a comet, nor that its approach to the earth and the mischief which it was likely to cause, should have been known to the antediluvians—persons learned enough in astronomy to be the inventors of the cycle of the Neros. Reason, natural philosophy, and sacred and profane tradition, all support the justness of this conclusion. In aid of history and astronomy we can also cite the opinion of some of the first geologists: MM. Cuvier, Deluc, and Dolomieu, affirm “that, if there is any circumstance thoroughly established in geology, it is, that the crust of our globe has been subjected to a great and sudden “revolution—not farther back than five or six thousand years ago;”—that the countries now inhabited had been before inhabited, if not by mankind, at least by land animals; consequently, one preceding revolution, at least, had overwhelmed them with water; and that if we may judge by the different orders of animals, whose remains are found therein, they had perhaps undergone two or three irruptions of the sea.¹

5. The assertion of the book of Enoch, that the axis of the earth was changed, was supported by Plato,² and the inclination of the earth’s axis was well known to the Greeks, and was called

¹ Jameson’s Cuvier, pp. 173—175, 4th Ed. 1822.

² See Volume I. p. 203. N. B. The suspicion which I have stated in the page here referred to, that the word *Λεξιας* related to the elliptic orbits of the planets, must be considered as erroneous—to be unfounded.

Λοξίας. This inclination was also well known to the Indians. There is a very remarkable passage in Plutarch: "It was the doctrine both of Diogenes and Anaxagoras, that after the creation " or primary constitution of the world, and the production of animals out of the earth, the world, " as it were of its own accord, was bent or inclined towards the South. And truly it is probable " this inclination was the effect of Providence, on purpose that some parts of the world might be " come habitable, and others uninhabitable, by reason of the difference of the frigid, torrid, and " temperate climates thereof."¹

6. "Varro places the deluge of Ogyges, which he calls the *first deluge*, 400 years before Inachus, (à priori cataclysmo quem Ogygium dicunt, ad Inachi regnum,) and consequently before the first Olympiad. This would refer it to a period of 2376 years before Christ, and the deluge of Noah, according to the Hebrew text, is 2349—only twenty-seven years of difference. This testimony of Varro is substantiated by Censorinus *de Die Natali*, cap. xxi."² Here we have a most important Gentile confirmation of the Mosaic record, affording a very strong *probability*, indeed, when united to the singular circumstance of a comet which I shall presently notice, a *proof* of its truth. The dates are as nearly identical as can be expected by any one who pays due attention to the difficulty of keeping a record of time in those remote ages, and this without making any allowance for disturbing forces, which may be expected to have operated. This western evidence is again confirmed by evidence in the East. But those who have read what I have stated of the Mosaic mythos in China,³ will not be surprised to learn, that the time of its first king or emperor, Yao, who drained and rendered the country habitable, is placed about the year 2333 B. C. Here we have, evidently, the flood and the God Iao of the Jews.⁴

7. Aristotle says,⁵ "that the Pythagoreans held a comet to be one of the planets which appears " after a long interval of time, and which, at the apex of its very elliptical orbit, is at as small a " distance from the sun as the planet Mercury. Now the Chaldæans held comets to be planets;⁶ " and the Egyptians predicted their returns."⁷ We must not forget this observation of Sir William Drummond's, that the Egyptians predicted the returns of comets, and for a reason which my reader will find hereafter, I think it right to remind him, that it was a Chaldæan astronomer, called Sosigenes, from Egypt, who corrected the calendar for Julius Cæsar. Professor Anthom, in his Lempriere, says, "Plato informs us, that in the time of Atreus the motion of the firmament had " changed in such a manner, that the sun and all the stars had begun to rise where formerly they " had set, and to set where they had been accustomed to rise; in a word, the machine of the world " was moved in a way contrary to that in which it had been before. It is evident, from the several parts of his relation, that he speaks of a confused and perplexed, and consequently a very " ancient tradition. In his Timæus, however, he makes the Athenians to have first learned it from " Solon; which would seem to favour the idea that the latter had, like Herodotus, received it from " the priests of Egypt. Pomponius Mela speaks of the same tradition, as also Plutarch, Achilles " Tatius, Solinus, and many other writers. Astronomers, however, insist, that the idea of such " an interruption of the regular motion of the earth, as this phenomenon would have required, is " not for a moment to be entertained, and that if it had taken place, it would have left physical " traces behind; besides, the figure of the earth shews, they maintain, that its revolutions have " been uniform since the flood. We leave the present subject with them and the ancients."⁸ —

¹ De Placitis Philos. Lib. ii. Cap. viii. apud Whiston's Theory, B. II. p. 107; where, in pp. 102, 103, may be seen the confirmatory opinions of Leucippus, Laertius, Democritus, and Empedocles.

With whom *I* will not leave it. Very true it is that the motion has probably been uniform since the catastrophe of the flood was *finished*; but this, **THE FLOOD**, is the very thing which we are talking about. It by no means follows, that there has been no flood since the throwing up of Chimborazo. Again I repeat, it is clear that there have been different floods, and we can never *know*, at least we do not *know*, whether the last flood did or did not throw up Chimborazo, although there may exist circumstances enough to decide our opinion. The author says, that if the motion of the earth had been interrupted, it would have left physical traces behind. Good God! what can this gentleman mean? Are there not physical traces every where? Are not Chimborazo and Mount Blanc physical traces? Can we take a single step without treading on them? The difficulty is not in finding *no* traces, but in finding too large ones, and too many of them. I speak not now of the processes by which the strata of the earth were deposited; but every thing tends to shew that the last change has been sudden and violent.

8. I now beg my reader to look back to what I have said in my **CELTIC DRUIDS**, p. 8, and in the Preliminary Observations, (Vol. I. p. 2,) respecting the origin of the seven-day cycle; then in pp. 27, 28, 291, 293, and 273, *note*, for what has been said respecting the flood or floods; to consider the universal tradition that it was caused by the sudden change in the direction of the earth's axis, as I stated in the note, in Vol. I. pp. 29, 30; and that, in consequence, the length of the year was changed from 360 to 365 days, and the length of the month shortened from 30 to 28 and 27 days. Now it is remarkable that, in Mexico, they have two weeks, one of 3 and one of 5 days, but not one of 7 days. This seems to shew that they separated from the old world before the change of the axis took place. This will make no material difference in my theory of the invention of figures and letters; because, instead of dividing the moon's period into fourteen and seven, they would act precisely on the same principle, and divide it into fifteen, and three fives, and ten threes.¹ The Javanese have the week of five days: on every first, they have their market, as was anciently the case with our Sunday; and they say, that the origin and names of the days of their week are unknown; but they have a tradition, that they were taken from *colours* and the division of the horizon. This is evidently the zodiac, when the two planes coincided. The evidence concerning this question of the change in the earth's axis is one thing, the belief of most persons respecting it is another. With the latter I do not concern myself; to the former, the evidence is clearly in favour of a sudden and violent change having taken place, which caused a very great flood; but this must have been before the building of the Pyramids, and must also have been before the flood which destroyed Maha-balipore; and yet, of course, it must have been since the creation of man. I can readily imagine an overflowing so great as, in a very small space of time, to have rushed over nearly the whole earth, in successive waves, so as not to have destroyed *every* individual, but to have left alive a very few persons, and that few to have perpetuated the race. One flood might be occasioned by successive convulsions of the earth, bursting the crust of the globe as we see it. There requires no miraculous interposition, if we suppose that in the intervals between the shocks of earthquakes, when the face of the globe might indicate renewed convulsions, a few of the more easily frightened inhabitants might be able to save themselves in boats or on rafts. Perhaps a few of them, cast on elevated lands by the wave and left there on its recession, might be able to save themselves in several parts of the world; and, in the same manner, a certain number of the animals might be preserved, and others lost, of which we now have only the remains. And the same effects may have been produced if we suppose the crust of the earth to have been burst by

¹ Crawford, Hist. Ind. Archipel. Vol. I. p. 289.)

the irruption of the central water from below, which may have been occasioned by the conjunction of a body with the moon, thus causing an immense tide. Had the change in the axis of the earth been asserted in Genesis, we should never have heard the last of the wisdom of that book. All the world, philosophers and devotees, would equally have received the assertion; but, because it is not there stated, though a consequence of it is, viz. the year having only 360 days, it is believed by none, notwithstanding all ancient tradition, natural history, and circumstantial evidence, are in its favour. Forster¹ says, the Hindoo year is 360 days. M. Adrian Balbi, in his *Ethnography of the Globe*, says, “Il est bon aussi de rappeler à nos lecteurs que les Mexicains avaient des semaines ‘ou petits périodes de 5 jours, comme les peuples du royaume de Benin et les anciens Javanais; ‘de mois de 20 jours, des années civiles de 18 mois, des indictions de 13 ans, des demi-siècles de 52 ans, et des siècles ou vielleses de 104 ans.” Here we have the year of 360 days.

We will now inquire what the ancients thought upon this subject.

9. I had collected a variety of authorities to prove that the ancients held, that both the civil and tropical year consisted of 360 days, and the month of 30 days, when I obtained Whiston’s *Theory of the Earth*,² in which I discovered that this had been proved by Newton,³ and that he had already demonstrated the truth of my doctrine. As I consider this of great importance, and my reader may not be able easily to obtain Whiston’s work, and if he could, he would find the proofs encumbered with much unnecessary matter, I shall copy them on this point, though they are rather long, and give those proofs instead of my own.

“The most ancient *civil* year in most parts of the world *after* the deluge; and also the *tropical solar* and *lunar* year *before* the deluge, contained just twelve months of thirty days a-piece, or 360 days in the whole.

“First.—I shall endeavour to prove, that the most ancient year in *civil* use, almost throughout the world, for several ages *after* the deluge, contained exactly 360 days, or 12 months of 30 days a-piece. Secondly.—That *before* the deluge, not only the *civil* year, but also the *tropical solar* year, wherein the sun passes through the ecliptic to the same point from whence it began; and likewise the *lunar* year, consisting of 12 Synodical months, each from new moon to new moon, or from full moon to full moon, were severally just 360 days long, and consequently that the *lunar* month was exactly 30 days.

“And, first, I am to prove that the most ancient *civil* year and month were of this length in most places *after* the deluge.

“(1.) This appears by that testimony mentioned in Georgius Syncellus, which informs us, that the additional five days, even amongst the Egyptians, one of the most ancient and learned nations in the world, were not originally added to the 360 days, or 12 months of 30 days a-piece, of which their year consisted, but were introduced about a thousand years after the deluge; so that till that time, their ancient year appears to have been no more than 360 days.

“(2.) This argument from the latter introduction of the five additional days, receives some confirmation from the *place* they always possess in the year, even after they were introduced in the *Egyptian* and thence in the *Nabonassarean* form, which was at the *end* of the whole year, as additional or superabundant days; which manner of adding them at the year’s end seems naturally to imply, that the several months had been so long stated at 30 days a-piece, and so the whole year at just 360 days, that they could not think fit to alter them, but only ventured to add

¹ Sketches of Hindoos, p. 40.

² Hypotheses, Book II. pp. 144—181.

³ Vide Rev. Dr. Barret’s Enquiry into the Constellations, pp. 8, &c.

“ five days at the end of the year, which indeed were scarce accounted a part of it : still implying
 “ and supposing that the ancient and stated year was made up of 12 months of 30 days a-piece,
 “ or of 360 days in the whole, and no more.

“ (3.) And what is but conjectured at in the last argument, is particularly asserted in a famous
 “ tradition in Plutarch, from whence it appears that the ancient *Egyptian* year was no more than
 “ 360 days, and that the five *Epagomenæ* were not looked upon as proper parts either of the year
 “ or of any of its months ; but as days belonging to the nativities of five several *Egyptian* deities,
 “ who, as this present piece of mythology supposes, *were to be born neither in any year, nor in*
 “ *any month*, and that thereupon, these five days were added to the ancient year ; which, there-
 “ fore, before this addition was made, contained no more than 360 days.

“ (4.) That the most ancient *Chaldean* or *Babylonian* year was just 360 days, appears by that
 “ number of furlongs for the compass of the walls of Babylon, which, as Q. Curtius and Tzetzes
 “ affirm, were built in a year, a furlong each day. For though some who wrote about the time of
 “ Alexander the Great, and seem to have known, either that the solar year was 365 days long, or
 “ the astronomical year at Babylon itself was of that length, do say that the compass of the walls
 “ was 365 furlongs ; yet Ctesias, who wrote before that time in the reign of Artaxerxes Memor,
 “ says with greater probability, that the number of furlongs was but 360. And since even those
 “ later writers add, that Babylon was as many furlongs in compass as there were days in the year ;
 “ 'tis more than probable that they erroneously concluded from thence, that because the tropical
 “ year (or the astronomical year of Nabonassar) had 365 days in it, therefore Babylon was 365
 “ furlongs in compass. Thus then we see the testimonies of several authors that the walls of Ba-
 “ bylon were as many furlongs in compass as there were days in the year ; and that the oldest
 “ and best testimony asserts that they were 360 furlongs in compass ; wherefore it must be
 “ concluded highly probable at least, that the most ancient *Babylonian* year was exactly 360 days
 “ long.

“ (5.) All this is more fully confirmed by a contemporary author, the Prophet Daniel, who lived
 “ and wrote in Babylon, in the reign of Nebuchadnezzar, who built those walls. For Daniel by
 “ his *time, times and a half*, or three years and a half, as we are sure from St. John's exposition of
 “ them, means 1260 days ; and consequently by a single *time* or one year, means no more than
 “ 360 days ; according to the usual computation of the age and nation in which he lived.

“ (6.) We find also several footsteps and remains of this old year in the Medo-Persian monar-
 “ chy which subdued the *Babylonian*. As in the 360 channels which Cyrus cut to make the river
 “ Gyndes fordable for his army, when he went on his expedition against Babylon ; and (if Jose-
 “ phus be not mistaken) in the 360 Satrapæ which Darius set over so many provinces of his em-
 “ pire. Thus also the sacred historian assures us, that *King Ahasuerus made a feast unto all his*
 “ *princes and his servants many days, even 180 days*, i. e. a just half-year's feast, that number being
 “ exactly half 360. Thus also the *Periodus Magorum*, mentioned by Scaliger, was 360,000 years,
 “ i. e. days, or a just millennium. In all which instances a plain reference is had to the year of
 “ 360 days then in use.

“ (7.) That the *Persian* year contained but 360 days is still more evident from the testimonies
 “ of Plutarch and Q. Curtius, who affirm that the number of royal concubines to more than one
 “ of the *Persian* kings, was just 360. And we know both from Scripture and Herodotus, that
 “ they went in constant courses to their kings. And since their number answers so exactly to
 “ the days in the ancient year, according to the other testimonies ; since also a year is so natural
 “ and obvious a length for one of those courses ; nay, since Diodorus Siculus directly affirms that

“ the Royal concubines were just as many as the days of the year, it is plain, the Persian year
 ‘ had just 360 days. Nay, even in much later times we find in the Arabic historians, that *Ardshir*
 “ *Ebn Babec*, who was king of Persia, in the third century of Christianity, was the author of the
 “ play which we call Tables; in which he appointed twelve houses or *Areolæ* to correspond to the
 “ 12 months of the year, and 30 calculi or Tablemen, to answer to so many days in every month :
 “ a plain instance (if not of the then present length of the Persian year and months, yet at least)
 “ of the tradition they still retained, that originally the Persian year was just 360 days, containing
 “ twelve months of 30 days a-piece.

“ (8.) There is also no small probability, that the most ancient year of the Mexicans in North
 “ America (who seem to have had their original from some of the *eastern* nations) was also exactly
 “ 360 days. This people (as Joseph Acosta, amongst others, informs us) ‘ divided their year into
 “ ‘ months, to [each of] which they gave 20 days, *wherein the 360 days are accomplished, not com-*
 “ ‘ *prehending in any of these months, the 5 days that remain and make the year perfect.* But they
 “ ‘ did reckon them apart at the end of the year, and called them *days of nothing*; during which
 “ ‘ the people *did not any thing*, neither went they to their temples, but occupied themselves only
 “ ‘ in visiting one another, and so spent the time. The sacrificers of the temple did likewise cease
 “ ‘ their sacrifices.’ Since then the Mexicans, even till these later times, esteemed as nothing
 “ those five days that were added to the 360 at the end of the year, and accordingly spent them
 “ in mere idleness; it is very probable they did this to signify that those additional days were not
 “ to be looked upon as any real part of the year, as they certainly were not of any of its months;
 “ or at least, to signify that they did *not originally* belong to the year, but were added to it in
 “ later times, to make it more agreeable to the solar year. And if so, it must be allowed that the
 “ primitive year of the Mexicans contained just 360 days, and no more.

“ (9.) The only year among the ancient Greeks, and the nations descended from them, that can
 “ come in competition with this year of 360 days, is the tropical year or a year made very nearly
 “ equal to the tropical by cycles of years, or proper intercalations of months or days in certain
 “ revolving periods. And that this year was not originally in civil use amongst them, appears
 “ very probable from the most ancient manner of determining the seasons of the year, which was
 “ not done by the names of the months and days of the civil year, but by the heliacal rising and
 “ setting of the fixed stars, as is well known to all that are conversant in the old poetry and astro-
 “ nomy. Now, if the tropical year, or a year made equivalent to it by proper intercalations, had
 “ been the civil year, it can hardly be imagined that the easy and obvious method of reckoning the
 “ seasons by the months and days of the civil year should be entirely neglected; and so odd and
 “ troublesome a method as that of fixing them by the heliacal rising and setting of the fixed stars,
 “ should be entertained in its stead. And in confirmation of this reasoning, Diogenes Laertius
 “ says, that Thales the Milesian was the first of all the Greeks who discovered the length of the
 “ four seasons of the year, and that the tropical year was 365 days in length. And though Solon
 “ is said to have made the month conformable to the motion of the moon at Athens, yet even he
 “ himself was utterly ignorant of the tropical year, if he really had that discourse with Cræsus,
 “ king of Lydia, which Herodotus relates he had. For he there supposes, that if the year of 360
 “ days had an *embolimary* month of 30 days added to it every other year, it would thereby become
 “ equal to the tropical year. Whereby it is plain, he took the tropical year to be 375 days long,
 “ which is above 9 days and 18 hours more than the truth. Wherefore I think it may be con-
 “ cluded, that till after the time of Solon (or if this discourse with Cræsus be feigned by Herodo-
 “ tus under Solon’s name, then even till Herodotus’s time, which is above 100 years later) the

“ ancient Greeks were generally ignorant of the true length of the tropical year; and, consequently, the most ancient Grecian year was not equal to the tropical. And if so, the following ancient testimonies will be undoubted evidence that it was of no other length than 360 days.

“(10.) That the ancient year of Greece, Lydia, and the Grecian colonies in Asia, was just 360 days, appears from several testimonies. There is a clear intimation of this in the 360 gods, which (as Justin Martyr assures us) that most ancient poet and philosopher Orpheus introduced; one, it seems, for every day in the year. The same thing may be concluded from the before-cited testimony of Herodotus, (of Halicarnassus, a Grecian city in Asia,) who introduces Solon discoursing with Cræsus, king of Lydia, where, he says, that 70 years, (viz. either Asiatic years, even till Herodotus’s time, or at least Lydian years in the time of Cræsus,) contained 25,200 days; from whence it follows, that a single year, at the same time, contained just 360 days. This also is proved from the riddle of Cleobulus, tyrant of Lindus, a city of Rhodes. *There is, says he, one father who has 12 children, and each of these has 60 daughters, 30 of them white, and 30 of them black; all of them being immortal, and yet mortal continually.* By which all agree, that the year is meant with its 12 months, and each of their 30 days and 30 nights. Thus also Hippocrates (of the island of Cos, in the Egean sea) affirms, that 7 years contain 360 weeks, and so one year 360 days. And also that 7 months are 210 days; and 9 months and 10 days are just 280 days; and elsewhere, that 9 months contained 270 days, according to the computation of the Grecians. From all which it is evident, that 30 days were then allowed to a month, and 360 days to a year.

“(11.) That the most ancient year at Athens in particular, was 360 days, and the month 30 days, appears from the very original constitution of the city of Athens itself, which, as we learn from Harpocration, Julius Pollux, and Suidas, was divided (to use the words of the last) into four tribes, in imitation of the 4 seasons of the year; which tribes contained 12 *φρατρίας* corresponding to the 12 months; and each *φρατρία* had 30 *γένη* answering to the 30 days of each month; so that all the *γένη* collected together were 360, as many as the days of the year. Which words, in the opinion of a learned man, do not only demonstrate the true length of the primitive Athenian year, but also give the reason of it, from the original constitution of the city itself. That they demonstrate the true length of the primitive Athenian year, I acknowledge is very plain; but (with submission) they are so far from deriving this year, with its 4 seasons, 12 months, and 30 days in each month, from the constitution of the city, that they assert on the contrary, the city was so divided and constituted in imitation of the year, and of its 4 seasons, 12 months, &c. And if Athens was a colony of the Egyptians, as seems exceeding probable, there can be no doubt but that the ancient year of 360 days and 12 equal months, (the only year and months the Egyptians then made use of) gave birth to the aforesaid constitution of that city, and so were evidently the primitive year and months in civil use at Athens.

“(12.) That the Athenians retained the year of 360 days, and the month of 30 days, till after the time of Alexander the Great, (either solely, as some learned men hold; or at least, together with the Lunæ-solar year, as Theodorus Gaza was of opinion,) may be proved from the books of ancient Athenians yet extant, as well as by other authorities. Thus Xenophon, in his excellent discourse of the revenue of the state of Athens, always takes it for granted that a year did then contain 360 days, and no more, as his late translator in his notes, particularly, observes and demonstrates. And Plato, in his 6th book de Legibus, would have the Senate of the new Commonwealth he is there describing, *to consist of 360 men, to be divided into 4 parts of 90 each; in this alluding plainly to the year of 360 days, and its 4 quarters.* And Aristotle expressly assures us, that the 5th part of a year was 72 days, and the 6th part was 60 days; and so by plain consequence, the whole year must have been 360 days. Lastly, Pliny, Laertius, and Varro, inform

“ us, that at Athens, Demetres Phalereus (after the time of Alexander the Great) had just 360
 “ statues erected to his memory, the year at that time (as Pliny says expressly, and the other two
 “ as expressly as he, if their testimonies be taken jointly) not having any greater number of days in
 “ it than 360.

“ (13.) This ancient year of only 360 days, appears also to have been the first Roman year be-
 “ fore Numa Pompilius’s correction. For Plutarch, in the life of Numa, says, that ‘ during the
 “ ‘ reign of Romulus, some months were not 20 days long, and others contained 35 days or more,
 “ ‘ the Romans not then sufficiently understanding the true length of the solar or lunar periods ;
 “ ‘ but only providing for this one thing, that the whole year should contain just 360 days.’

“ (14.) That this was the primitive Roman year, will appear very probable also from the Julian
 “ Calendar itself, which intercalates the Bissextile day immediately after the Terminalia, the last
 “ day of the ancient year ; that is, immediately before the 5 last days of February, the last month
 “ in the ancient year ; so that the 5 last days of February every common year, and the 6 last
 “ every Bissextile year, are to be reckoned intercalary, or additional days to the other 360. And,
 “ indeed, St. Austin, speaking of those who reckoned the Antediluvian years to be no more than
 “ 36 days, the 10th part of the lunar year, which he supposed to be 360 days, to which the 5½
 “ days were afterwards added to fill up the solar year ; directly says, that the Romans called all those
 “ five (or six days in a Bissextile year) intercalary days. And though an intercalary month in the
 “ times immediately before the Julian correction, was inserted in the same place where the Bis-
 “ sextile day is inserted now ; yet it is probable from what St. Austin says, and indeed from the
 “ agreeableness of the thing itself, that the first correction of the ancient year of 360 days, was
 “ made by adding the five days aforesaid to the end of it.

“ (15.) That the original Roman year was exactly 360 days, is farther proved, because a tacit
 “ year of that length was retained in the Roman Empire for the anniversary celebration of some
 “ particular solemnities, long after the establishment of the Julian year, as appears from some in-
 “ scriptions in Gruter ; concerning which bear the words of the famous Cardinal Norris.—‘ In
 “ ‘ harum Inscriptionum unâ dicitur Nonius Victor cum Aurelio Victore, *Datiano Cereale Coss.*
 “ ‘ tradidisse LEONTICA XVI. KAL. APRIL. Et in alterâ memorandum iidem, *Eusebio & Hypatio*
 “ ‘ *Coss.* iterum tradidisse LEONTICA IV. IDUS MARTIAS. Erant sacra anniversaria, quæ anno
 “ ‘ evoluta, ab iisdem instaurata fuerunt. Priora peracta sunt Anno Christi 358, die 17 Martii ;
 “ ‘ altera anno 359, die ejusdem mensis 12, jam evolutis diebus a prioribus Leonticis, 360.’ This
 “ reasoning, from such undoubted authorities, is so plain and convincing, that nothing farther
 “ need to be added to it.

“ (16.) This computation of 30 days to every month, and so of 360 days to a year in ancient
 “ time, is also confirmed by that length of a month all along in the old histories, as has, in great
 “ measure, been proved already, and is confirmed by these farther testimonies. When Queen
 “ Esther would express her absence from King Ahasuerus for an entire month, she expresses it
 “ thus : ‘ I have not been called to come in unto the King these 30 days.’ And when Darius’s
 “ courtiers in Daniel solicited him to prohibit prayers for an entire month likewise, they expressed
 “ it thus : that ‘ none should ask a petition of any god or man for 30 days.’ And this month of 30
 “ days did certainly continue in civil use at Athens till Solon’s time at least. Diogenes Laertius
 “ and Plutarch agree, that he was the first who accommodated the month to the motion of the
 “ moon, and called the last day of it (which before was named *τριακὰς*, the 30th day) *ἐνηκαινεία*,
 “ *the Old and New day*, as belonging partly to the old moon, and partly to the new. And Proclus
 “ also adds, that Solon was the first that made the month less than 30 days. Nay, even in later
 “ times, about 200 years after Solon, the ancient astronomers Euctemon, Philip, and Calippus, in
 “ those very cycles which they made for adjusting the years and months to the motions of the sun

“ and moon, did constantly allow 30 days to each month, and then threw out every 63rd or 64th day, as is particularly explained in Geminus; who himself also expressly asserts, that the ancients constantly allowed 30 days to a month. Lastly, Julius Pollux, Galen, Cleomedes, Orus Apollo, Achilles Tattius, and St. Austin, do each of them assure us, that by a month, in the vulgar way of speaking, is meant 30 days. Nay, the four last express themselves so as if the lunar month itself were exactly of that length. And St. Austin carries the matter farther, and takes the lunar year, or 12 lunar months, to contain just 360 days. And even Dionysius Exiguus, above 500 years after Christ, reproves many of this error, of taking the lunar month to be just 30, and the lunar year just 360 days. And it cannot be easily imagined how so great an error should so universally obtain, unless the most ancient year and month had been just 360 and 30 days in length respectively.

10. “ And thus I think I have clearly proved the first particular which I undertook, namely, that the ancientest year in use in most nations of the Postdiluvian world was exactly 360 days, and the month exactly 30 days. I come now to shew, that even in the Antediluvian world, not only the year in civil use, but also the solar year, and the lunar year too, were each of them 360 days in length, and exactly commensurate to one another. And here, if the reader will make allowances for the distance and obscurity of the times I am now about to treat of, and for the scarcity of any records belonging to them besides the Holy Scriptures, I believe he will find as much evidence, even for this second particular, as can reasonably be expected, and what is abundantly sufficient to satisfy him of the truth and reality of it.

“ And (1) since we have found, that the most ancient Postdiluvian year in civil use in most countries was exactly 360 days, consisting of 12 equal months of 30 days a-piece; it is a strong presumption, that the Antediluvian civil year was of the same length. For it cannot easily be imagined how this year should so universally obtain after the deluge, except it had been in use before it; especially, since it is neither equal to the present solar year, nor to the lunar. If the first nations after the deluge had made any change in their year, they would certainly have endeavoured to make it conformable to the motions either of the sun, or of the moon, or both; which appears to be the practice of every nation, when they undertake to correct or alter the year in civil use. And, therefore, since neither the year of 360 days, nor the month of 30 days, is agreeable to any of the celestial motions, it must be granted that the Postdiluvians were not the first framers of this year; and, therefore, that it was used before the deluge also.

“ (2.) This farther appears by that most ancient and most valuable testimony of Moses, whereby we understand, that from the 17th day of the second month, when the flood began, till the 17th day of the 7th month, when the ark rested, were just 150 days, or just 30 days for every intervening month. The words are these: ‘ In the 600th year of Noah’s life, the second month, the 17th day of the month, the same day were all the fountains of the great deep broken up, and the windows of heaven were opened. And the waters prevailed upon the earth 150 days. And after the end of 150 days the waters were abated; and the ark rested in the 7th month, on the 17th day of the month, upon the mountains of Ararat.’ So that hence it is evident that five months, viz. the 2d, 3d, 4th, 5th, and 6th, had just 30 days a-piece; and by consequence it is most probable that all the rest had so likewise, and that therefore the whole year had no more than 360 days.

“ *Lemma* to the third argument. The ancient succession of kings in Berosus and Abydenus, whose reigns are counted by Sari, governed some part of the Antediluvian world, and ended at the deluge. All this is asserted by the historians themselves. Nay, farther, Xisuthrus, the last king, appears evidently to be the same with Noah, since almost the whole history of the flood, and of Noah’s being saved in the ark, may be found in the remaining fragments of Berosus and

“ Abydenus, if you only change the name of Xisuthrus for Noah. As particularly, that ‘ God revealed to Xisuthrus, that a great deluge should destroy men from the earth, and begin on the 15th day of the month Dæsius, and therefore Xisuthrus was commanded to save himself and his family by entering into an ark or ship, and to take with him into the ark all sorts of birds and beasts, with necessary food for himself and them. Which being done, the deluge came, as predicted. And after the rain had ceased, Xisuthrus sent out a bird, to see if the waters were abated, which returned to him again, having found nothing to rest upon. And after some time, he sent out another, which returned likewise, but with dirty feet, whereby he knew the waters were abated. Lastly, he sent one out the third time, which returned not to him again. That afterwards, Xisuthrus opened the ark, and saw the ground was dry; so he and his wife came out and raised an altar and sacrificed to the gods. His children also came out and sacrificed, and found that the ark rested on the Gordyeen mountains in Armenia, and part of it still continued in being when this account was written. Afterwards Xisuthrus’s children journeyed towards Babylon, built many cities, and founded temples, and particularly built Babylon.’ These circumstances are so agreeable to the Scripture history of the deluge, that many have been tempted to think that Berosus transcribed this account from thence. But that cannot easily be, because amongst these truths there are some mistakes and falsities intermixed, which I thought it not worth the while to relate. But from those falsities, and from the idolatry in this history, it appears that it was collected and put into writing some few years after the deluge, namely, after the rise of idolatry amongst the Postdiluvians. And yet it is very probable this was done long before the lives of men were fixed to the present standard, while some that had conversed with the sons or grandsons of Noah were still alive; because the particulars of the deluge are more accurately related therein, as we have seen, than could be supposed possible, had the tradition passed through very many hands before it was committed to writing.

“ (3.) That the Antediluvian year was just 360 days long, appears from the reigns of these Antediluvian kings, which, as I said, are not reckoned by years, but by Sari. And our authors tell us, a Sarus is 3600 years; that is, as some ancient Christian writers understood them, (and as appears by the great length of the particular reigns, some of them amounting even to 18 Sari a-piece,) 3600 days, or ten years of 360 days each. And the Hebrew or Chaldee expression of a Sarus confirms this assertion. Hhazár is ten; and the first letter being such a guttural as could not well be pronounced by the Greeks, they would naturally express the word by Σαρος, which is therefore literally *a decad*. For the lives of the Antediluvians being generally at the least ten times as long as ours, they found it more convenient to reckon their own lives and the reigns of their kings, rather by decads of years than by single years. Now, if a Sarus or *decad* of years contained 3600 days before the deluge, it is plain that each year contained just 360 days.

“ (4.) If it be proved by the preceding arguments, that the civil year before the deluge was just 360 days, and the civil month just 30 days; it will be thence very probably concluded, that both the tropical year and the lunar month were each of the same length respectively. The great probability of this will appear, whether we suppose the civil year and month to have been of human or of divine institution. For, 1st, if they were of human institution, what could induce the Antediluvians to make use of this form of year, if it varied as much from the motions both of the sun and moon as it does at present? The Antediluvian earth was extremely fruitful, the lives of its inhabitants extremely long, and the air at that time extremely clear; so that the inhabitants of the old world wanted neither leisure nor time, nor opportunity to make multitudes of observations, in order to discover the true length of the year and month; which, if they had discovered, the great conveniences visibly consequent upon the use of them must needs have induced the civil powers to have enjoined and established them accordingly. Now, since

“ it appears by the former arguments, that in fact the civil year before the deluge was just 360
 “ days, and the civil month just 30 days ; it will be highly probable, from what is here alleged,
 “ that (if the same civil year and month were of human discovery and institution) the tropical
 “ year and lunar month were of the same length also. But, 2dly, if, on the other hand, God him-
 “ self revealed to mankind the true length of the year, it will be still more evident that the Ante-
 “ diluvian tropical year was exactly 360 days long, and the lunar month exactly 30 days ; for God
 “ cannot deceive his creatures ; nor would he institute a form of year which was less convenient
 “ and proper for attaining the end for which it was instituted, when nothing hindered but that the
 “ *most* convenient and *most* proper ; that is, the true tropical year and lunar month might have
 “ been as easily ascertained by divine revelation, as any others. Since, therefore, it is before
 “ proved, that the civil year was just 360 days before the deluge, and the civil month just 30
 “ days ; if God taught mankind this length of the year and month ; then it plainly appears, that
 “ the tropical year and lunar month were just 360 and 30 days long respectively. And upon the
 “ whole, whether the Antediluvian civil year and month were of divine or of human original, (and
 “ of one of the two they certainly were,) it appears either way highly probable, that both the
 “ tropical and lunar year were just 360 days each, and the lunar month exactly 30 days.

“ (5.) And that the primitive solar year was really no more than 360 days, and contained just 12
 “ lunar months of 30 days a-piece, appears farther, by the most ancient division of the solar course
 “ into just 360 degrees, and those distributed into 12 signs of 30 degrees a-piece. For the only
 “ natural reason that can be given why the zodiac or solar circle was at first divided either into
 “ just 360 degrees or 12 signs, and why just 30 degrees were allotted to each sign, must be, that
 “ when this division was made, the sun ran through the zodiac in just 360 days, which were also
 “ 12 lunar months, 30 days being then the exact length of every month. And this division of the
 “ zodiac or solar circle into 360 degrees was so very famous and remarkable in old time, that as-
 “ tronomers and all other mathematicians have transferred that number of degrees to every other
 “ circle which they considered, and still have supposed them divided, every one, great and small,
 “ into 360 degrees. And this division of a circle has continued ever since, to this day, as a stand-
 “ ing memorial of that most ancient tropical year which obtained when this division was made.
 “ I called this division of the zodiac a most ancient one, because it appears to have been made
 “ long before the earliest accounts of astronomy that we have ; they all still supposing it, and not
 “ at all mentioning any thing of its first introduction. And since this division was first made when
 “ the true solar year was no more than 360 days in length, and contained just 12 lunar months of
 “ 30 days a-piece ; it was therefore older than the deluge ; since we are pretty certain that, gene-
 “ rally speaking, since the deluge the solar year has been some hours longer than 365 days, and
 “ and the lunar year some hours shorter than 355. If, then, the zodiac was thus divided before
 “ the deluge, in correspondence with the true solar and lunar year ; it is evident that before the
 “ deluge they were each of them just 360 days, and subdivided into 12 lunar months of 30 days
 “ a-piece.

“ *Lemma 1*, to the sixth and seventh arguments. — Manetho’s *most ancient succession of the*
 “ *Gods, as he calls them, reigned before the deluge, and ended at it.* Manetho divides his dynasties
 “ into those of the *gods, demi-gods, heroes, and men.* In this place I only speak of the first of
 “ these, because none of the rest do contribute any thing to the present argument. Now by gods
 “ here, Manetho (as he elsewhere explains himself) means only mortal men, who, for their wisdom
 “ and goodness, were severally promoted to the regal dignity, and afterwards made immortal.
 “ And Diodorus Siculus also speaks to the same purpose. But I shall not take upon me to
 “ defend every thing that Manetho, or any other writer, has advanced concerning these very an-
 “ cient times. It is sufficient for my purpose, if I prove that these kings, whom Manetho calls

“ Gods, reigned over some part of the Antediluvian world, and ended at the deluge ; their memory
 “ being preserved by the old Egyptian records, and their history committed to writing not many
 “ years after the dispersion from Babel. I shall therefore endeavour to prove this Lemma ; first,
 “ by the authority of several ancient Christian chronographers at least, if not by the direct asser-
 “ tion of Manetho himself ; secondly, from a consideration of the *first* king ; and, thirdly, from a
 “ consideration of the *last* king in the same succession.

“ And, first, I am to shew what authority may be produced to prove that these kings reigned
 “ before the deluge. I observe, then, that both Africanus in the third, and Eusebius in the fourth
 “ century of Christianity, having spoken of the former sorts of Manetho’s dynasties, and of the
 “ Gods among the rest, do each of them prefix this title to the following dynasties of men, [of the
 “ Egyptian dynasties after the deluge,] which clearly intimates that the preceding ones (and
 “ therefore also the gods) were before the deluge. And Panodorus, in the beginning of the fifth
 “ century, supposes both the gods and demi-gods to have reigned before the deluge. And Geor-
 “ gius Syncellus, though he rejects Manetho’s authority in this particular, yet he every where
 “ allows and takes it for granted, that they were to be taken for Antediluvian kings, and supposed
 “ to be so even by Manetho himself. And indeed the length of some of their reigns is entirely
 “ disproportionate to any Postdiluvian times, and when allowance is made for Manetho’s way of
 “ reckoning (which I shall presently explain) will be found very agreeable to the longevity of the
 “ Antediluvian patriarchs.

“ Secondly, the succession of the gods appears to have been before the deluge, because Vulcan,
 “ the first king, was so. Tzetzes says, he was contemporary with Noah, whom he supposes
 “ to be the same with Osiris ; but by the same argument he ought to have concluded, that the
 “ Egyptian Vulcan was long before Noah, since he was long before Osiris, as all will allow, and as
 “ it particularly appears from this very succession of the gods. And, indeed, Vulcan seems to be
 “ no other than Tubal-Cain in Scripture. Their names are near akin to each other, and the same
 “ character belongs to both. The Scripture says, that ‘ Tubal-Cain was the instructor of every
 “ ‘ artificer in brass and iron ;’ and Vulcan is famous in profane authors, not only for his artificial
 “ working in all sorts of metals, but also for his instructing mankind therein. And it is remark-
 “ able, that this is the more peculiar character of this Vulcan here, in the Egyptian succession of
 “ the gods, than of any other.

“ Thirdly, the same thing may be proved from some considerations upon Typhon, the last king
 “ of this succession, namely, that he reigned immediately before the deluge, and perished therein.
 “ This will clearly follow from what is before proved, if compared with the following Lemma.
 “ For if Vulcan be Tubal-Cain, this succession must necessarily end at the deluge, the number of
 “ years it contains not permitting us to suppose it could possibly end any considerable time before
 “ it. But this will farther appear, 1st, because many circumstances of the deluge are mentioned
 “ in the history of Osiris and Typhon, in Plutarch and others ; as particularly the very day when
 “ the deluge began, or when Osiris (who is taken for Noah) was shut up in the ark, viz. the 17th
 “ day of the 2d month after the autumnal equinox, as has been observed before. And other cir-
 “ cumstances of the deluge there are in Typhon’s history, some of which I shall have occasion to
 “ mention presently, and others will be produced under the following hypothesis ; 2dly, the very
 “ name of Typhon also, according to some learned men, signifies a *deluge* or *inundation* ; whence
 “ the Egyptian priests (as Plutarch says) called the sea Typhon. 3dly, Typhon (whom the Latin
 “ poets more frequently call Typhœus) is represented as a monstrous giant who fought against
 “ heaven, and was at last overcome by Jupiter ; and as one says, lies now submersed in water.
 “ From all which it appears very probable, that he was one of those giants who, as the Scripture
 “ says, were in the earth before the flood ; one of those mighty men which were of old, men of

“renown, whose wickedness was so exceeding great, as might easily give occasion to the ancient tradition of their fighting against God. And, lastly, Typhon’s being said to be overcome and submersed in water, seems evidently to proceed from his perishing in the deluge, which was brought upon the earth by the great wickedness wherein he and, indeed, all the Antediluvian world had involved themselves. So that upon the whole, it cannot easily be denied that this succession of the Gods ended at the deluge, and that Typhon, the last king of it, perished therein. [See another notion of Typhon in the III Appendix to the Essay for restoring the True Text of the Old Testament.]

“Lemma 2, to the 6th and 7th arguments. *The reigns of the gods in Manetho are not expressed by years, but partly by lunar months, and partly by ὥραι or seasons.* The probability of this Lemma Diodorus assures us of, that when it is said that some of the first kings of the succession of the Gods reigned about 1200 years, so many lunar months are understood thereby; and when it is said that the latter kings of the same succession reigned 300 years or more, there the seasons of the year are understood, reckoning 4 months in every season, and 3 seasons in every year, namely, Spring, Summer, and Winter. And these two sorts of Egyptian computations for years are also observed by Plutarch. And particularly as to the former, Varro, Pliny, Macrobius, and Suidas, do all agree that the Egyptians of old computed a lunar month for a year. And Julius Africanus speaks also of several that computed the reigns of the most ancient kings of Egypt upon this hypothesis. And Eusebius also asserts, that this method of reckoning a month for a year, was practised by the most ancient Egyptians. Add, that Eudoxus also asserts, that the Egyptians formerly used a month for a year. And some ancient Christian chronographers were so fully persuaded of this, that they have extended it too far, and supposed that all the reigns of the Gods in Manetho were reckoned by months only, and on that supposition, have reduced them to tropical or Julian years; whereas it appears from Diodorus, that only the long reigns of the first kings are to be computed by lunar months, and those of the rest by seasons of 4 months a-piece, or the third part of a year. And this computation of 4 months for a year, is not only attested by Diodorus and Plutarch as before, but also by Censorinus, Solinus, and St. Austin, who each of them affirm that the Egyptians of old used this way of reckoning.

“(6.) That before the deluge the lunar year, at least of 12 lunar months, and very probably the solar year too, was just 360 days, and each month just 30 days, will appear from some reigns in this Antediluvian dynasty of the gods. This I shall prove by shewing, first, that the lunar year was then exactly 12 lunar months, or 12 synodical revolutions of the moon, without any embolimary month; secondly, that the tropical solar year contained 12 months also; and, thirdly, that each lunar month contained exactly 30 days. And, first, the lunar year was exactly 12 lunar months long; for Vulcan, in Manetho, is said to have reigned 9000 years; that is, as I have proved, 9000 revolutions of the moon, which make up 750 years of 12 months each, or, if you please, 75 Sari. From whence it appears, that each year had in it 12 lunar months exactly; no embolimary month being taken in for 750 years together. 2dly, the tropical year contained 12 months also, as appears from the years of the latter kings of this same succession of the gods, which are said to be each of the three seasons of the year, viz. Spring, Summer, and Winter, each containing 4 months. From whence it follows, that the tropical year (for it is a year determined by the seasons) was exactly 12 months also; which months must in all reason be supposed to be of the same sort with those which were before spoken of, namely, lunar months. So that it is highly probable, the tropical year at that time was just 12 lunar months in length. 3dly, each month at the same time contained exactly 30 days. This is attested by many ancient authors. Thus Varro, speaking of these large numbers in the records of ancient time, says, the Egyptians therein do reckon lunar months for years, and allow 30 days to the

“ time in which the moon finishes its menstrual course. And Diodorus Siculus speaking of those who reckoned the reigns of the gods in Egypt by lunar months, expressly asserts, that they computed 30 days to a month. And in like manner, when Eusebius (speaking also of the long reigns in the Egyptian succession of the Gods) says, that the most ancient Egyptians reckoned by lunar months, instead of years; he adds, in the same place, that those lunar months consisted of 30 days a-piece. And Panodorus seems to intimate, that before the deluge, not only the civil but also the lunar month was exactly 30 days, and that the reigns of the gods in Manetho were computed by lunar months of 30 days a-piece. To these testimonies I need not add St. Austin here, as having already produced what he has spoken on this subject. Since then it appears by the first part of this argument, that, during this Antediluvian succession, there were exactly 12 lunar revolutions in the year; and since it appears by the 2d part, that there were exactly 12 (and those very probably lunar) months in the tropical year also; and since it appears by the 3d part, that there were just 30 days in each lunar revolution at the same time; it is evident from all three taken together, that before the deluge, the lunar year at least, and very probably the solar also, consisted exactly of 12 lunar months of 30 days a-piece, or of 360 days in the whole.

“(7.) That not only the civil, but also the tropical year of the sun, and the lunar year of 12 synodical lunar months too, were each of them 360 days, and exactly equal to each other before the deluge, is farther attested by a famous piece of ancient mythology preserved in Plutarch, which I have had occasion to mention before; that about the times of Osiris and Typhon, that is, about the deluge, there happened such an alteration both in the month and the year, that the moon lost a 70th part of each day, and the sun gained it; whereby the lunar year became above 5 days shorter, and the solar above 5 days longer, than each of them were before. Wherefore, since the solar year is now somewhat more than 365 days, and the lunar year somewhat less than 355 days, it is most evident, that before this change, both the solar and the lunar year were just 360 days, and exactly equal to each other. Nay, more, it is evident also, the change made in the solar and lunar revolutions, from their original to their present state and periods, happened at the deluge.”

Almost innumerable references to, and many passages from, the original authors are given by Mr. Whiston, but I have not thought it necessary to reprint them. I now apprehend that the opinion of the ancients cannot be a matter of doubt. After shewing this, Whiston undertakes to prove that their opinion arose from a knowledge of the fact handed down to them by tradition, and which was really a fact, that the change in the length of the year and month was caused by the near approach of *the comet* which last appeared in the year 1680, and whose period is about $575\frac{1}{2}$ years. Treating of this comet he says,

11. “The period of this comet most exactly agrees to the same time, I mean to 7 revolutions in 4028 years, the interval from the deluge till its last appearance, 1680. For, as Sir Isaac Newton first observed, from its elliptic curvature before it disappeared, that its period must be in general above 500 years; so as he and Dr. Halley since observed, that the same comet has been seen four times, viz. the 44th year before Christ, A. D. 531 or 532, A. D. 1106, and A. D. 1680, and that by consequence it makes a revolution in about 575 years. Now if we make but a very small allowance for the old periods before Christ, and suppose that, one with another, it has revolved in $575\frac{1}{2}$ years, we shall find that 7 such periods amount to 4028 years, exactly, according to that number since the deluge. This is so remarkable an observation, and so surprising, that it will deserve a particular demonstration from the original authors themselves.”¹ He

¹ Whiston's Theory, 3d ed. p. 191.

then proceeds to give authorities which prove that the comet was first noticed on the death of Cæsar, 44 years B. C., and has been correctly noted three times since. But for his proofs I must refer my reader to his work, as this does not seem so very material, because the mere facts cannot be disputed.

12. The flood of Noah is stated, by Usher and the Hebrew version, to have taken place in the year B. C. 2348; this added to A. D. 1680, gives 4028, the number required for the last appearance of the comet. Now, I apprehend, this coincidence is of such a nature as to raise the highest probability of the influence of that comet in causing the flood. But there are several other circumstances relating to this matter of the greatest importance. It is surely another very striking circumstance, that if we take eight revolutions of the comet, of $575\frac{1}{2}$ years each, they bring us to the commencement of the system—to the entrance of the Sun into Taurus, at the Vernal Equinox; the 44 years before Christ (the time when the comet appeared) being added, as of course they ought to be—

$$575\frac{1}{2} \times 8 = 4604 + 44 = 4648. \qquad 65 \times 71\frac{1}{2} = 4647\frac{1}{2}.$$

Now, I contend, that this renders it probable that, at the time when the Sun entered Taurus, one of the violent revolutions or catastrophes took place which have manifestly happened to the globe at different times. It also raises a probability that this very comet is the agent which has produced these effects. Again, every one knows the fact, that a great discrepancy exists between the Samaritan and the Hebrew chronology. Mr. Whiston contends,¹ that the more exact Hebrew chronology,² by which he means the more exact chronology of the children of Israel, placed the flood in the 2926th year B. C., which was the very year in which the comet must, in its proper period, have arrived in our system; and that by its appulse to the earth, at that time, it must have caused the deluge. He goes at great length into the subject, and endeavours to prove this fact astronomically from the tables of the Sun and Moon, and by various arguments, (not necessary for me to copy,) to within a day or two of the day of the month of the year named by Moses, Berosus, and Abydenus, and to a single day with the express testimony of Plutarch—all which, as he observes, is an “exactness of coincidence not a little remarkable.” He supposes that the original circular orbit of the earth was made elliptical by the appulse of the comet, and the year lengthened from 360 to 365 days. It is not only, as Whiston says, not “a little remarkable,” but it justifies me in concluding either that the ancients knew of the flood from experience, or they knew of the periods of the comet, and invented or fixed the time of the flood to suit them. The apparent contradiction between the chronology of Mr. Whiston’s two accounts is reconciled, in a great measure, by a very surprising fact, that the 2926, (the year which he says the astronomical tables prove the comet to have come,) is the exact time of the eighth revolution of the comet, instead of the year 2348, which was the seventh; and, as he justly observes, when all the disturbing forces and other circumstances are considered, the trifling discrepancy which may be perceived is of such little consequence that, if there be any thing surprising in it, the surprise ought to be, that the discrepancy is not much greater instead of its being so little. It is a very remarkable circumstance, that one period seems to answer nearly to the Samaritan computation, and the other to the Hebrew. Mr. Whiston, on the Old Testament, says,³ “It will not be amiss to set down here a canon of what I now take to be the true chronology, from the beginning of the world till the Christian æra; I mean this, upon the joint consideration of the Samaritan, the Septuagint, the present Hebrew, and the old Hebrew used by Josephus.” This is, in fact, the Samaritan calculation, as he *proves* the others to have been most excessively corrupted.

² True Text of the Old Testament, p. 214.

³ Pp. 213, 214.

	Years
(1.) From the autumnal equinox next after the creation of Adam to that at the end of the deluge.....	1556
(2.) Thence to the departure of Abraham out of Haran	$966\frac{1}{2}$
(3.) Thence to the Exodus out of Egypt	430
(4.) Thence to the foundation of Solomon's temple.....	$479\frac{1}{2}$
(5.) Thence to its conflagration.....	$464\frac{1}{2}$
(6.) Thence to the beginning of the Christian era	$587\frac{1}{2}$
	$4483\frac{1}{2}$
	1556
Deduct 1556 and we shall have the space from the flood to the Christian æra	2927
Then multiply the period of the comet $575\frac{1}{2}$ by 5, and add 44, the year B. C., in which it appeared, and it gives $2921\frac{1}{2}$	$2921\frac{1}{2}$
	$\dots 5\frac{1}{2}$

and we shall have a coincidence of periods within 6 years ; which, when all the disturbing forces are brought into calculation or allowed for, is a difference so small as to raise the probability of *the truth of the theory* much higher than if the numbers had actually coincided. For, we may readily suppose, indeed we must suppose, that such a disturbance as that caused by the comet, would take several years to subside.—The following will exhibit another curious coincidence. The Hebrew states the flood to have taken place 1656 years after the creation, and as it makes the birth of Christ 4000 years from the creation, it makes the flood 2344 B. C. Now, if we take 1656 and add to it four periods of the comet at 575 or 2300, and also the years it came B. C., 44, we shall have exactly 4000. This justifies the inference that the Jews or Chaldæans knew the the period of the comet, but made a mistake in calculating backwards, taking it to have touched the earth in one period later than that in which the Samaritans supposed it affected the earth, and they accommodated the reigns of their kings, &c., to suit that hypothesis. I think no unprejudiced person can doubt that the comet of 1680 is really the same comet as that which appeared 44 years before Christ. Now, if we refer to the Samaritan chronology, we shall find that the flood is stated to have taken place 1656 years after the creation ; this is confirmed by the Hebrew, which, in this, exactly agrees with the Samaritan. If we add four revolutions of the comet to 44, and their sum to 1656, we have exactly the sum of 4000 years—the time from the creation to the birth of Christ. It is remarkable that 2348 is the date which our chronologers give (Usher's 4 years corrected) for the flood before Christ, according to Hebrew calculation : this is exactly 44 added to 2300, or to four revolutions of the comet, so that the Jews make the flood to have happened in the *fourth* revolution of the comet, and the Samaritans in the *fifth*. It is not possible to believe this to be the effect of accident. If we suppose the inventor of the mythos to have understood the period of the comet and the precession of the equinox, he contrived the entrance or the beginning of the sign Taurus to suit it, and made it to begin exactly with the eighth revolution, counting *backwards* and counting *forwards* it would end 44 years B. C., thus, $575\frac{1}{2} \times 8 = 4604 + 44 = 4648$. Then, 65 degrees at $71\frac{1}{2} = 4647$. It seems probable that this was the principle, and that it was from the conjoined knowledge of the *precession*, and of the *periods of the comet*, that the mythos was formed. The Bible says, the flood happened in the year B. C. 2348. The year of the comet in its 4th revolution is 2344 [2346?] years B. C., counting its periods at $575\frac{1}{2}$, and 2348 counting it at 576 ; in its 5th revolution it is 2919 years, and in its 8th revolution it is 4648 years. Now, I suppose the comet

caused floods in its 4th, 5th, and 8th revolutions. Whiston undertakes to prove that the corrected Samaritan chronology makes the flood to have occurred 2926 years B. C.: this is only 6 or 7 years from the year of its return as above, 2919;¹ and it is as near as could be expected. I think it is evident that the Samaritan chronology has been meant to answer to the 5th revolution. When the great confusion or violent interference with the regular course of the globe is considered, and this immense disturbing power is compared with the disturbing powers which the planetary bodies are believed to exert upon each other, surely the allowance of so small a space as six or seven years upon the three approaches of the comet is very little! The ancients never calculated by fractions, but always in whole numbers. They must have seen, if, as I suppose, they knew and calculated the comet's periods, that it was perfectly nonsensical to expect absolute correctness in the return of the periods, and that, therefore, to encumber themselves with fractional calculations was a proceeding worse than useless. It was a million to one that the disturbing power exerted *three* times, should, in six thousand years, come to less than six years. If we take the comet's period at 576 years, it will make a cycle with the 4320, the double of the 2160, in 75 revolutions. Here we see another reason for the long periods or cycles of the ancients. If we give Noah and his Chaldæans credit for as much knowledge as Mr. Whiston, and gained like his, by observation, or rather, I should say, by reasonings on recorded observations, we may very readily give him credit for knowing, as Enoch says he did know, by a calculation of moons or by a calculation by lunar periods, *that the flood would come*. I shall shew in a subsequent part, that the ancients knew the moon's period to within *half a second of time*. If the man we call Noah, were a great and powerful prince, living near the Caspian sea, and possessing this knowledge, there is nothing improbable in his having built a great ship or floating house, and in his having saved in it his family and a few domestic animals. We know from experience that this would be quite sufficient upon which to ground the fable, and that it was perfectly in keeping with the character of the ancients to have founded a fable upon it. The division of the zodiac being artificial, it is evident that the formers of it could make it begin where they pleased; and it is evident also, that they made it begin with the Bull—fixing it as near as they could to the time of the comet. It is probable that they arbitrarily fixed it to a certain point in the circle, which they called Taurus, and it followed of course, that the precession would make the post time correspond (as it does) to it. Why the signs of the zodiac came to bear their respective names we do not know; but they were probably the produce of a high latitude, where the *camel* and *elephant* were not much in use. I think it is evident that the first of Taurus was the beginning, to proceed *forwards*, of our system; but probably the ancients had some mythic history which went *backwards* from that period, to which the respective signs bore a relation, as the three signs of Taurus, Aries, and Pisces, bear a relation to our mythos. Mr. Whiston says, "We know, by the exactest calculation from the" present "Hebrew copies, if, with all the ancients, we suppose Abraham born in the 70th year of his father Terah, that the entire 4000 years till the days of the Messiah will end about A. D. 60."² Now this gives us to the year 1260 for the millenium, and shews that the 1260 of Daniel was calculated to begin from the commencement of our present æra, as two Neroses added to the 1260 complete the sum required. I shall be told, that though the comet comes in the periods I have pointed out, yet calculation shews that the earth and moon would not be in a situation of their orbits to be affected by it. To which I reply, it is very true that so it may appear by our calculations; but it is more probable that our calculations do not apply, or are wrong, or that there is something in the motions of the comet unknown to us, which makes our calculations wrong, than

¹ Here the reader will perceive that the Author omitted the *five* half years. These being added, there would remain a difference of only $4\frac{1}{2}$ years between the Author's statement and the Samaritan chronology. *Editor.*

² On Old Testament, p. 227, ed. 1722.

that the above three simple arithmetical calculations should accidentally agree with the precession of the equinoxes, with the book of Genesis, with the return of the comet, and thus with the whole of my theory or system. As comets move in different planes, this comet may, by moving in a different plane, have been made to come in contact with the earth. Its plane may have been altered, without any material alteration of its period, by some body coming in collision with it in the further part of its orbit, as it came into collision with our earth. These suppositions are much more probable than that Mr. Whiston and I should be wrong. We calculate upon data, of which we have almost a perfect knowledge: they who oppose us, upon very uncertain and almost unknown data. Almost any supposition is more probable than that we should be mistaken.

13. Our astronomers will assert, without hesitation, that they can calculate the periods of several of the comets. They would have fixed, without the least hesitation, a year ago, the time when Encke's would appear;¹ but it has disappointed them,² and shewn that their knowledge in this branch of their science is far from complete. I contend that the coincidence of the times of the periodical arrival of the comet, of $575\frac{1}{2}$, with the dates 4648, 2926, and 2348, the *first* the entrance of the Sun into Taurus, the beginning of the system of chronology, the *second* the date fixed by Whiston, and the *third* the date named in the Hebrew Bible for the flood, raises a high probability that the ancient Chaldæans, who were said to have invented the Neros, and whose knowledge was displayed by Sosigenes to Julius Cæsar, really understood the theory of the comets; and all the circumstances combined render it much more probable that our astronomers are mistaken, and in ignorance, than that such a coincidence of the facts displayed above should have taken place, without a knowledge of the system by the persons writing the accounts, and also without the system being true. If our astronomers talk to me of planes and periods, I tell them, their error in the case of the Encke comet, and the extraordinary coincidences pointed out by me, render it much more probable that the ancients were right in their *practice*, than that they are right in their *theory*. What periodical changes take place in the motions of the comets we do not know. They may keep their periods, yet change their planes in some way unknown to us. The comets are of various kinds; some have atmospheres, some have not: some have tails, some have not; some are all transparent, some are only partly so. They are of different colours, and they move in different planes, and in reality our astronomers know very little about them. The ancients may have discovered the laws which rule that of $575\frac{1}{2}$ years' period, and not the others. The knowledge of this and of the recurring Neros, would be quite enough to have given to a fraternity like the Chaldæans the empire of the world, which, under one name or other, Brahmins, Magi, &c., they obtained. I am sometimes induced to ask, may not the ancients, availing themselves of this knowledge, have made up a system? But they cannot have made the equinox to precede neither more nor less than about $71\frac{1}{2}$ in a degree. They cannot have made the arrival of the comet, in its proper period, to have arrived exactly when the Sun entered Taurus at the equinox. According to our astronomers, they know all these matters perfectly—all the laws of gravitation are perfectly understood by them; but when I go back to the Ptolemaic system, I find its professors exactly like our present astronomers, foretelling the eclipses, &c., &c., and teaching that their system was demonstrated by the clearest proofs. Prudence tells me to recollect that there are some of these clearly demonstrated doctrines which are disputed by persons as clear-headed as any of themselves, though poh-pohed down with noise and clamour—Sir R. Phillips, Friend, &c.

The following are opinions in favour of Mr. Whiston's system, given by several astronomers of great eminence:

¹ See Morning Chronicle, Sep. 1st, 1832.

² Mrs. Somerville says, "Its re-appearance in the years 1825, 1828, and 1832, accorded with the orbit assigned by M. Encke." *Connexion of the Physical Sciences*, p. 380, 2nd edit. It seems, therefore, that the Astronomers were *not* disappointed. *Ed.*

14. On Mr. Whiston's theory that a comet may have caused the flood, Dr. Gregory says,¹ "Alius etiam erit quandoque cometæ sive effectus sive usus: si nempe cometa prope planetam transeat, (ita ferentibus eorum orbitis et motibus,) hunc ita attrahet ut ejus orbita immutetur, (mutata etiam ex mutua actione cometæ orbita,) unde planetæ periodus etiam mutabitur. Sed et satellitem ita per attractionem deturbare poterit cometa, ut, relicto suo primario, ipse evadat primarius, circa solem deinceps rotatus. Præterea, mutationes multo maximas in ipso planetæ globō producere poterit, non solum prolectando fluidum, si quod sit, sed per alias etiam qualitates; si v. g. corpus tam vastum, et, si ex solis vicinia prodeat, ignitum, tellurem nostram è pro-pinquo prætervehatur." On Mr. Whiston's theory Dr. Halley says,² "Inter omnes nullus prioris appulsu terris minatus est quam ille anni 1680. Hic inito calculo non amplius ad Boream distabat ab orbe nostro annuo quam semidiametro solari, (sive radio lunaris orbitæ, uti existimo,) idque Novemb. 11^o 1^h 6' P. M. Quo tempore, si terræ quoad longitudinem conjunctus fuisset, parallaxis sane lunari æqualis in cometæ motu observari potuisset. Hæc astronomis dicta sunt; quæ vero ab hujusmodi allapsu vel contactu, vel denique collisione corporum cælestium (quæ quidem omnino non impossibilis est) consequi debeant; rerum physicarum studiosis discutienda relinquuntur."

15. Dr. Keill, who was an adversary of Mr. Whiston's work and doctrines, gives the following testimony: "I cannot but acknowledge that the author of the New Theory of the Earth has made greater discoveries, and proceeded on more philosophical principles, than all the theorists before him have done. In his Theory there are some very strange coincidents, which make it indeed probable, that a comet at the time of the deluge passed by the earth. It is surprising to observe the exact correspondence between the lunar and solar year, upon the supposition of a circular orbit, in which the earth moved before the deluge. It cannot but raise admiration in us, when we consider, that the earth at the time of the deluge was in its perihelion, which would be the necessary effect of a comet that passed by at that time, in drawing it from a circular to an elliptical orbit. This, together with the consideration that the moon was exactly in such a place of its orbit at that time, as equally attracted with the earth, when the comet passed by, seems to be a convincing argument that a comet really came very near, and passed by the earth, on the day the deluge began."³

16. But I must dwell a little longer on this subject. Whiston undertakes to prove, except the comet of 575½ years, "(1.) That no other of the *known* comets could pass by the earth at the beginning of the deluge.⁴ (2.) That this comet was of the same bigness with that which passed by at that time. (3.) That its orbit was then in a due position to pass by at that time. (4.) That its descending node was then also in a due position for the same passage by. (5.) That its period exactly agrees to the same time; or, in short, that all the known circumstances of this comet do correspond, and that it actually passed by on or about that very year, and on or about that very day of the year, when the deluge began."⁵

I do not pretend to answer for the validity of the proof of *all* the other matters which Mr. Whiston professes to have proved; but I believe it will not be denied he has proved, that the comet of 1680 has a period of about 575 years, and was seen 44 years B. C.; and it is of great importance to observe, that the learned Dr. Keill appears to have examined, and to have admitted the truth of, the part of Mr. Whiston's theory the most essential to my system. Then, if the

¹ Gregory's Astro. p. 431, apud Whiston's Theory, p. 443.

² Act. Philosoph. pp. 1398, 1399, No. 297, apud Whiston's Theory, p. 444.

³ Whiston's Theory, p. 445.

⁴ He means in 2926.

⁵ New Theory, p. 138.

reader admit this, and calculate backwards, he will find that the comet must have come, as I have already remarked, in its 4th revolution B. C., in the year 2349, and its 5th revolution, which Whiston says was the year of the flood according to *the more correct chronology*, in the year 2926. Now, it is very remarkable that the year 2348, the year allotted to the flood by Usher, Blair, &c., is not very far, viz. 172 years, from 2520 B. C., the period of the real entrance of the Sun into Aries at the Vernal Equinox, and the date of the flood as held by the modern Brahmins, when an error into which they have fallen of 576 years is corrected, and which I shall account for and explain. Every one must confess the confused state of the history of the Hebrews. This being admitted, I have no hesitation in saying, that if Mr. Whiston be correct in his calculations, which I cannot controvert, but of which I do not profess myself to be a judge, the flood must have taken place really in the year B. C. 2926. Had it not been for the high character which Mr. Whiston bears as an astronomer and mathematician, and the admission of his learned opponent Dr. Keill, I should, of course, have fixed its arrival to that year in which our chronologers fix the flood, viz. 2348 B. C. Mr. Whiston appears to me, but I do not profess to be a judge of his difficult astronomical reasoning, to have proved that the comet of 1680 must have come so near the earth in the year 2926 as to have necessarily caused some mighty effect, and this could be nothing but a flood. It is a striking circumstance that the 4th and 5th periods of the comet should fall, one on the corrected chronology of Whiston, the other on the chronology of the Jews, according to Usher. It looks very much as if chronology had been accommodated to one of them, by persons believing that the flood was caused by the comet, but by persons not knowing correctly in which period it had happened. It is also very remarkable that the period of what Whiston calls the corrected chronology of the flood, 2926, should be so very near the 3100, which the Brahmins now commonly fix for it. The result of the whole appears to be, that the Brahmins have had a mistaken tradition that the flood took place when the Sun entered Aries, at the Vernal Equinox, and that this has misled them. But I beg leave to suggest to astronomers, whether the comet may not have caused a *first* flood at the entrance of the Sun into Taurus about 4650 years B. C., and again the flood of Noah in 2926, and have come sufficiently near in 2348 to have caused another and a still less flood. We know so little of comets, that I think astronomers cannot safely assert that this may not have happened. We really know nothing except the *periods* of this comet and of some few others, and that their orbits are elliptical. If astronomers say that the effects alluded to could not have been produced by the comet of 575½ years' period, because the earth would not be at those times in a proper situation to receive the influence of it, they presume that it must have always moved in the same plane as that in which it now moves, and that, in other respects, it must have been subject to similar laws. I think it is much more probable that the comet may be subject to some law unknown to us, which keeping its period, brought it in collision with the earth at the times required by my hypothesis, than that the coincidences adduced should be the effect of accident. The doctrine of probabilities, I am persuaded, would shew monstrous odds against both accident and the infallible knowledge of our astronomers, and in favour of the hypotheses, that one or more floods have been caused by this comet, and also, that its period and influence were understood by the ancients. I think we have three well-marked floods; the last is the flood of Deucalion, or the Deus-Cali or holy Cali, and it took place 2348 years before Christ. The preceding one was really our flood of Noah, and it took place, as pointed out by Mr. Whiston, 2926 B. C.; and the first, or the flood of Ogyges, took place 4648 years B. C. This, perhaps, might be the flood which threw up Mont Blanc, Chimborazo, &c. The last mentioned year, 4648, was the time of the entrance of the Sun into Taurus: but I think the middle flood, in 2926, was that which altered the axis of the earth. The account in Genesis is a most valuable record of the tradition; but this is all that it is. The record of the tradition is for the philosophers, the detail for the rabble. It

is for the man of science and for the philosopher to distinguish one from the other. This was formerly done in the mysteries. Mysteries are now out of fashion; the race of man has outgrown them; and all the secrets are already or must be soon laid open. Man must be treated like a rational being. Whether when so treated he will act like one, God alone knows. I fear for him; for I see his folly every where—I see his wisdom only now and then. I know what I have said on the subject of comets will be turned into ridicule by some of my brethren of the Astronomical Society; but I believe learned men are as liable to follies as other people. I have not forgotten that the truth of the Aristotelian philosophy was as little doubted for many generations, and its truth held to be as clearly proved by men of the first talent in the world, as the Newtonian is now. And this shews that learned men can dogmatise without any foundation in truth for their dogmas. If we want a proof of the folly of a learned man, we have only to go to the works of the great NEWTON, now in the custody of Lord Portsmouth. It would be no difficult matter to make a collection of the follies of the *wise*, which should exceed all other exhibitions of folly. I do not advance this with the intention of stigmatizing our present learned astronomers as foolish, but I most assuredly wish to repress that feeling of perfect certainty which leads to dogmatism, and to tell them, that they are liable to be mistaken like their predecessors and the remainder of mankind; and that they sometimes assume too much on the *certainty* of what they call demonstration, when that demonstration depends on theoretical or analogical reasoning, not confirmed by experience. In such cases I contend that they can assume nothing more than a high probability.

17. A gentleman of the name of Arago lately published a learned History of Comets; but although he ridicules Mr. Whiston, calling him *poor* Whiston,¹ yet he is not able to advance a single valid or plausible argument against Mr. Whiston's Theory, *as far as it is adopted by me.*² His argument to prove that the comet would not have the effect of producing a great tide, because it would pass by the earth (which he allows that it would do so near as twelve thousand miles) with great *rapidity*, is by no means conclusive against its causing one great instantaneous tide or rush of waters from the deep, and from all parts, to the side next to itself, and of course of a rush back again as soon as the moving cause was withdrawn, and probably of several oscillating waves. This is quite enough to cause the destruction of most of mankind, leaving the countries in a great measure as they were before; and this is much more consistent with the actual escape of many of the inhabitants, than from a long-continued flood, and it is quite enough to furnish the ground for the mythos of Noah, taking all the animals into the Ark, &c., &c. M. Arago's treatise was written by direction of the French government to calm the fears of the people of Paris, and to satisfy them that there was no danger to be apprehended from the comet which was expected last year [1832].³ Let us now speculate briefly upon the traditions which have come down to us. Suppose, instead of knowing that the comet would *not* come, our astronomers had known that it *would* come, and that they had been dwelling in Asia, as I suppose the ancients dwelling in Asia knew of the coming of the comet of 2920; is it absurd to suppose that the learned in the *secret science*, spoken of by Enoch, should have betaken themselves to the highest mountains of their country, should have built a ship, should have fastened it to the side of a mountain opposite to that in the direction in which the flood was expected to come, with a long cable, to let it rise as the water rose, and that this mountain should, from this circumstance, have acquired in later times the name of Naubanda or ship-cabled-mount? If I am not mistaken we are most of us in the

¹ Preface, p. ix.

² He confirms what I stated in the Appendix to my first volume, pp. 829, 830, respecting the Caspian sea, and shews that the depression is much greater and more extraordinary than I have represented it. It appears that the Caspian sea is nothing but an immense chasm into which the Volga discharges itself.

³ Did not M. Arago's treatise on these *fears* apply especially to *Biela's* comet? This did appear in 1832. *Ed.*

habit of believing much more improbable things than this. Is it absurd to suppose that the people in possession of power at that time should take care of themselves, should do as the governors of Paris did last year, in their endeavours to calm the fears of the inhabitants, and secrete from them their danger? Is it absurd to suppose that they would be careful about their own security by fleeing to the highest mountain and providing their great floating house and fastening it to Naubanda? We are told, in substance, that, by calculation, they knew that a great catastrophe would happen to the earth; and we know, by astronomical calculation, that the comet which alone was capable of effecting any catastrophe did come. I should think, that persons who believe the *To Oυ* walked in the garden, ought not to find a difficulty in believing this history. I ask my reader no belief in any miracle—in any thing contrary to the laws of nature, to reason or probability. I ask of my reader, only to treat the histories of Genesis and of Enoch as Niebuhr does the history of Rome, and as every reader does the history of Vespasian by Tacitus—that is, to believe the *credible* and to disbelieve the *incredible*. It is perfectly clear to me that before the time of Herodotus every history was a mythos or mystery or sacred history, the intention of which was to *perpetuate*, but to *conceal* the truth, to mean one thing, and to say another, that the mass of mankind *seeing might not perceive*, and *hearing might not understand*. We are told so in the Gospel. What more would we have? I beg my reader to reflect upon the admitted fact, that the comet of 1770¹ [Lexel's] was retarded in its course by coming within the reach of the influence of Jupiter,² and upon the discovery of the asteroids in the vacant space where astronomers had long observed that a planet was wanting. In the latter case, as well as in the former, the probability cannot be denied, that an extrinsic force has been in operation, or that one body has operated on another. And surely no body is so likely as some kind of a comet, in a similar manner, to have caused a deluge on our earth at the time recorded. If there be waters on the planet Jupiter, I can have no doubt that they must have been greatly affected by the approach of the comet of 1770. Nothing is more likely than that, as changes took place in the motions of the comet of 1770, as described by M. Arago, the causes of which were not for a long time understood by our astronomers, so causes which may not be known to us may have operated on the comet of 575 years to cause it to affect the earth at the three times I have pointed out, and not either in the intermediate times of its return or since the year of the Hebrew flood, B. C. 2348.

18. At first sight it appears probable, that if a comet should be materially deflected from the plane of its orbit by any cause, its period also would be materially changed, and we know that it may be deflected since that of Lexel was twice deflected from the disturbance of Jupiter; but still we cannot be certain that its period *will* be much altered. As the orbit of Lexel's comet was first inflected towards the earth, by its approach to Jupiter, and again deflected from it by the same cause, so the comet of 1680 may have been so disturbed, in some way unknown to us, as to bring it three times to operate upon our earth, and this operation to be such as not materially to alter its period. I make this observation in reply to any objection which may be urged that, from calculation, it is known that the earth could not have been in such a part of its orbit as to have come into collision with the comet when it arrived. But I think the question will be one of probability, viz. is it more probable that our astronomers are in error or in ignorance, than *first*, that the coming of the comet should coincide with my theory of the entrance of the Sun into Taurus, at the Vernal Equinox, and *secondly*, with the beginning of my system, and *thirdly* and *fourthly*, with the two periods of the Samaritan computation and the Hebrew computation of the flood? I say, is it probable that all these events should coincide and fall out right, by accident? Is it

¹ See Arago, p. 22.

² See *supra*, p. 138, where the Author had left the date of the comet—of 1770—blank. *Ed.*

not more probable that the astronomers are ignorant, than that all the four events have occurred in a way suited to support my theory, by accident? It appears to me to be probable, that the fears of mankind, from the expected day of judgment and the termination of the millenium, may have been increased by the expectation, among such men as Roger Bacon, of the return of Cæsar's comet, or of the comet of 1680, in the twelfth century, but of the time of whose arrival they could not be certain, in consequence of their ignorance of what disturbing forces might operate upon it; but the existence of which disturbing forces such men as Roger Bacon might have readily had handed down to them, from Sosigenes and the Chaldæans who corrected the calendar for Cæsar.

19. No person, I think, looks at the question of the genuineness of Genesis correctly, or takes a correct view of the character of that book. It is very clear that it is in substance to be found, whether mythos or not, in almost every country, and that, as might be expected, the priests and people have accommodated it to their own purposes. It is impossible to deny that, stripping it of its nonsense, (which is a sort of thing found in every ancient history,) as we should strip the history of Vespasian of its miracles, the evidence is decidedly in favour of its authenticity. I contend that it is highly probable that a flood did take place, and that a man and his family were saved in a ship. If this were not the fact, then there must have been an universal mythos, or there must have been the fact, and it must have been accommodated to the universal mythos. That is, there must have been both true history and mythos. The peculiarity of the coincidences of the comet and the Mosaic chronology of the flood, almost put the fact of the *man saved* out of doubt. The strong proofs of the actual division of the world into three, and of its having been ruled by three potentates under one, as a supreme head, cannot be denied. It is quite impossible that so many traces of this system should remain without its having once existed. Ever since the Christian æra all accounts of countries and their inhabitants have been written by persons strongly prejudiced in favour of the modern date of the present system. The consequence has been, that they have generally left out or omitted to notice any thing which had a connexion with, or which would have shewn, the Christian or Judæan mythos. They believed all such matters to be merely modern, and only noticed such as appeared to them to have no connexion with the mythos. Hence, by degrees, almost every thing which could have shewn the universal system to have existed previous to the reputed time of Christ has disappeared. I am surprised that we have *so much* left, not that we have *so little*. In all our speculations and inquiries we have scarcely ever gone to *perfect accuracy*, so as to take in the consideration of fractions. Now a moment's reflection on the way in which the comets were connected with the system will shew the wisdom of this proceeding. For it is the very acme of absurd credulity to believe that a comet would throw the earth out of its proper plane and not cause some disturbance in the regularity of its period. That is, that its period should not be at least a little hastened or retarded at the time of the change. But by taking the calculations in whole numbers allowance is made for this, and no inconvenience can ever arise from it; as, for example, in calculating the precession by 72 years for a degree or day, there must be always room left to allow for the disturbance, necessarily unknown in quantity.

20. I apprehend that, in the primeval state of our system, the sun was in the centre, and the planetary bodies revolved around it in the same plane in concentric circles, in equal times, in the most perfect harmony and order, and that, including the earth, the primary planets were eight in number,—one probably being now split into the four new ones, called *Asteroids*. The system would then be very like a wheel, and exactly answer to the Mercavah or wheel of Ezekiel, which I shall notice presently. I see around me the ruins of a world. How is this? Can it be believed that the work of Wisdom is to go to decay? No, indeed! this I cannot believe. I must, therefore, form some theory to account for these ruins—to render them consistent with Omnipotent

Wisdom. I suppose that the comets may be the agents which have already effected great changes in all the planets, and that they may be destined to effect many others—till, in defined periods, the planets, by means of these agents, may be all reduced to a state of fusion or gas, and be at last reabsorbed into the *To Oυ*, or be renewed again in some way unknown to us—in some way not to be understood by our limited faculties.

21. I know that in the following observations, (a digression from my subject,) which I will take the liberty to make, I shall venture upon very slippery ground; and, therefore, I beg they may be considered to be only conditional, and more for the sake of argument than for the delivery of an opinion. But before I proceed, I would observe to such philosophers as believe the universe or matter to be God, that if they be right, *he* must exist in his *more* refined, as well as in his *less* refined state; then my argument will apply. To such philosophers as think that the universe is *idea*, and does not exist in *reality*, I do not at present address myself. Gas is defined, *a substance reduced to the state of an aeriform fluid by its permanent combination with caloric*.¹ Then, pray what was it before it combined with caloric? Was it hydrogen? This Gas, I think, is what the ancient materialists (and all the fathers and Moses were materialists) considered to be the substance of the First Cause. I am forcibly impressed with the idea that the substance which we call *hydrogen*, by which is meant a substance which is the base of both *water* and *fire*, constituted that which the ancients called *spiritual fire*, and that from this arise the apparent contradictions in the designations of water, fire, and air, as the origin of things—for air the third (gas) is the first product, perhaps, of the union of the two former. Then in what will hydrogen differ from the *To Oυ*? It is not *water*, though the base of water,—it is not *fire*, though the base of fire. It is not *air*, though air or gas arises from the union of its two products—shall I say, from the union of the *two emanations* from it? But here we may perceive the coporeal trinity of Plato. Whence came the baptism of water, fire, and air? From the FIRST (the *To Oυ*, Illusion) emanated the base of hydrogen, which base was Maia; from Maia, or the base of hydrogen, emanated hydrogen, the base of *fire* and *water*. These first three constituted the first Trinity. From these, three in one, emanated the next Trinity, consisting of fire, water, air or gas, in their most refined forms—three in one, one in three—and from these emanated all beings in existence known to us,—all the beings of this our world, perhaps of the universe, perceptible by us. All this is *ancient doctrine* only put into *modern words*—Gas and Hydrogen: it is the doctrine of Macrobius. I greatly suspect that the electric, the galvanic, the magnetic, fluids and hydrogen, are all one substance; that the first *three* are *one*, is, I believe, a doctrine now scarcely doubted. Every thing in nature was supposed to be microcosmic: thus the second Trinity was a microcosm of the first. And now we come to the most refined of all refinements. As the hypostatic universe was a microcosm of the IMMENSE *To Oυ*, so the minutest animalcule imaginable was a microcosm of the one above it: and thus, when we get to the least particle perceptible by sense, or even in imagination, how can we imagine any thing of this kind but by a circle, symbolised by a snake, with the tail in its mouth? What were the *second* and *third* of the first Trinity, but a picture, a reflection in a mirror, an idea, of the universe? All nature was a chain of trinities: the *third* person of the *first*, was the *first* person of the *second*; and so on, *ad infinitum*. Thus all nature was God; thus God was nature. Thus all matter at last was supposed to be resolved into the *To Oυ*, and thus to be eternal. All nature was a ladder or a chain, the ladder of Jacob, with its 72 angels or æons, each a step, I doubt not—a ladder *αιων των αιωνων*, revolving like the period or number 432 for millions of millions of years. Saga, Xaca, and Saca, all most clearly mean Wisdom. The Isis of

¹ Webster's Dictionary.

Egypt was called Neith or Wisdom. η *sk* in Hebrew means *a veil*, in Greek $\Sigma\eta\kappa\omicron\sigma$ (very like *Saca*). When the inscription says, *No one shall draw aside my veil*, does it mean, that no one shall explain my cabalistic doctrine of divine Wisdom? This Wisdom was the second person of the Trinity—the Logos—the Saviour; and was constantly called *self-existent*. This is the *Isa* and *Ma-hesa* of India, the *Hesus* of Gaul, and ψ *is, he is, profound wisdom*, and $\eta\psi$ *ise, existence, ψ iso, salvation, and Saviour*, of the Hebrews. From this came the $\Sigma\omega\zeta\omega$ *to save* of Greece.

Faustus says, “*Nos Patris quidem Dei Omnipotentis, et Christi Filii ejus et Spiritus Sancti, unum idemque sub triplici appellatione colimus Numen. Sed Patrem quidem ipsum LUCEM incolere credimus SUMMAM ac PRINCIPALEM, Filium in hac secunda ac visibili luce consistere; qui quoniam sit et ipse geminus, virtutem quidem ejus in SOLE habitare credimus, sapientiam vero in LUNA: necnon et Spiritus Sancti, qui est majestas tertia, AERIS hunc omnem ambitum sedem fatemur ac diversorium; cujus ex viribus ac spiritali profusione terram quoque concipientem gignere patibilem Jesum.*”¹ When I recollect that Wisdom is the second person of the Trinity, that Isis and Neith are Wisdom, I think I can, from the above passage, discover how Isis became identified with the moon, and why the moon constantly bore the same name as the female, or rather androgynous, generative power. I think we may here also discover how the Holy Ghost or *third* person of the Trinity, came to be described as *breath* or *air in motion*, which we have never been able to ascertain before. I think it is probable that the Indians considered air in its most attenuated state, or hydrogen, or some similar fluid, to fill all space; and it seems not improbable, when we consider how their refined igneous matter was always combined with air, that they understood what we call *hydrogen*. However, whether or not they understood what we call hydrogen, they certainly understood that there was a principle of water, fire, and air, which answers to all our properties of hydrogen, and this they called Gas or *Gast* or *Ghost*.² But still I think they considered this gas to be the same as the electric and magnetic fluids. The Christians of the present day, almost all of whose minds are enfeebled by the prejudices of education, look upon the Brahmins and their learning and religion with contempt. These feelings they have inherited from the Greeks and Romans; but let me remind them of what the Brahmins say to this. They say, and say truly, that in their Vedas may be found all the logic of Aristotle and the philosophy of Plato, and that among their sectaries may be found the doctrines of Epicurus and of the Stoics; that it is no more just to run them down on account of the corruptions into which their religion has fallen, and the state of degradation into which their order has been reduced by foreigners’ conquering their country, than it is to make the same charges against the religion and philosophy of the Western nations, on account of the corruptions of the Greek and Latin churches, and the present neglect of the philosophy of Plato, Epicurus, or Zeno; that philosophers of these sects are to be found occasionally in India as in Europe; that, if we have our Spinoza, &c., they have their Vyasa; that with regard to religion, we have no right to say a word; that ours is radically the same as theirs, only that we have in some measure corrupted it, and have forgotten or lost its first principles which they, with all their misfortunes, have retained; that our divine incarnation is the same as theirs; that, if the modern corruptions of the East and of the West be carefully taken from the two religions, they will be found to be identical—our Christ, their Cristna. These seem to me to be asseverations not easy to refute, as our missionaries know full well, and of their truth as far as concerns religion, the person who has carefully read the preceding part of this work must be very well qualified to form an opinion. The truth of the funda-

¹ Georg. Alph. Tib. pp. 278, 279.

² Which our Celtic ancestors invoked by the name of $\Gamma\alpha\gamma\tau$, *Ghast*, to preside over their Wittagemote.

mental principles of the religion, I think, every person who admits the existence of a God will allow, to be not improbable. Is not God the creator our preserver, and the regenerator of all nature? Does not every cycle and period return according to his divine law at its appointed time? What shall I say of inspiration? If a person feel a strong inclination to do a good act, is it very much out of the way to attribute it to the influence of divine goodness? If this be not divine inspiration, or if divine inspiration be not this, shall we have recourse to the learned Parkhurst and make it to be *air in motion*? (This may suit a narrow-minded priesthood, but the world has nearly outgrown it.) If this be not divine inspiration, shall we make a substance of it, and incarnate it? What is a divine incarnation, but a person endowed with more than a usual portion of the divine *spirit*? What, at last, is this, but a person having a more than common inclination to benefit his fellow-creatures? And if the *wind in motion* be given up, to this it must return—into this and into nothing but this, it will at last be resolved. Thus when religions are stripped of their grosser parts, they nearly resolve themselves into one. What, it may be asked, do you make of the renewal of worlds, and of the metempsychosis? I see nothing improbable or contrary to divine goodness in the renewal of worlds. The late discoveries of Laplace, and many other circumstances, give probability to the theory; and with respect to the metempsychosis, before it can be denied, many matters must be premised, which are of a nature attended with the greatest difficulty. Has man a soul? What is the soul? Is it substance or spirit? What is spirit? What is substance? Are not all these questions beyond the reach of the present human understanding? What is identity? Is man the same *to-day* that he was *twenty years ago*? He may as readily have existed in a former period and not be conscious of it, as he exists now and is unconscious of multitudes of things which happened to him twenty years ago. Thus we have a crowd of questions and difficulties which I shall not attempt here to resolve—questions to answer and difficulties to resolve, each of which have already, in vain, had hundreds of volumes lavished upon them.

22. We will now return to our subject. The circumstance that the year of the return of the comet, and the year of the flood according to Moses, should exactly coincide, raises a strong probability that a great deluge did take place at the time stated by Moses, and that it was effected by the agency of the comet. The testimony of all nations, that a flood did take place, strengthens the probability. Again, the appearance of the surface of the globe, as stated by Cuvier, tends to confirm it. Again, the testimony of Varro, respecting the flood of Ogyges, that it agreed in date with that of Moses, tends to confirm it. The union of these circumstances raises a probability that a deluge did take place at one of the two times stated—at one of the two approaches of the comet in its orbit, too strong to be shaken by any theories or mathematical calculations of philosophers at this day respecting the planetary motions, because it is impossible for them to know certainly how the cause would operate upon a system so different as our present one is from what it must have been formerly, before the catastrophe happened. The reasonings of philosophers can lead them to nothing more than a probability, and the final result of the two can only be probability against probability—and the question will rise, which is the stronger? But if the mathematical reasonings of philosophers should bring out a result favourable to the assertions or traditions of Moses and Varro and Whiston, then the probability will rise almost to certainty, indeed, as near certainty as can be expected in matters of this kind. A great catastrophe no one can deny. In fact, no one can deny several catastrophes. There is nothing, under all the circumstances, improbable in the doctrine, that there may have been two, or even more, of different degrees of magnitude, since the creation of man. It is not conclusive against the flood of Moses and Varro being at the time they name, or of its being effected by the comet of 1680, that its present motions, as now calculated by astronomers, if they should be so calculated, do not shew it would come into contact with the earth at that time; because it is very possible, that the concussion which

then happened may have caused its motions to be very different from what they now are: it may, after the great concussion of the bodies, have come into its present situation, and its habits of moving too, by degrees: if it be only moderately near, it is quite enough. If all the planets before this catastrophe moved in perfect order—all in their respective orbits, but all constantly in conjunction, and in one plane, it is possible that the same comet may have disarranged them all, and thrown the whole system into what appears to be disorder, at the same time. Every thing seems to shew periodical destruction and regeneration. What can be more probable than that comets should be the agents of these effects? Although the comet may not move in the same plane with the planets at this time, it may have done so before the concussion, or it may have come into the same plane by degrees, being previously ordained to do so, for the purpose of effecting great objects or changes. Although the present state of the system seems to shew disorder, it is probably only temporary or periodical, and all may return to order again. Ancient tradition and improved modern reason both support the probability of this doctrine. But in all this I contend, that I come as near the truth, or certainty, as the astronomers do; only *I* do not come so near dogmatical assertion.

23. At first persons will wonder how any one could *believe* that, in every six hundred years, a space of time so short, the history of the world could be renewed; that new Argonautic expeditions, new Trojan wars, &c., could be re-enacted—a belief at first sight so absurd and so palpably repugnant to all historical experience. But I think this superannuated dogma passed down the stream of time, like other superannuated dogmas which, in our times, may be pointed out: the Millenium for instance. It was, like the Millenium, almost obsolete; partly believed, partly disbelieved—believed by some of the vulgar, despised by the enlightened. Like the Millenium, it was sought for every where, and its falsity, which was proved from facts, was attempted to be explained away. Before the invention of letters, there is no difficulty in accounting for the belief; the difficulty only arises afterward. This belief arose from natural causes. If we carefully examine the state of man before the invention of writing, we shall find that his memory would not reach even to half a neros, or to 300 years. Let us think of our grandfathers, great-grandfathers, and great-great-grandfathers, giving them forty years each. What do we know of them? What should we now know of them had we not possessed the art of writing and ciphering? No man who thinks deeply upon this will be surprised at a popular belief prevailing, that the same mischief would happen to *new* Troy, Rome, which had happened to *old* Troy, before the expected Great One would arrive at the end of the cycle, in thirty or forty years' time. And when Virgil wrote his 4th Eclogue, that was thought or feared by the vulgar to be the course of events. When the T. S. R. or Cæsar was really believed to have arrived, that part of the mythos, it would be said and thought, had been misunderstood before, as our devotees say the time of the Millenium was misunderstood formerly by those who expected it at the end of the first 600 years of our æra. This ought to have taught the fools wisdom. Are fools ever taught wisdom? When folly is once taught, it is very difficult to unteach it. I beg my reader to refer to what I have said, in pp. 262—268, 280, respecting the origin of Deans and Chapters, and the whole of the Feudal system, and to observe the absolute darkness in which it is all involved, in an age thousands of years after the discovery of the art of writing. When he has done this, he will not be surprised at the ignorance of mankind before the art of writing was discovered, or if discovered, while it was kept a profound secret. Almost the moment the art of ciphering was found out, attempts would be made to make use of it to remedy the inconvenience which I have just mentioned. The first use would be to perpetuate the cycles or to register time, to perpetuate the knowledge on these subjects which, up to that time, had been acquired. In fact, to seize firmly and to secure that knowledge, that it should not, like other knowledge, escape them, of which they must have had daily experience, by

locating it in memorials as imperishable as possible; and this we find in the number of the stones in the stone circles, and probably in the stones of Carnac, to which a stone was added every year to record the time of the world, like the nails driven at Rome and in the Etruscan temple of Nurtia: ¹ The next contrivance would be that of putting words into numbers. For though man could not write in syllables, it is very clear he must always, after he had obtained any skill in speaking, have spoken in syllabic words, and almost at the same time in which he learned to speak in them, he would learn the art of making rhymes, or composing lines ending in similar sounds. We have the first account of this in the poet Olen at Delphi, ² and in the twenty thousand verses which the Druids of Britain caused their pupils to repeat. These were the first attempts to perpetuate facts. The very nature of them confined them to a caste or class, and made them secret and sacred. The next thing having the same object in view was to sing these lines or rhymes to a tune; and hence arose music. Hence arose the chaunting of Liturgies. Hence arose national songs. Hence arose among the priests an order or class of Bards, Muses, or Singers, singing or chaunting their Musas—singing or chaunting their doctrines or praises of the incarnate wisdom; ³ books of Wisdom, or of Buddhas, in process of time, by the regimine, becoming books called Vedahs, or the books of the prophets. The vedahs are never *read* but *sung*. This is to prevent them from being corrupted. ⁴ After a mythos or history of a person was once established, the recollection of which was an object to be desired, it was, as I have just observed, made into a song, and sung or recited. After some time instrumental music was added: again, in time, action was added, and by degrees more persons than one were employed. Thus dialogue commenced, a chorus was adopted to make the matter more intelligible to the audience, and sacred theatres were built. It is difficult to imagine whether this preceded or followed the practice of making processions, or Deisuls, or voyages of salvation, through the districts of a country, where all the adventures of the person were acted—probably the infant exposed—the young man killed and resuscitated, &c., &c.,—a part of the adventures of the incarnate God performed each peculiar day, till the whole of his life and death was gone through every year. These were contrivances adopted to keep in remembrance the history or M-Istory before the art of writing by syllables, perhaps before the art of writing by numerals was discovered. For this purpose, after epic poems were invented, each poem was divided into twenty-four books, each book into a certain number of lines, each line into a certain number of words, and for this purpose also each syllable of each word was by practice fixed to be long or short, and each line was formed by a certain number of short and long syllables, placed in well-known order. Thus we have hexameters, pentameters, &c.

24. I have formerly said that there was originally one history, *that* history a mythos or a doctrine, and that the doctrine consisted of the arrival of a divine incarnation in each age, which the priests of each country persuaded the people must be renovated in their peculiar country, by exhibiting to them their former history, which, with a new cycle, would be renewed. The system of the renovation of cycles was an integral part of the mythos. The doctrine of the renewed incarnation is very distinctly visible in India, Persia, Syria, Greece, Italy, and even in China and Mexico. In consequence of the friendly intercourse which in the later times of antiquity existed among all nations with respect to their religious concerns, I am induced to believe that it was a part of the doctrine, that there might be more divine incarnations than one for each cycle—that more nations than one might be favoured with the interposition of the Deity in its behalf. I think if this had not been the case they would have quarrelled about them, which they no where did,

¹ See Vol. I. pp. 307, 476.

² See Celtic Druids, p. 121.

³ The celebrators of the מִשְׁחָה *mesh*, by regimine, became themselves Muses.

⁴ See Dr. Rosen's Translation of Parts of the First Veda.

until the secret meaning of the mythos was lost. However, whether one nation allowed another to have it or not, it is certain that each nation claimed to have it. Indeed, I have somewhere met with an account, that it is no unusual thing for the Brahmins to allow the truth of the divine incarnation of Jesus Christ. But they say, "You have had your divine incarnation, so have we. We do not deny yours, why should you deny ours?" "Ah! but" (we say) "our Christ was an incarnation of God himself, for the salvation of all who believe on him, proved by previous prophecies and by his miracles." "Very true;" (is the reply); "we allow all you say. But our Christ-en or Christ-na was precisely the same for our salvation and the salvation of all mankind who believe on him, proved by previous prophecies and by his miracles." I imagine that this will be a very difficult argument to refute.¹ By representing to the people of Rome that its founder, Romulus, was descended from Troy—that he was deserted and saved from a tyrant, &c., &c., the priests could say to the people, "Is it not evident from this history, that you are a favoured nation, or one of the favoured nations?" On this account all histories were moulded to accommodate them to the mythos. This affords a satisfactory reason for all the histories being the same in some respects, and also for their having considerable differences. It also furnishes a satisfactory reason for each country having the same names of places. If it be said, that the tribes might have brought the names of places from the East, as our emigrants have carried our names of places to America, I reply, Not only are the names of places, but the mythos also, visible, where there are new names for the same thing. The identity is much too extensive to be the unintentional produce of tribes merely settling. The system is uniform in all countries. The fact is, our emigrants take their sacreds, dedicate their churches to saints, &c., &c., and, if they yet had the Deisul, they would every where have had a sacred mount to perform it round, even in Australia. In every country which had any pretensions to have a *Saviour*, there was a Mount Meru or Olympus or Acropolis, with all its accompanying little superstitions. And all these places had secret and sacred names, probably not used in common life, until, by degrees, the secret came to be divulged to so many persons, that it was, in fact, no secret at all. What would the secrets of Masonry be, if every person in England was initiated? By degrees the mysteries became known, without its being perceived that they were divulged secrets; and it is clear that, if the initiated perceived they were their secrets divulged, they would, on no account, admit the fact; or at any rate they would conceal it if possible, and they would cease to be a part of their mysteries. We know that there were the greater and the less mysteries. In the less mysteries, the novice was admitted to only a certain portion of the mythos; to how much it is impossible to say. It is very clear that it was the establishment of the sect of the Christians—the sect of Paul—teaching the contradictory doctrine of a spiritual saviour, instead of a temporal one, but still of a human being actually crucified,² which caused nearly all the mysteries, remaining in Paul's day, to be lost *as mysteries*. A violent and furious sect of fanatics, like the modern Methodists, divided among themselves, but uniting upon certain great points, let out all the secrets of the temples, as far as in their power. Like Luther, they considered the breach of an oath or vow to be meritorious in a good cause. Under these circumstances the initiated who held to their vows could do nothing but abandon their mysteries altogether, and the celebration of them nearly ceased; but, as might be expected, we find them

¹ See, on the admissions of the Jesuits to the Brahmins, Vol. I. p. 560.

² The Author probably meant by "a *spiritual*" instead of a temporal Saviour" one who was really to save from ignorance, sin, and death, instead of a metaphorical one, who saves only as wily priests teach, and as the ignorant many believe. In teaching the doctrine of such "a spiritual Saviour" there was, surely, nothing "contradictory"! for, who but a *human being* could be *actually crucified*? Let those who profess to believe that "the Eternal God *died*" as the real "spiritual Saviour" reconcile the apparent contradiction. *Editor.*

rising again under the fostering hand of Clemens Alexandrinus and of the reviving hierarchy, as soon as the sect began to improve in character. How much secret doctrine Clemens and his school may have taught, we do not know; but we do know enough to see that it was, at least, a part, and the best and most beautiful part, of the ancient system. The early Paulite Christians consisted of nothing better than what constitutes our Ranters, Jumpers, and Speakers with Tongues, in Mr. Irving's chapels at this day.¹ This Mr. Gibbon has satisfactorily proved. This Paul's first epistle to the Corinthians proves. They dreamt of nothing but an immediate kingdom of King Jesus—a sort of temporal or spiritual, visible king upon earth, at Jerusalem. As time advanced and proved the erroneousness of this dream, and as the sect improved in character, as all sects do in proportion to the rate at which their passion cools, their leaders, by degrees, went back to the old system,—the old mysteries began to revive, and they shew themselves almost as soon as we find any thing written respecting them in Clemens Alexandrinus. But the whole system could never be revived, because that which had been revealed to the whole world could not be unrevealed, viz. for an example, the multitudes of similar histories of the Avatars, &c., &c. But although the similarity of the histories is sufficiently striking, now that they are pointed out, they do not seem ever to have been publicly observed by the ancients. The fact could scarcely have been unknown in the mysteries; but it is never named by any writer, whose works remain to us; which seems to shew, that it must have been, if observed at all, a part of the secret system. Whatever knowledge the priests could keep to themselves, they most studiously kept. In the Western world, in modern times, no ancient institution or order has remained by whom it might be kept, unless it be in the conclave; but when the Europeans arrived in India, all the learning which remained to the priests, from their ancestors, they kept from the Europeans, and from all their countrymen except their own caste, with the greatest care possible; and, in a great many instances, they continue to keep it. Thus, to the escape of the secret knowledge, we are indebted for the destruction of the rule of the priests. I have no doubt that the sacred order which ruled the world possessed all science, and possessed it in a very high degree of perfection. When land became scarce and food difficult to acquire, men would become quarrelsome: to suppress disorders hired men would be employed, and their commanders, by degrees, would quarrel with their superiors. Then science would begin to creep out, and the veneration for the order to abate, till its rule would at last be overturned. Many causes would unite to produce this effect.

25. We have formerly seen in Vol. I. p. 264, that the Cabala consisted of two branches, the Barasit and the Mercavah. The latter is the knowledge of what are called sublunary beings, and might also consist of the knowledge of what we call natural philosophy, astronomy, the periods of the planets, the science of letters, high arithmetic, algebra, geometry, and some other secrets described by Bacon, as noticed in Vol. I. p. 341, *note*. The other, I think, probably consisted of the knowledge of all the profound doctrines of the Trimurti and the secret use of the system of cycles,—the meaning of the sacred *Om* and the *To Ou*, and of Theogony. The word Mercavah is said to mean a *chariot*, and to refer to the chariot as it is called of the first chapter of Ezekiel (verses 15—21). The word which gives occasion to this, or which is translated chariot, is אופן *apn*, the root of which is said to be אפן *apn*, but for the meaning of which Mr. Parkhurst refers to the word פנה *pne*. This, with a mutable or omissible ה *e*, he says, means *to turn*, particularly applied to the turn or the return of a day, or, of course, a period. He says also, that אפן *apn* means *a wheel*. This is justified by the

¹ It will be said, perhaps, that there were Josephs of Arimathea—men of a higher class—among the early Christians. This is very true—there were men of learning and wealth, like Mr. Whitfield, Mr. Wesley, Mr. Halhed, and Mr. Irving; but what, if admitted, does it prove against the argument? John Wesley was a talented and learned man; yet he believed he had miracles performed upon himself every day! But what were his and Whitfield's early followers?

context of Ezekiel, which treats much of a mysterious wheel, and upon the four cardinal points of the compass by the names of the Man, the Lion, the Ox, and the Eagle—the Equinoxes and Solstices. The generality of Jews give the first word of Genesis, *Barasit*, the common meaning given to it by the Christians, and though the greatest and the most learned of their philosophers, Maimonides, acknowledges the meaning of the two words is lost, yet, without any hesitation, they will tell you, that *Barasit* means *cosmogony*, and *Mercavah* the *moral doctrine*—thus transposing the two. Very certain I am, that this is a complete inversion. How they can make the wheels within wheels apply to *morality* I know not; but they aptly apply to *the planets*. In short, one, the *Mercavah*, was the doctrine of natural philosophy; the other, *Barasit*, the doctrine of moral philosophy. *Mercavah* taught astronomy, the use of the cycles, the history of the flood, and the cometary and planetary system, chronology, the secret principle or riddle of the millenium, and the microcosm, which I shall explain by and by, and with which the power of the initiated was most intimately connected, and which was, whether true or not, thought necessary for the government of mankind. The *Barasit* taught the doctrine of wisdom, the nature and attributes of the *To Ov*, the doctrines of the metempsychosis, of emanation, and of the reabsorption of every one into the First Being, hastened or retarded according to his good or bad conduct in this life; in short, every thing connected with morality, and the duties of man to his Creator.

CHAPTER II.

CÆSAR.—ALEXANDER.—GENGIS KHAN.—AKBAR.—NAPOLEON.—SUPREME PONTIFF.—RACES OF MAN. BLACK GODS.—TRINITARIAN DOCTRINE OF GENESIS. JEWISH POLITY. PRIESTHOOD.—SUPREME PRIESTHOOD.

1. I SHALL now proceed to shew more fully, that there have been many persons who have aspired to be divine incarnations.—Buddha, Cristna, Salivahana, Moses, Cyrus, Alexander, Julius Cæsar, Gengis Khan, Timur, Mohamed, Gregory, and Hakem Bemrillah, were all believed to be divine incarnations, as well as Jesus Christ, each opening a new age. Few persons who have read this work will doubt that the word Cæsar¹ must have some mystical meaning, and that meaning connected with the mysterious system which I have developed. I think the word in the first numeral letters has been, as the Pope of Rome calls himself, XPΣ=600. Having found from St. Barnabas, that X means 300 as well as 400, and from the other circumstances which I need not repeat, that the last three letters R, S, T, had each two meanings in common, and also that the last letter of almost all the alphabets, the Tau, was written indiscriminately with a cross, in fact, in any form of a cross; considering also, that we find the doctrine of Wisdom, or rather of the incarnation of Wisdom, to have been the secret doctrine of all nations; remembering also, that we are told, it was a common practice with the mystics of all nations to insert the letter I, the name

¹ See Vol. I. pp. 617—620; and *supra*, p. 95.

of God, into words, for the sake of a mystery,—I think it probable that the word Cæsar is the Hebrew word Rst or Rasit; or rather that, originally, the word Rasit has been X or T. Σ. P., read from right to left, TΣP., and that from this, the Tzr of Muscovy has, by a little corruption, been derived. It is not half so mystical as the nonsensical mysticism which we find, from the letter of Barnabas, and many other circumstances, really did prevail among the ancients. My mystery is in better style, and is not nonsensical. Ras is called the root of the Hebrew Rasit; but whence comes the *it* at the end of the word? I shall be answered, perhaps, that it is formative, or a letter is heemantive or paragogic—all hard words invented to conceal the ignorance of persons too vain to confess their ignorance. I believe the word Rasit is a corruption of R. S. T., and that it is the original of the word Cæsar, and Tzar, and XPHΣ—the *mitis* or *benignus* incarnation of every age—Pater futuri sæculi—*αιων των αιωνων*. The letters for gold, for the word peaceful or happy, and for the benignant being XPΣ, were the same in the first language of numeral symbols, and meant PΣT, the triune cyclic God or Genius—first, perhaps, ΧΡΙΣΤΥΝ=666, ΞΡΕΣΤ=60+100+1+5+200+300=666, corrupted into Crost; next to XPΣN=650; next to XPHΣ=608; and next, as it yet remains, to XPΣ=600 or XP=600.¹ Every thing which I have said respecting the XPΣ or Crest is confirmed by an observation of Bingham's in his *Christian Antiquities*, that the Christians were not called by that name till the time of Ambrose; they were previously called Christs—*anointed*.²

It would be surprising if we did not find the Trinity among the Romans, and we have it in the Capitolium, (and it is not only Trinitarian but Christian too,) in its three altars or shrines “to the three Gods,” called *Συνναιοι*, or, as this word is expounded by Nimrod, *the dwellers together*, the Dii Magni Samothracæ, *Θεοι μεγάλοι*, *Θεοι δυνατοι*, *ΘΕΟΙ ΧΡΗΣΤΟΙ*. Tertullian says, that the three altars in the Circus were sacred trinis Diis, magnis, potentibus, valentibus; eosdem Samothracias existimant.”³ These altars were to Jove, Apollo, and Minerva. The *Θεος Χρηστος* shews us what was meant when it was said in one of the gospel histories that the Christ descended and united itself to Jesus, at his baptism, and that he was Jesus the Christ, i. e. the Crest. We are all educated at this day with the impression that the AMID or *desire of all nations* was to be an actual God, or a person of the Godhead, and in consequence we can scarcely understand the situation or the feelings of a person who only looked for a man like himself, but endowed with a superior degree of the divine attribute of wisdom. I think this prevents us from entering properly into the feelings, and making a proper allowance for the natural and almost necessary weakness, of men placed in such situations as Cyrus, Alexander, Cæsar, Alaric, Mohamed, and Gengis Khan. I am convinced that every one of these believed himself to be the foretold person; in several instances they were generally believed to be so by their followers; and in several instances, also, I have no doubt, that this was the chief cause of their victories.⁴ We will now re-

¹ Lately, in the *Curiosa Miscellanea*, I met with another monogram, of which the author, Mr. J. Munro, says, he was not able to get any explanation from the priests, except that it meant something mystical; it was XP. It was found in the catacombs of Rome, on Christian monuments; but he says it was in use among the ancients long before the time of Christ. I apprehend it is the Hebrew and Samaritan Tau=400 and the Resh=200, jointly 600. But it may be the Greek Rho, in which case it will confirm what I have before proved from the epistle of Barnabas, that the last three letters of the old alphabet had each two meanings. We must not forget that the Tau in these old languages was written in every form of the cross.—See Vol. I. pp. 222, 223.

² Psalm cv. 15; Bingham, Book I. p. 7.

³ Nimrod, (Vol. I. pp. 243, 244,) who refers to Serv. in *Æn. lib. ii. vers. 225, 297*, and Tertull. *de Spectaculis*, Vol. iv. ch. viii. p. 117. Semler.

⁴ I think in the latter part of the life of Napoleon some slight symptom of this disorder—this hallucination—this monomania, may be perceived in that extraordinary man; but more on this point presently.

turn to one circumstance of the mythos of Julius Cæsar, to which I think, in Volume I. pp. 616—620, I have not done sufficient justice. It has always been understood that his mother underwent the operation, from her, denominated Cæsarean, and that her son Julius was extracted from her side. Now, when I consider that it was clearly a part of the mythos, both of the East and West, of that mythos, in fact, alluded to by Virgil, that the expected one, *the desire of all nations*, was to be born from the side of his mother, and not in the usual course of nature,—and when I consider the extraordinary circumstance of the connexion of his mother with the God in the form of a serpent in the temple of Apollo, and the aphanasia¹ or darkness at his death, &c., &c., I cannot believe in the operation, or attribute to accident the story of Cæsar's unnatural birth. I recur to the doctrine of probability—and I contend, that, under all the circumstances, the probabilities are as a hundred to one, that the story is a made-up one, to advance the claim of Cæsar to the sovereignty of the world—to support his claim of right by the *book* as well as by the *sword*. But I think the contrivance of the Cæsarean operation conveys with it a proof, that, though the doctrine of an unnatural or preternatural birth was meant to be taught, it was meant to be kept a secret. The more I meditate upon the numerous proofs scattered over the whole earth, which I have detailed in the preceding books of this work, the more am I convinced that the *χρηστηριον*² was the cabalistic or secret doctrine of all ages. In Volume I. p. 618, I have treated of a kingdom of Cæsar expected by the Jews in North India. Why should they expect a Cæsar? We must recollect that we found Cæsars in India; and all the princes of the Persian dynasty, who were overthrown by the Saracens, were Khosrus, which word was but a corruption of the word Cæsars. The popular belief that *a great one was to come*, must have been greatly aided by the uncertainty of the periods, from the difficulty of keeping a correct register of time. I think it very possible that Sosigenes persuaded Julius Cæsar to correct the calendar, by shewing him that he was born, if its errors were corrected, and it were put right, at exactly the proper time. Without the slightest attempt at a plausible reason for such an opinion, we find it general among the Romans, that their city was to be the seat of universal empire, the mistress of the world, and to be eternal. I have no doubt that this popular opinion greatly assisted towards its own fulfilment, and that it influences many of the persons who now inhabit that city, of a rank far above the vulgar. I have very little doubt when a spiritual kingdom came into fashion in the time of Constantine, this superstition influenced him in giving up the possession of the city, and, along with it, the right of ruling by the Book, to the successor of St. Peter. Pompey affected the same right or claim as Cæsar. His name shews it. All the world was ripe for it. It necessarily carried it with the destruction of the Republic and the establishment of a despotism. It was the secret doctrine of the Chaldæans and the mysteries, that a great one should come about that time;—the learned as well as the unlearned fools, against Cicero, Brutus, and the Philosophers. The mythos is very evident in the twelve successive Cæsars, like the Lucumones and Imams of Ali. I am by no means certain that the triumvirate was not an imitation of the division of the world among the three sons of Noah, and the three Samothracian Gods, the Dii consortes, or *Θεοὶ χρηστοί*, of whom I treated not long since—the division of the great world into three parts, in imitation of the division of the little *Ager Romanus* into three parts in former times. Varro³ says, “*Ager Romanus primum divisus in partes tres, à quo tribus appellatæ: Tatiensium, Rammensium, Lucerum nominatæ, ut ait Ennius, Tatienses à Tatio, Rammenses à Romulo, Luceres, ut ait Junius, à Lucumone.*” I believe that not only numbers of conquerors have thought themselves Messiahs, but that their followers have thought them so too. Is it less likely that Cæsar should have followers of this kind

¹ See Vol. I. p. 612.
VOL. II.

² See Vol. I. pp. 219, 585—588; 758, 759; 786—788.

³ De Lingua Latina, Lib. iv.

than Brothers and Southcote? When time has brought with it not an age of happiness, but, as usual, one of misery, conquerors have died away and been forgotten. This is beautifully exemplified in the temples, &c., &c., erected to Cæsar; and, again, in the history of Mohamed. Nimrod¹ describes Antony as filling the East with his debaucheries; he shews that Antony called "himself the new Bacchus, the husband of Minerva and the lineal descendant of Hercules." He adds, "This personage, besides being generally addicted to the literature of the East, dabbled particularly in the mysteries of the Jews, and consulted their doctor Rabenu Hacadosh concerning "the cabala of the Tetragrammaton and of the numbers 12 and 42." I cannot help suspecting that the profligate triumvirate divided the world into three in compliance with this superstition. Nothing is more common than the union of superstition and profligacy. I am quite satisfied that the opinion generally prevailed, that the world was to be divided into three parts, one of which was to have supremacy over the other two. The account of Antony shews the same mythos. These great men, dazzled, like Antony and Julian, drunk with prosperity, were easily taught the secret doctrines, and that each, in his own person, was the *promised one*: hence all the casting of natiivities, the calculating of pedigrees, and making of Janam-patri.² These men were of the highest order of Patres Conscripti or Lucumones, and any one of them might have been the lineal descendant of the first Japetus. I go so far as to suspect that, after the world was divided into three by them, their quarrel was for the nominal superiority.

2. If the reader refer to Volume I. pp. 380, 381, he will see an account of the immaculate conceptions of various great men, and among them, of Alexander the Great, whose father was Jupiter Ammon, in the form of a Dragon. By the Persian historians he is called Ischander, thus shewing that the *Al* is merely the emphatic article: then we have a compound of Arabic and Greek—the Arabic *Al*, and *Ischa*, (the latter the Arabic name of Jesus, meaning *the Saviour*, and of Sarah, the wife of Abraham, of Eva,) and *Ανρηρ* or *Ανδρος* the Greek for *man*. Mirkond³ says, that, "in the "Ionian language, Iskander signifies Aksheed Roos, that is, Filusuf: which word is abbreviated "from Fila Sufa: as the Ionians call *love* Filá, and *wisdom* Sufa; according to which etymology, "Iskander means, *A lover of wisdom*." That is, we may see among other matters, that he was of the sect of the Sofees or the Gnosis. The Filá Sufa is nothing but Φίλος Σοφίας. He was sometimes called a Roomite.⁴ He by force made himself master of *Ros-heng*⁵ and married her. His mother is said to have been delivered of him on a journey, and to have exposed him to perish in a desert, where sheep were fed. An *ewe* came and suckled him. The shepherd's wife, following the ewe, found him and brought him up. After a time, as usual in all these cases, his mother discovered him, brought him to the king, his father, &c., &c., &c. Here we have the usual mythos. In the account of the great battle with Dára or Darius, Mirkond says, "*the blood ascended "from the back of the terrestrial Fish, to the face of the celestial Pisces;*" and, again, "*Streams "descended and ascended to Earth-supporting Pisces.*"⁶ (I refer my reader to Vol. I. pp. 558, 559, and 635—637.) Alexander was said to be born in the year 360 before Christ, the year the Sun entered Pisces, at the Vernal Equinox.⁷ According to Mr. Shea's translation, Mirkond makes Alexander

² See Vol. I. pp. 183, 249.

³ Translation by Shea, p. 366.

⁴ Upon this word I must refer to the Index of Vol. I. for what is said in several places under the words *Roma* and *Rama*. Does this refer to the island of Roma, in Lat. 7. 35, Lon. 127. 20., and point to Romelia or Roma of Asia Minor, or of Italy, or of Rama of Western Syria?

⁵ Translation by Shea, p. 369.

⁶ *Ib.* p. 391.

⁷ The mother of Alexander is called by the Greeks Olympias. We all know how Mount Olympus is said to be the residence of the Gods, and that it is figuratively used for the heavens. The Persians call Olympias *Rakia*; (Translation

declare, again and again, that *his* is a religious war for the glory of God, and to display the true faith.¹ I believe the translation has suffered much from Mr. Shea's having yielded to the prejudice to which I have alluded in the latter end of the preface to the first volume. I believe Alexander alluded to his claim to the legal sovereignty of the world, as the head of the descendants of Noah. We must not forget that Clemens Alexandrinus was initiated into the mysteries of Eleusis, and he let out that he found the Mosaic mythos there; from this, probably, Alexander learned that the kings of Macedon, that is, of Scythia, were the descendants of Japetus, so well known to Grecian story. Mirkond makes the word Khizar to mean *a prophet*.² The account of the squinting and the ugliness of Alexander's face is curious.³ This reminds me of what I quoted, supra, p. 31, respecting the *marred face* of the promised one, in Mexico, from Lord Kingsborough's work. Mirkond describes Alexander, also, as a prophet. He was an Emperor or Embratur; that is, Om-bra-tur, which word originally meant *the reformer*, כרא *bra*, of the Tauric cycle of Om. The name of Alexander, when dissected, betrays the mythos. In the East he is never called Alexander, but the emphatic article *Al* is left out, and he is called Iskander or Ischander. This, as I have just said, is nothing but the Arabic *Al-Ischa*, *the Saviour*, the name of Jesus Christ, in Arabic, and the Greek *ανηρ, ανδρος*, *a man*—a Saviour man, or a Saviour incarnate. When I combine this with his immaculate conception, &c., I cannot doubt the correctness of this etymon. I think no one who reads Pownal's treatise on the Study of Antiquities, pp. 91, 92, can well doubt that, had Alexander lived to old age, he would have established the finest commercial empire in the world. His views seem to have been guided by the most liberal policy; and I have no doubt that his conquests were as much the effect of a general belief that he was the *promised one* as of his arms. We must not forget that he was said to be born in the year the vernal equinox ceased to be in Aries, and a new sign commenced, viz. 360 B. C.; and that he was the produce of a connexion between his mother and the God Apollo, in the temple. Alexander, like Moses, was said to be horned, and indeed I believe he appears with horns on some of his coins. This proves either that he claimed to be *a divine incarnation*, or the belief of his followers that he *was one*. But I think the *Ram's horns* must have been given him by persons who did not understand the mythos, for he was *Pisces*, which had nothing to do with horns. His name *Ischa*, in Irish Celtic, meant *a fish*, the same word which in Arabic meant *Saviour*. From the *Pisces* being the emblem of the Saviour, the word *ischa* came to mean *fish*.⁴ The anxiety of the princes of India to be the founders of cycles was great. When this is considered, along with the universal dissemination of the mythos and the belief that Alexander was a *divine incarnation*, it will not be thought surprising to find he had his *æra*. He was, as I have just stated, said to be born 360 years B. C.; but his *æra* began in the year 312. We know that the *æra* of neither Christ nor Mohamed began on the day of his supposed birth. Buddha's *æra*, in India, we have seen, in Vol. I. p. 192, was probably his supposed death. If Alexander was born 360 years B. C., and 312 was the time of his death, it would make him 48 years old. The title of the *æra* is *Yonane*; it is on a Persic MS. of the Gospels, at Cambridge. I cannot doubt that this *Yonane* is a formation from the Sanscrit *Jnana*—the *Ioannes*—*Oannes*—or the *Fish of Assyria*, and meant *wisdom*. This must be considered in concurrence with all the other mythic matters relating to this Ischander. The letter of The Old Man of the Mountain to Leopold, Duke of Austria, concludes thus:—"Sachez
"aussi que les présentes ont été faites par nous à mi-septembre, dans notre château de Messiat

by Shea, p. 396;) this is the Hebrew רקיע *raqia*, which we translate *firmament*, and the "rack" or *flying clouds* of Shakspeare—*shall leave not a rack behind*. See Vol. I. p. 335, note 1.

“ (Masziat), la quinze cent-quinzième année depuis Alexandre.”¹ If I knew the year of Jesus Christ, I could tell the date of the *birth* or *death* of Alexander, according to The Old Man’s reckoning. Nimrod says, “Nor need I do more than shortly repeat, that the fable of Alexander’s conception from an immense dragon is an exact copy from that of Nimrod the Dragon-begotten Bull, evidently made in order to conciliate the minds of the Orientals towards his design of setting up in Iran a new universal empire. ‘He had a certain feeling of rivalry (saith Arrian) towards Perseus and Hercules, in as much as he traced his descent from them. And he did himself ascribe his own generation to Ammon, in like manner as the fables referred that of Hercules, and of Perseus, unto Jove. It was *for this purpose* that he took his journey to the temple of Ammon, namely, that he might more assuredly know, or rather *make pretence of knowing*, who he really was.’ And I dare say that his real and authentic descent from Nimrod, (called Hercules in Greece, Perseus there and in Persia, and Sesostriis in Egypt,) stood him in some stead with the Egyptians and Persians.”² Again, Nimrod says,³ “Dion relates *that immediately before the murder of Soæmis and Heliogabalus*, ‘a certain dæmon, styling himself Alexander of Macedon, and having the very same features and dress, made his appearance on the banks of the Danube, and travelled over Thrace and Asia, like a Bacchanalian, with four hundred companions, who were adorned with the Thyrsus and fawn’s skin. All those who were then in Thrace affirm with one voice, that lodgings and all necessaries *were furnished him at the public expense*, and no man, neither general, nor soldier, nor prefect, nor even the supreme governors of these nations, attempted to resist him. But he arrived in broad day-light, and, as it were, in a religious procession, at Byzantium, as he had prophesied he would. And he put over to Chalcedon, where he performed certain nocturnal rites, buried a *wooden horse* in the earth, and disappeared. I had been informed of all these things in Asia before Bassianus (*i. e.* Antoninus Heliogabalus) had been disposed of at Rome. Pp. 1365, 6.’ I beseech the reader to weigh well these words, and by whom they were written, and he cannot fail to detect a deep and complicated scheme of imposture and mystic superstition.” And *I* beg my reader to add to this, a consideration of what he has just read from Von Hammer, respecting the æra of Alexander, and I think he will not fail to infer with me, that we have but a very small part of the true history of these times. After this, Nimrod adds, that John Chrysostom complained that, in his time, people made their children wear medals of Alexander around their necks as talismans; that Julian maintained he had the soul of Alexander, by metempsychosis; and, that this was what urged him on in his war with the Persians.⁴ Here we have a fine example of the monomania of which I have spoken in Julian, and of its leading on some persons to victory, and deluding others to their ruin; and, in his case, of its leading *him* to his ruin. Here it becomes apparent that it is for want of looking into, instead of despising, the secret histories of antiquity, that all our accounts of those times are so unsatisfactory, and that the conduct of many, indeed, of almost all, the chief actors in the dramas of those times is so unaccountable. In p. 283, Nimrod adds, “It was an old ambition of the Romans, or at least not a more recent one than the arrival of the Pessinuntian Great Mother and her Sodalities, that

“ Avitæ

“ Tecta velint reparare Trojæ.

“ The place at which Mammæus’s false Alexander prophesied he would arrive, and did arrive, was Byzantium. The son of Helena only accomplished what the son of Mammæa had first medi-

⁴ Socrates, Lib. iii. Cap. xxi.

“tated.” Here, in the conduct of Constantine, we have a proof of the close connexion of ancient Paganism and modern Christianity. After this, Nimrod goes on to shew, that Origen and other leaders of the Christians were deeply implicated in the transactions of those times, connected with the mythic superstition: he adds, “The same system of mysterious doctrines animated the united ‘Sophists and the imperial usurpers.’”¹ And, again, “It is remarkable that in the reign of Alexander Severus the Parthian empire was subverted by Artaxares, the son of Sassan, a man ‘ad-
“ ‘dicted to the ineffable mysteries. The workings of the same thing were towards the East as
“ ‘well as the West.’” This was repeated at the time of the Crusades. All this shews the going to pieces of the ancient system, and the struggles of the different persons, each to make out that he was this *great one* come. I have formerly noticed, en passant, the endless apparent nonsense of the Gorgon’s head or head of Medusa, with hair of snakes, and the brazen head of Roger Bacon, &c. At great length Nimrod² has brought together, probably all, the stories of magical heads, which appear to have been as numerous as they were general over the world. All those stories are evidently closely connected with the most secret of the mysteries of the Γνωσις. I think a key to unlock all these cabinets will be found in the identity of meaning of the words ראש *ras*, a Head, and *ras*, Wisdom, and שפינן *spipn*, Gen. xlix. 17, which means both *wisdom* and *a serpent*—sup-iphis or ophis, *wisdom of the serpent*. I shall not follow up this search—not attempt the disentanglement of this skein here, though, perhaps, I may return to it. But I may just observe, that Nimrod has pointed out that the Templars had a sacred head in the most remote crypt, and that they fabled much about the devil begetting the British *Merlin* on the body of a virgin, and the Dragon’s head assuming, by prestige, the appearance of Gorloes, Duke of Cornwall, and engendering Arthur upon his wife Iogerne.³ When we consider the story of the connexion between the siege of Troy and the Gorgon’s head of the Greeks, and all the mythos of immaculate conceptions in Alexander, Cæsar, and the Troya Nova of king Brute, &c., &c., we shall have no difficulty in seeing here the continuation of the mythos in Merlin, and in Arthur, with his round table and twelve knights—the secret mythos existing in Britain before the arrival of Cæsar, and passing down through the rule of the Romans to Arthur, to Alfred, and, at last, to Geoffry of Monmouth, who has fortunately preserved to us a remnant of it,—a remnant, which, instead of using, our short-sighted historians take all the pains in their power to destroy,—a remnant of a most important system, which yet continues to exert its secret influence upon all our institutions, both civil and religious. When my reader has well considered the above passages of Nimrod (Mr. Herbert), stripping them of the false colouring given by that gentleman, who can see nothing but devilish machinations in the simplest and most innocent matters, he, my reader, must be obliged to confess, that it is quite clear, that, in all our histories, we have in fact any thing but a real history of Alexander the Great. We have it just named, by Nimrod, to be ridiculed, that he said he was the son of Ammon. Just so far is said as will serve to justify the historian from a charge of fraudulent suppression; but, in reality, all the secret moving causes of Alexander’s conduct and of that of his followers, is kept out of sight. The circumstance that an æra arose from him in Asia, shews how extensive the mythos must have been. I feel little doubt that, if I ever recover my health,⁴ I shall be able to unravel all these matters. I believe the claims of all the persons entitled *great*, and called *emperors*, were founded upon the system of Avatarism—of a believed descent from the eldest of the sons of Noah; or, if this plea could not be set up, upon the reception of the χειροτονια from the lineal descendant, who was always believed to be known. In aid

³ Gervas of Tilbury says, that King Richard used that sign on his standard.

⁴ July, 1833.

of this came the impregnation by the Python, or the Holy Ghost, in the form of a snake. Thus Alexander had, mystically, two fathers. The case was precisely the same in this respect with Jesus, of Bethlehem, and Alexander. They each had *two* fathers. Jesus was the son of the Holy Ghost, but still in the line of Abraham: Alexander also was the son of the Holy Ghost, or the Ghost of Ammon, but yet of the line of Japhet. It is extremely gratifying to me to find such learned men as Constant and Creutzer, although without having the most distant suspicion of the true nature of ancient history, coming to the same conclusion with me. The former says, "Plusieurs faits qui nous sont parvenus, bien qu'isolement, à travers l'obscurité des siècles et la confusion des fables, semblent indiquer qu'à une époque encore antérieure à celle que nous nommons fabuleuse, la Grèce fut subjuguée momentanément par un ordre de prêtres, soit indigènes soit étrangers."¹ As this militates against his system, but cannot be denied, he endeavours to qualify it by the word *momentanément*. He then shews that Mr. Creutzer comes to the same conclusion, but by a different train of reasoning. The fact they could not deny, of the cause or the nature of this priestly government they were entirely ignorant. Mr. Schlegel says, speaking of the priests, "Dans les temps les plus anciens, la Grèce entière leur était soumise."² Again, "Plus tard, la caste des guerriers se souleva contre celle qui regnait au nom des dieux. L'Iliade porte de fortes empreintes de cette lutte: la dispute d'Agamemnon avec *Chryses* et *Calchas* en est un indice."³ I suppose I need not point out the *Xρῆς* of Delphi and the Chaldæan in Calchas! Schlegel then goes on to say, that these priests were Pelasgi, and spoke a barbarous language. This was, I doubt not, the language which contained the Eleusinian mysteries, which we are told by Clemens Alexandrinus, were taken from the Jews—the language of the Synagogue, —the language on which the Greek was founded. Again, Mons. Constant says, "Nous ne ré-poussons donc nullement la supposition qu'à une époque qu'entoure une nuit épaisse, il y ait eu en Grèce une religion sacerdotale, et des corporations puissantes, créées par cette religion et vouées à son maintien. Mais une révolution violente détruisit cette religion et ses pontifes, avec toute la civilisation dont ils étaient les auteurs."⁴ The facts of the pontifical government and the revolution he was obliged to see, the momentary violence is mere inference, mere dogmatism on a subject of which he was perfectly ignorant. The "corporations puissantes," were the municipal towns, wisely left to their own government by the pontifical order in every thing which did not concern its interests, contained in the productiveness of the vectigal—and on this account they were always prevented from going to war with one another. In the Areopagus of Athens we have the domestic legislature; in the Amphictyons we have the superintending one; this last, perhaps, assuming its form and power by degrees, as the superintending power of the distant autocrat fell away, or perhaps being the remains of the ancient pontifical government. M. Constant has treated at large on the Fétiches of the ancients. I think in these very low superstitions we have the religion of the Aborigines; but most certainly the higher ranks of society, and the professors of, or the instructed in, the cabala and the mysteries, cannot be suspected of believing such nonsense; though, occasionally, no doubt, a person or two might be found in the higher classes with understandings sufficiently mean to receive them. In my recollection the use of charms against witches, evil demons, and other similar nonsense as degrading as the fetiches of Africa, were common among the lower orders in Britain. No doubt as the doctrines of incarnations escaped from the conclaves they became mixed with the superstitions of the vulgar, till now it is difficult, perhaps quite impossible, to separate them. It is probable that when the high class increased, so as to be very numerous—too numerous to be initiated—they by degrees *descended* as

¹ Constant, Vol. II. p. 319.

² *Ib.* p. 331.

³ *Ib.* p. 332.

⁴ *Ib.* p. 336.

the Aborigines a little *ascended*, till the two nearly came together both in religion and intellect, and at last the distinction was entirely lost. Constant says, "Il ne faut pas confondre ces apo-
" théoses qui sont particulières à la religion Greque, avec les incarnations que nous rencontrerons
" fréquemment dans les religions sacerdotales : ce sont deux choses directement opposées."¹ In what particular cases the incarnate or solar mythos may have been attributed to real men, as we know it was to Alexander and Cæsar, it may be difficult to affirm or to deny, but I am persuaded that there never was a Bacchus, a Hercules, or a Jove.

3. When the time for the Millenium arrived, but no appearance of its actual arrival could be perceived, it was with the sect of Ali, as it was with the sect of the Christians—their whole system fell into pieces; and they were obliged to avail themselves of such resources as circumstances offered. It appears from a part of the *Dabistan*, translated by Professor Lee, and given by him to the Society of Literature, from whom I borrowed it, that the Mohamedans had a succession of twelve Imams, and that there was supposed to be yet one remaining in the world, though his residence was unknown. Of their *esoteric* system nothing can be made out, except merely, that there is an *esoteric religion*; but it seems to have some relation to the first doctrine of a divine Idea, according to which the world was formed. Along with the degradation of the human mind in most Eastern countries, the degradation of the doctrines has kept pace; till, really, in all those countries, unless China be excepted, their doctrines consist of nothing but the most inconceivable nonsense. If it were not for the hope of discovering the origin and nature of the learning of the early races of man, which keeps continually shewing itself in little detached parts, all the Eastern learning in the world would not be worth the half-hour's trouble of a wise man. But, as a means to discover the learning of antiquity, it is worth every thing, and by its means I have no doubt that the secrets of antiquity will one day be all clearly made out. I flatter myself I shall have paved the way.² The Sheahs hold an inconceivable quantity of nonsense respecting their open and concealed Imams; but it is what one would expect to arise from the falling to pieces of the system in such a state of society. It may be even doubtful whether any thing approaching to the beautiful system of the ancient Gnosis or Sopheism now exists among them. As might be expected, they accuse the Sonnees of having corrupted the Koran. The Sheahs or the followers of Ali, are obliged to confess that the successor or lineal descendant of Mohamed is in existence; but because *they* have not possession of him, they say he is in secret: the Turks or Sonnites deny this, and not unreasonably; for, under the circumstances, it is not at all likely that he should have forgotten his pedigree. They say that he is now living at Mecca. The present Royal family of Persia are of the *Kajar* tribe of Turks.³ This is the *Cæsar* tribe. Kai Khusrau or Cyrus is described by Mirkond⁴ as a prophet, and is said to have disappeared suddenly from the earth—not to have died.

¹ Vol. II. p. 470.

² I think sufficient importance is not attached to the fact of the ignorance of the Indians. It is almost beyond credibility. They have nothing pretending to be a history, which goes back to two hundred years before the Christian æra. Their Vedas do not pretend to be this kind of work. Their 18 Puranas (Moore, pp. 441, 442) are 18 Cosmogonies; but, by whom or when written, they do not pretend to know. They acknowledge that they do not know what is the meaning of the word Vyasa. Their astronomical tables carry on their face marks of extreme antiquity, but their authors are all unknown. The first historical æra is that of Vicramaditya, fifty-six years B. C., preceded by a period of three thousand years, in which the Hindoos pretend to no "continuous accounts, either religious, traditional or historical." This three thousand years is a chasm which cannot be filled up. (Hist. Sketch of Sans. Lit., Oxford, 1832, p. 68.) This is perfectly true, and I suspect that all their pedigrees in the lines of the Sun and the Moon—Chanora and Soma—are really sheer nonsense, designed to flatter the petty princes of the present day; and, except for a very few generations back, are not worthy a moment's attention. The whole of their histories of Soma and Chandra are modern inventions. Gengis Khan and his successors knew better than to credit them.

³ Translation by Shea, p. 192.

⁴ *Ib.* pp. 260, 263.

Here is the mythos. This is the ascension. Mr. Briggs tells me, that "when Selim III. possessed himself of the power of the Calif, he also got possession of his person, and took him with him to Constantinople, and ruled under his authority as long as he lived. But at his death the legal pontifical power descended to the heir of Mohamed, who is now at Mecca, and is in a private station there. That Mahmud Pasha now rules under his authority, and that he could cause the Grand Seignior to be excommunicated immediately by him if he chose it. That the act of excommunication by the Grand Seignior is a mere *brutum fulmen*, not having any influence on the minds of the Mohamedans, who look solely to the lineal descendant of Mohamed for the right of excommunication." Now this is evidently only one side of the question. The Turk must have another heir or he would not have pretended to excommunicate Mahmud Pasha. The grounds of his claim to the power of excommunication I think we shall discover presently. I suspect that the present is a struggle between the Turks and the Saracens; that, at the bottom, the Turks claim to be descendants from Japhet, and the Egyptians from Shem.¹ Mr. Briggs denies this, and says that Mahmud is an Osmanli. Mohamed, as we might expect, carried his pedigree up to Noah.² Turk is the descendant of Japhet; Mohamed of Shem. The first Pachalic of the empire is that of Jeddo, as Mr. Briggs says, because the holy city is placed there; but why is it called Jeddo or Juda? What has Juda to do with the city of Ishmael? Why, but because it was the chief city of a tribe of Juda?—which Eusebius lets us know existed before Abraham, and which came from India before the tribe of Abraham, and some of whom he found at Salem in Melchizedek. This was the tribe which gave the name of Judé to the Pole-star. When the tribe got as far as it could, it built a city. After a time it passed over and peopled Abyssinia and Upper Egypt. At this time the isthmus of Suez was a morass, or water, and the Delta had not appeared in consequence of the subsidence of the Mediterranean. We must not forget, that the Brahmins or Hindoos all maintain that they are a foreign race in India, and that they came from Tartary. It is a fact, not hitherto explained, that the native Hindoo princes formerly solicited (and even yet, if the British did not prevent it, would solicit) investiture in their dominions by the hand of the Mogul, at Delhi,³ though he is a Mohamedan, and they are followers of Cristna or of the Brahmins. The reason is found in his being supposed to be a descendant of Gengis Khan, who was believed to be an Avatar, a Vicrama-ditya, and, as such, entitled to universal dominion—a right to which dominion is believed still to exist in his lineal descendant.⁴ The fact of the Hindoo princes soliciting investiture by the hand of the Mohamedan Mogul may be accounted for by the theory which I advocate, that Mohamed also is considered by them to have been an Avatar, as he was certainly considered by the Afghans. The preservation of the Lingas and of the simple icons of Buddha, by the Mohamedans, when they destroyed all the idolatrous temples of the Hindoos, strongly tends to support my suspicion, that the Moslems objected to the *corruption* of the religion, not to the religion itself. Their conduct is exactly similar to that of Cambyses in Egypt, who left the Lingas when he destroyed the idolatrous temples. The ancient pilgrimages of Hindoos to Mecca confirm this theory. The Sopheism of India and Mohamed were, no doubt, originally the same. It is evident that the Mogul, the King of Siam, the Emperor of China, all claim to be the descendant of the eldest son of the first Patriarch, and from him to have a right to the empire of the world. From this we may see, that their titles of *king of kings*, &c., &c., are

¹ See Assiat. Journ. for Feb. 1833, p. 74.

² Sale's Koran.

³ The city of seven gates, like the city of Thebes, governed by Al-Mage, *the Mage* or Mogul. Delhi, *city of The-God-II*, D'-el-ii.

⁴ Vide Hamilton's Gazetteer, 2d ed., 8vo. pp. 494, 499.

not examples of mere empty, fulsome adulation, but that they have a basis. On this rests their claim or title of *Son of the Sun* and *Moon*, which at first appears to us so monstrously ridiculous. The Empire of Gengis Khan was called the *wise government* or the *government of wisdom*, and his name was Zin.¹ Respecting this prince see, in the Ency. Brit. art. Mogul, pp. 299, &c., the pedigree from Japhet, the romantic account of his ancestors for 400 years, his inauguration by a prophet, the change of his name from Teninjin, and the belief of his subjects that he was entitled to possess the whole world. This inauguration of Gengis took place in the 13th century, when in Europe the Millenium was expected, when all men were looking out for some *one to come*. Gengis Khan marched into China in A. D. 1211.²

Ranking, in his history of Mexico, says, "Those who were most interested in the advancement of Genghis Khan, have had the insolence to make him pass for the son of God: but his mother, more modest, said only that he was the Son of the Sun. But not being bold enough to aver, that she was personally beloved by that glorious luminary, she pretended to derive this honour from Buzengir, his ninth predecessor: and his partisans reported, that Buzengir was the son of the Sun." (This manifestly makes Gengis the tenth Avatar.)³ "His mother having been left a widow, lived a retired life: but some time after the death of her husband, Douyan-Byan, she was suspected to be pregnant. The deceased husband's relations forced her to appear before the chief judge of the tribe, for this crime. She boldly defended herself, by declaring that no man had known her: but that one day lying negligently on her bed, a light appeared in her dark room, the brightness of which blinded her, and that it penetrated three times into her body, and that if she brought not three sons into the world, she would submit to the most cruel torments. The three sons were born, and the princess was esteemed a saint." The Moguls believe Gengis Khan to be the produce of this miracle, that God might punish mankind for the injustice they committed.⁴ The same mythos was applied to Tamerlane, whose mother was said to have had connexion with the God of day.⁵ All this satisfactorily accounts for the wish of the native princes of India to receive investiture at the hand of the Great Mogul. Sumatra or Sabadios is a repetition of the same mythos, where there is a Delhi, in Lat. 3°. 46'. N., Long. 99°. 42'. E. The prince is called Sultan and "Allum Shah, which, being translated, signifies *the world's king*."⁶ Sultan is Sul-tania, *place of Sul*. Shah is Jah, and Allum is Al (Arab. تِه) and Om, or All, i. e. GOD Om.⁷ The Moguls trace their pedigree, with each particular ancestor specified, from Japhet.⁸ I have little doubt that the Emperor who was descended or who claimed to be descended from each of the three sons of Noah—Shem, Ham, and Japhet—would claim for his ancestor to be the eldest son of Noah, and of course to be like Noah—Emperor of the whole world. This is confirmed by the doubtful state of the text of Genesis, which, though doubtful, evidently inclines to Shem. I have little doubt that the Tzar of Muscovy maintains, that neither the Emperor of China, nor the Emperor of India, is the legal successor of Noah, but that *he* is the man.

¹ Ranking's History of the Mongols, pp. 18, 65.

² The Christian æra is the best of all periods to make the fixed one, or the pivot of ancient and modern times, because being settled by the Chaldæan Sosigenes, it is a fixed epoch for all the ancient Eastern nations as well as for those of the West. Ptolemy fixed the precession of the Equinox at 36 seconds a year, the same as it was once fixed by the Indians.

³ I suspect that Buzen-gir is gir-zaba—the cycle of wisdom. When I recollect that Sab or Zab is *wisdom* and that Zup or Suph is *wisdom*, and how Zab and the Zaboim or planets are connected with *wisdom*, I cannot help suspecting that Zup and Zab were originally the same word.

⁸ Abul Ghazi Bahadur, Part i. Ch. i.—iii., in Ranking, p. 385.

In the story of the mother of Gengis and her three sons, we have a confused account of the incarnation of the *trium* God—the expected and promised one—one who was to rule over the earth. I have come to a perfect conviction that this mythos has given rise to the pretensions of several of the great conquerors of the world, if not of every one of them; and I suspect that it secretly actuates the present Emperors of both Austria and Russia. This mythos is the foundation on which the divine right of kings, of which we have heard so much, is built. Richardson admits the feudal tenure to have prevailed in Arabia, and that Mahmud of Ghazni consented to solicit and receive investiture in his dominions from the Kalif Alkader. Richardson states the fact without understanding it.¹ Again, (in p. xv.,) Mr. Richardson gives a very striking description of the care of the great men of the East to make out their genealogies; at the same time, while he states the fact, he is obliged to attribute it in a great measure to fashion, or a natural impulse, not having the slightest idea of the real cause. Thus he states Tamerlane to have made out his pedigree to Gengis Khan, who pretended to be descended from Turk, the son of Japhet; and here we see in the descendants of Turk the sovereigns of Constantinople, ruling the world from the city of seven hills in Europe, as the Mogul, the descendant of Turk, affects to rule the world from the city of seven hills—Delhi—in Asia. And yet it is very curious to read the account given by Richardson of the suit and service done by Gengis himself, to a Tartar chieftain, called Thogrul or Prester John, the Khan of Cara-cum or Cara-corum, who must have been, in actual power, as nothing, compared with Gengis. But this can only be accounted for by supposing, that Thogrul claimed the right as an *elder branch* from Japhet. It is also very curious to observe all the great princes obeying the summons to assist Thogrul against his rebellious subjects; and all those inferior to Gengis, doing suit and service to Gengis.² In this example the whole *feudal system* of Germany, with its emperor and tributary princes, is complete. This example of Gengis doing suit and service to Thogrul, a person of whom we know nothing certain, except that he must have been very much the inferior in power to him, is exactly imitated by the Pacha of Egypt, in claiming to hold his dominion of an obscure individual, now resident at Mecca, and, under this authority, setting at defiance, as I have stated above, the excommunication pronounced against him by the Grand Seigneur.

4. Every thing which I said respecting the tendency of the doctrine of expected or foretold Messiahs, or Avatars, or renewed Incarnations, in December 1832, after I had written what my reader has seen, I found confirmed in a very curious account, given in the Bombay Transactions,³ by Col. Van Kennedy, of an attempt of Akbar, in the latter part of the sixteenth century, to establish what the Colonel calls *a new religion*. If we make allowance for the unquestionable fact, that, although the Colonel knew of the ten Avatars of India, yet that he was entirely ignorant of the real origin or nature of the mythos which I have been describing, and how they applied to modern times, and thus, for want of information, was deceived—we shall at once perceive, that Akbar probably believed himself to be the last Avatar—that Avatar which all the present Hindoos say is yet to come, and in which assertion they are still supported by the followers of Brothers, Southcote, &c., in the West. It appears that Akbar was called the *imperial wisdom*, the *accomplished apostle*, and the *perfect messenger* of God, *perfectly* skilled from the divine essence in all knowledge. Abul Fazl says, “When, through the good fortune of mankind, the season arrives for the revelation of the truth, a person is endowed with knowledge,⁴ upon whom God bestows the robes of royalty, in order that he may lead men in the right way with absolute dominion: such is the Emperor of our time.” This shews that Abul Fazl either was, or pretended to be, a

¹ Pp. ii., iii.² Richardson, p. xxxiv.³ Vol. II. pp. 242, &c.⁴ In other words Wisdom.

believer in him. After the above, Col. Van Kennedy goes on to observe, that Akbar was believed to have some peculiar and immediate communication with the Supreme Being; ¹ but the mode in which this was effected was considered *a mystery, only confided to the higher orders of the initiated*. Here we have the gradations of the Sophees. He assumed the title of Khalifah Ullah, or Vicegerent of God, and his religion was called Ilâhi, ² or Godly. And in the place of the usual symbol of Islamism, the following was adopted: "*There is no God but God, and Akbar is the Khalif of God.*" The Colonel gives a quotation from an Indian *Musselman author*, who, he says, *allows in bitterness of spirit*, that in five or six years not a trace of Islamism remained. The passage is very striking; and although the Colonel observes that the above author must limit his description of the propagation of the religion only to the court and the departments immediately connected with it, yet I think enough transpires to shew, that it extended over almost all his empire, and how or when it entirely ended, if it be ended, I think it will now be difficult to shew. It is a remarkable circumstance, that Akbar wished to abolish the slaying of animals, ³ and he made a pilgrimage to the tomb of Hadji, at Ajmir, *barefoot*. This does not look like *policy*, but *fanaticism*,—a return to the Buddhist system. But he was tolerant in the highest degree, permitting all sects to follow their own laws and customs, and on no account suffering them to be interfered with in religion, in any manner whatever. I should say he was very like Mohamed; but, like that great man, not entirely free from a mixture of fanaticism with his philosophy. We must, however, always bear in mind, that we really know nothing of what was taught to the *initiated in the mysteries*; but the Colonel says, that, after his death, when Jehangir re-established Mohamedism, ⁴ it is probable, that Akbar's followers concealed themselves *among the Sophees*, to whose tenets this religion *had a close resemblance*. I cannot help suspecting that the Sophee doctrines had more to do with this than Col. Van Kennedy had any idea of. We must not forget that it had its mysteries and its initiati. In the mode in which it extended itself, and, indeed, in every other respect, it was strikingly similar to the Evangelium Eternum and the St. Francis of the Romish Church. The thing lasted its little day, but various circumstances combined to prevent its continuance, as various circumstances, in a similar manner, had formerly aided the continuance of the Avatars of Cristna, Christ, and Mohamed. The first two of these were only required by the system of the mythos to be great men, bringing peace and happiness, each in his peculiar cycle,—and after the death, resurrection, and ascension of each, another was expected to come to complete the system. We may easily suppose in the case of Cristna, and we know in the case of Christ, that the mythos did not rise to its *highest prosperity* till an age of ignorance arrived. Though Christ may be said to have arisen in a time of high civilization, and in an improved state of the human mind, yet his doctrines did not make any great progress in the world till the human mind was in a rapid state of deterioration—till after the Council of Nice. No doubt the sect had some able followers, as the sects of Brothers and Southcote have had—such persons as Nathaniel Brassey, Halhed, Mrs. and the Honourable and Rev. Mr. Foley, and some highly respected personal friends of my own, whose names, out of regard to their relations now living, I do not choose to give. But there is this difference between the two: the circumstance of a rapid *decline* in the state of the human mind aided in converting Christ into a God; the present rapid *improvement* in the state of the human mind most powerfully operates against the mythos. The establishment of a priesthood by Constantine, so constituted as to be in a pecuniary manner greatly interested in its success, and who, as might be expected, left no stone unturned, and never stopped at any fraud to serve its purpose, favoured the mythos. The case might have been different had the Millenium been fixed at the end of

¹ Bomb. Trans. Vol. II. pp. 258, 259.

² I do not doubt *the ירו יעו*.

³ Bomb. Trans. p. 257.

⁴ Ib. p. 267.

ten thousand instead of the six thousand years. All these religions are the children of accident and circumstance. They all had their *origin* in the peculiar circumstance that the cycle of the Neros should form the cycle of the six thousand years, and the two again the cycle of 21,600, and 432,000. In the time of Christ, all persons were on the look-out for some one to come; such also was the state of the world in the time of Mohamed, and again, in the time of the Crusades. In the last case, however, the Millenium being expected to follow immediately on the appearance of the *promised one*, and this not arriving, the general expectation was disappointed, and the bubble burst. Brothers and Southcote had not these auxiliary circumstances in their favour, and so they died, and their pretensions were strangled almost in their birth. I cannot help thinking that Charlemagne claimed to be universal Monarch, as successor of Augustus.¹ It is admitted that he was controlled by his Barons, in temporal affairs, but that, in spiritual, his authority was paramount.² He exercised the power of excommunication, as appears from his chartularies.³ Nimrod has observed the peculiarity of character which attached itself to Charlemagne, without understanding in the slightest degree the truth or the nature of it: he says, "Charlemagne's reign, like that of Alexander and Arthur, was a favourite legend of secret anti-christianism, and a symbolical vehicle for its mysterious meanings. His paladins were the round table, and Roncesvalles the battle of Salusbury Plain over again."⁴ My reader must have observed a difficulty in my explanation of the universal system, arising from the probability that the Gods Buddha and Cristna both describe the Sun; in fact, I think I may say not the *probability* only, but the *certainty* that they are meant to be either actually the Sun or that Higher Principle of which the Sun is the Shekinah, and the emblem. At the same time, we have almost as good proofs that these Gods were once actually men, exercising the functions of royalty and governing large nations. Still they were supposed to be men in whom a portion of the God was incarnated. I think, from a consideration of the history of Akbar, we may find how this arose. The mythos taught that some one was to come—then the devotees naturally looked out for some one by the adoption of whom they might gratify that gloomy passion which we see in all religious people—that state of fear of damnation which often makes life intolerable—that state which makes the Goddess Cali a favourite in India, and the predestined state of damnation of Calvin a favourite dogma in Europe. If, at the beginning of a cycle, some great conqueror or chieftain did not appear, whom weakness and the flattery of followers could not persuade, like Akbar, that he was an Avatar, the devotees in the cycle following were sure to apply it to some one, or to create some one, on whom it might be fathered: thus Avatarism was in any case sure to be supported, and where great men did not offer themselves, like Cæsar or Alexander, little men, like Brothers, or the living God, described in Vol. III. p. 64 of the Bombay Transactions, were continually arising in all ages. This is the reason why the Hindoos say, there have been thousands of Avatars. We hear much in the Indian histories of a *second* and a *third* Buddha. I have very little doubt that this is all to be accounted for from princes of the countries professing the Buddhist religion having pursued the same plan as Gengis Khan, Akbar, and several others, and called themselves Avatars. Thus we have in Siam a *tenth* Avatar. The original principle of the mythos being lost, this did very well with an ignorant and degraded race. We need not be surprised at this in Siam, when we find it answered so well with Akbar. But from this have arisen all the stories respecting the *second*, the *third*, the *eighth*, or the *tenth* Buddha. I feel little doubt that, as we have believers in the *tenth* Buddha, so there are yet believers in the *divinity* of Akbar, as the tenth incarnation. Among the Guebres of Persia

⁴ Vol. IV. pp. 95, 96.

the same mythos is found.¹ This of course is accounted for by the Guebres having formerly been Christians, and having relapsed into Paganism. But those who have examined into their mysteries, say that, in fact, throughout the whole of their system marks of Christianity may be seen, though, as those Christian examiners say, *grievously defaced*; the annunciation, the magi, the massacre of the infants, the miracles of Christ, his persecutions, ascension, &c., &c., are all there. These Guebres are equally at enmity with Jews and Christians. After finding the mythos in China, Tartary, North and South India, and in Western Syria, it would have been surprising if it had not been in Persia. Of course, this will be attributed to the heresy of Nestorius, which the learned Nimrod has, I believe, very correctly declared to be Buddhism.² De Vallement³ says of Nestorius, "L'an 440, Nestorius parut sur les rangs et se mit à soutenir que Jésus-Christ, né de la sainte Vierge, n'étoit point Dieu, mais un pur homme, qui avoit mérité d'être joint à la Divinité, non par une union hypostatique; mais par une singulière et excellente habitation de la Divinité en lui." When I consider the late period at which this German made his appearance, I am compelled to believe, that what was called Nestorianism, was nothing but the same kind of Christianity which we have found on the coast of Malabar. It was, in fact, *χρησ*-ism. In Horace⁴ we find Augustus described to be the son of Maia. Here the mythos shews itself evidently. Thus in detached scraps, in loose expressions, it is discovered. It is difficult to believe that at the time when they were used, there was not much more before the public than we now find. Either this must have been the case, or the system must have continued a secret. In the former case, the evidence of it must have been destroyed by the Christian priests, when the old manuscripts were re-written by them; and this might easily be done—for we have not a single manuscript which has not passed through their hands. From the beginning of the modern system of *Χρησ*-ism at Antioch, to the Council of Trent, the practice of destroying books has never ceased. The system may be said to have been established, on the burning of the books by the Council of Nice, testified by the picture of it in the church of St. Giovanni Laterano, placed there both to commemorate the glorious event, and to incite the faithful to similar meritorious acts. I am quite certain, that we do not give credit enough to the effects which may, nay must, have arisen from the unceasing and systematic exertions of an immensely powerful, corporate body, acting together for a thousand years to produce them,—a body, however discordant in other respects, yet, on the point of secreting evidence, united by both temporal interest and religious prejudice,—a prejudice even going so far as to induce the persons under its influence to believe that their eternal welfare would be compromised if they did not yield to it. I cannot help being apprehensive that, on this subject, I shall probably fail in exciting in the mind of my reader the same strong impression of its importance which I feel myself. In order to do justice to it, much more, and much more *deep* consideration of the history of the earlier part of the Christian æra is necessary than most persons will be prevailed on to give to it.

We have in the history of Akbar a perfect example of an Avatar, and I suspect that he announced himself as a *tenth* Avatar, putting back Mohamed as the *ninth*. On the doubt which I formerly mentioned to have arisen in the time of Virgil, respecting the *eighth* and *ninth* Avatar, we find room enough left for Akbar to have raised his pretensions. In Akbar we have the whole thing undisguised; it was not attempted to be secreted. I cannot help suspecting that, in one or both of the Cæsars, the system has formerly been equally displayed; but that the evidence of it has been destroyed. I contend that this suspicion, indeed, I may almost say belief, is justified on

the truest principles of criticism and the laws of evidence, as applied to a calculation of the doctrine of probabilities.

A very beautiful picture of the Apotheosis of Akbar is in the possession of my friend, the learned [Sir] Greaves Haughton, Secretary of the Royal Asiatic Society. He asks a thousand guineas for it.¹

5. To what I have said in Vol. I. p. 688, respecting Napoleon, I think it expedient to add a well-known anecdote of him. When his uncle, Cardinal Fesch, once expostulated with him, and expressed his belief that he must one day sink beneath that universal hatred with which his actions were surrounding his throne, he led his uncle to the window, and, pointing upwards, said, "Do you see yonder star?" "No, Sire," was the reply. "But I see it," answered Napoleon, and abruptly dismissed him.² What are we to make of this? Here we have the star of Jacob, of Abraham, of Cæsar. Here we have a star, probably from the East. The whole of Napoleon's actions in the latter part of his life bespeak mental alienation. I believe that he continued to retain expectations and hopes of restoration to the empire of the world, till the day of his death. Many circumstances unite to persuade me that he was latterly the victim of monomania. I cannot help suspecting that Napoleon was tainted with a belief that he was *the promised one*. It is not improbable that he should have indulged a secret monomania; nor is it more improbable that it should happen to him than to Brothers, Wesley, Swedenborg, Southcote, and many others. A great mind is as liable to the complaint as a little one. Sir Isaac Newton, most assuredly, laboured under the complaint in his latter days. Look at his Treatises on the Apocalypse. Except with the view of paving the way for some ulterior measures, it will be difficult to find a reason for the famous Sanhedrim which Napoleon caused to be held at Paris. With a view to this object, of which he never lost sight, in a former day he attempted the conquest of Syria. With a view to this he made the famous declaration to the Egyptians, for which he was so much abused by our priests, that he was a Mohamedan. I have no doubt he flattered himself that he would unite all the sects—bring all the stray sheep into his fold. He wished to play the same game as Akbar, probably without knowing that Akbar had played it before him. Victor Cousin says, "You will remark, that all great men have, in a greater or less degree, been fatalists: *the error is in the form, not at the foundation of the thought*. They feel that, in fact, they do not exist on their own account: they possess the consciousness of an immense power, and being unable to ascribe the honour of it to themselves, they refer it to a higher power which uses them as its instruments, in accordance with its own ends."³ With the exception of the words in Italics, which I do not understand, I quite agree with M. Cousin. But how completely it bears me out in the assertion I have made, that the belief in each person that *he was the great one that was for to come* has led either to his success or to his destruction! It led Julian into the desert—Napoleon to Moscow. The more I consider the conduct of Napoleon, the more I am convinced that he laboured under monomania. Every action of his life bespeaks it. I learn from those who lived with him on the most intimate terms, at St. Helena, that he was what they call a decided fatalist. But this is by no means sufficient to account for the whole of his conduct, particularly in the latter part of his life, when he persisted in carrying on the *hitherto unaccountable* farce of being treated

¹ Akbar was poisoned, by mistake. His burial-place is at Scander, five miles from Agra. "Akbar the Second, present heir and representative of the imperial house of Timūr, enjoys only the empty title of 'King (Padshah) of Delhi,' without either royal prerogative or power." Extracted from Rammohun Roy's Work on the Judicial and Revenue Systems of India, Introduction, p. x., 8vo., London, 1832.

² J. T. Barker, of Deptford, to Ed. of Morn. Chron., Oct. 12, 1832.

³ For. Quar. Review, No. XXIII. July 1833, p. 202.

as an Emperor. It appears to me that, without some secret reason, his conduct was so absurd and childish that he must have laughed at himself. How he could carry the farce on without laughing I cannot comprehend, particularly after he had signed his abdication of the throne of France. Every action of his life is unaccountable, (although generally grand,) on the common known rules which actuate mankind; but allow the monomania for which I contend, and every action—his rise—his fall—are easily accounted for. I repeat, there is nothing to prevent a great mind from being subject to this malady any more than a little one. Only look back carefully into history and hundreds will be found to have laboured under this complaint. Endes, of Bretagne, for one. In Napoleon's case circumstances happened to be favourable, in other cases they were unfavourable. It is impossible to conceive any thing in our estimation more absurd than the conduct of the monarchs of Asia towards Europeans. In fact their conduct makes them, in our eyes, no better than idiots. All this arises from their principles of action, and from the motives of their conduct, not being understood by us. It arises from our ignorance, not from theirs. They are, or they suppose themselves to be, descended from the first three monarchs—the sons of Noah; and, on this account, as each entitled either to the sovereignty of his part, or, as eldest, to the Lord-paramountship of the whole world. On this account, every sovereign who does not claim as the descendant of one of the three, is, on his own shewing, a rebel, if, by his ambassador, as in case of our embassies to China, for instance, he refuses to do suit and service to his superior. The Emperor of China would say, either as descendant of Japhet, the eldest son, (or as having received the *cheirotomia* or *samach* or the *pallium* from the eldest son, and thus as his vicegerent or vicramaditya,) “I am entitled to suit and service from you.” When our ambassador was required to go down on his knees, his answer ought to have been, “My master is not a rebel; he denies that the person who granted investiture to Gengis, your ancestor, had any power,—was, in fact, the direct descendant of Japhet. He denies, also, that Japhet was the eldest son.” To this the answer would have been, “Even if Japhet was not the eldest, he was the one of the three who had power over your country—Europe; and you cannot deny what all Asia knows, that the Khan of Cara-corum is the lineal descendant of Japhet, as the Sheriffe of Mecca is of Shem.”

All these claims, we may say, are now obsolete and contemptible; but this can scarcely be advanced by any impartial Christian person, who admits that the doctrine is believed and has a powerful moral influence over hundreds of millions of human beings—and, after all, is founded upon his own religion. For, if I shew a believer in the literal meaning of the Old Testament, that any specific persons now living are the lineal descendants of the three sons of Noah, it will be difficult for him to deny the divine right of those persons, each to the sovereignty of his share of the world. We may easily despise the claim, and turn the whole book and all or any of its separate parts into ridicule; but the Asiatics who admit the truth of the book, act much more consistently in admitting the claims of the Khan of Cara-corum and the Sheriffe of Mecca, and in receiving investiture in their dominions from them. Very certain I am, that the monarchs of Asia have a *rational*, not a *silly* or *foolish* claim to *divine right* (whether it be founded in truth or falsehood) to which our European monarchs have not the slightest shadow of pretence—for which reason it is *silly* or *foolish* in *them*. If any kind of divine right is pleaded by European monarchs, they ought to send ambassadors to China, or somewhere else, to do suit and service to their Superior Lord. I believe Japhet, if he could appear, would say, “You, the descendants of Shem and Ham, owe me suit and service; but you are, in regard to each other, equals. You were each enfeoffed in your domain by our common ancestor.” I wish in a very particular manner to draw attention to the fact noticed by Mr. Von Hammer, that when the great meeting of Jurists took place in Bagdad, to discuss the claims of the different parties to the Califat, in the year 1011, its proceedings were secret. For what reason could this meeting, in the capital of one of the parties, be secret? Had

Mr. Von Hammer asked himself this question, it would probably have led him to much curious information. Why does the Tzar, the successor of the Tzarina who put Cyrus to death in ancient times, and who was the Queen of Cara-corum, call himself Tzar? Why is he treading on the Serpent? ¹ Why does he affect the name of Constantine? Why does he maintain, that the Pope is a *schismatic*, and that he, or his patriarch, is the head of the Christian church? Why! but because both Constantinople and Rome are in the domain of Japhet. The circumstance that the persons claiming to be the personal representatives both of Japhet and Shem, are persons in humble life (comparatively speaking) who are known to be, or are acknowledged to be, such representatives by great monarchs, as well as by their neighbours and countrymen, strongly supports the probability of their claims being founded in truth. ² I have little doubt that Mohamed believed himself to be, and was generally believed to be, the descendant of Abraham—that is, of Shem—after the failure in the line of Jesus, for want of heirs. It is from this mythos or true history, which ever it may be, that our veneration for the persons of our kings is derived. Superstition is hereditary: it has lasted in this case, as in many others, long after its cause has ceased to exist. This superstition is not natural to the human race, but entirely artificial. But it is at last dying away, and if once dead, it can never be restored. I suspect that few of my readers will be able to overcome their prejudices so far as to see the whole force and importance of this argument.

6. The Mohamedans of the East constantly call Constantinople *Room*, ³ and, as we might expect, its monarch, *emperor of the world*. To the pretensions of the different kings or emperors to this power, we are in the habit of paying no attention, treating them as mere ebullitions of empty vanity: but I believe this is the result of our *own* vanity. We are too apt to suppose that we know every thing, and this makes us too proud to look beneath the superficies of things to which we are not accustomed. I believe every monarch who assumes the title of Emperor, assumes to be the successor of one of the three patriarchal descendants of Noah; and then, I doubt not, base adulation steps in to persuade each individual that his line is the eldest, and that, of course, he is, by right, supreme over all. And I suspect that wherever a man has got the title of Great, it has been given him, by the advocates of this doctrine, as a distinctive badge. They are always *emperors*,—not merely *kings*. For this reason Napoleon was Emperor, not merely a King. It is a remarkable circumstance, that the horse on which Peter the Great is riding, on the famous monument at Petersburg, treads on the serpent. If the coincidence of this with my theory is the effect of accident, it is a very remarkable accident. It satisfies me that he was held, by the makers of the statue, to be an avatar, crushing the evil principle. The mythological nature of early history has been noticed by Cuvier. He says, “It would avail us nothing, if we now entered into an examination of the different traditions of Sardanapalus, in which a celebrated, learned man has imagined that he has discerned proof of three princes of that name, all victims of similar misfortunes: ⁴ and in the same way another learned man finds in the Indies at least three Vicramadityas, equally the heroes of precisely similar adventures.”—Again, “In a word, the more I reflect on the subject, the more I am persuaded that there was no more an ancient history of Babylon or Ecbatana, than of Egypt or the Indies; and instead of explaining mythology historically, as Evhemere or Bannier, it is my opinion that a great portion of history should be considered as mythology.” ⁵ This is precisely my doctrine. In Volume I. p. 42, I have stated that the third book of Genesis might be called, the book of the generations or regenerations of Adam. I might have added, or the book of the generations of Menu or Noah, or נח *nh* or mind, incarnated

¹ See infra, Sect. 6.

² See Vol. I. p. 832, and supra, 354.

³ Vide Bombay Trans. Vol. II. p. 9.

⁴ See Mem. of Freret, in Mem. Ac. Belles Lett, Vol. V.

⁵ Cuvier ap. Jameson, pp. 130, 131.

in man. I apprehend Noah was held to be the first divine incarnation, at or after the flood, or in the new world. He was the first Archierarch, the owner of the whole world, and from him descended three others, who were, after him, Archierarchs, and for this reason it is that this book of Genesis gives a pedigree of his three sons, in a direct male line from him. But, because *our sacred* book is the sacred book of the tribe or line of the Archierarch Shem only, we have his pedigree continued forward, beyond only a very few generations. The account of the wickedness of Cain, by which he forfeited his birthright, and of the death of Abel without issue, is given to prevent any claim to the Pontifical power from any persons who might have escaped the flood, exclusive of those in the ark. The reader may recollect the assertion I formerly made, in Vol. I. p. 294, that "the text does not say, that the surface of the whole globe was covered," and the Rev. Edward King has *proved* in his treatise, that the Hebrew text does not justify our translation, that all the inhabitants were drowned. The observation of Cuvier, that diluvial remains are not to be found above a certain height on the mountains, shews that if the book do assert (which it does not) that all the mountains were covered, and, in consequence, all mankind drowned, it asserts what is not true. It is probable that a great number of persons, all over the world, escaped, who, I doubt not, are the people we have been accustomed to call *aborigines*.¹

There is great difficulty in settling the proper places, according to their seniority, of the three sons of Noah, as all divines have allowed. I think it probable that Japhet was the youngest, and Ham the eldest, and that the story of his uncovering his father was only contrived to justify the claims of Shem to the high-priesthood and archierarchical sway over the others. The whole history looks as if there had really been such persons as those named,—that the account of them was substantially true, but that it had been accommodated to the system and circumstances of the Jewish priests and government, claiming supremacy from their ancestor, flattering themselves that, however obscure they might then be, a great saviour would come, to place them in the command of the restored Pandæan kingdom. This has, to a very considerable degree, succeeded in placing the Pope at the head of Christianity or modern Judaism, as it is in reality, though it is lost to the children of Shem. I think if there had not been something in it, we should have had a straight-forward declaration that Shem was the eldest, and that his descendants, the Jews, claimed to rule in that right. The pedigrees which we have of Jesus Christ are intended to shew his right, and his obscure situation is not unlike that of the present Calif, now resident in an humble situation, at Mecca, giving power to Mahmud of Egypt, and the case of the prince of Caracorum, which I described some time ago, in giving power to Gengis Khan. The reason why we call it or him Menu is, because each people having this mythos would maintain, that its ancestor was *the* incarnation of the divine mind, or the Man-nu, and that the other two were only men, or at least inferior incarnations under their Man-nu, and that *he* was entitled to universal empire. In like manner as we found the mythos of Noah, the ship, &c., in North India, so we find in the cases of the Grand Seignior, the Mogul, &c., the people tracing their pedigrees to a Noah. I doubt not, had we all their sacred books, we should find an accommodation of this mythos to their own peculiar circumstances, at every one of the temples of Solomon, by a little suitable change of the first part of Genesis, unless it be that *the Jews* have made the accommodation. And I think it very likely that this assumption (when the origin of the whole, as time advanced and nations were more and more separated, became doubtful) was the cause of the ruin of the Pontifical government. And here we have the reason why we not only find traces of what appear to us the doctrines of the little Jewish tribe of Western Syria, in all parts of the world, but what appear to us

¹ In the page above referred to, I suggested the probability that the Indians and Chinese escaped.

to be settlements of the same people, but without the books of Moses. They probably had their books, where their mythos was recorded, accommodated to their peculiar circumstances, but these have been long since destroyed by the Cambysees, &c., and it is probably owing to the preservation of the books of Moses and his followers, that we have the Jewish tribe not dissipated like the others. In the fourteen Solumi we have probably an example of fourteen tribes, like that of Abraham or Moses coming from India, and each setting up for itself the Mosaic mythos in many places, and particularly in Egypt. All this is confirmed by the exposition which I have given. In the history of Abraham we have the history of the tribe leaving India, and arriving, after various removals, in Egypt, and of its settling there. In the history of Moses we have an account of its *exod* from Egypt, and of its endowment with the mythos detailed above, or of the leaders of the tribe settling up a claim, like many others, to the supreme priesthood. In Moses we have an example of one of the chief priests setting up for himself, when the supreme Pontiff and his Pontificate had, in fact, become obsolete. On contemplating the nature of such a pontifical government as I have described, it appears to me that, before the art of writing was publicly known, the priests, aided by the influence of education and by the general veneration for their characters, would have little difficulty for a very long time in preserving their power, and in preserving order: they would be the lawgivers, and the people would have nothing to do with the laws but to obey them. In reality, in one sense, the people would be slaves, the priests masters; but, as the services rendered by the slaves were fixed to a tenth of the produce of the soil, and nearly the whole population were cultivators, their rule must, upon the whole, have been very mild, and favourable to the increase of the people. But still there appears every where a class of Helots who were almost always treated with cruelty by the superior dominant classes. They were the aborigines, and slaves under slaves, and *adscripti glebæ*. It is evident that the feudatories or payers of the tenths, the ryots, would constantly improve in moral character, with improved agriculture; but the Helots would be very liable to retrograde in moral character. I have said, that the feudatories or cultivators were slaves; this must be considered only a figurative expression, as their service was fixed, and, if they rendered it, the priest would have no further demand upon them. They were correctly the ryots of India. The Zemindars were originally merely the collectors for the Pontiff, to whom the tithe was due, and who, at first, (before any of his caste got possession of lands as allodial property, or perhaps, in some cases, on the same tenure as the ryots,) divided it among them, as was done in Britain in the earliest time. When tradesmen arose in towns, the occupiers of houses must have held them of the lord of the soil. Thus burghs or municipia arose around what in most cases became a castle, with its great or little seignior, according to circumstances. It is evident that the system, in different countries, would receive numbers of variations according to the circumstances of localities and other matters easily understood, all tending to cause variations,—but if the system *did* originally exist, the truth is likely to be discovered only by keeping the original in our view in our researches, always making proper allowances for the varieties alluded to above.

7. However various the races of man may have been, it is totally impossible to deny that marks the most unequivocal of an universal language, and of an universal polity, of some kind, are every where apparent. The Judæan mythos, in which the histories of Adam, Noah, Moses, &c., are mixed with that of Cristna, &c., or of which I had better say, the histories of Moses, &c., and of Cristna, &c., are parts, is to be found, in China, Mexico, Peru, Ireland, and Scotland—to be found every where. The multiplicity of the Divi or Gods of the Indians and Greeks, who arose in later times, are no more an objection to this, than the multitude of the Angels, Dæmons, and Saints, of the Christians of the West. If the doctrine of chances laid down by Dr. Young be strictly applied to all nations, there will not one be found where there will not exist a number of

Hebrew or oriental words much more than sufficient upon his theory to establish so high a probability of an universal language as to amount almost to mathematical certainty. Whether this was the symbolic or the first syllabic language, or both in succession, I will not pretend to say. Supposing aborigines of the white races of man to have been left scattered over the West and North-West, and in China, we can in no other way account for the Judæan mythos of black people being found in them, than by supposing it carried by persons whose colour has become changed by mixture with the white inhabitants. There is no reason to believe that the Judæan mythos was propagated as we now propagate the Gospel in distant countries. As far back as history extends, the Brahmins and Jews had an utter aversion to proselyting. In compliance with, or rather in submission to, the superior judgment of Mr. Laurence and other physiologists, on a subject on which I could not be expected to form an opinion upon anatomical grounds, namely, on the question whether there were originally only one or more than one species of man, in my observations respecting the black Gods, I treated them as one *genus* and one *species*; I now think it expedient to make a few additional observations to shew how my theory may be affected, supposing there was only *one* genus, (which is a fact which cannot possibly be disputed,) but *several* species.¹ If the latter should be the state of the case, as maintained by Mr. Ruish of Petersburg, who professes to exhibit the Rete-mucosum by which the blackness is produced in the negro, then I should suppose that there have been various races of *red* or *white* as well as the *black* one; but, that the originals of all the Gods have been of the black race, of the class of followers of Cristna, after the black race had become improved into the shape in which we find him—that, by the handsome black males constantly uniting with the most handsome black females, their progeny increased in beauty till it arrived at the degree of perfection which we find in Cristna; that the pontifical government did originally consist of this race; and that, in the East, the entire population consisting of this race, it continues black—still retains the rete-mucosum—though for the reasons before given by me, it is improved in shape: but that, in the West, to which it sent out numerous tribes, it mixed with the white races, the remains of inhabitants before the flood, called aborigines, the rich and powerful gradually marrying with the handsomest of the white races, till the whole race of the worshipers of the *black* God became white. We have daily experience of the black races, by this process, becoming white; but we have no example of the white race going back to the black. I pretend not to shew the cause of this latter circumstance, which is a fact—but the mere fact itself. This seems to shew that the aborigines were more numerous than the black colonies from the East; but this is, perhaps, no more than might be expected. For these reasons I think it must be allowed that, if the hypothesis that there was only one species be unfounded, yet the great argument and chain of reasoning which run through my work will not necessarily be in any respect overthrown. Nor do I perceive any difficulty in reconciling the apparent contradiction in it, if we only suppose what may have readily happened, that the high science attained by the *black* Chaldæans was not discovered till the race had improved in form and faculty to the state in which we find the God Cristna. But even allowing the truth of the discovery of Mr. Ruish of the Rete-mucosum, and all that the Abbé Basin has said,² I see no reason whatever why the Negro of the corn-growing valleys of the Upper Ganges should not, from the causes assigned by Mr. Crawford, as detailed by me, in Vol. I. pp. 285, &c., have improved in faculty so as to have become highly civilised, and master of much, indeed of high, scientific information, before his form became moulded into that of Cristna. It is, in fact, strictly within the conditions of my argument, that

¹ See Vol. pp. pp. 51, 134, 138, 242, 253, 398, 418, 751.

² Philosophy of History, translated by Wood Gandell, pp. 6—10.

the syllabic writing should have been discovered, and indeed all the high discoveries made, before the last flood, by the followers of Cristna—for our calculation goes to establish the fact, that the last flood did not take place till long after the sun entered Aries, at the vernal equinox. And we must recollect that my argument requires, that, long before the sun entered Aries, the race should have advanced, by degrees, in improvement, to be very nearly as improved in knowledge as at the moment of the sun's entrance into it. If we suppose man to have arrived at a high point of mental culture five or six hundred years before the entrance of the sun into Aries, the calculation will shew, that this will give him time to have had a knowledge, from astronomy, of the approach of the comet in twenty-nine centuries. In consequence of the prejudice (for it is really prejudice) against the Negro, or I ought rather to say, against the *possibility* of a Negro, being learned and scientific, arising from an acquaintance with the present Negro character, I admit with *great difficulty* the theory of all the early astronomical knowledge of the Chaldees having been acquired or invented by his race, and that the Chaldees were originally Negroes. But this prejudice wears away when I go to the precursors of the Brahmins, the Buddhists, and when I reflect upon the skill in the fine arts which they must have possessed when they executed the beautiful and most ancient sculptures in the Museum of the India-house, and the knowledge of astronomy shewn in their cycles of stones, &c., &c. That the *Buddhists* were Negroes, the icons of the God clearly prove.

8. The reason for the difference between the Ioudi of the West and of the East, is to be found in the circumstance, that the Afghan Brahmin who came with his tribe from the East, to Syria of the West, was an iconoclast: he was opposed to the use of images, just beginning to prevail (and now so much prevailing) when he left India. He was of the religion or sect of Persia, and of Melchisedek; and it is very evident that almost all the *peculiarities* found in the laws and manners of the Jews, are what arose from the anxiety of their lawgiver, Moses, to preserve this hatred of images—an anxiety of a sect well depicted in the history and book of Esther, and also in the conduct of Cyrus, Darius, Cambyses, &c., in destroying the images in Egypt, but leaving the lingas—and in restoring the Jews and their temple. And I think *that* is very likely to be true which is told by the Jews, namely, that they were not permitted to read Genesis for fear that it should, (*i. e.* that the Trinitarian doctrine found there should, for there is no other the least likely to do it,) draw them into idolatry, as it is pretty clear that it had done their ancestors in the East. I think, to the Trinitarian doctrine of several Persons or Gods, as it must always have appeared to the generality of mankind, and to the renewed avatars or divine incarnations, the numerous Gods, both of Greece and India, may be easily traced; and the influence of the doctrine among the illiterate part of mankind justifies the fears of the Jews, and may furnish a plausible reason for the care with which they concealed their cabala. No one can deny that the, at first perhaps innocent, *adoration of images* and emblems, has ended in the degradation of all nations. In every part of the history of the Jewish polity the struggle between the priest and the king is apparent; and, that the books are those of the priesthood is equally apparent: but yet the controul of the king in their manufacture may be observed. For instance, though David was a man after God's own heart, yet the priests contrive to say that both Saul and he were given to the Jews as a punishment. The object of the Jewish history was merely to preserve the pedigree, to shew the exercised right of the ruling power to their little throne at the time it was written, and the dormant right of the priesthood with whom it was in abeyance, until it was finally lost in the time when they became merged as a province in the neighbouring states. Had it not been for the fortuitous circumstance of Jesus Christ being of the little party of the *two tribes*, we should now have known as little about them as we know about the former great party of the Samaritans—the *ten tribes*. The books which the Jews choose to call *canonical* bring the history no lower than about the year

400 B. C. Here ends what may be properly called their *mythical* history, and their *real* history begins in what is called the Apocrypha, the historical books of which I doubt not contain a real history, though perhaps full of exaggeration. The books of Ecclesiasticus and Wisdom are evidently intended for the purpose of containing and concealing their cabala, the secret doctrines of Wisdom.¹ They are, in fact, a sort of paraphrase or commentary on the secret history of Genesis, and on the renewed incarnations, as is evident from the renewed incarnation in Jesus, the Son of Sirach, discovered and pointed out by me, *supra*, p. 124. If the priesthood whom we have supposed to have ruled the world were content to take as their tribute, a tenth of the lands of the cultivators, and that there was no intermediate class, like our gentlemen, between the cultivator and the lord of the soil, (observe the word Lord, L'aur-di,) there would necessarily be a prodigious increase of population. It might thus become peopled in so short a space, that there would not be time for the language to become so much changed into dialects as to cause one part to be unintelligible to another. Under these circumstances the communication between the remote parts would be extremely easy. There would be scarcely any temptation to rob a traveller, for I do not believe that in that early time any thing in the nature of money would exist, or precious stones be known. The cultivators would be as little disposed to travel as our farmers; and suppose one of the high caste were desirous of passing from one distant place to another, he would want nothing for his journey. He would only want the arrow of Abaris, the Mariner's Compass. In this state of the world hospitality would be the result of feeling. The world would be peopled to a very considerable extent before man would require any thing in commerce. He would want nothing except the produce of his farm or flock; then of what was he to rob the traveller, particularly a priest; or for what was he to injure him? As men became numerous and were obliged to betake themselves to ungenial climates and unproductive soils, the arts of weaving wool, of building houses of wood and sun-dried clay, the art of ploughing and sowing, and the habit of dwelling in towns, arose by degrees. I can readily conceive these arts to have arisen to a great pitch of perfection before various languages existed, and before there would be any impediment to the most free intercourse between different parts of the world, to the persons who might be employed about an archierarchy, and the very few persons who would wish to perform long journeys. It is very clear that the first persons who acquired the knowledge of astronomy and other sciences, by whatever means they acquired them, would become an initiated, or separated class, as the necessary result of circumstances, by what is vulgarly called accident, without, at first, any intention on their part. By degrees they would constitute what we call a priesthood. In this state of things the art of foretelling an eclipse would give them the dominion of the world; but I think they would have arrived at this power before they possessed science enough to foretell an eclipse. I shall be told, that the history of barbarous nations does not justify this theory. I say in reply to this, I think that the discovery (call it *accidental* if you please) of the art of symbolic, and afterward of alphabetic, writing, is quite enough to account for the civilization of one part of mankind being higher than that of another, and gives an answer to this objection. This theory is completely borne out by a fact which cannot be disputed—the existence of the Druidical and Cyclopæan remains in EVERY part of the world, which this theory accounts for satisfactorily, and to account for which no theory has even pretended to account before. The Druidical, that is the stone circular, buildings would be the first. The Cyclopæan walls would arise, by degrees, as the world became crowded with inhabitants, food and land scarce, and man quarrelsome—in fact as the golden age wore away. Then arose soldiers hired by the scientific caste to keep order,—then arose disputes for superiority between the hirelings to keep order, and the scientific caste,—be-

¹ See Vol. I. pp. 755, 795.

tween the crosier and the sword; and, by degrees, from natural circumstances, the four castes of priests, soldiers, tradesmen in towns, and cultivators, arose. For some hundreds of years, perhaps, while the golden age was passing away, while these things were taking place, the languages would advance in their formation, and the world begin to be, as at present, no better than a tower of Babel. The passage of man through the different stages which I have developed has been beautifully and very appropriately described by the Golden, the Silver, the Brazen, and the Iron ages,—for, as I have before remarked, I do not doubt that this was the order in which the metals were discovered. Every thing betrays the going to pieces of an immense machine—a machine which went well enough as long as circumstances were favourable to it, but which necessarily went out of order as they changed, and they necessarily changed because the law of nature—of all existent beings—forbids them ever to stand still. As the change of the circumstances was varied by situation, climate, and many other incidents of every different country, so the effects were varied. In most Asiatic states we have *despotisms*; in the temperate European, we have *free states*; in many others, the settlement of clans, where the order of priesthood never shews itself except it be as priest and king, united at the head of the tribe or clan. In Abraham we have priest and king; in Melchizedek the same.

9. I formerly stated, p. 264, that in Egypt, the power of the high-priest was such that, if he ordered the king to commit suicide, he would be obeyed; and that this is what is done by the Grand Seignior to the Pashas every day. In the following account, by Mr. Heeren, the supreme priesthood shews itself very clearly:—"The priests of Egypt were the principal land-holders of the country, and besides them the right of holding lands was enjoyed only by the king and the military caste. Changes of course must have ensued, amid the various political revolutions to which the state has been subject, in this important branch of the sacerdotal power, yet none of such a nature as materially to affect the right itself, and hence we find that a large, if not the largest and fairest, portion of the lands of Egypt, remained always in the hands of the priests. To each temple, as has already been remarked, were attached extensive domains, the common possession of the whole fraternity, and their original place of settlement. These lands were let out for a moderate sum, and their revenue derived from them went to the common treasury of the temple, over which a superintendant or treasurer was placed, who was also a member of the sacerdotal body. From this treasury were supplied the wants of the various families which composed the sacred college. They had also a common table in their respective temples, which was daily provided with all the good things which their rules allowed: so that no part of their private property was required for their immediate support. For, that they possessed private property, is not only apparent from the circumstance of their marrying and having families, but it is expressly asserted by Herodotus. From all which has been said, then, it follows, that the sacerdotal families of Egypt were the richest and most distinguished in the land, and that the whole order formed, in fact, a *highly privileged nobility*."¹ The success of Robertus de Nobilibus and the Romish missionaries in making proselytes, both in South India and China, has been much reprobated by Mosheim² and others, because it is said to have been obtained by unworthy means; but the more I examine the question, the more I am led to believe, that these unworthy means, as they were called, was in a great measure nothing but a real explanation of the ancient identity of the Indian and the Roman secret religions, as I have explained, supra, p. 127, which the Jesuits demonstrated to be the fact, when the corruptions which had been introduced into the religions of both Buddha and Cristna were removed from them. They are said (as if, in so doing, they had committed a heinous offence) to have persuaded the Chinese Emperor

¹ Heeren's Ideen, 2, 2, 125; Barker's Lempriere, in voce, Egypt.

² Eccl. Hist. Vol. I. pp. 20, &c.

and Nobility, that the primitive theology of their nation, and the doctrine of their great instructor, Confucius, differed in nothing important from the doctrine of the Gospel. They are further charged with inventing a variety of fictions, to shew that Jesus Christ had been known and worshiped in China many generations before. In all this, there seems to me to be a high probability that the Jesuits had discovered, or by some means had become informed of, the secret doctrine of the renewed avatars, which I have, so much at length, endeavoured to shew, existed in the conclave, and that they endeavoured, in South India, not to *destroy* the existing religion, but merely, its gross abuses corrected, to bring it into subjection to the Grand Lama in the West. And with respect to the Chinese who were Buddhists, they endeavoured to convert them to the faith of Cristna, substituting their own Grand Lama, the Pope, for the Grand Lama of the Chinese, at Lassa, in Tibet. I feel little doubt that had the Jansenists, the Dominicans, and the Franciscans, not interfered, the Jesuits would have effected the conversion of the Chinese, the Japanese, and the Indians; for it appears from Varenius,¹ that their religion was the same as that of the Chinese and the Tibetians, which I have already noticed—the same processions, statues, candles, perfumes, prayers for the dead, auricular confession, monasteries for both sexes, who lived in abstinence, celibacy, and solitude, &c., &c.² I have a great suspicion not only that the Jesuits taught the identity of the religions of Italy and India, but also believed them to be identical. And if they did believe this, they only believed what was true. Clear-sighted people like the Jesuits could not do otherwise. Modern Christianity, as exhibited at Rome and Petersburg, is nothing but a continuance of the ancient religion of Rome, if it be stripped of many of the modern corruptions with which it has become loaded. But it is the ancient *Esoteric* religion of which I speak—at first attempted to be established in its *esoteric* character; but, from the failure of which attempt, the present system arose, a great part of the ancient secret system now forming the public one.³

¹ Descript. Japon, Lib. iii. Cap. vi. p. 10.

² Vide Mosheim, Hist. Vol. V. p. 34, *note*, and Charlevoix's Histoire de Japon, Tom. II. Liv. xi. p. 57.

³ There are *two* clear and distinct Christianities—the *exoteric* and the *esoteric*. The exoteric consists of the atonement, imputed righteousness, &c., absurd degrading doctrines, and accounted for by an absurd story about a man eating fruit contrary to the order of God; but it is a story altogether intended for the vulgar. It consisted of the Gnosis or the doctrine of Emanations. It was Trinitarian, in the refined way which I have described in the latter end of the first volume. The reason why we do not find the Trinitarian doctrine clearly developed in the Gospels is, because it was found only by inference in the story of the tree and the fruit, because it necessarily requires the doctrine of a future existence which was not contained in the exoteric language of the Pentateuch. In *that* the people are attempted to be governed alone by threats of temporal punishments. It is strictly Unitarian; the doctrine of the Trinity and the Gnosis being no part of it, for they are couched in ænigmatical or equivocal language, for the evident purpose of concealment. It simply looked to the God $\text{I}\text{E}\text{U}\text{E}$, a local God, as the author of all. The *esoteric* doctrine was a secret. It might be meant to be described, but it was not meant to be explained. What little is found has escaped from the crypt, and coming into the hands of such men as Irenæus, Papias, Augustine, Athanasius, &c., it has ended in being what might be expected from such persons, incomprehensible nonsense. It is very curious to find the only class of persons who possess the smallest portion of philosophy, the Unitarians, struggling for the vulgar system against the system of the ancient philosophers, and getting over the difficulties in which this involves them, by throwing overboard some of the nonsensical doctrines—the atonement for instance. The Unitarians ask why the Trinity is not clearly expressed in the gospels. To this no reply can be given. But my hypothesis answers this at once—Because it was the secret doctrine. It was the cabala both of the orthodox Jews and the Christians. Upon reconsidering what I have said in the last section of the first volume (pp. 826, 827)—that the MIA $\text{A}\text{P}\text{X}\text{H}$ was the chief part of the *esoteric* religion, I have come to a conclusion, that, in fact, the whole Trinitarian doctrine constituted the secret religion; and this is the reason why, in the writers of the first two or three centuries, we every where have it in such doubtful terms. The doctrines of Christianity were but the doctrines of the ancient mysteries becoming public, and applying to the circumstances of the cycles as they advanced with time. What can be more striking than the expectation of the Millenium, equally among Christians and Gentiles? This accounts for such persons as Papias, Irenæus, &c., travelling from place to place to discover the true gospel. Either the secret doctrine was lost in their day, or they were not trusted with it. It would probably have been as imprudent to trust it to Irenæus in early times, as it would have been to trust it to Luther or Calvin in later times.

We often read of Hilarion and others being the founders of monasteries or monastic orders. This is said either when a new order was founded, or when the members of an ancient Essenian monastery were admitted into the Romish church. Jortin¹ states that there were more than ninety-six thousand monks in Egypt, in the fourth century. The Buddhists and Brahmins are well marked by Porphyry.² He says, "There is one tribe of Indians divinely wise, whom the Greeks are accustomed to call Gymnosophists; but of these there are two sects, over one of which Brahmins preside, but over the other the Samanæans. The race of the Brahmins, however, receive divine wisdom of this kind by succession, in the same manner as the priesthood. But the Samanæans are elected, and consist of those who wish to possess divine knowledge." Here, in the Samanæans we have the Essenes or Monks, and, I doubt not, also the Chaldæans. Originally the Sectaries of the Bull were followed by the Brahmins, the Sectaries of the Ram or Lamb; or I ought, perhaps, rather to say, they themselves, in many cases, changed and became Sectaries of the Ram or Lamb. The distinction between those who took by hereditary descent and those by election, well describes the two systems of the Buddhists and Brahmins. In the Archierarchy of the Buddhists we have the prototype of the Papacy. In the mixed system or democracy of the Brahmins, we have the prototype of the mixed system of the Protestants; and, in the innumerable sects of India, we have the prototype of the innumerable sects of Europe: in every case a similar cause producing a similar effect. It seems to me not improbable that, originally, Monachism might arise from a wish for retirement and the enjoyment of a contemplative life, which, by degrees, grew into all the present austerities and absurdities with which we are well acquainted. Abstinence from the *female*, without which families must have arisen to disturb the pursuits of science, would be among the first effects of the abuse of this praiseworthy propensity; and the appointment of a head or superior to keep order would at last finish the establishment. That it should become *religious* was a necessary consequence—for philosophy was religion. The knowledge of the *το ουτως ου*³ and his attributes was the religion, and the philosophy also. This knowledge was closely interwoven with the study of astronomy, as it has been frequently remarked in this work. After reading the account of the Essenes, of the Jews, and of the Samanæans, in Porphyry,⁴ and also the account of the Christian Essenes, as given by Philo, Josephus, and Eusebius, I cannot for a moment doubt, that they were all *one*, with such trifling variations as time and change of language and country must necessarily produce. The Chrestian religion, or the religion of the *Χρης*, evidently existed from the earliest time; and Jesus Christ was nothing but the *ninth Avatar* coming in his proper order—Salivahana in the East, Jesus *Χρης* in the West. And, as the Brahmins make their Cristna, not the *ninth Avatar*, but *God himself*, so the Christians do the same with their teacher of Samaria. And though Mohamed and St. Francis were thought to be the *tenth Avatar* by their followers, yet the followers of Cristna and Jesus would not consent to abandon their favourite object of adoration. Thus, notwithstanding the Salivahana of India is well known, yet the Cristna continues to prevail. In the West, the only difference is, that St. Francis, as an Avatar, has been rejected for the former Avatar. But I have no doubt that Mohamed was accepted as the *tenth Avatar*, by many millions of persons, in the East. The view which I here take of the origin of Monachism is not, I think, in opposition to what I have said in a former part of this work, respecting the contest between the *male* and *female* generative powers. I think both causes aided each other. We have the Brahmin well marked in Abraham; and the difficulty of separating the two sects, in modern times, is easily accounted for

¹ Ecc. Hist. Vol. II. p. 22.

² De Abstin. Book IV. Sect. xvii., Taylor's Trans.

³ Preface to Porphyry de *Abstinentia*.

⁴ De *Abstinentia*, pp. 147, 148.

by several circumstances—the first of which is, their union, as far as the feud respecting the adoration of the *male* or *female* generative power separated them from each other. Another circumstance is to be found in the fact, that the partizans of the two religions of Buddha and Cristina were, in reality, the same, however much they might hate each other; exactly as the Mohamedans and Christians are, in reality, the same, though we know that nothing can exceed the hatred which they bear to each other. These causes are enough to account for the great difficulty of making out the history of the sects in the West. But this difficulty is increased by several adventitious causes. Supposing that a tribe came from the East to Palestine, bringing with it its Samanæans, or its proportion of religions, at that time established in its country; it is very certain that these persons, in the course of perhaps a thousand or fifteen hundred years, would change considerably, and would probably have but a slight tradition of their origin. Probably they would acquire a new name, with the change in the language of their country, and a name again changed, by being handed down to us in the language of a Western people, who, in fact, did not understand that of the people about whom they were writing. We have an example in our priests. In little more than a hundred years our word *parsons* is very nearly gone, and is become changed into that of *clergymen*. And for language, the five dialects of the Celtic furnishes a very good example—Irish, Scotch, Welsh, Manks, Cornish. No person who has inquired can doubt their original identity: but how surprisingly are they changed! The individuals using them are now almost unintelligible to each other, and thus, in fact, these dialects are become separate languages. I believe that, if no very great mundane revolution should take place, nothing more than the common course of events, in three thousand years a historian will have more difficulty in making out the history and origin of the present nations of the world than we have. I believe that, as the distinction between the Buddhists and Brahmins became lost in the East, so in the West, the distinction between Protestants and Papists will insensibly diminish, until it will nearly, if not entirely, disappear. This will be greatly aided by no one religion being the sole religion of any very large district. This is the state of the case in the East, where sects are mixed—Buddhists, Brahmins, Mohamedans, Christians—at the side of each other, and often within each other. These different leading sects being also split and divided, into under, smaller sects, as Greeks, Papists, and Protestants, are divided in the West. No man, perhaps, is so well qualified to write a general history of the world as I am: but, I believe, if such a man as Sir Walter Scott was would take my work and study it carefully, with a candid desire to correct its errors and supply its deficiencies, he would be much better qualified. It must not, however, be an attempt to pursue the line of kings in each country, as we pursue our line—shewing how *Mary* followed Henry, and *Elizabeth* Mary; but it must be more in the nature of a critical dissertation on the history of each period, perhaps of each century. He must begin with the origin of the Buddhist religion and the Pontifical, Pandæan kingdom, marking well the few *facts* which we possess, from the *probabilities*: and, perhaps, in this early period, the fact of the existence of this golden age, or universal government, the builder of Stonehenge and Dipaldenna,¹ as the only one which we have remaining. The fact of the discovery of the Druidical and Cyclopæan edifices in all parts of the world proves its actual existence in a manner which nothing can impugn. It is pretty clear that the Monks, the *Regulars*, are descendants of the Buddhists—the *Seculars* of the Brahmins. This is the reason why we find the Monks in many countries possessing the tithes. The feuds between the two are the last remnants of the expiring disputes of the sects, called wars of the Mahabarat in India.² The

¹ See Vol. I. pp. 160, 230, 733; and supra, p. 135. N.B. the Author's orthography variable. *Ed.*

² We constantly read of the Brahmins having come into India from the North, and of a Pandæan kingdom. I have

Buddhists were the Hierists and Archierists, and the Pope became so, as I have said before, in consequence of the surrender of *the book* by Constantine. *He* was the follower of Cristna; and we have no Pope in India, because there did not happen to be a Constantine. We know very little of the domestic economy of the Brahmin church; but they may have imitated their Buddhist predecessors in some places unknown to us. Probably the Archierarch has become a king; and this may be the reason why the Archierarchy has disappeared. I think it is to be found in the Grand Magus—the Great Mogul—from whom the princes of India hold their crowns. I believe the Papists were nothing but a sect of Paulites—followers of Cristna—and Paul such a man as Luther, Calvin, or Montanus, acquiring many followers, and his sect put into power by Constantine. The Monks of Europe were Buddhists, and came over to this sect, and united with it afterward. All the apparent anomalies and confused mixture of the orders arose from the going to pieces of the first Archierarchy, and the rising of the second. The Monks were the Samanæans or Gymnosophists. The same thing took place in Britain and Ireland in the West, as took place in India, or we should not have found the Buddha and the Cristna and the Callidei here. When Cæsar arrived in Britain, the first system had gone to pieces. The Buddhist government had been overthrown by that of Cristna, and the whole country had become divided among petty princes and tribes. Gaul was in the same state. All the oriental mythos is well marked in that country. I think it is very likely that Cæsar conquered both Britain and Gaul as Cortes and Pizarro conquered Mexico and Peru; that he was thought to be the *Æsar expected to come*: for, as we have found other parts of the mythos, it is not unreasonable to expect to find this. The reason why we have no account of this in the Greek and Latin writers, is the same as that which prevents our having any account of this mythos in the historians of the conquest of Mexico and Peru; and yet no one can doubt that the mythos existed there, and that it aided their conquest. When the first Pontifical government went to decay, (perhaps its decay was caused by the rise of the sect of Cristna,) different effects would take place in different countries; yet remnants of it may be expected to be found in all. What we do find is exactly that which, under the circumstances, might be expected to be found. But the numerous remnants of the first system, religion, or mythos, prove its original existence beyond a doubt. This admitted, all the rest is a natural consequence.

no doubt that this was the kingdom founded when the sun entered Aries. The wars of the Mahabarat were the struggles to establish this kingdom. I think it probable that the sect of Cristna arose in Tartary, and, after a struggle with, and the defeat of, its countrymen, it advanced to the South and conquered India. This is exactly what happened to Baber in a later day.

CHAPTER III.

NIEBUHR ON PONTIFICAL GOVERNMENT IN ITALY.—PATRIARCHAL GOVERNMENT IN CHINA.—MOHAMED.—PONTIFICAL GOVERNMENT.—THE ASSASSINS.—NIEBUHR ON LANDED TENURES RENEWED.—CONFEDERATED STATES UNDER PONTIFICAL GOVERNMENT.—LETTERS AND POPULATION.

1. WE will now return to Mr. Niebuhr, and to the remains of the Pontifical government in Italy, discovered by him, but not understood.¹ Mr. Niebuhr says, "It is the more probable that the Roman kings, according to the general polity of states in the ancient world, levied a tenth off the lands, the property of which vested in the state, as it did with the princes of Asia; because even multiplied vassalage, without any considerable taxation, would have been inadequate to execute their enormous buildings."² I have no doubt that over the whole world, wherever the Cyclopæan or Druidical buildings are found, and where are they not found? a patriarchal system extended, and that it was supported by the tenths of the landed produce. In the account of the almost obsolete, at least much neglected, Agrimensores of Italy, and of the *ancient Etruscans* we have probably the only written remains of the financial polity of the ancient Patriarchal priesthood. But we have plenty of substantial remains of it in the Druidical and Cyclopæan buildings, and in the innumerable stone crosses yet every where to be seen in almost all countries, at the crossings of the roads and in many other places. The reason given by Niebuhr for the use of the cross, the *Cardo*,³ and the *Decumanus*,⁴ decussated on the face of the world, correctly according to

¹ See Vol. I. pp. 375, 376, 620—623, and *supra*, 26, 27, 56, 134, 137.

² The Roman History, Vol. I. p. 470. Walter's Ed.

³ The Patriarchs of tribes fixed their residence near the stone pillar, the object of adoration, the emblem of the generative principle. Most learned inquirers have seen that, of this, the *cross* was the emblem; but the reasons they have assigned why it became so have never been satisfactory to me. I believe it arose from the horizontal cross on the tops of the *Cardos*—the *Gnomon*.

⁴ It is related that Josiah burnt the Ashre in the fields of the Brook Kidron. 2 Kings xxiii., &c., &c. The root *Ash* means a *plant or tree*, and *one or the first*; it also forms the root of the word *Ashera*, which means *tenth or tithe*. We have seen the Alphabet to be a tree, and we have found, in the oldest languages, the figure 1, and the figure 10, to be denoted by the same form. I believe the *i od* for the letter *yew* and for 10, is only the holy I—*i di*. In the translation of the forged Veda into French (*Asiat. Res.* Vol. XIV. p. 32) "*Une syllabe compose son nom*" is given as the translation of the Sanscrit word *Acshara*, which Mr. Ellis says has not that meaning, but that it means *indestructible, infinite*, not considering that it may possibly have both meanings. He admits that it means letter. In the Arabic, I understand, it means *letter*. Robertus likens the world to a *tree*. In his imitation of the Veda the translator says, "Du système qui donne au monde la figure d'une fleur et des grandeurs de la déesse Tārā, qui habite sur la première feuille à l'Est." He then says, "La fleur qui compose le monde répondit la déesse est même composée de dix feuilles; je dois me métamorphoser sur chacune de ces feuilles," &c. Then occurs an account of the first leaf of the flower, &c., which is followed by a refutation, and, in succession, each of the *ten leaves* of the universe, and the *ten avatars*. The Tenth or the Decumanus of the West is called *Ashera*, which was the ancient payment to which Mohamed restored that part of the world which came under his dominion. I have little doubt that the Ashre set up by Abraham were at the cross-roads or the capitols, precisely the same as the stone pillars of the West, called *decumans*, and were used for the same purposes, and might perhaps be in some respects of a more scientific character. I suppose they were, as Mr. Landseer imagines, of the nature of Orreries, and would make the line of the meridian correctly. From being covered with stars, marked with letters that had the names of trees, they came to be called *woods*, and from marking the divisions into parcels of ten degrees each, for the payment of the tithe, the word came to mean *ten*, and, from the payment of tithe taking the precedence of all payments, it came to mean *first-fruits*. I am of opi-

the four cardinal points, and evidently connected with the Etruscan religion, is very striking. Here, if I mistake not, is the origin of the Mercator's Chart. The whole world, I do not doubt, was divided into squares or parallelograms, and a cross was fixed at every intersection, as Italy is described, by Niebuhr, to have been.¹ These crosses pointing to the four cardinal points could never be removed or mistaken, for they corrected each other. The object of this mensuration was the collection of the tenths for the priesthood. The Patriarch, the Πάτρις αρχη, Royal priest, as the Vicramaditya, the Vicar of God, was the owner of the soil of the whole world; the cultivators or consumers of the pasturage paid a tenth of the produce for the use of it. At first, with respect to the land, there were three persons concerned: first, the Arch-priest, who was the owner—Lord of the soil; secondly, the Cultivator or the Shepherd; and, thirdly, the Labouring Man, the Helot, the slave, *adscriptus glebæ* as he very soon became; and, after a certain time, arose the Soldier. This was the origin of Feudal Tenures.² After some time, of course, this state

nion that the Ashre were perpetual almanacks; and, from foretelling the times and marking the distances, they were called *stones of wisdom* or Lingas. For this reason, when they were lost in India, and a pillar with an Elephant's head formed their substitute, the Elephant came to be *the God of wisdom*, or the Elephant's head, the emblem of the God of wisdom, came to be their substitute on account of the wisdom of that animal.

¹ See supra, p. 117.

² "Les Saques, ou les Scythes, passoient pour un peuple très sage, et très modéré: ils n'imposèrent à l'Asie, conquise par eux, qu'un léger tribut, c'étoit plutôt une redevance, propre à marquer leur domaine, qu'une imposition, dont ils chargeoient des peuples soumis par la force de leurs armes.—'Asiam perdomitam vectigalem fecere, modico tributo, magis in titulum imperii, quam in victoriæ præmium imposito.' (Justin.) L'Asie étoit alors un *Fief dépendant* de la Scythie. C'est le premier état gouverné pendant un longue suite de siècles, par cette espèce de constitution, dans laquelle on peut reconnoître l'origine du droit Feudal, apporté en Europe par les descendans de Saques, ou Scythes. Leur gouvernement étoit très doux, et leurs lois très justes, comme on peut le juger par ce qu'en disoient Justin et le poëte Chærilus et bien mieux encore, par la manière dont l'Inde, la Chine, et le Japon étoient gouvernés par leurs premiers princes: car ces princes descendoient des Saques, et leur administration paroît avoir été réglée, sur le modèle du gouvernement d'une famille, dont le chef est regardé comme le père." (D'Ancarville, Rech. sur l'Orig. des Arts de la Grèce.) It is really very extraordinary how every learned inquirer finds his way at last to Scythia or Tartary, or to the country about ten degrees to the North and South of 40°. N. L. In the above extract there appears to me to be a recognition in the way of a collection of facts of all my theories and doctrines. First we have the primary existence and the wisdom and moderation of the Sacæ: that is, of the followers of Japhet. All that appears to have been required was, an acknowledgment of superiority. This was because Japhet claimed to be the eldest son. This strongly confirms what Richardson said, that Asia was a Fief of Scythia. This was because Shem owed suit and service to his elder brother; and very justly (I do not doubt) it is observed to have lasted many generations, and to have been of the nature of a Patriarchal government, or the government of a family, of which the chief was the father. All this is precisely my theory of Genesis and its division among the three sons of Noah. M. Benjamin Constant says, "En parcourant l'Europe, l'Asie, et ce que nous connaissons de l'Afrique, en partant de la Gaule, ou même de l'Espagne, et en passant par la Germanie, la Scandinavie, la Tartarie, l'Inde, la Perse, l'Arabie, l'Ethiopie, et l'Egypte, nous trouvons partout des usages pareils, des cosmogonies semblables, des corporations, des rites, des sacrifices, des cérémonies, des coutumes et des opinions ayant entre elles des conformités incontestables: et ces usages, ces cosmogonies, ces corporations, ces rites, ces sacrifices, ces cérémonies, ces opinions, nous les retrouvons en Amérique, dans le Mexique, et dans le Pérou.—C'est vainement que l'on voudrait assigner pour cause à ces conformités des dispositions générales inhérentes à l'esprit humain. Il éclate dans plusieurs détails des ressemblances si exactes, sur des points si minutieux, qu'il est impossible d'en trouver la raison dans la nature ou dans le hasard." (Pp. 197, 198.) If M. Constant be right, which I am certain no one can dispute, how can any one doubt that there must, at some former time, have been one universal system?—as he says, "D'un peuple primitif, source commune, tige universelle, mais anéantie, de l'espèce humaine." (P. 200.) "N'est-ce pas à ce peuple que nous devrions demander le point de départ de la religion?" (P. 201.) Again he says, "Nous n'affirmons nullement qu'il soit impossible au travail, et au génie d'arriver un jour à la connaissance de la grande vérité, du grand fait, du fait unique qui doit servir à réunir les fragments épars de la chaîne brisée dont nous soulevons quelques anneaux." I am vain enough to flatter myself that I shall go far to fulfil the hopes of Mons. Constant. Of this ancient system he says, (p. 214.) "Il est vrai que la théologie physico-mystérieuse prit naissance assez de bonne heure dans les pays où le sacerdoce exerça beaucoup d'influence: mais il est faux qu'elle ait d'abord été la religion populaire, et qu'elle soit ensuite devenue une doctrine secrète réservée

of affairs would vary in different countries ; but, by slow degrees. In India, collectors were appointed by the government to receive the payments, and to dispose of them, in some way, for the use of the Landlord. Here we have the Zemindars and the Ryots. A similar state of things was detected by General Vallancey, in Ireland, and under the same names too. These Zemindars in time, in some places, became what our country gentlemen are—they received from the lands as much more than *a tenth* as they could extort—in most cases obliged to do this by the government, become *military*, for its benefit. In order to render these early payments available to the distant governors, the most valuable of the metals was at last brought into use as a medium of exchange or commerce. It is evident that, without something of this kind, the produce of the land could never be made useful to a distant government. The exact process by which this machine crumbled into pieces, in various countries, and new ones became formed out of its ruins, cannot now, probably, be discovered ; but common sense teaches us, that different effects would be produced in different countries. In some, the priests would form a species of Aristocracy or Oligarchy: and I think Mr. Niebuhr has shewn, that this was probably the case with the Tuscan Lucumones in their first state, when symbolic writing¹ was used, and also when they became the Roman Senate. These hereditary Sacerdotes² got possession of the tenths ; when allegiance to a distant superior ceased—appropriated them to their own use, and then taxed the remainder of the people for the support of the state : and this usurpation it was which caused all the disputes in Rome about what were called Agrarian laws. It was something similar to what is going on between the priests and people with respect to the tithes in Ireland at the present moment. This is very similar to the state of Egypt described by Mr. Heeren. (See sup., p. 264.) Judging from the traditions of a Pandæan kingdom—from the remains of the mythos in every country, visible in the sacred names of places—judging also from the peculiar style of the Druidical buildings found in all parts of the world—the Cromlechs, the Carns, and the circular temples, I am induced to believe that the system was an archierarchy—that somewhere there was a Papa or grand Lama, a divine incarnation, who superintended the whole. It seems to me very natural for such an Archierarchy originally to arise ; and as the colonies went out from a country which would flourish greatly under such a state of things as I have suggested, that it should extend its paternal influence over the whole world.³ It is also very natural, after it had attained its utmost limits, that it should endure a certain number of years and then, operated on by the eternal law of change—containing within itself, as all systems do, the seeds of their own destruction—that it should go to decay and fall in pieces. But it was evidently a system very tenacious of life. After long depression we have seen it almost revive in Asia, under Akbar, and in Europe, under the Roman Papacy of the middle ages ; and there is reason to believe, that it has never been entirely defunct at Lassa. After the 6000 years had passed away, it is very clear that some change in the system must take place ; and now, neither in Rome nor

“ aux philosophes et aux initiés. Elle a commencé par être secrète, et s’est repandue ensuite peu-à-peu, malgré les “ prêtres.” I need not point out to my reader how completely my doctrines are supported here. M. Constant afterwards observes, (p. 226,) that Lévêque, who has written a history of Russia, places the source of all religions in Tartary. In this I believe Lévêque is right. By every inquiry I make, I am drawn to Tartary, perhaps to Cara-corum, or China.

¹ This was before syllabic writing was invented. From an expression in Mr. Niebuhr’s work it appears, that for some reasons which he does not give, he believes the Etruscans once used a symbolical writing, (Hist. of Rome, Vol. I. p. 22,) and afterward could transcribe their narratives in the more modern alphabetical characters. These symbols I do not doubt were the numeral letters. I regret exceedingly that Mr. Niebuhr has not given his reason or his authority.

² In the ancient language the priest was the possessor of the sacer-dos or sacred portion of the produce: from the regimine he became Sacerdos.

³ I suspect the Oriental pontiff has resided at many places ; for instance, at Oude, Agra, Benares, Delhi, Mundore, &c.

Tibet do we hear of the Divus, the Pater Futuri Sæculi, the *αιων των αιωνων*, but only of the vicramaditya or Vicar of God; in Rome receiving his authority from the last incarnation, passed by the hand of St. Peter. But yet the Pope holds in his poitrine the keys of the kingdom of heaven, and of supreme power over the whole globe.”¹ He never yields either to Emperor or King. When he wished to subscribe to our oriental translation society, an insuperable obstacle arose. He could not consent that his name should be placed in the list of members *after* the king of England: we English could not consent to have his name *before* it. For a long time I was much at a loss to account for the Roman state, instead of the Pontifex Maximus and the priests, possessing the tithes; but this is to be accounted for by the circumstance that the first kings were in fact Pontiffs as well as Kings, and, I have no doubt, supported their throne by the proceeds of their *Domain* as it is called by Niebuhr, and by the tithes. After their expulsion, to have left the Pontiffs in possession of the Domain and the Tithe would have left them to be Kings; therefore, a Pontiff was appointed of the sacred caste or order, who was content to fill the office, (but, perhaps, still with a secret reservation of the *rights of the church*,) with an outward conformity to the new order of affairs—an officer, by some fiction, being appointed, called King and Sagart, for the sole purpose of officiating in the sacrifices. These Pontiffs were like our old act-of-parliament Bishops. I have little doubt that the family of the Julii always aspired to the office of Pontifex. A prophecy has a natural tendency to cause its own fulfilment. I think this might both stimulate the exertions of Julius Cæsar, and also operate upon the minds of his friends and devotees—upon the minds of those who looked for some *one to come* at that time. Speaking of the tenure of land in Italy and the tithe, Niebuhr says, “The footing on which the possession of land and the land tax stand in India, supplied me with an existing image of the Roman possession, the Roman *vectigal*, and the mode of leasing it. In India the sovereign is the sole proprietor of the soil: he may at pleasure confiscate the land cultivated by the Ryot: nevertheless the latter may transmit it to his heir, and may alienate it: he renders a larger or smaller definite portion of the produce in kind: this the state leases or sells to the Zemindars: unless it has granted the revenue of a district or of a piece of ground to some temple or pious foundation for ever, or to some of its vassals and officers for life.—This state of things is not peculiar to India: traces of it occur throughout Asia: where, in ancient times, it prevailed far and wide in the most unequivocal form: as it did in Egypt, where all the land was the property of the Pharaoh, and the military class merely had the land tax remitted to them.”² The Tetrarchs in Syria were Zemindars, who usurped the rank of Sovereigns: as, through one of the most calamitous mistakes that ever brought ruin on a country, notwithstanding the most benevolent intentions on the part of the government, the Zemindars of Bengal succeeded under the government of Lord Cornwallis in getting themselves recognized as dependent princes and absolute proprietors of the soil. In like manner the agrarian institutions of Rome must not be deemed peculiar to it: they were undoubtedly common to all the Italian states: and many of the notions connected with them prevailed even beyond the peninsula: so that there is the less reason for supposing that the coincidence between them and those of India is accidental and therefore delusive.”³ In the above description Mr. Niebuhr makes a mistake respecting the land of the Ryot. I think the Sovereign had no right to resume possession of it, or confiscate it at pleasure, as long as the Ryot did his suit and service, and paid his *vectigal*. Mr. N. in many other places shews that the *vectigal* was originally a *tenth*; and that the Roman Patricians not only got possession of all the lands of the

¹ As possessing this power, he gave away Mexico.

² He here means tithe.

³ Vol. II. pp. 133, 134. Thirlwall's Ed.

state, merely paying the *tithe*, but that at last they usurped the tithe also. It is pretty certain that, with the present constitution of the human race, whenever a priesthood should get possession of sovereign power in a large and powerful state, the almost necessary consequence would be the separation from it of a new order of priesthood. The priests would become kings, and take with them the tithes, the right of the soil of the lands, granting to the officiating priests and temples, from time to time, portions for their support—they themselves every day more and more merging the character of priests in that of kings. Thus the Mogul, though not even professing the Hindoo religion, is looked up to as Lord paramount by the princes of India of the Brahmin religion. Thus, again, the Grand Seignior, who is descended from the Khans of Tartary, is looked up to by the little sovereigns of all the Mohamedan States who are not followers of Ali, as the Lord paramount and ecclesiastical head of the world. I consider the fact of the Hindoo princes of India soliciting investiture from the Great Mogul, as, in a very peculiar manner, supporting my theory—affording circumstantial evidence to its truth. Every thing tends to confirm the suspicion formerly expressed, (*supra*, p. 344,) that the mythos actually caused several conquerors to arise. For example, Cyrus, 600 years B. C.; Alexander at the entrance of the sun into Aries; Cæsar at the commencement of the ninth seculum; Gregory the Great; Mohamed; Gengis Khan; Attila; Akbar; and perhaps Napoleon—about the year 1800, the fourth sæculum from Christ. Amidst the inextricable confusion of Mr. Niebuhr's work, arising from his ignorance of the principle upon which the modern or republican disposition of the Roman lands was made, viz. the decay of an ancient system and the rise of something like a new system from its ruins, it does clearly appear, that a considerable part of the discontent of the people arose from the refusal of the Roman nobles to pay the tithe for the lands which, in fact, they had usurped.¹ It is very extraordinary that Niebuhr has filled many pages—several chapters—with a description of the unaccountable variety and complication of the constitutions of the Roman and Grecian states, in the course of which, he constantly exhibits his ignorance of the Roman and Grecian writers; but never, in any instance that I remember, does he attempt, on any rational ground, to account for this state of things. About the mythos, we have plenty of observations; and now and then a reflection on the amphictyons or the kingdom of Saturnia: but never does he attempt to examine what these may have been. Here he would have found, in the falling to pieces of the old polity, the reason of the difficulties which he meets with. South America is exhibiting something very like the state of Italy and Greece after the Pontifical kingdom went to ruin. The constitutions of France and Britain are something like the constitution of Rome: their origins are sought after by the antiquarians, but sought after with little success. They would succeed better if they went back to the Pontifical kingdom, and to the builders of Stonehenge and Carnac. It is surprising that Mr. Niebuhr was not led to the discovery of the Pontifical kingdom, when he was induced to observe, that the king had the sole power of convoking the senate and the people, and of proposing measures to them: that he had the absolute command of the army, and that he alone *could make a sacrifice for the nation*.² In an observation which he afterward makes, (p. 339,) that the Pontifical law and the Augurs were independent of the king, we have an example of a priest grown into a king beginning to lose his pontifical character, and the priests beginning to set up a power independent of him—to separate themselves from him. From the account given in p. 340, Vol. I. of Niebuhr's work, it appears that the Romans had a *lex non scripta* precisely as we have: the conditions or regulations of which were known only from adjudged cases, in old obsolete books of the priests, probably books not written for the sake of conveying legal information, but merely for the sake of the

¹ Hist. of Rome, Vol. II. pp. 164, 165. Thirlwall's Ed.

² Ib. Vol. I. p. 338.

mythos ; similar, he observes, to the practice of the Eastern nations, and particularly the Jews, as exemplified in Numbers xxxvi.[?] I have little doubt that the Mohamedans have the same system ; and when our travellers say they are ruled by the Koran alone, they are led to this by seeing no other written code. I do not doubt that the Koran always so far rules, that nothing is held to be law which is against its doctrines.¹ It is quite clear that the Jews had a *lex non scripta* before Moses partly composed, partly compiled, the Pentateuch ; and because many of the sect in North and South India, Mexico, &c., who have not the Pentateuch, have part of the same laws as the Western Jews, I am satisfied the latter were only their old laws put into writing by Moses. Mr. Niebuhr's history is the only one which I know possessing the shadow of a probability of any thing like truth, and with him, in many of his conclusions, I cannot agree. His work is rather a *critical dissertation* than a *history*, a sort of thing which must either, really or mentally, have been produced by every historian before he put down in order the results of his speculations. But when we have, as is commonly the case with historians, nothing but the results, without the power of judging of the reasoning by which they are produced, we can expect only what we find, on examination, a tissue of falsities and contradictions. A great fault of all ancient historians is, that they never consider sufficiently the state of affairs which they find as an effect of some previous cause ; yet the cause must be well understood before they can have any chance of understanding the true character of the people of whom they treat, and the nature of their institutions. Without a pretty correct knowledge of these particulars they must always remain in the dark. This imperfect knowledge, added to the almost universal practice (even Gibbon is no exception) of receiving unconditionally the evidence of partisans or of opponents, has made all history worse than a riddle.

2. Although we know very little of the internal economy of the Chinese empire, yet enough transpires from the persons who have written respecting it, to shew a high probability, that the universal feudal system and the payment of tithe prevailed there, as in other countries. As in all other countries the system has undergone great changes, so it has in China ; but remains of the original may be perceived. The Rev. David Collie, principal of the College at Malacca, in a note on his translation of the Shang Mung, p. 75, has stated, that by the *Kung* plan in China, an average of several years' produce was taken, and the *tenth* part of that average was fixed as the permanent tax on the land. He then describes several alterations ; that, at one time, a *ninth* was taken, that in some instances a portion of land was set out for the government, which was tilled by the farmers as a rent, for the eight or nine other parts, which they occupied. In some cases he states the land to be cultivated by companies who paid the *tenth* of the produce to government. Here, I think, the remains of the ancient Patriarchate are evident. I frequently suspect that the Chinese empire was the seat of the first patriarchal government—the *Officina Gentium*. It must have been either in China or in the country of the thousand cities of Strabo, in North India, nearly all of which have now disappeared. In the Chinese empire there is nothing of the nature of Knights' fees or of the Indian jagheers. This is what we might expect from the well-known unchanged state of that empire. It yet continues, with its Pontiff at its head, less changed than any state in the world. This is the state of the patriarchal government of China. And it was, probably, for the purpose of his receiving the payments in gross produce, that the wonderful canals were formed, which bring such immense tribute in fruits of the earth to the Emperor. I have no doubt that the Chinese exhibit the remains of the first patriarchal government, almost in every thing. We have

¹ I strongly suspect that the doctrine of predestination, held by the Mohamedans, had its origin in the doctrine of the *renewal* or *regeneration* of every thing in *cycles*. It is clearly subversive of *free will*.

in many nations examples of great works raised to gratify the foolish vanity or the idle superstition of man; but where, except in China, have we ever seen works executed by government for the encouragement of commerce, or for the promotion of human happiness? I fear, however, that even in China the canals were formed for the merely selfish purpose of receiving the tributes in kind, before money was in use.

3. I think there is every reason to believe that Mohamed considered himself to be the *tenth Avatar* or the *divine incarnation* of the *tenth age*. I now address myself to philosophers, and not to Paulite devotees. We must not forget that if he were merely a hypocrite, he deceived his wife, his slave, and the first four Califs—not weak men like the followers of Brothers, Whitfield, Wesley, and Southcote—but men of the greatest talent, who conquered and ruled a great part of the world with consummate skill. But how did these men live? Not in splendour, but in comparative poverty; walking on foot to the Mosque, without pomp or retinue, like the other citizens of Medina, and themselves performing, chaunting,¹ every day the simple service to the Deity required by the Mohamedan law. The simplicity of life, and the total neglect of every thing like personal gratification, exhibited by the first Califs, persuade me that they believed themselves the *locum tenentes* of a divinely inspired, or divinely commissioned, person. What should induce all these FOUR men in succession, in the possession of immense wealth, and in the command of large armies and of the finest empire on which the sun ever shone, to affect, and really to practise, extreme moderation, if not poverty? But they went farther, and by the establishment of the Ashera—that is, the restoration of their empire to the simple payment of the tenth of the produce, rents and all other taxes and Roman exactions being abandoned—they proved themselves a blessing to the whole of their world, which, from a state of great misery, they restored to great prosperity, and, as far as was in their power, to the happiness it had enjoyed under the rule of the first Hierarchy, in the golden age. Every thing tends to prove that their conduct was an attempt to return to that primeval state. Each Calif thought himself the successor of Adam and Noah, and the brilliant victories of their generals confirmed the delusion. I have little doubt that the belief, that Mohamed was the Vicar of God, ensured his victories much more than the sword; and it was this moderation in regard to taxation which secured his conquests. The armies of the Prophet, like all other armies, pillaged their conquered enemies in the moment of victory; but submission made and the sword sheathed, there was an end of oppression: peace succeeded to ceaseless civil war, and the tenth of the produce of the soil was substituted for endless and ruinous taxes, which the conquered countries had been subjected to under their former governors. This was the state of the dominions of the first Califs, which lasted long enough to amalgamate their heterogeneous collection of materials into an uniform mass. The tenths, without any oppression of the people, enabled their later Califs, the patrons of arts, science, and literature, to support large armies and a regal state in the greatest splendour.² This favourable state of things continued for five or six hundred years, till the Turkish barbarians arrived from the North, from Tartary, and overthrew it—once more plunging their fine countries into barbarism and misery. Every thing tends to shew that the first four Califs believed that they were destined to restore the *golden age*. With Othman, the third, this opinion probably began to die away. A very sensible and important article is given in the Foreign Quarterly Review, No. XXIII. July 1833, on Mohamed and Mohamedism. The

¹ Ockley.

² It appears that, in Spain, when the Christians surrendered to the Moors, they were required to pay only a *tenth* of the produce; but when the cities were taken by storm, a *fifth* was demanded. It is evident, however, that even under this imposition, as it was all that was demanded from the cultivator of the ground, he could not be much oppressed. Thus the Christian monasteries increased under the Moorish sway. Cobbett, Vol. LXXV. No. XIV. p. 879.

author has come nearer to the truth than any person who has treated on this subject. But he has, in a very surprising manner, omitted the notice of several hitherto extraordinary and unaccountable facts, which, in estimating the character of Mohamed, cannot reasonably be passed over. He never notices the fact, that the Koran, as it is admitted, was made up after his death, in a moment of confusion and civil strife, partly from papers in a state of rotteness, and partly from the *memoirs* of his followers; and that, twenty-two years afterwards, it was again made up or redacted by Othman. Thus it can be called no better than a forgery. But the learned Reviewer admits, that it contains evident marks of two religions, which he divides between the time previous to the flight to Medina, and the time posterior to that flight, while I think he ought to have allotted the first to the true Koran of Mohamed and the first four Califs—commanding, as I have stated above, immense armies, but walking on foot to the mosque, to chaunt the praises of God, in such simple ceremonies as might be expected from an “eclectic reformer: a reformer in the truest sense of “that abused term.”¹ The Reviewer says, “the Koran contains two very distinct religions: the “first, a system of pure theism, as perfect as the age could produce, inculcating severe morals and “stoical submission. . . . The second teaches a sanguinary propagandism.” Here we have the Koran of Mohamed and the first four sincere and zealous patriarchs, and the Koran of the conquering and magnificent Saracens—puffed up with pride and vanity. The Koran of the eclectic philosopher was not likely to suit the conquerors of Asia. A new one must be grafted on the old, to find a justification for their enormities. I must make another observation upon the Reviewer’s rather unfair description of the vision of the passage on the Borak, or flash of lightning, through the seven heavens, to the throne of God. As Mohamed passes along the several heavens, the different patriarchs request him to intercede with God for them; but when he comes to that nearest the throne, where Jesus Christ was placed, the scene changes, and Mohamed begs Jesus to intercede for him—hereby, in a very marked manner, placing Jesus Christ above himself, and declaring himself a Christian. This is in perfect accordance with the Mohamedan doctrine—that through the excessive depravity of man, the mission of Jesus—of love—of peace—of benevolence—having failed, a strong one—that of the sword—must follow.

Most assuredly, in the sixth century, nothing could be further from success as a mission of peace, than the mission of Jesus. It is quite inconceivable into what a state the whole eastern world had then fallen. One of the great causes of the rapid success of Mohamedism was the bringing into one body of peace all the jarring elements of that period. I shall be reminded of the accounts, in the Koran, of Mohamed’s violation of his own laws of morality with respect to women. But when was there ever great and unexpected success without its being attended with a species of intoxication? Mohamed was just as liable to this failing as other men. But this does not make him an impostor. To have obviated the ill effects of these errors of conduct in the minds of the first four califs, &c., there must have been something very interesting in the character of Mohamed, if, indeed, the stories were not foisted into the *second* Koran to palliate some later Saracen outrage by the prophet’s example. But the stories might probably be true. They are in character with what we know of the human animal from experience. Whether we attribute the second Koran to a change in Mohamed, or to the knavery of the later Saracens, to justify the conquest of the world, they are both in character, and may be, in part, both true. The Reviewer, (p. 204,) says, “We “have already said that the Koran contains two distinct religions, the one containing the germs of “*purity* and *illumination*, the other fraught with maxims of bigotry and intolerance.” I doubt it not. One was the religion of Mohamed the Sophee, the follower of divine wisdom, (treated on at

¹ Foreign Quarterly Review, p. 196.

large by me, in Vol. I. pp. 678—685,) the other was, or might be, the doctrine of the conquering Califs. It is very certain that there is no effect without a cause; and it is no way surprising that with such a mind as Napoleon's must have been, he was curious to know what could have been the cause of the wonderful success of Mohamed. It is easily to be pointed out; we will stop a moment to reconsider it. In the first place, Mohamed was believed to be the person promised by Jesus Christ, and also *the promised one* of the Jews. Besides, a great person was believed to have been promised, and was expected about his time by all the higher class of Gentiles, that is, the initiated part of mankind, particularly in the eastern world, who should be the *tenth incarnation*;¹ so that the minds of men were by this means prepared for the reception of him and his doctrines. This conduced to his success. Again his first success was the cause of a second; for success was very reasonably considered to be a proof of the truth of his mission. The next cause was the state of peace and security which was enjoyed by the nations under the Mohamedan sway. It appears that the occupiers of lands paid the Ashera or Zagal,² as it is called by Ockley,³ to the Calif, who was the sole proprietor of the soil, exactly like Julius Cæsar by right of the Sword and of the Book—by the union of the Royal and Sacerdotal power, exactly like the Egyptian Pontiff. Thus, as there were no persons to form a class like that of our gentlemen, the whole country was circumstanced as our country would be if, by an edict, all taxes were abolished and the occupier of every farm was declared the owner of the land he occupied—paying to the government the value of a *tenth* of the produce. In addition to this, every person who did not occupy land paid a poll tax; this was what I think, in the Romish church, was called Peter's pence. It appears that this, in Egypt,⁴ was two ducats a year. What proportion this might bear to a man's labour I know not; but it evidently must have been very small. When these circumstances are taken into account, and the peaceful and happy state of the countries under the Califs is considered, in comparison with the wretched state of the countries governed by the Greek emperors, it does not appear very wonderful that the temptation should have operated to the making of converts. *That* must never be forgotten, in considering these matters, which our priests always contrive to put out of sight, namely, that neither Jew nor Christian was required to give up a single iota of his faith when he turned Mussulman. The Mussulman religion was held to be the *completion of both*—the abolition, or, in fact, the changing, of neither. These were the causes which, at the death of Omar, in the twenty-third year of the Hegira, had given to the Saracens the empire of Arabia, Syria, Assyria, Persia, Egypt, and a considerable part of eastern Africa. These great conquests must have been made in less than fifteen years. After the death of Othman, the Califate became so split into parties that it is extremely difficult, perhaps impossible, to make out any thing that can be received as certainly true. The bigotry and malice of the Christians render every assertion they make *doubtful*: and when they quote a Mohamedan writer they almost always do so, as a contrivance to convict the Mussulmans of some enormity on their own evidence. As the sects of Mohamedans, of one or other of which every writer was a member, had as much hatred for each other as the Christians had for the whole of them, there can be no difficulty in Christians' finding a Mohamedan proof of what they want. And if we apply to any of the most respectable of the early historians, and consider them exempt from the failing of prejudice, it is impossible to avoid seeing that they have composed their

¹ See Vol. I. pp. 187—190, and 678—680.

² I suspect that the word Zagal is only il-saca, *THE Saca*, which is formed by the regimen—the payment or the right of Saca, become *the Saca*.

³ Vol. I. p. 12.

⁴ Ockley.

histories without taking the circumstances above detailed into consideration, and without the exercise of any thing like critical acumen. Suppose an Arabian author was to write the history of Europe; would he want materials to blacken the Popes, if he went for his facts to Luther or Calvin? But he could say, See what is admitted by Christian historians themselves! Thus Christians and Mohamedans were equally liable to misrepresentation. In both cases, when there was a lack of true enormities, which I fear seldom happened, there was no lack of falsities. Before the precious metals were known, and afterward, while gold, as it was in Mexico and Peru, was the only metal and coin not invented, the Supreme Pontiff could receive very little or no profit from distant possessions: the offerings must have been like those we read of, as being sent by the Druids of Britain to the temple of Apollo, at Delos, wrapped in wheat-straw. By degrees, this sort of homage would die away, or nearly so. This is the case with respect to Mohamedism. The Deys of Egypt, Tunis, Algiers, &c., all admit the Grand Seignior's or the Sultan's supremacy; and he, as the superior Lord, claims, though he does not receive, the *tenth* of the produce. But he does receive an acknowledgment. The country in the vicinity of the residence of the Pontiff, I doubt not, paid its tithes to him, and he consumed them. But as the tithes must have been in the form of perishable produce, they could be consumed in distant places by the initiated only who resided there, and who thus became the priests of every country—all appointed, originally, by the Supreme Lord. We constantly read accounts of most powerful Pashas submitting, without the slightest murmur or resistance, to an unarmed messenger, with the bow-string, when carrying the Grand Seignior's firman. This is the exact counterpart of the Egyptian High-priest's authority, spoken of in p. 366. It is precisely the same mythos—brought from Tartary. I believe the Grand Seignior claims the whole world, not as *king*, but as *Pontiff Seignior*, as a Divine incarnation; and all who do not acknowledge his authority, are rebels. On this account, I believe, he never makes a *peace*—only a *long truce*. A peace is a contract between equals: conceiving he has no *equal*, the Grand Seignior cannot submit to make a peace. It is perfectly clear that the Emperor of Germany always claimed the supreme power, and considered all the other kings of Europe, and I do not doubt of the world, as his vassals, in the same manner as Cæsar and Augustus did. He claimed superiority over the Pope, and the Pope claimed it over him. The Emperor of Russia maintains the same claim. These do not profess to be claims of *force* so much as of *right*. They claim as uniting in their persons both the right of priest and king—the book and the sword—as successors of the Cæsars.

4. I think, obscure as is our view of early Mohamedism, we may see, besides the adoption of the Ashera, other signs which cannot be mistaken, of an attempt to return to the primeval patriarchal government. In the Imams of Persia we have the 12 Lucumones; in the 72 Ansâr or Helpers, who assisted the prophet on his arrival at Medina, I think we have the 72 of the Jewish Sanhedrim, the Amphictyons of Greece, and the Cardinales of Rome; and in the three Mohajee or Movers, who accompanied him when he fled from Mecca, we have the three sons of Adam and Noah, the three Flamens of Rome, and the three Patriarchs of Antioch, Alexandria, and Rome—imitators of the division of the kingdom of Saturn—and the three Archflamens or Archiepiscopates of Britain. It seems probable that an Hierarch should have been appointed for each district or nation, as conveniently marked out by natural boundaries, with priests in various departments under him, who would receive the tithes and convert them to their own use, and change them into money, as soon as money was invented. This Hierarch would follow the footsteps of his Superior; and, by degrees, would claim and acquire the rights and privileges of Archierarch—the distant Lord, by degrees, as national intercourse became interrupted, might be lost sight of, and at last be forgotten altogether. When money was once invented, new questions would arise, and the Lucumones or Patricians, having been in the enjoyment of the produce before the invention of money, would

very naturally wish, and claim, to keep it ; but still they would not desire to throw off all allegiance to their Spiritual Father, who, at last, by desiring more than he had been used to receive, would cause the ruin of the system. Thus, by degrees, as even the knowledge of a very distant Lord faded away, the Hierarchs of kingdoms would grow into Archierarchs ; and, in many cases, the character of Pontiff would be lost in that of King—priest and king—like Melchizedek. I think, from the Jewish Sanhedrim and their tribes ; from the twelve Lucumones of the Etruscans ; and from several other institutions and circumstances before treated of, which my reader must remember, it seems probable, that a powerful body and a well-organised system originally prevailed over the whole world. The uniform character of the gigantic circular temples shews this ; they cannot be accounted for without something of the kind ; and this powerful body must have had *immense funds* in money, or other means at its command, or it could never have erected those stupendous edifices. Mr. Niebuhr justly observes, “the drains from the Lake Copias, cut through “thirty stadia of solid rock, and the cleaning out of which surpassed the strength of the Bœotians, “in the time of Alexander, were assuredly the work of a people antecedent to the Greeks.”¹ Here Mr. Niebuhr stops : not the slightest attempt does he make to ascertain who those people were. Similar works may be found in the temples of Pæstum² and the Gallery of Pausilippi. I think that there was in all countries a Pontifex, a cabinet of 12, and a counsel of 72 Cardones or Cardinales, divided among the districts, each superintending one of them. We have this division already marked in Genesis. In the appointment of an Hierarch, the Cabinet would, at first, *recommend* to the Archierarch ; at last they would *elect* ; and of course the choice would generally be one from their own number. It is easy to imagine how all this would arise. By degrees, the 72 would begin to wish to have a voice in the election ; and, after a time, the people occupying the lands and rendering the different feudal returns, whether they were in money or in services, would put in a claim. Of all this we see evident traces in Italy, Greece, and India. The process which I have here described, took place, I have no doubt, all over the Pandæan kingdom : but as the change arose from circumstances, it is also quite clear that it would occur in no two places in *exactly* the same manner. I have no doubt that the Cardinales and the Decumanni were attached in some way to the collection of the tithes, the Decumanni, particularly, as their name seems to imply—perhaps men of *the tenths* or *tithes*, the operatives under the Cardinales. All the receivers of the tenths were at first priests or initiated. By degrees, those only, who exercised the functions which arose and became the rites and ceremonies of the religion, would be, strictly speaking, *priests*. But the others would form a privileged or sacred caste—a caste more or less marked in different places, and more or less divided from the general mass of tithe takers, according to circumstances. It is not unlikely that these functionaries were monks, and that monks became, after a time, the sole and proper priests. In the sect of the Paulites we have a pretty clear account how its establishment arose—evidently in imitation of the Essenes of Egypt. It imitated the other old system, as closely as it could ; but it did not unite with its advocates till several centuries had elapsed. Its early separation, its ultimate union with the monks, are well marked.

5. In Volume I. p. 700, I observed, that Mr. Von Hammer was attempting a history of the Assassins, and that he had every qualification for the task, with the exception of *an enlarged and unprejudiced mind*. He has, since that time, completed the work, and has shewn that I formed a just estimate of his character. His work is, in fact, one great untruth, founded on one great mis-

¹ Roman History, Vol. I. pp. 119, 120. Walter's Ed.

² See Vol. I. pp. 432, 433, 563, 586, 777, and especially p. 625 on Niebuhr's silence on the builders of the *Cyclo-pæan wall* found under the ruins of the Colosseum. Ed.

take. He commences his inquiry with a thorough conviction that the objects of it, namely, the Assassins, were the most detestable of monsters; and, actuated by this opinion, he is blind to every thing in their favour, tortures the most insignificant and indifferent things to their prejudice, and not seldom sees proofs of guilt in parts of their character or history where any impartial person would see proofs of merit. Though I do not charge him with having wilfully stated a fact which is without foundation, yet the whole is really a misrepresentation. His history came into my possession at the moment the printer was finishing the Appendix to my first volume. It is a very able performance: and, as is usual with histories of this kind, under his skilful management there appear to be few or no difficulties in it; all is simple, plain, and detestable—a mass of straightforward, pure, unadulterated wickedness. These people are said to have first appeared about the year 1086, and existed till finally destroyed by Houlakou, the third successor of Gengis, the Khan of Tartary, in A. H. 654, i. e. A. D. 1256, a period of about 170 years.¹ It appears from Mr. Hammer's account, that the same general expectation of the end of the world prevailed in Asia, in the twelfth and thirteenth centuries, that prevailed in Europe, and caused the Crusades, as I have formerly described; thus, in a very satisfactory manner, supporting the truth of my ideas on that subject. If my theory were true, the same sentiment would prevail in both, about the same time. It appears, I think, first to have been expected in A. H. 489, i. e. A. D. 1095, on the conjunction of the planets, that year, in Pisces; and again in A. H. 582, i. e. A. D. 1186, on their conjunction in Libra.² This expected catastrophe was evidently attributed to an anticipated unfortunate collision of the planetary bodies. And I think we may readily suppose that the ancient belief in the collision of a Comet and the Earth may have given way to a belief that the mischief was to be caused, in some way, by a collision of the planets. Learned as the great Astronomer Naszireddin de Thous was, he might not know that the Comet of 1680 was to appear in 1106. But after it had appeared without any accompanying catastrophe, the general belief, the origin of which might be unknown, would settle itself upon the planets. It is certainly a very extraordinary circumstance that we should find this great astronomer, when basking in royal favour at the court of the Calif, and abounding in wealth, played the traitor both to the Ishmaelites and to the Calif; and, in fact, succeeded in delivering them both into the hand of the Khan of Tartary. I think this can be attributed to nothing but a religious motive. He exhibits a perfect picture of a renewed Daniel, for he appears, after the fall of his first master, to have been soon after a great favourite at the court of the Khan, the successor of the Calif, employed in making catalogues of the stars, and in doing other things for the good of mankind. I think it is not impossible, that the founder of the sect of the Ishmaelites, as Hassan Sabah became, may have been the last descendant in the right line or elder branch of Fatima, the favourite daughter of Mohamed.³ Such he was, or such he claimed to be. The particulars of the journey of Hassan Sabah from the court of Seldjoukide, Sultan Melekshâh, to Reï,⁴ and at last to Ispahan, and his dialogue with his host, Aboulfasl, where he is represented to offer his opinion to him, that, if he had only two friends,⁵ he could overthrow the Caliphate, may be all substantially true; but yet it is so represented as to be substantially untrue. I believe the story wants the addition, that the reason why he thought, if he had

³ In the various claims to power, founded on hereditary and feudal rights, we may see the reason for the attachment of all the ancients of the East to the preservation of their pedigrees.

⁴ Hammer, pp. 70, 72.

⁵ "Que s'il avait seulement deux amis fidèles et dévoués, il aurait bientôt renversé la puissance de ce Turc et de ce paysan." (*Ib.* p. 72.)

two friends, he could overthrow the Califate, was to be found in the moral influence which he would possess over the minds of the people of Asia, by making known the truth that he was the *lineal descendant of the prophet*, and the last real Imam. If this were the fact, or the true statement of the case, it is perfectly clear, that in either case it is a truth which would be most studiously concealed by every one of those who have written respecting him and his followers. I believe the Templars were Assassins, because they were Sophees. In the spread or dissemination of the Sopheistic doctrines is the reason why the Assassins are every where to be found. Here is the reason why what appear to be emissaries from the Assassin chief are found every where, in every country. Whether really connected with them or not, every Sophee would have the appearance of being one of them—and every Sophee would be their well-wisher, and would, at any time, be very easily brought into their pale. Every Assassin might be a Sophee, though every Sophee might not be an Assassin. Here we have the reason of the great moral influence which they acquired, and of the constant assemblage in the Eagle's Nest of all the great and celebrated philosophers, astronomers, and literati of the world. How is it possible to believe, for a moment, the representation of Mr. Hammer, that they were a band of miscreants, so bad as to be totally void of all good; and, at the same time, to believe, that they should be sought after even in their den by the great and good of all countries? It does not appear to me that they claimed to be the eldest of the lines or representatives of the eldest of the descendants of Noah, but to have ceded that rank to the rulers at Caracorum; and this is the reason why they were not destroyed by Gengis Khan, who evidently claimed to hold his power as vicegerent or vicar of the Khan of Caracorum, from him from whom he received investiture into his dominions after he had first won them by the sword. He knew the value of the moral power, though our people (in relation to the great Mogul) cannot be made to see it. By the investiture with the Pallium, as Elijah invested Elisha, or else by the *χειροτονια*, as Moses invested Aaron, he received power from the rightful possessor of all power at Caracorum, and in return he did suit and service to him for his dominions.¹ To Gengis I think there can be no doubt that the Calif at Bagdad paid tribute and did homage. The feudal system shews itself, unconsciously to Mr. Hammer, in several places. I think there can be no doubt that both the Calif and the Chief of the Assassins agreed in the first instance to pay tribute to Gengis Khan. Mr. Hammer says, "Le renversement du Khalifat n'entraîna point, à proprement parler, dans les projets du Khan. Les ordres qu'il avait transmis à son frère Houlakou en sont une preuve: il lui avait prescrit de ne demander au Khalife que sa soumission, et des troupes auxiliaires."² Here the Feudal principle shews itself in correct practice; and though we do not read any account of it in Mr. Hammer's pages, we may be very certain that the numerous castles of *the man of the mountain* would not have been left in peace by Gengis had he not done his suit and service; and it was the refusal of this redition, under the traitorous advice of Naszireddin de Thous, which probably brought on the ruin both of Bagdad and Almat or Almont.

I think the great point of the heresy of the Templars may be found in their secretly holding the Pope to be only the representative of Shem, while they admitted that Japhet or the Caracorum gentleman was the Lord Paramount. The Manichæans certainly denied the Supremacy of the Pope, and the Templars were most assuredly Manichæans. This accounts for their Christianity,

¹ I learn from Mr. Briggs, our Consul at Alexandria, that the present Pasha of Egypt (April 1833) claims to hold his dominions not from the Sultan, but from the Sheriff of Mecca, who is in no higher a station than that of a private gentleman. But he derives his descent from the Prophet. It is quite out of all question, I think, to suppose that the person at Caracorum can pretend to have any power from Mohamed, and if I be right in this, of course we have no where else to go for it than to Japhet.

² Hammer, p. 284; see also pp. 294, 301, 302.

and for a certain degree of submission to the Pope; for he was their immediate Lord—but the Lord of Caracorum was their Lord Paramount. When I find the house of Fatima ruling in Egypt, and always consisting of Ishmaelites, I am sometimes induced to suspect that there was a claim set up by them on the part of Ham. Of this we hear nothing, for the same reason that we hear almost nothing of the system any where—that is, because none of the despots can now establish a claim to it, which makes them all put it out of sight; for, to bring it forwards, would only shew that though *they* had no right divine, yet some one else might have it. The letter of the Old Man of the Mountain, or Le Vieux, to Leopold, Duke of Austria, extracted from Rymer,¹ though determined by Mr. Hammer to be spurious, contains, I think, evident marks of genuineness. I think had the Ishmaelites not really had the æra from Alexander, which we find in that letter, it would not have been there.² I think no Mohamedan, no Christian, forging that letter in the eleventh century, would have thought of such a thing. Certainly such an æra may have been common in Asia, though unknown to us, for we are really suprisingly ignorant, and so we shall always remain, unless we can lay aside some of our narrow-minded prejudices. We may see from this admitted æra why Philip, the king or emperor of Macedonia or Scythia, sought to be acknowledged by the Amphictyons, and why, before his son marched to attack the descendants of Shem, he received his appointment, or at least was acknowledged as Lord, or Sovereign, (as we know he certainly was,) over Greece, and probably over the remainder of the dominions of Japhet; and also, probably, as Lord Paramount over the dominions of Shem and Ham, which he soon after conquered. We are greatly too much given to attribute the attempts at universal dominion of the ancient conquerors to avarice or ambition. No doubt these vices acted most powerfully; but there was always, at the bottom, a *claim* and generally a *belief* too in a right. They generally had the moral as well as the physical power with them, or they endeavoured to have it.

Every thing relating to these matters is put out of sight as much as possible by both Christians and Mohamedans, because now, in Europe at least, it all operates against the right divine of reigning despots and the priests. Mr. Hammer admits, (p. 3,) that the organisation of the society of Ishmaelites can be compared to no other of the secret associations of *brigands* or *pirates* which have preceded or followed it. “L’histoire de ces dernières ne nous présente que de “malheureux essais ou d’infructueuses imitations.” The reason why the society of the Ishmaelites can be compared to no other society of brigands or pirates is, because it was not in *any respect* like a company of brigands or pirates. No doubt, like all other societies, it had faults, and great faults, and, like them all, committed great crimes; but this admission will not go the length to justify Mr. Hammer’s description. His zeal against modern secret societies has made him mistake the character of those of the ancients altogether. I have little doubt that the society was not called Assassin from being a *murderous* one, but that a murderer was called from it an Assassin. The proper meaning of the word I have given in Volume I. p. 723. The accounts of them were, as we might expect, before they were taken in hand by Mr. Hammer, incomplete—“Ces détails si incomplets par eux-mêmes, nous ont-ils été transmis *sans suite, sans ordre, sans aucune vue claire et précise.*” In my first volume (*ut supra*) I have described them as Chasdim or Chaldeans descending from a very early period. In one sense I am quite correct; but they probably did not assume that character which entitled them to the name of Ishmaelites till the time of the Imam Ismaël, the son of Dschafer.³ It was certainly a very remarkable accident, if it were an accident, that the Califate should become divided into three empires. The family of Ommia reigned

¹ Given in Hammer, pp. 345, 346.

² See *supra*, pp. 347, 348.

³ Hammer, p. 9.

at Granada, in Spain; the family of Abbas, at Bagdad, on the banks of the Tigris; and that of Fatima, at Cairo, on the Nile.¹ Here we have the three divisions of Shem, Ham, and Japhet—Europe, Asia, and Africa. “Aujourd’hui encore, les princes des familles de Katschar et d’Osman occupent avec le même titre les trônes de Téhéran et de Stamboul; les droits de ces derniers à un pareil titre sont légitimes, car, après la conquête de l’Egypte par Selim, les insignes du Kalifat, l’épée, le glaive et le manteau du prophète, qui jusqu’alors se gardaient au Caire, furent confiés à la garde de saintes villes de la Mecque, où il naquit, et de Médine, où était son tombeau. C’est pour cela qu’ils s’appellent gardiens des deux saintes villes. Padischah et Schah, empereur et roi, Sultan-al-berrein et Khakan-albahrein, sont des mots qui signifient dominateurs et seigneurs de deux parties du monde et de deux mers: ils pourraient aussi facilement se dire les *protecteurs de trois saintes villes*, les maîtres de trois parties du monde, et les dominateurs de trois mers, car Jérusalem, le Mecque et Médine sont en leur possession. Ils commandent en Europe, en Asie, et en Afrique: enfin, la mer Noire, la mer Rouge, et la mer Blanche, baignent des contrées soumises à leur pouvoir.”² Where the account above does not exactly dovetail into my system, I cannot help attributing the discrepancy to Mr. Hammer’s ignorance of the system, and I suspect that when the Pope caused the Mohamedan confession of faith to be placed on the chair of St. Peter, he was preparing Rome to become again one of the three holy cities. Hannibal had shewn that a march from Granada to Rome was not impossible. There is no doubt that Jerusalem, Mecca, and Medina, were considered holy; but when I recollect the circumstances which I have adduced in my first volume to shew that Mohamed wished to restore the world to its primeval patriarchal state, I cannot help suspecting that the capitals of the three quarters of the world were originally called THE sacred cities. When the attempt to restore the system failed, and the system became nearly forgotten, the Mohamedans having failed in conquering the *whole* world, the three cities of Asia might come to be substituted for the others. I cannot help considering the division into three, and into seventy-two sects, with the seventy-two helpers, and twelve advisers of Mohamed, and twelve Imams, to be similar to the Triumvirate of Rome, the twelve Cæsars, and the seventy-two free towns. These are odd *accidental* coincidences.³ I believe that the Ishmaelites were correctly the followers of Ham, and that is the reason we find them among the Fatémites of Egypt, who were all Ishmaelites. The Persians are the followers of Shem, and the Turks of Japhet. How the three connected themselves, whether in some way by descent or by the imposition of hands, with the three ancient patriarchs, I do not know; but the coincidence of circumstances is much too complicated to have been the effect of accident. The Ishmaelites were at war with the Califs and the Christians, because they both usurped a part of their dominions. Both Syria and Egypt were the domain of Ham; and the story of the uncovering of the patriarch by Ham, as indeed the book almost says, was invented to palliate or justify the usurpation or superiority of the other brothers. How the different Califs of Cairo, Bagdad, and Granada, made out their claims is very uncertain; but it appears that, in A. H. 402, and A. D. 1011, a great meeting was held at Bagdad, when the claims of the Fatémites to the Califate were declared to be null and void. “Sous le règne du Khalife Kadir-Billah, tous les légistes tinrent à Bagdad une assemblée *SECRETÈ*, dans laquelle les plus célèbres d’entre eux déclarèrent que les prétensions des Fatémites au Khalifat étaient nulles et sans fondement, et qu’il n’y avait rien de vrai dans ce qu’ils allé-

¹ Hammer on Assassins, pp. 21, 22.

² Ibid. p. 22.

³ No doubt it will be said, that these numbers might be adopted from the same kind of unmeaning custom which makes us talk of *scores* and *dozens*; or, if we have a large number to name, to say a *hundred*, instead of ninety-six or ninety-seven or one hundred and one. The probability of this will depend on collateral circumstances, and must be left to the reader’s decision. I believe that our habit of talking of, and in preference adopting, such numbers, has descended to us from the microcosmic superstition, the nature of which is now forgotten.

“guaient sur leur descendance.”¹ Here I think we may see why, in the mouths of the other two divisions, from whom alone we have the history, the Ishmaelites were Assassins. If we had the Ishmaelian account, although the others would not be called Assassins, Chasdim, or Chaldæans, they would be called robbers. Here, in the secrecy of the meeting, the true character of the whole shews itself—escapes out of the crypt—to our view. What could be the reason for keeping secret this meeting held in Bagdad, the capital city of the enemies of the Ishmaelians or Fatémites? The circumstance of secrecy here is in perfect keeping with what I have maintained throughout the whole of my work, that there were originally an esoteric and an exoteric system.

I very much suspect that Mohamed, before he died, pretended to divide the world into three parts, or that his followers pretended that he had divided it anew, and that this was done in consequence of the lines of Ham and Japhet having failed, and that therefore he had made a new division, as survivor of the eldest line, through the son of Abraham, by the *princess* Hagar. We must not forget that the Mohamedans maintain, that Hagar was not a *slave*, but a *princess*. We make her a slave to obviate Mohamed's claim. In Mr. Hammer's attempt to clear up the claims of the descendants of Mohamed to the Califate I see nothing but disputes and confusion. In the *secret* meetings, or the meetings charged with *secrecy* or *secret objects*, of great bodies of delegates from all parts of Asia, I confess I can see nothing but men meeting to bolster up the divine claim of the person calling them together. But still, it is observable that the object *was* secret. Why was it secret, if the whole system was not a secret one? It looks very like an acknowledgment of the different despots, that a real right existed somewhere, but each of them fearing that he should not be able to make out his own claim. The whole object of Mr. Hammer's work is to shew, from the example of the Assassins, the danger or the mischiefs which must arise to society from *secret* societies; in short, that secret societies must necessarily be leagued against the welfare of mankind. And, in the original distribution of mankind into the professors of an *esoteric* and *exoteric* religion, he is perfectly right; but it by no means follows that those societies which were formed upon, or arose from the ruins of, the ancient system, can be so considered. It was the possession of secret doctrines which makes Mr. Hammer angry, and he is angry because he cannot help seeing, that in this very society was the origin of the Free-Masons, Templars, &c., of Germany, of which he and his master are both afraid. He says, “Hassan “qui jusque-là avait cherché en vain un centre où il pût établir le siège de cette puissance “qu'il rêvait, s'empara enfin de la forteresse d'Alamout, dans la nuit, un mercredi, 6 du “mois de Redscheb, 483 ans après la fuite de Mohammed, 1090 ans après Jésus-Christ, et “sept siècles avant la révolution Française, dont les premiers auteurs furent des membres de “sociétés secrètes, qui, *comme les Ismaïlites, ne voulaient que le renversement des trônes et des “autels.*”² In page 95 he says, “C'est ainsi que, pour atteindre un but presque semblable, les “Pythagoriciens et les Jésuites durent employer les mêmes moyens que les Assassins.” Mr. Hammer represents the kings of Egypt to have been the servile tools, the mere generals, of the Priests, “dont le Lituus, la crosse de nos jours, était le véritable sceptre;” that these priests taught idolatry to the populace, whilst they concealed the true dogmas under hieroglyphics and symbols; that their great secret was the knowledge of a future state; that the popular belief was confined to a terrestrial life, the pretence for which was to prevent the mass of mankind from having their minds diverted from the necessary pursuits of social life by refined and abstruse speculations respecting the future.³ He adds, “Moïse, initié à la politique des prêtres de l'Égypté “et à tous leurs secrets, conserva quelques-unes de leurs sages institutions, et cacha à son peuple “la doctrine de l'immortalité de l'âme; aussi la connaissance en fut-elle en Égypte, réservée d'une

¹ Hammer, p. 34.

² P. 82.

³ Pp. 61, 62.

“manière presque exclusive à la caste des prêtres, du moins nous n’en trouvons aucune trace dans les livres des Hébreux, excepté dans le poëme Arabe de Job, qui encore n’en fait pas partie.”¹ He then goes on to shew, that the great object of the Priesthood was to direct the energies of the people to the good of the state. “Les mystères, véritables bienfaits pour les initiés, n’avaient rien de nuisible pour les profanes. La doctrine occulte du moyen âge de l’Egypte était d’une nature tout opposée: la première ne songeait qu’à affermir le trône et l’autel, la seconde qu’à les renverser.”² La grande différence qui existe entre la construction de l’ancienne Memphis et celle de la nouvelle Kahira peut nous servir de point de comparaison entre la doctrine secrète de l’ancienne *Académie d’Héliopolis* et celle de la *nouvelle Maison des Sciences*.”³ I have no doubt that Mr. Hammer is nearer the truth than he himself is aware of. The same doctrines of the Cabala or the Gnosis I firmly believe were taught in the old and the new academy of Egypt. The ancient philosophers knowing very well that the belief of the truth of a dogma (such, for instance, as that of the Trinitarian nature of the Godhead) can never be meritorious, nor the disbelief of it criminal, were not able to see in what manner speculations on such subjects were to benefit those whose whole time was required to procure the comforts of life. The reasons here assigned seem probable; they are consistent with what we know of the weak and selfish character of man. The Lacuna, in the system of the Hebrews, is beautifully supplied by what I have taught respecting their Cabala. The example of the great Temple of this little mountain-tribe, whose secret books have fortunately reached us, may be considered only as one example of the other great temples of the world. It is very interesting to observe Mr. Hammer lauding the ancients for keeping their fellow-creatures in debasement and ignorance, for the support of the throne and the altar, but reprobating the same system in modern Egypt, because it was not the system of his own sect. Hakem Benrillah, whom Mr. Hammer calls (p. 54) the most stupid of tyrants of whom the history of Islamism speaks, who was the sixth of the Fatémite Califs, about A. D. 1004, established or greatly enlarged the college or lodge at Cairo, called Darol-Hikmet or *the house of wisdom*, which he abundantly provided with books and mathematical instruments, and celebrated professors, and a revenue of 257,000 ducats. In this institution all the sciences were publicly taught, AS WELL AS THOSE OF THE SECRET DOCTRINE, which the Koran was believed to contain. The secret doctrines or mysteries were only taught by degrees, or initiations or gradations from lower to higher ranks. “Dans le sixième, on enseignait que toute législation positivement religieuse devait être subordonnée à la législation générale philosophique. Les doctrines de Platon, d’Aristote, et de Pythagore, étaient citées comme des preuves logiques et fondamentales.”⁴ Mr. Hammer, after this admission, goes on to shew, that the secret doctrines were of the most pernicious kind; but, as they were secret, it is very certain he can know nothing about them, and what he says must be looked on as mere calumnies. The college built at Cairo was (like that at Cambridge, and the Temple church in London) only rebuilt in or about the twelfth century, A. D. 1123. As the society of Assassins and Templars were (I have no doubt) of the same philosophy or religion, the previous existence of the College at Cairo raises a strong ground for belief that they existed, in fact, long before the building of it. It appears that, in the beginning of the twelfth century, *the house of wisdom* at Cairo was destroyed, but soon after restored, though in a new place. This was about the time when the London Temple-church was rebuilt, in a new

¹ Hammer, p. 63.

² In simple English, according to Mr. Hammer, one was to enslave the people, the other to liberate them. But whether the latter deserved this unconscious eulogium may be doubted.

³ Hammer, p. 64.

⁴ P. 58.

place, and I think also when the churches at Cambridge and Northampton must have been rebuilt on their ancient Saxon foundations. This causes me to suspect that about that time there must have been some general persecution of the order and destruction of their buildings; and, perhaps, on its nominal renewal, it may have taken the name of Teutonic or St. John or Templar. These were in fact all the same societies, as much as modern Templars, Rossicrucians, and Masons are; for they are really very little more than different lodges of one order. They have as little variation as could be expected in two long and distantly-separated lodges. Mr. Hammer shews that the Assassins were not a dynasty, but a *confrérie*, an order. "C'était simplement un ordre comme celui des chevaliers de Saint-Jean, des chevaliers Teutoniques ou des Templiers." (P. 90.) Again, "Les Chrétiens et les Infidèles, les ordres chevaleresques et celui des Assassins se conjurèrent en même temps pour renverser l'Islamisme et les princes de cette religion." (P. 103.)

After censuring D'Herbelot and Deguignes for considering the Assassins as a dynasty, Mr. Hammer says, "Tout ne prouve-t-il pas au contraire l'existence d'un ordre? Les Assassins n'ont-ils pas des Prieurs, un Grand-maître, des règlements, une religion spéciale tout comme l'ordre des chevaliers Hospitaliers, celui des chevaliers Teutoniques et des Templiers?" (Pp. 197, 198.) Again, "Nous avons plusieurs fois indiqué les analogies qui existent entre l'ordre des Assassins et d'autres ordres contemporains ou postérieurs: c'est vraisemblablement par l'influence des croisades que l'esprit de l'Orient s'est réfléchi dans celui de l'Occident. L'ordre où ces analogies sont plus frappantes est incontestablement celui des Templiers: leurs statuts occultes, spécialement ceux qui concernent le mépris de la religion positive et l'accroissement de leur domination par la conquête des citadelles et des châteaux forts, paraissent avoir été les mêmes que ceux des Ismaélites. Les Assassins portaient des habits blancs et des bandelettes rouges, les Templiers un manteau blanc et une croix rouge; c'est encore un point de ressemblance très-remarquable." (P. 339.) I have no doubt of the identity of the two orders, and that the Sophee or Gnostic doctrines were the bond of union. While Mr. Hammer (pp. 89, 90) represents the chief of the Assassins to have been neither priest nor king, and only to have taken the title of Scheik or Sage or Old Man of the Mountain, he yet asserts that *he claimed all power*. This is very like what we may perceive of the person at Caracorum, when the puissant Gengis Khan applied to him for inauguration, and is at the present moment claimed by the Sheriff of Mecca, in the dispute between the rulers of Egypt and Constantinople. (April, 1833.) In several places¹ Mr. Hammer distinctly admits, that the secret doctrines of the Ishmaelites existed at Cairo before the existence of the society of the Assassins founded by Hassan Sabah. All that this amounts to is, that he was the first person who got possession of the castle of Alamout or Almont, and of many others in the mountains near the Caspian Sea. Hammer also says, "Le Grand-maître, ses Prieurs et ses missionnaires allaient partout répétant qu'ils voulaient la domination non pour eux ou pour l'avantage de l'ordre, mais au nom de l'Imam invisible, dont ils se disaient les envoyés, et qui paraîtrait à la fin lui-même pour proclamer ses droits à l'empire du monde entier." (P. 143.) Here creeps out the claim of the followers of Ham, the Fatémites, to the first rank, to the archierarchy: and here the doctrine of the Millenium shews itself. It is admitted, (p. 176,) that Hassan, the second, assumed to be the real Imam. But this was, I think, after the failure of the Fatémites of Egypt. But in the order of their historical accounts there is much difficulty. It appears that some of the Assassins were men of high intellect, and that Hassan "assez instruit dans les théories philosophiques, il se croyait l'unique savant de son temps, dans cette branche de connaissances comme dans toutes les autres." Here *the unique savant* alludes to Hassan's

¹ See Hammer, p. 136.

being, in the opinion of his followers, a renewed incarnation of divine wisdom, like the Pope, or the Lama of Tibet. In every part of the history of the Assassins the most devoted fanaticism shews itself—a fanaticism which, if a tenth part of what Mr. Hammer has said be true, never has, perhaps, been exceeded. “*Nous possédons de lui un grand nombre de traités de philosophie et de jurisprudence, mais ce n'est pas le lieu de les citer.*” (It is unfortunate that no place has been found to cite these curious works; but it is a valuable admission that they exist or have existed.) “*Ces études étaient un hommage rendu non-seulement aux institutions du fondateur de l'ordre, qui profondément versé dans les sciences mathématiques et métaphysiques, avait amassé au château d'Alamout*” or Almont “*une précieuse collection de livres et d'instrumens, mais encore à l'esprit de son siècle, pendant le cours duquel la civilisation de la nouvelle Perse atteignit son plus haut degré et la philosophie et la poésie prirent le plus brillant essor. Son règne de 46 ans vit naître et mourir une pléiade de poètes Persans plus illustre que celle des Alexandrins sous les Ptolémées et que celle des poètes Français sous François 1^{er}.*” (Pp. 176, 177.) And yet we are taught to believe that these Assassins, the authors of these fine works, around whom all the worth and talent of the world appear to have been collected in the castle of Alamout or Almont, were a mass of infamy, unmixed with any thing of good. What fools Mr. Hammer takes all his readers to be! The true character of the whole history shews itself in the account of the great meeting of savants which was called in Persia by the Abbassides, against these people, their doctrines, and their claims. But every nerve is strained by Mr. Hammer to persuade his readers, that the whole was a temporal struggle for power, not one of religion or principle. Speaking of the death of a great philosopher, (p. 179,) he says, “*Comme sa doctrine était considérée par le collège des légistes comme philosophique, c'est-à-dire comme athée, chacun pouvait le tuer avec impunité.*” Here we see a probable reason for the assassinations by the Assassins—for I think there can be no doubt that they did commit them in great numbers as reprisals—but that they, with the *aid of fanaticism*, which was wanting to their opponents, who were as guilty as themselves, beat them at the game. It was not mere villany which made seventy thousand Fédawis (pp. 210—212) await the orders of the old man or Imam¹ to throw themselves from the battlements of his castle to shew their devotion to him.² It was fanaticism or religious principle alone which could do this. We are taught to believe that the writers of the fine works above alluded to were the enemies of mankind, though these works were calculated to be generally useful. The whole concludes with a general denunciation of their works, not a refutation of them; and, at last, when they are conquered by the sword of the successors of Japhet from Caracorum, by a general ignition of these works. (P. 239.) Yet it seems some of them have yet escaped; but we must not expect to obtain them through the medium of Mr. Hammer. He says (p. 198), “*Ce qui donne encore à notre opinion plus de force et de probabilité, c'est l'existence des écrits de Raschideddin, qui, jusqu'à ce jour, ont été conservés en Syrie par un reste des Ismaélites.*”³ “*On y voit clairement que l'auteur avait une connaissance étendue des livres sacrés du Christianisme.*” (P. 199.) It appears that the Mogul gave directions to the historian Atamelik Dschowâini to search the libraries of the Ishmaélites at Alamout, and to destroy, in fact, every thing which could make known the truth. “*Il mit à part les Korans et d'autres livres précieux, et livra ensuite aux flammes, non-seulement tous les*

¹ It is a singular thing that the origin and meaning of the word Imam should be totally unknown.

² Whatever was the age of the chief of the Assassins he was always called *old man*. This arises from the mistake in later and ignorant writers in not perceiving that what we call a Sage, did not necessarily mean an *old man*; but only a sage one—a possessor of wisdom. This is the reason why the Buddha of Wales, Ireland, Scotland, and India, is always called Old Man.

³ Extraits d'un livre des Ismaélis par M. Rousseau, tiré du LII cahier des Annales des Voyages.

“ ouvrages philosophiques et impies de l'ordre des Assassins, mais même tous les instrumens qui servaient à l'étude des mathématiques et de l'astronomie.” (P. 278.) After the history of this destruction Mr. Hammer informs us, (p. 279,) that the historian preserved documents from which he formed a short biography of the founder, Hassan-Sabah: “ Cette esquisse a servi à tous les auteurs Persans, entre autres à Mirkhond et à Wassaf, qui ont l'un et l'autre traité ce sujet avec assez de talent, et l'ont souvent mis à profit. *Nous-mêmes, nous avons suivi pas à pas ces deux historiens.*” I think, after this development of the source whence the history of the Assassins is drawn by Mr. Hammer, my reader will not be much surprised at the account which he has seen is given of them. The war between the Calif of Bagdad, the Imam of Alamout and the Emperor of the Mogols, or Schâh of Khowaresm (probably Korasan) is said to have arisen in consequence of a preference given to the standard of the Calif before that of the Emperor of the Moguls or Mongols.¹ “ Ce dernier s'approcha de LA VILLE DU SALUT, à la tête d'une armée de trois cent mille hommes,” to attack the Calif, who sent the famous Schehabeddin-Seherwerdi, who, to his harangue, received the following answer: “ C'est bien: l'homme qui revêtu du manteau de prophète, règne comme son successeur sur les fidèles, devrait posséder toutes ses qualités: mais je n'en trouve aucune dans les descendans de la famille d'Abbas.” (P. 224.) For some reason, the real nature of which we may easily guess, Hassan Sabah, the second, pretended to burn his books; but it appears that he only pretended to do it, or if he did it, he kept copies. This Mr. Hammer stigmatises as a shocking act of hypocrisy. There was probably something good in them which the despots in league against the Assassins could not refute, and durst not expose to the view of their subjects. It is perfectly clear to me that there must have been something good, and very good, or professing to be very good, in the system, or it would not have caused seventy thousand persons to be ready at all times to sacrifice their lives in its support, at the nod of their leader. We ought never to forget that a person who is not a hypocrite, but a sincere fanatic, always imagines that his cause is good.—A fanatic in intentional evil never existed. I think, if we divest our minds of prejudice, we shall see that all the great emperors or conquerors were devotees—fanatics. They were generally also fatalists. If we do not take these considerations into the account we shall form but a very imperfect idea of the real state of the ancient, and particularly the eastern, world. I think it is very likely that superstition as well as policy moved Gengis Khan to go for investiture to Caracorum. We ought never to lose sight of this fact, that, whether mere mythos or matter of fact, the doctrine of Genesis has been the moving cause of the conduct of almost all the world from the very earliest time. It was not a book confined to the Jews, but a book of the secret mysteries of the whole world, which appears to us to be confined to the Jews, because their secret books are those only which have been preserved.

We have direct and unquestionable proof that the mythoses of Jerusalem and Eleusis were the same; then what must the history of this mythos have been? “ La puissance des Ismaélites était détruite, les châteaux forts du Grand-maître avaient été conquis, leur troupe massacrées et dispersées, et leur doctrine publiquement condamnée. Toutefois, elle fut encore enseignée en secret: l'ordre des Assassins, comme celui des Jésuites, subsista long-temps encore après avoir été supprimé, surtout dans le Kouhistan, province hérissée de montagnes et peu favorable aux recherches de persécuteurs.” (P. 320.) But now arises the question, What was taught in secret? Was it merely to murder? I know not what it can have been but the secret doctrines of Sopheism—so universally disseminated, and so universally persecuted. Mr. Hammer says, (p. 330,) that “ Les débris de l'ordre des Ismaélites se sont maintenus jusqu'à ce jour en Perse et

¹ Pp. 223, 224.

“ en Syrie. Mais uniquement comme une des nombreuses sectes d’hérétiques, qui se sont élevées
 “ du sein de l’Islamisme, sans prétention au pouvoir, sans moyen de recouvrer leur influence
 “ passé, dont du reste ils paraissent avoir perdu le souvenir. La politique révolutionnaire, et la
 “ doctrine mystérieuse de la première loge des Ismailites, ainsi que la meurtrière tactique des
 “ Assassins leur sont également étrangères : *leurs écrits sont un mélange informe de traditions em-*
 “ *pruntées à l’Islamisme et au Christianisme, et de toutes les folies de LA THÉOLOGIE MYSTIQUE.*”
 Here, in the last sentence, we have good grounds for *suspicion*, or, perhaps I ought to say *belief*,
 that we have a proof of what I have before said respecting the Sopheistic character of the Ishmae-
 lites ; and that, however corrupted it may still be, they retain a remnant of the ancient Gnosis.
 They still remain in existence as a sect, and are scattered over extensive countries as far as India ;
 they still have an Imam at their head, “ qui réside sous la protection du Schâh à Khekh, village
 “ sur le territoire de Roum. Comme d’après la doctrine des Ismailites, l’Imam est un rayon
 “ incarné de la divinité, l’Imam de Khekh a encore aujourd’hui la renommée de faire des
 “ miracles, et les Ismailites — vont en pèlerinage, des bords du Gange et de l’Indus, pour
 “ recevoir à Khekh la bénédiction de leur Imam.” (Pp. 330, 331.) Mr. Hammer says, they
 are called Souweidani, which I call Soufidani or Sophees, and Khisréwi, which I call Cæsa-
 reans or Kaisar-ians. He adds, “ Ils sont ainsi appelés, ceux-là du nom d’un de leurs anciens
 “ Scheikhs, ceux-ci à cause de leur vénération particulière pour le prophète Khiser (Elias), le gar-
 “ dien de la source de vie.” (P. 331.) Here we have the Carmelites, the Essenes, and, probably,
 the real origin of the name of Cæsar. The doctrine of the Ras, the Gnosis, connects them all.
 They dwell about Mount Masziat, which is thus called as the mount of the Saviour.¹ Their Imam
 is only a little Lamà, like him of Tibet. Nothing can be more mean or contemptible, perhaps
 detestable, than the state to which they are now reduced. Mr. Hammer, near the end of his
 work, thus concludes : “ La constitution de la loge du Caire, la série graduée des initiations, les
 “ dénominations de *mâtres*, de *compagnons*, d’*apprentis*, la doctrine publique et la doctrine secrète,
 “ le serment d’obéissance passive, nous retrouvons tout cela dans ce que nous avons vu, lu ou
 “ entendu de nos jours, sur les sociétés secrètes qui ont été les instrumens de tant de révolutions ;
 “ et si nous cherchons des comparaisons dans l’histoire moderne, nous verrons que la procédure
 “ des tribunaux secrets de plusieurs ordres d’Allemagne offrait aussi quelque ressemblance avec
 “ celle de l’ordre des Assassins.”² (P. 340.) And here we may see the secret reason which in-
 fluenced Mr. Hammer to adopt every calumny against, and to misrepresent, the Assassins.

6. Mr. Niebuhr, speaking of the landed tenure of Italy, says, the “*general characteristic* was the
 “ principle that all landed property is derived from the State, and that the Conqueror acquires a
 “ title to it ; so that the exercise of his acquired ownership depends entirely upon his own will
 “ and pleasure, whether he shall tolerate the original occupants or not, on condition of a rent.”³
 Here, I apprehend, is the identical system of India and Europe, in its most simple form—the
 farmers or ryots or feudatories holding their lands by payment, a *redditio*, of part of the produce,
 and many facts unite to prove that *part, a tenth*. I have no doubt that the first GREAT wars (Ma-
 habarats) were between the sovereigns or High-priests or Pontiffs about the presidency over the
 whole world—as to which was the representative of the elder branch. With these the cultivators
 or feudatories would have little or no concern. In those early times there was no such thing as
 our land-holder or country gentleman. We see here the origin of the thirst after universal empire.

¹ This word is spelt Masziat, Mésiade, Masiaf, Masiath, and Mosiab. (P. 363.) In the time of the Crusades it was
 the chief place of the Assassins. When I recollect their doctrines of the metempsychosis and a divine incarnation, I
 cannot doubt that I have, above, given its true meaning, in the word *Saviour*.

² “ De Kopp, Constitution des Tribunaux secrets en Westphalie.”

³ Roman Hist. Vol. I. p. 122. Walter’s Ed.

This gave rise, after some time, to what Mr. Niebuhr has noticed—that “it was a peculiar notion of this people, that every war conferred this right, though waged without any appearance of extermination, but on the ordinary grounds; and this right existed also between nations of one stock.”¹ It has been judiciously observed by a writer in the *Philological Musæum*,² that Niebuhr has shewn, that “the primary and essential distinction between the patricians and plebeians, who were not an aristocracy and a rabble, as the writers of the Augustan age, and, as following in their wake, all the historians of modern times imagined, but two several nations—the one domineering, the other dependent, like the Normans and Saxons, to take an instance, during the first centuries after the conquest, or like the English settlers and the native Irish.” Here we have the exact picture of the Chaldæan or Druidical or Brahmin caste, with greatly and out-of-all proportion superior knowledge, and therefore superior power, coming from the East and taking possession of the countries occupied by the Aborigines—ignorant, naked, and defenceless; split, probably, into numbers of little, unconnected tribes, and, perhaps, after the first alarm, grateful to their conquerors for peace and security.—This may remind us of Abraham and his 318, trained or initiated in his own house, who, in his war with the five kings, probably employed under their command thousands of mercenaries! But it is very difficult to discover in the Roman state the difference between the Plebes and the Clientelæ or Tenants. Mr. Niebuhr acknowledges that they became amalgamated into one. I apprehend the Plebes were the occupiers of the lands, whose ancestors were what we call tenants *in capite* of the first Pontifical government. The Clienteles were occupiers to whom the sacerdotal order, who were the successors of the Pontiff, let their domain lands, or the lands of which they had acquired the possession, at first, probably, under the pretence of supplying their families with necessaries, (as our Parsons possess their Glebes,) but which were by degrees increased, till they possessed large tracts. The remains of the caste are well marked in the prohibition of the marriage of Patricians with the class of Equites or Plebes. The Roman state was essentially agricultural. It had originally neither trade nor navy; and when it admitted other towns to the freedom of Rome, I believe this was confined to the plebes or occupiers of lands only, except in some particular instances where the nobles of those towns were admitted to Roman citizenship; but in this case, I think, they were admitted into the class of Patricians, if not into the Senate, or among the *Patres Conscripti*. Mr. Niebuhr correctly observes, that the Clients were to the Gentes, what the tenantry were to the Lairds in the Highlands of Scotland. I apprehend the family of the Julii or of Cæsar is an example of a foreign noble admitted to the right of citizenship. The Ælii, the Fabii, the Lamii, perhaps furnish other examples; and I suspect that when great numbers of these foreign nobles became Roman citizens, the old Patricians adopted the devise of enrolling themselves as sole members of the senate, to keep out the others, who, though admitted into the state, were nevertheless excluded from the exercise of the powers of Government—whence the Senators were called *Patres Conscripti*. They were our English House of Peers—the foreigners were our Scotch and Irish Peers. The latter would vote only as Knights. The knights in all states, I believe, were the same. They answer to the military caste of India. They were the richest of the Plebes, who could afford to arm themselves and serve on horseback. By degrees they grew into a separate caste; and, I think it not unlikely, that they might, in some cases, have the vectigal remitted to them for their services. Thus we have, as in India, the priests, the warriors, the farmers, and the *οἱ πολλοί* constituted the fourth class. The same natural cause produced nearly the same natural effect in India and in Europe. We have nearly lost the fourth caste; but it may just be seen, with its subcastes, in the crafts or corpora-

¹ Roman History, Vol. I. p. 122. Walter's Ed.

² No. I. p. 199.

tions of our towns. We must never forget that the Roman writers, such as Festus, &c.,¹ acknowledge that those matters were only pretended to be understood by *erudite lawyers*. Although there was, I think, no legal distinction between a Plebs and a Client, each being entitled to vote in the assemblies, yet I do not doubt that there was a very great and marked distinction between them, arising from the absolute independence of the former, and the dependence of the latter on the noble under whom he held his land. I have little doubt that the Plebes or farmers, or occupiers of the lands, to whom they were let or granted by the sacred order, could sell or part with the lands as they pleased, the new owner always continuing subject to the vectigal. In this manner individuals of the Plebes became very wealthy. The struggles between the Patricians and the Kings, the *traditions* of which, and nothing more, remain to us, were only the natural contests between the high-priests, as to *who* should be *king* and *priest* when the great pontifical government fell to pieces. The whole mythos—the immaculate conception, death, &c., is found in the History of Servius Tullius.² Servius Tullius was the first who had the glory. Mr. Niebuhr has observed, that every city in the West, from Tyre to Gades, had a senate and general assembly, and that all the confederacies of early nations were based on religion. This is, no doubt, true, and for many generations this principle secured to the noble priesthood, the initiated or sacred caste of nobles, the empire over their fellow-creatures. As the first system went to pieces, of course systems differing in some respects would arise in different countries. I must again remind my reader, if he should ask why we have not accounts of the system which I endeavour to disclose, that the Roman writers all acknowledge, that every thing connected with these subjects was involved in darkness and doubt. Niebuhr³ says, the accounts of the historians “differ materially from each other, because neither” of them “was explaining the institutions of his own times, or those nearly approximating, but “matters entirely obsolete, and rendered the more obscure because things wholly different in “nature had assumed the ancient names.” The very terms of law, respecting the nature of the possession of lands, were, like every other matter relating to them, subjects of dispute with the lawyers. Thus Festus gives one definition of *possessio*, Javolenus another.⁴ All these doubts arose from the fact, that the original principle of the sacerdotal, feudal system was lost, like the original of our own common law, and was endeavoured to be made out, like our law, from unwritten tradition and decisions of former judges, and from reasoning upon the two. I think there can be little doubt that the Sacerdotal order was at first strictly hereditary, and for some time this would answer very well; but I believe we may take it for a settled matter, that an exclusive order, of the nature of an aristocracy, will not last a long time, but will dwindle away—first into an oligarchy, and at last die. This tendency, I imagine, was the cause of the admission of persons into the order by initiation, which was adopted as a mode of keeping up the numbers. In Vol. VI. p. 111, of Lord Kingsborough’s *Antiquities of Mexico*, an account is given of a correspondence between Cortes and the Emperor, recommending him to get a grant of the tithes from the Pope, Alexander the Sixth, which was refused; but the Emperor hereby acknowledged the right of the Pope to the tithes. This shews the truth of the theory I advocate. The Pope is said to have given all the new-found countries to the Spaniards; but, in fact, he enfeoffed the king of Spain in them—reserving to himself the Vectigal or Ashera. Protestants never cease abusing the Pope for his arrogance in *giving away* those countries: the truth is, they have not the slightest idea of *the nature of his claim*. It is very certain that the vectigal was not a payment of rent: it was the rendering of a portion of the crop—and *that* Niebuhr has, over and over again, shewn to be *the tenth*. And although this mode of exacting a rent is, as when with us it comes to be a tenth

¹ Niebuhr, Vol. I. p. 249. Walter’s Ed.² Ib. pp. 261, 262.³ Ib. p. 279.⁴ Ib. Vol. II. p. 363.

added to a third, the most pernicious imaginable ; yet, when it consisted, as in all ancient states, of only a *tenth*, I can scarcely imagine that it would be found to operate at all against the great prosperity of agriculture. Mr. Niebuhr says, “The Patrician occupants of the domains still continued to pay no taxes. Livy, IV. Cap. xxxvi.”¹ Here we have an example of the priests being themselves the occupiers, and, no doubt, cultivating the lands by means of their servants or slaves. And when the state conquered a country, they claimed to be owner of the land, as head of the state, and to receive the vectigal. One great object of the struggles of the tribunes was, to compel the nobles to restore the payment of the tax or tithe for these domain lands, which, when held in domain, were supposed not to be liable. As representatives of the Supreme Pontiff, the Patricians claimed *all* the soil, and, as his representatives also, the *redditio* or vectigal, though this only as trustees, for the use of the state. They came to stand in his place ; and in return for the vectigal, maintained the government of the nation. Besides this, they had the lands in domain ; these being in their own occupancy, paid no vectigal. *Ecclesia non solvit ecclesiæ*. When the Romans conquered a country, they said, the land is the property of the Roman Sovereign, who then stood in the place of the sovereign whom they had conquered. “Yes,” said the nobles, “it is the property of us, the representatives of the Archierarch, and we shall receive the vectigal, as trustees for the state, leaving the lands in the hands of their old occupiers.” But both the Patricians and Plebeians said, “Our state being now the sovereign of this new country, we will take a part of it—as much as we please—from the old occupiers, and give the occupation of it to our own citizens.” “Good,” said the Patricians, “we will take it among us, and cultivate it by our slaves, and pay the vectigal to the state.” “No,” said the poor people, and the soldiers who had won it, “you shall give it to us ; we will cultivate it ourselves, and pay the vectigal to the state ;” for, no doubt, it had long been found, that the tithe or *one tenth* only being paid, a great profit was to be made out of the other *nine tenths*, after all the expenses. Thus I apprehend there were two subjects of complaint—the people complained that the nobles did not pay the vectigal for the land held in domain, while they had got possession of large vectigal-paying tracts, cultivated by their slaves, which the people said ought to be theirs to cultivate and occupy, they paying the vectigal. Most, if not all, of the land of Italy is held by the Nobles, and cultivated by their serfs or labourers on their account. It is the same in Russia. Niebuhr says, “When the consulate was divided between the two orders, the Patricians demanded the exclusive possession of the jurisdiction, because the civil, no less than the religious law, was the science of their caste, and more especially of the pontifices, who could only be nominated from their body.”² But how this came to pass it is clear no one knew. This civil law was obviously, at first, a *lex non scripta* ; and the knowledge of this being confined to the Patricians, would evidently give them the opportunity (particularly when combined with the power of interpreting the religious law according to their pleasure) of deciding every great case in which the landed property of the state was concerned, according to their own interest. Every endeavour to account for this state of things has hitherto failed. Mr. Niebuhr does not seem to have attempted it : he has contented himself with merely setting out the state of the case. I apprehend my theory of the falling to pieces of the Pontifical Government will afford the requisite explanation.

7. The confederated towns or states of Ionia, of Attica, and of Etruria, being in the precise number *twelve*, sufficiently shew method and design, and therefore, probably, that their confederation was formed under the superintendence of the Pontifical government, and not the effect of a few states confederating for mutual defence. System, not accident, is evident. Then arises the

¹ Rom. Hist. Vol. II. p. 197. Walter's Ed.

² Ib. pp. 415, 416.

question, Where and what was the system? and I think I have a right to reply, that it was part of the policy of the Pontifical government thus to form the nations under its sway, leaving them in the exercise of their municipal rights, but exercising a controul, so as to prevent wars; or, if wars arose, to make them speedily be at peace again. I think a careful examination will satisfy the reader, that none of the sovereigns aspiring to be the supreme Pontiff ever made peace. If the rebels to their authority did not submit, they only made a truce. This, as I have already remarked, is the practice of the Grand Seignior. Mr. Niebuhr has pointed out the same system of confederated states among the Celts of Gaul, as we have just noticed in Greece and Italy. Indeed, I think the system is plainly perceivable in the Druidical polity.¹ I cannot help suspecting that one great reason why Rome was saved after the Gallic capture was this, that it was maintained to be the original emporium, the Capitolium or religious head of the Italian, if not of the European, Pontificate; and, as such, was looked up to by all the other states, with no little veneration. Though it had banished its kings, yet in the person of its Pontifex Maximus, it possessed within itself the right to the sovereignty of the world. The tradition of its right to the sovereignty, which we always find it most strenuously claiming, might readily continue, after the real particulars of the history of its origin were forgotten. However, the claim, the superstition, is always well marked by every historian; but no one, I think, has ever given the shadow of a plausible reason for its prevalence. Mr. Niebuhr thinks Cære was the parent city of Rome.² He adduces the long state of peace between the two states, and the opinion of the Romans themselves, that their religious rites came from Cære; of which they adduced the word Cærimonia as one proof. When the Romans were in distress they always sent their sacred things, and their riches, to Cære. It appears not unlikely that Cæres is a formation from the *Xρης* of Delphi. I think there can scarcely be a doubt, that the city, which originally stood on the seven hills, was extinct for a time: if it was deserted, as some persons have thought, in consequence of a volcanic eruption, the inhabitants or government may have removed to Cære, and afterwards returned. I can hardly account for the peculiar sanctity of Rome, if Cære had ever been the peculiarly sacred place, or the first *Cardo*. I think we are quite in the dark on this part of the subject. I think we may see that, in early times, when soldiers first arose, they received no pay. In the great empires, in which the general of the Priest or Pontiff usurped the power and made himself Khan (*כח* *en* Cohen), the lands were granted to his followers, on condition of finding a man and horse, *i. e.* himself equipped for war.³ I have no doubt that the kings received the vectigal as both King and Pontiff; and hence came their funds for erecting buildings and making war. When the kings were expelled, Mr. Niebuhr⁴ shews, that these funds were embezzled by the nobles to the great impoverishment of the state. I think there can be no doubt that the nobles were the caste which had come from the East, and whether the people whom Niebuhr⁵ names as living after the time of the capture of Veii were their followers merely, or an earlier race of aborigines, or a body composed of both, it may be very difficult to determine.

8. If we carefully consider the first state of man, we shall find that he must have been in a situation peculiarly favourable for increase in numbers. Suppose, with Whiston,⁶ that the eight persons in the Ark increased to about 2000 in one hundred years; and if we double them every twenty-five or thirty years, which I am convinced is not unreasonable, in 600 years there would be 100,000,000, in 650 years, 500,000,000 of people on the earth.⁷ In whatever state we choose to place the world

⁷ Professor Leslie, of Edinburgh, states the *square feet* on the globe to be 5,482,584,878,284,800.

when the numeral symbolic language, which I have proved to have existed, was invented, it is very certain that when once a close society had formed its system and assigned numeral symbols to a given number of words, as long as that society existed and used those symbols, that language would continue in a great degree fixed. I think there is every reason to believe that this system would be co-extensive and contemporary with those peculiar cyclic or Druidical buildings which we find all over the world. I suppose we may safely believe one language to have continued intelligible to the whole world for five or six hundred years, or until the population rose to two or three hundred millions. The probability, I think, is, that the Druidical temples were erected when the numeral alphabet was in use, but when the syllabic alphabet was a secret, if it was discovered at the time. The numbers of the cycles described by the pillars, clearly prove the astronomical knowledge. The squared Trilithons at Stonehenge shew a much more recent work than the rude pillars at Abury—and the finely-executed temples at Pæstum, a date still more recent. The more I reflect on the subject, the more I am disposed to believe in a kingdom of Pandæa. This kingdom may have arisen in various ways. I can readily imagine an order rising to power—the effect of its superior intelligence—and, from a secret society of equals, growing by degrees into an Archierarchy; I can imagine this order continuing to govern by its influence for a long time,—its *secrets* gradually growing into *sacreds*, (the similarity and peculiar relation of these two words make me suspect them of very great, almost primæval, antiquity,)—its president acquiring power, and at last sovereign sway over his equals. Or if we suppose a college of priests or possessors of wisdom, with a president, at last obliged to employ a general—a soldier, to keep order, and that he should seize the crosier of his employer, in many cases, the only effect would be like that which happened at Rome with Cæsar—the Pontifex would become a warrior. With the change of the man, the archierarchy would only acquire more power—as the Chinese acquired more territory by being conquered by the Tartars. The Tartars annexed their own state as a province to the Chinese Empire, which it yet remains.

I conclude this chapter with repeating, that I cannot help suspecting, if we could come at the truth, that we should find in China strong marks of the *patriarchal government*, and, perhaps, of the first government of man. I have little doubt that originally, the monarch of the celestial empire was thought to be an incarnation of the solar Ray; whence he is brother of the Sun and Moon. The integrity or identity of its institutions has been preserved from the earliest time by the use of its symbolic alphabet. If we suppose that it was the original patriarchal state, we may easily conceive the natives of Uria or Callida to have discovered the syllabic system, and to have been unable to prevail against the strong patriarchal government which had become established in the East—by degrees, to have formed and established a new Archierarchy, extending itself to the West, and ultimately prevailing over all the western world. It may be said, that this must have been after the establishment of the Judæan mythos, because we find it established in China; but the present Mosaic or Judæan mythos is nothing but a branch of the first Buddhist or Tauric system of cycles; or, perhaps, I should say, a collection of the remnants of the first system, established when the symbolic numeral alphabet was in use, and destroyed by the wars of the Mahabarata. After this, probably, the syllabic letters and the Chaldæi, as an order, may have arisen, in Callida. I think in the Callidei of North and South India, we have a decisive proof that they actually possessed the dominion of all India, or ruled or prevailed over it, in some way—either by the *sword* or the *crosier*.

CHAPTER IV.

MICROCOSM. — ATOMS. — CHINESE MICROCOSM.—THE WORLD, &c., DIVIDED INTO THREE.—SACRED NUMBERS.—MERCVAH AND CAABA.—MEASURES OF THE ANCIENTS.—ETRUSCAN AGRIMENSORES. TEMPLUM. MOUNT GARGARUS. COR. CARDO. AGRIMENSORES. TERMINI.—THE BRITONS.—THE SAXONS.—TITHES RESUMED.—THE ATHENIANS.—DIVISION INTO CASTES, INTO THREE, &c. — ARCHIERARCH, SANHEDRIM, AMPHICTYONS.—RELIGIOUS DANCES. POETRY. MUSIC.

1. AMONG the ancient philosophers there was no superstition or doctrine more universal than that of the MICROCOSM, though it is now nearly lost. The fragments of it lie scattered around us in the greatest abundance. We occasionally express our wonder at them, but we never think of inquiring into their cause or object. I must try whether I cannot, for a little time, arrest their progress towards oblivion.

The Microcosm is most intimately connected with the Cabalistic doctrines of the Trinity and of Emanations. It is seen every where, when once attention is drawn to it. The most ancient author, I believe, who has treated of it, is Plato, and he has named it only once to my knowledge, and that is in his *Timæus*.¹ It is very remarkable that it has acquired so great an influence, that all nations, without being conscious of it, constantly act from the impulse given by it in former times. We every where find it in what the ancients called *sacred numbers*; but no one has ever been able to give a satisfactory reason for these numbers having the sacred character affixed to them. Magic has been assigned; but nobody can tell what Magic was or is; nor are the sacred numbers in any way connected with it, except some few of them with that branch of it called *judicial astrology*. The origin of the Microcosm may, perhaps, be found in Genesis, i. 27, *God created man in his own image*. Every thing was supposed to be in the image of God; and thus man was created double—the male and female in one person, or androgynous like God. By some uninitiated Jews, of about the time of Christ, this double being was supposed to have been created back to back; but I believe, from looking at the twins in all ancient zodiacs, it was side to side; precisely as we have seen the Siamese boys,—but still *male* and *female*.² Besides, the book of Genesis implies that they were side to side, by the woman being taken from the *side* of man. Among the Indians the same doctrine is found, as we might expect.

Brahma was *scientia excellentissima*, because he was *humani generis propagator*: idemque etiam est rerum universarum architectus et opifex, summe potens, summeque intelligens. *Hujus vero symbolum, et ænigma erat apud veteres homo*.³ Thus Man or Mannus was in the image of God; and thus, after God—Om—he was called Hom-o. Every thing was microcosmic. In the Tauric cycle we have Adam and his wife, and Cain, Abel, and Seth. In the Arietic cycle we have Noah and his wife, and Shem, Ham, and Japhet—a new trinity every 1800 years at first, then every 2160. When the mystics could not make the number come right, they made Noah live in *both* worlds.⁴ The *To Oυ* was supposed to be *duplicate*—then from the *two* to *triplicate* himself. From him proceeded the male Logos, and the female Aura or Anima or Holy Ghost—in ancient times always

¹ See Stanley's Philosophy, p. 208.

² Georg. Alph. Tib. p. 116.

³ See Vol. I. p. 505, *note*.

⁴ See Index to Vol. I. for references to Noah.

female. In microcosmical imitation of this, man, animals, and plants, and, in short, all animated nature, were believed to be formed of both sexes. Thus the *To Ou* was supposed, in himself, to possess the two principles of generation. Thus we have Adam and Eve; from them, Cain and his wife; Abel and his wife; and, afterward, Seth and his wife. Again, Noah and his wife; and Shem, Ham, and Japhet, and their wives. Cain, the eldest, was supposed to have forfeited his right to supremacy, by his misconduct. And on the believed fact, that Noah really escaped from the flood, the mythos is contrived to shew, that, in consequence of the misconduct of Cain, he had a right to the supremacy; and, again, in consequence of the misconduct of the eldest son of Noah, that the second, Shem, inherited the right; that, in that line, the Pontificate should proceed; that, in that line, the Avatar saviours, kings, and priests, should always be found; and that, in that line, should all mankind be blessed.

2. In all the speculations in which I have indulged, my reader must have observed, that I have confined myself strictly to describing the doctrines or opinions of others, carefully retaining my own; but I cannot here resist the opportunity of observing, in what an extraordinary manner the probability of the truth of the ancient doctrine of the Microcosm is supported by the discovery of modern physiologists—that, when the seed of any animated being is examined in its minutest development, it seems to have the full or complete form of its parent, and that generation is, at last, but accretion. I suspect it was held, that the minutest atom was but a microcosm or miniature existence of some future being; and that, probably, every atom in its turn would be both the germ and the increment of other beings, till every atom had taken its turn.¹ The *atomic* doctrine of Pythagoras was learnt by him (as we are told) from the Phœnician or Judæan or Chaldæan, called Moses or Moschus, the name in both cases equally corrupted. The doctrines of Pythagoras and Moses, with very little exception, appear to have been identical. This was the philosophy revived, in a later day, by Des Cartes, with some additions, on the truth or falsity of which, I, as an expositor merely of the doctrines of the ancients, am not called upon to give an opinion. But this much I will say, the Cabalistical doctrines of Moses, of Pythagoras, and of Jesus, were the same: and the Sopheism of Mohamed, and the name of his temple Caaba or Caavah, the same as the Mercavah² of the Jews, raise a strong probability that *he* held similar doctrines.

3. An expression is dropped in a learned paper in the Asiatic Journal,³ from which it appears, that the Chinese have among them the doctrine of the Microcosm: the author says, “By the Chinese, Man is considered a Microcosm: the universe is man, on a large scale: this is all we find positively stated on this subject. Human reason is the reason of the universe. The holy man, or the sage by eminence, is like the great pinnacle, and spirit as *he* is. He is the first of all beings. His spirit is one with the heavens, the master-work of the Supreme Reason, a being perfectly

¹ Colonel Wilford says, “It is to be observed, that, in general, the Hindus believe that all living beings originate from an atom-like germ, endued, virtually, with life; but inert till placed in a proper medium; when it becomes actually a *punctum saliens* or an embryo. It is indivisible, and cannot be destroyed by any means whatever; but will remain till the end of the world. *When a man dies, his body restores to the earth, and to the other elements, all that augmentation of substance, which it had received from them*: but the atom-like germ remains the same. . . . This atom-like germ is called in Sanscrit *atibahica*, and is mentioned in the Garudapurana. It is called also *vayaviyam*, because it goes faster than the wind. They say, that it is exactly the sixth part of these atoms, which we see moving in the rays of the sun, when admitted into a dark room, through a small aperture.” (Asiat. Res. Vol. XIV. p. 431.) The part which I have marked with italics, shews that Col. Wilford has misunderstood his subject. It is a pity he had not gone deeper into it. I suppose the original of the word *vayaviyam* has been the Latin *vivo—vixi*—disguised by the formation according to the artificial Sanscrit rule. I cannot help suspecting that the abuse of those artificial rules not only leads the modern Sanscrit scholars into great absurdities, but entirely shuts the avenues to ancient learning, and by this means has been one of the causes of their present lamentable state of ignorance.

² See *supra*, p. 342, and *infra*, p. 401.

³ No. XXXVI. New Series, Dec. 1832, p. 306.

“unique.” The Chinese system begins like all others; and, in this, it instantly displays its identity with all others. The doctrine of Taou Tsze says, “*Taou* or ‘Reason’ produced *one*; one produced *two*; two produced *three*; three produced *all things*.”¹ Here we have the doctrine correctly, as I have, in part, described it in Vol. I. pp. 594, 703, 757, &c. This last passage is taken from the work called *Taou tih king*, a Latin version of which is in the Library of the Royal Society, and which was executed by a missionary who had devoted his whole life to the study of it.

4. To return to our subject.—The world was divided among the descendants of Noah into *three*, and again into *seventy-two*. These were as follow: Japhet, the youngest, had *twelve*; Ham, the second, had *twenty-four*; and Shem, the eldest, had *thirty-six*.² This induces me to return to an observation in Volume I. p. 474, where I ridiculed Sir W. Jones’s division of the languages of the world into *three*, those of Shem, Ham, and Japhet. I now think it right to observe, that it does not seem unlikely, when the world came to be divided into three sovereignties, that the universal language should, in its grammatical forms, have run into three dialects, which would shew themselves in a marked manner. On this point, therefore, I may have been under a mistake. In similar microcosmic manner the period which I have formerly described of 21,600 years was divided into *three*. The libration of the planes of the Ecliptic and Equator was supposed to take place in 7200 years. It was thought to librate three times in the 21,600 years; seventy-two small cycles of 600 years, or 72 large cycles of 6000 years, in 432,000 years. In this manner all the cycles were microcosmic. Thus, microcosmically, also, the surface of the globe was arranged. From Adam proceeded Cain, Abel, and Seth; and from them proceeded all mankind: yet we know not how the *first* world was divided; but we shall, by and by, find circumstances which will lead us to believe that it must have been divided as the second was divided. After the Flood, came Noah, and Shem, Ham, and Japhet. Their *posterity* was divided into *three*, and these were subdivided into *seventy-two* races. In like manner the *world* was divided into three parts—the portions of Shem, Ham, and Japhet; and these again, as appears from Genesis, into seventy-two districts, occupied by the seventy-two races spoken of above. In this way Noah was the patriarchal Archierarchal Pontiff while he lived, and, under him, his three sons, as Hierarchs, one for each division. After his death, they became three Archierarchs—one, perhaps, at Oude or Babylon, for Asia; one in Egypt, for Africa; and one, probably, at Rome, or at Thebes, in Bœotia, for Europe. In later times the heathen kingdom of Saturn was divided, in like manner, into three parts—one at Antioch, for Asia; one at Alexandria, for Africa; and one at Rome, for Europe. Now insulated facts and circumstances like the Amphictyon, scraps of records like Genesis, and analogy, raise a probability that this was the foundation of the universal microcosmic mythos. Perhaps a religionist will say, It was a literal truth. We will now point out what will add to the probability of its existence, whether *mythos* or *truth*. I believe the above is chiefly mythos; but I believe that an Archierarch did arise, who was what was thought to be the first incarnation, and will represent Buddha and the Pandæan kingdom; and that, under him and his successors, the world was ruled in peace, till the equinoctial sun passed into Aries—till the festivals required correcting,—till, perhaps, a great flood happened—and that, during this time, the Druidical circles were erected—the microcosmic mythos was invented or RENEWED and acted on, as we shall presently find. I see no impossibility in the first Archierarchy having arisen before the sun

¹ Asiatic Journal, No. XXXVI. New Series, Dec. 1832, p. 303.

² Genesis x. 21, ought to be rendered thus: “Unto Shem also, the father of all the children of Eber, and the brother of Japhet, the elder to him, were children born.” Here, as we might expect, the sacred book not only makes the ancestor of the Jews the *eldest*, which would give him the tithes of the whole world, but it gives him as many kingdoms in domain as the other two put together.

entered Aries, in what we call the æra of Buddha; and if this were the case, I see no improbability in an archierarchy having succeeded by descent from the first King-priest who lived after the deluge, and in such Archierarchy having continued during many generations. I have just intimated that Buddha would represent Noah. There are a hundred circumstances, and, if my memory do not deceive me, some authorities, in favour of Buddha being Menu; but Menu was Noah, therefore Buddha would be Noah. Here I think we have the amalgam of the systems of Genesis in the East and West—Buddha, Divine Wisdom incarnate in Noah. Menu and Buddha are but qualities, appellatives personified.

5. In all our inquiries we constantly find men actuated by an opinion that some numbers are more *lucky* than others, but we nowhere meet with an explanation why they should be so considered. I believe the general conclusion is, that this opinion arose from magic; but how this could be I believe no one can shew, and I think it only arose from no one knowing what magic was, and thus it served to conceal ignorance. It appears that man and every thing else was believed to be made in the image of God, or of that first pattern which proceeded from the *To Oυ*, after which the universe was formed. The more nearly a person imitated this pattern, the more pious, or perfect, or excellent he was esteemed; and, on this account, the more an individual was withdrawn from the flesh and abstracted from the world, the more he assimilated himself to God; and, in like manner, all the numbers connected with the microcosm of the world, were holy and fortunate. For this reason, as far as possible, every human work was assimilated to the great work of God, by the adoption of the sacred numbers. As Noah divided the world to his sons—Shem, Ham, and Japhet; so Saturn divided the earth to his three son—Jupiter (Ham), Pluto (Shem), and Neptune (Japhet).¹ As the kingdom of Saturn was divided into *three*—Asia, Africa, and Europe; so the world, as then known, was divided, after the death of Christ, into three Patriarchates—the chiefs of which resided at Antioch, Alexandria, and Rome. I suspect that the division of the world among his three sons, by Constantine, was a compliance with the mythos of Noah and Shem, Ham, and Japhet. I believe the Pope will allow that Cæsar held both by the *book* and the *sword*. When Christ came, the Emperors only held by right of the sword. The successor of Christ, the Pope, held by right of the book. When Constantine had given Italy to the Pope, he held it by right of both the book and the sword. He was king and priest of Italy. But he held all the remainder of the world by right of the book. He was not king of it, but he had a right to the tithes of it, which his ancestor, Noah, retained, when he granted the land to his three sons. As heir of the eldest son, the Pope was Lord Paramount of the soil. The kings were his viceroyalties, his feudatories, bound to do him suit and service, and to pay him the *tenths*. The Emperor of Germany was successor of Constantine, and claimed all his rights. And, in like manner, I have no doubt that *each* country was divided. Mr. Hallam² states this of England. The old British historians tell us, that, in the time of Lucius, about A. D. 180, there were three Archflamens, viz. of York, London, and Carleon (Chester), who, when Lucius was converted to Christianity, became Archbishops.³ Here we have the country divided into *three*, in imitation of the three divisions of the world. The Romans divided Britain into five dioceses. Brutus, grandson of Eneas, having killed his father Sylvius, fled from Italy, and after joining himself to some emigrants from Troy, in Greece, and *undergoing many adventures*, he landed at Totness, in Devonshire. The island was inhabited by Giants; he conquered them and seized the island. He had, as I stated in Vol. I. p. 367, three sons—*Locrin* or *Loegrin*, to whom he gave Loegria, that is, England; *Camber*, to whom he gave Wales, hence called *Cambria*; and *Albanact*, to whom he gave Scot-

¹ Vide Calmet, in voce Japhet.

² Hist. Mid. Ages, Vol. II. pp. 20—23.

³ Somner's Ant. Cant. p. 228.

land, which from him was called Albania. Here we have the old mythos—the going out, the adventurous journeys, and the Father—Brutus—and three sons; like Adam, and Cain, Abel, and Seth; or Noah, and Shem, Ham, and Japhet. This history is found in Geoffrey of Monmouth, and is now always regarded as a fiction of the monks of the middle ages; but the single fact of the Game Troy in Wales, being noticed by Pliny, joined to the names of the countries, raises a strong probability that Geoffrey did but repeat the tradition which he found. The Game Troy seems to me decisive upon this point.¹ Tot-ness is Tat-nesos, or nase or town of the promontory of Tat, Taranis, or Buddha. It stands very near a remarkable peninsula or promontory. The Scots have a similar story of Gathelus, a king of Athens, but it is not worth repeating, and is noticed only to shew the existence of the mythos. It may be seen in Rapin. In the respective histories of Brutus and his Sons we have the exact repetition of the mythos. If we look back to Vol. I. pp. 615, 616, we shall find the history of the life of Virgil to be an exact copy of the history of Homer. Thus, not only was the history of nations always a renewal, a repetition, of a former one, but the history of their musas or bards was a repetition. There is nothing *new* under the sun, said Solomon. In the reign of William I., England is said, by Selden, to have been divided into thirty-seven shires.² These included, I doubt not, the disputed town and county of Berwick upon Tweed. By statute 35 Henry III.,³ Wales was empowered to send twenty-four members to the English parliament. If it were *one* for each county, it would leave *twelve* for Scotland, to complete the seventy-two, and give her only twelve counties. If it were *two* for each county, then it would leave Scotland twenty-four. But it is of no consequence to me, in either case; the probability is, that the whole for the island was seventy-two. The microcosm creeps out, which is all that interests me. Mr. Hannay observes,⁴ that the municipal governments of our towns dated their beginning centuries before the Norman or even the Saxon conquest, or, I believe, the Roman invasion. I have no doubt that they may date with Troy Nova, or Trinobantum.

6. I mentioned, near the close of the first chapter of this book, that I should explain the microcosm of the word *Mercavah*. Maimonides and other learned Jews say, that the *Mercavah* refers to the chariot of Ezekiel, chap. i. vers. 15—21, and ch. x. 9—16; now, what is this Hebrew word which is substituted for the word used by Ezekiel אִפֶּן *apn*, and alleged to mean chariot? It is מִרְכָּב *mrkb*, and is said to be derived from the root רָכַב *rkb*, or Recab, meaning *to ride*, and *a carriage*. But here is the *M* unaccounted for. When I recollect that all this writing is invented to record and continue, but yet to conceal, that which ought not to be written, and which was originally preserved in verses unwritten, and that the intention is to make the meaning as difficult as possible to be discovered,—when I also recollect the context of the four animals of the cardinal points, and their connexion in the text with the wheel, and what we have seen of the *Om* of Isaiah, of the cabalistic meaning of the monogram *M* and the custom of using it as a monogram, I suspect that one part of the *Mercavah* refers to the cycle of the *Om*; that by the translated term *Mercavah* is meant, a vehicle or conveyor of the secret of the *Om*, of the doctrine of the renewal of cycles, with all its various concomitant mythoses. The word *Caaba* was derived from the last part of the word *Mercavah* or *Mercaba*—from the noun *Recab*. It was the temple⁵ of the cabalistic cycle or circle

¹ See Vol. I. pp. 377, 385.

² Hannay's Hist. Rep. p. 46.

³ Ib. p. 184.

⁴ Ib. p. 166.

⁵ A Temple was the circle or wheel of the heavens. The *Caaba*, with its 360 pillars around it, was the temple of Mohamed (like the temple of Solomon) or circle or wheel of Mohamed, or of *Om*, *the desire of all nations*. *Mercavah* or מִרְכָּב was the רָכַב *rkb* of *Om*. To have called it temple of *Mercaaba* would have been a tautology. All the oldest temples of Zoroaster and the Indians were caves, acknowledged to be in imitation of the vault or circle or wheel of heaven. From all these considerations I am induced to believe that the word *Mercavah* is formed of מ *M*, ה *H*, ע *E*

of the sun or the heavens, the temple of Recab. For this reason it had a circle of 360 stones around it, and the black stone in the inside of the circle is still adored as the emblem of the sun, the generative principle. Originally it had a dove or Iune, as an object of adoration: this is said to have been destroyed by Mohamed himself. (The temple in the sacred island of Iune or Iona of the West, was surrounded with 360 stone crosses; but, within the larger circle, it had a smaller one of 60 crosses; and close to it is the island of Linga. Here is the same mythos in the East and West. After this, if there were no other reason, we should scarcely be surprised to find Mohamedism connected with the ancient mythology and modern Christianity.) Notwithstanding the story of the destruction of the Dove, the use of the crescent induces me to believe, that Mohamed adopted the double principle. The Caaba is said to have been planned originally in heaven. This is, in fact, after the pattern of heaven,—the circle of the sphere. Mr. Low has observed, that a considerable analogy appears to exist between the shape, construction, and ornaments of the tabernacle and altar described in Exodus, and those of the Caaba.¹ This is what we might expect. Every temple was a microcosm of the universe. In imitation of this, the temples were surrounded with pillars.² The temple of Mecca had 360. The temple of Iona had 360 in the outer circle, and 60 in the inner one, wheel within wheel; and three revolving globes. The temple at Ana-mor, in the county of Fermanagh, in Ireland, has 48, the number of the ancient constellations, in its outer row, placed in an ellipse, and 9 in a circle within, to shew that 9 cycles were passed, or the ninth cycle was arrived when it was built.³ The ellipse and the small circle of 9, placed in one of its foci, seem to shew, that the elliptic orbits of the planets were known to its builder. But the most common number of the pillars was 40. I suppose this has been 38, and 2 at the entrance, marked in some way to distinguish them from the others, as at Stonehenge. Probably the *two* have been the Jachim and Boaz—emblems of the *male* and *female* generative powers, standing in front of the temple. I do not think it improbable, that the persons who knew from the calculation of the moons and secret science, that the earth would become inclined and the flood ensue, should have known the exact number of the Planets. Sir William Drummond believed, that the ancients counted them to 16 in number. I believe that there was originally only one pillar before the temples, and that this, the Cardo or Cross or mete-stone, increased to two, when the union of the sects of the Linga and Ioni took place. But there is a single obelisk in Egypt, before the temples, as also in Rome, before all the churches. In most cases, in Rome, the obelisks are the sacred ones brought from Egypt. But in one case, before the church of Maria Maggiore, a Corinthian column is placed, that is, a column ornamented with Rams' horns and Palm-leaves, which was, I believe, the pillar chiefly used at Jerusalem.⁴ The Temple at Hierapolis, now Balbec, that is Bal-bit—*house of Bal*, has 40 pillars,⁵ and in the magnificent plan of the temple of Ezekiel, published by Solomen Bennet, the four oblong buildings in the middle of the courts have each 40 pillars, and the four oblong buildings at the four corners, which have no grand entrances, have each 19, the number of the metonic cycle so common in the circles in Britain and Ireland. All this is in perfect keeping with the minor, and, I may venture to say, nonsensical, parts of the Cabala. But the religion of the Cabala proceeded, as all other religions have pro-

(meaning chief or $\alpha\chi\chi\eta$) כב *cb*, *cav* or *cavah*—the chief or head circular vault of M. The idea of wheel applied to the revolving planetary bodies is peculiarly appropriate. The Cavah is the origin of our word *cave*.

ceeded, and always will proceed, while the mind of man has its present constitution, from simplicity to complication, till it arrived at the fooleries which we meet with in such endless variety, described in Montfaucon, &c., called Gnostic emblems: for Gnosticism was nothing but the doctrines of the Cabala corrupted and becoming publicly known. I have no doubt that the metestone, mentioned above, was the father or generator of 600 other smaller measures. This metestone was the sacred stone called Mudron. For a great variety of information respecting sacred stones, the sixth chapter of the Celtic Druids may be consulted. From association, the boundary, or mete-stone, being the emblem of the generative power, the word *dud* and *dd* came to mean the paps of a woman and love; and from the same came our word Madam. By association might also come the name which we give to the substance out of which the globe was supposed to be formed, called Mud; and, again, the Muth or Mother, the name which the Egyptians gave to Isis; and, as Mr. Webster says, truly,¹ in this is a proof of the identity or common origin of the Phœnician, the Celtic, and the Teutonic languages. In this manner, by the association of ideas, almost all language may be traced to its source, and the origin of every word be shewn.

7. The learned and Rev. Mr. Gabb, whom I have quoted in Vol. I. pp. 296—298, in his *Finis Pyramidis*, has gone at great length into the examination of the measures of the ancients, and though I doubt the truth of his idea, that the great Pyramid at Giza, was built solely for the purpose of forming a standard measure of length and capacity, yet I have no doubt whatever that, from a comparison of it with some of the ancient Temples and the Nilometer at Cairo, the oldest, the most perfect and universal of the measures of the ancients may be ascertained. All nations have originally had certain names of measures—the digit, the finger, the palm of the hand, the foot, the pace—which are still in use in most countries; and it is evident that they were originally so called from a reference to the human body. Five digits or inches made the palm; two palms the foot; three feet the pace. The ancients had also the cubit and the stadium. I shall begin my observations with the foot. My reader, however, will recollect that my object is not to treat of the ancient *weights* and *measures*, but merely to shew that they were founded on the microcosmic principle, or that it may be discovered in them. It appears that the sarcophagus or *parallelopiped* in the great pyramid of Giza consists of two cubes, which together are equal in length to the one hundredth part of the side of its base. This chest is divisible into ten parts, each of which constitutes a foot, and into four parts, each of which constitutes a cubit; thus each cubit is two feet and a half, and the whole chest or sarcophagus is ten feet, or four cubits, or the little stadium,² and the side of the base of the Pyramid is four hundred Nilometer cubits, or one thousand feet, which make the great Egyptian stadium. The ten feet, the length of the chest, the little Egyptian stadium or the Hebrew fathom, is the measure by which the Parthenon at Athens, the temple at Ephesus, and the temple at Jerusalem, were built, and which was a measure anciently used by the Romans in their temples.³ This foot of the ancients is (I believe with Mr. Gabb) correctly represented in our inches, by 8.7552 *in.*, and in our feet by 0.7296, and two such feet by 1 *ft.* 5.5104 *in.*⁴ The foot used by Archimedes and the Syracusans was probably the same, as

¹ Dict. in voce Mud. See Vol. I. p. 336, note 3.

² I consider the Pyramids to be of late erection compared with most of the Druidical circles. This I think is proved by the workmanship. The art of using the chisel was probably scarcely known when most of the circles were erected; but still, when I recollect that Moses orders the pillars set up not to be touched with the chisel, it occurs to me that a religious principle may have operated against its use.

³ The front of the Parthenon Hecatompèdon at Athens, destroyed by Xerxes, was one hundred feet. Gabb, pp. 38, 44.

⁴ Gabb, p. 102.

it differed from the Egyptian foot only $\frac{1}{100000}$ of an inch.¹ Mr. Gabb says, (p. 48,) "And 400 cubits, which equal 1000 Pyramidic feet, are equal to the side of the Pyramid's base, and is the stadium of the Egyptians. 200,000 cubits are equal to 500,000 Pyramidic feet, which are equal to a meridional degree, if taken very near the equator: of course 72,000,000 of cubits are equal to 180,000,000 of Pyramidic feet, which are equal to the circumference of the earth." To which I add, (in order to make the microcosm clear,) or 360,000,000 palms,² (two of which equal a pyramidic foot,) are equal to the circumference of the earth. I think the Microcosmic system no one can doubt here. And from the whole which has been written upon this subject by Mr. Gabb, Sir Isaac Newton, Mr. Whiston, and Sir W. Drummond,³ there can be no doubt that the ancients had a standard of measure, taken from the mensuration of a meridional degree at the equator, more correct than the French have at this day, after all their attempts, with their modern scientific improvements, and that both they and the English would have shewn their wisdom if they had adopted Mr. Gabb's advice, and taken the chest at Cairo, the old standard, as their standard of measure.⁴ I feel little doubt that the palm was the universal measure of all the very ancient temples, and was the invention of the first Pontifical race, and probably descended with them and with the Neros, as Josephus says, from before the last of the three floods, perhaps before the second of them. If the reader return to the Preliminary Observations, Vol. I. p. 6, he will find that I have there divided the circle of 360 degrees into 180, then the 180 into 90, then the 90 into three times 30, then each thirty into three tens, and each ten into two fives, or each 30 into 6 fives; and he will remember that in the *five* we have the Lustrum of the old Italians. Pliny divided the circle into 72 constellations; these were the lustrums; then, as there were 360,000,000 palms in the circle, there would be 72,000,000 of lustrums. Picus, of Mirandola, thus describes the Microcosm of Plato: "Plato asserts, (In Timæo,) that the Author of the world made the mundane and all other rational souls, in one cup, and of the same elements, the universal soul being the most perfect, ours least; whose parts we may observe by this division. Man, the chain that ties the world together, is placed in the midst; and as all mediums participate of their extremes, his parts correspond with the whole world: thence called Microcosms."⁵ Man is the stadium,⁶ the fathom, the standard. The first man was an incarnation of Wisdom, and down, step below step, to animals; animals, step below step, to plants; plants, step below step, to metals, stones, the minuted particle of matter, the invisible gas, the ethereal or spiritual fire. Above him, souls of men, dæmons, angelical minds of various degrees, angels, arch-angels, principalities, God.

I am not certain that the stadium, in strict analogy to the above, was not considered, in mensuration, as the standard or chain placed in the midst, which tied the world together. The ancients divided the globe in the following manner:

$$360,000,000 \text{ palms} \left\{ \begin{array}{l} 2 = 180,000,000 \\ 3 = 120,000,000 \\ 4 = 90,000,000 \\ \div 12 = 30,000,000 \\ 36 = 10,000,000 \\ 72 = 5,000,000 \\ 360 = 1,000,000 \end{array} \right.$$

² See *infra*, p. 405.

³ Classical Journal, Vol. XVI.

⁴ See Gabb, p. 55.

⁵ Stanley's Hist. Phil. Pt. V. p. 208.

⁶ The stadium comes from *sto* to *stand*, whence also come stans and standard. From the crosses of the Agri-

Again,

360,000,000 palms	}	÷	5 = 72,000,000
			10 = 36,000,000
			15 = 24,000,000
			30 = 12,000,000
			40 = 9,000,000
			60 = 6,000,000
			120 = 3,000,000
			360 = 1,000,000

The first measure was 1, Digit, Finger, or Inch.

- 5 Fingers or Inches made 1 Palm or Hand.
- 2 Palms or Hands, or 10 Fingers 1 Foot.
- 2½ Feet or 5 Palms 1 Cubit.—Πηχυς.
- 2 Cubits, 5 Feet, or 10 Palms 1 Cube, Yard, Pace, or Stride.
- 2 Cubes, or 4 Cubits, or 20 Palms, or 10 Feet { 1 Chest, Stadium, Fathom, or height of a tall man.¹
- 100 Chests, Stadia, or Fathoms, or 1000 Feet, or 2000 Palms } 1 Pyramid, or Great Fathom, or Stadium.
- 50 Pyramids, or 50,000 Chests, or 500,000 Feet, or 1,000,000 Palms } 1 Degree.
- 360² Degrees, or 360,000,000 Palms 1 Circle.

Thus the man is the *fathom* or *stadium* or *standard* by which all measurements were made; and all temples, and parts of temples were built in equal numbers of this measure, or some equimultiples of this measure. In the same manner, the circle of the heavens, and the circle of the earth, were divided into equimultiples of this measure. I think, as I have before intimated, that all temples were anciently believed to be microcosms of the world. Whiston, on the Old Testament, p. 85, says, "It may not be amiss to set down here the exact length of the old Egyptian and Jewish cubit, as our great Sir I. Newton has determined it from the measures of the Pyramids of Egypt, taken by the learned Greaves; and as I have found it also most agreeable to the measures of the sepulchres of the house of David, still remaining at Jerusalem, in Maundrel's Travels; and to the measure of the table of Shew-bread upon Titus's Arch at Rome, in Reland's discourse thereon. I mean, that in inch-measure it was=20.7936 inches, and in foot-measure= 1.7325 feet, or 1 ft. 8 in. $\frac{79}{100}$." The reason why Mr. Whiston and Sir Isaac Newton did not come to the same conclusion as Mr. Gabb, with respect to the length of the Jewish and Egyptian measure, the fathom, the stadium, and the foot, was because they took the account from Mr. Greaves's measurement of the Pyramid, which was taken, where only *he* could take it, from the

mensores being put up of the size of one stadium, they were called stans or stones; and from the collections of dwellings round these stones, towns came to be called stan—as Penistan, in England; Bagistan, in Persia. Stadium may be also Standiom—Stan-di-Om—Stone of the sacred Om, or Hom, the height of a man. Fathom may be Father-Om. A fathom is equal to ten pyramidic feet, which are equal to about 80 of our inches, or 6½ feet, the height of a tall man.

¹ An Irish Giant or a Goliath.

² The 360, I apprehend, were also divided into three parts of 120 each; these into two of 60 each; these into two of 30 each; these into two of 15 each; and three of 5 each; and the 30, into five of 6 each. Thus we come at the two lowest lustrums.

side, and not from where the French took it, at the foundation or widest part of the triangle. But the identity of measurement shewn by Mr. Gabb in the length of the base of the Pyramid, with the construction of the Nilometer of Cairo, with the temples at Jerusalem, Ephesus, Athens, and Rome, furnish a proof very superior to the theories of Greaves and Newton—indeed, they leave no room for any doubt on the subject. The discovery had been made by the French Savans before it was observed by Mr. Gabb, and it is astonishing that they failed to make it useful. One of them says, “The monuments of Egypt have something mysterious, which betrays ideas worthy of our admiration. Each side of the base of the great Pyramid 500 times multiplied gives 57,075 toises, which complete a geographical degree. The cube of the Nilometer 200,000 times multiplied gives exactly the same result.”¹ I believe the ancients took their measurement of the degree in the island of Jaba-dios, or the island of the holy *ΙΕΥΕ*, or Sumatra, in, perhaps, the province of Rome-lia, and near the city of Rome, which was probably there. This circumstance may justify the inference, that they knew, that the degree was less at the Equator than near the Poles. Indeed, this is in perfect keeping with their knowledge of the periods of the comets, and of other important facts, which every where shews the superiority of their learning to ours. In accordance with the system of microcosmic numbers, the oriental philosophers have determined, that a man in health makes 360 respirations in a Ghari of time; six such respirations, therefore, must equal a Pal, or the sixtieth part of a Ghari, and, in the course of 24 hours, a man, in health, will make 21,600 respirations. The Ghari is the sixtieth part of a day and night, which sixtieth part is further divided into sixty other parts—called Pal, and the latter, again, subdivided into sixty other parts—called Bebal. The Greeks had two standards of square measure, called the Aroura and the Plethron, the latter known to be the double of the former. I think as there were two stadiums or measures of length of one name, Stadium or Fathom, there were two Plethrons and two Aouras. The small Aroura was 720 square feet, and the large one 1440, and the other was 5000 square feet for the small Aroura, and 10,000 for the large one.² If we allow for the mistake, probably of the printer, of 722 for 720, we must see here the microcosm and the whole system. The 720 square feet are evidently only the double of 360 palms. The 5000 and 10,000 are from the base of the Pyramid. Again, the Egyptian Aroura was the square of 100 cubits, or 10,000 square cubits; and the Plethron 20,000 square cubits.³ Pliny calls them *jugera*, and says the largest Pyramid occupied 8 of them, which produce an area of 160,000 square cubits. The discovered dimensions prove this perfectly correct: for the side of the base of the Pyramid being 400 cubits, these multiplied by 400, give 160,000 square cubits. The granite chest 25 times repeated, gives a length, of which the square is the Aroura, or 10,000 square cubits. Although none of our writers have given us the inside capacity of the chest, or the exact thickness of its sides, we may be very certain that it formed the measure of capacity. Indeed, after a standard of length is once fixed, there is no difficulty with a standard of rain-water. Mr. Gabb has observed, that the ancient *jugera* were the lowest standard or unit of land measure, and meant not only any inclosed position, but what we call lands, that, is balks or strips of land, in the open town-fields.⁴ We have here the use of the Agrimensores measuring and granting out the land of the Lords to their feudatories, and the origin of our town-fields. The same system may be perceived in the measurement of the lands by the Etruscan Agrimensores. Niebuhr says, “The *jugerum* was, as its name indicates, a double measure; and the proper unit of the Roman land measure is the *actus* of 14,400 square feet, a square of each side of which measured one hundred and twenty feet. A quadrangle

¹ Pauton, *Métrologie*. Paris, 1780. Muller's *Univers. Hist. Sect. iii.*

² See Gabb's *Fin. Pyram.* p. 75.

³ *Ib.*

⁴ *Ib.* p. 73.

“containing a superficies of fifty jugera comprised the square of ten actus within its area, and is certainly a century, not indeed of a hundred jugera, but of a hundred actus.”¹ In the 120 and 14,400 the mythos is evident. Again, Niebuhr says, “The Etruscan and Umbrian versus, of ten ten-foot rods, bore the same proportion to the square root of the Roman actus or fundus, twelve ten-foot rods, as the cyclical to the civil year of the Romans. A century, therefore, of a hundred actus, contained one hundred and forty-four versus, i. e. the square of twelve.”² The Pythagoreans, as well as the Platonists, (in fact, they were the same, only successors of each other,) held the doctrine of the microcosm; but I think it was a part of their secret system. Indeed, the whole of the system which I have developed contains innumerable facts which can be accounted for only from a desire of secrecy. The theory that Man was the centre of the animal or animated mundane system, is pregnant with many curious circumstances. It seems that the race of men was like the race of animals, which was thought to descend from the Ganesa, the Elephant, the wisest of animals, to the lowest, to the point where it connected with the race of animated plants, which in like manner descended. As the highest of the race of animals descended to the lowest, and thence to the highest of the race of plants, so the highest of the race of man was thought to have descended to the lowest—from the Newtons and Lockes to the idiot—or rather, I should say, from the incarnation of divine wisdom in the Supreme Pontiff, in Noah and his successors; in fact, in the Chaldæans, who inherited the supremacy of the whole world. And from this, after the theory was lost, from the effect of custom or tradition not understood, all the claims of kings by *divine right* have descended. From this, too, the desire of all kings to trace their pedigree up to Noah has arisen. The corresponding committee of the Asiatic Society, of which Sir Alexander Johnstone is the chairman, have been so obliging as to make inquiries for me into the dimensions of some of the old temples of India. The subject of ancient weights and measures is a very comprehensive one. At a future day I shall probably return to it, when I may be able to ascertain whether what I suspect is really true, viz. that the old temples in China, Mexico, India, Syria, Greece, Italy, and of Stonehenge and Abury, were all built by one measure, and were intended, each in its own peculiar way, to be a microcosm of the universe.

8. We will now return to the Etruscan Agrimensores, from which, indeed, we have made a very long digression. All the operations of the Tuscan Augurs or Agrimensores, for they were both one, were of a religious nature. Their first unit of measure or ager, our acre, was a microcosm of a greater. It was called a temple, and every temple was a microcosm of a greater, of a wheel within a wheel, till it became a microcosm of the globe, and the temple of the globe was a microcosm of the planetary system, and *that* of the universe.³ The *Cardo*, the *Decumannus*, and every part of the duty of an Agrimensor, was religious, and intended to regulate the collection of the tithe: this arose from circumstances and was continued by policy. The word *Templum* or *Temple* is a very important word, and may serve to throw some additional light on the origin and secret meaning of the Templars and their doctrines: indeed, I think a proper understanding of it will, in a great measure, open the door of their sanctuary. When an Etruscan Augur began his divinations, he “used to rise in the stillness of midnight to determine in his mind *the limits of the celestial temple*.”⁴ This temple was evidently a something in the heavens,

¹ Hist. Rome, Vol. II. p. 389. Walter's Ed.

² Ibid. pp. 389, 390.

³ I doubt not that the refusal to pay the tithe was denounced as a great sin. By what process, or by what cunning manœuvre, the Roman priests got the custom established of taking *auguries* before any assembly could proceed to business, I do not know; but the object evidently was, to have the power at all times of controlling them. This power gave the Pontifex Maximus a negative upon all the proceedings of the state. It was, in effect, a *veto*.

⁴ Niebuhr, Hist. Rome, Vol. I. p. 221. Thirlwall's Ed.

perhaps the hemisphere, and again shews that the word *templum* had some meaning much more sublime than a humanly-erected building. But the celestial vault was the *Templum* erected by the CHIEF MASON, the Megalistor Mundorum. Here I stop. Templars are nothing but masons, and there are some of their secrets I would not divulge if I could; but perhaps I do not know them. I may be in error, but this I will say, they are so closely connected with masonry, that it is very difficult to separate them. Very certain I am, that they are under some very great mistakes, and I can set them right, if I choose. The temple of Ieue at Jerusalem was called היכלבית *eiklbit*, but often היכל *eikl* only—the second word בית *bit*, which means *house*, being omitted; it is, in fact, a pleonasm, very common in the Hebrew; a habit or defect, perhaps, of writing, which probably arose when the written language was known as a secret science to very few, in the recesses of the temple, and but ill understood even there. The word כל *kl* has the meaning of ALL, and probably in its origin is כ *k*, as, and אל *al*, meaning *as all, as God*. The word כל *kl* answers to the Latin *omnis*, and OM has the same idea, from the sacred word for God, whence I think it had its derivation. But כל *kl* has also the meaning of the *heavens*, and here we have the Latin *cæl-um*. I must now request the very close attention of my reader, and his excuse for a long quotation from Mr. Parkhurst,¹ without which he will not understand this most recondite subject. “היכל *eikl*, the middle and *largest* part of the *temple* of the Lord, the *sanctuary*.—It is “applied to that *high* and *holy* place where Jehovah peculiarly dwelleth; otherwise called the *holy heavens*, or *heavens of holiness*—מהיכלו *meiklu*² —From his *Temple*, Ps. xviii. 7. Mr. Merrick, in “his annotations on this text, observes, that this expression is applied to *heaven* by heathen authors, “from whose writings the following passages are cited by *De la Cerda*, in his commentary on “Virgil, *Georgic* iii. p. 389:

“ ‘——— *Cæli tonitralia* Tempa.’—LUCRET. lib. i.

“ ‘*Qui* templa *Cæli* summa sonitu concutit.’—TERENT. Eun.

“ So also *Ennius*, quoted by *Delrio*, on *Seneca’s* *Herc. Fur.* p. 217:

“ ‘*Contremuit* templum *magnum* *Jovis* *altitonantis*.’ And,

“ ‘*Quantum* multa manus ad *cæli* *cærule* Tempa

“ ‘*Tendebum* *lacrymans*———’”

These texts clearly prove, that with the ancients the word *templum* had a meaning much more grand and refined than merely the building on the earth, or the *bit* or *tectum* built by human hands, which was always considered to be a microcosm of the temple of the firmament. Thus, in the oldest monuments of the Druids, we have the circle of stones, in the number 12, the signs in the circle—signs of the zodiacal circle, with the arch of heaven for the cupola; and, in fact, the divisions of the heavens marked in a great variety of ways. I know some persons will say this is fanciful; but they cannot deny the facts of the numbers in the monuments; and there must be some cause for their peculiarity. With respect to the fancifulness, I quite agree with the objectors that nothing can be more fanciful than almost all the recondite doctrines of the ancients appear, when taken without the remainder of the system of which they form a part being considered, and without the *necessity* for them being also considered.³ This *necessity* arose from the

¹ On the word היכל *ehl* I. and III.

² From this comes our Saxon word *mickle* for *much*; and, in some cases, used for *all*, as, *Micklegate*, York—the *sole* or *only* road into the city, and over the bridge from the south.

³ In the Pantheon at Rome, with its open top, we have a beautiful example. Here we have the plan of the oldest temples, as they would be built, before the art of building a key-stoned arch was discovered—this would be an approximation to it.

ignorance of the ancients of the art of writing, which left them no other resource to register these most important parts—groundworks of all their theories, systems, and festivals. Under the law of Moses, when the religion was confined and intended to be confined to one little country, a place was fixed on and a temple built for the worship of God; but when the Saviour of the whole world invited all people to a participation in his favours, this attachment to one place was done away, and every place was considered equally good for his service. Jesus Christ had no predilection for the temple at Jerusalem or at Gerizim. In whatever place his people shall assemble, in his name, he will be in the midst of them. Accordingly, the first Christians assembled indifferently in houses or other places where they happened to be; and it cannot be doubted that, if Jesus Christ had thought temples necessary, he would have said so: but the poor man's religion wanted no such superstitious adjuncts. The beautiful globe was his *τεμενος*, and an humble and contrite heart his temple. This was the doctrine of the Buddhist, of the Pythagorean, of the Essenian philosopher of Samaria. This was the doctrine which the Samaritan Nazarite taught, as I have pointed out in my preface to the first volume.¹ Here we have no gorgeous temples, no trumpery shows, no sects, nor the possibility of forming them. Here we have no firebrand creeds or symbols of faith to incite men to cut each other's throats. Here all is peace and brotherly love. Here we unite all religions.

To return from this digression. Every thing was divided into *two*. The heaven was divided into two hemispheres, and the globe we inhabit into the North and the South—the Dark and the Light—the Good and the Evil. Man, in like manner, was originally believed to have been formed in *two* parts in *one* body—male and female²—the higher and the lower—the good and the evil. In the same way time was divided—the day and night, the winter and summer. Thus we read much in the works of the Brahmins of *the day of Brahma* and of *the night of Brahma*. All the cycles were made up of the multiplication of the *five* and *six* together—the *He* and the *Vau*—the male and the female—from whose union and conjunction all the race of man descended. We have found the cycles of 360 and 432 originally founded on the two numbers *five* and *six*—the *two lustrums*; and the two cycles 360 and 432³ to have been united at last in one larger cycle. Now, I think, all this had reference to, in fact was closely interwoven with, the theological system, as the cycles may be said to have been interwoven into one another. There was the one, the *To Oυ*, generally marked in a very peculiar manner.⁴ Then there were the *three*;⁵ then the other cyclar numbers as described in my Celtic Druids, Sect. XXIII., and I feel little doubt that the microcosm, after the one and three, was made to depend on, or was regulated by, the foundation number *five* or *six*; and these two arose from the change in the length of the year (and consequently in the length of the cycles) from 360 to 365 days—the number 432, the cycle formed by the *six* being to unite with the cycle of 360, and together to form one whole, and thus to retain both. The temple of Stonehenge is a production of the $5 \times 12 = 60$, &c.; the temple at Abury in its number of 650 included both in its system. Both these are in good keeping with the remainder of the system, but we cannot come to any determination respecting them, nor do I know that it is of any consequence. The division of the nations named in the tenth chapter of Genesis,⁶ which was into 72, is alluded to most clearly in 32nd ch. and 8th verse of Deuteronomy, where the Most High is said, in the LXX., to have

¹ Pp. xvii. xviii.

² See *supra*, p. 397.

³ Vol. I. pp. 6, 7.

⁴ This in Stonehenge may have been the altar-stone as it is called, but which must have been merely for the Eucharistia, as I believe there is no appearance that a large fire has ever been lighted upon it: or it may have been the single stone at a *little distance*, like the crosses in our churchyards—the *Lingas* or *Phalluses*.

⁵ The altar-stone and the two stones at the entrance, or the three stones standing outside the circle.

⁶ See Vol. I. p. 265, and *supra*, p. 399.

divided the nations according to the number of the Angels of God, and not, as in our text, according to the number of the children of Israel. Now, I think this division of the world is a microcosm of the division of the heavens. We know the stars are commonly called *angels*, and that Pliny said there were 72 constellations, or groups of stars, called by the names of animals or other things. I suspect the stars here alluded to were constellations, and that the surface of the earth was divided microcosmically after the heavens. I have not been able to make out, from examples, in any one country, a perfect or nearly perfect system; but this is not to be expected; nor, indeed, have I been able, as the Irish did with their *elk*, to put all the parts collected from different quarters into a whole; for this reason, at present we can consider it as only a proposed theory, to remain for examination, with such a degree of weight annexed to it as each reader may think it deserves. But yet I think the existence of the microcosm is rendered probable, by facts still existing. Mr. Niebuhr has observed, that every cardo or stone cross set up, where the lines of the agrimensores crossed each other, was called a Templum. But in every country there was one grand Templum or Cardo or Cross or Capitolium or Acropolis or Stonehenge, whence all the others proceeded, or by which they were regulated; and it is evident that this must be a microcosm of the temple of the globe, of the temple of the planetary system, with its beautiful pole-star, or the star of Juda or cross with many points, the Templars' cross at the top of it. We every where read of nations adoring large rude stones, in such a manner as is almost incredible of rational beings. I believe this was a species of *δθλεια* paid to the Cardos, the nature of which had become forgotten; and perhaps it might, in some instances, be transferred to other large stones by credulous devotees, who, in all ages and all nations, are perpetually at work to increase the objects of their devotion—always at work to find something new—something to make them more worthy than their neighbours of the favour of God. These cardos or termini or mere-stones were all poles—polises, and the first from which all the East and West branched off was the arco or acropolis. From these came our Maypoles. The villages grew up around these poles, as they are found at this day, and hence arose the name of *πολις* for *town*. I suppose the Umbrians of Italy had 360 of them, as we know Persia had, and as I believe all other nations had; and that it was 300 of these which the Etruscans conquered.¹

9. In Volume I. p. 527, I have alluded to the stone circle on Mount Gargarus by the Indian name or epithet Cor-Ghari, treated of by Mr. Faber.² Here is evidently the Welsh name of Choir Ghaur, of Stonehenge, applied to Gargarus of Troia. I think no human being will doubt this. The passage noticed in my Celtic Druids, Ch. VI. Sect. XXI. p. 237, where Homer describes the chiefs meeting in the circle, must allude to Gargarus, and to the stone circle seen by Dr. D. Clarke, upon that mount.³ The Monks called Stonehenge Chorea Gigantum. *חג-גור* *hg-gur* is *place of the circle*: the two form the terminations of Indian towns ending with *urg* and *uggur*, and our *burgs*. The word *Cor* is evidently the *Choir* and the same as the *Cor*, the centre of the measurements in Italy. *Cor* also means the heart; and, probably, from being the *heart* or *centre*, in Persia, it described the Sun. I think from this it is probable that the Cardinales or centres of measurements of Britain began at Stonehenge, or if, as is probable, Britain was microcosmically divided into *three*, that it was one of the three. One of the names of Stonehenge is Main Ambres or Ambrose. Cleland has shewn that *Meyn* means *stone*, and was the origin of our Minsters, and Monasteries. *Main* of *Am*, or *Om-bra*, *stone of Om the Creator*. The famous Rocking stone in Cornwall was called *Main Ambre*. This is the same. I suspect the *bra* was the same as *divus*, and at last

¹ Vide Niebuhr, Hist. of Rome, Vol. I. pp. 112, 113. Thirlwall's Ed.

² Anal. Vol. III. pp. 31, 229.

³ See Vol. I. pp. 229, 360, 362, 423.

meant *holy*. Ambrosia was the liquor of the holy or creative power Om. The oil was that of the holy or creative power, whence comes the French Ampulla. Professor [Sir Greaves] Haughton says, Cor Gharri may be analysed into Cor-Ghirry, the mountain Cor: for Ghirry means a mountain, as you may have heard of Nilgherries or blue mountains. If the G is pronounced hard, as in gift, no *h* is wanted, and it would then be Giri, and sounded Ghirry. Stonehenge seems to mean no more than *the hanging* or *suspended stone*. Cor Gawr is the old British name, which means the circle of the powerful ones, from Cor, a circle, and Cawr or Gawr (Gaor), the Mighty One, the Great One. But I think we have another Gargarus or Choir Ghaur in the celebrated Carum Gorum, of Tartary, whither Gengis Khan went to receive investiture in his dominions. This was the residence of *the Prestre John*, or the Priest of the God of Wisdom. The kingdom of Gengis called itself in a particular manner the kingdom of wisdom. Hence I believe that Carum Gorum is etymologically the same as Choir Ghaur and as Gargarus, and that it had the same meaning. But I think we have, as we might expect, another Choir Ghaur, in Scotland, in the mount of Carum Gorum, [cairn gorm?] whence the precious stones of that name are procured, in the county of Perth. They are all mounts of the Cor or circle or heart or wisdom. They were all acropolises, capituliums, of the divine incarnation.—I must now return to what I have said, that Carnate probably had its name from the two Carns of St. Thomas,¹ and observe, that, in consequence of finding the word Carn in such very general use all over the world, I am obliged to seek for some other meaning; and I think I have it in the word Cor, which, when read Hebraicè, meant *wisdom*; and I think, from allusion to this name of God, the piles of stones called Carns, which are generally surrounded with circles of upright stones in the numbers of sacred cycles, (vide several in the neighbourhood of Inverness,) had their names.² From Mr. Claproth's excellent map of Asia, I learn that the country between 40 and 50 degrees of N. Lat., and 100 and 120 E. Long. by French reckoning, the country of Caracorum, in the year 232, was called the country of *Sian pi Libres*. (Sion the Free. In Siam, it may be remembered, that the natives say the French have the same name as themselves—*free*.) In 302 it was called kingdom *des So theou* (or of the holy Saviour) or *Tho po* (the God). In 425 it was the empire of Joan Joan. (This, I do not doubt, was Prestre John, or the Priest of Jnana, *wisdom*.) In 565 it was the empire of the Turks. In 632 it was the kingdom of Thou Khiu (God Khiu). In 679 it was the country of Hœi He, or Ouigours or country of Thou khiue (Circle of *Iaw* or the *Iaw*). In 745 it was the empire of the Ouigour, or the Hœi He, or the encampment of the Kakan. In 865 it was the country of Kirghiz or the Tartars. In 1125 it was the empire of the Kin or Altoun Khans. Next it was the Mongols. In 1290 it was the empire of Khorin, or Caracorum, or Ho-lin. It really appears probable that from this remote country in the earliest time all our mythology has come. We have found an Ararat in the Il-avratta of India. According to the theory of Agrimensurism, both the Ararats ought to be Cardos. In India we have this in Mount Meru. In Western Asia it is very clearly made out by Cellarius, in his *Geographia Antiqua*. He shews that the part of Taurus, which separates *Sophene* from Mesopotamia, was called the Godyeen mountains. On these the Ark of Noah was supposed to have rested. Berosus says, the Ark rested on the mountains *τω καρδουαωω*. The Targum of Onkelos on Gen. viii. 4, uses the word Kardu, which the Targum of Jonathan, by metathesis, calls Kadrun. Elmacinus calls it the Mountain Cordi. It has also the name of Baris, which means *ship*.³

¹ See Vol. I. pp. 757, 765.

² The word Gard, which means *place*, as Stutgard, Chunigard, &c., or *district*, was the Hebrew גיר *gir* and די *di*, *holy circle*. Hence comes our small inclosure called a *yard*. Hence come the circles of Germany, which were all religious divisions, formed in the time of the pontifical government.

³ I have little doubt that the Mount Nevis, which is close to Beregonium, the ancient capital of Scotland, and within

Here, in the name of this very remarkable mountain, I think we have a *Cardo* in chief to complete the mythos. It was the *Cardo* of Noah. *Baris* or *Ararat*, or the Mount of *Kardi*, was believed to be the highest in the world; and from this mountain, as a centre, Noah was supposed to divide the world among his three sons. The *Gar* of *Gargarus*, the *Giri* of *India*, the *Gaur* of *Choir Gaur* or *Stonehenge*, the *Cor* of the *Mounts of Cordi* or *Kardu*, or *Ararat*, and the *Cardo* of *Italy*, are all the same word and have the same meaning. They are all central points round which circles of some kind were built or supposed to be built, (and here we have the *cir* of circle,) and they were also acropolises or capitoliums, and had the meaning of *Cor*, *heart*, as the centre of measurement round which the 72 and 360 districts were laid out; as our system is placed round the sun. The change in letters, such as in the *G*, the *C*, the *K*, &c., will not be objected to by any person who makes a due allowance for the absolute uncertainty of all old languages, before the invention of grammar, and the constant use of what we learnedly call the anagram and metathesis, which were originally mere corruptions, habits, or styles of speaking or writing. As we have seen the Roman Cardinals called *hinges*, so the *Choir Gaur* was called for the same reason the *Stone-hinge*. It was the pontifical capital, the pivot on which all the districts of Britain depended or turned, when England was under the jurisdiction of its three Arch-flamens. And I have not a doubt that there was a similar *Cor-giri* somewhere for both *Scotland—Albania* or *Caledonia*—and for *Cambria*. When I find the *Om* the object of adoration of all nations—the emblem of the creative power, the temple of *Stonehenge*, by means of the cycles, the emblem of the same mythos, and the Hebrew language of *Britain*, it is not unreasonable to go to the Hebrew language for the explanation. The whole is evidently in keeping. The parts are in character with one another.¹ I beg leave to draw my reader's attention to the names of *Gargarus* and *Stonehenge* being the same (*Choir Ghaur* and *Cor-Ghari*) in the Sanscrit and the old English language, and also to the *Cor* of the *Etruscans*. This, of itself, almost confirms my theory of the ancient system, the crosses, &c. These two names for *Stonehenge* are similar to the word Sanscrit of *India* and *Scotland*, and *Sanscort* of the *Celts*. Every inquirer into the antiquities of nations knows, or ought to know, how much labour the learned *Vallancey* took to prove that the *Irish* were a tribe from *Spain*, but which previously came thither from the *East*. We have seen that the *Sibyls* say that *Mount Ararat* was in *Phrygia*, in *Asia Minor*, which *Phrygia* was adjoining to *Mysia* or the country of the *Mystur*, or *Troy*. But I think it probable that the whole of *Asia Minor* was *Mysia*, or *mystic land*, the land of *Room*. In *Asia Minor* we have *Calinda*, *Calamina*, and *Calida*, places of *India*, connected with the mythos of *Ararat*. We have also a nation of *Brigantes*, and *Briges*, whence *Drummond*² supposes the name of *Phrygians* came, and the word *Free*, and the *Scandinavian Phriga* or *Freya*. From this root we have formerly observed that the *Siamese* say the *Franks* or *French* have the same name as themselves. There is also a place called *Caledonia* and an *Albania*, and *Milea* or *Miletia*, and a *Mount of Solyma*.³ In *Britain* we have *Brutus*, descended from *Æneas*, and his three sons, and *Trinobantum* or *Troya Nova*, and *Albany*, and *Caledonia*, and the *Brigantes*, and the *Calidei*, and the *Miletii*, and *Patrick* in *Ireland*. Can any one doubt that the same mythos or the same people have been in both places? But *Asia Minor* was both *Mysia* and *Room*, the *mystic name* of the city in which the *Pontifex Maximus*, or chief *Bridge-builder* in *Italy* dwells. *Sir W. Drummond* has observed, that the name of *Brigantes* comes from *Briges*, and that *Phryges* and *Briges*,

sight of the island of *Iona*, meant *Baris* and *Navis*. Like the *Baris* and the *Cordi*, the centre of the *Agrimensorism* of *Asia*, it was the centre of *Scotland*. Vide *Bochart Geo. Sac. B. I.*, and *Whiston's Theory of the Earth, B. II. p. 135, 3rd ed.*

¹ See *CELTIC DRUIDS*, Ch. VI. Sect. XVIII. p. 231.

³ See Vol. I. pp. 594, 810.

according to the Greek authors, are the same, and that these people came from Thrace, where we have formerly found the Sindi and the other Indian names. He then (p. 355) observes, that the Thracian name for a *pons* was *Brig* or *Briga*, the very name the same useful contrivance bears in North Britain, where some of the common people, even at this day, believe that the arch is held together by sorcery or magic. *Cor* was the Latin name for both heart and wisdom. Here we see why the *Bulla*, treated of *supra*, p. 87, was in the form of a heart: originally, I have not a doubt, from the name בל בעל *bol* באל *bal* Bull-a, in form of a Calf, as it has been and is yet in modern times in form of a Lamb—the *Agnus Dei*. From this came the word *Cardo*, ἀκμῆ. We have the meaning of it in the *cor januæ quo movetur*, as hinge, regulator of the door;¹ and, as regulator, it gave name to the line drawn from North to South,—the pole or axis of the earth, used by the Etruscan Agrimensores to make their squares for the collection of the sacred tenths or tithes. This line regulated all others. The word is *cor-dis-di—divus*, and from this it came, that where the *Decumanus*, the line, crossed it from East to West, the point of intersection at which a cross was set up, was called *cor*, or *cardo*, car-di. It was in each district the centre, the heart, of all their operations: it was, from circumstances, the *Arca-polis*, the *Caput-olium*. From this point of intersection two roads always branched off, which is the reason why we have a cross or mere-stone in the centre of every village, which arose by houses collecting round the sacred X: for this was, for many evident reasons, declared most sacred and holy, and in suitable places the temples arose around or over these crosses. The whole circle was divided into 360 parts; and, beginning at the Equator, the *Decumanus* was drawn at every ten of these parts to North and South, whence it had the name *Deca*. In a similar manner, I believe, the mensuration by the Agrimensores took place in every country. The *Decumanus* would always be the same, but the *Cardo* would in one sense vary. A *Cardo* would run through every capitol or principal town, which of course would divide the land into parallelograms of different lengths. The lengths would vary according to localities. Our system is the same: the parallels of Latitude never vary, the Longitude each nation reckons from its own *cardo*. It was from being the superintendants or curators of the Seventy-two *Bareichs*, parishes or cardinal divisions, into which the city of Rome was divided, that the Roman cardinals had their names. I have no doubt originally, perhaps even yet, *Cardinales* of the whole of the 72 divisions into which the patrimony of St. Peter may have been divided: for the patrimony of the Resoul, the *Vicra-ma-ditya*, the Vicar of God, extended over the whole world. That it *was* divided into 72, is clearly proved by the division of the 72 nations of the earth, mentioned in the tenth and eleventh chapters of Genesis. The author of that book perfectly understood the doctrine of Agrimensorialism. That book was never written by Moses, though it might be adopted by him. The adoption of the number of seventy-two arose out of the divisions of the circle. The Gaelic word *coir*, genitive *choir*, signifies a space of ground inclosed on all sides. It is the Greek χωρα, *locus*.² We have the *cor* in *cortex*, the bark of a tree, and χαρτης, *charta*, and the Gaelic *cart* and *chart*. It is curious to observe the cart, by its wheels only distinguished from the sledge, and the chart, connected both with letters and the agrimensorial measurement of land. In the Celtic language *reich* meant *ruler of a country*: from this came the *Rex*, and both are the same as *Ray*. *Gor* is *a circle*; *Gor-reich* *the ruler of a circle*, like the German *circles*.³ The *Ager* of the Romans is our *acre* (that is, measure of land or τεμενος). It is the Hebrew גור חג *gur hg*, originally *place of the circle*. I have no doubt that this was a cross in a circle; that is, a circle divided into four. The Roman territory was called *Ager Romanus*; and at first, as we might expect, it was divided like the globe—like

¹ Litt. Dict.² Grant's Thoughts on the Gael, p. 169.³ Cleland's Spec. Ap. p. 33.

India—like Britain—like Scotland—and probably all other countries—into *three parts*. It may be asked why the word Cor just spoken of came to have the meaning of *Wisdom*. What has the heart more than any other part of the body to do with Wisdom? In the ancient Etruscan language, read from right to left, it was Cor or Roç, that is, Ros or Ras, and the country where we find this, we are told, was called Razena; that is, country of Ras or wisdom. It was ras, not “à curâ, quia in eo omnis sollicitudo et scientiæ causa manet.”¹ From this came the cardo, car-di; the c in these words answering to the g, and the g answering to the c and k, and the acra or ακρα or αρκα of the acropolis, the origin of the Ager. It was the heart as the centre of the operations of the Agrimensores, the point of intersection of their Decuman and Cardo; and as wisdom or scientia it was the regulator or pivot or hinge on which the two right lines to the cardinal points extended. As the point which directed and regulated all the operations, it was closely allied to mind, or intelligence, or wisdom. The *cor* is also the root of concors, concordia; from this comes also the word *to care*, that is, to interest one’s-self about, and the Gaelic word *car*, affection, *cardias*, friendship, and the Greek καρδια, in place of cædia, and the Latin *carus* dear. And, finally, it is the Persian name for the *Sun*; thus, again, uniting the centre, the Το Ου, and wisdom.

We constantly say a thing hinges upon this or that, hereby evidently considering a hinge as a regulator, as it regulates a door. Ainsworth says, a Cardo means a way crossing through the fields from North to South. This is also often called a *balk* by Niebuhr, and is a word at this time in common use for the strips of land in open town-fields in Yorkshire, and in other parts. Now this shews us that these cultivated lands or strips were regulated by these balks, which were not subinfeudated by the Lord, but always were, and yet are, his property. On the inclosure of my Manor of Skellow many years ago, I, of course, as Lord, claimed land for the balks, and had it allowed to me, as it is usual in similar cases. Hence we see that one of the great employments of these agrimensores must have been to protect the Lords’ balks from being destroyed or stolen, to which they were very liable. The ridge of mountains which *divides* North India or Oude from Tartary, is called Balkan: this may mean Bal-ania, *land of Bal*. A similar ridge called Balkan divides the Sindi of Thrace from Scythia or Tartary. They were both Sindi—followers of the holy Xin. From Cardo we have, as I have before remarked, the cardinal points of the compass; and, as the line from North to South was first drawn, it evidently regulated the others. We know that the magnetic needle has varied for a great number of years back. The needle, I think, anciently pointed North and South, without any variation; that this variation is like the variation of the angle made by the planes of the Equator and Ecliptic; that, at the time *they* were displaced, it also was displaced; and, like them, it is gradually coming right again—though, like a pendulum put in motion, they may both oscillate some time before they get right. The Indians thought the oscillation was *great*, M. La Place thought it *small*. It may at first have been *large*, now *small*, and thus both the Indians and La Place may be right. At the boundaries of districts and where roads meet in Britain are the remains of the ancient termini, which were *crosses*, and, in the time of the Romans, priapuses, in different forms; all these were emblems of the generative power. The boundary, from being an emblem of the Ter-Menu, was called *terminus*; it denoted the creative power, of which also Apis or the Bull was the emblem: it was called Pra or Bra Apis—Priapus. Apis was but Ab or Ba *the father*. The Father, the Creator, was the triune principle—A=1, B=2=3. The Terminus was Ter-omen-us. An Omen was a kind of projector or foreteller or giver of warnings, and might be good or evil. Ter-omen was the *triple* omen, or omen of the *Triune* God. Martianus Capella tells us, that the cycle of Om—M—608, was called OMEN.² The

¹ Isid. ap. Litt. Dict.

² See Vol. I. p. 192.

Pillar with a cross at the top, placed on a Calvary of three steps, was an emblem of the Trimurti with the *To Om* above it. I have just said that the crosses were the emblems of the generative power. These central stations, and particularly the first, was the generative point whence all the measurements proceeded; on this account, in a particular manner, it became the emblem of the generative power, as well as of the *heart* and of *wisdom*; it produced, generated, all the others. Every one is aware into what a variety of grotesque, and often indecent, forms, the termini of the Romans degenerated; but they all had a reference to the generative principle in some way or other, and in all cases their origin was in the sacred cross of the Agrimensores. In India, the same cause produced the same effect. A writer in 'Tait's Edinburgh Magazine says, "Gun-putty, " with an Elephant's head, that shews itself on various milestone-like appurtenances at the side " of an Indian road."¹ From this passage it is evident that the same termini remain in India and in Europe, as might be expected. The termini were considered the special protectors of gardens. Gun-putty is a figure with the head of an Elephant, the emblem of wisdom, or magical knowledge or science. Judging from the drawings and icons of him, I suspect his proboscis often formed a *gnomon*. The name is a compound of *gn* for garden, and *petti* father, *the futher of the garden*. This is of importance, as it shews the same compound doctrine of agrimensurism, of wisdom, and of the generative principle, in India and in Europe. Let it be recollected, that in India Buddha is said to have been crucified for *robbing a garden*!² From being the emblem of the Om, the obeliscal pillar came to be called עמד *omd*, that is, om-di—emblem of the *holy Om*. This renovating cycle was itself the emblem of the Self-existent; whence עמדי *omdi* came to mean *self-existent*.³

I will now draw my reader's attention to another natural effect necessary to be attended to in order to obviate some objections. If we consider that great principles were originally laid down, general rules to be at first attended to, it followed that, after the system went to pieces, and all communication between the distant parts ceased, those principles would be carried into operation in a variety of ways,—still all endeavouring to keep to the system. Thus it is we have the great cycles described and supported in different ways. In some countries of the East we have the 600, in others the 60. In Italy we have the 240, and 360, and 120; but all coming to the same conclusion. In a similar way, in the building of temples, the pillars had different microcosmic numbers—8, 12, 38, 19, 360, &c., &c. In a similar manner some people built the choirs of their cathedrals crooked; some, perhaps, having lost all knowledge of the astronomical import, would, on rebuilding their temple, make it, as they thought right, by building it straight. Thus it is that we have an endless variety; and, in fact, there is scarcely an ancient monastery or cathedral in foreign countries, which does not retain some fragment of the old system, lost by most, and often not understood by any of the inhabitants. As various as the numbers of pillars in the stone circles are, I have little doubt that they have all once had their respective allusion to the principle, in some way unknown to us. Besides, it is possible, that some of the circles may have been erected after the system went to pieces, and the principle was no longer understood.

10. After Cassivellaunus was defeated by Cæsar, he disbanded all his army, except the warriors of 4000 chariots, with which *he retreated to the woods*. What a barbarian the man must have been to have had 4000 chariots; and how little skill he must have had to manage them in woods inaccessible to the Romans, and in a country *without roads*! Nothing but prejudice can have caused the belief in the Roman accounts of the barbarism of the Britons.⁴ I have no doubt they bore to the Romans pretty much the same relation that the Mexicans did to the Spaniards: but who will say

¹ No. I. p. 32.

² See *supra*, pp. 248, 249.

³ Parkhurst in *vocce*.

⁴ It is a beautiful example of the absurdity of historians in taking as true the evidence of enemies.

the Mexicans were *barbarians*? The human sacrifices were the same in both Rome and Britain; and if they prove the Britons to be *barbarians*, they prove Augustus Cæsar to have been one, for he offered up 300 human victims in one night at Perugia; and human sacrifices were not laid aside till the time of Claudius. The 20 towns, said to have been conquered by Vespasian, I suppose to have been part of the *Municipia* alluded to above, in fact, to have been so many of our old Borough towns, which sent their deputies to the *Wittagemote*. We are told that the military roads which we find in England and other countries were made by the Romans. I believe these were the roads originally set out by the sacerdotal *agrimensores*, but continued and increased by those of the Romans, who seldom destroyed the works of art in the countries which they conquered. I cannot believe that a people like the ancient Britons were *barbarians*, as they were sufficiently civilized to bring into the field of battle large bodies of charioteers and cavalry, and to manœuvre them, as Pownall has shewn, exactly in the manner practised by the Greeks and Asiatics.¹ The fact of these chariots is alone sufficient to prove that the natives were not in the state of barbarism which has been described. This and the science displayed in the temples negative all the story of the barbarism of the Britons. I believe that many of the right-lined roads were what were travelled on by these chariots, and were originally formed when the builders of Abury and Stonehenge held sway. But it must not be understood that I mean to say that the Romans did not make new roads, or that ignorant devotees in later ages might not set up crosses from pious motives, and in ignorance of the original intention of those they imitated. I do not doubt that they did. On the tops of modern crosses I think will be found an upright cross, or the hole in the centre where it has been fixed. On the tops of ancient ones will be found horizontal crosses; in fact, the dials and gnomons of Ahaz, always inscribed with right-lined Etruscan figures, or, as Vallancey has shewn them to be, Phœnician figures, which we still continue to use. The gnomon was to indicate the cardinal points. In all the accounts of Britain we read of a Supreme Pontiff or Archdruid. I have no doubt there were three Archflamens under him, who became the three Archbishops spoken of, *supra*, p. 412.

11. It cannot be denied that the attempts of Mr. Hume and all our other historians to account for many circumstances in the history of the early constitutions of our Saxon ancestors have been attended with very little success; and the difficulty, as he justly observes, has been greatly increased by some of the most important provisions having become objects of party dispute. But I think this has, in a great measure, arisen from the confined view which the historians have all thought proper to take of their subject. It seems never to have entered into their minds to inquire what became of the population left by the Romans; and whether some customs or laws of the mighty people, for mighty *they* must have been who raised Stonehenge and Abury, might have remained. Indeed, the fabricators of these buildings seem never to have once entered into their minds. Mr. Hume says, "the language was pure Saxon; even the names of places, which often remain while the tongue entirely changes, were almost affixed by the conquerors."² In order to get rid of the old inhabitants, he represents them to have been nearly exterminated; and, then, to account for the Saxon names, he represents them to have been given by the *new* Saxons, when, in all probability, they only resumed their old Saxon names in the few instances where others had been given by the Romans. We have reason to believe, from the numerous Roman names of towns yet remaining, that the later Saxons did not change the names. I think when the Saxons came, they found the remains of their ancestors, who had, five or six hundred years before, built Stonehenge, &c.; and if our historians could have ascended a little higher in their researches, they

¹ Stud. of Ant. p. 274.

² Vol. I. Ap. I. p. 262.

would have found sufficient, probably, to have removed all the difficulties of the Saxon constitutions and laws.

I think circumstances tend to shew, that the great Barons were limited in number by the necessary offices which they held; for they were not like our present peers, mere animals of ornament,—each had some place or duty assigned to him. We are told that they consisted of from *fifty to eighty* persons;¹ but when I consider the mysterious numbers in the towns, I cannot help suspecting that, originally, they were, like the cardinals of Rome, 72 in number; and that, consequently, the nation was divided originally into 72 Earldoms, which would be, perhaps, the Domain of as many Municipia, with each its 12 Aldermen and 24 Common Councilmen. Each Earldom had its Urbs—a microcosm of the world. I think the Aldermen or Eldermen have been confounded with the Earls. The Earl was הלאר *elar*, THE *lar*, and was the same as the Heretogh or Duke, who was the הארץ *eartz*, עצה *oje*, Aga of the land.²

12. Pownal³ says, “From the nature of that branch of revenue, the tithes, which arose from the *Agri Decumani*, and by an inquiry how this branch was transferred to the Christian church on its political establishment, may be discovered, I should guess, the true origin of tithes, as they, in fact, came to the church.” The person who has read this work thus far, will not, I think, require teaching the means by which the tithes descended to the Christian church. Allodial property was, in the first instance, only that *occupied* by the priests, and thus subject to no return of any kind. As these priests or initiated increased, with the decay of the system they would, by degrees, keep getting possession of more of the *Agri Decumani*, till they came to form a very large part of the productive lands of the country. By degrees, as the priests lost the character of functionary priests, only keeping the character of sacred caste, they began to acquire more land than they could occupy, and they subtletted it in soccage, &c. The initiated or priests by degrees formed an aristocracy: they were, in fact, the non-officiating priests—gradually losing their sacerdotal character, like the Prince Palatines or Bishops of Germany. On the division, or, perhaps I should rather say, on the rise, of the military aristocracy, when they began to settle and to form a second aristocratic branch or class or caste, I think they enfeoffed their followers in the lands not previously occupied, in their own countries, and in conquered countries by force of arms in such districts as they chose to take from the conquered; but in every case the church or priesthood claimed, though they might not always obtain, the possession of the tithes. The priesthood claimed the soil as representatives of the vicar of God, and the tithe was the return to the Lord. In due season, in order that he might unite the right of *the book* to the right of *the sword*, the man of the sword compelled the priest to give him the χειροτονια; but this the priest always did accompanied with the open or mental reservation of the rights of the church. And it is exceedingly curious to observe the tenacity with which the obnoxious words *rights of the church* were always inserted in treaties or in rendering homage or in swearing fealty, when the priests were obliged to succumb to the violence of the kings or barons, and the anger of the latter at these words, because, as they very properly observed, they could not understand them. The fact was, the right of the church was the Lord Paramountship over the soil of the whole world; and, for the permission to the laity to the use of it, the moderate return of the tithe was required. For this reason it is that the tithe precedes all—kings’ taxes—landlords’ rent—military services—tithe comes before all. The right is maintained to be inalienable, indefeasible—*nullum tempus occurrit ecclesiæ*. And when we find the tithes in the hand of the prince, it is where the Bishop has become Prince, and has lost his sacerdotal character. But in this case we always find the officiating priests claiming,

¹ Hallam, Const. Hist. Eng. Vol. I. p. 6.

² Hume, App. p. 266, n.

³ Stud. of Ant. p. 115.

and at last receiving, the tithes.¹ I suspect that after the agrestic life in a great measure ceased, all lands which were not held by one of the other tenures came into the hands of the priests, who granted off or disposed of their *usufruct* as circumstances called for them, in return for the payment to them of tithe; and that this is the reason why very large tracts of waste lands are found by Mr. Hallam to have been in the hands of the Monks, who acquired great riches by bringing them into cultivation.

13. The same disputes took place among the Athenians as in the Roman state, respecting the oppression of the people and the division of lands, before the time of Solon.² The same stories are told as we hear in Italy about debtors, creditors, &c.; but at last the whole comes to this, that in neither country is the state of the case understood, unless Mr. Niebuhr has discovered it. Cecrops is said to have divided the Athenians into four tribes; these, I apprehend, were the four Indian castes, each tribe into three peoples, and each people into thirty parts.³

Before the time of Solon, the Athenians were divided into four castes—the sacerdotal nobles, the soldiers, the farmers, and the tradesmen, and, in fact, a *fifth*, the slaves or outcasts.⁴ Their state was divided into 12 districts; and the system is to be seen in the 360 persons who were called confrères. Respecting the question of debtors and creditors, of which so much is said both in Greece and Italy, I think there is yet something not understood. What connexion have debtors and creditors to lands, any more than houses or other matters? I suspect that the *debts* were demands made by the nobles upon the feudatories, for more than the tenths or tithes, to which the landholders would maintain that the nobles were not entitled. It is evidently a struggle between the nobles and the people for disputed debts, having, I think, some connexion with the lands. Tithes were paid to the priests of Delphi, and the similarity of the agrarian disputes at Rome and Athens seems to raise a probability that they both arose from the same cause. Dr. D. Clarke has observed, that it appears, from an inscription which he found in Bœotian Thebes, “That anciently, in that city, as in London, there were different companies, or communities, established for the different vocations.”⁵ Here we have the same system as that which we have assigned as the foundation of our Municipia. At the time when we read of the Amphictyons, the sacerdotal system had evidently gone to decay; but yet in the 12 states sending their deputies to the council, and in the 360 confrères of the Athenians, we may see the fragments of it. Treating of the nobility of Athens, Mr. Niebuhr says, “There was indeed at Athens, in very remote times, a nobility which traced their descent from the heroes and princes of the heroic age; that is the idea of an aristocracy. Solon himself belonged to this class, and so did the later Plato, and Critias, and the orator Andocides. The distinction of this nobility was ascertained by the ancient division of

¹ Aristotle states the tribute from the land in Greece to be a *tenth*. (Briggs, p. 11.) Persia paid *one tenth*. (Ib. p. 14.) Syrian Judea paid *one tenth*. (Ib. p. 9.) In China *one tenth* is paid. (Ib. p. 15.) In the Burman Empire *one tenth* is paid. (Ib. p. 16.)

The Laws of Menu expressly admit the Sovereign to be lord paramount of the soil in India. (Ib. p. 25.)

Bertolacci states, that the whole of the land in Ceylon is the property of the Crown, of which it is held by the payment of returns of various kinds. (Ib. p. 45.)

After a careful inquiry, Col. Briggs comes to the conclusion, that the Hindoo institutions at one time were similar and universal throughout India. (Ib. 81.)

In India the country was in a very particular manner divided into districts, each containing 84 sub-districts—similar to the hundreds in England. (Ib. p. 85; Tod, Vol. I. p. 141.)

The Aids in Orissa, Travancore, and Ceylon, are a *tenth* of the produce. Briggs says, it is this which probably gave rise to the prevalent opinion throughout India, that the demands of the king were once limited to the *tenth* of income or produce, in lieu of all other direct imposts. (Ib. p. 93.)

⁵ Travels, Vol. IV. p. 56, 4to.

“clans, not altogether unlike castes; and the blending of these with the other citizens, was the aim of Clisthenes’ code of laws. In some of these families, as the Eumolpidæ and Butades, there still existed a few hereditary but unimportant offices of the priesthood. The Aleuades, like the Bacchiades,¹ were a numerous and widely-diffused royal Gens. There also existed in Greece, oligarchies of the most odious description, frequently degenerated from the aristocracy.”² Here are evident traces of the first order of priests growing into an order of lay aristocrats; the different offices of the priesthood having become hereditary in families—the origin of which the families themselves had forgotten. This, before the art of writing was generally practised, would soon happen. Mr. Niebuhr observes,³ that it was the general opinion of the philosophers as well as the people of Greece, that an older race had occupied that country, who had perished, and who were the fabricators of the walls of Tiryns, and other buildings called Cyclopean,—of the drains from the lake Copias, &c., &c.; but of whom they had no records whatever, except their works. How could this have been, if the art of writing had been known and in common use for the purposes of history? This early race were the people who came from India and conquered the aborigines, as we conquered the people of North America, and are conquering the people of Australia. The laws being unwritten, letters not being invented, an order of priesthood or a separate order would be required to keep them in remembrance; for this reason the courts, like the Areopagus of Athens, were constituted, which, I doubt not, answered to a lodge of Freemasons, and above them were the Amphictyons, who answered to the chapter. These were the men by whom the book of wisdom, or the Veda, Beda, or Saga, was compiled in each case, when letters came to be known, the object of which was to produce uniformity, as that began to fail after the system began to go to pieces. I think it not unlikely that the monks and monasteries might at first, after the sacred caste came to be numerous, arise from there being establishments for education, and for the preparation of novices for the priesthood. The books of religion and of law, I do not doubt, were what the Pentateuch and the Koran yet are, the codes both of law and of religion. The sodalitates or companies of brethren or phratries or crafts in Athens were 12 in number, in what were called 360 houses.⁴ Here we have the remains of the Microcosm. In a very ancient history of the Umbrians, it was related that the Etruscans had conquered three hundred of their towns.⁵ Here Mr. Niebuhr says, we ought to consider the three hundred to mean only a large indefinite number. The absurdity of three hundred towns, in the common acceptance of the word town, he could not get rid of. Pliny says, there were more than twenty towns in the Pontine Marsh, which is about twenty-five miles long. In each case (notwithstanding all the learned distinctions of the literati) between the different kinds of towns the towns were nothing but polises—the divisions of the Agrimensores, something like our townships, each divided from its neighbour by a *Cardo*. They were parts of the 360 subdivisions. The country villages of the Romans were called *pagi*; the real nature of these is explained by the Greek name which they bear in the history of Dionysius, where a *pagus* is called a *περιπολιον*—as we should say a *circumpole*.⁶ These were, I doubt not, our Maypoles, where the priest treated the people (when they came to pay their tithes) with games and feasting, as the landlords in Britain have a feast on the rent day. I suspect the houses named above, called *Φαραις*, and by the Lombards *Fara*,⁷ had their names from the same root as the Pharaohs of Egypt, and all had reference to the feudal

¹ In the Aleuades and Bacchiades I suspect we have allodial proprietors and bookmen—the scribes of the Jews.

system. Mr. Niebuhr says, "The tribes in the states of antiquity were constituted on a twofold principle: in some states the arrangement was regulated by the houses which composed the tribes, in others, by the ground which they occupied."¹ On considering this observation, I am induced to suspect, that when tribes came from the East to settle a country, not only the land was set out according to the microcosmic principle, but the people had the lands allotted to them on the same principle; and that it was the remains of this which Mr. Niebuhr perceived. The existence of the castes he shews² to be clearly perceptible in Italy. From the whole of the early part of this chapter it is plain that Dionysius, Aristotle, and Polybius, were all equally ignorant of the origin of the tribes, fraternities, &c., of the Greeks and Italians, and that all their statements are mere attempts at theories to account for that state of which they had no historical records; and the reason of this was because they had their origin when the widow-burning first took place on the river Sinde in Thrace, and in the Saturnian kingdom in Italy—before, in fact, the use of letters was known. The whole are the scattered remnants of the microcosmic system—remnants probably retained only in the national poems or songs. In his chapter entitled, "The Patrician Houses and the Curies,"³ Mr. Niebuhr has bestowed very great pain in his endeavour to explain the origin of the tribes and divisions of the Greeks and Italians: he has, however, quite failed. I think if he had possessed the knowledge of the Sacerdotal Government, and how the Feudal System was connected with it, he would have succeeded much better. He would have unravelled the mystery where I fail.

14. The division into castes may be observed in the very early history of almost all nations. It was an effect which naturally arose from the universal Pontifical Government. The same causes every where produced the same effect. Strabo says, the Iberians were divided into *four* ranks.⁴ The old Irish were divided in a similar manner.⁵ As the Lucumones of the Etruscans were *twelve* in number, so we find, in the oldest monastery of the world, of which we have any remains, that of Iona of the Culdees, that it had *twelve* and their Prior, by whom they were ordained.⁶ In the 360 Satrapes, into which Persia was divided; in the 72 Solumi, and in the three counsellors of Darius, named in the third, fourth, and fifth chapters of the first book of Esdras, when he ordered the Temple of Jerusalem to be rebuilt, I think we may see traces of the Microcosm in Persia. Josephus⁷ says, that Darius made the prophet Daniel ruler over 360 cities. The oldest division of South India was into three Tamul principalities,⁸ herein exhibiting signs of the same mythos. But this was probably before the priests of either Cristna or Vishnu arose. The universal mythos shews itself in a very peculiar and striking manner in the islands of Java, Sumatra, and Japan. They are all called by the same name—Jabadios. This, as I have frequently remarked, is clearly the island of the Holy Ieue. In Sumatra, the king calls himself by the two names of Sultan and of Allum Shah, the latter of which explains the former. We are told that it means *the world's king*. I have been informed by a very intelligent and respectable traveller, that the Turkish cavalry are, in general, feudatories, and that they hold lands on condition of themselves serving or finding a man and horse when *called on*, or at specific times, according to the terms of the tenure. Mr. Klaproth, p. 156, states the Tatar nation to have consisted of 70,000 families. I have little doubt that we have here a sacred caste, limited to the sacred number of seventy-two. These were the tribes of Caracorum. The Turcomans of the Ottoman empire are divided, like the Roman Cardinales, into seventy-two tribes. In this, joined to several other circumstances which I have

before noticed, we see a proof of the origin of the Turkish power.¹ (In the same work Mr. David observes, that the Nestorian Syriac literal character has a close affinity to the Ouigour.² This is because they are, in fact, both the Pushto.) The Grand Seignior has twelve Ulemas. Tacitus informs us that the Germans divided the year into *three*. In honour of Augustus Cæsar 70 cities in the Roman provinces were called Augusta.³ I can entertain little doubt that these were 72 ecclesiastical capitals of districts, into which the empire was divided, and they are continued in the Roman cardinals. It has before been observed, that the chiefs at the siege of Troy were 72 in number. The Universal History⁴ says, "So we find Chedorlaomer, King of Elam, to have presided over several Reguli or Phylarchs, who, notwithstanding this, exercised a sovereign authority in the district where they held their residence. In like manner, at the siege of Troy, all the petty Greek princes obeyed the orders of Aga-memnon,⁵ whom Homer represents as king of kings; and, that this form of government prevailed anciently in Arcadia, Numidia, Etruria, Tartary, &c., has already been evinced." Here we have marked traces of the Microcosm in Greece and the other states named. The name of Chedorlaomer reminds me that the 70 kings, whose thumbs and great toes were cut off,⁶ shew the mythos or microcosm in Syria. The Universal historian then goes on to shew that originally the same system prevailed in China, and that the feudatory princes formed a species of parliament, or, I should say, Wittenagemote, and *that they officiated solely in religious matters*. Iεω was the great prophet, lawgiver or saviour, of the Chinese; there he had seventy disciples.⁷ In like manner Ιη-σους, that is IH, the ζω or Saviour, had 70 disciples. It is repeatedly observed by Mitford, in his history of Alexander, that all the Indian princes who were subjected to that conqueror, seem to have been feudatories to some grand potentate residing to the East; and there is an observation in the Universal Ancient History,⁸ that a Tartar Khan called Kiun Kan, before the time of Alexander the Great, divided his dominions among 48 princes. These, I apprehend, were subinfeudatories, or, in fact, tributary nobles, doing suit and service; and I think we may see, that these Khans were the ancestors of the Mogul, and claim to be the direct descendants of Noah and Japhet, to whom they trace their pedigree. I feel little doubt but that this Mogul claims to be one of the three, and the division into 48, the number of the ancient constellations, again shews the remains of the microcosmic system. Faria y Sousa says, the king of Bengal is the *heir* to all men.⁹ Among both the Greeks and Romans we read very distinct accounts of families possessing by inheritance certain offices or dignities, and among the priests particularly. But remains of this, I think, may be seen in most nations, when their ancient history is closely examined. In consequence of this system, the four great castes, as in India, became divided into a great number of little ones. All trades, all sciences, were hereditary. This seems to have answered very well; for, under the practice, all arts and sciences seem to have risen to a high state of perfection, and only to have declined with the destruction of it. Chevalier Ramsay, in his *Cyrus*, (p. 54,) has described the system to have been the practice of Ireland. I think it very probable that before the invention of letters it may have been the most eligible plan which could be adopted. It is difficult for us, brought up in the knowledge of letters, to judge of the state of the world before their invention. The Roman Pontifex Maximus, it is known, had a council, a kind of cabinet of *twelve* persons; but of what they consisted does not seem to be known. They were, I doubt not, the Tuscan Lucumones. The word *Lucumon* I suppose to be Lux-mannus or Lucis-mannus. They had also an order called the

Flamens, originally only *three* in number, who were Flammæ-mannus. The Ager Romanus was divided into *three* districts. The microcosm is visible in the Pontiff, and in the Flamens or Augurs, confined to the number *three*; and, like the Supreme Pontiff, their persons were sacred, and they were accountable to the Pontiff only for their conduct. When I think upon the admitted obscurity in which the subject of the Roman early polity is enveloped, and I find that the knights were at first restricted¹ to *three hundred*, and afterwards increased to *six* and then to *eighteen* hundred, and that the Patres Conscripti were at first limited to *three hundred*, I am induced to suspect that the latter were originally three hundred and sixty, and that the remainder of the numerical mythos of seventy-two, &c., was originally in use, though now lost to us. The numbers in the formation of the Roman Legion, and other parts of their military establishment, clearly display the mythos. The case of the Microcosm or Macrocosm, whichever it may be called, to which I have so often alluded, is similar to the case of the Irish Elk, which I mentioned above. It is unreasonable to expect to find the whole system, or proofs of its former existence, in any one place; but I think it is not unreasonable by collecting fragments of it in different places to hope to make out the whole, as the Irish made out their whole Elk. However, of this I am quite certain, that if I cannot make out the whole, I can exhibit quite enough to prove both its actual existence and its general nature.

15. I think there is a great probability that there was an Archierarch and a council of *twelve*, and a senate of *seventy-two* in every country—the governors under a Pope at Oude, Agra, Mundore, Samarcand, or some other great capital. We see remnants of this system in different places. We have them in the twelve Lucumones of Italy; in the twelve heads of Tribes and in the seventy-two of the Jewish Sanhedrim, and in the seventy-two Solumi of Persia; in the twelve states of Ionia; and in the council of the Amphictyons, who were evidently a religious assembly, sent from twelve states of Greece. I suspect that the *three* presidents did not impart *all* their secrets to the Council or Chapter, or Conclave of *twelve*, or the chapter of twelve all their secrets to the *seventy-two*. These would be formed in every great natural division of the world, or in every one of the seventy-two divisions, as we have them laid down in Genesis—a grand council to superintend each division, and, under it, as many subdivisions as would be required by localities and circumstances—each having its Flamens, Lucumones, and Sanhedrim; and each having its sacred Mount or Cardo or Acropolis or Olympus or stone circle or *τεμενος*, around which the processions, the Deisuls, the voyages of salvation, were made, and the collection of the tithes would be paid, as at Delphi and Jerusalem. All this being strictly religious, all independent of any petty disputes which might take place between emigrating tribes, it would not be affected by them in the slightest degree. Thus we find the council of the Amphictyons unaffected even by the invasion of Xerxes.² This superior Sanhedrim, originally, I suspect, filled up by itself, as vacancies occurred, would leave to the respective subdivisions the management of their domestic affairs. It would seldom interfere with its civil concerns; but yet, I think, each government would be a kind of subinfeudation of the great one. Every district would have its archpriest. Of this we have remnants in abundance in our hierarchy, in our municipalities—succeeding to the Roman Municipia—in our Mayors and Corporations, which, by degrees, came to be formed; and, in the country, in our Lords of Manors, (Lords of Minerva,) originally, I have no doubt, all ecclesiastics, sacerdoties beginning to lose their sacerdotal character. In the council of Amphictyons,³ at Delphi and Eleusis, we have the origin of our College of Heraldry—a *sacred* (i. e. also *secret*) college, with its *κερυξ* or messenger of peace;⁴ and in the Druidical col-

¹ Niebuhr, Hist. Rom. pp. 255, 256. Walter's Ed.

³ The word Amphictyon is, Am-phi-iction or Ixion.

² See Vol. I. p. 632.

⁴ See Vol. I. p. 590.

leges—our universities—we have the places where youth were educated for the different situations of the priesthood. But I must still be understood to mean, that all these divisions went on as subordinate to the *three* Archierarchs—the descendants of Shem, Ham, and Japhet. I think it is probable that the first Archierarchical Government left the towns and the districts appertaining to them, generally, to the management of themselves; from which the various free states of Greece and Italy arose. They were held in feudal tenure of the God Phree. Their business was to preserve the supreme power of their Pontiff, wherever he happened to reside, and to arbitrate disputes among the tribes. At this time and under these circumstances it is evident, that there could be none of the wars and national enmities, or causes of them, which at present exist. Whenever differences arose the Amphictyons would be the disinterested mediators. This we see most clearly in the Amphictyons of Greece. There would be no interest in these early Amphictyons to do injustice; their tithes would be known and certain; but it would be most evidently their interest to preserve peace, for the sake of encouraging the increase of the produce of the land, and the consequent increase of their tithes. As this system began to go to decay, they would begin to increase rites and ceremonies of religion to intimidate the people. Magic and juggling tricks of every kind would begin to arise. In the little republics of Greece, and in the same, or nearly the same, description of little states in Italy, we have the formation of societies for their own governance in secular affairs: in Greece, under the council of the Amphictyons—in Italy not so clearly marked, but probably under a Pontifex Maximus somewhere, and under the Lucumones and Cardinales. Remains of this system shew themselves every where, when ancient history is examined to the bottom; and the consentaneousness of the remains proves, that an universal system prevailed throughout the world. The traditions of the poets, are, in fact, in their foundations, true traditions—not as we have been accustomed to consider them, merely poetical effusions, for the sake of amusing idle people. The Golden Age was no figure of speech, but a reality.¹ In the history of the Phocian war, and the interdict pronounced against it by the council of the Amphictyons, we see the almost expiring power of one of the local conclaves. It is perfectly clear that the council possessed the supreme power, at least in every thing appertaining to religion; and that all the different states of Greece formed a whole subject to them. It is also pretty clear, from the different accounts given of the origin of this council, that it was, equally with the origin of the state of Greece itself, at that time unknown to their writers. This arose from its institution having taken place several generations before the use of letters, in an age said to be *barbarous*. So fine an institution bespeaks any thing but an age of barbarism! This is the reason that the states of Greece were all exactly in the same situation with respect to their early history, as the least impartial examination of it will satisfy any one. When Alexander the Great aspired to the sovereignty of the world, he applied to the Amphictyons, who acknowledged him as their Lord, or who took upon themselves to appoint him to the sovereignty of all Greece. This seems to be nearly among the last exertions of their supreme power. But I have little doubt it was with the understanding, that he was the *new incarnation*; though this might be only secretly professed by the initiated. We must never forget, that the real system was kept *a secret* as much as possible. Amidst all the confusion in which the history is involved, it is very clear that Philip aspired to be chief of the Grecian states, only as general or officer of the Amphictyons. The Areopagus at Athens, I suppose, was the high ecclesiastical court of that state, and probably, originally founded on the same plan as its superior—the Amphictyonic council, to whom, no doubt, it was amenable. Although in periods of public calamity the Areopagus sometimes interfered in state affairs, this

¹ See *supra*, pp. 305—308.

seems to have been a stretch of authority. It took cognizance of all religious concerns, and, as such, of criminal actions, murder, &c. The origin of this court, like all other Grecian concerns, is lost in fable. I believe that the emblematical figures which are every where found in such great numbers in the East, had their origin before the knowledge of letters, and were invented for the purpose of assisting in keeping alive the mythos. As might well be expected, the meaning of them is now almost entirely gone. I have repeatedly observed in the course of this work, that the ignorance of the Latins and Greeks of their mythology and Gods is quite unaccountable; but on more mature consideration I think the invention and adoption of them, previous to the knowledge of letters, is quite sufficient to account satisfactorily for that ignorance. It appears to me, now that I consider it in connexion with their ignorance of letters, to be a necessary consequence. Their sacred poems would enable them to retain or preserve but a very small part of their mythology; and of history, for the *purpose of history*, they had none. Besides, sacred poems retained by memory, would answer very well as long as every thing proceeded peaceably; but the moment civil wars and revolutions of empires commenced, they would be no longer of any avail. I had nearly completed this work, in which I have so frequently expressed my surprise at the unaccountable union of ignorance and knowledge among the ancients, before it occurred to me, that many facts prove that science must have been, till a very little time before Christ, entirely confined to *secret societies*—each philosopher keeping his science as much as possible to his own followers. We must recollect that the total absence of every thing like reviews, magazines, and newspapers, must have rendered this comparatively easy. This will readily account for the Callidei or Chaldæans being the possessors of science, to the exclusion of others. This is supported by the book found in Egypt by Mr. Hammer, which says, as I have before-mentioned, that every learned man had a letter of his own.¹ I have frequently observed, that the religion of Buddha must have come to the West, using the epithet *Buddha*. I rather regret that I have so used it, as it may have a tendency to raise objections in the minds of some persons, who will revolt at the local superstition of India being brought to Britain and other western nations; but facts found in them sufficiently prove, that the same system really existed in both, and actually by the name of Buddha too. We find little of this system in *books*, because when syllabic literal writing began to escape from the adyta of the mysterious temples, the law of eternal change was operating to its destruction; but we cannot look a yard around us, without seeing remnants of it, from the village mere-stone, and the four-road cardinal-decuman cross to the mighty Stonehenges and Aburys yet existing, from Iona in Scotland, to Iona in Ceylon—from Tanga Tanga of Tartary and China, to Tanga Tanga of Peru.

16. Dancing is looked on with contempt by philosophers at this day; but I have no doubt that the dance was among the ancients really of much greater importance than has been suspected. It was generally accompanied with both music and poetry, and the original intention was to keep in recollection the sacred mythoses before the invention of writing;² and surely nothing could be better contrived for this purpose. All early sacred books are poetical. For the same purpose festivals, equally accompanied with dancing and poetry set to music, and sung to the dancing, were established to keep in recollection victories or other celebrated events. When this view is taken of those apparently frivolous arts, how surprisingly are they changed! Instead of sciences contemptible and demoralising, as they became after the art of writing was made public, we see that, when under the supervision of the first priesthood, they were originally most important, and must have been the firmest supports to patriotism, morality, and every generous virtue. We now

¹ See *supra*, p. 205.

² See Vol. I. p. 404, and *supra*, p. 179.

see why they were patronised by the Socrateses and Pythagorases of antiquity. Although I give more credit than has been given by any one in modern times to the great change which must have been effected in the world by the knowledge of the art of writing having become general, yet I suspect I do not, by any means, give credit enough to it. To the knowledge of it I attribute, in a great measure, the conversion of those originally moral and delightful arts into causes of every kind of vice and impurity. With their utility they lost their innocence and simplicity. Being no longer necessary to preserve the recollection of historical events or mythoses, they were abandoned to those who practised them without understanding their meaning—merely for their sensual gratification. All the best feelings and refined sensations gave place to the gratification of the lowest passions, and the temples became no better than taverns and brothels, the places of resort for strumpets and bacchanals. That this was their state no one can deny. But though the later of the ancients admit the fact, yet it is quite clear that the abuse had crept on so imperceptibly, that they were utterly at a loss to account for it, and with the corruption of the mythology and religion, an absolute ignorance of their meaning very naturally ensued. As the knowledge of the art of writing crept out by slow degrees, and was used, without any previous system, to record only a few of the most important matters, its tendency would be to induce carelessness, and a relaxation of the efforts to explain the meaning of the dances, poems, &c., which would previously be bestowed, when there was nothing but the retention of them in the memory to depend upon.

“ In a choral ode of Sophocles, he (Pan) is addressed by the title of Author and Director of the “ Dances of the Gods ; as being the author and disposer of the regular motions of the universe, of “ which these divine dances were symbols. Among the Greeks, all dancing was of the “ mimetic kind : wherefore Aristotle classes it with poetry, music, and painting, as being equally “ an imitative art : and Lucian calls it a science of imitation and exhibition, which explained the “ conceptions of the mind, and certified to the organs of sense things naturally beyond their reach. “ To such a degree of refinement was it carried, that Athenæus speaks of a Pythagorean, who “ could display the whole system of his sect in such gesticulations, more clearly and strongly than “ a professed rhetorician could do in words ; for the truth of which, however, we do not vouch, the “ attempt being sufficient. Dancing was also a part of the ceremonial in all mystic rites : whence “ it was held in such high esteem, that the philosopher Socrates, and the poet Sophocles, both “ persons of exemplary gravity, and the latter of high political rank and dignity, condescended to “ cultivate it as an useful and respectable accomplishment. The author of the Homeric hymn to “ Apollo, describes that God accompanying his lyre with the dance, joined by the other deities ; “ and a Corinthian poet, cited by Athenæus, introduces the Father of Gods and Men, employed in “ the same exercise. The ancient Indians, too, paid their devotions to the Sun by a dance imi- “ tative of his motions, which they performed every morning and evening, and which was their “ only act of worship. Among the Greeks, the Cnosian dances (Q. Gnosian ?) were peculiarly “ sacred to Jupiter, as the Nyssian were to Bacchus, both of which were under the direction of “ Pan ; who, being the principle of universal order, partook of the nature of all the other Gods ; “ they being personifications of particular modes of acting of the great all-ruling principle, and he “ of his general law of pre-established harmony ; whence, upon an ancient earthen vase of Greek “ workmanship, he is represented playing upon a pipe, between two figures, the one male and the “ other female ; over the latter of which is written ΝΟΟΣΣ, and over the former ΑΑΚΟΣ : “ whilst he himself is distinguished by the title ΜΟΛΚΟΣ : so that this composition explicitly “ shows him in the character of universal harmony, resulting from mind and strength ; these “ titles being, in the ancient dialect of Magna Græcia, where the vase was found, the same as “ ΝΟΥΣ, ΑΑΚΗ, and ΜΟΛΙΗ, in ordinary Greek. The ancient dancing, however, which “ held so high a rank among liberal and sacred arts, was entirely imitative ; and esteemed ho-

“nourable or otherwise, in proportion to the dignity of what it was meant to express.”¹ David danced before the Ark,² and one of the Gospels³ describes Jesus and the Twelve Apostles as having celebrated a dance after the *last supper*. It is difficult for us to enter fully into the feelings of the actors or spectators of the dance, or to comprehend the intensity of them, which would probably arise from the belief that they were the representations of scenes of real life. For want of experience we can form no idea of the effect which must have been produced. I have before observed that all the mythoses of antiquity were contained in poems.⁴ I have no doubt that writing was originally used solely for the purposes of religion, and used only in the form of poetry, for the sake of aiding the memory,—prose being comparatively a late invention. This, I think, led to the universal degradation of the human character—of the human animal. In the first place, the memory deteriorated, and, in the next place, by the abuse of allegory, the minds of the uninitiated were brought, by degrees, to the reception of the most degrading puerilities. The common people finding such stories as those of *Cristna* believed by their superiors, the initiated, (but which, in fact, were not believed by them,) were also induced to believe them. Thus, in time, in all countries, arose the mythology, and in a similar manner the poems came to be considered to have divine authority, and to be, as inspired writings, infallible. I have no doubt that if the *Paradise Lost* had been written in the beginning of the Christian æra, it would have been regarded as of divine authority. Its mixture of puerile nonsense and beautiful passages is well calculated to attract a devil-driving age. The Marquis de Fortia d’Urban⁵ says, “La prévention pour la coutume a été, de tout tems, un obstacle au progrès des arts : La musique s’en est surtout ressentie. A Lacédémone, où Lycurgue avait joint la musique aux exercices militaires (Plutar. Apophthegmes des Lacédémoniens, Chap. xxxi.); il n’était permis de faire aucun changement dans l’art de célébrer les actions héroïques, quoique fort instruit des anciens usages, il ajouta une corde à la lire pour varier les tons. Les Éphores condamnèrent cette nouveauté, et clouèrent sa lire à un mur : tant on était attaché à la simplicité des accords !” says the Marquis. He then adds, “Le musicien Timothée ayant aussi ajouté deux cords à sa lire lorsqu’il disputa le prix aux jeux CARNÉANS, un des Éphores vint, un couteau à la main, lui demander de quel côté il voulait que fussent coupées les cordes qui excédaient le nombre de sept.” He adds, “On voit par ces faits l’importance que les anciens attachaient à la musique, au chant, et même aux instrumens.” The Marquis may be perfectly assured that the Spartans might have sung to what tune they pleased, had not something very important depended upon it. All those exercises of the young Carneans were religious, as were all their games. How all the notes of music were made useful to record the mythos, it may be impossible now to discover; but when I recollect all the Pythagorean doctrines and praises of music, I cannot doubt that they were converted to such use, and were of the very first importance too. It seems probable that the class of persons called Rhapsodists, in Greece, were correctly the bards of Britain, Ireland, Scandinavia, and India; and the rhapsodies which they sung were the cyclic poems, or poems to celebrate the renewal of Cycles or Avatars—in songs carrying a double meaning—an *exoteric* and an *esoteric* meaning,—which was clearly the case with their tragedies.

It is a very important fact to be observed and recollected, in this disquisition, that, in reality, poetry was the only species of composition which could by possibility exist until the invention of the material of books, such as prepared skin or papyrus, was brought to a very considerable degree of perfection; and we have reason to believe that this invention in the West, at least, had no very

⁴ See *supra*, p. 225.

⁵ Sur l’Orig. de l’Ecriture, p. 94.

great antiquity. And here we see the reason why (as Mr. Niebuhr has observed) all the ancient pseudo-histories, but real mythoses, of Italy, appear to have been in verse or poetry. No doubt an exertion of memory surprisingly great must have been required for the composition of such poems as the Iliad and the Odyssey; but we can scarcely form an idea how different from ours may have been the retentive faculties of persons, the improvement of whose powers of memory formed the great and leading object of their education. I doubt not, as I have already intimated, that the art of *writing* has been the ruin of the retentive faculty of the human mind. I believe in every country the religious system, which included in it what might very properly be called also the philosophic system, was concealed or conveyed in ballads or feigned adventures of a person, from which, when historians arose, they formed their respective histories. As in each country, from the lapse of time and other circumstances, small variations in the ancient story must have arisen, so, in the respective histories, variations would take place, yet the universal mythos would still occasionally shew itself.

CHAPTER V.

MICROCOSM CONTINUED. VEDANTA AND NYAYA PHILOSOPHY OR DOCTRINES.—NATURE OF THE MICROCOSM.—PYTHAGORAS ON NUMBERS. CYCLES.—MYTHOLOGY. PATRON AND CLIENT. COLONIES. ISOPOLITY. DOCTRINE OF THE ANCIENT AND MODERN *Xpῆς*.—BAILLY, BUFFON, &c., ON BIRTH-PLACE OF MANKIND. FORMER HEAT AT THE POLES. THE MYTHIC-CYCLIC-MICROCOSMIC SYSTEM. WHAT HAS HAPPENED MAY HAPPEN AGAIN. ILLUSION.

1. WE have seen much respecting the contention between the advocates of the *male* and of the *female* principles of generation for superiority. Besides this, there was another source of dissension, which was the produce of it, and which was of the most refined and abstruse nature; indeed, it was of so refined a nature that, whoever has endeavoured to explain it has lost himself. The doctrine has agitated the schools as well in Europe as in India, from the most remote of times. It is the abyss in which deep thinkers and learned men have generally been shipwrecked. Their lucubrations have ended in *illusion*. This has arisen from their attempt to grasp what is evidently out of the reach of the mind of man. In Europe we have had it, in modern times, under the names of *Des Cartes* on one side, and of *Berkeley* on the other: in India it has been discussed chiefly by *Vyasa*; and it is called the doctrine of the *Vedanta* philosophy in opposition to the *Nyaya* philosophy. The word *Vedanta* is evidently a formation from the word *Ved*, which I have shewn to be the same as *Bud*, and to mean *wisdom*,¹ and it has acquired this name in India, because it was principally the doctrine of the ruling power, the Brahmins. This meant the doctrine of the eternal existence of matter or substance (the doctrine of *Des Cartes*); of which the First Cause, the *ἢ ἰε*, the *I shall be what I have been* was supposed to consist—the *ἢ ἰε* *ieie* chanted by the

¹ See *supra*, p. 4.

Brahmins in the word *Yeye*. The word *Nyaya* was the opposite of this, and is a formation, almost English, consisting of the negative *ny*, which is the English word *Nys*, (used, I believe, only by Spenser,) meaning, *none is*. It is the negative particle and the Hebrew ω *is*, which jointly mean *not is* or *not wise*, and the Hebrew word η *ie*, *existence*. The two doctrines in common terms may be defined those of Matter and Spirit—of Materialism and Immaterialism—called also Atheism and Deism.

The followers of the *Nyaya* were also the followers of the *female*, *Maia*—those of the *Vedanta* were followers of the *male*, *Brahme*. I think, in the Mahabarat war, the Buddhists were followers of the *Nyaya*, and the Brahmins of the *Vedanta*; but the two sects in later times, after the whole became merely a matter of the idle speculation of philosophers, in short a logomachy, and the meaning of the mythology was lost, were completely intermixed and so confounded one with the other, that they perpetually changed sides, and the followers of the *Nyaya*, the *spiritualists*, who were formerly considered the *Atheists*, are now considered the only *Deists*; and the *materialists* are considered the *Atheists*. The two doctrines are so nearly the same in principle, that it is very difficult to distinguish one principle from the other; and, if I understood Mr. [Sir] Greaves Haughton, the learned Secretary to the Asiatic Society, on the 2d of March, 1833, they are at the bottom the same. Under these circumstances I think I shall not be thought very paradoxical in thus stating my belief, that the modern Brahmins, in their endeavours to recover the lost learning of their ancestors, have done precisely what has been done by the Jews with the *Barasit* and *Mercavah*, in their Cabala, namely, they have substituted one for the other. The η *ie* is clearly materialism, let the priests say what they will to the contrary; however, it is the dogma of the Brahmins; and *Nyaya* is nothing but the denial of the *Yeye*—the negative of it. But if I be mistaken as to the sects having changed, this will not alter the fact that one is a negative of the other, The $\eta\eta$ *ieie* I am satisfied, was understood to be a spiritual fire, an *emanation* from the Supreme Being, and partaking of his nature—hereby making him into a material existence. I believe it will not be denied that the great feud between the Buddhists and Brahmins arose *in part* from the difference between the *Vedanta* and the *Nyaya* philosophies; which, as I have intimated, are called the doctrines of *materialism* and *immaterialism*, *matter* and *spirit*, and, as thence inferred, of *Theism* and *Atheism*, which, in Vol. I. p. 815, I have shewn is an inference not possible to be supported.¹ From this the worshipers of God, under the names of *Cristna* or the *benevolent lamb*, or *Vishnu* the *fish*, gratifying their sectarian hatred, take occasion to call the *Sacæ* or *Saxons* or followers or worshipers of *Saca*, the God of wisdom under the name of *Buddha*, *Atheists*; and they find our learned men, such for instance as the learned Mr. Colebrook, blockheads enough to follow their example. I have little doubt that this feud arose as early as the division between the Buddhists and the *Vishnavites*, whenever this might have happened, and that it was long before the perfecting of the Sanscrit language. Of course, as usual, (and after the manner of the Greeks formerly complained of by Plato,) Sanscrit scholars go to the Sanscrit for an etymology,² and they make of *Nyaya* *i*, to go, with the prefix *ni* into, *inference*, *argument*, *reasoning*, *logic*; and of *Vedanta*, from *Veda*, and *anta*, *the end*: the end, that is, the purpose or ultimate result and substance of the *Veda*. The above is the explanation of one learned Sanscrit professor: the following is the explanation of another: “The word *Vedanta* is derived from *Vêda*, *the Scripture*,

¹ I am well aware that what I have said in the passage quoted above, may be, and will be, disputed by the metaphysicians; but what are all their nice distinctions on these subjects, (which are in reality *above our comprehension*,) but a mere logomachy and nonsense?

² There are great numbers of words in the first *Veda* which are in no Lexicon; this is because their meaning was lost before a lexicon was made. Dr. Rosen tells me, the first lexicon was made about 600 years after Christ.

“and Anta, *end*; implying the end or object of the Veda. Nyāya, in its original sense, means “fitness, propriety; hence its applicability to express the same thing as we call *logic*.” These etymologies may be satisfactory to the profound searchers into these questions; they are not so to me. The following, I think a better explanation: the Vedānta is the patronised doctrine of the ruling powers in India; and I suppose they meant, that the doctrine has *wisdom* for its *end* or *object*; and that they affirmed, that this, that is, Ved, Bed, or Bud, is its doctrine, in opposition to the other, which is *not wisdom*. Now we have formerly seen that the Brahmins chaunt in their service the word Yeye,¹ which they do not understand; but say, they suppose it to mean *victory*, the word *ye* meaning victory. I have shewn that this is the name of the Hebrew God יהוה *ieie*, who is often called the God of victory, but the meaning of which is *self-existent God*, and is an epithet in a particular manner applied to the God of wisdom. I believe, therefore, as I have lately remarked, that the Nyaya is merely the Hebrew and Sanscrit word יהוה *ieie*, with the Celtic, Saxon, and Sanscrit negative, prefixed by the Brahmins to convert it into a term of reproach against their opponents, to make them deniers of the self-existent God, or to be *Atheists*. Then the first will be, the doctrine of *the wise*; the latter of *the unwise*. I repeat, that our Sanscrit scholars, in endeavouring to expound the meaning of *proper names* by the Sanscrit only, are exactly in the same situation as that in which Plato describes the Greeks to have been, in their endeavours to expound *their* proper names by their *own language*, instead of going to the Barbari. Sanscrit scholars also should go to the Barbari. I believe the names of all their Gods will be found in the Arabic, that is, in the Hebrew roots. Mr. Wilson says, “by Siva himself, the Pásupata writings were composed: Kanáda is the author of the Vaisheshika philosophy. The Nyāya originates with Gautama. Kapila is the founder of the Sánkhyā school, and Vrihaspati of the Chár-vāka. Jaimini, by Siva’s orders, composed the Mimánsā, which is heretical, in as far as it inculcates *works* in preference to *faith*, and Siva himself, in the disguise of a Brahman, or as Vyása, promulgated the Vedānta, which is heterodox in Vaishnava estimation, by denying the sensible attributes of the Deity.”²

2. We will now inquire farther into the nature of the microcosm. From the $T\omicron O\upsilon$ proceeded the Creator, Preserver, and Destroyer—Brahma, Vishnu, and Seva; from them proceeded 72 Angels, and from them 360 others; these were the angels seen by Jacob, and these were the 360 Æons of the Valentinians, and the 360 tutelar saints of the Romish church, one for each day of the year, and the Divi of Macrobius. The seed of every living or animate being was believed to have been formed at the first creation, or to be a part of or an emanation from the $T\omicron O\upsilon$, to have existed from eternity, to be a perfect animal in miniature, a microcosm of every animal above it, and at last, of course, of the first Great Cause. Every seed was a microcosm, i. e. a little world—was a world in miniature. Naturalists, by means of the microscope, perceive that the seed of every animate being, like the egg of the serpent waiting in the sand for the solar ray to develop its faculties, is a being complete, and only waits for the peculiar circumstances suitable to its nature to develop itself.³ It is evident that without the solar heat no animate being would ever come into existence. Hence we see how the sun came to be regarded as the Creator, and why the ancients adored that luminary: and the prayer of Cyrus, though he was an Iconoclast, and of Martianus Capella, noticed in Vol. I. pp. 191, 192, shew that they could reconcile the adoration of the solar power under his various names with the adoration of one Supreme Being, at the head of

¹ See Vol. I. pp. 430, 468.

² Asiat. Res. Vol. XVI. p. 10.

³ Here we have a microcosm of Brahme brooding over the deep, and of the Spirit of God moving on the face of the water, of *Genesis*. See *supra*, p. 67.

all. I consider it quite impossible for any one to have read this work with attention, and not to have seen that an universal mythos once prevailed; but I cannot help thinking that, if it had been a system regularly made out, and previously contrived in all its parts, we should have made it clearly out *step by step*. On this account I am induced to suspect that the mythos arose from circumstances, and was founded on, or consisted of, the microcosmic principle; and that from this, when applied to the cyclic system, which is most clearly microcosmic, the mythic histories took their rise, in all nations having a certain degree of resemblance, but in all nations, from the peculiar circumstance that the facts of real history were used to describe the *mythos*, it must of course vary, *i. e.* a certain quantum of variation must take place in the mythic history. Real facts could not be bent quite to fit; but they were bent to do so as nearly as possible. The bending of the real facts would be aided by the natural uncertainty of tradition, by which only they were handed down, writing being, I suppose, unknown. As story or a tale of facts was to be the vehicle, such leading facts as the native tradition preserved, must, of course, be used, and would be very easily made to bend. Thus we have, as observed by Nimrod, the Exodus or *going out* of all nations, probably the first migration of the tribe. We have this part of the mythos clearly in North India, South India, in Syria, Babylon, Troy, Rome, and in Mexico, perhaps the most remarkable of all.¹ In Genesis we have the microcosm of two worlds. We have the Patriarch, that is, the head father or Pontifex Maximus, and his three vicars, dividing the world into three parts; and the four in each case are microcosms of the *To Oυ*, and of the Creator, Preserver, and Destroyer. In the first case, Cain was the *destroyer*. In the second case, Ham was the *wicked one*, or the *destroyer*, the *cursed one*—the father of the Canaanites or followers of the female principle—*Γυνή*, *Cune*.² Julius Firmicus Maternus says, “It is necessary to know, in the first place, that the God, who is the fabricator of man, produced his form, his condition, and his whole essence, in the image and similitude of the world. And thus the Demiurgus exhibited man by the artifice of a divine fabrication, in such a way, that, in a small body, he might bestow the power and essence of all the elements, nature for this purpose bringing them together; and also, so that from the divine spirit, which descended from a celestial intellect to the support of the mortal body, he might prepare an abode for man, which, though fragile, *might be similar to the world*.” Again, “So that the animal *which was made in imitation of the world* might be governed by an essence similarly divine.”³ He was endowed with a portion of the first attribute of God or of the divine idea—wisdom. He had a portion of the generative power; he had a portion of immortality. Every animal, as I have already remarked, was a microcosm of man—beginning, probably, with the wise elephant, and descending to the meanest reptile. A portion of the same mind or wisdom, the same generative power, is visible in all. Every plant was a microcosm of the animal, and possessed a portion of mind. The sun-flower turns itself to the God of day; the pimpernel⁴ opens to the sun, and shuts itself to the storm. The ash-tree planted on a bank, with one root hanging down, turns it inwards to the earth. The sensitive-plant, like the youthful maiden, at first shrinks from the touch of man. Every plant has the living principle and the organs of generation; and thus every thing descends, and the whole world, and each part,

¹ See *supra*, pp. 23, 24; Lord Kingsborough's *Mex. Ant.*, Vol. VI. p. 237; and Nimrod, Vol. II. pp. 370—373.

² I stated in Volume I. p. 724, from Chrysostom, that when the Gentile mysteries began, a herald proclaimed “*Procul! hinc procul este, profani*,” and that the Christians did the same thing, exclaiming “hence all *dogs*.” Why make such a point of turning out the dogs, more than any other animal? I believe a mistake took place between the *Γυνή* and *Κυνος*, and that it originally applied to followers of the *female generative principle*.

³ Trans. by Taylor.

⁴ In the case of the pimpernel, to evade the question or to disguise the fact, I shall be told some idle, inconclusive story, about the stimulating power of the solar ray or of light; but it is all true—it is matter acting upon matter.

is an image of God. How curiously is this connected with the first principles of the *To Oυ*, or Gnosticism or Wisdom, and how beautifully does all resolve itself into one system!

3. We may now see what Pythagoras meant when he said, that all things arose from *numbers*. In the first place, numbers, as we have seen, constituted the symbolic letters in which all the natural and religious learning of the ancients was contained. The learning of languages was not considered as any part of science or education with them; none being *dead*, all were *intelligible*. Grammar, with all its complicated rules, was unknown to them; but they must have had enough to do to be able to repeat the meanings attached to the numeral symbols. The second sense in which the expression of Pythagoras is explainable, is most clearly found in the microcosmic numbers, and in the doctrine of emanations and cycles; from *one* proceeded *two*, from the *two* proceeded *three*—in all *five*; and from these proceeded the seven planets, the constellations divided into 12, 24, 72, 360, 432, and all the immense cycles of which we have been treating, and which ultimately brought up all the aberrations of the planetary system, when every thing was reabsorbed into the Deity.

It is not to be supposed that the philosophers who taught this system expected the world to be renewed every 600 or 6000 years. These were but little cycles to enable them to keep their time and their festivals in order; they were used as religious contrivances to delude the vulgar. Very different renewals of all things were looked for by the philosophers—various floods, and, perhaps, after a year of Brahma, 4,320,000,000 of years, a restoration of a perfect globe, of the planetary system, and the universe of fixed stars to their first state. Our globe is evidently an effect, in part perfected; the effect, perhaps, of a third or fourth or fifth internal or mundane revolution. Nobody can suppose the globe will go to ruin or decay. It will most assuredly all come again to some perfect state unknown to us. It is like a butterfly; it will pass through all its stages—return to its egg—and run its course again. If the reader look back to Volume I. pp. 166, *et seq.*, he will find that the system of cycles which I have unfolded, is founded on two numbers, the number *five* and the number *six*; that from them arose the numbers 360 and 432, and that from these a cycle was formed which included them both, viz. 21,600. In many places I have observed that the first year of all nations was believed to have had only 360 days.¹ If this were the case, it is evident that the science of astronomy would, before the irregularity of the motions of the planets arose, and before the number of the years of the periods of the sun and moon became comprised in odd numbers, and in fractional parts of years, days, and hours, be comparatively easy. The 12 moons of 30 days each, and the 360 days, would make an exact Soli-lunar cycle, and the account of time would be kept regularly and without difficulty. And we may readily suppose this astronomical knowledge would be acquired without any very profound science or skill in observation. Now we may easily imagine that after the catastrophe of the flood, as soon as man found the system thrown into disorder, he would begin to devise means to correct the evil, and then astronomy would be improved by making cycles, as I have supposed in Volume I., and by experiments and observations, until he brought it to the perfection at which I have shewn that it finally arrived. Then it would be that the millennial system was formed by taking the period of time between the entrance of the equinoctial sun into Taurus and his entrance into Aries, and then carrying the cycles forward, as I have there explained. This seems to me to furnish a very satisfactory reason for the operation of first taking off the sum of 2160 for the precession in one sign. The existence of the fact I have there clearly proved. The reason of it we have here. If we suppose the flood to have happened and the Pontiff and his court to have escaped, it would be a very considerable time be-

¹ See, particularly, *supra*, pp. 316—326, and 409.

fore they would discover that the regular periods no longer returned ; and, probably, by the time that they discovered the correct length of the new year and of the new month, they would have forgotten almost every thing, except that their year had been 360 days, and their moon's period 30 days. Under these circumstances it seems natural, as soon as they had found out that the precession of the equinox took place after the rate of 2160 years in a sign, that they should, when they formed their artificial system as we have seen it, go back for one sign and endeavour to make the two systems into one, as we have really found them to have done. This is the more probable, because the system would go on *pari passu* with the experiments which I have shewn probably took place to ascertain the real length of the new Soli-lunar period, the Neros. If the theory which I here propose, and it is the result of improved information and additional study, be thought probable, it will in a slight degree vary the theory advanced in Volume I. pp. 177, 178, for the discovery of the cycles ; but though it will change the course of progression by which they were discovered, it will tend to confirm the system on the whole. We must recollect that, when I attributed shortness of memory to the early race, I suppose them to have had only the numeral symbolic, and not the syllabic, system of letters ; perhaps not even *that*, but only the knowledge of figures of notation. I have much suspicion that all the periods consisting of the number *twelve* were formed when the year was actually 360 days long, and that the periods consisting of the number *ten* were formed when the new and compound cycle was formed of the ten Neroses and ten signs of the Zodiac. The Equinox, if it preceded at all, preceded after the rate of 54'' in a year, a degree in 66 years, a sign in 2000 years, and the circle or 12 signs in 24,000 years. When the ancient astronomers discovered that, in consequence of the flood, the circular motions of the heavenly bodies were completed in broken periods, they probably invented the cycles out of the two systems to obviate the inconvenience which the change had brought about. And this is the reason why we have the sacred numbers sometimes from the *twelves*, the *old* system—and sometimes from the *tens*, the *new* one. And thus we have the system of the cycles of 21,600, of 43,200, of 432,000, and of 4,320,000, to unite the two systems. Sir W. Drummond says,¹ “If the “priests of Ammon were right, the antediluvians may have been so likewise, for Plutarch tells us, “that according to the former *the annual period has been continually decreasing.*” This, in no small degree, tends to confirm my theory, that the year was lengthened by the change in the direction of the earth's axis, and that it is gradually returning to its former natural state.

When I read the critical dissertations of Mr. Niebuhr on the History of Rome, which every where betray the utter confusion in which the early part is involved, the total failure of the almost unceasing attempts of the later historians (such as Cicero and Tacitus) to produce any thing like order, or to account for the endless anomalies in the customs, laws, and constitutions of the respective states, which every where shew themselves, I am driven to seek some cause which they have not understood or to which they have paid no attention. I am thus almost compelled to have recourse to the ancient Pontifical government, about which I have already said so much, and to trace the difficulties of the Roman writers to their neglect to search into the few remaining circumstances of this ancient empire, of the importance of which they seem never to have formed a proper estimate. It is like ourselves : we are always looking for the causes of effects in times since the Roman conquest of Britain, which ought to be looked for in the times and in the state of things before their arrival—which state of things, in many respects, they left, unaltered, to their successors, when they quitted the island. Once, and I think only once, Mr. Niebuhr's² attention seems to have been drawn to what he calls the *influence of numerical forms* in the states of anti-

¹ Class. Journ. Vol. XVI. p. 156.

² Vol. II. p. 20. Thirlwall's Ed.

quity which, on that occasion, he says, *solves a puzzle*; but he almost instantly loses sight of it. He often observes the recurrence of the numbers 12 and 30; but it seems never to have once occurred to him to inquire further into the reason of this recurrence, which a moment's consideration would have taught him must have had a cause. He notices the tradition of the Alban and Latin states being formed of 600 families, and also that some of the very heavy and oldest coins, called *ases*, without inscriptions, have the head of a young man on one side, wearing a *Phrygian bonnet*, and on the reverse a *wheel*, with six spokes. The former figure he thinks represents Ascanius, the latter, the spokes of the wheel, the six centuries of the Lavinian Colony.¹ This may be true; but I can only conceive the regulation of the states by the number 600 to have the same reference as the spokes on the coin, viz. to the revolving cycle of 600, celebrated by Virgil. The bonnet or *mitre* marks the cycle as *sacred*. The formation of the legion by 6000 men, and its decuples 60 and 600, had reference to the same superstition. Niebuhr says, "At this time four legions must have been 12,000 men: add to this 12,000 from the colonies and subject towns, and 24,000 for the double contingent of each allied state, and the whole assembled force will be 72,000 men. The legend peeps through in this wantoning with typical numbers, which it delights to multiply enormously."² But Mr. Niebuhr, like our modern English historians, never once gives himself the trouble of asking what was the meaning of the legend which peeped through, and why they thus *wantoned* with certain peculiar typical numbers. After the knowledge of the system was lost, the legend was continued from habit, and we constantly talk of our *scores* and *half scores*, our *dozens* and *half dozens*, &c. Had this habit arisen from the nature of these numbers, we should have found a similar name for the number eight, which has the accidents that may be supposed to influence the numbers *twelve* and *ten* in a much more remarkable degree. Indeed, had arithmetic been the effect of learning, instead of what we call accident, there can be no doubt that eight would have been taken as the terminate number, instead of ten.

4. The microcosm is visible in the number of the Gods, as in every other part of the creation which is in any way subject to the genius of man. We have three at the head, in the capitol—Jupiter, Apollo, and Minerva. We have the 7 *Dii Consentes*, the *Cabiri*; the 12 greater Gods, and the 360, one for each day. It is true we do not now find the 72; but, as we found them distinctly marked in the 72 angels of the 72 nations of the world, and in the 72 angels ascending and descending the ladder of Jacob, we may be very certain they were once there. Mr. Niebuhr has taken great pains to exhibit the infinite variety in the minor internal forms, and in the outward relations of the several states and municipia of Italy and Greece with one another; but he scarcely ever attempts to account for such a state of things having arisen. All this, however, is a necessary consequence, or arises very naturally out of the state which I contemplate, of a supreme Sacerdotal or Patriarchal government overriding the whole, but leaving each to govern itself in its own way, to form its domestic regulations according to the circumstances of the localities, climate, &c., of each; yet, as we see in the *Amphictyons*, when necessary, exercising a paternal and mediatorial power of the most beneficial nature over them all. In consequence of the profits of this order of mediators being fixed to the unvarying *tenth* of the produce, its interest would, in a very peculiar manner, as I have before remarked, lead it to the preservation of universal peace. It would prosper with the prosperity of the sub-infeudate castes; it would suffer with their sufferings; it would sympathise with them in all their feelings. The system of patron and client would exist in the most amiable of forms.³ And when at last the universal law of change began to

¹ Niebuhr, *Hist. Home*, Vol. II. p. 19. Thirlwall's Ed.

² *Ibid.* p. 40.

³ Mr. Niebuhr observes, (*Hist. Rome*, Vol. I. p. 119. Thirlwall's Ed.,) that "at Rome the relation between patron

operate upon the system, it would produce precisely what we read of in the rhapsodies or poetical works of the bards—first a Golden age, then an age of Silver, then one of Brass, and, at last, when the system went entirely to pieces, what has very well been called an age of Iron. The more I reflect, the more I become convinced that the theory, (a theory founded upon innumerable facts,) which I have laid before my reader, will rationally account for all the hitherto anomalous circumstances in which the world is placed; and, as my theory is upon the whole, or perhaps with some trifling errors, the truth, it is the only theory which will ever do it. There is no subject of which we hear more than that of the sending out of colonies, from both Italy and Greece; but they are all described to have taken place in very remote times. The actual going out, in every case, seems to have been forgotten. It is very natural that the patriarchal government should have promoted this system, to relieve the overflow of the population, which, by causing a scarcity of food, would cause vice and misery to prevail, and, with vice and misery, make the people more difficult to be governed, and thus to endanger its rule. And every new colony would add to the wealth and power of the Patriarchate. Among the Buddhists we have in a peculiar manner the monastic system, and under this system we may readily suppose the order of monks, which was kept up by taking children from the other classes, would be kept within such bounds as were thought desirable, and that it would be abundantly supplied with food, without ever being liable, except from an occasional scarcity—the effect of bad seasons—to the inconvenience of want. I think this celebrated system must have arisen by degrees, and have had its origin in various causes; but, perhaps, chiefly in the natural tendency of man to monopolise and secrete knowledge. And probably the institution of an order which should continue itself by descent, may have arisen from the going to pieces of the first system. We have the remains of the first of these in the monks of Tibet and Europe, and of the second in the Brahmins of India; we have the system also, in modern times, pretty nearly portrayed in the celibate Catholic, and the marrying Protestant, clergy. Mr. Niebuhr every where finds a system which he does not understand, or at least does not know how to account for, called *Ἰσοπολιτεία* or Isopolity. This was an interchange of rights among the different towns or free states. This again was a natural effect which would arise (as he finds it varied in many ways) from the general, superintending character of the Patriarchal government, leaving the respective towns to regulate their own domestic concerns, and it was the remains of that government falling to pieces by degrees. I think there is nothing of this kind left now any where. Perhaps the remains of it may be seen in the *Pale* of Germany and Ireland.¹ Livy, not understanding or advertent to the fact, that it was an effect of a previous cause, the remains of a former state of society, treats it as a *cause* instead of an *effect*. Livy calls it a hospitable relation entered into with a whole people.² But Niebuhr justly observes, that it “is a feature of ancient tradition which no late writer could have invented.” He represents the rights of the municipium to have been acquired in three ways—*by birth, by exercising isotelty, and by manumission by a municeps*.³ The first, is that of our sons of freemen succeeding their fathers; the second, our apprentice; and the third, our grant of the freedom of a town. In the *Pale* of Ireland, and the *Pfahlbürger* of Germany,⁴ we have a remnant of the Pontifical or Patriarchal government which cannot be disputed. I have no doubt that the word was brought to both countries by the first tribe of Saxons. It comes from the Hebrew *נָּבַל* *pla*, in its sense of *separavit*.

“and client was the feudal system in its best form.” I mention this to shew that the system (or rather the remains of the system) made itself visible.

¹ Niebuhr, Vol. II. pp. 74, 75. Thirlwall's Ed.

² *Ibid.* p. 57.

³ *Ibid.* p. 55.

⁴ *Ibid.* Vol. I. p. 398; Vol. II. pp. 74, 75. Thirlwall's Ed.

To be in the *pale* was to be separated from something. I do not find the root in Hebrew for the Greek $\pi\upsilon\lambda\eta$; but a moment's reflection shews that the *separavit* has essentially this idea. A door or gate cannot well be disconnected from the idea of *separating*. The word *iso*, I think, may have come from the root יֵצָא *iza*, *egressus est*, and the compound word would mean *persons gone out from the pale*. We use the word *pale* in Yorkshire for a sheep-fold; and a vessel to hold milk, from the cow, a milk-pail. I think it probable, that when Numa Pompilius became governor of Rome, he found the state ruled by a portion of the customs or laws of the previous government, which had gone to decay, and left nothing but a chaos behind it: and he undertook to arrange and write down a certain part of what he found and thought necessary for the use of the infant state, then first beginning to assume the form of a settled government: but this would not exclude the deciding of such cases as his writing did not provide for, when they arose, according to the ancient customs; and these decisions would naturally form or *declare* (precisely as ours do) a *lex non scripta*. The great mistake of Niebuhr and many other writers consists in this, that they consider every thing to have taken its rise from the supposed date of the Roman city or state, while the city, state, and almost every thing connected with them, are effects of something preceding. From inattention to this circumstance, the whole of Niebuhr's explanation of the constitutions of the Romans and Grecians is a chaos, and particularly with respect to the occupation of the land. He clearly shews, that the same principle prevailed in both Italy and Greece. I have no doubt that whenever the conquering tribes of Chaldæan-Celtic Sacæ arrived in a country new to them, and in fact in all countries, from Tartary or Scythia, they established their own feudal tenure of land, either by subinfeudating the lands in part to the miserable, ignorant, savage, descendants of antediluvians, or aborigines as they were called, or to their own tribe entirely—reserving to the rulers, who were the priests, the *tenth*s. Thus the whole world became subject to the same Patriarchate—a Patriarchate subdivided into three, and I doubt not each of the three having a book, like Genesis, which would shew that its was the eldest branch of the family of Noah, whether it was Ham or Japhet or Shem. The circumstances which Mr. Whiston has pointed out, that astronomical science shews the first race was preserved in that part of the globe called Tartary, and that Noah must have resided in China, tend to confirm this. But I must remind my reader, for my own credit, that I do not affirm the truth of any part of Mr. Whiston's system, except that which I expressly mention as adopting. I by no means wish to implicate myself in much nonsense which that amiable and learned person persuaded himself to believe. He exhibited a remarkable proof that *learning* does not, in every thing, carry with it *sense*.

5. I must now revert to a circumstance which would necessarily arise from the numeral symbolic writing in a downward direction, growing into horizontal alphabetic writing, in different nations, in which the spoken languages had so far changed as to be in part or almost entirely unintelligible to one another. I suppose the change from the symbolic to the alphabetic would take place by degrees, and the upright line would be turned sometimes one way, sometimes another; this would form entirely *new* words.¹ Thus Ras might become *sar*; and as we know the s became c, or was originally c, here we have the word *car* or *cor*,² for *heart* and *wisdom*—two ideas of things widely different. In this way many words would be formed, each of them sometimes having two meanings totally different from one another. Here it is evident that we have a class of words which

¹ See Vol. I. pp. 455, 484, 942; and *supra*, 153, on the word *ros* or *sor*. *Ed.*

² This is remarkably confirmed by what we find in Ethiopia and Egypt. In the former, in the Chaldee, it turned to the left; in the latter, in the Coptic, it turned to the *right*; but in both it had the same meaning—head, chief, prince, wisdom.

will bid defiance to all rational etymology. This is remarkably the case with *ras* and *cor*. *Sul*, the Sun, I think is another example. It would form *Lus*¹ or *Lux*, *lucis*. We must recollect, that in this reasoning I suppose what we know was the fact, that the first letters were right lines, perhaps some few at angles, in fact, the Runes, and the letters used by the Masonic Culdees, at York, as may be seen in their books now possessed by his Royal Highness the Duke of Sussex. If we consider maturely the situation of man in the first ages of the world, we shall immediately observe the paucity of words which, in a numeral symbolic language, would be requisite to carry on the common affairs of life, and how very much less would be required than is actually now in daily use in China. Sir William Jones has said, that, without any regard to grammar, if a person would learn to repeat or learn the meaning of three thousand words in any language, he would be able to speak it. I have no doubt that the knowledge of the meanings attached to a certain portion of numeral symbols constituted part of the learning contained in the twenty thousand verses which the Druids required the pupils to repeat in their colleges. Even after the world arrived at so advanced a state as to erect such works as Stonehenge and Abury, the number of necessary words would not be large. We may safely say that a *fifth* of what are requisite now, would not then be wanted—merely nouns, verbs, and pronouns. I am convinced that if a judicious selection of a thousand words, or rather ideas, was made and located to numbers, any two persons who learnt these might communicate without any difficulty, although speaking and knowing no languages but those which are the most dissimilar in the world. By being attached to numbers, the language would be remarkably stable and fixed, and by being formed of right lines at angles, it would require very little learning. What we call the Arabic figures, which are known all over the world, and which were probably known from almost the earliest period, might answer the purpose. In order to reap the benefit of such a system, at this day, it would not be necessary even that it should be generally learned to be *repeated*. A printed key might be circulated in each country. For example: if a vocabulary of the thousand Persian words were printed with the numbers annexed, the language would instantly become known to every one who could write the Persian language. They would be readily printed upon fifteen pages of a sheet of paper folded in octavo, leaving the sixteenth for the direction, to send it by post. It is very evident, that for the purposes of commerce, or science, by increasing the number of ideas attached to increased numbers, it might be carried to almost any extent. I here only describe the ancient system, a part, a remnant of which is yet found in China and Java. In the first language of numerals none of the little words which we use for the signs of cases of nouns would occur, and I think they were not used in writing till syllabic literal writing began to be practised. They came into use by degrees, which is the reason why, in the old Hebrew language, they all seem to have the same meaning. For the same reason it is that the word which has now become the exclusive emphatic article of one nation, may be found in the proper names of another: for instance, the Tusci were nothing but THE-osci—Thosci—Thusci—Tusci, inhabitants, I suppose, of Naples.² I much suspect that not only the high branches of Geometry and Mathematics were known to the ancients, but Algebra also. We are taught to believe that it was discovered by the Arabians in the middle ages.³ When I find that it was known in Italy three hundred years ago, and that it was ascertained that it had been known *in a secret society* three hundred years before that time, I am immediately led to conclude, that it was a remnant of the science of the old Tuscan Augurs or Agrimensores—a part

¹ From this the Lotus, or flower of the Sun, the manifestation of Wisdom, of Love, &c., came to be called *flower of Lus* or *Lys*—the Rose of the Water, of Ice, Isis, Isuren, Sharon.—See *supra*, pp. 6, 7, 32, 33, 44, 45.

² See Niebuhr's Map.

³ The science of algebra is nothing but a symbolic language.

of the ancient mysteries—of magic ; for the answers to questions given by its means would, to ignorant people, be truly magical. Mr. Christie¹ has observed a passage of Diodorus, (Book I. Chap. I.,) which seems to refer to the first numerical symbols. He says, “At the time when “speech was indistinct and confused, *ασημις και συγκεχυμενης*, they by degrees expressed “themselves in a more articulate manner, and appointed symbols to represent the objects under “consideration, by which means they were able to explain themselves intelligibly.” This passage of the Greek Diodorus leads me to repeat, that we ought not to be tied down in our construction of Greek words in the early period when that language was naturally *ασημιος*, in the same manner as when it became fixed, and when the Greeks, in respect to delicacy of speech, became the most fastidious people upon earth.² When I consider the vast variety of independent states in Greece, their continual feuds and jealousies, and the practice discovered by Mr. Hammer of every philosopher having a form of letter of his own,³ I cannot much doubt that the Amphictyonic council of the *state* regulated the sacred letter in which all matters under its cognizance were recorded. This would naturally become in time the letter of the whole country, superseding the letter of the separate states. All this seems to account rationally for the great dissimilarity of forms with the uniformity of system, and for all the discordant or heterogeneous states of Greece having one letter—and the discordant or heterogeneous states of Italy another. Thus I think it probable that the Greek system of writing was for a long time confined to the caste of priests in Greece, the Latin to the caste of priests in Italy, as the Sanscrit was for a long time confined to the caste of priests in India. The above description by Diodorus is peculiarly applicable to the Synagogue Hebrew, and must have been equally applicable to all written languages in their early stages. I have frequently observed, that the dogma forbidding any change in the text has preserved the Hebrew, locked up in the Temple, in a state of purity.

6. But to return to the Pythagorean philosophy of the generation of numbers. This was the generation of cycles, ending or beginning with the *To Ον* or One : for *one* is but *on*, and increasing or decreasing, as the case might be, like the coats of an Onion⁴ *ad infinitum*, either way ending in illusion ; for we are as incapable of forming an idea of the least atom as of the greatest substance ; and the idea of number cannot be separated from or formed without matter. In no part is the system more beautiful than in the doctrine of the microcosm. We have an abundance of theories to account for the adoration of animals by the Egyptians and others, but none of them satisfactory. I believe it arose from the names of animals being unintentionally formed of the numeral symbols which also formed certain cycles, when the numerals grew into letters. Thus the numeral letters *clo*, which meant 600 in Chaldee, meant *a cat*—*k* final=500, *l*=30, *o*=70=600. Thus a Cat came to be sacred. In the same manner the Onion, on account of the similarity of its coats to the planetary spheres, was called—from being sacred to the Father of Ages—*αιωνων*—*onion*. It was also strikingly similar to the microcosmic principle. I much suspect that most of their sacred animals were adored for similar reasons. Thus every animal, the numeral letters of whose name described at once the animal and one of the planets or sacred cycles, came to be an object of adoration, and the animal was considered sacred to the God. Hence the explanation I have given above, p. 113, of *Æsculapius* from *Asclo-οφης*. The ops *οψς*, *οπος*, and *οφης* were in fact anciently

¹ Essay on worship of the Elements, p. 3. ² The same observation will apply to the Sanscrit. ³ See *supra*, p. 247.

⁴ The Onion was adored (as the *black stone* in Westminster Abbey is by us) by the Egyptians for this property, as a type of the eternal renewal of ages, and for this very reason, probably, called *αιων των αιωνων*, as our *settle* is so called from the Hebrew שֶׁטֶל *stl*, and our *order* from the Hebrew עֶרֶךְ *ord*. The Onion is adored in India, and is forbidden to be eaten. Forster's Sketches of Hindoos, p. 35. See Vol. I. pp. 193, 338, 449.

the same word, and meant Logos and Serpent. Thus the Logos is divine wisdom; and thus the serpent came to be regarded as the wisest of animals. Cyclops is the same—κυκλος and οφεις—Serpent of the Cycle, or Logos of the Cycle. If it be objected that what I have said of the οψς and οφεις cannot be admitted, as they do not furnish proof—I reply, If there have been one original language, the different ancient words may be expected to be found scattered indiscriminately in all languages descended from that original, or formed upon it. I admit they do not furnish proof. Scarcely in any case can a proof ever be found; at the most a high probability is all that can be expected, and that I contend we have here. But this is a matter of opinion: every one must judge for himself. Hutchinson and Shaw say, that the *onion*, in Hebrew סוּם *sum* or סוּמ *sm*, is a perfect emblem of the disposition of the heavens. Supposing the root and head to represent the poles, if it be cut transversely or diagonally, it will be found divided into the same number of spheres, including each other, counting from the sun or centre to the circumference, as the ancients knew the courses of the orbs divided this system into, and so the divisions represented the courses of those orbs. The Sanscrit word *Syāma* means darkness, black, black flowers; and *Syāmānga* means the planet Mercury or Buddha. This is formed from the Hebrew root סוּם *sm* which means *a planet*, plural סוּמִים *smim* planets, rulers, and disposers. These planets were called messengers and αγγελου or angels. As we find so many Sanscrit words in the English and other languages,¹ I suspect that the *Syām* and *ānga* mean *the Angel Sam* or *Buddha*. From finding the word *Sam*² to mean the Sun, the Planet Mercury, darkness, and Buddha, and the *Tam* to mean a zodiacal incarnation, *i. e.* of the Sun in the sign of the Twins—and in several other cases from finding the T and the S to be interchanged, I am induced to suspect that the *Tam* is a corruption of the *Sam*—as I formerly suspected the *Tages* to be a corruption of the *Sages*. I have Parkhurst's authority for saying that the change of the ψ into the τ was usual.³ I am rather inclined to think the *Onion* was an emblem of the recurring cycles than of the planets; but as it would evidently suit for both, it probably was used for both. Notwithstanding the identity of the appellation (for it is merely an appellative) of *Crēt* or Χρης given to the two persons in India and Europe, at the head of the two divisions of the religion, it seems probable that the Western Crēstians descended directly from the Buddhists rather than from the Brahmins. It is true that we constantly meet with what appear to be traits of the Brahmins in the West, but we must not forget that the Buddhists and Brahmins were the same in all great points. Brahminism was but Protestant Buddhism, and the two assimilate to the Papists and Protestants, in the fact, that, in each case, the reformers, as they called themselves, abolished the Archierarchy which I have exhibited to my reader.⁴ I have called them reformers, and so in both cases they were. For, in India, the effects of Brahmanism were, to reform the calendar, to make it assimilate to the changed state of the heavens, and thus, no longer to have Taurus as their emblem, but Aries. This was the case with Moses, who reformed the system of his tribe by abolishing the golden calf; and it was attempted to be restored by the *ten tribes*, who set up the Calves at Dan and Bethavon. In almost every point the Archierarchy of Rome and Tibet are the same. I think it seems probable that the Patriarchal government or the Archierarchy continued until after the time that the sun entered Aries at the vernal equinox, when the religious revolution took place; this was about the time when the flood happened—the axis of the earth became changed or inclined, and almost all the ancient learning of the world was lost. If this event happened about two thousand five hundred years B. C., and only very few persons escaped, in five or six hundred years, as I have

¹ See *supra*, pp. 166, 167, *note*.

² *Ibid.* pp. 199—201.

³ Greek Lex. in voce ΘΥΡΑ.

⁴ See Vol. I. pp. 161, 162; also *supra*, pp. 53, *et seq.*, and pp. 359, 360.

already shewn, they might readily have increased to five or six hundred millions of people ;¹ and if the knowledge of symbolic writing and arithmetic remained with the heads only of the Pontifical government in the East, we may see a very probable reason why that body of men, by means of their colonies, became the rulers of the world, even long before the period of five or six hundred years had elapsed. If the Archierarchal system was established before the flood, it was very natural that it should have been revived after it. We have this well described in the histories of Adam and Noah. If the last great convulsion left a few people in every country, or in only most countries, they would stock the world, to a very considerable extent, in much less time than I have allotted to them ; and if they were under a patriarchal government before the catastrophe, they would subsequently be prepared to submit more readily to its superiority, especially when it was introduced by the castes from the oriental hive, of whose arrival in the West, and their conquest of what have been called the aborigines, we have such abundant proofs. From the Eastern tribes being called $\Delta\iota\iota\ \Pi\epsilon\lambda\alpha\sigma\gamma\omega\iota$ or *holy sailors*, it is probable that they brought peace and civilization to the aborigines. I think from the picture I have drawn of *the golden age*, this was probably the case. Their superior attainments would give them the superiority, and it would not be till they became corrupted, that they would reduce the aborigines into Helots. These Pelasgi or Sailors might be also Chalidei. The Pelasgi were, in a marked manner, said to be inhabitants of Crestona in Thrace. They are called $\Delta\iota\iota\ \Pi\epsilon\lambda\alpha\sigma\gamma\omega\iota$ by Homer, because, says Eustathius in his Commentary, they were the only people who, after Deucalion's flood, preserved the use of letters.² This theory seems to me to agree very well with all the circumstances, such as the change in the earth's axis and the consequent flood by a comet, a fact established upon as strong a probability as in such a case could be expected. If we consider every person who was admitted to the high mysteries of the religion as, by that privilege, admitted to the sacred caste, we have no longer any occasion to seek for the reason of the great anxiety to conceal the doctrines. As these doctrines became known, the mysteries would fall off by degrees, till, in fact, there would be scarcely any left. High arithmetic, literal writing, astronomy, and other sciences, were what originally constituted the mysteries. We have almost the last examples of this exclusiveness and spirit of monopoly in the concealment of algebra in Italy. In all countries we have well-marked traditions of tribes coming from the East, and of their finding and conquering the aborigines, who were often supposed to have been indigenous, as they knew nothing of their own origin, except a few vague traditions, of which one always was, that they had escaped from or arisen after the flood. For want of the knowledge of letters this seems to be a consequence which would necessarily follow in five or six hundred years. I am convinced that this has every probability on its side. I consider the circumstances of coincidence between the comet of 1680 and the chronological date of the flood in the Indian, Jewish, and Grecian writings, (when their 3101 period is corrected and its mistake accounted for) to establish the reality of a flood at that time, on so high a degree of probability as to amount almost to certainty. However, it is a probability on which I have no hesitation in saying, that any philosopher may rationally found a *probable opinion*, and any devotee a *belief*. I have said above, that I think the Western Christians descended from the Buddhists, though we very often see traits of Brahminism in the West. I suspect that all the old Druidical monuments are antediluvian. I think this would not be thought improbable if persons could be brought to consider the fact of the flood divested of the mythic absurdities and mistranslations with which it is loaded in Genesis. These absurdities I have shewn were, in all ancient

¹ See *supra*, p. 395.

² Grant on the Gael, p. 21.

books, contrived to conceal under them, and to preserve for the use of the initiated, certain great truths.

7. Before I venture upon another of what will be called, by persons of *little minds*, my *bold speculations*, I must beg my reader to recollect, that when the famous ancile came from heaven, sent by Pallas to Numa, five others were immediately made by that legislator, in order that the true one might not be known. This shield was to be the protector of the eternal city.¹ Thus there were to be five records of the mythos, at least of the cyclic mythos. In the Tamul, in which we found the Mosaic mythos, we have an account that their sacred writing had five distinct meanings.² Now what has happened to the ancient mythology of the Gentiles? Various persons have attempted its explanation, and it cannot be denied that several of them have succeeded with a considerable show of probability: for instance, one class of persons, the followers of Euhemerus, have made it into the history of *men*; another class, the Stoics, have explained it by allegory; by which process they have deduced from it *moral truths*. Now, I ask, is there not a probability that the first ancient sacred writing, before it became corrupted, might have been constructed, like the lost writing of the Tamul, to contain several meanings—so constructed for the purpose of gratifying the prevailing attachment to secrecy, so that no person might be able to say certainly what was its real meaning? May not Genesis have been this very Tamul book? Clemens himself has been supposed to have been initiated into the mysteries of Eleusis;³ and this being admitted, he gives us a piece of information of the greatest importance to my whole system. He says,⁴ *that the truths taught in the mysteries had been stolen by the philosophers from Moses and the prophets.*⁵ That is, in other words, that they were the same, at least with some part of what is contained in the doctrines of those persons or in their writings. This is a piece of extraordinary confirmatory evidence of almost my whole system. In another place, speaking of the mysteries, he says, *here is an end of all instruction. We behold nature and things.*⁶ Here is the Mercavah, which, together with the Barasit, I have little doubt contained all the mysteries—that is, the Grecian Cabala. Perhaps there is no point upon which the modern religious are more completely deceived by their priests than on that of the ancient mysteries. They are represented by all Protestants as matters of little moment, to which novices or only half Christians were admitted, when, in fact, they were for many generations held to be of the greatest possible importance, and must evidently have contained something very different from what is now celebrated or preached in our churches every day. They were taught by Clemens, Origen, and the higher order of Christians; but I believe they were not known to Paul or his followers, who, I think, had no concern with them. When the Paulites got possession of power, the mysteries were treated with contempt. I shall, perhaps, have passages produced to me to shew that Origen or Clemens acknowledged Paul. As well might passages be produced from my works to prove that I acknowledge Wesley, Wilberforce, Halled, Southcote, or Brothers. Suppose I do acknowledge them all and their writings, and admit them to have been most excellent persons, and many of their doctrines to have been very good. What then? Does this make me adopt all their pernicious fooleries? It is quite impossible to maintain that the doctrines of the Trinity, of Baptism, and of the Eucharist, can be the secret doctrines which are so clearly declared, by Clemens Alexandrinus, to exist, because all these were openly explained to the world by Justin Martyr, in his Apology, addressed to Antoninus Pius, long before the time of Clemens, about the year 160. It therefore follows, that Clemens must allude to some

⁶ Strom. V. p. 2; Ouveroff, *ib.* p. 42.

other secrets or mysteries; at the same time, I think there can be no doubt that many of the Romish fathers did affect to make a secret of their explanation of Baptism, the Eucharist, &c. But the public explanation of Justin shews that this was not the principle of the church. The fact was, I have no doubt, that after the Paulite fathers got power, they began to wish for mysteries, which, when their sect was in adversity or a state of weakness, they affected to despise; thus they attempted to make mysteries of the doctrines which I have shewn were not so considered by Justin. What constituted the *whole* of the Christian mysteries will probably never be discovered; but their existence cannot be denied. I consider the *eucharistia*¹ as a solemn pledge of secrecy—to preserve faithfully the secrets which the Master had been communicating to the elect; and as we have found it in almost all nations, it was probably in this manner originally used in all. It cannot be denied that the Eucharist was celebrated by Jesus in his last supper *in secret*—it was confined to the twelve; and in the Roman church of the Paulites it was kept a secret from the rabble for several hundred years. I do not, as I have just said, consider it so much a secret, though still it was a secret, as a pledge of the faithful keeping of the secrets or mysteries at that time just celebrated. In the mode in which we have found this Melchizedeckian and Pythagorean ceremony celebrated by the ancient Latins and the modern Jews, we have an example of a mystery having become, as it is now with us, public. This is the case with all the Judæan mythos which we have found in Mexico, China, India, Syria, &c., &c.² Augustin, Theodoret, Basil, Pope Innocent I., and others, have treated of the mysteries of the Christians, of which they clearly say, that Baptism, the Eucharist, and the meaning of the other Sacraments, constitute a part; but their words generally imply that they were only a part. Innocent says, “*Reliqua vero, quæ scribi fas non est, cum adfueris, interrogati poterimus edicere.*”³ Now we know very well that the *scribi fas non est* must apply to something besides the sacraments, about which it was common to all these fathers to write. It may be observed, that there is scarcely a single dogma or rite of the Romish church which I have not already shewn to have been equally in use among the Gentiles;⁴ therefore, on this account, it seems to follow, that there must have been something else: and what can this have been but the secret doctrines of Wisdom and the Gnosis, which I have shewn were the secret doctrines of all nations? In our endeavours to ascertain the cause why the Judæan Χρησ-ian mythos, which I have discovered in so many nations, was not treated of in ancient authors, we never give sufficient credit to the exertions of the ancients to keep secret their mysteries, of which this *Χρησθηριον* was the chief part. It was not only forbidden to reveal the mysteries, but it was forbidden either to write OR EVEN TO SPEAK ABOUT THEM. And whenever they were so spoken of or written about, it was always held to be *contra bonos mores*—contrary to good taste, and was, in fact, enough to exclude the writer or speaker from good society, and to consign his writings to oblivion. They were regarded by almost all persons in the same way as a great majority of persons in England consider the writings of Payne or Carlile. The word mystery took a new meaning, as it has done with us. We call Baptism, the Eucharist, &c., mysteries; but by this name we do not mean to describe them as *secrets*. This is proved by the circumstance of Justin having published them all. In fact there are *public* and *private* mysteries. We must not forget that we have found that part of the mythos which consists of the crucifixion among the Jews, where we might expect to find it, if it were a secret system, namely, in their books of the *secret doctrine*, called Apocrypha—in Wisdom and Ecclesiasticus.⁵ Every thing tends to shew,

¹ I have no doubt whatever that the banquet, which always follows a Masonic Lodge or Chapter, is the remains of the Eucharistia.

⁵ See *supra*, pp. 124—126, 232.

that the part consisting of the deaths and resurrections of the Gods were parts of a secret system, which, originally performed in the mysteries by the initiated alone, by degrees got out and became known to the vulgar. This satisfactorily accounts for the way in which we always find it wrapped up in an ænigmatical style of writing, as it is in Wisdom and Ecclesiasticus above named. If this history were a part of the ancient religion and mysteries, the state in which it is come to us in the different countries is what is a necessary consequence. That the apocryphal books are now only in a Greek translation, is no proof against their antiquity. If we suppose them forgeries, we must allow that the person forging them in Greek must have held them out as translations. We may as well say, that the works of Irenæus are not his, because we have them not in the Greek, but only in a Latin translation. I pay very little attention to the opinion of the Jews of the present day, who may as readily throw out ancient learning as they adopt modern; such, for instance, as the Masoretic pointing. But I have met with learned Jews who maintain that Wisdom and Ecclesiasticus shew from their idioms a translation from the Hebrew. St. Jerome went to Syria to study Hebrew, and I have seen it stated in the *Revue Encyclopédique*, that there is in his works an account of his, that he found the ancient writings of the Jews defaced and dispersed in fragments in different places, and that he collected them with great difficulty. The Jews are like other sects. As time advances they all arise from circumstances, and where they are not new, but old, they constantly change with circumstances, and each gives to its ancient books the construction most suitable to its modern ideas, which are the effect, in every case, of the new circumstances in which the sect is placed. Hoffman says, that the early Christians did wisely not to expose the mysteries to the profane view of the infidels. How futile these arguments appear, since I have shewn that there is no rite or ceremony now known among Christians which was not common to them and to the Gentiles! Even the famous transubstantiation we have seen was alluded to by Cicero.¹ It cannot be doubted that the mysteries alluded to by Clemens Alexandrinus, and delivered by Jesus Christ to the three, were very different from those heathen figments about which the Romish and Protestant priests have always made so great a noise. There can be little doubt that the construction given by the fathers to the words of Jesus, that the Apostles should not throw their pearls before the swine, meant, that they should not reveal the secrets of the religion. Dr. De Vallemont has proved, by authorities of the ancient fathers, the most numerous and unquestionable, that the later fathers endeavoured to make the doctrines of the Trinity, Regeneration, and the Eucharist, among others, into *secrets*, the most sacred, and they attempted to preserve them from the vulgar and the Gentiles with the greatest possible care. He has abundantly proved the same thing of the Gentile mysteries. The secreting of the Christian mysteries was but an attempt to restore the secrets of Paganism, which had been, by degrees, revealed by unprincipled persons, and which will always happen when society comes to that unhappy state in which an oath is no longer considered binding. The Pagan religion in the fourth century, and indeed long before, had become virtually dead; most of its mysteries had become known or were forgotten among the mass of the people; and where they yet continued and were noticed by the Christians, the latter were deluded by a story which suited their capacities well enough, that the Devil had been at work, and had copied from the Christian rites. This was, I doubt not, quite sufficient to satisfy the scruples of the few who were able to inquire or desirous of inquiring. The Christian, that is, the Popish, mysteries were in every respect similar to the ancient Gentile. I do not believe that they varied in any important particular. On the subject of the *real presence* in the Eucharist, De Vallemont has most undoubtedly the advantage in the argument with the Pro-

¹ See *supra*, p. 61.

testants. If the Protestants choose to argue the question of Transubstantiation on the ground of common sense, excluding the ancient practice and the authority of the ancient fathers, they beat the Papists; but they must then admit all other tenets of their religion to be argued on the same grounds; then down go Papism and Protestantism together, and we come to the Philaletheans and to Ammonius Saccas. De Vallemont says, “Y a-t-il de l'équité à chercher la créance des Pères sur l'Eucharistie dans des discours, où il ne vouloient pas sur ce point être intelligibles à ceux qui n'étoient pas du secret des Mystères?”¹ No, indeed, it is not equitable; nor is it equitable to seek in the same way for the belief of Plato or of Philo or Jamblicus—to seek for their opinion in works written evidently unintelligibly to deceive the ignorant—works which have only been left to us by the Papists, because the secrets they were meant to conceal were as well those of the modern as of the ancient church. The whole of the work of Jamblicus *de mysteriis* is written to occupy the attention of inquirers and to mislead them. Nor shall we be surprised at works of this kind being fabricated, when we pay a due attention to the extreme anxiety displayed by the initiated both before and after the death of Christ, to conceal and preserve their secrets. And when we reflect upon the indisputable fact, that all the doctrines of modern Rome were the same as the open or secret doctrines of ancient Rome, we shall no longer be surprised at the Popes re-enacting all their rites and ceremonies. Nor shall we any longer be surprised at finding *Xρησι*-ianity at Rome, at Delphi, and in Malabar. The doctrine of the *Xρησι* was the secret doctrine of the ancients which we have known by the name of Gnosis. It had ceased to be a secret, and the doctrine of the modern *Xρησι* was precisely the same which Clemens, Origen, &c., endeavoured, but endeavoured in vain, to restore. The secrets once divulged could never be entirely concealed again; and the increasing number of sects, and the growing use of letters, all conspired to defeat the project. From this arose the heterogeneous mass which became modern Christianity, a motley mixture—every sect wearing a dress peculiar to itself. When mysteries are communicated to too many persons, the profound respect in which they were previously held is lost in the eyes of educated persons, and they become incautious; this is the reason why we find Cicero letting out the secret of the Gentile transubstantiation. It cannot be denied, that the apology of Justin, addressed to the Emperor Antoninus, and to the Senate and people of Rome, wherein he explains the mystery of the Eucharist in pretty clear terms, must be allowed to be an exception to the course of the other fathers. What was the reason of this singular conduct in this celebrated martyr will probably never be certainly known. I have not seen any satisfactory excuse for it. The more I read, think, and inquire, the more I am convinced that Popery is nothing but reformed Paganism,² as Protestantism is nothing but reformed Popery, but with this marked distinction, that Protestantism cut off and abolished many important parts of Popery, while Popery retained every part of Paganism which could be considered of any consequence.

8. I beg my reader to recollect what has been said respecting the symbolic language of the Chinese, and the probability, indeed I may almost say the certainty, of its having originally been formed by numerals.³ Numerals offer themselves so readily as the symbols, and must be so well adapted to aid the memory and to fix the meaning, that I really cannot imagine how they could be overlooked. But I have no doubt that they were, in fact, the origin or cause of the written language being discovered—the language was an effect of them. If this numeral Chinese language

¹ Du Secret des Mystères p. 116.

² This accounts fully for all the apparent half *Pagan*, half *Christian* eccentricities of Constantine the First. See *supra*, pp. 51, 119, 207, 281.

³ See *supra*, pp. 160, 215, 216.

were the written language of the Pontiff, we see how easily he would communicate with the most distant nations, long after their spoken languages had deviated from the original, (which was not far from the sixteen-letter Hebrew,) so far as not to be intelligible to one another.¹ The knowledge of this would be confined, necessarily, to the sacred caste. Every thing tends to shew that the original of this language ought to be placed in Chinese Tartary, which Bailly, Buffon, Linné, and indeed all the most learned philosophers, agree in selecting as the birth-place of mankind. The symbolic language of which I have been treating is nothing but the language of China. About the beginning of the French Revolution, the celebrated philosopher Bailly published his history of ancient astronomy, in which he endeavoured to prove, that the first race of men, after the flood, had been situated on the East of the Caspian Sea, and thence had extended towards the South. In his treatise on the Origin of the Sciences in Asia, he has undertaken to prove, that a nation possessed of profound wisdom, of elevated genius, and of an antiquity far superior even to that of the Egyptians or Indians, soon after the flood, inhabited a country to the North of India *proper*, between the latitudes of forty and fifty, or about fifty degrees of north latitude, the birth-place of the book of Enoch,—a country of about the latitude of London. He proves that some of the most celebrated observations and inventions relating to astronomy, from their peculiar character, could have taken place only in those latitudes; and he maintains, that arts and improvement gradually travelled thence to the Equator. The people to whom his description is most applicable, are those near Mount Imaus and northern Tibet, a country in which very celebrated colleges of learned men were anciently established, particularly Nagracut, Cashmere, and Bocharia. Mr. Hastings informed Mr. Maurice, that an immemorial tradition prevailed at Benares, which was itself in modern times the grand emporium of Indian learning, and therefore the less likely to preserve such a tradition against itself, that all the learning of India came from a country situated in forty degrees of north latitude. On this Mr. Maurice says, “This is, in fact, the latitude of Samarkand, the metropolis of Tartary, and by this circumstance the position of M. Bailly should seem to be confirmed.” Astronomical calculations, tradition, and the evidence of old writers, all confirm the doctrine advanced by Bailly. About or a little before the time when M. Bailly published his history, Buffon, Linné, and others, had published some very curious speculations respecting the origin and formation of man. They produced facts to prove that the earth had been originally much hotter at the poles than it is now; that it had gradually cooled; and that the cold was gradually and by imperceptible degrees increasing. This they endeavoured to account for by a *theory* which improved science, I think, has shewn to be unfounded; but the *facts* remain unshaken. From a very close attention to the nature of the ancient mythologies, all which are intimately connected with astronomy, they imagined that man had been created, and that the arts and sciences had take their rise, not far from the Arctic Circle, where the earth had first cooled—and that they had extended southwards as it became by degrees more and more cold. Many sepulchres and some very surprising remains of antiquity had been found in Upper Tartary, about the neighbourhood of Selinginskoi. These were supposed to be remains of an ancient people *previous to the flood*. M. Bailly concludes his argument in the following words: “These facts, then, unite to produce the same conclusion: they appear to prove to us, that the ancient people who brought the sciences to perfection, a people who succeeded in the great enterprise of discovering the exact measurement of the earth, dwelt under the 49th degree of latitude. If the human mind can ever flatter itself with having been successful in discovering the truth, it is when many facts, and these facts of different kinds, unite in producing the same result.”² The philosophers

¹ See *supra*, pp. 148, 149, 217.

² Celtic Druids, Ch. II. Sect. X. to XVI.

above-named accounted for the greater degree of heat which they thought they had detected at the poles, by supposing, that the earth had been in a state of fusion. I only concern myself with the fact, that they thought they had detected a greater degree of heat in the polar regions. The greater angle made by the two planes will rationally account for this,¹ as its decrease will rationally account for the increase of the cold in those regions, and the constant increase of cold in England. Sir William Jones and other short-sighted and narrow-minded persons have turned Bailly, Buffon, Linné, and other foreign philosophers, into ridicule, for teaching that man must have been created in Tartary, about the latitude of London, $51\frac{1}{2}$. If my theory of the change in the earth's axis be true, that country must have had, soon after the flood, a much finer climate than it has now. Respecting that part of the theory relating to the cooling of the earth, I give no opinion, not professing to possess any skill in geology; but, independently of that part of the question, there are many circumstances to justify Bailly in his opinion. I suspect the great mythic-cyclic-microcosmic system, of which I have treated, was the foundation of the systems of all nations; but, as time advanced, and as heresies necessarily arose, the mythos would be made to bend in every new heresy to its dogmata. Every great sect or division had its book of wisdom; and, during the continuance of the division between the great sects of the Linga and Ioni, each sect would have had that book leaning to its paramount dogma. When the union took place, this would, in some measure, be corrected, but probably not entirely. Where the *female* was the favourite, as at Athens, we should find a leaning, even after the union, to the Minerva or Ceres; where the *male*, as in Jerusalem, the leaning would be to the Jupiter or Iao. The system of Cycles, an effect arising out of almost the first and most pressing wants of man, was in itself of a nature peculiarly proper to perpetuate this mythic system, and may be considered as the great cause which prevented, for a certain time, the divergence of the system, and of its present actual dispersion and disappearance. It lasted one period of ten ages, or 6000 years; it is now nearly dissipated and gone. It arose out of the wants of man; it was continued by those wants: it aided greatly in supplying or remedying those wants. Those wants being now supplied by the diffusion of great scientific knowledge, the system is gradually yielding to the law of change, of eternal regeneration—and to the law which forbids man to look too far either behind or before him. It is almost lost and forgotten. But a few ruins of the building—once beautiful—lie scattered around us. We have them distorted and corrupted in Papism, Grecism, in Sopheism, in Sonneism, in Lutheranism, and in Calvinism. What will come next no one can tell; but, perhaps, Solomon was right, that there was *nothing new under the sun*. Perhaps man is near his end. What has happened before may happen again. The *mastodon* is dead. Perhaps the comet of 1680 may come again: the tops of the mountains may be the bottom of the seas; and, in a thousand years more, philosophers, in some shape or other, may speculate respecting the properties of that extinct animal, the remains of which they will find, and which we call *man*! In the doctrine of Pantheism the $\text{T}\circ\text{O}\nu$ was every thing, and every thing the $\text{T}\circ\text{O}\nu$. In its monad, in its least of all possible quantities as well as in its circle, whose centre is every where, whose circumference is no where, all was $\text{T}\circ\text{O}\nu$: but what is this but *illusion*?

¹ It is said that, if the planes coincided, the equatorial regions would be uninhabitable. I believe that African Negroes would not find it too hot.

CONCLUSION.

IN Volume I. pp. 824, 825, and *supra*, pp. 130, 131, I spoke of what was called the Eclectic philosophy. This I suspected was really the original Chr stianity. I shall now return to that subject. About the time of the C sars we find the mysterious secrets of Χρησ-tianism beginning to creep out, to escape from the crypts, and to shew themselves to the world in various ways. We see this very particularly marked in the general expectation of the world, that some *great one was to come*. After a certain time, when the period of the new age was certainly passed, as it appears, from the passage in Juvenal,¹ to have been well known to be, a belief gradually arose that the great one, the Χρησ, the Saviour, had appeared. The first effect of this was, to produce a feverish state of the public mind, rendered worse by the utter contempt into which the corrupt state of the heathen religion had fallen ; and the next effect was, to produce a great number of sects, of what were called Christians, each inquiring if *the great one* had come. Some thought that *Herod*,² others believed that *C sar*, might be the person. Indeed, it is well known, that each of these was believed to be the person by vast numbers of devotees. Soon after this time, the destruction of Jerusalem, of its records, and of every thing which could give certainty to a report, having taken place, the popular voice fixed upon an individual who was said to have lived and taught there, and to whom was applied that part of the mythic mythos relating to the *crucifixion* and *resurrection* ; and then it was found, for the first time, by the Paulites, that this Saviour was to be a *spiritual* not a *temporal* Messiah. It is impossible on reading the works of Plato, and perhaps of every one of the ancient philosophers, not to remark the nonsense with which their writings appear to abound : all this arises from their wish to keep their doctrines *secret*, and is well described by a passage in the Encyclop dia Britannica, in voce *Platonism*. Speaking of Plato, the author says, “After having said that he meant to wrap up his meaning in such obscurity, as that an adept only should fully comprehend it, he adds expressions to the following import : The Lord of nature is surrounded on all sides by his works : whatever is, exists by his permission : he is the fountain and source of excellence : around the second person are placed things of the second order ; and around the third, those of the third degree. Περὶ τῶν παντῶν βασιλεῖα, παντ’ ἐστὶ, καὶ Ἐκείνου ἐνεκὰ πάντα. Ἐκείνος αἰτία παντῶν τῶν καλῶν. Δευτερον δὲ περὶ τὰ δευτερα, καὶ τριτον περὶ τὰ τρετα. (Opera, p. 1269.) Of this obscure passage a very satisfactory explanation is given by Dr. Ogilvie.” For want of attention to this principle, all translators have endeavoured to make these mystical works of the ancients to read into sense, and to find out from their *literal* meaning a system, which it is evident their authors never intended to teach. A system they had certainly ; but it was not a system described or expressed by the common meaning of the words, but one which was hidden in jargon, purposely made unintelligible to common readers, when looking only to the common meaning of the words.³ Few people, I am persuaded, are aware of the

¹ See Volume I. pp. 187, 579.

² See *supra*, p. 233.

³ Written originally in a language of numeral symbols or what we call ciphers.

extent to which this pernicious practice was carried. The moment the author of the above passage in the Encyclopædia has finished it he throws it aside; and, without any attention to the assertion of Plato, that he meant to couch his doctrine in obscure terms, he proceeds to reason upon their literal meaning, and to shew how they differ from the Christian Trinity. No unprejudiced person can doubt that the Trinity of Plato was substantially both the Trinity of the Christians, and the Trinity of the Hindoos, and no one but a devotee, who has sacrificed his understanding to fears for his future welfare, will doubt on the subject. The following is the account of the Eclectics,¹ and of the greatest of the sect or school, Ammonius Saccas, given by the Edinburgh Encyclopædia: "This learned man was born of Christian parents, and educated in their religion: the outward profession of which, it is said, he never entirely deserted. As his genius was vast and comprehensive, so were his projects bold and singular; for he attempted a general coalition of all sects, whether philosophic or religious, by framing a system of doctrines which he imagined calculated to unite them all, the Christians not excepted, in the most perfect harmony. In pursuance of this design, he maintained, that the great principles of all philosophical and religious truth, were to be found equally in all sects; and that they differed from each other only in their method of expressing them, and in some opinions of little or no importance; and that by a proper interpretation of their respective sentiments, they might easily be united into one body. Accordingly, all the Gentile religions, and even the Christian, were illustrated and explained by the principles of this universal philosophy; and the fables of the priests were to be removed from Paganism, and the commentaries and interpretations of the disciples of Jesus from Christianity. In conformity to this plan, he insisted, that all the religious systems of all nations should be restored to their original purity, and reduced to their primitive standard, viz., the ancient philosophy of the East, preserved uncorrupted by Plato; and he affirmed, *that this project was agreeable to the intentions of Jesus Christ*, whose sole view in descending upon earth was, to set bounds to the reigning superstition, to remove the errors that had blended themselves with the religions of all nations, but not to abolish the ancient theology from which they were derived. He, therefore, adopted the doctrines which were received in Egypt concerning the universe and the Deity, considered as constituting one great whole: concerning the eternity of the world, the nature of souls, the empire of providence, and the government of the world by dæmons. He also established a system of moral discipline, which allowed the people in general to live according to the laws of their country and the dictates of nature; but required the wise to exalt their minds by contemplation, and to mortify the body, so that they might be capable of enjoying the presence and assistance of the dæmons, and ascending after death to the presence of the Supreme Parent. In order to reconcile the popular religions, and particularly the Christian, with this *new system*, he made the whole history of the Heathen Gods an allegory, maintaining that they were only celestial ministers, entitled to an inferior kind of worship: and he acknowledged that Jesus Christ was an excellent man, and the friend of God; but alleged that it was not his design entirely to abolish the worship of dæmons, and that his only intention was to purify the ancient religion. This system so plausible in its first rise, but so comprehensive and complying in its progress, has been the source of innumerable errors and corruptions in the Christian church. At its first establishment it is said to have had the approbation of *Athenagoras, Pantænus, and Clemens the Alexandrian, and of all who had the care of the public school belonging to the Christians at Alexandria*. It was afterwards adopted by Longinus, the

¹ Eclectic, from *εκλεγω*, *I choose*. The Eclectics were called *Anulogetici*, or, as Dr. Brewster says, never assumed any distinct name. Thus, under this designation, the ancient Chréstians have been hidden.

“ celebrated author of the treatise on the Sublime, Plotinus, Herennius, Origen, Porphyry, Jamblicus the disciple of Porphyry, Sopater, Edisius, Eustathius, Maximus of Ephesus, Priscus, Chrysanthius the master of Julian, Julian the Apostate, Hierocles, Proclus, and many others, both Pagans and Christians. The above opinions of Ammonius are collected from the writings and disputations of his disciples, the modern Platonics ; *for he himself left nothing in writing behind him* : nay, he imposed a law upon his disciples not to divulge his doctrines among the multitude ; which injunction they made no scruple to neglect or violate.”

In considering the above description, it should be recollected, that it is written by a person not only profoundly ignorant, if my idea of the philosophy be correct, but by a person whose prejudices lead him unconsciously to misrepresent it in every way. But yet enough transpires to shew us, that, according to this account, all the leading points which I have been advocating through the whole of my work are to be found in it ; and, indeed, that the systems must have been the same with some trifling discrepancies, in which it is probable that both I and those who have represented to us the doctrines of Ammonius, may have fallen into mistakes. It were ridiculous to suppose that either I or they can have wholly avoided error ; and I beg every candid reader to recollect, that the malicious exaggeration of trifling errors ought not to be permitted to influence his mind with respect to the remainder. In the list of the advocates of this system we have unquestionably the most illustrious names of antiquity, both Christians and Gentiles. It is worthy of observation, that we have in this list, persons said to be the greatest enemies of Christianity, which makes me suspect that these men were only enemies to the prevailing sect of the Paulites. Let it not be forgotten, that we have the works of Julian, Longinus, Porphyry, &c., only from the hands of the Paulites, who, we know, omitted nothing to misrepresent and blacken their enemies, having recourse to frauds and forgeries of every kind. For an instance, I have only to name the Philosophy of Oracles, forged in the name of Porphyry, as declared by Lardner. How can we know that the same may not have been done for Julian ? In the account given by the Encyclopædia, there seems nothing in the system which may not easily be shewn to be rational and consistent with sound philosophy, except the part relating to dæmons, which was, in fact, the doctrine of the Romish church, under the name of angels. It may be collected from the latter part of the account that Ammonius fell into the usual error of all the philosophers, of endeavouring to keep the system secret, in consequence of which, it was not committed to writing ; and, as might be expected, it was first grossly misrepresented, and then finally lost. In order the better to disguise the truth respecting its advocates, the Paulites called them *Eclectics* ; but the name by which they called themselves was *Philaletheans*, or *lovers* or *friends of truth*. In not committing his doctrines to writing, we find Ammonius Saccas treading strictly in the footsteps of Socrates, Pythagoras, and his master—Jesus.¹ I think when the author of the above-cited article represents this system as new, it is obvious that he grossly misrepresents it, and that this was nothing but the oldest and original system taught by Jesus, and held by the enlightened part of his followers in the school of Alexandria ; at least that it was held by them to be so. So far from being new, it is manifest that the Eclectic or Philalethean sect,² one of whom Jesus Christ was, existed before his time, and was previously taught by Potamon, who was succeeded first by Jesus, then by Ammonius. The doctrines taught by them both were the ancient, oriental, uncorrupted Gnosis or Wisdom, which I have shewn existed in all nations and all religions. We are misled in our estimate of it by seeing it through the prejudices instilled into us by our education in the doctrines of Paul, who founded one of the numerous and low or inferior sects. This sect, as I have frequently remarked, aided by

¹ See supra, p. 219.

² Of which sect I beg to be considered a member.

Constantine, got possession of all power, and thus was enabled to destroy or corrupt all evidence by which the truth might have been discovered.¹ We must not forget that, in these ancient systems, philosophy cannot be separated from religion—for philosophy was religion, and religion was philosophy. If we take this view of the subject, we may not find it difficult to discover the reason why, in all ages, the Paulite priesthood have been so addicted to fraud and dishonest practices; for it is evident that, without these infamous measures, they never could have succeeded in so completely deceiving mankind as they have done. This readily accounts for their systematic destruction of all books, Christian as well as Gentile, except the contemptible trash of their own sect. It seems pretty clear to me, that when we meet with the epithet *anti-Christian* applied to such men as Porphyry or Julian, we may almost always read instead of it the word *anti-Paulite*. It must not be supposed, I maintain, that there were not differences among the Philaltheans—for instance, between Clemens and Porphyry. No doubt there were differences; but though these differences are unquestionable, yet it is evident they themselves maintained, that their doctrines were virtually the same.

I now conclude with a simple statement of what, (as it appears to me,) an unprejudiced, dispassionate inquirer after truth may reasonably believe respecting Jesus and his doctrines. If any learned and liberal-minded priest shall think that I have mistaken any fact, or erred in the conduct of any argument, or in any conclusion which I may have drawn, I shall be extremely happy to receive his correction. I shall notice it, with the respect it deserves, in an appendix, which I shall publish for this and other purposes.² In the time of Tiberius appeared a man of the name of John. He was a Nazarite, of the monastic order of the Pythagorean Essenes, and lived the life of a hermit. He was put to death by Herod, for rebuking him for his vices. About the same time lived a person, who was his cousin, whose original name has probably been changed, like that of Abraham, Jacob, Joshua, Pythagoras, &c., but who has since been known by the name of JESUS CHRIST. This person was also a Nazarite, of the same sect or monastic order—the Pythagorean Essenes. He, like his cousin John, was a philosopher, a teacher of morality and of reformation of manners to his Jewish countrymen. He was put to death³ by the priests of the Pharisees, the prevailing or orthodox sect, at that time, in Judea, against whose vices he loudly declaimed, and whose hypocrisy he exposed. He was a person of a most virtuous life and amiable manners—the Socrates or Pythagoras of his day. We know that he taught a very strict and pure morality, the unity of God, the immortality of the soul, and that this life is only a state of probation for a state of future existence, in which every person will be rewarded or punished according to his merits or demerits. These are the facts which we know respecting Jesus and his doctrines,—and as I believe that the facts are real, and that the doctrines are true, I consider that I am his follower, his disciple, and a *Christian*.

¹ See *supra*, pp. 117, 173.

² “In the midst of *life* we are in *death*.” Two years and a half before this sentence was printed, the Author was numbered with the dead! *Editor*.

³ As this part of the Author's MS. was transmitted, by his direction, to the printer, *unaltered*, it may admit of doubt whether he was fully satisfied with the evidence adduced from Irenæus in proof that Jesus Christ was *not* crucified, but attained the age of *fifty*. See *supra*, pp. 120—123, 142, 228. *Editor*.

INDEX.

- | | Page | | Page | | Page |
|---|-------------------------|---|----------|--|-------------------------|
| A, the first letter of Ailm, the <i>first</i> or <i>one</i> , | 184, 249 | <i>Aborigines</i> , the, of South India, have no distinction of castes, | 274 | Abraham, St., and Mary his niece, | 81 |
| Aaron, the rod of, what, | 204 | —, remains of, <i>white</i> races, more numerous than the <i>black</i> colonies sent out by the Pontifical government, | 363 | Abram, | 58 |
| Ab or Ba, probably the first word of infant man, | 162, 167 | —, the, ignorant, naked, and defenceless—their countries taken possession of, by the learned caste from the East, | 392 | Absolution—refused by monks, to compel laymen to leave church patronage to them, | 267 |
| —, (P) —father—God the Father, the Trimurti, | 223 | —, of Greece, conquered by a race from India, as we conquered the people of North America, and are conquering those of Australia, | 419 | Absorbed, absorption, into the To Ov, | 249, 251, 254, 301, 336 |
| — or Ba, <i>the father</i> , Apis, from, | 414 | Aboufasl (the host of Hassan Sabah), | 382 | <i>Abstineto à fabis</i> —abstain from <i>fables</i> , not, from <i>beans</i> , | 239, 240, 300 |
| Abacus—the ancient Roman and Chinese, the same, | 216, 217 | Abraham, 8, 10, 14, 16, 34, 45, 60, 61, 97, 110, 194, 245, 300, 329, 360, 386, | 449 | Abulfaragius or Bar Hebræus, | 96 |
| Abad, the Great, or Buddha or Baudha or Abaddon, | 133 | —, Zoradust or Zoroaster, | 58 | Abul Fazl, on Akbar, | 354 |
| Abads, <i>thirteen</i> , the generations of Solimans, | 133 | — and Sarah, mythological character of, | 81 | Abul Ghazi Behadur, | 353 |
| Abaris, the arrow of, the mariner's compass, alone necessary to the early traveller, | 365 | —, his birth announced by a star, | 95 | Abury, built by the Cyclops, | 135 |
| Ab-ba, father, the root of the cycle of 432, a lustrum, | 181 | —, supposed to have had the same soul as Adam, David, and the Messiah, i. e. an angel, | 97 | —, the rude pillars at, more ancient than the Trilithous of Stonehenge, &c., | 396 |
| —, the, was king and priest, | 297, 298 | —, 14 generations before, | 133 | —, the temple at, in its number of 650, &c., | 409 |
| Abba-Sin—the Upper Nile once so called, | 181 | —, the Brahmin, 139, 257, 310, | 364 | — and Stonehenge, the builders of, must have been a <i>mighty</i> people, | 416 |
| Abbas, the family of the Calif, ruled at Bagdad, | 385 | —, an ashera set up by, in Beersheba, | 194 | Abydenus, on antediluvian kings, | 321, 322 |
| —, declared by the emperor of the Mougols not to possess any of the virtues of the prophet, | 390 | —, the simple religion of— of the three sacraments, | 282 | —, on the time of the flood, | 327 |
| Abbasides—a great meeting of learned men called by the, in Persia, against the Assassins, their doctrines, &c., | 389 | —, the 318 circumcised or initiated of, an example of a numeral and astrological allegory, | 297, 298 | Abyssinia and Upper Egypt, peopled by a tribe of Juda, which came from India, before the tribe of Abraham, | 352 |
| Abbé or Rabbi, a contraction of Roy or Rey-abbé, R'abbé, | 297 | —, the God of wisdom, peculiarly the god of, | 299 | Abyssinian Christians, | 37 |
| Abbé Bazin. See Bazin. | | —, an, and a Lot, dispute between the servants of, | 306 | Accommodesan—a portion of the produce of land, | 292 |
| Abbé Guerin de Rocher, the. See Rocher. | | —, an, and a Lot, would soon settle a dispute in the Golden Age, | 307 | Accusamilenses, the, | 30 |
| Abbé Marolles, the. See Marolles. | | — and his 318 men—the Jews descended from, | 310 | Acham (Sanskrit) Ogham (Irish) אכח (Heb.) Wisdom, | 158 |
| Abbot, a mitred, a bishop <i>without functions</i> , &c., | 285 | —, opposed to images—beginning to prevail when he left India, | 364 | Acherah—tithes among the Mohamedans, | 264 |
| Abbots, the mitred, made abbots by their chapters, and bishops by the Popes, | 278 | —, priest and king, | 366 | Achilles, | 293 |
| —, their right to sit in Parliament, <i>what</i> , | 285 | —, the Brahmin well marked in, | 368 | — Tatius, | 314 |
| Abbuto or Pater But, the Apollo of the Japanese, | 287 | —, the Ashre set up by, were probably at the cross roads or capitol—like the stone pillars of the West, called Decumans, &c., | 371 | —, on a mouth as 30 days, | 321 |
| Abekt—the symbolic letters of Indian Algebra, | 217 | —, the Ashre set up by, were probably at the cross roads or capitol—like the stone pillars of the West, called Decumans, &c., | 371 | Acosta, | 30, 31 |
| Aben Ezra, | 105 | — and his 318, brought up in his own house, in his war with the five kings, probably employed, under their command, thousands of mercenaries, | 392 | —, on the Mexican year, | 318 |
| Aberdeen — a Delecarlian landed near, was understood at, | 258 | | | Acropolis, an, in each country having any pretence to have a <i>Saviour</i> , | 341, 422 |
| Abged, the Persian for numeration, our A, B, C, | 217 | | | Acrostic writing in the Tamul, the Psalms, and the Runes, | 185 |
| —, abekt, abacus, &c., prove letters are derived from figures, | 217 | | | Acts of the Apostles, the, fabricated—the Latin character of, visible in every page, | 131, 132 |
| Abile or Calpe, the Straits of, | 19 | | | Actus or fundus, the Roman, <i>twelve</i> ten-feet rods, &c., | 407 |
| <i>Aborigines</i> , an inoffensive race, Buddhists, | 203 | | | Ad or Hadad, the, of Syria, is Buddha, | 6 |
| —, the so called, | 283 | | | <i>Ad ad</i> corrupted into <i>Hadad</i> , | 162 |
| —, escaped from a flood—conquered by colonies, &c., | 258, 309, 361, 435, 439 | | | Ad, God so called in India and Western Syria; A is one, and d, is di—holy one or Monad, | 181 |

_____ , in Syriac, is Oden, _____ , called the eldest son of God—robbed the garden of a flower, was crucified, &c.,	350, 253	_____ , the, of the Deisuls, and in the sacred theatres,	340	Agra, Akbar's burial-place near,	358
Adonises, Atyses, Bacchuses, Budd- has, Cristnas, Herculeuses, Mithras, Salivahanas, all the, put to death, and rose from the grave, &c.,	142	_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ , a pope at, or at Oude, &c.,	422
Adoration of saints, the,	81	_____ , the, of the Deisuls, and in the sacred theatres,	340	Agrarian laws—cause of disputes about the, in Rome, and in Athens,	373, 418
Adrian, Hadrianus, to destroy the Christian faith dedicated the image of Jupiter, and profaned Bethlehem with the temple of Adonis,	95	_____ , the, of the Deisuls, and in the sacred theatres,	340	Agri Decumani, the, got possession of, by the priests,	417
_____ , before the time of, the temple of Adonis existed at Bethlehem,	96	_____ , the, of the Deisuls, and in the sacred theatres,	340	Agrimensores, the, Etruscan, 117, 284	
Adrian I. (pope),	111	_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ , in the account of, we probably have the only written remains of the finan- cial polity of the Patriarchal priesthood,	371
Adventures, the, of the incarnate God, acted in the Deisuls, and in the sacred theatres,	340	_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ , the use of, in mea- suring out lands to feudatories— the origin of our <i>town</i> fields,	406
Ælfric's Anglo-Saxon Bible differs from the Hebrew, Samaritan, Septuagint, Vulgate, &c.,	172	_____ , the, of the Deisuls, and in the sacred theatres,	340	Agrimensorism—the author of Ge- nesis perfectly understood the doctrine of,	313
Æneas, 64, 74, 400, 412	412	_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ , wisdom, and the generative principle—the same compound doctrine of, in India and in Europe,	415
_____ descending to the shades, passed an elm-tree loaded with dreams,	69	_____ , the, of the Deisuls, and in the sacred theatres,	340	Ahasneris—the 180 days' feast of, just half a year, &c.,	317
Ænon,	246	_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ , queen Esther not called to, for 30 days,	320
_____ , sacred to the sun,	95	_____ , the, of the Deisuls, and in the sacred theatres,	340	Aïa, Aja—Jah, Jave, Jove, &c.,	5
Æon, aspirated, is Chæon,	155	_____ , the, of the Deisuls, and in the sacred theatres,	340	Aikin, Dr., on the Callan inscrip- tion,	206
Æschylus's <i>Prometheus vincetus</i> , 113,	136	_____ , the, of the Deisuls, and in the sacred theatres,	340	Ailm, ilm, elm, oeilm, or ulm,	249
_____ 's Plays, cause of lacunæ in,	116	_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ , the elm, the first letter of the Tree-alphabet, 148—150, 184,	249
_____ , the Tragedies of,	293	_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ , all letters and numbers form- ed on the,	190
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Ainsworth, on the word <i>Cardo</i> ,	414
		_____ , the, of the Deisuls, and in the sacred theatres,	340	<i>Air</i> , <i>fire</i> , <i>water</i> , the Etruscans bap- tized with,	67
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ , in motion, breath, spirit,	67, 123
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Αἰων, aspirated, is Chæon,	135
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Αἰων των αιωνων, 51, 56, 251, 254, 336, 344	
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ , the, not heard of now, in Rome or Tibet, but only the Vicramadytia, &c.,	374
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Aja — self-existing — a name of Brahma,	175
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Ajax,	18
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Aje-mere—its origin may be Aja,	5
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Akbar believed himself, and was believed to be, the last Avatar; was called <i>perfect messenger of God</i> , &c., &c.,	354
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ assumed the title of Vice- gerent of God,	355
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ his <i>divinity</i> , &c., yet believ- ers in,	356
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ announced himself as the <i>tenth</i> Avatar, putting back Mo- hamed as the <i>ninth</i> ,	357
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ poisoned by mistake—pic- ture of the Apotheosis of,	358
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ , the archierarchy almost re- vived under,	373
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ the Second, enjoys only the empty title of King (Padshah) of Delhi,	358
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Akme—perhaps the same as the Americau Sachem,	25
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Al, God, <i>all</i> ,	284, 408
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Alaric, a supposed Avatar,	207
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ and his Goths—Scythians, Sacæ, &c.,	273
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ believed himself to be the person foretold,	344
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Alb or <i>alba</i> , the, ordered by Numa, to be worn by a priest,	64
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Alba, Mount, preceded the Capitol as the <i>sacred mount</i> ,	291
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ , white sow of, <i>black</i> ,	34, 291
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ , Sln, the natives of, the Egyp- tians,	292
		_____ , the, of the Deisuls, and in the sacred theatres,	340	_____ Vestis,	79
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Alban and Latin states, tradition of the, being formed of 600 families,	433
		_____ , the, of the Deisuls, and in the sacred theatres,	340	<i>Albanact</i> , to whom his father Brutus gave Scotland, hence called Albania, 400, 401, 412	
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Albanians—a name for Britons, or the English,	2
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Alchemists,	301
		_____ , the, of the Deisuls, and in the sacred theatres,	340	Aldborough, the capital of the Bri- gantes,	298

Aldermen and Councilmen, whence their number, 276, 417
Alein, the, of Genesis, or Wisdom, 256
 —, the plural feminine of *AL*, 257
 — has a feminine termination, 291
Ale-manni, the Franks, 267
Aleuades and Bacchiades, the, a numerous and royal Gens—probably allodial proprietors and bookmen, 419
Alexander, 17, 34, 36, 317, 319, 320, 356
 — conquered Egypt about 30 years before Christ, 17
 — de Symbolis Pythagoriscis, 49
 — opposed by the *Poorus* and *Hericidas*, 117, 118
 —, the *Genius* of his age, probably sought in, 127
 —, decrees of Fate revealed to, by speaking trees, 165
 — conquered the *Sacæ* or *Saxons*, and restored their country to the chiefs, &c., 272
 —, believed to be a divine incarnation, 343, 347
 — himself to be the person foretold, 344
 —, his name from *Al*, *Ischa* (Arabic) and *αἰσχος*, a man, 346, 347
 —, said to have been born 360, B. C., the year the sun entered *Pisces* at the Vernal Equinox, 346, 347, 375
 —, ascribed his generation to *Jupiter Ammon*, 346, 348, 349
 —, declared his war a religious one, &c., 347
 —, an æra of, in Asia, 348, 349, 384
 —, had, mystically, two fathers, 350
 —, why, before he marched, he was acknowledged as sovereign over Greece, over the other dominions of *Japhet*, and probably over those of *Shem* and *Ham*, 384
 — acknowledged by the *Amphictyons* as their lord, and as sovereign of all Greece, they probably regarding him as the new incarnation, 423
 — ab *Alexandro*, 51, 64, 76, 79
 —, Pope, 88
 — VI., Pope, refused the Emperor a grant of the tithes of Mexico, &c., 393
 — Severus, 349
Alexandria, 22, 399, 400
 —, colonies of Jews from, supposed to have gone to America, 22
 —, the philosophers of, 131
Alfred, the tithings of king, in England, like the divisions in Western Syria, and in India—*Decapolis* and *Deccan*, 277
 —, was this from *Al-phre-di*? His tithings were ecclesiastical, and like those of the Chinese, 292
Algebra—an *unspoken* language, 213
 —, the letters of, from Hebrew or Arabic, 217
 —, said to have been discovered, by the Arabians, in the middle ages—known in Italy 600

years—probably a remnant of the science of the old Tuscan *Augurs* or *Agrimensores*—is a symbolic language, 436
Algebra, a part of the ancient mysteries, of magic, 437
 —, in the concealment of, an example of the spirit of monopoly, 439
Ali, the Shahs of the house of, 207
 —, the followers of, 291
 —, the *Imams* of, like the *Lucumones* and the 12 *Cæsars*, 345
 —, the system of the sect of, fell into pieces, when the *Millennium* did not arrive, 351
Alkader, the Calif, gave investiture to *Mahmud* of *Ghazni*, 354
All Saints and *All Souls*, the Mexican festival of advocates answered to our, 31, 82
All Souls, the festival of, at Florence, 68
All Souls' Day—what the Irish call the feast of the fires of *Baal*, 82
Alleganias, the, 312

| | | | —, the Il-avratra of India, 18, 411 | 18, 411 |
| | | | —, placed by the Samaritans in Serendive, | 229, 288 |
| | | | —, Naubanda—Mount of the Ship, | 292, 411 |
| | | | —, Ship-cabled Mount, | 294, 333, 334 |
| | | | Araxes, the, Aras, Ros, Ras, or Cyrus river, | 231 |
| | | | Arcadia, Numidia, Etruria, Tartary, &c., the same form of government anciently prevailed in, | 421 |
| | | | Arca-pulis, place of deposit of sacred things, | 242 |
| | | | Αρξ, the ship in which the germ of animated nature was saved, | 113 |
| | | | Archbishop, an, in the Romish church, though elected by suffragans, must have the <i>pallium</i> from the vicar of God, | 231 |
| | | | Arch-Druid, the, in Gaul, held out his foot to be kissed, | 55 |
| | | | Archdruid or Supreme Pontiff, the, of Britain, probably had under him three archflamens, | 416 |
| | | | Αρχη—divine wisdom, | 242 |
| | | | Archflamens, the three, of York, London, and Carleon (Chester), became Archbishops, when Lucius was converted, | 400 |

	Page		Page		Page
Archierarch, Noah the first, and his three sons Archierarchs after him,	361	been ruled in peace, by the Archierarch—till the festivals required correcting, &c.,	399	med) established by the Califs; the (Mohamedan) world thus made as happy as under the first Hierarchy,	377, 379, 380
—the rights and privileges of, gradually acquired by the Hierarch of each nation; and the distant Lord was at last forgotten,	380, 381	Arietic cycle, in the, we have Noah and his wife, and Shem, Ham, and Japhet—a new Trinity every 1800 years, at first, &c.,	397	Ashera, an, set up, by Abraham, in Beersheba,	194, 371
—, there probably was an, with a council of 12, and a senate of 72, in every country, under a Pope,	422	Aristites, Sacerdotum, the, &c.,	3	Ashre, the, were burnt by Josiah,	371
Archierarchical government, the first, probably left towns, &c, to their own management—hence the <i>free</i> states of Greece and Italy,	366, 423	Aristocracy, the sacred and military,	417	—, were perpetual almshouses,	372
—, if the, was established before the flood, it would revive after it—the few persons remaining would readily submit to its superiority,	439	Aristophanes,	199	Ash-Wednesday, Shrovetide, &c.,	59
Archierarchs, three, after the death of Noah, his three sons became; one, perhaps, at Oude or Babylon, for Asia; one in Egypt, for Africa; one at Rome or Thebes in Bœotia, for Europe,	399	Aristotle,	153, 314	—, the ceremony of putting ashes on the head on, a continuation of the festival of the <i>fordicidia</i> of the Romans,	92
Archierarchy—very natural for an, to arise, and that it should extend its paternal influence over the whole world,	373	—, the first who wrote on Greek grammar,	195, 196	Asia, 4, 25, 39, 66, 69, 70, 75, 120—122,	312
—, the first may have arisen before the sun entered Aries, in the æra of Buddha, and have continued during many generations,	399, 400	—, the alphabet of,	220	— and Africa, the wandering tribes of, readily came over to the Mohamedan faith,	207
—, the, abolished by Christ and Cristina—that of Rome and Tibet almost the same,	438	—, on the length of the year,	319	—, once a fief depending on Scythia,	262, 372
Archierist, the, (of India,) may have been a king—hence the Archierarchy may have disappeared,	370	—, on the tribute in Greece—a <i>tenth</i> ,	417	—, an æra of Alexander arose in,	348, 349, 384
Archimedes and the Syracusans—the foot measure used by,	403, 404	—classes Dancing with poetry, music, and painting, as equally an imitative art,	425	—, the conduct of the monarchs of, towards Europeans, not understood—it arises from supposing themselves descended from the first three monarchs, the sons of Noah,	359
Ardshir Ebn Babec, author of the play called Tables,	318	Aristotelian philosophy, the, once as little doubted as the Newtonian is now,	333	Asia Minor—the whole of, probably, was Mysia or mystic land, the land of Room: in it are Calinda, Calamina, and Calida, places of India, connected with the mythos of Ararat,	412
Areopagus, the, of Athens, courts like, answered to a lodge of Freemasons, &c.,	419	Aritlmetic (high), literal writing, astronomy, &c., originally constituted the mysteries,	439	Asiatic Journal, the,	352
—, was the high ecclesiastical court, &c., but amenable to the Amphictyons,	423, 424	Arjoon, the cousin (or brother) of Cristina,	137, 241, 242	—, on the Microcosm among the Chinese,	398
Argha—serpent—emblem of the female generative power,	113, 174	— or Juana, the assistant to Cristina,	242	— Researches, the, 7, 67, 103, 104, 122, 181, 214, 219, 225, 236—238, 240, 260, 261, 287, 371, 398, 429	148
Argheus—an universal spirit—evidently the Indian Argha,	301	Ark, the,	361	— Society, Transactions of,	149
Argonautic Expedition, the,	105	— of the Covenant,	10	Asperorio, the, for sprinkling the people with holy water, a Pagan custom,	91
—, new, every 600 years, believed in by the vulgar, despised by the enlightened,	339	—, the, Noah, and Thebes, have the same meaning,	12, 13	Asre, asire, ashres—groves—a kind of celestial globes, &c.,	193, 194
— mysteries,	114, 115	— of the Mexicans,	27	Ass and Horse, the, unknown, in a state of nature, to the Americans, before the arrival of the Spaniards,	35
Argonauts, the,	293	—, increase of the 8 persons saved in, in 100 years, &c.,	395, 439	—, the golden, of Apuleius,	76
Arhiman—the evil principle,	83, 88, 106	Arka (<i>Arka</i>) in Javanese—the sun,	222	Assaceni or Astaceni, the, whose capital was Massaca or Massana—A-saceni, the Sacæ?—Ma-saga, the great Sacu?	230
Aries, 138—140		—, the ancient temple of Jagernaut, at Kanarak, so called,	261	Assassin, every, might be a Sophee,	383
—, the equinoctial sign changed from Taurus, to, before time of Moses,	105, 106	Arkite <i>Athene</i> , i. e., Divine Providence,	114	—, the Society probably not called so, from being a <i>murderous</i> one, but a murderer from it, called an <i>assassin</i> ,	384
— personified, called the Lamb of God, applied to Jesus, and worshiped,	107, 109, 110	Armenia,	4	Assassins, the,	348, 381—392
—, the worship of, the worship of the sun,	112	Armenian Christians, the, turned to the sun, in prayer,	89	—, Druids, Magi, &c., practised the rite of baptism,	248
—, till the equinoctial sun passed into, the world may have		— language, the, originally the same as the Zend and the Pahlavi,	237	—, their history, according to Von Hammer, is a mass of straight forward, pure, unadulterated wickedness,	382, 389
		Arnobius,	64, 80	—, why every where found,	383
		Arouma, the,	242	—, considered a dynasty by D'Herbelot and Deguines, as an order by Hammer,	388
		Arouna and Plethrou, Egyptian and Greek standards of square measure,	406	—, were profoundly versed in the <i>mathematical</i> and <i>metaphysical</i> sciences; their fauna-	
		<i>Αρωμα</i> , the sweet smell, a flower, pushpa,	242		
		Arran, the isle of, so called from <i>Arhan</i> , consort of Buddha,	287		
		Arrian,	118, 230, 272		
		Artaxerxes Memor,	317		
		— was addicted to the ineffable mysteries,	348		
		Arteng,	8		
		Arthur's (prince) <i>round table</i> , &c., the mythos seen in,	349, 356		
		Article, the emphatic, is often the name of God— <i>Al</i> (Arabic), <i>Pi</i> (Coptic), π or ρ (Heb.),	200		
		Artimodorus,	262		
		Arungabad, the Shufcek or Sophce or Rhymer of,	182		
		Ascanius and the Lavinian colony,	433		
		Asenath, the wife of Joseph,	110		
		<i>Ases</i> , old Latin coins, without inscriptions, having the head of a young man, and a wheel with 6 spokes, &c.,	433		
		Ashera— <i>tenth</i> s, tithe,	193, 371		
		—, the, (restored by Moha-

 —, square letter, the primeval language of the East, 153
 —, alphabet is Estrangelo, &c., &c., 206, 239
 — or Hebrew, the original root of the Sanscrit, 236, 237
 Chaldees, if originally Negroes, &c., 364
 Chaldei or Mathematici, the, Josephus says, handed down the *cycle* from the Antediluvians, 135
 —, the first account of, in the

Buddhist history of Genesis—both, of West and East, from Upper India, 257
 Chaldei, an order of, escaped from a flood, and, by their learning, established a universal pontifical government, 309
 Chalidi, the, followers of Cali, 135
 Champollion, M., 11
 —, his discoveries all delusions, 159
 Chandra, 83
 — and Soma, pedigrees in the line of, nonsense, 351
 Chang-ti, 36
 — and Tchangti, the Supreme Being, 229
 Chaons, the, 3, or Chæones, 135
 Chardin, 217, 263, 268, 271, 272, 288
 Chariots, the, of the Britons, probably travelled on many of the right-lined roads formed when Abury and Stonehenge were built, 416
 Charities, Carities, Charistia, the festival of, 62, 64
 Charlemagne, probably claimed to be universal monarch, as successor to Augustus; his paladins and Roncesvalles, &c., 356
 Charlevoix's *Histoire de Japon*, 367
 Charms and amulets, ancient, retained in Italy, 92
 — against witches, evil demons, &c., once common among the lower orders, in Britain, 350
 Chartres, the stone in the cathedral of, the same as the *Linga*, 259, 260
 Chart (*χαρτης*) and *Cart* (Gaelic) connected with letters, the agrimensorial measurement of land, and with wheels, 413
 Chasdim, the, or Kasdim or Casidim, were Kasideans, 135
 Chasuble, 64
 Chati, same as Sacti or Sakti, 6
 Chemin, 137
 Chemsennissa, wife of Feirouz, allegory on, 245
 Chéphren or Chabyris, 13
 Chequers, the calculi of Italy so called, 235
 Cheres, 13, 14, 20, 21
 — or Chæres was Moses, 14
 Chérinus, or Menchérinus, 13
 Cherubim, the, 10
 Chia (Eve corrupted), the wife of Bochica, 34
 Chibirias, the mother of Bacab, 32
 Children, of the same trade as their parents, in India, 280
 Chimalman, the Mexican Virgin, 32
 Chimborazo—the author required to believe that the water rose 15 cubits above, 254
 —, the flood which threw up, 312
 —, and Mount Blanc—are they not physical traces? &c., 315
 —, might be thrown up by the flood of Ogyges, 332
 China, 10, 28, 31, 35, 36, 39—41, 69, 173, 192, 214, 218, 223, 229, 232, 240
 —, the Hebrew spoken in, 41
 —, myths of the crucifix common from, to Thule, 129
 —, all taxes in, paid by a portion of the produce of the land, 272

China, the emperor of, called Sou of the Sun, 292, 353
 —, the renewed incarnation visible in, 340
 —, the emperor of, as descendant of Japhet, would say, he is "entitled to suit or service from" European kings or their ambassadors, 359
 —, canals in, for the encouragement of commerce, &c.; perhaps, rather for receiving the tributes in kind, before money was in use, 376, 377
 — gained territory by being conquered. Could we come at the truth, we should probably find strong marks of the patriarchal, and perhaps of the first, government of man in, 396
 Chinese, the, 33, 36, 202, 205
 — use the expression *bones of the Son of the Spirit of Heaven*, 103
 —, on the first created, 133
 —, are Sin, Saxons, or Buddhists, 215, 220
 —, have the whole myths of the immaculate conception, &c., &c., 215
 —, the wisest people in the world, because they exclude European pirates, 216
 —, or Sines, 227, 279
 —, have *si* a tree, the root of *su*, a learned man, 227
 —, hold letters in religious veneration, 228
 —, hold the Trinity and the fall of Adam, 239
 —, have trial by Jury, 278, 279
 —, said to have once conquered Ceylon, 292
 —, emperor and nobility, persuaded by the Jesuits, that the doctrine of Confucius did not differ much from that of the Gospel, &c., 366, 367
 —, who are Buddhists, attempted, by the Jesuits, to be converted to the faith of Cristina—why, 367
 —, consider Man a Microcosm; the universe is man, on a large scale, &c., 398
 —, language, the, ancient, nearly related to Hebrew, 148
 — is that of symbols, and called the language of flowers, 148, 149, 247
 —, first system of letters, was of right lines, 160, 215
 —, Japonese, and Siamese languages, the, nearly the same, 214
 —, numerals, the, one stroke or line meant *one*, &c., 216
 — language, the, is understood over a space of 4900 miles, 217
 —, the symbolic language of—the almost certainty of its having been formed by numerals, 443
 — empire, the, or the country of the 1000 cities of Strabo, probably the seat of the first patriarchal government, 376
 —, Mexican, and North-Indian Mythoses, the, 35, 376
 — Records destroyed, 36

 —bec—Book or Bec-d'-om, 302
 —day-book—D'om-d'aita—a re-
 cord of the land of the sacred
 Om, land which paid its tenths, *ib.*
 —tree, the, 65
 Domesday Book—Liber Judicatio-
 rius, 277
 Domingo, St., language of, corrupt
 Hebrew, 19
 Dominos, 79
 Dominus, *Κυριος*, Lord, name of
 honour of Jesus Christ, 99
 —Mortis, or Bal-Sab, 82, 83
 —Sol, the Saviour, 89, 112
 Domitian wished the words *the*
Lord our God commands it to be
used, 55
 Domus, from D'om, Di-om, the
 place of the *holy* OM, 302
 Don, river, from *דן* *adn* Adon, 99
 —or Dun, the Du—wisdom or
 knowledge, 250
 Doncaster, an altar of Hercules at, 154
 Door, a, in Sanscrit *dvara*, Saxon
dora, Greek, *θύρα*, 158
 Double principle, the, adoration of,
Διπληα, a species of, paid to Cardos,
 their nature or design being for-
 gotten. Devotees in all ages and
 nations strive to increase the ob-
 jects of adoration, 410, 416
 Douyan-Byan, husband of the mo-
 ther of Gengis Khan, 353
 Dove, the, Semiramis, 228
 —, in Heb. *Iona*, in Lat.
Columba, the name of Ii, Iona,
 Icolmkill, 285
 —, in Hebrew, is always *fe-*
male, 174, 285, 291
 Doyle, Bishop, X Doyle, 198
 Dozens and scores, our, probably
 derived from the microcosmic
 superstition, the nature of which
 is forgotten, 395, 433
 Draco, 217
 Dragon, the, and Thorah, the fable
 of, 305
 Dravida—hence Fort St. David? 238
 Druid, a, brought the mythos from
 Bokhara to Ireland, 97
 —, the Arch, in Gaul, held his
 foot out to be kissed, 55
 —, probably had under
 him, three archflamens, 416
 —, when a, commanded an army,
 and he usurped the throne, many
 of his barons would be Druidi, 278
 Druids, the, 31, 44, 50, 62, 64, 69,
 71, 82, 83, 277, 278,
 —, kept Dec. 24th and
 called the 25th Nollagh, 99
 —, were persecuted by the
 Romans, who took (learned) no-
 thing from them, *ib.*
 —, of Gaul, worshiped the
 Virgo-Paritura, as the mother of
 God, 100 years before the birth
 of our Saviour, 108, 109, 259
 —, taught by, or descend-
 ed from, the Chaldæans of Tary,
 or Eastern Syria, or North
 India, 135, 136
 —, were called Vates, by
 the British—Ouateis by the
 Greeks, 225
 — or priests—almost all
 lands in Europe anciently belong-
 ed to the order of, 266
 —, enmity of the Romans
 against the, why, 281
 —, the 20,000 verses their
 pupils repeated, 340, 436
 —, the, of Britain, sent offer-
 ings to the temple of Apollo, at
 Delos, wrapped in wheat straw, 380
 —, in the oldest monu-
 ments of, we have the circle of
 12, stones,—the number of the
 signs of the zodiac, &c., &c., 408
 Druidical or Cyclopæan buildings—
 no inscription found on any, 197, 198
 —circle, every, or cathedral,
 had its sacred mount, for the
 Deisul or procession of God the
 Saviour—of Sol, from East to
 West, 276
 —temples, the, became Ro-
 man and Christian temples or
 churches, &c., 278, 280
 —built, with pillars
 in cyclic numbers, to remedy de-
 fects of memory, for historic
 knowledge, 310
 —circles, the, mark *nume-*
erals, but nothing like *letters*, 311
 —and Cyclopæan buildings
 found everywhere, 312
 —remains of, in EVERY part of the
 world, 365, 373
 —edifices
 prove the existence of the Gold-
 en Age, under the universal pon-
 tiffical government, 369
 —, wherever found, there the pa-
 triarchal system extended, 371
 —temples, the, probably
 erected when the *numeral alpha-*
bet was in use, but when the
syllabic was a secret, if it was
 then discovered, 396
 —colleges (whence our uni-
 versities) these, &c., subordinate
 to the three Archierarchs—the
 descendants of Shem, Ham, and
 Japhet, 432
 —monuments, all the old
 suspected to be antediluvian, 439
 Drummond (Sir William), 48, 159,
 236, 297, 314
 —, on Hebrew
 names of places, &c., all astron-
 omical, 105, 136
 Drummond (Sir William), on *buf-*
foonery, 179, 212
 —, on the
 knowledge of the ancients, res-
 pecting the number of the
 planets, 402
 —, Sir I.
 Newton, Mr. Whiston, and Mr.
 Gabb, on the standard measure
 of the ancients, 404
 —, on the Bri-
 gantes, &c., 412, 413

 of Chartres, 259, 260
 Dugas-Montbel (Mons.), 196
 Du Halde, on signs or symbols
 known to people of Cochinchina,
 Tonquin, Japan, and China, 214
 —, 229, 268, 272
 Duir, the *Oak* and number *four*,
 161, 163
 —and Gort, the first letters of,
 to make Dog or Dg, 161, 185
 Dulanre, 219, 279
 Dnpaix, M., 28
 Du Perron, 55
 Dupuis, 6, 60, 66, 85, 99, 100,
 102—105, 107, 110—112, 193
 Duret, Claude, 3, 190
 Dutch, the, conduct of, in India, 216
 Dutchman's Cap, the isle of, called
 Linga in old maps, 291, 292
 Du Verdier, 79
 Dwapar, the, 118
 Dwara (Sanscrit), *dora* (Saxon),
θύρα, a door, 158
 E, the, changed into O, with the
 Ethiopians, 250
 Eagle's Nest, the—reason of the
 constant assemblage of philoso-
 phers, astronomers, &c., in, 383
 Earl (Lord) E Lar-di, *the* Lar, 301, 417
 Earldoms, the nation supposed to
 have been originally divided into
 72, the domain of as many mun-
 icipia, each with its 12 Alder-
 men and 24 Councilmen, 417
 "Earth to earth," &c., is copied
 from the ancient Egyptians, 92
 Earth, change in the Axis of the,
 310, 311, 313, 315, 332, 438, 439
 —, the revolution of, at the
 equator, about equal to the velo-
 city of a cannon ball; and if she
 were slightly checked in her daily
 motion, the Pacific would rush
 over the Andes, &c., and the At-
 lantic over Europe, Asia, &c., 312
 —, the, its figure shews its
 revolutions, &c., 314
 —, that the would incline and
 the flood ensue—those that knew
 this, from the calculation of the
 moons, might know the exact
 number of the planets, 402
 —, the surface of, suspected to
 be microcosmically divided, after
 the heavens, 410
 —, the, supposed by Buffon,
 &c., to have once been in a state
 of fusiou, 444

Geddes, Dr.,	1, 4, 61
—, on identity of Hebrew	
and Saxon,	155, 199, 275
Geminus, on a month, as 30 days,	321
General of the Priest or Pontiff,	
when the, in great empires, made	
himself Khan, the lands were	
granted to his followers, on con-	
dition of each equipping himself	
for war,	395
—, if the, seized the crosier	
of his employer, as at Rome,	
with Cæsar, the Pontifex would	
become a warrior,	396
Generation but accretion, how ren-	
dered probable,	398
Genesis,	4, 11—13, 16, 19
— and history of Egypt ideu-	
tical,	11, 12, 15
— a Buddhist book,	83
—, allegorical meaning of,	105
—, names of the actors in,	
shew the mythos,	128
— shews marks of compilation,	
and of mutilation,	134
—, the books of, the oldest in	
the world,	155
—, a, the secret book of the	
first pontifical government,	173
—, had two meanings, for the	
<i>learned</i> and the <i>vulgar</i> ,	183
—, a Buddhist book, forbids	
animal food,	202
—, in ch. ii. to end of ch. iv.	
is Brahmimical; it permits ani-	
mal food in sacrifice of the Lamb,	203
—, the 1st and 2nd books of,	
have two histories and two alle-	
gories,	247, 248
—, should be called <i>Barasit</i> ,	
i. e. wisdom, i. e. Veda or Buddha,	251
—, mentions not the change	
in the earth's axis,	316
—, the account in, a valuable	
record of the tradition of the	
flood,	332
—, how its history should be	
treated,	334, 335
—, the text of, inclines to	
Shem, &c.,	353, 361
—, the 3rd book of, might be	
called the book of the genera-	
tions or regenerations of Adam,	360
—, the text of, does not say	
the surface of the whole globe	
was covered—many persons, in	
different parts, may have escaped,	
&c.,	361
—, the Jews not permitted to	
read, lest it should draw them	
into idolatry, by its Trinitarian	
doctrine,	364
—, the divisions of 72, &c.,	
marked in,	381
—, the doctrine of, the moving	
cause of the conduct of almost	
all the world, from the earliest	

	Page		Page		Page
time; it was not confined to the Jews, but was a book of the secret mysteries of the world,	390	German, the, on words in, identical with Sanscrit,	234	Guosticism was nothing but the doctrines of the Cabala corrupted, and becoming publicly known,	403
Genesis implies that the first pair were created side to side like the Siamese boys—but still <i>male</i> and <i>female</i> —by the woman being taken from the <i>side</i> of man,	397	Germans, the,	59, 221	_____ , nakedness of,	204

Pentameters, hexameters, &c., how the, arose,	340	—, celebrated the resurrection of Mithra on March 25th,	99
Pentateuch, the, 31,	225	—, had the same idea of the Resurrection as the Jews,	101
—, allegorical meaning of,	105	—, alone had the <i>lamb</i> for the equinoctial sign,	111
—, partly composed, partly compiled by Moses; many of the sect in North and South India, Mexico, &c., who have not the Pentateuch, have part of the same laws as the Western Jews,	376	—, adored <i>fire</i> as the emblem of creative wisdom and power, or as the Wisdom and Power itself,	128
— and Koran, the, codes both of law and religion,	419	—, said, that there were 72 Solomons before the flood,	134
People on the earth—the probable number of, in 650 years after the flood,	395	—, called the Sun <i>Συνη</i> ,	242
Pepakam (a poem) probably is Pidak—the wisdom,	222	—, are followers of Shem,	385
Periodus Magorum, the, or 360,000 years,	317	Persons, a few easily frightened, may have saved themselves, in boats or on rafts, from a flood,	315
<i>Perpetuam felicitatem</i> made into St. Perpetua and St. Felicitia,	86	Peru, 30, 39	30, 39
Persepolis,	77	— and Mexico, the Antiquities of,	21—41
—, arrow-headed letters of,	206	—, while Gold was the only metal in, and coin not invented,	380
—, the destruction of, by the Mohamedans,	261	Peruvian nation, the founder of,	34
		Peruvians, the, had the festival of <i>Capacreyme</i> ,	31
		—, believed in one Supreme,	34
		Pervigilium Paschæ,	104, 105
		Pesach (same as Pushto?) the festival of the <i>slain lamb</i> ,	241
		Pessinuntian Great Mother, the,	348
		Petalon—Greek writing from top to bottom—a tree,	219, 250
		Περελα or leaves— letters, 159,	163, 166, 249, 250
		Peter, St., 54, 56, 57, 122,	145
		—, has the keys of Janus,	81
		—, a rock, &c.,	182
		—, his being called a <i>stone</i> mystical and equivocal,	254, 259
		—'s, St., chair and church,	55—57
		—'s Pence,	54
		—, the, of the Romish church, probably the poll-tax paid in different countries by those who did not occupy land,	379
		Peter Martyr,	39
		— the Great—probably regarded as an Avatar, crushing the Evil Principle, with his monumental horse—treading on a serpent,	360
		Petersburgh and Rome—modern Christianity as exhibited at, a continuance of the ancient religion of Rome,	367
		Petronilla, an epithet of Sa. Anna,	91
		Petronius, Divus,	90
		Petrus, Divus,	80
		Pezron,	208, 242
		Pfeifferus, Augustus,	148
		Φαινω from φων=600, or φωνν=608,	143
		Phallus, the,	242, 249
		Phallic worship,	85
		— rites, at the vernal equinox,	106
		Pharamond—a king or dynasty of the Franks,	267
		Pharaoh, the hardness of his heart,	105
		—, all the land of Egypt the property of,	374
		Pharaohs, the, had the names of Gods,	212
		Pharisees, the,	101
		Φηνη and Phennicse (Irish)=608—φωνν=600 in Coptic,	143, 183
		— icia or country of Phen,	209
		Philæ, relics of Osiris shewn in the temple of,	102
		Philalethean sect, the Author wishes to be considered a member of the,	448
		Philaletheans, the,	442, 448, 449
		Philaster,	50
		Philip and Mary (of England),	299
		—, the ancient astronomer,	320
		— of Macedon, why he sought to be acknowledged by the Amphyletions,	384, 423
		Philippi,	43
		Phillips, Sir R.,	330
		Philo, 49, 50, 202	49, 50, 202
		— says nothing about Jesus Christ,	46
		—, on double meaning, &c.,	130
		—, on the Essenes,	368
		Philoë, the priest at, could order the king, i. e. the general of the sacerdotal forces, to commit suicide,	264, 366, 380
		Philological Museum, the,	392

	Page		Page		Page
Philosophers, the, of Athens, Crotona, and Nazareth,	253	Pitima, the father of all men,	175	to discover. Probably the Plebes were occupiers, as tenants in

Pilgrimages, imitated from the Pagans,	86	—, on the division of the senate into 4 parts of 90 each, &c.,	319	Pomegranates and bells on the garment of the Jewish high priest and the king of Persia,	69
—, the ancient, of Hindoos, to Mecca,	352	—, the corporeal Trinity of,	336	Pompey claimed to rule by the same right as Cæsar,	345
Pillars surrounding ancient temples—the most common number was 40, probably 38, and 2 at the entrance,	402	—, Aristotle, and Pythagoras—the doctrines of, cited as logical and fundamental, &c.,	387	Pomponius Mela,	314
Pimpernel, the, opens to the sun, &c.,	430	—, the most ancient philosopher who has treated of the microcosm,	397, 404	Pons—the Thracian name for a, was Brig or Briga, the same as in the North of Britain, &c.,	413
Pinkerton,	217	—, on all souls being made in one cup, of the same elements,	404	Pontifex—is it a translation of Dom?	303
Pipes or bagpipes, the, of Calabrian shepherds,	90, 91	—, Philo, and Jamblicus—not equitable to seek for the belief of, in their works, written evidently unintelligibly to deceive the ignorant,	443	—, the family of the Julii always aspired to the office of,	374
Piromis (καλος) a man,—Pi-rouma is Pi-roma, Brama, former or creator,	243	—, on the Lord of nature surrounded on all sides by his works,	446	—, a, with a cabinet of 12, and a council of 72 cardones or cardinales in each country,	381
Pisces, or John,	138	—, the Trinity of, substantially that both of the Christians and of the Hindoos,	447	—, Maximus, the, 52, 53, 56	
—, the Vernal Equinox fell on the 25th of, 1800 years ago,	139	Platonics, the modern,	448	—, —58, 76, 92	
—, the sun entered the sign of, 360 years B. C.,	144	Platonism—the Encyclopædia Britannica on,	446	—, the king	51
Piscina,	69	Platonists, the,	72	— of the age,	51
Pisistratus,	168	Plebes and Clientelæ or Tenants—the difference between, difficult		—, the title of,	55
Pitegie, the feast of,	86			—, a microcosm of the Megalistor, M-wisdom,	298
				—, in the person of, Rome possessed the right to the sovereignty of the world,	395
				—, by auguries being taken, had a negative, a veto on all state affairs,	407

Pontifex Maximus, the, the chief bridge builder,	Page 412
Pontiff, if the, and his court, escaped from the flood,	311, 431
— or Pope, the oriental, has probably resided at Oude, Agra, Benares, Delhi, Mundore, &c.,	373, 422
—, if the numeral Chinese were the written language of the, he would easily communicate with distant nations, long after their spoken languages were un- intelligible to each other,	443
Pontiffs, the,	34, 52
Pontifical dominion, the, over the whole world, acquired by a know- ledge of letters,	257, 258, 275
— government — Constant, Creutzer, and Schlegel, on the,	350, 372
—, under the, the priests, by their knowledge of writing, &c., would be mas- ters—the people slaves,	362
—, the, origi- nally black, sent out colonies to the West, which mixed with white races, till the worshippers of the black God became white,	363
—, the first, went to decay (perhaps by the rise of the sect of Cristina)— numerous remains prove its origi- nal existence,	370, 371
— kingdom — antiquarians would succeed better if they went back to the, and to the builders of Stonehenge, &c.,	375
— government—the falling to pieces of, affords an explana- tion of the struggles of the Patri- cians and Plebeians of Italy; this, Niebuhr has not attempted,	394
—, a part of the policy of the, to form towns and states into a confederacy,	394, 395
Pontifices Maximi, the, had sove- reign authority,	51—53
—, exercised authority as delegates of the THEΣ,	54
Pontine Marsh, the, (25 miles long) —Pliny says there were more than 20 towns in; they were polises, divisions of the Agri- mensores, &c.,	419
Pontius Pilate, Jesus of Nazareth not crucified, under, according to Irenæus,	122, 129
Pontoppidan and Scheffer on the word alodial,	284
Poor man's religion, the, wanted not the adjunct of temples,	409
Pooshtoon, the old name of the Afghans,	239
Poo te Choo, the tree of Know- ledge,	148
Pope, the,	52—54, 75, 81, 84
—, and court of Spain kept strangers from America,	22
—, throws money to the people when crowned,	55
—, is adored,	55, 56, 75
—, called himself head fish- erman of Galilee,	56
— (John XIV.), issued a bull for baptizing bells,	70
—, claims to be possessor	

of all lands, as Vicar of God,	Page 266, 374, 400
Pope, the, secular bishops procured from, by barons and kings,	276
—, placed at the head of Christianity or modern Judaism, by the Jews claiming the high priesthood for Shem,	361
—, became the Archierist, by Constantine's surrender of the book to him,	370, 400
—, would not consent that his name should be put, in a list, after that of the king of En- gland,	374
—, superiority over, claimed by the emperor of Germany, and by the Pope over him,	380
—, when the, caused the Moha- medan confession of faith to be placed on the chair of St. Peter, he was probably preparing Rome to become again, one of the three holy cities,	385
—, the, (Alexander VI.,) gave all new-found lands to the Spaniards, but refused a grant of the tithes to the Emperor: he reserved to himself the vectigal,	393
—, the, will probably allow that Cæsar held by both the book and the sword,	400
—, a, at Oude, Agra, Mundore, Samarcaud, or some other great capital,	373, 422
Popery, is but reformed Paganism; Protestantism is but reformed Popery,	443
Popes, the, and the Spaniards,	35
—, like the emperors, wished Latin to be common in all nations,	54
—, allowed those to be killed who were excommunicated,	55
—, claimed supernatural knowledge,	56
—, why some of, called themselves Gods,	136
—, and Monks, contentions between, in the dark ages,—the result,	270, 285
—, brought all the Carmel- ites or Essenes and their pro- perty into the church,	285
—, claimed all islands as the peculiar patrimony of God,	288
—, would an Arabian writer want materials, to blacken, if he went to the writings of Luther or Calvin?	381
Popish mysteries, the, in every re- spect similar to the ancient Gen- tile,	442
Population—a prodigious increase of, when the priest, as lord of the soil, took only a tenth of the produce; little temptation then, to rob a traveller, there being no money, &c.,	365
—, to relieve the overflow of, colonies sent out by the Pa- triarchal government,	434
Populifugia or populifugium,	24
Pork, hated by Scotch Highlanders, as by the Jews,	292, 293
Porphyry, 43, 50, 80, 127, 368, 448, 449	
Porson, Mr., on $\frac{1}{2}$, as $\frac{1}{2}$ in English,	204
Portsmouth, Lord, the works of Newton in the custody of,	333

Portuguese, the,	Page 35, 238
—, conduct of, in In- dia,	216
Portus Cresso, the Crestian Port,	117
Porus—his standard,	118
Posh or Push, the flower,	33, 148
Post-diluvian year, the, 360 days, and the month 30 days,	316—321
Postellus, on what "is to be read in the heavens,"	235
Potamon,	448
Potisato, a flower, a name of Buddha,	240
